Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop summer term (low-residency):

10 hours WR 503 Thesis

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

All MFA candidates will be required to complete a thesis, which is to be a sustained piece of creative writing of literary merit (for prose, 80-120 pages, and for poetry, 38-45 pages). The thesis will be read by the student's primary advisor and a second reader and approved by the program director. A formal examination will be also required of MFA students. The exam consists of two parts, oral and written, and will usually be given in the student's final term of study, and consists of questions assessing the student's grasp of the history of the genre, the contemporary creative writing situation, influences and models, and matters of craft, all within the context of the student's own writing.

- e. Indicate in what ways the proposed program at OSU-Cascades will differ from the OSU-Corvallis campus program.
- Though the OSU-Cascades MFA Program in Creative Writing satisfies the same degree as its traditional high residency counterpart in the School of Writing, Literature, and Film in Corvallis, it differs in that students do not reside on campus for the duration of the graduate program but only during the eight to ten day on-campus residency periods. It will not duplicate, but add diversity to the creative writing offerings at Oregon State University. Also, the low-residency program does not have the primary goal of preparing teachers, so the literature and composition requirements will be shifted to bibliographic aspect of the low-residency program and attendance at craft lectures and literary craft workshops held on site during the residencies. The emphasis is on one-on-one coaching of writing, transmitting professional experience, professional editing, and introduction to the publishing world.
 - The professional mentorship/residency model offers a different approach to delivering the same quality instruction as is offered with the high-residency model. The low-residency

professional mentors are employed on a contract basis which allows the program to assemble highly qualified writers from across the country and represents a cost-savings relative to payroll and benefit costs. The average number of professional mentors, to maintain one-on-one mentoring during off-campus periods is calculated at one professional mentor per four students. The low-residency model emphasizes the professional mentor and student relationship as a way to accelerate learning, thanks in part to the low professional mentor-student ratio and the collaboration of professional mentor and student in designing a program best suited to the student's needs and goals.

- During the mentorship period, students and professional mentors exchange what are referred to as packets. Clear guidelines are provided for regularly scheduled exchanges and responses from the mentor. For each mentoring period of ten weeks (excluding residencies), students submit packets and receive corresponding substantive critical responses from professional mentors at least once a month. A typical packet from the student includes new and/or revised creative work, bibliography of completed reading, critical analysis of reading, and responses to directions and questions from the professional mentor in previous exchange of packets. A typical packet from the professional mentor includes critiques of student's creative work with suggestions for new and substantially revised work, return of student's manuscripts with line-specific suggestions, comments on student's critical analyses of reading assignments, suggestions for related reading to be included in the annotated bibliography, especially books on craft related to student's particular ambitions and style of learning, and individualized instruction about aspects of craft. A student typically studies with a different professional mentor each term and during residencies with several different workshop leaders, thus exposing the student to a variety of literary sensibilities and academic approaches to the study and practice of writing.
 - To graduate, per the established requirements of the OSU-Corvallis high residency program, students must demonstrate expertise in at least one genre and produce a literary work. In addition to required creative work, students are also required to write and present an essay, and to give a public lecture on an issue of literary craft or tradition. The accomplishment of the essay/lecture portion of the graduation requirement is second in importance to the thesis (usually 38 to 45 pages of poetry and 80 to 120 pages in prose). (See also 1.d). The thesis must be defended before a committee of OSU professors.
- f. List any special requirements or prerequisites for admission to the program in Creative Writing at OSU-Cascades
- The requirements will be equivalent to the requirements of the MFA on the Corvallis Campus, with the emphasis shifted to the Advanced Creative Writing and thesis credits.
- g. Is there an accrediting agency or professional society that has established standards for this program? If so, is the program currently accredited? If accredited, what steps would be needed to ensure that accreditation is maintained vis-à-vis the OSU-Cascades offering? Does the accrediting body require notification of the program offering at a new location?
- The program at OSU-Cascades would operate under the accreditation of the English Department and the School of Writing, Literature, and Film.
 - The Associated Writing Programs (AWP) has established standards for low-residency programs, and these will be followed closely in the operation of the program at Cascades. We will invite AWP representatives to Bend for a site visit after two years.

2. Demand

- a. List any similar programs offered at the proposed or nearby location(s).

- In Oregon, there is one, Pacific University; three in Washington, Pacific Lutheran University, Seattle Pacific University, and Goddard's Port Townsend campus. The University of British Columbia has a low-residency program in Vancouver. Naropa in Boulder, Colorado and two southern California low-residency programs round out the competition regionally.

b. Provide evidence of need for the program at the new location(s).

- The Oregon, Washington, and Vancouver low-residency programs are all located west of the Cascades. A program at OSU-Cascades could potentially draw students from Central Oregon, eastern Washington, Idaho, Montana, Nevada, and Northern California. According to the Low Residency MFA Directors' Survey, eight of the 31 programs polled responded that their program is composed of 50% or more in-state students which bodes well for attracting students to an Oregon-based low-residency MFA in Creative Writing program.
- Student populations have grown at state universities and community colleges during the current recession. When the recession ends, the Central Oregon region's population will grow again. Both scenarios contribute to an expected growth in the student population. When family or economics or jobs keep students place-bound, it is the local campus that can offer what they need. However, the MFA in Creative Writing at Cascades will also strive to attract students nationwide. With a strong, nationally recognized pool of professional mentors, the program will draw from across the United States. While serving the region is a central part of the mission of OSU-Cascades, so too is the effort to build nationally known and respected programs in Bend, which in turn contributes to the heightened national visibility of Oregon State University as a whole.
- Therefore, it is important that an OSU-Cascades MFA in Creative Writing program aim to rival the most respected programs in quality and academic rigor. Given the differing goals of the students who enroll, also reinforced by a survey of graduates of other low-residency programs, the great appeal of a low-residency program is its flexibility, which involves the student in the design of his or her individualized curriculum while meeting the requirements of the program itself. The low-residency model attracts more age-diverse applicants annually than the traditional creative writing program. The average age of the student is 36, more in line with the demographic served by OSU-Cascades. Given the population served by OSU-Cascades, the low-residency program will also attract employed students seeking an additional degree while maintaining employment. Low residency answers the requirements of the current economic times as people strive to better position themselves professionally while maintaining employment. The program emphasizes the study of literary craft from within the writer's perspective. It is not, however, a technical or narrow degree. The reading and analytical components of each mentorship period, and the variety of classes and workshops offered during the residency periods, provide well-integrated curricula in the humanities, with the emphasis falling on direction of individual manuscripts, instruction in literary craft, and the actual work of writing. While the balanced study of literature and the craft of writing does make graduates viable candidates for teaching positions, the OSU-Cascades MFA in Creative Writing is not geared toward specifically educating teachers. It can open the doors to many professions, including journalism, editing, marketing and communications and is recognized as important to improve writing, communication and abstract thinking skills in engineering and the sciences.
- For a state university system to offer both a low and high residency MFA in Creative Writing is unique to Oregon and most of the country and would help both programs at both OSU campuses. The OSU-Cascades MFA Program in Creative Writing complements the established high-residency program at OSU Corvallis/School of Writing, Literature, and Film and adds to the breadth of graduate offerings at OSU-Cascades. The addition of a graduate degree in the Liberal Arts creates balance with the current focus on professional graduate programs at Cascades, and also enhances OSU-Cascades' reputation as a well-rounded undergraduate institution, while increasing student enrollment at both the graduate and

undergraduate level. The proposed graduate program underscores OSU-Cascades' growing potential as a destination for writers with national visibility.

c. Estimate enrollment and number of graduates over the next five years. Will any enrollment limitation be imposed? If so, how will prospective students be enrolled be selected?

- AY 2012-2013: 16
- AY 2013-2014: 36
- AY 2014-2015: 40
- AY 2015-2016: 40
- Future enrollment levels will be reevaluated at the five year mark.

3. Personnel

a. List the names and qualifications of faculty (regular and adjunct) who will be involved in delivering the program at OSU-Cascades, and their tentative teaching assignments. Will new faculty be needed?

The following list includes Corvallis faculty in the School of Writing, Literature, and Film, who are able to participate in The OSU-Cascades MFA Program in Creative Writing.

-
- Tracy Daugherty, PhD, Distinguished Professor of English and Creative Writing/OSU/Corvallis
- Karen Holmberg, PhD, Associate Professor of English (poetry), OSU/Corvallis
- Ted Leeson, PhD, Senior Instructor, OSU/Corvallis:
- Susan Rodgers, MFA, Associate Professor of English, OSU/Corvallis
- Keith Scribner, MFA, Associate Professor of English, OSU/Corvallis
- Neil Browne, PhD, Associate Professor of English, OSU:
- Henry Sayre, PhD, Distinguished Professor of Art, OSU

The OSU-Cascades MFA Program in Creative Writing will have to hire new professional mentors. As in most low-residency programs, professional mentors are contracted specifically for workshop during the summer periods of service and for extended mentoring. All new professional mentors will be term-limited contract employees, which permits the program and the professional mentors a certain flexibility not possible with a resident faculty. Participation by OSU-Corvallis contracted employees during 9-month period of regular service would be subject to approval by the Director of English/School of Writing, Literature, and Film.

The MFA in Creative Writing (low residency) at OSU-Cascades will offer students a close, sustained working relationship with masters in the field of creative writing, who will function as professional mentors. They will consist of writers who have reached the apex of their profession and are dedicated, committed mentors. The program will build a core mentoring staff, writers who will build extended experience in the program—professional mentors familiar with our format and standards, and able to ensure continuity in the work and development of current students. The program will utilize a rotating pool of highly respected writers.

It is essential to understand that, by contrast to tenure-line commitments made by universities in full-residency MFA Programs, prestigious low-residency programs across the country (from Warren Wilson to Sarah Lawrence) recruit their staff from high-profile authors with MFA training to work as professional mentors and to facilitate biannual residencies on term contracts. These professional mentors are not physically housed at OSU Cascades Campus. They work from their own home base on a contract basis. They are people who have reached the upper levels of their craft and are not seeking tenure or full time employment at OSU. This is the norm, and is expected by both students and mentors. Of the top-ten-rated low residency creative writing programs in the United States, all function on this model.

- Professional mentors will be drawn from distinguished writers from across the country and internationally who will be contracted on a term to term basis. The importance of a distinguished and artistically diverse pool of accomplished writers who are also excellent teachers can't be underestimated in attracting students and establishing the program's reputation regionally and nationally. In addition, as an extension of the OSU-Corvallis program, the low-residency professional mentors at OSU-Cascades must meet the requirements of instructional faculty as established by OSU-Corvallis standards. Each professional mentor must have at least one book published by a respected press in the genre the professional mentor teaches. Each professional mentor must hold a terminal degree (PhD or MFA).
 - It is important to achieve a balance between the flexibility of part-time mentors and the need for core individuals who work in the program year after year. Given the resources available to the OSU-Cascades program, thanks to its relationship with the OSU-Corvallis MFA program and English department, the OSU-Cascades American Studies program, The Nature of Words and other literary organizations in the region and nation, the OSU-Cascades MFA Program in Creative Writing can assemble a pool of professional mentors of the highest caliber. This strategy guarantees the development of not only a core of accomplished writers and gifted instructors and advisors, but also a rich resource of guest lecturers and panelists qualified to address a wide range topics including perspectives on career, craft and creativity.
- b. Estimate the number and type of support staff needed to provide the program at the new location(s).
- The low-residency program would require a full-time director.

4. Other Resources

- a. Describe facilities (e.g., buildings, labs, equipment) necessary to offer the program at the new location(s).
- The facilities at OSU-Cascades' new graduate center will be used.
- b. Indicate how library needs will be met.
- Library needs will be met in the same way they are met for all Cascades programs. Students can draw on the OSU Cascades and COCC library collections, can order materials from the Valley Library, can access all the same material via databases that all OSU graduate students can access, and students have access to the entire Summit System and the Orbis Cascade Alliance. (See attached letter from library services.)
- c. Indicate how students at the new location(s) will receive student services (e.g., academic advising, etc.).
- Students will receive the identical services to which all OSU Cascades students have access. Additionally, support will be offered by the director of the low residency program.

5. Budgetary Impact

- a. Indicate the estimated cost of the program for the first four years of its operation. (Use the "Budget Outline" and "Budget Outline Instructions" forms on the Forms and Guidelines Web site.)
- Please see attached documents. OSU Cascades will fundraise to support the OSU-Cascades MFA Program in Creative Writing until it is financially self sustaining.
- b. If the program will be financed from existing resources:
1. Describe what the budgetary unit will be doing that is not currently done in terms of additional activities.

- The unit will draw funds from existing resources in OSU-Cascades' fund balance in order to start the program, which includes the hiring of a director. The program will support itself on tuition monies once it is underway.
 - 2. State what these new activities will cost and whether financed or staffed by shifting of assignments within the budgetary unit or reallocation of resources within the institution. State which resources will be moved and how this will affect those programs losing resources.
- There will be no reallocation of resources from OSU Corvallis. There will be no allocation of resources from existing OSU-Corvallis MFA Program in Creative Writing or English/School of Writing, Literature, and Film programs. OSU-Cascades' fund balance will provide the investment to start up the program, and tuition will provide the ongoing monies for the program.

Memorandum of Understanding

Proposal to Extend an Existing OSU Program From OSU-Main (Corvallis) to OSU-Cascades (Bend)

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

For Instructions, see <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/mou-process>
Please attach Executive Summary Proposal, Library Evaluation (performed by the library), Letters of Support (if any), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Title of Program (include if it is a major, minor, option or certificate)

OSU Cascades MFA Program in Creative Writing (low residency)

CIP# 231302

Fall 2013

The proposed low-residency MFA in Creative Writing at OSU-Cascades extends the Advanced Creative Writing workshop-based side of the MFA in Creative Writing on the Corvallis campus and delivers the same high quality training in writing and literary craft. The delivery significantly differs. Studying under a low-residency studio/mentorship model, students in the OSU-Cascades Low Residency MFA Program must satisfy graduate degree requirements parallel to those established by the OSU-Corvallis MFA in Creative Writing. The low-residency MFA in Creative writing—through its different delivery method—will add diversity to, not duplication of, the established writing programs at Oregon State University. The OSU-Cascades Low Residency MFA Program offers a curriculum requiring 60 credit hours, during which students come to develop the skills needed for writing an original book-length creative work. This curriculum is equivalent to the requirements of the OSU-Corvallis high residency MFA: 40 hours in Advanced Fiction Writing / Advanced Poetry Writing and other course work appropriate to the degree, and 20 hours in thesis, writing and conference, or 599 craft courses. Students enroll in at least nine credit hours per term. Students are required to write original fiction, creative nonfiction, or poetry. A project focusing on the craft of writing is required in the form of an essay, lecture or teaching a seminar. The key requirement of the course of study is a creative thesis, an original literary work in the student's chosen genre.

The OSU-Cascades MFA Program in Creative Writing (low residency) is comprised of two parts: a mentoring section and a residency section. Central to the OSU-Cascades Low Residency MFA Program are the residencies and the one-on-one mentoring relationship between student and teacher which, in combination, accelerate the participating students' development as writers.

Students are not in residence on campus during the mentorship section. They work from a distance. During the off-campus mentorship period, students work one-on-one with a writer/faculty member who guides each student's study of craft and provides written commentary on their student's work. Included in the requirements of both faculty and students is a regularly scheduled exchange of packets, which include students' original creative work, responses to reading assignments and responses to the mentor's critiques and advice. Also included in packet assignments are students' analyses and critical papers in craft, and required entries for an annotated bibliography.

Though the OSU-Cascades MFA Program in Creative Writing (low residency) satisfies the same degree as its traditional high residency counterpart in the proposed School of Writing, Literature, and Film in Corvallis, it differs in that students do not reside on campus for the duration of the graduate program but only during the eight to ten day on-campus residency periods. It will not duplicate, but add diversity to the creative writing offerings at Oregon State University. Also, the low-residency program does not have the primary goal of preparing teachers, so the literature and composition requirements will be shifted to bibliographic aspect of the low-residency program and attendance at craft lectures and literary craft workshops held on site during the residencies.

**Extend: MFA in Creative Writing (Low Residency)
From OSU-Main to OSU Cascades**

**School of Writing, Literature, and Film
College of Liberal Arts**

**March 2012
Proposed Effective Term: Fall 2013**

CPS Tracking #: 83436

1. Program Description

a. Program title, level

- MFA in Creative Writing
- CIP# 231302

CIP # 231302

Title: Creative Writing

Definition: A program that focuses on the process and techniques of original composition in various literary forms such as the short story, poetry, the novel, and others. Includes instruction in technical and editorial skills, criticism, and the marketing of finished manuscripts. .

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

b. OSU main campus department and school/college under which the program is offered.

- School of Writing, Literature, and Film, College of Liberal Arts

c. Who will be the administrator(s) of the OSU-Cascades program?

- Marla Hacker, Dean of Academic Programs
- Neil Browne, Director, American Studies
- A faculty board with representation from English and creative writing at OSU/Corvallis and at OSU Cascades will be created to oversee the program.
- The OSU Low-Residency Faculty Board will be an appointed board consisting of 2 OSU Cascades faculty members, along with 3 members the OSU Corvallis MFA. The Low-Residency MFA Faculty Board would draw on strengths of faculty knowledgeable in low-residency programs to provide artistic and curricular guidance for a 21st century program suited to OSU and the unique opportunities of OSU/Cascades. The Low-Residency Faculty

Board would also be represented in the hiring of a Director through a national search process. Once a Director is hired, the Board would serve in an ongoing function as a recommending body on artistic and curricular direction, while day-to-day operations are in Bend.

- The low-residency program is administered under the same conditions as other graduate programs at OSU-Corvallis, with governing authority ultimately belonging to the Chair of English/Director of the School of Writing, Literature and Film, and local authority on day-to-day operations belonging to OSU-Cascades.
- d. Briefly describe the academic program, and provide a program degree audit sheet that lists all courses (including number of credits) and indicates how each course will be offered at OSU-Cascades [resident course {COCC, OSU, OU, EOU, other}, distance education, web, etc.].
- The proposed MFA in Creative Writing at OSU-Cascades (low residency) extends the Advanced Creative Writing workshop-based side of the MFA in Creative Writing on the Corvallis campus and delivers the same high quality training in writing and literary craft. The delivery significantly differs. Studying under a low-residency studio/mentorship model, students in the OSU-Cascades MFA Program must satisfy graduate degree requirements parallel to those established by the OSU-Corvallis MFA in Creative Writing. The MFA in Creative writing at Cascades—through its different delivery method—will add diversity to, not duplication of, the established writing programs at Oregon State University. The OSU-Cascades MFA Program offers a curriculum requiring 60 credit hours, during which students come to develop the skills needed for writing an original book-length creative work. This curriculum is equivalent to the requirements of the OSU-Corvallis MFA: 40 hours in Advanced Fiction Writing / Advanced Poetry Writing and other course work appropriate to the degree, and 20 hours in thesis, writing and conference, or 599 craft courses. Students enroll in at least nine credit hours per term. Students are required to write original fiction, creative nonfiction, or poetry. A project focusing on the craft of writing is required in the form of an essay, lecture or teaching a seminar. The key requirement of the course of study is a creative thesis, an original literary work in the student's chosen genre.

- CIP #: **2321302**
- SIS #: **8920**
- Degree Types Offered: **Master of Fine Arts (MFA)**
- Program Types: **Graduate**
- Academic Home: **Department of English, School of Writing, Literature, and Film, College of Liberal Arts**
- Options: **Not applicable**
- Areas of Concentration: **No change (existing)**
 - Fiction
 - Nonfiction Writing
 - Poetry
- Undergraduate Minors: **Not applicable**
- Graduate Minors: **Creative Writing (existing)**
- Course Designators: **WR (Existing)**
- Delivery Mode and Location: **OSU-Cascades**
- Unique Admission Requirements: **None**
- Enrollment Limitations: **None** (enrollment will be reevaluated in five years)
- Accreditation: **None currently** (Submission to the Associated Writing Programs (AWP) to

request a site visit in two years.)

- Proposed Start Date: **Summer Term or Fall Term 2013** (Banner 201300 or 201301)

- The OSU-Cascades MFA Program in Creative Writing is comprised of two parts: a mentoring section and a residency section. Central to the OSU-Cascades MFA Program are the residencies and the one-on-one mentoring relationship between student and teacher which, in combination, accelerate the participating students' development as writers.
- Students are not in residence on campus during the mentorship section. They work from a distance. During the off-campus mentorship period, students work one-on-one with professional mentors who guide each student's study of craft and provide written commentary on their student's work. The emphasis is on one-on-one coaching of writing, transmitting professional experience, professional editing, and introduction to the publishing world. Included in the requirements of both professional mentors and students is a regularly scheduled exchange of packets, which include students' original creative work, responses to reading assignments and responses to the mentor's critiques and advice. Also included in the packet assignments are students' analyses and critical papers in craft, and required entries for an annotated bibliography.
- The OSU-Cascades MFA Program in Creative Writing requires four residencies of eight to ten days for 40 days in residence overall. Residencies are typically scheduled at the beginning of summer and winter terms. Students are required to attend each residency. During the eight- to ten-day residencies at the host campus, students attend workshops, lectures, panel discussions, seminars and literary readings led by the program's professional mentors as well as guest authors and representatives of the publishing industry. During the residency period, students, with the professional mentor's assistance, develop a reading list and study plan for the mentored portion of the term. The goal of each residency is to 1) broaden and deepen each student's knowledge and practice of creative writing; 2) develop a supportive literary community for students that offers encouragement and constructive criticism in workshops, seminars and one-on-one discussions with professional mentors; 3) educate students about publishing and editing through panels and informal conferences involving publishers, editors and agents during the residency period; and 4) generate a list of works to be included in the annotated bibliography.
- Assessment:

Learning Outcomes

Outcome 1: Produce original work in a specified genre, culminating in a thesis of publishable quality and of high literary merit. The student and professional mentor confer to determine length, form, and content, but typically a thesis will be for prose, 80-120 pages, and for poetry, 38-45 pages.

Outcome 2: Develop and employ methods of intensive revision.

Outcome 3: Demonstrate mastery of various literary theories and techniques. Mastery will be achieved through participation in the poetry or fiction/non-fiction workshop (24 total credit hours of WR 521 or WR 524), as well as in courses that focus on specific aspects of craft. Craft courses concentrate on a particular theory, genre, theme, technique, author or topic. Examples include courses on dialogue, the "uncanny" novella, linked story collections, the prose poem, the lyric essay, literary imitations, etc.

Outcome 4: Demonstrate an understanding of the contemporary creative writing profession. In addition to the instruction received in workshops on the profession, students attend mandatory residencies each year. These events feature nationally acclaimed writers who give public readings of their work and conduct colloquia specifically designed for the MFA

students. Students engage in in-depth conversations with the writers about craft, the creative process, publishing, creative writing pedagogy, and other topics. Students also benefit from panels on a wide range of subjects relevant to the profession, as well as readings, roundtable discussions, and other events.

Outcome 5: Perform all activities in an ethical manner. This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's coursework in literature, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately.

Measurement

Outcome 1: The student's writing is assessed in three ways. Students submit original work to the workshop throughout the two-year program, and receive extensive feedback, both oral and written, from their peers and professional mentor; students enroll in 12 credit hours of thesis/writing and conference, in which they work one-on-one with a professional mentor who assesses their progress; and students take a two-hour oral examination. The exam measures the quality of the thesis's individual parts, as well as how it coheres as whole.

Outcome 2: Students study and practice methods for revision in workshops and in consultation with the professional mentor. In workshop, participants describe, explore, and evaluate the premises of works in progress, with an eye toward editorial improvement. Revised drafts are submitted to the workshop for consideration and further suggestions. In conferences, students present revisions of work, and professional mentors offer both conceptual and sentence-level suggestions, as well as providing literary models that may assist in the revision process.

Outcome 3: Mastery of various literary theories and techniques is assessed through craft courses and workshop. Craft courses involve both critical writing and creative writing: Students study technique as demonstrated in their readings, analyze technique in their critical papers, and practice technique in creative exercises.

Outcome 4: The understanding of the contemporary creative writing field is measured through the oral examination.

Outcome 5: This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's bibliography project, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately.

- **AUDIT SHEET:**
Master of Fine Arts in Creative Writing

To complete the course of study for the MFA degree in Creative Writing, a minimum of 60 quarter/term hours are required in the following categories:

36 hours/credits in Advanced Fiction Writing / Advanced Poetry Writing and
12 hours/credits in Literary Craft Courses
12 hours/credits in Thesis and/or Writing and Conference

Built into the course work is a sustained critical engagement with a broad range of literature and contemporary writing, which will be demonstrated by an annotated bibliography of at least 60 entries and by the students' participation in literary craft courses during the residencies. This work is equivalent to the literature and composition requirements in the program in Corvallis. Because the low residency program will not be primarily focused on training future teachers, the

requirements in the OSU-Cascades MFA Program in Creative Writing will be tailored to the individual student's need as determined by the student and mentor.

Advanced Creative Writing Courses (a total of 40 credit hours is required). This requirement demands that the student complete ten Advanced Creative Writing courses. The topics will vary. All courses will be offered as 500 level courses only.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)

Thesis/Writing and Conference (a total of 20 credit hours is required).

- WR 503: THESIS
- WR 504: WRITING AND CONFERENCE

Year 1 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop Summer term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Year 2 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop summer term (low-residency):

10 hours WR 503 Thesis

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

All MFA candidates will be required to complete a thesis, which is to be a sustained piece of creative writing of literary merit (for prose, 80-120 pages, and for poetry, 38-45 pages). The thesis will be read by the student's primary advisor and a second reader and approved by the program director. A formal examination will be also required of MFA students. The exam consists of two parts, oral and written, and will usually be given in the student's final term of study, and consists of questions assessing the student's grasp of the history of the genre, the contemporary creative writing situation, influences and models, and matters of craft, all within the context of the student's own writing.

- e. Indicate in what ways the proposed program at OSU-Cascades will differ from the OSU-Corvallis campus program.
- Though the OSU-Cascades MFA Program in Creative Writing satisfies the same degree as its traditional high residency counterpart in the School of Writing, Literature, and Film in Corvallis, it differs in that students do not reside on campus for the duration of the graduate program but only during the eight to ten day on-campus residency periods. It will not duplicate, but add diversity to the creative writing offerings at Oregon State University. Also, the low-residency program does not have the primary goal of preparing teachers, so the literature and composition requirements will be shifted to bibliographic aspect of the low-residency program and attendance at craft lectures and literary craft workshops held on site during the residencies. The emphasis is on one-on-one coaching of writing, transmitting professional experience, professional editing, and introduction to the publishing world.
 - The professional mentorship/residency model offers a different approach to delivering the same quality instruction as is offered with the high-residency model. The low-residency

professional mentors are employed on a contract basis which allows the program to assemble highly qualified writers from across the country and represents a cost-savings relative to payroll and benefit costs. The average number of professional mentors, to maintain one-on-one mentoring during off-campus periods is calculated at one professional mentor per four students. The low-residency model emphasizes the professional mentor and student relationship as a way to accelerate learning, thanks in part to the low professional mentor-student ratio and the collaboration of professional mentor and student in designing a program best suited to the student's needs and goals.

- During the mentorship period, students and professional mentors exchange what are referred to as packets. Clear guidelines are provided for regularly scheduled exchanges and responses from the mentor. For each mentoring period of ten weeks (excluding residencies), students submit packets and receive corresponding substantive critical responses from professional mentors at least once a month. A typical packet from the student includes new and/or revised creative work, bibliography of completed reading, critical analysis of reading, and responses to directions and questions from the professional mentor in previous exchange of packets. A typical packet from the professional mentor includes critiques of student's creative work with suggestions for new and substantially revised work, return of student's manuscripts with line-specific suggestions, comments on student's critical analyses of reading assignments, suggestions for related reading to be included in the annotated bibliography, especially books on craft related to student's particular ambitions and style of learning, and individualized instruction about aspects of craft. A student typically studies with a different professional mentor each term and during residencies with several different workshop leaders, thus exposing the student to a variety of literary sensibilities and academic approaches to the study and practice of writing.
 - To graduate, per the established requirements of the OSU-Corvallis high residency program, students must demonstrate expertise in at least one genre and produce a literary work. In addition to required creative work, students are also required to write and present an essay, and to give a public lecture on an issue of literary craft or tradition. The accomplishment of the essay/lecture portion of the graduation requirement is second in importance to the thesis (usually 38 to 45 pages of poetry and 80 to 120 pages in prose). (See also 1.d). The thesis must be defended before a committee of OSU professors.
- f. List any special requirements or prerequisites for admission to the program in Creative Writing at OSU-Cascades
- The requirements will be equivalent to the requirements of the MFA on the Corvallis Campus, with the emphasis shifted to the Advanced Creative Writing and thesis credits.
- g. Is there an accrediting agency or professional society that has established standards for this program? If so, is the program currently accredited? If accredited, what steps would be needed to ensure that accreditation is maintained vis-à-vis the OSU-Cascades offering? Does the accrediting body require notification of the program offering at a new location?
- The program at OSU-Cascades would operate under the accreditation of the English Department and the School of Writing, Literature, and Film.
 - The Associated Writing Programs (AWP) has established standards for low-residency programs, and these will be followed closely in the operation of the program at Cascades. We will invite AWP representatives to Bend for a site visit after two years.

2. Demand

- a. List any similar programs offered at the proposed or nearby location(s).

- In Oregon, there is one, Pacific University; three in Washington, Pacific Lutheran University, Seattle Pacific University, and Goddard's Port Townsend campus. The University of British Columbia has a low-residency program in Vancouver. Naropa in Boulder, Colorado and two southern California low-residency programs round out the competition regionally.

b. Provide evidence of need for the program at the new location(s).

- The Oregon, Washington, and Vancouver low-residency programs are all located west of the Cascades. A program at OSU-Cascades could potentially draw students from Central Oregon, eastern Washington, Idaho, Montana, Nevada, and Northern California. According to the Low Residency MFA Directors' Survey, eight of the 31 programs polled responded that their program is composed of 50% or more in-state students which bodes well for attracting students to an Oregon-based low-residency MFA in Creative Writing program.
- Student populations have grown at state universities and community colleges during the current recession. When the recession ends, the Central Oregon region's population will grow again. Both scenarios contribute to an expected growth in the student population. When family or economics or jobs keep students place-bound, it is the local campus that can offer what they need. However, the MFA in Creative Writing at Cascades will also strive to attract students nationwide. With a strong, nationally recognized pool of professional mentors, the program will draw from across the United States. While serving the region is a central part of the mission of OSU-Cascades, so too is the effort to build nationally known and respected programs in Bend, which in turn contributes to the heightened national visibility of Oregon State University as a whole.
- Therefore, it is important that an OSU-Cascades MFA in Creative Writing program aim to rival the most respected programs in quality and academic rigor. Given the differing goals of the students who enroll, also reinforced by a survey of graduates of other low-residency programs, the great appeal of a low-residency program is its flexibility, which involves the student in the design of his or her individualized curriculum while meeting the requirements of the program itself. The low-residency model attracts more age-diverse applicants annually than the traditional creative writing program. The average age of the student is 36, more in line with the demographic served by OSU-Cascades. Given the population served by OSU-Cascades, the low-residency program will also attract employed students seeking an additional degree while maintaining employment. Low residency answers the requirements of the current economic times as people strive to better position themselves professionally while maintaining employment. The program emphasizes the study of literary craft from within the writer's perspective. It is not, however, a technical or narrow degree. The reading and analytical components of each mentorship period, and the variety of classes and workshops offered during the residency periods, provide well-integrated curricula in the humanities, with the emphasis falling on direction of individual manuscripts, instruction in literary craft, and the actual work of writing. While the balanced study of literature and the craft of writing does make graduates viable candidates for teaching positions, the OSU-Cascades MFA in Creative Writing is not geared toward specifically educating teachers. It can open the doors to many professions, including journalism, editing, marketing and communications and is recognized as important to improve writing, communication and abstract thinking skills in engineering and the sciences.
- For a state university system to offer both a low and high residency MFA in Creative Writing is unique to Oregon and most of the country and would help both programs at both OSU campuses. The OSU-Cascades MFA Program in Creative Writing complements the established high-residency program at OSU Corvallis/School of Writing, Literature, and Film and adds to the breadth of graduate offerings at OSU-Cascades. The addition of a graduate degree in the Liberal Arts creates balance with the current focus on professional graduate programs at Cascades, and also enhances OSU-Cascades' reputation as a well-rounded undergraduate institution, while increasing student enrollment at both the graduate and

undergraduate level. The proposed graduate program underscores OSU-Cascades' growing potential as a destination for writers with national visibility.

c. Estimate enrollment and number of graduates over the next five years. Will any enrollment limitation be imposed? If so, how will prospective students be enrolled be selected?

- AY 2012-2013: 16
- AY 2013-2014: 36
- AY 2014-2015: 40
- AY 2015-2016: 40
- Future enrollment levels will be reevaluated at the five year mark.

3. Personnel

a. List the names and qualifications of faculty (regular and adjunct) who will be involved in delivering the program at OSU-Cascades, and their tentative teaching assignments. Will new faculty be needed?

The following list includes Corvallis faculty in the School of Writing, Literature, and Film, who are able to participate in The OSU-Cascades MFA Program in Creative Writing.

-
- Tracy Daugherty, PhD, Distinguished Professor of English and Creative Writing/OSU/Corvallis
- Karen Holmberg, PhD, Associate Professor of English (poetry), OSU/Corvallis
- Ted Leeson, PhD, Senior Instructor, OSU/Corvallis:
- Susan Rodgers, MFA, Associate Professor of English, OSU/Corvallis
- Keith Scribner, MFA, Associate Professor of English, OSU/Corvallis
- Neil Browne, PhD, Associate Professor of English, OSU:
- Henry Sayre, PhD, Distinguished Professor of Art, OSU

The OSU-Cascades MFA Program in Creative Writing will have to hire new professional mentors. As in most low-residency programs, professional mentors are contracted specifically for workshop during the summer periods of service and for extended mentoring. All new professional mentors will be term-limited contract employees, which permits the program and the professional mentors a certain flexibility not possible with a resident faculty. Participation by OSU-Corvallis contracted employees during 9-month period of regular service would be subject to approval by the Director of English/School of Writing, Literature, and Film.

The MFA in Creative Writing (low residency) at OSU-Cascades will offer students a close, sustained working relationship with masters in the field of creative writing, who will function as professional mentors. They will consist of writers who have reached the apex of their profession and are dedicated, committed mentors. The program will build a core mentoring staff, writers who will build extended experience in the program—professional mentors familiar with our format and standards, and able to ensure continuity in the work and development of current students. The program will utilize a rotating pool of highly respected writers.

It is essential to understand that, by contrast to tenure-line commitments made by universities in full-residency MFA Programs, prestigious low-residency programs across the country (from Warren Wilson to Sarah Lawrence) recruit their staff from high-profile authors with MFA training to work as professional mentors and to facilitate biannual residencies on term contracts. These professional mentors are not physically housed at OSU Cascades Campus. They work from their own home base on a contract basis. They are people who have reached the upper levels of their craft and are not seeking tenure or full time employment at OSU. This is the norm, and is expected by both students and mentors. Of the top-ten-rated low residency creative writing programs in the United States, all function on this model.

- Professional mentors will be drawn from distinguished writers from across the country and internationally who will be contracted on a term to term basis. The importance of a distinguished and artistically diverse pool of accomplished writers who are also excellent teachers can't be underestimated in attracting students and establishing the program's reputation regionally and nationally. In addition, as an extension of the OSU-Corvallis program, the low-residency professional mentors at OSU-Cascades must meet the requirements of instructional faculty as established by OSU-Corvallis standards. Each professional mentor must have at least one book published by a respected press in the genre the professional mentor teaches. Each professional mentor must hold a terminal degree (PhD or MFA).
 - It is important to achieve a balance between the flexibility of part-time mentors and the need for core individuals who work in the program year after year. Given the resources available to the OSU-Cascades program, thanks to its relationship with the OSU-Corvallis MFA program and English department, the OSU-Cascades American Studies program, The Nature of Words and other literary organizations in the region and nation, the OSU-Cascades MFA Program in Creative Writing can assemble a pool of professional mentors of the highest caliber. This strategy guarantees the development of not only a core of accomplished writers and gifted instructors and advisors, but also a rich resource of guest lecturers and panelists qualified to address a wide range topics including perspectives on career, craft and creativity.
- b. Estimate the number and type of support staff needed to provide the program at the new location(s).
- The low-residency program would require a full-time director.

4. Other Resources

- a. Describe facilities (e.g., buildings, labs, equipment) necessary to offer the program at the new location(s).
- The facilities at OSU-Cascades' new graduate center will be used.
- b. Indicate how library needs will be met.
- Library needs will be met in the same way they are met for all Cascades programs. Students can draw on the OSU Cascades and COCC library collections, can order materials from the Valley Library, can access all the same material via databases that all OSU graduate students can access, and students have access to the entire Summit System and the Orbis Cascade Alliance. (See attached letter from library services.)
- c. Indicate how students at the new location(s) will receive student services (e.g., academic advising, etc.).
- Students will receive the identical services to which all OSU Cascades students have access. Additionally, support will be offered by the director of the low residency program.

5. Budgetary Impact

- a. Indicate the estimated cost of the program for the first four years of its operation. (Use the "Budget Outline" and "Budget Outline Instructions" forms on the Forms and Guidelines Web site.)
- Please see attached documents. OSU Cascades will fundraise to support the OSU-Cascades MFA Program in Creative Writing until it is financially self sustaining.
- b. If the program will be financed from existing resources:
1. Describe what the budgetary unit will be doing that is not currently done in terms of additional activities.

- The unit will draw funds from existing resources in OSU-Cascades' fund balance in order to start the program, which includes the hiring of a director. The program will support itself on tuition monies once it is underway.
 - 2. State what these new activities will cost and whether financed or staffed by shifting of assignments within the budgetary unit or reallocation of resources within the institution. State which resources will be moved and how this will affect those programs losing resources.
- There will be no reallocation of resources from OSU Corvallis. There will be no allocation of resources from existing OSU-Corvallis MFA Program in Creative Writing or English/School of Writing, Literature, and Film programs. OSU-Cascades' fund balance will provide the investment to start up the program, and tuition will provide the ongoing monies for the program.

External letters of support are not required for an MOU for extending existing Corvallis programs to OSU Cascades.

Category I Proposal

Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Title of Proposal:
Low Residency MFA in Creative Writing / Cascades

Effective Date:

Fall 2013

Library Support for the MFA in Creative Writing on Cascades Campus

Cascades' library services offers the collections and services described below in support of the proposed MFA in Creative Writing at Cascades Campus. The curriculum for this program will be identical to the approved program in Corvallis. Consequently, the OSU Libraries already provide much of the support the program is expected to need.

Monographs

Scholarly monographs are the core of Cascades' English Language and Literature collection. We currently collect, in coordination with the Valley Library, monographs and literary texts by and about major American writers. Our local collection is particularly focused on works by Native American, Northwest and Western authors as well as nature and ecology writing. The MFA students' individual needs are expected to be diverse and may often be best served by access to collections beyond OSU. This access is facilitated by our consortial agreements and interlibrary loan services.

The library may need to purchase more monographs in the future to support the MFA literature and craft coursework. This can be done in collaboration with the faculty and students of the program through our Purchase on Demand and Patron Drive Acquisitions services. We plan to focus purchases in Environmental Literature rather than developing a thin and broad literature collection. Currently 11% of the monograph budget goes towards literature. This should remain adequate unless the faculty significantly changes its focus.

Journals

The OSU Libraries subscribe to a range of literary journals. Many core titles such as *Kenyon Review* and *Virginia Quarterly Review* are available electronically. Titles available at Valley Library in Corvallis in print-only, whether the restriction is a result of age, format preference, or publisher availability, are accessible to Cascades students via the Libraries' "Scan and Deliver" program, a service to scan and send electronic copies of articles held in the libraries' print collection.

Cascades also has subscriptions to a few print journals, notably *Publications of the Modern Language Association of America*, along with access to Central Oregon Community College's subscriptions to locally relevant titles such as *High Desert Journal*.

Other important titles such as *New England Review* are included in our state licensed database packages, available online to all members of the OSU community.

Databases

OSU Libraries subscribe to the Modern Language Association (MLA) International Database, a critical resource indexing more than two million books, book reviews,

journal articles, and dissertations back to 1926. This is the primary tool for accessing research and criticism in the language and literature disciplines.

The libraries also subscribe to Project MUSE, a full-text interdisciplinary humanities database and to several JSTOR collections including Arts & Sciences I which includes the full-text of some humanities journals.

All members of the OSU community, including Cascades faculty and students, have online access to OSU Libraries' subscription databases.

Library Staff and Expertise

OSU Libraries English Subject Librarian Stefanie Buck along with the Cascades Librarian will provide needed reference, instruction, and collection support to the program's faculty, staff, and students.

Summary

The OSU Libraries collections are adequate to support the proposed MFA in Creative Writing at the Cascades Campus. The local collection, while small, is focused and addresses the current faculty members' needs and research interests. Additional funding is not needed at this time. If the program grows or its focus shifts, funding may be necessary to build a foundation collection or fill gaps.

Library Proposal for MOU

Proposal to offer a Master of Fine Arts in Creative Writing
Title of MOU

Department of English/pending School of Writing Literature and Film
Department

College of Liberal Arts
College

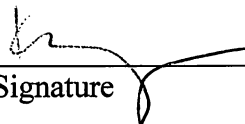

The OSU Cascades librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that the present collections and services are:

- ☐ inadequate to support the proposal
- ☐ marginally adequate to support the proposal
- ☒ adequate to support the proposal

Comments and Recommendations:

The OSU Libraries collections are adequate to support the proposed MFA in Creative Writing at the Cascades Campus. The curriculum for this program will be identical to the existing program in Corvallis. Consequently, the OSU Libraries already provides much of the support the program is expected to need. The local collection, while small, is focused and addresses the current faculty members' needs and research interests. Additional funding is not needed at this time.

Kate Gronemyer
OSU Cascade Librarian

Neil - As you know, I'm completely supportive of the low-residency MFA in Creative Writing to be offered through OSU-Cascades, in collaboration with our colleagues in Corvallis. I believe that the strengths of the current faculty in Creative Writing can be combined with a strong group of adjunct faculty mentors to provide a high quality experience for the low-residency students. I understand that the program may not break even right away, and am committing the resources needed to get the program up and running.

Thanks for your efforts in moving this proposal forward.

Becky

Count me on the side of the MFA low-rez; let's get it done.

Definitely! I support the MFA in creative writing. marla

Dear Neil,

Speaking for both the "Spring Creek Project for Ideas, Nature, and the Written Word" and the nascent "Environmental Humanities Initiative" at Oregon State University Corvallis, I would like to express strong support for the new low-residency MFA program at OSU-Cascades. With its emphasis on environmental writing, the MFA will be an important player in OSU's on-going efforts to provide students the skills and knowledge they will need to be leaders, helping shape our culture's response to the future.

Kathleen Dean Moore
Distinguished Professor
School of History, Philosophy, and Religious Studies

Walter Loveland (Budgets and Fiscal Planning Committee) May 25, 2012 10:01pm

The BFP group would like to see a detailed breakdown of the anticipated revenues for this program and a detailed breakout of the personnel, their salaries, FTE and OPE costs

4. Originator Response

[Cornelius Browne](#) Associate Professor / Acad Prog / Student Aff, September 20, 2012 12:03am

Comments

Cornelius Browne September 20, 2012 12:03am

I have added two explanatory paragraphs about hiring in response to questions from the BFP group. The additional paragraphs can be found on page eight, section 3a of the proposal.

Also in response to queries from the BFP group, I have posted a budget addendum under "Other Attachments."

5. Review - Budgets and Fiscal Planning Committee

Sent Back by [Walter Loveland](#), October 3, 2012 10:50am

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) October 3, 2012 10:50am

This proposal is being returned because the BFP group, the Graduate Council and the Provost have, in the past, indicated that they do not regard programs where large numbers of faculty are appointed at 0.49 FTE as sustainable, appropriate ways to construct programs. While these groups recognize the utility and need for part time faculty, a program that seems to be largely based upon faculty who are not receiving health insurance and retirement benefits is not acceptable. We suggest that these faculty be appointed at > 0.5 FTE allowing them to have full benefits. In addition, it is not clear to us the number of regular OSU faculty and the number of newly hired Cascades faculty participating in this program in each year and how these people are designated in the budget.

6. Originator Response

[Cornelius Browne](#) Associate Professor / Acad Prog / Student Aff, November 8, 2012 5:28pm

Comments

Cornelius Browne November 8, 2012 5:28pm

I have attached a newly revised MOU and budget sheets addressing the BFP group's concerns.

It is essential to understand that, by contrast to tenure-line commitments made by universities in full-residency MFA Programs, prestigious low-residency programs across the country (from Warren Wilson to Sarah Lawrence) recruit their staff from high-profile authors with MFA training to work as professional mentors and to teach in biannual residencies on term contracts. These professional mentors are not physically housed at OSU Cascades Campus. They work from their own home base on a contract basis. They are people who have reached the upper levels of their craft and are not seeking tenure or full time employment at OSU. This is the norm, and is expected by both students and mentors. Of the top-ten-rated low residency creative writing programs in the United States, all function on this model

7. Review - Budgets and Fiscal Planning Committee

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) November 16, 2012 9:54am

We are returning this proposal for corrections and needed additional information. The items needing attention are: (1) Please edit the proposal to remove the "mfa mou browne .doc (10/03/2012)" and the "MFA Budget Addendum.xlsx" (10/03/2012). We believe these obsolete files could confuse readers. (2) Under Personnel in the budgets, please either footnote the budget page or describe, in the narrative, that the 70K\$ is the salary of the director, the 33.5K\$ is the OPE for that salary (and how that number was estimated). (3) Under Personnel in the budgets, please add the salaries to be paid to OSU faculty participating in the program and the relevant OPE costs (and the basis for the estimates.) (4) Under Supplies and Service, please indicate the breakdown between Supplies and Services (where we understand the Services are the Personal Service Contracts for the "guest faculty" and how these estimates were made.) (5) Indicate the inflation factor used in estimating the expenses in years 2-4. (6) In Column E of the budget, please indicate the estimated revenue from tuition (or other sources) for each year

8. Originator Response

11. Review - Budgets and Fiscal Planning Committee

Approved by [Walter Loveland](#), November 20, 2012 1:43pm

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) November 20, 2012 1:43pm

This proposal is approved with the following conditions and advisories. All of the supply expense should be put together in the supplies budget with appropriate adjustments elsewhere. This includes the \$12,000 of general supplies, the \$15,000 of director's supplies and the computer (\$3000) for the director. The Director of the Office of Budgets also advises that the RAM monies are not allocated to the units and you should plan without that revenue.

Final Examination

Successful completion of a final oral examination is required for all master's degrees with the exception of students who complete the nonthesis option under the EdM degree. In those cases, nonthesis EdM students must take a final written examination. Some departments also require the student to pass a written exam prior to the oral exam.

The final oral examination for master's candidates may, at the discretion of the graduate program, consist of a public thesis defense followed by a closed session of the examining committee with the candidate. Under normal circumstances, the final oral examination should be scheduled for two hours.

For master's candidates whose programs require a thesis, not more than half of the examination period should be devoted to the presentation and defense of the thesis; the remaining time can be spent on questions relating to the student's knowledge of the major field, and minor field if a minor is included in the program of study. Graduate faculty serving on thesis-oriented master's degree programs may contribute to the direction of the student's thesis, will assess the student's thesis and his or her defense of it in the final oral examination, will vote to pass or fail the student, and may sign the thesis when it is in acceptable final form. The examining committee consists of at least four members of the graduate faculty—two in the major field, one in the minor field if a minor is included, and a Graduate Council representative. When a minor is not included, the fourth member may be from the graduate faculty at large. All members of the student's graduate committee must approve the scheduling of the final examination.

Students writing a thesis must have a Graduate Council representative on their committee. It is the student's responsibility to obtain his or her own Graduate Council representative from a list provided by the Graduate School. This must be done prior to scheduling the final exam.

When no thesis is involved, not more than half of the examination period should be devoted to the presentation of the research project; the remaining time can be spent on questions relating to the student's knowledge of the major field, and minor field if one is included in the program. For nonthesis master's degree programs, the major professor is responsible for directing and assigning a final grade for the research or culminating project. Other members of the nonthesis committee will assess the student's defense of the project in the final oral examination, as well as the student's knowledge of his or her field, and vote to pass or fail the student. The examining committee consists of three members of the graduate faculty—two in the major field and one in the minor field if a minor is included. When a minor is not included, the third member may be from the graduate faculty at large.

Report on Follow-up Review of the OSU College of Pharmacy Graduate Program

The Graduate Program within Oregon State University's College of Pharmacy was reviewed by a committee appointed by the Graduate Council and Dean of the Graduate School. The review took place in May, 2007 and a report detailing the review and its recommendations was submitted to the Graduate School in July, 2007. The committee reported its observations and recommendations to the Graduate Council in the Fall of 2007. The faculty then developed an Action Plan in response to the twenty-one "short term" recommendations and three "long-term" recommendations provided by the review. This plan was subsequently presented to the Graduate Council and the Provost. On May 5, 2010, committee members Shawna Grosskopf (CLA) and Thomas Wolpert (CAS) met with Gary DeLander (Executive Associate Dean and Chair, Department of Pharmaceutical Sciences) and Theresa Filtz (Chair, Graduate Studies Committee) to discuss progress in carrying forward the Action Plan. Of note, after this review was completed, the Provost appointed a new Dean to the College on Sept 1, 2010, Dr. Mark Zabriskie, previously a faculty member in the Department of Pharmaceutical Sciences at OSU.

These are our findings relative to the Action items that address recommendations made by the 2007 Review Team:

"Short-term" Recommendations:

(1) Hire a faculty member in pharmaceuticals in the area of biopharmaceuticals to build toward a critical mass in this area and to relieve a chronic shortage of faculty expertise in this area of concentration.

(2) Add an additional faculty in pharmacology.

(3) Add an additional faculty in chemical biology whose laboratory is housed within OTRADI's high through-put screening facility. The faculty member is expected to accelerate natural product lead identification and optimization and to catalyze the Department's translational studies with OHSU faculty

(4) Add senior hires to increase leadership, mentorship, and external funding within the Department.

Recommendations 1,2,3 and 5 all suggested additional faculty hires and reflected the college strategic plan but addressing these recommendations is dependent on budgetary opportunities to expand the faculty further, particularly in regards to a senior hire.

Since 2007, the college hired a faculty member, Ganesh Cherala, based in Portland who is a member of the pharmaceuticals group doing clinical pharmacokinetics. They also successfully filled a vacancy created last year (2009) due to the departure of a pharmaceuticals faculty member and a search for a new Corvallis-based pharmaceuticals faculty member is in progress (fall 2010). Finally, the Provost's divisional faculty hiring initiative resulted in funding for a new faculty member in pharmacogenomics with interdisciplinary research interests to be hired in 2011.

The college is also coordinating with OHSU to occupy a new building on the waterfront with additional capacity for the College in Portland and in close proximity

to the OTRADI facility. The facility is being planned with the expectation of an open, collaborative research floor plan and includes space for expansion of faculty in Portland conducting foundational research.

(Also, see #6 with regards to a "senior hire".)

(5) Revitalize the College's presence in the areas of pharmacoeconomics, outcomes, policy, and epidemiology research and pharmacy administration to meet the health needs of the State and the increasing importance of these disciplines.

The college is moving forward with plans, outlined in the self-study, to develop a graduate track in pharmacoeconomics/outcomes/policy/epidemiology with faculty based in Portland and has been successful in attracting two faculty members in this area that have training and capacity to conduct research. An additional hire in this area is in progress (fall 2010). The most direct path to expansion of graduate education in this area may be through collaborative efforts within the new divisional structure. In addition, recent approval by the Graduate Council allowing pursuit of dual degrees will open that door for development of a Pharm.D./MPH program.

(6) Strengthen ties to Chemistry and Microbiology to support program project or training grants consistent with the NIH roadmap and initiatives.

The medicinal chemistry faculty has been meeting with the organic chemistry faculty to build closer ties. Research proposals have been exchanged and further meetings are planned. The college participated in a health sciences division RFP in spring 2010 for pilot project proposals that have an interdisciplinary focus and had one funded. In addition, a joint Natural Products Chemistry position has been approved as part of the Provost's initiative. This position is intended to be a more senior hire and is to be completed this academic year.

(7) Unify the Medicinal Chemistry and Natural Product unit within one building that is equipped to conduct contemporary research in natural products and permit the development of the full potential of this interactive group (faculty and students).

The college continues to seek sufficient space at OSU to re-unite the medicinal chemistry/natural products group into one building. Neither the pharmacy building nor available space at Oak Creek can accommodate the five faculty and labs. The university space committee has been alerted to our needs and the college persists in its efforts to examine opportunities to pursue this goal. At this time, no specific progress has been made beyond that described.

(8) Upgrade the infrastructure in the Pharmacy Building including the installation of emergency power and expansion of the animal quarters.

The college of pharmacy has been nearly continuously upgrading the plumbing, wiring, HVAC systems, lab space and animal facilities in the Pharmacy building and more recently, Oak Creek building, for at least 10 years. An expansion of rodent housing rooms to double the available space and a complete upgrade to isolated housing for sensitive knock-out mouse strains was completed in 2007 and current plans include further updates of this facility. Emergency power is a next priority. A plan and budget does exist for upgrades, but progress is dependent upon the Research Office for funding.

(9) Initiate a weekly seminar program in the Department of Pharmaceutical Sciences that is a blend of outside (academic, pharmaceutical) and student speakers where students are required to give seminars on a recent, noteworthy publication.

The college of pharmacy has a seminar program scheduled at a consistent day and time that accommodates outside speakers from academia and industry. Instead of expanding the seminar program to include students, the department decided to increase the student presentations at their annual retreat to a requirement that every student present every year.

(10) Endorse rigorous safety procedures in all laboratories.

An expanded section on laboratory and chemical safety was added to the graduate student handbook and safety update presentations at the student journal club are now being held on an annual basis.

(11) Establish a mechanism for the intermittent reviews of the graduate curriculum to insure that course requirements and class objectives are met and updated, and clarify classes recommended for the doctoral program.

The college has revitalized a medicinal chemistry course, Phar 540, Natural Products Chemistry. They also have two new courses in pharmacology since May 2007, Phar 565, Mammalian Molecular Genetics, crosslisted with MCB, and Phar 563, Cancer and Chemoprevention. Assessment of the Graduate Program has also been incorporated into the overall assessment processes for the College.

(12) Add a graduate pharmacology class to the graduate curriculum.

See #11 above.

(13) Increase TA lines from 7.5 to 10 over the next five-year period to accommodate the increased expansion of the graduate student body.

The college has agreed to increase funding for the graduate program to 10 GTA lines in the coming academic year (2011) at \$23,000 per year plus the health insurance subsidy to maintain national competitiveness.

(14) Increase the teaching/research graduate stipend and offer competitive fellowships to incoming graduate students.

At the time of the review, the college was supporting assistantships at \$20,000/year. As indicated above, this has been increased to \$23,000. Also, it was the perception of the college, based on survey information, that the stipend level was not a factor in decisions to attend graduate school elsewhere. Instead, surveys indicated that the lack of a chance to visit the university was affecting decisions to matriculate. In response, the college elected to participate in the on-campus life sciences graduate recruiting weekend, which has greatly increased recruiting success.

(15) Increase interaction with international students during recruitment and their graduate studies to assess and augment academic, language, and writing skills.

Starting 2006, the college began conducting phone (and internet video) interviews with all international students prior to acceptance to gauge language skills and obtain more information about prior academic and research experiences. All admissions require a formal written essay as well as GRE scores including a writing score. In 2006, the department held a faculty development workshop with Vickie Tolar Burton specifically to discuss issues of teaching improved writing skills to international graduate students. Students with language difficulties are provided guidance on obtaining conversation partners through the ELI and attending weekly conversation instruction. Students and postdocs with significant language difficulties that do not improve with time have been directed to classes at the ELI at

department expense. We note the language classes being offered by INTOSU for international graduate student GTAs in fall term, 2010.

(16) Develop a formal procedure to monitor graduate student progression and identify students in need of help.

In 2004, the department implemented a formal procedure whereby all graduate students are required to submit an electronic annual report on oral presentations, publications, date of most recent committee meeting, and accomplishments over the previous year such as completion of preliminary exams. The department currently monitors preliminary exam completion to help students meet the 10-term deadline. E-mails are sent to all students and their major advisors at the completion of the eighth term (usually winter term of their third year) who have not completed their preliminary exams. Students are reminded of the deadline and provided advising as needed. Following completion of the prelim exam, their progression to degree is monitored. In 2010, the department implemented an annual written assessment for each student and advisor to be completed every year after completion of the oral qualifying exam. The graduate studies committee chair checks with advisors of PhD students completing their fifth year of the program to assess progress and plans for timely completion. To address gaps in monitoring of first year rotation students, in 2010 the department implemented a written research rotation evaluation to support the grade for every term in a student's first year.

(17) Clarify expectations required for graduation (i.e., publications) within the Department.

This recommendation has generated discussion among the graduate faculty. Establishing a uniform number of publications for graduation is not practical given the diversity of research conducted by faculty in the department. A single large publication as a result of the creation and analysis of a new mutant mouse over several years would be sufficient in pharmacology for a PhD project in some cases. However, a student in natural products would be expected to accumulate several first author publications over four years on multiple isolations. Nevertheless, the recommendation has highlighted our need for major advisors to be more explicit with graduate students in their programs regarding expectations for graduation, clearly explaining disciplinary differences and providing examples of previous graduate student accomplishments.

(18) Expand outreach to alumnae from the graduate program, both in industry and academia. Seminars from alumnae would provide excellent opportunities for current students to learn first hand how to make the transition from graduate school to a professional career.

Immediately following the review, the department sent an annual report to graduate program alumni. Annual reports to graduate student alumni have continued. Alumni of the graduate program have been added to the College Advisory Council and the department continues to host alumni meetings, when possible, at regional or national meetings.

(19) Consider contacting pharmaceutical companies with intern programs to see if non-pharmaceutics students (i.e., medicinal chemistry and natural products, pharmacology) could spend 3-6 months in an industrial setting.

Unfortunately, funding for these internships is an issue given that the pharmaceutical companies may provide a stipend but seldom a tuition remission. Students who have always been covered by GRA or GTA fellowships are generally

not interested in interning when they are not eligible for a tuition remission under those circumstances.

(20) Facilitate greater translational research projects through shared lab meetings, additional contact between faculty and students at the Corvallis and Portland campuses, and in active recruitment of new faculty with interdisciplinary interests.

The recommendation was viewed as completely in line with the department's long term goals and relates to comments given for recommendations 1,2,3 and 5 (above).

(21) Maintain and upgrade the College's instrumentation to sustain and augment its contemporary research programs.

Since 2007, the college has invested to upgrade the 300MHz NMR in the Oak Creek facility. Ongoing contributions to the Mass Spec facility have resulted in the addition of four new instruments including a Waters LC-T Premier, an Applied Biosystems 3200 Q Trap LC-MS/MS, a Thermo LTZ-FT-MS Ultra with ECD and an Agilent NanoLC system, and a Waters Ion Mobility Time-of-Flight Mass Spectrometry SYNAPT HDMS System equipped with a Waters NanoAcquity LC system.

"Long-term" Objectives:

(1) Move the College to the OHSU site thereby providing a one-stop program for the professional students and unifying the College's faculty.

This objective has long been part of the college strategic plan. However, space in Portland is at an even greater premium than in Corvallis and poses a significant limitation for unification. At last estimate (proceeding the 2007 review), approximately \$40M to \$60M would be required to purchase laboratory and office space in Portland sufficient to accommodate all faculty. Such an investment would require a major capital campaign. A feasibility study conducted a few years previous to the 2007 review revealed that the college donor base was grossly insufficient to support such a venture. The university did not prioritize such a move in its current capital campaign.

Renting equivalent space in Portland could cost \$1M per year or more considering that the department would require a vivarium and major instrumentation rooms for NMR and mass spectrometers and centrifuges, in addition to standard laboratories, a dark room, tissue culture facilities, an aquaculture facility, a histology room, and a cold room to replicate facilities in Corvallis.

Given the significant expense of faculty unification in Portland, the college does not anticipate such a move in the foreseeable future. However, the college agrees that creating an opportunity for such a move should remain a priority for both the college and the university.

(2) Expand the graduate faculty in all current areas of concentration and add expertise in drug target analysis, toxicology, and proteomics (system biology).

(3) Increase graduate enrollments concomitant with increased external funding.
Long-term objectives 2 and 3 are also part of the college plan.

Subject: FW: Vet. Med. MS

Cyril,

Here is the basis for my comments on our just completed phone call.

Bruce Rettig and I have read the draft self study document and I examined my notes from previous meetings with you and Sally, plus reviewed what email exchanges I could find about the graduate programs in Veterinary Medicine.

Please correct me if this is not an accurate summary of the history.

The M.S. in Veterinary Science was last reviewed by the Graduate Council in 1996, and it should have been reviewed in the 2006-7 academic year.

Notes from a meeting with you and Sally in December 2007 indicate that you would provide the Graduate School with a proposal for the future of the M.S. in Veterinary Science in February, 2008. At that time there were no Ph.D. students and 5 M.S. students in the program.

You met with Sally on February 25, 2008 to discuss your Category I, and based on notes in our graduate program review data base, the outcome of that meeting was that you were scheduled for a graduate council review in spring or fall 2009.

Although no reviews were conducted in 2009, a Category I proposal was approved for termination of the Ph.D. in Comparative Veterinary Medicine in July 2010. The review of the Veterinary Science M.S. was scheduled for winter 2011. At this time you are requesting another delay to complete the planning related to the reorganization HHS, Pharmacy, and Veterinary Medicine and to decide how the M.S. fits into that reorganization.

Clearly it is time for action with respect to your M.S. degree.

Possible options:

(1) Based on the facts that the M.S. program is in a state of flux and has not been reviewed in 14 years (soon to be 15 years) and your question to me over the phone "Why bring in a team of external reviewers to tell us OSU should have closed down this program years ago?" leads me to believe that the College of Veterinary Medicine should suspend admissions to the program until the three colleges in your division decide how the M.S. in Veterinary Science will be folded into a new degree program.

(2) The Graduate School could grant you a one term delay, with the review being held in spring 2011. I fear that because reviews are based on the history of the program not on

plans for the future, the recommendation of the review panel would be no different from that if the review were held in winter term 2011 - that is the M.S. should be suspended or terminated.

(3) You could take your case to postpone the review until fall term 2011 to the Graduate Council. (Again the review is based on the history of the program and a one-term delay will not significantly change 15 years of history.) The Council's response could be to grant the postponement but requiring a category I proposal in Fall term, but it could also be to suspend admissions to the M.S. in Veterinary Science. Last year the entomology graduate program was in a situation similar to yours and the Council voted to terminate the degree program and recommended suspension of further admissions until final action on program termination and development of new degrees took place. The program was asked to develop an action plan in response to this recommendation. The action plan was forwarded to the Provost for his review. He concurred that admissions to that graduate program should be suspended until further action by the College of Agriculture redefined the program.

(4) Your redefined program would require a Category I proposal defining the new degree with its new requirements, new curriculum, new name, and new graduate faculty. You suggested on the phone that you would like to hold a review so that external reviewers could comment on your proposed reorganization. This is certainly your prerogative and bringing leaders of Veterinary Science programs to campus to consult about your reorganization could be very productive. Unless there is a program review, however, the Graduate Council and Graduate School would not be involved in this process. This review would not substitute for a Graduate Council review, so you would still be faced with options 1, 2, or 3, above.

I think the best path at this time take option (1). Your faculty will still be able to advise students in the other graduate programs.

Yours,

Marty

Dr. Martin Fisk, Interim Dean of the Graduate School

Executive Summary

Fisheries and wildlife resource conservation is a challenging profession involving biological, ecological, management, policy, and social systems. Although many of professionals obtain entry-level positions with B.S. degrees, mid- and upper-level positions typically require additional training. The proposed Professional Science Masters of Fisheries and Wildlife Administration (PSMFWA) degree is designed to provide advanced training for early- and mid-career professionals employed by natural resources agencies and non-government organizations. The PSMFWA degree will assist natural resources agencies and non-government organizations in meeting workforce planning goals and will meet self-improvement goals of current employees.

The PSMFWA is a 57-credit curriculum organized into four main sections: a fish and wildlife core (18 credits), a professional core (18 credits), policy (6 credits), human dimensions (9 credits) and internships (6 credits). It will be taught primarily as a distance, on-line curriculum, although some students may choose to work toward the PSMFWA degree while in-residence at OSU. All of the courses proposed for the PSMFWA degree are already taught in-residence and many are taught on-line. Currently, enough courses are taught on-line to provide students with substantial choice among courses in all curriculum areas. Forty-eight faculty members have agreed to serve as advisors to students for completion of their internships and degree. The PSMFWA degree will be offered as a non-thesis option only, similar to a Masters in Business Administration, Masters of Agriculture, or Masters of Forestry.

We present evidence of need for the PSMFWA from several sources: published literature on workforce planning in natural resources, changes in Masters programs with comparator institutions, and a survey of potential employers. All provide strong support for such a program.

There are no closely related programs in OUS. The Department of Fisheries and Wildlife offers the only degrees related to the fish and wildlife professions in the Oregon University System. A Master of Natural Resources (MNR) degree has just been approved by the Provost's Council and the Sustainable Natural Resources (SNR) Graduate Certificate are related programs because of their general focus on natural resources. Both of these graduate programs target much broader, less well-defined audiences than the narrow professional focus of our PSMFWA degree. Our proposal explains other differences between the degrees and identifies areas of collaboration.

Because we already have a large graduate program substantial new resources are not needed to offer this degree. However, we propose to add staff support to deliver this program. Resources to support these staff will come from revenues generated by our eCampus programs (B.S. and PSMFWA). We estimate an annual cost of \$42,447 to support the program. Revenues from our eCampus program exceeded \$400,000 last year and have increased at a rate of 10-20% per year for several years. We began to offer our BS on-line fall of 2009 and had >75 majors the first term. Thus, we anticipate that revenues from eCampus will easily cover these new costs.

Proposal for New Academic Program
Professional Science Masters of Fisheries and Wildlife Administration

Institution: Oregon State University
College/School: Agricultural Sciences
Department/Program: Fisheries and Wildlife

1. Program Description

a. Proposed Classification of Instructional Programs (CIP):

b. Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.

Fisheries and wildlife resource conservation is a challenging profession involving biological, ecological, management, policy, and social systems. Although many of professionals obtain entry-level positions with B.S. degrees, mid- and upper-level positions typically require additional training. The proposed Professional Science Masters of Fisheries and Wildlife Administration (PSMFWA) degree is designed to provide advanced training for early- and mid-career professionals employed by natural resources agencies and non-government organizations. The PSMFWA degree will assist natural resources agencies and non-government organizations in meeting workforce planning goals and will meet self-improvement goals of current employees.

Brief Description. The proposed 57-credit PSMFWA curriculum is organized into four main sections: a fish and wildlife core (18 credits), a professional core (18 credits), policy (6 credits), human dimensions (9 credits) and internships (6 credits). It will be taught primarily as a distance, on-line curriculum, although some students may choose to work toward the PSMFWA degree while in-residence at OSU. Many of the courses proposed for the PSMFWA degree are already taught both in-residence and on-line. The only new course required to offer the degree is FW 510, internship. Most faculty listed below have agreed to serve as advisors to students for completion of their internships. The PSMFWA degree will be offered as a non-thesis option only, similar to a Masters in Business Administration, Masters of Agriculture, or Masters of Forestry.

c. Course of study – proposed curriculum, including course numbers, titles, and credit hours.

The PSMFWA is a 57-credit curriculum organized into four main sections: a fish and wildlife core (18 credits), a professional core (18 credits), policy (6 credits), human dimensions (9 credits) and internships (6 credits). It will be taught primarily as a distance, on-line curriculum, although some students may choose to work toward the PSMFWA degree while in-residence at OSU. All of the courses proposed for the PSMFWA degree are already taught in-residence and many are taught on-line. Currently, enough courses are taught on-line to provide students with

substantial choice among courses in all curriculum areas. Faculty listed in 6a below have agreed to serve as advisors to students for completion of their internships and degree. The PSMFWA degree will be offered as a non-thesis option only, similar to a Masters in Business Administration, Masters of Agriculture, or Masters of Forestry.

Curriculum List (# eCampus offering; * Graduate only; + offered only at Hatfield Marine Science Center)

Fish and Wildlife Core Courses (18 credits min)

BOT 540 Field Methods in Vegetation Science (4) #
FW 520 Ecology and Management of Marine Fishes (3) #*
FW 521 Aquatic Biological Invasions (4) #
FW 525 Coastal Ecology and Resource Management (5) +
FW 527 Principle of Wildlife Disease (4) #
FW 531 Dynamics of Marine Biological Resources (4) #
FW 535 Wildlife in Agricultural Ecosystems (3) #
FW 545 Ecological Restoration (4)
FW 547 Trophic Cascades (2-3)*
FW 551 Avian Conservation and Management (4) #
FW 553 Forest Wildlife Habitat Management (4)
FW 554 Fishery Biology (4) #
FW 556 Limnology (5)
FW 558 Mammal Conservation and Management (4)
FW 563 Conservation Biology of Wildlife (3) *
FW 564 Marine Conservation Biology (3)
FW 565 Marine Fisheries (4) +
FW 570 Ecology and History of Landscapes of the Columbia Basin (3) #
FW 571 Environmental Physiology of Fishes (4)
FW 572 Advanced Ichthyology (3)
FW 573 Fish Ecology (4)
FW 574 Early Life History of Fishes (4)
FW 579 Wetlands and Riparian Ecology (3) #
FW 580 Stream Ecology (3) *
FW 581 Wildlife Ecology (4) #
FW 586 Genetics and Demography of Small Populations (3) *
FW 590 Coastal Population Genetics and Conservation (6) *+
FW 591 Fish Diseases in Conservation Biology and Aquaculture (4)
FW 597 Aquaculture (3) +
FW 598 Aquaculture Laboratory (3) +
FW 661 Analysis of Animal Populations (5) *
FW 667 Research Perspectives (4) *

GEO 565 Geographic Information Systems and Science (4) #

MRM 535 Rights Based Fisheries Management (3) #*
SNR 530 Ecological Principles of Sustainable Natural Resources (3) #*
SNR 535 Sustainable Management of Aquatic and Sustainable Resources (3) #*

Professional Cohort Courses (18 credits)

COMM 550 Communication & the Practice of Science (3) #*
[PHL 547](#) Research Ethics (3) #*
PSM 513 Professional Seminar (3) #*
PSM 565 Accounting and Finance for Scientists (3) #*
PSM 566 Management & Marketing Scientific Technologies (3) #*
PSM 567 Innovation Management (3) #*

Policy Courses (6)

FW 620 Ecological Policy (3) #* or FW 517 Fisheries and Wildlife Law and Policy (3)
plus one of the following:
AREC 532 Environmental Law (3) #
ES 544 Native American Law: Tribes, Treaties and the U.S. (3) #
MRM 521 Ocean Law (3) #*
PS 574 Natural Resource Policy and Bureaucratic Politics (4)
PS 575 Environmental Politics and Policy (4) #

Human Dimension Courses (9)

FW 585 Consensus and Natural Resources (3) # **plus** two of the following:
AREC 534 Environmental and Natural Resource Economics (3) #
COMM 542 Bargaining and Negotiation Processes (3)
COMM 540 Theories of Conflict and Conflict Management (3)
SNR 520 Social Aspects of Sustainable Natural Resources (3) #*
SNR 521 Economics of Sustainable Natural Resources Management (3) #*
SNR 522, Basic Beliefs and Ethics in Natural Resources (3) #*
PHL 540 Environmental Ethics (3) #
SOC 580 Environmental Sociology (4) #
SOC 581 Society and Natural Resources (4) #

Internship (6-18)

Total Credits (57 min)

d. Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).

The PSMFWA degree is envisioned to be mostly on-line, although some students may opt to take some of the listed classes in-residence. Thus, we expect a high level of use of on-line teaching technologies, which the department has been developing since 1995. All classes taught on-line are taught annually, most other classes are taught annually, but some are taught on an alternate year basis. In addition, a new course (FW 510) will provide experiential learning

opportunities for students. The PSMFWA will use two internship experiences for degree completion. All participants will be required to complete a professional development workshop or attend a professional society meeting for 1 credit. The workshop would be special training in their area of expertise (e.g., monitoring techniques, habitat management, harvest management, etc.) and are typically offered by professional societies at the state or national level. Otherwise, they would need to attend a local, regional or national professional society meeting such as the American Fisheries Society, The Wildlife Society or Society for Conservation Biology. All students will participate in a more intensive internship designed to last three months or more. Students will be encouraged to identify possible internship opportunities when they complete their application. Our Internship Coordinator, the student's major professor and a workplace mentor will work with each student to develop an appropriate internship experience. Because all of our students will already be employees of an agency, internships will most likely be special assignments within an agency (e.g., develop a management or recovery plan, develop and lead a public process, etc.) or temporary training in another position or division within their agency. In some cases, it may also be possible for a student to be assigned temporarily to another agency. Some of the letters of support in Appendix D specifically mention an interest in working with students on internships.

e. Ways in which the program will seek to assure quality, access, and diversity.

Academic program quality is assured with our Annual Graduate Student Assessment of progress (http://fw.oregonstate.edu/Graduate%20Information/annual_evaluation.htm). We also conduct a statistical survey of all graduates every three years (Edge 2009). Quality of our research program is assured by the number of publications in national and international journals and competitive grants that faculty and students produce. The Chronicle of Higher Education most recent survey of Ph.D. program productivity (<http://chronicle.com/stats/productivity/>) ranked our Wildlife Science program number one in the nation and our Fisheries Science program number two in the nation. The Oregon University System only had one other number-one-ranked program (UO School of Psychology) and no other number-two-ranked programs.

Access to our graduate degrees is currently restricted by the number of students we can support on Graduate Research Assistantships or Graduate Teaching Assistantships; no students are accepted without some form of support. We anticipate that students in our PSMFWA program will be self-funded or will be supported by their employers. However, because we currently have a large graduate program based on thesis research supporting faculty research programs, we do not have a large capacity for PSMFWA majors. We anticipate many more applicants than we can allow in the program. However, access to graduate classes is enhanced by our on-line classes and we do not anticipate limitations on enrollment in individual classes.

Diversity is major issue for us because the Fisheries, Wildlife and Conservation Biology professions have historically been staffed predominately by white males. By the end of the 09-10 academic year our department will have a diversity and community enhancement plan. However, we have been actively engaged in enhancing diversity for many years. Nine of our last 15 faculty hires have been women and/or minorities. One of our most recent hires under the Tenured Faculty Diversity Initiative will specifically work on diversity recruitment and retention as part of her position. We have a 2+2 program agreement with Tuskegee University that has significantly increased the number of Black Americans in our program. Furthermore,

we have developed an endowed diversity-based scholarship and our block grant for the Oregon Laurels Scholarships designates 50% of those funds to go to underrepresented populations.

f. Anticipated fall term headcount and FTE enrollment over each of the next five years.

The PSMFWA degree is designed for professionals working in the fisheries and wildlife disciplines. We expect to enroll about 10 students per year, after an initial lag time of 2 to 3 years during which time enrollments will build. This expectation is based on the evidence presented in 4a below. We anticipate that we will have awarded 30 PSMFWA degrees by 2016.

| Degree | AY11-12 | AY12-13 | AY13-14 | AY14-15 | AY15-16 |
|--------|---------|---------|---------|---------|---------|
| PSMFWA | 5 | 7 | 10 | 10 | 10 |

g. Expected degrees/certificates produced over the next five years.

| Degree | AY11-12 | AY12-13 | AY13-14 | AY14-15 | AY15-16 |
|--------|---------|---------|---------|---------|---------|
| PSMFWA | 0 | 3 | 10 | 10 | 10 |

h. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

For admission, students will be required to have earned at least the equivalent of a B.A. or B.S. in one of the following areas of study: fisheries and wildlife, natural and life sciences, natural resource management, forestry, agriculture, environmental studies, or social sciences, AND have five years of professional experience within the natural resources professions. Students must identify a faculty mentor before applying to the program. Professional experience must demonstrate the application of current biological knowledge to problems and programs dealing directly with the fish or wildlife resources (administration, education, research, or management) as a significant portion of job responsibilities. Professional experience provides demonstrated expertise in making decisions in the application of ecology to stewardship and management of fish and wildlife resources and the environment. Technician-level work, such as data collection, surveys, and habitat manipulation conducted under existing protocol or under the specific direction of another, is not considered professional-level experience.

Because this program will be delivered almost entirely on-line we anticipate that approximately 75% of the students will be nonresident. Up to 10% of those may be international students. Enrollment in the PSMFWA will be restricted to currently employed professionals with five years of professional experience. Because of our enrollment requirements and because the degree will be delivered almost entirely on-line most of our students are likely to be nontraditional in the sense that they are on-line majors and they will be older than our typical graduate student body. We anticipate that most will be part-time because they will likely continue to work during their program of study.

i. Adequacy and quality of faculty delivering the program.

See statement in 1e above about our national rankings. Furthermore, our program underwent a comprehensive 10-year review in 2007 and received very high marks for our research, teaching, and outreach. Over 95% of our classes are taught by tenure-track faculty members or courtesy faculty with PhD degrees; we use very few instructors to deliver our academic programs.

j. Faculty resources – full-time, part-time, adjunct.

The following faculty are tenure-track, research, courtesy or adjunct faculty that currently conduct research, teach graduate classes, or advise graduate students in our M.S. and Ph.D. Fisheries Science and Wildlife Science programs. Vita for faculty members are available upon request.

Department of Fisheries and Wildlife faculty that conduct research, teach undergraduate or graduate classes and advise graduate students.

riparian-upland trophic interactions |

k. Other staff.

The department has over 20 Faculty Research Assistants, 1 Head Advisor, 1 Internship Coordinator/DE Advisor, 1 Office Manager, 2 Office Specialists, 1 Grants and Contracts Technician, 2 IT support staff, 1 facilities manager/aquaculturist.

l. Facilities, library, and other resources.

The Department of Fisheries and Wildlife is housed in two buildings on the main campus and at several locations around the state. In addition, research is conducted at several off-campus facilities. The on-campus buildings include Nash Hall and Weniger Hall. The main campus facilities also include the Valley Library (Liaison pending) and a computer lab in Withycombe Hall. The computer lab is a shared resource with the Animal Science Department. Because most students admitted to the PSMFWA degree will be on-line learners, the current facilities are sufficient for meeting the needs of these students.

Research and instruction, and research support are conducted at several off-campus facilities.

Hatfield Marine Science Center (HMSC)--The HMSC (<http://hmsc.oregonstate.edu/index.html>) is located in Newport, Oregon, approximately 53 mile west of Corvallis. Seven tenure-track faculty members, research faculty an instructor and numerous courtesy faculty members are

housed at HMSC. The HMSC brings OSU's diverse marine science programs together for effective collaboration and higher national and international visibility. The Center plays an integral role in marine and estuarine research and instruction, as a unique laboratory facility serving resident scientists and graduate students, and as a base for oceanographic research. The Department of Fisheries and Wildlife offer 16-24 credits of courses at HMSC during the fall term.

Fish Performance and Genetics Laboratory (FPGL)--The FPGL is located approximately 4 miles northeast of main campus, and is situated on 7 acres of Agricultural Experiment Station land, adjacent to the Willamette River. The FPL consists of four main buildings, and an outside cement pad area for large fish rearing tanks. The facility is ideal for performance testing, physiological assessments, and behavior observations. This laboratory also allows for testing the genetic bases of phenotypic traits. In addition, research on the effects of various toxicants have been and are being conducted. The laboratory has a large number of rearing units, thus permitting replication of experimental units. In addition, the abundant, constant temperature, pathogen-free water is ideal for the rearing of Northwest fishes. The facility has the ability to raise fish over their entire life cycle; it also has the capacity to cool and heat water. In addition, the FPGL has a warm water facility that is used for rearing tilapia and zebrafish.

Oak Creek Biology Lab (OCBL)--The OCBL is located approximately 4 miles northwest of main campus, and is situated within the boundary of McDonald Forest on approximately 8 acres. The facility consists of eight buildings with five currently in use. Previous work at this facility was aquatic toxicology. Present use is now related to avian research; the facility is actively being used by a faculty member and graduate students. There is also a small apartment on this site, which is occupied by a student caretaker.

Fairplay Facility--This facility is located 4 miles north of main campus on 8.34 acres of university property on the corner of Hwy 20 and Conifer St. The facility consists of five main buildings and a mobile home used as the residence of a caretaker. The facility is used by several faculty members and graduate students for storage and staging areas for field equipment (i.e., travel trailers, boats, snowmobiles, etc.). There are two large barns and an open bay pole barn for storage. At the entrance to facility is an office building, which is periodically used for processing of field samples. A cinder block building is also used for processing samples, and is designated for development as a lab for amphibian work. Another cinder block building previously used by ODFW fish pathology has been recently transferred to the department and has been designated as storage by facilities services.

Oregon Hatchery Research Center (OHRC)--The OHRC (<http://www.dfw.state.or.us/OHRC/>) is a research facility located on Fall Creek off of Hwy 34, approximately 35 miles southwest of Corvallis. The OHRC is an innovative facility designed to address both practical management issues and fundamental research questions. The OHRC is owned by the Oregon Department of Fish and Wildlife (ODFW) and is operated jointly by ODFW and the Oregon State University, Department of Fisheries and Wildlife. The OHRC investigates the differences that may exist between fishes from hatchery and wild origins, in relation to the management and conservation of Oregon's native fish species. The design and construction of the facility, which opened in

October 2005, allow for a wide range of research, including tests of conventional hatchery procedures as well as innovative experimental analyses under controlled environmental conditions. Major research features of the OHRC include: controlled environment space, with the availability of either ambient water or water that can be sterilized and recirculated at controlled temperatures; extensive dry lab research space; a large number of tanks of various sizes for controlled rearing of experimental fish; and four very large simulated stream channels. The OHRC provides residential dormitory space, office space and research space for research collaborators. We anticipate continuing research collaborations with colleagues from management agencies, OSU and other institutions within Oregon, from universities and management agencies in other states, and with colleagues from other countries. Another major function of the OHRC is education and outreach. This includes design features to encourage the public to visit and tour facilities, to internship programs with universities and colleges across Oregon, to electronic and conventional print publication of information about the activities of the OHRC.

Hyslop Farm Small Mammal Enclosures--The department maintains a series of small mammal enclosures at Hyslop Farm, a Crop and Soil Science facility. The 12.25 acre site includes 24, 0.5-acre rodent-proof enclosures. The site, which is approximately 10 miles north of Corvallis is leased from Crop and Soil Science and has been used for ecological risk assessment and wildlife damage management research.

m. Anticipated start date.

If approved, the program will become operational in fall 2011. We will begin promoting the PSMFWA degree as soon as we receive its approval. The first student will graduate from the program during academic year 2012-2013.

2. Relationship to Mission and Goals

a. Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.

Our current graduate program is among the largest at OSU and thus supports OSU's goals for access and student learning. The Professional Science Masters degrees are a high priority for OSU. See 1e above regarding our national rankings based on scholarship and faculty productivity, which are the highest in OUS. Many of our faculty serve on state or federal panels, task forces, endangered species recovery teams, as editors of scientific journals, etc., as well as the normal complement of college and university committees.

b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

OSU's Strategic Plan, Phase II identified science of sustainable Earth ecosystems as a signature area of distinction. Conservation and management of vertebrate organisms is central this signature area. Vertebrate organisms have captured the imagination of the American public and conserving these organisms is a high priority based on national and state policies and funding levels. The PSMFWA program will support research, teaching and outreach related to

sustainability, ecosystem services, ecology and management of vertebrate species, communities and their habitats and ecosystems.

c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

Professional Science Masters degrees are a high priority for OUS. See 1e and 2a above. We train many of the fisheries and wildlife professionals in the state and region and have good to excellent employment statistics (Edge 2009). We employ over 350 people on an annual basis with our grants and contracts. Furthermore, fish and wildlife resources, which our graduates manage, have substantial economic impact in Oregon. Based on a 2009 economic survey ([http://www.dfw.state.or.us/agency/docs/Report_5_6_09--Final%20\(2\).pdf](http://www.dfw.state.or.us/agency/docs/Report_5_6_09--Final%20(2).pdf)), Oregonians and visitors spent \$2.5 billion dollars per year on fishing, hunting, shellfishing and wildlife viewing activities and equipment. Other states around the country report similar statistics. The long-term sustainability of this economic engine is dependent on effective management of these resources. Graduates of our PSMFWA degree will rapidly advance in the employment structure of the agencies they currently work for.

d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.

See 2c above for ways in which the program meets state's economic capacity. The teaching, research and outreach of the department are central to meeting the state's environmental challenges and opportunities. The science we are engaged in is central to concepts of sustainability, ecosystem services and natural resources management. We estimate that there are approximately 3,500 fish and wildlife professionals in the state of Oregon employed by state and federal agencies or non-government organizations. Graduates of the PSMFWA program will be promoted to mid- to high-level positions within their agencies and will therefore have significant impact on management of natural resources within Oregon.

3. Accreditation

a. Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.

There is no organization that accredits a PSMFWA degree. However, the three primary professional societies (American Fisheries Society, Society for Conservation Biology, and The Wildlife Society) all have specific missions and codes of ethics, but these societies do not accredit academic programs.

b. Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.

Both the American Fisheries Society (AFS [<http://www.fisheries.org/afs/certification.html>]) and The Wildlife Society (TWS [http://joomla.wildlife.org/index.php?option=com_content&task=view&id=29&Itemid=234]) have certification programs designed to certify professionals at two levels (Associate and full certification). However, certification is not a requirement for employment in most state or federal agencies. Undergraduates of our programs generally qualify for certification depending on electives they choose in their programs. The proposed program of study will enable all graduates to become certified as either a Certified Fisheries Biologist (AFS) or Certified Wildlife Biologist (TWS). Both certification programs require the completion of a rigorous program of study, typically accomplished by a B.S. degree. The most common deficiencies in candidates for certification for either program are the number of policy or human dimensions courses. All students in our program will be advised to consider course-work requirements for certification. Certification for both professions also requires five years of professional work experience. Because enrollment in the PSMFWA degree will be limited to employees with five years of professional experience, all students completing the PSMFWA degree will be certifiable by one of these two professional societies.

c. If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.

Not applicable—see 3a and 3b above.

d. If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.

Not Applicable.

4. Need

a. Evidence of market demand.

Evidence of need for a PSMFWA comes from several sources: published literature on workforce planning in natural resources, changes in Masters programs with comparator institutions, and a survey of potential employers. Workforce planning is a huge issue in the natural resources market place (Berkson et al. 2009, Julian and Yeager 2002, National Research Council [NRC] 2000, U.S. Department of Commerce [USDC] and U.S. Department of Education [USDE] 2008). The primary employers of fisheries and wildlife graduates are state and federal natural resources agencies. Most of these agencies experienced huge workforce expansions during the period from the early 1970s to the mid 1980s as a consequence of numerous environmental laws at both the state and federal level. Examples of federal legislation include the National Environmental Quality Act, the Endangered Species Act, Clean Water Act, Federal Land Policy and Management Act, and the National Forest Management Act; most states passed related laws during the same time period. Most state and federal natural resources agencies are experiencing large retirement pulses as their workforce grays (Julian and Yeager 2002). This retirement pulse and the subsequent workforce planning ramifications have been the subject of numerous articles in the natural resources literature in recent years (Berkson et al. 2009, Julian and Yeager 2002, NRC 2000, USDC and USDE 2008). In addition to challenges of finding sufficient, well-trained fish and wildlife biologists, employers are also calling for additional knowledge, skills and abilities (KSAs) from employees including interpersonal communications, conflict resolution, leaderships and teamwork skills, policy, ethics, budget development and administration, and human dimensions of fish and wildlife management (Baydack et al. 2009, Bissonette et al. 2000, Bleich and Oehler 2000, Millenbah and Wolter 2009, Stauffer and McMullin 2009, The Wildlife Society 2009). These KSAs are particularly important as employees of natural resources agencies move up the career ladder.

Many of our comparator institutions have begun offering similar non-thesis masters degrees. In 2005, only 2 of 60 member institutions of the National Association of University Fish and Wildlife Programs offered non-thesis masters degrees in fish and/or wildlife science. In 2009, that number had grown to 18. Only 1 of these institutions (Texas A & M) offers part of their degree on-line.

A market survey of potential employers indicates that the need for non-thesis masters degrees and additional training is high. We estimate that there are approximately 3,500 fish and wildlife professionals in the state of Oregon employed by state and federal agencies or non-government organizations, and most western states would have a similar number. In the fall of 2008 we conducted an on-line survey of approximately 90 state and federal fish and wildlife agencies. Division (fish, wildlife, marine) administrators in state agencies or regional human resources administrators of federal agencies were the target of our survey. Although the response rate was poor (21%; 16 of 78 valid email addresses), the results suggests a strong

demand for an on-line, non-thesis masters in fish and wildlife. Eighty-one percent of respondents stated that their employees would benefit from an on-line masters degree. All respondents indicated that their agency had from 2 to more than 5 employees that would benefit from such a degree (the modal response was 3 employees). Half of the respondents stated their agency has a policy of supporting employees in advance training and an additional 6 of 16 stated they may be able to support employees. When asked what types of support an agency might offer an employee, 63% (10 of 16) would pay tuition, 63% would offer salary support, and 50% would allow a leave of absence for advanced training. When asked what KSAs employers hoped an employee might receive in such a program, the responses were consistent with the literature cited above. In addition to advanced training in fish and wildlife ecology and conservation science, employers commonly cited human dimensions of fish and wildlife, budget development and administration, interpersonal communication, media relations, policy and ethics as desired KSAs.

Oregon State University offers thesis-based Masters of Science degrees in Fisheries or Wildlife Science. Our MS degrees provide training for researchers and managers in natural resources and typically requires two field seasons of data collection for a thesis. The OSU's Survey Research Center conducts a survey of our past 3 graduating classes every 3 years. The results from the past 3 surveys (9 graduating classes) have been remarkably consistent (See Edge 2009, the most recent): response rate was good (~60%), over 60% of B.S. graduates have permanent employment in natural resources within 3 years, and employment success with a masters degree is greater than 95%. For many years, a Masters degree was considered the entry level degree in the fish and wildlife professions. Our surveys suggest that a substantial number of B.S. graduates become permanently employed in natural resources agencies and that essentially all of our masters graduates get jobs. Taken together, these statistics suggest that there are insufficient numbers of graduates with masters and a large number of permanent employees in the workplace with B.S. degrees that might benefit from additional education. Our traditional thesis-based M.S. degree is not feasible for permanent employees because of the extensive period of data collection required for a thesis.

b. If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).

Not applicable—there are no other similar programs in the state.

c. Manner in which the program would serve the need for improved educational attainment in the region and state.

The data and literature cited in 4a represent national workforce needs in the fish and wildlife professions. However, most of the letters of support in Appendix D are from state or regional natural resources agencies. These letters do not provide estimates of number of employees that might seek a PSMFWA degree, but all imply there will be a high level of interest among employees for the degree. We suspect that our enrollment goals can be met from the state and regional service area alone, but because the degree will be available completely on-line we will market the degree nationally and internationally.

d. Manner in which the program would address the civic and cultural demands of citizenship.

Knowledge of environmental stewardship and conservation of fish and wildlife resources will become increasingly important as the U.S. population increases and as climate change places additional stress on ecosystems. This program will train professionals that will assist the public in understand their civic and cultural responsibilities for maintaining intact ecosystems.

5. Outcomes and Quality Assessment

a. Expected learning outcomes of the program.

The proposed PSMFWA degree is an integrated curriculum designed to provide advanced, professional training in four areas: (1) core knowledge in fish or wildlife biology, ecology and management; (2) professional skills and abilities; (3) human dimensions of natural resources management; and (4) natural resources policy. In addition, each student will participate in an intensive internship experience engaging students in real world work situations involving technical problems, teamwork, communication skills, and decision-making. Specific learning outcomes for each of the major components of the PSMFWA degree are listed below.

Fish or Wildlife Biology, Ecology and Management

Graduates of the PSMFWA will have an in-depth understanding of:

- nature and characteristics of ecosystems;
- complex interrelationships among biological, physical, and human components of ecosystems;
- spatial and temporal variation in ecosystem structure and processes;
- linkages and interfaces of terrestrial and aquatic systems;
- ecosystems as context for the dynamics and adaptation of populations and life histories;
- application of ecosystem principles in development and implementation of holistic, synthetic approaches to management; and
- information requirements to support application of conservation principles and develop approaches for specific ecosystems or specific organisms within these ecosystems.

Professional Skills and Abilities

Graduates of the PSMFWA will have an understanding of:

- basic concepts in practical accounting and finance, marketing, project management, and entrepreneurship,
- interpersonal and organizational communication styles,
- ethical issues in scientific and social settings, and
- how to apply scientific knowledge in a variety of settings and by working as part of a multi-disciplinary team.

Human Dimensions of Natural Resources Management

Graduates of the PSMFWA will be able to:

- identify interactions between human ecology and nature; and
- incorporate social information (e.g., demographics, environmental policy, economic systems) in development of conservation plans and natural resource decision making.

Natural Resources Policy

Graduates of the PSMFWA will have an understanding of:

- fundamental operations and assumptions of human institutions, including politics,

- economics, culture, history and social/value systems; and
- how natural resources are affected by actions dependent on human philosophy, ethics, world views, religion, and psychology.

b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

We conduct a statistical survey of all graduates every three years (Edge 2009). This survey asks respondents to characterize the importance of different Knowledge, Skills and Abilities in their current jobs and ask how well our program trained them in those areas. Questions specific to the PSMFWA learner outcomes will be added to the survey and responses will be stratified by degree. Thus, we will have graduates self-assessment of the importance of individual learner outcomes and how well we prepared them in each area. We will also conduct follow-up surveys with employers to determine: (1) if the training we provide is still relevant to their needs, and (2) if the employees that recently completed their degrees were well trained in the areas identified in our learner outcomes.

c. Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.

See 3b above for certification requirements. Because all students admitted to the program will be currently employed professionals, employment success will be 100%. We anticipate that most will be promoted by their employers within a year or two of completing the program.

d. Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.

The science we are engaged in is central to concepts of sustainability, ecosystem services and natural resources management. See 1e above. We are arguably the best graduate program in OUS.

6. Program Integration and Collaboration

a. Closely related programs in other OUS universities and Oregon private institutions.

There are no closely related programs in OUS. The Department of Fisheries and Wildlife offers the only degrees related to the fish and wildlife professions in the Oregon University System. A Master of Natural Resources (MNR) degree has just been approved by the Provost's Council and the Sustainable Natural Resources (SNR) Graduate Certificate are related programs because of their general focus on natural resources. Both of these graduate programs target much broader, less well-defined audiences than the narrow professional focus of our PSMFWA degree. Furthermore, the Professional Science Core classes and the internship requirement in the PSMFWA make our degree very different in focus than the MNR degree, which concentrates on interdisciplinary studies and includes a capstone project. Because our degree is much more focused on the fish and wildlife professions and professional-level training for currently employed professionals, we believe there will be very little overlap in student interests in these very different degrees. A student pursuing a MNR degree may elect to include our Fisheries Management Certificate as an area of emphasis but this training would still be very different than the professional core training and internship we have proposed.

b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.

There are no closely related programs in OUS. The Department of Fisheries and Wildlife offers the only degrees related to the fish and wildlife professions in the Oregon University System. OSU is currently the only university in OUS offering professional science masters degrees and currently offers PSM degrees in Applied Biotechnology, Applied Systematics in Botany, Environmental Science, and Applied Physics. Except for the professional science core classes, these programs are unrelated to the proposed PSMFWA degree. Many of our graduate classes are taken by students in Environmental Sciences, Forest Science, Rangeland Ecology and Management, Sustainable Natural Resources and Zoology. A few of our graduate classes are taken by students at other OUS institutions, primarily UO. As mentioned above in 6a, two other graduate programs at OSU, the MNR and the SNR, require some of the same classes as in the PSMFWA degree. For example the SNR lists five of the same classes listed in two sections of the PSMFWA degree and the MNR degree list six of 18 classes in the ecology/production area and eight of 21 classes in the human systems area that are on the course lists for PSMFWA. We believe that students pursuing a PSMFWA degree will be drawn from a different potential client base and therefore having students pursuing these different degrees are likely to increase enrollment in the on-line classes more than compete for students in these programs. Thus, we will be collaborating in that Fisheries and Wildlife faculty teach some of the classes listed in both the MNR and SNR programs; having increased enrollment will help us achieve minimum enrollment requirements for these classes. Our faculty may also elect to advise MNR students on their capstone projects.

c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.

Not applicable.

d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.

We do not anticipate any major impacts to our unit or other units on campus. We anticipate increased interest in our graduate programs and the number of potential students contacting our faculty. However, because enrollment will be limited to current professionals with at least 5 years of professional experience and because we believe we only have capacity for approximately 10 students/year, the PSMFWA degree will be a minor component of our graduate program.

We do not anticipate significant impacts on other units because this degree is unique to our program (see response in 6a and 6b above), and because enrollment will be limited to professionals already in the workplace. Because we will limit enrollment, some students applying to the PSMFWA program may elect to enroll in the MNR degree and thus, we expect interest in our program to increase enrollment in the MNR degree. Students pursuing the MNR degree may seek Fisheries and Wildlife faculty to mentor them on their capstone projects, but we do not believe that the PSMFWA program will cause a workload problem. We have 48

faculty members who have expressed an interest in serving as major advisors for students in the PSMFWA program. Given that we will limit enrollment to 10 students per year, we have the additional capacity to mentor the few MNR students that are doing fish and wildlife related capstone projects.

7. Financial Sustainability (attach the completed *Budget Outline*)

a. Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.

Because we already have a large graduate program substantial new resources are not needed to offer this degree. However, we propose to add staff support to deliver this program. Resources to support these staff will come from revenues generated by our eCampus programs (B.S. and PSMFWA). We estimate an annual cost of \$42,447 to support the program. Revenues from our eCampus program exceeded \$400,000 last year and have increased at a rate of 10-20% per year for several years. We began to offer our BS on-line fall of 2009 and had >75 majors the first term. Thus, we anticipate that revenues from eCampus will easily cover these new costs.

One 0.25 FTE PSMFWA degree Director/Advisor (Appendix A)

One 0.20 FTE PSMFWA Distance Degree Coordinator (Appendix A)

One 0.1 FTE for clerical support (Appendix A)

The College of Agricultural Sciences has a priority staffing process for allocating FTE to replace faculty loss to attrition or for developing new positions. Because of our unit metrics we have been successful in the process in refilling or acquiring new positions for years. Because of our national and international reputation we easily recruit and retain new faculty.

Minor additional library resources will be required to offer this degree (see library assessment—Appendix B) . The scientific and technical literature required are largely available for the M.S. and Ph.D. programs we currently offer but additional funds will be required for the on-line support.

b. Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.

No unique resources are necessary to offer this degree.

c. Targeted student/faculty ratio (student FTE divided by faculty FTE).

Not all faculty members will have the capacity to advise PSMFWA majors. However, 21 have specifically said they would advise students admitted to the PSMFWA. Thus, with 10 majors per year the student/faculty ratio for advising will be $10/21 = 0.5$. Combined with our current graduate degrees we might anticipate having a maximum of 100 students enrolled during any term. All faculty listed in 1j above have advised graduate students and many teach graduate

classes. If all graduate students including PSMFWA are considered then the student faculty ratio would be $100/47 = 2.1$.

d. Resources to be devoted to student recruitment.

Because the degree will be offered predominately on-line, eCampus will develop a comprehensive marketing plan. In preparing for our market survey (4a) we developed a comprehensive list of natural resources employers that can be used to recruit students.

8. External Review

(if the proposed program is a graduate level program, follow the guidelines provided in *External Review of new Graduate Level Academic Programs* in addition to completing all of the above information)

Executive Summary

Fisheries and wildlife resource conservation is a challenging profession involving biological, ecological, management, policy, and social systems. Although many of professionals obtain entry-level positions with B.S. degrees, mid- and upper-level positions typically require additional training. The proposed Professional Science Masters of Fisheries and Wildlife Administration (PSMFWA) degree is designed to provide advanced training for early- and mid-career professionals employed by natural resources agencies and non-government organizations. The PSMFWA degree will assist natural resources agencies and non-government organizations in meeting workforce planning goals and will meet self-improvement goals of current employees.

The PSMFWA is a 57-credit curriculum organized into four main sections: a fish and wildlife core (18 credits), a professional core (18 credits), policy (6 credits), human dimensions (9 credits) and internships (6 credits). It will be taught primarily as a distance, on-line curriculum, although some students may choose to work toward the PSMFWA degree while in-residence at OSU. All of the courses proposed for the PSMFWA degree are already taught in-residence and many are taught on-line. Currently, enough courses are taught on-line to provide students with substantial choice among courses in all curriculum areas. Forty-eight faculty members have agreed to serve as advisors to students for completion of their internships and degree. The PSMFWA degree will be offered as a non-thesis option only, similar to a Masters in Business Administration, Masters of Agriculture, or Masters of Forestry.

We present evidence of need for the PSMFWA from several sources: published literature on workforce planning in natural resources, changes in Masters programs with comparator institutions, and a survey of potential employers. All provide strong support for such a program.

There are no closely related programs in OUS. The Department of Fisheries and Wildlife offers the only degrees related to the fish and wildlife professions in the Oregon University System. A Master of Natural Resources (MNR) degree has just been approved by the Provost's Council and the Sustainable Natural Resources (SNR) Graduate Certificate are related programs because of their general focus on natural resources. Both of these graduate programs target much broader, less well-defined audiences than the narrow professional focus of our PSMFWA degree. Our proposal explains other differences between the degrees and identifies areas of collaboration.

Because we already have a large graduate program substantial new resources are not needed to offer this degree. However, we propose to add staff support to deliver this program. Resources to support these staff will come from revenues generated by our eCampus programs (B.S. and PSMFWA). We estimate an annual cost of \$42,447 to support the program. Revenues from our eCampus program exceeded \$400,000 last year and have increased at a rate of 10-20% per year for several years. We began to offer our BS on-line fall of 2009 and had >75 majors the first term. Thus, we anticipate that revenues from eCampus will easily cover these new costs.

Category I Proposal Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Library Evaluation for Category I Proposal

Professional Science Master of Fisheries and Wildlife Administration
Title of Proposal

Fisheries and Wildlife
Department

Agricultural Sciences
College

The subject librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

- ☐ inadequate to support the proposal (see budget needs below)
☒ marginally adequate to support the proposal
☐ adequate to support the proposal

Estimated funding needed to upgrade collections or services to support the proposal (details are attached)

Year 1:
\$2,500

Ongoing (annual):
\$5,350

Comments and Recommendations:

Core collections are at risk due to flat budgets. Year 1 costs address improving students' access to targeted information. Ongoing costs reflect database and e-book purchases.

Comments Concerning Liaison Responses and Request Letter

Liaison requests with the draft Category I proposal attached were email on 19 February 2010 with a response requested by 8 March 2010. The liaison message clearly stated that lack of response would be interpreted as support of the proposal. The original message and the responses to our proposal are listed below. We received 11 responses to our liaison request; all were supportive of our proposal; five offered helpful suggestions or comments that we respond to in each of the paragraphs below.

Bill Lunch suggested another Political Science course (PS 574) be added to the list of courses in the policy section of our curriculum. We agree that the course is very appropriate for the proposed curriculum and we added the course to our list.

Russ Karow from Crop and Soil Sciences suggested a course in employee management or “personnel management for dummies.” We have elected not to include such a course in the curriculum for two reasons. First, because all or out students will be early to mid-career professionals, it is likely most will have had substantial employee management experience. Second, the most appropriate course at OSU in this area, BA 553, Human Resources Management, requires a prerequisite that most or all of our students would not have had.

Badege Bishaw, Director, Sustainable Natural Resources Graduate Program, provided several comments, suggestions and expressed a concern. He suggested that two SNR courses (522 and 540) be considered in our curriculum. We added SNR 522, Basic Beliefs and Ethics in Natural Resources to our Human Dimensions section. We elected not to add SNR, 540 Global Environmental Change to the list because our students will be employed natural resources professionals and likely will be very familiar with most of the topics presented in that class. Dr. Bishaw pointed out that 10 students per year was realistic based on the SNR program. We will initially limit enrollment to 10 students because we are uncertain the level of effort advising these students will take and we will ramp the program up slowly until faculty become more familiar with advising these students. However, we anticipate that many more students will apply than will be accepted. Dr. Bishaw points out that courtesy faculty cannot be paid to teach or advise students. We expect our courtesy faculty members to participate in advising students and graduate teaching to the extent possible given their appointments as a condition of their courtesy faculty appointments, and do not anticipate paying them for those services. We list 11 courtesy faculty members in our faculty list and all teach and/or advise graduate students currently. Dr. Bishaw points out that it would be good for the proposal to include some statements of collaboration and complementarily to the SNR and MNR program at OSU. We concur and have added text to sections 6a and 6b in our proposal. Dr. Bishaw also expressed a concern about sharing some of same faculty as potential student advisors, and tapping some of the same Natural Resources professionals as potential pool of students. We address these concerns in our revised proposal (sections 6a, b and d), but basically believe that our potential pool of students is very different than students that might seek a MNR degree and that OSU has sufficient capacity to accept students in both programs.

Susan Capalbo from Agricultural and Resource Economics offered several suggestions. First, she pointed out that our distinction between "policy" and "human dimensions" seemed arbitrary, with courses about law in both, and with no economics courses in either. We concur and moved a law course from the human dimension list to the policy list. We also added AREC 534, Environmental and Natural Resource Economics to the human dimensions section and AREC 532, Environmental Law to the policy section. We elected not to remove SNR 521 from our list of courses as she suggested because we want to retain as much flexibility for our on-line students as possible. Because all of our students will be currently employed by natural resources agencies, it seems likely they will face scheduling conflicts and we would like to retain that flexibility. Next, Dr. Capalbo observed that about half of the policy and human dimensions classes are in FW and that the students could elect a program that was dominated by FW classes. The FW classes that are required in each of these sections, give students discipline-specific training that we believe is needed. However, we concur that students would be better served by taking classes from other departments/disciplines. We have added additional courses from other departments (AREC, COMM, PS and SNR) in both sections, and we have changed the lists to prevent students from taking more than one FW class in each section.

Robert J. McGorin from Food Science & Technology related a concern about how this is a true graduate degree versus a BS with additional slash classes. He implied that the comment came from a faculty member who didn't read all the details of the proposal and we believe that probably explains the comment. However, in response, the PSMFWA degree will require 57 credits, at least half of which will be graduate only courses. The degree will also require two internships and will provide early and mid-career professionals the type of training that state and federal agencies want their employees to obtain.

Original Liaison Request

Head/Chair/Director:

The attached Category I proposal describes a new Professional Science Masters in Fisheries and Wildlife Administration that we propose to begin offering the fall of 2011. The degree will be delivered entirely on-line, but we anticipate there may be some students in residence.

In accordance with the liaison criteria in the Curricular Procedures Handbook, this memo serves as notification to your college/department/program of our intent to develop and offer this new degree. Please review the attached materials and send your comments, concerns, or support to me by 8 March 2010. Your timely response is appreciated.

Please note that a lack of response will be interpreted as support of our proposal.

Thank you for your time and input.

**General Learning Outcomes (GLOs)
Approved by the Faculty Senate
Thursday, January 13th, 2011**

As a result of successfully completing the requirements toward the Ph.D., students shall: (a) produce and defend an original significant contribution to knowledge; (b) demonstrate mastery of subject material; and (c) be able to conduct scholarly activities in an ethical manner. Additional outcomes, the assessment of all outcomes and the specification of learning objectives related to these outcomes are to be carried out at the program level and reviewed periodically.

These outcomes are to be assessed at the program level.

- Outcome (a) is already part of the assessment performed at the final oral exam and the GCR is specifically required to raise this metric.
- Outcome (b) is part of every unit's requirements for students and is assessed by course work grades, and preliminary examinations.
- Outcome (c) is new and will require the units to be sure the students are informed/trained as to what is required to conduct scholarly activities in an ethical manner. There is an array of methods the units could choose to use, such as the Grad School course on RCR, Ph 574, and other courses, instruction in research groups, etc.

Materials linked from the February 25, 2011 Graduate Council agenda.

Cc: Beach, Gary; Naguib, Nagwa; Bray, Tammy
Subject: Re: Nutrition and Exercise Sciences Graduate Programs - Site Visit

Marty and Walt,

A difficulty I have with denying my request for delaying by one term the time of the EXSS grad program review is that the original scheduled time for the review (08-09) was premature, which was not the case for the Nutrition review. There is no compelling logic that the two programs be concurrently conducted. I do understand that grad program reviews can be conducted at intervals shorter than 10 years, but there must be a significant reason for doing so given the investment of faculty time involved (time taken from other work) and the expenses associated with a review, and I am not aware of any compelling reason for the EXSS grad program review to have been earlier than normal process call for.

Yes, Sally granted an extension, which allowed the Nutrition grad program to take hold and grow with the then recently hired faculty and grad program director. That program review will happen Spring term. As noted below, an unanticipated major reorganization has been called for by the University, which intersects with the College's strategic initiative to become an accredited College of Public Health & Human Sciences, and this has consumed significant faculty and administrative effort. At least 15 faculty searches are occurring in the College this year, ten in our school, with extensive time devoted to the screening, interviews and selection processes. We must be mindful of what is realistically feasible for faculty to accomplish in addition to their appropriate focus on achievement in teaching and research.

Given that the 2-year extension was given for a program review that was at least 1-year prematurely scheduled, I think it is entirely reasonable under current circumstances to request that the review be conducted one term later, in Fall 2011. So I ask for your reconsideration.

Thanks,
Tony

From: "Fisk, Martin" <Martin.Fisk@oregonstate.edu>
Date: Wed, 16 Feb 2011 10:31:35 -0800
To: Tony Wilcox <anthony.wilcox@oregonstate.edu>

Subject: RE: Nutrition and Exercise Sciences Graduate Programs - Site Visit

Tony,

The Graduate School researched the history of the review of the Exercise and Sport Science and Nutrition graduate degrees.

Nutrition was last reviewed in the 1998-9 academic year and was scheduled for review in 2008-9. Exercise and Sport Science was last reviewed in the 1999-2000 academic year and was also scheduled for 2008-9.

You must have requested a postponement of those 2008-9 reviews and Sally granted you a two-year

postponement to this academic year, 2010-11.

The Guidelines for Graduate Program Reviews indicates that postponements are normally granted for one year.

"Programs may request a postponement of a scheduled Graduate Council Program Review by presenting a compelling case to the Graduate School for the Dean's review and approval. If approved, postponement is normally granted for one year only."

On October 7, 2010 the Graduate Council established principles for allowing postponement of Graduate Program Reviews. These are:

"1. When synchronizing within plus/minus one year with either professional reviews or accrediting body reviews; when and if requested.

"2. When eliminating the program.

"3. When reorganizing and a Category I proposal will be used to change the program. In this case a one year postponement will be approved and the Cat I must be submitted within that year. If the Cat I is not submitted, the review will take place a year from the originally scheduled date."

The Category I proposal mentioned in 3 above refers to changes in the degree, not changes in the administrative structure of the college.

Finally, graduate program reviews are very important for maintaining and improving the quality of graduate education at OSU, and they are the only mechanism the university has to review the quality of graduate education and to suggest changes. The schedule and outcomes of graduate program reviews is now included in the accreditation report of the university. Nutrition and Exercise and Sport Science are only two of five graduate programs that have not been reviewed in the past 10 years. Other programs not reviewed are being eliminated or are will be reviewed this academic year.

Because of the importance of reviews to the university and because your degree programs have already received a two year postponement, and your request does not fit the principles set by the Council, I think it is not appropriate to grant another postponement to your review. If there are other factors not included in your email, please let me or Walt Loveland know about them.

Yours,
Marty

Dr. Martin Fisk, Interim Dean of the Graduate School

To: Naguib, Nagwa; Fisk, Martin
Cc: Beach, Gary
Subject: Re: Nutrition and Exercise Sciences Graduate Programs - Site Visit

Nagwa, Marty and Gary,

The Nutrition graduate faculty have drafted their self study and are reviewing it, as well as actively considering who may serve as external reviewers (it will be faculty from other institutions only, as that is most appropriate for this grad program). I will try to get the names and suggested dates to you next week.

The dietetics option within the Nutrition major is undergoing reaccreditation this year, with the site visit scheduled for March 28 & 29. The dietetic option accounts for 90+% of the undergraduate majors in Nutrition, so it is appropriate for the reaccreditation to stand as the review of the undergraduate program.

The Movement Studies in Disability masters program was discontinued with the program reductions enacted by President Ray in Fall 2009.

It has been impossible for us to devote the time and attention necessary to conduct the EXSS grad and undergrad program reviews this year, and I am requesting permission for this to be delayed into next year (e.g., Fall 2011).

It may be more appropriate for me to meet with you to discuss this matter, but briefly, the reason we are requesting this delay is because our programs have been thoroughly engaged in the intense work related to reorganizing the departments in CHHS into Schools, and I have been responsible for much of that work: writing the Category I, leading faculty in the programs that will become the School of Biological & Population Health Sciences (epidemiology; biostatistics; environment, safety & health; exercise & sport science; nutrition) in the process to determine our School's governance (P&T procedures; curriculum procedures; program governance). In addition, we have numerous faculty searches underway, which has taken considerable time and energy. And related to that, we are particularly short-handed in faculty in the EXSS program, so it has not be feasible to appoint someone to take the lead in managing the self-study. Fortunately, such has not been the case in Nutrition, so we've been able to prepare that self-study.

I suspect that requests for delays come to you at times, and that the normal response is to deny them. I hope the Gradu School recognizes the extraordinary circumstances that have been created by the University mandate to reorganize our academic units, which has compounded the work we in CHHS are doing as we also pursue becoming an accredited college of public health & human sciences. We are also managing as best we can the increase in enrollments in our majors and our courses while being short-handed with tenured and tenure-track faculty.

I will also add that our EXSS doctoral program has been ranked in the past year by both the NRC and the American Academy of Kinesiology & Physical Education (now the National Academy of Kinesiology), and the latter ranking placed us at 8th in the country. So we are not speaking about a program that is in disarray. Rather, we must recognize that we are able to accomplish only a finite number of important tasks, and at this time, we cannot give the program review the time, effort and thought it deserves. I am optimistic that we can do so if we were granted permission to conduct the review in fall term of the 2011-12 academic year.

As noted, I would like to meet with you to discuss this further.
Thanks for your consideration of this request.

Tony

Subject: Nutrition and Exercise Sciences Graduate Programs - Site Visit

Hi Tony,

It is time for us to start selecting reviewers and schedule the Site Visit for the upcoming Graduate Program Reviews for:

1. **Exercise and Sport Science**
2. **Movement Studies in Disability**
3. **Nutrition**

As you know, #1 and #3 above have an undergraduate review as well. For the sake of the Graduate Reviews, the Graduate School will need a list of names for suggested reviewers, both Peers and Potential Employers, as well as the blackout dates when your dean, faculty, etc. CANNOT meet with the reviewers. Once we receive this information, Marty Fisk will start working on contacting the reviewers. Please let me know if you have any questions regarding the above.

**Review Panel Report
Oregon State University**

Science and Mathematics Education Graduate Program

Graduate Review Panel

Carolyn Aldwin, HHS (Internal Reviewer)

James Coakley, Business (Internal Reviewer)

Dawn Granger, Principal, Corvallis High School (Potential Employer)

Thomas Koballa, Georgia Southern University (Peer Reviewer)

January 5, 2011

OVERALL RECOMMENDATION

In light of the pending repositioning of the Science and Mathematics Education Department within the College of Education, the Review Panel's focus was not exclusively retrospective. **Had the review been conducted under stable circumstances, the Panel's recommendation would be to maintain the Science and Mathematics Education Graduate Program. Given the present context, however, the Review Panel recommends that the Program be restructured.** Restructuring efforts should highlight the pivotal role of the Science and Mathematics Education Graduate Program to the formation of a research-focused College of Education and the significant value of establishing a university-wide Science, Technology, Engineering, and Mathematics (STEM) Center. The challenge for the program is to maintain high quality MS and PhD degree offerings and provide evidence of effectiveness of program features and success of program graduates. Program continuity through the engagement of faculty outside of the Department of Science and Mathematics Education and aggressive recruitment of a diverse student population is essential for the future success of the program. The program faculty needs to play an active role in the restructuring of the College of Education, ensuring that adequate resources are available to sustain research-based science and mathematics degree offerings and provide for the collection and analysis of data to inform future program revisions.

General Recommendations

- The Department should incorporate under-represented populations into the applicant characteristics statistics, and begin tracking these statistics by degree option to accurately assess the quality of incoming students.
- The Department should track student credit hour generation across the different degree options and by individual faculty members in order to better understand how the workload is distributed.
- Data should be gathered on an ongoing basis regarding the career success for all program graduates. This information should be collected and evaluated for programmatic improvement for all of the master's and doctoral programs.
- The Department should compile summary performance data to allow for a more informed assessment of the level and quality of faculty performance.
- Broken and dilapidated furnishings as well as electrical and Internet fixtures should be replaced and/or repaired.
- Develop a plan and secure support from the Deans of the Colleges of Science and Education to regularly update computers and other forms of technology used for instruction and research.
- The Science and Mathematics Education faculty should pursue the establishment of a university-wide Center for Research on Lifelong STEM Learning, but be mindful of the impact of Center affiliation on self-esteem and productivity of faculty and students.

Recommendations for Masters Students

- The availability of on-line courses should be increased; efforts should be made to communicate program needs to other departments that offer desired courses and work begun to develop online options of these courses.
- A course equivalent to history of science or philosophy of science should be made available for mathematics education students.
- The program should provide opportunities for all licensure students to work with 6-12 students from diverse cultural backgrounds, as well as students with special physical, emotional, and learning needs, and to incorporate information on these students into coursework.

Recommendations for the Doctoral Program

- The process of first year advising should be studied and modified to enhance the academic experience for the doctoral students and include student input.
- Consideration should be given to adding learning experiences in science and mathematics teacher education, grant writing, program evaluation, and international education to enhance the marketability of doctoral program graduates.
- Faculty members should evaluate their personal biases/strengths and assess the impact that they might have on student learning in doctoral courses.
- The program faculty should engage the OSU mathematics faculty in conversation about the relationship and overlap between the mathematics education doctoral programs offered in the two departments, with the conversation resulting in a statement that distinguishes the two doctoral degree options.
- The Dean's Office of the College of Science should provide the Department with data on student credit hour generation.
- It is recommended that faculty monitor individual supervision loads and work to equalize the loads over the entire faculty or advocate for additional faculty lines.

SUMMARY OF FINDINGS AND RECOMMENDATIONS

The Science and Mathematics Education Department supports a strong, focused and successful graduate program. This review comes at a critical time as the Department is to be repositioned within the College of Education. Even within this organizational transition, the Department's faculty remains committed to its mission (developed in 2006) to "[b]etter understand and facilitate the variety of ways in which people of all ages and backgrounds engage in science and mathematics learning throughout their day and lifespan." This mission is reflected in the three foci for their degree programs: K-12,

College Teaching, and Free-Choice Learning; and fits well with the implementation guidelines for the strategic alignment of academic and support units in the OSU Strategic Alignment and Budget Reduction Implementation Plan for 2009-2011.

The Department's graduate program is populated by high quality students who are admitted based on a well-defined process, requiring additional qualitative information beyond the University graduate admission requirements. However, the Department has a limited number of internal scholarships and GTA/GRA positions that are available to students and seems to attract few students from underrepresented populations. To address these challenges, the faculty has initiated actions to obtain GTA/GRA positions for each of its PhD students and to seek scholarships to recruit and retain students from populations traditionally underrepresented in science and mathematics. In order to track the successes of these initiatives, **it is recommended that the Department incorporate underrepresented populations into the applicant characteristics statistics, and begin tracking these statistics by degree option to accurately assess the quality of incoming students.**

The curriculum across the Department's PhD and MS degree options is very strong. The *School-based Master's for K-12* teachers and the *Free-Choice Learning Master's* are innovative programs, in that they provide advanced learning opportunities for persons through online offerings. A limitation for both of these programs is the availability of online course offerings that might be used to fulfill program requirements beyond those offered through the Department. **It is recommended that efforts be made to communicate program needs to other departments that offer desired courses and work begun to develop online options for students.**

The *Professional Teacher Education Master's* program (grades 6-12 science and mathematics) is well conceived and consistent with national recommendations and standards of science and mathematics teacher education programs. The requirement of a history of science or philosophy of science course is also commendable. Unfortunately, a comparable learning experience seems not to be available for mathematics education students. **It is recommended that a course equivalent to history of science or philosophy of science be made available for mathematics education students.**

Among the PhD program's strengths is the emphasis of science and mathematics learning opportunities from birth to death, reflecting the three program strands—K-12, college teaching, and free-choice learning—and an emerging trend in science and mathematics education programs. However, attention need to be given to *learning experiences to enhance the marketability of program graduates (e.g., science/math teacher education, grant writing, international education) and whether the personal biases of faculty may adversely impact student learning*. In addition, **it is recommended that the Department track student credit hour generation across the different degree options and by individual faculty members in order to better understand how the workload is distributed.**

The Department faculty is highly qualified and well suited to fulfill the Department's vision of establishing a Center for Research on Lifelong Science, Technology, Engineering and Mathematics (STEM) Learning and contributing significantly to building a research-focused College of Education. The financial resources available to support the Department seem to be adequate, in large measure due to the faculty's ability to secure external funds through grants and the income generated through online courses. However, the department's infrastructure is in need of immediate attention. With Dr. Flick named the Associate Dean of Academic Affairs for the reorganized College of Education, the Department faculty may wish to learn more about how this new appointment will influence his administrative and instructional duties within the Department. **It is recommended that broken and dilapidated furnishings as well as electrical and Internet fixtures be replaced and/or repaired.**

Faculty and student productivity is very respectable, based on indicators provided. The Department faculty has almost \$4 million in current grants and is highly ranked among PhD granting institutions. Students are satisfied with the financial support provided them by the Department. Students work with faculty to make professional presentations and generate scholarly publications. The scholarly community provided for students by the Department faculty seems exceptional for teacher licensure students, but not all that it could be for PhD students. PhD students seem to be disparate in their feelings of connectedness to each other and the Department. These feelings seem to be linked to the advising approach applied with students during the early semesters of their doctoral work. **It is recommended that the process of first year advising be studied and modified to enhance the academic experience for the doctoral students.**

Evaluation of the professional viability of graduates and student ratings and rankings was hampered by the lack of data. These data could serve an invaluable function for assessing program viability and guiding programmatic improvement. **It is recommended that data be gathered on an ongoing basis regarding the career success for all program graduates.**

DETAILED FINDINGS

Introduction

This review of the Science and Mathematics Education Graduate Program follows an earlier review conducted in 2001 and comes on the heels of an announcement that the Science and Mathematics Education Department will be repositioned within the College of Education as part of a University-wide reorganization. Consistent with the Guidelines for Graduate Council Program Reviews, the objective of the review was to identify and articulate positive suggestions for enhancing the Science and Mathematics Education graduate program.

The review site visit took place on December 6th, 2010, with an organizational meeting of the review panel on the evening of December 5th, 2010. Members of the review panel

included: Dr. Thomas Koballa (Dean, College of Education, Georgia Southern University), Dawn Grander (Principal, Corvallis High School), and two members of the Graduate Council, Dr. Carolyn Aldwin (HHS) and Dr. James Coakley (Business). Members of the panel were provided with the program's Self-Study Report prepared by Dr. Larry Flick (Department Chair) with significant assistance by department secretary Paula Dungjen and doctoral student Teresa Wolfe as well as Dr. Larry Enochs (previous department chair) prior to the site visit. Degree program advising sheets were made available during the visit. Dr. Martin Fisk, Interim Dean of the Graduate School, was present as an observer.

On December 6th, the review team first met with Dr. Larry Flick, Department Chair, who provided a summary of the Self-Study Report and context regarding the Department's pending repositioning within the College of Education. The review panel then met with Dr. Sherman Bloomer, Dean of the College of Science, who described the Department's current status within the College of Science. Next the panel met with the Graduate Program leaders and with the Graduate Program faculty. Following a working lunch, the team toured Department facilities and met separately with groups of doctoral students and licensure students. A teleconference was scheduled with distance education students, but no students called in to speak with the review panel. A closing meeting with Dr. Flick concluded the panel's site visit.

All participants were extremely open and helpful. The review panel appreciated the professional conduct experienced during the site visit and the ample time provided to pose questions and to hear faculty and student opinions, comments, and suggestions for improving the program.

The remainder of the report is organized according to the outline provided by the Graduate School into four sections: Inputs, Productivity, Outcomes, and Conclusion.

Inputs

a. Fit of the mission of the program with the college and university missions

The Strategic Alignment and Budget Reduction Implementation Plan for 2009-2011 (<http://oregonstate.edu/leadership/sites/default/files/budget-documents/implementation-plan-10-8-09.pdf>) provides implementation guidelines for the strategic alignment of academic and support units within Oregon State University. These guidelines call for the creation of four divisions: Arts and Sciences; Business and Engineering; Earth Systems Science; and Health Sciences. The Division of Arts and Sciences is comprised of three Colleges: Science, Education, Liberal Arts. The proposed mission of the Division of Arts and Sciences is to become the intellectual center of Oregon State University, answering the fundamental questions that underlie the natural sciences, the arts, the humanities, and the social sciences (Report to the Strategic Alignment/Budget Reduction Review Committee, Mar 15, 2010, <http://oregonstate.edu/leadership/sites/default/files/budget-documents/mar15-asdiv.pdf>). The Colleges of Science, Education, and Liberal Arts are currently undergoing internal college reorganizations with a proposed consolidation of education-focused departments across the university. The proposal also includes creation

of a cross-disciplinary Center for Research in Lifelong STEM Learning. The Department of Science and Mathematics Education (SMED) within the College of Science is currently in a state of organizational transition with the ensuing uncertainty regarding the final organizational structure and form of the department. Our presumption is that the SMED will remain as a department within the new organizational structure and that SMED will continue to offer the existing graduate programs (PhD and Masters).

Even with this organizational uncertainty, the SMED faculty remain committed to their mission (developed on 2006) to “[b]etter understand and facilitate the variety of ways in which people of all ages and backgrounds engage in science and mathematics learning throughout their day and lifespan.” The faculty believes this mission is unique in that it is focused on investigating and supporting lifelong science and mathematics learning, which in turn supports all three Signature Areas of Distinction of the University. This mission is reflected in the three foci for their degree programs: K-12, College Teaching, and Free-Choice Learning.

b. Quality of students

The SMED has distinctly different degree programs: the PhD in science and mathematics education, the on-line Master’s degree for K-12, the online Free-Choice Learning Master’s degree, and the on-campus Professional Teacher Education Master’s degree. The “Applicant Characteristics” provided in the Self-Study Report (Table I, p. 12) reflects characteristics aggregated across students from all of the degree programs. Overall, the quality of the students appears to be high based on the average GPA of the matriculated students. It should be noted that students admitted to the Professional Teacher Education Master’s program are required to complete “teaching tests” administered by the Oregon Teacher Standards and Practices (OTSP) Commission (ORELA, CBEST and Praxis) by the end of September. Results of these tests may also be used to track the quality of the incoming students.

Over the past three years, 82% of the matriculated students have been female, and the students are predominately domestic (as would be expected for the K-12 and licensure programs). The Department does have a diversity initiative to recruit and retain students from underrepresented populations, and has submitted a proposal to use the Oregon Laurels Block Grant to provide scholarships to support the initiative. However, the Department does not appear to track underrepresented populations as part of the applicant characteristics. **It is recommended that the Department incorporate underrepresented populations into the applicant characteristics statistics, and begin tracking these statistics by degree program to accurately assess the quality of incoming students.**

c. Admissions selectivity

The SMED has a well-defined process for selecting students into the PhD and Master’s degree programs, requiring additional qualitative information beyond the university graduate admission requirements. None of the graduate programs require the GRE or other standardized exam as part of the admissions criteria. Students admitted to the

Professional Teacher Education Master's program are required to complete tests administered by the Oregon Teacher Standards and Practices (OTSP) Commission, but these tests are not part of the admissions criteria. The admissions requirements for the licensure program are consistent with the requirements for licensure programs in the College of Education.

d. Level of financial support for students

The SMED has a limited number of internal scholarships and GTA/GRA positions that are available for their students. The stated goal of the faculty is to obtain a GTA/GRA position for each student within the PhD program. These positions offer full tuition support plus a monthly stipend. The Department faculty acknowledges that it is dependent on the availability of GTA/GRA positions in other departments to meet this goal.

Financial support for the Master's degree programs tends to come from scholarships, both internal to the SMED and external scholarship support available through the University and other Foundations and Organizations (see p. 19 of the Self-Study Report). The SMED students earned approximately 20 scholarships per year over the past three years, suggesting that approximately 25 percent of the student in the Master's degree programs earn some form of financial support.

e. Curriculum strength

The *School-based Master's for K-12* teachers and the *Free-Choice Learning* Master's are innovative programs, in that they provide advanced learning opportunities for persons through online offerings. The Free-Choice Learning program also addresses the unique needs of persons choosing to work in non-formal science and mathematics environments. Both degree options clearly are developing a national audience for OSU programs. Online advising materials, available at the Department's website, present sequences of required coursework for both degree options. Considerable efficiency is achieved by offering coursework required for both programs during the same semester.

The School-Based Master's for K-12 option provides an excellent venue for mid-career professionals to extend their understandings of science and mathematics teaching and learning and to build leadership capacity in these fields. This degree option enrolls about 30 science/mathematics students, according to the Department faculty. This number should be considered the maximum allowable given the faculty resources allocated to the program and the demands associated with project supervision and the oral examination. Department documentation indicates that only Drs. Van Zee and Niess provide program leadership and they teach many of the program courses. They also work directly with students during the oral examination and project phases of the program. Even though the continuous enrollment of 30 students brings the program close to its carrying capacity, the program courses tend to enroll few students each semester. [Tracking trends in enrollment was made difficult by the absence of Fall 2009 course data in Table 5 of the Self-Study Report.]

The Free-Choice Learning Master's option is at the forefront of programs that prepare individuals for working in free-choice science learning environments. However, the program enrolls few students. According to the Department faculty, only 17 students are enrolled in this degree option. Moreover, considerable overlap seems to exist among the three courses that constitute the option's primary strand, SED 582, SED 583, and SED 584, and the nature of the projects (i.e., SED 506) in which students engage may need further clarification.

Regarding both the School-based and Free-Choice Master's programs, the Department faculty expressed concern about the availability of online offerings that might be used to fulfill program requirements beyond those offered through the Department. They described the lack of available online offerings as a significant limitation in both programs. **It is recommended that efforts be made to communicate program needs to other departments that offer desired courses and work begun to develop online options for students.**

The *Professional Teacher Education Master's* program prepares grades 6-12 science and mathematics teachers for public and private schools. Overall, the program is well conceived and consistent with national recommendations and standards of science and mathematics teacher education programs. Entrance into the program is facilitated through prerequisite coursework completed during a student's undergraduate degree program or in the summer prior to beginning the program. Through this cohort program, students may seek subject matter endorsements in one or more science and mathematics content specializations. The program coursework, particularly that involving school-based experiences and the preparation and enactment of two Work Samples, is commendable. Interviews with students confirmed the strength of the program's cohort model, stating that the model provides a mechanism for student support and collaboration. The requirement of a history of science or philosophy of science course is also commendable. Unfortunately, a comparable learning experience seems not to be available for mathematics education students. Also seemingly missing from the program are significant opportunities for students to learn how to work effectively with grades 6-12 students from diverse cultural backgrounds and with special physical, emotional, and learning needs. **It is recommended that:**

- **a course equivalent to history of science or philosophy of science be made available for mathematics education students; and**
- **the program should provide opportunities for all licensure students to work with 6-12 students from diverse cultural backgrounds, as well as students with special physical, emotional, and learning needs, and to incorporate information on these students into coursework.**

The admission of 20-26 students annually, as reported by Department faculty, brings into question the program's overall contribution to the State's need for grades 6-12 science and mathematics teachers. Is the program's production of teachers contributing substantially to the State's teaching population? If not, perhaps the program should be presented as a model program, one that is carefully studied by faculty and students, and

whose innovative processes and outcomes are publicized in order to inform the national discussion on science and mathematics teacher preparation.

The PhD includes coursework in research methodology and research content that one would expect in a highly-rated science and mathematics education doctoral program. The inclusion of research methodology courses outside of the department is commendable, providing students with opportunities for gaining diverse perspectives relative to quantitative or qualitative research methodologies. Another strength of the program is the emphasis on science and mathematics learning opportunities from birth to death, reflecting the three program strands—K-12, college teaching, and free-choice learning—and an emerging trend in science and mathematics education programs. Apparently missing from the program is coursework that is related to expectations associated with many science and mathematics education positions in higher education, including science and mathematics teacher education, grant writing, program evaluation, and international education. Also, the Department's emphasis on the preparation and support of grades 6-12 teachers may provide less than an attractive learning environment for doctoral students interested in science and mathematics education in the elementary grades. **It is recommended that consideration be given to adding learning experiences in science and mathematics teacher education, grant writing, program evaluation, and international education to enhance the marketability of doctoral program graduates.**

The enacted curriculum, reflecting the expertise and interests of individual faculty, was a point of concern among students in the program. Students indicated that doctoral coursework is slanted by faculty expertise and interest. This sometimes adversely impacts the students' course learning experiences. Some students felt that instructors' interests sometimes led to focusing of courses on a narrow field that was outside of the interests of the students. **It is recommended that faculty members evaluate their personal biases/strengths and assess the impact that they might have on student learning in doctoral courses.**

Moreover, faculty pointed out that two doctoral programs in mathematics education are offered at OSU, one by the Department of Science and Mathematics Education and a second by the Department of Mathematics. Conversations with the Science and Mathematics Education faculty suggest that overlap exist between the two doctoral degree options and students may be confused about the worth of the two degrees in terms of future employment. **It is recommended that the program faculty engage the OSU mathematics faculty in conversation about the relationship and overlap between the mathematics education doctoral programs offered in the two departments, with the conversation resulting in a statement that distinguishes the two doctoral degree options.**

The Department's Self-Study Report does not include information on the number of student credit hours generated by the various programs or by individual faculty members. The Department Chair indicated that Student Credit Hours are not regularly tracked, but that these data should be available from the Dean's Office of the College of Science. **It is**

recommended that the Dean's Office of the College of Science provide the Department with data on Student Credit Hour generation.

f. Quality of personnel and adequacy to achieve mission and goals

The Department faculty is highly qualified and well suited to fulfill the Department's mission to "Better understand and facilitate the variety of ways in which people of all ages and backgrounds engage in science and mathematics learning throughout their day and lifespan." In support of this mission, the faculty is distributed across the disciplines of science education and mathematics education to support graduate programs and engage in research that highlight the areas of K-12, college level, and free-choice learning within the two disciplines.

With the repositioning of the Department within the College of Education, the Department faculty is anxious to carve out an identity within this emerging unit. The recent decision to appoint Dr. Larry Flick as the Associate Dean of Academic Affairs for the reorganized College of Education should serve to reduce the anxiety and provide the Department faculty with a voice in how the College is organized and the positioning of the Department within the College.

The Department faculty should work with colleagues in the recognized College of Education to address its short- and long-term goals. Support will likely be found across departments that make up the new College for a vision of lifelong education in STEM and other program areas and for integrating culture and linguistic diversity into coursework and other student learning opportunities. In addition, the Department faculty will want to be involved in the process that leads to the selection of a new Dean for the College of Education, ensuring that the hire understands the history of the Department and its important role in positioning the College as a unit in which research and efforts to garner external funding for scholarly endeavors is highly valued and rewarded.

The Department's faculty is well positioned to provide leadership to the creation of a Center for Research on Lifelong STEM Learning. The Department's goals to establish the Center would leverage the talents of scholars across the OSU campus to build core partnerships and serve to re-conceptualize the meaning of STEM learning at OSU. Great care must be taken to consider the mission of the Department in creating the Center so as not to identify an elite group of scholars and in so doing alienate Department and College of Education faculty and students not invited to affiliate with the Center. If all Department faculty members will be invited to affiliate with the Center, as suggested on page 102 of the Department's Self-Study Report, then it may be possible to allow the Department to serve the function outlined for the Center, at least for the short-term and until the College of Education is fully operational. Faculty from OSU units could be identified as adjunct Department faculty and potential collaborators could be identified as Departmental partners. A true advantage of the Center organization would be to provide emphasis across the STEM disciplines, with attention to engineering and technology that are not noted in the Department's current science and mathematics education degree programs. Creation of the Center will likely raise OSU's profile as a leader in STEM education. **It is recommended that the Science and Mathematics Education faculty pursue the establishment of a university-wide Center for Research on Lifelong**

STEM Learning, but be mindful of the impact of Center affiliation on self-esteem and productivity of faculty and students.

g. Level and quality of infrastructure

The OSU Libraries provide more than adequate support to the Department. Faculty and students cited no problems with securing books, monographs, and journal articles needed for coursework and research. Faculty offices, classrooms, and conference rooms are located on the second floor of Weniger Hall, with a graduate student office and the shared Departmental office on the third floor. Space in Weniger Hall is marginally sufficient for the needs of the Department. Computers and other forms of technology used for instruction and research seem to be adequate for current needs. However, plans for the regular updating of these items that do not rely exclusively on the faculty's ability to secure external funds should be put in place.

The Department's classrooms, laboratories, and conference rooms are in disparate need of new furnishings and updating. Tables and chairs used by students in the Department's classrooms and laboratories are mismatched and in disrepair. Window blinds and overhead lighting fixtures in the Department's classrooms, conference rooms, and laboratories are old and some are broken. Graduate student offices, particularly those on the third floor, are in need of remodeling. Electrical and Internet cables need to be permanently mounted and heating ductwork repaired. **It is recommended that immediate attention be given to the repair and replacement of broken and dilapidated furnishings and fixtures.**

The financial resources available to support the Department seem to be adequate, in large measure due to the faculty's ability to secure external funds through grants and the income generated through online courses. According to the faculty, no funds are available from the College of Science for instructional supplies and materials and computer technology. Purchases needed to support the instructional and research missions of the Department require the use of funds from other sources. The level of support provided Department faculty and students to attend professional meetings and the sources of any support were not disclosed during the panel's site visit or in the Department's Self-Study Report, although subsequent communication revealed that there is little, if any, university support.

h. Quality of organizational support

The Department is currently positioned as a unit of the College of Science, with Dr. Larry Flick as the Chair. It has received strong support from the Dean of the College of Science, Dr. Sherman Bloomer. Evidence of this strong support includes approval for recent faculty hires, the Department's use of space in Weniger Hall, and Dr. Bloomer's decision to maintain control of all science and mathematics education faculty lines as the Department is repositioned within the College of Education. The Department faculty feels most comfortable with Dr. Flick serving as Chair and the leadership that he has provided for programs, faculty and students. As Dr. Flick has recently been named the Associate Dean of Academic Affairs for the reorganized College of Education, the

Department faculty may wish to learn more about how this new appointment will influence his role as Department Chair. Dr. Flick will want to clarify the relationship between these two roles—Department Chair and Associate Dean—and alert faculty to how his position as the Associate Dean will influence his administrative and instructional duties within the Department.

The level of organizational support provided to the Department as a unit of the College of Education is unknown at this time. While it seems reasonable to assume that the Department faculty will remain stable, it is unclear how instructor positions, those of visiting scholars, and office support staff will be situated within the new College. These matters will need to be negotiated with the new Dean of the College.

Productivity

a. Level and quality of student performance

Currently there are more than 100 graduate students, most of whom are in the master's programs. There are two MS degrees in mathematics and in science education, each of which has three concentrations: a grades 6-12 teacher licensure program and two online programs, one of which is focused on free-choice learning. There are also two doctoral programs in mathematics and science education, respectively, which combined have about 30 active students.

To indicate the level of the productivity and performance of the students, the Department's Self-Study Report listed their awards and honors for the past five years. Most of these take the form of tuition support from university sources. This support often averages over \$100,000/year, suggesting that the program's students are competitive financially with other programs.

Five members of the faculty submitted reports of student scholarly work, and the panel was not able to determine whether these works were the products of doctoral or master's students. The panel estimated that there were 32 different students who reported at least one presentation, with some students having many presentations involving multiple faculty members. It would have been helpful to have lists for individual students, indicating whether they are doctoral students or master's students. But it does appear that the faculty actively involves graduate students in their research activities.

b. Level and quality of faculty performance

Assessment of faculty performance was hindered by a lack of summary data within the Self-Study Report. For most of the categories – grants and contracts, awards and honors, and professional service and leadership – the report simply referred the reader back to the faculty vitae. Unfortunately, it is beyond the scope of the committee to provide these summary reports. **It is recommended that the Department compile summary performance data to allow for a more informed assessment of the level and quality of faculty performance.**

However, the Self-Study Report did include two measures of faculty performance. First, the Report indicated that the program faculty is ranked 9th in the nation out of 375, but checking the website revealed that (a) the 375 was for all universities offering PhD programs, and it is not clear how many Science and Mathematics Education graduate programs are represented in the 375 and (b) the z-score (-.52) presented at the website suggests that the Department's productivity rate was slightly below the mean (<http://chronicle.com/stats/productivity/page.php?year=2007&institution=3008&byinst=Go>). Nonetheless, being in the top ten in the nation among Science and Mathematics Education programs is certainly very respectable.

Second, the Self-Study Report also included a table of financial resources to support the program. The table showed that program faculty had almost \$4 million in current grants (see p. 57), which is also very respectable.

c. Viability of the scholarly community for students

The cohort model for the on-campus teacher licensure program appears to work very well. Conversations with students suggest that they are actively engaged in coursework and school-based experiences and supportive of each other.

Unfortunately, none of the online master's students called in during the scheduled teleconference, so the panel was unable to directly assess the effectiveness and needs of that community. The faculty expressed acute awareness of the relatively small number of faculty available to serve students enrolled in the free-choice learning program, and felt that more faculty lines are needed to adequately support this degree option.

The doctoral students appeared to be more disparate in their feelings of connectedness to each other and to the department. One student, a GRA, kept office space in her mentor's lab located across campus from the department, and felt somewhat isolated. This may be an endemic problem for programs that have faculty scattered across departments. Nonetheless, the graduate students seemed reasonably content, but noted three major concerns. First, a relatively few number of faculty shouldered most of the burden for the doctoral students; having a greater number of faculty available as primary mentors would provide for greater diversity of opportunity. Second, students complained about the quality of some of the lectures, observing that the faculty sometimes provided information about new learning approaches and techniques but did not always apply them. Third, stability of funding was a concern for these students. Indeed the Department Chair, Larry Flick, mentioned that there are few dedicated GTA for the doctoral students, and the rest were provided from contributing departments on an *ad hoc* basis or through grant funding secured by Department faculty. The students do appear to enjoy a fairly high level of GRA support. Of these three concerns, the panel saw the heavy burden of doctoral student supervision as a potential weakness to the program. **It is recommended that faculty monitor individual supervision loads and work to equalize the loads over the entire faculty or advocate for additional faculty lines.**

Outcomes

a. Professional viability of graduates

Doctoral students in the program have completed a variety of dissertations that represent current issues facing education in the K-12, collegiate, and community setting. They appear to be well prepared for a variety of leadership positions in their chosen fields.

The graduates of the on-campus teacher licensure master's program are often placed in local schools for their student teaching. It seems from the data presented in the Self-Study Report that many are also hired in these districts. Although the Report did not provide retention data for these teachers, judging from the experience of the Corvallis School District, there is longitudinal success for those teachers hired. **There needs to be data gathered on an ongoing basis regarding the career success for all graduates. This information should be collected and evaluated for programmatic improvement.**

b. Satisfaction of students and graduates

The doctoral students interviewed by the panel seemed satisfied with their financial support despite information provided by the College of Science when they surveyed all doctoral students. There is a clear request that the students be more involved in the decision-making processes related to financial support.

Students also noted that advising is an important consideration during the first year of doctoral work and would like to have improvements made in their advising. Students interviewed by the panel stated that perhaps the advisors are over-extended. Conversations with faculty suggested that two professors are primarily responsible for advising students before students identify major professors to supervise their examinations and dissertation work. Even with relatively light teaching loads, the burden of advising was recognized as contributing significantly to the workload of the two professors. In particular, some doctoral students lamented the lack of a daily presence with their advising professor. However they were very aware of the quality of the advisors and their positions in the "forefront" of the field. **It is recommended that the process of first year doctoral advising be studied, with the inclusion of student input, and improvements be made to the advising process based on the findings of the study.**

The doctoral students interviewed seemed to agree that some of their courses were not as engaging as they would like. The observation was that the instructors often talked about "best practices" but sometimes did not utilize these practices in their own instruction. A positive note that the students also agreed upon was the appreciation of the hands-on and research portions of their coursework. Also noted was a desire to see the coursework in the doctoral program more aligned with the actual research work the students were doing, so that these were mutually supportive.

Master's students enrolled in the 6-12 licensure option are usually with the program only a year. The review panel interviewed several of the students enrolled in this degree option, which is a partnership with the OSU College of Education. The students reported that their classes are adequate. Many teaching candidates enjoyed the school-based experience of their program and were pleased with efforts made to secure placements for them close to their homes. It was clear that the program's cohort structure was a popular strength of the 6-12 licensure option for the students. The students highly valued their relationships with one another and the professors. They were happy with the quality of their supervising teachers and the schools and classrooms in which they were placed. They unanimously reported feeling very well prepared for a teaching career.

c. Rankings/ratings

The OSU science education faculty was ranked 9 out of 375 for scholarly productivity, according to information provided in the Self-Study Report. This is evident in the amount and quality of research experience their students enjoy. However, the ranking is of all universities offering PhD programs, and it is not clear how many Science and Mathematics Education graduate programs are included in the ranking.

Recent NCATE and TSPC accreditation processes were successfully completed. There were recommendations around data collection and diversity in these reviews, which are being addressed. **It is recommended that data collection and analysis should extend beyond teacher candidates enrolled in the 6-12 licensure option and include all program graduates.** This would be especially useful for evaluating the relatively new and unique Free-Choice Learning degree options.

Conclusion

The overall recommendation of the panel is, given the pending repositioning of the Science and Mathematics Education Department within the College of Education, that the graduate program be restructured. Restructuring efforts should highlight the pivotal role of the Science and Mathematics Education Graduate Program to the formation of a research-focused College of Education and the significant value of establishing a university-wide Center for Research on Lifelong STEM Learning. Steps to improve the Program are presented in the Summary of Findings as well as the Detailed Report above and include the following:

- Work with OSU Departments to develop online variants of desirable courses for inclusion as options in the online MS degree programs.
- Encourage the development of a course for mathematics education students that is equivalent to the history of science or philosophy of science courses available to science education students.

- Provide opportunities for all licensure students to learn about and work with 6-12 students from diverse cultural backgrounds and with special physical, emotional, and learning needs into courses and school-based experiences.
- In support of the Program's doctoral degree options,
 - (a) consider adding learning experiences in science and mathematics teacher education, grant writing, program evaluation, and international education to enhance the marketability of graduates;
 - (b) encourage faculty members to evaluate their personal biases/strengths and the impact that they might have on student learning in doctoral courses;
 - (c) distinguish between the mathematics education doctoral programs offered in the Department of Mathematics and the Department of Science and Mathematics Education; and
 - (d) Establish a consistent policy for doctoral student advising based on input from students and faculty.
- Replace broken and dilapidated furnishings in classrooms and laboratories and repair electrical and Internet connections and fixtures.
- Pursue the establishment of a university-wide of Center for Research on Lifelong STEM Learning, but be mindful of the impact of Center affiliation on self-esteem and productivity of faculty and students.
- Secure data on Student Credit Hour generation from the Dean's Office of the College of Science.
- Develop a plan and secure support from the Deans of the Colleges of Science and Education to regularly update computers and other forms of technology used for instruction and research.
- Collect, analyze, and report on an ongoing basis data on completion rates, time to completion and placements of all graduate students. Also, provide annual student reviews and summary evidence of faculty performance.

Attachment A
Graduate Policies to be enforced by the COB

Graduate Policies are listed at <http://catalog.oregonstate.edu/Default.aspx?section=Graduate>

A. Program Admission (see URL <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=36>)

1. University minimum entrance requirements for graduate students including international students (degree recognition, minimum GPA, TOEFL for international students).
 - a) The TOEFL requirements for the MBA are higher than the university minimums, plus the COB has established minimums in each area that are higher than university minimums.
 - b) The current process requires that the college evaluate the candidates and accept them on the Departmental Action Form (DAF) before the graduate school initiates an evaluation of the candidate. Thus there is complete duplication of effort in this area.
 - c) We would use the same procedures as Pharmacy and Vet-Med in coordinating with Admissions and the Registrar regarding admission of students to the MBA program.
2. COB MBA Program minimum entrance requirements (GPA, GMAT, TOEFL, resume, letters of recommendation, etc.) As mentioned above, these criteria are evaluated before the candidate is accepted on the DAF and sent to the graduate school for review.
3. Proof of finances/financial certification requirements for international applicants.

B. Graduate Program policies (see URL <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=38>)

1. Policies relating to graduate majors, minors, areas of concentration and graduate certificates. The COB will only administer students seeking the MBA degree. Students pursuing the MAIS with an option in business, or pursuing a minor in business, will continue to be administrated through the major department and the graduate school.
2. Policies relating to reserving credits for graduate courses and transfer credit. All of these policies are currently coordinated with the Registrar's office.
3. Policies relating to registration requirements:
 - a) full time status, including GTA/GRA requirements and international student registration requirements
 - b) maximum load – which is currently enforced by the Registrar
 - c) continuous enrollment policies (minimum registration, leave of absence, unauthorized break in registration). Note that the MBA program is very structured and only allows one elective course. We will request a waiver of the continuous enrollment policy from the Graduate Council since it is intended for thesis and dissertation-based programs.
4. Policies relating to grade requirements, course numbers (including restrictions on use and repetition of courses) and courses graded on a non standard basis.

- a) The COB currently monitors the performance of every MBA student and has a set policy defining academic policies and satisfactory progress requirements in the MBA handbook (see URL http://www.bus.oregonstate.edu/services/graduate/mba_handbook_2009-10.pdf, page 11)
 - b) The COB currently uses our internal Status Report system to monitor the academic progress of all students enrolled in business-managed programs, including the MBA. The college intends to transition to Degree Works once it is implemented within the university. Both of these systems monitor the use of slash and blanket coursework within the program, and will provide notification when students deviate from the satisfactory progress requirements.
5. Petitions for students wishing to deviate from graduate program regulations and procedures. The COB currently uses our Graduate Program Committee to review all petitions regarding the policies and procedures for the MBA.
6. Policies and procedures relating to award of degrees and diplomas. Students would apply directly to the Registrar for graduation, similar to the process used in undergraduate programs.
7. Policies governing graduate work by faculty members, graduate student teaching and graduate appointments. The COB will continue to comply with policies established by the Graduate Council in these areas.
8. Policies relating to dismissal from the graduate program.
 - a) All academic policies and satisfactory progress requirements are defined in the MBA Handbook (see URL http://www.bus.oregonstate.edu/services/graduate/mba_handbook_2009-10.pdf, pp 11-14).
 - b) Note that dismissal from the MBA program does not necessarily mean that a student will be dismissed from the Graduate School. We have two examples of students who were dismissed from the MBA program yet remained as a non-degree graduate student within the university.
9. Participation in enforcing Student Conduct Regulations.
 - a) The COB currently works with Student Conduct for all undergraduate student conduct issues. We would work directly with Student Conduct rather than go through the Graduate School.
 - b) The COB has additional Academic and Professional Standards that were approved by the University Legal Counsel (see URL <http://www.bus.oregonstate.edu/about/professionalstandards.htm>)
10. Participation in Grievance Procedure. Appeal and grievance procedures are included in the COB Academic and Professional Standards (See URL <http://www.bus.oregonstate.edu/about/professionalstandards.htm>) and the MBA Handbook (see URL http://www.bus.oregonstate.edu/services/graduate/mba_handbook_2009-10.pdf).

C. Master's Degree Program policies (See URL <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=39>)

1. General requirements (minimum graduate credits for masters programs including thesis or research in lieu of thesis credits, graduate stand alone course requirements, slash course (400/500) limitations).

The COB currently performs audits on all MBA candidates to ensure they have met requirements for graduation. We expect this task will be performed in Degree Works in a manner similar to undergraduate degree audits.

2. Residence Requirements.
All degree requirements should be encoded in Degree Works and monitored by the COB during the graduation audit.
3. Graduate Study Program (approval, approval of any changes to program).
 - a) The current MBA program consists of 42 hours of required coursework and a minimum of 3 hours of elective. The required coursework is all stand-alone graduate credit, thus all programs will exceed the minimum requirement of at least 50% graduate stand-alone courses.
 - b) The “Program of Study” will be maintained in Degree Works. Again, 14 of the 15 courses are dictated by the degree program. The structured nature of the MBA program reduces the necessity for filing and amending a program plan of study.
 - c) If an MBA student decides to pursue a minor in another discipline, then the MBA program will coordinate with the graduate school to ensure completion of all appropriate requirements for the minor.
4. Time limits for master’s degrees.
The COB monitors the progress of each MBA candidate. We do not anticipate anyone taking longer than 5 years to complete the degree, but will petition the Graduate Council if a special situation occurs where a student will take longer than 7 years to complete the degree (consistent with current Graduate School policies).
5. Thesis requirements for master’s degrees.
The MBA program completes projects, many of which have restricted dissemination due to confidentiality and non-disclosure agreements. We currently do not send copies of the completed projects to the library or to the graduate school.
6. Final Examination requirements.
We currently comply with all policies regarding final examinations for non-thesis programs.

GRADUATE COUNCIL

April 22, 2010

2:30 pm - 128 Kidder Hall

3. MBA Degree Program Outside of the Graduate School - Ilene Kleinsorge, Dean and Jim Coakley, Associate Dean, College of Business (COB)

Loveland began by informing the Council that there have been some correspondences regarding the proposal submitted by Dean Kleinsorge to Provost Randhawa about the MBA degree program transitioning out of the Graduate School (GS). Marty Fisk prepared a response highlighting the Graduate School's current role in monitoring the MBA program.

Dean Kleinsorge proceeded by thanking the Council for giving the College of Business the opportunity to present its proposal. The MBA program is a small program. It graduates sixty students a year, with an average of ninety students in the whole program. There is a need and desire to grow the graduate student population to 20% of the total student population. The MBA has a global graduate distinction. INTO at OSU requested 50 slots in the MBA next year expecting to transition to 40 students. The COB saw the opportunity to grow and started thinking about how to ramp up the program to include the INTO students, as well as recruiting domestic students. In the early 1990's, 62% of the student population was international students. The faculty decided not to have more than 50% international. Currently, the international students form 20% of the total population. They are looking at this transition as part of the strategy to grow a robust MBA program, up to 250 students a year. They would like to eliminate redundancy. The request, as in the case of Veterinary Medicine and Pharmacy, is to take control of the processes from admissions to graduation, while maintaining and retaining the Graduate Council policies. The COB is asking for the Council's advice on how to transition the MBA program from the GS to the COB. She also indicated that Associate Dean Jim Coakley will be in charge of this transition.

Loveland reported that Provost Randhawa is funding this transition as a pilot program. Kleinsorge noted that the extra funds will be used for domestic recruitment. Jim Coakley indicated that the goal is to double or triple the student population and make the process more efficient.

Loveland wondered how to set up a matrix to evaluate the success of the program. Kleinsorge responded that a baseline will be established this May with the MBA Graduate Program Review. The new processes will be reviewed in two years. Tom Wolpert asked about the MBA accreditation process. Kleinsorge responded that accreditation reviews occur every five years. Those include a spot check of what is working and what is not working, an assurance of learning that is very vigorous, learning objectives of the program, external reviewers to judge the students, and several requirements for the faculty. The American Assembly of Collegiate Schools of

Business (AACSB) is the accreditation association which has been in existence for a long time.

Coakley reiterated that the COB monitors its MBA students, which becomes redundant with what the Graduate School performs. The faculty will continue being involved in streamlining the processes.

When asked if the course numbers will be changed from 5xx to 7xx, Kleinsorge responded that they had no intention of making this change. She also indicated that they already control the tuition, are not planning on moving from the Graduate Council as it is responsible for setting up policies for graduate programs, and the strategy is to partner with other programs, e.g. MEng. Coakley pointed out that the MBA is a non-thesis program.

Loveland pointed out that the list prepared by Fisk indicates that professional schools processes are not monitored by the Graduate School. As far as the MBA admission process, Kleinsorge noted that the COB approves the applications for admission, and then send them to the Graduate School for review. Not one application has been denied by the GS. They also do the graduation audits. Their goal is to streamline and get to the potential students in a timely manner, and respond quickly to qualified domestic students. She also indicated that she has had a conversation with Fisk regarding the difficulty in reviewing international transcripts.

Loveland proceeded by saying that other groups on campus might be interested in going this independent route. Fisk stated that there would be no problem for the COB to do their own admission, but this would not apply to other departments or colleges without an accrediting body. These are two different issues. Rick Colwell wondered if the COB was intending to articulate this plan at the upcoming MBA Program Review. Kleinsorge responded that, so far, this is just a proposal and the COB is seeking feedback. It is an opportunity for advice on the transition from the GS and on growing the MBA program. Fisk informed the Council that Dean Sally Francis' opinion is if this proposal is approved, that all the processes for the MBA should be moved out of the GS. He then pointed out that the students will not have a central point to go to and it would create some confusion. Jo Tynon wondered how many students were lost due to the current procedure done through the GS. She pointed out that the longer turnaround in the admissions process is not a good reason for moving forward with this proposal. When asked about the turnaround time for reviewing MBA applications, Rosemary Garagnani indicated that as of that day, there were 26 fall term admits, with a median turnaround of 4.5 days and an average turnaround of 6.8 days. Those admitted include both domestic and international MBA applicants.

Kleinsorge would like the opportunity to meet with the Graduate School to find the most effective way to deal with the transition, and identify best practices. More discussions followed. Once the Graduate School and the COB meet, the Council will revisit the proposal.

Adjourned 4:35 pm

Materials linked from the May 19 Graduate Council agenda.

Subject: **RE: New Areas of Concentration within the MBA Degree Program**

Theresa,

The MBA_AOCs_Commercialization and MBA_AOCs_Thesis attachments are our proposals for adding new Areas of Concentrations to the exiting MBA program. We have defined the MBA core curriculum, based on the discipline-based learning outcomes that we use for our AACSB accreditation. Our existing MBA becomes the "Commercialization" AOC. We propose adding a "Clean Technology" AOC which will focus on commercialization projects related to clean technology (very similar curriculum), and a "Research Thesis" track designed for those students who intend to continue beyond the MBA into a PhD program or a research position. This AOC uses the same core coursework and replaces the "project" with a thesis.

The MBA_AOC_Supplement attachment provides justification and implementation considerations for the new initiatives. We will continue to use our current faculty to support all three AOCs. Commercialization and Clean Technology will continue to use a three-person business-faculty committee to conduct the project defense and individual oral exam. The Research Thesis will follow the current Graduate Council guidelines regarding the structure of the committee, liaison with the Library, etc.

We currently have 28 tenure/tenure-track faculty and 14 professionally-qualified faculty who participate in delivery and advising of the MBA program. This year, we have hired 11 additional tenure-track faculty. Six are filling existing tenure/tenure-track lines that were vacant and five are growth positions funded through Provost initiatives.

Thanks,
Jim

Subject: Re: New Areas of Concentration within the MBA Degree Program

Hi Jim,

I will read over the document. I think that we can get this AOC request on the Grad Council agenda this term, probably for May 19. In the meantime, can you revise the document to either remove the Research track--if you aren't going to pursue this concentration at the moment--or create two separate documents, one with the commercialization and clean technology tracks and the other with the research track. I think that it would be easier for Council to handle them separately.

In regards to making AOCs transcript visible, I had very brief conversations with Walt and Brenda about this (separately). This is partially a matter for the Registrar whose input I'd like to have before or during a Grad Council discussion on the topic. Of course, if the faculty feels strongly that AOCs on transcripts are very important, then difficulties with programming at the Registrar's level shouldn't drive the decision. But I'd like to know how much a burden would be imposed by such a decision. As this is the time of year when the Registrar's office starts to go crazy in preparation for graduation, it

might be prudent to start conversations this summer and punt full consideration of the issue to next year's Council.

Just my thinking on the topic.

Thanks,
Theresa

On Apr 27, 2011, at 10:54 AM, Coakley, James - COB wrote:

Bruce,

We had originally submitted this as a Cat II – so our original intention was to have it reviewed by the Council. We were advised by Gary to withdraw the Cat II and submit as Areas of Concentrations using the guidelines outlined at

URL http://oregonstate.edu/ap/curriculum/policies/G_gradconc.html. This does all fit under the broader issue of having transcript-visible Areas of Concentration at the graduate level, which we started to discuss at the Council and then deferred.

Theresa,

We could probably offer the Clean Technology track under the existing MBA program. We would like to advertise and recruit for this as a specialization within the MBA, so would request that it be approved as an Area of Concentration. We would be willing to defer discussion and approval of the Research Track since that does involve a different focus.

Jim

Subject: New Areas of Concentration within the MBA Degree Program

Jim, after reviewing the request with Brenda and Marty, we conclude that your request for modifying areas of concentration could be interpreted as a major shift in the thrust of the program. The Graduate School was charged with reviewing and approving areas of concentration on behalf of the Graduate Council, but only for small changes. I am copying Theresa so that she can include your request as an item for Graduate Council review and decision.

I know that you are concerned about the heavy workload faced by the Graduate Council and hoped to avoid delays in getting in the queue for Council review and decision. My response should not be viewed as a critical response to the proposal. It is simply an attempt by the Graduate School to operate with full respect for the Faculty Senate processes and to stay within the limit of our delegated authorities.

Subject: New Areas of Concentration within the MBA Degree Program

Bruce,

The MBA_AOCs.doc attachment is our proposal for adding new Areas of Concentrations to the exiting MBA program. We have defined the MBA core curriculum, based on the discipline-based learning outcomes that we use for our AACSB accreditation. Our existing MBA becomes the "Commercialization" AOC. We propose adding a "Clean Technology" AOC which will focus on commercialization projects related to clean technology (very similar curriculum), and a "Research Thesis" track designed for those students who intend to continue beyond the MBA into a PhD program or a research position. This uses the same core coursework and replaces the "project" with a thesis.

We will continue to use the current faculty to support all three AOCs. Commercialization and Clean Technology will continue to use a faculty committee to conduct the project defense and individual oral exam. The Research Thesis will follow the current Graduate Council guidelines regarding the structure of the committee, liaison with the Library, etc.

We currently have 28 tenure/tenure-track faculty and 14 professionally-qualified faculty who participate in delivery and advising of the MBA program. This year, we have hired 11 additional tenure-track faculty, five of which are growth positions funded by the Provost initiative.

I have submitted Cat II requests for two of the new courses – BA 566 and ACTG 429/529. The other new course is currently under development – we are looking a multiple programs on campus that offer similar courses focused on the economic impact of environmental change. The most promising at this point is a partnership with Oceanography on the "Business of Climate Change", which would be team-taught by the two colleges. I expect to submit that "BA 534" course for approval over the summer.

Please let me know if you need any additional information.

Thanks,

Jim

**Supplemental Information to Support
Areas of Concentration**

Clean Technology Track

Rationale

In the past year, the College has visited with various industry representatives in renewable industries, talked with various stakeholders, and visited universities in several Asian countries. These dialogues lead us to believe that clean technology is a growth area in the Oregon economy, and that there is a growing demand for mid-level managers that understand clean technology, energy-related regulation and managerial skills.

The Clean Technology track is different from those of Portland State University (PSU) and University of Oregon (UO). Currently, PSU is offering the “MBA+” program in which there are two electives from courses throughout the university and two required business courses on sustainability strategy and environmental performance measurement (Managing Sustainable Enterprise and Metrics for Sustainable Enterprise). UO currently offers a joint degree of MBA and JD (Environmental and Natural Resources Law). In 2012, it will offer an MBA option on “Sustainable Business Practices.” A comparison of the proposed courses in our College and course contents in these two schools suggests that ours is more focused and systematic. The strength of our curriculum in this proposal is that it offers a highly integrated body of knowledge and is multi-disciplinary.

A review of IBPs recently completed in our current Commercialization MBA program demonstrates a growing demand for commercialization projects of clean technologies from business corporations and research centers/labs in universities. Over the past five years, 40 percent of the IBPs have focused on the clean technology sector. Listed at Appendix I are the IBPs that fit within our definition of the clean technology sector.

Table 1 provides a comparison of the current Commercialization program and the proposed Clean Technology program. The MBA core curriculum coursework (30 credits) is augmented with two Clean Technology Specific courses (ACTG 524 and BA 534), three Clean Technology Integrated Business Project (CT-IBP) -specific courses (BA 566, BA 567 and BA 568) and one elective course.

Implementation Considerations

The CT-IBP will be managed by John Turner, who will teach the BA 566, BA 567 and BA 568 course sequence. The projects will focus on the commercialization of clean technologies. CT-IBP projects will be identified by the IBP Selection Committee (Tom Dowling and John Turner) as they gather IBP proposals from our various constituents (tech transfer office and business partners). Prior to MBA orientation in the fall, we will work to identify which incoming IBP students will be placed in the CT-IBP track (vs the regular 9-month commercialization track). CT-IBP students will participate in the regular MBA orientation, with special break-out sessions for project presentations.

The proposed class schedule, presented below, is designed to support the 4-term CT-IBP and allows for increased flexibility for the multiple year students to complete the MBA Core Curriculum courses

Planned MBA Class Schedule for 2011-2012

| | | | |
|------|--------|--------|--|
| Fall | Winter | Spring | |
|------|--------|--------|--|

New Course Proposal for MBA Clean Technology Track

BA 566. Clean Technology Commercialization [3]

Students will exercise commercialization concepts on recently awarded Clean Technology patents. Students will learn a process and tools to assess the business viability of a technical idea, and to develop the best business approach for commercialization.

BA 534: Environmental Economics [3] (Please note – this course is still under development)

This course will outline theory and apply concepts related to basic tools of economics used to analyze sustainable natural resources and environmental issues from an economic standpoint. The course is built on the premise that problems arising from the unsustainable use of natural resources can be traced, completely or in part, to failures in market mechanisms or institutions. The course will use lecture format, videos, and in-class group exercises to learn about how economists apply various tools to analyze and address problems relating to the understanding and management of environmental problems and issues.

ACTG 524 Environmental Accounting and Reporting [3]

Covers economic and accounting issues relating to corporate social responsibility and environmental performance. Designed to foster an understanding of how the measurement of social and environmental performance contributes to business goals and strategies. The course provides a framework to help understand the nature, purpose and importance of decision-useful and decision-facilitating CSR and environmental information. PREREQ: BA 528

Proposed new electives for all MBA tracks

BA 5XX. Management of Technology [3]

Examines the technical and managerial challenges of leading innovation in high-tech enterprises and industries. Particular consideration is given to the forces affecting the nature and rate of technological innovation and the managerial alternatives available to both established and entrepreneurial organizations. The course explores sources of innovation, including acquisitions and alliances, real options thinking for investing under uncertainty, managing new ventures and developing effective processes and organizational structures for driving sustainable results.

BA 5XX. Emerging Technologies [3]

This course discusses emerging technologies, how they evolve, how to identify them and the effect of international, political, social, economic and cultural factors on them. Topics covered in the course include accuracy of past technology forecasts, how to improve them, international perspective on emerging technologies, future customer trends and forecasting methodologies such as monitoring, expert opinion, trend analysis and scenario construction.

BA5XX: Environmental Law and Public Policy [3]

Explores fundamental legal and policy issues in environmental law, clean energy and sustainability. Covers federal statutes including the Clean Air Act; the Clean Water Act; CERCLA (the Superfund law); the National Environmental Policy Act; and the Endangered Species Act. Exposes students to the principal approaches to environmental law (litigation, command and control regulation, market incentives, and providing information), as well as to the challenges of setting environmental policy goals and choosing policy targets. Provides exposure to environmental management systems and risk management, environmental permitting, agency aspects of energy projects and contract issues related to buying and selling contaminated property

Research Thesis Track

Rationale

Although our current, IBP-focused MBA program has a number of outstanding characteristics; *e.g.*, it embodies the entrepreneurial emphasis of the College and provides a clear and distinctive character and integrity that sets it apart from many other programs, the program lacks opportunities for students and faculty to engage in joint research. With the demand for MBA education growing, we can expect at least some future students to be interested in engaging in research with COB faculty. This Area of Concentration is meant to offer those students and faculty an opportunity to engage in research within the framework of the MBA program.

Implementation Considerations

Duration: It is intended that the Research Thesis Track be completed over a two-year period. Students will ideally complete the Research Methods and Directed Readings and Conference courses, and defend their thesis proposal, in the first year and engage in the actual thesis research during the second year. There is no preferred sequencing of the non-thesis-related course work, although we recommend an emphasis on thesis work in the second year.

Quality Assurance: Quality of the non-thesis part of program is implicitly assured by the adoption of the core curriculum coursework within the existing MBA program. Quality of the thesis part is assured by means of two measures:

- The discipline-specific part of the BA505 Reading & Conference course is assembled and approved by the discipline faculty and the student's mastery of the material is assured by the associated exam.
- Quality of the thesis (BA503) is assured through the thesis committee, including the graduate school representative.

Resource Requirements: The proposed Research Thesis Track adds two credits to the overall MBA program. However, it replaces nine credits of IBP that require direct faculty teaching resources with ten academic credits that do not require these direct teaching resources.

- Assuming limited graduate student enrollment, the existing BA 596 (Marketing Research Practicum) fulfills the Research Methods requirement without additional faculty cost.
- The Reading & Conference credits will be absorbed by the faculty advisor as an 'investment' in the research engagement.
- The nine credits of current IBP courses (BA560/7/8) will no longer be required and will be absorbed in the Reading & Conference (four credits) and the six thesis credits. As in the case of Reading & Conference, the thesis credits will be absorbed by the faculty advisor.

Hence, relative to the faculty resources required for the IBP-focused program (nine credits), the Research Thesis Track generates ten credits without requiring any (billed) faculty resources.

The Research Thesis Track students must be associated with a thesis committee that has at least two members

of the major (Business). This implies that for each thesis, a business faculty member must be found as the other representative of the 'major' on the thesis committee member. The third committee member—the graduate representative—must be recruited from the University at large. Of course, this assumes that graduate representatives can be found, but since they can be found for all other thesis projects in the University, we see no reason why they should not be found for an MBA Thesis committee. As in the case of Reading & Conference and the Thesis, thesis advisors assume committee membership as part of their advising responsibilities and graduate representatives are not compensated.

The only additional resource claim that applies is space and basic computing facilities. It is common academic practice that research graduate students have their 'own' space where they can work and conduct their research. Our current MBA students have a dedicated common room and a dedicated computer lab with eight computers. These facilities tend to get very crowded and are clearly unsuited to accommodate the future growth of the program. We are in the design phase for the new College of Business Building (Austin Hall). The current concept is to ensure limited but acceptable spatial and computing resources be incorporated into the design that can be dedicated to Research Thesis students.

Table 2: Comparison of current (IBP-based) and proposed Research Thesis programs

| | Current (IBP-based) | Thesis Area of Concentration |
|-------------------------------------|---|---|
| Concept | Commercialization | Students and faculty engage in joint research |
| Integrative component | IBP | Thesis |
| Nominal duration | 9 months | Approximately 2 years |
| Exit hurdle | IBP & final examination | Thesis & final examination |
| Core course credits | 33 credits | 33 credits |
| (From) existing | <ul style="list-style-type: none"> • BA528 Financial and Cost Analysis • BA531 Law & Ethics for New Ventures & Emerging Technologies • BA540 Corporate Finance • BA543 Financial Markets • BA550 Organization Management • BA555 Practical Business Analysis • BA561 Supply Chain Management • BA562 Project Management • BA569 Advanced Strategic Management • BA572 Advanced Information Systems • BA590 New Product Development | <ul style="list-style-type: none"> • BA528 Financial and Cost Analysis • BA531 Law & Ethics for New Ventures & Emerging Technologies • BA540 Corporate Finance • BA543 Financial Markets • BA550 Organization Management • BA555 Practical Business Analysis • BA561 Supply Chain Management • BA562 Project Management • BA569 Advanced Strategic Management • BA572 Advanced Information Systems • BA590 New Product Development |
| Area of Concentration added credits | NA | BA 596 Research Methods or equivalent ¹ (4 credits). If equivalent already completed; replace with elective. |
| Project / Thesis | 9 credits (IBP BA560/7/8) | BA503 Thesis (6 credits) Prereq: BA505 Reading & Conference (4 credits) |

| | | |
|--------------------------------------|------------|---------------|
| Electives | 3 credits | None required |
| Total credits | 45 credits | 47 credits |
| Individual or group project / thesis | Group | Individual |

¹ Students may substitute another 'research methods' course for BA 596 with approval of the thesis committee. The preferred OSU substitutes are

- SOC515. Understanding Social Research (very limited access due to existing demand and prereqs, and
- IE594. Research Methods in Engineering.

Also, some students will already have previous training in research methods. Some OSU-based courses which qualify as such training and which may substitute for BA596 are the following:

- AHE562. Introduction of Research Methods in Education
- ANTH595. Anthropological Research Design
- COMM 514. Communication Research Methods
- DHE594. Research Methods in Design and Human Environment
- PSY560. Advanced Social Research Methods
- SED612. Quantitative Research Design and Critical Analysis

All other cases may be evaluated on an individual basis.

Appendix I. Past IBPs Related to the Clean Technology Sector

| Year | Project Name | Description |
|------|--|---|
| 2006 | Earth Renewal Solutions | product providing an animal waste processing method that increases efficiency and facilitates compliance of livestock operations with government regulations |
| | Precision Agriculture Sensing | a GPS equipped handheld device that accurately and instantly measures water, nitrogen and chlorophyll content in any live deciduous plant leaf enabling customers to design efficient fertilization and irrigation plans that meet their unique needs |
| | Sideways Solutions | offers customers a natural alternative to killing germs in the household. Its product, Grapes of Wrath Disinfectant (GOW), is made from a patented blend of non-toxic ingredients that are deadly to germs, but safe for humans and pets |
| 2007 | Harmony Estates | residential homebuilders that focus on the construction of environmentally sustainable communities |
| | Griswold Water Technologies | provides chemical-free, energy-efficient water treatment solutions |
| | Farm Fuels | sells bio diesel production systems to farmers who have or can grow enough oil feedstock plants to make bio diesel fuel primarily for their own consumption |
| | Small Modular Array Light-water Reactor (SMALR): | a new innovative nuclear reactor design that provides clean, safe, and reliable nuclear power in a conveniently sized modular package |
| 2008 | Organic Herbicide Systems | use the latest scientific advances to provide the most effective, low cost, sustainable bio-herbicide to the organic farming industry |
| | Diatom Semiconductors | make it possible to have affordable household Light Emitting Diode (LED) bulbs that generate quality light |
| | Integrated Pole Solutions | provides utility companies with a solution that mitigates the three main issues facing their utility poles; the use of fewer and less toxic chemicals in treating wood poles; safe and sturdy poles that provide reliable power; and economical electricity for rate payers |
| 2009 | InnoGreen | offered selective organic bioherbicides that will enable grass seed farmers, organic farmers, and golf course managers to effectively control grass weeds in an environmentally friendly way |
| | CommonSensors | offers a complete technical solution to track and assure the quality of temperature perishable products during transportation and storage by monitoring temperature in real time |
| | CLS Xchange | developed a dealer based market for buying and selling recycled nylon |
| | Caspian Cooling Technologies | manufactures and markets central processing unit (CPU) active liquid cooling products based on novel microchannel technology for compact electronic cooling |
| 2010 | Cellulosic Ethanol Production | system that will increase ethanol yield by 30-40% from low cost feed stocks such as straw and corn stalks |
| | Chemical Bath Deposition Process for Solar Panel Manufacture | a new and inexpensive method for depositing thin films for CIGS solar cells over large areas |
| | High Efficiency Solar Energy Collection | enables the supply of high efficiency, small form-factor solar collection panels that are ideally suited for urban environments where space is at a premium |

| | | |
|--|--|--|
| | Novel Biodiesel Production Process | a ground-breaking continuous catalytic system for converting triglycerides and alcohols to biodiesel fuel |
| | Viscoelastic Thermal Compression of Wood | process for manufacturing a high density wood product from low cost woods such as hybrid poplar which would decrease our dependence upon mature Douglas-fir forests in the Pacific Northwest for load-bearing building materials |

Graduate Area of Concentration

Research Thesis

The Research Thesis Area of Concentration (Research Thesis track) offers MBA students and COB faculty with joint research interests an opportunity to engage in research as part of completing the requirements for the MBA degree program. This two-year alternative program includes the 33 credit MBA Core Curriculum plus 14 course and thesis credits. These 14 course and thesis credits include:

- one four-credit course in Research Methods (BA 596). Students may substitute another 'research methods' course for BA 596 with approval of the thesis committee.
- one four-credit BA 505 Reading & Conference consisting of the following:
 - Study of a discipline-specific core literature, determined by the discipline of the student's advisor.
 - Study of a topic-specific literature tuned to the research topic to be addressed in the thesis and determined by the student in collaboration with the thesis advisor.
 - Submission and defense of written Thesis proposal.
- BA 503 Thesis (6 credits).

Table 1. Additional Learning Outcomes for the Research Thesis Track

| Upon completion of Research Thesis track, students will be able to: | Coursework |
|---|-------------------------------|
| Design, execute and report on business research problems and their solutions. To achieve this outcome, students must demonstrate an ability to: | |
| • Inventory the existing academic literature regarding a specific research topic | BA 596, BA 505 |
| • Formulate research questions | BA 596, BA 505 |
| • Formulate a research plan for investigating the research question | BA 596, BA 505 |
| • Execute the research plan; <i>i.e.</i> , collect and analyze the data | BA 503 Thesis |
| • Report on the research findings, both in oral and written formats | BA 503 Thesis |
| • Conduct scholarly activities in an ethical manner | BA 596, BA 505, BA 503 Thesis |

Thesis Faculty Committee: OSU Graduate Council Policy states that graduate level thesis students must be guided by a thesis committee consisting of three or four members. For students pursuing the MBA degree, the committee is made up of the thesis advisor, one other committee member from inside the major field and a Graduate Council representative, the latter selected by the student. If the student intends to pursue a minor in another discipline, a fourth committee member must represent the minor.

Graduate Areas of Concentration

Business administration

The MBA program represents a broad, yet responsive, general management curriculum with an entrepreneurial focus that crosses the functional disciplines of business and is enhanced by advanced management and contemporary topics course work. The MBA program is open to both business and nonbusiness undergraduates. Its advanced management emphasis creates practical value-added content for all students.

The MBA program is intended to provide the broad knowledge and skills necessary to become competent and responsible managers.

Persons interested in the MBA Program should write: Graduate Business Programs, College of Business, Bexell 209, OSU, Corvallis, OR 97331-2603, or e-mail: osumba@bus.oregonstate.edu.

The MBA program is an accelerated management program with an experiential component and an emphasis on innovation, sustainability, technology and entrepreneurship. The program is designed to provide our graduates with the necessary skills to solve complex business problems and to successfully compete in the business marketplace. Foundation courses include such fundamentals as Business Law, Accounting, Finance, and Marketing. Advanced courses explore contemporary business topics in depth, with an emphasis on sustainability, technology, entrepreneurship and innovation in the global economy. Course work is completed in tandem with the experiential component of the program, the Integrated Business Project (IBP).

With the IBP, student teams are tasked with creating fact-based, research-driven business plans for the companies of their choice. Whether developing an entrepreneurial venture from scratch or providing an established business with new direction and growth potential, students become active in their own education. As the cornerstone of the College of Business MBA, the IBP program has a lasting impact, not only on students, but on commerce and industry in Oregon.

The MBA program is an intensive, fast-paced program designed to guide students through a rigorous foundation and core curriculum, while allowing them to pursue their interests and push their boundaries. Throughout, students learn to build teams, integrate disciplines, work under pressure and multitask. In short, the same skills they will rely on when they leave campus.

Proposed New Catalog Content:

MBA Program

The MBA program represents a broad, yet responsive, general management curriculum that crosses the functional disciplines of business and is enhanced by advanced management and contemporary topics coursework. The MBA program is available to students who have completed an undergraduate degree program -- both business and nonbusiness majors. The MBA program is intended to provide the broad knowledge and skills necessary to become competent and responsible managers. The program is designed to provide graduates with the necessary skills to solve complex business problems and to successfully compete in the global business marketplace. Throughout, students learn to build teams, integrate disciplines, work under pressure and multitask. In short, the same skills on which they rely when they leave campus.

The MBA curriculum is based on three levels of course work: foundation knowledge, advanced management topics, and the experiential learning component in the form of an Integrated Business Project (IBP) or research-based thesis. Students without an undergraduate degree in business must first complete a series of undergraduate foundation knowledge courses or the “Essence of Business” summer series. The foundation knowledge coursework provides the fundamental components of business background considered necessary to succeed in subsequent graduate level courses.

Undergraduate foundation knowledge courses

ECON 201 Introduction to Microeconomics (4)
MTH 241 Calculus for Management and Social Science (4)
BA 211 Financial Accounting (4)
BA 213 Managerial Accounting (4)
BA 233 Legal Environment of Business (2)
BA 276 Introduction to Statistical Inference (2)
BA 360 Introduction to Financial Management (4)
BA 351 Managing Organizations (4) or BA 352 Managing Individual and Team Performance (4)
BA 357 Operations Management (4)
BA 390 Marketing (4)

Essence of Business Summer Series

BA 513: The Essence of Business - Business Legal Environment (3)
BA 514: The Essence of Business - Sustainable Business Operations (4)
BA 515: The Essence of Business - Accounting and Finance (4)
BA 516: The Essence of Business - Management and Marketing (4)

The core curriculum of the MBA program is comprised of advanced management courses designed to add significant incremental learning and experiences beyond the foundational knowledge courses and offer students in-depth exposure to current topics in business. The core curriculum is comprised of 33 credit-hours of required coursework used to provide coverage of the MBA Program Core Learning Outcomes derived from accreditation standards of the Association to Advance Collegiate Schools of Business (AACSB). The learning outcomes for the core curriculum and the coverage by corresponding coursework are provided in Table 1:

Table 1. Learning Outcomes for MBA Core Curriculum

| Upon completion of the core curriculum within the MBA program, students will be able to: | Foundation Knowledge Coursework | Advanced Management Coursework |
|--|--|---------------------------------------|
| Understand, analyze and apply accounting information to facilitate strategic decision making | (BA 211 and BA 213) or BA 515 | BA 528 |
| Identify and use analytical tools to measure firm value and manage firm growth through strategies such as mergers, acquisitions, international expansion, and new venture development. | BA 340
or BA 360
or BA 515 | BA 540
BA 543 |
| Demonstrate awareness of economic, environmental, political, ethical, legal and regulatory contexts of global business practice | BA 230
or BA 233
or BA 513 | BA 531 |
| Discuss and analyze how value is created through the integrated production and distribution of goods, services, and information. | BA 357
or BA 514 | BA 561
BA 531 |
| Understand and apply conceptual frameworks and skills required for interpersonal effectiveness as leaders and members of teams and organizations. | BA 351
or BA 352
or BA 516 | BA 560,
BA 562 |
| Use statistical and management science tools to support organizational decision making. | BA 276
or BA 514 | BA 555 |
| Master core marketing concepts and effectively communicate and apply the ideas, strategies and tactics that result from them. | BA 390
or BA 516 | BA 590 |
| Recognize the role of and utilize information technologies as they influence the structure and processes of organizations and economies, and as they influence the roles and techniques of management. | None | BA 572 |
| View and evaluate business plans and activities in an international context. | None | Integrated throughout coursework |

Advanced Management Courses in MBA Core Curriculum

BA 528 Financial and Cost Analysis (3)
 BA 531 Legal Aspects of Tech & E-Bus (3)
 BA 540 Corporate Finance (3)
 BA 543 Financial Markets & Institutions (3)
 BA 550 Organization Management (3)
 BA 555 Practical Business Analysis (3)
 BA 561 Supply Chain Management (3)
 BA 562 Managing Projects (3)
 BA 569 Advanced Strategic Management (3)
 BA 572 Advanced Information Systems (3)
 BA 590 New Product Development (3)

The cornerstone of the MBA program is the experiential learning component which integrates the functional-area coursework throughout the program. The experiential learning component varies depending on the Area of Concentration.

Persons interested in the MBA Program should write: Graduate Business Programs, College of Business, Bexell 209, OSU, Corvallis, OR 97331-2603, or e-mail: osumba@bus.oregonstate.edu.

Graduate Areas of Concentration

Commercialization

The Commercialization Area of Concentration (track) emphasizes innovation, technology commercialization and entrepreneurship to prepare graduates to assume leadership roles in emerging business organizations. The cornerstone of the Commercialization track is the Integrated Business Project (IBP) that serves as the primary tool to integrate the curriculum across functional courses throughout the program and requires students to learn practical business tools by creating and delivering research-driven business plans that focus on the commercialization of new technologies. Most of these technologies come from the OSU Technology Transfer Office or industry partners (ONAMI, OSHU, HP, *etc.*). The IBP has evolved to be the prime distinguishing feature of the Commercialization MBA program at Oregon State University. The Learning Outcomes for the Commercialization track are presented in Table 2.

Table 2. Additional Learning Outcomes for the Commercialization Track

| Upon completion of the Commercialization track, students will be able to: | Coursework |
|---|---|
| Create, build and manage innovative, socially responsible, and sustainable technology-intensive enterprises in a global business environment. To achieve this outcome, students must demonstrate an ability to: | |
| • Develop an investor-ready business plan | IBP (BA560/567/568) |
| • Present a compelling argument for funding | IBP (BA560/567/568) |
| • Formulate strategies to be competitive in an international business environment | BA 569 and IBP (BA560/567/568) |
| • Evaluate the implications of applying concepts of sustainability, ethics and social responsibility to managerial decisions | Core curriculum and IBP (BA560/567/568) |

Advanced Management Courses in Commercialization Track

BA 560 Venture Planning (3)

BA 567 ST/ Colloquium (3)

BA 568 Integrated Business Project (3)

Clean Technology

The Clean Technology Area of Concentration (track) within the OSU MBA program prepares students with a theoretical knowledge of business, entrepreneurship, innovation, commercialization processes, and environmental economics that enables them to apply such knowledge to develop a business proposal for a selected project within the clean technology sector. For the purposes of this track, we define the clean technology sector as a diverse range of products, services and processes including technologies in:

- Alternative energy, such as wind, solar, biofuels, geothermal, tidal power and others;
- Energy storage, including fuel cells, advanced batteries, hybrid systems and others;
- Energy management and transmission, including smart-grid technologies;
- Energy efficiency, including lighting, buildings, glass and others;
- Advanced recycling;
- Water and wastewater;
- Transportation logistics and structures;
- Manufacture, marketing and use of sustainable, natural resources-derived materials such as wood, bamboo, straw and other plant-based goods.
- Manufacturing including advanced packaging, monitoring and control, smart production and others;
- Agriculture including natural pesticides, land management and others.

The Clean Technology track is a one-year program (48 credit hours) with four terms. To achieve the MBA Core and Clean Technology specific learning outcomes, the track consists of a series of ten core curriculum courses (30 credits) augmented with two Clean Technology specific courses (6 credits), three Clean Technology Integrated Business Project (CT-IBP)-specific courses (9 credits) and one elective course (3 credits). The CT-IBP project is a four-term, nine-credit capstone project that integrates the knowledge and skills acquired in the core curriculum courses and allows student to apply them to a real-world business problem. The learning outcomes for the Clean Technology track are presented in Table 3 below.

Table 3. Additional Learning Outcomes for the Clean Technology Track

| Upon completion of Clean Technology track, students will be able to: | Coursework |
|---|--------------------------------|
| Create, build and manage innovative, socially responsible, and sustainable technology-intensive enterprises in a global business environment. To achieve this outcome, students must demonstrate an ability to: | |
| <ul style="list-style-type: none"> • Apply screening tools and the technology commercialization process to develop a business proposal for a selected clean technology project | IBP (BA566/567/568) |
| <ul style="list-style-type: none"> • Present a compelling argument for funding | IBP (BA566/567/568) |
| <ul style="list-style-type: none"> • Formulate strategies to be competitive in an international business environment | BA 569 and IBP (BA566/567/568) |
| <ul style="list-style-type: none"> • Understand core principles and technologies shaping the clean-technology industry | ACTG 524, BA 534 |

Advanced Management Courses in Clean Technology Track

ACTG 524 Environmental Accounting and Reporting (3) (NEW)

BA 534 Environmental Economics (3) (NEW – replaces BA 543 in the Core Curriculum)

BA 566 Clean Technology Commercialization (3) (NEW)

BA 568 Integrated Business Project (3)

Materials linked from the May 19, 2011 Graduate Council agenda (item #3).

From: "McComb, Brenda" <Brenda.McComb@oregonstate.edu>

Date: May 3, 2011 5:23:07 PM PDT

To: "Harvey, Marie" <Marie.Harvey@oregonstate.edu>

Cc: "Khanna, Sunil" <skhanna@oregonstate.edu>, "Filtz, Theresa" <theresa.filtz@oregonstate.edu>, "Garagnani, Rosemary" <Rosemary.Garagnani@oregonstate.edu>

Subject: **Dr. German Escobar's application for admission into OSU's MPH Program**

Dear Marie,

I have discussed German's case with Sunil, Rosemary, Becky Warner, and Theresa Filtz. This seems a precedent setting decision, so Theresa and I agreed that we would like to receive Grad Council guidance before I make a decision on German's admission. Sunil summarizes the situation below. Apparently there are strong feelings about situations like this on the Graduate Council.

Could you please work with Theresa to schedule a time to present the situation and see if the Council wishes to change policy? Thanks so much.

Brenda

Dear Brenda,

At our last meeting, we discussed briefly about Dr. German Escobar's application for admission into OSU's MPH Program. Just to provide a synopsis of this case –

Dr. Escobar's application was deemed ineligible because his medical degree from Colombia is not a Título de Licenciatura, Título de Ingenier, or Título Profesional, Therefore, it was concluded that Dr. Escobar does not hold a degree equivalent to a US bachelors degree and, therefore, is not eligible for application to the graduate program.

I believe there is a case to be made that Dr. Escobar's medical degree can be seen as equivalent to a bachelor's degree in the Colombian education system. In Colombia (see first scanned attachment), there are two ways that an individual can complete an equivalent to an undergraduate education and prepare himself/herself for graduate education. To make this somewhat comprehensible, please see below a quote from the AACRAO Edge database on the overview of the Colombian educational system:

Admission to universities requires a bachillerato and an entrance exam...There are 75 public and private...universities...and 90...university institutions. Coursework at this level is measured in unidades de labor academica/ULA (academic work units). The first level of studies (licenciatura) is 4-5 years long and students are awarded a Titulo de Licenciado (Title of Licentiate) after earning at least 3200 ULAs. The Titulo Profesional (Professional Title) is awarded after the minimum coursework and defense of a thesis. Law, engineering, medicine and dentistry programs are 5 years. Graduate programs require a Titulo de Licenciado or a Titulo Profesional and an entrance examination for admission.

Once students complete their graduate education, they receive a Titulo de Especialista. On the educational ladder attached, you will see that both the four year Titulo de Licenciado and the Titulo Profesional lead to the Titulo Especialista. Please note also that under the Titulo Profesional there are several professional degrees listed. One of those degrees, Titulo de Ingeniero, is listed on the Graduate School website as meeting admissions requirements for graduate study at OSU. It's unclear here why one professional degree would be acceptable when another isn't.

http://oregonstate.edu/dept/grad_school/country_reqs.php

(You will need to choose Colombia from the drop down list to view requirements)

In addition, to the educational structure discussed here, the minimum GPA required for graduate applicants is a 3.5 out of 5.0. Dr. Escobar received a cumulative GPA of 4.22 which, according to AACRAO Edge, is equivalent to an "A" average. Much of the coursework taken also appears to be public health-oriented.

I would, therefore, request that the Graduate School reconsider its assessment of Dr. Escobar's eligibility. I am also requesting Dr. Marie Harvey (Chair, Public Health) to send you her comments/recommendation on Dr. Escobar's application.

Please let me know if you have any questions or need further information.

Sincerely,

Sunil

"Trees have a curious relationship to the subject of the present moment. There are many created things in the universe that outlive us, that outlive the sun, even, but I can't think about them. I live with trees." Annie Dillard

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☐ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☒ Reorganization -- moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Title of Proposal:
**Reorganize the College of Health & Human Sciences
Into the College of Public Health & Human Sciences**

Effective Date:
July 1, 2011

I certify that the above proposal has been reviewed and approved by the appropriate Department and College committees:

 3-4-11
Chair, Design & Human Environment

 3/7/11
Dean, Health & Human Sciences

 03.02.11
Chair, Human Development & Family Sciences

 3/4/11
Chair, Nutrition & Exercise Sciences

 3/2/11
Chair, Public Health

**Abbreviated Category I Proposal to
Reorganize the College of Health & Human Sciences
Into the College of Public Health & Human Sciences**

Executive Statement

This Abbreviated Category I proposal reorganizes the College of Health & Human Sciences into the College of Public Health & Human Sciences. In so doing, the Departments of Human Development & Family Sciences, Nutrition & Exercise Sciences, and Public Health have been dissolved and reorganized into the School of Biological & Population Health Sciences and the School of Social & Behavioral Health Sciences. The Department of Design & Human Environment remains a department in the College; it has a strategic plan to become a School of Design & Human Environment and align with a different college, which will be presented in a subsequent Abbreviated Category I proposal.

The College is also pursuing accreditation by the Council on Education for Public Health (CEPH) as a college of public health. If the application to become a CEPH-accredited college of public health is successful, accreditation will take effect in 2014.

**Abbreviated Category I Proposal to
Reorganize the College of Health & Human Sciences
Into the College of Public Health & Human Sciences**

**CPS Tracking #: 81646
March 2011**

Institution: Oregon State University
Proposing college: College of Health & Human Sciences
Date submitted: March 4, 2011
Proposed effective date: July 1, 2011

A. Title of the proposed instructional, research, or public service unit. For name changes, give both the current and proposed names. Describe the reason(s) for the proposed change.

Current name of the College and its academic units

The College of Health & Human Sciences is currently organized into four academic units:

- Department of Human Development & Family Sciences
- Department of Nutrition & Exercise Sciences
- Department of Public Health
- Department of Design & Human Environment

Proposed name of the College and its academic units

The College will be renamed the College of Public Health & Human Sciences and will be organized into three academic units:

- School of Social & Behavioral Health Sciences
- School of Biological & Population Health Sciences
- Department of Design & Human Environment

Through this Abbreviated Category I proposal, we are proposing to create a College of Public Health & Human Sciences, which will consist of the School of Biological & Population Health Sciences, the School of Social & Behavioral Health Sciences, and the Department of Design & Human Environment. Approval of the reorganization proposed in this Abbreviated Category I has been conducted by votes of the faculty in each of the academic units, with the outcome being overwhelmingly in favor of the proposal.

The College of Health & Human Sciences (CHHS) is pursuing accreditation by the Council on Education for Public Health (CEPH) as a college of public health, which will be named the College of Public Health & Human Sciences (CPHHS). If the application to become a CEPH-accredited college of public health is successful, accreditation will take effect in 2014.

To be a CEPH-accredited college of public health, the College must meet or exceed program standards in five core areas of public health: biostatistics, epidemiology, health promotion & health behavior, health management & policy, and environment, safety & health. In addition, a public-health perspective is to be integrated into each of the college's academic units. The five public health core areas are currently programs within the Department of Public Health, but in an integrated college of public health, the five programs cannot reside in a single department. In addition, OSU's organizational guidelines require that academic units have at least 20 faculty members, and none of the core public health program areas meets OSU's minimum size standard to become a stand-alone academic unit. To simultaneously meet

the CEPH-accreditation requirement to integrate public health programs throughout the College while meeting the University's academic unit-size requirement, the departments of Public Health (PH), Human Development & Family Sciences (HDFS), and Nutrition & Exercise Sciences (NES) will be dissolved and reorganized into two schools: the School of Biological & Population Health Sciences (BPHS) and the School of Social & Behavioral Health Sciences (SBHS).

New college name:

- **College of Public Health & Human Sciences**

New school names:

- **School of Biological & Population Health Sciences**
- **School of Social & Behavioral Health Sciences**

Terminated college/departmental names:

- **College of Health & Human Sciences**
- **Department of Human Development & Family Sciences**
- **Department of Nutrition & Exercise Sciences**
- **Department of Public Health**

The Department of Design & Human Environment (DHE) has developed a strategic plan to become a School of Design & Human Environment that will be aligned with another OSU college and division. An Abbreviated Category I has been drafted that presents the program composition and college affiliation of the proposed School of DHE. It also presents a business plan that will allow DHE to grow to more than 20 faculty by 2013. The Department of DHE will maintain its affiliation with the CPHHS until the Abbreviated Category I establishing the School of DHE is submitted and approved.

B. Location within the institution's organizational structure. Include "before" and "after" organizational charts (show reporting lines all the way up to the Provost).

Departments and academic programs within the current CHHS:

Department of Human Development & Family Sciences

Human Development & Family Sciences (BS)*

Options:

Child Development

Human Development & Family Sciences, General

Human Services

Human Development & Family Studies (MS, PhD)

** This degree is offered at both the Corvallis and Cascades campuses.*

Department of Nutrition & Exercise Sciences

Athletic Training (BS)

Exercise & Sport Science (BS)

Options:

Applied Exercise & Sport Science
Fitness & Nutrition
Physical Education Teacher Education
Pre-Therapy & Allied Health
Nutrition (BS)
Options:
Dietetics
Nutrition & Health Sciences
Restaurant/Foodservice Management
Exercise & Sport Science (MS, PhD)
Nutrition (MS, PhD)

Department of Public Health

Public Health (BS)
Options:
Health Management & Policy
Health Promotion & Behavior
Public Health (MPH, PhD)
Concentrations:
Biostatistics (MPH only)
Environment, Safety & Health (MPH, PhD)
Epidemiology (MPH only)
Health Promotion (MPH only)
Health Promotion & Health Behavior (PhD only)
Health Management & Policy (MPH, PhD)
International Health (MPH only)

Department of Design & Human Environment

Apparel Design (BS)
Interior Design (BS)
Options:
Interior Design
Housing Studies
Merchandising Management (BS)
Design & Human Environment (MA, MS, PhD)

Schools, Department and academic programs within the proposed CPHHS:

School of Social & Behavioral Health Sciences

Human Development & Family Sciences (BS)*
Options:
Child Development
Human Development & Family Science, General
Human Services
Public Health (BS)
Options:
Health Management & Policy
Health Promotion & Behavior

Human Development & Family Studies (MS, PhD)

Public Health (MPH, PhD)

Concentrations:

Health Promotion (MPH only)

Health Promotion & Health Behavior (PhD only)

Health Management & Policy (MPH, PhD)

** This degree is offered at both the Corvallis and Cascades campuses.*

School of Biological & Population Health Sciences

Athletic Training (BS)

Exercise & Sport Science (BS)

Options:

Applied Exercise & Sport Science

Fitness & Nutrition

Physical Education Teacher Education

Pre-Therapy & Allied Health

Nutrition (BS)

Options:

Dietetics

Nutrition & Health Sciences

Restaurant/Foodservice Management

Exercise & Sport Science (MS, PhD)

Nutrition (MS, PhD)

Public Health (MPH, PhD)

Concentrations:

Biostatistics (MPH only)

Environment, Safety & Health (MPH, PhD)

Epidemiology (MPH only)

International Health (MPH only)

Department of Design & Human Environment

Apparel Design (BS)

Interior Design (BS)

Options:

Interior Design

Housing Studies

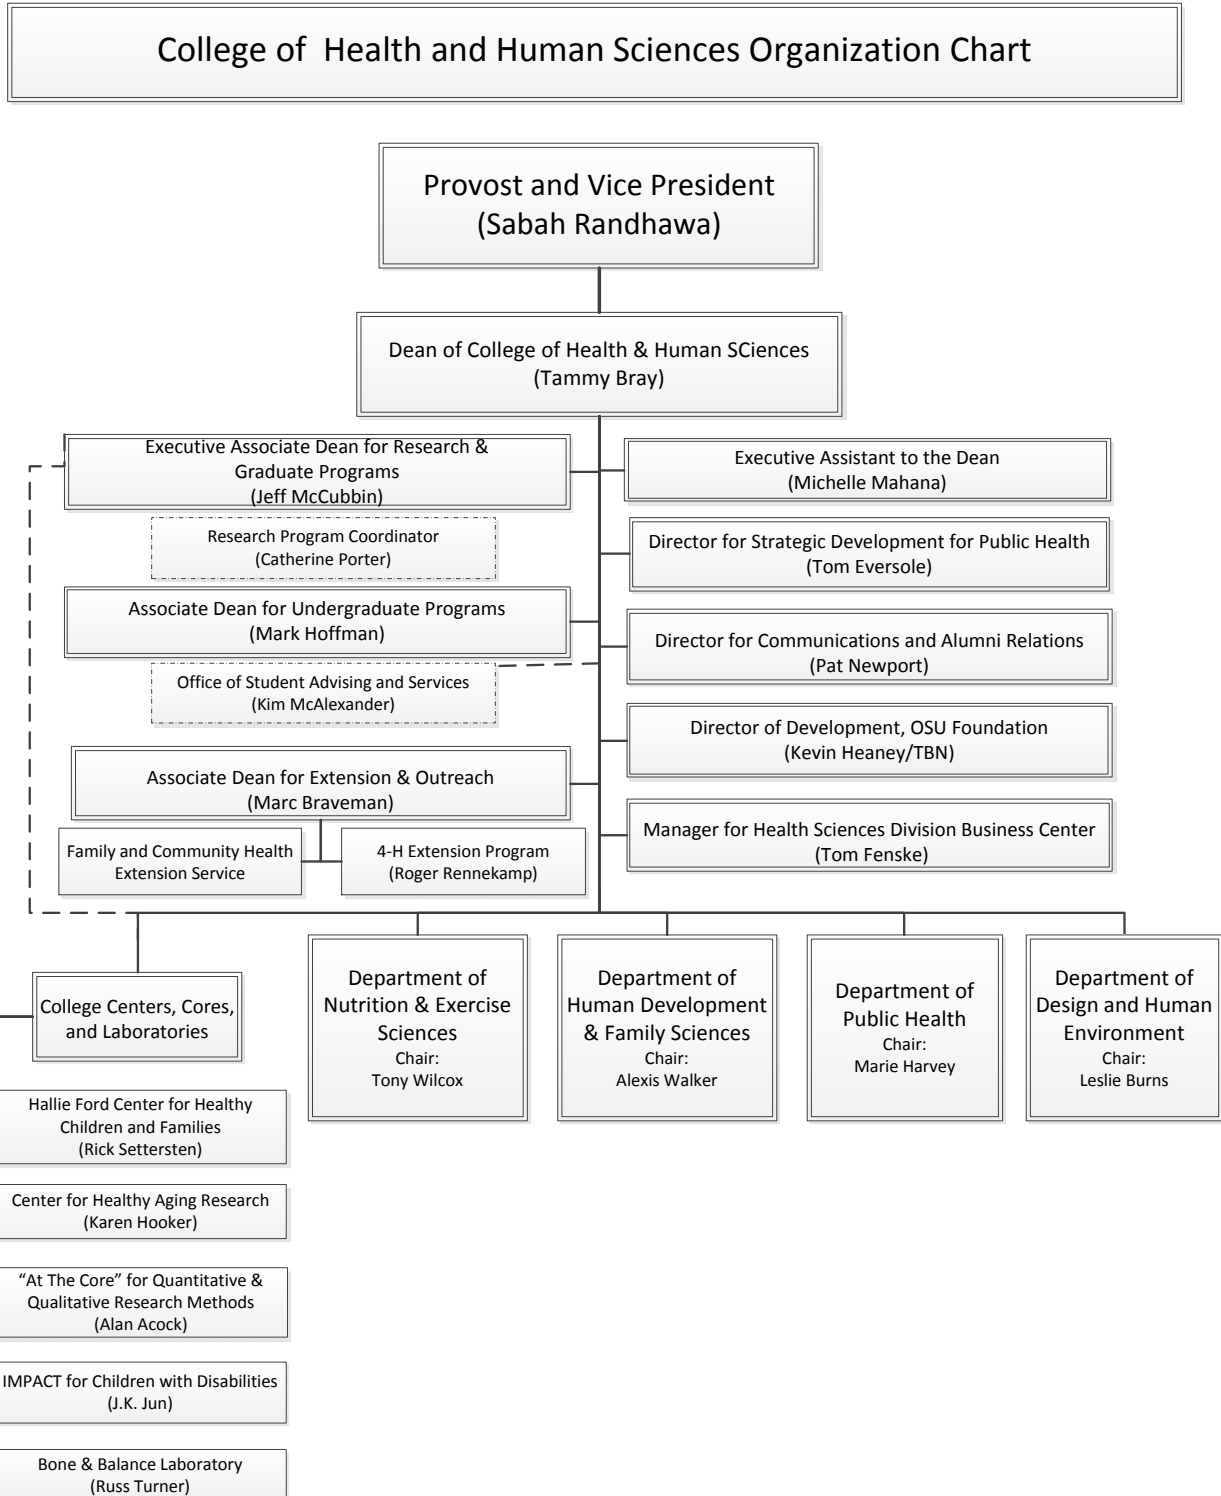

Merchandising Management (BS)

Design & Human Environment (MA, MS, PhD)

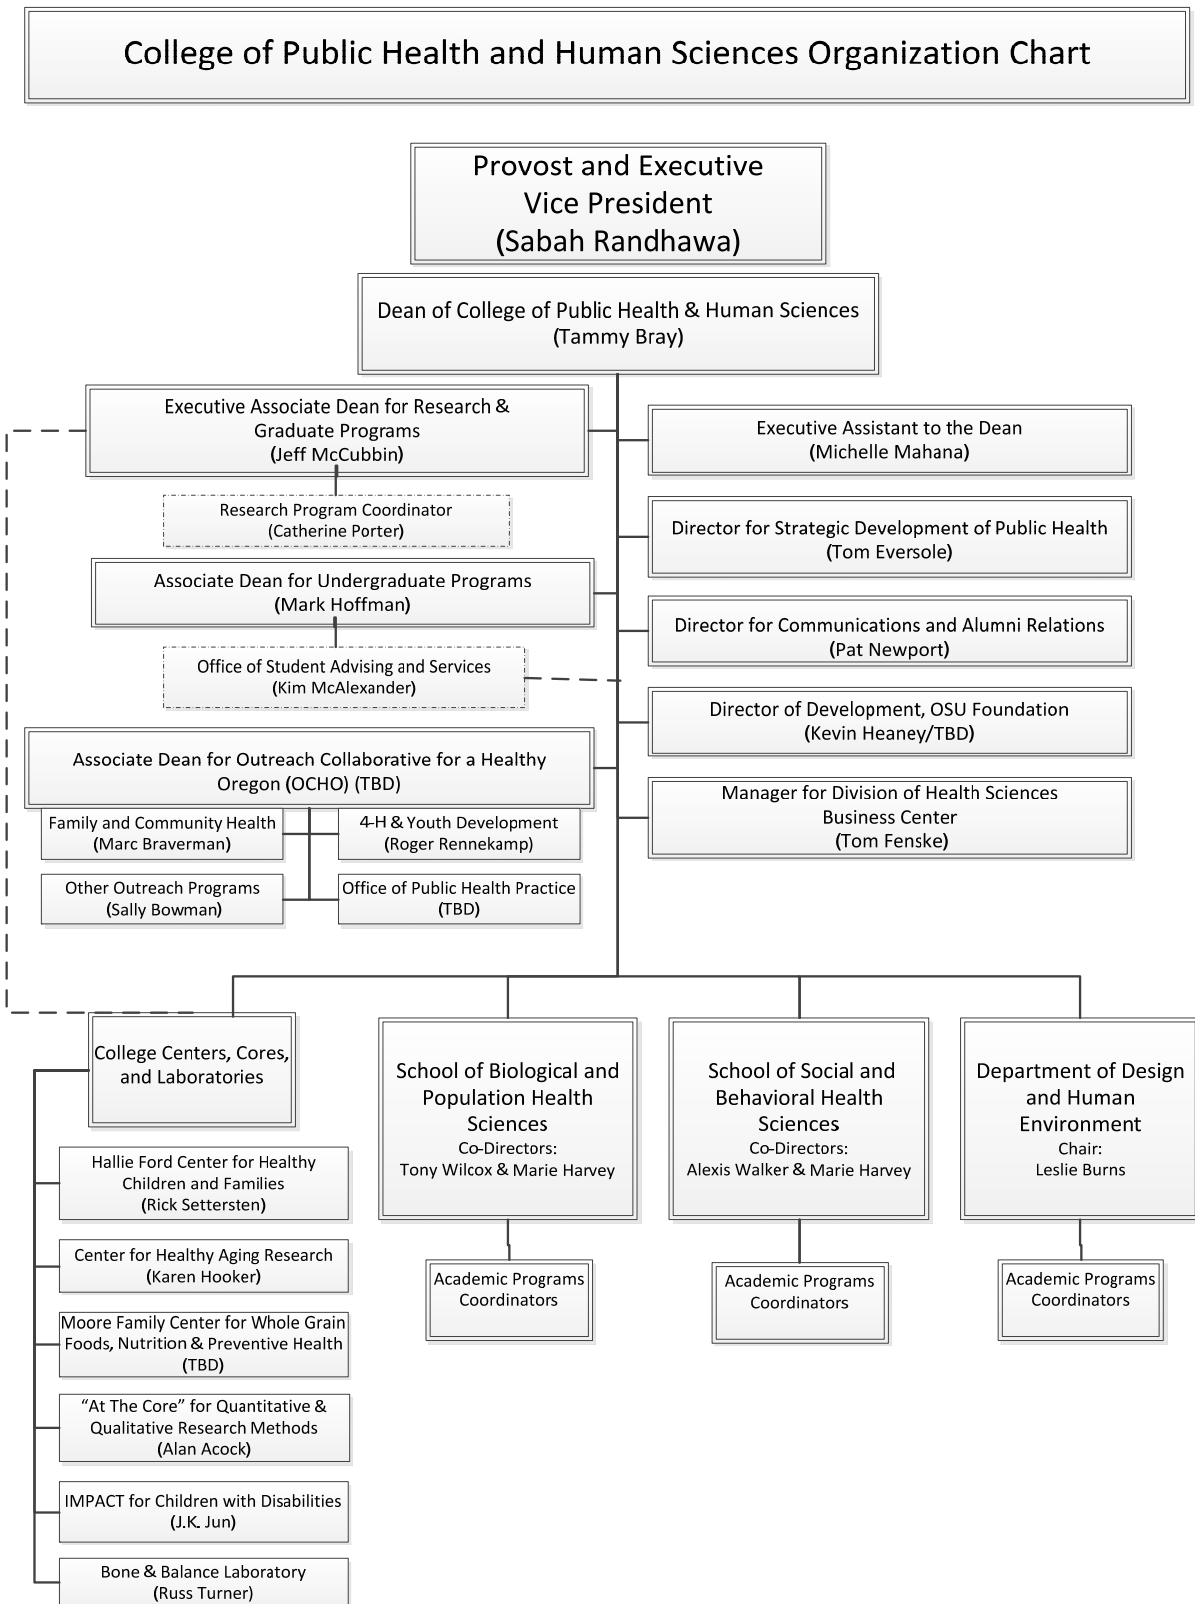

The current and proposed organizational charts are presented on pages 5 and 6.

(continued on page 7)

Current Organizational Chart

Proposed College of Public Health & Human Sciences Organizational Chart

1. Configuration of programs in BPHS, SBHS, and DHE

As described in Section A above, CEPH-accreditation requirements and OSU's organizational guidelines directed decisions by which the HDFS, NES and PH Departments were reorganized into the Schools of BPHS & SBHS. In this Section, the rationale for the configuration of programs within the two schools is provided, which is followed in Section 2 by a description of the process by which faculty input, engagement, and support occurred in the development of the reorganization proposal. See Appendix C for a description of the rationale for naming the schools within CPHHS.

When reconfiguring the programs in HDFS, NES, and PH into two schools, multiple alignments and configurations with collaborative and integrative potential were conceivable. Therefore, a guiding principle in the decision-making process was that, with whichever proposal that advanced, school and program boundaries will be permeable and collaboration among faculty across boundaries will be fostered and encouraged. As is described below, collaboration across schools and programs is structurally embedded in the delivery of the Public Health undergraduate and graduate degrees.

School of Social & Behavioral Health Sciences (SBHS)

When the College of Education (COE) was reorganized in Fall 2009, the Department of Youth Development Education was moved from COE to CHHS, and the faculty joined the Department of HDFS. In the School of SBHS, the academic programs of Human Development & Family Sciences, Health Promotion & Health Behavior, and Health Management & Policy share a focus on behavioral sciences as applied to human health and social and health policy. More specifically, the new SBHS brings together disciplines in public health and human sciences to better understand how behaviors, programs and policies operate at the individual, family, community and societal levels to improve health and quality of life. Examples of cross-disciplinary work among programs that constitute the SSBHS include: interventions that maximize aging in place, prevention programs to enhance the health of children and youth, and development of policies to advance the health of children of immigrants and address health disparities among disadvantaged populations.

School of Biological & Population Health Sciences (BPHS)

The programs in BPHS bring together disciplinary approaches that link individual biology and behavior to population and environmental health: Biostatistics; Environment, Safety & Health (ESH); Epidemiology; Exercise & Sport Science (EXSS); Nutrition (NUTR), and International Health. Epidemiology and biostatistics (E&B) programs are frequently united in schools of public health, and they will be joined as one program within the BPHS. Being complementary applied human science programs was the rationale that brought the EXSS and NUTR programs together into one department at OSU over five years ago. The new BPHS brings together disciplines in public health and human sciences to better understand how environmental factors including food, water, physical activities, carcinogens, pollution, biohazards, etc, influence the development and progression of biological disease. This information is coupled with quantitative methods (epidemiology and biostatistics) to better understand the causes of population-level disease as well as methods of intervention and prevention. Examples of cross-disciplinary approaches among programs that constitute the BPHS include: nutritional epidemiology, physical activity epidemiology, and environmental and occupational health (e.g., workplace ergonomics). Environment, nutrition, and epidemiology are important areas of study in emerging global health issues today and, therefore, logically associate within the proposed school.

Faculty hires in the CPHHS will be designed to build additional collaborative bridges between programs within the Schools and College.

Department of Design & Human Environment

Becoming an accredited College of Public Health & Human Sciences will alter the alignment between the mission and goals of the College and those of DHE. Whereas there was a desire for continued collaborations among faculty in DHE and other units in CPHHS related to health and the built environment, the exploration of alternative organizational alignments for DHE was supported. The Department of DHE will be affiliated with the CPHHS until it is established as a School of DHE. Conversations are ongoing as to the most effective long-term college/divisional alignment for the School of DHE. A subsequent Abbreviated Category I proposal will be submitted to create and align the School of DHE.

2. Development Process for the Proposed Structure

The strategic plan to become an accredited college of public health originated at the administrative level of the CHHS, under the leadership of Dean Bray. The CHHS Administrative Team developed the vision for creating a college of public health that is enriched through collaboration with the instructional, research and Extension programs in human sciences that exist at OSU. In addition, the Administrative Team drafted organizational structure options that incorporated the collaborative and interdisciplinary vision for the new college while also being compliant with CEPH-accreditation requirements and OSU organizational guidelines.

During the 2009-10 academic year, CHHS faculty were updated on the evolving proposal for the CPHHS and the options being considered for its organizational structure through periodic college-wide meetings, department-level discussions in faculty meetings, and regular email updates from the Dean. Several open forums for faculty input were held in May 2010, from which a recommendation arose for the creation of a Faculty Transition Team (FTT) to work with the Administrative Team in finalizing the proposal for the CPHHS and assisting in its implementation. Representative faculty from HDFS, NES, and PH, including faculty with Extension appointments, volunteered and were selected to form the FTT (FTT members are listed in Appendix A). For its work on the creation of the CPHHS, the Administrative Team was renamed the Administrative Transition Team (ATT). The ATT and FTT held several retreats during the summer of 2010, from which the proposal for a 2-school organizational structure emerged (schools as yet unnamed). The vision and rationale for the 2-school model was presented to faculty and staff at the College-wide meeting in September, and the administrative leadership for the schools was announced.

Throughout the Fall 2010 and Winter 2011 terms, faculty meetings were held within each of the two schools to name the respective schools and to develop faculty-governance policies (e.g., promotion and tenure review procedures, curricular development and approval procedures). The rationale for the school names is presented in Appendix C. In each school, faculty have developed and approved promotion and tenure (P&T) procedures that constitute its P&T committee by faculty election through a process that ensures equitable program representation. Curricular procedures were developed to ensure a central role of program faculty in curricular development while also achieving interdisciplinary input in keeping with the affiliation of programs in the respective schools. It is intended that each school will have Program Coordinators, similar to what currently exists in the departments, whose responsibilities will include matters pertaining to program curriculum and its implementation.

Appropriate FTE will be assigned and instructional release time granted for the Program Coordinator role; these details are still being developed.

A proposal to create a School of Design & Human Environment has been part of the strategic plan for the Department of Design & Human Environment since 2004, conditional on additional sources of revenue. Within DHE, targeted faculty hires, increased research infrastructure, and growth in instructional capacity have been put into place. Dean Bray and DHE Faculty have been in conversation with deans from the College of Business and the College of Engineering about alignment of the proposed School of Design & Human Environment within the “Healthy Economy” division. In addition, a proposal has been submitted to implement differential tuition for DHE majors.

C. Objectives, functions (e.g., instruction, research, public service), and activities of the proposed unit.

Impact on undergraduate programs

No changes are being proposed in undergraduate majors or minors. All undergraduate majors and minors will continue to be offered.

Undergraduate majors with Fall 2010 enrollment:

School of Social & Behavioral Health Sciences

| | |
|--|------------|
| Human Development & Family Sciences | 785 |
| Pre-Health Management & Policy* | 54 |
| Health Management & Policy (HMP)* | 60 |
| Health Promotion & Health Behavior (HPHB)* | 186 |
| Public Health* | <u>111</u> |
| Total | 1,196 |

* The HMP and HPHB majors were combined into one Public Health major in June 2010; the enrollments in HMP and HPHB reflect students completing those degrees, while the Public Health enrollment reflects newly enrolled majors and students who migrated to the new major from HMP or HPHB.

School of Biological & Population Health Sciences

| | |
|--------------------------|------------|
| Exercise & Sport Science | 1,022 |
| Athletic Training | 44 |
| Pre-Athletic Training | 1 |
| Nutrition | <u>280</u> |
| Total | 1,347 |

Department of Design & Human Environment

| | |
|--------------------------|------------|
| Pre-Apparel Design | 91 |
| Apparel Design | 87 |
| Pre-Housing** | 4 |
| Housing Studies** | 45 |
| Pre-Interiors | 70 |
| Interior Design | 124 |
| Merchandising Management | <u>265</u> |
| Total | 686 |

** Interior Design and Housing Studies majors were consolidated beginning Fall 2010.

Undergraduate program coordinators will administer the undergraduate majors in each school. The curriculum for the Public Health majors is predominantly delivered by faculty in SBHS, but faculty in BPHS also teach courses in the undergraduate Public Health degree program.

As an accredited college of public health, students in the academic disciplines within the CPHHS shall obtain a broad introduction to public health, which includes familiarity with the basic principles and application of epidemiology as well as an understanding about how their discipline-based specialization contributes to achieving the goals of public health. Meeting this accrediting requirement will entail some curricular revisions, such as the creation of an introduction to public health course that will be taken by undergraduate students in the College. Such a course is consistent with a national effort to include public health content in the general education curriculum for baccalaureate degrees. In light of the relevance of the public health perspective to modern issues and understanding, the introductory public health course would also be appropriate for consideration for inclusion in OSU's Baccalaureate Core. Faculty within the proposed schools are meeting to consider and propose options regarding how this criterion will be met. Any curricular change proposed to meet the accrediting requirement (new course, course revision, or program requirement revision) will follow School and College curricular procedures, as well as the Category II approval process.

Impact on Undergraduate Advising

Undergraduate advising will continue to be conducted by the College's centralized Advising Office, so there will be no effect on student access to timely and effective academic advising.

Impact on Undergraduate Admissions

There will be no change in admission procedures to the undergraduate majors as a result of College reorganization. The College currently enrolls 3,229 undergraduate students (Fall 2010), which is the 4th-highest undergraduate enrollment among OSU colleges. The Exercise & Sport Science and Human Development & Family Sciences majors have the 3rd and 6th-highest enrollments, respectively, among OSU undergraduate degree programs. All majors in the College have experienced steady growth in enrollment, and that growth is expected to continue.

Impact on Graduate degree programs

No changes are being proposed for graduate degree programs. All of the current graduate degrees will continue to be offered.

Graduate degree programs with Fall 2010 enrollment:

School of Social & Behavioral Health Sciences

| | |
|--|----|
| Human Development & Family Studies (MS, PhD) | 34 |
| Public Health (MPH, PhD) | * |

School of Biological & Population Health Sciences

| | |
|------------------------------------|----|
| Exercise & Sport Science (MS, PhD) | 58 |
| Nutrition (MS, PhD) | 13 |
| Public Health (MPH, PhD) | * |

* There is a combined total of 128 graduate students in the Public Health graduate program, the 4th-highest enrollment among OSU graduate degree programs

Graduate program coordinators will administer the graduate programs in each school. The requirement for an integration of a public health perspective into the curriculum of the academic disciplines within the accredited CPHHS applies also at the graduate-program level. Therefore, through seminars or coursework, the graduate programs in the College must ensure that all graduate students obtain a broad introduction to public health, which includes familiarity with the basic principles and application of epidemiology as well as an understanding about how their discipline-based specialization contributes to achieving the goals of public health. As with the undergraduate curricula, faculty will consider and propose course options that will be submitted through College and then OSU curricular procedures.

Outreach and Engagement

The Outreach Collaborative for a Healthy Oregon (OCHO) will be home to all of the outreach and engagement programs of the proposed OSU College of Public Health & Human Sciences. These include the Extension Family and Community Health Program, Extension 4-H Youth Development Program, KidSpirit, Team Oregon, and Public Health Practice. The goal of OCHO is to deliver programs and catalyze partnerships that focus on community-based solutions to public health and human development issues. Faculty affiliated with OCHO will have their academic homes in one of the three schools in the reorganized College of Public Health & Human Sciences.

D. Resources needed, if any: personnel, FTE academic, FTE classified, facilities and equipment.

The rationale for reorganization into a College of Public Health & Human Sciences is strategic. The budgetary impact of reorganization will be minimal, entailing expenditures associated with letterhead and signage conversion, and CEPH accreditation-related expenses. Budget Outline Forms are attached.

E. Funding sources: state sources (institutional funds - state general fund, tuition and fees, indirect cost recoveries), federal funds, other funds as specified.

There will be no change in the sources of funding with the reorganization of the College of Health & Human Sciences into the College of Public Health & Human Sciences.

F. Relationship of the proposed unit to the institutional mission

With aspirations to become one of America's top-10 Land Grant Institutions, OSU began laying the foundation for a college with a focus on public health in 2002. Establishing an accredited CPHHS in Oregon was proposed in September 2007 and adopted as an institutional goal in March 2009. Improving Human Health and Wellness (Healthy People) emerged in OSU Strategic Plan 2009 as one of three signature areas of distinction to be achieved along with Advancing the Science of Sustainable Ecosystems (Healthy Planet) and Promoting Economic Growth and Social Progress (Healthy Economy). To that end, the Division of Health Sciences, consisting of CHHS and the OSU Colleges of Pharmacy and Veterinary Medicine, was established. Deans of the three colleges and their faculty recognized the opportunity to transform CHHS into a professional college of public health as a forward-thinking and collaborative approach to achieving their Division's goal for Healthy People.

The following mission and vision statements have been developed for the proposed College of Public Health & Human Sciences:

MISSION

Inspired by our mission as a leading land-grant university, we create synergy in teaching, research, and outreach to develop the next generation of globally minded public health and human sciences professionals. Through interdisciplinary research and innovative curricula, we advance knowledge, policies, and practices that improve population health in communities across Oregon and beyond.

VISION

Lifelong health and well-being for every person, every family, every community.

G. Long-range goals and plans for the unit (including a statement as to anticipated funding sources for any projected growth in funding needs).

Teaching: Deliver world-class education in public health and human sciences that improves health and human experience by advancing public health and human science knowledge, policies, and practice.

Research and Creative Activity: Become a national leader in conducting trans-disciplinary, translational research and creative activity in public health and human sciences.

Service: Establish a system of Extension Public Health that networks County Extension Offices with Local Health Departments throughout Oregon to provide consultation and technical assistance for public health practice improvement.

H. Relationship of the proposed unit to programs at other institutions in the state.

Oregon is the only west coast state without a school or college of public health. The proposed change in name and structure is required for the College to become accredited as a College of Public Health & Human Sciences. OSU is the only university in Oregon that offers bachelors, masters, and doctoral-level degree programs in public health. OSU is the only institution in Oregon that provides Masters of Public Health (MPH) education in all five disciplines required for accreditation as a college of public health. OSU is the only university west of the Rockies to offer bachelors through doctoral degrees in Design & Human Environment specialty areas. OSU offers the only accredited bachelor's degree in dietetics (Nutrition) in Oregon, and has one of only two accredited dietetic internship programs in the State (the other being at Oregon Health & Sciences University).

Portland State University (PSU), Oregon Health & Sciences University (OHSU), and OSU are the participating institutions in the accredited Oregon MPH (OMPH) Program. As noted above, OSU is the only institution in Oregon that provides MPH education in all five disciplines required for accreditation as a college of public health. PSU provides education in two of the MPH disciplines (Health Promotion & Health Behavior and Health Management & Policy). The School of Medicine and School of Nursing at OHSU offer a hybrid Epidemiology and Biostatistics MPH track, and the School of Nursing also offers an MPH track in Primary Health Care & Health Disparities.

Transition of CHHS to CPHHS and ultimate withdrawal from the OMPH Program will not jeopardize OSU's accreditation or prevent MPH tracks at OHSU and PSU from continuing and remaining accredited

under the OMPH unit of accreditation. Discussions among OSU, PSU, and OHSU at the dean, provost and president levels have clarified the intent and ability of each institution to continue to provide public health degrees. A collaborative plan for OSU transitioning to an accredited CPHHS and for the OMPH transitioning to a two-institution program without OSU has been arranged with the OMPH leadership and CEPH, the accrediting body.

Continuity in the Human Sciences programs (Design & Human Environment, Human Development & Family Sciences, and Nutrition & Exercise Sciences) leaves relationships with other programs in Oregon intact and unchanged.

I. If the program is professionally accredited, identify the accrediting body and discuss how the proposed change may affect accreditation.

The major goal of reorganization of the CHHS is to become an accredited college of public health. To this end, an application to CEPH has been submitted to gain approval to proceed with the self-study process that establishes the basis for accreditation.

The current MPH degree offered by the Department of Public Health is accredited as part of the OMPH collaborative described in Section H above.

The other accredited programs offered in the College will not be impacted by reorganization and by accreditation as a college of public health. The accredited programs are:

- Athletic Training (BS), now offered by NES and will be offered by the Exercise & Sport Science program within BPHS; accredited by the Commission on Accreditation of Athletic Training Education
- Dietetics option of the BS in Nutrition and the Dietetics Internship (post-baccalaureate program), now offered by NES and will be offered by the Nutrition program within BPHS; accredited by the Commission for Accreditation for Dietetics Education of the American Dietetics Association
- Human Services option of the BS in Human Development & Family Sciences, now offered by HDFS and will be offered by the HDFS program within SBHS; accredited by the Council for Standards in Human Service Education

Appendix A. Composition of the Administrative and the Faculty Transition Teams

Health & Human Sciences Administrative Transition Team

Tammy Bray, Dean
Jeff McCubbin, Executive Associate Dean
Alexis Walker, Chair, Human Development & Family Sciences
Tony Wilcox, Chair, Nutrition & Exercise Sciences
Marie Harvey, Chair, Public Health
Leslie Burns, Chair, Design & Human Environment
Tom Eversole, Director of Strategic Development
Marc Braverman, Associate Dean, Extension and Outreach; Program Leader, Family & Community Health
Roger Rennekamp, Program Leader, State 4-H Youth Development
Sally Bowman, Extension and Outreach
Kim McAlexander, Head Adviser
Pat Newport, Marketing & Outreach
Michelle Mahana, Executive Assistant to the Dean
Karen Hooker, Director, Center for Healthy Aging Research
Rick Settersten, Director, Hallie Ford Center for Healthy Children and Families

Health & Human Sciences Faculty Transition Team

Mary Arnold, 4-H & Youth Development
Viktor Bovbjerg, Public Health
Chunhuei Chi, Public Health
Kathy Gunter, Nutrition & Exercise Sciences
Mark Hoffman, Nutrition & Exercise Sciences
Melinda Manore, Nutrition & Exercise Sciences
Leslie Richards, Human Development & Family Sciences
Maret Traber, Nutrition & Exercise Sciences
Anthony Veltri, Public Health

Appendix B. Faculty in the College of Public Health & Human Sciences

(Instructors and professorial-rank, full-time, by unit)

School of Social & Behavioral Health Sciences

Alan Acock, PhD, Distinguished Professor of Family Science; Knudson Endowed Chair in Family Research & Policy
Carolyn Aldwin, PhD, Professor, Human Development & Family Sciences
Mary Arnold, PhD, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Carolyn Ashton, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Shahrnaz Badiie, MS, Instructor, Human Development & Family Sciences
John Baggott, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Stephanie Bernell, PhD, Associate Professor, Health Management & Policy
Lynette Black, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Virginia Bourdeau, MS, Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Sally Bowman, PhD, Professor, Extension Family & Community Health, Human Development & Family Sciences
Jeanne Brandt, MS, Professor, Extension Family & Community Health, Human Development & Family Sciences
Marc Braverman, PhD, Professor, Program Leader, Extension Family & Community Health, Human Development & Family Sciences
Candace Brey, MAT, Senior Instructor, Human Development & Family Sciences
Barbara Brody, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Suzi Busler, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Joseph Catania, PhD, Professor, Health Promotion & Health Behavior
Donna Champeau, PhD, Associate Professor, Health Promotion & Health Behavior
Amelia Cobarrubias, MS, Instructor, Human Development & Family Sciences
Saarah Cofer, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Janice Cowan, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Dana Crawford, MS, Instructor, Human Development & Family Sciences
Inge Daeschel, MS, Instructor, Human Development & Family Sciences
Jamie Davis, BS, Instructor, Extension Family & Community Health, Human Development & Family Sciences
Woody Davis, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Patricia Dawson, MS, Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Peggy Dolcini, PhD, Associate Professor, Health Promotion & Health Behavior
Debra Driscoll, MS, Professor, Extension Family & Community Health, Human Development & Family Sciences
Karen Elliot, PhD, Instructor, Health Promotion & Health Behavior
Joan Engeldinger, MS, Instructor, Extension 4-H Youth Development, Human Development & Family Sciences
Brian Flay, PhD, Professor, Health Promotion & Health Behavior
Robin Galloway, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Kathy Greaves, PhD., Senior Instructor, Human Development & Family Sciences
Jeremy Green, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Doug Hart, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences
S. Marie Harvey, DrPH, Professor & Co-Director, Public Health
Wendy Hein, MS, Senior Instructor, Extension 4-H Youth Development, Human Development & Family Sciences
Karen Hooker, PhD, Professor, Human Development & Family Sciences
Maureen Hosty, MS, Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Sharon Johnson, MS, Associate Professor, Extension Family & Community Health, Human Development & Family Sciences
Joy Jones, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences
Nancy Kershaw, MS, Professor, Extension 4-H Youth Development & Extension Family & Community Health, Human Development & Family Sciences
Vanessa Kingensmith, MS, Instructor, Extension 4-H Youth Development, Human Development & Family Sciences

Mike Knutz, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Marilyn Lesmeister, PhD, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Shannon Lipscomb, PhD, Assistant Professor, Human Development & Family Sciences

Dennis Linn, PhD, Instructor, Human Development & Family Sciences

Maggie Livesay, BS, Instructor, Extension 4-H Youth Development, Human Development & Family Sciences

Kate MacTavish, PhD, Associate Professor, Human Development & Family Sciences

Mario Magaña, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Anne Manlove, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Anne Mannerling, PhD, Instructor, Human Development & Family Sciences

Tracy Martz, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Megan McClelland, PhD, Associate Professor, Human Development & Family Sciences

Wendy McKenna, Instructor, Human Development & Family Sciences

Lori McGraw, PhD, Instructor, Human Development & Family Sciences

Patricia Moran, PhD, Associate Professor, Human Development & Family Sciences

Janet Nagele, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Chris Names, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Cindy Osterland, MS, Senior Instructor, Extension 4-H Youth Development, Human Development & Family Sciences

Judi Peters, BS, Instructor, Extension 4-H Youth Development, Human Development & Family Sciences

Roger Rennekamp, PhD, Professor, Program Leader, Extension 4-H Youth Development, Human Development & Family Sciences

Leslie Richards, PhD, Assistant Professor, Human Development & Family Sciences

Nina Roll, BA, Instructor, Extension Family & Community Health, Human Development & Family Sciences

Pamela Rose, PhD, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Jenny Rudolph, MPA, Instructor, Extension Family & Community Health, Human Development & Family Sciences

Debera Schreiber, MA, Assistant Professor, Extension 4-H Youth Development & Extension Family & Community Health, Human Development & Family Sciences

Candace Scott, MS, Instructor, Human Development & Family Sciences

Nancy Seifert, PhD, Assistant Professor, Health Management & Policy

Rick Settersten, PhD, Professor, Human Development & Family Sciences

Carole Smith, MS, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Joanne Sorte, MS, Senior Instructor, Human Development & Family Sciences

Lynn Steele, MPH, Instructor, Extension Family & Community Health, Public Health

Alexandra Steiner, Instructor, Extension Family & Community Health, Public Health

Sheryl Thorburn, PhD, Associate Professor, Health Promotion & Health Behavior

Cesiah Vega, MS, Instructor, Extension Family & Community Health, Public Health

Jacquie Volkers, MS, Instructor, Extension Family & Community Health, Public Health

Sam Vuchinich, PhD, Associate Professor, Human Development & Family Sciences

Alexis Walker, PhD, Petersen Chair in Gerontology & Family Studies; Professor and Co-Director, Human Development & Family Sciences

Elissa Wells, MS, Assistant Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Dave White, PhD, Associate Professor, Extension 4-H Youth Development, Human Development & Family Sciences

Jaime Williams, MS, Instructor, Extension Family & Community Health, Public Health

Pat Willis, MS, Assistant Professor, Human Development & Family Sciences

Shana Withee, MS, Associate Professor, Extension 4-H Youth Development & Extension Family & Community Health, Human Development & Family Sciences

School of Biological & Population Health Sciences

Melinda Ameele, MS, Instructor & HHS Lifetime Fitness Program Director, Exercise & Sport Science
Ann Asbell, MS, Instructor & Physical Activity Courses Program Director, Exercise & Sport Science
Dana Baxter, BS, RD, Extension Family & Community Health, Nutrition
Stacy Bennett, BS, Extension Family & Community Health, Nutrition
Viktor Bovbjerg, PhD, Associate Professor, Epidemiology
Adam Branscum, PhD, Associate Professor, Biostatistics
Tammy Bray, PhD, Professor & Dean, Nutrition
Brad Cardinal, PhD, Professor, Exercise & Sport Science
Susan Carozza, PhD, Associate Professor, Epidemiology
Renee Carr, MS, Instructor, Extension Family & Community Health, Nutrition
Patricia Case, MS, Associate Professor, Extension Family & Community Health, Nutrition
Jenny Chavez, MS, Extension Family & Community Health, Nutrition
Chunhuei Chi, PhD, Associate Professor, International Health
Mary Cluskey, PhD, RD, Associate Professor & Dietetics Internship Program Director, Nutrition
Barbara Cusimano, PhD, Associate Professor, Exercise & Sport Science
Cathy Dark, MS, Senior Instructor, Exercise & Sport Science
Tina Dodge Vera, MPH, Extension Family & Community Health, Nutrition
Vicki Ebbeck, PhD, Associate Professor, Exercise & Sport Science
Jamie Fitch, BS, RD, Extension Family & Community Health, Nutrition
Janice Gregg, MS, Associate Professor, Extension Family & Community Health, Nutrition
Kathy Gunter, PhD, Assistant Professor, Extension Family & Community Health, Exercise & Sport Science
Kim Hannigan, PhD, ATC, Clinical Assistant Professor, Exercise & Sport Science
Anna Harding, PhD, Professor, Environment, Safety & Health
S. Marie Harvey, DrPH, MPH, Professor & Co-Director, Public Health
Amanda Hatfield, BS, Extension Family & Community Health, Nutrition
Emily Ho, PhD, Associate Professor, Nutrition
Mark Hoffman, PhD, ATC, Associate Professor & Associate Dean for Academic Programs, Exercise & Sport Science
Anne Hoisington, MS, RD, Senior Instructor, Extension Family & Community Health, Nutrition
Glenda Hyde, MS, Instructor, Extension Family & Community Health, Nutrition
Urszula Iwaniec, PhD, Assistant Professor, Nutrition
Deborah John, PhD, Extension Family & Community Health, Exercise & Sport Science
Sam Johnson, PhD, Instructor, Exercise & Sport Science
Donald Jump, PhD, Professor, Nutrition
Peter Lachenbruch, PhD, Professor, Biostatistics
Gianni Maddalozzo, PhD, Senior Instructor, Exercise & Sport Science
Robin Maille, MA, MF, Extension Family & Community Health, Nutrition
Melinda Manore, PhD, RD, Professor, Nutrition
Jeff McCubbin, PhD, Distinguished Professor & Executive Associate Dean, Exercise & Sport Science
John Molitor, PhD, Associate Professor
Jan Ostby, MS, Extension Family & Community Health, Nutrition
Michael Pavol, PhD, Associate Professor, Exercise & Sport Science
Stephanie Polizzi, MS, Instructor, Extension Family & Community Health, Nutrition
Stephanie Russell, BS, Extension Family & Community Health, Nutrition
Elaine Schruppf, MS, Instructor, Extension Family & Community Health, Nutrition
Rochelle Schwab, MS, Instructor & Director of the Faculty/Staff Fitness Program, Exercise & Sport Science
Ingrid Skoog, MS, Instructor & Dietetics Program Director, Nutrition
Janice Smiley, MS, Associate Professor, Extension Family & Community Health, Nutrition
Ellen Smit, PhD, Associate Professor, Epidemiology
Carol Soleau, PhD, Associate Professor, Exercise & Sport Science
Lynn Steele, MPH, Extension Family & Community Health, Nutrition
Kelly Streit, MS, Extension Family & Community Health, Nutrition

Shelley Su, PhD, Instructor, Environment, Safety & Health
Maret Traber, PhD, Professor, Nutrition
Stewart Trost, PhD, Associate Professor, Exercise & Sport Science
Russell Turner, PhD, Professor, Nutrition
Jennifer Vannoy, MS, RD, Instructor, Nutrition
Anthony Veltri, PhD, Associate Professor, Environment, Safety & Health
Anthony Wilcox, PhD, Associate Professor & Co-Director, Exercise & Sport Science
Heidi Wegis, PhD, Clinical Assistant Professor, Exercise & Sport Science
Helena Wolfe, MPH, Extension Family & Community Health, Nutrition
Joonkoo Yun, PhD, Associate Professor, Exercise & Sport Science

Department of Design & Human Environment

Leslie Burns, PhD, Professor and Director, Merchandising Management and Apparel Design
Carol Caughey, MA, Associate Professor, Coordinator of Interior Design
Hsiou-Lien Chen, PhD, Associate Professor, Merchandising Management and Apparel Design/Textiles.
Brigitte Cluver, PhD, Instructor, Manager of the Textiles and Apparel Performance Testing Laboratory,
Merchandising Management, Apparel Design, and Interior Design/Textiles.
Sandy Dawson, MS, Instructor, DHE Internship Coordinator, Merchandising Management
Marianne Egan, MS, Instructor, Apparel Design
Minjeong Kim, PhD, Associate Professor, Coordinator of Merchandising Management
Kwashinta Muljani, MS, Instructor, Interior Design and Housing Studies
Kathy Mullet, PhD, Associate Professor, Coordinator of Apparel Design
Elaine Pedersen, PhD, Associate Professor, Curator, Historic/Cultural Textile and Apparel Collection, Apparel
Design, Merchandising Management, and Interior Design
Gita Ramaswamy, PhD, DHE Graduate Faculty, Adjunct
Marilyn Read, PhD, Associate Professor, Interior Design
Peggy Suzio, MS, Instructor, Interior Design
Carmen Steggell, PhD, Associate Professor, Coordinator of the DHE Graduate Program, Interior Design and Housing
Studies

Appendix C. Rationale for Naming Schools within CPHHS

CHHS Faculty have selected the following names for the two new schools within the College: a) The School of Biological & Population Health Sciences, and b) The School of Social & Behavioral Health Sciences. Faculty chose these names through a deliberative process to clearly and distinctly communicate to prospective faculty and students the expertise and focus for teaching, research and service in each new school.

Names of the schools were also chosen to effectively communicate to the Council on Education for Public Health (CEPH), the body that accredits colleges of public health, that the College addresses the prescribed academic fields required to become accredited. An accredited school or college of public health must provide training in the five areas of knowledge considered basic to public health: biostatistics, epidemiology, environmental health sciences, health services administration, and the social and behavioral sciences. This expectation for required curricular content in social, behavioral, biological, and population health studies is clearly outlined in CEPH accreditation Criterion 2.1 attached.

School of Social & Behavioral Health Sciences

CEPH references the required education in this area as: “Social and behavioral sciences – concepts and methods of social and behavioral sciences relevant to the identification and solution of public health problems.” The naming of this school reflects the college’s focus within this field as it applies to public health. For diseases with no medical cure (e.g., AIDS) and those of affluence or poverty (obesity), population-based, social, behavioral, and policy interventions constitute the leading public health approach to improving population health.

The School of Social & Behavioral Health Sciences includes faculty with expertise in health behavior, health disparities, health psychology, human development, family sciences, sociology, and health policy. Faculty conducts research and training on the impact of human behavior and societal conditions on the health of populations. We seek to understand how social systems/policy and behaviors within an environmental context operate at the individual, family, and community levels to affect health. We seek to develop, implement, evaluate and disseminate interventions that facilitate health behaviors to improve health outcomes.

School of Biological & Population Health Sciences

The name of this school aligns with CEPH’s emphasis on biology applied to population health as reflected in its definitions of two of its five core required disciplines housed in this academic unit:

- Environmental health sciences – environmental factors including biological, physical, and chemical factors that affect the health of a community;
- Epidemiology – distributions and determinants of disease, disabilities, and death in human populations; the characteristics and dynamics of human populations; and the natural history of disease and the biologic basis of health

The School of Biological & Population Health Sciences investigates the interplay between environmental exposures, human biology, genetics, and chronic diseases that limit our longevity and quality of life. Faculty use state-of-the-art science and quantitative methods to understand how environmental factors including food, water, physical activities, carcinogens, pollution, biohazards, etc, influence the development and progression of biological disease necessary to prevent illness and to improve human health and wellbeing. Using integrated teams of scientists from varied and relevant disciplines, faculty addresses complex hypotheses by identifying environmental biologic health hazards and coupling this

information with quantitative methods to better understand the causes of population-level disease as well as methods of intervention and prevention. This knowledge is then translated into public health initiatives and policies with profound impacts on people's health locally. We focus on diseases that have a high or increasing prevalence in the U.S. population including those related to carcinogens, nutrition, physical activity, and disabilities.

ACCREDITATION CRITERIA

Schools of Public Health

Council on Education for Public Health (CEPH)

2.0 Instructional Programs

2.1 Degree Offerings. The school shall offer instructional programs reflecting its stated mission and goals, leading to the Master of Public Health (MPH) or equivalent professional masters degree in at least the five areas of knowledge basic to public health. The school may offer other degrees, professional and academic, and other areas of specialization, if consistent with its mission and resources.

The areas of knowledge basic to public health include:

Biostatistics – collection, storage, retrieval, analysis and interpretation of health data; design and analysis of health-related surveys and experiments; and concepts and practice of statistical data analysis;

Epidemiology – distributions and determinants of disease, disabilities and death in human populations; the characteristics and dynamics of human populations; and the natural history of disease and the biologic basis of health;

Environmental health sciences – environmental factors including biological, physical and chemical factors that affect the health of a community;

Health services administration – planning, organization, administration, management, evaluation and policy analysis of health and public health programs; and

Social and behavioral sciences – concepts and methods of social and behavioral sciences relevant to the identification and solution of public health problems.

Appendix D. Liaison

The Rationale for Naming Schools within CPHHS document (Appendix C) was distributed to the Provost's Council by Dean Bray. The following response was received:

On 2/7/11 5:16 PM, "Curtis, Larry" <larry.curtis@oregonstate.edu> wrote:

Hello Tammy

Reading through "Rationale for Naming Schools within CPHHS" leaves me with a very positive impression of the progress of you and your faculty in moving towards accreditation as a school of public health. The foci for the two schools seem right on target to me. I also hear you have good candidates for the recruitments you have in progress and are quite inclusive the interview process. I appreciate your collegiality.

Best regards.

Larry

Appendix D. Liaison (continued)

Following unanimous faculty agreement on the proposed name of the School of Social and Behavioral Health Sciences, Alexis Walker spoke with both Denise Lach, incoming Director of the School of Public Policy, and John Edwards, Chair of the Department of Psychology. She told each about the proposed changes in the College, about the creation of a new School, and about the proposed name for the School chosen by the faculty. Both were verbally supportive. She asked them to check with their colleagues and to let her know if they had questions or concerns. She also sent an email to each of them and to Sally Gallagher, Chair of the Department of Sociology, inviting input (see below). None followed up with her regarding the proposed name or any of the other proposed organizational changes.

From: Walker, Alexis J

To: Edwards, John
Subject: Proposed School Name

Hi John,

Just following up on our conversation this morning.

As I indicated in my phone call, we are proposing to call our new unit (including academic programs in health management and policy, health promotion and health behavior, human development and family sciences, and tenure-line faculty from two Extension programs: 4-H youth development and family and community health) the School of Social and Behavioral Health Sciences. I hope my colleagues in psychology are comfortable with this name—but let me know if you have questions or concerns.

Hope your year is off to a great start!

Alexis

Subject: New Name and Getting Together

Hi Sally,

Nice to hear your voice today!

As I indicated in my call, we are proposing to call our new unit (including academic programs in health management and policy, health promotion and health behavior, human development and family sciences, and tenure-line faculty from two Extension programs: 4-H youth development and family and community health) the School of Social and Behavioral Health Sciences. I hope my colleagues in sociology are comfortable with this name.

And, let's definitely get together. How about Wednesday, October 13th between 10 and Noon or at 4? If nothing is possible here, I'd need to move to the following week.

Looking forward to seeing you!

Alexis

From: Walker, Alexis J

Cc: Bray, Tammy; Zabriskie, Mark
Subject: RE: Please review and comment

Thanks for giving me the opportunity to comment on the proposed names for the new schools within CPHHS. While I recognize that the words "Biological", "Population", "Social" and "Behavioral" are broadly defined descriptions that are or can be applied to other units on campus, none of these describes a particular domain of disciplines that should be exclusive to any particular unit. Furthermore, all of these words would be used to qualify "Health Sciences", which should avoid any confusion.

As you know, the transformation of CHHS into an accredited college of public health is a major strategic goal of the Division of Health Sciences, and I strongly support the reorganization that CHHS must undergo to meet accreditation standards.

Subject: Re: Please review and comment

I welcome the chance to comment on the proposed naming of the schools within the new College of Public Health and Human Sciences. I believe organizing the new College into 'The School of Biological and Population Health Sciences' and 'The School of Social and Behavioral Health Sciences' is an effective means of arranging the College in a way that both meets the new University requirements for department size and uses descriptors that clearly describe the focus of the academic endeavors within each school. I also understand that, importantly, this organizational structure aligns with the necessary programmatic requirements dictated by the accreditation body for colleges of public health. Because securing an accredited public health program is one of the top priorities of the Division of Health Sciences, I am very much in support of this reorganization of the College of Health and Human Sciences.

Although there may be concerns with the use of descriptors such as 'biological' and 'social' among some units on campus, I believe that such terms broadly apply to disciplines within numerous units and should not be held in reserve for any specific area. And, because the descriptors are used clearly in the context of the Health Sciences, there should be no confusion.

Best regards,

Mark--

Subject: Comments on names for Schools

March 7, 2011

Dear Tammy:

Thanks for the opportunity to have my chairs review the proposal for the structure and names of the new units. One question was just one of clarification....was Biostatistics part of the Epidemiology group in School A?

All of the other comments (from all of the life sciences chairs) expressed concern about the name "School of Biological and Population Health Sciences" for School A. The concern was that Biological is too broad a description of the work of the faculty in the school, even if those reading the title note the "Health" modifier later in the name. The point from the chairs was not one of territoriality, but one of describing the work of our units accurately for students and for those looking at us from the outside. There are very strong programs in parts of health and biomedical sciences in the new College of course---the group working in diet and gene expression through LPI, the bone lab group, and the exercise/aging physiology groups for example. However, my chairs felt there were wide swaths of health-related biological sciences that weren't represented in the new College---proteomics, enzymology, most aspects of microbiology, immunology, disease ecology, comparative anatomy, biophysics, and cell biology just for some examples. If people mistook the title to imply Biological Sciences, the missing pieces are larger (plant sciences, general ecology, etc.). There are also already several programs on campus in Biological Sciences, all with names more specific to the part of biology they pursue (e.g., the Biology Program which is broad, Biomedical Sciences in Vet Med, Pharmaceutical Sciences in Pharmacy, etc.). It seems important that names accurately reflect the focus of particular programs.

None of the Chairs commented on the "Population Health Sciences" part of the title, though it was generally assumed that referred mostly to the epidemiology program within the proposed School.

I believe the point of the concern is to make sure the titles give a clear picture of the focus of the unit (which we appreciate of course is changing). Just to see what some common titles were I took a look at some large Schools of Public Health and some small ones (since we're not going to get as big as Michigan for a while!). It seems the most common names for the units like School A include Environmental Health Sciences, Epidemiology, and Health Science. Perhaps some combination of those would work and provide more clarity on the work of the school?

Let me know if you have any questions or if you'd like to meet with the group of chairs to talk about the issue.

Best regards,

Sherm

Response to the Liaison Input from the College of Science

As described in the Abbreviated Category I proposal, the departments of Public Health (PH), Human Development & Family Sciences (HDFS), and Nutrition & Exercise Sciences (NES) will be dissolved and reorganized into two schools: the School of Biological & Population Health Sciences and the School of Social & Behavioral Health Sciences. Distributing programs currently housed in three departments and integrating them into the two schools simultaneously meets the University's academic unit-size requirement and the requirement of the accrediting body for colleges of public health that the public health programs are to be integrated throughout the College. The school names reflect the integration achieved with the respective distribution of programs:

Biological & Population Health Sciences

Environment, Safety & Health

Epidemiology & Biostatistics

Exercise & Sport Science

Nutrition

Social & Behavioral Health Sciences

Health Management & Policy

Health Promotion & Health Behavior

Human Development & Family Sciences

The overarching and inclusive names of the schools were chosen by the faculty through a deliberative process to describe the array of academic disciplines included in each school and to clearly communicate to prospective faculty and students the expertise and focus for teaching, research, and service in each new school. The general terms in the names (*biological*, *social* and *behavioral*) acknowledge that disciplinary foundations for some of the fields encompassed in the schools can be found in the Colleges of Science and Liberal Arts, while the inclusion of *health sciences* in the names communicates the applied nature of the schools' expertise.

Support for the name of the School of Social & Behavioral Health Sciences was received through liaison communication with the chairs of Sociology and Psychology, and the designated director of the School of Public Policy (see Appendix D). Concerns were raised in liaison input from the College of Science over the use of *biological* in the name of the School of Biological & Population Health Sciences (attached) and are addressed below.

As described above and in the Abbreviated Category I, the faculty in the College of Health & Human Sciences were extensively involved in designing the organization of programs into schools in the proposed College of Public Health & Human Sciences, and those in each of the schools selected the name of their respective school. The College conscientiously adhered to University organizational guidelines, accrediting requirements, and principles of faculty governance throughout its reorganization, and the design and names of the schools are outcomes of this diligent process.

The liaison input does not dispute that the name of the School of Biological & Population Health Sciences accurately reflects its program focus and expertise. The expressed concern of the chairs in Science is that at OSU there are "...wide swaths of health-related biological sciences that weren't represented in the new College...." The name is understood as a whole. There is little risk that "students and for those looking at us from the outside" would have difficulty locating the Microbiology, Biology, Biochemistry & Biophysics, Zoology, and Environmental Science programs wherever they are located. The proposed names of the schools and the College, each of which includes *Health Sciences* redirects persons in search of basic science departments to other colleges within the University. The terms in the school name are general, accurate in their description, and not delimiting. They convey applied health-science disciplines. The chairs in the College of Liberal Arts understand and acknowledge this, and know that the name of the School of Social & Behavioral Health Sciences will not cause the mistaken impression that Sociology and Psychology programs are not in their college, nor will it prevent faculty in those disciplines from engaging in research that is health-related.

In closing, we point out that the web-based sampling included in the liaison input about the names of programs in other colleges of public health is misdirected. The examples are not appropriate comparators because:

- None of the selected colleges (or schools) of public health is a college of public health and health sciences, which is a defining feature of our College – only 2 of the 12 colleges have a nutrition program; none have exercise science, human development and family sciences, or Extension. For that reason, the names found in these colleges would not need to be broad enough to encompass the range of programs that exist in our schools.
- The academic units within these selected colleges (or schools) of public health are departments, and so have the narrow specificity of department names. As explained above and consistent with OSU's academic unit-size requirement, the academic units in the College of Public Health & Human Sciences at OSU will be schools. Because schools comprise multiple programs, the name must be broad and encompassing to reflect the commonalities that link and form the rationale for these programs being joined together in a school.

The Response to the Liaison Input from the College of Science was sent to Science with the following message:

Subject: Re: Comments on names for Schools

Dear Sherm:

Thank you very much for your input on the names of our new unit (schools) under the proposed College of Public Health and Human Sciences. I appreciate very much you and your team taking the time to review our rationale and process of naming the schools. I have circulated your email input to our leadership team and our Faculty Transition Team seeking their consideration and response to your concerns. (see below response to your input).

I wanted to emphasize that we have intentionally clustered those individual disciplines in each of our schools to create intellectual cohesive connection. For example in School of Biological and Population Health Sciences, most of our new hires in Epidemiology and Biostatistics are biology based in their training, solving health issues related to poor nutrition and physical inactivity at population level. Some of their research falls into the category of 'Nutrition Epidemiology' and/or 'Physical activity epidemiology', which are new emerging fields of Public Health. Our new faculty in biostatistics are coming from biology roots and doing research that links to nutrition and epigenomics, biomarkers of diseases induced by pollutants, missing data that linked to longitudinal analysis of human health during aging, predicted health impact of obesity of children in the vulnerable population, etc. Our faculty in Environment, Safety and Health are (and will be) members of Environmental Health Science Center and some of them are supported by NIEHS funding. Their studies are focusing on the health issues of women and children related to arsenic contaminant in deep well water of rural area in Bangladesh because the surface water is contaminated with pathogens, health issues of migrant workers who are handling various herbicides and pesticides, and hearing lose and other injury of construction workers, etc...

Overall, the focus of our faculty research in the new unit is more applied and translational in addressing health issues at the population level, but the root or the impact of the disease is basic and biological. I know this is a bold move for us, and I believe our new units will change the landscape of our college with minimum confusion among students or faculty who are seeking the basic disciplines of biology. I would like to continue to encourage our faculty in HHS to collaborate with faculty in COS or CLA who are truly the foundational disciplines of our applied health sciences. I hope you and your team in COS are willing to understand and support our tremendous effort of this reorganization and transformation. Thanks again.

Tammy

Subsequent communication between Dean Bloomer and Dean Bray:

Re: transition planning between Oregon MPH Program and Oregon State University

Dear Dr. Harvey,

Per your request the following confirms our plans for working together on the changes for both Oregon MPH and Oregon State University. This letter also confirms the commitments made to CEPH, the accreditation body for public health education.

The Oregon MPH intends to transition from a three-institution collaborative program to a two-institution (Portland State University and Oregon Health & Science University). Simultaneously, Oregon State University will transition to a stand-alone College of Public Health and Human Sciences (CPHHS).

Transition planning and communications have been in place for the past year and all levels of the OMPH governance structure have been involved in this planning. These bodies include the Academic Program Council, Coordinating Council, Dean's Oversight Committee, Student Campus Representatives, and the External Advisory Council. This transition plan has the full support of the leadership at each of the three universities.

Assuming our accreditation body, The Council on Education for Public Health (CEPH) accepts OSU's application for CPHHS in July 2011, at that time Oregon MPH will begin notifying all students, current and future, of this change. This will assure students the rights, privileges, and opportunities with the collaborative OMPH Program through July 2014, at which time the collaborative will become the aforementioned two-university program.

Sincerely, *Gregory M. Lee, PhD*

**Review Panel Report
Oregon State University**

Science and Mathematics Education Graduate Program

Graduate Review Panel

Carolyn Aldwin, HHS (Internal Reviewer)

James Coakley, Business (Internal Reviewer)

Dawn Granger, Principal, Corvallis High School (Potential Employer)

Thomas Koballa, Georgia Southern University (Peer Reviewer)

May 15, 2011

OVERALL RECOMMENDATION

In light of the pending repositioning of the Science and Mathematics Education Department within the College of Education, the Review Panel's focus was not exclusively retrospective. **Had the review been conducted under stable circumstances, the Panel's recommendation would be to maintain the Science and Mathematics Education Graduate Program. Given the present context, however, the Review Panel recommends that the Program be restructured.** Restructuring efforts should highlight the pivotal role of the Science and Mathematics Education Graduate Program to the formation of a research-focused College of Education and the significant value of establishing a university-wide Science, Technology, Engineering, and Mathematics (STEM) Center. The challenge for the program is to maintain high quality MS and PhD degree offerings and provide evidence of effectiveness of program features and success of program graduates. Program continuity through the engagement of faculty outside of the Department of Science and Mathematics Education and aggressive recruitment of a diverse student population is essential for the future success of the program. The program faculty needs to play an active role in the restructuring of the College of Education, ensuring that adequate resources are available to sustain research-based science and mathematics degree offerings and provide for the collection and analysis of data to inform future program revisions.

General Recommendations

- **The Department should incorporate under-represented populations into the applicant characteristics statistics, and begin tracking these statistics by degree option to accurately assess the diversity and quality of incoming students.**
- **Data should be gathered on an ongoing basis regarding the career success for all program graduates. This information should be collected and evaluated for programmatic improvement for all of the master's and doctoral programs.**
- **The Department should track faculty workload across the different degree options in order to better understand how the workload is distributed.**
- **The Department should compile summary performance data to allow for a more informed assessment of the level and quality of faculty performance.**
- **Special attention should be given during the planned move to Education Hall to ensure adequate physical office space is available for both faculty and graduate students.**
- **Develop a plan and secure support from the Deans of the Colleges of Science and Education to regularly update computers and other forms of technology used for instruction and research.**
- **The Science and Mathematics Education faculty should pursue the establishment of a university-wide Center for Research on Lifelong STEM Learning, but be mindful of the impact of Center affiliation on both opportunities for and productivity of faculty and students.**

Recommendations for Masters Students

- The availability of on-line courses should be increased; efforts should be made to communicate program needs to other departments that offer desired courses and work begun to develop online options of these courses.
- A course equivalent to history of science or philosophy of science should be made available for mathematics education students.
- The program should provide opportunities for all licensure students to work with grade 6-12 students from diverse cultural backgrounds, as well as students with special physical, emotional, and learning needs, and to incorporate information on these students into coursework.

Recommendations for the Doctoral Program

- The process of first year advising should be studied and modified to enhance the academic experience for the doctoral students and include student input.
- Consideration should be given to adding learning experiences in science and mathematics teacher education, grant writing, program evaluation, and international education to enhance the marketability of doctoral program graduates.
- Faculty members should evaluate their personal predilections for different didactic modes and assess the impact that they might have on student learning in doctoral courses.
- The program faculty should engage the OSU mathematics faculty in conversation about the relationship and overlap between the mathematics education doctoral programs offered in the two departments, with the conversation resulting in a statement that distinguishes the two doctoral degree options.
- The Dean's Office of the College of Science should provide the Department with data on student credit hour generation.
- It is recommended that faculty monitor individual supervision loads and work to equalize the loads over the entire faculty and/or advocate for additional faculty lines.

NOTE: the Graduate Council requested some additional information from the Department which can be found in Appendix A to this report.

SUMMARY OF FINDINGS AND RECOMMENDATIONS

The Science and Mathematics Education Department supports a strong, focused and successful graduate program. This review comes at a critical time as the Department is to be repositioned within the College of Education. Even within this organizational transition, the Department's faculty remains committed to its mission (developed in 2006) to "[b]etter understand and facilitate the variety of ways in which people of all ages and backgrounds engage in science and mathematics learning throughout their day and

lifespan.” This mission is reflected in the three foci for their degree programs: K-12, College Teaching, and Free-Choice Learning; and fits well with the implementation guidelines for the strategic alignment of academic and support units in the OSU Strategic Alignment and Budget Reduction Implementation Plan for 2009-2011.

The Department’s graduate program is populated by high quality students who are admitted based on a well-defined process, requiring additional qualitative information beyond the University graduate admission requirements. However, the Department has a limited number of internal scholarships and GTA/GRA positions that are available to students and seems to attract few students from underrepresented populations. To address these challenges, the faculty has initiated actions to obtain GTA/GRA positions for each of its PhD students and to seek scholarships to recruit and retain students from populations traditionally underrepresented in science and mathematics. In order to track the successes of these initiatives, **it is recommended that the Department incorporate underrepresented populations into the applicant characteristics statistics, and begin tracking these statistics by degree option to accurately assess the diversity and quality of incoming students.**

The curriculum across the Department’s PhD and MS degree options is very strong. The *School-based Master’s for K-12* teachers and the *Free-Choice Learning Master’s* are innovative programs, in that they provide advanced learning opportunities for persons through online offerings. A limitation for both of these programs is the availability of online course offerings that might be used to fulfill program requirements beyond those offered through the Department. **It is recommended that efforts be made to communicate program needs to other departments that offer desired courses and work begun to develop online options for students.**

The *Professional Teacher Education Master’s* program (grades 6-12 science and mathematics) is well conceived and consistent with national recommendations and standards of science and mathematics teacher education programs. The requirement of a history of science or philosophy of science course is also commendable. Unfortunately, a comparable learning experience seems not to be available for mathematics education students. **It is recommended that a course equivalent to history of science or philosophy of science in math education be made available for mathematics education students.**

Among the PhD program’s strengths is the emphasis of science and mathematics learning opportunities from birth to death, reflecting the three program strands—K-12, college teaching, and free-choice learning—and an emerging trend in science and mathematics education programs. However, attention needs to be given to *learning experiences to enhance the marketability of program graduates (e.g., science/math teacher education, grant writing, international education) and whether the personal predilections for different didactic modes of faculty may adversely impact student learning*. In addition, **it is recommended that the Department track faculty workload across the different degree options in order to better understand how the workload is distributed.**

- The Department faculty is highly qualified and well suited to fulfill the Department's vision of establishing a Center for Research on Lifelong Science, Technology, Engineering and Mathematics (STEM) Learning and contributing significantly to building a research-focused College of Education. With Dr. Flick named the Associate Dean of Academic Affairs for the reorganized College of Education, the Department faculty may wish to learn more about how this new appointment will influence his administrative and instructional duties within the Department. The financial resources available to support the Department seem to be adequate, in large measure due to the faculty's ability to secure external funds through grants and the income generated through online courses. However, the department's infrastructure is in need of immediate attention. **Special attention should be given during the planned move to Education Hall to ensure adequate physical office space is available for both faculty and graduate students.**

Faculty and student productivity is very respectable, based on indicators provided. The Department faculty has almost \$4 million in current grants and is highly ranked among PhD granting institutions. Students are satisfied with the financial support provided them by the Department. Students work with faculty to make professional presentations and generate scholarly publications. The scholarly community provided for students by the Department faculty seems exceptional for teacher licensure students, but not all that it could be for PhD students. PhD students seem to be disparate in their feelings of connectedness to each other and the Department. These feelings seem to be linked to the advising approach applied with students during the early semesters of their doctoral work. **It is recommended that the process of first year advising be studied and modified to enhance the academic experience for the doctoral students.**

Evaluation of the professional viability of graduates and student ratings and rankings was hampered by the lack of data. These data could serve an invaluable function for assessing program viability and guiding programmatic improvement. **It is recommended that data be gathered on an ongoing basis regarding the career success for all program graduates.**

DETAILED FINDINGS

Introduction

This review of the Science and Mathematics Education Graduate Program follows an earlier review conducted in 2001 and comes on the heels of an announcement that the Science and Mathematics Education Department will be repositioned within the College of Education as part of a University-wide reorganization. Consistent with the Guidelines for Graduate Council Program Reviews, the objective of the review was to identify and articulate positive suggestions for enhancing the Science and Mathematics Education graduate program.

The review site visit took place on December 6th, 2010, with an organizational meeting of the review panel on the evening of December 5th, 2010. Members of the review panel included: Dr. Thomas Koballa (Dean, College of Education, Georgia Southern University), Dawn Grander (Principal, Corvallis High School), and two members of the Graduate Council, Dr. Carolyn Aldwin (HHS) and Dr. James Coakley (Business). Members of the panel were provided with the program's Self-Study Report prepared by Dr. Larry Flick (Department Chair) with significant assistance by department secretary Paula Dungjen and doctoral student Teresa Wolfe as well as Dr. Larry Enochs (previous department chair) prior to the site visit. Degree program advising sheets were made available during the visit. Dr. Martin Fisk, Interim Dean of the Graduate School, was present as an observer.

On December 6th, the review team first met with Dr. Larry Flick, Department Chair, who provided a summary of the Self-Study Report and context regarding the Department's pending repositioning within the College of Education. The review panel then met with Dr. Sherman Bloomer, Dean of the College of Science, who described the Department's current status within the College of Science. Next the panel met with the Graduate Program leaders and with the Graduate Program faculty. Following a working lunch, the team toured Department facilities and met separately with groups of doctoral students and licensure students. A teleconference was scheduled with distance education students, but no students called in to speak with the review panel. A closing meeting with Dr. Flick concluded the panel's site visit.

All participants were extremely open and helpful. The review panel appreciated the professional conduct experienced during the site visit and the ample time provided to pose questions and to hear faculty and student opinions, comments, and suggestions for improving the program.

The remainder of the report is organized according to the outline provided by the Graduate School into four sections: Inputs, Productivity, Outcomes, and Conclusion.

Inputs

a. Fit of the mission of the program with the college and university missions

The Strategic Alignment and Budget Reduction Implementation Plan for 2009-2011 (<http://oregonstate.edu/leadership/sites/default/files/budget-documents/implementation-plan-10-8-09.pdf>) provides implementation guidelines for the strategic alignment of academic and support units within Oregon State University. These guidelines call for the creation of four divisions: Arts and Sciences; Business and Engineering; Earth Systems Science; and Health Sciences. The Division of Arts and Sciences is comprised of three Colleges: Science, Education, Liberal Arts. The proposed mission of the Division of Arts and Sciences is to become the intellectual center of Oregon State University, answering the fundamental questions that underlie the natural sciences, the arts, the humanities, and the social sciences (Report to the Strategic Alignment/Budget Reduction Review Committee, Mar 15, 2010, <http://oregonstate.edu/leadership/sites/default/files/budget->

[documents/mar15-asdiv.pdf](#)). The Colleges of Science, Education, and Liberal Arts are currently undergoing internal college reorganizations with a proposed consolidation of education-focused departments across the university. The proposal also includes creation of a cross-disciplinary Center for Research in Lifelong STEM Learning. The Department of Science and Mathematics Education (SMED) within the College of Science is currently in a state of organizational transition with the ensuing uncertainty regarding the final organizational structure and form of the department. Our presumption is that the SMED will remain as a department within the new organizational structure and that SMED will continue to offer the existing graduate programs (PhD and Masters).

Even with this organizational uncertainty, the SMED faculty remain committed to their mission (developed on 2006) to “[b]etter understand and facilitate the variety of ways in which people of all ages and backgrounds engage in science and mathematics learning throughout their day and lifespan.” The faculty believes this mission is unique in that it is focused on investigating and supporting lifelong science and mathematics learning, which in turn supports all three Signature Areas of Distinction of the University. This mission is reflected in the three foci for their degree programs: K-12, College Teaching, and Free-Choice Learning.

b. Quality of students

The SMED has distinctly different degree programs: the PhD in science and mathematics education, the on-line Master’s degree for K-12, the online Free-Choice Learning Master’s degree, and the on-campus Professional Teacher Education Master’s degree. The “Applicant Characteristics” provided in the Self-Study Report (Table I, p. 12) reflects characteristics aggregated across students from all of the degree programs. Overall, the quality of the students appears to be high based on the average GPA of the matriculated students. It should be noted that students admitted to the Professional Teacher Education Master’s program are required to complete “teaching tests” administered by the Oregon Teacher Standards and Practices (OTSP) Commission (ORELA, CBEST and Praxis) by the end of September. Results of these tests may also be used to track the quality of the incoming students.

Over the past three years, 82% of the matriculated students have been female, and the students are predominately domestic (as would be expected for the K-12 and licensure programs). The Department does have a diversity initiative to recruit and retain students from underrepresented populations, and has submitted a proposal to use the Oregon Laurels Block Grant to provide scholarships to support the initiative. However, the Department does not appear to track underrepresented populations as part of the applicant characteristics. **It is recommended that the Department incorporate underrepresented populations into the applicant characteristics statistics, and begin tracking these statistics by degree program to accurately assess the diversity and quality of incoming students.**

Tables A1 and A2 in the Appendix to the report provide additional data on matriculation and graduation by program. As a whole, the numbers meet or exceed the current guidelines for numbers of students by program.

c. Admissions selectivity

The SMED has a well-defined process for selecting students into the PhD and Master's degree programs, requiring additional qualitative information beyond the university graduate admission requirements. None of the graduate programs require the GRE or other standardized exam as part of the admissions criteria. Students admitted to the Professional Teacher Education Master's program are required to complete tests administered by the Oregon Teacher Standards and Practices (OTSP) Commission, but these tests are not part of the admissions criteria. The admissions requirements for the licensure program are consistent with the requirements for licensure programs in the College of Education.

d. Level of financial support for students

The SMED has a limited number of internal scholarships and GTA/GRA positions that are available for their students. The stated goal of the faculty is to obtain a GTA/GRA position for each student within the PhD program. These positions offer full tuition support plus a monthly stipend. The Department faculty acknowledges that it is dependent on the availability of GTA/GRA positions in other departments to meet this goal.

Financial support for the Master's degree programs tends to come from scholarships, both internal to the SMED and external scholarship support available through the University and other Foundations and Organizations (see p. 19 of the Self-Study Report). The SMED students earned approximately 20 scholarships per year over the past three years, suggesting that approximately 25 percent of the students in the Master's degree programs earn some form of financial support.

e. Curriculum strength

The *School-based Master's for K-12* teachers and the *Free-Choice Learning* Master's are innovative programs, in that they provide advanced learning opportunities for persons through online offerings. The Free-Choice Learning program also addresses the unique needs of persons choosing to work in non-formal science and mathematics environments. Both degree options clearly are developing a national audience for OSU programs. Online advising materials, available at the Department's website, present sequences of required coursework for both degree options. Considerable efficiency is achieved by offering coursework required for both programs during the same semester.

The School-Based Master's for K-12 option provides an excellent venue for mid-career professionals to extend their understandings of science and mathematics teaching and learning and to build leadership capacity in these fields. This degree option enrolls about 30 science/mathematics students, according to the Department faculty. This number should be considered the maximum allowable given the faculty resources allocated to the program and the demands associated with project supervision and the oral examination. Department documentation indicates that only Drs. Van Zee and Niess provide program

leadership and they teach many of the program courses. They also work directly with students during the oral examination and project phases of the program. Even though the continuous enrollment of 30 students brings the program close to its carrying capacity, the program courses tend to enroll few students each semester. [Tracking trends in enrollment was made difficult by the absence of fall 2009 course data in Table 5 of the Self-Study Report.]

The Free-Choice Learning Master's option is at the forefront of programs that prepare individuals for working in free-choice science learning environments. However, the program enrolls few students. According to the Department faculty, only 17 students are enrolled in this degree option. Moreover, considerable overlap seems to exist among the three courses that constitute the option's primary strand, SED 582, SED 583, and SED 584, and the nature of the projects (i.e., SED 506) in which students engage may need further clarification.

Regarding both the School-based and Free-Choice Master's programs, the Department faculty expressed concern about the availability of online offerings that might be used to fulfill program requirements beyond those offered through the Department. They described the lack of available online offerings as a significant limitation in both programs. **It is recommended that efforts be made to communicate program needs to other departments that offer desired courses, such as History of Science and Mathematics Education, and work begun to develop online options for students.**

The *Professional Teacher Education Master's* program prepares grades 6-12 science and mathematics teachers for public and private schools. Overall, the program is well conceived and consistent with national recommendations and standards of science and mathematics teacher education programs. Entrance into the program is facilitated through prerequisite coursework completed during a student's undergraduate degree program or in the summer prior to beginning the program. Through this cohort program, students may seek subject matter endorsements in one or more science and mathematics content specializations. The program coursework, particularly that involving school-based experiences and the preparation and enactment of two Work Samples, is commendable. Interviews with students confirmed the strength of the program's cohort model, stating that the model provides a mechanism for student support and collaboration. The requirement of a history of science or philosophy of science course is also commendable. Unfortunately, a comparable learning experience seems not to be available for mathematics education students. Also seemingly missing from the program are significant opportunities for students to learn how to work effectively with grades 6-12 students from diverse cultural backgrounds and with special physical, emotional, and learning needs. **It is recommended that:**

- **a course equivalent to history of science or philosophy of science specifically targeted at mathematics education be made available for mathematics education students; and**
- **the program should provide opportunities for all licensure students to work with grade 6-12 students from diverse cultural backgrounds, as**

well as students with special physical, emotional, and learning needs, and to incorporate information on these students into coursework.

The admission of 20-26 students annually, as reported by Department faculty, brings into question the program's overall contribution to the State's need for grades 6-12 science and mathematics teachers. Is the program's production of teachers contributing substantially to the State's teaching population? If not, perhaps the program should be presented as a model program, one that is carefully studied by faculty and students, and whose innovative processes and outcomes are publicized in order to inform the national discussion on science and mathematics teacher preparation.

The PhD includes coursework in research methodology and research content that one would expect in a highly-rated science and mathematics education doctoral program. The inclusion of research methodology courses outside of the department is commendable, providing students with opportunities for gaining diverse perspectives relative to quantitative or qualitative research methodologies. Another strength of the program is the emphasis on science and mathematics learning opportunities from birth to death, reflecting the three program strands—K-12, college teaching, and free-choice learning—and an emerging trend in science and mathematics education programs. Apparently missing from the program is coursework that is related to expectations associated with many science and mathematics education positions in higher education, including science and mathematics teacher education, grant writing, program evaluation, and international education. Also, the Department's emphasis on the preparation and support of grades 6-12 teachers may provide less than an attractive learning environment for doctoral students interested in science and mathematics education in the elementary grades. **It is recommended that consideration be given to adding learning experiences in science and mathematics teacher education, grant writing, program evaluation, and international education to enhance the marketability of doctoral program graduates.**

The enacted curriculum, reflecting the expertise and interests of individual faculty, was a point of concern among students in the program. Students indicated that doctoral coursework is slanted by faculty expertise and interest. This sometimes adversely impacts the students' course learning experiences. Some students felt that instructors' interests sometimes led to focusing of courses on a narrow field that was outside of the interests of the students. **It is recommended that faculty members evaluate their predilections for teaching styles and content and assess the impact that they might have on student learning in doctoral courses.**

Moreover, faculty pointed out that two doctoral programs in mathematics education are offered at OSU, one by the Department of Science and Mathematics Education and a second by the Department of Mathematics. Conversations with the Science and Mathematics Education faculty suggest that overlap exist between the two doctoral degree options and students may be confused about the worth of the two degrees in terms of future employment. **It is recommended that the program faculty engage the OSU mathematics faculty in conversation about the relationship and overlap between the**

mathematics education doctoral programs offered in the two departments, with the conversation resulting in a statement that distinguishes the two doctoral degree options.

The Department's Self-Study Report does include information on the number of graduate student committees chaired by individual faculty members, but it would be helpful if the data were broken down by program. **It is recommended that the Department track workload by program more carefully.**

f. Quality of personnel and adequacy to achieve mission and goals

The Department faculty is highly qualified and well suited to fulfill the Department's mission to "Better understand and facilitate the variety of ways in which people of all ages and backgrounds engage in science and mathematics learning throughout their day and lifespan." In support of this mission, the faculty is distributed across the disciplines of science education and mathematics education to support graduate programs and engage in research that highlight the areas of K-12, college level, and free-choice learning within the two disciplines. Additional information on faculty productivity and awards is included in Appendix A.

With the repositioning of the Department within the College of Education, the Department faculty is anxious to carve out an identity within this emerging unit. The recent decision to appoint Dr. Larry Flick as the Associate Dean of Academic Affairs for the reorganized College of Education should serve to reduce the anxiety and provide the Department faculty with a voice in how the College is organized and the positioning of the Department within the College.

The Department faculty should work with colleagues in the recognized College of Education to address its short- and long-term goals. Support will likely be found across departments that make up the new College for a vision of lifelong education in STEM and other program areas and for integrating culture and linguistic diversity into coursework and other student learning opportunities. In addition, the Department faculty will want to be involved in the process that leads to the selection of a new Dean for the College of Education, ensuring that the hire understands the history of the Department and its important role in positioning the College as a unit in which research and efforts to garner external funding for scholarly endeavors is highly valued and rewarded.

The Department's faculty is well positioned to provide leadership to the creation of a Center for Research on Lifelong STEM Learning. The Department's goals to establish the Center would leverage the talents of scholars across the OSU campus to build core partnerships and serve to re-conceptualize the meaning of STEM learning at OSU. Great care must be taken to consider the mission of the Department in creating the Center so as not to identify an elite group of scholars and in so doing alienate Department and College of Education faculty and students not invited to affiliate with the Center. If all Department faculty members will be invited to affiliate with the Center, as suggested on page 102 of the Department's Self-Study Report, then it may be possible to allow the Department to serve the function outlined for the Center, at least for the short-term and until the College of Education is fully operational. Faculty from OSU units could be

identified as adjunct Department faculty and potential collaborators could be identified as Departmental partners. A true advantage of the Center organization would be to provide emphasis across the STEM disciplines, with attention to engineering and technology that are not noted in the Department's current science and mathematics education degree programs. Creation of the Center will likely raise OSU's profile as a leader in STEM education. **It is recommended that the Science and Mathematics Education faculty pursue the establishment of a university-wide Center for Research on Lifelong STEM Learning, but be mindful of the impact of Center affiliation on both opportunity for and productivity of faculty and students.**

g. Level and quality of infrastructure

The OSU Libraries provide more than adequate support to the Department. Faculty and students cited no problems with securing books, monographs, and journal articles needed for coursework and research. Faculty offices, classrooms, and conference rooms are located on the second floor of Weniger Hall, with a graduate student office and the shared Departmental office on the third floor. Space in Weniger Hall is marginally sufficient for the needs of the Department. Computers and other forms of technology used for instruction and research seem to be adequate for current needs. However, plans for the regular updating of these items that do not rely exclusively on the faculty's ability to secure external funds should be put in place.

The Department's classrooms, laboratories, and conference rooms are in disparate need of new furnishings and updating. Tables and chairs used by students in the Department's classrooms and laboratories are mismatched and in disrepair. Window blinds and overhead lighting fixtures in the Department's classrooms, conference rooms, and laboratories are old and some are broken. Graduate student offices, particularly those on the third floor, are in need of remodeling. Electrical and Internet cables need to be permanently mounted and heating ductwork repaired. **Special attention should be given during the planned move to Education Hall to ensure adequate physical office space is available for both faculty and graduate students.**

The financial resources available to support the Department seem to be adequate, in large measure due to the faculty's ability to secure external funds through grants and the income generated through online courses. According to the faculty, no funds are available from the College of Science for instructional supplies and materials and computer technology. Purchases needed to support the instructional and research missions of the Department require the use of funds from other sources. The level of support provided Department faculty and students to attend professional meetings and the sources of any support were not disclosed during the panel's site visit or in the Department's Self-Study Report, although subsequent communication revealed that there is little, if any, university support.

h. Quality of organizational support

The Department is currently positioned as a unit of the College of Science, with Dr. Larry Flick as the Chair. It has received strong support from the Dean of the College of Science, Dr. Sherman Bloomer. Evidence of this strong support includes approval for

recent faculty hires, the Department's use of space in Weniger Hall, and Dr. Bloomer's decision to maintain control of all science and mathematics education faculty lines as the Department is repositioned within the College of Education. The Department faculty feels most comfortable with Dr. Flick serving as Chair and the leadership that he has provided for programs, faculty and students. As Dr. Flick has recently been named the Associate Dean of Academic Affairs for the reorganized College of Education, the Department faculty may wish to learn more about how this new appointment will influence his role as Department Chair. Dr. Flick will want to clarify the relationship between these two roles—Department Chair and Associate Dean—and alert faculty to how his position as the Associate Dean will influence his administrative and instructional duties within the Department.

The level of organizational support provided to the Department as a unit of the College of Education is unknown at this time. While it seems reasonable to assume that the Department faculty will remain stable, it is unclear how instructor positions, those of visiting scholars, and office support staff will be situated within the new College. These matters will need to be negotiated with the new Dean of the College.

Productivity

a. Level and quality of student performance

Currently there are more than 100 graduate students, most of whom are in the master's programs. There are two MS degrees in mathematics and in science education, each of which has three concentrations: a grades 6-12 teacher licensure program and two online programs, one of which is focused on free-choice learning. There are also two doctoral programs in mathematics and science education, respectively, which combined have about 30 active students.

To indicate the level of the productivity and performance of the students, the Department's Self-Study Report listed their awards and honors for the past five years. Most of these take the form of tuition support from university sources. This support often averages over \$100,000/year, suggesting that the program's students are competitive financially with other programs.

Five members of the faculty submitted reports of student scholarly work, and the panel was not able to determine whether these works were the products of doctoral or master's students. The panel estimated that there were 32 different students who reported at least one presentation, with some students having many presentations involving multiple faculty members. It would have been helpful to have lists for individual students, indicating whether they are doctoral students or master's students. But it does appear that the faculty actively involves graduate students in their research activities.

b. Level and quality of faculty performance

Assessment of faculty performance was hindered by a lack of summary data within the Self-Study Report. For most of the categories – grants and contracts, awards and honors, and professional service and leadership – the report simply referred the reader back to the faculty vitae. Unfortunately, it is beyond the scope of the committee to provide these summary reports. The Department did provide summary information on request (see Appendix A). **It is recommended that the Department compile summary performance data to allow for a more informed assessment of the level and quality of faculty performance for future reports.**

However, the Self-Study Report did include two measures of faculty performance. First, the Report indicated that the program faculty is ranked 9th in the nation out of 375, but checking the website revealed that (a) the 375 was for all universities offering PhD programs, and it is not clear how many Science and Mathematics Education graduate programs are represented in the 375 and (b) the z-score (-.52) presented at the website suggests that the Department's productivity rate was slightly below the mean (<http://chronicle.com/stats/productivity/page.php?year=2007&institution=3008&byinst=Go>). Nonetheless, being in the top ten in the nation among Science and Mathematics Education programs is certainly very respectable.

Second, the Self-Study Report also included a table of financial resources to support the program. The table showed that program faculty had almost \$4 million in current grants (see p. 57), which is also very respectable.

c. Viability of the scholarly community for students

The cohort model for the on-campus teacher licensure program appears to work very well. Conversations with students suggest that they are actively engaged in coursework and school-based experiences and supportive of each other.

Unfortunately, none of the online master's students called in during the scheduled teleconference, so the panel was unable to directly assess the effectiveness and needs of that community. The faculty expressed acute awareness of the relatively small number of faculty available to serve students enrolled in the free-choice learning program, and felt that more faculty lines are needed to adequately support this degree option.

The doctoral students appeared to be more disparate in their feelings of connectedness to each other and to the department. One student, a GRA, kept office space in her mentor's lab located across campus from the department, and felt somewhat isolated. This may be an endemic problem for programs that have faculty scattered across departments. Nonetheless, the graduate students seemed reasonably content, but noted three major concerns. First, a relatively few number of faculty shouldered most of the burden for the doctoral students; having a greater number of faculty available as primary mentors would provide for greater diversity of opportunity. Second, students complained about the quality of some of the lectures, observing that the faculty sometimes provided

information about new learning approaches and techniques but did not always apply them. Third, stability of funding was a concern for these students. Indeed the Department Chair, Larry Flick, mentioned that there are few dedicated GTA for the doctoral students, and the rest were provided from contributing departments on an *ad hoc* basis or through grant funding secured by Department faculty. The students do appear to enjoy a fairly high level of GRA support. Of these three concerns, the panel saw the heavy burden of doctoral student supervision as a potential weakness to the program. **It is recommended that faculty monitor individual supervision loads and work to equalize the loads over the entire faculty or advocate for additional faculty lines.**

Outcomes

a. Professional viability of graduates

Doctoral students in the program have completed a variety of dissertations that represent current issues facing education in the K-12, collegiate, and community setting. They appear to be well prepared for a variety of leadership positions in their chosen fields.

The graduates of the on-campus teacher licensure master's program are often placed in local schools for their student teaching. It seems from the data presented in the Self-Study Report that many are also hired in these districts. Although the Report did not provide retention data for these teachers, judging from the experience of the Corvallis School District, there is longitudinal success for those teachers hired. **There needs to be data gathered on an ongoing basis regarding the career success for all graduates. This information should be collected and evaluated for programmatic improvement.**

b. Satisfaction of students and graduates

The doctoral students interviewed by the panel seemed satisfied with their financial support despite information provided by the College of Science when they surveyed all doctoral students. There is a clear request that the students be more involved in the decision-making processes related to financial support.

Students also noted that advising is an important consideration during the first year of doctoral work and would like to have improvements made in their advising. Students interviewed by the panel stated that perhaps the advisors are over-extended. Conversations with faculty suggested that two professors are primarily responsible for advising students before students identify major professors to supervise their examinations and dissertation work. Even with relatively light teaching loads, the burden of advising was recognized as contributing significantly to the workload of the two professors. In particular, some doctoral students lamented the lack of a daily presence with their advising professor. However they were very aware of the quality of the advisors and their positions in the "forefront" of the field. **It is recommended that the process of first year doctoral advising be studied, with the inclusion of student input,**

and improvements be made to the advising process based on the findings of the study.

The doctoral students interviewed seemed to agree that some of their courses were not as engaging as they would like. The observation was that the instructors often talked about “best practices” but sometimes did not utilize these practices in their own instruction. A positive note that the students also agreed upon was the appreciation of the hands-on and research portions of their coursework. Also noted was a desire to see the coursework in the doctoral program more aligned with the actual research work the students were doing, so that these were mutually supportive.

Master’s students enrolled in the 6-12 licensure option are usually with the program only a year. The review panel interviewed several of the students enrolled in this degree option, which is a partnership with the OSU College of Education. The students reported that their classes are adequate. Many teaching candidates enjoyed the school-based experience of their program and were pleased with efforts made to secure placements for them close to their homes. It was clear that the program’s cohort structure was a popular strength of the 6-12 licensure option for the students. The students highly valued their relationships with one another and the professors. They were happy with the quality of their supervising teachers and the schools and classrooms in which they were placed. They unanimously reported feeling very well prepared for a teaching career.

c. Rankings/ratings

The OSU science education faculty was ranked 9 out of 375 for scholarly productivity, according to information provided in the Self-Study Report. This is evident in the amount and quality of research experience their students enjoy. However, the ranking is of all universities offering PhD programs, and it is not clear how many Science and Mathematics Education graduate programs are included in the ranking.

Recent NCATE and TSPC accreditation processes were successfully completed. There were recommendations around data collection and diversity in these reviews, which are being addressed. **It is recommended that data collection and analysis should extend beyond teacher candidates enrolled in the grade 6-12 licensure option and include all program graduates.** This would be especially useful for evaluating the relatively new and unique Free-Choice Learning degree options.

Conclusion

The overall recommendation of the panel is, given the pending repositioning of the Science and Mathematics Education Department within the College of Education, that the graduate program be restructured. Restructuring efforts should highlight the pivotal role of the Science and Mathematics Education Graduate Program to the formation of a research-focused College of Education and the significant value of establishing a university-wide Center for Research on Lifelong STEM Learning. Steps to improve the

Program are presented in the Summary of Findings as well as the Detailed Report above and include the following:

- Work with OSU Departments to develop online variants of desirable courses for inclusion as options in the online MS degree programs.
- Encourage the development of a course for mathematics education students that is equivalent to the history of science or philosophy of science courses available to science education students.
- Provide opportunities for all licensure students to learn about and work with 6-12 students from diverse cultural backgrounds and with special physical, emotional, and learning needs into courses and school-based experiences.
- In support of the Program's doctoral degree options,
 - (a) consider adding learning experiences in science and mathematics teacher education, grant writing, program evaluation, and international education to enhance the marketability of graduates;
 - (b) encourage faculty members to evaluate their personal pedagogical predilections and the impact that they might have on student learning in doctoral courses;
 - (c) distinguish between the mathematics education doctoral programs offered in the Department of Mathematics and the Department of Science and Mathematics Education; and
 - (d) Establish a consistent policy for doctoral student advising based on input from students and faculty.
- Pursue the establishment of a university-wide of Center for Research on Lifelong STEM Learning, but be mindful of the impact of Center affiliation on both opportunity for and productivity of faculty and students.
- Track faculty workload by program.
- Develop a plan and secure support from the Deans of the Colleges of Science and Education to regularly update computers and other forms of technology used for instruction and research.
- Collect, analyze, and report on an ongoing basis data on completion rates, time to completion and placements of all graduate students. Also, provide annual student reviews and summary evidence of faculty performance.

Appendix to the Graduate Program Review, January 2011

Department of Science & Mathematics Education

Table A1. Number of Matriculated Graduate Students by Degree Level, Concentration and Year

| | Concentrations in PhD | | PhD | Concentrations in Licensure | | MS Licens. | Concentrations in Online MS Program | | | MS Online |

* Within the math and science concentrations, students elect specific course work in either K12 teaching, collegiate teaching, or free-choice learning.

Faculty Performance

Current external funding by SMED faculty averages about \$150,000 per FTE and has been increasing each of the last five years. Faculty receives the majority of funding from NSF, NOAA, Department of Education, and the Noyce Foundation. A cursory examination of vitae suggests that each year tenure-track faculty (5.5 FTE) publish about 25 first-author peer-reviewed papers or chapters. Many more papers are published where faculty are not the first author. Each year, tenure-track faculty successfully competes for peer-reviewed presentation slots at major international conferences, in their respective fields.

Faculty Honors and Awards

Faculty members are recognized locally and nationally for their work. It is hard to summarize the general nature to these awards. Faculty are recognized for both scholarship and leadership within their profession. Below is a sample of awards over recent years.

Dr. Shawn Rowe received the 2011 Emerging Scholar Award from the OSU chapter of Phi Kappa Phi.

The American Association of Colleges recognized Dr. Rebekah Elliott and her collaborative team with the 2010 award for Outstanding Paper in the *Journal of Teacher Education*.

Dr. John Falk and Dr. Lynn Dierking were presented with the *John Cotton Dana Award for Leadership* at the American Association of Museums meeting in L.A. 2010.

Dr. John Falk appointed to the Governor's Task Force on No Oregon Child Left Inside as Oregon University System representative, 2009.

Dr. Larry Flick received the Fred Fox Distinguished Service to Science Education Award from the Oregon Science Teachers Association, 2007.

Draft

Graduate School Strategic Directions

NOTE!!! This is a very preliminary overview of the kinds of directions and investments that the Graduate School Leadership team is considering. **We need input from others** including the Graduate School staff, Graduate Council, Grad Program Directors, Advisers, students and stakeholders to develop a strategic plan. This is a very early first step to understand issues, hear new ideas, set goals, and plan tactics to achieve those goals. The information herein reflects ideas generated from discussions that the Grad Dean has had with the following:

- President Ray
- Provost Randhawa and Vice-Provost Warner
- All academic deans and several Associate Deans
- Dean of Students, Mamta Accapadi
- Vice Provost for International Programs, Sunil Khanna
- Vice President for Research, Rick Spinrad
- Vice Provost for Informational Services, Lois Brooks
- INTO leadership, Amy McGowan and others
- Grad School Leadership
- Graduate Women's Network staff, Beth Rietveld
- Selected graduate students (I am having lunch with 5 students each week)
- Gita Ramaswamy, Director of Assessment
- Bella Bose, EECS
- Affirmative Action Office, Roni Sue
- CGE Leadership
- Director, Human Resources, Jacqueline Rudolph

I will be meeting with

- Graduate program directors and department Heads, by Division
- Graduate Council now and repeated meetings (or a sub-committee) who will help to craft the 5-year plan
- Additional Graduate Students
- Grad Deans at PSU, U of O and WOU
- OSU Foundation

Financial resources available and funding models

Based on our current budget allocations and expenditures we have approximately \$250-\$300k in recurring funds that we should invest strategically in new, long-term initiatives (positions or other recurring efforts) and another \$150-250k per year that we should be spending from our carry over (non-recurring) to make short-term impacts in high return investment areas.

Funding models and administration of existing and future Interdisciplinary programs should be reconsidered. E.g., a shared funding model (Central with Colleges and Ecampus where appropriate) and administratively housed in a home department.

We will be coordinating with the Foundation and Academic Deans to raise money for Scholarships and Fellowships.

Strategic priorities – more background information is needed. For instance, understand how Graduate Programs in peer institutions are structured and function. Have a GRA research all programs offered among our peers and compare theirs to ours. What follows are some initial ideas for short-term improvements. **I need YOUR feedback on areas that we should be considering.**

- A. Recruitment
 - Coordinate efforts among degree programs
 - Focus on those areas with capacity for growth: non-thesis programs and Provost-initiative hire areas.
 - Coordinate with University recruitment efforts, Admissions, Marketing and INTO
- B. Admissions
 - Go paperless in nearly all that we do -- digital transcripts, etc. Coordinate with COB, others.
 - Academic standard = 3.0 gpa; find processes to allow students to meet other competencies.
 - English training through INTO for international students with inadequate English abilities
 - Bacc core training through classes – work with others to identify a path for international students.
- C. Student quality
 - Provost's Fellowships and recruitment – ensure access to all programs
 - Identify, recruit and retain the best and brightest
- D. Enrollment
 - Acquire a list of the new Faculty hires and their areas of expertise – Project potential number of new students as a result of Provost-initiative hires in each grad program – develop an alignment matrix.
 - Grad programs to sunset or restructure -- identify them – e.g., Entomology
 - Interdisciplinary programs to grow – Conservation Biology, Plant Sciences, Environmental leadership, Public Policy(?), Climate Change Science
 - Professional degree growth capacity – develop predictions for future enrollment/capacity. e.g., PSM, MBA, MPP, MPH, MNR, etc. Coordinate recruitment efforts
 - Begin working with Ecampus to assess capacity for growth of graduate degree programs, especially non-thesis degrees.
 - INTO -- internationalization; reduce redundancy among Graduate School, INTO and International Programs office
- E. Time to completion: what are best practices? Assess effectiveness of the continuous enrollment policy. Compare what we do to others. What works best?
- F. Assistantships and scholarships
 - Complete plans to offer a Graduate Teaching Certificate
 - Initiate Foundation efforts around scholarships, fellowships and travel grants with academic Deans

- Align strategic goals for Graduate School with the Research Office and theirs with ours to ensure support for students and post-docs while increasing research capacity
 - Provide incentives for faculty to support PhD students on grants.
- G. Diversity support/enhancement
- Invest in additional diversity recruitment scholarships each year
 - Monitor other diversity efforts and hold programs accountable for investments
- H. Internationalization -- align our strategic goals with INTO and theirs with ours

Space

Request a space audit for the Graduate School and consider how we might arrange ourselves as new people and duties are added.

Professional development

- Staff – Banner, IT, and other training opportunities
- Students –grants, writing, teaching certificate, ethics, value-added training
- Advisers – DPD training; mentoring workshops

Assessment/Accreditation

- Grad Program Review aligned with certification reviews -- reduce redundancy
- Data capture from Banner and on-line documents to assess metrics regularly
- On line exit interviews – adaptive management process; nearly complete.
- Alumni tracking – outcomes assessment. Work with Alumni Association

Possible new positions and investments

New or replacement positions

- Support Staff position (1.0 FTE)
 - Research Office Liaison and Post-doc program oversight (0.5 FTE)
 - Associate Dean replacement (6 mos.) while Fisk is on sabbatical leave
 - IT Technical support (1.0 FTE)
 - Student Intern (0.49 FTE GRA)
 - Recruitment – PD needed; must coordinate with others
- Others????

Possible Investments

Highest Priority by Grad School leadership

- Travel grant (leverage from ASOSU and departments; 10 per term)*
- Web improvements*
- Mentoring and workshops (e.g., Hugh Kearns & Peter Fiske)*
- Develop a “Craigslist” – like site for available TAs; coordinate with the Career Center*
- Revive the proposed TA Certificate Program*
- Continue and Expand Faculty Mentoring*

Other possibilities

- Increase our opportunities for Diversity Fellowships
- Fund and instructor for an expansion of the Ethics course IST520X (1 cr.) to all terms
- Professional Development for Faculty and Staff
- Training in Patent Development
- Campus Visit/Orientation improvements
- Preparing future faculty
- Grant/Dissertation Writing Program
- Summer Research Experience for Undergraduates Program
- Difference, Power and Discrimination training for Grad Advisers
- Develop and support new Interdisciplinary Programs
- Others???

PROGRAM

**Proposal for Delivery of an Existing OSU Program at OSU-
Cascades.**

MAT name change

Submit proposals to: Office of Academic Programs and Academic Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/MOUs/mou.html>.
Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence,
Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Oregon State University-Cascades
Proposal to Alter an Academic Program
Executive Summary

OSU-Cascades, in consultation with the Oregon State University College of Education, requests a change in the name of the existing Master of Arts in Teaching (MAT) in Language Arts Education degree to a Master of Arts in Teaching in Humanities. The MAT program prepares students for licensure to teach in middle and high schools throughout Oregon and the nation. The two endorsement areas in which students may concentrate are social studies and language arts. The current degree name (“in Language Arts Education”) does not accurately reflect the scope of preparation our graduates receive. Furthermore, school districts are increasingly moving to an interdisciplinary model of teaching English and social studies, particularly in the middle levels. An MAT in Humanities more accurately reflects the knowledge content, theoretical foundation, curricular study, and pedagogical formation found in the MAT program.

**Oregon State University
Abbreviated Category I Proposal
Rename: MAT in Language Arts Education to
MAT in Humanities**

**CPS Tracking #81959
April 2011**

**Institution: OSU-Cascades
College/School: College of Education
Department/Program: Teacher and Counselor Education (TCE)
CIP Code: 131399**

CIP #: 131399

Title: Teacher Education and Professional Development, Specific Subject Areas, Other.

Definition: Any instructional program in teacher education, specific academic and vocational programs not listed above.

(Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.)

1. Program Description

- a. Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.

OSU-Cascades, in consultation with the College of Education in Corvallis, proposes to change the name of the existing Master of Arts in Teaching (MAT) in Language Arts Education degree to a Master of Arts in Teaching in Humanities.

The OSU-Cascades program prepares educators to teach in the language arts and social studies, and the current term “Language Arts Education” does not adequately describe the scope of preparation our students receive. An MAT in Humanities would more accurately reflect the graduating student’s content knowledge, theoretical foundation, curricular study, pedagogical formation, and objectives of our program. Schools in Central Oregon, as well as around the country, are emphasizing interdisciplinary work in humanities, expecting language arts and social studies teachers to collaborate and coordinate the curriculum and instruction. Preparing language arts and social studies teachers together in a Humanities MAT, similar to the manner in which science and math teachers are prepared, promotes such collaboration.

The MAT program at OSU-Cascades also provides required coursework and experiences for Oregon Initial I Teaching Licenses in language arts and social

studies with an ESOL emphasis. The full-time, 14-month program begins each June and concludes in July of the following year. The OSU-Cascades' Master of Arts in Teaching program is approved by the Oregon Teacher Standards and Practices Commission and is nationally accredited by the National Council for Accreditation of Teacher Education (NCATE). All courses are resident courses taught on the OSU-Cascades campus.

|---|

- b. Course of study – proposed curriculum, including course numbers, titles, and credit hours.

The academic preparation of the OSU-Cascades' MAT students already reflects a Humanities perspective. There will be no change in admission requirements, student learning outcomes and experiences, or advising structure and availability. The objectives, functions, and activities of the existing program are not changing as a result of, or in conjunction with, this name change.

MAT in Humanities Proposed Curriculum Total: 67 hours:

TCE 507 (2) Seminar: Issues in Teaching Language Arts/Social Studies
TCE 509 (3) Practicum: First Authorization (including Sept experience and work
TCE 510 (13) Internship: Student Teaching– Second Authorization (work sample)
TCE 512 (3) Psychology of the Adolescent
TCE 520 (3) Classroom Management and Discipline
TCE 523 (3) Strategies & Organizational Structures for the Mid Level (content specific with technology integrated)
TCE 525 (4) Curriculum Implementation & Instructional Strategies for High School (content specific with technology integrated)
TCE 524 (2) Teacher as Reflective Practitioner (capstone
TCE 528 (3) Using Assessment to Improve Instruction
TCE 545 (3) Planning Curriculum Aligned to Standards (content specific with assessment integrated)
TCE 549 (3) Teaching in a Differentiated and Diverse Classroom
TCE 572 (3) Theoretical Foundations of Language Acquisition (ESOL endorsement)
TCE 573 (3) Instructional Approaches for P-12 English Language Learners (ESOL endorsement)
TCE 576 (3) Language Policy Issues in Bilingual/ELL Education (ESOL endorsement)
TCE 593 (3) Reading and Writing in the Middle and Secondary School

TCE 599 (3) Special Topics: Linguistics for Bilingual/ELL Teachers (ESOL endorsement)

TCE 599 (2) Special Topics: Contemporary Issues for Rural Education

ENG 5XX (8) Graduate level coursework in Subject Area Specialization

- c. Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).

All coursework is delivered on campus. All classrooms are multimedia equipped. The student teaching practica provide additional learning experience and opportunities to utilize technology.

- d. Ways in which the program will seek to assure quality, access, and diversity.

The proposed name change does not affect quality, access, or diversity. Quality is formally assessed and assured at various points throughout the year: meeting prerequisites for admission, conducting formal observations throughout the year (based on National Council for Accreditation of Teacher Education standards and requirements), assessing academic performance, and passing several national and state licensure examinations.

Students must demonstrate the following criteria prior to admission:

- **Completed bachelor's degree;**
- **Minimum GPA of 3.0 in the last 90 quarter hours of graded undergraduate work and all work completed thereafter;**
- **Three letters of recommendation;**
- **Competence in language arts and social studies;**
- **At least 60 verified hours observation or experience working with middle or high school age students (preferably in a public school)**
- **Demonstrated effectiveness in literacy skills;**
- **Sincere and appropriate desire to become a public school teacher and an understanding of the demands placed on a teacher;**
- **Professional disposition;**
- **Satisfactory answers to "good conduct" questions as required by the Oregon Teacher Standards and Practices Commission (TSPC).**

In addition, we ask that students complete, as prerequisites, the following courses or an equivalent:

TCE 499: Special Topics: Civil Rights in Education (2 credits)

TCE 560: Research in Learning (3 credits)

TCE 599: Special Topics: Professional Formation (1 credit)

Students must receive a "B" grade or higher in each class.

Testing Requirements

Prior to entering the MAT in Language Arts Education program in June, all students must take and pass the California Basic Education Skills Test (CBEST) OR all three subtests of the PRAXIS PPST. In addition, Cohort members must pass the Oregon Educator Licensure Assessment Multiple Subjects Examination (ORELA MSE) Subtests I and II, the ORELA Civil Rights exam, and the NES exam for Language Arts or Social Studies by deadlines specified throughout their resident year.

While admission is selective, the OSU-Cascades MAT program accepts candidates who meet the above criteria and who demonstrate experience working in diverse settings.

- e. Anticipated fall term headcount and FTE enrollment over each of the next five years.

The current cohort has 13 FTE students. OSU-Cascades anticipates awarding 18 MAT in Humanities degrees per year over the next five years. We utilize a Cohort model from June to July (5 terms). Enrollment limitation would be subject to staffing requirements prescribed by NCATE and funding availability. Prospective students will be selected through the criteria outlined above with particular attention paid to academic ability, depth of knowledge in content area, experience with middle and high school students, and dispositional characteristics that indicate the likelihood of professional success in the classroom.

- f. Expected degrees/certificates produced over the next five years.

90 degrees are expected to be awarded over the next five years.

- g. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

This full-time program serves resident, full-time, traditional and non-traditional (mid-career changing) students.

- h. Adequacy and quality of faculty delivering the program.

All faculty involved in delivering the academic program have been approved by the Graduate School at OSU. Everyone holds an earned Masters, Ed.D., or Ph.D.

- i. Faculty resources – full-time, part-time, adjunct.

Full time:

Jay Casbon, Ph.D.

Carolyn Platt, Ph.D.

Part time:

Dennis Lynn, Ph.D.,

Adjunct:

Phil Hoffman, Ph.D.; Cate Denson Hill, MA; Laura Sugden, MA; John Nehl, MA; Ann Allred, MA.

- j. Other staff.

University Supervisors: Student teaching field placement evaluators 2, part-time (Headcount)

Placement Coordinator: 1 fulltime, shared with other programs

Licensure and Administrative Coordinator: 1 fulltime, shared with other programs

Educational Librarian: 1 fulltime, shared with other programs

- k. Facilities, library, and other resources.

Classrooms and support facilities are already in place in the OSU-Cascades building. All classrooms are multimedia equipped. The educational library is incorporated into the Central Oregon Community College/OSU-Cascades Library.

- l. Anticipated start date.

Academic year 2011-2012.

2. Relationship to Mission and Goals

- a. Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.

The proposed name change has been discussed and supported by faculty and administrators at OSU-Cascades and in the College of Education on the main campus. The College of Education at OSU understands that this name change will apply to any MAT degrees awarded on main campus as well. As a branch campus of a land grant university, OSU-Cascades communicates with and responds to the communities comprising Central Oregon. Extensive discussions with the seven regional superintendents demonstrate support for the proposed name change. (See Letters of Support)

- b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

The proposed name change dovetails with OSU-Cascades' strategic priorities and signature areas of focus. The graduate programs in TCE meet the need of the Central Oregon educational community and provide the means for educating the population east of the Cascades. As stated above, OSU-Cascades MAT degree to supports the community's educational and workforce needs. The community, both students and school districts, supports this requested name change. (Letters of Support)

- c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

Until the commencement of OSU-Cascades, Central Oregon's rapidly growing population had been underserved in higher education. The Department of Teacher

and Counselor Education (TCE) has filled a large gap in the need for Central Oregon educators. OSU-Cascades' TCE continue to strive to meet the needs of our school districts and respond to their request for training and professional support where we can. The proposed degree name change to an MAT in Humanities is one such important step.

- d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.

The presence of OSU-Cascades, OSU's first branch campus, is addressing the educational and workforce needs in Central Oregon which had been severely underserved until the inception of OSU-Cascades.

3. Accreditation

- a. Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.

The OSU-Cascades MAT program, in affiliation with the College of Education on main campus, is nationally accredited through the National Council for Accreditation of Teacher Education (NCATE), as well as regionally accredited through the Northwest Commission on Colleges and Universities (NWCCU). Additionally, OSU-Cascades is approved to offer professional licensure by the Oregon Teacher Standards and Practices Commission (TSPC).

- b. Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.

This program meets all of the standards set by its national and state accrediting bodies.

- c. If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.

N/A

- d. If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.

The program already is awarded accreditation. The proposed name change will not affect accreditation or licensure in any way.

4. Need

- a. Evidence of market demand.

OSU-Cascades works in close partnership with the six Central Oregon school districts, the High Desert Educational Services District, and Central Oregon Community College. We seek to change the name of the MAT in Language Arts Education program to bring it in line with the strategic plans of our school districts, which hire our graduates. School personnel expect the educational preparation and practicum experiences of language arts and social studies teacher candidates to demonstrate interdisciplinary competence in the humanities.

We have had extensive discussions with the superintendents and senior administrators of each school district. There is consistent and vocal support for OSU resident graduate programs, including the MAT in Humanities, in teacher education for Central Oregon by regional superintendents, teachers, school boards, and community patrons. Please see the attached letters of support.

- b. If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).

There is no other OUS resident teacher education program in Central Oregon.

- c. Manner in which the program would serve the need for improved educational attainment in the region and state.

Situated on the OSU branch campus that serves Central Oregon, OSU-Cascades' MAT program is congruent with the mission, goals, accreditation, and strategic plan of Oregon State University and its College of Education.

- e. Manner in which the program would address the civic and cultural demands of citizenship.

As preparers of future public school educators, the OSU-Cascades' MAT program integrates issues of civic and cultural demands of citizenship in its teaching philosophy and expects its graduates to demonstrate and instill these qualities every day in the students with whom they work.

5. Outcomes and Quality Assessment

- a. Expected learning outcomes of the program.

As part of NCATE and TSPC accreditation, the OSU-Cascades' MAT program conforms to the rules and regulations driving an outcome-based learning experience. Learning outcome standards from NCATE inform the student academic and practicum experiences. The values and standards that form the core of the conceptual framework for the MAT include knowledge and demonstrated competence in ethics and professionalism, reflective teaching, lifelong learning, and ability to meet the needs of diverse learners. Teacher candidates in the MAT program must demonstrate competency in subject knowledge, pedagogy, professional skills and dispositions in

order to achieve a diploma and be recommended for teaching licensure. The learning outcomes in each of these categories are quantified and reported to NCATE, the OSU College of Education, and TSPC annually. The proposed name change to MAT in Humanities will not affect the learning outcomes in any way.

b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

Multiple assessments of student performance occur throughout the program, which in turn, are reviewed and used to improve the curriculum and instruction. OSU-Cascades submits each syllabus for alignment with the appropriate department on OSU-main campus. We review student evaluations and hold faculty meetings to align and assess course content and student teacher preparation for the middle and high school classrooms. Our field supervisors, who are in the public schools observing our student teachers, bring a professional and community perspective to the program. OSU-Cascades works closely with the Cooperating Teachers, who also evaluate the student teachers on instructional preparation and professional formation. NCATE accreditation requires an annual analysis and reporting of program and student data which the department uses to improve curriculum and instruction.

c. Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.

In addition to a required grade-point average of 3.0 in all courses, each student must produce two work samples and a Professional Portfolio (complete with oral exam), which meet NCATE and TSPC standards of competence in key areas of teaching. Throughout the student teacher practicum, six formal observations by the university supervisor, six formal observations by the cooperating teacher, and five three way evaluations (student teacher, cooperating teacher, and university supervisor) are conducted. National and state exams certify subject area competence. All of this is considered before recommending program graduates to TSPC for licensure. We provide annual reports on the program and on each student to TSPC and NCATE. The proposed name change to MAT in Humanities will enhance marketability for our graduates and not impinge on performance indicators.

d. Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.

OSU-Cascades adheres to the same benchmarks and metrics that are expected for faculty on the main campus concerning promotion and tenure, as well as for the process of faculty evaluation.

6. Program Integration and Collaboration

a. Closely related programs in other OUS universities and Oregon private institutions.

OSU-Cascades offers an MAT in Early Childhood and Elementary Education. Other universities such as George Fox University, Concordia University, and Eastern Oregon University offer the MAT in a hybrid (distance and limited on-location) model. There is consistent and vocal support for OSU resident graduate programs in education for Central Oregon by regional superintendents, teachers, school boards, and community patrons.

- b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.

The Teacher and Counselor Education faculty of OSU-Cascades is connected to, and works closely with, the College of Education on the main campus. Within the branch campus, close collaboration occurs with the programs in MAT Elementary Education, Human Development and Family Sciences, and Counseling. We collaborate, and are open to additional collaboration, with other Oregon institutions that have NCATE accredited status. A name change will not have any impact on current or future collaborations.

- c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.

N/A

- d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.

The requested name change will not impact any other program in areas of budget, enrollment, faculty workload, and facilities. In addition, there will be little impact to OSU-Cascades TCE in these areas because of the name change.

7. Financial Sustainability (attach the completed *Budget Outline*)

- a. Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.

Please see attached budget pages for the long-term financial plan (4 year). The proposed name change will have very little cost associated with it and this is reflected in the first year of the budget outlines. Faculty and staff are already in place and there is no additional need for library acquisitions.

- a. Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.

N/A

- b. Targeted student/faculty ratio (student FTE divided by faculty FTE).

6:1

- c. Resources to be devoted to student recruitment.

The OSU-Cascades budget already covers recruitment costs for TCE program. A limited amount of funds goes into advertising local information sessions. Most students learn about the program from the OSU-Cascades' web site. The full-time faculty conducts the advising and program admission. OSU- Graduate School, in conjunction with the OSU College of Education, admits applicants to the university. The requested program name change will not affect the process in any way, nor will it add any cost to recruitment.

April 12, 2010

To: Oregon State University

OSU-Cascades is requesting a name change for “MAT in Language Arts Education” to “MAT in Humanities.” The proposed name better illustrates the complexity of the program that OSU-Cascades is offering here in central Oregon.

Recently, I interviewed the superintendents in the Bend-La Pine, Sisters, Madras, Culver, Redmond, and Crook County School Districts. All of the superintendents were supportive of the MAT programs initiated by OSU Cascades and were eager to support the program. They were also eager to see an expansion of the education department to include additional opportunities to develop teachers ready to serve in their districts.

Oregon State University needs to respond to the respect and the allegiance of the community by adding additional programs and also making changes that reflect the programs presently being offered.

As a member of the Board of Advisors at OSU Cascades and the OSU College of Education, I urge you to support this name change.

Sincerely,

Kathryn Persing

April 12, 2010

Carolyn Platt, Ph.D.
Instructor and Secondary MAT Advisor
Oregon State University-Cascades Campus
2600 College Way
Bend, OR 97701-5933

Dear Carolyn,

Bend-La Pine Schools strongly support the request to change the name of the current MAT degree program at OSU-Cascades from "MAT in Language Arts Education" to "MAT in Humanities". It appears to be the more appropriate name for the degree program as the program has evolved.

The need for higher education opportunities in Central Oregon is high, and the change in the degree program name should increase the attractiveness of the program to include potential participants looking for a broader application to the degree.

We appreciate OSU-Cascades' efforts to be proactive in meeting the needs of Central Oregon students, and support their continued endeavor to improve on opportunities available to our students.

Sincerely,

Ron Wilkinson
Superintendent
Bend-La Pine Schools

The BFP Committee has fully approved the MAT in Humanities proposal (# 81959;
<https://secure.oregonstate.edu/ap/cps/proposals/view/81959>).

Please pdf and post this email to the CPS website as our committee's feedback on this proposal.

All members in attendance at our meeting today (May 16th) voted unanimously in favor of approving this proposal with no notes or comments.

Thanks,
Steve Hoelscher
BFP Committee Co-Chair

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

Berg
5/2/11

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☐ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☒ Rename of an academic program or unit
- ☒ Reorganization -- moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Title of Proposal:

Effective Date:

Merger of the Department of Geosciences with the College of Oceanic and Atmospheric Sciences: Creating the College of Earth, Ocean, and Atmospheric Sciences

1 July 2011

Department/Program:

College:

Geosciences

College of Oceanic and Atmos. Sciences

I certify that the above proposal has been reviewed and approved by the appropriate Department and College committees:

Executive Summary

The creation of the College of Earth, Ocean, and Atmospheric Sciences (CEOAS) is at the heart of a 10-year process to define a new research and education enterprise organized around the interdisciplinary sciences of the Earth, ocean, and atmosphere. It will span the natural science disciplines and create strong linkages with the social sciences both within the new college as well as around the university. The plan is the culmination of an intensive engagement of faculty from the College of Oceanic and Atmospheric Sciences (COAS) and the Department of Geosciences (College of Science).

The new college will prepare students and enable faculty to seek out new ideas and innovative approaches to the complex issues of planetary-scale science. It will bring an entrepreneurial and collaborative spirit to its endeavors, be willing to take risks and to create new partnerships. With its focus on innovation and exploration, the new college will build upon a strong tradition of applied analytical and computational technology and effective fiscal processes. CEOAS will pursue a new model for the integration of research and education, from undergraduate to graduate to post-graduate. The new college will be an “honors college for the Earth sciences,” bringing together the scientific disciplines, research and education through the use of new methods and approaches.

CEOAS will house the undergraduate programs in Geography, Geology, and Environmental Sciences. There will be no changes in the structure or content of these programs as a result of this merger. The new BS in Earth Sciences degree (subject of a separate Category 1 proposal submitted earlier this year, CPS #81399) will retain its three options (assuming that it is approved): Earth Systems, Geology, and Geography. This new Earth Sciences degree with its three options will subsume the existing degrees in Geology and Geography. The Environmental Sciences program (BS and BA) will continue to be supported and structured as it is today, and it will be housed in CEOAS.

The present graduate programs in Oceanic, Earth and Atmospheric Sciences, Geology, Geography, and Marine Resource Management will not change with the merger. Over time, we expect that there will be some changes in course requirements as faculty in the two units work together as one enterprise and as new collaborations form across the Earth System Sciences division and OSU.

Merger of the Department of Geosciences with the College of Oceanic and
Atmospheric Sciences:
Creating the College of Earth, Ocean, and Atmospheric Sciences

Oregon State University
CPS Tracking #82104
April 2011

Proposing Colleges:

College of Oceanic and Atmospheric Sciences and College of Science

Proposing Department:

Department of Geosciences

CIP 400699

Proposal Date:

12 April 2011

Proposed Effective Date:

1 July 2011

A. *College of Earth, Ocean, and Atmospheric Sciences (CEOAS)*

This new name represents the merger of two units, the Department of Geosciences in the College of Science (Geo) and the College of Oceanic and Atmospheric Sciences (COAS). CEOAS will focus on the basic sciences of the Earth system, and the new name captures both the existing strengths of Geo and COAS and opens the door for new programs in research and education regarding our home planet.

Table 1. Summary of Proposed Changes

Departmental Move/Merger:

- Department of Geosciences in the College of Science moved/merged with the College of Oceanic and Atmospheric Sciences

New college name:

- College of Earth, Ocean, and Atmospheric Sciences

Terminate:

- Department of Geosciences in the College of Science
- College of Oceanic and Atmospheric Sciences

Degrees, Minors, Certificate and Courses Move (From College of Science to the proposed College of Earth, Ocean, and Atmospheric Sciences):

- Undergraduate Certificate in Geographic Information Science (CIP # 450799)
- BA, BS in Environmental Sciences (CIP # 030104)
- MA, MS, PhD in Geography (CIP # 450701)

Areas of Concentration

- Geographic Information Science
- Physical Geography
- Resource Geography
- MA, MS, PhD in Geology (CIP # 400601)
Areas of Concentration
 - Glacial Geology
 - Geochemistry, Hydrogeology, Structural Geology
 - Geomorphology
 - Geophysics
 - Igneous Petrology
 - Tectonics
 - Volcanology and Mineral Deposits
- Graduate Certificate in Geographic Information Science (CIP # 450799)
- Graduate Certificate in Water Conflict Management and Transformation (CIP # 030205)

Graduate Minors

- Ecosystem Informatics (CIP # 450799)
- Geography (CIP # 450701)
- Geology (CIP # 400601)

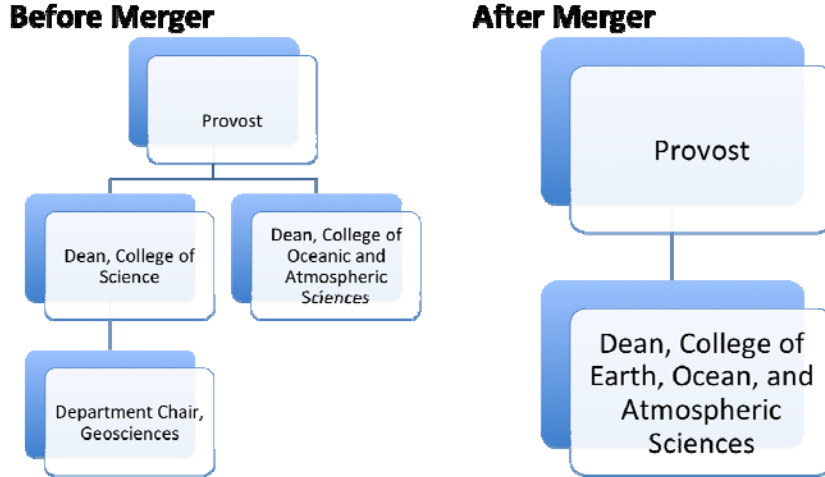

Courses

- All courses with a GEO course designator will move from the College of Science to the proposed College of Earth, Ocean, and Atmospheric Sciences

Effective Term:

- Term associated with final approval (i.e., Summer Term or Fall Term 2011)

B. Organizational structure

C. Objectives, functions, and activities of the new college

The creation of the College of Earth, Ocean, and Atmospheric Sciences is at the heart of a 10-year process to define a new research and education enterprise organized around the interdisciplinary sciences of the Earth, ocean, and atmosphere. It will span the natural science disciplines and create strong linkages with the social sciences both within the new college as well as around the university. The new college will prepare students and enable faculty to seek out new ideas and innovative approaches to the complex issues of planetary-scale science. It will bring an entrepreneurial and collaborative spirit to its endeavors, be willing to take risks and to create new partnerships. With its focus on innovation and exploration, the new college will build upon a strong tradition of applied analytical and computational technology and effective fiscal processes. CEOAS will pursue a new model for the integration of research and education, from undergraduate to graduate to post-graduate. The new college will be an “honors college for the Earth sciences,” bringing together the scientific disciplines, research and education through the use of new methods and approaches.

CEOAS will house the undergraduate programs in Geography, Geology, and Environmental Sciences. There will be no changes in the structure or content of these programs as a result of this merger. The new BS in Earth Sciences degree (subject of a separate Category 1 proposal submitted earlier this year, CPS #81399) will retain its three options (assuming that it is approved): Earth Systems, Geology, and Geography. This new Earth Sciences degree with its three options will subsume the existing degrees in Geology and Geography. The Environmental Sciences program (BS and BA) will continue to be supported and structured as it is today, and it will be housed in CEOAS.

The present graduate programs in Oceanic, Earth and Atmospheric Sciences, Geology, Geography, and Marine Resource Management will not change with the merger. Over time, we expect that there will be some changes in course requirements as faculty in the two units work together as one enterprise and as new collaborations form across the Earth System Sciences division and OSU.

CEOAS will be assessed through its impacts on education and research, including:

- Substantially increased participation by undergraduates in research (for example, through lab experience, research projects, senior theses, or internships)
- Increasing quality and diversity of undergraduate majors (for example, participation by underrepresented groups, increasing GPAs among entering students, undergraduate awards, publications in the research literature, etc.)
- Increasing number of interdisciplinary research projects (by both graduate students and by faculty through externally-funded grants) on the Earth system, including the human dimension
- Increasing national and international recognition of faculty through peer-reviewed publications and citations, scientific awards, and leadership of major scientific programs and committees
- Growing partnerships with the private sector in both joint research and education programs, engagement with STEM education programs at OSU and around the nation, and cooperative research with state and local governments.
-

D. Resource needs

No new resources are needed, as this is a merger of two existing programs. No additional staff, programs or new requirements will be created.

The process to create the new College has been led by teams of faculty from the Department of Geosciences and COAS. Beginning with a faculty retreat in June 2010, the Deans have worked with a Faculty Advisory Committee that led the synthesis of work by five faculty committees. The final plan for the integration of the two units came directly from the work of these committees, with substantial input from individual faculty and curricular groups. Over 90% of the Geosciences faculty and 30% of the COAS faculty were directly involved in these committees. Monthly town halls were held to discuss progress, issues, and concerns. The Deans have worked on logistic and administrative issues including an MOU to define the joint commitments, and issues around computing, graduate student support, undergraduate support, and facilities development. On February 25, 2011, the final report was delivered at a joint town hall of the two units. A copy of the final report and a summary of the MOU are included.

E. Funding sources

Funding for CEOAS will be a combination of the existing budgets for Geo and COAS. Details are shown in the budget below. No new resources are required.

Resources*

| | |
|-------------------------|---------|
| OSU Base budget | \$5.9M |
| Returned overhead | \$2.8M |
| Tuition, e-campus, etc. | \$1.5M |
| Total | \$10.2M |

Expenses

| | |
|-----------------------|---------|
| Salaries and benefits | \$9.0M |
| Services and supplies | \$1.1M |
| Total | \$10.1M |

*Resources do not include prior year carryforward amounts.

F. Relationship to the institutional mission

CEOAS is structured to support the fundamental goals of the OSU Strategic Plan:

- Create outstanding academic and student engagement programs, especially in the area of undergraduate and graduate research opportunities and internships;
- Strengthen innovative research activities through the support of interdisciplinary research on the Earth system; and
- Develop strategies and solutions to issues facing Oregon and the world, including the impacts of climate change, natural hazards, and changes in ocean ecosystems.

The new college is clearly aligned with the first Signature Area of Distinction: *Advancing the Science of Sustainable Earth Ecosystems*. Through its support of basic research on the components of the Earth system (its atmosphere, its oceans, and its land surface), CEOAS will be at the forefront of studies of the interactions of the physical, chemical, and biological environment. Moreover, its programs in Geography and Marine Resource Management will also encompass the human dimension of the Earth system. CEOAS will play a supporting role in the other Signature Areas of human health and economic development.

There are no negative impacts on either Geo or COAS, but there are new opportunities for both research and education. Geo faculty will have increased access to COAS technical and administrative infrastructure for

research as well as closer collaborations with COAS faculty. COAS faculty will have opportunities to be more closely engaged in the undergraduate teaching mission. Both units are realigning their curricular groups to deliver a more integrated and interdisciplinary graduate curriculum organized around the primary components of the Earth system.

The new college should open up further collaborations with other units on campus, such as the new School of Public Policy, the Department of Forest Ecosystems and Society, the Department of Crop and Soil Science, the Department of Fisheries and Wildlife, the Department of Zoology, and many others engaged in research and education on the Earth system.

Lastly, CEOAS will be an important component of the Division of Earth System Sciences. It will continue to build research and educational links with the basic and applied research programs in the College of Agricultural Sciences and the College of Forestry, helping to position OSU as the nation's premier academic institution in teaching and research on the Earth as a system.

G. Long-range plans and goals

From the 25 February 2011 report of the Geo and COAS faculty:

Vision Statement:

The College of Earth, Ocean, and Atmospheric Sciences will provide, to Oregon and the world, leadership in observation and understanding of the past, present, and future Earth. The College will have nationally recognized undergraduate and graduate programs in Earth, ocean, atmospheric and environmental sciences; excellence in Earth-, ocean-, and atmospheric-science research in support of society's natural scientists, educators, and resource managers; and leadership and outreach to the public and local, state, national and global stakeholders.

Mission Statement

The mission of the College of Earth, Ocean, and Atmospheric Sciences is to enhance knowledge of the integrated Earth system through innovative and relevant research, engaged teaching, and significant service to the public, policy makers, and professionals. The College of Earth, Ocean, and Atmospheric Sciences pursues its purpose through:

Faculty Excellence. *The College is built on a foundation of diverse, interdisciplinary researchers, educators, and technical staff that fosters collaboration in world-class knowledge discovery and dissemination.*

Earth Observatories. *The College maintains and utilizes state-of-the-art ocean, land, atmospheric and space-based observation platforms from which*

College and affiliated researchers gather essential information about the changing Earth.

Laboratories and Facilities. *World-class laboratory, computing, and archival facilities created and supported by the College give the scientific community access to study of the Earth system from molecular levels to global simulations and allow solution of problems critical to Oregon and the world.*

Education and Guidance. *College faculty educate and mentor the next generations of Earth system scientists and citizens with interdisciplinary curriculum and advanced degree programs with strengths in hands-on and applied research and management projects built on a firm theoretical framework.*

Leadership and Outreach. *The College maintains an active presence in the local, national and global community through outreach, distance learning, and engagement with political and professional leaders.*

In the long-term, the new college will need a state-of-the-art facility to house innovative research and education programs. A preliminary design was funded by the Provost and COAS several years ago, and a rough update was developed last year. The Earth Systems Science Center is part of the Campus Plan and would be located just to the south of the COAS Administration Building. A rough cost estimate is \$75M, which would be raised through both state bonds and private donations.

H. Relationships to other programs in Oregon

The new college will maintain its existing relationships that are primarily based on joint research partnerships and education. For example, the Oregon Climate Change Research Institute is housed in COAS but it provides collaboration opportunities for the University of Oregon, Portland State University, and Oregon Health and Science University. COAS is part of an NSF Science and Technology Center led by OHSU. There are no anticipated changes in these (or future) relationships. However, the new college should foster new opportunities across the state, both with OUS institutions and state agencies. It should also enhance partnerships with federal agencies, especially those with a mission focus such as the US Geological Survey, the National Oceanic and Atmospheric Administration, and the Department of Energy.

I. Professionally-accredited programs

There are no professionally accredited programs in either Geo or COAS.

Abbreviated category 1 proposal. No external letters of support.

Category I Proposal

Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Title of Proposal:
College of Earth, Ocean, and Atmospheric Sciences

Effective Date:

1 July 2011

I Introduction

II. Deans' Perspective

III. Outline of New College Structure

IV. Implementation Timeline

I. Introduction

We present a proposal and implementation plan for the integration of the existing Department of Geosciences and the College of Oceanic and Atmospheric Sciences (COAS) into a new College of Earth, Ocean, and Atmospheric Sciences (CEOAS). This new College will respond to regional, national, and international needs for integrative Earth science education and research, by merging two existing nationally ranked OSU Earth science academic units, and incorporating the existing interdisciplinary undergraduate Environmental Sciences program.

Planning for this integration began with a workshop attended by about 50 members of the OSU faculty on June 4, 2010, to explore the potential of the merger and conduct initial discussions on how this new unit would be structured and governed. The attendees were mostly from COAS and Geosciences, but also from the College of Agriculture and the College of Forestry, including representation of the Environmental Sciences undergraduate program (ESUP). Based on the encouraging results of the workshop,

COAS & Geosciences faculty engaged in a process during the fall of 2010 to produce a plan to accomplish this merger. Four faculty task groups comprised of equal numbers of faculty members from both COAS and Geosciences considered themes of 1) Strategic planning; 2) Faculty development, including promotion and tenure, and hiring; 3) Academic programs and; 4) Rebranding and communications. A fifth joint faculty group, the Next Steps Committee (NSC), coordinated the merger plan development process. The NSC (K. Falkner, R. Nielsen, T. Ozkan-Haller, N. Pisas (chair), R. Samelson, and A. Wolf) provided oversight for the task groups (listed in appendices) and, in consultation with the Deans of COAS and COS, developed a proposed governance structure for the new unit that was consistent with the task-group findings and recommendations. Over 90% of the Geosciences and 30% of COAS faculty participated directly in these coordinated group discussions. The groups reviewed current practices and considered options for the new unit and captured their findings in written documents that are appended to this report. It was recognized from the outset that the themes would result in some degree of redundancy on some issues. However, it was considered important that we have some parallel discussions on the most important topics so as to include a wide range of views on how the new College would function.

The NSC hosted four “Town Hall” meetings during fall 2010 to keep the entire faculty apprised of the plan development process, to address questions, and to invite input. The NSC assembled a draft merger plan based largely on the task group input that was first presented at the final Town Meeting on December 9, 2010, and posted for faculty comment through January 9, 2011. Additional faculty members were entrained with the NSC to revise the draft plan in accordance with faculty feedback.

The resulting plan consists of measured steps to bring about a full merger of the Department of Geosciences, the Environmental Sciences Undergraduate Program and the College of Oceanic and Atmospheric Sciences. Our goal was to preserve the successful aspects of the individual units and recommend new practices that would result in a College that was greater than the sum of its parts. Particular attention was paid to achieving the collective academic and scientific mission while maintaining fiscal health.

The role of faculty in governance has been strong in both units, and it is envisioned that it remain so and even be fortified in key ways. The new unit will be organized on the basis of broadly defined discipline groups as opposed to formal departments. Representatives from these groups will populate committees that will conduct college business. Ongoing strategic planning is considered a key element of business for the new unit. Most importantly it is the vision that this unit strive for excellence in research and undergraduate and graduate education as well as outreach and service. Faculty position descriptions will necessarily vary to assure excellence in the breadth of the unit missions and will serve to manage implementation of this vision. The merger will require changes in the governance hierarchy and support staffing to assure accountability to the unit missions.

The fact that so many already very busy faculty gave substantially of their time and thoughtful energy to this planning process portends well for the new unit. However, the timeline for developing this merger plan was very tight. Several issues remain to be more fully resolved and these are highlighted in the plan. It is expected that others will become apparent in the merger transition. It is envisioned that responsibility to oversee

amendments to the plan will fall to the College Advisory Committee for the new unit. Any amendments should be guided by our goals of building and sustaining a world-class Earth science enterprise while maintaining a culture that encourages and rewards participation of the faculty in governance and planning.

II Deans' Perspective

The integration of the College of Oceanic and Atmospheric Sciences and the Department of Geosciences is at the heart of the 10-year vision to create a new research and education enterprise organized around the interdisciplinary sciences of the Earth, ocean, and atmosphere. It will span the natural science disciplines and create strong linkages with the social sciences both within the new college as well as around the university. The new college will prepare students and enable faculty to seek out new ideas and innovative approaches to the complex issues of planetary-scale science. It will bring an entrepreneurial and collaborative spirit to its endeavors, willing to take risks and to create new partnerships. With its focus on innovation and exploration, the new college will build upon a strong tradition of applied analytical and computational technology and effective fiscal processes. Advanced information technology will be especially important, allowing faculty and students to create and integrate new observing systems and numerical models, pursue real-time and mobile applications, collaborate locally and globally, and ultimately build new approaches to research, teaching, and publishing.

We are at the beginning of a journey to create a new model for the integration of research and education, from undergraduate to graduate to post-graduate. The new college will be an “honors college for the Earth sciences,” bringing together the scientific disciplines, research and education through the use of new methods and approaches.

COAS and Geosciences are both strong units, each with its own successful research and education programs. But while their cultures and business processes are different, they are complementary. Both can learn from each other, and develop new approaches as appropriate. The key to success is to preserve the strengths of each, but evolve as necessary to position the new college for greater success. This document is a framework to guide this integration over the next few years, rather than a detailed implementation plan. It focuses first on the principles that the new college should follow (e.g., develop faculty-driven discipline groups as a key organizational element, rather than a traditional departmental structure) as well as some of the processes that are especially critical for faculty and student success (e.g., aligning diverse position descriptions with the appropriate evaluation processes for promotion and tenure).

Although the undergraduate and graduate curricula are initially separate, the formation of new discipline groups as well as the Category 1 proposal for a new undergraduate program between COAS and Geosciences are immediate steps that will drive the evolution of the new college. Today, faculty are discussing new curricula in biogeochemistry and ecology, as well as new opportunities between Geography and Marine Resource Management. Ultimately, it will be the students that we recruit and graduate who will be at the educational core of the new college.

Establishing a new business center that focuses solely on the needs of the new college is essential. It will require additional positions to meet the college's needs, as the budget alone will be over \$50M/year, comparable to other university business centers. Although it will be one business center, the budgets will be maintained as separate accounts, at least for the first 2-3 years, to ensure that there are no disruptions to the existing services provided by COAS and Geosciences to its faculty, staff, and students. We expect that over time the budget will evolve to support the strategic directions of the college.

The most important and difficult issues concern faculty development (including promotion and tenure) and faculty hiring. A core value is to recognize the diversity of faculty positions and expectations, and thus ensure that there is a close alignment between performance and assessment. Faculty (both tenure-track faculty and non-tenure track instructors) whose primary responsibility is teaching should be assessed more rigorously on educational outcomes than those faculty whose primary responsibility is research. This diversity also carries over into faculty hiring strategies. The college has both teaching and research responsibilities, and this is reflected in the available financial resources. For example, teaching positions are funded through the university budget model that distributes funds based on student credit hours, number of majors, etc., and the new college will hire faculty to meet these curricular needs. New programs (such as the Category 1 proposal now being considered by the university) are one way to increase the number of faculty in addition to growth in existing programs. Similarly, research positions will reflect the levels of returned overhead as well as perceived research opportunities emerging at the federal level. Thus the new college will continue to pursue these complementary paths of education and research, and faculty and instructor hiring strategies will reflect both current needs as well as new opportunities.

The merger of COAS and Geosciences will focus on balancing the needs to preserve existing capabilities as well as developing new capabilities to pursue new directions in both teaching and research. There will not be a rapid (and ultimately disruptive) shift to move towards a college where everyone is the same. Rather, its evolution will be deliberate and informed, recognizing the strength in the diverse and complementary strengths of the faculty.

As the merger process unfolds, it is clear that new resources will be required from the university. The Category 1 proposal identifies the resources needed for the new undergraduate program. A new business center will require 3-4 new FTE. And funds will be needed to bring salaries for GRAs and TAs up to equitable levels. We expect that some of these resources will be made available immediately; others may be phased in over time. However, the Provost has repeatedly stated his commitment and enthusiasm for the new college.

Lastly, we will all need to continue to learn about each other's needs and expectations, and with knowledge comes understanding and trust. We have made significant steps forward, through activities such as this report, sharing ideas about faculty hiring priorities, and planning new undergraduate and graduate curricula. Ultimately, we will build new research programs and recruit a new generation of students, focusing on the

interplay of the Earth, ocean, and atmospheric systems. By focusing on the future, we can ensure that our processes enable us to achieve our vision.

III. Outline of New College Structure

Name, Vision, and Mission Statement

Name:

It is the recommendation of the Faculty of the new college that the new name will be:

College of Earth, Ocean, and Atmospheric Sciences

to be abbreviated CEOAS and pronounced “see-ohs”.

Vision Statement:

The College of Earth, Ocean, and Atmospheric Sciences will provide, to Oregon and the world, leadership in observation and understanding of the past, present, and future Earth. The college will have nationally recognized undergraduate and graduate programs in Earth, ocean, atmospheric and environmental sciences; excellence in Earth-, ocean-, and atmospheric-science research in support of society’s natural scientists, educators, and resource managers; and leadership and outreach to the public and local, state, national and global stakeholders.

Mission Statement

The mission of the College of Earth, Ocean, and Atmospheric Sciences is to enhance knowledge of the integrated Earth system through innovative and relevant research, engaged teaching, and significant service to the public, policy makers, and professionals. The College of Earth, Ocean, and Atmospheric Sciences pursues its purpose through:

Faculty Excellence. *The College is built on a foundation of diverse, interdisciplinary researchers, educators, and technical staff that fosters collaboration in world-class knowledge discovery and dissemination.*

Earth Observatories. *The College maintains and utilizes state-of-the-art ocean, land, atmospheric and space-based observation platforms from which College and affiliated researchers gather essential information about the changing Earth.*

Laboratories and Facilities. *World-class laboratory, computing, and archival facilities created and supported by the College give the scientific community access to study of the Earth system from molecular levels to global simulations and allow solution of problems critical to Oregon and the world.*

Education and Guidance. *College faculty educate and mentor the next generations of Earth system scientists and citizens with interdisciplinary curriculum and advanced degree programs with strengths in hands-on and applied research and management projects built on a firm theoretical framework.*

Leadership and Outreach. *The College maintains an active presence in the local, national and global community through outreach, distance learning, and engagement with political and professional leaders.*

Administrative Structure

The College of Earth, Ocean, and Atmospheric Sciences (CEOAS) will have a lean and efficient administrative structure with key administrative positions working along clear lines of communication and responsibility to support the research, teaching and outreach missions of the College. In turn, the duties of the administrative and support staff will be connected to the needs of the faculty and students along equally clear lines (Figure 1).

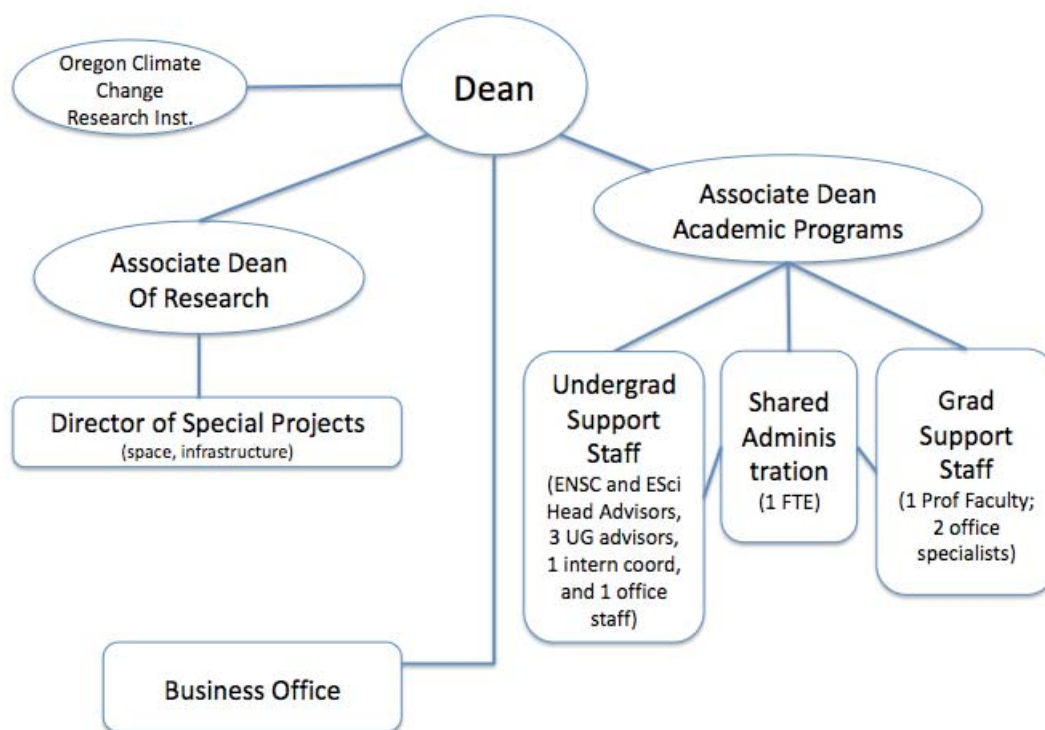

Figure 1. Administrative Structure

Table 1: Administrative positions with their primary responsibilities

| Position | Primary Responsibilities |
|---|--|
| Dean | <ul style="list-style-type: none">• Overall administrative oversight including fiscal management, assessment and strategic planning• Liaison with state, regional and national research organizations• Administrative oversight of research facilities• Oversight of accountability measures, including assessment of student learning outcomes and productivity measures used by internal and external audiences• Faculty and staff hiring, merit/promotion, performance of Faculty (coordinated with Assoc Deans)• Administrative oversight of scheduling, coordinated so as to achieve academic/strategic goals• Alumni Relations and development |
| Associate Dean of Research | Develop strategies for competing with major research initiatives from federal and private funding sources, operational and strategic aspects of space and equipment. Represent College on University wide committees relevant to College research. Interface with other College in the Division. |
| Associate Dean of Academic Programs | <ul style="list-style-type: none">• Assign teaching duties in cooperation with programs. Curriculum coordination.• Chair Instructional Programs Committee.• Manage assessment and advising• Coordinate START (with director or Env Sci Program and Head Advisor of Earth Sci UG degree).• Allocate GTA resources to discipline groups based on their role in course delivery (after consultation with Dean and IPC).• Calculate total GTA needs based on curriculum development and delivery. |
| Director of Special Projects | Chair Research Facilities committee. Develop priorities. Identify initiative opportunities. Oversee facilities and space. |
| Undergraduate Support Staff (Professional Faculty Advisors) | Provide advising to undergraduates in assigned degree major including: <ul style="list-style-type: none">• Degree progress• Course selection• Professional development• Liaise with adjunct faculty• START advising |

| | |
|---|--|
| Undergraduate Support Staff
(Internship Coordinator) | Coordinate undergraduate activities including: <ul style="list-style-type: none"> • START, UG research experiences • UG internship partners • Community colleges • Participate in START advising |
| Graduate Support Staff
(Professional Faculty in Graduate Student Services) | Oversee the primary activities of graduate support office: <ul style="list-style-type: none"> • Support student recruitment • Monitor student progress and success • Support student advising |
| Shared Administration
(Student Administrative Services) | Support administrative tasks required of both graduate and undergraduate academic programs. |

One of our goals will be to integrate the administration of undergraduate and graduate programs to the greatest degree possible. Therefore, individuals in support positions will have primary duties related to either graduate or undergraduate administration, with the expectation that individual roles will cross the grad-undergraduate administrative boundaries during periods when needs are greatest in each. The individual in the “shared administration” will be responsible for working with the Associate Dean of Academic programs and the UG degree program directors to distribute staff support and administrative workload.

A strong tradition of self-governance in both COAS and Geosciences will be maintained through the merger. This will be accomplished via the discipline group organization detailed below. Key faculty committees that will provide guidance to the governance of the new College and their relationship to the college dean is illustrated in Figure 2.

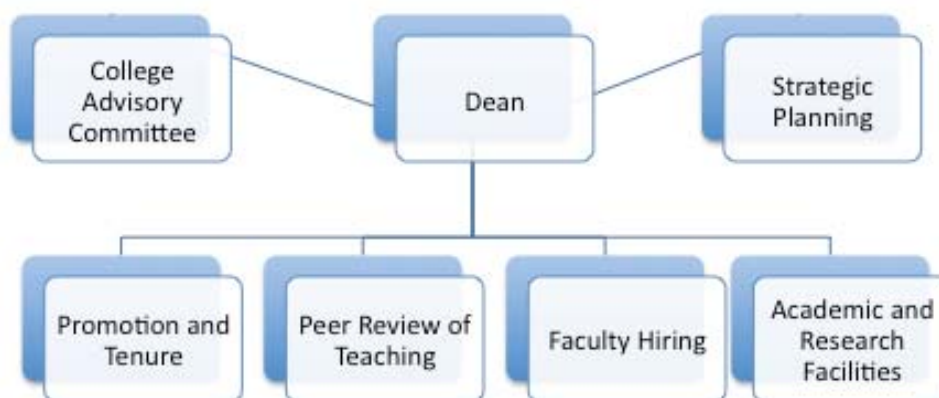

Figure 2. Faculty Committees Reporting Directly to the Dean (CAC, P&T, PRT, FHC, ARF, SPC). The committees reporting to the Associate Deans are: the IPC,

GAC, ESSC, and MRMSC to the AD of Academic Programs; and the SC, SOC and ARC to the AD of Research.

The key faculty committees and their role in the governance of the college are:

Instructional Programs Committee (IPC)

Who: 2-3 representatives from Geology and Geophysics; 1 from Biogeochemistry; 1 from Ecology & Biological Oceanography; 1 from Geography plus the ESUP Director and the MRM Director; 2 from Physics of Oceans and Atmospheres. Selection criteria for individual representatives should be based on interest and engagement in and knowledge of the corresponding degree program. Members will organize curricular groups (primarily consisting of those faculty who deliver the courses in the degree) to help manage each of the graduate and undergraduate degree programs.

Accountability: Dean and Assoc Dean of Academic Program, curricular and discipline groups and MRM and Env. Sci. steering committees. The discipline groups will be responsible for nominating individuals to represent their interests in each degree program.

Responsibilities: Develop procedures on admissions, GTA assignments. Set curriculum priorities. Develop guidelines on advising, student recruitment and assessment goals. Work with the Associate Dean of Academic Programs to secure and allocate resources that would significantly increase the total FTE for GTA support beyond the current level tied to the delivery of existing programs.

Goal: Maintain and integrate current function of COAS instructional program and Geoscience graduate and undergraduate committees.

College Advisory Committee (CAC)

Who: Two representatives from each discipline group, and representatives of the classified staff, non-tenure-track faculty, professional faculty, Faculty Research Assistants, and Student Advisory Committee. Chaired by the Dean.

Accountability: Dean of CEOAS and discipline groups.

Responsibilities: Advisory to Dean CEOAS on budget, hiring strategy, and management issues. Primary mechanism for faculty involvement in faculty governance.

Goal: Integrate current function of COAS and Geosci Advisory committees.

Strategic Planning Committee (SPC)

Who: Two representatives from each discipline group plus outside partners. Chaired by a senior faculty member.

Accountability: Dean of CEOAS and discipline groups.

Responsibilities: Provide comprehensive goals, directing the function (research, education, outreach and development) and assets (people, space and infrastructure) of the College.

Goal: Develop and regularly update a written a strategic plan for the CEOAS, to provide long-term planning recommendations to the CEOAS Dean.

Faculty Hiring Committee (FHC)

Who: Two representatives from each discipline group.

Accountability: Dean of CEOAS and discipline groups.

Responsibilities: Development and implementation of hiring processes, including formulation of hiring plans as recommendations to the Dean.

Goal: Oversee hiring processes and develop short-term and long-term hiring plans for the CEOAS, to provide long-term planning recommendations to the CEOAS Dean. The hiring plans developed by the FHC will balance the research and educational goals of the new unit, including the maintenance and further development of high-quality undergraduate educational programs, and considering other aspects such as facilities and equipment needs for potential candidates in specific research areas.

Peer Review of Teaching Committee (PRT)

Who: Up to two representatives from each discipline group plus student representatives. ~10 individuals, chaired by a senior faculty member. Members will organize subcommittees to help manage individual Peer review cases.

Accountability: Dean and Associate Dean of Academic Programs and discipline groups.

Responsibilities: Conduct peer reviews of faculty according to the College guidelines (once every 5 years for each faculty member). Propose changes to guidelines and make nominations for faculty teaching awards. Coordinate with P&T committee to ensure peer review and promotion timelines coincide.

Goal: Integrate peer review processes from Geosciences and COAS, and facilitate excellence in undergraduate and graduate education by providing critical and constructive reviews of teaching performance.

Graduate Admissions Committee (GAC)

Who: One or two members from each discipline group (decided by discipline groups based on size and need).

Accountability: Assoc Dean of Academic Program and discipline groups

Responsibilities: Facilitate review of student applications, coordinate open houses and student visits. Does not make decisions on acceptance of graduate students. Coordinate annual review of student progress.

Goal: Maintain current function of COAS Grad Admission committee and expand to also include Geosciences applicants.

Promotion and Tenure Committee (P&T)

Who: Up to two members from each discipline group nominated by Dean after consultation with discipline groups, and elected by the faculty. ~10 individuals, chaired by a senior faculty member. Members will form subcommittees organized around individual cases.

Accountability: University P&T committee, Dean and discipline groups.

Responsibilities: Coordinate production and assessment of dossiers for promotion and tenure according to university guidelines.

Goal: Combination and integration of Geosciences and COAS P&T processes.

Academic and Research Facilities Committee (ARF)

Who: One representative from each discipline groups. Chaired by Director of Special Projects.

Accountability: Associate Dean of Research and discipline groups.

Responsibilities: Develop priorities. Identify initiative opportunities. Liaise with library.

Goal: Expand current COAS committee and merge function with Geosciences Library committee.

Safety Committee (SC)

Who: One representative from each discipline group. Chaired by Director of Special Projects.

Accountability: Associate Dean of Research and discipline groups.

Responsibilities: Oversee safety issues for the College, including monitoring lab safety and organizing training sessions for staff and students.

Goal: Combine COAS safety committee with Geo safety coordination functions.

Ship Operations Committee (SOC)

Who: 1-2 representatives from each discipline group plus Ship Operations leadership.

Accountability: Associate Dean of Research and CEOAS Dean.

Responsibilities: Oversee ship operations following the model of the current COAS Ship Ops Committee.

Goal: Conduct ship operations oversight in merged unit.

Alumni Relations Committee (ARC)

Who: One representative from each discipline group. Chaired by a senior faculty member. Dean serves as an ex-officio member.

Accountability: Dean and discipline groups.

Responsibilities: Plan and organize alumni publications (newsletters) and events.

Goal: Provide faculty input on alumni issues and assistance in organization of alumni events.

Environmental Science Undergraduate Program Steering Committee (ESSC)

Who: Representatives from faculty at large, selected by Assoc Dean of Academic Programs and ESUP Director. ~8–12 individuals. Chaired by the ESUP Director.

Accountability: Assoc Dean of Academic Programs, ESUP Director, participating programs and discipline groups.

Responsibilities: Strategic planning (with Director). Set curriculum priorities. Develop procedures on advising. Consult and liaise on teaching assignments and assessment.

Goal: Maintain current function of Environmental Science steering committee.

Marine Resource Management Steering Committee (MRMSC)

Who: Representatives from faculty at large, selected by Assoc Dean of Academic Programs and MRM Director, ~8–12 individuals. Chaired by the MRM Director.

Accountability: Associate Dean Academic Programs, MRM Director, and participating programs and discipline groups.

Responsibilities: Strategic planning. Set curriculum priorities. Develop procedures on advising. Consult and liaise on teaching assignments and assessment.

Goal: Maintain current function of MRM steering committee.

The discipline groups from which committee members are to be drawn, as detailed in the above list of committees, are described below, under Faculty Governance and Discipline Organization.

Faculty Governance and Discipline Organization

The faculty in the CEOAS will be organized into disciplines, following the existing COAS model and with strong parallels to the existing Geoscience model, where the CEOAS Dean will have a role similar to that of the current Geoscience department chair. All CEOAS faculty members and graduate students will belong to one or more of the proposed five discipline groups. Discipline-based organization fosters interdisciplinary research and education and promotes the efficient and flexible use of College-wide resources, and provides for a direct connection between the faculty and the administrative deans of the college. Disciplines and discipline responsibilities will form the basis of representation on most CEOAS committees. The similar functionality of the former department structure for Geosciences is carried forward via the faculty committee and governance structure.

The proposed five discipline groups are (1) Biogeochemistry and Chemical Oceanography, (2) Ecology and Biological Oceanography, (3) Physics of Oceans and Atmospheres, (4) Geology and Geophysics, (5) Geography and Environmental Synthesis. These five groups broadly represent the biogeochemical, living, fluid, solid, and human dimension elements of the Earth sciences. These units will have specific curricular and degree responsibilities, as well as reflecting primary faculty research commonalities. Faculty members were polled regarding their preference of a primary and, if desired, secondary discipline affiliation. The results of this preliminary distribution of faculty into the five groups are summarized in Table 2.

While the Ecology and Biological Oceanography faculty is relatively small at present, the role of aqueous and terrestrial biosphere science in the new College is recognized to be essential. Initially, it may be most effective for the biogeochemical and life-science disciplines to operate as a single discipline. This would better balance numbers between the disciplines and help to assure an equitable committee workload. These two disciplines have natural alignments but can and do have quite distinct research and education foci and approaches. Activities should anticipate the eventual splitting into two disciplines as expansion warrants.

Table 2. Discipline Groups for the College of Earth, Ocean, and Atmospheric Sciences

(Non-italic indicate tenure track faculty, italic indicate research faculty and instructors, (2) indicates faculty's second choice.

| Biogeochemistry and Chemical Oceanography | Ecology and Biological Oceanography | Physics of Oceans and Atmospheres | Solid Earth: Geol./Geoph. | Geography and Environmental Synthesis |

Role of Disciplines in College Governance

The responsibilities of the discipline groups are:

- Provide representatives to all faculty governance and degree program steering committees.

- Establish and maintain specific graduate and undergraduate degree programs and options.
- Identify course instructors and take the lead (through their representatives on the IPC and the Assoc. Dean of Academic Programs) on coordinating the delivery of courses with other disciplines .
- Recruit and select graduate students to be admitted
- Assess graduate student status and progress
- Administer the graduate comprehensive examination
- Make faculty recruiting and hiring recommendations to the Dean via the appropriate channels.

Discipline groups explicitly do not:

- Have formal chairs; however, discipline groups are free to self-select faculty members to act as discipline coordinators.
- Allocate space, facilities, financial or administrative staff resources from a central pool.
- Control faculty “slots” for hiring.
- Perform faculty evaluations or recommend compensation levels.
- Review or evaluate faculty contract and grant proposals.

Role of Discipline Groups in Academic Programs

In addition to the specific roles noted above, a key function of the disciplines is to provide faculty governance for the degree programs of the College.

At present three undergraduate degrees are offered by the Department of Geosciences: Geology, Geography and Earth Sciences. A Category 1 proposal is being submitted this academic year to replace these three degrees with a single undergraduate degree in Earth Sciences that will be offered by the new College. The Earth Sciences (ES) degree will have three Options: Geology, Geography and Earth Systems (ESys). The Geography and Earth Systems options will in turn have 4 tracks each. The Geography tracks will be Human Dimensions of Earth Sciences; International Development, Peace, and Security; Geography of Climate and Water; and the undergraduate certificate in Geographic Information Science. The Earth Systems (ESys) tracks will include: Climate; Marine; Land-Water; and Earth Science Education. In addition, the Environmental Science undergraduate program (ESUP) will be administered through the CEOAS. Table 3 lists the responsibility of each discipline for the undergraduate programs of CEOAS.

Table 3. Undergraduate Programs and Discipline Groups

| Biogeochemistry and Chemical Oceanography; | Ecology and Biological Oceanography | Physics of Oceans & Atmospheres | Geology and Geophysics | Geography and Environmental Synthesis |
|--|-------------------------------------|---------------------------------|---|--|
| ESys/Land Water | ESys/Marine Sci. | ESys/Climate | ES/Geology
ES/overall
ES/ESys/overall | ES/Geography
ESys/Education
ESUP |

Note that all members of the college are encouraged to be involved in the undergraduate mission of the new College, and it is emphasized that the undergraduate program and degrees are the responsibility of the whole faculty of the new College. Faculty may engage in undergraduate education in a variety of ways that may include undergraduate teaching, mentoring, research, and/or advising.

CEOAS will offer graduate degrees in four major areas: PhD and MS in Ocean, Earth and Atmospheric Science (OEA), PhD and MS in Geology, PhD and MS in Geography, MS in Marine Resource Management (MRM). In addition, faculty are very active in the three degrees offered through the Water Resources Graduate Program, which is housed in the OSU Graduate School: MS & PhD in Water Resources Science, MS & PhD in Water Resources Engineering, and MS in Water Resources Policy & Management. Within the OEA graduate degrees there are six areas of concentration: Atmospheric Sciences; Biological Oceanography, Chemical Oceanography, Geological Oceanography, Geophysics, and Physical Oceanography. Table 4 lists the responsibility of each discipline for the graduate degrees of CEOAS.

Table 4. Graduate Programs and Discipline Groups

| | | | | |
|---|-------------------------------------|-----------------------------------|------------------------|---------------------------------------|
| Biogeochemistry and Chemical Oceanography | Ecology and Biological Oceanography | Physics of Oceans and Atmospheres | Geology and Geophysics | Geography and Environmental Synthesis |
| OEA/Chem Oc. | OEA/Biol. Oc. | OEA/Phy. Oc. | OEA/Geol. Oc. | Geography |
| OEA/New focus biogeochemistry? | | OEA/Atmos. Sci. | Geology, Geophysics | MRM |

Discipline responsibilities for the graduate and undergraduate programs will be delegated by the Associate Dean of Academic Programs and coordinated across the College through discipline representatives on the Instructional Programs Committee (IPC).

To provide an appropriate number of faculty to match these discipline responsibilities, the IPC will include at least the following number of representatives from the corresponding disciplines: 2-3 from Geology and Geophysics; 1 from Biogeochemistry; 1 from Ecology & Biological Oceanography; 1 from Geography plus the ESUP Director and the MRM Director; 2 from Physics of Oceans and Atmospheres. The formation and maintenance within each discipline of curricular groups responsible for the specific curricular programs assigned to the discipline is the responsibility of the given discipline and the faculty members who associate themselves with the corresponding curriculum. The IPC membership defined here in terms of discipline representatives assures that each curricular group, when formed, will have adequate representation on the IPC. In some cases, curricular groups may include some faculty who are not members of the discipline having responsibility for the given curriculum.

The IPC will in this way include representation for the following curricular programs, through the indicated discipline homes. Individuals may well represent more than one program, and program homes may migrate over time:

Undergraduate Curricula:

Earth Sciences degree coordinator; housed in Geology & Geophysics, would need to consult with Geology, Geography, and Earth Systems reps
Environmental Sciences coordinator; housed in Geography & Env. Syn. and will work with an ESUP steering committee selected in consultation with the contributing programs.

Graduate Curricula:

Geology (could also represent undergrad Geology and Earth Systems tracks in Earth Sciences); housed in Geology & Geophysics
Geological Oceanography; housed in Geology & Geophysics
Geophysics; housed in Geology & Geophysics

Physical Oceanography; housed in Physics of Oceans & Atm.
Atmospheric Sciences; housed in Physics of Oceans & Atm.

Chemical Oceanography; housed in Biogeochemistry

Biological Oceanography; housed in Ecology & Biological Oceanography

Geography (could also represent undergrad Geography track in Earth Sciences); housed in Geography & Env. Syn.

Marine Resources Management; housed in Geography & Env. Syn.

Graduate Program in Water Resources; housed in the Graduate School

The proposed alignment and distribution of responsibilities within the new College for undergraduate and graduate degree programs and other academic program elements is largely incorporated at this stage into other areas of this plan. The separate, but parallel Category I proposal for the merged Earth Sciences undergraduate degree has been submitted, and will be evaluated through the Cat I process in winter and spring 2011. All existing graduate degree programs will be maintained. Dean, discipline, committee and program-director responsibilities for the undergraduate and graduate degree programs are summarized in Figures 1 and 2, and Tables 3 and 4, above.

Brief overview of Category I proposal for joint Earth Sciences BS:

The Department of Geosciences (GEO) and College of Oceanic and Atmospheric Sciences (COAS) propose the creation of a new Bachelor of Science degree in Earth Sciences. The new degree will replace the existing BS degrees in Geography, Geology, and Earth Science currently administered by GEO, as well as the BA Geography and Geology degrees. The new degree will

have three options: Geography, Geology, and Earth Systems. The Geography and Earth Systems options will in turn have tracks designed to train students for specialized career paths such as research, education, or resource management. Connections between Earth Sciences and society, economics, technology, and policy will be highlighted during all phases of the Earth Sciences curriculum.

The proposed program will be among the nation's premier undergraduate Earth Sciences curricula, building on existing strengths at Oregon State University in the sciences of the solid Earth, ocean, and atmosphere; in marine and terrestrial ecology and hydrology; and in natural resource management, environmental policy and sustainability. This preeminent educational program will be compelling and accessible to students with a broad range of interests and career aspirations, and it will engage both science and society in critical issues facing the region, the nation, and the international community. As one of only two "land, sea, space, and sun grant" institutions in the nation, OSU has the responsibility to provide educational leadership in this strategic area and to provide the focused training that will prepare an informed citizenry. The proposed degree merges current independent, high-quality, research-driven educational programs into a unified, multi-disciplinary Earth Sciences curriculum. It takes new advantage of OSU's world-class faculty for undergraduate teaching and advising and provides an opportunity to attract strong, motivated students to a signature program. An added benefit will be new research collaborations that are likely to grow out of the cross-disciplinary teaching partnerships on which the educational program is founded.

Discipline Leadership

The discipline leadership should be defined by each discipline to allow for effective coordination of their responsibilities in delivering the academic and research mission of the College. For example the Geology and Geophysics discipline is not only the largest group but has a large set of responsibilities in the college: overseeing the graduate and undergraduate geology programs, the marine geologic focus in the CEOAS degrees; support of the field camp and a large number of OSU Foundation accounts related to the support of the Geology graduate and undergraduate programs that need to be managed. The oversight of such accounts will be done by the appropriate disciplines.

The Geography and Environmental Synthesis discipline group has some of the same organizational needs as the Geology and Geophysics group. The elected leadership of each of the discipline groups should be proportional to the additional workload to coordinate all their activities. The extent of the required workload, and the level of compensation will be determined by the Dean and Associate Dean of Academic programs in consultation with the disciplines. As the discipline groups evolve and gain or relinquish responsibilities, the role of discipline group coordinators will evolve.

Strategic Planning

Strategic planning will happen in a variety of forms at many different levels in CEOAS. The mission and vision statements for the CEOAS provide the highest level direction. Faculty will develop and regularly update a written strategic plan for the CEOAS, to provide long-term planning recommendations to the CEOAS Dean.

This plan, developed and maintained by the standing Strategic Planning Committee with broad CEOAS faculty representation, will provide comprehensive goals, directing the function (research, education, outreach and development) and assets (people, space and infrastructure) of the college.

Faculty Development

Faculty Position Descriptions

To achieve the goal of maintaining excellence in the broad range of Earth science research, teaching and outreach activities currently conducted with the Department of Geosciences, COAS, and the ESUP, it is recognized as essential that the new College include faculty positions with widely varying position descriptions. In most cases, existing position descriptions for current faculty will be used to define their existing and ongoing roles and support levels in the new merged unit. The proposed continuation of existing position descriptions applies to all faculty positions, including those at the tenure-track, non-tenure-track, professorial, and non-professorial or instructor levels. Support for these existing positions in the new unit will continue at current levels and from existing funding sources. The important role of non-professorial instructors in delivering essential components of the undergraduate curriculum is recognized and confirmed in the proposed merger plan.

New faculty will have position descriptions that clearly outline the parameters and expectations of the position. There will be three basic position descriptions that will define the starting points for development of the specific description associated with a given faculty position: (1) a 9-month, 1 FTE, tenure-track appointment with 100% university support and, currently, a teaching load of roughly 4 courses per academic year; (2) a 12-month, 1 FTE, tenure-track appointment with 30-40% university support and, currently, a teaching load of roughly 1.4 courses per academic year; (3) non-professorial instructor appointments with FTE and support commensurate with teaching load. It is anticipated that there will be opportunities for faculty members to alter the long-term balance of teaching and research in individual job descriptions by negotiation with the Dean; this process is intended to provide a mechanism for the long-term evolution of individual faculty positions to reflect systematic changes in an individual's professional interests and focus, and is specifically not intended as an administrative tool to enforce delivery of or prescribe particular curricular or research program. The continuation of existing position descriptions will extend to continuation of existing sabbatical policies for the existing positions; sabbatical policies for new positions of type (1) and type (2) will follow the respective existing sabbatical policies.

Promotion and Tenure

Promotion and Tenure procedures in COAS and the Department of Geosciences have been very successful. The overall goal in the merger is to take the best from both units to develop promotion and tenure procedures for the new College. Significant changes to existing Promotion and Tenure procedures should not be required, as the current promotion and tenure processes in the two units should generally continue to function well. The primary recommendation is that flexibility in the timing of tenure and promotion decisions be allowed in the new College, to reflect the diversity of position descriptions and types within the merged unit. Specifically, for positions of type (1) above, the tenure and promotion to Associate Professor decisions will typically be made at the same time, after six years of service in the rank of tenure-track Assistant Professor; for positions of type (2) above, the tenure decision will typically be made at the time of decision on promotion to Full Professor, for which application may typically be made at any time after four years in service in the rank of tenure-track Associate Professor. It is anticipated that the new unit will eventually need to consider whether to move, over time, toward a more uniform P&T process that still reflects its diverse education and research mission. Additional recommendations are that a midterm review be performed for all tenure-track and research faculty, and that a more formal periodic review of faculty and Peer Review of Teaching be adopted (more similar to the processes used currently by COAS and as required by the university).

Faculty Hiring

A Faculty Hiring Committee (FHC), which will report to the Dean, will be tasked with the development and implementation of hiring processes, consistent with the long-term plans developed by the Integrated Strategic Planning Committee and with direct input from the faculty through their discipline representatives. The FHC will develop specific, College wide, position-by-position hiring plans as recommendations to the Dean. The membership of the FHC will be detailed above, under Organizational Structure. The hiring plans developed by the FHC will balance the research and educational goals of the new unit, including the maintenance and further development of high-quality undergraduate educational programs, and considering other aspects such as facilities, and equipment needs for potential candidates in specific research areas. The FHC will also provide oversight of hire-of-opportunity processes. The search process for positions announced by the Dean will be managed by position-specific search committees, with membership appointed by the dean and with opportunity for input to the committee from the entire faculty. Most job descriptions for new tenure-track positions are expected to be either type (1) or type (2) above, and the new hires will be expected to excel in both teaching and research consistent with their position description. For positions of type (1), which have a stronger teaching focus and a higher level of formula support, considerations relating to maintenance and development of high-quality educational programs will be of proportionately greater importance. For positions of type (2), which have a stronger research focus, considerations relating to the maintenance and development of high-quality research programs will be weighted more heavily. Intermediate positions, reflecting a blend of education and research considerations, may be created if it is seen in the best interest of the group and if unit financial models allow. In addition, support of the large service teaching role of Geosciences will require that we continue to support and hire faculty at the instructor rank. Those individuals will

continue to deliver approximately half of the student credit hours for the new unit (face to face and Ecampus). Based on long experience in Geosciences, hiring into those positions should be done strategically – thereby ensuring the highest possible quality of instruction.

It is assumed that growth of the teaching program, which is likely given the innovation in programs to come from merger, will be matched by growth in the proportion of salary support for teaching activities. Anticipated increases in numbers of undergraduate majors in the ESys and ESUP Programs will require increased support for professional faculty-rank advising staff, as well as new tenure track faculty and instructors.

Rebranding and Communications

Recommendations regarding the public face of the new College are made on three timescales:

1. Transition period (from 1 Jan to 30 Jun, 2011): Activities necessary to prepare for the new College and to announce its imminent launch.
2. Day One (1, July, 2011): The new College look—determine what our look and feel will be.
3. The longer-term future: How we will market and brand the new College and its exciting future opportunities, particularly for fundraising, recruiting and outreach purposes.

The new College branding should be developed and implemented in collaboration with University and Foundation experts, and with input from the existing Geosciences Board of Advisors. Major branding opportunities to be considered include signage for facilities such as the new Ocean Observatories building on Rt 99 South of town and research vessels. OSU research vessels Wecoma and Elakha currently have old OSU logos which require updating.

IV. Implementation Timeline

Completion and Delivery of Plan

February 2011: This document, the final draft integration plan delivered to the faculty on 25 February 2011, contains an outline of the basic steps needed to achieve the integration, and a corresponding timeline for these steps. The Deans will be responsible for planning and overseeing the associated transition of accounting and university administrative procedures.

Launch of New College

July 1, 2011: The new College of Earth, Ocean, and Atmospheric Sciences will formally begin its existence, replacing the Department of Geosciences and the College of Oceanic and Atmospheric Sciences, which will no longer exist. University course listings will

carry the new EOA designator beginning Fall Quarter 2011 (contingent on approval of Cat 1 proposal).

March to June 2011

March:

- New discipline groups hold initial meetings in order to prepare for the transition and address any new joint academic responsibilities for the 2011–2012 academic year, and choose representatives for 2011–2012 CAC, Strategic Planning, and Faculty Hiring committees.
- Form new College Advisory Committee (CAC).
- Form new Integrated Strategic Planning Committee.
- Engage with Foundation representatives to determine basic branding elements and plan transition activities.
- Initiate planning for unified web presence, including domain name.
- Communicate merger plan to existing and prospective graduate and undergraduate students.
- CAC defines process for selecting individuals to fill administrative positions
- Begin process of filling administrative positions.
- Deans begin to review position descriptions with all faculty.
- CAC and Dean review the structure and responsibilities of faculty governance committees.

Spring Quarter:

- Complete process of filling administrative positions
- April: College Advisory Committee (CAC) and Dean name membership on 2011–12 faculty governance committees.
- Initial meetings of joint 2011–2012 committees, Strategic Planning, Faculty Hiring, Instructional Programs, and Research and Computational Facilities Committees.
- Promotion and tenure recommendations finalized into document for use by 2011–2012 P&T Committee.
- Peer review of teaching recommendations finalized into document for use by 2011–2012 PRT Committee.

July:

- Start of New College

December:

- Finish the first Strategic Plan of the new College.

Summary of the Memorandum of Understanding

A new College of Earth, Ocean, and Atmospheric Sciences between the College of Science and the College of Oceanic and Atmospheric Sciences

Context

The strategic planning and reorganization discussions that the OSU community engaged in during the 2009-2010 academic year made a strong argument for new College-level structure focused on the study of basic Earth system processes. Based on those discussions, the College of Science and the College of Oceanic and Atmospheric Sciences have committed to a joint enterprise that will merge the Department of Geosciences in the College of Science with the College of Oceanic and Atmospheric Sciences. The new entity will be referred to as the College of Earth, Ocean, and Atmospheric Sciences (CEOAS.)

The purpose of this MOU is to document the commitments of CEOAS to continue and build the work of the Department of Geosciences and of COS to continue and build the financial support for the joint mission of CEOAS.

Principles

COS and COAS will be guided by the principles of commitment to success, equity, accountability, transparency, and flexibility throughout the restructuring process. As issues emerge, we will work to resolve them as a partnership, recognizing the interests and capabilities of each partner. Our process will seek out these issues, frame them in the context of our 10-year vision, identify the options, risks, and opportunities, and develop an implementing agreement between the units. The process will be deeply informed by the reports from the faculty working groups that were established to guide the merger. Each implementing agreement will document the expectations of each partner, the planned outcome, and timeline.

Areas of Agreement

Administration

Support costs for the academic and research programs of the new college will be maintained by CEOAS, and investments by COS in the new enterprise will be managed jointly by the deans of CEOAS and COS. CEOAS will manage all grants submitted by CEOAS faculty.

Academics and Advising

CEOAS will continue delivery of service teaching in the earth and environmental sciences and undergraduate degree programs in the broad areas of Environmental

Sciences, Geography, and Geology. CEOAS will maintain viable undergraduate majors in environmental sciences and earth sciences with pathways suitable for students in what are now the geology, geography, earth science, and environmental sciences program. It will also maintain a viable program in the human dimensions of earth sciences, including undergraduate and graduate pathways appropriate for students in what are now the geography programs.

COS will provide access to the COS central undergraduate advising and assessment offices and activities to support the undergraduate programs in CEOAS. COS will commit to providing the same level of funding to CEOAS for faculty and staff support as was budgeted in FY11.

Faculty

Faculty position description, peer review of teaching, professional reviews, merit assessments and post-tenure reviews will be the responsibility of the dean of CEOAS. Promotion and tenure reviews will be managed by CEOAS.

When a COS-funded line comes vacant, that line will be refilled if the productivity outcomes are in place for the unit. If those core missions have not been successfully discharged, the two deans will discuss with the Provost if the vacant line should be refilled in CEOAS or should be reallocated elsewhere. COS may not reallocate a vacant position out of CEOAS without approval from the Provost.

Development

The deans of CEOAS and COS will coordinate fundraising efforts as appropriate given the donor base associated with the former units of Geosciences and COAS. The COS is committed to the success and development of this initiative.

Liaison Correspondence Request

The following request was sent to Deans Adams, Ramaswamy, and Salwasser.

Attached is a draft of our proposal to combine COAS with the Department of Geosciences to create a new college, the College of Earth, Ocean, and Atmospheric Sciences (CEOAS, pronounced "see-ohs"). Sherm and I would like your feedback and comments. We'd like to submit this early next week so that we can get it into the university process this month.

Liaison Correspondence Response – Ron Adams

We received a response from Dean Adams, which expressed his strong support for the proposal and suggested that we highlight the connections between the new college and the Division of Earth System Sciences.

Liaison Correspondence Request

The following request was sent to Deans Adams, Ramaswamy, and Salwasser.

Attached is a draft of our proposal to combine COAS with the Department of Geosciences to create a new college, the College of Earth, Ocean, and Atmospheric Sciences (CEOAS, pronounced "see-ohs"). Sherm and I would like your feedback and comments. We'd like to submit this early next week so that we can get it into the university process this month.

Liaison Correspondence Response – Sonny Ramaswamy

We received a response from Dean Ramaswamy and two members of his college leadership.

Russ Karow: The group consistently needs to remember that soils are part of Earth Systems. This has been mentioned before with no changes in verbiage made. There are already meaningful interactions among faculty so perhaps they consider they consider soils efforts already part of who they are.

Stella Coakley: I have reviewed the proposal and it appears to reflect an extended process of working with the involved faculty. Geosciences appears to be the unit most impacted by the change. The stated vision and mission sound good, and overall the proposal appears to primarily impact just COAS and Geosciences. Since very little detail is given within the proposal, it is not possible to assess whether an earlier mentioned idea to house the undergraduate 'Environmental Sciences' degree within the new college is being planned or not. I mention that because the degree, while housed entirely within COS currently, has had participation from across the campus and many tracks not necessarily specific to the new college. Moving it there might be a great idea but the minimal information provided leaves it unclear what impact the proposal has on the actual graduate and undergraduate degrees within geosciences, COAS, or environmental sciences.

We noted the linkages with the Department of Crop and Soil Sciences, but also that CEOAS will have maintain and expand its linkages with many other units across campus. We also included material on the undergraduate and graduate degree programs and the impact of the merger.

Liaison Correspondence Request

The following request was sent to Deans Adams, Ramaswamy, and Salwasser.

Attached is a draft of our proposal to combine COAS with the Department of Geosciences to create a new college, the College of Earth, Ocean, and Atmospheric Sciences (CEOAS, pronounced "see-ohs"). Sherm and I would like your feedback and comments. We'd like to submit this early next week so that we can get it into the university process this month.

Review Panel report of Oregon State University's Graduate Programs in Geology and Geography

1. Overall Recommendation:

Expand the Geography Graduate Program

Maintain the Geology Graduate Program

2. Summary of Findings and Recommendations

Both graduate programs are small in size, but of very high quality and populated by excellent faculty and graduate students. Overall performance indicators, in terms of external funding productivity, research publication, and graduate placement, all compare favorably to competing programs in the Geosciences. Graduate education thrives within both programs despite resource constraints, especially within Geography. Program personnel in Geosciences, moreover, play a critical role in graduate training across campus, with teaching and advising efforts that benefit allied programs in natural resources and environmental sciences. We have identified five key areas in which these programs are in need of increased resources.

1. The Geography program requires an **infusion of new faculty FTE** in order to maintain its viability, but we also believe that faculty in other OSU graduate programs (e.g., Forestry, Marine Resource Management) could be recruited to teach dedicated graduate (as opposed to so-called “slash”) courses in support of graduate education and training.
2. The **high proportion of slash courses** in the Geology graduate program is also a problem, although this issue (as well as some others delineated throughout this report) may be resolved when the Geosciences graduate programs are integrated within COAS in the coming year.
3. Recruitment of the best students in both Geosciences graduate programs is compromised by the **inequity of TA and RA stipends** relative to those in other Colleges at OSU. This issue is also impacting the morale of the Geosciences student body and needs to be resolved prior to the merger into COAS.
4. The Geosciences graduate programs also have some key infrastructure needs that must be addressed soon: (i) increased **suitable space for research laboratories and graduate student offices**, and (ii) **enhanced computer technology capabilities and support**, specifically acquisition of both hardware and software, as well as better computer lab accessibility for students.
5. Finally, we believe Geosciences graduate students would benefit from further **professional development in the areas of teacher training and grant proposal preparation**.

Detailed findings

Introduction

This review of the Geography and Geology graduate programs in the Department of Geosciences at OSU was undertaken by a committee consisting of: Peter Schiffman (Geology, U.C. Davis), Paul Robbins (Geography, U. Arizona), Anne MacDonald (GeoEngineers, Portland), James Strittholt (Conservation Biology Institute, Corvallis), and Walt Loveland (Chemistry, OSU). The review is based upon an extensive self-study document prepared by Geosciences, as well as on meetings conducted with OSU administrators, faculty and students on February 27th and 28th, 2011. This report uses the organizational template suggested by the OSU Graduate Council

Inputs

1. The fit of the mission etc.

Geography

The fit of the Geography program to both college and university mission is strong. Specifically, Geography faculty research and graduate training focuses closely on topics including: maintenance of sustainable marine ecosystems, measurement and provisioning of water resources, and the linkages between resource availability, natural hazards, and political conflicts. These match directly with OSU strategic initiatives in the area of a “healthy planet” and College of Science efforts to match basic research with practical policy to advance human and ecosystem health.

Geology

The fit of the Geology program to both college and university mission is similarly strong: Geology faculty research and graduate training focuses on topics including volcanic and tectonic hazards, economic geology, hydrogeology, Earth surface processes, and climate and biogeochemical cycles. The Geology faculty also has strong research and teaching ties with a wide range of groups on the OSU campus.

2. Quality of students

Data on student quality/admissions selectivity were provided for three graduate programs: Geography, Geology, and the interdisciplinary Water Resources program housed in the Graduate Council, but strongly supported by Geosciences faculty advisors. Objective measures of student quality (i.e., GPAs and GRE scores) were highest for matriculated students in Water Resources, lowest for Geography, and intermediate in Geology. This is explained by the dominant “audience” for each of these programs: the Water Resources program is relatively unique in the western United States, and completely unique within the Oregon higher education system.

The Geography program dominantly attracts students who intend to carry their graduate education only through a Master's level before embarking upon their professional careers. The Geology program attracts a more typical blend of Master's and Doctorate graduate students, with commensurately higher entering qualifications.

Selectivity on the part of the admitted students is also an important consideration. Relative student quality is measured as the average of GPA and GRE scores (exclusive of analytical writing, which is not uniformly available). The "quality" ratio of matriculated students to those who refused their OSU admissions offer was 99% in Geology, 96% in Water Resources, and 92% in Geography. This indicates that OSU is not losing their "best" applicants in Geology, but may be in Geography. Nonetheless, the overall quality of geography graduate students is consistent and strong. Students in this program have shown a notable ability to secure fellowships and scholarships, as well as external support from agencies including the National Science Foundation. There is some reported modest difficulty retaining the very best students in the area of human dimensions and social/environmental issues, owing to competition from parallel institutions, including University of Oregon. The overall success rate for students in finding external funding and their excellent post-graduation placement speaks to the strength of the program in maintaining a strong student pool this regard, however.

3. Admissions selectivity

Admissions selectivity can be measured in a number of ways. Geology has the highest applicant: matriculated ratio (nearly 11:1), while Geography and Water Resources are comparable (6:1 and 4:1, respectively). With respect to qualifications, as measured by the average of GPA and GRE category scores (exclusive of analytical writing), matriculated students are slightly (2-3%) better qualified than the entire applicant pool across all three programs. Using this same "quality" measure and comparing admitted to rejected students, the OSU programs are only slightly more selective: admitted students score 3% higher than rejected applicants in Geology, and 8 and-9% higher, respectively, in Geography and Water Resources.

Geography

The percentage of applicants admitted between 2005 and 2009 averaged 39% in Geography, and 51% in Water Resources. Compared to peer institutions, the Quantitative GRE scores of OSU Geography students is 30 points lower (see Table 3 of the self study report). No similar data are available for Water Resources students. Average quantitative GRE scores for admitted Geography students fall only marginally below those of peer institutions.

Geology

The GPA and quantitative GRE scores of admitted and matriculated students are very high, but the GRE scores are lower than those at peer institutions by nearly 80 points (see data from Table 3 of the self-study report). Between 2005-2009, 399 students applied to the Geology graduate program and 133 of these (or 33%) were granted admission.

4. Level of financial support of students

In the current and near-future economic climate, financial support for students is imperative. Geosciences graduate students are at the bottom of the pay scale on the OSU campus. This issue is affecting student morale and potentially will affect the ability to be competitive in recruiting the highest quality graduate students into these programs. Once student stipends are made comparable to those of other COAS students, we suggest that the OSU Geosciences program compare stipends to those of their peer institutions on an “affordability” basis as a means of evaluating the competitiveness of student support.

Geography

This program periodically admits some students without financial support but some of these students have been given teaching assistantships, so only a small proportion of students are self-funded.

Geology

This program does not admit students without a promise of financial support. Since 2005, 93 % of graduate students have had either a TA or RA stipend, and 96% have had a tuition fee waiver. Students expressed concern regarding the security of their grants over their degree programs.

5. Curriculum strength

All students take a course in Geosciences Communication, which provides an introduction to research methods and provides the opportunity to develop a thesis proposal. This course also begins the development of a graduate student cohort. Cohort development is strengthened by an orientation field trip (Geology graduate students) or GE0534 (Field Research in Physical Geography). The Geology graduate students expressed interest in further tailoring of these courses to match the skill levels of incoming students.

The Geology graduate program has elected to maintain strengths in three main areas: (1) Volcanology and Igneous Petrology (VIPR) (i.e., volcanology, igneous petrology, economic geologic) (2) Structural Geology/Geophysics/Tectonics (including neotectonics and earthquake geology), and (3) Surface Earth processes

and history (i.e., Earth system history, hydrology and hydrogeology, geomorphology, and climate and biogeochemical cycles). The number and range of course offerings are good to strong in each of these categories: 10 courses listed for VIPR, 6 courses listed for structural geology/tectonics/ geophysics, and 12 courses listed in surficial processes and history. The course offerings are strengthened when geography courses are included: geography course are useful to increasing degrees from areas 1 to 3. There are a significant proportion of offerings as joint upper division/graduate “slash” courses (an average of 46%, ranging from 33-52% per school year from 2005-2010), which proves somewhat problematic for Masters students interested in attaining a degree within 2 years. Students are sent to other departments as needed (e.g., mathematics, chemistry, civil engineering) for specialized advanced analytical training.

Geography graduate curriculum focuses largely in the area of physical geography, techniques, and resource management. In the area of Geographic Information Science, the curriculum is thoroughly rigorous and includes fully updated techniques and methods.

A crucial area of program success has been the creation and flourishing of the graduate program in Water Resources. That degree area has consistently attracted, retained, and graduated students with higher GREs and GPAs than the other units within Geosciences, and represents a signature program area for Oregon State University that is unavailable elsewhere. That program’s success has been predicated on utilizing already existing resources (especially faculty advising time and GTA lines), moreover, with little additional institutional support. Further modest investment in this area, therefore, will likely pay dividends in terms of matriculation, graduation, placement and increasing program and university profile.

6. Quality of personnel and adequacy to achieve mission and goals

Geography

The Geography program is extremely small in comparison to peer institutions, with 7 current FTE. These numbers are further constrained in their ability to deliver graduate teaching and advising, owing to faculty commitments to key programs, especially E-campus courses and the GIS certificate. Nevertheless, the program has maintained a relatively short time to graduation, successful pursuit of external funding sources support students, and excellent graduate placement.

Geology

There are currently only 10 faculty FTE in the Geology program, which is small relative to comparably ranked programs (most of which are in the 20+ range). The small size of the Geology faculty restricts its ability to comprehensively offer graduate courses in some programs areas (particularly structural geology/ tectonics and stratigraphy/sedimentary petrology) and eliminates the option to provide

coverage in other Geoscience topics (e.g., paleontology, which is comprehensively provided at the University of Oregon).

7. Quality of organizational support

The impending merger with COAS should have a positive effect on the Geology graduate program as students will have more access to COAS courses, facilities, and faculty. The campus has created 32 new positions across campus of which one position will come to Geosciences, in Geography. The College of Sciences is trying to assist Geosciences with their space needs by providing storage space off-campus for collections, thus freeing up space in Wilkinson Hall.

Productivity

1. Level and quality of student performance

Geography and Geology

Completion and retention rates in the program meet and exceed those of comparable programs, with very good time-to-degree for both Masters and PhD students. These students, moreover, demonstrate high levels of productivity when involved in faculty research, with research presentation at international meetings (including venues like the Association of American Geographers and the Ecological Society of America, the Geological Society of America, and the American Geophysical Union) as well as co-authored publications (in outlets including *Land Use Policy*, *Bulletin of the Geological Society of America*, *Journal of Geophysical Research*, *Geophysical Research Letters*, *Earth and Planetary Sciences Letters*). Graduate students in Geology have also received prestigious national fellowships (i.e., NSF IGERT and Research Fellowships, NASA Space Grant Fellowships).

2. Level and quality of faculty performance

The Geography faculty maintains rates of publication and citations per publication (2.22 – double that of those programs compared) far higher than peer institutions, indicating an extremely high level of productivity as well as a very high individual and institutional profile. Publications are consistently in major and high profile outlets. Approximately 80% of faculty members hold grants, a high rate relative to peer institutions.

In terms of research productivity (e.g., % with extramural grants and publications/year), the Geology faculty ranks well with peer institutions (see compilation of data from recent NRC report on graduate programs, as summarized in Table 47 of the self-study document).

3. Viability of scholarly community within which students can interact

The scholarly community within the Geosciences graduate programs remains at a good size to represent a breadth of investigations. This provides a benefit to graduate students directly or indirectly; after OSU, these students are not likely to work in a professional world composed solely of those similarly trained. Continued efforts to build a cohort across the department are encouraged to provide a strong level of investment in their colleagues' research. Furthermore, the OSU scholarly community has been robust and attractive to graduate students regionally for over 30 years thanks to the faculty, students, and programs in the Colleges of Oceanography and Atmospheric Sciences, Forestry, Agriculture, Engineering and Arts and Sciences, along with the contribution of the USDA Forest Services' Forest Science Lab (FSL) and related facilities such as the HJ Andrews Experimental Forest. [n.b., Although it is not within the control of OSU, disinvestment in FSL by the federal government and key retirements by USFS personnel within the next decade could reduce the quality of this interaction in the area of surface processes.]

Geography

The high ratio of students to faculty, coupled with high levels of research and instructional commitments on the part of Geography faculty, make student interaction with faculty more difficult, though there is little evidence of an impaired intellectual atmosphere. Graduate students report very high satisfaction both with the quality of their interactions with their major professor as well as overall intellectual interactions with their peers. Then program also facilitates student access to linked research groups across campus.

Geology

Although there are only 10 faculty members in Geology, the close proximity between Geology and COAS greatly increases the number of potential scholars available to Geology graduate students. Also, the University of Oregon's Geology Department is relatively close, and some OSU students have taken graduate courses in Eugene.

Outcomes

1. Professional viability of graduates

Geography and Geology

A central measure of program productivity and success is the excellent record of graduate placement. The direction and emphases of graduate employment reflects program strengths, moreover, specifically in crucial, applied, problem-solving areas in natural resource management. Graduates are consistently employed in key sectors, including state land management agencies (e.g. National Parks Service),

non-governmental and multi-lateral institutions (e.g. World Bank), and private sector areas (e.g. environmental consulting). The range and prestige of these institutions speaks directly to the overall success of the graduate training mission of the program, along with the list of peer institutions to which many students go on for further study or employment. Multiple specific elements contribute to this effective professionalization, including a well-established, cohort-centered approach (reflected in things like the annual field camp and student-student mentoring activities) as well as an effective effort to network students with potential employers. This has unquestionably produced a viable scholarly community.

2. Satisfaction of students and graduates

The Department of Geosciences can't guarantee office space to new graduate students, but has been able to do so to date. Most students don't like their assigned spaces because most offices have no windows. Some have expressed frustration with privacy issues, particularly as it pertains to accomplishing their research – some students reported conducting telephone interviews on their cell phones in the hallways or empty classrooms rather than in their crowded offices. There is also no communal space for graduate students to meet and, e.g., eat their lunch.

Geology

When interviewed, the Geology graduate students expressed their happiness with choosing the OSU graduate program, primarily because of the reputation of their research advisors. It was also pretty evident that they didn't choose this program because of the quality of the facilities or the financial support that was offered them. The TA stipend inequity issue is having an adverse affect on graduate student morale. The students also expressed concern about the seismic safety hazard in Wilkinson Hall. Students felt that laboratory safety issues are not well addressed, and that some are expected to establish these for their own labs. Students who work with rocks noted the lack of suitable space for rock crushing/sample preparation. Students expressed unhappiness with the limited number of graduate course offerings: many are so-called "slash" courses (offered to both grads and undergrads) but campus only allows 50% of grad courses for degree requirements. Curriculum in slash classes is generally less advanced. Courses offered through COAS help because none are slash. Students would welcome a dedicated proposal writing class in fall quarter. They felt that Geosciences 518, offered in winter quarter, is not filling their needs (e.g., many felt that many of the topics covered were too elementary). Students felt that they need more teacher-training to be better TA's: they feel that the single day course they currently receive is not adequate. Students felt they have very little input into suggesting seminar speakers.

Geography

Geography students uniformly reported satisfaction in their choice to come to OSU, specifically citing the high caliber of the faculty. Some Geography students stated a concern about the uneven and low levels of assistantship stipends. Students also explicitly expressed concern about the work levels and work/life balance of their professors: “burning the candle at both ends”.

3. Rankings/ratings

Geography

NRC rankings of the Geography program released in 2010 show a reputational rank range of 15-38, among 49 doctoral programs overall. Most notable in terms of comparative achievement, OSU’s program performed in the top-ten of smaller programs for Placement Rate of students, confirming internal assessment of the very high rate of success in training students for professional activities.

Geology

In the recent NRC survey of graduate programs, the OSU Geology program ranked well relative to peer institutions. Overall, it ranked 38th amongst 140 programs in the “reputational” category and 56th in the “statistical” category.

Conclusion and recommendations:

Both of these graduate programs are of excellent quality, but the Geography program is in dire need of FTE infusion to maintain its viability. We offer the following recommendations on issues we feel need to be addressed:

1. Need for Geography FTE

Across the university, but especially in any new CEOAS formation, there will be increasing demands for human dimensions expertise, spatial and spatiometric analysis, as well as synthesis experience and theory. Larger interdisciplinary solicitations from NSF (coupled natural human system research, LTER, ULTRA, etc.) and other agencies - which require human dimensions participation - will create further demand in these areas. Given the development of such solicitations and an overall increase in demand for science-society collaboration, as well as human dimensions and global change adaptation research and training, the need for ongoing development of faculty strengths in geographic science is not only desirable, but likely inevitable. In this sense, if there is not a strong Geography program when this area of critical work begins, the university and CEOAS will likely have to *create one*. The committee concludes, therefore, given the demonstrated current efficiencies and strengths of the graduate program in Geography, which will be the only PhD-granting unit performing human dimensions research in the new

unit, it would be advisable to “double-down” on the existing program and support its expansion precisely into these area of human-environment research, environmental management, and spatially-explicit resource planning (the program’s historic strengths).

This would represent a reversal of the current trajectory. Despite dramatically increasing productivity of individual geography faculty, increasing advising by individual faculty, and a relatively short time to degree, the diminution of faculty FTE over time (from 11 to 7), has led to a decreasing GRA opportunities and funding, with a concomitant decrease in graduate admissions in the program. In terms of the overall resources and time available to meet multiple goals, the Geography unit has reached an apparent breaking point and requires reinvestment. Given the likelihood of an additional retirement within the next five-years, moreover, the window for retaining the program’s viability is time-limited.

To that end, there is a demonstrable need to expand the core Geography faculty if the program is to remain viable and crucial graduate training is to continue. There are several key areas where hires in geography might foster effective cross-campus collaborations and external funding flows, including biogeography, science / policy analysis, coastal marine spatial planning and the geography of food security. Most urgent, however, especially for leveraging synergies in allied units (e.g. the new climate center), *three* key hires would maintain the viability of the unit and its critical role across campus:

- 1) Human dimensions of global change adaptation and sustainability science
- 2) Environmental risks and hazards
- 3) Geographic information science, modeling, in the area of adaptation and risk

2. Need to increase number of dedicated graduate courses in Geosciences.

Geosciences can’t continue to rely on other units on campus to provide dedicated (i.e., non-slash) courses for Geology and Geography graduate students. This issue is less significant for Geology graduate students as they have access to courses offered through COAS. An infusion of faculty FTE for Geography would improve this situation for their graduate students.

3. Need for resolving stipend inequity for graduate students

This issue is undermining student morale and must be resolved prior to the merger with COAS. We recommend that stipends for Geosciences graduate students should be identical to those in COAS.

4. Need for increased laboratory and graduate space for teaching and research missions.

One of the principal challenges for the future health of the Geology and Geography graduate programs is the lack of adequate research and teaching space. The self-study reports that as of 2006, the Geosciences Department had 9563 ft² of research space and 10285 ft² of office space. The relevant University metrics for this department would indicate the research space should be 19194 ft² and the office space should be 11879 ft², deficits of 9631 and 1594 ft². In 2007, the department requested 1700 ft² of office space, 4200 ft² of lab space and 2900 ft² of storage space. In the intervening time, the situation has worsened, as the research funding of the department increased. Without new or renovated facilities, growth of the graduate and research programs will be limited. Additional space is needed for graduate student offices and laboratories, graduate instruction, graduate student communal space, and faculty research. Apart from computer facilities, the majority of space in Wilkinson Hall has not been renovated in four decades.

The space deficit is significant (11,225 ft²) but not overwhelming. The ultimate solution would be a new Geosciences building built in cooperation with other groups in the Earth Sciences Division. However, given this building is not on the current OSU building priority list, that solution is decades away.

The Department needs to develop a realistic plan to address space issues in the short and medium term. The forthcoming merger of Geosciences with COAS may offer opportunities to increase the space available for Geosciences. The review panel urges the Department to make a series of realistic shorter-term estimates for various plans to address space issues. One of these plans should deal with various options for the renovation/remodeling of Wilkinson Hall. (We understand Wilkinson Hall was built to accommodate the addition of another floor for the building although the need for seismic retrofitting may impact that option). The review panel encourages the Department to develop a set of smaller short-term projects that will improve the quality of the present space and increase it in modest increments. The Department needs to seek external funding for these improvements in cooperation with the College of Science, the Earth Sciences Division and the OSU Foundation.

5. Need for enhanced computing facilities

Geography and related disciplines are growing increasingly dependant on high-end computer mapping technologies including remote sensing and geographic information systems (GIS). Modeling and statistical software is becoming increasingly demanding as it keeps pace with rapid advances in computer hardware. In order to attract and keep high-quality students, it is imperative for any modern Geography department to remain at the forefront of these technologies.

Currently, students of the Department of Geosciences have various computer facilities for their use. There is 30-seat Digital Earth Classroom (Wilkinson 210), which is largely used for teaching, the small Terra Cognita Lab (Wilkinson 208), and even smaller Graduate Student Research Facility (Wilkinson 106). Graduate students working under some faculty also have access to additional computing facilities for their research. The Digital Earth facility is primarily for teaching but allows some use by students for research.

Based on the site visit, review of facility specifications, discussions with faculty, and interviews with graduate students, the current computing facility is not fully meeting the current demand by students and will deteriorate without clear planning for the future. There is an overwhelming sense of frustration by the students in terms of not having the computing tools available to do their best work. Students frequently reported that they had to resort to purchasing their own hardware and software in order to carry-out their classroom work and research, because these resources were not being provided or were not easily accessible by the department. In order to remain a strong Geosciences department, close and continued attention to the computing facility is fundamentally important.

The following recommendations are -

1. Consider developing a lab similar to Digital Earth (~15-20 stations) to be used exclusively for research. This would relieve pressure on the Digital Earth Classroom and dramatically improve the current demand for dedicated computer facilities for graduate students.
2. A hardware upgrade policy should be formalized that maximizes graduate student access to the most current technology.
3. Current hardware performance is generally good, but some number of machines should be dedicated as state-of-the-art machines and reserved for projects that are computationally demanding. Most computers are using fast processors but are beginning to lag on RAM and video card speed. Hard drive space is also limiting in some instances and relatively inexpensive to address. Computers built for spatial analysis and visualization need to keep pace with the technology.
4. Student access to current resources should be improved and the changes clearly communicated to students. Some facilities should be available to graduate students 24/7.
5. For those students with heavy computer needs, a dedicated workstation should be assigned for their research.

6. Software review should be regularly conducted with student involvement and the most useful packages maintained, including the high-end functions that are often not included in base packages.

6. Need for improved professional development for graduate students in the areas of teacher training and proposal writing.

We recommend that Geosciences establish a 1 unit, fall quarter-length TA training course that brings up real, on-going issues that TA's are facing as well as topics such as syllabus development. Revise Geosciences 518 into 2 separate courses. Create a writing class for all new students, and a separate (NSF-style) proposal writing class for PhD students who have already completed a MS thesis.

Subject: Appeals process for non-equivalent and international degree holders

Hi,

At our May 19 meeting we had discussed the case of Dr. German Escobar, a MD from Colombia, who wanted to apply to the MPH program. We made a one time exception for him to appeal to the Graduate Admissions Committee (GAC) for admissions.

Leah Minc, Rosemary Garagnani, Brenda McComb, Valerie Rosenberg and I met last week to talk about an appeals process for international graduate student applicants whose professional degree is not considered equivalent to a bachelor's degree. We agreed that the GAC could handle these appeals given guidance. We created a draft of a form (attached) to be used by graduate programs to appeal the rejection of an applicant with a non-equivalent degree. We thought that this may work best as a pilot program to be re-evaluated in six months to a year. We also agreed that, for the pilot program, the GAC would only consider international applicants who met all the requirements for admission, including at least a 3.0 GPA on the last 90 credit hours (or equivalent), at least the minimum acceptable TOEFL scores for regular admission, and had a degree from a recognized international university (a list of which is maintained by OSU).

So, assuming that we have time tomorrow at our meeting, please look over the attached form. I will bring forward the following request for a policy change:

"Graduate programs with an international applicant who does not have a four-year bachelor's or an appropriate alternative degree, e.g. a professional degree of at least four years duration, but who meet all other requirements for admission as a graduate student at OSU, may appeal the admissions denial to the Graduate Admissions Council. The Graduate Admissions Council, based on evidence presented by the graduate program, will determine if the student has sufficiently demonstrated preparedness to enter a graduate program and may provide an exception to allow admissions."

Thanks,
Theresa

Subject: Critical last minute issues

Dear GC members,

An issue has come up that we need to grapple with on short order. The graduate school has requested that we give them an opinion on the issue below, so I am squeezing time into the agenda tomorrow to discuss this situation. Please read the rest of this email in preparation.

The graduate school has come to us to ask for an opinion on how to proceed in the event that a graduate program is unable to meet its own rules--rules which are more stringent than university policy--and yet refuses to waive those rules for a student in good standing. Please allow me to try to explain by telling a story to protect student anonymity. This story that is a bit of a mix of facts from different scenarios, all of which have occurred at one time or another in my program, to illustrate the problem. I am asking that you keep confidential this story and any accompanying discussion.

Several years ago, there was a graduate student in my PhD program in pharmacy who we accepted enthusiastically, despite some unpleasant interactions between her husband and our graduate program assistant. [The husband kept phoning our assistant for information on his wife's application despite repeated assertions that 1) FERPA rules prevented our discussing his wife's situation with him, 2) we had a procedure for dealing with applications that can take several weeks or even months, and 3) we would not waive our requirement for a GRE score.] The student did quite well in her didactic classes in her first year, i.e. she was a student in good standing. However, in my program, students work in three different labs in each quarter of their first year and then choose a thesis lab at the end of spring term. At the end of spring term for this student, no one in pharmacology wanted her in their lab. No one wanted her because a) she thought that she knew everything and was very resistant to instruction (not so uncommon, but annoying), b) she did not hesitate to complain regularly to our department chair, the dean and even requested meetings with the Provost (unsuccessfully as far as I know) whenever she was unhappy about something, and most importantly, c) her husband would regularly call and berate whoever she was working with, threatening a lawsuit in at least two cases. Interactions were complicated because she did not want to meet alone with any male faculty members and wanted her husband, who was a bully, to be present at all face-to-face meetings. So, we were faced with the problem. We couldn't force her to leave the program--there was no basis in performance for that. She refused to work with the two male faculty members of my four member discipline. The other female faculty member refused to work with her because she threatened a lawsuit (and was the spouse of one of my male colleagues). So, I had to take her on; it was that or open our program to a lawsuit. A further difficulty was that no one else in the pharmacology group would sit on her committee (and she, in return, did not want them). In the end, we had to agree to alter our program requirement that at least two members of the pharmacology discipline sit on a student's PhD thesis committee. In this case, my department chair understood the difficulty of the situation and waived our requirement. She eventually graduated with her degree, although after considerable difficulty and tension.

We now have a very similar situation confronting the graduate school. However, in this case, the department chair and faculty are not so understanding and refuse to waive their rule that at least two members of the specific program must sit on every student committee. This is despite the fact that OSU only requires that each student's committee have one member from their specific program.

So, the graduate school is asking us, as the graduate council, to decide whether the more stringent committee membership requirements of a graduate program can be over-ruled, and allow for a student in good standing to continue in a graduate program and graduate, if they meet all university rules.

I will add the caveat that if we decide that this can not happen, i.e. the graduate school can not over rule the faculty of a graduate program on this issue, what should be done to rescue a student in good standing in this situation?

Thanks,
Theresa

Info on CEOAS merger below.

Subject: questions from GC

Hello Theresa:

Mark Abbott is traveling and asked me and Aaron Wolf to field the questions you sent, following a recent review of the COAS-GEO merger Cat I proposal by the Graduate Council. I hope these answers are clear and sufficient. If not, I'll be ready to discuss further.

Bob Duncan

1. Support staff for Graduate Programs in Geosciences. The same numbers of support staff as currently serve the two graduate programs in COAS (OEAS and MRM) and the two graduate programs in Geosciences (Geology and Geography) will continue in the new College, but responsibilities will be somewhat re-assigned into a Student Services office and a Student Development office. The first will manage most of the administrative details (receiving and circulation of student applications, course scheduling, course evaluations and access, assigns student office space, etc), while the second will support the faculty admissions committee, student funding, progress reports, program committees, conduct new student orientation, recruiting, career counseling, and assessment, etc).
2. The Geosciences and COAS graduate programs will be directed by the Associate Dean for Academic Programs (currently 0.80FTE, but will be 1.0FTE in the new College). The AD works with the faculty committee that monitors student admissions, progress and nominations to the College graduate faculty, and the director of student development, to ensure proper tracking of graduate students in all four programs. Advising graduate students is the responsibility of each student's program committee (led by the major advisor(s)), the director of student development, and the Associate Dean. Progress is reviewed annually by each of the four faculty discipline groups and reported to the director of student development and Associate Dean through the discipline representatives on the faculty graduate admissions committee.
3. The grievance pathway for a graduate student is described in the "Graduate Student Handbook" for COAS students, which will apply to all graduate students in the new College. This augments the "Grievance Procedures for Graduate Students at Oregon State University" which is available from the GSO. Briefly, the student is advised to first resolve the problem informally through consultations with the College, starting with the major advisor or other members of the program committee, followed by the director of student development and/or the Associate Dean, followed by the Dean. If these meetings prove unsatisfactory, the student is given information about the procedure for filing a formal grievance with the University.
4. The faculty committee that coordinates student admissions is currently called the Graduate Admissions Committee, but as noted above, also tracks student progress annually and interacts closely with the student development office. It is correct to say that the GAC does not make admissions decisions, but communicates the decisions of each of the faculty discipline groups to

the student development office and student services office, along with funding assignments (GRAs and GTAs). The student services office then communicates these decisions to University admissions with departmental action forms (DAFs).

Subject: Re: CEOAS merger/reorg Cat I

Theresa:

Mark and I have talked, and we're a bit concerned about adding the MOU as an addendum until Sabah has reviewed and signed it (it's on his desk) If it is helpful, the sections related to budget say:

"Budget transfer and support:

COS will commit to providing the same level of funding to CEOAS for faculty and staff support as was budgeted in FY11 to the Department of Geosciences and the Environmental Sciences Program (see Appendix A) with the specific understandings as outlined in the remainder of this document.

Budget:

Geosciences and Environmental Sciences Undergraduate Program (ESUP) initial budgets will be transferred from the College of Science to CEOAS within two weeks of the initial budget distribution. Allocation of future OSU incremental budget changes attributable to Geosciences and ESUP programs will be calculated by COS accounting support personnel using (as much as possible) the Office of Budget and Fiscal Planning's allocation methodology. COS will notify CEOAS of incremental budget adjustment amounts attributable to Geosciences and ESUP in a timely manner.

This budget arrangement is to ensure that the missions of service teaching, undergraduate education, and research (as detailed elsewhere here) that are currently carried out by the Department of Geosciences are embraced by CEOAS. Once those missions are firmly embedded in the mission and culture of CEOAS the budget investment by COS will be moved into CEOAS as part of the initial budget allocations. This change will require the agreement of both Deans and the Provost. This arrangement will be reviewed after three years to gauge its effectiveness and can be extended for another two years with the approval of the two Deans. After five years, the budgets should be combined, unless there are strong objections from either Dean, in which case, the Deans and Provost will discuss an appropriate arrangement."

Will that address the concerns of the Council?

Subject: Re: CEOAS merger/reorg Cat I

Theresa:

I'll work with Mark to get you the necessary materials. The MOU is actually already a document that's been signed and forwarded to the Provost, so it's not something that we plan on editing (it does have discussion of a sunset clause in it). It also addresses largely issues of budget, accountability, and responsibilities for management of functions like business and IT. None of it discusses issues of graduate programs or graduate program management, as we tried to be careful to keep the academic program discussion squarely in the academic structure proposal.

Subject: CEOAS merger/reorg Cat I

Hi Mark, Sherm, Aaron and Bob,

The Graduate Council tabled full consideration of your Cat I proposal until our meeting this week on June 9, the final meeting of the year.

In preparation for continued discussion and potential approval of your proposal, the Council is requesting some additional information and a few edits.

1. Can you please send us the complete MOU regarding the transfer of Geosciences out of COS to CEOAS? We only have an abbreviated version in the proposal.

2. Add a sunset clause to the MOU

3. Include a current org chart for COAS to be compared to the new org chart on page 6.

4. Is the Associate Dean for Research a new position? If so, describe the budget source for this position. If there are any other new positions created with the merger, please note those as well and budget source.

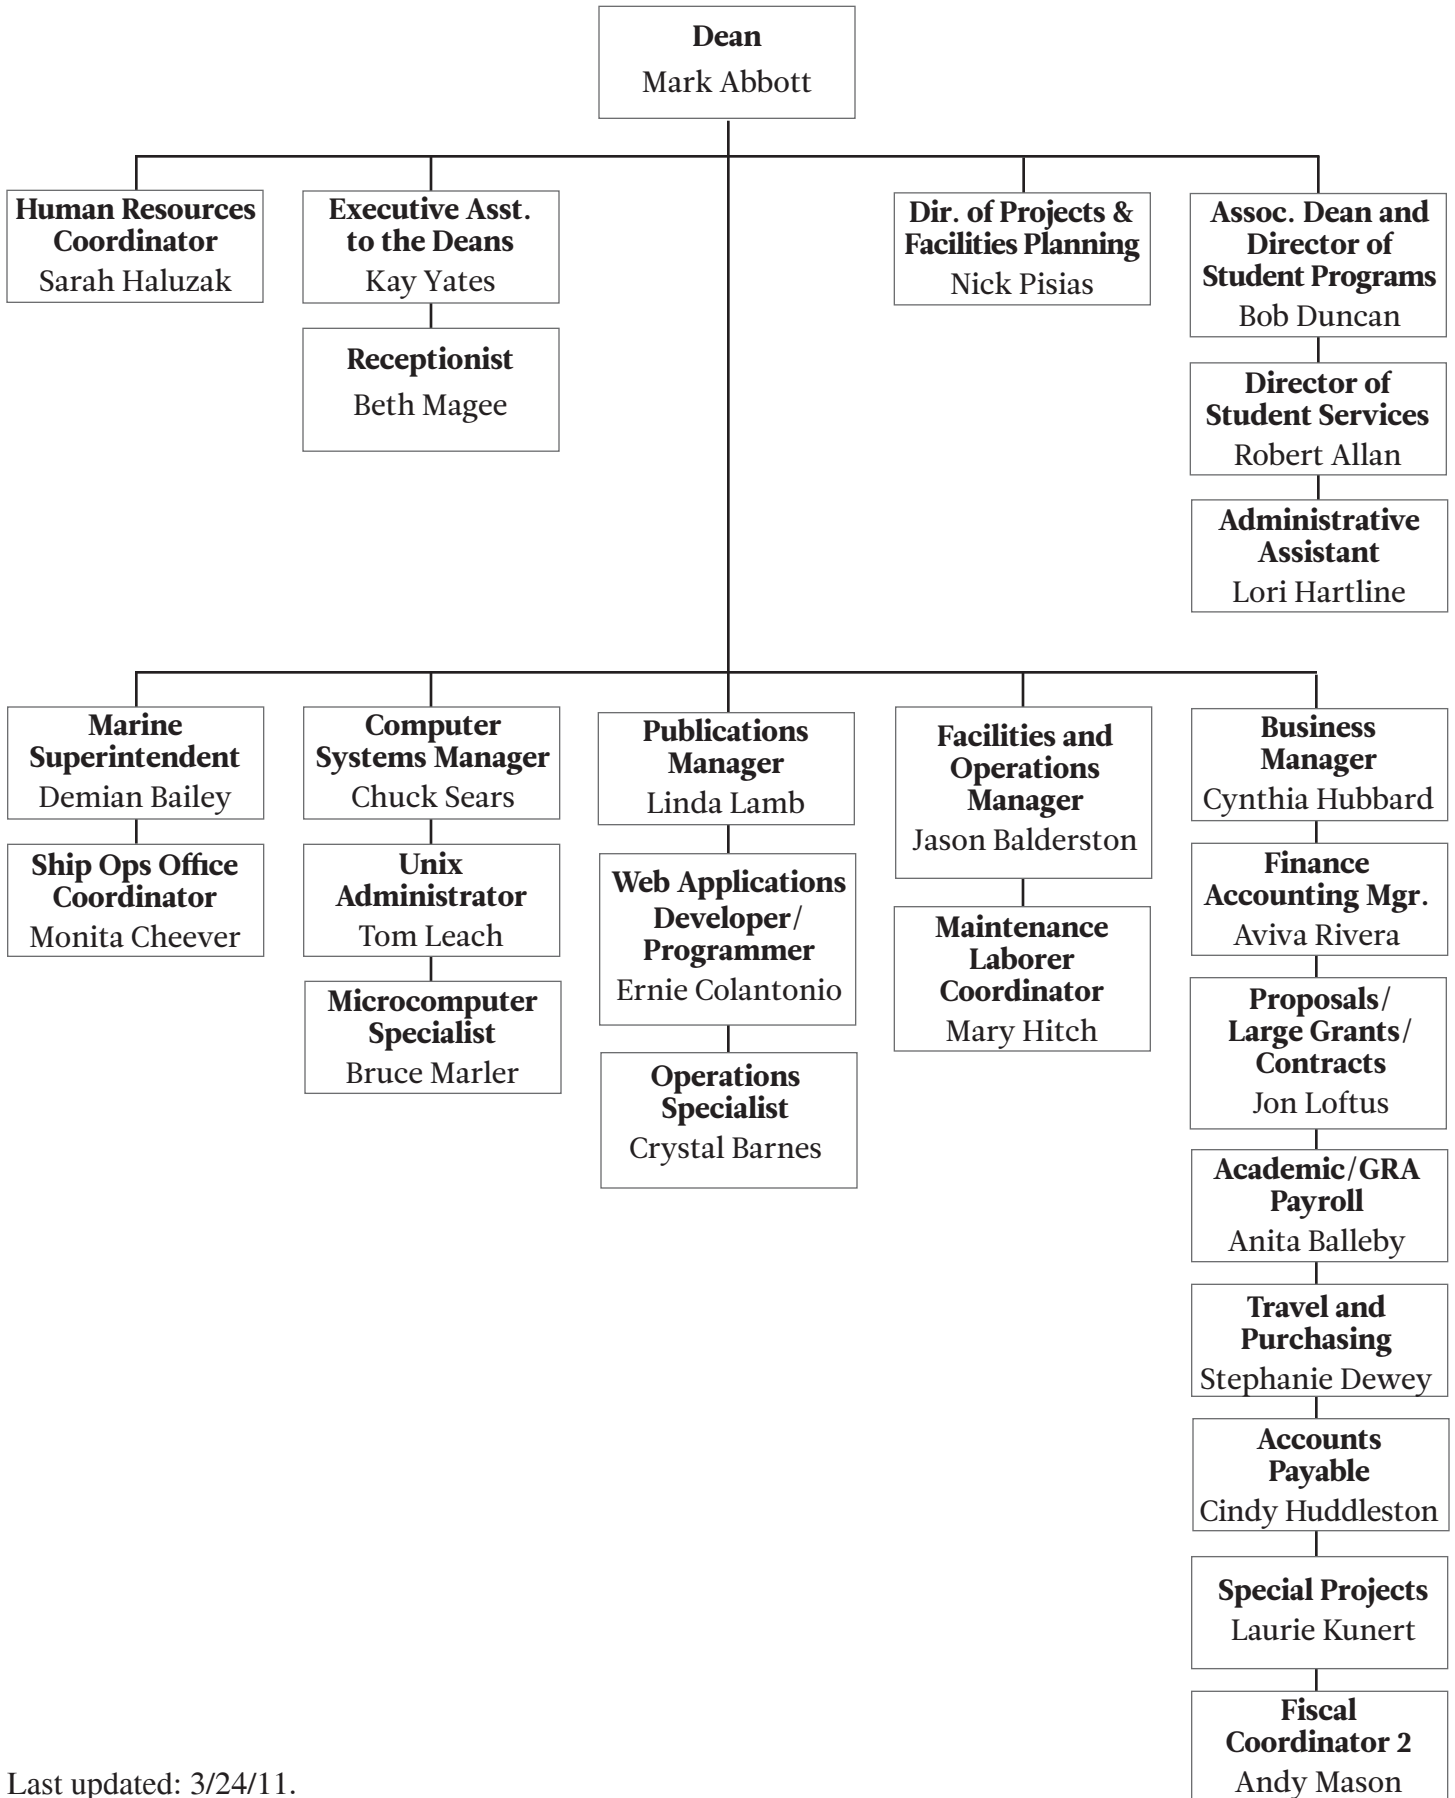

Similarly, where will the budget for the undergraduate support staff and the grad support staff originate? Will these monies also be transferred with the Geosciences department. If so, please provide this detail in the MOU (if not already included).

5. Include a statement in the proposal that the Dean of CEOAS will be responsible for all aspects of the graduate programs in Geography and Geology, including the recommendations that will come forward as a result of program review.

Thanks,
Theresa

Subject: Grad Council work load for next academic year

Grad Councilors,

I intend to send the letter below to Jack Higginbotham, Faculty Senate President, and Kate Hunter-Zaworski, President Elect. I'm sending it under my own name, not Council's, but in my capacity as outgoing Chair. I welcome comments before I send it at the end of the week.

Thanks,
Theresa

I am writing to you as the outgoing Chair of the OSU Graduate Council, as a Council member for next year, and as a veteran member of the Graduate Council since 2004. I am greatly concerned about the predicted workload to be handled by the Council in the 2011-2012 academic year. Gary Beach of Academic Programs tells us that 24 Cat I or abbreviated Cat I proposals will need to be considered by the Council next year. The influx of proposals beginning this spring has stretched our work load beyond that reasonably to be expected of a volunteer position.

Further, the Council learned recently that a substantial backlog of graduate program reviews needs to be completed within the next two years as part of OSU's re-accreditation. Graduate program reviews are a significant responsibility for Graduate Council members when they are assigned to a review team, and require time in Council meetings to discuss.

The Graduate Council also provides help to the Graduate School to evaluate several competitive fellowship programs including the Lottery Scholarships and the Laurels block grants. The stack of Lottery scholarship applications to be reviewed this year was a foot high. When you add these duties to the need for Council to consider new policy issues related to increased internationalization, desire to grow programs in non-traditional ways, restructuring, and new degree types such as the PSM, the Council agenda and work-load was over-full this year despite a doubling of our meeting frequency to once every week in winter followed by an increase in meeting time. Members of Council are, at times, making a strategic decision to avoid Council meetings because the demands have become too onerous.

So, I am asking for your help in deciding how to reconfigure the workload on the Council to reduce the burden on each faculty member who volunteers to serve. We have some ideas in Council, including reducing the number of readers on a Cat I proposal to two instead of engaging the entire Council. I believe that Curriculum committee is taking this approach. Some additional recruiting of faculty just for graduate program reviews might also help. There is not a consensus on Council regarding whether more members would reduce the burden or simply make it more difficult to find a time to meet, but we need to find ways to alleviate the time commitment.

As for whoever takes over as the new Chair of Graduate Council, I would urge them to consider distributing some of the duties. I believe that a representative from Council should be assigned as liaison to the University Assessment Council and to the academic program pre-proposal

meetings, and allow the Chair to focus on the other duties of the position. Re-distribution will, of course, add an additional burden the Council members.

Thanks,

Theresa

Reviewer Comments – Cat I MA/MS Communications

Cass Dykeman and I have reviewed the Category I proposal for the MA/MS in Communications and believe that additional information about the proposal is needed to inform the deliberations and decision by the council.

- We were not able to find the responses to CLA Liaison.
- We were confused by a statement at the bottom of page two of the English Liaison document. The liaison letter indicates that when graduate students name Speech Communication as both their first and second areas, they complete their masters' work using only 9 credits outside the department. Yet page 12 of the proposal states that these students earn 36 of their 48 credits from the Communications department. Please explain the disparity, and how this meets the MAIS requirement of 15 credits from each of the three areas.
- We were not able to find a clear distinction between the MA and the MS degree requirements within the proposal.
- The Category 1 lists Fall 2011 as the implementation date. (pg 4, item 1c)
- We are concerned with the extensive use of slash courses in the proposal. If the thesis credits are removed from the equation, at least 41% of the course work is slash courses. Since the proposal is for building an MA/MS degree with a projection of 20 students, why not develop the proposal with more stand-alone graduate coursework? What is driving the choice of using slash courses in the curriculum?
- Related to the point above, we note that the research methods courses are slash courses. We believe it may be more appropriate to use stand-alone graduate coursework for research methods.
- Given the large percentage of slash courses, would this degree program really be an option for OSU Communication undergraduates?
- Pg 9, item 3d – Learning outcomes. The third learning outcome suggests the thesis will integrate the minor area. However, the curriculum proposed does not specify the requirement for a minor area. Please explain.
- The proposal cites that the GRE will be required for admission, but does not specify minimum scores. How will the results of the GRE be used in the selection decisions? (pg 10)
- On page 11 (item 6aiii), the proposal seems to justify the need for this degree program because GTAs are needed to teach lower-division Communication classes. From the university perspective, and giving consideration to the lost revenue associated with tuition remission, it would seem that the use of professional faculty to deliver classes would be more cost effective. The GTA positions should be used to attract highly qualified candidates for the degree program.

- Is data available on the current enrollments in the UO and PSU Master in Communication degree programs?
- Pg 12, item 6b – Needs for employment:
 - What are the specific labor market projections (Oregon and US) for master's graduates from CIP # 09.0101?
(n.b., <http://nces.ed.gov/ipeds/cipcode/cipdetail.aspx?y=55&cipid=88045>)
 - To the point that many of the MA/MS students will come from the MAIS program:
 - Can placement results from past MAIS-dual-communication-area graduates be provided? The proposal makes very general statements regarding demand for graduates from this degree program. It would seem that the placement results of past graduates could be used to demonstrate demand and the types of career opportunities available.
 - Is there any data to suggest the number of students who are currently pursuing the MAIS with a concentration in Communication that would opt to switch to a Communication master's degree?
 - Is there data on the number of alumni from the MAIS with a dual concentration in Communication that would have instead opted for a Master in Communication?
- Pg 14, Item 8. Assessment. The proposal indicates that assessment will be based on individual courses and the evaluation of the thesis. If so, then the learning outcomes need to be mapped to the specific courses in which they are evaluated and assessed. Given the current emphasis within the university on assessment, a more thoughtful program for assessment should be included in the program.
- The proposed budget does not seem to reflect the diversion of faculty time for teaching additional stand-alone graduate classes and guiding up to 32 thesis projects. If it is budget neutral with no additional faculty resources, then what impact would this degree program have on the quality of the current undergraduate program?

Oregon State University

Review Process for Ecampus Proposals

Programs:

- A. Review by the Curriculum Council and the Office of Academic Programs, Assessment, and Accreditation should take place for all online Ecampus program proposals, including undergraduate and graduate majors, minors, and certificates as well as undergraduate options of majors. The review process will entail the following steps for existing, previously approved programs:
1. Following submission by an academic unit, Ecampus evaluates the proposal to decide if the program should be offered online. This is part of the Ecampus review process. Ecampus evaluates a potential program based on the following criteria:
 - does the subject lend itself to online learning;
 - is there market need;
 - what is the cost to develop; and
 - does the program have potential for financial sustainability over time?
 2. If Ecampus approves the program for distance delivery, the proposal is forwarded to the Office of Academic Programs, Assessment, and Accreditation for review of the program requirements to determine equivalency with the campus-based program.
- B. Review by the Office of Academic Programs, Assessment, and Accreditation will include the following:
1. If a major, which options will be offered?
 2. What are the curricular requirements for the proposed program?
 3. What courses will be offered through Ecampus to meet those requirements?
 4. Are the minimum requirements of the program being met? If not, indicate in what ways the proposed program will differ from the one on the OSU main campus.
- C. As a result of the review by the Office of Academic Programs, Assessment, and Accreditation, a summary evaluation statement will be prepared and forwarded to the Curriculum Council (Graduate Council, if applicable) for its review and approval of the proposal.

- D. The Graduate Council (if applicable) and the Curriculum Council will review the proposal and suggest any needed changes/clarifications along with its approval. The approval is entered into the minutes and posted on the web.
- E. The Office of Academic Programs, Assessment, and Accreditation notifies the academic unit and Ecampus of the proposal's approval. In addition, a CPS (expedited Category II) form is prepared and submitted to the Catalog and Registrar's Office for implementation.
- F. Ecampus and/or academic unit will notify the Office of Academic Programs, Assessment, and Accreditation of any changes to the delivery of an approved program, including notification of its intent to terminate any previously approved online delivered program.
- G. The Office of Academic Programs, Assessment, and Accreditation will maintain a list of all approved Ecampus delivered programs (majors, minors, certificates, and options). Ecampus programs will be placed on the Office of Academic Programs, Assessment, and Accreditation home web page.

Courses:

- A. Ecampus will **not** fund or develop any course that has not been approved through the CPS Category II process. When a course proposal comes to Ecampus that has not been approved by the Curriculum Council, Ecampus will have the proposer submit the course through the regular Category II review process. Ecampus will review the course for online delivery, but will fund the course for development only after it has received Category II approval.
- B. Ecampus will accept course proposals for online delivery only if the course already appears in the OSU Catalog.
 - 1. Ecampus will not send course proposals for additional curricular review because they have already been reviewed and approved and exist in the OSU Catalog.
 - 2. Ecampus will copy the Curriculum Coordinator in the Office of Academic Programs, Assessment, and Accreditation on the approved course proposals.
 - 3. The Curriculum Coordinator will facilitate the implementation of course schedule-type coding by submitting an expedited Category II proposal through the CPS.

Approved by:

Academic Affairs: October 7, 2011

Extended Campus: October 13, 2011

Office of Academic Programs, Assessment, and Accreditation: October 14, 2011

Graduate Council: October xx, 2011

Curriculum Council: October xx, 2011 (Final Approval)

Core Theme 2: Graduate Education and Research

Revised 10/11/11

- McComb and Holdren will be coordinating leadership.
- Graduate Council will serve as the steering committee and leadership body for Core Theme 2.1 and assist with determining performance thresholds for each metric.

Objective 2.1:

Maximize opportunities to attract and train high quality and diverse graduate students who find employment in rewarding professional careers.

Institutional Indicators:

1. GPAs and GRE scores of admitted and entering graduate and professional students. GPA Threshold = 3.0; goal = >3.5; GRE threshold = top 50% of all scores; goal = top 25% of all scores
2. Proportion of the total student body who are graduate and professional school students. Threshold = 15%, goal = 25%.
3. Proportion of students from under-represented groups (ethnic, racial, 1st generation, economic status, women in STEM fields, protected status). Threshold = Proportional representation to peer institutions (where data are available); Goal = proportional representation for Oregon population
4. Average number of doctoral students per Graduate Faculty member. Threshold = 1; goal = 3.
5. Average time to completion for PhD students. Threshold = 6 years; goal = 5 years. For MS/MA students. Threshold = 4 years, goal = 2.5 years.
6. Percentage of students obtaining passing scores on licensing exams and average scores on these exams. Threshold = 95%; goal = 98%
7. Percentage of students employed in their profession after 5 years. Threshold = 80%; goal = 95%.

Objective 2.2:

To foster a research and scholarship environment that is diverse and has a high impact.

Institutional Indicators:

1. Dollar volume of total research enterprise,
2. Dollar volume per T/TT faculty member,
3. Number of books, performances and forms of national awards and recognitions generated/received by faculty, and
4. Economic impact, including;
 - a. Number and dollar volume of Industry agreements
 - b. Number of start-ups,
 - c. Number of licensed technologies,
 - d. Number of industry contracts (including SBIRs and STTRs), and
 - e. Licensing and Royalty revenues.

USDA-NIFA and OSU Internal Review Report – April 24, 2011

Graduate Programs in (1) Animal Sciences and (2) Rangeland Management and Ecology

Oregon State University, Corvallis OR

1. Overall Recommendation: **Restructure** by combining the programs.
2. Summary of Findings and Recommendations
 - a. **Key Issues**
 - i. Faculty FTE are below “critical mass” due to
 1. Lack of replacement faculty FTE over the last two decades
 2. Loss of early career faculty due to unanticipated departure from the institution without replacement
 - ii. Current faculty demographics of both departments are such that reduction of faculty numbers means that fewer students are being trained
 1. The near-retirement stage of some faculty, the administrative and/or undergraduate teaching loads of others, coupled with fiscal considerations to cover the cost of supporting students have impacted the graduate education programs with an adverse impact on the morale of students and faculty alike
 - a. Nonetheless, student consensus indicated that “things have improved”
 2. Interestingly, the faculty:student ratio (Animal Sciences) has not changed indicating a continued commitment of faculty to graduate education
 - iii. E&G budgetary constraints of CAS and departments
 1. Campus administration needs to address the flow of financial resources to the department to support student enrollments
 - a. Provision of funding for GTAs to support the undergraduate education mission of the units (ANS/RME courses) will assist funding for graduate education
 - iv. Faculty Mentoring and Professional Development
 - a. Enhance professional development of new hires which will promote retention of new hires
 - b. Set expectations for instruction of graduate courses by faculty

b. Findings – Recommendations

1. Campus administration must address and fulfill faculty FTE commitments for the new consolidated department: Hire tenure-track FTE (a cluster hire of assistant and associate levels would be most beneficial)
 - a. A combined target of 18-20 faculty is recommended
 - i. 5 FTE immediately as a cluster hire to enhance programmatic developments *including* graduate education opportunity
 - ii. Replacement priority for future FTE due to resignations and retirements to develop and maintain the necessary preeminence for the consolidated unit
2. The consolidated department should merge the two graduate programs to create a modernized graduate education opportunity for MS and PhD degree conferrals
 - a. Develop a modern and comprehensive name
 - e.g., Animal Systems and Range Ecology
 - e.g., Biology of Animals and Ecology of Range
 - b. Develop a graduate education core **plan** that takes advantage of departmental strengths (upon the new FTE hires) and campus opportunities that gives students personalized disciplinary “options”
 - i. Identify minimal core curriculum for MS and PhD programs – develop appropriate core courses for research area of interest/ so students understand what is expected for degree completion and the courses are available for enrollment
 1. Consider if it is a possibility that graded course requirements for a research PhD are too high
 2. Consider a policy/regulation course (perhaps covering both animal science and range issues)
 - ii. Range program – connect and enhance collaboration with water resources and natural resources – research, undergraduate and graduate programs, extension
 - iii. Campus administration should address issues related to advanced degree students being “locked out” of courses in other units
 - iv. Campus administration and the department should develop *an educational think-tank workshop* to develop a consortia to consider novel opportunities for “missing” classes via long distance learning with western states or e-classes
 1. To make gains in this arena, financial resources to bring faculty from disparate sites together to develop are essential with campus IT/interaction modes to “make it happen”

2. Change admission strategy to develop an early (campus compatible) deadline (e.g., January 15) for application review and allowing for competition for fellowships and opportunity to gain the “best crop” of students (this doesn’t preclude continuing admissions beyond the early deadline)
 - a. Consider the balance of OSU vs non-OSU applicants
 - b. Consider opportunities for international students
 - c. Consider opportunities to enhance the diversity of students (both gender and ethnicity)
3. Student Development and Communications
 - a. Improve the mentoring and orientation for 1st yr students (regardless of term admitted)
 - i. Teaching, safety issues, and research should be emphasized
 - b. Convene a session involving students and a faculty committee to consider salary issues – and the equalization of salary base and workload
 - i. Develop a greater faculty-student partnership within the department, which will be especially important for students as the consolidation unfolds
 1. Develop “a consolidated departmental plan” for funding of graduate students that is equitable and openly-communicated with students
 2. Work with administration to gain GTA funding from campus for ANS and RNG courses
 3. Investigate GTA opportunities for program students in other departments
 - c. Communication and mentoring regarding workload balance
 - i. Discussion of expectations with students and mentors
 - d. Focus on communications with students regarding the departmental merger and any potential graduate program merger
 - e. Investigate campus-wide teaching/TA-training programs – require participation if available; consider development of

- a 1 unit grad level “teaching skills class” that all program students must take in their first quarter
- f. Develop student-to-stakeholder interactions
 - i. Consider an annual event to provide interactions which could lead to student-funding development and career opportunities
 - 1. For example:
 - a. Half day of student presentations
 - b. Luncheon
 - c. Half day of stakeholder presentations

3. Detailed Findings

- a. Introduction:
 - i. **Objectives of the review.** The graduate program review was commissioned as part of the 10 yr review process required by the institution. An unusual feature of this review is that it was organized in alignment with the USDA-NIFA external review of the departments of Animal Sciences and Rangeland Ecology and Management. These two departments are planning to merge as of July 1, 2011. The department heads (Jim Males and Mike Borman) have been working with stakeholders, faculty, staff and campus administration to create a strategic vision for the new department. A search for a new head is underway.
 - ii. **Participants.** See iv below and **Attachment 1: Participants**
 - iii. **Order of events.** See **Attachment 2: Review Site Visit Agenda**
 - iv. **Organization of the report.** The report format was organized according to university guidelines. The overall content was defined by a one page sheet provided by the Graduate School entitled “Appendix II: Outline for the Review Panel Report”. Dr. Mary Delany (UC Davis), a member of the USDA-NIFA external review team was identified as the lead for the internal Graduate Program Review and asked to compile the introductory materials and the report as a whole. Dr. Twig Marston (University Nebraska), a member from the USDA-NIFA external review team and OSU-internal team members (Walter Loveland, Carolyn Aldwin, Martin Fiske) participated in the scheduled meetings. The other USDA-NIFA team members (see attachment 1) also provided input by discussion during the site visit. Drs. Delany, Marston, Loveland, and Aldwin held

responsibility for the text based material below (Sections: b. Inputs, c. Productivity, d. Outcomes, e. Conclusion) and overall recommendations.

b. Inputs:

- i. **Mission fit and relationships to college, and university missions.** The strategic plan provided by the merged Department of Animal and Rangeland Sciences addresses teaching, research, and extension. This aligns the department with more than the general connotation of land grant universities; the new department has taken great care in aligning with particular components of both the Oregon State University and College of Agricultural Sciences mission statements. Highlights include the commitment to excellence in the classroom, research, and programming. The department is committed to contributing to Oregon's overall economy. Also, the Animal and Rangeland Sciences strategic plan provides both a science track, which prepares students for veterinary school or graduate school, and an animal management track, which prepares students for careers oriented in animal/range management or related industries. The department is dedicated to using internal staff and external stakeholder inputs to craft its present and future endeavors. The department strategic plan is begins with ambiguously large concepts, but it ends with specific ideas and plans it expects of itself to achieve attainable, high-quality goals.
- ii. **Quality of students/Admissions selectivity.** The rolling admissions format practiced by the department(s) may be an impediment to recruiting the level of scholarly students that would enhance the program. It may also be an impediment for gaining fellowship support for students. The GRE scores of rejected students were often higher than those accepted, and there evidence for declining GRE scores over time.. The stated reason for this policy is that students were taken on as research projects were funded, which leads to selecting for convenience/familiarity rather than excellence. This is partially in response to lack of alternative stable support for graduate students such as GTAs. The department (ANS) has devised a new strategy to raise the credentials (40% percentile threshold for average GRE scores) of incoming students.
- iii. **Level of financial support of students.** The department (ANS) has designed a strategy to provide 0.2 fte which allows for fee remission in return for service activities (assistance with classes). However, there may be discrepancies between the stated FTE and the number of hours worked, which should be corrected. There is an apparent disparity and a lack of communication regarding salary support and opportunities for students to get GTAs. The departments need to spend time developing an improved plan for graduate funding, as does the campus administration. Also surprising was the lack of active participation in

the graduate student union which might provide support for improved [job equity for the graduate students](#)

- iv. **Curriculum strength.** Graduate classes were evaluated on breadth and depth of class offerings. It appears that classes taught both within and outside the home departments are adequate to prepare graduate students for knowledge and research support. Graduate students expect a majority/large percentage of classes to be made available from within the Animal and Rangeland Sciences, which may not be feasible. Students should be realistic in understanding that the breadth of classes needed to provide individually-needed class work will have to encompass several different departments, colleges, and schools within the University. Graduate student surveys indicate student satisfaction in knowledge transfer and course quality. Complaints and concerns center on two areas. First is the number of graduate stand-alone courses as compared to “slash” classes. This is magnified because a vast majority of the graduate students come from OSU undergraduate degree programs, hence, “slash” programs have already been taken to complete B.S. degrees. Compounding this is the critically low number of graduate faculty and their graduate-level teaching loads/expectations. The second problem is the inability of Animal and Rangeland Science graduate students to gain timely admittance into graduate level classes being offered in other departments and colleges or schools. Those specifically mentioned frequently reside in the College of Veterinary Medicine. The inability to enroll in these classes has caused delays in degree completion and student frustration. The unit administration should negotiate with COVM to provide access to their classes, especially in light of the services provided to COVM in terms of access to animals, etc.
- v. **Quality of personnel and adequacy to achieve mission and goals.** The quality of the faculty and the instructors are appropriate to meet the mission/goals of the programs, offering effective opportunities in the lab and field for advanced degrees in the areas outlined, however, the number of faculty are inadequate which has resulted in a low number of trainees (i.e., low faculty numbers and high administration loads, as well as faculty nearing retirement age not taking on students). More students could be accepted than faculty have resources to fund – so in some ways the faculty are appropriately not taking on too many students. However, the number of graduating students does not meet the current university-mandated criteria, which is why we recommend that the graduate programs be merged. Students in a survey expressed strong satisfaction with their mentors (ratings of 4 and 5 from 10 of 16 students that completed the

survey). Also, the low number of faculty means that the diversity of graduate courses offered is lower (students indicated a lack of graduate courses was a problem). As mentioned earlier, many of the classes are “slash” courses, and since many of the students graduated from OSU, they may have already taken these classes. Ultimately, expectations need to be established (perhaps at least a threshold of expectation for graduate education once tenure is achieved; at other institutions it can be an expectation that a faculty member upon advancement will offer a graduate level class in their area of scholarship).

- vi. **Level and quality of infrastructure.** Students are trained at the OSU (Animal Science, campus based) site as well as the Agricultural Research Center (ARC, Eastern Oregon) (Rangeland Ecology Management). Withycomb Hall was mentioned by many administrators and faculty as being in need of renovation to make it a suitable laboratory environment. Problems include leaking roofs. A Nutrition Lab exists where students can run assays or have assays conducted with a sliding payment scale set by the institution. Access to a Reproductive Physiology lab also is an opportunity. A building or animal facilities tour was not part of the review, so the space/infrastructure was not directly assessed nor was discussion held on graduate student study space (cubicles/offices, etc.). The field opportunities and the access to Eastern Oregon labs (Union Station, Burns) seemed high quality (overview by slide presentations). The Burns unit is a partnership with USDA-ARS and apparently has many advantages for laboratory analyses. Students mentioned that access to a high quality molecular/cellular biology techniques (laboratory) course would be a welcome addition.
- vii. **Quality of organizational support.** The Animal Sciences faculty discussed their Graduate Student Handbook as an information-laden resource for students. The students did not see this in the same light. Students entering “off cycle” seem especially at a disadvantage. Annual reviews/performance sheets were part of the mentoring process, although this seemed more like a “check off” than mentoring/professional development. The students appear to be very positive about the seminar course being run by a new faculty member, in which they give presentations (two quarters) and then are exposed to internal faculty presentations. Opportunities for GTA’s (an important form of organization support) are not apparent within the department (which seems odd, given the number of undergraduates being educated, about 430 in ANS and 30 in REM, and given the expected laboratory sessions). This seems to be an issue needing resolution by the campus administration. Communication of opportunities for GTAs in other units should be offered.

c. Productivity:

- i. **Level and quality of student performance.** The review committee was concerned by the data (Appendix K of the self-study) on the number and quality of graduate students. For the **Animal Science** program the number of graduate students declined significantly from 2000 to 2010, mirroring the reduction in FTE and overall demographics of the faculty. In the period from 2002-2003 to 2010-2011 the total number of entering doctoral students was 8 and the total number of entering masters students was 43. Of these masters students it appears that 12 did not complete the program to receive a degree, a 28% attrition rate. For the doctoral students the attrition rate is not easily determined although the NRC data (see below) suggest it was not good. Neither the masters nor the PhD programs appear to meet the University's guidelines for sustainability of graduating 2 PhD students per year and 5 master's students per year. For the **Rangeland** program, a similar decline in student numbers was observed from 2001 to 2010. In the ten year period from 2001 to 2010, 8 students entered the doctoral program and 44 students entered the masters program. The graduation rate for the masters program was excellent with only 3 people leaving without completing a master's degree. The same sustainability problem exists with the Rangeland program as exists in the Animal Science program. **The review committee suggests the two graduate programs be combined to create a more sustainable overall program with areas of concentration in Animal Science and Rangeland.** The choice of a program name for the combined program/degree should be carefully chosen with full all stakeholders and the graduate students being involved.

A second issue is the quality of the graduate students in Animal Science. The average GRE verbal scores of the applicants declined from 582 in 2004-2005 to 430 in 2009-2010. The latter score for a cohort that is primarily native speakers of English is abysmal. A similar decline in GRE quantitative scores from 592 to 450 was noted also. What is paradoxical about these scores is that the average quantitative GRE score of rejected applicants in 2009-2010 was 710. This may be the product of what the department refers to as "rolling admissions" in which students are admitted continuously rather than grouping the applicants and making decisions on an entire group of students. **The review committee suggests graduate applicants be admitted on fixed dates, January and the usual April 15th, so as to make sure that the best students are selected for admission.** Limited current data is available for admissions of Rangeland students but these data suggest a much better set of average GRE scores (650 and 510) but a similar problem with rejected applicants (680 and 560). **The review committee suggests that GRE scores be required for admission to either program.**

- ii. **Level and quality of faculty performance.** The level and quality of faculty performance is best summarized by the NRC metrics discussed below. However the review committee is concerned with another aspect of the faculty situation, the apparent decline in the number of faculty, which certainly affects the number of students in the graduate programs. In Fall 2000, the Animal Science program had 33 non-emeritus tenure-tenure track faculty. By Fall 2010, the number of non-emeritus tenure-tenure track faculty was 24. Approximately 11 faculty had retired or resigned in the intervening years which means there was little replacement of these faculty. Of the current faculty 12 are primarily extension faculty. We understand there is a plan to add five new faculty members to these departments which will help.

Rankings/ratings. The Animal Science program was evaluated in the recent NRC evaluation of quality in graduate education. Oregon State University, as part of its decennial accreditation by the NWCCU, used eight of the NRC metrics to rate its graduate programs. The metrics used were the number of publications per faculty member, the number of citations per publication, the percent of faculty with grant support, the average completion rate of PhD students, the average time to degree of PhD students, the number of PhD students graduated per year, the percent of interdisciplinary faculty and the GRE scores of the entering PhD students. For each metric the score of each graduate program was compared to the mean score of our peer institutions (Auburn, Arizona State, Clemson, Colorado State, Iowa State, Kansas State, Oregon, North Carolina State, Purdue and Washington State). If the score of the OSU program was within two standard deviations of the mean, it was said “to meet expectations”. If the OSU score was more than two standard deviations above the mean, it was said “to exceed expectations”. If the OSU score was less than two standard deviations below the mean, it was said “not to meet expectations”. The Animal Science program did not meet expectations for two metrics (number of publications per faculty member and the percent of faculty with grants), exceeded expectations on one metric (completion rate) and met expectations for all the other metrics. Animal Science calls attention to the issue with the NRC study of how the number of faculty were calculated for each program which was a problem for land grant institutions where graduate faculty are routinely drawn from industry, national laboratories and federal agencies. Overall the Animal Science program is said to “meet expectations.”

- iii. **Viability of scholarly community within which students can interact.** The review team met with 13 students. On an individual basis, it is clear students are

interacting with their research mentors, and they are also interacting amongst themselves (a positive and supportive cohort was interviewed who reported a number of positive efforts, such as a journal club, research presentations, etc.). They clearly would enjoy more opportunities to attend meetings, discuss career options, etc. They were concerned about the departmental merger although they seemed accepting of it; however, there were clear concerns regarding any consolidation of the graduate programs. This means that some “leg work” is necessary to assure them, listen to and evaluate concerns, and promote faculty-based scholarly interactions that they can be a part of – to see the value of the interdisciplinary or multidisciplinary scholarship to their education. It was not clear that the students are interacting with other faculty outside the department, but since the majority of students are M.S., this is not unusual.

d. Outcomes:

- i. **Professional viability of graduates.** There is a clear career path for the range degree students; the animal sciences students seemed less clear as to their opportunities. That is not unusual for ANS students throughout the country as they often start out committed to veterinary school. A key recommendation is to develop an alumni base which these departments should have, given their long history, to help educate the students as to career opportunities (which in fact are very positive opportunities ranging from further professional and research advanced degrees, laboratory research, positions in state and national regulatory agencies and government, positions in agribusiness and allied industries, etc.).
- ii. **Satisfaction of students and graduates.** Student interviews indicated a mix of satisfaction with mentors (despite the scenarios where faculty left the institution) but concern about graduate level classes (perceived lack), lack of training to be a good instructor, negative views of orientation during their first year of the program, and lack of access to techniques-base courses. The students were fierce in their view that the programs (animal and range) were stronger in their “separateness”. They expressed concerns about the job opportunities given the current economic climate. The self study analysis indicated 10 of 16 student responses expressed strong satisfaction (4 and 5) in evaluating their mentoring experiences. The students were “out of the loop” in regard to the departmental merger and we recommend rectifying that by increased communication. Students were happy with the journal club format of one seminar series.

e. Conclusion:

- i. We affirm the value of these advanced degree graduate programs for their contribution(s) to the mission of the land grant institution and in public service to the state of Oregon in educating students. We believe that consolidation of

the two programs along with a concerted effort by faculty (which must include new hires) to enhance aspects of the opportunities for students will result in a unique (there are only three advanced degree programs of this type in the nation), high quality and well-known program with national visibility and many opportunities to engage in international education in the future. Specifically, this consolidated and updated program at OSU has the potential to be the lead and premier unit in promoting science-based knowledge and educated experts (working in the field or voting at the polls) regarding livestock and animal systems and range sciences of the Great Basin, this will bring further visibility to the institution. The current and future (as committed by campus administration) disciplinary-based graduate faculty offer will provide expertise for training in the molecular, cellular, organismal and systems level analysis of animals and the environment – and how the important interactions between these units.

Departmental Review

March 14-17, 2011

Sunday March 13

Afternoon: Convene Boise Airport. Jim Males and Mike Borman will meet and drive to LaGrande, OR

Monday March 14

| | |
|-------------------|---|
| 7:00 am. | Breakfast with Males, Borman, Tim DelCurto (Superintendent EOARC), and Larry Larson (EOU Ag Program Leader) |
| 8:30 am. | Convene with EOU, EOARC Faculty |
| 8:45 – 9:15 am. | Overview of EOARC Burns and Union and EOU facilities |
| 9:15 am | Break |
| 9:30 – 10:30 am. | EOARC Animal and Range Research overview |
| 10:30 – 11:00 am. | EOU Undergraduate Program (Range Major and Animal Sciences Minor) |
| 11:00 – 12:00 pm. | Team and EOARC/EOU Faculty (with box lunches) |
| 12:15 pm. | Leave for Corvallis |
| 7:00 pm. | Dinner for Team and OSU Graduate Program Review Team – Corvallis |

Tuesday March 15

| | |
|-------------------|--|
| 8:00 am. | College of Agricultural Sciences and Extension Administration |
| 9:30- 10:15 am. | Overviews, Departmental (Males and Borman); Undergraduate Program (Jim Hermes); and Graduate Programs (Fred Menino). |
| 10:30 -10:45 am. | Break |
| 10:45 – 12:00 pm. | NIFA and Undergraduate Program Review Team meet with Undergraduate Students |
| | NIFA and Graduate Program Review Team meet with Graduate Faculty Eastern Oregon Faculty available Polycom. |

| | |
|-----------------|---|
| 12:00-1:00 pm. | Working lunch for NIFA, Graduate Program and Undergraduate Program Review Teams |
| 1:00 – 2:00 pm. | Meet with Stakeholders |
| 2:00 – 3:15 pm. | NIFA and Undergraduate Program Review Team meet with Undergraduate Teaching Faculty |
| | NIFA and Graduate Program Review Team meet with Graduate Students |
| 3:15 – 3:30 pm | Break |
| 3:30 – 4:00 pm | OSU Review Teams meet with Males and Borman |
| 4:00 – 5:00 pm | NIFA and OSU Review Teams in Executive Session (if NIFA team is not included in this they will be taken on a tour of farm facilities) |
| 7:30 – 9:00 pm | Reception for Review Team, Faculty, Administrators – Males Home |

Wednesday March 16

| | |
|------------------|--|
| 8:00 – 9:00 am | University Administration |
| 9:30 – 11:00 am | Research Overviews Faculty (Break will be worked in as needed) |
| 11:00 – 12:00 pm | Extension Overview (Jim Thompson) |
| 12:00 – 1:00 pm | Lunch with CAS Unit Leaders |
| 1:15 -2:00 pm | Animal Unit Managers & Laboratory Support Personnel |
| 2:00 | NIFA ReviewTeam Open for Discussion and work on report |

Thursday March 17

| | |
|----------------|---|
| 8:30 – 9:30 am | Exit Interview – College of Agricultural Sciences and Extension Administrative Team |
| 10:00 am | Exit Interview – Animal and Rangeland Sciences Faculty |

Report on the Cat I. proposal to create a School of Integrated Plant, Soil and Insect Science (81957)

The proposal deals with what should be a straight-forward merger of two departments but the following items need further attention.

General comments

While discussed briefly, the driving force behind the merger is not clear. What advantages are gained by the merger? What compensates for the administrative trouble of creating the merger?

Entomology

The "Insect Science" part of the proposal seems weak. There are only two faculty that identify themselves as insect scientists. Is this enough?

The history of a weak, non-sustainable graduate program in Entomology that was terminated/suspended needs to be discussed, in particular, how this will be made into a viable undergraduate program and a graduate minor. The INT headcount in 2010 was criticized in the discussion of the graduate program review. Please reply to these criticisms.

Fiscal Issues

The BFP group requested the budget reflect inflation. It does not. The effect of declining support for the SWPS upon the program should be addressed.

The Curriculum

It is said that there is no set curriculum for graduate degrees. Course work is assigned by program committees. How does one determine when the requirement for a graduate degree is met?

SCH/Faculty ratios

This discussion is hard to follow given the large number of faculty.

BPP

Why do they have no role in this merger? The few sentence discussion of this point seems superficial.

Details

What is "citizen evaluation of teaching"? What is the availability of internships? What is the relation between the current courses and the new courses?

Executive Summary
Review of Design and Human Environment
Oregon State University
April 2011

The Design and Human Environment department has many strengths including hard-working faculty that are committed to a student-centered educational experience. Several key strengths include the fact that DHE is the only Ph.D. program west of the Rocky Mountains, it is located in the center of a vast outdoor apparel industry, and it is in transition to a new academic home providing opportunity to realign itself as a School of Design and Human Environment with special focus on design and consumer behavior. Not surprisingly, reviewers from academia and from industry approached the review from somewhat different perspectives, regarding, for example, overall aspirations for the program, especially regarding curriculum, competitive ranking of programs, and preparation of graduates for working in today's fast-paced design industry.

Currently DHE has a strong national reputation for its traditional broad-based textile, apparel, and interior design program. However, to transition to a School of Design and Human Environment, the Review Committee strongly suggests that a strategic plan be written that includes goal setting, benchmarking, and implementation plans that would better position the School to be a top-rated program. Important to this strategic plan is a focus on WHAT DHE wants to be—a design school or a strong broad-based program that includes design, merchandising, interior design, consumer behavior, and social aspects of design and human environment. Regardless, because of the vast outdoor apparel and sports industry located in the area, it would be strategic to revise the curriculum to better prepare students so they are competitive with the job opportunities in the area. At the same time, it is important to understand that not all students will remain in the Pacific Northwest; therefore a broad-based approach can prepare students for the vast opportunities across the nation and globally

The Review Committee concludes that in order for DHE to become more design focused, attention must be given to the curriculum and the admissions process. Yet, without a strategic plan with a plan for implementation and goal-setting, it is unclear whether DHE wants to be a “design school” or, instead, provide a strong yet broad-based design, merchandising, interior design, and housing program. An assessment of current faculty strengths as compared to a strategic plan of what would be required to be a top-rated Design and Human Environment program needs to occur. As DHE evolves the curriculum, it should continue to build inter-departmental alliances in departments where students can take supporting courses.

Currently, the faculty has a diverse range of expertise; yet only a few faculty have the necessary design background to prepare students in the competitive field of apparel and interior design. According to the DHE program review documents provided by the Department, academic freedom is strongly supported (p. 8). Yet it is generally maintained that the reputation of university programs is supported by faculty that conduct research aligned with the strategic goals of the program. Should ‘design’ be the intent of the new school, much attention needs to be given to building a curriculum, research programs, selective admissions plan, and infrastructure including modern studios and technology support. This may require that some faculty be re-trained with a stronger focus on design;

and research would need to focus on strategic initiatives of the school. As new faculty is hired, it will be critical that the new hires meet the strategic goals of the revised program.

It is recommended that DHE implement a portfolio review as part of the selection process for admittance to the program and that a target date is set to execute this review process sooner rather than later. It is also suggested that DHE identify who their peer institutions are, and conduct a critical review of their programs so that the curriculum at DHE can evolve into a program that stands out among their peers and develops strong DHE graduates. Being mindful that the majority of companies in the Pacific Northwest are outdoor apparel companies, it is critical to seek advice from these industry partners to be able to prepare students for the wide variety of career options at these unique companies. To do this, it is recommended that a critical analysis is made of faculty strengths and a plan is implemented to hire additional faculty that would enhance the revised curriculum.

The Department of Design and Human Environment is challenged with the required relocation to a new 'home,' yet this challenge can also be seen as an opportunity to evolve the program to become even stronger and more closely aligned with needs of industry. The Review Committee encourages DHE to develop a strategic plan that will create a strong place in their new academic home.

Our detailed report follows a summary of strengths and recommendations below.

Comments on the Review Process

The Review Committee would like to mention that the internal review process could have been better. The self-study data requested were (mostly) provided, with the exception of the Graduate School exit survey. However, there was very little analysis and evaluation of the data. A list of thesis titles does not address program outcomes, for example. Further, the Department did not provide a list of goals for the future. The trends and forecasts section was exactly that, a discussion of trends, not a thoughtful evaluation of future opportunities and threats. Goal setting with timelines and benchmarks was missing. Strategic planning is not evident. Overall, the self-study report did not present evidence of critical self-reflection amongst the faculty. They have high aspirations but no evidence of concrete plans to achieve them.

Overview of strengths and recommendations:

Strengths

- Dedicated but over-extended faculty
- Location
- Strong vision but lacking strategic plan to get there
- Broad-based program that meets the mission of the land-grant university
- Internationally recognized faculty with reputations in consumer behavior, functional design, housing, and history.

Overall Recommendation

- The Committee recommends that the DHE Graduate Program be maintained and improved.
- As DHE transitions to a new home, the mission will need to be revisited to make sure it meets the mission of the newly associated College and the strategic direction of DHE.

The Review Committee strongly suggests that a strategic plan be put in place that outlines the path to accomplish the new direction for the School of Design and Human Environment. The remaining recommendations below then follow from the assumption that the Department will be working with a revitalized strategic plan.

Detailed Recommendations

1) Quality of Students and Admissions Selectivity

Undergraduate Program:

- To be a leading undergraduate design program, DHE must change its student quality through its admissions process. It is highly recommended that potential students submit a portfolio or entrance project with their application. If help were needed in developing that requirement, external industry and academic partners would be more than happy to help facilitate expectations.
- It is also recommended that a team of DHE faculty and external advisors manage the admissions process, as the current staff in DHE is not strong enough in modern-day portfolio development and evaluation. Last, DHE should be more selective and focus only on the best student applicants, by reducing its acceptance rate.

Graduate Program:

- To be a leading Graduate Program, DHE must focus on recruiting top graduate students to their program. It is suggested that students interested in the design area should submit a portfolio or entrance project with their application for assessment. DHE could call on external industry and academic partners to assist with the portfolio development and review process.
- DHE faculty also need to focus tightly on research disciplines that are relevant to the newly developed strategic plan. Graduate students must be admitted that support the faculty's research areas while at the same time build the reputation of the program. Strong, focused recruitment efforts will hone the Graduate Program to be highly effective, efficient, and reputation-building.

2) Level of Financial Support

Undergraduate

- The level of financial support should be increased so that there are enough faculty to meet the program needs. Supplemental fees and outside funding are sought to help support these efforts.

Graduate

- The review recommends that the Graduate Program be maintained with current funding for assistantships.

3) Curriculum Strength

Undergraduate

- As DHE repositions into a different academic "home", it must critically analyze the curriculum to best meet the new strategic plan AND the general philosophy of the college for which it is associated.
- If DHE decides to focus on "design," careful attention to how the design industry has exponentially changed in the past 15 years will be critical. Regardless of whether DHE

decides to become a “design” school or an iteration of its current program, all curriculum must evolve to meet the changing needs of society.

- If DHE aspires to be a leading School of Design and Human Environment with a focus in Functional Design and Consumer Behavior, then it must evolve from its current course offerings to one that best matches the revised mission and strategic plan. Attention should be paid to industry and society needs to make sure several key areas of study are offered or required from other programs across campus. For example, for functional design, necessary courses might include mechanical drawing, rendering, 3D, human factors/ ergonomics/ anthropometry/ anatomy, design process/ methodology, graphic design, ideation, mandatory design internships, consumer psychology and perception, textile science classes with attention to performance fabrics, business development, entrepreneurship & innovation, display/ presentation design and modern day portfolio development. Many of these courses can be found in programs across campus, so it will be important to partner with strategic inter-departmental alliances.

Graduate

- The graduate curriculum in DHE must evolve to meet the revised strategic goals and mission of DHE. An analysis of the curriculum as it aligns with the strategic plan and the philosophies of the newly aligned college will be necessary. In the context of developing a detailed strategic plan, it will be important to determine whether the program desires that the majority of its graduate students will become academics or work for industry. Curriculum will need to provide adequate courses to meet these graduation/placement goals.

4) Level and Quality of Faculty and Adequacy to Achieve Mission and Goals

- New faculty hires should be focused on the needs arising from the revised strategic plan. Faculty should conduct research in areas that enhance the reputation of a top Graduate Program. It is recommended that creative scholarship be embraced to increase the stature of the program.

5) Level and Quality of Infrastructure

- The Department needs to raise funds to enhance technology. From computers to laboratory to studio equipment, it is important to provide up-to-date technology for both student learning environments and research purposes.

6) Level and Quality of Organizational Support

- The Department also needs to strongly consider budgeting dollars for computer and equipment upgrades, bringing in external speakers a few times a year (which may not cost much given the concentration of textile industry in Portland), and providing faculty travel funds to defray travel expenses for conferences. These funds may need to come at the expense of a GTA. However, the department should consider submitting for University RERF funds for equipment or appealing to donors.

7) Level and quality of students

Undergraduate

- Per the discussion in the curriculum section, the Undergraduate Program needs to be re-developed so students can focus on a specific subject matter and learn up-to-date skills that will allow them to be more competitive in the job market upon graduation. Careful attention

must be made to hire the right product Design Faculty who understand the Design industry and its modern-day requirements to succeed.

Graduate

- A required graduate seminar needs to be developed that would prepare graduate students on proper format for academic presentations and how to write papers for publication. The seminar series could also be in conjunction with outside industry/research speakers, so students could interface and network with professionals. Graduate students should be strongly encouraged to submit work for publication and to presentations at national/international conferences such as International Conferences related to their area of expertise such as International Textile and Apparel Association; Costume Society; or Surface Design Association.
- DHE should consider as a goal that their graduate students and research be increasingly funded by local industry. To do that, the Graduate Program focus must change to reflect what is really going on in the local industry. Portland, Oregon is known as the Sports Design Product capital of the world, and companies continuously relocate their headquarters to Portland so they can acquire the best talent and create the most innovative products.
- One reviewer advised that DHE immediately re-focus key research so it is relevant to apparel/interior end uses. For example, if textile sustainability is important in the sports apparel industry – the research could be re-focused and better aligned, i.e., find a new recyclable spandex.

8) Viability of the Scholarly Community

- The Department should start a seminar program with external speakers every year. Utilize local (i.e. Portland) industry and/or the advisory board as a source of speakers or revenue to support speakers. Be clearer with graduate students regarding the importance of publishing, grant writing, and contracts with industry.

9) Satisfaction of Students

Undergraduate

- To increase the needs of Undergraduates, a stronger emphasis should be placed on technology across the curriculum. This includes both hardware updates and curriculum that teaches important software functions for both Interior Design and apparel-related applications. For faculty to gain industry experience, it is suggested that faculty development time is provided for faculty internships.

Graduate

- First, the Department needs to look at the Graduate School's exit survey data and provide their own analysis.
- Second, although it is wonderful that the graduate students in the program feel supported and well mentored, there is concern that the students are perhaps a bit too satisfied. Are they being pushed outside of their comfort zones in terms of thinking about design, being creative with materials, or pursuing industry and grant funding? Students who are pushed beyond their comfort zone often rise to the occasion and are able to produce good results.

Introduction

The purpose of this regularly scheduled undergraduate/graduate review of the Department of Design and Human Environment (DHE) at Oregon State University is to recognize and document the program's strengths and weaknesses and make recommendations for improvements that will enhance academic excellence. With forthcoming changes in the College structure and with the University-wide realignments, Design and Human Environment seeks a new academic home via the proposed creation of a School of Design and Human Environment. The Department and its programs have been evolving in order to meet these challenges and take advantage of the subsequent opportunities. Recommendations from this review are intended to guide DHE during this transitional process. All members of the Review Committee were involved in the entire process. Specifically, observations of the Undergraduate Program were conducted on February 2, 2011 by Elizabeth Bye, Susan Solowski, Adry Clark, Gary Beach, and Sara Jameson. Review and documentation of the Graduate Program were conducted by Jana Hawley, Theresa Filtz, Martin Fisk, and Thomas Wolpert.

The report of the Review Committee follows, with recommendations, in these sections:

Inputs:

- Fit of the Mission
- Quality of Students and Admissions Selectivity – Undergraduate and Graduate
- Level of Financial Support – Undergraduate and Graduate
- Curriculum Strength – Undergraduate and Graduate
- Level and Quality of Faculty and Adequacy to Achieve Mission and Goals
 - Number of Personnel, Faculty/Student Ratio, and Workload
 - Productivity of Personnel
 - Student Focus
- Level and Quality of Infrastructure
- Level and Quality of Organizational Support

Productivity:

- Level and Quality of Students – Undergraduate and Graduate
- Viability of the Scholarly Community

Outcomes:

- Professional Viability of Graduates – Undergraduate and Graduate
- Satisfaction of Students – Undergraduate and Graduate
- Rankings

Inputs

Fit of the Mission

Design and Human Environment has developed a mission that aligns well with the mission and goals of the College of Health and Human Services and the University. The Department practices their mission with attention to teaching, scholarship and service with the purpose of improving the lives of people and their designed environments. DHE approaches their curriculum and scholarship interests

with a solid understanding of their multi-disciplinary approach and aligns their programs with strategic initiatives held by the College and University.

Recommendations:

As DHE transitions to a new home, the mission will need to be revisited to make sure it meets the mission of the newly associated College and the strategic direction of DHE. The Review Committee suggests that a strategic plan be put in place that outlines the path to accomplish the new direction for the School of Design and Human Environment.

Quality of Students and Admissions Selectivity**Undergraduate Program:****Evaluation:**

Top ranked undergraduate design programs in the United States are known for their competitive and selective admissions process, including a portfolio review prior to acceptance. Some schools, such as the Fashion Institute of Technology (FIT) in New York City also require a panel interview with faculty, along with sewing and art tests prior to acceptance. The Fashion Institute of Design and Merchandising (FIDM) in Los Angeles has an “entrance project” (even potential merchandising students partake) to which all perspective students must submit with their application. These additional admission requirements provide a more accurate picture of the applicant, their energy towards the program, and their creative potential.

By contrast, currently, DHE has traditional admissions criterion for undergraduates (3.35 GPA, average SAT 1473), The GPA is right at the national average, but slightly below the University and peer institution average. In contrast, the average SAT score is 31% higher than the national pool and 27% higher than University average. The admission rate is also higher than that of peer institutions. This presents a student who is well prepared for university studies.

But the Department does not evaluate potential undergraduate students for their design or creativity skills. By accepting students based only upon their scholastic abilities, DHE is not setting itself up to be a competitive design program in the United States. In addition, DHE admits a very high percentage of applicants to the pre-professional lower division courses- 88% - whereas schools such as the University of Cincinnati’s College of Design, Architecture, Art, and Planning (DAAP) are more selective, only admitting 52% and Otis College of Art and Design in Los Angeles admitting 50% of all applicants. As a result of high acceptance rate of undergraduate majors and without basing acceptance on creative potential, the average quality of undergraduates in the DHE program is bound to be lower than at more selective schools. This can be attributed to the quality of the cohort – “raising the bar” and pushing/competing with each other, which separates the serious from those without the drive and dedication.

The DHE professional programs in Apparel Design and Interior Design admit 72% of applicants to the upper level courses, with an average of 50 Apparel Design and 36 Interior Design students. Criteria include completion of 45 credit hours with a minimum GPA of 2.4. Students are ranked by GPA and accepted based on faculty and their availability.

In addition to selectivity based on grades, the faculty plans to introduce a portfolio review as part of the application process. The Committee strongly supports this decision; however, there is no target

date. GPA is one indicator of potential for success in the design field, and the addition of a portfolio review will allow faculty to review the design thinking and creative abilities of students as well. This should result in a stronger cohort of designers who have the holistic qualities to succeed professionally. The number of students accepted currently results in a student/faculty ratio of 76 to 1, for students to TT faculty, which exceeds a strong student to faculty ratio that is needed to advance in a studio-based curriculum. Studio environments are typically held at approximately 18-20 students based on time and space requirements. A higher standard for acceptance that will result in a reduction of student enrollment, and/or adding faculty, are suggested to improve ratios and quality of personal attention for maximum student learning.

The average matriculated GPA of DHE students is slightly higher than the University's and DHE failure/suspension rate is about third of the University's. When compared to peer institutions, the Department compares favorably in matriculation.

Recommendations:

- To be a leading undergraduate design program, DHE must change its student quality through its admissions process. It is highly recommended that potential students submit a portfolio or entrance project with their application. If help were needed in developing that requirement, external industry and academic partners would be more than happy to help facilitate expectations.
- It is also recommended that a team of DHE faculty and external advisors manage the admissions process, as the current staff in DHE is not strong enough in modern-day portfolio development and evaluation. Last, DHE should be more selective and focus only on the best student applicants, by reducing its acceptance rate.

Graduate Program:**Evaluation:**

As commented above, DHE does not evaluate potential undergraduate students for their design or creativity skills. This is also true at the graduate level where it is even more essential that incoming students have high potential for professional productivity, including scholarship and teaching. At the Graduate level, students should be able to demonstrate a passion for their area of study and communicate why they want to be in the DHE Graduate Program at OSU before being accepted.

The PhD program in DHE started in 1993, and the masters program is 7 years old, with students studying a wide range of disciplines including: Culture, History, Design, Human Behavior, Merchandising and Applied Textiles for Near Environments. This broad-based program compares positively to similar programs at peer land-grant institutions. However, the department lacks enough design focus to develop a strong point of difference and make OSU's DHE stand apart in the Design community. One might even argue that the DHE Graduate Program is sociologically based due to its focus on Design and Human Environments. If the program aspires to be a "design school," it will be necessary to build a unique and focused design program that can be marketed to potential students and the local community. For example, if we know that Portland, Oregon is the sports product design capital of the world, then how should the DHE Graduate Program focus to support this industry better?

Another point of interest when reviewing the DHE Graduate Applicant Characteristics, it was noticed that a considerable percentage (28%) of students show interest in the program and apply, but then

remove their application or refuse the offer of acceptance. It may be worth investigating why potential students discontinued their interest in the DHE program.

There is a rigorous process of review of graduate applicants for the MS and PhD that includes GPA, GRE, TOEFL, statement of professional goals, transcripts and letters of recommendation, but no portfolio review. A DHE faculty member must agree to advise the applicant to confirm admission. There has been growth over the past six years based on increased numbers that indicate the visibility and reputation of the program, though some variation in average credentials. DHE has a goal to increase average GPA and GRE scores of admitted students. The Committee supports the goal to increase the standards for acceptance and work towards increased diversity among graduate and undergraduate students. As more minority undergraduates are graduated, the graduate program can become more diverse.

Recommendations:

- To be a leading Graduate Program, DHE must focus on recruiting top graduate students to their program. It is suggested that students interested in the design area should submit a portfolio or entrance project with their application for assessment. DHE could call on external industry and academic partners to assist with the portfolio development and review process.
- DHE faculty also needs to focus tightly on research disciplines that are relevant to the newly developed strategic plan. Graduate students must be admitted who support the faculty's research areas while at the same time build the reputation of the program. Strong, focused recruitment efforts will hone the Graduate Program to be highly effective, efficient, and reputation-building.

Level of Financial Support**Undergraduate Program:**

During the 2009-2010 academic year, \$74,710 was awarded in undergraduate scholarships. In terms of internship, 47% of Apparel design, 48% of Merchandising and 25% of Interior design/Housing studies students receive paid internships to fund their tuition. For the non paid internships, about half of the students received some type of compensation whether it was in merchandise, or a discount or bonuses.

Recommendations:

- The level of financial support should be increased so that there are enough faculty to meet the program needs. Supplemental fees and outside funding are sought to help support these efforts.

Graduate Program:

The DHE department provides funding for approximately 20 graduate students per year. The vast majority of the funding comes in the form of graduate teaching assistantships (GTAs) with students receiving appointments usually ranging from 0.25- 0.45 FTE (Full Time Equivalent)/appointment. A student with sole responsibility for one course/term is typically assigned a 0.35 FTE. Research assistantships (RAs) are very limited. For example, in the current funding year (FY 2010-2011) 20 students are supported on assistantships with 19 receiving GTAs ranging from 0.25 FTE to 0.45 FTE. In addition, one student is being supported on a combined GTA/GRA with a 0.49 FTE appointment. Salaries for students are approximately \$33,056/FTE/year. In addition, some students are self-funded,

and some GTAs are hired as teaching assistants in other academic units. The decision for determining who receives funding is made by the DHE Graduate Committee in collaboration with the Department chair. Typically, MS students are provided with two years of GTA funding support, and PhD students are provided with three years of funding support.

Recommendations:

- The Review Committee recommends that the Graduate Program be maintained with current funding for assistantships and encourages faculty to pursue grant funding to increase the availability of GRAs.

Curriculum Strength**Undergraduate Program:****Evaluation:**

At the February 2011 DHE Program Review, the Department Chair described that the program was founded in Functional Design and Consumer Behavior. With further investigation, there are many “splinter disciplines” in the current program, including research of local textile fibers, thermal manikin research, historical costume, merchandising, apparel design/pattern making, gerontology, housing, interior design, consumer behavior, cross cultural studies, pattern making/tech design and apparel design. Having so many different lines makes it difficult for DHE to train students sufficiently in any one area and market itself clearly to prospective students. Further, such a diverse curriculum makes it harder to attract funding when donors do not see a clearer picture of the Department’s mission. Universities and colleges with strong Design programs have a more specific focus. Can there be a “Design School” at a land grant institution and still meet the mission of the university? How would tenured faculty be retrained to the expert status they would need to be to offer a more focused curriculum?

Recommendations:

- As DHE repositions into a different academic “home”, it must critically analyze the curriculum to best meet the new strategic plan AND the general philosophy of the college for which it is associated.
- If DHE decides to focus on “design,” careful attention to how the design industry has exponentially changed in the past 15 years will be critical. Regardless of whether DHE decides to become a “design” school or an iteration of its current program, all curriculum must evolve to meet the changing needs of society.
- If DHE aspires to be a leading School of Design and Human Environment with a focus in Functional Design and Consumer Behavior, then it must evolve from its current course offerings to one that best matches the revised mission and strategic plan. Attention should be paid to industry and society needs to make sure several key areas of study are offered or required from other programs across campus. For example, for functional design, necessary courses might include mechanical drawing, rendering, 3D, human factors/ ergonomics/ anthropometry/ anatomy, design process/ methodology, graphic design, ideation, mandatory design internships, consumer psychology and perception, textile science classes with attention to performance fabrics, business development, entrepreneurship & innovation, display/ presentation design and modern day portfolio development. Many of these courses can be found in programs across campus, so it will be important to partner with strategic inter-departmental alliances.

Graduate Program:

Evaluation:

At the February 2011 DHE Program Review, the D School at Stanford University was referenced as the benchmark program. In evaluation, the curriculums between the DHE Graduate Program and the D School will be compared:

To start, the Stanford University D School's mission is "to teach design thinking and innovation methodologies aimed at creating highly leveraged graduates who, acting as change agents, tackle the "wicked problems" of sustainability, renewable energy, technology futures, design-driven behavior change and organizational transformation." By contrast, OSU's DHE's mission is "a multi-disciplinary approach to understanding the interaction between people and the designed environment as that environment affects the social, psychological and physical well-being of individuals, families and communities," according to the self-study. These missions are quite different as the D School program focuses on critical thinking, design process, and innovation, whereas the DHE program does not currently offer any classes in critical thinking and innovation.

To further demonstrate this point, a small listing of D School Graduate Classes is presented:

- The Designer in Society
- Creative Gym: A Design Thinking Skills Studio
- Storytelling and Visual Communication Salon
- Designing for Sustainable Abundance
- Entrepreneurial Design for Extreme Affordability (2 Quarter class)
- Design Garage: A Deep Dive in Design Thinking (2 Quarter class)
- Improv and Design
- Transformative Design
- Creativity and Innovation

The following table was created to classify all DHE classes, by specialty, to show the contrast between both programs:

| | | |
|---------------------------------|--|--|
| Finance
3% (1 class) | Non-Specific
38% (18 classes) | Policy/Legal
6% (3 classes) |
| Historical
10% (5 classes) | Apparel Design & Development
6% (3 classes) | Commercial/Interior Design
6% (3 classes) |
| Merchandising
6% (3 classes) | Theory
10% (5 classes DHE Graduate) | Research
8% (4 classes) |
| Quality
3% (1 class) | Cultural/Demographic
4% (2 classes) | |

Recommendations:

- The graduate curriculum in DHE must evolve to meet the revised strategic goals and mission of DHE. An analysis of the curriculum as it aligns with the strategic plan and the philosophies of the newly aligned College will be necessary. It will be important to determine whether the majority of the graduate students will become academics or work for industry. Curriculum will need to provide adequate courses to meet these graduation/placement goals.

Level and Quality of Faculty and Adequacy to Achieve Mission and Goals

Number of Personnel, Faculty/Student Ratio, and Workload:

DHE has 15 faculty: 9 tenured/tenure track, 4 full-time instructors, 1 part-time instructor and 1 adjunct instructor. The student/faculty ratio is ~ 56 students per faculty or 87 for T/TT faculty. Merchandising courses tend to have more students per faculty, while studio classes tend to be smaller. This is appropriate given the varying pedagogy for each program.

The current DHE faculty of 15 is severely strained in their ability to advance the Department's mission and achieve their goals. The current ratio of T/TT faculty to students is 1/87. This large number coupled with demands for research, grant applications for funding, graduate student and service responsibilities and other expectations for faculty creates an unrealistic environment that prevents the faculty and students from achieving their full potential. If the current plans to add seven tenure/tenure track faculty and instructors over the next few years come to pass, that should help the department to slowly transition to a position of strength. The ratio of graduate students to faculty supports a strong graduate experience.

Quality of Faculty:

Design and Human Environment faculty are nationally and internationally recognized for the teaching and research they do. Much of the good reputation of DHE is based on student-centered learning, service to national organizations and on refereed presentations at national and international meetings. Unfortunately, not enough of these presentations move toward peer-reviewed publications. It is imperative that the faculty move the presentations to published manuscripts or nationally juried exhibitions. In addition, currently, the tenured/tenure-track faculty conducts scholarship in the widely diverse areas that fit the broad mission of the department. However, if DHE plans to become a "School of Design," it will be imperative to review the mission to see if it meets the strategic goals necessary for a school of design and more strategically focus the research. The faculty's commendable strong commitment to student centered learning comes at a detriment to research productivity.

Productivity of Personnel:

In addition to insufficient faculty, the productivity of the current faculty over the past several years has been less than expected with a few notable exceptions. Scholarship appears uneven between faculty and within individual faculty records. The current tenured faculty has the scholarly ability and creative abilities to contribute to the broader academic discourse in their disciplines with the support of additional faculty members to share responsibilities for teaching, mentoring graduate students, and essential department work. The faculty has a strong record of international scholarship, bringing international visibility to the department. However, there is a weak record of recent journal publications which could be improved by turning a good record of presentations into publications. Grant writing has been an area of development for this faculty, and efforts should continue to increase the quality and quantity of grant applications.

Student Focus:

Two particular strengths were observed. The faculty is very student focused despite the low faculty/student ratio, and there is a strong sense of community in the department.

As the only Ph.D. program west of the Rockies with a focus on Design and Human Environment, the Review Committee encourages the faculty to develop a stronger regional perspective and presence. With the proposed School of Design and Human Environment, the diversity of faculty backgrounds, experience and perspective needs to be expanded to build a stronger core focus on functional design and consumer behavior.

Recommendations:

- New faculty hires should be focused on the needs from a revised department curriculum. Faculty should conduct research in areas that enhance the reputation of a top Graduate Program. It is recommended that creative scholarship be embraced for promotion and tenure purposes.

Level and Quality of Infrastructure

The infrastructure will be described and then evaluated according to access, equipment, space, and general impressions.

Description of Infrastructure:

The Department resides in Milam Hall occupying approximately 30% of the building space spread out on several floors. Space occupied by the Department includes various classrooms, faculty office space, graduate student office space, undergraduate advising office space, two apparel design studios, a computer aided design laboratory, an interiors studio with associated resource rooms, textile laboratories including a chemical laboratory and a textile testing facility, and space holding the historic and cultural textile apparel collection.

One apparel design studio houses a variety of sewing equipment including sewing machines, pressing equipment and commercial manikins. Major equipment for industry pattern making, pattern grading and production sewing with industrial sewing machines is housed in another apparel design studio. The computer aided design laboratory utilizes basic AutoCAD software as well as specialized software programs for students to simulate apparel design and production functions. Design functions include creating garment designs and textile designs and producing garment technical drawings. The Computer Aided Design and Drafting (CADD) lab also provides studio courses in both Housing and Interiors design work.

The interiors studio contains drafting facilities for 20 students, and an adjacent interiors resource room contains samples of building and other interiors materials, product and pricing literature, kitchen, bath, and lighting catalogues and specifications, and lighting demonstration equipment. The studios have good natural north and/or west light.

The textile laboratories include a chemical laboratory, as well as a temperature and humidity controlled conditioning room. Combined, the laboratories are equipped with instruments and supplies necessary for the chemical and physical testing of fibers, yarns, and fabrics. These laboratories are used not only for student instruction, but also for faculty research, and for textile testing services for businesses within the industry. The laboratories are equipped to test thermal properties, appearance retention, abrasion resistance, textile strength, colorfastness, color evaluation, fiber identification and various other miscellaneous evaluations. A recent significant addition to these laboratory facilities is the thermal manikin "Newton." The thermal manikin consists of a carbon-epoxy shell with internal

heater elements, temperature sensors, and an integrated fluid supply system to simulate metabolic heat and perspiration levels. The manikin enables testing a garment's insulating capability when exposed to various environmental conditions while the manikin either "walks" or remains stationary.

The historic and cultural textile apparel collection includes approximately 2,000 Euro-American and ethnic apparel pieces and other textile products. The artifacts range in date from an ancient Egyptian textile fragment, c. 1560 BCE to 1980s Euro-American dress and include artifacts from a variety of countries including China, India, Mexico, and Italy. Currently the collection is housed in two spaces in Milam Hall, with a small display case in the hallway.

Graduate students share offices, which is typical at OSU. The offices that were seen appeared to be adequate to their needs for their research and their teaching demands.

Conference room space on the third floor is adequate in size, with natural light.

Evaluation of Infrastructure:

A number of concerns were raised about the infrastructure in DHE, including student access, equipment to provide adequate training for current professional marketplace needs, and space.

Access: Students expressed concerns that the access to the computer-aided design laboratory is limited and in general, there is very little access to department-supported computers and those that are available are often outdated. Additionally, concerns were raised about limited access to the textile apparel collection, suboptimal storage facilities for the collection, and the fact that the collection is not properly cataloged and annotated.

Outdated Equipment: General concern was raised about the textile laboratories. Equipment in both the chemical laboratory and textile-testing laboratory, while functional, is very outdated.

Questions were raised regarding the relevance of student training on this equipment compared to what they would encounter in the "real world." The quality and number of commercial sewing machines in the apparel design studio appeared limited, and in general, studio space and capacity, while currently adequate, is likely soon to present a limiting factor to program growth. The addition of the high-tech thermal manikin "Newton" while an outstanding resource, has only limited utility due to the lack of a properly-outfitted controlled environment chamber.

Space: The historic textile collection needs more space for proper storage and especially for display for teaching purposes.

General Impressions: Considering that DHE promotes itself on interior design, their third floor conference room could and should be a showplace of their design skills.

Recommendations for Infrastructure:

- The Department needs to raise funds to enhance technology. From computers to laboratory to studio equipment, it is important to provide up-to-date technology for both student learning environments and research purposes.

Level and Quality of Organizational Support

The Department has a Graduate Program coordinator, Dr. Carmen Steggell, who receives a one class reduction to serve in this position. The Department devotes a significant percentage of E&G funds to graduate student support in the form of GTAs. This may change with the addition of new faculty. This level of support is commendable and reflects the overall supportive atmosphere of the program that was mentioned by several students.

In contrast, the faculty and students report that there is no funding to support faculty or student travel to conferences and no funding for external speakers. This affects the viability of the scholarly community.

In addition, the students and the Review Committee noted that the equipment available for student training does not meet current industry standards. The graduate students in particular were vocal about their need for working, up-to-date computers in the graduate student offices.

Recommendations:

- The Department also needs to strongly consider budgeting dollars for computer and equipment upgrades, bringing in external speakers a few times a year (which may not cost much given the concentration of textile industry in Portland), and providing faculty travel funds to defray travel expenses for conferences. These funds may need to come at the expense of a GTA. However, the department should consider submitting for University RERF funds for equipment or appealing to donors. Faculty must also become active in grant writing to help support equipment and travel funds.

Productivity:

Level and Quality of Students

Undergraduate Program:

Evaluation:

The current DHE Undergraduate Program provides a very basic understanding of the apparel and interior design industries. Unfortunately, the program is in dire need of updating so there is a sharper focus for students to become experts in specific areas, as opposed to generalists. For example, students coming from the DHE program often do not have adequate skills with Microsoft Office Suite (Word, Excel, etc) or design skills to compete with students from other universities for entry-level positions.

Further, the Design portfolio is the #1 point of difference between DHE students and students from other Design universities. From the samples displayed during the team's visit, DHE student portfolios are often presented poorly (lack of storytelling), with old-fashioned techniques (little computer work, rendering), missing information (seam lines, stitching and technical information) and no examples of ideation/sketching.

Many new graduates from DHE are hired into industry temp jobs for 1-2 years so they can learn the skills they did not get in the Undergraduate Program to become competitive in industry.

Recommendations:

- Per the discussion in the curriculum section, the Undergraduate Program needs to be re-developed so students can focus on a specific subject matter and learn up-to-date skills that will allow them to be more competitive in the job market upon graduation. Careful attention must be made to hire the right product Design Faculty who understand the Design industry and its modern-day requirements to succeed.

Graduate Program:**Evaluation:**

Graduate student performance is hard to measure, as there was little record presented to show what graduate students have accomplished since graduation (except “current placement”). However, what is known based on graduate student interviews is that there is a lack of training and experience in research grant writing, presentation and publishing. Graduate students seek professional development workshops and/or courses to prepare them for professional presentations, academic manuscript writing, vita preparation, and interviewing to name a few. No grant writing courses are currently offered for DHE students. This lack of opportunity means that graduates of the DHE Graduate Program may not be adequately prepared to compete for teaching and research positions at other research institutions where publication and presentation experiences are preferred; hence, DHE graduate students may struggle to succeed.

Many DHE graduate students aspire to be academics and often graduate degrees are not valued in the design industry. However, for those DHE graduate students who do aspire to enter industry upon graduation, there is a disconnect between thesis project subject matter and how the research is relevant to the modern-day and local industry needs. This disconnect makes it difficult for graduates to market themselves for industry jobs, since they would have nothing in common with the companies they are trying to work with. Ideally, a graduate student should be able to obtain a mid management position upon graduation, based upon their focus and expertise in a subject matter.

Recommendations:

- A required graduate seminar needs to be developed that would prepare graduate students on proper format for academic presentations and how to write papers for publication. The seminar series could also be in conjunction with outside industry/research speakers, so students could interface and network with professionals. Graduate students should be strongly encouraged to submit work for publication and to presentations at national/international conferences such as International Conferences related to their area of expertise such as International Textile and Apparel Association; Costume Society; or Surface Design Association.
- DHE should consider as a goal that their graduate students and research be increasingly funded by local industry. To do that the Graduate Program focus must change to reflect what is really going on in the local industry. Portland, Oregon is known as the Sports Design Product capital of the world, and companies continuously relocate their headquarters to Portland so they can acquire the best talent and create the most innovative products.
- One reviewer advised that DHE immediately re-focus key research so it is relevant to apparel/interior end uses. For example, if textile sustainability is important in the sports apparel industry – the research could be re-focused and better aligned, i.e., find a new recyclable spandex. DHE has to run its program like a business now, in order to be successful

and survive in a time when universities are closing down departments that do not generate revenue.

Viability of the Scholarly Community

As noted under “Quality of Organizational support,” the Department does not have a seminar speaker series, does not appear to have a history of bringing industry speakers to campus, and does not support conference travel for students or faculty. Further, the productivity of the faculty, detailed above, is mixed. Students seem to be receiving mixed messages about the importance of publishing. Access to the historical collection appears to be hampered by lack of staff to monitor and maintain the collection.

However, faculty noted that they pay out of pocket to attend conferences and stay current, which is commendable. Faculty also help students in whatever way possible to defray travel expenses for conference attendance and for fashion and industry tours. Once again, this speaks to the support, encouragement and attention from faculty that the graduate students greatly value as strength of this program. The faculty conveys a sense of passion for the discipline, and there is camaraderie among the students. Further, the Department has interdisciplinary collaborations across campus with the Institute on Aging and Women’s Studies. Thus, the morale of the Department and the students seems good.

On campus, the students have started a chapter of the American Association of Textile Chemists and Colorists.

Recommendations:

- The Department should start a seminar program with external speakers. Utilize local (i.e. Portland) industry and/or the advisory board as a source of speakers or revenue to support speakers. Be clearer with graduate students regarding the importance of publishing, grant writing, and contracts with industry.

Outcomes

Professional Viability of Graduates

Positions: Data from the 2010 BS and MS/PhD alumni survey indicate that 90% of the respondents were employed in retail or managerial positions, with 81% in positions that related to their degree. (Missing is the response rate for the full survey.) This indicates strong viability of graduates from DHE.

Internships: Internship is not required in the program, but of students who participate in internship, 73% were offered permanent positions. According to the DHE Self-Study, responses from employers who provided undergraduate and graduate internship opportunities were generally positive.

The Apparel Design, Merchandising Management and Marketing, and the Interior Design programs could improve student academic experience, primarily related to technical experience, specific to their discipline and including experience with current software, CAD, and industrial equipment. Each program must develop a strategic plan to address these areas for improvement. Employers will be

more supportive of the DHE program and its students in terms of hiring and funding if they see evidence that their input is valued and has led to change. Undergraduate students indicated that they felt unprepared for some internships because they were lacking in technical and CAD experience. Students also requested a broader context to many of the merchandising courses which tend to focus more narrowly on apparel. There is also a need for more management content in the merchandising curriculum.

Plans for the Interior Design program to become CIDA accredited should be strongly supported. Additional T/TT faculty will be essential to achieve this goal. Future accreditation by NASAD will require a similar level of investment. Professional accreditation is a good way to strengthen the professional viability of the graduates. Financial investment in expanding and updating the DHE infrastructure and equipment is essential to educate students to be competitive.

The viability of students with a graduate degree is very good for both M.S. and Ph.D. with the majority finding positions in academia or industry, or pursuing an advanced degree. Positions are across the country as well as international

Satisfaction of Students

Undergraduate Program:

Areas in which students expressed satisfaction:

Students expressed satisfaction with graduating from the program with portfolios they view as well-developed. They believe that the programs provide a good understanding of issues related to their field. They particularly liked how study abroad options are well organized and widely available. According to poll of students in 2010, students seem to think academics, advising, library resources, and policies are adequate or better. Alumni survey respondents rated their university experience 3.59/5.0.

Areas in which students expressed concern:

Some of the specific areas of complaints from students included lack of industry specific training, too much focus on apparel, lack of industry experience in faculty, and labs, technology, and equipment that is below industry standards. Students expressed concern about not being career ready coming out of the programs. Specifically they lack specification training and vendor relations background.

Students in the focus group expressed their perception that general classes for all majors have a dominant apparel emphasis, except for History, which is more balanced. This perception of an apparel focus may be because two-thirds of the DHE students are enrolled in Merchandising Management and Apparel (see Self Study p. 13 and 35-36) compared to one-third majoring in Interior Design and Housing. Merchandising Management (Apparel Emphasis) graduates the most undergraduates per year, according to the chair of the department (email). Marketing/ merchandising classes are generally larger classes than studio based classes. Students said that including the merchandising of home furnishings products would support the interior design program and interests. The Review Committee recognizes that interior design accreditation requirements leave little room for electives and this impacts whether ID students have place in their plan of study for merchandising course work.

Students in the focus group expressed frustration that computer labs and software programs are behind advances in the industry. The DHE computer lab in Milam 218 which is funded through TRF grants has the following software programs available to students: Photoshop, Illustrator, AutoCAD, Revit, Google SketchUp, InDesign, Optitex, Retail Pro, and Sourcing Simulator. However, students say they can only get access during class time and they would like more access to the labs outside of class hours.. When they want to do homework after class, they need access to these specific software programs, and the lab they use didn't have that. The students seemed to be referring to a specific lab they used after class, though the specific lab location was not mentioned or seen. Students also said they want more training on how to use software common to their field, such as CAD. They said they have resorted to teaching each other CAD. Currently the students are taught hand-drafting, which students perceive is no longer practiced in industry. Currently computer skills are only taught freshman in two undergraduate courses focused on basic computer training -- DHE 121 Computer Design for Apparel and DHE 182 Computer Assisted Design and Drafting -- and again in their senior year, which means that skills may grow rusty in the interim. Students suggested integrating computer technology into the entire curriculum. According to the Department Chair other software programs are taught/integrated throughout the curriculum, though this focus group expressed a desire for more explicit computer instruction.

Students were overall satisfied with the internship program, but cited the Merchandizing Management program needs more internship options besides retail selling. They would like to apply more of what they're learning in areas such as buying or forecasting.

Other comments included having difficulty staying on the Departmental listserv for receiving departmental e-mails and a lack of writing emphasis, especially style related writing. Finally, faculty were viewed as being too new and lacking industry experience.

Recommendations:

- To meet the needs of Undergraduates, a stronger emphasis should be placed on technology across the curriculum. This includes both hardware updates and curriculum that teaches important software functions for both Interior Design and apparel-related applications. For faculty to gain industry experience, it is suggested that faculty development time is provided for faculty internships.

Graduate Program**Areas in which students expressed satisfaction:**

Graduate students appear to come to the program based on its reputation for being highly supportive. Students mentioned that they were recruited by specific faculty and, with the rare exception, were very satisfied with the program and the mentoring in particular. Student success after graduation appears to be good in terms of securing academic positions at good institutions.

Areas in which students expressed concern:

A few areas in which students would like to see improvement are in access to up-to-date computers, better access to the computer labs, better access to design software, and more access to the historical collection.

The Graduate School exit survey data were not included in the self-study, which is a major means of assessing graduate satisfaction. During the day of the review, these data were made available in a single hard copy.

Recommendations:

- First, the Department needs to look at the Graduate School's exit survey data and provide their own analysis.
- Second, although it is wonderful that the graduate students in the program feel supported and well mentored, there is concern that the students are perhaps a bit too satisfied. Are they being pushed outside of their comfort zones in terms of thinking about design, being creative with materials, or pursuing industry and grant funding? Students that are pushed beyond their comfort zone often rise to the occasion and are able to produce good results.

Rankings

There is no national or international ranking system for programs of textile/apparel/design. However, DHE is well-recognized as the only program west of the Rockies that offers a Ph.D. For Interior Design, the only well-recognized program for ranking is *DesignIntelligence*. However, without Council of Interior Design Accreditation (CIDA), it is doubtful that the Interior Design program would be ranked by *DesignIntelligence*. For purposes of comparison, peer institutions would need to be established so that the program evolves to become a nationally recognized, competitive program that is keenly focused on what it means to be a well-respected School of Design and Human Environment. Comparison to other state universities such as Minnesota State and Colorado State is appropriate because DHE must also meet the University's land-grant mission of serving Oregon's population.

MEMORANDUM OF UNDERSTANDING

College of Business And Graduate School OREGON STATE UNIVERSITY

This memorandum of understanding (MOU) summarizes agreements between the College of Business and the Graduate School to transfer **all** responsibilities for graduate Business Administration programs from the Graduate School to the College of Business. It will be approved by the Provost and Graduate Council.

Responsibilities of the College of Business: The College of Business will continue to deliver graduate business education and implement all relevant Graduate Council policies. The College of Business will assume full responsibility for the Masters of Business Administration at Oregon State University by January 1, 2011. Transition will begin July 1, 2010. -

Responsibilities of the Graduate Council: All curriculum or relevant policy changes in the graduate business programs will be approved by the Graduate Council. The Graduate Council will review the Business Graduate Program procedures in the first half of 2013 to ensure compliance with listed policies and/or new policies approved by the Graduate Council. The metrics for this assessment will be decided in the Fall of 2010 by the Graduate Council. The results of the 2013 review will be used to ascertain the continuation of the College of Business oversight of all responsibilities and the extent of reliance to be placed on the College of Business AACSB maintenance of accreditation review which occurs every five years.

Responsibilities of the Graduate School: The Graduate School will provide advice on all aspects of the transition. To accomplish this, regular meetings will be scheduled between appropriate staff in the College of Business and the Graduate School.

The Graduate School will administer the Graduate Faculty database for faculty in the College of Business who serve on committees of MAIS students and as advisors on business administration minors.

Loveland summary of history of TCE Graduate Program Review.

1. In June 2009, a review of the Teacher and Counselor Education (TCE) graduate program was carried out.
2. In Fall 2009, the program review was presented to the Graduate Council and accepted.
3. In Fall 2009, a meeting of the Graduate School Dean, Dean Stern, Sue-Ann Bottoms (TCE) and W. Loveland (representing the review team) was held with the Provost. The graduate program review was discussed. The Provost asked "Where is the Action Plan? The group replied "Whoops" and vowed to provide the action plan ASAP.
4. In Fall, 2010, the TCE action plan to address the review suggestions and comments was delivered to the Graduate School.

In the original graduate program review, the recommendation for TCE was to "Reduce or re-structure" the program. The central criticisms of the program were: (a) insufficient number of tenure track faculty for the size of the program (b) exceptional burden on the tenure track faculty that leads to a reduction in scholarly activity of the faculty and unusual tension or stress amongst the faculty (c) inappropriate use of fixed term faculty (65 fixed term instructors were being employed at < 0.5 FTE, thus not allowing benefits for these employees) (d) need for better student tracking and (e) lack of student financial support.

In the action plan, it was stated that the number of tenure track faculty was being increased from 7 to 9 to serve the needs of about 100 graduate students (with the number of such students staying approximately constant although two sub-programs were being eliminated/suspended). The use of fixed term instructors was defended as being the norm for the field in that there is a preference for using practitioners to teach single one term courses. The lack of student support was attributed to the strong component of distance or part-time students in the program who are not eligible for financial aid.

Concerns remain that the suggestions of the review team to have Ecampus support full time advisor(s) as they do for other programs were not implemented, nor were suggestions to combine some of the fixed term appointments to create tenure track appointments and to simply reduce the total number of students in the program to improve sustainability.

10/14/2010 Graduate Council

Revision of the "Guidelines for the Review of Graduate Programs"

At a meeting with the Provost on Academic Program Reviews, Leslie Burns asked why does the Graduate Council request the specific data that it does in the "Guidelines for the Review of Graduate Programs"? The consensus at the meeting was that this is a reasonable question and that programs should be able to understand why specific data is being requested. Below is a list of questions that are derived from the self study guide.

Assignment. Over the next two weeks could you please review the list and determine questions are important in evaluating a graduate program? And what questions are missing from the list? This will be discussed in two weeks when the Council reviews the self study guide for graduate program reviews.

Introduction

- History of the program.
- Vision, mission, and goals of your program.
- Issues facing the program.
- Programs goals for the review.
- What is your graduate student enrollment?

Inputs

- What is the quality of your incoming students? Provide GPA, GRE, TOEFL scores.
- Admissions selectivity.
- Describe the demographics of your students (minorities, in state, out of state, international, master's degree candidates, Ph.D. candidates) and what your demographic goals are.
- How much financial support do you provide students?
- Describe your curriculum.
- What are your class sizes?
- How many stand alone graduate courses do you offer?
- What are the graduate level learning outcomes of the courses?
- Who are your graduate faculty and how have they contributed to the graduate degree program in the past 10 years?
- How is your program administered?
- What support staff do you have for graduate students?
- What is your process for evaluating and making improvements in your graduate degree?
- Describe facilities include office space, library collections, equipment.
- Financial resources available to the program.

Productivity

- What are your students' times to degree?
- What is the graduation and attrition rates?
- Faculty productivity.
- How many graduate advisees does each member of your graduate faculty have?
- How many stand alone graduate courses do you offer?

Outcomes

- What do students do after graduating from your program?
- Are the students satisfied with the program?
- How does the program rank?
- What are your goals for the next ten years?
- What are your perceived strengths, weaknesses, and needs?

GRADUATE COUNCIL

October 7, 2010

Minutes

Grad Council Members Present: Carolyn Aldwin (HHS), James Coakley (Business), Theresa Filtz (Pharmacy), Michael Kent (Vet Med), Denise Lach (CLA), Murray Levine (COAS), Walt Loveland, Chair (SCI), Jo Tynon (Forestry), Jessica White (Education) and Tom Wolpert (AG SCI).

Grad Council Members Absent: Vinod Narayanan (ENGR)

Ex-officio Members Present: Martin Fisk, Bruce Rettig, Leah Minc (Graduate Admissions Committee)

Support Staff Present: Nagwa Naguib

Guests: Brent Steel, Director, Master of Public Policy;
Joe Beatty, Co-Chair, Zoology;
Gita Ramaswamy, Director, University Assessment

1. Introductions

Walt Loveland asked attendees to introduce themselves.

2. Approval of Minutes – June 3rd, 2010

June 3rd, 2010 minutes approved with no corrections.

Martin Fisk commented on the minutes, #3, page 3, regarding a fix to the Banner system to properly identify who gets credit for advising. It seems that the capability for this fix is present, but that this would require substantial time and effort to input and check the data that is entered into Banner. Carolyn Aldwin responded that she used a BANNER feature when she was at the University of California and that the adjustment is not complex or difficult to implement. This issue will be reevaluated.

3. Summer Actions

Loveland reported that the Graduate Council (GC) participated in a large number of reviews during the summer. He praised the GC members for the work they have done. The Council's work on reviewing the Category II proposals has brought praise from the university and he wanted to let the Council know that their efforts on this and other issues has been appreciated.

He informed the Council that Provost Randhawa was not pleased with the decision by the Entomology Program to not provide a self study for its Program Review. He directed the Graduate School to suspend admitting students to the program for now, until further notice.

4. Agenda for Year

Loveland presented his list of possible GC agenda items for the year. We have thirteen Category I proposals in the pipeline. More are being suggested. He then informed the Council that he had received an email from Dan Edge indicating that both President Ray and Provost Randhawa were in favor of the Category I proposal renaming Fisheries & Wildlife Department to Fisheries, Wildlife and Conservation Biology Department and asking the Council what he needed to do to respond to its request for changes. Loveland replied to Edge that the Council would be happy to review his Cat I proposal but the re-submitted proposal should address the issues raised by the previous review.

5. Request for postponement of Public Policy Graduate Program Review

The Council then started a discussion regarding the requests for postponement of graduate program reviews, and discussed how such requests should be handled. Except for programs that are reviewed by external accrediting bodies, the only assessment of continuing program quality is the graduate program review. Loveland reported that Leslie Burns, President of the Faculty Senate, would like to see a revision of the guidelines to make sure that the required information is being used in the program review. Fisk indicated that the program review guidelines are being revised and will be presented to the Graduate Council soon for their review.

Fisk reminded the Council that the programs start getting reminders from the Graduate School five years in advance of their upcoming review year. Loveland pointed out that, although the program review process focuses on past performance, it provides key information for making forward looking decisions about reorganization and other changes that are needed. Ideally, much of the information should be provided by the Office of Institutional Research to reduce the record keeping and analysis needed by academic programs. Unfortunately, the Office of Institutional Research has had a hard time assembling needed data in a timely manner. A Director of Institutional Research will be hired soon. Interview candidates are most promising and a new hire should go a long way toward resolving this issue.

Nagwa Naguib will send a list of the site visit dates of the upcoming program reviews to the Graduate Council.

Brent Steel, Director, Master of Public Policy Program (MPP), was introduced to the Council. He asked the Council to approve a postponement of the MPP Program Review during the ninth year of its existence (first degree awarded was in 2003) as opposed to the eighth year. The Program is applying for membership to the National Association of Schools of Public Affairs and Administration (NASPAA), a year after which they can apply with NASPAA for accreditation. He then asked for some leeway of one year for the above to be accomplished. He is waiting to hear back from NASPAA regarding their application for membership, and is hoping to know by October 15th. Although informal contacts suggest that the MPP Program exceeds the Association's standards, a full accreditation visit will be required. He would

prefer holding the graduate program review the same year as the accreditation visit.

6. Request of postponement of Zoology Graduate Program Review

Joe Beatty, Executive Associate Chair, Zoology Department was introduced to the Council. He presented the Department's request for postponing the Zoology Graduate Program Review from Winter 2011 to Spring 2011. He indicated that this request is due to the fact that the department is currently involved in three faculty searches, two P&T cases, in addition to the reorganization in the Life Sciences. All these activities require a large amount of committee work.

7. Discussion of 5 and 6 above

Theresa Filtz wondered why a postponement of a program review within the same academic year, should really matter to the Graduate Council. Couldn't the Graduate School make the decision instead? A discussion regarding the criteria and principles for postponement followed and resulted in the following:

Principles for allowing postponement of Graduate Program Reviews:

1. When synchronizing within plus/minus one year with either professional reviews or accrediting body reviews; when and if requested.
2. When eliminating the program.
3. When reorganizing and a Category I proposal will be used to change the program. In this case a one year postponement will be approved and the Cat I must be submitted within that year. . If the Cat I is not submitted, the review will take place a year from the originally scheduled date.

It was also decided that the 10 year review cycle starts when the first student is enrolled in the program

The Graduate Council approved postponement of both the Zoology Graduate Program for a term (Spring 2011) and the Master of Public Policy Graduate Program for one year (2011-12).

8. Accreditation

Loveland indicated that he is the Council's representative on the Accreditation Committee. OSU is the first PAC-10 university to undergo this review by the NWCCU group, after the standards have been changed. We will be evaluated in three areas: undergraduate education, graduate education and research, and outreach and engagement. These areas are called the "Core Themes" of the University. We will be judged by certain "institutional indicators." A request has been made to provide data for these indicators and assign a "grade" for each indicator/objective/Core Theme.

The timeline for this review is:

- Data will be given to the groups by October 15th;
- Preliminary Review by November 30th;

- Report to the Accreditation Committee by December 15th;
- Accreditation Report to be submitted to the NWCCU by end of February 2011.

He then asked Council members their opinion on how to approach this process. Should the Council be divided in two groups, each group would review half of the objectives; or should the whole Council review all the objectives? We will need to define the expectations, and answer Objectives 2.1 & 2.2. The document will be short.

After a short discussion, the Council decided to dedicate meetings at the end of October or early November to work on the Accreditation project, as a group.

9. Assessment:

Gita Ramaswamy, Director of Assessment, presented the Graduate Student Learning Outcomes (GSLO) Based Assessment which she was charged by the Provost to lead. She, with a colleague, led this project at Purdue University.

She indicated that Assessment is the accreditation agency requirement. Assessment needs to be kept simple and meaningful. There is a tie between outcomes assessment and quality of graduate education if we focus on graduate students' success. The most important reasons for dropping out of PhD programs are 1) Lack of mentoring; and 2) Personal reasons (family and cost). The Council of Graduate Schools has conducted major studies of problems with doctoral degree completion. Ramaswamy will forward information about the CGS studies to Council members.

Meeting adjourned 1:00 pm.

**OREGON STATE UNIVERSITY GRADUATE PROGRAM REVIEW
MASTERS OF BUSINESS ADMINISTRATION PROGRAM
COLLEGE OF BUSINESS**

Review Panel Report

June 2010

Panel Members:

Don Wardell, Director Fulltime MBA Program, University of Utah—Peer Reviewer and Panel Chair
Bill Humphreys, President, Citizen Bank—Potential Employer
Walt Loveland, OSU Faculty, Chemistry—Internal Reviewer, Graduate Council
Rick Colwell, OSU Faculty, COAS—Internal Reviewer, Graduate Council

Overall Recommendation:

The review panel generally supports the intention of the College of Business (COB) to expand the Masters of Business Administration (MBA) program. We do believe, however, that the growth needs to be carefully thought out and managed. Specific recommendations related to the expansion, together with a few other recommendations resulting from the panel's site visit, are included in the subsequent section.

Summary of Findings and Recommendations:

In general, the review panel was impressed with the quality of the COB's self study and appreciated the opportunity to learn more about the MBA program through the site visit. We found the college faculty, staff and students to be candid and responsive.

The MBA program focuses on entrepreneurship and innovation. The curriculum consists of 12 core courses, but is really defined by the integrated business project (IBP), which all constituents agreed was the core strength of the program. The IBP allows students to integrate their course material by creating a business plan for the commercialization of a technology developed by faculty members at Oregon State and business partners. The program mainly attracts students from the Willamette Valley area as well as several international students. Students appear to select the program because of its focus on entrepreneurship, its location, the ability to complete the program in one year, and the relatively low tuition.

The current MBA program is small compared to many competing programs across the country. The COB administration acknowledges the small size and desires to increase enrollment substantially in a short period of time. (There are currently approximately 90 students and the goal is to increase the size to approximately 250 students within 5 years. The leadership team suggested that doing so would make the ratio of graduate to undergraduate students in the COB more comparable to the ratio in the University as a whole. Even with the increase, the percentage would

be less than the current 15% value of the ratio of graduate students to total students at OSU. With 250 graduate students and 2500 undergraduate students, the COB would be at only 9%.)

The program faces some large challenges. The COB currently does not have any in-house career services staff. Instead, they rely on the OSU's central career services to meet the needs of students. In contrast, top MBA programs have multiple in-house career services staff members who help to bring recruiters to campus and to prepare students to market themselves and interview effectively. On the other end of the process, the COB lacks scholarship funds to help attract highly qualified students to the program. Finally, the panel is concerned that the compensation package for faculty makes it difficult to attract and retain faculty. Salary compression was identified as a very large problem, with assistant professor salaries being similar to those of associate and full professors (professor/assistant) = 1.11.

Based on the strengths and challenges that we observed, together with the COB's own plans for the future, we identified following recommendations. Most are related to the growth of the program, which is key to increasing revenue to support other initiatives. While generally supportive of growth plans, we believe that there are challenges associated with that growth that need to be considered carefully.

1. **Be careful of a “If we build it they will come” assumption.** The panel was concerned that growing the program might not really be the right thing to do if the COB has to “buy” that growth with scholarships. The IBP projects allow students to think carefully about whether or not there is a market for a particular technology. We encourage the COB to do the same to determine if the MBA product has a strong enough market demand to generate the anticipated growth.
2. **Increase revenue and then add capacity.** Related to the first recommendation, the panel believes that the order in which growth is achieved is important. We inferred from discussions that the current plan is to add new faculty and then to bring in the additional students. Securing funds from central administration for a large number of faculty may be difficult given the current economic climate. If the COB can accommodate demand with the current number of faculty, they should be able to increase revenue that can be used to fund the additional faculty lines.
 - a. Increase tuition to raise revenue. Currently the cost of the program is very low relative to many other programs. Often it is the case that a higher tuition is seen as a signal of quality and can actually increase demand.
 - b. Increase class sizes. The current class cap of 35 is very low compared to many MBA programs. Larger class sizes will allow for more students to move through the program with the same number of faculty. We recognize that doing so will increase grading burden for faculty, but believe that the additional resources make it worth it.

Obviously there is a danger in this strategy, i.e., increasing the number of students without a long term administrative commitment to faculty expansion could lead to an over-burdened faculty

3. **Approach the graduate council with a proposal to streamline the examination process.** Both students and faculty raised concern about the administrative “pain” associated with completing the IBP and the individual oral exam. That pain will grow significantly with the projected growth in student body. Reducing the required committee size for the IBP and removing the oral exam requirement for each student will facilitate making growth feasible.
4. **Be prepared to increase the support staff needed to accommodate the growth.**
 - a. Provide resources to help students to write well. A good portion of the growth is anticipated to come from international students through the INTO program. Students reported that the program is very writing intensive, and students whose native language is not English often face large challenges with writing well. (We recognize that domestic students also have writing problems and that international students bring other advantages, so we are not suggesting that the INTO strategy is misguided.).
 - b. Provide resources for dedicated career services. Given the difficulty of attracting recruiters to OSU, we recommend exploring the possibility of a regional solution to career services. Collaboration with other local programs may provide the scale necessary to attract recruiters.
 - c. While more development staff may not be needed, additional scholarship funds appear to be necessary to compete with local competitors like Willamette.
5. **Be thoughtful about the mix of international to domestic students.** Part of the mission of a land grant institution is to serve the local community. Many in Corvallis and more generally in Oregon feel strongly that the COB should educate the citizens of Oregon.
6. **As part of the follow-up meeting, report on their strategic retreat.** In response to some of the panel’s questions, the COB Leadership Council noted the strategic retreat that will be taking place in summer 2010. Many of the initiatives that are likely to result from the retreat will impact the growth strategy and hence will be related to recommendations resulting from the Graduate Council Review.
7. **Consider revising the mission and vision statements to focus more on the students’ success.** The current statements seem to have an internal focus, whereas a focus on the students and alumni will likely resonate better with potential applicants and the local community. We recommend reviewing Stanford’s Graduate School of Business’s statements as a benchmark.
8. **Investigate ways of communicating information to students.** Students commented that communication was primarily by e-mail, was sometimes late (provided too little notice) and came from various parties. They would appreciate a more centralized and timely method for communicating program information.
9. **The COB should play a predominant role in achieving the University’s strategic plan.** Two of the strengths of the MBA program are entrepreneurship and sustainability. The program is also striving to increase the international focus. These foci are consistent with OSU’s “three Signature Areas of Distinction: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress.” (<http://oregonstate.edu/leadership/strategicplan/>)

Detailed Findings

The following subsections of the report give more detail on what led us to the recommendations in the previous section. As suggested by the Graduate Council, this section is organized around inputs, productivity and outcomes. It begins with a brief introduction and ends with a similarly brief conclusion.

Introduction

As described in the *Guidelines for the Review of Graduate Programs*, the purpose of the review of the MBA program is to “provide an opportunity ... to reflect on the nature of their graduate instruction and develop approaches to enhancing program quality.” It “provides a mechanism for constructive change” and “an opportunity to review, to evaluate, and to plan in a deliberative and collegial setting.” The main objective of the panel was to understand the needs of the MBA program and offer constructive suggestions to the COB and OSU’s administration to improve the program.

The review process began with the COB preparing a self-study document, which the review panel used to gain initial insights about the MBA program and to formulate an initial list of questions and concerns to be explored during the site visit. Prior to the site visit, members of the review panel met on Sunday, May 23 to discuss the process and preliminary impressions of the program. The site visit occurred on Monday, May 24 and consisted of meetings with several constituents of the MBA program, in addition to a working lunch and a wrap-up meeting for the panel to discuss findings and recommendations. The process concluded with the preparation of this report.

Meetings were held with the COB Leadership Council, the Graduate Program Committee, graduate student representatives, MBA faculty representatives, MBA admissions staff and a few outside staff and faculty who have been involved with the IBP. COB Leadership Council participants were Ilene Kleinsorge (Dean), Carol Brown, Jack Drexler and Jim Coakley (Associate Deans) and Malcolm Lemay, Director of Operations. COB faculty members (including those on the Graduate Program Committee) who participated included David Baldrige, Rene Reitsma, Zhaoui Wu, Tom Dowling, John Turner, Roger Graham, Eric Larson, Ping-Hung Hsieh, Don Neubaum, V.T. Raja, and John R. Becker-Blease. A total of 8 students met with the panels, but we did not record their names. The MBA admissions staff who participated (in addition to Associate Dean Coakley) were Clara Horne and Kishani Kaliupahana. The non-COB faculty and staff who met with the panel were Brian Wall (Director, OSU research sponsors), Mark Leid (Pharmacy), Vince Remcho (Chemistry) and Alex Chang (Chemical Engineering).

Inputs

This subsection follows the Graduate Council’s recommended outline. Areas to be addressed include the fit of the mission of the program, the quality of students (including admissions selectivity), the level of financial support for students, the curriculum strength, the quality of personnel to achieve the program’s mission, the level and quality of the infrastructure and the quality of organizational support.

The fit of the mission of the program and its relationship to the mission of the college and the University

The College of Business along with the College of Engineering comprises the Division of Business and Engineering. The focus of this Division is a collaborative effort centered around “innovation” and the “commercialization of research results.” The formation of the Division is in its early stages and is not expected to occur until FY2011 or later. If completed, this Division will support the OSU Strategic Plan goal of “Promoting Economic Growth.”

The ongoing University effort on Strategic Alignment and Budget Reduction is not expected to have any major impact on the College of Business. A possible 10% reduction in the COB budget for either FY11 or the following biennium would impact undergraduate education primarily although such a cut might be financed by delays in filling open positions (due to faculty retirement and/or departure)

Quality of students

One of the aims of the MBA program is to increase the number of students that apply and that are admitted. Specifically, the program would like to increase applications to 200 per year and achieve a recruitment goal of 60 additional students per year. A companion challenge to these goals will be to maintain the number of candidates of reasonably high quality. The self-study sets the standards that the program seeks in their applicants and students by expressing a desire to see the GPA of incoming students rise to 3.5 (up from the 3.3 five year average) and to achieve an increased average GMAT score of enrolled students of 600 (up from the 563 of matriculating students). The plan is to accomplish this by investigating restructuring of the scholarship program by attracting quality students and pursuing additional merit and need-based scholarship support to attract and retain high quality students. Recently, the program secured \$200,000 from the Provost’s scholarship fund for both academic merit and diversity scholarships. The MBA program is also seeking private funding to establish a Minority Graduate Fellowship to support US minority students from within Oregon and out of state.

Admissions selectivity

During the 2004-2008 academic years 64% of the students enrolled in the MBA program were from Oregon and 24% of the students were international. In this same period, 56% of the students were Caucasian. A recruiting plan has been implemented this year in order to boost the number of students that are applying to the program from outside of Oregon and particularly from western states (Self Study, Appendix 5). The plan includes a strategy for increasing the diversity of MBA candidates by traveling to career and graduate school fairs in the Pacific Northwest and by contacting prospective candidates through diversity forums such as the California Forum for Diversity. Newly established relationships with the local chapters of the National Black MBA Association and the National Society of Hispanic MBAs should improve the opportunities to recruit from minority populations. The success of this recruiting plan as it is executed should be examined in the coming years.

The current students with whom the review panel visited stated several ways by which they were attracted to the program. Many of the students had prior degrees from OSU and the students viewed this as being beneficial because it allowed a seamless start to the program. Some students acknowledged that receiving assurance of a GTA or obtaining one of the Laurels Scholarships were enticements. That the program focuses on entrepreneurial development that would complement prior degrees obtained by the student or that would permit exposure to foreign countries (e.g., Asia/China) were also cited as reasons for affiliating with the program. At least one student admitted that they identified strongly with a single faculty member. Life in Corvallis was also noted to be an important consideration in selecting the OSU MBA program, perhaps a reflection of the program's ability to draw students from the Willamette Valley.

Level of financial support of students

The COB seems to follow the “low tuition, low aid” model with respect to the MBA students. Most of the current students are in-state (Oregon) residents who pay tuition of about \$15,000/year.

Of the approximately 90 MBA students in 2009, 13 received some sort of scholarship support while 17 of these students also received assistantships. Of the 17 students receiving some assistantship support, 10 received support from campus units outside of the COB. Of the seven students with assistantships from the COB, each was employed for less than a full GTA position. With budget reduction pending at OSU, the number of students supported by assistantships should decline.

For the most part the scholarships are awards from university-based programs (e.g., Laurels Tuition Support, Oregon Sports Lottery Scholarship, COB Brown/Hertich Scholarships) as opposed to programs funded from outside the university, which are apparently less common than in other graduate disciplines. For the academic year 2010-11, the COB was not successful in its Laurels Block Grant application and no funds were allocated to the COB.

It will be difficult to recruit and retain high quality domestic students with the current level of student support, especially if, as this panel recommends, the MBA tuition is increased.

Curriculum Strength

The MBA curriculum is focused on entrepreneurship and innovation. It is also built around the IBP. Students with an undergraduate degree in something other than business are required to take a set of “foundation” courses, which are undergraduate courses in the main functional areas of business (finance, operations, accounting, marketing and management) in addition to skills classes in math and economics. After completing the foundation classes, these students join those with business undergraduate degrees in the “core” MBA courses. The core classes help to provide context for the IBP and students apply the material that they are learning in the classes to their projects. They also provide a more in-depth look at the major functional areas in business. The IBP is a hands-on learning experience over 3 quarters where students create a business plan for a

technology that has been developed at the University. As mentioned, the students apply material that they learn in their classes to their project, giving them a strong experiential education.

The external reviewer on the committee (Professor Wardell) was surprised to see that the foundations classes were undergraduate classes. While it was a concern for him individually, he recognizes that there is a wide variety of ways to provide students with a foundation for more advanced courses. In particular, the MBA curriculum was very recently reviewed by the College's accrediting body (the Association to Advance Collegiate Schools of Business, or AACSB) and was found to meet standards to be accredited. The AACSB guidelines assure a level of consistency and quality across business schools while at the same time providing flexibility for programs to differentiate themselves. Accreditation suggests that the curriculum is strong and is preparing students for careers in business.

In discussions with all constituents who participated in the program, it became apparent that the IBP defines the MBA at OSU and is considered a major strength of the program. It is an experiential program that focuses on entrepreneurship and innovation, all advertised strengths of the MBA at OSU. In general, students found the IBP to be a very useful and worthwhile opportunity. They also recognized that the coursework was very beneficial and some indicated that for them, it was more conducive to their learning than the projects.

The students also noted that the program was extremely writing intensive. While some of them complained about the quantity, it is the opinion of the committee that the writing requirements very well could be giving OSU graduates an advantage as they seek careers. In at least some committee members' experiences, most employers complain about the writing of graduates from business programs. OSU graduates are likely better writers than graduates of many other programs and hence at an advantage (assuming that they can sell their writing abilities to recruiters).

Because of the writing intensity, students expressed concerns about plans to bring more international students to the program. The faculty and admissions staff at the College also admitted that it represents a challenge. While the students noted that writing was an issue for the international students, they also acknowledged that international students bring diversity to the teams and allow students to learn from each other. Moreover, they acknowledged that in many cases native English speakers also struggle with writing. Students recommended that the COB involve the writing center more heavily in the program, perhaps acting as writing consultants for the projects.

Because of the central role of the IBP, it is worth noting a few other concerns that were raised about the projects. First, participants from different groups believe that the administration (usually termed "bureaucracy" by participants) was cumbersome and detracted from the experience. In particular, the need for a 3-person committee was seen to be excessive and a process hindrance to the project. Second, some student participants felt that not all students should be required to do the IBP. These students recommended that applicants should be evaluated before the program begins to decide

whether they should do the IBP or not. According to the student participants, the decision would be primarily based on the applicant's desire to be an entrepreneur in the future. Students not participating in the IBP could then take more courses, allowing them to specialize in a particular area of emphasis. They also wondered if a 2-year program would be more beneficial, because it would allow more specialization. There was a perception held by some students that the program is a "mile wide and an inch deep." Other suggested improvements to the IBP were a stronger emphasis on the finance component (venture capital) and the possibility of stronger involvement of alumni as mentors.

In conclusion, the curriculum easily meets the needs of the students and the faculty and should be appealing to recruiters. The IBP is a strength of the program and is valued by all constituents. Based on discussions related to the curriculum, the panel recommends the following (given at the beginning of the report but repeated here for emphasis).

- **Approach the graduate council with a proposal to streamline the examination process.** Both students and faculty raised concern about the administrative "pain" associated with completing the IBP and the individual oral exam. That pain will grow significantly with the projected growth in student body. Reducing the required committee size for the IBP and removing the oral exam requirement for each student will facilitate making growth feasible.
- **Be prepared to increase the support staff needed to accommodate the growth.**
 - Provide resources to help students to write well. A good portion of the growth is anticipated to come from international students through the INTO program. Students reported that the program is very writing intensive, and students whose native language is not English often face large challenges with writing well. (We recognize that domestic students also have writing problems and that international students bring other advantages, so we are not suggesting that the INTO strategy is misguided.).
- **Be thoughtful about the mix of international to domestic students.** Part of the mission of a land grant institution is to serve the local community. Many in Corvallis and more generally in Oregon feel strongly that the COB should educate the citizens of Oregon.

Quality of personnel and adequacy to achieve mission and goals

The COB has 35 tenured/tenure-track faculty. Not all of those faculty members participate in the MBA program, however. Within the MBA curriculum, just over half of the classes are taught by tenured/tenure-track faculty members. Professionally qualified faculty teach the remaining courses. (The self-study defines "professionally qualified.") As mentioned in the previous section, the curriculum and program were reviewed by the AACSB and the college was accredited, indicating that instructors are qualified to teach in the program. We have no reason to question the AACSB and concur that the quality of the faculty is sufficiently high to contribute to the mission and goals of the college and program.

Although the existing faculty are of high enough quality, the panel concurs with the college that the number of faculty is lacking and that additional faculty will allow the program to achieve its goals.

The IBP is a high touch project that requires many resources. While it is not a complete time sink for the faculty, growing the size of the faculty will allow the college to meet its goal in growing the student body without reducing the quality of the program.

The current faculty felt that they will be able to attract new faculty to the program for a few reasons. While the teaching load is somewhat higher than at other business schools (tenured faculty teach 6 courses per year and untenured teach 5), the majority of the faculty are able to cover their classes in two quarters, allowing up to six months for research. In addition, research faculty received funding to attend at least one conference per year. They also felt like the location of the University was a big draw. Moreover, they agreed that there is a high degree of collaboration and collegiality, making it an appealing place to work. There was general agreement that Dean Kleinsorge had created a very nice environment for faculty to work.

The panel also concluded that the admissions staff were helping to achieve the goals of the program, although their numbers were small, especially given the desire to grow the program, which will require traveling to neighboring states and reaching out to international students through OSU's INTO program. While the staff members themselves appeared to have high quality, they and others who were interviewed expressed the concern that the scholarship offerings were insufficient to allow the program to grow adequately.

The most pronounced deficiency in terms of meeting the goals of the school was the lack of a local career services presence. The college relies on central career services, who serves the undergraduate population more fully than the graduate. One member of the panel also noted that the central career services appeared to be downsizing, sharing their physical space with student grievance bodies. A career services presence is central to the mission of any MBA program because the quality of the program in most instances is evaluated and judged by employers.

The students with whom we spoke also expressed concern about career services offerings. While they felt that the COB works well with central career services, including having Tuesday evening sessions that provide some networking, there were clear deficiencies. The students specifically mentioned that they would like to see more support from the COB. They also lamented that central career services doesn't differentiate job opportunities between needs for undergraduates and MBA. In some cases, graduating students arrived at an interview arranged by central career services only to find that they were overqualified and the employer was targeting undergraduates.

Based on our discussions regarding personnel, we recommend the following (again repeated from the beginning of the report).

- **Increase revenue and then add capacity.** Related to the first recommendation, the panel believes that the order in which growth is achieved is important. We inferred from discussions that the current plan is to add new faculty and then to bring in the additional

students. Securing funds from central administration for a large number of faculty may be difficult given the current economic climate. If the COB can accommodate demand with the current number of faculty, they should be able to increase revenue that can be used to fund the additional faculty lines.

- Increase tuition to raise revenue. Currently the cost of the program is very low relative to many other programs. Often it is the case that a higher tuition is seen as a signal of quality and can actually increase demand.
- Increase class sizes. The current class cap of 35 is very low compared to many MBA programs. Larger class sizes will allow for more students to move through the program with the same number of faculty. We recognize that doing so will increase grading burden for faculty, but believe that the additional resources make it worth it.
- **Be prepared to increase the support staff needed to accommodate the growth.**
 - Provide resources for dedicated career services. Given the difficulty of attracting recruiters to OSU, we recommend exploring the possibility of a regional solution to career services. Collaboration with other local programs may provide the scale necessary to attract recruiters.
 - While more development staff may not be needed, additional scholarship funds appear to be necessary to compete with local competitors like Willamette.

Level and quality of infrastructure

The College of Business is housed in Bexell Hall, an approximately 80-year old building, which has been remarkably well maintained and renovated. The College has recently announced plans for constructing a new \$50M building which will more than double the space available for the COB. The building is to be ready for occupancy in 2014.

The College features several large computer facilities where state-of-the-art computers are made available for student use. The College supports auxiliary costs associated with printing in these facilities. While commons areas for the MBA students seem to be somewhat limited it is expected that the new building will alleviate this issue. All in all, the physical infrastructure of the MBA program is very nice and better than that of many other OSU programs.

Quality of organizational support

The COB attempts to support the efforts of its faculty by structuring their appointments to be 45% scholarship, 45% teaching and 10% service. Many of the faculty choose to teach their entire load in two quarters, allowing six months of uninterrupted time for scholarly activity. There is some support for summer salaries of some of the faculty along with support for professional travel.

Productivity

Level and quality of student performance

The data that we were provided relative to student performance were non-completion rate and IBP summaries. The college reports that, “on average 13 percent of the students who start the program do not finish due to varying reasons that include work and personal commitments, employment opportunities in other parts of the country or a mismatch between student expectations and program design.” The 13% “dropout” rate appears high and is a concern. (At the University of Utah, the number is below 5%.) We recognize that some factors are out of the COB’s control, but they can have strong influence on the “mismatch between student expectations and program design.” First, they can be careful in their advertising and admissions materials to help potential students understand the curriculum, the IBP and the time commitments. Second, they should take to heart the student recommendation mentioned in the “Curriculum strength” subsection by evaluating students before the program begins to decide whether they should do the IBP or not.

The success of the IBP is a good indicator of student performance. By all accounts the projects are very successful. They are a benefit to the researchers whose technology is being commercialized, they are a great benefit to the students’ learning and they have the potential to bring in money to the University as commercialized technologies become viable in the marketplace. While it is possible that the “clients” with whom we spoke may have represented a biased sample, our discussions with them indicated that students work hard, produce a quality report and make quality recommendations.

Level and quality of faculty performance

Professional accreditation bodies have determined that the MBA faculty meets the expected standard for faculty competence. There is, however, some concern about this performance. OSU has set goals of having its departments, programs and faculty be in the top tier of land grant institutions. In the national rankings of Business Week, the Financial Times, the Wall Street Journal, Forbes and U.S. News and World Report, the OSU MBA program is a bottom tier, un-ranked program. The COB cites the Aspen Institute for Business Education rankings of business schools that have innovative full time MBA programs that integrate social and environmental stewardship into their curriculum and scholarly research. In this survey, OSU’s MBA program ranks 87th of the top 100 programs (147 programs participated).

There is an internal metric about faculty performance where there is some confusion. It was reported by a faculty group to the review team that only about ½ of the faculty hired as assistant professors achieve promotion and tenure at OSU. In some areas, the success rate was reported to be much lower. Dean Kleinsorge reports a very different situation with 94% of assistant professors being promoted in the P&T process. The magnitude of this dichotomy seems unusual.

Scholarly productivity of the faculty seems to be low, especially if they have 20 hours/week (reported by at least one faculty member) for this activity. The publication rate of the tenure track faculty appears to be < 1 paper/year in peer-reviewed journals with some publications appearing in second or third tier journals. The review team recognizes that timelines and other factors related to publishing in top business journals are somewhat different than in other disciplines. For example, the review times for top journals in business are extraordinarily high (at least 4 months for a first review, and typically the time from 1st submission to acceptance is at least one year), which makes it difficult to publish in those outlets frequently. For the most part, however, COB faculty are publishing in lower tier journals, where it should be easier to generate higher numbers. While we did not ask explicitly, it is possible that COB faculty are first submitting at the top-tier outlets, having their papers rejected (after a long review process) and then going to the lower-tier journals.

Viability of scholarly community within which the students can interact

The nature of an MBA program is such that it is not common for students to be participating with business faculty in their own research programs. While it happens in some programs to varying degrees, it is not something that would be expected. On the other hand, the students are very engaged with faculty outside the COB through the IBP. They learn about cutting-edge research that faculty members in the sciences and engineering are conducting to such an extent that they are able to explore the possible market for the technologies. While they are not directly involved in creating the knowledge, they become intimately familiar with the research and benefit therefrom.

Professional viability of graduates

To the best of their ability, the MBA program has tracked the progress of its graduates though this is a difficult task to perform. Information is collected from former students that contact the COB and also from the OSU Foundation records. Graduates of the MBA program were surveyed in March 2010 (see Final Report – Close to the Customer Project). Of the 127 surveys sent 47 responses were received. Over 90% of the alumni that responded were employed either full-time or part-time. MBA students have found positions in a number of organizations in the Pacific Northwest as listed in the Self-Study (pg. 88).

Satisfaction of students and graduates

In general, respondents to the alumni survey noted above were favorable when asked questions related to the value of the MBA program and its contribution to their success. The strongest affirmation of the MBA program showed 80% of the respondents agreeing that the program expanded their career options and 78% of the respondents agreed that the program increased their earning potential. However, survey responses noted that OSU MBA graduates rate the value of their investment in the program below the national median score. The COB believes this low rating to be due to a lack of dedicated career services for students while they are pursuing the MBA degree. Notably absent from the survey were any questions related to the central themes of the MBA, namely the goal of instilling concepts related to innovation and entrepreneurship in the students. Respondents to the survey had the following suggestions:

- Add areas of focus to the program and provide MBA students with more support.
- Provide more professional development activities.
- Provide online opportunities for social networking.

The committee met with approximately 10 students during the review. Comments from these students that represent areas where the program might strive to improve or where the program might be sensitive to student concerns are listed as follows:

- Improve the flow of communication; information regarding presentation requirements or guest speakers seems to be slow in arriving to the students; e-mail is the main form of communication now and perhaps other means need to be considered.
- For those interested in entrepreneurship the IBP is great. However, the COB may want to assess students who want to be entrepreneurs vs. those that would prefer a traditional MBA path; the IBP is good but may be difficult to implement if one has traditional interests in business.
- Some concern was expressed regarding the English quality of incoming students, especially those arriving through the INTO program. The College should have a way of coping with this perhaps by offering more mentoring in writing.
- Flexibility is innate to entrepreneurship but the students sometimes feel locked into an assignment. Consider ways to provide the flexibility for a program that aims to encourage innovation and open thinking.
- For 2-year students, consider additional programs such as investment programs, opportunity to sit on boards, or internships.
- Include more practical learning.
- The career center on campus is the main source of help for finding jobs after their degrees. Can the COB develop something specific to COB graduates?

Rankings/ratings

The COB does not make overt attempts to be ranked in the most visible rankings (e.g., *Business Week*, *US News & World Report*). For example, one part of those rankings that is very important is the average score on the standardized GMAT entrance exam. The COB does not require all students to take the exam, including those who probably have the potential to score high. In particular, they do not require the exam of students with previous master's degrees. Many of those students have degrees from the sciences, engineering and other technology degrees that often score very well on the GMAT. We have also mentioned the lack of a career services presence within the college, which results in placement numbers being far below those that would merit a high ranking.

The one ranking that is important to the college at this point is the Beyond Grey Pinstripes survey and alternative ranking of business schools provided by the Aspen Institute. In 2009, OSU's MBA program ranked 87th in the world on that survey. In our judgment, the Aspen ranking is appropriate for the COB because its mission is to "spotlight innovative full-time MBA programs that are integrating issues of social and environmental stewardship into curricula and research."

Conclusion

The MBA program at OSU's College of Business has several strengths that it can continue to build on. The predominant strength is the Integrated Business Project, which serves the students, the faculty across campus and the community. It is entrepreneurial in nature and allows students to differentiate themselves by creating a business plan for innovative technologies and by improving their writing skills.

The program also faces many challenges, many of which are exacerbated by constrained resources. The COB hopes to expand the size of the program, which will require more resources. The panel feels that a growth strategy is an appropriate one, but will require careful planning and implementation as described in our recommendations. We encourage the leadership team to use the planned retreat to consider our recommendations carefully and to determine the best avenues for program growth that don't sacrifice quality.

- *Representing the Graduate School Council*

Forward: This document is prepared for the OSU Graduate School by the review committee in response to a review of a self-study conducted by the Department of Teacher Education regarding its graduate programs. Findings are based on the material provided and a site visit involving interviews with administration, faculty, staff, and students. This report is written in response to the stated graduate school standards and in compliance with format and procedure directives from the OSU Graduate School. Since the committee was provided with separate self study reports for the counseling and teacher education programs, the committee has responded in kind with separate sections devoted to counseling education and teacher education.

The visitation team met with Sally Francis, Graduate Dean, on Sunday evening, June 7, to review the charge to the review committee and to address any questions or concerns of the reviewers.

Monday, June 8 the following schedule was followed:

- 8:00 - 8:45 am Meet with TCE Department Chair SueAnn Bottoms, Michael Dalton and Mark Stauffer, Power Point Presentation and Overview, Ed Hall (Ed Hall 107)
- 8:45 - 9:30 am Dean, Sam Stern (Ed Hall 215A)
- 9:30 - 10:15 am [Program Administration] Meet with Program Leads - Ed Hall 107:

1. Cass Dykeman, Counseling
2. Jean Moule, Immersion
3. Nora Cohen, 2-year
4. Ken Winograd, 2-year
5. Sue Helback, EdM
6. Kathleen Cowin, MAT Cascades
7. Kathy Biles, Cascades Counseling
8. Sara Williams, Administrative Assistant

10:15 - 10:30 am Break

10:30 - 12:00 pm [Curriculum] Meet with Program Faculty - Ed Hall 107

1. Kathy Biles

2. Gene Eakin
3. Tom Guss
4. Deb Rubel
5. Kay Stephens
6. Joyce Mphande-Finn
7. Daniel Stroud
8. Kathryn Ciechanowski
9. Karen Higgins
10. Lori Blackman
11. Liz White
12. Linda Wallace
13. Jay Casbon
14. Candace Brey
15. Cass Dykeman
16. Jean Moule
17. Nora Cohen
18. Ken Winograd
19. Sue Helback
20. Kathleen Cowin

Counselor Education Emphasis

1. Overall Recommendation

Reduce and/or restructure with attention given to recommendations from the self study and the graduate school review team's recommendations

2. Summary of Findings and Recommendations

The Counselor Education program is one of the oldest and most established counselor training programs in the country, having initiated counselor education courses in 1916 and degree programs in 1929. It is nationally accredited by CACREP (The Council on Accreditation for Counseling and Related Educational Programs) and was recently reaccredited for seven years, the maximum granted by CACREP. The program is also accredited by NCATE (the National Council for Accreditation of Teacher Education).

The counseling master's programs have two areas of emphasis and students select one of the two, either community counseling or school counseling. The community counseling program will be undergoing change in the near future as CACREP is stopping accreditation of community and instead is accrediting mental health counseling programs. The faculty indicated they would be developing the mental health program offering in the future in time to be ready for the next CACREP accreditation visit. The two master's programs admit approximately 50 students per year. The admissions standard for the master's programs is low, with students who earn an undergraduate grade point average of 3.0 being admitted; if they have a lower gpa they may still be considered for admission. Graduates of the program appear to do well, for they have a "pass rate" of approximately 97% on a national standardized examination, and most obtain relevant employment and state certification or licensure.

The doctoral program in counseling admits approximately 6-10 students per year and is a part-time program, requiring students to complete two courses a quarter for two years, followed by an internship. The program is a blend of on-line and face-to-face, and it is also a CACREP accredited program. Graduates of the program appear to do well in employment, with the majority taking faculty roles in colleges and universities.

Students in both the masters and doctoral programs report satisfaction with their programs and indicate there are good relationships between faculty and students; further the students are, overall, quite satisfied with their programs, based upon follow up surveys and self report of students. However, a limited number of students participated in the follow up evaluation.

It is recommended that, based upon student outcomes (test scores, employment, satisfaction) and national accreditation (CACREP, NCATE) the programs should be continued, but there are suggested steps that faculty are encouraged to take to address specific areas of program integrity. The areas of concern and recommended steps are described below.

3. Detailed Findings

Introduction

Each of the programs reviewed at the masters and doctoral level presented mission statements and the missions as stated were in agreement with the mission statement of the college and the University. The mission seems to be relevant, appropriate, and reflects the commitment that OSU has to the public and to addressing the educational needs of the state and region.

While there is a clearly stated mission, there is concern about the specific lack of direction for the counselor education program, for while there is a mission statement and goals, there does not seem to be a specific plan to carry out the mission. Rather, there seems to be an attempt to use new delivery models (on-line, e-campus) to attempt to deliver as much program as possible with the limited resources available. It may be beneficial to step back and re-focus on the direction of the programs within the college to determine strengths, niche, and other relevant topics, followed by a strategic plan that clearly identifies goals and resources. There seems to be an inadequacy of resources to fulfill the stated mission with the quality expected of a national leading counselor preparation program.

Quality of Students and Admissions Selectivity

The admissions process seems to be missing a pre-screening piece. Currently the admissions process seems to be more oriented toward a self-selection experience, for applicants identify their interests, meet with faculty to discuss their intentions, and then the majority of applicants who follow through are admitted. It may be more beneficial to establish an application and pre-screening process. For example, instead of spending time interviewing an extensive number of applicants for a program, time might be better spent with re-designing the materials in a clear

format that lays out the expectations and time commitment required of the program, including the expected admissions standards. A first level paper-screen might then result in fewer face-to-face interviews being required. The current process is time consuming and focuses away from other duties that may be more beneficial to the school and personnel. A restructured procedure may also help by tightening the selection and admissions process, resulting in fewer admissions but of students who better suited to the programs, thus reducing the numbers of students that do not matriculate for whatever reason. While the graduates of the program appear to do well in placement and employment, there is some level of program-leaving, which indicates that the program may not be targeting the students most appropriate for the program. When as many as one-third do not finish a program, a follow-up survey, study, or exit interview should be conducted.

The graduates do well on national examinations and state and regional placement, which is indicative of talented graduates. On the other hand, most graduate programs require additional criteria of potential success in graduate training, including Graduate Record Examination scores and other indices of potential success.

Level of Financial Support for Students

An area of concern expressed by students was the minimal level of funding available. The programs are presented as part-time graduate programs available to students who are currently employed in relevant work settings, but the lack of sufficient assistantships and other forms of financial aid was voiced by students in the follow-up report completed by graduates. This lack of financial support for students also impacts the quality and experience of doctoral students, for there is a very limited opportunity for students to engage in scholarship, research, and teaching with their advisors or other faculty.

Curriculum Strength

The masters and doctoral programs are nationally accredited, demonstrating that they meet the curricula expectations of at least two national accrediting agencies. The course syllabi appear to have clearly defined objectives and outcomes, and the coursework appears to have sufficient rigor. Clearly the students accomplish sufficient learning to master the national standardized examination required for licensure, and so their achievement appears to be satisfactory.

Quality of Personnel and Adequacy to Achieve Mission and Goals

For the large number of students enrolled, there are insufficient numbers of tenure track faculty available for teaching, research, and mentoring. For 2008 there are four faculty with .500 teaching assignments (full load) and an additional 3 with a lower load (.250 or .125). On the other hand, there are significant numbers of term-to-term faculty employed to offer the courses necessary to staff the programs. Currently, given the number of doctoral students enrolled, the tenure track faculty who are eligible for advising and dissertation direction are supervising large numbers of doctoral students, as many as ten students per faculty member. In their self-study report the faculty identify their shortage of sufficient positions to adequately cover the research supervision and the teaching demands. This has resulted in the move to employ faculty from other institutions to assist with research projects of graduate students or to allowing non-tenure track faculty to direct the student research programs. Additionally, while the plan to develop an alternative dissertation model may be for educational purposes, the faculty move to change the dissertation requirement from a standard dissertation to a series of articles may also be reflective of the inability of faculty to adequately supervise doctoral research programs that result in a fully developed dissertation. The decision to alter the dissertation model should be based on educational expectations rather a limitation of sufficient numbers of faculty.

With approximately 100 graduate students being admitted each year, and with heavy course- oriented degree programs and minimal support staff, the burden on the tenure/tenure-track faculty is exceptional. Research and scholarly activity have largely vanished among the tenure-track faculty members. The “in-print, refereed” publications of the tenure/tenure-track faculty amount to slightly more than 1 paper per faculty member in a five year period. The journals in which the articles appear are not, for the most part, top-tier, but second or third tier. This is not commensurate with a research university and bespeaks more of a “service and teaching emphasis” rather than a research intensive or research extensive graduate program. Again, though, the CACREP and NCATE accreditation visits may have resulted in more in-depth analyses of the scholarship and there may be more substantive work than was identified by this current review team.

The mission of the College of Education includes preparing professionals who excel as educational leaders. This should apply to their faculty and staff first, as they are the leaders and mentors for students. It appears that the workload made it nearly impossible for the current tenure-track faculty to adequately conduct research, remain abreast of current trends and best practices, and keep up with the increasing demands put on schools. While the faculty have managed to do a credible job with

what they have been doing, the longevity of continuing in the same manner may be fairly short and may be reflected in the recent departure of some of the faculty. Faculty and staff we met reported extensive work requirements and high expectations for productivity in teaching and supervision, but with few resources for professional renewal, ongoing scholarly productivity, or innovative approaches to educational practice, beyond the on-line model being developed and delivered. Several faculty suggested that there could be a better use of time; for example having an assistant who would do some of the program processes, including admissions, rather than high paid faculty who engage in administrative or clerical work out of necessity. This may also assist in the student funding issue described earlier.

With the commitment to research, scholarship, and social justice that is advocated by the counseling faculty there is concern about the practice of having instructors supervise Ph.D. dissertations and there is unease over the employment of approximately 65 term-to-term instructors, who are paid <0.50 FTE, making them ineligible for benefits. Many of these people seem to have been employed for multiple years in this category with one person citing ten or more years of employment. This employment model appears to be in conflict with AAUP guidelines on teaching faculty.

The counseling programs have valuable faculty who care very much about their teaching and supervision and they are well-regarded by their students. For the tenure track faculty, though, there is a concern about how they will be able to maintain an adequate program of scholarly research sufficient for them to attain tenure and promotion, and how they will advance themselves as scholars within their field. A reexamination of the plan to employ so many term-to-term instructors may result in an action that would lead to pooling resources to provide for fewer part-time faculty and the employment of more full-time, research/teaching/supervision faculty. Several of the term-to-term positions may be combined to create 1.0 FTE positions that provide benefits. Additionally, Ecampus needs to support staff positions, such as a graduate advisor, to take this and similar chores off of the faculty (along with providing aid for the students in the program). The number of students in the program should be reduced to align better with the number of tenure/tenure-track faculty.

Currently there are, realistically, too many part-time or term-to-term faculty to get a true picture of how they truly teach other than student evaluations Without taking

time to step back and do strategic planning, and without consistent leadership that guides the work and helps faculty stay on target with the mission, the viability of the programs will likely suffer.

All of the steps suggested for reducing term-to-term faculty and increasing the number of tenure track faculty will reduce the net revenue of the College and the TCE department but should result in significant improvements in faculty morale, faculty productivity of scholarship and teaching. Some of the decreased or “missing” revenue resulting from fewer students and additional tenure-track faculty may be recovered from the increased productivity of faculty through research grants and service contracts.

We did not have sufficient information about the three faculty in Bend, such as what credentials they possess, who oversees their work, whether they are tenure track or term-to-term instructors, and the degree of collaboration among the faculty of the various programs. This should be clarified.

Level and Quality of Infrastructure

The counseling programs need to establish a more sophisticated data utilization system. Many programs have developed student information sources that track student progress from the time they apply, all through the academic program, and following up with graduation, licensure, employment, and related information. This information is often used for program evaluation and improvement and includes ongoing sampling of student engagement and recommendations. The counseling faculty did have a survey that students took immediately upon completion of their program, but there was little additional information provided. Perhaps there was substantially more information available from other accreditation visits (CACREP; NCATE) but it was not presented as part of this review. Follow up surveys of one, three and five years out would be informative. This would give the programs an idea of whether graduates stayed in the field, utilized what was taught, or if there were areas for which the graduates were not prepared. Additionally, while there were interviews with supervisors, there was no follow up data on employer satisfaction, job performance, and related information. There was a comment that preparedness was an area of concern for the faculty across the several programs, but there was no follow-up information provided about a plan to address the concerns.

Quality of Organizational Support

Currently there is a need for increased support for the counseling programs. The facilities are presently undergoing a major external renovation and internal

modernization is planned. There is also a need for increased availability of instructional technology updating to keep the extensive on-line programs current and advancing, for as the College moves to increased on-line curricular offerings, there will need to be enhanced technology to foster the delivery of the programs.

Administrators provide support for the programs, but there is a need for overall strategic planning to address resource shortages across the faculty lines.

4. Conclusion:

The graduate programs in counseling are nationally accredited and have a long and rich history of providing counselor education in the state and region. The students appear to be academically capable, though the admissions criteria rely upon individual interviews, an undergraduate gpa of 3.0, and self-selection for the programs, which is insufficient for today's accountability-oriented educational environment. The graduates of the program do well on their professional examinations. The faculty come from very good educational backgrounds and are highly committed to their educational programs. There are insufficient numbers of tenure-track faculty and the ones who are there are under-resourced for adequate scholarship and programs of research, resulting in them taking on a stronger identity as teachers and supervisors rather than as scholar/practitioners or academics with research programs. A strategic review of the programs, students, faculty, procedures, and resources would be beneficial for examining ways of aligning the missions, objectives, goals, and outcomes of each of the programs with the University, the College, and the individual programs.

Teacher Education Emphasis

1. Overall Recommendation

Reduce and/or restructure with attention given to recommendations from the Self Study and the graduate school review team's recommendations.

2. Summary of Findings

Oregon State University has been preparing educators for nearly 100 years resulting in more than 14,000 graduates. The current College of Education was reestablished as an academic unit in 2002. In its earliest form, it was the Department of Industrial Pedagogy and it has been part of the College of Home Economics and Education, the New School of Education, and perhaps other forms. It has three departments: 4-H Youth Development Education, Adult Education and Higher Education Leadership Department, and Teacher and Counselor Education. In the latter, two master degrees (MAT and EdM) are the focus of this review. There are three delivery models for the MAT and EdM is provided on-line. The unit has a doctorate in Teacher Leadership, but the Teacher Education Self Study Notebook did not address this degree and the review team only acquired information about it from interviews. The visit occurred following an National Council for Accreditation of Teacher Education site visit (NCATE) and a Oregon Teacher and Standards (TSPC) site visit with the results of these visits pending.

3. Detailed Findings

Introduction

The fit of the mission of the program and its relationship to the mission of the academic college and the University mission.

The unit provides a strong conceptual framework on which practice is based that includes four core values:

1. Ethics and Professionalism
2. Reflective Practitioner
3. Lifelong Learning
4. Diversity and Equity

Moreover, it emphasizes the knowledge, skills and dispositions associated with teaching and learning, the K-12 learner, assessment, and the content subject matter. This framework is compatible with national and state standards, the mission of the College of Education and the institution. While the institutional

and college missions and the unit conceptual framework have a degree of alignment, the observation is that the conceptual framework may drive instruction and curriculum, but it is unclear how it drives assessment practices in the unit.

The mission of the College of Education is “to be one of the most exemplary education units in the world”. This mission is guided by creativity, connection, culture, and caring. How these college values are related to the unit conceptual framework values is perhaps implied, but there is no specific documentation showing explicit linkage from mission to framework to practice (curriculum, instruction, and assessment). This linkage might provide greater focus and enhanced effectiveness. While mission statements are by nature lofty, it was the observation of the team that resources are inadequate to support current programming and definitely inadequate for becoming “one of the most exemplary education units in the world.”

Quality of Students and Admissions Selectivity

Admission requirements for the MAT are clearly identified and consistent with many other programs found in the State of Oregon. The requirements appear to be consistent across all three MAT program delivery models. Requirements increase as the candidate approaches clinical practice. The required NCATE Key Assessment table was provided for the MAT program. Attrition in the campus models appears to be about 15% for the years reported. The Cascades cohort model appears to have an attrition rate of about 3% for two years. Attrition rates are cited here as they are often indicative of admission decision success or failure. Team members commented that unit rejection rates appeared low, questioning if the criteria were discriminating.

Admission criteria to the EdM program were found in the required NCATE Key Assessment table and verified through interviews. While the entry criteria seem mostly appropriate, the team expressed concern that no nationally recognized graduate school admission test was required. Attrition in the EdM program is at 13%, but the data collection categories are not consistent across all programs, so while there may be little reason to compare attrition rates across two different degree programs, the inconsistency of measures would make it absolutely meaningless. Again, team members commented that unit rejection rates appeared low, questioning if the criteria were discriminating.

While admission criteria appear standard and observed, rejection rates are low, attrition rates are variable, and there is no cumulative data provided in the Self Study on the admitted students, i.e. average UG GPA, test scores, etc., to examine trends related to profiling admitted students. The review team expressed concerns about the lack of candidate selectivity in some programs.

Interviews with faculty suggest that low rejection rates at admission are associated with a discernment process during the pre-admission advising sessions.

Level of Financial Support for Students

The Self Study indicates that there are no graduate assistantships and graduate students enrolled through Ecampus are not eligible for scholarships. Graduate students applying for on campus graduate programs are eligible for scholarships and the financial support is through the College of Education. In general, faculty interviews indicated inadequate funding for graduate student tuition relief, although scholarships and awards are reported in Appendix D of the Self-Study.

Curriculum Strength

The curriculum in the MAT program appears to address national and state standards and reflect solid professional practice. Curriculum strength at the course level appears well planned with syllabi providing adequate information about the course. Many of the syllabi provide paragraphs describing the relationship of course content to the standards. Some syllabi provide a discussion of the linkages to the unit conceptual framework. Many of the syllabi provide adequate rubrics and protocols for assessment and evaluation. Many individual course assessments/assignments are implicitly linked to the objectives of the course, the unit conceptual framework, and standards, but explicit linkage from conceptual framework to national standards to course objectives to assessment is less frequent. When such linkages are noted in course objectives for example, a key for interpretation is sometimes missing. Such explicit linkage could provide greater focus for students and data about specific course effectiveness in assisting candidate attainment of program outcomes, specifically the knowledge, skills, and dispositions of the unit's conceptual framework. In summary, there is variance in the breadth and depth of information provided to candidates.

Curriculum strength at the program level is positive according to the graduate survey results summarized in Appendix D, although the summary does not

indicate which comments are EdM or MAT, so specific program assessment is limited. In the Self-Study, the data were disaggregated, but the frequencies are not sufficient for valid and reliable conclusions. The MAT is an initial preparation program with numerous assessments described in the various MAT handbooks, Self Study and exhibits. This excellent overview of assessments suggests that the unit provides comprehensive assessment and evaluation practices. No data associated with the assessments was provided. The data associated with the assessments could be used in program evaluation providing a measure of curricular strength beyond the graduate survey self-reported results. Collecting, aggregating and disaggregating data from these various assessments might provide additional data about curricular strength and other program qualities and outcomes. The graduate survey data does provide a metric of the self-reported attainment of knowledge, skills, and dispositions outlined in the conceptual framework. Many of the assessments in courses and program benchmarks could provide useable data for examining program effectiveness beyond graduate self-reported data. Using multiple measures reflects best practice.

The EdM degree appears to have its own conceptual framework (EdM Handbook page 18-19) and program outcomes. It is not explicit about how the EdM conceptual framework and the program outcomes are related to the unit's conceptual framework or state or national standards for advanced practice. All previous statements about the qualities of syllabi, in the MAT program appear to be true of the syllabi in the EdM program. In short, some are detailed and provide the student with the general structure and content of the course, but explicit information about the alignments of conceptual frameworks, objectives, class sessions and assessments are infrequent.

This issue has been wisely noted by the faculty in its own Self Study. In the short term program goals section, the faculty has indicated the need for alignment in recommendations 3 and 5 (Self-Study p. 37 and 38). The team recommends that each program be reviewed for alignment and that the data related to the various assessments be collected, analyzed, and used in driving program direction. This should precede any program or service expansion endeavor. The graduate survey was the only assessment with data provided, beyond enrollment and exit statistics. The team also had questions about the quality of the survey data. Data from multiple assessments for each assessment benchmark are necessary to reflect current best practice.

Quality of Personnel and Adequacy to Achieve Mission and Goals

For the number of students enrolled, there are insufficient numbers of tenure track faculty available for teaching, research, and mentoring. In such heavy course- oriented graduate degree programs with minimal support staff, etc., the burden on the tenure/tenure-track faculty is too large. Research and scholarly activity have suffered, yet the faculty appear committed and resourceful in their dedication to the candidates and programs. Additionally, it appears there are too many part-time or term-to-term faculty to get a true picture of how they teach other than student evaluations. Concerns about the unit's ability to provide cohesive learning experiences because of the number of part time faculty were discussed by the review team. Without taking time to step back and do strategic planning, and without consistent leadership that guides the work and helps faculty stay on target with the mission, the viability of the programs will likely suffer.

Through interviews, the review team noted that fixed term instructors are chairing dissertation committees. This practice seems ill-advised for a research intensive university and should cease.

The review team believes that some of the issues associated with the previously mentioned challenges could be to direct Ecampus to support the unit directly, since the unit is using Ecampus for many course offerings. In particular, Ecampus could fund one or more graduate advisor/grad admissions positions to relieve the burden of the faculty and provide the missing student aid previously mentioned.

The review teams offers these additional suggestions: 1) condense the 65 non-benefits positions to a lesser number of positions that pay benefits, 2) hire new tenure track faculty and reduce the program size so that the load on the faculty is appropriate. Clearly this suggestion is difficult in this fiscal climate, but without some movement in this direction, the program will continue to be compromised and faculty productivity will not address all aspects of the university's mission. These issues are the primary reason for the review team's general recommendation for reduction and or restructuring.

The team did not have sufficient information about the three faculty members in Bend related to the OSU unit. For example, it was unclear who oversees their work, whether they are tenure track or term-to-term instructors, what budgetary resources are available, what governance structure exists, and the degree of collaboration among the faculty of the various programs. This warrants clarification. Faculty interviews provided some information, but Cascade budgetary and personnel authority and the relationship with the College

of Education Dean was not established within the time parameters of the review.

Level and Quality of Infrastructure

Education Hall is over 100 years old. The facility appears to be held together by a complete exterior wrap in cyclone fencing material. Inside there are classrooms, one that appears to be preferred, offices, and basic facilities. Fresh paint and interesting displays are invitational. The historic nature of the building is appreciated, but repairs and remodeling could enhance the learning experience and faculty productivity. Many courses are held in facilities off-campus, in Bend, or on-line, so the Education Hall is not the only learning environment for the College.

A robust data system would assist the faculty in program evaluation and candidate assessment from pre-admission to post-graduation benchmarks. Currently, assessment information and data are limited and therefore the use of data in making data driven decisions are limited and or compromised.

In general, the amount of instructional technology needs to be increased so that on line and in-classroom programs can remain current and advance.

Quality of Organizational Support

It appears to the review committee that there is adequate formal administrative support as outlined in the organizational charts, but some leadership roles are assumed by faculty which the review team believes contributes to the taxing load on the faculty. The review team expressed concerns about the governance issues related to the Cascade campus based program.

Productivity

Level and Quality of Student Performance

Since 2008, all candidates have been required to complete an exit survey at the time of program completion. Since that date, 130 candidates have completed the survey; eighty-six are graduate candidates. The frequencies of response in some programs are too low to ascertain valid and reliable data and Tables 8-10 in the Self-Study may combine initial and advanced teacher preparation results.

Given that teacher candidates in Oregon cannot complete an initial teacher preparation without meeting testing requirements for licensure, it is noted that

initial preparation candidates/completers meet that standard. There is no additional aggregated or disaggregated data in the Self Study or related exhibits that indicate that average scores on such key assessments as work samples I and II, three way evaluation scores for clinical practice, portfolio scores, GPAs, or binary data about meeting program benchmarks on time, etc.

The Self Study did indicate that five to ten graduate candidates each year participate with faculty state level conferences.

The review team notes that many assessments are required of students. Copies of the assessments and the related forms were provided in the exhibits, but no data on the assessments beyond the graduate survey were provided. This void compromises the team's ability to comment further on the level and quality of student performance. Although student interviews, while limited in number, revealed program satisfaction among the candidates.

Level and Quality of Faculty Performance

OSU standards suggest that faculty members are to spend no less than .15 FTE on research, scholarship, or other creative activities. Interview results indicate that most faculty members must devote time beyond the full-time equivalency to accomplish this standard. Members of the review team concluded that the amount of evidence of research, scholarship, and other creative activities is not optimal for the stated goal of becoming one of the top ten land grant universities in the United States. The faculty has scholarly achievements in books, chapters, and articles, presentations, and grants.

Faculty members engage in service. A review of vita and the evidence in the Self Study indicate faculty are active in professional associations, scholarly societies, advisory boards, state committees and commissions, and school boards.

The review has previously noted serious concerns about adequate numbers of full-time tenured and tenure track faculty to support the array of programs. The review team provided some recommendations for consideration.

Viability of Scholarly Community Within Which Students Can Interact

A scholarly community exists within which students may interact. The quality of the community is stretched by inadequate numbers of full-time tenure track faculty, a reliance on part-time fixed term faculty, and the admission of too many candidates for faculty size. It is compromised by an apparent need to explore

more off-campus sites which will eventually commit faculty to more travel time, thus stretching the viability of the scholarly community. The plans for program expansion to other locations that were revealed in the interviews and other documents, seem ill-advised until curricula are aligned, faculty FTE increased, and strategic planning reviewed, etc. In fact, the recommendations and the short term goals for the programs outlined on pages 36-38 of the Self Study should be addressed before program expansion is considered. The Self Study recommendations do not suggest program expansion, but such expansion endeavors were discussed at some length during the interviews.

There appears to be a spirit of community among the faculty, staff, and administration. Interviews with candidates indicate program satisfaction and a high level of engagement in clinical aspects of the MAT program, but there was not sufficient information to conclude that the students felt they were partners in a viable scholarly community. Student interviews were very limited so substantive conclusions were not formed by the review team.

4. Conclusion:

The graduate programs in teacher education are nationally accredited by NCATE and state accredited by TSPC; renewals of these accreditations are pending. The candidates appear to meet admission requirements, stay in their respective programs with some attrition, complete their programs and aggregated data from the graduate survey results suggest candidates are satisfied. Further, candidate interviews indicated they were very enthusiastic about the clinical aspect of the program and their chosen profession. Faculty appear committed and enthusiastic about their work, but collectively indicate that the lack of resources and over extension of administrative and instructional duties compromise the research agenda. Clearly, faculty members are teachers, advisors and supervisors first, with research taking second place, a noble ordering of priorities, but this may not be in keeping with university and college mission statements. The review team has noted concerns in this area. While nationally and state accredited, there was an absence of candidate and program assessment data in the exhibits and Self Study available to the team in the time parameters of this review which compromises the ability to assess the level and quality of student performance or program quality beyond the limited data in the graduate survey. A substantive strategic review that carefully examines all programs, resources, policies, procedures and considers all Self Study recommendations and implements the suggestions from the review committee

would be beneficial in aligning missions, conceptual frameworks, objectives, goals, outcomes, and assessments of each of the programs with University and College missions, plus national and state standards.

The review team recognizes that interviews, exhibits, a Self Study, and a brief site visit have limitations in presenting a comprehensive view of the graduate programs in teacher education. The observations, suggestions, recommendations and opinions in this report are based upon a limited review. However, many of the observations of the team reaffirm the recommendations as found in the Self Study. The conclusion of the review team is to maintain these programs, but with strong encouragement to implement the recommendations in the Self Study and those found in this response before considering any program or location expansion.

Graduate Council Program Review
Teacher and Counselor Education
Reaction/Response to Report of Review Team and Actions Taken to Address Recommendations
August 30, 2010

The faculty and staff welcomed the opportunity to conduct a self-study and participate in an open and thorough review of the program and hope to embrace and utilize the recommendations set forth from the review team. The recommendations come at an opportune time as the University is asking for realignment and restricting to focus more specifically on the Strategic Plan and to address the potential economic impacts to higher education in Oregon.

Several University level initiatives are in play that in addition to the recommendations of the Graduate Review will have long term and significant impact on the College of Education. Additionally, the OUS Task Force on Teacher Education has identified the following as priorities for the state: Follow up surveys of employers of OUS institutions, New Teacher Induction, and a focus on preparing science, technology, engineering, and mathematics (STEM) teachers all of which support the refocus of this new unit. Efforts are also underway to expand programs at the OSU Cascades campus with a focus on education and counseling. Through the university realignment process the College of Education is located within the Division of Arts and Sciences. The new organization of the college will reflect a faculty of the whole including Adult and Higher Education, Teacher and Counselor Education, Science and Mathematics Education (formerly in the College of Science), and the Science and Math Investigative Learning Experiences Program with a focus on science, technology, engineering and mathematics and cultural and linguistic diversity. The faculty from Youth Development Education (YDE) has been moved to the College of Health and Human Sciences).

A preliminary draft of the proposed reorganization/restructure was submitted to the Dean in March (refer to Appendix A). This proposal included a proposed mission statement, research agenda, and organizational structure. The planning group will revisit this proposal in the fall and develop a timeline and implementation plan as part of a modified Category I with the intent that these changes will be effective July 1, 2011. The findings from the self-study and the recommendations of this graduate review will provide useful data for this group and the tasks forces addressing focused issues (refer to Appendix B). Several of the implementation tasks and decisions address concerns raised by this review. The list is by no means complete, but provides the reviewers an idea of the process involved in this restructuring of particular interest to the review committee are the questions related to strategic staffing and programming:

- 1) Align tenured-line and instructor faculty job descriptions to meet the mission of the college and research expectations.

- 2) Pathways for yearly evaluation & Tenure/Promotion reporting structure for all (tenure-line and instructor) faculty.
- 3) Build and strengthen synergies of collaborations on research and programs within college, division, and university.
- 4) Construct infrastructure to support effective and efficient program clusters
- 5) Program sustainability – what number of faculty, graduates, and enrolled students are necessary to make a program viable?
- 6) Where do you invest in programs to sharpen focus?
- 7) What programs are shifted to Cascades or let go?

The approved structure (refer appendix C) would include a Dean, three Associate Dean (one for Research and two for Academic Affairs (Corvallis and Cascades campus). At the time of the preliminary proposal, the Associate Dean position at Cascades did not exist. The Search for the position is currently underway. This position will take the lead on for the administrative, licensure, and accreditation responsibilities for teacher and counselor education at the Cascades campus. The three department chair positions will be eliminated. The programs will be realigned by focus and the expectation is that faculty will work across at least two focus areas. The three focus areas are teaching and learning (doctoral programs), community and organizational leadership and education, and licensure and teacher education.

The Associate Deans of Academic Affairs will have oversight for scheduling and operations, human resources (promotion and tenure, personnel issues, adjunct and term-to-term faculty), accreditation, curriculum reviews, graduate reviews, handbooks, and course catalogs. The Associate Dean of Research will have oversight for establishing and guiding the research agenda, review and approval of proposals, grant administration, and doctoral programs.

The Dean of the College of Education (in collaboration with the Dean of the College of Science) has assigned faculty in the Department of Science and Mathematics Education (SMED) the College of Education (COED) to continue work on realignment and to develop a strategic plan for the transition that will be effective July 1, 2011. To this end the Deans have charged this group with completing a Category I (modified, see Appendix B for details) proposal to address the reorganization/realignment of the college by January 1, 2011

Additionally the Dean of the College of Education has charged the following groups:

1. Search Committees and hiring of three tenure track positions for 2011-2012 academic year (Elementary Science Education, Education Policy, and Cultural and Linguistic Diversity)
2. M.A.T. Task Force
3. Counseling MS Task Force
4. Cascades program expansion Task Force

Counselor Education Emphasis

Overall Recommendation

Reduce and/or restructure with attention given to recommendations from the self study and the graduate school review team's recommendations

Departmental Actions

- A Task Force was formed to review the status of the MS Counseling program on the OSU campus, recommendations (attached, Appendix D) are being sent to the Dean for review on 9/01/2010; and
- The Task Force recommendations address several of the issues raised by the Graduate Review; strategic staffing, delivery method, and refocusing of program.

Response to Summary of Findings and Recommendations

Comment: OSU's Counseling Academic Unit (CAU) recently passed a rigorous national accreditation site visit (CACREP) and passed with no deficits on the 186 standards, an almost unheard occurrence. The CAU has nine core faculty spread across two campus. Both the MS and PhD are fully enrolled with rejections rates that run up to 75%.

Action: During the self-study year two tenure track faculty left the unit, one for another position and one for health reasons. The Counseling Task Force has made recommendations to the Dean to address staffing and delivery concerns, this report will inform the recommendations made by the reorganization work group and be incorporated into the unit's strategic plan.

Quality of Students and Admissions Selectivity

The admissions process seems to be missing a pre-screening piece. Currently the admissions process seems to be more oriented toward a self-selection experience, for applicants identify their interests, meet with faculty to discuss their intentions, and then the majority of applicants who follow through are admitted. It may be more beneficial to establish an application and pre-screening process.

College of Education website:

Master's Candidates (MS with a Major in Counseling)

The minimal prerequisite is a bachelor's degree. Academic background, personal and emotional suitability, volunteer or paid experience in the helping professions, and the educational and professional goals of each candidate are evaluated before admission is granted. Screening includes, but is not limited to, a minimum GPA of 3.0 on the last 90 hours of undergraduate work, three letters of recommendation, and a writing sample. A personal interview is required for

those applicants who meet the initial application criteria. Prior counseling-related academic work from an accredited institution may meet some of the program requirements; however, the core requirements for the M.S. must be taken at Oregon State University. For more information, please consult the Master's Handbook.

Comment: We were confused by the points made in this section given our extensive pre-screening process. A few years ago we rejected the grand-daughter of a powerful state legislator at the pre-screening stage. The state legislator asked for a detailed description of our pre-screening process. After his in-depth review, he accepted our decision without further comment. We usually invite 40% of the paper screenees to campus for an extensive day of interviews including counseling demonstrations. We are unaware of any counseling program that employs a more extensive admissions process. Perhaps we did a poor job describing our admission process to the evaluators from the graduate school.

“The admissions standard for the master's programs is low, with students who earn an undergraduate grade point average of 3.0 being admitted; if they have a lower GPA they may still be considered for admission.” We found this statement in contrast to our experience of high rejection rates for our programs. Last year, only 25% of the applicants to the MS program in Corvallis were admitted.

Level of Financial Support for Students

An area of concern expressed by students was the minimal level of funding available. The programs are presented as part-time graduate programs available to students who are currently employed in relevant work settings.

Historical context: OSU offered their first course in counseling in 1916; only five years after Harvard University presented the first counseling course in the country. In 1932, the Oregon State Board of Higher Education exclusively charged OSU with the mission to provide access to counseling training to the citizens of the State. Following this charge, OSU began a master's degree with a major in Counseling in 1941 and a doctorate with a major in Counseling in 1950. In 1986, the PhD with major in Counseling was one of the first counseling doctorates in the nation to receive the prestigious program accreditation from the Council for Accreditation of Counseling and Related Educational program (CACREP). In 1993, Oregon State Board of Higher Education reasserted its charge to OSU to provide access to counselor training and made a special financial allocation to support the program despite the era's severe financial crisis. In 2001, the College of Education began to offer the PhD with a major in Counseling through E-Campus in order to create access to advanced counseling training for working professionals within the Mid-Willamette Valley. In 2008, the College of Education decided to transition the PhD with a major in Counseling to a hybrid format in order to (1) extend access to advanced counseling training to all Oregon citizens no matter where they resided, and (2) extend access to advanced counseling training across the United States in order to further promote the national

impact of OSU. To assist with this transition, E-Campus provided grant funding to convert all of the courses in the PhD with a major in Counseling to a hybrid format.

Comment: The advanced preparation model, adopted in 2008 is based on a cohort of part-time practitioner leaders who will be employed in the field of counselor education. This model provides practitioners the opportunity to engage in graduate level work while remaining in the field of their chosen area of study.

Comment: A growing number of both established and newly developed doctoral programs are focusing on the preparation of practitioners rather than career researchers (Willis, Inman, & Valenti, 2010). According to Willis, et al. professional doctorates are the fastest growing segment of doctoral education.

Action: The Department will continue to work with Ecampus and the Graduate School to redefine what it means to be a graduate student in the 21st century and how the university structure can support students in these programs. Both Counseling and Teacher Education are state and nationally accredited programs which indicate they meet or exceed standards in their respective fields. Graduate school scholarships are not currently available to students in Ecampus programs, given the growing number of programs perhaps this is an area that should be reconsidered.

Quality of Personnel and Adequacy to Achieve Mission and Goals

Action: The CAU defines “core faculty” as a member of the faculty who possesses a contract that ranges from .49 FTE to 1.0 FTE and includes the following: (1) graduate advising responsibilities, (2) attend faculty meetings on a regular basis, (3) program leadership responsibilities, and (4) graduate faculty status. Under this definition the CAU has nine core faculty spread across two campuses. We do acknowledge that due to unexpected resignations, the CAU faculty is a bit “light” on tenure-track faculty. There are plans to reshuffle the faculty mix and add tenure track members. During the 2010-2011 school year, the CAU will employ five term-to-term instructors. All are experienced OSU instructors with one having 17 years of experience teaching in the CAU. These plans will be provided to the reorganization group and be used to inform the strategic plan of the unit.

Comment: The manuscript option for a thesis is common in the sciences, agriculture, and forestry and is being adopted by the College of Education for the same sound educational reasons; it is a process that prepares candidates to write publishable articles. Upon completion of the thesis or dissertation candidates have two to three articles ready for submission to peer reviewed scholarly journals. Additionally, the Graduate School supports this practice and requires that these articles are related and connected with an introductory chapter, a literature review, and a final chapter that discusses the results and implications of the research.

We did not have sufficient information about the three faculty in Bend, such as what credentials they possess, who oversees their work, whether they are tenure track or term-to-term instructors, and the degree of collaboration among the faculty of the various programs. This should be clarified.

Comment: The three Cascades Counseling faculty are Instructors (Dr. Kathy Biles, Dr. Joyce Mphande-Finn, and Dr. Daniel Stroud). The Cascades faculty and Corvallis faculty have a strong collaborative relationship and meet once a week to talk about curriculum, programming, staffing, etc. Their vitas were part of the appendices and are also available at the following link: <http://oregonstate.edu/education/accreditation/vitae.html> .

Level and Quality of Infrastructure

The counseling programs need to establish a more sophisticated data utilization system.

Action: The restructuring of the College of Education includes reassigning work responsibilities to the five support staff in the unit. This process is part of the overall reorganization and should result in increased efficiencies. The current College of Education data base is quite robust and capable of handling the type of data inquiries required for data driven decision making and continuous program improvement. However, as part of the restructuring the task force has recommended that the Assessment Coordinator review a number of the software systems that have been designed to support NCATE and CACREP accreditation. In the short term support (0.25 FTE) is being provided to support program leads in managing their data.

Quality of Organizational Support

Action: The PhD program with a Major in Counseling utilizes a three-part instructional architecture. Each of the following parts represents approximately a third of total instruction time:

- **Asynchronous Web.** *Platforms:* Blackboard & OSU Media Manager.
- **Face-to-face.** *Platform:* Twice quarterly day-long classes located off-campus at a setting near a major airport (given the nationwide student population).
- **Synchronous Web.** *Platform:* Adobe Connect Pro with a Talking Stick Add-in and Integrated Telephony.

The primary uses of synchronous web are clinical instruction and supervision. In addition to instruction, Adobe Connect Pro is used for oral exams, faculty meetings, faculty training, and student advising sessions. Some of our Ph.D. students will be able to assist in teaching classes in the weekend format and via asynchronous and synchronous instructional technologies. Ph.D. students are currently providing distance supervision to MS students utilizing the HIPAA compliant secure synchronous technology (Adobe Connect Pro). The CAU is, therefore, not only able to provide our Ph.D. students with experience in teaching graduate classes but also in

utilizing two online technologies for instruction and supervision.

Action: As per the Provost, the Department of Teacher and Counselor Education, Adult and Higher Education and the Department of Science and Mathematics Education will merge into one unit. Conversations and strategic planning are underway. This restructuring provides an opportunity to address some of the concerns raised by this review. Refer to introduction and documents in appendices for detailed explanation of this restructuring process.

Conclusion:

A strategic review of the programs, students, faculty, procedures, and resources would be beneficial for examining ways of aligning the missions, objectives, goals, and outcomes of each of the programs with the University, the College, and the individual programs.

Action: CAU's mission statement is the operationalization of a specific long-standing mandate of the Oregon State Board of Higher Education to the CAU. In 1932, the Oregon State Board of Higher Education exclusively charged OSU with the mission to provide access to counseling training to the citizens of the State. Following this charge, OSU began a master's degree with a major in Counseling in 1941 and a doctorate with a major in Counseling in 1950. In 1993, Oregon State Board of Higher Education reasserted its charge to OSU to provide access to counselor training and made a special financial allocation to support the program despite the era's severe financial crisis. Over time, CAU has worked to meet this OSBHE mandate through innovative instructional architectures such as (1) summer sequential instructional platform, (2) expansion to a branch campus, and (3) use of hybrid instruction. Faculty sees a strong inter-linkage between the evolution of the instructional architecture choices and the shifting access needs of Oregon communities. Additional note: the present three-part hybrid instructional architecture has at its base the synchronous web platform Adobe Connect. Our use of Adobe Connect was inspired by the extensive use of this instructional platform by our sister land-grant university: Penn State. In sum, our selection of our present instructional architecture was driven by our specific OSBHE mandate.

Action: College restructure and reorganization through a modified Category I process will address issues raised in this review, the self study and the university's strategic priorities and the OUS recommendations.

Teacher Education Emphasis

Overall Recommendation

Reduce and/or restructure with attention given to recommendations from the Self Study and the graduate school review team's recommendations.

Action: As indicated previously the College of Education will submit a modified Category I proposal addressing issues raised in this and other review processes.

Response to Summary of Findings

The unit has a doctorate in Teacher Leadership, but the Teacher Education Self Study Notebook did not address this degree and the review team only acquired this information about it from interviews.

Action: Dean Stern and Dean Francis agreed that this program would be reviewed for the 2011-2012 Self-Study that includes the Community College Leadership program. The Teacher Education Leadership program is not accepting candidates for the 2010-2011 academic year and will be reviewed as part of the realignment and restructuring of the College and programs.

Action: As part of the reorganization, the task force is reviewing the mission statement and engaging faculty in conversations about the focus and direction of the unit. An all faculty meeting in spring of 2010 included a draft mission statement as well as the other reorganization documents to start the conversation and gather feedback from the larger unit.

Quality of Students and Admissions Selectivity

Admission requirements for the MAT are clearly identified and consistent with many other programs found in the State of Oregon. Team members commented that unit rejection rates appeared low, questioning if the criteria were discriminating.

Interviews with faculty suggest that low rejection rates at admission are associated with a discernment process during the pre-admission advising sessions.

Comment: Graduate level programs in the Teacher and Counselor Education follow the graduate school guidelines for admission. In addition to these guidelines students must have at least 90 hours of experience in a classroom, three letters of recommendation that address the candidate's academic ability, interaction with children, and disposition. A transcript analysis documenting a grade of B or better in all prerequisite and content courses is completed as part of the admission screening process. The review process requires that three faculty individually review the applicants file. During the onsite interviews candidates are required to answer questions related to the unit's conceptual framework.

Action: Although the CBEST has been a required state exam for licensure, it has not been used as an admission requirement. Effective for fall 2011 admissions all applicants into the M.A.T. programs must have a passing score for full admission into the program.

The online EdM program in addition to the graduate school requirements requires applicants to hold a teaching license (meaning they have already passed the required tests), are currently teaching in a K-12 classroom, three letter of recommendation that address the applicants classroom teaching, academic ability, and disposition. Each applicant must write an essay that addresses his/her understanding of diversity and equity in education and a research-based paper on a current educational issue. The admission files are reviewed individually by three faculty members.

Level of Financial Support for Students

The Self Study indicates that there are no graduate assistantships and graduate students enrolled through Ecampus are not eligible for scholarships. Graduate students applying for on campus graduate programs are eligible for scholarships and the financial support is through the College of Education.

Comments: The initial teacher education programs require extensive internship and practicum experiences in class rooms and do not typically offer assistantships. Advanced programs require that the candidate hold a teaching position in a K-12 classroom. Most of the graduate programs in the College of Education are offered through Ecampus as either a full-time program with students immersed in classroom settings or a part-time program where the students are full time practitioners. Both of these options provide student access to a master's program that they might not otherwise have access; an access that is strongly supported by the Land Grant mission of OSU. The immersion program provides students the opportunity to be immersed in school with a student population that reflects the changing diversity of K-12 students in the state and nation. The two-year program provides access to those who are place bound and/or are instructional aides in a district and would not be able to obtain their license in another way.

Action: While there is some financial aid available to these students through sources outside of the University, it is limited. Both Ecampus and the College of Education acknowledge that lack of scholarships is an issue and are committed to seeking ways to support students in these programs. One issue in play is the traditional definition of what it means to be a college student in the 21st century. All of the programs offered through Ecampus and the College of Education are approved graduate programs and are accredited at both the state and national levels. Students in these programs are eligible for federal and state financial aid as well as College of Education scholarships. The scholarships they are not eligible for are graduate school scholarships. These are OSU students in approved programs, why they no longer eligible for graduate school scholarships is a question that warrants further research and conversation.

Curriculum Strength

The curriculum in the M.A.T program appears to address national and state standards and reflect solid professional practice. Curriculum strength at the course level appears well planned with syllabi providing adequate information about the course.

The team recommends that each program be reviewed for alignment and that the data related to the various assessments be collected, analyzed, and used in driving program direction. This should precede any program or service expansion endeavor. The graduate survey was the only assessment with data provided, beyond enrollment and exit statistics. The team also had questions about the quality of the survey data. Data from multiple assessments for each assessment benchmark are necessary to reflect current best practice.

Action: During preparation for this graduate review and other external evaluations the faculty redesigned its assessment system, revised various assessment tools, and created a syllabi template reflecting these changes. The exit surveys have been redesigned and reflect the unit conceptual framework. There are multiple assessment measures with clear metrics that were in place during the review and being used to compare across the various programs. The five key assessments are aligned to the conceptual framework and state and national standards all of which are linked to the program goals and outcomes (See appendix E for conceptual framework, alignment documents, and key assessments). All assessment data is now available (effective 2008-2009,) at the unit level (aggregated, Appendix F) and at the program level (disaggregated, Appendix G).

Quality of Personnel and Adequacy to Achieve Mission and Goals

Action: The unit is currently involved in conversations at both the division and college level about restructuring and staffing. At both levels there is a commitment to retain and recruit quality faculty as financial constraints allow. In discussions at the college level with the potential of moving towards a faculty of the whole (merging three departments) there is increased opportunity to have faculty teaching across programs. The proposal for restructuring of the unit includes developing a strategic plan for the unit that will address the staffing and faculty concerns expressed in this review.

The team did not have sufficient information about the three faculty members in Bend related to the OSU unit. For example, it was unclear who oversees their work, whether they are tenure track or term-to-term instructors, what budgetary resources are available, what governance structure exists, and the degree of collaboration among the faculty of the various programs. This warrants clarification.

Comments: At the time of the review there were two faculty in teacher education, one tenure-track (Dr. Kathleen Cowin) and one tenured (Dr. Jay Casbon). There are now two additional fixed term faculty, one with a doctoral degree and one with a master's degree. Tenure and

promotion comes from the Corvallis campus. Issues of curriculum, accreditation, licensure, and assessment are part of the departmental process as one unit. This information was available during the review as part of the appendices and was also available electronically at <http://oregonstate.edu/education/accreditation/vitae.html>

Level and Quality of Infrastructure Education Hall is over 100 years old. The facility appears to be held together by a complete exterior wrap in cyclone fencing material.

Comment: The fence was to make the building earthquake compliant. Education Hall is currently undergoing major revisions and the College has been temporarily relocated to the 4th floor of Waldo Hall.

A robust data system would assist the faculty in program evaluation and candidate assessment from pre-admission to post-graduation benchmarks. Currently, assessment information and data are limited and therefore the use of data in making data driven decisions are limited and or compromised.

Action: The data system is being upgraded as part of the process of creating a unit wide assessment system. We are in a three-year cycle to revise and refine our process and product based on accreditation reviews and anticipated needs.

Productivity

Viability of Scholarly Community Within Which Students Can Interact

A scholarly community exists within which students may interact. The quality of the community is stretched by inadequate numbers of full-time tenure track faculty, a reliance on part-time fixed term faculty, and the admission of too many candidates for faculty size.

Action: As part of the Provost's initiative, the College will search for three new tenure track faculty: elementary science education, education policy, and cultural and linguistic diversity. These three new faculty will join the College, fall of 2011.

Action: Strategic staffing will be a part of the unit restructuring. This will include but not be limited to a review of current position descriptions, assessment of staffing, and a review of the program offerings in the unit (refer to restructuring document in Appendix B). The creation of an Associate Dean of Research moves forward a strong research agenda for the unit as well as to provide support in grant development and implementation.

Action: Professional programs in teacher and counselor education have historically relied on practitioners as a part of the overall staffing of a unit. This practice is grounded in research and supports both students and faculty in the program as it nourishes the linkage between theory and practice and supports the philosophy of theory into practice.

College of Education Proposal for Strategic Alignment and Budget Reduction

March 15, 2010

1. Overall plan for strategic alignment and budget reduction

In addition to the strategic alignment and budget reduction guidelines, the College of Education proposed changes have been influenced by the university charge to focus on STEM (science, technology, engineering, and math) education and other strategic areas; the need to expand programs at the Cascades Campus; the OUS Task Force on Teacher Education; and a number of state and national education initiatives.

Currently, the College of Education serves about 1,600 students, about 1,300 undergraduates and 300 graduate students. All of the undergraduate students are enrolled in the Education Double Degree, OSU's second largest undergraduate major. As currently organized, the College of Education has three departments and two other units, the Western Center for Community College Professional Development and SMILE (Science and Math Investigative Learning Experiences Program).

Given that one of the College's departments (Youth Development Education) will move to the College of Health and Human Sciences, and another (Adult Education and Higher Education Leadership) is considerably smaller than prescribed by the planning guidelines, it is proposed that the College be organized as a "faculty of the whole," including faculty currently in the Department of Science and Math Education in the College of Science (through a joint venture with the College of Science). Academic and research programs would have a focus on STEM and cultural and linguistic diversity, both areas of great importance to teaching and learning in and out of schools. Research activity will be advanced through a new Center for Research on Lifelong STEM Learning (a joint venture with the College of Science) and the existing Western Center for Community College Professional Development.

The College's mission would be to conduct research and deliver programs toward the improvement of learning and teaching environments situated in multiple social and cultural contexts across the lifespan. In particular, the research efforts and practices focus on STEM learning to produce educated citizens and professionals who are prepared to work on science, mathematics, and technologically challenging societal issues. The program will (a) focus research on understanding STEM learning over a life span in increasingly complex learning and teaching environments, (b) design research to improve educational practices with a focus on cultural and linguistic diversity, and (c) offer compelling academic programs in learning and teaching at the undergraduate (including teacher licensure) and graduate levels informed by research. The focus on STEM learning represents a significant partnership with the College of Science and the Center for Research on Lifelong STEM Learning, building on the expertise of faculty throughout

the university. (See Appendix B for the faculty planning group report on the reorganization of the College. Note that the consideration of a new name for the College has been proposed.)

2. Summary of alignment with academic and administrative guidelines

- The proposed organization of the College of Education (and Learning Sciences) would be a “faculty of the whole,” which, including SMED faculty and education faculty at the Cascades Campus would be about 45 faculty on annual appointment with an FTE of at least 0.5. In addition to the College “faculty of the whole,” there would be two other units, the existing Western Center for Community College Professional Development and the proposed Center for STEM Teaching and Learning.

The Western Center has five fixed-term staff, all of whom are funded through projects, the largest of which is a recurring annual contract of about \$425,000 from the Oregon Department of Education in support of professional development for Oregon community college faculty. Faculty formerly associated with the Department of Adult Education and Higher Education Leadership and others engaged in research related to community colleges will be affiliated with the Western Center.

The Center for Research on Lifelong STEM Learning would promote a holistic, university-wide approach to understanding and supporting cradle-to-grave STEM learning that would accomplish the following:

- Creatively build a nexus and critical mass of inquiry around lifelong STEM learning.
- Build a core partnership among the Colleges of Science, Engineering and Education (and Learning Sciences) to leverage opportunities for external funding of research and programs.
- Re-conceptualize the meaning of STEM learning research by tapping into and supporting the signature areas of scientific and technological distinction at OSU.
- Substantively involve colleagues from across the university in leveraging resources and providing the interdisciplinary base for tackling large STEM-related problems.
- Significantly raise OSU’s profile as a national/international leader in STEM learning research. OSU would become the central source of STEM education information in the state for the legislature, the Oregon Department of Education, and other institutions of higher education.
- Significantly, enhance OSU’s ability to compete for government and private funding in this growing area of national concern and support.

The Center would draw on faculty from multiple colleges (Science, Education, Engineering, COAS, Agriculture, and others) who are already engaged in research on STEM learning and teaching. We do not anticipate substantial first year costs for starting up this Center, as many of the resources and faculty time are already committed in this area. The workgroup is continuing to develop an implementation plan. The Colleges anticipate that the returned overhead from this work will provide the necessary funding for growth of the program (See Appendix C for the faculty planning group report on the proposed Center for Research on Lifelong STEM Learning).

In the proposed organization, SMILE would continue to be a unit within the College of Education, but would transition to be affiliated with the new STEM Center, a university-wide Youth Outreach Center that is being proposed by the SMILE Director and others, or other unit.

- All undergraduate and graduate degree programs offered by the College meet the enrollment guidelines and, with relatively few exceptions, all graduate and undergraduate classes meet the class enrollment guidelines.
 - The proposed organizational structure meets the administrative guidelines (levels of management, minimum number of reports).
3. Rationale for exceptions/disconnects
- SMILE, a unit with less than six direct reports, will continue to operate as a College unit through the 2011-12 year, as plans are made for SMILE to be affiliated with the new STEM Center, a university-wide Youth Outreach Center, or other unit.
4. Budgetary implications
- Over the past two years, the College of Education has made strategic cuts in anticipation of targeted investments. The College will end this fiscal year with a modest fund balance and is prepared to make investments in faculty positions in STEM and other strategic areas. Budget implications of the proposed reorganization include start-up investment in the proposed STEM Center (in partnership with the College of Science), some overlap in College administrative positions during the transition, and opportunity costs associated with the change process.
5. Decision making process
- Discussion and decision making engaged the College Advisory Board, Dean's Council, Department of Science and Math Ed./College of Ed. Planning Committee, and Division of Arts and Sciences Planning Committee. Faculty and staff were engaged in the process through meetings, email, and a BlackBoard web site.

Addendum on planning for the expansion of education offerings at the Cascades Campus

Planning for the expansion of education offerings at the Cascades Campus has been informed by the College Advisory Board (which includes the Bend School Superintendent and a member of the Cascades Campus Advisory Board), discussion of the Dean's Council (which includes Jay Casbon of Cascades Campus), and the results of interviews with Central Oregon school superintendents conducted by Kathy Persing, a member of both the College and Cascades Campus Advisory boards.

Currently, there are five faculty on annual appointment (two tenure-track and three instructors) and about 100 students enrolled in education programs at Cascades Campus in the Counseling MS, Elementary MAT, and Language Arts MAT programs. Plans for expansion include modification of the Language Arts MAT to include social studies education, addition of a science and math MAT, and a series of courses to address continuing education needs of regional teachers. Those courses, when combined with other on-line graduate Education courses, can be used to earn a master's degree in education. With the addition of social studies, science, and math (and expansion of the counseling masters enrollment), enrollment in education programs at the Cascades Campus will grow to about 150 students by 2013. Given the relatively large number of Cascades education students and complexity of their professional programs, it will be especially important for Cascades Campus to plan for additional faculty and a leadership position for education programs with responsibility for curriculum coordination/liaison, scheduling, staffing, and assessment.

Another possibility for expansion of Cascades education programs is in counseling. Currently, the same master's degree in counseling (with school counseling and community counseling options) is offered at both the Cascades and Corvallis campuses. A doctorate in counseling is also offered through Ecampus, managed by faculty at Corvallis. With changes in national accreditation requirements and a suspension of enrollment in the master's degree at the Corvallis campus for the 2010-11 year, we are commissioning a joint Corvallis/Cascades planning group with responsibility for providing analysis and recommendations regarding the future of counseling programs at the Cascades and Corvallis campuses. Specific options to be considered are the consolidation of masters programs (on and off campus) at the Cascades Campus with the doctoral program managed by the Corvallis Campus or clear distinction between the master's programs at the two campuses. It is expected that the planning group will submit their analysis and recommendations to the Dean of Education and OSU Vice President for Cascades Campus before the end of spring term.

Appendix A: Current and Proposed Organizational Structure

Current Organizational Structure

Dean

Associate Dean

Department of Adult Education and Higher Education Leadership

Adult Education EdM; Community College Leadership EdD, PhD; College Student Services EdM, MS

Department of Teacher and Counselor Education*⁺

Education Double Degree BA/BS; Counselor Ed. MS, PhD; Elementary Ed. MAT; On-line EdM; Teacher Leadership PhD; Professional Development (non-degree); University Teacher Licensure

Department of Youth Development Education (4-H)

Science and Math Investigative Learning Experiences (SMILE)

Western Center for Community College Professional Development

**Elementary Ed. MAT, Secondary Language Arts MAT, and Counseling MS degrees are offered at the Cascades Campus*

⁺ Agricultural Ed. MS, Music MAT, Physical Ed. MS, Science and Math Ed. MS are offered in partnership with other colleges

Proposed Organizational Structure

The proposed organization of the College of Education (and Learning Sciences) would be a “faculty of the whole,” which, including Department of Science and Math Education faculty and education faculty at the Cascades Campus would be about 45 faculty on annual appointment with an FTE of at least 0.5. In addition to the College “faculty of the whole,” there would be two other units, the existing Western Center for Community College Professional Development and the proposed Center for STEM Teaching and Learning. SMILE would continue to operate as a unit in the College of Education while transitioning to an affiliation with the proposed STEM Center, proposed university-wide Youth Outreach Center, or other unit. The College of Science would fund positions in the College of Education (and Learning Sciences) and provide support for those positions as at present. Accountability for the productivity of those positions would be from the Dean of Education to the Dean of Science. The College of Education would manage strategy, assignments, and personnel. Promotion and tenure evaluations for jointly funded positions would include both Deans.

During the 2010-11 year, the College will transition from departments to faculty clusters intended to advance curricular development, research, and academic communities. Administrative functions will transition from departments to the central college level. A proposed infrastructure for the College is described in Appendix B.

The College will continue to represent all university teacher education programs, including those at the Cascades Campus, for state licensure, program approval, and national accreditation.

Appendix B: College of Education/Science and Math Ed. Planning Group Report

Proposal for College of Science and College of Education Faculty Collaboration (Preliminary Draft)

The President and Provost provided an image of how learning research might be transformed in a research extensive university. We (the working group for college organization) have taken this invitation seriously to consider how faculty might put forward a mission that positions the unit as a regional, nation, and global leader in research on lifelong STEM focused learning. We also have adhered to the Provost’s recommendations to create synergies of work suggesting that this new unit is a college of the whole. To reflect a research-focused unit and position the college as a partner in a research-oriented division within the university, we propose a new name for this unit of the whole, the **College of Learning Sciences (CLS)**. Through consultation with numerous faculty and former and current administrators, the college working group committee, convened by Deans Sherm Bloomer and Sam Stern, are charged with creating a structure that supports this new vision of a STEM-focused research unit. We propose the following missions and research agenda of the college as well as organizational structures to support them.

Mission Statement

The CLS' mission is to conduct research and deliver programs toward the improvement of learning and teaching environments situated in multiple social and cultural contexts across the lifespan. In particular, the research efforts and practices focus on STEM learning to produce educated citizens and professionals who are prepared to work on science, mathematics, and technologically challenging societal issues. We balance research with the responsibility to serve the learning and teaching professions. We accomplish this balance by (a) focusing research on understanding STEM learning over a life span in increasingly complex learning and teaching environments, (b) designing research to improve educational practices with a focus on cultural and linguistic diversity, and (c) offering compelling academic programs in learning and teaching at the undergraduate and graduate levels informed by research. The focus on STEM learning represents a significant partnership with the College of Science and the Center for the Study of STEM Learning, building on the expertise of faculty across divisions.

Guiding Principles of Organization

- Focus on research in STEM learning and teaching building on the university's land grant mission.
- Organizational support for research agendas that put forward national and internationally recognized scholarship and faculty who are positioned to make serious progress on regional, national, and global issues in lifelong learning and teaching situated in diverse social and cultural contexts.
- Programs at the undergraduate and graduate levels embodying the College's research agenda of *lifelong* learning in culturally and linguistically *diverse* environments.
- Leverage the research of faculty to coordinate and collaborate within division and across division to inform undergraduate STEM education.
- Strong partnership between tenured-line and instructor faculty to ensure high quality research informed programs for all students.

Infrastructure of College

As a college of the whole, we are proposing the following structure and positions for the College of Learning Sciences. Titles for positions are placeholders and will need to consider the University, Division and College reporting structures.

The Dean's office will be supported by (1) Associate Dean of Research and (2) Associate Dean of Academics & Operations. These two Associate Deans will oversee three clusters of programs with support structures to be determined to successfully direct and administer programs in the three clusters. These clusters are: Professional Programs, Doctoral Programs, and Professional Teacher Education Programs. The Associate Dean of Academics will also work closely with the Head Advisor of the undergraduate program and a similar position overseeing initial advising in all graduate programs.

The Associate Dean of Research will focus primarily on assuring faculty are positioned to engage in research and programs to fulfill the College's mission and produce graduates to become scholars in their fields. The Associate Dean will also be a liaison to faculty-affiliated Centers within the college (Western

Center), in the division (Center for Research on STEM Learning), and across the University. Duties include, but not limited to:

- Initiatives for interdisciplinary research efforts and collaboration with other colleges such as engineering, forestry, etc. and national and international institutions
- Infrastructures for increasing the number of grants and contracts submitted and funded
- Expanding the opportunities for non-tenure track faculty to be part of funded research proposals/programs
- Research seminars and professional development
- Scholarship of faculty -- Encourage and track indicators of faculty distinction
- Scholarship of PhD students – Support for doctoral student research publications and scholarly inquiry.
- Fundraise--Expand business and industry partnerships, enhance/increase alumni relations and major gifts, ensure internal funding for pilot projects leading to larger awards

The Associate Dean of Academic Affairs oversees programs, policies, procedures, and initiatives related to undergraduate students and graduate students in professional degrees. These include:

- Recruitment, enrollment, and retention—including initiation and participation in diversity initiatives, support for OSU recruitment efforts and events, enrollment coordination, oversight of college and university graduation requirements, coordination of scholarships and fellowships, oversight of student petitions and grievances, coordination of student clubs and the Honor Board, and coordination of student employment opportunities.
- Coordination of curriculum and advising—including articulation with universities and community colleges, curriculum coordination with OSU, undergraduate degree program, and accreditation by professional societies including teacher licensure.
- Enhancement and assessment of instruction—including student assessment of teaching and advising and program evaluations.
- Coordination of student-related international academic exchanges and agreements

Implementation Tasks and Decisions

Faculty

- 8) Align tenured-line and instructor faculty job descriptions to meet the mission of the college.
- 9) Pathways for yearly evaluation & Tenure/Promotion reporting structure for all (tenure-line and instructor) faculty.
- 10) Build and strengthen synergies of collaborations on research and programs within college, division, and university.
- 11) Construct infrastructure to support effective and efficient program clusters

Programs

- 12) Program sustainability – what number of faculty, graduates, and enrolled students are necessary to make a program viable?
- 13) Sharpen focus on Corvallis campus to Cascades and constructing MS in elementary education.
- 14) Where do you invest in programs to sharpen focus?

15) What programs are shifted to Cascades or let go?

Proposal for a Center for Research In Lifelong STEM Learning (Preliminary Draft)

Sharpening the foci of strengths in the University affords a unique opportunity to forge a high profile alliance between the College of Science and the College of Learning Sciences in the formation of a Research Center for building knowledge about lifelong learning in science, technology, engineering & mathematics (STEM). By establishing one of the first and arguably the most comprehensive centers in the world devoted to research on *lifelong* STEM learning, this Center would position OSU at the forefront of information and innovation in Oregon on issues related to STEM learning and education.

A Center, embodying a substantive partnership among the science, mathematics, engineering, psychology, health, business, policy and education communities and building on existing expertise in STEM learning research, would be a national and international model for fostering productive affinities between scientific research, policy and the learning sciences.

Optimizing lifelong learning research in STEM at OSU will directly support the guiding principles of the Phase II Strategic Plan: (1) maximize student learning and success; (2) maximize recruitment and retention of faculty to advance student success and signature areas of distinction; and, (3) use the strategic plan as a guide to current and future opportunities.

Arguably, all of the complex STEM-related issues facing society in the 21st Century have a significant human component; research on how humans come to understand and behave relative to these issues needs to be part of any solution space. Accordingly, basic and applied STEM learning research must be an integral component of each of the three signature areas of scientific and technological research at OSU.

Mission

A holistic, university-wide approach to understanding and supporting cradle-to-grave STEM learning would accomplish the following:

- Creatively build a nexus and critical mass of inquiry around lifelong STEM learning.
- Build a core partnership among the Colleges of Science, Engineering and Learning Sciences to leverage opportunities for external funding of research and programs.
- Re-conceptualize the meaning of STEM learning research by tapping into and supporting the signature areas of scientific and technological distinction at OSU.
- Substantively involve colleagues from across the university in leveraging resources and providing the interdisciplinary base for tackling large STEM-related problems.
- Significantly raise OSU's profile as a national/international leader in STEM learning research. OSU would become *the* central source of STEM education information in the state for the legislature, the Oregon Department of Education, and other institutions of higher education.
- Significantly, enhance OSU's ability to compete for government and private funding in this growing area of national concern and support.

Metrics & First Year Operation

- No first-year costs; Appoint a point of contact for Center
- Grant expenditures per STEM tenure-track faculty
 - FY09 \$130.5K; with Math \$140K
 - FY10 (to date) \$114.3K [projected \$150K]; with Math \$143K [projected \$190K]
 - FY11 \$300K (est.)
- Prepare Category I proposal and develop business plan
- Develop job descriptions for director and support services
- Engage stakeholders across campus and in the state
 - Oregon Department of Education & Other State Government Departments
 - Major STEM-related institutions and businesses

Need

There is a growing consensus nationwide for a greater focus on understanding and promoting *lifelong* STEM learning; the need for improvements in STEM learning are apparent at both the state and national levels; within the formal school structure grades K to 16 and within the public in general.

- Recently, the National Governor's Council concluded: "Effectively integrating...(STEM) education and its impact on the economic opportunity into the culture is more important today than anyone ever anticipated. Our nation's recent economic struggles, coupled with concerns about career readiness and 21st century jobs, have refocused our attention on infrastructure improvement--both physical and human. At the heart of rebuilding our nation's intellectual infrastructure is a STEM-literate society, students equipped with the STEM skills needed to succeed both in school and career and citizens capable of understanding and making good decisions related to the myriad challenges facing the nation."
- In 2009 an Oregon State Task Force commented: "The State of Oregon, currently ranking 4th in the United States for high tech arena business volume, recognizes the crucial need to generate its own human capital of scientists, engineers, technology leaders, teachers and STEM...-literate citizens."
- Improving college-level instruction in STEM areas, including how to better attract and retain quality students from historically under-represented groups at both the undergraduate and graduate levels, requires high quality research and development.
- While there are over 100 separate STEM education programs supported by the federal government, primary support for STEM educators and students comes through the Department of Education and the National Science Foundation with approximately \$1.2 billion in funding proposed in FY11.

Strategic Planning Retreat: Minutes

Thursday, August 19, 12:00 – 3:00

1. Overview of our outcomes for the day

- *Articulate planning assumptions for College “transition year” (2010-11)*
- *Develop enhanced plan for reorganization activities during transition year (what, why, who, by when)*
- *Discuss transition year governance process*

2. Review of Sam’s 2009 – 10 goals’ assessment and 2010 – 11 goals

Draft

1. Provide leadership for the development of an abbreviated Category I proposal for College reorganization and associated revisions to College governance.
2. Collaborate with OSU Facilities and architects on the refurbishment of Ed Hall.
3. Prepare for College leadership transition.
4. Prepare for 2012 research sabbatical.

Comments: Consider combining #3 and #4. Add goal related to Division and collaboration with Colleges of Science and Liberal Arts on STEM and cultural and linguistic diversity.

3. Conversation about planning assumptions that inform the College reorganization

Assumptions from Dean’s Council (* for priority)

****New and different relationship between SMED and College of Ed.

**College will look different structurally

**Focus on research

**There will be strategic personnel opportunities (retirements, new positions)

*Will reorganize as “faculty of the whole”

*Focus on STEM and cultural and linguistic diversity

- *Continue existing programs while considering changes/collaborations
- *Continuing association with accrediting bodies is important (NCATE, CACREP, TSPC)
- *Continuing development of Cascades Science/Math MAT
- *Increase collaboration with Cascades Campus
- *Remain open to emerging opportunities

Ongoing refurbishment of Ed Hall

Unfolding developments regarding Division operations

4. Discussion of Planning Group recommendations (handout)

5. Development of enhanced plan for transition year reorganization planning groups

Recommended groups

- A. **College of Education Category I Development Task Force.** Charge: Develop draft of an abbreviated Category I proposal that describes the reorganization of the College of Education. Members: SueAnn Bottoms, Donna Drake-Clark, Ryan Collay, Larry Flick, Darlene Russ-Eft. Timing: September – December 2010.
- B. **STEM Center Planning/Advisory Group.** Charge: Develop Category I proposal for the creation of the STEM Center. Seek engagement and support from within and outside of OSU. Members: TBD. Timing: TBD
- C. **MAT Elementary Task Force.** Charge: Develop Category II proposal describing changes to the Elementary MAT that addresses the College focus on STEM and cultural/linguistic diversity; NCATE/TSPC recommendations; and Graduate School Program Review recommendations. Members: Sue Helback, Ken Winograd, Karen Higgins, Kathleen Cowin. Timing September – November 2010.

6. Follow up...

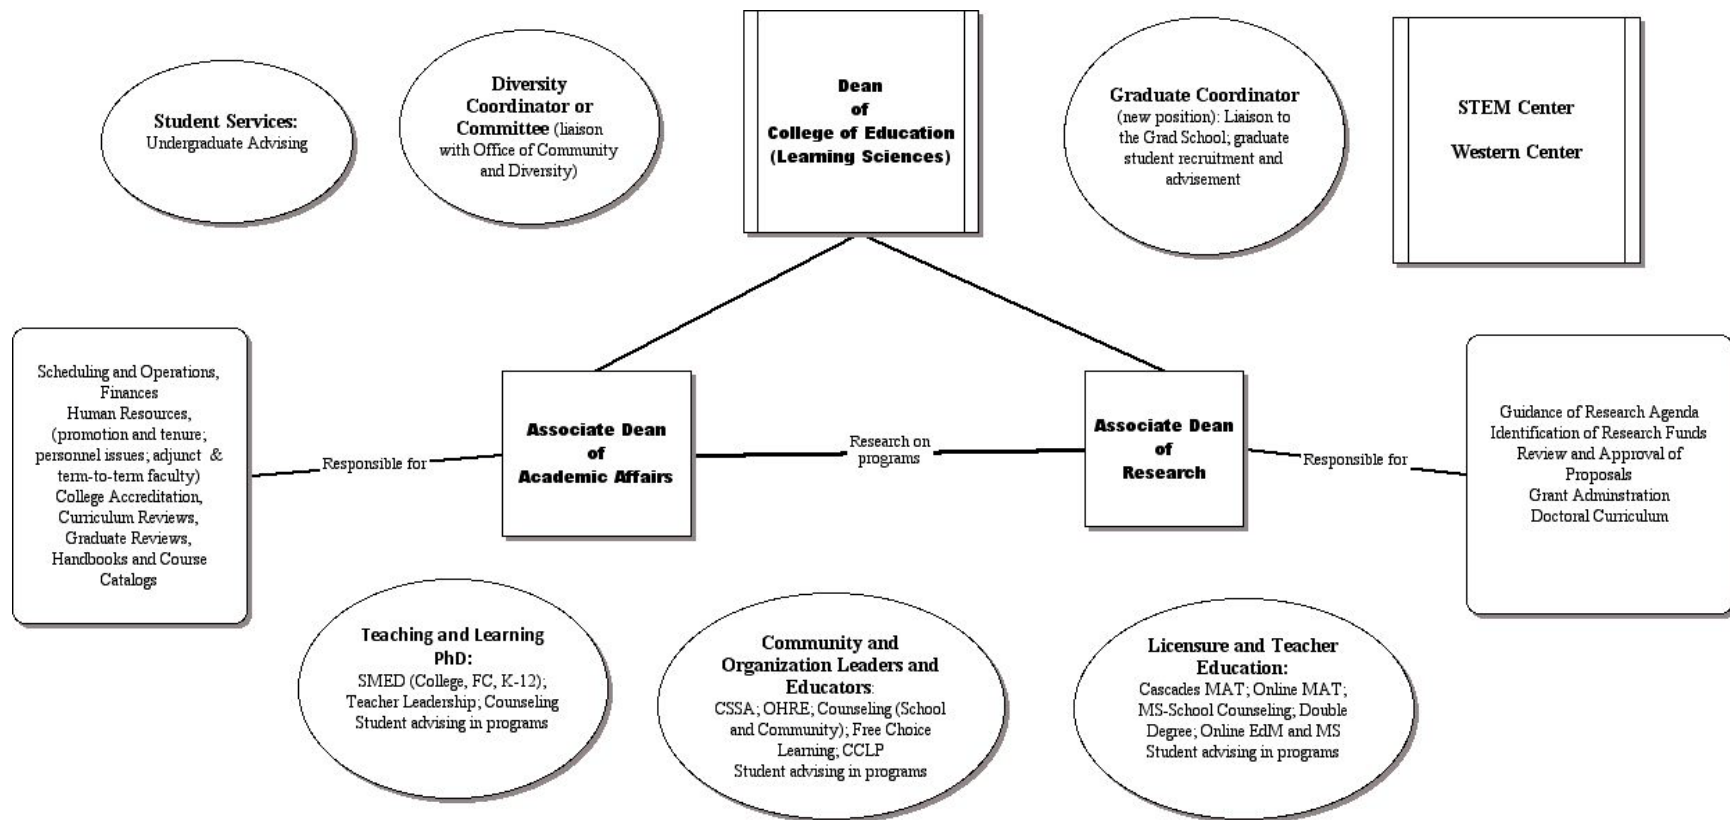

- Communication with faculty/staff regarding roles/responsibilities during transition year for central administration (Dean, Associate Dean, Advisors, Department Heads (Darlene, SueAnn), and all staff.

Appendix D Recommendations to Dean from Counseling Task Force

September 1, 2010

Dear Dean Stern,

You requested the Counseling Academic Unit prepare a report examining the benefits and costs associated with two scenarios:

1. A Ph.D. in Counseling program with an MS in Counseling program at Cascades only.
2. A Ph.D. in Counseling program with MS in Counseling programs offered through both the Cascades and Corvallis units.

The report from the Counseling Academic Unit Task Force is attached. Dr. Deborah Rubel, Dr. Kathy Biles, and Dr. Gene Eakin were the members of the Task Force preparing this report. We obtained input from staff members Dr. Cass Dykeman and Dr. Lorie Blackman as well as from Teacher and Counselor Education Chair, Dr. SueAnn Bottoms. As per your recommendation, we also had external reviewers examine this report and provide their reaction. The external reviewers were Bryn Browning, Assistant Superintendent of the Hermiston S.D., and Marlys Alger, retired school counselor/administrator from the Jefferson County S.D.

The Counseling Academic Unit Task Force, upon analysis of the benefits and costs associated with the two scenarios as outlined on these next five pages, proposes the MS in Counseling program at the Corvallis Campus:

1. Be offered through e-campus as a three-year part-time program and incorporate the Division/College focus on cultural and linguistic diversity as well as a focus on science, technology, engineering, and mathematics.
2. Utilize a hybrid instructional model such as that utilized in the Ph.D. program. Classroom instruction to be provided in the Salem area and augmented by asynchronous instruction (Blackboard) and HIPAA compliant secure synchronous instruction (Adobe Connect Pro).
3. Admit nine students per cohort into the school concentration (75 credits) and nine students into a child and adolescent clinical mental health concentration (90 credits).
4. Recruit students for both concentrations and particularly the school concentration from rural Oregon and from under-represented populations.
5. Admit students on the normal MS in Counseling program admission timeline of 10/15/10 – 1/15/11 and conduct interviews in 3/11 for a cohort starting date of June, 2011.
6. Apply for an E-Campus Course Development grant during fall quarter, 2010 such that the grant proposal will be approved in time for the course development of the first two classes to be completed in spring, 2011 and offered in summer session, 2011.

Respectfully Submitted,
Counseling Academic Unit Task Force

The Task Force believes the history of the counselor education program at Oregon State University is unique in a number of respects and informs the direction the Counseling Academic Unit should advance the MS in Counseling program. We, therefore, provide you with a summary of that history:

OSU offered their first course in counseling in 1916, only five years after Harvard University presented the first counseling course in the country. In 1932, the Oregon State Board of Higher Education exclusively charged OSU with the mission to provide access to counseling training to the citizens of the State. Following this charge, OSU began a master's degree with a major in Counseling in 1941 and a doctorate with a major in Counseling in 1950. In 1986, the PhD with major in Counseling was one of the first counseling doctorates in the nation to receive the prestigious program accreditation from the Council for Accreditation of Counseling and Related Educational Programs (CACREP). In 1993, Oregon State Board of Higher Education reasserted its charge to OSU to provide access to counselor training and made a special financial allocation to support the program despite the era's severe financial crisis. In 2001, the College of Education began to offer the PhD with a major in Counseling through E-Campus in order to create access to advanced counseling training for working professionals within the Mid-Willamette Valley. In 2008, the College of Education decided to transition the PhD with a major in Counseling to a hybrid format in order to (1) extend access to advanced counseling training to all Oregon citizens no matter where they resided, and (2) extend access to advanced counseling training across the United States in order to further promote the national impact of OSU. To assist with this transition, E-Campus provided grant funding to convert all of the courses in the PhD with a major in Counseling to a hybrid format.

Scenario 1: Ph.D. Program Only

The Corvallis Campus of the Counseling Academic Unit (CAU) drop their offering of a MS in Counseling to focus on the PhD with a Major in Counseling offering and the MS with a major in Counseling to be offered only at the Cascades Campus.

1. Benefits:

- d. The myriad of TSPC, CACREP, NCATE, OBPLCT administrative requirements as well as the MS student advising demands originally handled by five tenure track faculty would be reduced by no longer offering a Corvallis based MS in Counseling degree. The two tenure track staff thus could devote their full attention to the very successful Ph.D. in Counseling program.

2. Costs:

- d. **Loss of potential MS program revenue:** In the current format, i.e., dissertation credits being paid for via regular campus tuition rather than e-campus (a loss of approximately \$116,812.80 revenue to the College of Education annually), the Ph.D. program is generating \$200,000 revenue for the College of Education annually. The proposed e-campus based MS in Counseling program would provide the College of Education with an additional \$116,812.80 per MS cohort (18 students) or \$350,000 per year when all three MS cohorts have been admitted. This revenue would not only pay for the FTE required for the MS program but also assist in defraying the costs of hiring the tenure track staff needed for the instruction and advising in the Ph.D. program.

- e. **Possible loss of CACREP Accreditation:** Based on the CACREP Accreditation program review team's comments (2008), the CAU believes CACREP will be very concerned that Corvallis-based staff teach at the Ph.D. level but not at the MS level while at the same time those teaching in the MS in Counseling Program at Cascades have limited involvement with the Ph.D. program. Please note that our Ph.D. program would not have nearly the interest it currently has if the program were not CACREP accredited. Graduates seeking positions in counselor education after 2012 need to be graduates of counselor education programs and preferably CACREP counselor education programs. Oregon State University is the only CACREP Ph.D. program on the West Coast. Students apply to our program specifically because it is CACREP accredited.
- c. **Loss of a "lab school" experience for PhD students:** A number of our Ph.D. students intend to seek employment in counselor education. Providing these students with counselor education internship experiences with our staff is an important part of their preparation as counselor educators. With the MS in Counseling program in the part-time hybrid format as proposed, some of our Ph.D. students would be able to assist in teaching classes in the weekend format and via asynchronous and synchronous instructional technologies. Ph.D. students are currently providing distance supervision to MS students utilizing the HIPAA compliant secure synchronous technology (Adobe Connect Pro). The CAU is, therefore, not only able to provide our Ph.D. students with experience in teaching graduate classes but also in utilizing two online technologies for instruction and supervision.
- d. **Loss of core faculty attached to the MS program to assist with unit-wide tasks and campus-wide tasks:** The administrative workload for NCATE, TSPC, and OBLPCT will undoubtedly be diminished without the MS in Counseling program, there will remain, however, CACREP and Graduate School administrative tasks to be dealt with but with far fewer staff to do so.
- e. **Loss of positions for staff who teach MS classes who can also contribute to the Ph.D. program:** If Dr. Dykeman and Dr. Rubel are no longer providing instruction in the MS in Counseling program, they and a tenure track staff we propose be hired in 2012 will teach almost all of the Ph.D. classes. This staffing pattern presents several limitations:
 - i. With three staff members teaching in the Ph.D. program, the unit's flexibility to hire additional staff that has experience teaching courses in which the core staff does not have experience becomes very limited.
 - ii. A staffing pattern that limits Ph.D. student contact to interaction with just a few instructors can lower the credibility of the Ph.D. program. Students have indicated they prefer to interact with a diverse set of professors each with unique professional interests, skill-sets, and research/publishing backgrounds.
- f. **Diminished OSU College of Education identity in K-12 education:** The OSU Counselor Education Unit has been educating school counselors for over 60 years and part of that well-established "footprint" in our State's public educational system will begin to disappear.

Scenario 2: The Corvallis Campus of the Counseling Academic Unit (CAU) offers an MS with a Major in Counseling as well as the PhD with a Major in Counseling. The MS with a Major in Counseling program

will feature the characteristics outlined on the cover letter of this proposal.

Fiscal Considerations and Benefits:

1. The E-Campus Grant will provide approximately \$172,000 revenue of which half will be used to reimburse staff for course development and half retained for administrative costs.
2. The revenue stream of \$116,812.80 per cohort or \$350,000 when three cohorts have been admitted will provide the revenue to not only cover the costs of staffing the MS program but will also provide revenue to assist with staffing the Ph.D. program.

Curricular/Instructional Considerations and Benefits:

1. All courses for the clinical mental health (CMH) program have been approved through the Category II process. The Cascades campus initiated this concentration starting in June, 2010. Some modification of courses will occur as the Corvallis CAU focuses the CMH concentration on child and adolescent counseling.
2. Dr. Dykeman has already led the CAU full- and part-time staff in examining how courses could be offered in a variety of formats in the new hybrid program. The CAU is committed to provide training to all course developers in the use of asynchronous (Blackboard) and HIPAA compliant secure synchronous (Adobe Connect Pro) instructional/supervisory technologies as well as training on each of the following elements that will inform the development of their courses:
 - a. 2009 CACREP Standards.
 - b. Cultural-linguistic competency.
 - c. Science, technology, engineering, math career awareness and counseling interventions for math/science anxiety, etc.
 - d. Issues specific to schools and communities in rural Oregon as identified by the Oregon University System as concerns to be addressed by the OUS, e.g., lower college-going rates for graduates from rural communities.
3. The CAU is rapidly becoming an exemplar in the use of a HIPAA compliant secure synchronous platform (Adobe Connect Pro) for instruction and supervision at the Ph.D. level. Utilization of this technology in the MS in Counseling program will further the CAU's capacity to become a leader for other university programs as well as state agencies and educational entities on the use of this platform for communication, instruction, and supervision for and with individuals and programs throughout the State.
4. Once the CAU has fully implemented the program, it becomes possible to expand the program to offer:
 - a. Licensure Only programs.
 - b. Programs to school districts such as Salem-Keizer to assist their Child Development Specialists in meeting qualifications for the Initial I School Counselor License.
 - c. Licensure II and Continuing Licensure classes for counselors throughout Oregon and the United States.
5. As previously noted, the MS in Counseling program will provide Ph.D. students an opportunity for a counselor education "lab experience."

Staffing Considerations and Benefits:

1. We propose adding a fixed term position in the summer or fall of 2011. This individual will begin to assume administrative responsibility for the MS in Counseling program and assist in instruction and advising in the Ph.D. program.
2. We propose adding a Tenure Track position in the fall of 2012. This individual will teach classes

in both the Ph.D. program and the MS program and assume an advising load in the Ph.D. program in which we currently have two full-time advisors and forty advisees.

3. Note that even with the addition of these two additional positions, during the 2011-12 academic year, 14/52 or 1/3 of classes will need to be taught by part-time staff and during the 2012-13 academic year and each year thereafter, 20/62 classes will be taught by part-time personnel.

Social and Political Capital Benefits:

1. Oregon State University will maintain its well-established “footprint” as a preparer of school counselors.
2. The College of Education would fulfill the OSU Land-Grant mission of meeting the educational needs of citizens throughout the State as well as fulfill the charge the Oregon State System of Higher Education issued on two occasions that the Oregon State University Counseling Academic Unit provide a counselor education program for the State. You will recall that when the Counselor Education Unit had a “summer-sequential” program, students from locations such as Eagle Point, Klamath Falls, Medford, Grants Pass, Newport, Pendleton, LaGrande, and Boardman attended. The proposed MS in Counseling program in a hybrid format will make it even easier for students from “remote” locations to earn an MS in Counseling degree.
3. Child and Adolescent Clinical Mental Health concentration:
 - a. The Task Force would like to acknowledge Dr. Lorie Blackman, Program Lead for the Community Concentration and a school psychologist in the Salem-Keizer S.D., for reminding us of the mental health needs of children and adolescents throughout our State. Statements such as the one below are just one of many we could cite that support Dr. Blackman’s assertion:
 - i. *Many mental disorders have their beginnings in childhood or adolescence.*
 - ii. *The National Health and Nutritional Examination Survey found that 13 percent of children ages 8 to 15 had at least one mental disorder, a rate that is comparable to diabetes, asthma, and other diseases of childhood. Yet, mental disorders often go undiagnosed and untreated for years.*
 - b. <http://www.nimh.nih.gov/health/topics/child-and-adolescent-mental-health/index.shtml>
 - c. The child and adolescent focus will be unique to the Corvallis Counseling Academic Unit and, thereby, differentiate the Corvallis clinical mental health program from that offered at Cascades.
 - d. The CAU also believes the child and adolescent clinical mental health program will become a signature program: In our awareness there is no other program in the Pacific Northwest with this concentration.

Costs:

1. Though there are staffing costs associated with this program, we have already noted that program revenue should be more than sufficient to cover these costs, help defray the additional staffing requirements of the Ph.D., and any increased infrastructure costs associated with the addition of the program.
2. The NCATE/TSPC and CACREP requirements for data collection, data entry, data processing, and data analysis have increased incrementally in just the past few years and will only continue to increase. Though the need for the infrastructure to accomplish these NCATE/TSPC data tasks is already visibly apparent to Teacher and Counselor Education faculty and Chair, the MS in

Counseling program data requirements reinforce the need for additional infrastructure to meet these data needs.

Additional Considerations:

1. **Employment Projections for School and Clinical Mental Health Counselors:** While the current economic times make it challenging to estimate employment prospects for graduates of this proposed program, there are at least two sources of information that indicate graduates are likely to find positions:
 - a. A New York Times article *Report Envisions Shortage of Teachers as Retirements Escalate* provides a map of the fifty States showing the percentage of teachers nearing retirement age. The report indicates that Oregon, Washington, and Idaho are States with over 50% of teachers being over fifty years of age.
<http://www.nytimes.com/2009/04/07/education/07teacher.html>
 - b. The Bureau of Labor Statistics projects that from 2008-2018 there will be increases in jobs for counselors ranging from 13% to 24%.

- Comment on % candidates with GPA who did not have a 3.0 GPA

SUMMARIZE ANALYSIS QUESTIONS, INSERT YOUR RESPONSES BELOW

1a. Content Knowledge for Teacher Candidates - continued

2. What are the candidates' *general knowledge* and skills in reading, writing, and math upon entering the initial licensure programs?

Table 2 CBEST Test Scores

| | CBEST
(total passing score 123;
41 on subtests)
n = 28 | | | | % Pass Rate |
|---------|---|---------|------|-------|-------------|
| | Reading | Writing | Math | Total | |
| Average | | | | | |
| Range | | | | | |

Analysis Questions:

- Reflect on evaluation question #2
- Compare mean total scores on CBEST or PPST to “passing score” (CBEST: a total of 123 is required for passing; passing score for each section is 41, must have a 37 on one or two sections); see PPST passing scores in table.
- How much do the average scores exceed the passing test score?
- Discuss strengths and weaknesses of subscores: reading, writing, and math and relate to implications to success in program or changes to program.
- Address the subtest with lowest score. How does this data impact your program? Do you have program entry requirements (e.g. 9 credits composition, writing sample, math courses, etc.) or program modifications to address these scores?
- Comment on % candidates passing CBEST or PPST.

SUMMARIZE ANALYSIS QUESTIONS, INSERT YOUR RESPONSES BELOW

1a. Content Knowledge for Teacher Candidates - continued

3. What is the overall *content knowledge* of candidates entering clinical practice as measured by tests used for state licensure?

Table 3 ORELA Multiple Subjects Exam (MSE) and ORELA ESOL Test Scores

| | ORELA MSE
(passing score 240)
n = 28 | | | ORELA ESOL
(passing score 240)
n = 1 | | |
|---------|--|------------|--------|--|------------|--------|
| | Subtest I | Subtest II | % pass | Subtest I | Subtest II | % pass |
| Average | | | | | | |
| Range | | | | | | |

Analysis Questions:

- Reflect on evaluation question #3
- Compare subtest scores on ORELA MSE subtests I & II and ESOL subtests I & II (if applicable) to “passing score” (passing score is 240 for each subtest)
- Comment on % candidates passing ORELA MSE & ESOL (if applicable)

or

- Compare mean scores on Praxis II exams to “passing score” (passing scores vary)
- Comment on % candidates passing Praxis upon entry to clinical practice
- How does the candidates’ GPA, CBEST/PPST test scores, and ORELA MSE & ESOL (or Praxis test scores) reflect their ability to teach content in your program?

SUMMARIZE ANALYSIS QUESTIONS, INSERT YOUR RESPONSES BELOW

| |
|---|
| 1a. Content Knowledge for Teacher Candidates - continued |
|---|

1a. Program Summary Questions

- How does your program address low or non-passing test scores? What is your program policy for not passing? Number of retakes? How do you accommodate candidates who do not pass, such as English Language Learners?
- How do these overall scores inform your program about the teacher candidates content knowledge that they plan to teach and can explain important principles and concepts based on standards?
- Discuss content knowledge course requirements in relation to general knowledge and skills (reading, writing, and math) and in the content area.
- If you have additional data that measures student content knowledge or insight add it and discuss it in your narrative.

REFLECT ON YOUR REPONSES TO QUESTIONS 1-3, INSERT YOUR RESPONSES TO THE PROGRAM SUMMARY QUESTIONS BELOW

End of NCATE Element 1a.

1b. Pedagogical Content Knowledge for Teacher Candidates – Question 4

- Teacher candidates understand the relationship of content and specific pedagogy delineated in professional, state, and national standards.
- Candidates have a broad knowledge of instructional strategies that draws upon content and pedagogical knowledge and skills delineated in professional, state, and national standards.
- Candidates facilitate student learning of the content through presentation of content in clear and meaningful ways and through integration of technology.

4. What do work sample data suggest about candidates *pedagogical content knowledge*?Table 4 Work Samples I and II: *IV. Conceptual Framework: Rationale/Unit Goals/ Standards (a-c)*

| 3 items (a-c): maximum score = 9* | | |
|-----------------------------------|---------------|----------------|
| | Work sample I | Work sample II |
| | n = | n = |
| Average | | |
| Percentage** | | |
| Ranking (1-4)*** | | |

*based on scale 0 to 3

**Percentage is a calculation of the average scores of the subsection divided by the maximum number of points (score) that can be awarded to the specific section (e.g. 7.3/9 & 6.5/9)

***Ranking is based on the highest % to the lowest % (1 to 4) in the four subsections in the Work Sample

Analysis Questions:

- Reflect on evaluation question #4
- Compare percentages and rankings for subsection IV in work samples I & II.
- Compare ranking to other subsections in Work Samples I & II (ranking: 1 = highest %, 4 = lowest %)
- Discuss strengths and weaknesses of each item (a-c) (see complete program data)

SUMMARIZE ANALYSIS QUESTIONS, INSERT YOUR RESPONSES BELOW

| 1b. Pedagogical Content Knowledge for Teacher Candidates – Question 4 |
|--|

1b. Program Summary Questions

- How does your program address Work Sample or Three-way Evaluation subsections with low percentages/ranking?
- Reflect on your program's overall effectiveness in preparing candidates to understand the relationship of content and specific pedagogy and provide them with a broad knowledge of instructional strategies that draws upon content and pedagogical knowledge and skills. What do you conclude based on the data provided?
- What data might be used or do you use to measure if a candidate integrates technology in their teaching? Discuss how candidates integrate technology in their teaching.
- What additional data could be collected or that you already collect that measures student pedagogical content knowledge? Discuss it in your narrative.

REFLECT ON YOUR RESPONSES TO QUESTION 4, INSERT YOUR RESPONSES TO THE PROGRAM SUMMARY QUESTIONS BELOW

End of Element 1b.

1c. Professional and Pedagogical Knowledge and Skills for Teacher Candidates – Questions 5 - 8

- Teacher candidates can apply the professional and pedagogical knowledge and skills delineated in professional, state, and institutional standards to facilitate learning.
- Candidates consider the school, family, and community contexts in which they work and their prior experience of candidates to develop meaningful learning experiences.
- Candidates reflect on their practice.
- Candidates know major schools of thought about schooling, teaching, and learning.
- Candidates are able to analyze educational research findings and incorporate new information into their practice as appropriate.

5. What do work sample and three-way evaluation data suggest about candidates professional and pedagogical knowledge and skills?

Table 5 Work Samples I and II: V. Instructional Plans (a-d)

| 4 items (a-d): maximum score = 12* | | |

GRADUATE COUNCIL

June 3, 2010

Minutes

Grad Council Members Present: Carolyn Aldwin (HHS), Rick Colwell (COAS), Theresa Filtz (Pharmacy), Denise Lach (CLA), Walt Loveland, Chair (SCI), Kathy O'Reilly (Vet Med), Jo Tynon (Forestry), Tom Wolpert (AG SCI)

Grad Council Members Absent: Nancy King (Business), Chris Lenn (Student Representative), Vinod Narayanan (ENGR), Darlene Russ-Eft (Education)

Ex-officio Members Present: Martin Fisk, Bruce Rettig

Support Staff Present: Nagwa Naguib

Guests: Bill Warnes, Director, Materials Science Graduate Program

1. Approval of Minutes – April 29th, 2010

Theresa Filtz asked that the minutes be edited as follows:

3. 5xx/6xx/7xx DVM courses

Para 2:

Theresa Filtz remarked that the College of Pharmacy has subsets of 5xx courses whose lecture components are attended by graduate students along with professional students. The graduate and professional students attend under different syllabi and sometimes take different exams. They are treated as separate courses.

Para 6:

O'Reilly confirmed that 7xx courses used on graduate programs should go through Graduate Council approval. Filtz reiterated that the pharmacy 7xx courses which are used on graduate programs of study have already gone through the Graduate Council approval process. The student learning outcomes for professional students are different than that of graduate students.

April 29th minutes approved with above corrections.

2. Chair Report

Walt Loveland reminded the Council that the Entomology Graduate Program Review Site Visit, previously scheduled to occur on June 4th, has been cancelled. The cancellation of the Entomology program review was by an email discussion of the

Graduate Council that indicated that without the self-study the Entomology program refused to furnish, there was no point in a review. The Graduate Council drafted a review document recommending that the graduate program in Entomology be terminated due to its lack of viability and that the admission of new students to the program be put on hold. Marty Fisk pointed out that he alerted Provost Randhawa that some actions from the Graduate Council will be forthcoming regarding the Entomology graduate program.

Theresa Filtz wondered why the Council needed to wait for an action plan before suspending the program. Fisk remarked that email discussions between Council members could be considered a report. When the report and the action plan are completed, they will both be sent to the Provost for his final decision. Loveland suggested that it might be appropriate to informally let the Provost know of the Council's decision. (Subsequently the draft Graduate Program review was sent to the Provost and he requested an action plan from the Entomology program by 30 June, 2010.)

Bruce Rettig reported that the Department of Entomology was dissolved a few years ago, and the faculty transferred to different colleges and departments. According to the Entomology Program website, the Program of Study is individually developed for each student. Could this process continue to be delivered in this manner, as long as the faculty would agree to do so?

Fisk noted that the Graduate School is the one admitting the students into the program. The Graduate Council could direct the Graduate School to stop admitting students to the Entomology Graduate Program. Rettig pointed out that, although international students have a deadline for admission that provides time for them to obtain the appropriate immigration documents, domestic students can be admitted up to two weeks before the beginning of the term.

Fisk will request Rosemary Garagnani, Assistant Dean of the Graduate School, to hold admissions in Entomology until further discussion.

Loveland then proceeded to report to the Council on the Applied Economics Graduate Program and the fact that they wanted to change the courses that provided the core for the applied economics degree program from cross-listed AREC/ECON courses to AEC courses. Conversations involving the Curriculum Council on this issue led to a removal of the cross-links between the AREC/ECON courses and permission for the AREC courses that were part of the Economics and Applied Economics core to change to AEC. Decisions on the part of the ECON courses will be deferred to Winter 2011 as their possible use in a newly proposed program is decided.

He then reported that he participated in the MBA program review, and for the first time he understood why the MBA program is different from any other masters program. Students start their program in September and they graduate the following June. Approximately ninety oral exams are conducted within a short time period. It is a logistical mess which they had not made very clear to the Council

when they submitted their proposal to transition outside of the Graduate School. This additional information will come up in the site visit report as reviewers commented that the requirement for individual oral examinations for MBA programs is uncommon. The College of Business will need to work out those details with the Graduate School and the Graduate Council. Other remarks regarding the oral examination system was that some students did not think that the exams were at a graduate level; teams of five faculty interview the ninety students over two Fridays.

3. Materials Science Program Review Follow-Up – Report

Bill Warnes was introduced to Council members. Theresa Filtz reported that she met with Dr. Warnes on April 23, 2010. Spring 2007 program review team recommendations were reviewed. Warnes provided an updated action plan for the program: the recommendations were taken seriously at the time. There has been a significant number of new faculty who joined the program. Materials Science is supported by the School of Mechanical, Industrial and Manufacturing Engineering (MIME), even though some faculty reside in different departments. Filtz pointed out that most interdisciplinary programs also suffer from the problem of determining how to credit the faculty participating in such programs. Things need to be uniform.

Denise Lach wondered what it meant for someone to advise students and not get credit for it. Warnes pointed out that this was a departmental decision. Loveland questioned where, in this case, the student credit hours go?

Carolyn Aldwin remarked that Banner needs to be used more effectively. A small fix could allow the system to properly identify who gets credit for advising. We should recommend that the Registrar's Office make needed changes to resolve this problem. Jo Tynon remarked that there are more and more discussions of interdisciplinary graduate programs, so this issue needs to be addressed.

In response, Fisk informed the Council that the interdisciplinary programs will be discussed at next week's Provost Council meeting. OSU's plan is for the graduate student population to increase to 25% of the total student population.

When asked, Warnes indicated that the faculty would like to see a change in that students admitted in Materials Science are formally identified with the home department of major professor in both the University and the Graduate School records. They should not necessarily have their records imply a connection to the School of Mechanical, Industrial and Manufacturing Engineering. DAF forms identify the College of Engineering, so all students get charged engineering resource fees. There should be a fix with this Banner issue. Fisk will talk with the Registrar's Office and inquire about a way to use it more effectively.

Motion: Accept Materials Science Follow Up Report. Carolyn Aldwin moved. Rick Colwell seconded. Motion passed.

4. Summer Plans for Council Business

Loveland reminded the Council members that their job on the Council continues through June 30th. He also thanked Council members Rick Colwell, Nancy King (who was not present) and Kathy O'Reilly for their service on the Council. Three new members will be assigned to the Council next fall. The Executive Committee asked Loveland to continue in his role as Chair of the Council.

He proceeded by saying that SABRR indicated that there will be no reorganization this summer. We might receive some Category II proposals during the summer term. The new system worked very well this year. He also asked members to approve and send on any proposals with undergraduate options. We will retain some provision for emergency issues, but service will be greatly reduced.

As far as the designation of secondary reviewers, Loveland will request each Council member to identify two or three areas in which they are interested before assigning the designations. He also reminded Council members that starting September 1st, the workload for Category I and Category II proposals might increase.

5. Graduate Program Review Guidelines

Loveland reported that per Dean Sally Francis' recommendation, the Council should revise the Guidelines to reflect that a failure to provide a self-study in a timely manner, will lead to a recommendation by the Council to terminate the program. He agrees with Francis that it should be made clear in the guidelines.

A discussion regarding the language to be used resulted in the following addition:

Self-Study Document – last paragraph, page 4:

"Failure to provide a self-study in a timely manner and/or lack of cooperation with the review process, will lead to Graduate Program Review report recommending termination of the program and suspension of the enrollment of new students in the program."

Motion: Add the above paragraph to the Graduate Program Review Guidelines.

Theresa Filtz moved. Denise Lach seconded. Motion passed.

Fisk reported that the Provost asked to make the graduate program reviews more efficient. As we make changes to the guidelines, we might want to review the whole document. Rettig suggested that the Council might want to ask Gita Ramaswamy, Director of Assessment, to assist in reviewing the guidelines, as she brings her experience from Purdue University. Loveland agreed that the Council will ask her to assist with this review next fall.

Adjourned 9:30 a.m.

Possible Graduate Council Agenda Items 2010-2011

- 1.** 12 Graduate Program reviews/requests for postponements
- 2.** 13+ Cat I proposals for re-organization
- 3.** Set evaluation standards for MBA MOU
- 4.** “Assessment”
- 5.** “Accreditation”
- 6.** Two Graduate Program Review Reports from 2009-2010
- 7.** Seven follow-up reviews of graduate programs
- 8.** Grad council review of Certificates and Minors without Majors
- 9.** Revision of the Guide for Program Reviews
- 10.** Joint/Dual degrees with foreign universities
- 11.** Review of the remote participation policy adopted last year
- 12.** Usual business of Cat II proposals, honors and awards, etc.
- 13.** Review of TCE action plan
- 14.** Criteria for programs leaving the Graduate School
- 15.** Interdisciplinary programs/funding

Materials linked from the October 7, 2010 Graduate Council agenda.

Subject: Re: Graduate Review of MPP

Thanks Walt! I think we were scheduled based on when the CAT 1 was approved (we didn't implement right away)?

I sure would like to help you decrease the workload next year!

Brent

On 7/7/10 10:08 AM, "Walter Loveland" <lovelanw@onid.orst.edu> wrote:

Brent,

The decision to postpone a graduate program review is made by the Graduate Council. The Council is in recess over the summer but we would be happy to take up your request at one of the first meetings of the Council in the fall. The Council is in a "backlogged situation" with 12 reviews for next year instead of the usual 8 reviews per year due to postponements. Marty can comment on why the MPP program was scheduled for next year.

Steel, Brent wrote:

Marty et al.,

The Master of Public Policy program is scheduled for a Graduate Council review next year. However, the program has only been in operation since 2002 and graduated our first student in 2003. If graduate degrees are to be reviewed every 10 years, perhaps we could reschedule for 2012?

Another consideration is that we will be going through an external accreditation process next year with the National Association of Schools of Public Affairs and Administration that will require external reviewers, along with a possible external review of our proposed PhD in Public Policy. That would be a lot of external reviewers and logistics to deal with!

Accreditation

In April 2011 OSU will be visited by the NWCCU group for their annual ten year accreditation review. Unlike previous reviews, the standards by which OSU will be judged have changed along with the format of the self-study. Generally speaking OSU will be evaluated in three areas, undergraduate education, graduate education and research, and outreach and engagement. These areas are called the “Core Themes” of the University.

For each Core Theme, we are to be judged by certain “institutional indicators”. The number of such indicators and the nature of them has been set by the Accreditation Steering Committee after extensive consultation with the NWCCU. The attached spreadsheet shows the Core Themes and the indicators. A request to various groups has been made to provide data for these indicators (with a due date of 15 September). The institution must now evaluate the data submitted for the indicators and assign a “grade” for each indicator/objective/Core Theme. Needless to say, we will give ourselves passing grades in everything but we do have to be honest and point out areas where we are not doing well, especially in relation to our peer institutions. We are then asked to provide plans for remedying the perceived shortcomings. (We know, for example, that we will be “dinged” for 50 M\$ of deferred maintenance but there is nothing we can do about that). There will be follow-up visits every two years to see our “progress” in fixing our shortcomings.

The Graduate Council has been asked to provide the “grades” for Graduate Education. I attach a pseudo report card similar to the one developed by the University of Alaska who was the guinea pig for this protocol. Don’t take this report card seriously as it was just intended to show the level of comments needed to justify the “grades”.

The immediate task for the Graduate Council is to decide how you want to do the grading. Do you want to appoint a committee to do the grading or do it as a group or..?

When are the grades due? Yesterday!! Or more realistically within a month.

Chapter 4 –Effectiveness and Improvement

Core Theme Evaluation

Core Theme #1—Undergraduate Education

Core Theme #2 –Graduate Education and Research

Core Theme #2—Evaluation—Executive Summary

Oregon State University is a Carnegie Doctoral/Research-Extensive University with Very High Research Activity. It is one of only two land, sea, space and sun grant universities in the United States. As such Graduate Education and Research are essential components of what Oregon State is.

To evaluate our effectiveness in Graduate Education and Research, we have selected four Objectives for our efforts in Graduate Education and Research. They are: (1) Provide high quality and rigorous graduate education and professional programs. (2) Engage in a broad range of scholarly, artistic and research-related activities (3) Foster a creative and collaborative intellectual culture within the University and beyond and (4) Demonstrate measure-able economic impacts within Oregon and beyond.

In the first three objectives we judge our efforts as **Satisfactory** while we judge our efforts towards Objective 4 as **Superior**.

Objective 1.—Grade: Satisfactory

Rationale for Satisfactory Grade

For Objective 1, we recognize that at the cornerstone of a research university, one must find rigorous graduate education and professional programs. The graduate and professional students are essential products of our research enterprise. Their training and development helps to meet the manpower needs of Oregon, the Pacific Northwest, the U.S. and the world. To contribute effectively to research, our students must be of the highest quality and must be challenged to produce their best. Based upon our institutional indicators for Objective 1, we note that our graduate students constitute about 15% of the total student enrollment with 34% of these being doctoral candidates.

Compared to our peer institutions, both of these numbers are low with our peer institutions averaging 20% of the total student enrollment being graduate or professional students and 60% being doctoral candidates. We are engaged in an aggressive program to address these problems with goals of achieving 20% graduate enrollment by 2014 (4100 graduate students). This program will result in an increase of 900 in the number of graduate students. To achieve this goal, we must also increase the ratio of (PhD candidates /graduate faculty) to 2/1 by 2014 and eventually reach a goal of 3/1.

These graduate students are somewhat limited in their geographic origin with 50% being from Oregon, 25% from the U.S. outside of Oregon and 25% being international in origin. (2002 data). We are now seeking to increase the number of international students through a new cooperative initiative with the INTO organization.

Currently about 9 of our 80 graduate programs are ranked in the top third of programs within their discipline within the U.S. This is consistent with our status as a Tier 3 national public university.

Our professional programs are very successful in preparing students for careers in education, veterinary medicine and pharmacy. Over 90+% of our graduates successfully complete licensure examinations in their chosen area. The OSU median score on these examinations is 67% which is substantially above the national median score of 50%.

In summary, we believe these indicators support a “grade” of **Satisfactory** with respect to Objective 1.

Objective 2.—Grade: Satisfactory

Rationale for Satisfactory Grade

To be a research university, we (students, and faculty) must be deeply involved in scholarly activity. Research involves original significant contributions to knowledge and we can’t make those contributions from the sidelines. Scholarly activity is measured in a variety of ways, including the traditional publications in peer-reviewed journals, book authorship, public performances and exhibitions, etc.

OSU faculty published xxxx articles in the refereed literature in 2009-2010, authored yy books, edited zz journals and were granted qq patents.

Material Science Graduate Program Follow-up review
April 23, 2010

I met with the Materials Science Graduate Program Director, Bill Warnes, in his office in Dearborn hall on April 23, 2007. We reviewed the recommendations of the program review team from Spring 2007. Dr. Warnes provided the attached update to the action plan for Materials Science (Mat Sci) and highlights of the program in the intervening three years.

Looking back at the original action plan, the School of Mechanical, Industrial and Materials and Manufacturing Engineering continues to be very supportive of the Materials Science program, providing administrative support and 0.2 FTE for the Director.

Significant steps taken by the program since the review include:

1. The addition of 19 new faculty, all outside of Mechanical Engineering.
2. A resolution by the Chemistry department to treat Mat Sci students as full members, allowing them to hold Chemistry GTA positions.
3. The establishment of a uniform qualifying exam.
4. Establishment of an online application and faculty distribution system for evaluation of applicants.
5. Faculty and grad student barbecue events and regular faculty meetings.

The program took the recommendations of the review team seriously and implemented significant changes to the program as detailed above and in the attachments. However, one item remains uncompleted. The program did not complete the required student surveys prior to the review team visit in spring 2007 and promised to do so by the follow-up review. The surveys have still not been done.

Finally, as with most interdisciplinary graduate programs at OSU, there continues to be confusion regarding who gets "credit" for advising a Mat Sci graduate student. For example, Wood Science requires that all Mat Sci grad students who conduct thesis research in their department complete a dual degree as a means of accounting for the support of those students. This seems an unnecessary burden for the students and an issue that continues to need to be addressed at the university level.

Prepared by: T. M. Filtz, Ph.D., College of Pharmacy

**Action Plan for the
MATERIALS SCIENCE GRADUATE
DEGREE PROGRAM
Oregon State University
August 2007**

Bill Warnes, Director of Materials Science Graduate Program
Mechanical Engineering Dept., X7-7016 WarnesW@engr.orst.edu

REVIEW COMMITTEE OVERVIEW:

The committee was impressed with the overall quality of the Materials Science Program. Over the past two years, the Program has begun to regenerate itself with new leadership under Bill Warnes, new core faculty in Mechanical Engineering, enthusiastic support from the Department Head of Mechanical Engineering (Belinda Batten), faculty who want to participate in the Program, and a strong cadre of graduate students who identify themselves as being in the Department of Materials Science. The Deans of the Colleges of Engineering, Forestry, and Science all said the Program is strategic for their colleges, and for OSU. Materials Science is poised to benefit from the rebirth of the shared instrumentation facility OSUMI (Oregon State University Materials Institute) and the nanoscale science initiative ONAMI (Oregon Nanoscience and Microtechnologies Institute).

This review committee unanimously recommends the Program continue. Today the indicators for the Program generally point in the positive direction. This report outlines the Program's strengths, enumerates what we perceive to be the challenges the Program faces, and makes specific recommendations we believe will strengthen the Program to keep the indicators positive in the future. We believe the Program can continue to improve, but if it is to become a strong, truly cross-college interdisciplinary Program, important issues need to be addressed and resolved. Some of these can be solved at the Program level, but others are systemic to interdisciplinary programs and can only be resolved at the College and Graduate School levels.

GRADUATE COUNCIL ADDENDUM:

At the June 7 Graduate Council meeting, a motion was made and seconded to approve the Materials Science Graduate Council Review Report with a three part addendum, that added:

- A recommendation that the directorship be increased to at least .25 FTE.*
- Recognition that the decision whether or not to move the program to the Graduate School remains with the program faculty.*
- A recommendation that alternative business models be explored*

ADDRESSING THE SPECIFIC RECOMMENDATIONS:

1. *An administrative staff person should be assigned to the Program.*

Response: Materials Science shares administrative staff with the School of Mechanical, Industrial, and Manufacturing Engineering in the College of Engineering. Given the small number of graduate students in the Materials Science graduate program, this is unlikely to change. We will develop a clear set of contacts for graduate students for dealing with administrative issues and have these posted on our website.

- 2.a. *The Program faculty members are encouraged to hold a series of retreats to discuss the issues of administration, developing a committee structure for the Program, and examining the new curriculum.*
- 2.b. *The Program faculty members should begin to meet regularly.*

Action Taken: The Materials Science faculty held a faculty meeting on May 29, 2007 to discuss the Graduate Program Review and vote on a new curriculum. The meeting was held over lunch and attended by 14 of the 35 faculty members with all three Colleges represented. The principal result was the adoption of a new graduate curriculum plan that has been in development over the past two years. The faculty voted to have the new curriculum apply to the incoming students (Fall 2007). We have also decided to meet once each term as a faculty in addition to several social events including both faculty and graduate students.

3. *Students should be included on some Program committees to get their input.*

Response: As the committee structure develops, graduate student input will be sought for all relevant issues. This is informally done now, and we will develop a formal process for inclusion of graduate students in critical discussions.

4. *The Materials Science Program's self-study omitted important assessments of student experience that are expected by the OSU graduate council. The Program should complete the required survey of current students and present an analysis of the data, along with a plan for on-going programmatic assessment as part of the required two-year Program Review follow-up.*

Response: The Program Director accepts responsibility for not completing this part of the review. It will be completed in the review follow-up.

5. *The Program should create a series of required courses that is part of the first year curriculum and is taught by Materials Science faculty members from each of the three colleges. The goals of this series of courses are to introduce the students to the breadth and perspective of materials science in Engineering, Science, and Forestry, to create a unique experience that defines materials science, and to have a forum to discuss critical issues as research methodology and ethics.*

Action Taken: The newly approved graduate curriculum addresses all of these issues and is in place starting Fall term 2007.

- 6.a. *The Program should be moved so it is under the direction of the Graduate School.*
- 6.b. *Addendum: Recognition that the decision of whether or not to move the program to the Graduate School remains with the program faculty.*
- 6.c. *Addendum: A recommendation that alternative business models be explored.*

Response: This question of how to administer the graduate program will be addressed this year (2007-08) in the first two of our planned faculty meetings. There are several models for inter-disciplinary degree programs on campus, and other examples around the country, each with it's own set of advantages and disadvantages. The Materials Science Faculty will work to determine the best course of action for the program. Now that the curriculum is in place, this is the highest priority action item for the faculty.

- 7.a. *The Program should have a Director and two co-Directors, one from each college, so each director can advocate for the Program in their home college.*
- 7.b. *Addendum: A recommendation that the directorship be increased to at least 0.25 FTE.*

Response: Historically, only ME faculty have been given teaching release or support for taking on the role of program director. This has typically been at the level of one course release per year. The Materials Science faculty support the spirit of the recommendation, and in the present climate of higher education funding, anticipate significant difficulty in achieving these goals. A request will be made for co-directors from the colleges of Science and Forestry during our first faculty meetings.

8. *OSU should examine its current model for allocating GTA funds. The current model, which is ubiquitous in the US, has the unfortunate effect of making students in interdisciplinary programs like Materials Science second class citizens when they compete for GTAs. The underlying issues that need to be*

addressed are whether the Oregon state funds used for GTA positions “belong” to each individual department and if these funds can be earmarked exclusively for a department’s graduate students. Or do departments need to advertise their GTA positions and hire the OSU student who is most qualified for a specific GTA independent of the student’s home department or program?

Response: The faculty in the program agree with this analysis of the difficulty in funding GTA’s for interdisciplinary programs, and are working to develop solutions to student funding. Ultimately the GTA appointments will be controlled by the departments offering the courses, and will therefore be out of the direct control of the Materials Science program.

CHALLENGES:

The challenges are presented progressing from those for the smallest unit – the Program – to the largest unit – the University – and ending with the students. Often the challenges are at multiple levels, in which case they are first mentioned in the smallest unit. The rationale for categorizing the challenges this way is to attempt to identify the level where they need to be addressed.

The Program

9. *As previously mentioned, a strength of the Program is the close proximity of the core Mechanical Engineering faculty offices, labs, and students. These core faculty members see each other almost daily and meet informally on a regular basis to discuss Materials Science issues. Although this has been very positive in reinvigorating the Program, it creates a challenge for faculty outside the core to feel enfranchised in the Program, particularly when all the faculty members in the Program have not met formally for several years. The challenge is to make faculty outside Mechanical Engineering feel enfranchised and want to actively participate in the Program.*

Action Taken: The Materials Science faculty held a faculty meeting on May 29, 2007 to discuss the Graduate Program Review and vote on a new curriculum. The meeting was held over lunch and attended by 14 of the 35 faculty members with all three Colleges represented. We have decided to meet once each term as a faculty in addition to several social events including both faculty and graduate students. A research seminar course has been organized during the past two years to bring faculty from across campus and outside of campus to meet with all the Materials Science graduate students. This has been a very successful and positive addition to the program, and has been formalized as a 1 credit course offering for graduate students. Attendance by faculty outside of ME has been good and will continue to grow. We also expect the materials science website will act as a “home” for faculty, with secure pages for information, schedule pages,

advertisements for thesis defenses and seminar presentations, and open research positions.

10. *The self study indicated the Program is perceived as belonging to Mechanical Engineering. This is due to the core faculty being in ME and identifying themselves with Materials Science, the center of gravity (offices and labs) of the Program being in an ME building, ME providing some administrative staff support for the Program, ME providing some TA support for Program students, and the Program's core courses being mainly ME courses taught by ME faculty, and Program students being recruited through Engineering's recruiting event. The challenge is to make this a truly interdisciplinary program with cross-college support.*

Response: This is possibly the biggest impediment for the program for continued growth. The history of the program shows that the domination of the program by ME faculty and students has diminished significantly over the past 15 years, but the perception of the program being an ME program continues. We are committed to making the program as interdisciplinary as possible. Several actions we have planned that will help with this issue are:

- Identifying students as belonging to the College of their major professor. At present, all Materials Science students are coded as College of Engineering students, even though their support and major professor may come from the College of Science or Forestry;
- Continuing to develop cross-disciplinary "Focus Tracks" as part of the graduate curriculum. Presently we have one such track in polymeric materials, which was developed largely by the faculty in the Wood Science and Engineering Department (College of Forestry), and the Chemical Engineering Department (College of Engineering). A new focus track in nano-scale materials involving the Colleges of Science and Engineering is planned for this academic year;
- Improving the review process for applicants to the program to provide faculty outside ME with better access to the applicant files will help broaden the recruiting and funding opportunities for potential students and improve the perception of program within OSU;
- Developing additional coursework within the core courses that will be taught by faculty outside ME. At present, we offer a graduate laboratory course (ME555: Experimental Techniques in Materials Science) which is designed to be team-taught by faculty from all disciplines and provide exposure to a broad variety of experimental facilities on the OSU campus.

11. *There is little in the Program that brings all the students together and sets them apart academically as Materials Science students. The challenge is to identify what defines the Materials Science Program and to orient the students about the various aspects of Materials Science across the campus.*

Action Taken: The new graduate curriculum addresses this in several ways. Firstly, the core courses will provide a uniform introductory course experience for all entering students. This common core in the first year will help students establish a sense of community and develop contacts within the University. Secondly, the research seminar provides a weekly meeting point for students and faculty with a principle focus on the materials research occurring at OSU; and finally, the graduate laboratory course will provide access to experimental facilities at OSU from a variety of departments across campus

12. *The Program's curriculum is currently in a state of significant transition. The Program has developed a new core curriculum, but approving then implementing all the courses associated with the new graduate curriculum is still a long way off. The challenge is to make sure that all Program faculty have had input into the new curriculum and to make it happen.*

Action Taken: The new graduate curriculum was approved by all Materials Science faculty and is in place for students entering the program in Fall term 2007.

13. *The Program takes in students from a wide range of disciplines and has a common set of core courses to give them the same background materials. However, it has individualized preliminary exams that do not specifically test the core material. The challenge is to create a standard metric for competency on the core material.*

Response: This is a critical issue for students to have a uniform experience in the Materials Science program. It will be the subject of our first faculty meeting of 2007-08, and a solution will be sought during this next academic year. It is, of course, a somewhat knotty problem because of the differences in the philosophy of participating faculty and departments as regards the utility and purpose of the preliminary and qualifying exams.

14. *The Program's curriculum encompasses a large number of 400/500 ("slash") courses. The challenge is to define what constitutes a graduate education.*

Action Taken: The new graduate curriculum does not have this difficulty as all the core courses are now graduate level only.

15. *Information about the Program is very difficult to find on the web. The challenge is to develop a web presence that is easy to find and navigate, and that gives as much information as possible about the Program.*

Action Taken: A web site has been developed and put on-line in the spring of 2007. The site will continue to expand and include more information about the program. We have requested all University and Departmental websites provide links to this website as appropriate. The address for the program website is:

matsci.oregonstate.edu

16. *The Program has a goal of increasing its “diversity and interdisciplinary participation of students and faculty in the education and research missions of Materials Science”. The challenge is to make this happen.*

Response: Because our numbers of students are small, drawing conclusions from them is a little dubious. Over the five years of the Graduate Review (2002-2007) 25% of the admitted students were female (from a pool of applicants that was 20% female). We have not done a similar analysis based on ethnic background. While we clearly need to work on attracting more underrepresented applicants to our pool, we have been active in bringing those who do apply to the degree program. The bigger question of increasing the interdisciplinarity of the program will continue to be a focus of faculty discussions, probably indefinitely.

Departments

17. *Do the Program students “belong” to ME where most of the graduate courses are currently taught? Or do the Program students “belong” to the department in which they are conducting their thesis work? The problems are:*

- Some faculty outside ME were concerned that their department does not give them credit for advising and supporting Program students.*
- Some departments outside Engineering were concerned that they would not get credit from their college for Program students working with their faculty members.*

The challenge is to give the faculty members and departments as much credit as possible for educating graduate students.

Response: At present, all students are automatically designated as belonging to the College of Engineering when they are accepted into the Materials Science graduate program. This has several disadvantages;

- some Colleges allocate budget resources based (partly) on the number of graduate students in the degree program. This provides a disincentive for some faculty to participate in the program by supporting students getting a Material Science degree;
- College of Engineering students pay a large resource fee each term, even if their major professor and laboratory work are conducted in another College. This provides a financial disincentive for students outside the College of Engineering to become Materials Science students.

We have begun conversations with the Graduate School and the Admissions office to have students in the program identified as “belonging” to the College of their major professor. This will help to clarify where the student support is generated and will help to engage more faculty and students in the program, but it is not yet clear how this can be done without individually changing each student record by hand.

18. *Courses are created at the department level and instructors for the courses are assigned by the department in which the course is taught. This creates problems because:*

- *New faculty have brought new areas of research interest, new or upgraded laboratory facilities, and expanded scientific expertise. Over time, they will want to develop new courses in these areas. Currently, any new course is created by a faculty member within a department. As such, it is difficult to develop a course specifically for the Program, as the course has to satisfy the academic needs of students in the department as well as those of the Program students for whom it is being created.*
- *Courses in one department are typically taught by faculty members within that same department. Cross department teaching is not common, which makes it difficult for faculty outside ME to teach core courses.*

The challenge is developing a mechanism to create new courses for the Program and to have faculty from one department teach courses in another department.

Response: This is a concern common to any interdisciplinary program, and it is unlikely to be solved without large additional resources for instructional support. However, the very interdisciplinary nature of the Materials Sciences provides the context for additional learning and connections that is possible when taking a course in another discipline. Examining the new curriculum shows that courses from all member departments are welcome components of the graduate program of study. In particular, the development of a “Focus Track” to emphasize the specialized coursework needed for a student’s research. We have so far refrained from cross listing courses so that the Departments originating the course will accrue the Student Credit Hours as a small incentive for making courses germane to the Materials Science program.

19. *A college gives GTA funding to specific department and that department preferentially gives the GTA positions to that department’s graduate students. Program students working with a faculty member outside ME are almost always second in line behind the department’s own graduate students for departmental GTA support. The challenge is to find a mechanism whereby Program students are not “second class” citizens with respect to GTA support.*

Response: This is unlikely to be changed without substantial additional funding for GTA’s across the campus.

Colleges

20. *None of the three colleges provide direct support to the Program. All the support at the college level is indirect, as described below. Engineering provides the most support, which it does indirectly through Mechanical Engineering. ME has chosen to provide support to reduce the Program director's teaching load by 1 course per year – from 5 to 4 courses per year - and by providing some administrative support. Engineering also provides indirect support for the Program because many of the Program's core and other courses are taught by engineering faculty members. Science and Forestry both provide a small amount of indirect support through courses Science and Forestry faculty teach that are taken by Program students. The challenge is to get all colleges associated with the Program to contribute direct support to the Program.*

Response: See remarks above (comment 7).

21. *Previously we noted that not all faculty members are rewarded by their department (or colleges) for participating in the Program. This translates to their department and college missing an opportunity to publicize that they have greater breadth because of having a faculty member who participates in the Program. The challenge is for departments and colleges to augment their academic reputation from having faculty participate in the Program.*

Response: We believe this will change as the program becomes more successful and faculty are vocal in their support of it.

22. *Students in the Program are confused where they needed to go for academic and administrative issues, so they go to their advisor. The Program students need staff support for academic and financial issues. The challenge is to make administrative portion of graduate school as painless as possible for the graduate students.*

Response: We are working on a more streamlined and clear process for graduate students, which will include an improved web presence and better separation of the graduate process from that of the ME Department.

University (including the Graduate School)

23. *The University needs to learn how to manage cross-college interdisciplinary programs. The challenge is to broaden compartmentalized issues inherent in a college/department structure to serve programs such as Materials Science that flourish across traditional department and college boundaries.*

Response: Many of the faculty in the Materials Science program are anxious and willing to take on these broader issues for the University about interdisciplinary programs at OSU. We would certainly be interested in helping to determine the University's role in supporting cross discipline programs.

Students

24. *Many students have limited funding and if their advisor is outside ME, they are often not in the top tier to be considered for GTA funding by their advisor's home department. This was mentioned previously, but is such an important factor in attracting and retaining students that our concern is reiterated here. The challenge is to find a mechanism that allows Program students to be eligible for GTA positions.*

Response: This issue will ultimately be determined by the major professor and the Department to which the major professor belongs. Outside of developing additional fellowship and scholarship funding specifically for Materials Science students, there is little the program can do to affect this point of view.

25. *One department (Wood Science) encouraged students to do a double major. This appears to have been due to OSU's earlier budget allocation model in which departments benefit by the number of students enrolled in the graduate program offered by the department rather than in interdisciplinary programs. The challenge is minimizing the time to graduation while maximizing the student's mastery of their chosen field.*

Response: This isn't a unique situation to Wood Science and Engineering. We believe that this situation has been changing, but must be solved by the faculty in the Wood Science and Engineering Department and their administration.

26. *As previously mentioned, the students are sometimes confused who they should see about administrative and financial issues. Currently they go to their advisors. The challenge is to provide an administrative structure that Program students can readily identify as being there to help and guide them.*

Response: See remarks above (comment 22).

27. *As mentioned above, there is little in the Program that brings all the students together and sets them apart as Materials Science students. The challenge is to provide students who have a wide variety of backgrounds and will work for faculty members in at least three colleges with a unifying experience in their first year in the Program.*

Response: See previous remarks (comments 11, 12, 13).

-END-

**UPDATE to Action Plan for the
MATERIALS SCIENCE GRADUATE
DEGREE PROGRAM
Oregon State University
April 2010**

Bill Warnes, Director of Materials Science Graduate Program
Mechanical Engineering Dept., X7-7016 WarnesW@engr.orst.edu

SUMMARY OF ONGOING RESPONSES TO GRADUATE PROGRAM REVIEW RECOMMENDATIONS (Spring 2007)

Rec 2: Regular Meetings of Faculty: We have met twice each year for formal faculty meetings (see Highlights) and Committee meetings.

Rec. 4: Survey of current students: This has still not been done. Lack of time and supporting personnel has pushed it to a lower priority.

Rec. 6: Alternative business models be explored: Several faculty meetings have determined that present structure is working well and there is no desire for radical change. It is desirable to have students formally identified with the home department of major professor in University/Grad School records. No progress on this front, as it is a Banner issue. A new joint research initiative will create some opportunities for restructuring the academic program in the future.

Rec. 7: Director supported to at least 0.25 and add co-Directors: The Director position continues to be supported by the School of MIME at a 0.20 FTE. A co-Director was added from Wood Science and Engineering in 2008. Increasing the frequency of faculty meetings has reduced the need for co-Directors, and these positions have not been filled in the past two years.

Rec 10: Decrease appearance of being an ME program and increase interdisciplinary nature: Growth of Materials Science faculty (see Highlights) has been entirely outside of the ME Department, and the number of Materials Science students supported by faculty outside ME continues to rise. The addition of a course designation for Materials Science courses (MATS) has reduced the emphasis on ME in the coursework and provides a cohesive Materials Science curriculum visible from outside the University.

Rec 13: Develop consistent qualifier and preliminary exams for all Materials Science students: This was completed in the Faculty meeting of April 2008 (see Highlights).

HIGHLIGHTS OF MATERIALS SCIENCE PROGRAM SEPTEMBER 2007-APRIL 2010

Number of Students: Enrolled: Applicants:
Fall 2007: 22 S08 for F08: 51 (9 accepts)
Fall 2008: 24 S09 for F09: 40 (17 accepts)
Fall 2009: 30 S10 for F10: 55 (10 accepts)

Degrees Awarded:
2007-08: 2 MS, 4 PhD, 1 MS-minor
2008-09: 5 MS, 3 PhD, 2 MS-minor, 1 PhD-minor
2009-10: 4 MS, 1 PhD (not complete list)

Number of Faculty:
March 2007: 28
March 2008: 38
March 2009: 43
March 2010: 47

Materials Science Faculty Meetings and Faculty/Graduate Student Mixers:

Oct 17, 2007: Faculty Meeting (13 attended out of 38)

Outcomes:

Students should be identified by home department of advisor.
On-line application process developed
COE fee remission agreement for non-COE students

Oct 29, 2007: Faculty sub-committee to design “Nano-materials” graduate track course requirements.

March, 2008: Resolution to treat Materials Science students as full members of the Chemistry department approved by Chemistry Faculty. This allows Mat Sci degree students working in Chemistry to occupy Chemistry GTA positions, as is presently the case in other member departments.

April 9, 2008: Faculty Meeting (15 attended out of 39)

Outcomes:

Established uniform qualifier requirement
Approved the “Project” MS degree (a non-thesis option)
Discussed the prelim exam process

June 10, 2008: Faculty and Grad Student BBQ, Avery Park
Awarded the “Ralf Busch Best Seminar” award for 2007-08

October 16, 2008: Faculty and Grad Student BBQ, Avery Park

April 7, 2009 Faculty Meeting (16 attended out of 43)

Outcomes:

Approved Graduate minor in Materials Science

Approved concept of MATS cross-listing course designator

PhD Prelim exam rules approved

Rules for thesis committee make-up approved

June 4, 2009: Faculty and Grad Student BBQ, Avery Park

Awarded the “Ralf Busch Best Seminar” award for 2008-09

June 18, 2009: Materials Science Curriculum Development Meeting

October 29, 2009: Faculty and Grad Student BBQ, Avery Park

November 13, 2009: Faculty Meeting (18 attended out of 45)

Outcomes:

Alternate thesis format requirements discussed

Future Plans/Research Collaboration Discussion

Materials Science Student and Faculty Kudos: (A partial list)

2007-2008:

Yu-Hong Jeon and Jin Zeng: Oregon Laurels Grad Fellowships

Minal Shah: First Place Presentation, Oregon ASM International Student Night Competition

Chien-Chih Huang: Third Place Presentation, Oregon ASM International Student Night Competition

Kyle Rozman and Noon Prasertpalichat: Targeted Graduate Tuition Scholarships

2008-2009:

Eric Patterson: ARCS Scholarship Award

Chris Shelton: Best Poster Award, American Ceramic Society

Associate Professors Jay Kruzic and Bill Warnes: Erasmus Mundus Faculty Scholarship Awards

Eric Patterson: 2009 Communication Chair of the Presidents Council of Student Advisors, American Ceramics Society

Morgan Emerson: First Place Presentation, Oregon ASM International Student Night Competition

Max Launey (Mat Sci alum): Dec 2008 publication in SCIENCE

Associate Professor Jay Kruzic: OSU Promising Scholar Award

2009-2010:

Associate Professor Jay Kruzic: Arthur Hitsman Faculty Scholar Award

Eric Patterson and Noon Prasertpalichat: Members of the Presidents Council of
Student Advisors, American Ceramics Society
Yi Liu: Newly appointed Director of OSU Electron Microscopy and Imaging
Facility

Report of the Graduate Council Review of the Entomology Program

The graduate Entomology Program offers MS and Ph.D. degrees in Entomology. It is housed in the College of Agricultural Sciences but is an interdisciplinary program involving faculty, staff and students from the Colleges of Agricultural Sciences, Science and Forestry. (The program also offers an undergraduate minor in Entomology although that effort was not part of this review). The program is said to involve 13 graduate students working with 22 faculty who call themselves "entomologists" who are spread throughout the University. (The Entomology web site lists seven students as entomology majors and five students with Crop and Soils Science or Horticulture majors or no major).

The graduate Entomology Program was last reviewed in 1996-97. A Graduate Council program review was scheduled for 2006-07, postponed until 2008-09 and postponed again to Spring 2010. The Spring 2010 review was to take place on 4 June, 2010. External reviewers were engaged for the review. Approximately two weeks before the scheduled review, the Graduate Council was informed that the Entomology Program would not prepare a self-study for the review. On 19 May, Dean Fisk, W. Loveland (Chair of the Graduate Council) and Professor P. McEvoy, representing the Entomology Program, met to discuss the situation.

Prof. McEvoy presented some data on the graduation rates for the program. In the last five years, the program has granted 4 MS degrees and 7 PhD degrees in Entomology. An additional 14 MS degrees and 11 PhD degrees were granted in cooperating departments like Horticulture, Forestry, etc. by faculty who call themselves entomologists but who prefer to have the degrees be in Horticulture, Forestry, etc. Dean Fisk suggested, based on the two postponements of the review, the absence of the self study, and the entomology graduation rates that the Graduate Council could recommend that no new students be admitted to the program and the program be terminated. Other possible options and directions for the program were discussed. For example, we know that at least two Colleges are planning new re-organized units/schools/departments with the words "insect science" in their titles. Would the Entomology Program fit in those units? The Entomology program indicated they have no interest in joining any of these re-organized units and would prefer to remain an interdisciplinary program in Ag.

The Graduate Council discussed the situation by email with a lively discussion taking place. The Council agreed unanimously that: (a) it made no sense to continue with the scheduled graduate program review without a self-study, (b) it recommends that the graduate program in Entomology be terminated, and (c) until the fate of the graduate program in Entomology is determined, that no new students be admitted to the program. In making recommendations (b) and (c) above, the Council supports the opinion of Dean Fisk that the program does not meet current standards for viable, sustainable graduate programs in view of the low graduation rates. The apparent lack of interest of the Entomology program faculty in exploring alternate paths for their program and their lack of cooperation with the review process does not bode well for the future of the program.

As part of the graduate program review process, the program being reviewed is asked to provide an "action plan" to deal with the recommendations of the review. The Graduate Council hopes that, in the development of this action plan, a more thorough examination of this program can occur.

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☐ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☒ **XX** Rename of an academic program or unit
- ☐ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Title of Proposal:

Effective Date:

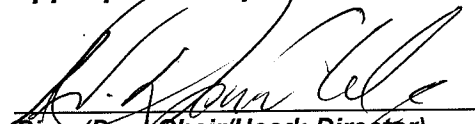

"Rename Department of Fisheries and Wildlife" to
"Department of Fisheries, Wildlife, and Conservation Biology"
Department/Program: College:

As soon as approved

Fisheries and Wildlife

Agricultural Sciences

I certify that the above proposal has been reviewed and approved by the appropriate Department and College committees:

Proposal for Academic Program Name Change

Institution: Oregon State University
College/School: Agricultural Sciences
Department/Program: Fisheries and Wildlife

1. Program Description

a. Proposed Classification of Instructional Programs (CIP): 03.0101

b. Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.

We propose to change our name from the “Department of Fisheries and Wildlife” to the “Department of Fisheries, Wildlife, and Conservation Biology” to better represent to the university, students and public the nature of our mission. Across the country, departments such as ours were created to train students to manage the harvest of game and commercial species. Relatively speaking, the world and the Oregon of yesterday were much richer in fish and wildlife resources. Now, the world and Oregon are rapidly deteriorating because of high human population growth rates, and its attendant problems. Over the last 30 years, we have adapted our research and educational directions to meet these challenges and we have now developed a national and international reputation for work on vertebrate species that are disappearing from the ocean, old growth forests, urban, agricultural, and rangeland land and riverscapes. Virtually all of our faculty are involved in research on species of special interest or concern or at risk of extinction, including; (1) whales, leatherback turtles, and groundfishes in the ocean; (2) marbled murrelets, spotted owls, and red tree voles in old growth forests; (3) amphibians at risk of extinction but needing habitat in agricultural landscapes; (5) endangered suckers of Upper Klamath Lake; (4) diminishing runs of Oregon salmonids; and (5) pygmy rabbits, sage-grouse, and Lahonton cutthroat trout in eastside arid landscapes. Many of our faculty have or presently serve on federal and state teams, task forces and panels involved in conservation issues, like Endangered Species Act recovery planning. This is the short list, but enough to tell you who we are. We are not your father’s Fisheries and Wildlife Department.

We have faculty who use concepts of metapopulation and population genetic structure in their work, and we have people involved with GIS technology to integrate information across land, river and seascapes. GIS technology can be used for developing conservation strategies using interactive maps. For example, our faculty developed the Willamette River Atlas as a means of exploring alternative future states for the planning of the Willamette Valley. Students are exposed to the quantitative tools of demography, as well as qualitative mathematical modeling of community interactions. As a result, our graduate students and faculty are actively involved with the cutting edge areas of biological assessments central to understanding trends and resource status at local, regional, national, and international levels of geographical resolution. Our students have access to hands-on learning at the Hatfield Marine Science Center and the Oregon Hatchery Research Center. The latter is not just a place to learn about hatcheries, but a place that tests important questions about evolution, adaptation, genetics, and ecology and where the question always remains that a judicious use of any tool must always be tested and challenged.

The lessons we learn from research are extended to the students in the classroom. We offer a B.S. degree in Fisheries and Wildlife Science, M.S. and Ph.D. degrees in Fisheries Science or Wildlife Sciences and a graduate certificate in Fisheries Management. The students in these programs are encouraged to think more about management of ecological communities, rather than single, targeted species. Students learn how abundance, distribution, and genetic structure influence species persistence. In short, the principles and techniques of Conservation Biology are central to our curriculum.

There is a growing awareness of the importance of this field. The world needs more conservation biologists. Within the past two years, both the Oregon Department of Fish and Wildlife and the Washington Department of Fish and Wildlife have recast their mission towards biodiversity, ecological community management, and conservation. We specifically recruit and train the type of employee they seek. Likewise, there is a growing demand for our students from conservation oriented NGO's and private consulting firms. Youth are very attracted to this field because they sense its urgency and importance to the planet. Already five well recognized Fish and Wildlife programs, U.C. Davis, University of Florida, University of Minnesota, Colorado State University, and New Mexico State University, have added "Conservation" or "Conservation Biology" to their names. We should do likewise, as it announces that our department will retain its leadership at the forefront of the discipline. To remain the best, we have to recruit with the best.

c. Course of study – proposed curriculum, including course numbers, titles, and credit hours.

Not applicable to name change proposal—We are not proposing to change the curriculum or name of any of the degrees, minors or certificates we offer.

d. Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).

We offer all of our degrees on campus and have 31 undergraduate and 12 graduate classes developed for on-line delivery. Starting Fall 2009 we began to offer our B.S. on-line and we currently offer our graduate certificate in Fisheries Management on-line. We also offer an intensive field-based term of study at Hatfield Marine Science Center in the fall and our some courses are also taught for the Agricultural Program at Eastern Oregon University and on the Cascades Campus.

e. Ways in which the program will seek to assure quality, access, and diversity.

Academic program quality is assured with our Learner Outcome Assessment plan (<http://fw.oregonstate.edu/pdfs/FWDraftAssessmentPlan.pdf>) for our B.S. degree and for our graduate students by our Annual Graduate Student Assessment of progress (http://fw.oregonstate.edu/Graduate%20Information/annual_evaluation.htm). We also conduct a statistical survey of all graduates every three years. The 2009 survey is available at: <http://fw.oregonstate.edu/pdfs/Surveyofgraduates09report.pdf>. Quality of our research program is assured by the number of publications in national and international journals and competitive grants that faculty and students produce. The Chronicle of Higher Education most recent survey of Ph.D. program productivity (<http://chronicle.com/stats/productivity/>) ranked our Wildlife Science Program number one in the nation and our Fisheries Science program

number two in the nation. The Oregon University System only had one other number-one-ranked program (UO School of Psychology) and no other number-two-ranked programs.

We have no restrictions on our B.S. majors and our recent addition of a BS degree on-line substantially increases access to that program (~75 new majors the first term). Access to our graduate degrees is restricted by the number of students we can support on Graduate Research Assistantships or Graduate Teaching Assistantships; no students are accepted without some form of support. Access to graduate classes is also enhanced by our on-line classes.

Diversity is major issue for us because the Fisheries, Wildlife and Conservation Biology professions have historically been staffed predominately by white males. By the end of the 09-10 academic year our department will have a diversity and community enhancement plan. However, we have been actively engaged in enhancing diversity for many years. Nine of our last 15 faculty hires have been women and/or minorities. One of our most recent hires under the Tenured Faculty Diversity Initiative will specifically work on diversity recruitment and retention as part of her position. We have a 2+2 program agreement with Tuskegee University that has significantly increased the number of Black Americans in our program. Furthermore, we have developed an endowed diversity-based scholarship and our block grant for the Oregon Laurels Scholarships designates 50% of those funds to go to underrepresented populations.

f. Anticipated fall term headcount and FTE enrollment over each of the next five years.

The following data are based on an average of the past 5 years with the exception of AY09, which is actual data; we have no reason to anticipate significant changes in enrollments in our programs with the exception of an increase in our on-line BS. We enrolled approximately 75 majors for our on-line program during the first term, but have no way to predict how large it could grow. Our only frame of reference is the number of students in our on-campus BS relative to the on-campus enrollment of Environmental Sciences and Natural Resources degrees, which are also offered on-line. Based on those relative proportions, we might anticipate that our on-line enrollment might increase to approximately 200 majors. Data for M.S. degrees (Fisheries Science and Wildlife Science) and Ph.D. degrees (Fisheries Science and Wildlife Science) are combined.

| Degree | AY09-10 | AY10-11 | AY11-12 | AY12-13 | AY13-14 |
|--------|---------|---------|---------|---------|---------|
| B.S. | 257 | 350 | 400 | 400 | 400 |
| M.S. | 43 | 50 | 50 | 50 | 50 |
| Ph.D. | 38 | 38 | 38 | 38 | 38 |

g. Expected degrees/certificates produced over the next five years.

The following data are based on an average of the past 5 years with the exception of AY09, which is actual data; we have no reason to anticipate significant changes in degrees conferred with the exception of our BS degree on-line (see 1g). Data for M.S. degrees (Fisheries Science and Wildlife Science) and Ph.D. degrees (Fisheries Science and Wildlife Science) are combined.

| Degree | AY09-10 | AY10-11 | AY11-12 | AY12-13 | AY13-14 |
|--------|---------|---------|---------|---------|---------|
| B.S. | 49 | 49 | 60 | 60 | 60 |
| M.S. | 14 | 19 | 19 | 19 | 19 |
| Ph.D. | 9 | 6 | 6 | 6 | 6 |

h. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

The following data characterize our current student body.

| | Total | Residents | Nonresidents | International | Minorities | Older than 25 years | Part-time |
|------------|-------|-----------|--------------|---------------|------------|---------------------|-----------|
| Undergrads | 305 | 279 | 126 | 1 | 41 | 199 | 63 |
| Graduate | 103 | 45 | 58 | 13 | 17 | 98 | 8 |

i. Adequacy and quality of faculty delivering the program.

See statement in 1e above about our national rankings. Furthermore, our program underwent a comprehensive 10-year review in 2007 and received very high marks for our research, teaching, and outreach. Over 95% of our classes are taught by tenure-track faculty members or courtesy faculty; we use very few instructors to deliver our academic programs.

j. Faculty resources – full-time, part-time, adjunct.

The following faculty are tenure-track, research, courtesy or adjunct faculty that currently conduct research, teach graduate and undergraduate classes, or advise graduate students in our M.S. and Ph.D. Fisheries Science and Wildlife Science programs. Vita for faculty members are available upon request.

Department of Fisheries and Wildlife faculty that conduct research, teach undergraduate or graduate classes and advise graduate students.

k. Other staff.

The department has over 20 Faculty Research Assistants, 1 Head Advisor, 1 Internship Coordinator/DE Advisor, 1 Office Manager, 2 Office Specialists, 1 Grants and Contracts Technician, 2 IT support staff, 1 facilities manager/aquaculturist.

l. Facilities, library, and other resources.

Not applicable to name change proposal.

m. Anticipated start date.

As soon as approved.

2. Relationship to Mission and Goals

a. Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.

Our current BS has a relatively large enrollment and our graduate program is among the largest at OSU and thus supports OSU's goals for access and student learning. See 1e above regarding our national rankings based on scholarship and faculty productivity, which are the highest in OUS. Many of our faculty serve on state or federal panels, task forces, endangered species recovery teams, as editors of scientific journals, etc., as well as the normal complement of college and university committees.

b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

OSU's Strategic Plan, Phase II identified science of sustainable Earth ecosystems as a signature area of distinction. Conservation and management of vertebrate organisms is central this signature area. Vertebrate organisms have captured the imagination of the American public and conserving these organisms is a high priority based on national and state policies and funding levels. The name change of our department signals to the public and our colleagues that we intend to stay at the cutting edge of research, teaching and outreach related to sustainability, ecosystem services, ecology and management of vertebrate species, communities and their habitats and ecosystems.

c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

See 1e and 2a above. We train many of the fisheries and wildlife professionals in the state and region and have good to excellent employment statistics (see our survey of graduates cited in 1e). We employ over 350 people on an annual basis with our grants and contracts. Furthermore, fish and wildlife resources, which our graduates manage, have substantial

economic impact in Oregon. Based on a 2008 economic survey ([http://www.dfw.state.or.us/agency/docs/Report_5_6_09--Final%20\(2\).pdf](http://www.dfw.state.or.us/agency/docs/Report_5_6_09--Final%20(2).pdf)) , Oregonians and visitors spent \$2.5 billion dollars per year on fishing, hunting, shellfishing and wildlife viewing activities and equipment. The long-term sustainability of this economic engine is dependent on effective management of these resources.

d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.

See 2c above for ways in which the program meets state's economic capacity. The teaching, research and outreach of the department are central to meeting the state's environmental challenges and opportunities. The science we are engaged in is central to concepts of sustainability, ecosystem services and natural resources management.

3. Accreditation

a. Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.

There is no organization that accredits the degrees we offer. However, the three primary professional societies (American Fisheries Society, Society for Conservation Biology, and The Wildlife Society) all have specific missions and codes of ethics, but these societies do not accredit academic programs.

b. Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.

Both the American Fisheries Society (AFS [<http://www.fisheries.org/afs/certification.html>]) and The Wildlife Society (TWS [http://joomla.wildlife.org/index.php?option=com_content&task=view&id=29&Itemid=234]) have certification programs designed to certify professionals at two levels (Associate and full certification). However, certification is not a requirement for employment in most state or federal agencies. Graduates of our programs generally qualify for certification depending on electives they choose in their programs.

c. If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.

Not applicable—see 3a and 3b above.

d. If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.

Not Applicable.

4. Need

a. Evidence of market demand.

Not applicable to name change proposal but see liaison with students, alumni and stakeholders with respect to support for name change (Appendix B).

b. If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).

Not applicable to name change proposal.

c. Manner in which the program would serve the need for improved educational attainment in the region and state.

Not applicable to name change proposal.

d. Manner in which the program would address the civic and cultural demands of citizenship.

Not applicable to name change proposal.

5. Outcomes and Quality Assessment

a. Expected learning outcomes of the program.

Not applicable to name change proposal but see 1e above.

b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

Not applicable to name change proposal but see 1e above.

c. Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.

Not applicable to name change proposal but see 1e above.

d. Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.

Not applicable to name change proposal but see 1e above.

6. Program Integration and Collaboration

a. Closely related programs in other OUS universities and Oregon private institutions.

There are no closely related programs in OUS. The Department of Fisheries and Wildlife offers the only degrees related to the fish and wildlife professions in the Oregon University System and no degrees are offered in Conservation Biology within the system.

b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.

Not applicable to name change proposal. However, some of our undergraduate classes are required or are common electives in several programs (Environmental Sciences, Forest

Engineering, Forest Resources, Natural Resources, and Rangeland Ecology and Management and Zoology), and our undergraduate minor is commonly taken by students in Environmental Sciences, Forest Resources, and Zoology. Many of our graduate classes are taken by students in Environmental Sciences, Forest Science, Rangeland Ecology and Management, Sustainable Natural Resources and Zoology. Few of our classes are taken by students at other OUS institutions. We have had discussions with other programs on campus regarding developing an interdisciplinary MS degree in Conservation Biology and will continue to pursue those discussions.

c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.

Not applicable to name change proposal.

d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.

We do not anticipate any major impacts to our unit or other units on campus. It may result in a small increase in undergraduate majors that may be attracted to OSU because of the added search term “conservation.” We anticipate increased interest in our graduate programs and the number of potential students contacting our faculty. However, because we discourage students from applying before they have contacted faculty and because we only accept students that can be supported on assistantships (predominately GRAs), we anticipate a small increase in number of graduate applications and no change in the number of students admitted.

We do not anticipate significant impacts on other units. Each year we have 10-15 undergraduate transfers from other programs on campus (predominately from Animal Science, Biology, Environmental Science, and Zoology) after they take one or two of our classes and understand the nature of the science we conduct. It is possible that these students might have selected our program initially with a different name.

There are faculty who do research related to conservation biology all over campus (Agricultural and Natural Resources Economics, Botany and Plant Pathology, Crop and Soil Sciences, Forest Ecosystems and Society, Forest Resources Management, Geosciences, Range Ecology and Management, Sociology, Zoology). Depending on the outcome of reorganization efforts across campus, some of these faculty members may wish to become part of our renamed unit if they feel their research foci no longer fits within the mission of their reorganized units. We have not encouraged these conversations.

7. Financial Sustainability (attach the completed *Budget Outline*)

a. Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.

Not applicable to name change proposal. See Appendix A.

b. Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.

Not applicable to name change proposal.

c. Targeted student/faculty ratio (student FTE divided by faculty FTE).

Not applicable to name change proposal.

d. Resources to be devoted to student recruitment.

Not applicable to name change proposal.

8. External Review (if the proposed program is a graduate level program, follow the guidelines provided in *External Review of new Graduate Level Academic Programs* in addition to completing all of the above information)

Not applicable to name change proposal. However, see external liaison with students, alumni and stakeholders regarding proposed name change (Appendix B).

Appendix A. Budget.

Appendix B. External Liaison Correspondence

Message sent to students, alumni, and stakeholder (state and federal agencies and non-government organizations) in August 2008 proposing the name change.

Dear Colleagues,

The Department of Fisheries and Wildlife at Oregon State University is considering a name change, and as one of our students, alumni or stakeholders, I would like your input. We are proposing to change our name to the Department of Fisheries, Wildlife, and Conservation Biology. There are a number of reasons we are considering this change:

- 1. The additional term "Conservation Biology" is a better description of the research, teaching and outreach efforts of our faculty and a better characterization of the curricula we offer at the undergraduate and graduate levels.*
- 2. We believe the name will be more appealing to today's students because of an increasing interest in conservation as a result of proliferation of media stories and content related to conservation of natural resources.*
- 3. The new name would better differentiate us from Oregon Department of Fish and Wildlife. Although this is a minor justification, we do get a large number of calls each year from people who think they are calling ODFW, suggesting confusion among the public about the respective roles of these two agencies.*

The idea of a name change has enthusiastic support among our faculty, but I want to check with you, our stakeholders. Please send me any comments you would like to offer by 31 August.

Summary of responses regarding department name change

| | Pro | Con | Mixed |
|-------------|-----|-----|-------|
| Students | 21 | 5 | 2 |
| Alumni | 17 | 7 | 6 |
| Stakeholder | 13 | 9 | 1 |
| Total | 51 | 21 | 9 |

Comments by group. Note, many stakeholder are also alumni. In those cases we tried to put them in a group based on the perspective they presented (my department vs agency). We removed the names from the students' comments to protect the innocent. Some of the alumni and stakeholders only signed a first name or had no signature and we could not tell from the address who the comment was from. At the end of the comments is a list of the alternative names suggested.

Students (names removed for confidentiality)

I am in full support of the name change. I agree with the points that you made, and I feel that not all the fish geeks in our department are involved with fisheries. As a matter of fact I think that there are more students on the fish side that are interested in non-fisheries related studies

than fisheries related ones. I think the name change will have a positive impact for the future of the department.

Since you do not foresee a name change on the degrees, then I am all for the name change of the department!

I think it sounds amazing and I'm all for it, longer titles are cool!

I think the name change is a great idea. I believe that any time we can educate the public, especially with a new keyword in the title of our department, greatly reflects what we are doing. We need to get the word out about conservation. Another positive about changing the name is that we won't be stereotyped as JUST hunters and fishermen to the public.

Thank you for the opportunity to voice my opinion in this manner. I am excited to hear about the proposed name change for our department, and think it accurately represents much of the work that we are involved in. I know some other students have made comments to the tone of, "what's the difference", but I see this as a huge change in the philosophy of science conducted by our department.

I am currently writing my Master's thesis and have struggled with the communication of conclusions/inferences from my work. As a graduate student I have learned the foibles of advocacy in science, and have struggled in presenting my work from a conservation standpoint. I am passionate about my subject and find my writing much more inspired when I feel that this department supports my conservation ethic. Historically this department (and our field of study) has catered to resource managers trying to harvest for sustainable yields. I view myself as an ecologist and conservation scientist, not a fisheries manager, and am glad to see the new approach our department is considering. In light of this recent report on the quality of conservation science coming out of Oregon State University, I believe now would be an excellent time to capitalize on this publicity. I believe changing our department's name to "Fisheries, Wildlife and Conservation Science" will facilitate the continued recognition of our department nationally, and will further aid the recruitment of bright, young, future scientists into the OSU family.

Thank you for seeking feedback. I appreciate it as I am about to earn a degree from this department! My vote is to NOT include the word conservation in the department name. I feel that this imparts an air of advocacy to our department that may lead others to challenge the credibility of the science we produce. I will temper that position by adding that I agree with point #3 in your email and support that perspective.

I think that this would be a good change to the department. For someone that is new to the university their initial impression by the title may be that this department is solely focused around fish and game management as I did when I first became a student at OSU, this turned me off a bit from it. After I looked into the department further and have experienced the courses the department has to offer my view has completely changed. Also, since we are able to choose a specialization that is unique to the individual we are able to take classes from other

departments that also incorporate conservation issues. I know quite a few people including myself who chose to have the word conservation in their specialization. I may be biased because of this, but aside from that I agree that this change would attract more students due to the growing interest in conservation issues, which would benefit the department.

I like the idea of getting "conservation" into the department name, but in my opinion the new title is not inclusive of the research we do, and it's too long. How about "Department of Conservation Biology," or "Department of Biological Conservation"? Since "biology" is "science" (last I checked), you get the implication that it's rigorous and at the same time dealing with organisms of some sort. "Fish and Wildlife" doesn't seem to leave room for invertebrates and plants, which we do study. "Fish and Wildlife" also (to me anyway) implies "target species" that people hunt and fish for, and I think if you want to attract a new breed of student that may limit their perceptions of the department.

I think that the new name would be great. It sounds a little more professional. I think that putting the conservation science part on there more accurately portrays the department.

It sounds like a mouthful to me....While I agree with the reasons for change, the name is just too long. Is there anyway to shorten it at all?

When we came up with RAFWE we also talked about the appropriate name for that event. We added ecology to broaden the scope from fish & wildlife since some folks in the department don't study fish or wildlife. I could see something like this being an appropriate name as well: Department of Fish, Wildlife & Ecosystem Conservation Science. It would cover some more courses that are offered in our department as well. I am sure you have talked about an option like this and it might have other issues to it, but I would prefer that name.

I'm not crazy about the proposed name, but I understand and the need for, and support a change. I think using 'conservation science' may be a little narrow in the minds of some people. While it may attract a new group of prospective students, it could dissuade many others. I think 'Fish & Wildlife Biology' or something similar would be more appealing to more people. I don't think it would be wise to pigeon-hole the department with a name as narrow as the proposed one.

Too many words! A title should reflect what people will speak (most importantly) and write. Now, we are referred to "Fisheries and Wildlife". Adding Conservation Science will not change that we will then be referred to as "Fish and Wildlife"..... making it more likely to be confused with ODFW. Think about the rest of campus: Geosciences, Zoology, Political Science, Veterinary Medicine, Animal Science, and on and on... 1 or 2 word titles.....So.... How about "Dept of Conservation Biology" "Dept of Wildlife Biology" - this is defined as including fish biology too, or just "Department of Fish and Wildlife. 4 words is too long.....

Alumni

Works OK for me -- I'm not a big fan of name changing to fit the latest audience & generally prefer to stick with tradition -- but, in this case the sense of tradition is mostly retained by keeping "fish and wildlife" in the name (versus, for example, Dept. of Conservation Science -- which would have lost the F&W link). Dennis R. Lassuy

What's the world coming to? A PC name for the DFW... I guess I can see the point- and at least you are going to keep the name more or less the same- not changing to "Natural Resource Conservation" or some such blandness. You have to stay proud of your "Bait and Bullet" background- between the anti-gun and PETA people here in the East I'm sometimes surprised we still have a DFW and actual hunting... but the same people get pretty upset when the deer eat their landscaping, or the beavers flood their septic systems, or a coyote shows up in the back yard. How can we educate the general population that "conservation" does not equal "preservation" and that healthy wildlife populations can be maintained with harvest? Caleb Slater

I have an issue with lengthy names and titles. I truly wish there was a way to shorten the name. Personally I feel that conservation is part of the science. Actually, now that I think of it aren't these terms contradictory? Science is science and conservation as much as I appreciate it is a policy statement.

My only comment would be more emphasis on management (as in the Department of Fish and Wildlife Conservation Science and Management?). From my experience working with young folks coming into positions with regulatory agencies and also serving on the TWS Certification Review Board, there seems to be a need to refocus on "the art and science of manipulating habitats and populations to achieve a desired goal". People can have good backgrounds in biology/ecology but without practical knowledge regarding what can and can't be done on the ground given economic, regulatory, and societal constraints, the theoretical aspects can be pretty meaningless. Just my opinion. Bob Carey

I like all of your arguments for the name change, and I support the basic premises behind them. My only concern with the name change is with what I call the "usability factor". Though it seems trivial, "Department of Fish and Wildlife Conservation Science" is a little long and cumbersome. Our records and admissions building, Boyle Education Center, became "BEC". Federal Express became "FedEx", and G.I. Joe's became just "Joes". You can change the name, which may be useful as a recruiting aid in the catalog, and on the web. The addition of Conservation Science to the department name may catch the attention of some folks, but my guess is you will be forever referred to as "OSU Fish and Wildlife". One last thought - have you talked to the folks who will be answering the phones how they feel about the name change? So I guess bottom line, I would support the name change, with just a cautionary suggestion that we not hope for too much change in how folks perceive the department. Bret Michalski

A great idea and an attractive name. Getting "fisheries" out of the name disassociates your department from harvest. That's important. Now if you could just disassociate from the forestry department. John Deshler

How about the subtle change to **Department of Wildlife and Fisheries Science**? Less clunky, more to the point, and a bit further away from the ODFW name than the current one. Justin Soares

I think a name change could be good, but not so sure about the Conservation part. I do think Dept. of Fisheries and Wildlife Science would help those who don't know the department take it more seriously and clear the confusion with ODFW. Lisa Reiley

My only concern is that potential employers who are used to hiring employees with degrees in Fish and Wildlife may not understand it is the same thing. It does kind of sound like a degree spit out from an overnight pay a lot of money receive a little education university like ITT Tech or University of Phoenix. April Lindeman

I don't have strong feelings one way or the other, but I doubt that adding a couple of fancy words at the end will change some people's opinion about what we wildlife people do. Eric Forsman

Well, I would like to say that the idea is interesting because it gives a better indication that wildlife science is an applicable science, not just an academic field. This may be not too important in the US, as you guys have a long history on wildlife conservation, but this is my feeling. We deal with this kind of problem here in Brazil, as most of our biology programs ends up in ecology, zoology or botany (nothing as an applicable science such as conservation, despite many programs hold the Conservation word in their names). Walfrido Tomas

Sounds reasonable at first glance. But, I'm not sure that the core curricula reflects the conservation science umbrella, at least the current classes. I know this would disturb many of the old guard, but is the perceived problem the "Fish and Wildlife" part of the name? What about Dept. of Wildlife Conservation Science (fish are wildlife by the way) or Dept. of Conservation Science? I'm sure you have tested those out already. Charlie Bruce, ODFW

I am in agreement that a name change is needed. However, instead of using the word "Conservation", how about calling it Environmental Science. After all, students are taking courses in soil science, botany (trees, shrubs, forbes and grasses), entomology and hydrology. How about considering changing to Department of Fish, Wildlife and Environmental Sciences? When I accepted the faculty position of Assoc. Prof. at SUNY College of Forestry in Syracuse in 1968, I heard talke about a possible name change. It became the College of Environmental Sciences and Forestry a year or so later. The Department of Biological Sciences included Fisheries and Wildlife, along with Soil Science, Hydrology, Botany and Entomology. I hope you and your faculty will give my suggestion some consideration. Thank you for giving me the opportunity to make a suggestion. Regards, Austin Hamer

First, I must state that those persons within the university and among conservation organizations that maintain a persistent belief that the research and educational curricula related to conserving fish and wildlife resources contains very little science and is more art or

guesswork aimed purely at putting out fires are not going to change their opinion based upon a name change. Those people have a problem, and it is probably a bad case of ignorance or worse, and a name change won't help that. The above being said, I would like to comment that I like your current designation. If a change is needed for a significantly important reason, such as reducing the confusion between your department and the Oregon Department of Fish and Wildlife, that has some merit, though as you say, it is minor. The reputation of the Department of Fisheries and Wildlife at Oregon State University in producing scientifically sound research and management work in fisheries and wildlife conservation is well known by those professionals in the field, and those aspiring to get there. Other than the above, I don't think a name change will improve anything. Joe Greenley

Consider changing the name to fish and wildlife management. I believe that conservation is a subset of management, but the term conservation has preservation connotations to some. Charlie Corrarino (ODFW)

I don't have a serious objection. However, I am always skeptical of changes in name, logo or organization. They are expensive, in terms of reprinting everything and offer confusion to those not tracking such things...but finding the change later and asking "what for"? I think the current name is just fine and would not change it unless there were stronger justification. This name and the work it stands for have a long history and that history should be respected. For anyone who spends a few moments looking over the staff and results of the department, there is no confusion on the science end. Anyone who will simply look at the name and not go any further than that, before drawing conclusions, is not worth changing for, in my opinion. Finally, for some, the insertion of Conservation Science will be read as code for endangered species as opposed to fisheries and wildlife management....and that has connotations as well. In summary, if it were up to me, I would leave the name alone and focus on more substantive issues like the budget for innovative new classes and programs. If you think this name change will make any positive difference to funders, then it is worth considering seriously.-- Jim Martin

This is a good idea. The word "fisheries" has obvious economic connotations, similar to "game," and diverts the focus from the department's research focus. Lori Hennings, Portland Metro

I'm torn, since effective info goes down with the number of words. I like Conservation and I like Science, but having both seems to push the name over a sort of size threshold in my mind. How about "Conservatience"? (kidding) "Animal Conservation Science" is more concise, but will be unfamiliar to fish-and-wildlifery. So, as is often the case, I don't super like the new name, but don't have a great alternative to provide. Eric Schaubert, Southern Illinois University

This sounds like conversations that have popped up on occasion here at MSU. Anyway, I wonder about the loss of the term fisheries. Maybe that reflects the department, but changing from fisheries to fish suggests more of a focus on zoology than management. I don't mind the conservation. Also, changing to fish only makes the department sound even more like ODFW. My thoughts would be: Department of Fisheries and Wildlife Conservation and Management-- Geoffrey Habron, Michigan State University

At first glance, I like the name change proposal. If it is a better description of what actually occurs in the department and would have wider appeal, it sounds logical to me. Jack Williams, Trout Unlimited

I appreciate the reasons for the name change and think the inclusion of the words 'conservation' and 'science' exemplifies the department's focus. However, for the same reasons, I wonder why the department is still retaining the words 'fish' and 'wildlife,' as these words retain the restricted interpretation by some conservation-minded individuals as excluding non-fish and wildlife species. The word 'ecology,' on the other hand, has important 'values' in the minds of many conservation and ecology organizations because it embraces the scientific study of the distribution and abundance of living organisms (fish, wildlife, and others) and how their distribution and abundances are affected by interactions among organisms and their environments. Therefore, I encourage the department to also consider striking the words 'fish and wildlife' and consider including the word 'ecology' in the department's name. Ecology might be included into the name like this: Department of Ecology and Conservation Science. Jeff Manning, U Idaho

Boo--1. While we're in the business of *conserving* fish and wildlife, I hardly feel as if I'm a Conservation Scientist. I'm a Fish Biologist. 2. For those who believe our work is hocus-pocus and not science, I highly doubt changing the department name will change their minds. If a change is what they desire, we should change our actions, not our name. 3. I don't know how kids choose colleges these days but a wise man once told me that we better root for the Beavs if we want to increase attendance in the department. 4. What's so wrong with being confused with ODFW??? Seriously, that's an unfortunate similarity and one that will likely be corrected when legislature merges ODFW and ODF into ODNR (natural resources).

I support the name change. Your reasoning is sound. I believe the title to be more descriptive of what is clearly emphasized in the department's undergraduate and graduate education curricula. The change properly emphasizes the core mission of the fisheries and wildlife educational process at Oregon State. Pat O'Donogue

The addition of the word "science" makes a great deal of sense and will hopefully serve as a reminder that the management of fish and wildlife is a science which requires knowledge and skill. I doubt that you will change many minds with the change though. Unfortunately resource management has become politicized and thus has lost its respectability in the minds of many. The word "Conservation" brings to mind the "locking-up or putting-away out of reach" and does not, to many people, allow for fishing (recreational and especially commercial) or hunting. I would point to forestry where the term "conservation" has become synonymous in the minds of many with no logging or harvest. I know that is not what you mean but you could find yourself spending great amounts of time explaining such. Perhaps the term "Resource" would be a suitable substitute. Perhaps the name **The Department of Fish and Wildlife Resource Science** would be an acceptable substitute.

The concern is the same as above – conservation can mean locking-up or putting-away, not the wise, science based multiple use approach. Thus students may have a very different set of expectations that do not encompass the use of the resource even in a carefully crafted manner.

I would think some confusion might be eliminated if the term “Department of” were eliminated from the name. In forestry, we use the terms “Forest Engineering”, “Forest Management”, “Wood Science and Technology” and others. The term “Department of Forest Engineering” or “Department of Forest Management” are avoided. This should also help in the confusion of your school and the Oregon Department of Fish and Wildlife to some extent. I think that while you may be able to reduce the confusion, there will always remain some. This is especially true in the fact that while you may change the name for you, the staff as well as future students, the name will stay the same for much of the public (especially older folks) no matter how much publicity the change receives. (How many older individuals still refer the University as OAC or OSC?) To many you are and always will be “OSU Department of Fisheries and Wildlife” or even the “OSU School of Fish and Wildlife” and that will never change. Mike and Kay Brown

Stakeholders

The change indicates an intellectual and programmatic shift from a focus on both **utilization** and **conservation science** to one focused primarily on **conservation**. Fish and wildlife resources provide society with both short and long term benefits and consumptive and non-consumptive benefits. A science that focus only on one type of benefit will fail to meet society's need or knowledge that **enhances and balances overall social welfare**. Choosing either utilization or conservation science is also inconsistent with the multi-objective mission of a Land and Sea Grant College. And ultimately, emphasis on either conservation or utilization will lead to a false choice making it more difficult for units in the College of Agricultural Science to conduct the creative science that helps society improve both utilization and conservation-related benefits.

I am also concerned about catering to students who are attracted to conservation programs due at least in part to a "proliferation of media stories." It is true -- today, many undergrad and graduate students are attracted to programs and curriculum at the University due to an emphasis on conservation and resource protection. But the reality is far more complex. Some of our best moments as educators occur when students begin to grasp the complex and interdependent issues associated with resource science and management. Such moments can occur when students understand that if we treat renewable resources as long term valuable assets that a portion of contemporary returns can be used to reinvest in the science and management needed to enhance long term benefits. I would hope that the pendulum in popular thinking and "media stories" could one day shift to reflect such broader understanding.

Finally, and maybe most importantly, such a name change would place COMES faculty who have their academic home in the Dept of F&W in a potentially untenable position. Our faculty have job descriptions that reflect the COMES mission of *conducting research to **understand, utilize, and sustain** marine resources and coastal ecosystems in order to benefit the citizens of Oregon, the Pacific Northwest, the Nation, and the World*. This mission was co-developed by

our faculty, advisory board, and key stakeholders. Some of our best research has objectives that simultaneously improve utilization while also enhancing conservation; often this research is conducted in close collaboration and partnerships with coastal communities and industries. Quite frankly, some of our faculty might need to find other academic homes if the department changes its name and its underlying intellectual and programmatic emphasis.

Please feel free to share my perspective with your faculty and others participating in this discussion. Gil Sylvia (COMES).

Well, you will still offer management classes too won't you? Hopefully it won't be all feel good conservation stuff. Not that it's not important- it is- but you know there are a lot of us working in the fisheries field who deal with angling regs, harvest, politics, education, and a whole host of other things that aren't strictly research or have little to do with conservation. Many people still have the "it's a little brown bird" mentality and really don't do the conservation/ diversity agenda. I will be frank here and tell you that many people are choosing Humboldt over OSU as they feel that OSU is TOO research orientated and not enough hands on training. My prejudiced opinion here- since I think research work would be hideous and much rather prefer working the crowd, financing research projects, and dealing with politics. But then I am not totally sane either.

I agree with you here. However, some people also tend to play the "dueling scientist" game too. Sometime some of these processes like setting angling regs are like making sausage- you don't want to know how it's done. I think it's important to teach students that you may have the best cutting edge research/science and be able to prove without a doubt that the agency should be heading one way, but one call from a senator who has an angry constituency reduces all of your work to zero. It's political science for the most part in the real world of management. Sorry to be such a cynic but at 10+ years of experience I'm not the Pollyanna I was.

Maybe people do look at names. I think a lot of folks look at price, what the program has to offer, location, etc. I would agree that conservation is much more appealing to folks as we see angler numbers drop off over the years.

Since no one has called me and thought it was OSU maybe you're right.

Personally, I like the name "OSU Fish and Wildlife Management Department", or maybe just "OSU Fish and Wildlife Sciences". My degree says Fisheries Science and I'm Ok with that (even though it's a clever forgery, ha ha). I would leave the conservation out. Yes, bird/critter watching is on the rise, but there's still a ton of folks out there who hunt and fish. Theoretically, they purchase licenses to allow ODFW to manage these populations. They also expect us to conserve them as well, and protect some populations from harvest. So I'm not sure if conservation is really the word for the degree you get, it's a part of the degree. Do I get a new degree if you change names? Laura Tesler (ODFW and alumnus)

As you are well aware, the science aspect of all we do at ODFW is critical when dealing with our state's resources and informing the public and other agencies about what we do and why we make decisions (it's surprising how often we in ODFW get feedback that we make rules and decisions capriciously). With this in mind, by using Conservation Biology as part of the name it will let people know that the research being performed in the Department and that graduates from the Department are well versed in the scientific aspect of resource management. It may even help to convince some students to join the department and pursue careers in fish and wildlife science.

A valid point since we, in ODFW, also get confused at times with the Department. Especially those of us that are fortunate to be housed at the University and even more so those like the staff in Fish Health that are housed in the same building as the Department. I am 100% behind the idea of the name change. Tony Amandi ODFW

Thanks for the opportunity to comment on this. I wasn't going to take the time to do so, since at first look it seems like this is a fairly easy decision. However, having moved into the management of fish and wildlife after spending considerable time in academic and research settings, I started having second thoughts about the Department's name change.

In my personal opinion, I feel that universities (our society's primary producers of scientists and resource managers) should be unbiased at a social level to maintain credibility and produce the highest caliber of scientist and resource manager, who in their job's should ideally be unbiased so they can best follow the tenets of good science and implement scientific findings and resource policy, respectively. To me, this means universities should concentrate on (in no particular order) 1) actively uncovering new information (= research - doing, and teaching how to do, science), 2) passing on information (= teaching what research has uncovered), and 3) preparing students to apply information out in the general public (= management, which also must take into account social concerns, values, and priorities).

Placing the term "conservation" in the Department's title adds a social value judgment which, in my opinion, is definitely biased; "conservation" lies on one distinct side of a continuum of actions related to resource use, and any given action taken for any particular issue ultimately is a social decision landing somewhere on that continuum. Thus, at the very least there would be a perceived social bias if "conservation" was in the Department's name. Clearly, conservation needs must be a part of science, teaching, and management, but, in the academic setting, I feel conservation should be viewed as a result rather than the cause.

Please don't get me wrong, I feel that resource conservation is extremely important and will only become more so, but if the Department's goal is to produce reputable, unbiased scientists, educators, and managers, I don't think bias should be included in it's name. I also don't think that having an unbiased education precludes scientists, educators, or managers from having (and acting upon) a social conscience and values. I just think that these should be framed in the right perspective relative to the goals of the Department.

To add something constructive, I would suggest the following name:

Department of Fish and Wildlife Information

- a. See the 3 items above on how the possible goals of the Department are embodied in the word "information".
- b. In addition to these 3 ways "information" applies to the Department, there is also an allusion to "information science". As I work at ODFW, I see an incredible need for (and struggle with) the integration of information science (i.e., computer tools: GIS, databases, programming, internet accessibility, servers) with fish and wildlife management. What managers are asked to do is becoming increasingly complex, especially given the vast number of needs, regulations, and interests, the overwhelming amount of potential or existing information out there, and the need to more widely coordinate and communicate information internally and externally. Managers are also starting to see the importance of marketing (i.e., another type of "information") in order to achieve goals, recruit constituents, elucidate connections to other social activities, and generate new revenue streams. Scientists are already very integrated into the use of traditional information sciences (I learned a programming language for one research project).
- c. Related to "b", adding "conservation" to academic departments' names seems to me to be a trend that has been around for a while. The "Information" name might inspire thought on ways the Department could go in new directions and remain a clear leader in the education of fish and wildlife scientists and managers. Another way to say this is that I think the need for conservation is generally agreed upon at a social scale (i.e., "old news", even if not always the highest priority for some) and the growing need is how to integrate and/or balance resource needs (conservation) with other social needs resulting from our growing population and social complexity. To me, what will allow this to happen is information organization, access, and presentation (which the entire fish and wildlife management field seems behind on), as well as information generation (science).
- d. We live in the "Information Age" and this adds a little modernity to the Department's name, possibly attracting those who have grown up in this digital age.
- e. It could lend itself to some catchy phrases ("Information: Generated, Taught, Applied"; "Information: Understood"; "Taking Fish and Wildlife Needs to the Next Level"). Tom Stahl (ODFW and alumnus)

I think a name change that accurately reflects the research and curricula of the department is acceptable. I also think a name change will achieve the other intended objectives. However, I feel that more than a name change may be necessary if we are to truly change the perception/image of the department. I appreciate you asking for our input. John Helgesson

I like the name change and the rationale for doing it. I have the continuing concern of integrating science and management. Science informed management is the goal and the outcome is conservation of ecosystems that provide public benefits. We have a need for conservation science and conservation management. A more accurate name for what the department does will help define the academic purpose, attract students and perhaps change

the agency some of them will work for. That is a lot to put on a name change, but it endorses the reason for doing it. Bill M. Bakke, Native fish society

Gosh, we'd discussed this in Roby's Conservation Bio class years ago, for all the reasons you mention below. I'm glad the faculty is onboard. I'm definitely onboard! Good on ya! Wow, I'm a stakeholder now!? :) Anne Mary Myers (ODFW and alumnus)

My first thought is the new name sounds like too much of a mouthful. I like the idea of separating it from ODFW better. "Conservation Biology" might also alienate some. "Conservation Biology" brings to mind the ecological aspects of the science and not the nuts and bolts such as those interested in propagation, pathology, physiology, etc. While the work is done with conservation in mind, doesn't smoothly fit under the title. The same with those interested in Policy, which while based on science (hopefully) might turn people off. I'd be more for adding Science and dropping Conservation. I guess it sounds too much like the word of the day to me, but I still refer to Reser Stadium as Parker Stadium, so what do I know. Is the Department having a hard time recruiting students, i.e. is the current name a problem? Just so you don't change it to the Department of Wildlife and Fisheries..... Mary Buckman (ODFW and alumnus)

I flat hate it. That name indicates to me that Oregon State is moving even farther to the left and selling out the food producers in Oregon. Why not the something like (Department of Fish and Wildlife Sciences). The word conservation has tremendous negative connotations amongst many people on the coast it means to us you just want to lock up the resources of the people of this state. The second reason to say (NO) is it cost money to change names. When I read, the two names my staff, their reaction was, Why? It is a waste the money to change all headings when the present name tells what you do. Dan, I respect you, but need to get out in the field more before you make a change like this. Personally I know a lot industry people who would never leave a dime to a organization with the word conservation in it. Terry Thompson, County Commissioner

I think you are on the right track, but I would drop the term, "conservation," and leave in "science," as that one word may limit the department in seeking funding from all sources. I know that there exist very generous people who would gift their ranch or cash equivalents to OSU, but who would balk at contributing to an entity that they perceive as extremist, and I am not saying that OSU is, of course. Carter Kerns, FW Commissioner

Do you really want the word "conservation" in the title? Why not just science? It could lead to some concerns related to the current "Conservation Biology" that means to many, a non-traditional science approach to the natural sciences; but then again I could be seeing ghosts related to the issue. Pete Test, ODFW

Why not something like Department of Fish and Wildlife Sciences or something a bit more simple and clean cut? I personally find it stifling and long winded, but thus are the changing times. I think the department has a lot more to it than Conservation Science, and that by naming it such it is a very limited and narrow representation. Trish Yarwood

It is a mouthful, but it is a positive name that accurately captures the evolution of the science of fish/wildlife conservation. My alma mater, UF, underwent a similar name change for similar reasons. Peg Boulay, ODFW

I would propose dropping the word Conservation as I see it being rather restrictive. But, I know what it is like to ask people for their opinions! Dixon Landers, EPA

My only comment would be to pluralize Science to Sciences, it sounds better when spoken out loud. Bobby Levy, FW Commissioner

My immediate thought was that the Department should reflect more than the pure science side of fish and wildlife education. That applies to engineering, forestry, agriculture or whatever. My forestry studies were lacking the non science of a good "education", in fact I often referred to it as "training." I believe OSU students will continue to have a fairly well rounded education regardless of the name. Zane Smith, FW Commissioner

I like the change - it better reflects the typical role for future graduates (more conservation and less hook and bullet). For many of us we are already there. I support the change. Mark Chilcote (ODFW and alumnus)

Alternative Names Proposed

Fisheries, Wildlife and Conservation Science (3)
Department of Biological Conservation
Department of Fish, Wildlife & Ecosystem Conservation Science
Fish & Wildlife Biology
Dept of Wildlife Biology
Department of Fish and Wildlife Conservation Science and Management
Department of Fisheries and Wildlife Conservation and Management
Department of Wildlife and Fisheries Science
Dept. of Fisheries and Wildlife Science (4)
Dept. of Wildlife Conservation Science
Dept. of Conservation Science
Department of Fish and Wildlife Environmental Science
Fish and Wildlife Management (2)
Department of Ecology and Conservation Science
Department of Fish and Wildlife Resource Science
Fish and Wildlife Information

Responses to Liaison with Other Units

Liaison requests with the draft category I proposal attached were email to 43 people on 9 December 2009 with a response requested by 15 January 2010. The liaison message clearly stated that lack of response would be interpreted as support of the proposal. Appendix C contains the original message and the responses to our proposal. A summary of the responses is presented in the table below. Of the 43 people on the original liaison request, 30 did not respond; 7 responded with specific support for the proposal (1 of these questioned the timing); and 6 responses expressed concerns about the proposal.

The concerns regarding our proposal fell into two categories: (1) concerns about the timing with other restructuring conversations occurring at OSU and how this name change might align with those conversations (Bloomer, Salwasser, Flick, Gallagher, and Muir); and (2) objections to the name because expertise in conservation biology is represented in other units on campus (McComb, Muir). We offered responses to those concerns in our draft proposal.

On 17 March, the Curriculum Council requested that we specifically contact five individuals (Joe Beatty, Andy Blaustein, Mike Borman, Paul Doescher, and Lynda Ciufetti) that either were not listed in the original liaison request, or whom did not respond. All five responded that they were supportive of the proposal (but see Blaustein's "unofficial" statement about timing and other units—you have got to love the guy). Doescher suggested another name (... and Conservation Science) might be better and Ciufetti's support was contingent on the name change not impinging on Botany and Plant Pathology's future interest in developing restoration ecology or conservation biology options in their curricula. Because others were copied on these responses, we also received additional (more detailed) comments (McComb, Salwasser and Tesch). The recent emails are listed at the end of the liaison responses and they have been added to Table 2. Thus, after the two sets of liaison responses we have identified three concerns (timing/alignment with other unit transformations, Fisheries and Wildlife is not the only venue for conservation biology, renaming might preclude curricular development in other units) and some alternative names have been proposed. We address those concerns in the following paragraphs.

Timing or Alignment with Other Unit Transformations

Five (six?—see Blaustein's "unofficial" statement) respondents expressed concern about the timing of our name change proposal and how the name change might affect realignment with other units in transitions. As far as timing goes, we believe this is an ideal time. As restructuring conversations move forward there will be a lot of Category I proposals for changing names, unit structure and curricula. Because this is simply a name change without restructuring the department or changing curricula, we would prefer to be first in the queue. The Department of Fisheries and Wildlife meets all academic and administrative guidelines for minimum faculty, student and class sizes. There have been no conversations within the Division of Earth Systems Science or College of Agricultural Sciences (CAS) suggesting that the Department of Fisheries and Wildlife would be combined with other units and the CAS transformation proposal includes our proposed name.

The conversations in other units across OSU have progressed to the point that we have sufficient clarity about how those transformations will progress and our conclusion is that this name change will not affect other units. The College of Forestry is not proposing any changes beyond those made two years ago. College of Oceanic and Atmospheric Sciences will propose a new name (Earth Sciences) and may consolidate with Geosciences but all three administrators in COAS supported our name change. The College of Science will reorganize the biological sciences into two units tentatively named Molecular/Health and Organismal/Ecology and Evolutionary Biology. Thus, we believe that concerns related timing or alignment with other units are not valid concerns for delaying this proposal.

Our decision to change the name of our department is not sudden or in response to any of the structural realignments being considered at OSU. We began our discussion about changing the name of our department over five years ago and conducted several surveys of student, alumni, and stakeholders. We have proceeded carefully with extensive faculty discussion for several years. The emergence of the University restructuring process makes this requested name change appropriate and constructive.

Conservation Biology is Represented in Other Units at OSU

Two (three?—see Blaustein’s “unofficial” statement) people responding to the liaison request objected to our proposal because expertise in conservation biology is represented elsewhere at OSU. We acknowledged that fact in our proposal. Conservation biology is interdisciplinary in nature and draws on the potential expertise of faculty in multiple departments at OSU. Brenda McComb provides an official definition from the Society for Conservation Biology in her more detailed comments in response to the second liaison requests (but, see Salwasser’s follow-up comment). Nevertheless, we are the only department at OSU that **predominately** does research, teaching and outreach related to conservation biology. Of 134 current grants in Fisheries and Wildlife on 26 February 2010, 100 (75%) are related to endangered species, biodiversity or monitoring ecosystem components. We are the only department at OSU with courses that have “conservation biology” in the title (except one that is cross-listed with Zoology and one cross-listed with Microbiology). The professional society representing the discipline, The Society for Conservation Biology, lists academic programs in conservation science (<http://www.conbio.org/Resources/Programs/>). This is a database that any department can list a conservation-related academic program on. As of 3 March 2010, the Fisheries and Wildlife Department was the only program at OSU that is listed on the database; we have been for over 10 years since the society created the database. Other programs in Oregon that are listed include Biology at UO and SOU, Environmental Studies at Lewis and Clark, and Environmental Sciences and Resources at PSU. Likewise, the society also lists faculty members with interests related to conservation biology (<http://www.conbio.org/Resources/Programs/Search/fs.cfm>). As of 3 March 2010, 37 of 38 people listed on the database from OSU are associated with Fisheries and Wildlife; Zoology had the only other listing. I believe if we ran a summary of members of the society at OSU that the difference between **interest** in the discipline and **participation** in the professional society would be even more pronounced. We might even find that Fisheries and Wildlife has more graduate students that are members of the society than faculty in all the other departments on campus. Thus, we believe that the Department of Fisheries and Wildlife can rightfully claim to be **the**

center of conservation biology at OSU with activities in the field that dwarf participation by all other programs.

Name Precludes Curricula Development or Work Related to Conservation Biology in Other Units

Ciuffetti supported our proposal contingent on the name change not precluding BBP from developing curricula options related to conservation biology or restoration ecology. We have no intention of doing so, and the record is clear about how willing Fisheries and Wildlife has been in collaboratively developing curricula across campus. There is a Fisheries and Wildlife Conservation specialty option in Natural Resources and many Environmental Sciences students minor in Fisheries and Wildlife for their required specialization area. In previous discussions regarding what might become of natural resources at OSU we (Doescher, Edge and McComb) have discussed an interdisciplinary MS Degree in Conservation Biology and intend to pursue that regardless of the outcome of this proposal. We have added text about this in 6b above. The idea that putting the term Conservation Biology in our name might preclude other departments from working in that discipline is absurd. That is no more likely than the use of the term ecology in a new unit in the College of Science might somehow influence the work of ecologists in our department or several others on campus.

Alternative Names Proposed

Five of the responses proposed alternative names: Fisheries and Wildlife Conservation Biology (Muir and Tesch); Fisheries and Wildlife Conservation Science (McComb); Fisheries, Wildlife, and Conservation Science (Doescher); and Fisheries and Wildlife Conservation Biology and Management (Salwasser). Three of these suggested names restrict the scope by removing the “and” in the title. We do not think these are acceptable alternatives. Faculty in Fisheries and Wildlife are diverse in their interests and expertise (including anthropology, economics, entomology, paleontology, plant ecology and sociology among the more traditional fish and wildlife ecologists). It may seem like semantics for folks outside the discipline, but we do fisheries biology, wildlife biology, and conservation biology. The commas and the “and” in our proposed name were carefully placed. A title without “and” Conservation Biology would disenfranchise many of our Fisheries Biologists or Wildlife Biologists, especially those doing applied science at branch experiment stations. We have aquaculture specialists for example who might reasonably argue they do not belong in a Fisheries Conservation Biology department.

Hal Salwasser’s suggestion of Fisheries and Wildlife Conservation Biology and Management is a non-starter. First it is too long, but more importantly, the majority of practitioners in the natural resources fields view “conservation” as synonymous with “management” (but see some responses by our alumni and stakeholders). Conservation is a more contemporary and more widely used term.

Two responses (Doescher and McComb) proposed the term “Science” instead of “Biology.” Our faculty already had a long debate about the difference in those terms and had another via email between 29 March and 2 April (these emails are available for anyone who has the time). The overwhelming preference among our faculty is for use of the term “Biology” in the name. Conservation Biology has its own professional society, scientific journal, guiding

principles, and postulates; in short, it is a reasonably well-defined field of scientific inquiry devoted to the conservation of the earth's biodiversity. "Conservation Science" lacks any of these attributes. Conservation Science(s) is an umbrella, a group for specialties, some not in biology and brings in hydrology, atmospheric science, political science and sociology, to name a few.

Table 2. Summary of Liaison Response to Name Change Proposal.

| Name | Department/College | Response |
|-----------------|---------------------------------------|--|
| Mark Abbott | COAS | Support |
| Dan Arp | Honors College | No Response/Support |
| Anita Azarenko | Horticulture | No Response/Support |
| Joe Beatty | Zoology | Support |
| Andy Blaustein | Zoology | Support |
| Sherm Bloomer | COS | Concerns regarding timing and other opinions |
| John Bolte | Biological and Ecological Engineering | No Response/Support |
| Mike Borman | Range Ecology and Management | Support |
| Tammy Bray | HHS | No Response/Support |
| Susan Capalbo | Ag and Resource Economics | No Response/Support |
| Lynda Ciuffetti | Botany and Plant Pathology | Support contingent on being able to develop interdisciplinary degrees or options in BBP in restoration ecology or conservation biology |
| Cyril Clarke | CVM | No Response/Support |
| Paul Doescher | Natural Resources | Support-- Prefers Fisheries, Wildlife, and Conservation Science |
| Theo Dreher | Microbiology | Support |
| Robert Duncan | COAS | Support |
| Larry Flick | Science and Math Ed | Concerns regarding timing; align with other name changes |
| Kevin Gable | Chemistry | No Response/Support |
| Sally Gallagher | Sociology | Timing premature or possible affect on other programs |
| Dennis Garity | Math | No Response/Support |
| Michael Harte | Marine Resource Management | Support |
| Peg Herring | Extension and Exp Station Comm | No Response/Support |
| Henry Jansen | Physics | No Response/Support |
| Ed Jensen | COF | No Response/Support |
| Jon Kaplan | Political Science | No Response/Support |
| Russ Karow | Crop and Soil Science | No Response/Support |
| Andy Karplus | Biochemistry | No Response/Support |
| Bill Lunch | Political Science | Support but concerns regarding timing |
| Jim Males | Animal Science | No Response/Support |
| Thomas Maness | Forest Engineering Resource Manage | No Response/Support |
| Craig Marcus | Environmental and Molecular Tox | No Response/Support |
| Bob Mason | Biology | No Response/Support |
| Brenda McComb | Forest Ecosystems and Society | Does not support—Conservation Biology extends beyond FW—suggested Fisheries |

| | | |
|----------------|-----------------------------|--|

| Dawn Wright | Geosciences | No Response/Support |

Appendix C. Liaison Request and Responses

On Dec 9, 2009, at 8:38 PM, Edge, W. Daniel - FW wrote:

Head/Chair/Director:

The attached Category I proposal describes a rename of the Department of Fisheries and Wildlife to the Department of Fisheries, Wildlife, and Conservation Biology. We propose this name change to better represent to the university, students and public the nature of our mission in teaching, research and outreach. We are not proposing to change the curriculum or name of any of the degrees, minors or certificates we offer.

In accordance with the liaison criteria in the Curricular Procedures Handbook, this memo serves as notification to your college/department/program) of our intent to make this curricular change. Please review the attached materials and send your comments, concern, or support to me by 15 January 2010. Your timely response is appreciated. Please note that a lack of response will be interpreted as support.

Thank you for your time and input.

Hi Dan:
I'm just wondering about the timing of the name change, given the ongoing discussions about organization in the College of Agricultural Sciences and the College of Science? I do expect there will be some opinions about this one, but it might be better to tussle over names after the organization is outlined?

thanks

Dan,

We certainly need CB branded on campus -- no doubt about that -- and I have to be an obstacle for you, I really do. But CB extends to plants, inverts and societies in a way that extends far beyond F&W. I really think that it should be used to brand an interdepartmental program and not a department. Sorry...

Hi Dan,

I saw the push-back from both Hal and Larry. In my opinion, Hal is saying that we should not move forward on anything during these times of change. In other words, don't try to improve your programs/department because we are going through divisional, departmental, etc. changes. Larry's feedback sounds like the College of Science feels they OWN the word biological, and that change is happening too fast to be offering another change - a name change. Both are not sound reasons for your name change. I feel that you, your department, and stakeholders know what is best for your department and the name change. I say go forth young man, go forth.

Dear Dan et al.,

I am sorry to say that I too agree with Hal's point. I also have a concern about the proposed name. It implies that this department is "the" home for conservation biology research and teaching at OSU, which isn't the case. If a name change were to be pursued, even a subtle shift such as "Fisheries and Wildlife Conservation Biology" would, in my view, be an improvement, as it makes clear that the conservation biology aspect of the unit is tied to fisheries and wildlife issues.

Sorry - I really don't mean to be cantankerous!

Although Sociology is only tangentially affected by the proposed name
change, it does seem reasonable to consider the ways in which the change
may be premature (given realignments) or adversely affect other programs
whose focus is also in the areas of biology and/or conservation.

Subject: I need your feedback regarding the renaming of Fisheries and
Wildlife by 31 March
Importance: High

Paul, Lynda, Mike, Joe and Andy:

Please see the message from the Curriculum Council below about the
proposal to rename "Fisheries and Wildlife" to "Fisheries, Wildlife, and
Conservation Biology." They want to see responses to our proposal from
you guys. Please provide me with a response by 31 March. The attached
revised Cat I proposal has my response to folks who objected earlier to
the proposal starting on page 32. As an aside, the CAS transformation
plan to be released on Friday will have the new name in it—I am not
sure if that proposal overrides our proposal or what.

I appreciate your response whether it is supportive or not.

Cheers,

Dan

To: Edge, W. Daniel - FW
Cc: Leslie, Susie; Loveland, Walter D - ONID; Brown, Carol - COB; Fisk, Martin
Subject: additional feedback regarding the rename of FW

Dan,

I had a great conversation with Marty Fisk this morning regarding the rename of FW. In that conversation we reviewed the liaison section of the document and were concerned about gaps due to non-response with the larger concern being how this might impact the proposal as it moves forward. Specifically, the recommendation would be to attempt to connect with the following folks who either did not respond or were not asked:

1. Paul Doescher
2. Linda Ciuffetti
3. Mike Borman
4. Joe Beatty
5. Andy Blaustein

Given how chaotic the university has been in response to the budget crisis, it is probably in the best interest of the proposal to have a documented response rather than suggesting no response means agreement.

Thanks and please let me know if there is anything I can do to help out!

Cheers,

Dan

Dan,

My official response is: "I support the name change" for many of the reasons outlined in your proposal. I agree that The Fisheries and Wildlife Department is traditionally conservation oriented probably more so than other units (including zoology) on campus.

Unofficially I too wonder about the timing with all the changes occurring on campus and the fact that many other units have Conservation Biologists.

Additional text on graduate faculty appointment unrelated to name change was deleted.

Good luck with the name change and let me know if I can help.

Hi Dan,

I believe you mentioned to the group that we had a conversation regarding the name change for F&W. As I mentioned to you during our conversation, it is important that a name change doesn't preclude BPP or discussions going on with the Plant Sciences group on campus from offering an option within a "plant science major" that includes conservation biology and/or restoration ecology. As others have pointed out in their responses, these types of emphases are important for the plant sciences units on campus.

Thank you for all the liaison and discussion that you have had with the group.

Best regards,

Lynda Ciuffetti

+++++

Hi Dan--I tried to send you a response yesterday from Canada, but although it appeared to send, today I notice it was not in my sent box.

Basically in that message I indicated that I was OK with either Conservation Biology or Conservation Science added to the Department name. However, I prefer Conservation Science--I think it avoids some of the concerns expressed over Conservation Biology but still conveys an excellent representation of all the good work done in your Department.

Paragraph on college names deleted.

Hope this helps and let me know, I will be back in town tomorrow afternoon.

Paul Doescher

+++++

3/25/2010

Dan

SCB definition is not the meaning of the word conservation. Their definition would support a Society for Preservation Biology. TWS, AFS, SAF do conservation biology.

Hal

Subject: RE: I need your feedback regarding the renaming of Fisheries and Wildlife by 31 March

Dan

Sorry for the delay in responding.

From The Society for Conservation Biology's own website: "The definition of Conservation Biology that we are using is the one supplied by the Society for Conservation Biology, as described in The Society's journal. Applying this description to our site: "We will provide information on programs that are attempting to develop the scientific and technical means for the protection, maintenance, and restoration of life on this planet - its species, its ecological and evolutionary processes, and its particular and total environment." see: <http://www.conbio.org/resources/Programs/About/faq.cfm> Much more detail on what is included in this definition is available in that professional society's strategic plan (<http://www.conbio.org/AboutUs/StrategicPlan/2006/>). Given the breadth of expertise needed to adequately address this definition, including the biotic and abiotic components of environments, it seems incomprehensible to me that any one department could legitimately claim that name. The social sciences, economics, ecosystem sciences, political sciences, as well as taxonomic disciplines spanning the plant and animal kingdoms all address this profession. I have been a member of the Society for Conservation Biology for years and served on the Editorial Board and the manuscripts that I reviewed spanned all of these areas of expertise. Clearly many people in the Fisheries and Wildlife are indeed directly involved in addressing conservation biology issues. So are people in Forest Ecosystems and Society and Botany and Plant Pathology; and the undergraduate and graduate curricula offered in Natural Resources also address the training of our students in various aspects of this profession.

My suggestion to you is to consider a name such as Fisheries and Wildlife Conservation Science. That is, the conservation of terrestrial and aquatic organisms in which you train students and conduct research with others across campus who, with you, provide important expertise in the broader Conservation Biology profession with regards to ecosystem process (e.g., climate change, nutrient cycling, energy flow), social and political systems and taxonomic determinations. Indeed it is this synergy among these disciplines that will be needed to address contemporary conservation problems and should be the basis for an interdepartmental and intercollegiate graduate degree program in Conservation Biology.

Brenda McComb

+++++

Hi Dan,

I cannot support renaming to include the words conservation biology for reasons previously explained. I could support Fisheries and Wildlife Conservation Biology and Management, which I think is a more accurate description.

Paragraph on his experience with trying to rename Forest Engineering a few years ago was deleted.....

I have not been involved in the liaison on this proposal, so forgive me if I am plowing old ground. As I read your emails below it struck me that the proposal might be more broadly embraced if it was clearer that the focus was on fisheries and wildlife conservation biology or whatever. Your statement about that intent seems inconsistent with the terminology that Dan is using that states fisheries, wildlife, AND conservation biology. I think it is easier for others who have an active interest/stake in this discipline to feel that threatened by that "AND" wording. Is there alternative wording to make the intentions your state more clear?

Best wishes for working this out. We do want OSU to have a strong identity as a leader in conservation biology, science, and management.

Subject: RE: I need your feedback regarding the renaming of Fisheries and Wildlife by 31 March

Dan-as you know, Conservation Biology is near and dear to my heart. Somehow and somewhere at OSU, we need a Conservation Biology Program that draws on the many strengths that exist in this area. These strengths span many departments across several colleges.

I have heard the proposed name change is causing some individuals significant concerns.

One factor that could help me in regard to your proposal (and endorsing it or not) is to hear how others individuals and departments are responding. If there are significant concerns, my suggestion would be to convene key individuals involved in Conservation Biology efforts to discuss how best to promote this area at Oregon State University. I think basically it is a question of affirming the efforts in Conservation Biology and creating collaboration rather than divisiveness. One thought is to create an interdisciplinary, cross-unit degree program that would bring individuals together. This effort could be spearheaded by Fisheries and Wildlife.

Paul

Subject: RE: I need your feedback regarding the renaming of Fisheries and Wildlife by 31 March

Paul,

I am attaching two documents for your review. The first (**Responses to Liaison with Other Units.doc**) is our response to the concerns expressed during the first liaison request—you might have looked at this already, but I am assuming you did not. The second document (Liaison Responses Part 2.doc) are the responses I have received from 3 of the 5 people that the curriculum council asked me to specifically ask. I had a conversation with Lynda Ciuffetti on Thursday and she said that her response was likely to be support conditioned on the assumption that the name change would not prevent any interdisciplinary degree or degree options in their program related to restoration and conservation. That of course has never been our intent. In fact, Brenda McComb and I have discussed beginning work on an interdisciplinary MS in Conservation Biology and has presented in some of the draft documents regarding aligning natural resources at OSU.

Let me know what you think; if you would like have a cup of coffee to discuss this, I would be glad to meet with.

Cheers,

Dan

Dan et al.

I still have concerns about F&W usurping this name; many OSU departments are involved in Conservation Biology. I am preparing a more detailed response to your proposal, but I do agree with Paul's suggestion of convening all of those on campus involved in that discipline to discuss an appropriate approach to bringing recognition to OSU. I am sure that there must be a less divisive approach to allow OSU to be recognized for all of the good things that so many departments do in this discipline.

Brenda

Walt Loveland, PhD
Chair OSU Graduate Student Council
Oregon State University
Corvallis, OR 97331

Dear Dr. Loveland:

We are very appreciative of the Graduate Student Council's recent approval of policy that provides for implementation of dual degree programs at OSU. Thank you for letting us be a part of those discussions, so that members of the Graduate Student Council would have a context for the dual degree program we present in this letter.

The fields of veterinary medicine and public health have changed significantly since September 11, 2001. Additionally, we have entered a new era of globalization and comparative medicine that requires both professional medical training and graduate public health education. Accordingly, the OSU College of Veterinary Medicine and the College of Health and Human Sciences will work together to provide a dual degree (DVM & MPH) program for a limited number of select students. The policy and administrative processes are in place to support the program, although we will need to walk through this novel process carefully to avoid communication errors.

The attached documents outline the planned dual degree program in further detail. The need to use professional courses for masters degree credit is very minimal. The DVM and MPH degrees both prepare practitioners rather than researchers as would a PhD degree. Our aim is to make OSU a more competitive contributor in our professions and to better serve the academic needs of Oregonians.

Thank you for considering this innovation at OSU. We request and look forward to the Council's advice, support and endorsement in this effort.

Sincerely,

Sue Tornquist, DVM, PhD
Associate Dean for Student
and Academic Affairs
College of Veterinary Medicine

Tom Eversole, DVM, MS, MS
Director of Strategic Development for a College
of Public Health and Human Sciences
College of Health and Human Sciences

**OSU Dual Degree Program
in Public Health and Veterinary Medicine
April 1, 2010**

Professional Background

The World Health Organization as well as the American Veterinary Medical Association (AVMA), the American Medical Association (AMA) and the American Public Health Association (APHA) ascribe to the “One Health” approach to world health problems. One Health posits that human and animal health in a shared environment cannot be separated – as evidenced by pandemics of AIDS, swine flu and MRSA or epidemics such as SARS and Ebola. Increasingly, health education will become transdisciplinary, involving medicine, pharmacy, public health, veterinary medicine in dual degree programs to solve new and emerging global health problems. OSU is positioned to be a key player in that future.

The landscape for professional and graduate education has changed. Since 9/11 and the anthrax attacks, there has been an increasing awareness of the role of veterinary public health in emergency preparedness and bioterrorism response. The threats of avian flu and swine flu underscore the importance of surveillance for animal-to-human (zoonotic) diseases. Oregon Congress member and veterinarian, Kurt Schrader, is a co-sponsor of the Veterinary Public Health Workforce Enhancement Act, slated to provide resources to universities that train veterinarians in public health. If passed, the bill would provide scholarships, faculty salary, laboratories and teaching facilities for schools of public health and veterinary colleges offering dual degree (DVM-MPH) programs. CHHS has already activated two new MPH tracks in epidemiology and biostatistics, seen to be the primary focus of students interested in our dual degree program.

OSU Specific Background

The DVM/MPH dual degree program has value for OSU’s strategic initiatives, specifically: (a) the OSU Strategic Plan, (b) establishing an accredited school of public health, (c) increasing health sciences research and (d) addressing the national focus on comparative medicine through an enhanced veterinary public health workforce. OSU is committed to enhancing the public health workforce.

As part of its strategic plan, Oregon State University has identified Improving Human Health and Wellness as one of three signature areas for investment and development. The College of Pharmacy, College of Veterinary Medicine and College of Health and Human Sciences (CHHS) now comprise the Health Sciences Division. The CHHS has undertaken to become an accredited college of public health and human sciences (CPHHS) in 2014, advancing it to the stature of the other two professional schools in its area of excellence. Oregon currently has no accredited school of public health, which excludes it from a variety of research and service funding opportunities.

Importance for Oregonians

The workforce that Oregon needs now and for tomorrow requires dual degree options combining professional training and graduate education. OSU requires this program to be competitive and ensure that it attracts outstanding students, who wish to complete two degrees in a timely fashion.

The trend to offer combined DVM /MPH degree programs has expanded rapidly in the last few years. Twenty of the 28 veterinary colleges in the US offer public health degree options for veterinary students. OSU does not. OSU is one of the few land grant universities with a co-located accredited college of veterinary medicine and public health program. OSU is well positioned to be competitive as an academic institution, to contribute to global health research and to produce tomorrow's work force, if it fully supports dual degree programs.

DVM/MPH Curriculum

The proposed curriculum for the dual degree program is attached, using the epidemiology track as a model. See Attachment 1. Admission requirements for both the graduate program and the professional program apply. For coursework to apply to both degrees, students must be enrolled in the dual degree program. We anticipate only 1-2 students per year enrolling in the program. The MPH graduate student's committee will retain accountability and authority for assuring quality and rigor of academic studies applying to that degree.

Operationally, the program allows students to complete both degrees in five years. Veterinary students move through their curriculum as a cohort, making it possible to position one year of public health coursework either between year three and four of the veterinary curriculum or following year four but prior to degree award. In the future, some core public health courses will be offered during summer sessions, which will increase convenience for dual degree students wishing to matriculate then.

Only three professional courses are required for credit toward the master of public health degree in any track: Veterinary Medicine and Public Health (VMB 766), Epidemiology (VMB 767) and Preceptorship (VMC 780.) See Attachment 2. The College of Veterinary Medicine has submitted category II proposals for VMB 766 and VMB 767. We are currently submitting VMC 780 to be approved for graduate credit.

This program has the support of deans of the respective colleges as well as university administration. Drs. Tornquist and Eversole will coordinate administrative efforts to assure compliance with the program's national accrediting bodies as well as the OSU Registrar's and Finance Offices.

Courses applying to both curricula in Green

Veterinary Course Credits applying toward MPH degree

April 1, 2010

Professional Veterinary Medicine courses counting toward Graduate MPH degree with advisor's approval and enrolment in dual degree program:

1. VMB 766 Veterinary Medicine and Public Health (3)
2. VMB 767 Epidemiology (3)
3. VMC 780 Preceptorship (4)
 - Satisfies H510 (6), public health internship when combined with senior veterinary paper

VMC 780 – Veterinary Preceptorship (in Epidemiology)-

A minimum of 4 weeks (200 Hours.) This work qualifies for 4 credits in the DVM program. For veterinary preceptorship to satisfy the MPH internship requirement, the student's written and verbally-presented senior paper (2 additional graduate credits) must relate to the preceptorship in the MPH track discipline (epidemiology, biostatistics, etc.)

H510 – Public Health Internship

A minimum of 5 weeks (200 hours) of internship for 6 graduate credits. The internship requires/includes a final report/paper about the internship to describe what the student did, learning objectives they met and program objectives they have met. Internships may be more than 200 hours and may earn up to 9 credits. This course will be cross-listed as a Veterinary Medicine course to facilitate credit tracking.

Core Theme #2: Graduate Education and Research

Objective #1: Provide high quality graduate education and professional programs

Outcome #1: OSU has nationally recognized and highly sought after graduate programs.

- Indicators:
 - GRE scores of entering graduate or professional students
 - Percent of total enrollment that are graduate or professional students
 - Percent of the graduate student body that are doctoral candidates
 - Number of graduate programs that are ranked in the top third of programs within their discipline within the country

Outcome #2: Professional students perform at or above the median levels of performance on national level licensing examinations.

- Indicators:
 - Percent of entering students that successful complete their programs and attain passing results on national licensing examinations
 - Class median scores on national examinations relative to national medians

Objective #2: Engage the university community in scholarly and research related activities

Outcome #1: Students at all levels have opportunities to engage in scholarly activities within their chosen field

- Indicators;
 - Formal, structured research-access programs available to undergraduates
 - Number and disciplinary distribution of Honors Students
 - Number of Undergraduate, Research, Innovation, Scholarship, and Creativity-supported (URISC) students.
 - Number of International Undergraduate Research Program (IURP) applicants received each year.
 - Number of students engaged in other undergraduate research programs
 - Number of public shows, exhibits and performances offered by OSU undergraduate students offered each year

- Engagement by graduate students in faculty-initiated research
 - Number of graduate students engaged in research
 - Number of graduate student authors of scholarly papers each year.
 - Number of graduate students identified as co-inventors on invention disclosures submitted

Outcome #2: The University sustains an environment that supports and validates faculty research productivity

- Indicators:
 - Competitive grants awarded
 - Books and peer journal publications
 - Publications in high impact journals
 - National awards and recognition of our faculty

Objective #3: Foster a creative and collaborative intellectual culture

Outcome #1: Students and faculty engage in interdisciplinary work

- Indicators
 - Number of students and faculty engaged in interdisciplinary studies
 - Number of undergraduate and graduate degrees in interdisciplinary areas.
 - Percent of proposals submitted with co-investigators from multiple departments or colleges
 - Number of multi-institutional grants/contracts in which our faculty participate

Outcome #2: The University grows a vigorous Honors College program

- Indicators:
 - Number of students enrolled in the Honors College
 - Number of faculty participants in the Honors College
 - Number of students graduating with Honors
 - Ratio of applicants/accepted students in the Honors College

Outcome #3: The University supports a dynamic and productive University Center and Institute (C/I) program

- Indicator:
 - Number and diversity of departmental representation among each C/I's members

- Number of federally-funded Centers or Institutes
- Amount of research leveraged by facilities operated by C/Is

Objective #4: OSU research/scholarship demonstrates measurable economic impact within the state and beyond.

Outcome #1: Academic programs within OSU prepare students at all levels for participation in the workforce

- Indicators:
 - Placement of graduates into their chosen field
 - Industry support for student capstone courses

Outcome #2: OSU faculty develop and engage in corporate-funded, corporate-relevant research

- Indicators:
 - Percent of the sponsored research funded by industry
 - Number of Master Agreements established with industry partners
 - Licensing of IP to industry partners as a result of industry-funded research

Outcome #3: OSU students acquire critical business skills through the entrepreneurial student programs

- Indicators:
 - Student participation in the Weatherford Entrepreneurial Program (WEP)
 - Number of student start-up companies from WEP
 - Business plans built by OSU MBA students around OSU technologies
 - Success of MBA students in angel/venture competitions

Outcome #4: The OSU community generating economically-relevant research

- Indicators
 - Number of invention disclosures submitted
 - Number of patents awarded
 - Percent of revenue generating patents
 - Licensing revenue generated
 - Success of companies utilizing the OSU Venture Development Fund
 - Number of successful start-up companies using foundational IP from OSU (successful = still viable or sold after three years)

Cc: Harte, Michael James; Francis, Sally K.; Naguib, Nagwa; Bechert, Ursula
Subject: Creation of PSM programs

Walt and Susie,

Could you please give me your opinion on how OSU should approve new PSM programs?

Ursula is asking about the procedure for approving a new Professional Science Masters degree. OSU now has three approved PSM degrees (Environmental Science, Applied Biotechnology/MCB, and Applied Systematic Biology). You can see from the emails below there has been discussion about using the Category II process for creating new PSMs. Sally and I have also talked about this.

She indicated that the Sloan Foundation owns the PSM trademark and all programs wanting to call themselves a PSM must have their program approved by the Council of Graduate Schools (CGS), to whom the Sloan Foundation has granted the authority for approving PSMs. Sally and I concluded that it would be appropriate for the university to have an internal approval process before a PSM application is submitted to CGS.

The PSM is a non-thesis masters with 30 credits of science core, 18 credits of professional courses, and 6 credits of internship credits. For each new OSU PSM the science core would be different, but the 18 professional and 6 internship credits would be the same.

I can see two possible existing options for approval of PSMs before submitting an application to CGS, Full CAT I and CAT II. The Full CAT I process seems to be the most appropriate because it is for new degree programs and major changes in existing programs. A new PSM could be considered a major change to an existing program. The CAT II process might also be appropriate because it is used for changes to a major (if you consider each PSM program equivalent to a major).

I am proposing that because the template for the OSU PSM exists that new OSU PSM programs that have the same template be considered equivalent to a change in a major and that the CAT II process be used. Could you let me know what you think about this?

Thanks,
Martin

Subject: RE: Creation of PSM programs

Thanks, Marty. I agree that a Cat II would be a good way to approve new PSM programs at OSU as long as they are in departments with existing non-thesis MS options and conform to a general template. Right now, the template is 30 credits of science core, 18 professional courses, and 6 internship credits (54 credits total as a minimum).

Please let me know what you think, and if we should put this together for the MRM PSM.

Thanks again and enjoy the sunny weekend! --Ursula

Stella,
Thanks for the response and for pointing out the F&W PSM CAT I. I have a draft copy and I'll examine it to see if it seems like the appropriate model of creating new PSMs. A CAT II proposal might be a better approval vehicle unless additional fundamental changes are proposed.

Thanks again,
Marty

To: Fisk, Martin
Cc: Bechert, Ursula; Dowhower, Dan; Naguib, Nagwa
Subject: RE: Creation of PSM programs

Marty,

Three were created utilizing existing non-thesis master's options within the respective programs and the fourth, initially associated with the non-thesis genetics programs, evolved and was created subsequently for MCB---that would have required whatever is needed to add a M.S. to a program that didn't have one and I was not directly involved. In the early days of the program, it made the best sense to utilize existing programs to expedite their launch. Sally Francis worked extensively with the establishment of these programs and ultimately in trying to help the graduate council understand the nature of the National PSM programs and to assist in the approval process for the Business component; Sherm Bloomer was the most engaged with trying to sort out the financial model for the latter piece.

With the proof of concept for the PSM program nationally (and at OSU), increased interest, OUS involvement, it makes good sense to move to time effective, predictable process by which to create these. I believe that there is a CAT I coming through from F^W just about any day to do so for a new PSM. I've lost track of the umbrella request that I believe Ursula has worked on/submitted. If the latter has been approved, it would make sense to use a streamlined process to add new options---don't know what that would be.

Hope this helps.
Stella

Subject: Creation of PSM programs

Stella,

After discussions with Ursula about creating new PSM programs, I am wondering how the original four PSMs were created. In particular, I am curious about the level of approval that was needed within the university. I believe you were the PI on the original Sloan proposal and I wonder if you can tell me if the proposal had supporting Category I or II proposals or if there was some other approval process? If you are not the right person to contact about this, can you please tell me who I should consult.

Thanks very much,

Yours,
Marty

Materials linked from the March 3, 2010 Graduate Council agenda

Report on Follow-up Review of the History of Sciences Graduate Program

The History of Science Graduate Program was reviewed by a committee appointed by the Graduate Council and Dean of the Graduate School during March 8-9, 2007. The committee reported its observations and recommendations March 26, 2007. The History of Science (HS) program faculty then developed an Action Plan for response to nine key recommendations. This plan was presented to the Graduate Council and the Provost. On November 17, 2009, committee members Robert Duncan (COAS) and Thomas McLain (Wood Science & Engineering) met with History Department chair Jonathan Katz to discuss progress in carrying forward the Action Plan.

These are our findings relative to the Action items that address recommendations made by the 2007 Review Team:

1. “Maintain a critical mass of core faculty in the field.”

At the time of the review (March, 2007), the HS program had 3.0FTE faculty dedicated to course delivery and advising. David Luft has replaced retiring Robert Nye, Anita Guerrini has replaced Mary Jo Nye, and Michael Osborne has replaced Paul Farber. In addition, Jacob Hamblin has been hired in the research area of history of geosciences. In the meantime, Ronald Doel (joint HS and Geosciences faculty member) left for a faculty position elsewhere. This makes 4.0FTE now supporting the program, or an increase of 33% in core faculty. Other Department of History faculty members have research interests in history of medicine (Ben Mutschler, Lisa Sarasohn, Gary Ferngren, Paul Kopperman) and are being included as potential advisors in the HS program. Discussions are also underway in the CLA for development of a Medical Humanities program that would increase course offerings and advising for graduate students in the HS program.

2. “Increase the number of graduate students.”

The graduate student enrollment in the HS program was 5-6 at the time of the review. Today there are 9 students enrolled: 8 students are resident and 1 followed Ronald Doel but will receive an OSU degree. Two new students are expected to matriculate next September. Of the current 8 resident students, 6 are supported financially in their graduate programs.

3. “Increase the number of 500 and 600 level classes.”

Luft, Guerrini and Osborne have each added or proposed at least one new graduate-level (i.e., not “slash”) course to the curriculum. Attention is paid to scheduling at least one 500-level course each term. The larger cohort (8-10 students) ensures that courses will stand a good chance of meeting the new OSU guideline for minimum student enrollment.

4. “Introduce proseminars”.

Chairman Katz remarked that it is difficult to get faculty to take on seminars as teaching assignments because these are viewed as “extra” (overload). The idea here is to institute a regular, year-long student-led seminar for presenting and discussing research progress and methods. Faculty will be present but only to guide or facilitate discussion. COAS and Wood Science have such research seminars, which are run with only small burdens on the faculty of those units.

5. “Encourage cross-disciplinary contact.”

Other similar graduate programs in the US are moving toward an integrated “History and Philosophy of Science” program focus with graduate applicants seeking training in this broader area of scholarship. This trend has led to discussions with faculty in the Department of Philosophy about expanding the HS program. This would increase capacity to advise students and increase course offerings in support of the program. The current review team suggested that it may be possible and desirable to develop a course of wide interest to graduate students in science and engineering that addresses recent concerns of federal funding agencies (e.g., NSF). This might have a title like “Responsibility and Integrity in Science and Engineering”, addressing issues of science, medical and environmental ethics. Funding to develop and delivery such a course might be secured from NSF support. We also discussed the desirability of developing a certificate course in HS for graduate students in natural science subjects. This could be developed and offered in parallel through E-campus.

6. “Increase financial support for graduate students.”

As reported above, 6 of the current 8 students receive financial support toward their HS programs. This comes from GTA support, the Horning endowment, and revenue from E-campus course delivery. This is a significant improvement over the level of student support in 2007. However, full support for graduate students in this area will be difficult to maintain in the current environment.

7. “Increase office space for graduate students.”

All graduate students are currently accommodated in Milam Hall with a desk and computer in shared offices, but more space is needed with anticipated expansion of student numbers. The new “Paul L. Farber” student lounge is intended and used primarily as a common space for graduate students.

8. “Track student placements.”

Chairman Katz agreed this is desirable and is being implemented at the review committee’s suggestion.

9. “Expand employment opportunities for students.”

The Public History initiative was cited as one example of expanded employment opportunities for HS graduates. This effort in applied history (examples focused on coastal communities) could direct graduates toward employment in archives, museums, historical societies and grant writing.

From Gary DeLander

We propose the following:

1. Students may co-enroll in professional and graduate programs. This will be referred to as enrollment in a 'dual degree' program. Enrollment in each program will require a separate admissions decision. Only students who have completed a Bachelor's degree may enroll in a graduate program.
2. For students enrolled in a dual degree program, enrollment in either professional courses or graduate courses will satisfy the continuous enrollment requirement of the Graduate School for a specific term.
3. Students may use 'graduate approved' courses in professional programs (specific graduate approved 7XX courses) as also satisfying the requirements of their graduate program if taken while co-enrolled as a professional and graduate student. Responsibility for defining a student's graduate program, including selection and approval of the student's curriculum, lies with the student's graduate committee. In this and all other aspects, the progression of students will follow normal processes and policies for a graduate program established by the Graduate Council and implemented by the Graduate School will be followed.
4. Completion of graduate programs will be confirmed and degrees granted using established Graduate School procedures. Completion of professional programs will be confirmed and degrees granted using established procedures for the respective colleges.

Policy Statement Regarding International Graduate Teaching Assistants

If the Graduate School's determines that an applicant or current student's native language is not English, the proposed IGTA is required to take the Internet Based TOEFL (iBT) test before being appointed as a graduate teaching assistant. (Students who matriculated prior to Winter 2010 are exempt from this policy.)

Potential IGTAs scoring below 26 on the speaking section of the iBT can be appointed, but will be required to undertake further English language training.

If a unit wishes to offer a student with an iBT speaking score of 18 to 25 an assistantship, the unit must:

- (a) Affirm that the graduate student will be enrolled in **IEPA 098NC COMMUNICATION FOR IGTAs** (with the unit paying the cost of this training).
- (b) If at all possible, assign the graduate student chores (such as paper grading, reagent preparation, etc.) that do not require personal contact with undergraduate students.
- (c) If (b) above is not possible, and if possible, pair the IGTA in the laboratory or classroom with another TA who is a native speaker of English.
- (d) Monitor the quality of IGTA performance using student evaluations and the evaluations of the supervising professors. The unit will document for each student the results of their evaluation of the student's performance as a GTA.

If the unit agrees to meet these conditions, the IGTA appointment can be made.

The scheduling of IEPA 098NC will be coordinated with the units so that students can attend the course and conduct teaching assistantship duties. Please check the OSU course catalog for confirmation of the time and date:

<http://catalog.oregonstate.edu/CourseDetail.aspx?subjectcode=IEPA&coursenumber=098NC>

Guidelines for the Assignment of International GTAs

| iBT Speaking Sub Score | Assignment Considerations |
|--|---|
| 26 and above | A score of 26 indicates near-native speaking ability. No significant language difficulty is anticipated. Language proficiency usually includes demonstrated audience awareness, cohesive and well developed responses, limited deficiencies in fluency, vocabulary, grammar or pronunciation. |
| English language training is required for scores of 25 to 18. | |
| 25 - 23 | Characteristics in this range may include strong but understandable accent, labored and deliberate pronunciation, possible difficulty with free-response |

| | |
|---------|---|
| | <p>items, halting speech patterns or vocabulary limitations. Teaching assignments should be made recognizing that the IGTA has language limitations. The graduate teaching assistant must attend the IGTA or equivalent course. Departments should provide close ongoing monitoring of progress in the IGTA assignment and in language skills development.</p> |
| 22 - 18 | <p>The teaching assistant should take English language training, the level of which will be determined by INTO-OSU. Course work could include the IGTA course or equivalent courses. Only assignments involving minimal student-teacher interaction should be made. Departments should provide close ongoing monitoring of progress in language skills development.</p> |

Students with an iBT speaking score of less than 18 can not be assigned teaching assistantships.

Materials linked from the February 19, 2010 Graduate Council agenda

Review Panel Report: Oregon State University Environmental Sciences Graduate Program

OVERALL RECOMMENDATION

The Review Panel recommends that the Environmental Sciences Graduate Program (ESGP), a multi-disciplinary program at Oregon State University offering PSM, MS, MA and PhD degrees be maintained. The mission of the ESGP is very much in alignment with the University's mission to promote environmental progress; the challenge is to maintain high quality and provide evidence of success of graduates of this program. Program continuity by engagement and participation of more active faculty is essential for the future success of the program. Faculty need to be given a sense of 'ownership' in the program.

SUMMARY OF FINDINGS AND RECOMMENDATIONS

The Environmental Sciences Graduate Program is currently academically administered and financially categorized under the Graduate School. Given its multi-disciplinary nature, the Graduate School provides a natural home.

The Graduate School provides some funding for administration and other purposes, however, the main support for graduate students falls to the major professor or their departments. The College of Science has also provided funding in the form of GTAs for basic biology classes. However, the Dean of the College of Science has indicated that future GTA funding for students in this program is not guaranteed. This funding model is precarious, especially in the face of the current budgetary climate. Unfortunately the panel could only identify this problem---we were unable to solve it, however a few suggestions are mentioned below.

Given the current funding model, we do not recommend that the program increase their admissions.

The budget from the previous four years provided on p. 38 of the Self Study report suggests that the year-end balances could be used to support approximately two graduate students per year. Perhaps the faculty in the program could pursue an IGERT in one or more of the thematic areas. If this is successful, graduate student support could be guaranteed for several years.

In other programs on campus, revenue from the professional side is used to subsidize the Master's and PhD students. Perhaps that could be pursued here as well.

A related issue is the fact that faculty currently have little incentive to participate in the program, particularly as major professors. Apparently some financial incentive has been given in some past years, which might address this problem. According to the self study document, roughly only 10% of the graduate faculty have participated as major professors. ESGP students often end up as 'second class citizens', especially in terms of funding. Students within the various disciplines are generally given higher priority in their respective Departments.

The program is truly multidisciplinary, with almost 150 faculty listed as members of the ESGP faculty. They hail from across the OSU campus, as well as agencies such as the USEPA. While it is impressive to

see such a large faculty listing, it is clear from the Self Study report that very few of these faculty have actually participated in the program over the past few years. Again it might be helpful to reinstate financial incentives.

There are three required ES courses. Students then choose among eight tracks, with approved lists of course offerings. This cross-disciplinary focus is both a strength and weakness of this program. The panel suggests streamlining the tracks (the self study notes that the water resources track may be eliminated due to overlap, but the Deans and Directors recommend keeping it as it offers a niche not available in water resources). The Natural Resources track may overlap with the Master's in Natural Resources degree. We also recommend streamlining/updating the course offerings within the tracks, perhaps with student and faculty input.

The program relies heavily on its web pages to attract applicants and inform current students of program requirements. These need to be regularly updated (since our review, these pages have been updated).

Given the fact that students in this program do not have a natural common home (other than the graduate school), there is little chance for students to form an 'esprit de corps' other than that formed when they take the core ES courses in the winter term. Modern technology could afford students a virtual home, which we encourage the students to pursue. We would also recommend moving the ES courses to the fall term for entering students. Another issue that needs attention is inequality in student salary across Departments within ESGP and between students in the home Department and ESGP.

The panel recommends that the program reconsider the current policy that students follow the requirements of the respective Departments of their major professor in completing their degree, which are being undertaken. A uniform policy concerning exams, for example requiring only oral exams should be considered. Also, it would be helpful to provide major professors with an 'information packet' concerning the program requirements.

The requirement that incoming students have a major professor is reasonable for the MS and PhD students (PSM students do not have this requirement), however it appears that the Director, Andy Blaustein, is bearing the biggest burden in finding and contacting matches. Although the program has set up its own web-based admissions, which is excellent, there are apparently still problems with incentives for faculty to participate in committee work. This again goes back into faculty buy-in for the program. It is recommended that the Director, the Dean of the Graduate School, and the Deans of the participating Colleges meet to discuss ways in which faculty engagement can be enhanced. Perhaps an IGERT and/or graduate internship opportunities could motivate faculty into participating more actively in the program.

The interdisciplinary nature of the program makes the administration of the program complex. Luckily, the leadership has been enthusiastic and energetic under both Bill Winner and Andy Blaustein, and the staff (Linda James) has been indispensable. Reduction in staff support would be devastating, an increase would be more than welcome.

Students can easily fall through the cracks in this type of program. We recommend that students be evaluated annually (a standard form for students to ask their advisors to complete might work). Also, we recommend that the program keep track of completion rates, time to completion and student placement after graduation.

The current ES core teaching staff is excellent---enthusiastic, talented, and excited about the resourcefulness of their students. There is, however, no clear plan for long term teaching of these courses.

Introduction

This was the first review of the graduate program in Environmental Sciences (ESGP) since its approval in Winter 1998. The stated goals of the review were to assess: the direction and growth of the program, funding adequacy, adequacy of core courses, and the program's ability to meet employer demands.

The review took place on June 3, 2009 at the Memorial Union. Because of the interdisciplinary nature of this program, no specific on-site tour of facilities was undertaken as a part of the review.

The participants on the review team included: Alison Power (Dean of the Graduate School at Cornell University), Susan Walls (Florida Integrated Science Center), and two members of the Graduate Council: Vinod Narayanan (Engineering) and Shawna Grosskopf (Liberal Arts). The team was provided with guidelines as well as an excellent Self Study Report prepared by Dr. Andrew Blaustein (program director) and coordinators Kimi Grzyb and Kathleen Kraska before the review. We were also provided copies of the Category I proposal establishing the program.

Present as observers were Sally Francis, Dean of the Graduate School and Martin Fisk, Associate Dean. Nagwa Naguib from the Graduate School also attended.

We first met with Dr. Andrew R. Blaustein, ESGP director, who provided us with a very helpful summary of the written report. We then met with three of the seven deans involved in this program (Sherman Bloomer, Dean of the College of Science, Larry Curtis, Associate Dean, Agricultural Sciences, and Larry Rodgers, Dean of the College of Liberal Arts). Next we met with the faculty teaching the core courses (William Hogsett, EPA, Eric Seabloom, Zoology, Elizabeth Borer, Zoology), followed by meetings with graduate students, graduate faculty, and a closing session with the director and administrative assistant Linda James.

All participants were extremely open and helpful. The panel members appreciated the professional conduct of the review visit as well as the documents provided to us. We were provided ample time to pose questions, and we believe that the participants were given ample time to provide opinions, comments and suggestions for improving the program.

The rest of the report follows the outline for the review panel report provided by the Graduate School.

INPUTS

1. Fit of the Mission of the Program with college and university missions

The stated mission of Oregon State University (<http://oregonstate.edu/mission/>) is to promote economic, social, cultural and environmental progress for people across Oregon, the nation and the world through our graduates, research, scholarship, outreach, and engagement. By providing a cross-cutting platform across several disciplines such as Zoology, Forestry, Liberal Arts, Agricultural Sciences, and Oceanic and Atmospheric Sciences, the ES Graduate Program fits well with OSU's mission of affecting environmental, social and economic progress. The graduates from this program are trained to analyze environmental systems and predict changes in the environment as well as manage environmental resources. The ESGP is housed at the Graduate School and hence transcends the mission of each of its participating Colleges.

A unique aspect of the ESGP is that it is a Joint Campus program between Oregon State, University of Oregon and Portland State Universities. Faculty and students researchers participate in a Joint Campus conference once a year. The review team considers this conference to be of great value to students since it gives the students exposure to the diverse, yet complementary nature of environmental sciences. There were some concerns expressed related to the low turnout at a recent Joint conference. This review team was not privy to the structure of the ESGP at UO and PSU and hence cannot suggest ways of improving participation. However, the low attendance of participating faculty and Deans with the Review team indicates that the inter-disciplinary inter- institutional nature of this program is both its uniqueness as well as its challenge. One suggestion is to coordinate reviews of the ESGP at all three institutions or to have Directors of the ESGP from UO and PSU provide input on their respective programs to the review team.

At OSU, the ES Graduate Program has eight tracks: Biogeochemistry, Ecology, Environmental Education, Natural Resources, Quantitative Analysis, Social Science, and Water Resources, in addition to a Professional Science Masters' track. The Director has informed the Review Committee that two other tracks are in the planning stages, one of which is Conservation Biology. The Director further informed the Review team that only three of these eight tracks, namely Ecology, Social Science, and Professional Science Masters had the largest enrollments. **This observation, coupled with the other regarding lack of active faculty participation except for a select group, suggests that elimination of tracks with low enrollment should be considered.** While such a move would not necessarily change the financial situation, it would help in two ways: (a) present a more coherent front to the Program, and (b) reduce the burden of processing some additional applications.

2. Quality of Students

ESGP students consistently have GPA's over 3.0 and GRE scores that are competitive with the national averages (as determined in 2000). For all degree programs in the ESGP, a high proportion of applicants and graduating students are female and either international or non-residents of Oregon. Students are resourceful, with many of them garnering their own funding and being recognized with a variety of honors and awards. Several have published in peer-reviewed scientific journals and given presentations at professional meetings.

3. Admissions selectivity

From 2004 to 2008, the number of applications to the ESGP that were received, followed by the number of students admitted, were as follows: 2004, 17 (3); 2005, 9 (7); 2006, 23 (12); 2007, 26 (10), and 2008, 22 (7). This resulted in an overall average rejection rate of 56.4%, ranging from 22.2 to 82.3%. The primary reason that applicants are not admitted to the program is the inability of a student to secure a major professor prior to admission (not a requirement of PSM students). The Program Director exerts a considerable amount of time and energy in attempting to match the interests of prospective students with those of ESGP faculty. This is an example of a task with which the Program Director needs the participation of his ESGP colleagues (see below).

4. Level of financial support of students

Many students receive external financial support and/or GRA's through their major professor's department, however support is not guaranteed. The self-study report notes that 56% of ES graduate students worked in non-university funded jobs during graduate school, compared to 35% of OSU graduate students overall. There are no ESGP fellowships available. **To compete for, recruit and sustain high quality graduate students, teaching stipends need to be increased (both in terms of number of**

stipends available and the funding amount per stipend). There are only 6 annual GTA positions available for students, offered in conjunction with the Biology undergraduate program, each at \$1,380.00/month. These are mostly funded through the College of Sciences, and are not guaranteed. Moreover, because some GTA's receive stipends from their respective home departments, and departments vary in funding available for stipends, GTA's perceive that there is a disparity in stipend amounts for the same workload. **Funding mechanisms for GTA's should perhaps be standardized, if possible.** Other possibilities for students to earn income in their academic field of study are described below.

5. Curriculum strength

The required core courses (ENSC 515, 520 and 508) are well-structured, relevant to current environmental issues, and germane to the mission and goals of the ESGP. In addition to these three classes, graduate students are required to take up to one additional course from an approved list of core courses to comprise a total of 9-12 credits of a core curriculum. The required and approved additional core courses address contemporary needs of prospective employers in both the public and private sectors. Additional courses are required to fulfill degree requirements, and the number of these needed vary with program of study. In theory, the lists of available courses are sufficiently diverse to allow students the flexibility to design a course of study tailored to their particular interests, whether more academic or applied. However, it is not clear how many of these courses are actually offered on a regular basis. A course that appears to be lacking, but which would be beneficial to students, is one on Professional Development (e.g. one that covers development of a curriculum vitae, statements of teaching and research, interview skills). This might be offered as a workshop at the annual meeting.

6. Quality of personnel and adequacy to achieve mission and goals

The credentials of the faculty available for participation in the ESGP are stellar. A pivotal concern is the general lack of faculty participation in the program, which undoubtedly could be increased by offering incentives. Faculty participation is needed for service on committees (e.g. admissions), as well as for teaching. The Program Director has had little support from his colleagues with detailed decision-making processes. The faculty who have been involved in teaching the core courses (Borer, Hogsett and Seabloom) are extremely creative, vibrant and enthusiastic, with excellent research credentials. They should be recognized for their commitment to the program (as should the Director). Participation by other faculty is greatly needed, however, to allow these faculty the opportunity to rotate out and teach other classes in their areas of specialties.

Administrative support: The program is understaffed. Linda James does an excellent job as the singular support person for this program. **The addition of even modest additional support, such as a work study student, could potentially improve administration, especially if that person also had expertise to provide website support, a skill which is needed.**

7. Level and quality of infrastructure

The Environmental Sciences graduate program is a purely interdisciplinary degree program involving eight colleges with degrees granted through the Graduate School; ESGP does not have its own physical facilities. The Director and Student Services Manager reside in offices in Cordley Hall which are shared with the Environmental Science Distance program, Entomology, Science Pre-Education and first and second year Biology/Zoology students. The program also receives support from the College of Science Management Center (Cindy Alexis and Leah Quinlivan handled ESGP finances and are moving to the Arts and Sciences Business Center); Dr. Ursula Bechert manages student recruitment, mentoring and outreach for the PSM Program in Environmental Sciences and Andrea Wirth is the Geosciences and Environmental Sciences librarian. Although library budgets have declined, roughly half of the

monographs in the environmental sciences section have been purchased since 2000. OSU subscribes to 18 of the 20 top journals in the environmental science area. Given that materials are available through Summit and Interlibrary loan, library services are probably adequate.

All participating faculty have home departments or agencies other than Environmental Science. There are no dedicated facilities for the graduate students in the program, which probably contributes to the perceived lack of cohesion and communication among these students. Although a physical home would certainly be welcome, the social infrastructure and communication among students and between faculty and students could be enhanced even without such a home. During our visit with graduate students, many suggestions were made, including setting up an online communication network among the students themselves (see section on student satisfaction below for more recommendations). **We recommend that the ESGP include student representatives on program committees (which will be done starting this Fall), make Fall orientation a community-building event by inviting returning students and faculty, consider moving required courses to the Fall term, and schedule an annual review of students to provide feedback on their progress.**

8. Quality of Organizational Support

The Graduate School provides financial support for the Environmental Sciences Graduate Program, which includes funding for the Director and Student Services Manager for the program. As mentioned in the previous section, additional staff support services are provided by the College of Science Management Center, which appears to be moving to the Arts and Sciences Business Center. Dr. Ursula Bechert provides services to the PSM Program in Environmental Sciences as part of her duties as director of off-campus programs.

According to the self study report, as of FY08 the program no longer receives funding from other units. Since FY04, there has been a positive end of year balance, which presumably could have been used to invite seminar speakers or finance graduate students. The report notes that the ESGP was awarded an additional \$19,000 in 2008/2009 by the Graduate School which was to be spent on travel and student support by June 2009.

The review committee would recommend additional funding for FTE staff or student workers to help with the web and perhaps an Associate Director, however the persistent positive balances need to be addressed.

The organizational structure as it stands looks fine on paper, however, the support provided by the ESGP advisory committee and the Graduate admissions committee is lacking what economists call incentive compatibility. Participation on these committees is entirely voluntary with 'rotating faculty'. In practice, it appears that participation on the admissions committee in particular, falls on a few faculty---currently the Director has apparently been bearing the major burden which is considerable given the requirement that all ESGP students (except PSM students) must have a major professor to be admitted. It is unlikely that students themselves can identify and convince one of the over 100 faculty listed as participating ESGP graduate faculty to be their major professor. Again, these faculty all have home departments and agencies, to which they have obligations and students to support and mentor. Although there were financial incentives in the past, currently there is no real incentive to actively participate as a major professor or committee member in this program. Although the problem is easy to identify, our review committee does not have a remedy, other than to refer the problem to the participating deans.

PRODUCTIVITY

1. Level and quality of student performance

The review committee's meeting with Environmental Science graduate students suggested that the majority of students are bright, articulate, and thoughtful. The quality of their academic performance was somewhat more difficult to evaluate based on the information provided in the program's self-study.

Indicators of student performance for doctoral and research master's students include numbers of publications, numbers of presentations at national meetings, and grants received. While there is evidence that some students are presenting their research regularly at national meetings, it is not clear how common this is among the students. Numbers of publications in peer-reviewed publications are limited. Students appear to be applying for, and receiving, various small grants, but it is not clear whether they have been applying for national awards such as NSF Graduate Research Fellowships, EPA STAR fellowships, or NSF Doctoral Dissertation Improvement Grants. Success in these highly competitive national grant programs would be a clear signal of high quality student performance. However, faculty assistance is necessary to inform students about these opportunities and guide them through the application process, so a lack of these awards does not mean that the students could not be competitive with faculty guidance.

Students in the Professional Science Master's program who are not carrying out research would not necessarily be expected to publish, present at meetings, or apply for grants. While GPA in coursework might be an appropriate indicator of performance for these students, the most useful indicator is likely job placement. As noted below under Outcomes, the data on job placement is minimal. **We recommend a concerted effort to collect such data in a systematic way, though we recognize that this probably could not be done without additional administrative assistance.**

Other measures of student performance, such as time to degree and completion rates, can be useful indications of the success of a graduate program. Those data were not available to the review team and therefore cannot be evaluated. **Again, we recommend that the program systematically collect these data in collaboration with the Graduate School, to the extent that resources permit.**

2. Level and quality of faculty performance

Overall, the Environmental Sciences Graduate Program faculty are demonstrably outstanding. They have garnered numerous honors and awards and have highly successful research programs funded by NSF, EPA, NIH, DOE, USDA, CDC, US Forest Service, and many other government agencies, foundations, and non-governmental organizations. Curriculum vitae indicate excellent publication records for many faculty members. Many of these faculty would be excellent advisors and mentors to Environmental Science students. However, it is the impression of the review team that relatively few of these faculty actually advise students. Instead, it appears that only a handful of faculty members are actively engaged in the program, either teaching core courses and/or advising students. Relatively few faculty came to the review team's scheduled meeting with faculty. Moreover, there is some concern that a number of the active faculty are at or close to retirement. **To ensure a successful program, it is essential to provide incentives to engage faculty, particularly early to mid-career faculty with active research programs.**

3. Viability of scholarly community

Due to a lack of centralized space for Environmental Science graduate students, the ES scholarly community is less than the sum of its parts. Some students expressed strong feelings of isolation and a lack of interactions with other students and faculty in the program. The students who expressed the

most satisfaction had identified with the scholarly community in their home department (e.g., Zoology), rather than Environmental Science. **It is clear to the review committee that the program needs additional attention from faculty to build and sustain a viable scholarly community.**

OUTCOMES

1. Professional viability of graduates: The stated vision of the ESGP is to develop a strong interdisciplinary graduate program that prepares graduate students for employment in academia, government agencies, and private industries. Thus far, 56.5% of ESGP students have secured employment after graduation, and 100% of these positions were directly related to ESGP degree training. The data on job placement that were provided to the review team did not appear to be comprehensive, hence it is difficult to judge outcomes with any confidence.

With the exception of one student placed at a Turkish university, none of the placements listed in the self-study report were academic. Since the data were sparse, it is possible that there have been other academic placements. Unlike placements in the private sector, these would be relatively easy to find using simple web searches. Assuming that the data are accurate and academic placement has been rare for Environmental Science students, it would be useful to determine whether students are encouraged to consider an academic career, or whether the program actively directs them toward other professional options. It is telling that a survey of current students indicates that the students do not expect assistance from their major professor in seeking employment. Traditionally, the faculty advisor is the single most important source of advice regarding academic employment. The program course offerings are sufficiently diverse to provide a broad knowledge base that is adequate for students that wish to pursue an academic career, along with opportunities for specialization. But the surveys indicate that **enhanced career services, for both academic and non-academic careers, are essential for students to succeed in realizing their professional potential.**

For those interested in employment opportunities with both state and federal agencies, there are on-line sources of information (see Attachment 1) that would be helpful for students to consult in designing a course of study that is best suited for their particular career interests. By informing themselves of the prerequisites for employment with these agencies, and by becoming aware of existing student employment opportunities, students can potentially enhance their professional viability upon graduation.

2. Student Satisfaction

The review team met with several graduate students in the ES program, including the PSM program. The team also evaluated the satisfaction section of the self-study report and e-mails received after the review. This section presents our findings of satisfaction of students currently enrolled in the program as well as that of the alumni. It affords several recommendations on how to improve student satisfaction by some simple means. In general, the students were very appreciative of the opportunity to be pursuing an inter-disciplinary degree in the ES. They were very positive about the efforts of both the Director, Dr. Blaustein, as well as the administrative assistant, Linda James.

The current student satisfaction survey indicates that students are in general satisfied with their experience in the ESGP, and very satisfied with their major advisors. Three areas have been indicated by students in the survey as less than satisfactory: Departmental advising/guidance, the level of financial support, and somewhat with the resources available for student research. Our meeting with the students also revealed that these areas needed to be addressed. We observed that student satisfaction was related substantially to the home Department of the ES student. For example students in the

Department of Zoology (the Director's home unit) were very satisfied with their experience while those in other Departments were less than satisfied in several areas. Some of their concerns, along with recommendations, are indicated below.

Several students commented on inconsistencies in the expectation level of each faculty member on their dissertation committees. ESGP faculty echoed this comment as well. Students were also concerned with the multiple requirements (coursework as well as examination policies) that needed to be satisfied.

The ESGP needs to have a consistent policy on requirements for students. This policy should clearly lay out the examinations and coursework.

Faculty who wish to mentor students in ESGP should be made aware of this policy and the differences between Departmental and ESGP students.

Faculty who participate in the ESGP students' committee, in particular, the GCR, should be made aware of the policies of the program.

The Director of ESGP should meet with the Deans/ Heads/ Chairs of participating Colleges/Departments to ensure that students are not made to jump through two hurdles-- one for their department and the other for ESGP.

With the exception of the Joint-campus conference, students were mostly unaware of the advantages of the Joint-campus program, such as being able to take courses at either UO or PSU.

The Director should meet with his counterparts at UO and PSU and discuss which of the courses in their institutions are equivalent to those in the OSU program.

The Joint campus advantages, as well as procedures, should be clearly identified on the website of all three campus programs.

Several students remarked that they faced an "Identity crisis" –This is a challenge with any program that transcends a single Unit level. With the exception of the first year, students are not in classes together.

A seminar series that meets one or two term a year, in which each student presents his/her ongoing research, would help in bringing students together. A venue for students to meet gives them a chance to discuss their experiences and research. The Director or one of the core faculty could facilitate the seminar series (although the annual inter campus conference does help serve this purpose).

Students had resolved to form an e-mail listing by the end of our meeting with them- this could be a simple, no-cost mechanism to connect students. Students could self-organize social events and such other activities. The recommendation is for the ES administration to formalize this listing of students and keep it current. A formal ESGP Graduate Student Association would probably be useful for continuity.

With the exception of Zoology students, ES students felt that they were treated as "second class citizens" within their departments: Teaching Assistantships and office space were offered to other students within their Departments prior to the ES students. This is a serious concern that needs to be addressed since there is little incentive for faculty to mentor ES students.

The Director needs to meet with Deans/Head/Chairs of participating Units and ensure that ES students are treated in the same manner as other students within the participating Units. This treatment includes: (a) equal opportunity to obtain TAs, office space as regular students (we have learned that office space will be available for 10-12 students this fall), and (b) equal pay scale for TAs within the unit. The committee realizes that this recommendation is very challenging to implement since the Director does not really have any "carrots" to offer to the Unit Heads/Chairs.

Although not explicitly mentioned by the students, the Director brought to the review team's attention dissatisfaction among ES students with regards to the disparity in salary scale across the program. See the discussion above on level of financial support for students.

There was a strong desire by all students to see an updated course listing provided on the website as well as on the brochures of the tracks. The Director informed us that the website was being redesigned to address this concern.

The Director appoint "Track Leads" who can update and maintain the course listing in their tracks, perhaps with student input. The Director would have to provide some incentive for the track lead or negotiate with the unit heads to count this towards the Lead's service obligation.

The PSM students had a more cohort sense than the other tracks-- this is to be expected considering the structure of their program. However, they felt a disconnect with the rest of the ES program.

Recommendation: Drs. Blaustein and Bechert need to discuss how to better integrate and enrich the experiences of the two groups of students.

3. Rankings/Ratings

The major sources of graduate program rankings, the National Research Council's Assessment of Research Doctorate Programs and U.S. News and World Report, do not include rankings of graduate programs in Environmental Science. Using rankings for biology programs, conservation biology programs, or even ecology programs, is tenuous, since Environmental Science is a highly interdisciplinary program that includes faculty from the social sciences as well as a variety of biophysical sciences. The review team was unable to identify a useful source of ratings for environmental science graduate programs.

The self study document points out the OSU is highly ranked in the area of research productivity in conservation biology according to a recent paper in *Conservation Biology*. Although this isn't directly linked to ESGP, this certainly could be used as part of a recruiting effort.

The committee recommends that the ESGP track completion rates and time to completion of their students.

Conclusions

The overall recommendation of the panel is that the Environmental Sciences Graduate Program be retained. Steps to improve the Program are presented in the Summary of Findings as well as the Detailed Report above and include the following:

- Review tracks, streamline where there are low enrollments and redundancy with other programs
- Update course lists for tracks, perhaps with appointed track leaders and student input
- Keep web pages updated, including links to PSU and University of Oregon programs; additional staff or student worker help is recommended
- Work with Deans to provide incentives for faculty participation in the program as major professors, committee members and core teachers
- Collect consistent data on completion rates, time to completion and student placement after graduation. Also provide annual student reviews

- Consider moving core courses to fall term to build student esprit de corps, include returning faculty and students to fall orientation, encourage formation of student e-mail list, student seminar series and a formal ESGP Student Association
- Have a consistent policy on requirements for students, including examinations and coursework
- Work with Deans, Chairs etc to ensure that ES students are on par with students in the participating units
- Enhanced career services for both academic and non-academic careers

Attachment 1

For those interested in employment opportunities with both state and federal agencies, students should be advised at the start of their degree program to consult websites such as <http://www.usajobs.gov/> for examples of prospective employment opportunities in their field of interest, and to pay particular attention to the required educational and experiential qualifications listed for a given position. Such consultation will aid in designing a course of study that is best suited for their particular career interests. Another means by which the professional viability of students can be enhanced would be to take advantage of student career opportunities that are available within at least some federal science agencies (e.g. U.S. Geological Survey, U.S. Fish & Wildlife Service and the USDA Forest Service). Within these agencies, there is a Student Educational Employment Program (SEEP) that has two components, the Student Temporary Employment Program (STEP) and the Student Career Experience Program (SCEP) (<http://www.usgs.gov/ohr/student/benefit/seep.html>). *Pending available federal funds*, this opportunity is available to all levels of students: high school, vocational and technical, associate degree, baccalaureate degree, graduate degree, and professional degree students. In the STEP program, job opportunities offer temporary employment that can provide students with a valuable work experience. Employment can range from summer jobs to positions that can last as long as student status is maintained (in one-year increments or less). The duties do not have to relate to a chosen academic field of study. Students in this program may be eligible for conversion to SCEP positions. The SCEP option offers valuable work experience directly related to a student's academic field of study. It provides formal periods of work and study while attending school. The program is designed to be a partnership between the student, his or her academic institution, and the federal agency. SCEP combines academic classroom learning with practical, on-the-job experience and provides students with paid work experience in their field of study. The SCEP may lead to permanent employment after you graduation and upon meeting the necessary position requirements. Agencies such as the U.S. Geological Survey want to attract students who demonstrate the talent, skills, and abilities the USGS needs. USGS student vacancies are highly competitive. Moreover, in some situations, students may be eligible for tuition assistance.

February 18, 2009, Three year follow-up review of graduate programs in nuclear engineering and radiation health physics.

Department of Nuclear Engineering and Radiation Health Physics
Oregon State University, Corvallis, OR 97331

In attendance:

| | |
|----------------------------|--------------------------|
| Graduate Program Chairmen: | Dr. A. Farsoni (current) |
| | Dr. Q. Wu (past) |
| Department Head: | Dr. J.N. Reyes, Jr. |
| Assistant Head: | Dr. K. Higley |
| Graduate Council Rep | T. M. Filtz, Pharmacy |
| Graduate Council Rep | R. Harter, HHS |

The external review of the graduate programs in the Department of Nuclear Engineering (NE) and Radiation Health Physics (RHP), College of Engineering, Oregon State University, was conducted on February 13, 2006. The required three year follow-up was conducted at the Radiation Center on February 19, 2009. Previously, the review team was very favorably impressed with the NE and RHP graduate programs. They are well-regarded nationally, serve a regional and national need, and are growing in funding, faculty and students. The review team's initial report focused on suggestions for improvement to a very strong program. The follow-up review found the programs gaining in strength. A follow-up report on progress (appended) was presented to the review team (Filtz and Harter) and was discussed for approximately 1 hour. The following is a brief summary of the review team's impressions. The department is currently in the enviable position of having demand for its graduates increase dramatically in recent years, of seeing increased federal funding of its research, of having a unique facility for industry-supported training, and of being strategically positioned nationally and regionally to meet the demand. Details are in the appendix.

Based on a concern that the faculty were stretched to the limit, growth of the graduate programs in NE & RHP--for which demand is extremely strong--required additional faculty hires. In the past three years, three new faculty members were hired, a 50% increase in FTE for the program. The positions are partly funded by an agreement with Idaho National Labs and the Oregon Engineering and Technology Industry Council. This has allowed for reduction in teaching loads from 4 to 3 courses per year per faculty member, with provisions for buyout for faculty with heavy research loads. In addition, two retired professors are being paid to teach some courses, the Department is developing an instructor pool of recent PhD graduates and a few graduate students with interests in teaching skills are being utilized as teaching assistants with faculty oversight. All of these developments are extremely healthy and should help the program to grow in numbers and further in stature. However, one difficulty that the department faces is that salaries in the private sector far out-strip academic salary offerings to potential faculty.

The program appears to be maintaining and furthering a very productive research agenda with \$3.5 million in grants and contracts this year, up from \$3 million in 2006, and a further \$10 million expected by the department chair.

Graduate student enrollment has increased from 75 to 91 students in three years. The previous review suggested that the pool of qualified applicants to the program was very deep and expansion of the program was desirable. Of interest, approximately half of these students utilize the distance learning opportunities provided by the program. The department is currently conducting an assessment of the distance program to evaluate its effectiveness in training and satisfaction compared to the Corvallis based program. The department should share these results with the next review team.

A new graduate program in Medical Physics is accepting applications and expects to enroll 6 to 8 students in fall 2009, having survived the Category I approval process. Agreements with OHSU for the logistics of the joint program are moving forward. Applications for this program, to which students will be expected to be tuition-paying and self-supporting, are already arriving prior to any advertising.

The department is securing funding to allow the nuclear test facilities on campus to provide more academic training. A contract with China State Nuclear Power Technology company will bring in engineers to train on the APEX test facility. The department is also applying for an NRC curriculum grant to run the APEX facility for teaching purposes.

As recommended, the department has instituted a program requiring all students to submit annually for external fellowships. At least 6 students are now externally funded in the program. The department has also instituted ethics training into its new student orientation and utilizes the seminar program to bring in speakers on internship and scholarship opportunities for graduate students. In response to the question regarding monitoring of adequate student progress, the department noted that all students prepare quarterly reports on academic and research progress that are reviewed by faculty. This is commendable.

The one final item that the review team noted was a need to develop a diversity action plan at the department level. This item is awaiting further guidance from College-level diversity support personnel.

PROGRESS REPORT OF ACTIONS FOLLOWING THE 2006 OSU NE/RHP GRADUATE PROGRAM EXTERNAL REVIEW

Department of Nuclear Engineering and Radiation Health Physics
Oregon State University, Corvallis, OR 97331

Graduate Program Chairman: Dr. A. Farsoni
Dr. Q. Wu (2006)
Department Head: Dr. J.N. Reyes, Jr.
Assistant Head: Dr. K. Higley
February 18, 2009

The external review of the graduate programs in the Department of Nuclear Engineering (NE) and Radiation Health Physics (RHP), College of Engineering, Oregon State University, was conducted on February 13, 2006 by three internal and two external reviewers. According to the review report, the review team was favorably impressed by the graduate programs, and was satisfied with the department self-study that highlighted the strengths of the program in its current state while acknowledging future challenges. The reviewers concluded that both NE and RHP graduate programs are well regarded nationally due in large part to the department's expertise in reactor safety/thermal hydraulics and radiation health physics. They also concluded that, in general, the department's graduate students were very satisfied with their programs and faculty. They indicated that the department chair and faculty were to be commended for maintaining strong graduate training programs despite budgetary and other constraints. The review team made several valuable suggestions in an effort to help improve and maintain the high quality of the graduate programs. In view of these suggestions, the faculty of the NE/RHP graduate program drafted an action plan for program improvement and adjustment. After almost three years of efforts, the NE/RHP faculty made the following progresses:

1. Reduction of Faculty Workload to Maintain Competitiveness of the Program

Reviewers' Suggestion:

"The review committee suggested that Faculty are overburdened and will not be able to meet the rapidly increasing demand for more graduates without a serious investment by the College and the University. As a top 10 nationally ranked program, NE and RHP are great assets to the College and University. The graduate programs risk losing their national stature due to staffing challenges and/or becoming overly dependent on unstable external funding. The committee recommends an increase in full-time, tenure-track faculty. In addition, the faculty needs to find a mechanism to reduce teaching loads to compensate for high productivity in research and obtaining research funding. This recommendation was made in 1991 and remains unaddressed."

Actions Plan:

Some support from the College has already been provided to help implement this recommendation. One new half-time tenure track faculty member has been hired since the graduate review was conducted. One full-time tenure track faculty member will be hired by the

fall of 2007. These new faculty members will broaden our research capabilities while reducing the teaching load of each individual faculty member. The department's broader spectrum of research capabilities will attract new research opportunities that will help us continue to grow our graduate programs.

Additional College and University support is needed to fully address this recommendation. Two paths are being considered; faculty hires via collaboration with the Idaho National Laboratory (INL) and faculty hires through a strategic investment by the State of Oregon and industry as stated in the 2006 proposal developed and approved by the Engineering and Technology Industry Council, (ETIC).

Growing with INL is one of our strategies for further advancement. INL's emphasis on the development of the next generation nuclear power plant, matches our expertise in the advanced reactor technology. As part of INL's restructuring during the past two years, we have built a strong collaboration with INL that may serve to elevate our research program to a new level. As the nation's lead university for nuclear plant certification testing, the program would continue to play a major role in developing and testing next generation technologies. If the plan progresses as expected, INL will fund four half-time faculty positions to promote the collaboration.

As part of an effort to strengthen the state's economic development and its ability to compete nationally, ETIC has approved a proposal that would dramatically strengthen the College. If approved by the legislature and governor, the net result to the department is 6 new full-time faculty hires over the next 4-6 years. Details of the ETIC proposal can be found on their website: <http://www.oregonetic.org/nb.htm>.

Actions Taken:

- (1) In the past three years, three new faculty members were hired, including Dr. Camille Lodwick, Dr. Abi Farsoni and Dr. Alena Paulenova.
- (2) Currently, we are in the process of implementing the strategy to rely on the partial financial support of Idaho National Laboratory for joint faculty appointments.
- (3) We also have reduced teaching loads to a baseline of 3 courses per year, with provisions for buyout for faculty with heavy research loads.
- (4) Hiring two retired professors, Prof. S. Binney and Prof. J. Ringle, for three courses to reduce the teaching average faculty teaching load.
- (5) Currently, we are in the process of hiring qualified instructors to teach certain courses as the research work load increases. An instructor pool is under construction.

2. Improving Utilization of Graduate Teaching Assistants

Reviewers' Suggestion:

"The faculty needs to re-evaluate the under-utilization of graduate teaching assistants as a means to reduce the undergraduate teaching load."

Action Plan:

Based on the committee's recommendation and subsequent faculty discussions, we have decided to utilize a graduate teaching assistant to teach three freshmen level courses. This will reduce the

faculty teaching load and provide valuable training of graduate students who have the potential for careers in academia. In the past, for the purpose of retaining freshmen, we generally assigned experienced professors to those courses, and occasionally hired one or two Ph.D. candidates to share part of these courses. To guarantee the instructing quality, each graduate instructor will develop the course under the guidance of at least one faculty member having a thorough understanding of the course objectives. In this way, graduate students will learn the elements of course development, notes preparation, and assignment selection.

Action Taken:

- (1) We have hired 4 graduate students teaching courses partially or independently. This year we have had Ph.D. candidates Wade Marcum and David Bytwerk teach freshmen classes. A third PhD student is scheduled for spring term.
- (2) In certain causes, NE467/567 and NE451/551 for instance, professors gave a portion of the course to Ph.D. students, not only for the reduction of faculty teaching load, but also for the training of students.

3. Developing Joint-degree program in Medical Physics with Caution

Reviewers' Suggestion:

"Faculty should proceed cautiously with the plan for a new joint-degree program in Medical Physics in collaboration with OHSU."

Action Plan:

The plan for the inclusion of a graduate level medical physics program that aims at improved diagnostics and treatment methods would be responsive to developing the technologies needed to care for Oregon's aging population. A medical physics program is essential to the state and we are in the best position to provide this service. With regard to teaching workload, the new medical physics program coursework significantly overlaps our existing Health Physics program. The fall 2007 faculty hire will have a specialty in the medical physics. Furthermore, because of our joint capabilities in distance education, the teaching load for the core coursework in medical physics can be easily shared between OHSU and OSU. We expect more inter-disciplinary collaborations and research programs as a result of the medical physics program. The number of students admitted into the medical physics program will be limited. The goal is a Fall 2007 startup.

Action Taken:

- (1) A program preparation team was formed with the participation of Dr. K. Higley, Dr. D. Hamby and Dr. J. Reyes.
- (2) Legal and authority support of OSU were obtained, and the plan has been proceeding slowly and carefully.
- (3) New hire, Dr. C. Lodwick, is in position to lead the program.
- (4) New student selection for the 2009 Fall term to start the program is in process.

4. Expanding the Program to Meet the Increasing Demand

Reviewers' Suggestion:

“Demand for graduates is high and expected to increase dramatically in the near future. Overall, graduate student quality is very good; however, an equal number of equally qualified applicants are not admitted due limitations based on funding, faculty size and research interests. The college and department need to consider means to expand the program to take advantage of increased demand for graduates and adequate supply of qualified applicants.”

Action Plan:

The department will vigorously pursue industry and private support for graduate scholarships. While the department has committed more funds to support teaching assistants, the faculty, especially the department head, with the support of the university and college, have participated in various fund raising activities. Thus far, their efforts have resulted in the support of at least three more graduate students. Also, relevant to the suggestion, growing the program with the support of INL and the plan for the inclusion of a medical physics program can potentially bring in more research funds to support graduate students.

Action Taken:

- (1) We now have 4 to 6 graduate scholarships/fellowships being offered annually.
- (2) The growth of distant-education graduate student population has been steady, reaching the limit of our resources.

5. Balance the Efforts on Research Projects and Academic Activities

Reviewers' Suggestion:

“The faculty members are encouraged to participate in on-going graduate programmatic assessment based on academic goals. Faculty productivity in terms of revenue generation appears to be over-emphasized relative to publication quality. This phenomenon has been identified by the faculty and was included in the self-study document.”

Action Plan:

Regarding faculty and student publication, as the self-study summarized, the faculty felt that we could have done better with the size and scale of our research programs. The growing Ph.D. student population in recent years did make a difference. However, a reduced teaching load would be favorable for the promotion of research publications. Although faculty members have enough research funds to buy out of a certain amount of teaching FTE, there are not enough alternative instructors to shoulder the teaching load. As a result, faculty members are usually tied to teaching a full load of courses each year. To realize the transition from a traditional teaching model to a research model, adding faculty members is the rational choice. For a healthy research group, as we demonstrated in the past decade, the external research funds would be significantly greater than the investment on the manpower. Therefore, the action plan for this suggestion is indirectly related to the growth of the program and the increase of graduate student population, as stated in items 1 and 3, respectively.

Actions Taken:

The actions taken in item 1, 2, and 3 are related to the reduction of faculty teaching load, and thus leaving more time for scholar activities.

6. Enhanced Use of Facilities for Academic Purposes

Reviewers' Suggestion:

"The reactor, APEX facility, radiation center, and radiochemistry lab are exceptional facilities. However, they appear to be significantly influenced by funding sources and could be better integrated with the academic mission."

Action Plan:

The OSU TRIGA reactor, the Radiation Center and radiochemistry labs regularly receive significant academic use. Because of the expense of running the large APEX thermal hydraulics system, the primary use for APEX continues to be externally funded graduate level research. Numerous theses have been published using data from the test facility. One option being considered is to obtain a long term grant from the nuclear industry to provide support for academic training using APEX.

Action Taken:

- (1) The APEX facility has been completely restored for AP1000 testing. A new contract with Westinghouse has been signed to train the Chinese customer, China State Nuclear Power Technology Company (SNPTC) engineers, a educational use of the facility.
- (2) The development of a course that uses APEX tests is in progress.

7. Further Actions Proposed By the Reviewers

The faculty has adopted the following rules and activities recommended by the reviewers for the improvement of the graduate program.

- (1) Require all graduate students to complete at least one application annually for an external scholarship or fellowship. The department covers the expenses of application submission, including costs of requests for official transcripts.
- (2) At least one seminar per year is devoted to student applications for external funding.
- (3) We recruited outside speakers to highlight internship and scholarship opportunities (e.g., PNNL's presentation on the NNSA internship program; Dave Brockman on DOE-RLs internship program).
- (4) Provided annual seminars for new graduate students centered on ethics (Annual Introduction to the Department).
- (5) Develop and integrate a department-level diversity action plan with the College of Engineering's plan to increase diverse gender and ethnic representation among graduate students, faculty and staff.

**FOLLOW-UP REVIEW OF THE
GRADUATE PROGRAMS IN
THE DEPARTMENT OF FISHERIES AND WILDLIFE
November, 2009**

On November 19, 2009 the follow-up review team of Alix Gitelman and Darlene Russell (members of the original 2007 review team) met with Dan Edge, Department Head of Fisheries and Wildlife. Dr. Edge prepared a Progress Report document enumerating the Department's response to/implementation of recommendations from the original program review, and this document served as the basis for our discussion ~~(it is appended to this report).~~

First, it should be noted that the original Program Review by the Graduate Council in 2007 reflected quite positively on the Department of Fisheries and Wildlife. To quote the original Program Review document:

The review teams (Graduate Council team, and Cooperative State Research, Extension and Education Service—CSREES—of the U.S. Department of Agriculture team) found the Department of Fisheries and Wildlife (hereafter, the Department) to be well functioning and very well respected within the University as well as regionally, nationally and internationally. The external reviewers concluded that the Department was among the top such Departments nationally in terms of quality, breadth and depth of research and faculty expertise. The diversity of expertise among the faculty enables them, and their graduate students, to address virtually any major issue pertaining to natural resources. Furthermore, the close links between the Department and many state and federal agencies afford graduate students access to both relevant problems and potential employers. The Department benefits from the strong leadership of the Department Head, which is acknowledged by faculty, staff and graduate students. Graduate students are well-qualified, extremely dedicated to their research programs and also very loyal to the Department.

Second, the follow-up team found that the Department has responded to, and where appropriate, implemented recommendations from the original review. The remainder of this document highlights these responses.

- *Develop a plan for recruiting minority graduate students.*

A diversity enhancement plan is being prepared and it is expected by the end of The '09-'10 academic year.

- *Ensure and enhance communications between on- and off-campus graduate students and faculty.*

The Department has increased its use of polycom systems to communicate with Hatfield Marine Science Center (HMSC) and two experiment stations; three graduate courses are now taught at HMSC and locally in Corvallis.

- *Further evaluate “slash” courses*

Revisions to the curriculum resulted in some courses being taught only at the undergraduate level and two new graduate-only courses. The hope is to add 3 more graduate-only courses, but faculty are limited. All “slash” courses now have distinct learning outcomes for the two groups.

- *Try to increase teaching opportunities for graduate students*

The Department’s distance education program has provided substantially more teaching opportunities for graduate students, albeit of the distance education variety. The Department has approximate 3 FTE for on-campus GTAs each year, and approximately 8 FTE for distance education GTAs each year.

- *GTA’s assigned to “slash” courses should not grade papers of their peers*

Done.

- *Be clear about financial support and length of program*

Department faculty have these conversations with students at the time a graduate research assistantship is offered. While some of the length of time to degree issues have not been resolved, the increase in distance education GTA FTE and the Oregon Laurels block grant have helped to bridge gaps in research funding.

- *Continue annual performance reviews of graduate students*

Done.

- *Continue to involve graduate students with department governance and operations*

Done.

- *Continue to conduct surveys of recent graduates*

Data are collected through these surveys every three years.

Appendix II: Postponement of Animal Sciences/Rangeland Ecology Review

January 21, 2010

Martin Fisk, Interim Dean, The Graduate School
Walter Loveland, Chair, The Graduate Council
Oregon State University
Campus

Dear Marty and Walt:

Pursuant to a January 12, 2010 telephone conversation with Marty this letter summarizes rationale for delaying graduate program reviews for the Department of Animal Sciences (ANS), and the Department of Rangeland Ecology and Management (REM). It also commits to completing these graduate program reviews in the 2010/2011 academic year.

As you know, a merger of ANS and REM is in progress and preparation of the necessary Category I Proposal for this is in an early stage of development. This is part of the College of Agricultural Science's (CAS) reorganization in response to the ongoing economic crisis. It is also consistent with actions all of the colleges are taking in response to directives from the Provost. This particular merger is more than a simple combination of two departments. It reflects deep structural changes made necessary by over 15 years of erosion in state funding, acute reductions in faculty numbers in both of these departments, and new directions in science. At the end of this academic year on-campus faculty headcount for REM will be three, down from seven as of July 1, 2007. The absolute reduction in ANS faculty is about the same, they will have four or five fewer on-campus faculty next fall than in July 2007. Since ANS is a larger department the relative reduction is less than that in REM. Merging these departments promises to yield some synergies that can partly offset faculty losses. CAS also intends to hire additional faculty into the new department after the merger. Budget uncertainty does not allow us approve positions at this time, however. The need for substantive changes in existing curricula is more pertinent to delay of graduate program reviews. Changes in both the science underpinning these graduate programs and the reductions in state resource to support them necessitates elimination of many graduate courses (about one-quarter of those now in the catalog for ANS) and restructuring of others. This is a work in progress that requires at least several more months. Recruiting and hiring new faculty significantly influences development of curricula that can best meet the needs of future graduate students. A review of the extant programs and their curricula is a rehash of the past not the look towards the future the new graduate programs need.

We respect the need for the Graduate School and The Graduate Council to complete program reviews in a timely manner. The current circumstances force us take additional time to revise the existing graduate programs for both ANS and REM. We do commit to completing these revisions in a timely way and undergoing graduate program reviews in the 2010/2011 academic year.

Sincerely,

Lawrence R. Curtis
Associate Dean, CAS

James R. Males
Head, ANS

Michael M. Borman
Head, REM

OREGON STATE UNIVERSITY COLLEGE OF PHARMACY

Sample curriculum for co-enrollment in the Pharm.D. and Ph.D. degree programs, 2009-2010

Key: Pharm.D. Professional only courses

Ph.D. Graduate program only courses

Pharm. D. and Ph.D. Graduate program co-contributing courses, all currently approved by the Graduate Council

Additional graduate Council "approved" 700 level courses, not being used for the Ph.D. program in this sample curriculum

Sixth Program Year/Second Graduate Year and beyond

During the first graduate year/fifth program year, all didactic coursework for the PhD degree should be completed and the student should prepare for the qualifying exams to be taken in summer. For the remainder of the program (an additional one to three years), students should continue to register 15 credits of Phar 603, thesis research, and for 1 credit of Phar 507, seminar, every term.

Accumulated didactic credits by the end of the first graduate year includeⁱ

| | | |
|--------------------|-------------------|---|
| BB 590, 591, 592 | 9 credits | 400/500 level slash course |
| Phar 564, 565 | 6 credits | Graduate stand alone |
| MCB 554, 555 | 8 credits | Graduate stand alone |
| MCB 668 | 2 credits | Graduate stand alone |
| Phl 557 | 3 credits | Graduate stand alone |
| Phar 735 | 4 credits | Graduate Council approved course, required of ALL students in pharmacy (Pharm.D. and Ph.D.) |
| Phar 752, 753, 754 | 21 credits | Graduate Council approved professional courses |
| Total | 53 credits | |

This is a sample program for a student co-enrolling in the Pharm.D. and Ph.D. programs and pursuing research in a *pharmacology* laboratory. A co-enrolled student pursuing research in a *pharmaceutics* laboratory may choose to substitute Phar 750, Pharmacokinetics, Phar 751, Biopharmaceutics, and Phar 770, Advanced Pharmacokinetics (10 credits) for Phar 752, 753 and 754 (21 credits) which would still yield 42 didactic credits total. Similarly, a student whose research in pharmacology is more biochemical and less genetic could substitute advanced biochemistry courses for MCB 554 and 555 in their program.

¹ Professional student tuition would be paid through the spring of the fourth professional year. Graduate level tuition would commence in the summer prior to the fifth program year/first graduate year and continue through the remainder of the program.

² Phar 601, research rotation, will be accepted by the Pharm.D. program in lieu of Phar 797, elective advanced pharmacy practice experiences.

If a student enters either of our pharmacy programs (Pharm.D. or Ph.D) with a sufficient biochemistry background, we waive this requirement. Doing so for co-enrolled students would allow other graduate courses to be completed in the first program year (e.g. MCB 554 and MCB 555), further accelerating the program.

A variation on this curriculum is to “step out” of the Pharm.D. program after the second professional year and use the third program year to complete all research rotations and didactic coursework required for the Ph.D. degree. This would then be considered the first graduate year. Students would pay graduate tuition in this year and then re-commence the Pharm.D. program in the “third professional year” as the fourth program year. This option has been requested in the past.

College of Pharmacy co-enrolled Pharm.D./Ph.D. Program

Co-enrollment in Pharm.D. and Ph.D. degree programs in the OSU College of Pharmacy is offered to students seeking to advance translational research in pharmacy. Practitioners possessing both degrees will be able to bring an understanding of molecular pharmaceutical sciences to contemporary pharmacy practice, and consequently broaden opportunities for advances in healthcare research. Co-enrollment will allow full exploration of patient care aspects of a professional degree, while preparing students to address critical questions that will advance fundamental research. The ability to design and analyze foundational research that addresses pressing patient care issues is critical as we attempt to advance healthcare quality in the future.

For the purposes of this document, "professional" refers to the Pharm.D. degree program and "graduate" refers to the pharmacy Ph.D. program.

General Requirements for entry and progression in both degree programs:

- Admission into the professional Pharm.D. program.
- Completion of a B.S. or B.A. degree before entry into the Ph.D. program.
- Acceptance into the Ph.D. graduate program in the College of Pharmacy through the OSU Graduate School.
- A cumulative 3.0 GPA in all graduate level courses and all professional courses attempted.
- Satisfactory review of performance each academic year for continued enrollment in the Pharm.D. / Ph.D. program.

General Curricular guidelines:

Students interested in co-enrollment should make contact with the graduate program assistant, Ms. Debra Peters (Debra.Peters@oregonstate.edu), as early as possible to initiate application to the Graduate School.

Co-enrollment is designed to accelerate sequential completion of the Pharm.D. and Ph.D. degrees. As noted below, students are expected to complete the Pharm.D. degree within 4-5 years and to complete the Ph.D. degree within an additional 3 years. The exact length of time required to complete the Ph.D. is dependent, in part, on the nature and success of the student's thesis research project.

Professional program curriculum

P1 and P2 years (1st and 2nd year of program):

Students are enrolled in the traditional professional curriculum. Several professional didactic courses may be used for partial fulfillment of didactic components of the graduate program of study. Students are encouraged to use electives in the professional curriculum to complete required graduate courses.

Before enrolling in the P3 professional year, it is expected that the student will have completed some or all of the Ph.D.-required research rotations. Options for completion of the research rotations include:

- a. Students may complete research rotations (6 weeks, full-time) in summers before and after the P1 year, and after the P2 year. This would be the most accelerated option as a student could begin thesis work in winter of the P4 year.

- b. Students may complete up to 2 research rotations as elective advanced pharmacy practice experiences (APPE) during the P4 year (see below). In this scenario, at least one research rotation would need to be completed in a summer prior to the P3 year. Thesis work could commence in summer after the P4 year.
- c. Students may complete research rotations during the academic year (10 weeks, part-time) following their P2 year. This option will interrupt progress in the Pharm.D. curriculum for one year. Students will complete the traditional Pharm.D. P3 year after completing research rotations and all graduate coursework.

P3 year:

Students enroll in the traditional professional curriculum during the P3 year.

P4 year (Experiential rotations):

The professional curriculum requires five patient care clerkship rotations and two elective rotations. The Director of Advanced Experiential Education will work with students to schedule patient care rotations in Blocks 1 – 5 allowing completion of these rotations by the end of January. The student will begin research in support of their Ph.D. program in blocks 6 and 7. Research in support of the Ph.D. program will be accepted as elective APPEs required for the completion of the Pharm.D. program.

The student, graduate advisor and Director of Advanced Experiential Education may collectively agree to extend the time period over which a student enrolls in and completes patient care clerkship rotations. The Pharm.D. degree will be awarded upon successful completion of all required and elective APPEs.

Graduate Program Curriculum

Pharm.D. students seeking co-enrollment in the graduate program must apply to the OSU Graduate School for acceptance. Students may apply as soon as possible following notification of their acceptance into the professional program, but can apply at any time during the Pharm.D. program. Earlier enrollment provides more opportunities for acceleration of the graduate program. We do not have a program for initiation of the Pharm.D. program partway through a graduate program. After admission and matriculation into both the Pharm.D. and Ph.D. programs in pharmacy, enrollment each term in courses required for either degree program will be accepted as satisfying the OSU Graduate School's continuous enrollment policy.

Graduate Research Rotations:

Students are expected to select three laboratories engaged in research of interest to the student and complete a research rotation in each laboratory, registering for a minimum of 5 credits of Phar 601 for each rotation. As noted under the description of the professional curriculum, these rotations can be completed in summers, beginning as early as the summer before beginning the professional curriculum. Alternatively, a student may choose to spend the academic year following the P2 professional year completing research rotations and all graduate coursework. This will delay enrollment in the P3 professional year, becoming year 4 of the student's overall program.

Didactic coursework:

The Ph.D. degree course requirements include all of the discipline-specific course requirements for pharmacy and may include Graduate Council approved 700-level courses completed during or after the Pharm.D. portion of the program. Specific didactic course requirements will be determined by each student's graduate thesis committee.

Courses for fulfillment of graduate degree requirements may be completed at any time. It is important to note that professional program course requirements are substantial and it will be challenging to add graduate level courses to a full professional course load*. As needed, graduate level courses, that are not also professional courses, will be completed following completion of the professional curriculum. Students that choose to complete research rotations during the third academic year are expected to use that year to complete most of the remaining graduate courses

*(*If a student has already completed biochemistry before admission to the professional program, they are strongly encouraged to pursue additional graduate level courses during the first professional year)*

Graduate Committee and Graduate Examinations

Students are encouraged to identify a graduate advisor and laboratory immediately upon completion of research rotations. The graduate committee should be selected and a Program committee meeting held within one term after selecting a graduate advisor. Preliminary examinations should be completed within one quarter of completing didactic coursework (usually before or during the sixth academic year).

Thesis Research and Completion of Ph.D. degree

Students are expected to commence thesis-related research immediately upon selecting a graduate advisor and laboratory. It is understood that the time available for a student to work on thesis-related research may be severely limited during completion of the professional program. While completing professional program requirements, however, the student should meet regularly with their graduate advisor, attend laboratory meetings when possible and conduct preliminary experiments. The student's research goal, while completing the professional curriculum, should be to become current in their chosen area of research and identify a general thesis topic.

Completion of the professional degree should be accompanied by a full time commitment to thesis-related research on a topic developed while completing the professional degree. Students will conduct research under the direction of their graduate advisor and defend their thesis at an appropriate time, as determined by their graduate advisor and graduate committee. It is anticipated that most students will be engaged actively in research for approximately two years following completion of their preliminary examination. The Ph.D. degree is awarded upon successful defense of the student's thesis.

Graduate Council Follow-up Report – English Department
Discussion with Department Chair Professor Kerry Ahearn
25 January 2010

Hal Koenig and Mike Unsworth were members of the Graduate Council team that reviewed the English Department in May of 2007. Hal and Mike met with Professor Ahearn on November 18th, 2009 to discuss significant issues raised in the Report from the review team.

Department Strategic Plan

Since the review in the spring term of 2007, there have been a number of organizational issues that the English department has faced. Larry Roper, served as interim dean of CLA from July 2007 to July 2008, and the new dean, Larry Rodgers, arrived on campus in September, 2008. In addition, the department has converted their courses from 3 credit hours to 4 credit hours (excepting ENG 100-level and WR 121, 201, 214, 222, 323, 327 and 330) which has been a sizable undertaking. These issues appear to have slowed the department's response to the Graduate Council Report.

One of the primary recommendations in the Report was for the department to define itself and determine appropriate foci by creating a strategic plan. The department has begun to have discussions about focus, but for reasons mentioned above, this effort has not progressed to a state where it approaches a plan. Examples of progress include an effort to give MA students a more focused list of areas in literature for their thesis rather than leaving it wide open. In addition, there has been discussion about scaling back from offerings in all periods, genres, and national areas.

While these discussions are important for moving the department toward a strategic plan, the pace has been glacial. Waiting for things to settle down before pushing ahead on a plan will result in further delays and may result in another entity at OSU deciding or defining the English department's mission and contribution to the university. It is in the interests of the Faculty to make sure that their vision for a redefined department is speedily clearly expressed. As noted in the Report from the review team, this effort should take into account the strengths of the department and how those strengths complement the needs and strategic direction of OSU. The Report recommended that the department define their own destiny – failure to seize this opportunity increases the chance that their purpose at OSU will be defined in ways they may not like.

During the discussion it was noted that the department has gone from 30 to 22.5 FTE. Professor Ahearn mentioned the University claim that the recent divisional reorganization would be associated with be some new faculty hires in CLA. Obviously, with the current Oregon revenue forecasts, it is not clear how soon this

might happen. Also, Professor Ahearn indicated that there would be a number of faculty members in the department retiring in the next five years. It is imperative that the department have a plan that guides these hiring decisions. In the near term it is a given that the department will be smaller than 30 FTE. Therefore, they should not seek automatically to replace a specialist scholar with another scholar in the same discipline – they need targeted hires to produce the correct mix of scholars that will create a great undergraduate and graduate experience for their students with a smaller faculty.

In the discussion with Professor Ahearn, there appeared to be a lack of enthusiasm regarding the strategic plan. Thinking about the discussion, maybe the concern was that it would lock the department into a particular path or configuration. One way around this problem could be for the plan to specify different staffing options for the department. For example, at the current staffing level (22.5 FTE), what would be the focus in the undergraduate major, how would the MA and MFA be staffed and at this staffing level what challenges or barriers exist? If the department was to increase their FTE to 25, how would the focus change at the undergraduate and graduate level, what specialties or areas would be reinforced with a second or third scholar, what specialties or areas would be added, and would any of the challenges of the lower staffing level be eliminated, and *how much better* would the department be with this level of staffing?

It is understood that the current staffing of 22.5 FTE is not good; it is clearly “lemons,” but how good or bad can the department’s “lemonade” be? With future retirements and targeted hiring how could it be better? The department must decide what their focus is going to be and decide what will be eliminated. How much better could the department be at 25 FTE? This is the question that the dean will likely ask when considering which departments get new faculty hires.

Masters Degrees in English

As noted in the Report, the MFA degree has been well received and Professor Ahearn confirmed this is still the case; this year there were applicants from 35 states and three foreign countries. As there are 28 other MFA programs in California, Oregon and Washington, it is clearly the reputation of the department’s faculty that draws applicants from a distance.

As part of the Review Team’s request for the English department to create a strategic plan, the department was asked to consider if continuing funding an MA degree was desirable, and if so, what the focus of the MA program should be. To the first question, Professor Ahearn raised a number of points. He noted that within the college, the department’s MA degree is highly valued, as not all CLA departments have a masters degree; therefore, eliminating the degree would be seen as a step backwards within the college. In addition, if the degree were to be eliminated then some faculty would be less likely to participate in graduate education and this would effectively create a caste system within the department. In short, the department has no intention of eliminating the MA degree.

To the question of focus in the MA degree, this should be part of the discussion when developing the strategic plan. A little movement has occurred on this front as the department is trying to limit the range of topics a student can select for an MA thesis. An additional problem is offering enough stand-alone classes (5xx) so students get a true graduate experience rather than a diluted graduate experience through slash classes (4xx/5xx) – obviously, this is exacerbated by running both an MA and an MFA degree program.

University Budgeting

The Review team report was highly critical of the past university practice of failing to fund essential core writing classes up-front. There has been some progress in university budgeting as this year there was a line item for about half of the Baccalaureate Core writing classes. Unfortunately, this still leaves the department in the untenable situation of never being able to balance revenue with expenses created by the large number of writing classes that support OSU's undergraduate program. As such, any revenue from summer school or e-campus classes, two activities where revenue goes back to the unit, immediately vanishes into the huge amount of "red ink" created when OSU does not fund writing classes "up front." This university practice undoubtedly destroys any faculty enthusiasm for new initiatives such as e-campus developments. Such initiatives might be very attractive to students on the Cascades campus.

While this is a follow-up for the Graduate Council, the continuing funding debacle created by failing to clearly support undergraduate writing classes must be noted, as it has a direct impact on instructor availability for the department's graduate programs. Simply put, this is beyond unreasonable. For OSU to not directly fund the writing classes that support *all* undergraduate degrees on campus is irresponsible and reprehensible.

Hiring

Since the review visit in 2007, there has been one retirement; English retained the line and hired a new faculty member. While there is still only one tenure-track poet, there is an instructor who has now published his third volume of poetry and he provides significant assistance to the MFA program.

As noted above, there has been talk of the addition of 15-20 faculty lines in CLA. As the largest department in the college, English hopes to see their share, but it is unlikely that anything will happen until the economy turns around and the state revenue projections increase. The English department will make a much stronger case for their share of these lines with a well reasoned strategic plan that shows how their strengths complement OSU's direction.

Appendix I: Correspondence with Graduate School re Geosciences Proposal

Fisk -> Loveland 12/17/09

“Bruce points out that once a minor in Water Conflict Management and Transformation is established students could get a minor and a certificate for the same body of work. There is nothing in university policy that prevents this. This topic has implications for all certificates, so permitting this for WCRT is essentially permitting this for all certificates if the programs wish to create a minor in the same field. It seems that this is a topic the Graduate Council should have the opportunity to comment on.

Some potential Council outcomes could be:

- (a) No problem, a transcript visible minors and certificates in the same field are OK.
- (b) No way, you can have a minor or a certificate, but not both.
- (c) OK but, the certificate and the minor can only have 6 credits in common (same as our double counting percent for a second OSU master's)
- (d) Other”

RESTRUCTURING***

Proposals (Abbreviated
Category I) Developed by
Colleges/Units, Submitted to
Provost's Office

Proposal Forwarded to SA/BRRC.

Proposals that fall under the FCG
review will be forwarded to FCG.

FCG Reviews Proposals:

If Program Reorganization or
Elimination, FCG deliberates and
prepares report.

If Curricular Change, Proposal is
Submitted to Curricular Process

Chairs of Curriculum Council,
Graduate Council and Budgets and
Fiscal Planning will meet and have
authority to approve curricular
actions on behalf of the Councils.
Chairs will decide which proposals
need full review of Councils.

BFP, GC, and CC reviews:

Council meetings scheduled so that
proposals can be reviewed with 1-2
month period.

Faculty Senate Review of Proposals

Revisiting iBT issue

- **At its 13 April 2009 meeting the Graduate Council passed a policy change that designated the iBT speaking section score as replacing the SPEAK test score in evaluating the English language proficiency of international students seeking teaching assistantships at OSU. A minimum iBT speaking score of 26 (out of 30) was adopted as replacing the SPEAK test score of 50. Implementation of this policy was set by Dean Francis as Winter 2010.**
- **The Chemistry Department realized that the proposed implementation of this policy which involved denying GTA appointments to students with iBT scores of less than 26 would devastate its GTA pool leading ultimately to a loss of 75% of the GTAs. The Chemistry Department petitioned the Graduate Council for relief from this policy.**
- **At its 6 November meeting the Graduate Council took up this issue and ultimately passed a policy statement that addressed this issue from the point of view of the Chemistry GTAs. That policy stated:**

Current policy statement regarding iBT and Chemistry's Graduate Teaching Assistants

1. The Grad School will continue to review applications for admission from international students using their stated criteria for TOEFL, iBT and IELTS scores.
2. When a prospective Chemistry student is not allowed to hold an assistantship on the basis of their iBT speaking score, the Chemistry department will be notified and given an opportunity to appeal the decision. This appeal right will be restricted to cases where the student has an iBT speaking score is more than 18. (The student will not be notified of the occurrence of the appeal until the appeal is fully resolved.)
3. If the Chemistry department wishes to offer a student with a non-passing iBT speaking score an assistantship, the department must:
 - a. Guarantee that the new graduate student will be enrolled in **IEPA 098NC. COMMUNICATION FOR IGTA's (3)** upon arrival (with the department paying the cost of this training). The course **IEPA 098NC. COMMUNICATION FOR IGTA's (3)** must be offered at a time when GTAs can attend without interfering with their class and teaching schedules.
 - b. If at all possible, assign the graduate student chores (such as paper grading, reagent preparation, etc.) that do not require personal contact with undergraduate students.
 - c. If (b) above is not possible, pair the graduate student with language problems with another TA who is a native speaker of English in the laboratory or classroom environment.
The Chemistry department will maintain documentation for each student of how conditions (a), (b), and (c) were met.

If the Chemistry department meets these conditions, the student will be admitted with support.

4. The Chemistry Department will continue its rigorous monitoring of the quality of GTA performance using student evaluations and the evaluations of the supervising professors. (Chemistry does insist upon quality performance of its GTAs.) The Chemistry Department will document for each student the results of their evaluation of the student's performance as a GTA. The Chemistry Department will report the results of this evaluation yearly to the Graduate Council.

This policy, as worded, applied only to the Chemistry Department and its GTAs. It has been pointed out that a more general wording is needed for this policy. The Graduate School has provided the following new policy statement that avoids this difficulty.

Proposed New Policy statement regarding iBT and Chemistry's Graduate Teaching Assistants

1. The Graduate School will continue to review applications for admission from international students using their stated criteria for TOEFL, iBT and IELTS scores.
2. When a prospective student is not allowed to hold an assistantship on the basis of their iBT speaking score, the department will be notified and given an opportunity to appeal the decision. This appeal right will be restricted to cases where the student has an iBT speaking score ≥ 18 . (The student will not be notified of the occurrence of the appeal until the appeal is fully resolved.).
3. If the department wishes to offer a student with a non-passing (18-25) iBT speaking score an assistantship, the department must:
 - (a) Guarantee that the new graduate student will be enrolled in **IEPA 098NC COMMUNICATION FOR IGTAs (3)** upon arrival (with the department paying the cost of this training). The scheduling of **IEPA 098NC** will be coordinated with the departments so that students can attend the course and conduct teaching assistantship duties.
 - (b) If at all possible, assign the graduate student chores (such as paper grading, reagent preparation, etc.) that do not require personal contact with undergraduate students.
 - (c) If (b) above is not possible, pair the graduate student with language problems with another TA who is a native speaker of English in the laboratory or classroom environment.
The department will maintain documentation for each student of how conditions (a), (b), and (c) were met.

If the department meets these conditions, the student may be admitted with support.

4. The department will monitor the quality of GTA performance using student evaluations and the evaluations of the supervising professors. The department will document for each student the results of their evaluation of the student's performance as a GTA.

The Graduate Council is asked to approve this technical revision of the previous policy.

- **Subsequently the Graduate School posted on its website a new Graduate School policy regarding these issues. It is as follows:**
- English Language Testing and Training Policy for International GTAs
- All international GTAs (IGTAs) whose native language is not English are required to take the Internet Based TOEFL (iBT) test before serving as graduate teaching assistants. Test scores for incoming students can be reviewed using the Banner student information system or confirmed by contacting the Graduate School staff.
- Departments are advised to include in their offers of graduate teaching assistantships the specification that students receiving iBT speaking sub scores of less than 26 will be required to undertake further English language training ~~and that the cost of such training may be the responsibility of the student.~~
- IGTAs with iBT speaking sub scores of 26 or above should have no significant language difficulties. It is anticipated that IGTAs with scores in this category should be fully competent to complete assignments requiring significant student-teacher interaction.
- For IGTAs scoring below 26, departments should use the [Guidelines for the Assignment of International GTAs](#) to make assignments commensurate with the level of English language proficiency and should monitor and ensure effectiveness and competence in the IGTA's fulfillment of assignment.
- IGTAs scoring below 26 will be required to undertake further English language training, the level of which will be determined by the original score received. Departments are expected to pay for the course designed specifically for IGTAs (IEPA 098NC, Communication for IGTAs). This three-credit course will be offered only fall term and is tentatively scheduled late on Tuesday and Thursday afternoons. Please check the OSU course catalog for confirmation of the time and date:
<http://catalog.oregonstate.edu/CourseDetail.aspx?subjectcode=IEPA&course number=098NC>.
- The specific course work required will depend upon INTO-OSU's course recommendation and course availability during the term in which further training is needed. IGTAs enrolling in INTO-OSU courses other than the IGTA course should notify their INTO-OSU instructors that they are potential GTAs and will need to be evaluated as such. They should also request that the instructor fill out the GTA evaluation form at the end of the term.
- IGTAs will be evaluated by the INTO-OSU staff at the end of the term in which further language training has been undertaken. INTO-OSU will make a recommendation as to whether English language proficiency is sufficient, limited, or that further training is necessary. INTO-OSU will take into consideration the training policy and [Guidelines for the Assignment of International GTAs](#) when making a recommendation.
- ~~Students who perceive unsatisfactory performance by graduate teaching assistants due to inadequate language proficiency should present their complaints to the department chair/head employing the GTA. A complaint can also be given to the student's advisor, head advisor, or academic dean of the college offering the course, who in turn will forward it to the appropriate department chair/head. The performance of the GTA will be investigated by~~

the department chair/head and, if a problem is found to exist, appropriate action will be taken. The department chair/head will report complaints and actions taken to the academic dean and the graduate dean.

- Departments employing IGTA's shall maintain on file records of assignments and any remedial action taken should there be questions or complaints about IGTA performance.
- **Guidelines for the Assignment of International GTAs**

| iBT Speaking Sub Score | Assignment Considerations |
|---|--|
| 26 and above | No significant language difficulty is anticipated. A score of 26 has characteristics of near-native speaking ability. Language proficiency usually includes demonstrated audience awareness, cohesive and well developed responses, limited deficiencies in fluency, vocabulary, grammar or pronunciation. |
| English language training is required for scores below 26. | |
| 25 - 23 | Assignment should be made recognizing that the IGTA has language limitations. The graduate teaching assistant must attend the IGTA course. INTO-OSU may recommend alternate courses when the IGTA course is not offered. Departments should provide close ongoing monitoring of progress in the IGTA assignment and in language skills development. Characteristics in this range may include strong but understandable accent, labored and deliberate pronunciation, possible difficulty with free-response items, halting speech patterns or vocabulary limitations. |
| 22 - 18 | Teaching assistant is expected to undertake further English language training, the level of which will be determined by INTO-OSU recommendation and course availability during the term in which further training is required. In the absence of alternate courses, INTO-OSU may recommend the IGTA course be taken. Only assignments involving minimal student-teacher interaction should be made if possible . Departments should provide close ongoing monitoring of progress in language skills development. |

- **There are some possible inconsistencies between the details of the Grad School website policy and that passed by the Graduate Council on 6 November. These are indicated by a yellow highlight above. These should be resolved before the new policy is established. They are: (a) who pays for the GTA training (b) the use of GTAs with scores in the 18-22 category. (c) language in which the Graduate School suggests policies about undergraduate education.**

Remote Participation in Formal Meetings: It is generally expected that all of your committee members or approved substitutes will attend all meetings required by the Graduate School (program meetings for doctoral students and MAIS students, preliminary exams for doctoral students, and final oral exams for all students). If you or any committee member needs to participate remotely, you and your committee must assure that all the conditions listed on the Remote Participation Form are met, and you must submit the form to the Graduate School one week prior to the meeting.

(http://oregonstate.edu/dept/grad_school/current/forms.html#remote)

Master's Degrees - Final Examination: All master's degrees (except non-thesis EdM students electing the internship option) require a final oral exam. You must have a minimum GPA of 3.00 on both your Program and cumulative graduate transcript to schedule the final oral examination. All course work with a grade of I appearing on the program of study must be completed prior to scheduling the final oral examination. You must schedule your exam with the Graduate School one week in advance to allow time to audit of your Program of Study.

Doctoral Degrees:

Preliminary Oral Examination: In order to be admitted to candidacy for the doctoral degree, you must pass a comprehensive preliminary oral examination conducted by your committee. The purpose of this exam is to determine your understanding of your major and minor fields and to assess your capability for research. The exam may cover your proposed research topic, although no more than one-half of the time should be devoted to specific aspects of the proposal. The preliminary oral exam is taken near the completion of all course work on the Program of study. The exam should be at least two hours in length, and all committee members must be "present" or participate remotely.

Final Oral Examination: At least one complete academic term must elapse between the preliminary oral exam and final oral examination. The examination committee will consist of the same members as for the preliminary examination, although substitutions may be made if approved by the department/program or college and the Graduate School. You must contact members of the committee to arrange the date, time and place, then schedule the exam with the Graduate School not less than two weeks before the examination. Submit one examination copy of the pretext pages of the thesis to the Graduate School at the time you schedule. Distribute examination copies of your thesis to all committee members, including the Graduate Council Representative, sufficiently early to permit thorough review prior to your exam date. The exam should be scheduled for two hours, and all committee members must be present or participate remotely. The first part is the thesis defense portion is open to all interested parties. After the thesis defense portion of the exam, the examination committee may exclude all other persons and continue with the examination of your knowledge of your field.

Remote Participation

Website Language

Current:

Remote Participation in Formal Meetings: It is generally expected that all of your committee members or approved substitutes must be present for all meetings required by the Graduate School (program meetings for doctoral students and MAIS students, preliminary exams for doctoral students, and final oral exams for all students). If you have a special case in which a committee member may need to participate remotely, you and your committee must assure that all the conditions listed on the Remote Participation Form are met, and you must submit the form to the Graduate School one week prior to the meeting.

Proposed:

Remote Participation in Formal Meetings: All committee members or approved substitutes must **participate** in all meetings required by the Graduate School (program meetings for doctoral students and MAIS students, preliminary exams for doctoral students, and final oral exams for all students). **If you or any committee member may need to participate remotely, then the student and committee members must assure that all the conditions listed on the Remote Participation Form are met,** and you must submit the form to the Graduate School one week prior to the meeting.

Catalog Language

Current:

It is generally expected that all members of graduate committees should be physically present at all required graduate committee meetings (i.e., program meetings, preliminary examinations, and final examinations). However, it is permissible for one member to participate from a remote location under certain circumstances. Appeals for exceptions to this policy may be addressed to the dean of the Graduate School. Contact the Graduate School for complete details.

Proposed:

It is generally expected that all members of graduate committees should be physically present at all required graduate committee meetings (i.e., program meetings, preliminary examinations, and final examinations). However, it is permissible for **the student, and/or committee members** to participate from a remote location **provided all conditions listed on the Remote Participation Form are met and the student submits that form to the Graduate School (with appropriate signatures)** one week prior to the meeting. Appeals for exceptions to this policy may be addressed to the dean of the Graduate School. Contact the Graduate School for complete details.

Graduate Council policy permits members of a student's committee (and the student) to be connected from a distant site for required committee meetings, but only if several conditions are met. The conditions are:

- a. Advance written agreement of the student first, and then all committee members, has been obtained;
- b. A two way video connection is used for the meeting that allows everyone to see and hear everyone else participating in the meeting.
- c. The remote members participate in the entire and complete conduct of the meeting;
- d. The major professor has accepted responsibility for the oversight of any logistical arrangements necessary; and
- e. Any costs associated with remote participation are not the responsibility of the Graduate School, and must be arranged in advance.

We, the undersigned, are aware that members of this committee (and/or the student) will be participating remotely in this meeting and agree to this remote participation. We do hereby verify that all of the above conditions have been or will be met for the committee meeting checked above.

(Faxed signatures will be accepted.)

Responses About Remote Participation on Doctoral Committees
Community College Leadership Program
Oregon State University
January 2010

Positive Responses:

I think it would be very helpful for those students who have to travel so far, as well as the committee members who are having to travel. I don't see any problems with making the change.

Julie Kopet
Director Workforce Development Programs
Corrections Education
Portland Community College

If asked to participate on a doctoral committee, I would prefer to have this as an option over traveling to Oregon. I would need to know far enough in advance to reserve appropriate room/technology at my institution and I would need to have OSU initiate the call.

Sue Lorimer, Ed.D.
Vice President of Instruction
Folsom Lake College

Here are my thoughts:

*0. To what extent would this pose a problem for the remote committee member, in your opinion?
[financially, technologically]*

I think it would be more of a technological than financial issue for most. It depends on the actual technology (laptops vs high end equipment) used for the two-way conferencing though. It would be very important to a) use a very easy and reliable system and b) have technical support readily available. Who would be responsible for set up? The phone should still be there as a backup.

- *Might such two-way video result in enhanced participation by the remote person; or would it not make any difference? Again, in your opinion.*

If it is relatively glitch free, and a high quality connection, I think it could enhance the participation by the remote person and could potential put the student at ease (seems more personal, ability to read their face, etc.) It might turn some committee members off though if they are particularly uncomfortable with technology. It might also constrain freedom of movement for the committee overall depending on camera line of

Responses About Remote Participation on Doctoral Committees

sight. I would want to get info from committees that have already used video conferencing technology before deciding anything.

- *What other issues might be of concern with such a change?*

If the technology is good enough, this type of remote participation may make it easier to attract committee members who live at a distance and might not be interested otherwise due to time or financial constraints. Of course the converse could be true if it ends up being expensive or hard to use.

Sue Goff
Dean, Career & Technical Education
Mendocino College

Participation via ITV or two-way video would not create any problem for me and it would enhance my participation when I am at a distance.

Michelle Andreas, Ed.D.
Associate Director, Education Services
State Board for Community and Technical College

Some thoughts: Most outside committee members are fairly high ranking in their institutions, I'd guess (e.g., Ed Brewster) so they probably have good support to call upon to arrange technology for them. The idea of having two-way video also moves their participation out of the auditory realm alone--myself, I'm more visual, so I'd tend to be in favor of it all around.

Catherine Forte
Tutoring Center Coordinator
Bates Technical College

Greetings from Doha, Qatar! As one who required remote participation by committee members on more than one occasion during my program, and who conducts meetings from remote locations around the world, I would endorse the use of 2-way video. With the rapid progress of technology, the cost of multiplexing audio/video has plummeted. Today, a laptop, Skype and a \$20 webcam is sufficient for a committee member to participate remotely with audio and video connectivity.

I know from personal experience that participation in a meeting can be enhanced by adding video to the usual telephone connection. It can be difficult to gauge the mood in the room, and the subtleties of the interactions when you are limited to audio. Having 2-way video also helps the remote participant to feel more engaged.

The only issue I can see is for those who are currently in the process. To suddenly impose a new

Responses About Remote Participation on Doctoral Committees

restriction is very unfair to participants who have already made commitments to their committee members. Perhaps a gradual move from “strongly recommending” 2-way video for those who have already constituted a committee to a “required for remote participation” for new students position might help ease the transition.

My 2 cents worth. Hope this helps.

Expect success,
Rob

Rob Fuller, Ed.D.
Director, Entrepreneur Development Programs
Rady School of Management
UC San Diego

Neutral Responses:

For me, I would need to know what type of video technology would be used. If what I have available at the college is not compatible with the technology that OSU is using, then I would not be able to participate in that way. Being in a rural, small community, we do not have access to a Kinkos or other business where you can rent the use of such equipment.

As someone who attended one meeting via phone, I feel it is important to meet in person for the first committee meeting and for the defense. I think that shows respect for the student and the process. For the other meetings, attending remotely makes it more palatable to agree being a committee member.

Thanks for asking!
Susan

Dr. Susan J. Wolff□
Wolff Designs

Darlene, we use two-way video for some of our meetings. It can work but there is number of constraints/considerations. Scheduling, having technology help, who pays, training for faculty, and slow transmission interfering with discussions. These can be overcome but the committee would have to have some built in flexibility and reasonable expectations. I foresee some difficulty for the student adding another dimension to factor in when scheduling.

Steve Smith

Responses About Remote Participation on Doctoral Committees

Director, Curriculum Support Services
Portland Community College

I can't be certain about my external committee-person's situation, but every community college in Washington is connected with a two-way video connection.

Some of us have aging equipment but I think this set up would be possible. I would think this would better engage the remote committee member and create a richer experience for all.

My concern would be how well the room is arranged to enable this remote access. I have seen poor arrangements and excellent arrangements where the committee member almost seemed to sit at the table. Technology is still dependent on the people who set it up and they don't always understand how it will be used. In case of technology failures, we still need a conference phone for backup.

Thank you for asking for our input.

Sincerely,

Mindy Coslor
Dean of Library Learning Resources and Basic Skills
Norwood Cole Library
Skagit Valley College

Negative Responses:

Thanks for asking about the proposed change. I think the video-conferencing should be an option but not be required at this time.

*1. To what extent would this pose a problem for the remote committee member, in your opinion?
[financially, technologically]*

Even though PCC has extensive technology, it is hard to schedule video-conference rooms as they are in high demand. If the grad school is thinking about using Skype or other personal conferencing packages, I am not sure that technology is sufficiently advanced to be able to handle PowerPoint or other visuals as well as the student's verbal presentation. Not sure how robust the audio is on some of these systems. I also worry about the interoperability of systems across colleges. If video conferences were required, I expect we would need tech support on each end. PCC would not charge me for use of its systems but other colleges may have fees in place.

Responses About Remote Participation on Doctoral Committees

- *Might such two-way video result in enhanced participation by the remote person; or would it not make any difference? Again, in your opinion.*

The participation, especially the non-verbal interactions, may be enhanced but that will only be as good as the technology allows. Certainly it could be an improvement over audio-only but only if the video system is solid.

- *What other issues might be of concern with such a change?*

I am concerned that this adds another level of uncertainty for the student and the major professor. Worries about the stability of the video-conferencing system will be added on top of the usual preparations for the exams/defense.

I like the direction of this thinking but I suggest that it is too soon to implement. Perhaps for those interested in experimenting could do some testing/trials for us. Heavens, we had a heck of a time getting a computer projector at Silver Falls ;-)

Hope you are thriving,

Charmagne D. Ehrenhaus
Dean, Math, Engineering & Social Sciences
Mount Hood Community College

While I believe that this is a great way to grow inclusion on graduate committees and may even allow more global participation I believe that it should be phased in. While technology is moving quickly in this area it is still not as widely used on campuses. I would encourage language that allows it as an option but does not require it.

I do greatly appreciate OSU's commitment to using technology as a forum of both instructional methodology and student engagement.

Sincerely,
Dave Pelkey
Director of Student Life
Tacoma Community College

As a "remote" committee member, from time to time, I can offer the following:

1. Setting up a two way video incurs an expense regardless of the "remote" members location because it requires setting up video equipment and connections. Even if the "remote" member is at a location (e.g., a college) that has the equipment and technical staff to do the work, it costs that college the wages of the staff and the expense of the

Responses About Remote Participation on Doctoral Committees

equipment. This has always been looked at as a contribution or negligible expense for the institution doing the work. But, it always has been a real expense and, now, when there are fewer staff and lower funding available, it is an even bigger cost issue for the institution.

2. For a remote member like myself who is no longer at a college, it is expensive to go to a facility (usually a for profit location like FedEx/Kinko or the like). □ □
3. If it is assumed that "remote" members will make an arrangement at a college to use their facilities, you're back to the issues in my first point. In addition, it means the "remote" member is obligated to make the effort to contact a local college, convince them to take on this task and then follow through in making it all happen in line with the schedule of the other committee members on campus. (This last point, meeting the schedule of the on-campus people, has been a big issue every time I've been a "remote" member. The campus-based people always control the meeting time. So, if a video conference requirement is established, availability of the "remote" person would have to be the driver for the meeting time.

I hope these make sense. If not, please give me a call.

Best wishes,

Bill Becker

Adjunct Instructor, CCLP, OSU

Former Executive Vice President, Mount Hood Community College

Former Interim President, Mount Hood Community College

I have committed to Dr. Vaughan that he may participate on my committee remotely. As a retired individual living on the east coast, I anticipate that he won't easily be able to avail himself of two-way video at his home in order to participate. While Skype has made the use of two-way video much easier than it used to be, I think the technological hurdle presented by implementing it might be just enough of a deterrent that Dr. Vaughan would withdraw from serving. This departure would definitely be a loss of valuable expertise and the contribution he could make to the committee.

As one that has participated in hundreds of meetings that included remote participation by telephone, by myself or others, I can attest to the value the remote participants bring to the meeting. While video has the potential to improve that participation, it also has the potential to detract due to the increased technological complexity and the risk of that technology not functioning correctly.

I'm sure I've not shared anything here that you've not already considered in this matter. My opinion is that adding this requirement is putting in place a potential hurdle that will not significantly improve the participation of remote committee members and has the potential to cause the loss of valuable participation by those who are currently willing to serve.

Responses About Remote Participation on Doctoral Committees

Ralph Orr
Former President, Eastern Arizona College;
Former President, Tillamook Bay Community College

To what extent would this pose a problem for the remote committee member, in your opinion?
[financially, technologically]

From experience, I will suggest that this consideration may eliminate potential committee members who might consider participation. In my case, my remote committee member is located in Seattle and knows me from previous academic participation. I feel confident with his support, guidance and input. To create what might be considered restraints or barriers for remote participation inevitably could eliminate quality individuals from participating in the committee process.

I see no practical purpose in making it more difficult than it already is in establishing relationships with committee members. student and programs.

Note: I am anticipating that my committee member be present at my oral presentation even it means at my cost. This of course will be a financial barrier for me.

Might such two-way video result in enhanced participation by the remote person; or would it not make any difference? Again, in your opinion.

Two way remote communication is a possibility, however, this too might be a logistical barrier.

What other issues might be of concern with such a change?

If the change does happen, I do hope this will only take effect to subsequent participates within our respective graduate programs.

I hope this helps.

Extended Campus Response and Proposal

Response:

The policy positions of the referenced universities are, for the most part, based on traditional face-to-face graduate program scenarios and reference primarily the remote participation of the faculty committee members, not the students. The assumption in these cases is that the student is physically present on campus, and do not take into consideration the unique and distant composition of the students in online programs. The only exception is the University of Washington, whose policy does allow remote participation of the student: note that the UW offers online graduate professional programs. If OSU adopts a more flexible policy regarding remote participation of distance student in examinations, we would be in good company.

Proposal:

- Remote participation of faculty committee members would follow existing OSU policy.
- Implementation of a second set of remote participation policy specifically addressing the unique needs of distant student participants in OSU's online graduate degree programs.
 - The Graduate School and/or Graduate Council, reviews program proposals from the Colleges for blanket approval of the option for remote participation of distance students in examinations.
 - In recognition of their geographic diversity, maturity, and professionalism, students in distance (online) graduate programs are, with approval of the Committee Chair, allowed the option of participation in person, or remote participation in examinations.
 - With approval of the Committee Chair, remote participation of the student may be via two-way video or audio-only, and may require a proctor at the distant site if deemed advantageous.
 - The College/Committee Chair is responsible for ensuring that appropriate technical infrastructure and support and is available to both the student and the Committee to allow for un-interrupted remote participation using either two-way video or audio only. It is the student's responsibility for costs incurred for remote participation.

GRADUATE FIELD MODEL PROPOSAL

Summary: This proposal is to transform existing graduate programs to cross-department fields of study in order to increase the visibility of key strategic programs, tighten the focus our graduate programs, and enhance their stature,. This change will generate savings of current expenditures on a large number of graduate majors, separately funded interdisciplinary programs, and address issues of graduate program viability by providing a mechanism for reducing the number of small enrollment graduate programs, as suggested by the ACBSP.

Background

The development of institutions of higher education in the US has produced a commonly followed model of organizational structure generally consisting of departments or schools organized within colleges. This departmental model historically has been reflected in the manner by which intellectual subject matter is organized for the purpose of assembling faculties and offering academic programs. That is, typically, departments of chemistry have offered academic programs in chemistry; departments of history have offered academic programs in history, and so forth.

For the past century, this approach to the organization of knowledge was logical. However, such is no longer the case. Intellectual fields are rapidly emerging that have little regard for historic departmental lines in the research and graduate education enterprise. Thus, we have observed the establishment of interdisciplinary, multidisciplinary, and multidepartmental graduate programs. At OSU, the graduate programs in water resources and environmental sciences are excellent examples of the emergence of new programs built around intellectual themes and societal problems that are both too broad and too complex to be adequately addressed through a traditional, departmentally based graduate program. This evolution is particularly evident within the life sciences which has become a challenge for many universities today.

It is now common for individuals from a number of different departments to be members of a graduate faculty that offers a particular advanced degree. The recent NRC Assessment of the Research Doctorate revealed this pattern to be the case at OSU, with the majority of faculty members belonging to more than one graduate faculty. It has been estimated that the average OSU Graduate Faculty member serves on about 3 different graduate faculties including directing doctoral dissertation research in those programs. At OSU, one faculty member was discovered to be active in 10 different graduate programs.

In a recent *New York Times* Op-Ed (April 27, 2009), Mark C. Taylor argued for restructuring university curricula. He wrote, "The division-of-labor model of separate departments is obsolete and must be replaced with a curriculum structured like a web or complex adaptive network. Responsible teaching and scholarship must become cross-

disciplinary and cross-cultural.” Taylor maintained that restructuring graduate education in this manner would lead to a transformation of “fields of inquiry and methods of investigation” better situated to address today’s critical questions. He offered *water* as an example.

Proposal

All graduate programs at OSU will be converted into *graduate fields* independent of departmental, school, or college structures. The proposed model is based on the field model in place at Cornell University. Like Cornell, graduate fields at OSU will be led and managed by a director provided by an academic department or school. The vision is that both the host department/school and the director will freely move from among the departments that house the participating members of the field graduate faculty.

The criteria for establishment of a graduate field at OSU will include:

- An identifiable and recognized intellectual core must be clearly articulated.
- The field must have institutional strategic relevance.
- An academic department or school must express willingness to serve as host.
- An academic department or school must express willingness to provide the resources required to sustain the field including providing the director’s FTE.
- A minimum of 25 graduate faculty members must be actively engaged in offering the field.
- A minimum of 30 students must be enrolled in the field.
- An annual minimum of 5 master’s and 2 doctoral students must complete degrees in the field.
- There must be an understood approach to student support. In cases where the expectation is that students are financially supported, the source(s) of funding must be identified.

The Provost should immediately commission a faculty work group with leadership from the Graduate School to develop an implementation plan that includes an initial presentation of graduate fields and detail sufficient to launch the new model by fall, 2010.

The following principles guide this proposal:

- The graduate field model is consistent with the complex nature of today’s pressing questions and should be pursued.
- Graduate fields will be established to align with OSU’s strategic direction.
- Graduate fields will enhance the visibility of OSU’s intellectual strengths.
- There will be no net costs associated with the transition to the graduate field model.

Goals

- Increase graduate student per tenure track faculty member ratio.
- Replace current graduate majors with about half as many graduate fields.
- Find cost savings as a result of fewer specialized programs and/or fewer redundant course offerings, and so forth.

- Establish graduate fields that will meet enrollment guidelines suggested by the ACBSP (i.e. award a minimum of 5 master's and 2 doctoral students per year).
- Create the new model by the end of the 2009-10 academic year.

Issues

The Deans presenting this proposal believe it presents significant opportunities for OSU and are strongly supportive of the approach. At the same time, the proposal for restructuring graduate programs at OSU represents a very significant change. Such change presents challenges as well as the opportunities that underlie the resolve to undertake the planned change. The following issues are not meant to be inclusive but are meant to acknowledge that the effort to enact the proposal will require substantial resolve.

This change is likely to greatly increase the visibility and competitiveness of OSU's strategic areas of strength (such as conservation biology and ecology) .

However, it may cause visibility of long established, traditional programs to be lessened. This will require clear communication with all stakeholders, internal and external,

The strong college model at OSU may limit our ability to produce a deep philosophical as well as operational shift. Host departments/schools will be challenged to think and act beyond traditional boundaries represented on organizational charts.

However, we note the commitment of the group making this proposal to the proposed model and accompanying philosophy .

Admission procedures across organizational structures that are the sources of student funding will required coordination. For example, the awarding of GRA and GTA appointments must be reconceptualized within the admissions procedure. Existing programs have differing policies regarding matters such as whether or not students may be offered admission independent of funding or whether students must identify a major professor as a condition of admission. Faculty groups in each field will need to establish clear criteria for admission and departments funding GTAs or GRAs must be clear on the expectations for the assignments of admitted students.

The Incentives for this approach require that departments are credited with the students who work with their faculty members. An accountability mechanism will need to be created such that student enrollment accrues to the department/school home of the major professor. We do this now for most of the interdisciplinary graduate programs.

Hiring must be coordinated across organizational boundaries to ensure that the needs of graduate fields are met and must be coordinated with the needs of other graduate fields, undergraduate instructional programs as well as the research and outreach missions of the University. Departments struggle with this tension now, so the issue is not new, but it will demand coordination.

Support and coordination of student recruiting activities will be required.

Graduate Council policies may need to be created or revised to support the field model.

For example, graduate faculty membership should be revised to require active

participation of faculty members who are associated with each field.

Field Examples

Three examples of graduate fields that could be established are presented below. The three fields are ecology, nutrition, and material science. OSU currently offers a graduate major in both nutrition and material science; there is no major in ecology even though OSU is recognized as having exceptional strength in the field of ecology. All three examples provide evidence that there already exists a critical mass of faculty, students, and intellectual strength to support creation of the field.

Example I: Graduate Field in Materials Science

Purpose and Outline: Materials science research and education at OSU involves over 50 faculty members from 10 departments and is a key area of research for our strategic aspirations in innovation. The synthesis of new materials and the identification of new uses for materials provide some of the most powerful tools for creating new businesses and economic opportunity. OSU scientists work on problems from transparent electronics to fiber composites and are leading the development of a new generation of materials. Particular emphasis exists in electronic materials, composite materials, magnetic materials and superconductivity, structural materials, optical materials, and biomaterials.

The program will offer the M.S. and Ph.D. degrees. Students in the program will be required to take 4 credits of ME 570 (Structure-Property Relationships in Materials) as well as three (for a M.S.) or four (for a Ph.D.) classes from each of these five categories: Thermodynamics of Materials; Kinetics/Rate Processes of Materials; Mechanical Behavior of Materials; Electronic/Magnetic Behavior of Materials; and Characterization of Materials.

The M.S. requires an additional 9 credits in a concentration, 8 credits of electives selected in consultation with an advisor, and 12 thesis credits. The Ph.D. requires an additional 12 credits in a concentration, 13 credits of electives selected in consultation with an advisor, and 63 thesis credits. Proposed concentrations are in Mechanical Behavior of Materials; Electroceramics; Polymer Materials; Electronic Materials; Nano-processing of Materials; and Fiber-based composite materials.

There is demand for graduates of this program in the emerging solar industry, alternative engineering, biotechnology and information technology companies, chemistry companies, and telecommunications firms.

Anticipated graduation rate: Based on the existing student populations in the relevant programs and the distribution of faculty members, we anticipate 25 graduates from the program annually, once the transition is complete from existing degree programs.

Departments participating: Chemistry; Physics; Civil & Construction Engineering; Mechanical, Industrial and Manufacturing Engineering, Electrical Engineering and Computer Science; Nuclear Engineering and Radiation Health Physics; Forest Engineering, Resources, and Management; and Wood Science and Engineering.

Facilities: Existing laboratories and equipment in the Colleges of Forestry, Science, and Engineering and the Center for Advanced Materials Research, with the University's Electron Imaging Facility, provide an excellent core for this program.

Support: The School of Mechanical, Industrial and Manufacturing Engineering will serve as the host unit for the Materials Sciences Field of Study. Teaching assistantships for first and second year students will be provided by School of Mechanical, Industrial and Manufacturing Engineering, the Department of Physics, and the Department of Chemistry.

Example II: Graduate Field in Ecology and Evolutionary Biology

Purpose and outline: Broadly defined, ecology and evolutionary biology have been distinctive and high profile programs at OSU for many decades. In fact, they are internationally renowned programs. Ecology and evolutionary biology are foundational to OSU's internationally premier applied Land Grant programs in forestry, agriculture, rangelands, freshwaters, and marine resources. The Colleges of Agricultural Sciences, Forestry, Ocean and Atmospheric Sciences, and Science have a large and active group of biologists, ecologists, evolutionary and conservation biologists and related disciplines in multiple Departments (Botany and Plant Pathology, Fisheries and Wildlife, Rangeland Ecology and Management, Forest Engineering, Resources and Management, Forest Ecosystems and Society, Zoology, and Geosciences), whose research collectively spans a broad range of levels of organization (molecules to ecosystems), habitats (marine, freshwater, terrestrial), and organisms (invertebrates, vertebrates, non-vascular and vascular plants). These OSU scientists work closely with affiliated federal and state scientists on campus and off, including numerous international collaborations in the Field.

Focal systems for research include rocky intertidal and adjacent coastal marine ecosystems, salt marshes, coastal dunes, coral reefs, ponds and lakes, streams and rivers, grasslands, old-growth and managed forests, chaparral systems, rangelands, and insect-plant systems. The diverse and relatively unspoiled habitats of Oregon provide opportunities for much of this research, an unmatched outdoor laboratory. In addition, many research programs incorporate a broader geographic element, for example, a regional focus (e.g., West coast of North America) or international settings (e.g., the Bahamas, New Zealand, Central and South America, Central and South Africa). Particular strengths and cross-cutting themes in the Field include Conservation Biology and Ecology, with active programs on the ecology of invasive species, population declines and extinctions, restoration ecology, marine reserves, environmental policy, and biodiversity conservation.

Subjects:

Ecology

Evolutionary Biology

Conservation Biology and Ecology

Concentrations

Forests

Freshwaters

Marine
Arid lands
Populations
Ecosystems

The program will offer M.S. and Ph.D. degrees. Students in the Field will be required to take or have taken 16 credits (core of the Field) of Z 345 (Introduction to Evolution), Z 527 (Paleobiology), Z 581 (Biogeography), and ATS 520 (Principles of Climate) as well as three (for a M.S.) or four (for a Ph.D.) classes from these five categories: Ecology, Physiology, Conservation Biology and Ecology, Evolutionary Biology, and Oceanography.

The M.S. requires an additional 9 credits in a concentration, 8 credits of electives selected in consultation with an advisor, and 12 thesis credits. The Ph.D. requires an additional 12 credits in a concentration, 13 credits of electives selected in consultation with an advisor, and 63 thesis credits. Proposed concentrations are in forests, freshwaters, marine, arid lands, populations and ecosystems.

There is high demand for graduates of this program in academia, government research agencies, and domestic and international conservation organizations.

Anticipated graduation rates: Based on the existing student populations in the relevant programs and the distribution of faculty members, we anticipate a minimum of 50 graduates from the Field annually, once the transition is complete from existing degree programs.

Departments participating: Botany and Plant Pathology, Fisheries and Wildlife, Rangeland Ecology and Management, Forest Engineering, Resources and Management, Forest Ecosystems and Society, Zoology, and Geosciences.

Facilities: Existing laboratories and equipment at Hatfield Marine Science Center, H. J. Andrews Experimental Forest, Hatchery Research Center, on campus and at various Agricultural Experiment Stations around the state provide an excellent core for this program.

Support: A new School of Ecology and Evolutionary Biology in the College of Science will host the Field of Ecology and Evolutionary Biology. Teaching assistantships for first and second year students will be provided by contributing Departments. Sally S. Volunteer from the School of Ecology and Evolutionary Biology will serve as Graduate Director for the Field, and will be provided release time by her home department.

Example II: Graduate Field in Nutrition

Purpose and outline:

The graduate field in nutrition is aligned with OSU strategic initiatives, represents an area of critical need for Oregonians and beyond, and is built on a foundation of a graduate faculty with existing national and international reputation. In the aggregate, these faculty members generate more than \$1.5M dollars in research support annually. Thus, there is obvious programmatic strength in the area of nutrition that is not bounded by organizational lines. Input was gathered from existing web resources and in communication with various nutrition leaders on the campus. The core curriculum is modeled after comparable programs at UC-Davis, University of Wisconsin, Cornell University, and University of North Carolina. The data in this example have not been verified by multiple people, but are intended to provide a general overview of this potential graduate field.

Using a framework similar to Cornell University the proposed graduate field is Nutrition with four associated Subjects (i.e. Animal Science; Bionutrition; Human Nutrition; Food Science and Technology); four Concentrations (Biochemical/Molecular; Human Nutrition; Animal Nutrition; Food Safety and Toxicology); and three Minor Concentrations (community nutrition; epidemiology; biostatistics).

Anticipated graduation rates: Based on the existing student populations in the relevant programs and the distribution of faculty members, we anticipate a minimum of 15 graduates from the Field annually, once the transition is complete from existing degree programs.

Departments participating: Animal Science, Food Science and Technology, Veterinary Medicine, Pharmacy, and Nutrition and Exercise Sciences. Departments in Ag???
Departments in Science???

Facilities: Existing laboratories and equipment ZZZ on campus provide an excellent core for this program.

Support: Teaching assistantships for first and second year students will be provided by contributing Departments. Sally S. Volunteer from the Department of XXX will serve as Graduate Director for the Field, and will be provided release time by her home department.

To: Walt Loveland, Chair of the OSU Graduate Council

Dear Dr. Loveland,

I am writing to you regarding the relationship between the professional Pharm.D. program and graduate programs at OSU. We are currently working with the Graduate School on a student-specific issue, but believe there is a broader issue that will require clarification by Graduate Council. Specifically, we advocate a change to the language in the Graduate Catalog regarding transfer courses and the potential use of graduate-approved professional Pharm.D. courses on a PhD program of study. A detailed explanation of our request is attached.

I am happy to provide more information, including sample programs of study in the Pharmacy PhD program and examples where other universities have made accommodations for PharmD students seeking a PhD degree. Please let me know if you believe that this can be included on the Graduate Council agenda for early this fall.

Thank you for considering our request.

Sincerely,

A handwritten signature in black ink, appearing to read "Theresa M. Filtz".

Fax: 541-737-3999
Email: Gary.Delander@oregonstate.edu

Objective:

Our primary interest is to confirm that Pharm.D. graduates can transfer and use courses completed as part of their professional degree into a Ph.D. program, with the approval of their Ph.D. committee.

Background:

Students that have completed a Masters program or Graduate Certificate are currently allowed to transfer coursework to Ph.D. programs that they subsequently pursue.

Quoting the current Graduate catalog:

Graduate courses to be transferred to a doctoral degree program can be courses that were used to satisfy the graduate course requirements for a graduate certificate or a master's degree (or equivalent). Selected 700-level courses that have been deemed equivalent to graduate-level learning may be used on doctoral programs of study upon approval of the student's graduate committee. There is no limit on transfer credit toward the doctoral degree as long as the doctoral residence requirement is satisfied.

Credits earned in fulfillment of a graduate certificate program may be applied to a graduate degree, so long as they meet the appropriate standards for use in the degree and the criteria to transfer credit as defined herein. Courses completed for a degree program may likewise be applied toward a certificate program.

Graduate courses taken at OSU while the student was a graduate nondegree-seeking student, a postbaccalaureate student, or a professional degree seeking student (PharmD or DVM), and courses reserved for graduate credit while the student was an undergraduate or postbaccalaureate student are considered transfer courses.

The catalog language is currently confusing in that, in paragraph one, it discusses the use of 700 level courses within a broader discussion of allowing the transfer of courses to Ph.D. programs. However, the text does not specifically include professional courses in the first sentence that allows for the use of '*courses that were used to satisfy the graduate course requirements for a graduate certificate or a master's degree (or equivalent)*' on Ph.D. programs of study. As currently interpreted, graduates of the professional program are penalized by their achievement of a Pharm.D. degree. Had they entered the graduate program without having completed advanced education in pharmacy and pharmaceutical sciences, the courses in question would be allowed in the Ph.D. program.

Rationale and Impetus:

The impetus for seeking clarification relates to our interest in attracting outstanding professional students to seek graduate education. Demand for Pharm.D./Ph.D. dual degree holders is extremely high. National academic organizations have noted the paucity of scientists that can bring the perspectives of pharmacy to education and research, and have advocated for the development of dual degree programs in Colleges and Schools of Pharmacy across the nation. The Pharm.D. /Ph.D. is considered equivalent to earning an MD/PhD degree in terms of opportunities for translating basic research into clinical practice. There is a special NIH funding mechanism for students seeking both degrees in response to an identified national need.

Convincing students to pursue both Pharm.D. and Ph.D. degrees is extremely challenging. There is a clear need for dual degree educated individuals, but professional graduates often face significant debt and a lucrative job market immediately upon graduation. An additional five years of study is a significant deterrent to student choosing to further develop their talents. Qualified potential graduates students often choose to pursue interests for advanced education in shorter specialized clinically-focused programs, such as residencies or clinical fellowships, or simply choose not to develop their talents further; rather than pursue graduate study.

In dual Pharm.D/Ph.D. programs across the country, it is common for professional students to utilize professional program coursework to partially satisfy graduate coursework requirements. In addition, students are often allowed to enroll in graduate level coursework and research experiences as electives in the professional programs or during summers while enrolled as a professional student that will transfer to their graduate program. These opportunities allow students to shorten their graduate programs by one or two years and significantly lessen a perceived barrier to their pursuit of a Ph.D. degree. In an ideal world, where the College has worked closely with a prospective graduate student during the professional program, a student will have completed the bulk of their didactic and preparative research experiences while a professional student and be prepared for the preliminary exam within a year of completing their professional degree.

We want to be clear that our proposal asks that professional students be allowed to use graduate-level approved professional courses on their doctoral programs. The appropriateness of these courses would be determined by the program committee as for any graduate program. The only change is that the students be allowed to complete the courses while enrolled in the professional program and then transfer them to the doctoral program.

Proposal:

We propose that language in the graduate catalog be amended from:

Graduate courses to be transferred to a doctoral degree program can be courses that were used to satisfy the graduate course requirements for a graduate certificate or a master's degree (or equivalent).

To read:

Graduate courses to be transferred to a doctoral degree program can be courses that were used to satisfy the graduate course requirements for a graduate certificate, a master's degree (or equivalent), or a professional degree (Pharm.D. or VMD).

.....

Addendum:

We do not want to confuse or delay the current proposal, but the Graduate Council may want to consider broader implications in the future. We have had promising discussions with representatives from the College of Business and College of Health and Human Sciences in the past regarding the appropriateness of some courses in the professional pharmacy curriculum for use in partial fulfillment of Certificate, Masters or Ph.D. programs within their colleges. It may be appropriate to allow students to utilize professional courses that are graduate-level approved, for any graduate level education.

Theresa and Walt

My thanks to Theresa and Gary for the excellent summary and recommendations regarding the dual PharmD-PhD degree. There are even broader implications that came to light during other conversations this morning. There is a strong desire on the part of the Colleges of Pharmacy, Veterinary Medicine, and Health and Human Sciences to develop dual PharmD-MPH and DVM-MPH degree options. Many of the barriers that Theresa presents pertain to those dual degree options as well. Thus, we should include representatives from Vet Med and HHS in future discussions.

Deans Bray and Clarke as well as Drs. Marie Harvey and Tom Eversole from the College of Health and Human Science are copied on this message.

We look forward to expanded graduate options as a result of these discussions.

Dear Dr. Loveland,

Please see the attached document in which the the College of Pharmacy is requesting a change to the Graduate Catalog. I am submitting this request to you as Chair of the Graduate Council for the upcoming academic year. I would be more than happy to meet to discuss this issue further or provide other information if that would be helpful.

Sincerely,
Theresa

<Susan.Tornquist@oregonstate.edu>, "Eversole, Tom - HHS" <Tom.Eversole@oregonstate.edu>

Hi Walt,

Thanks for being willing to pick this up. The proposal that Theresa and I sent was a 'work around' attempting to accommodate concerns voiced by the Graduate School that any true dual degree programs would require Category I proposals (which I don't agree with, maybe Becky Warner could weigh in)

The more direct and I think better solution is to move on the 'addendum', making it possible to have true dual degree tracks and to a large extent trusting the Colleges (and in the case of a Ph.D., the student's committee) to define the courses they will accept for the didactic portion of a graduate degree. Ideally, this trust would include deleting any limit on the number of credits that can be used for both programs.

We will meet with representatives from Vet Med and HHS to make certain we are all on the same page, but in order to respond to concerns raised in discussions we have had with the Graduate school I think the following are issues that probably need to be addressed.

- Students would need to be allowed to co-enroll in the Graduate school and professional school. We envision that students would still be expected to meet admission requirements for each program independently. (I'm uncertain whether Banner currently supports concurrent enrollment in two degree programs, but this would likely involve very few students and tracking it on paper should not be burdensome)

- Should we continue to request approval for graduate credit for specific professional courses or give a blanket approval for all professional courses? In Pharmacy, we currently use the former and it would actually work fine to continue with this, if it makes the most sense to the Council. (For Pharmacy, we essentially oversee the credential and already flexibility already as to whether we allow specific courses from a graduate program as meeting one of our professional requirements. Our Academic and Professional Requirements committee makes these types of decisions routinely)

- The Graduate Council, and perhaps the Curriculum committee, would need to be willing to allow the use of professional and graduate course(s) to concurrently satisfy the degree requirements of both the professional degree and the graduate degree. (In earlier discussions, with Business and Public Health we have identified professional courses that could meet program requirements for Masters degrees and vice versus.)

- If only specific professional courses are allowed for graduate credit, the graduate school would have to accept enrollment in the professional program as satisfying the continuous enrollment policy of the graduate school. (There may be terms during the students progression in the professional program in which no 'graduate approved' courses are being taken)

Thanks again for looking at this. Dual degree options, such as a M.D./Ph.D. (and increasingly Pharm.D./Ph.D. or M.Ph.), have long been available at medical schools. For this reason, I would admit that we were a bit naive in our expectations that this would not be a significant concern at OSU.

Again, we'll get together and make certain we understand the needs and interests of Pharmacy, Vet Med and HHS. If there are questions or concerns you would like us to address prior to the Graduate Council taking up this discussion, please let me

Walt Loveland, PhD
Chair OSU Graduate Student Council
Oregon State University
Corvallis, OR 97331

Dear Dr. Loveland:

This letter is in support of the August 18 memo to you from Drs. Theresa Filtz and Gary Delander concerning the relationship between professional programs and graduate programs at OSU. The issues raised for such programs in Pharmacy apply to programs in Veterinary Medicine and Public Health. We are engaged in efforts to respond to the increasing need in Oregon's Public Health workforce for dually trained professional/graduate students. Current policies regarding this more comprehensive approach may soon become a liability to the university both in its efforts to remain competitive and to achieve its strategic plan.

Specifically, we too advocate a change in policy regarding the transfer of courses and the potential use of graduate approved professional courses in a MPH and PhD course of study in public health. Similarly, we advocate that certain approved course work and practicum experiences (internships) be allowed to satisfy appropriate requirements in public health, veterinary medicine and pharmacy for students seeking dual degrees. We recommend that this policy issue be addressed by the Graduate Council early this fall.

The attached document provides background information relative to our concerns. We would be pleased to provide more information if that would be helpful. Thank you for considering this important request.

Sincerely,

Sue Tornquist, DVM, PhD

**Overview of Issues Related to Professional/Graduate Education
in Public Health and Veterinary Medicine
September 11, 2009**

Objective

Our primary interest is to confirm that veterinary students and graduates may transfer and use professional courses completed as part of their graduate degree in public health (MPH.) Secondly, we wish to confirm that certain approved practicum/internship experience credits may apply to both DVM and MPH degrees. Third, we would like to confirm that approved MPH or DVM courses successfully completed may serve as elective credit in the other (DVM or MPH) program.

Background

The issue under consideration has ramifications for OSU's involvement in several strategic initiatives, specifically: (a) the OSU Strategic Plan, (b) establishing an accredited school of public health, (c) the national focus on veterinary public health workforce and (d) increasing emphasis on the "One Health" movement.

As part of its strategic plan, Oregon State University has identified Improving Human Health and Wellness as one of three signature areas for investment and development. The College of Pharmacy, College of Veterinary Medicine and College of Health and Human Sciences (CHHS) comprise that signature area of excellence. The CHHS has undertaken to become an accredited college of public health in 2014, advancing it to the stature of the other two professional schools in its area of excellence. Oregon currently has no accredited school of public health.

The landscape for professional and graduate education has changed. Since 9/11 and the anthrax attacks there has been an increasing awareness of the role of veterinary public health in emergency preparedness and bioterrorism response. The threats of avian flu and swine flu underscore the importance of surveillance for animal-to-human (zoonotic) diseases. Oregon Senator Kurt Schrader is a co-sponsor of the Veterinary Public Health Workforce Enhancement Act, slated to provide resources to universities that train veterinarians in public health. If passed, the bill would provide scholarships, faculty salary, laboratories and teaching facilities for schools of public health and veterinary colleges offering dual degree (DVM-MPH) programs. As part of the proposed college of public health we have a preliminary plan for such a program as well as a Pharm.D. – MPH option. (See Attachment 1, Draft Proposed DVM-MPH/Epidemiology

Curriculum.) CHHS is activating MPH tracks in epidemiology and biostatistics in support of this option.

The World Health Organization as well as the American Veterinary Medical Association (AVMA), the American Medical Association (AMA) and the American Public Health Association ascribe to the “One Health” approach to world health problems. One Health posits that human and animal health in a shared environment cannot be separated – as evidenced by pandemics of AIDS, swine flu and MRSA or epidemics such as SARS and Ebola. Increasingly, health education will be transdisciplinary, involving pharmacy, public health and veterinary medicine in dual degree programs to solve new and emerging global health problems. OSU is positioned to be a key player in that future.

Impetus and Rationale

The workforce that Oregon needs now and for tomorrow requires dual degree options combining professional training and graduate education. We need the provisions outlined in this request in order to offer dual degree programs in ways that are an efficient investment for students. A number of DVM-MPH programs already recognize that benefit. (See table 1.) To be competitive, OSU should assess its existing policy to ensure that it attracts outstanding students, who wish to complete combined degree programs in a timely fashion.

The trend to offer combined DVM – MPH degrees has expanded rapidly in the last few years. About half of the 28 veterinary colleges in the US offer public health degree options for veterinary students. OSU does not. [See partial list attached.] OSU is one of the few land grant universities with a co-located accredited college of veterinary medicine and public health program. OSU is well positioned to be competitive as an academic institution, to contribute to global health research and to produce tomorrow’s work force if it fully supports dual degree programs.

The benefit of dual degree options is not limited to public health, pharmacy and veterinary medicine. Policy makers also should be aware of the premium placed on MSW-MPH and MBA – MPH combinations. Now is an opportune time to reconsider emerging workforce needs and to ensure that our academic policies are contemporary enough to meet them.

Proposal

We propose that language in the graduate catalogue be amended to read:

- Graduate courses to be transferred to a masters or doctoral degree program may be courses that are used to satisfy the graduate course

requirements for a graduate certificate, a masters degree (or equivalent), or a professional degree (Pharm.D. or DVM.)

- Earned credit for approved courses in Public Health may be applied to satisfy the graduation requirements for the DVM degree.
- Earned credit for approved internship courses may be applied to the graduation requirements for both the DVM and MPH degrees.

Subject: Issue for the Grad Council

Nancy,

As you are aware, we are over capacity this year in our MBA classes. This is causing us some issues across campus in that we are not able to honor some requests for our MBA classes. It is almost impossible to predict demand outside of business and CEM programs. We have solved some of these issues internally with our notes to business faculty that we need to have copies of the program plans if they include BA courses on a masters or PhD Program. This only works if there is a business faculty on the committee, and the business faculty remembers to tell us. There is also the problem, however, that any faculty member on campus can put a BA course on a program plan without our consultation or approval. The graduate school considers the approved program plan as a contract with the student. So we have to deny access to students who rightfully think we are obligated to give them access.

This may not be an issue in other departments. They may not be at capacity in their graduate programs, and there may not be large demand outside of the department for the classes. We do not want to deny access to students – but we need to know what we are obligated to offer.

I would be hopeful that the Graduate Council would consider this issue and offer some guidance.

Jim

Summary of information regarding the iBT and Chemistry Teaching Assistantships

On April 13, 2009, Rosemary Garagnani presented to the Graduate Council a resolution concerning the internet based test (iBT) for international students. The minutes of that meeting indicate what happened:

- *Internet Based TOEFL (iBT) score of 26 for speaking to replace 50 on the SPEAK test:* Garagnani proposed that the iBT test replace the OSU administered SPEAK test as the English Language Institute is reorganizing and will stop administering the test. Score of 26 is being used by the University of Oregon and the University of Arizona as the minimum for students being awarded a GTA. She is recommending using the score of 26 iBT for students being awarded GTAs with no teaching restrictions.

Departments who use non-native English speakers as GTAs might be requested to provide the evaluation of GTAs to the Graduate School. A discussion regarding the GTAs followed. A suggestion to add another question to the form for students' review of instructors was made. Garagnani will check with General Counsel about any issues related to evaluations of GTAs.

Motion: A motion to accept the proposal to set a minimum Internet Based (iBT) score of 26 to replace the SPEAK score of 50 with the condition to review it at the end of 2009-2010 was moved by Kathy O'Reilly and seconded by Jo Tynon. All voted in favor.

Subsequently it was learned that UC-Berkeley and UW also require a iBT speaking score of 26 for international students holding a GTA while UCLA requires a score of 24 and USC requires a score of 29.

Dean Francis of the Graduate School decided that the implementation of this new policy would take effect in Winter, 2010.

Chemistry typically admits about 20 graduate students per year and about $\frac{3}{4}$ of these students are international students. Typically all these students are admitted with GTA offers because of the need to have a large number of GTAs to service the large introductory chemistry courses and because the TA experience is a valuable teaching tool. Of the international students admitted for the fall of 2009, none would have passed the new iBT requirement. Based upon their own program of screening international students which involves face-to-face interviews of students by Chemistry faculty, the Chemistry faculty concluded that this year's group of new students was similar to that admitted in previous years.

Chemistry subsequently provided the student evaluation scores for 2007, 2008 and 2009 for the international and domestic teaching assistants. The scores tabulated below are averages of the student responses to the following two questions: 1. The course, as a whole, was: NC-unable to rate 1 – very poor 2 – poor 3 – fair 4 – good 5 – very good 6 – excellent 2. The instructor's contribution to the course was: NC 1 2 3 4 5 6

The data is as follows:

| | | | |
|-------------------|------|--------------------------|------|
| 200701 | | | |
| Dept Average | 4.43 | 1st yr average | 4.43 |
| Internatl Average | 4.07 | Internatl 1st yr average | 3.65 |
| Domestic Average | 4.83 | Domestic 1year average | 5.21 |
| 200702 | | | |
| Dept Average | 4.48 | 1st yr average | 4.49 |
| Internatl Average | 4.25 | Internatl 1st yr average | 4.16 |
| Domestic Average | 4.52 | Domestic 1year average | 4.82 |
| 200703 | | | |
| Dept Average | 4.62 | 1st yr average | 4.49 |
| Internatl Average | 4.61 | Internatl 1st yr average | 4.3 |
| Domestic Average | 4.64 | Domestic 1year average | 4.67 |
| 200801 | | | |
| Dept Average | 4.58 | 1st yr average | 4.45 |
| Internatl Average | 4.29 | Internatl 1st yr average | 3.81 |
| Domestic Average | 4.96 | Domestic 1year average | 5.08 |
| 200802 | | | |
| Dept Average | 4.5 | 1st yr average | 4.3 |
| Internatl Average | 4.24 | Internatl 1st yr average | 4.11 |
| Domestic Average | 4.76 | Domestic 1year average | 4.49 |
| 200803 | | | |
| Dept Average | 4.61 | 1st yr average | 4.42 |
| Internatl Average | 4.61 | Internatl 1st yr average | 4.42 |
| Domestic Average | 4.62 | Domestic 1year average | 4.41 |
| 200901 | | | |
| Dept Average | 4.68 | 1st yr average | 4.38 |
| Internatl Average | 4.57 | Internatl 1st yr average | 4.21 |
| Domestic Average | 4.94 | Domestic 1year average | 4.54 |
| 200902 | | | |

| | | | |
|-------------------|------|--------------------------|------|
| Dept Average | 4.72 | 1st yr average | 4.6 |
| Internatl Average | 4.63 | Internatl 1st yr average | 4.59 |
| Domestic Average | 4.87 | Domestic 1year average | 4.6 |

In general, the teaching evaluations of the international and domestic students are similar and for the first year students, they become similar after 1-2 quarters. This is probably due to improvements in the speaking ability of the international students and an increased cultural awareness of the domestic undergraduate students.

In summary, the Graduate School recommendation of a speaking score of 26 on the iBT is consistent with practices employed at other PAC-10 universities. It is also clear from the data provided by the Chemistry Dept. that students with a less than passing iBT speaking score are able to function effectively as teaching assistants.

The problem appears to involve defining an admissions policy for graduate teaching assistants that allows departments like Chemistry to admit and employ sufficient numbers of teaching assistants to meet the demands of very large enrollment introductory classes and at the same time, meet the reasonable requirements of the Graduate School to insure high quality teaching assistants who are proficient in English. A draft policy to accomplish that goal is attached.

Draft of policy statement regarding iBT and Chemistry's Graduate Teaching Assistants

1. The Grad School will continue to review applications for admission from international students using their stated criteria for TOEFL, iBT and IELTS scores.
2. When a prospective student is not allowed to hold an assistantship on the basis of their iBT speaking score, the relevant department will be notified and given an opportunity to appeal the decision. This appeal right will be restricted to cases where the student has an iBT speaking score ≥ 18 . (The student will not be notified of the occurrence of the appeal until the appeal is fully resolved.).
3. If the department wishes to offer a student with a non-passing iBT speaking score an assistantship, the department must:
 - (a) Guarantee that the new graduate student will be enrolled in **IEPA 098NC. COMMUNICATION FOR IGTAs (3)** upon arrival (with the department paying the cost of this training).
 - (b) If at all possible, assign the graduate student chores (such as paper grading, reagent preparation, etc.) that do not require personal contact with undergraduate students.
 - (c) If (b) above is not possible, pair the graduate student with language problems with another TA who is a native speaker of English in the laboratory or classroom environment.The requesting department will maintain documentation for each student of how conditions (a), (b), and (c) were met.

If the department meets these conditions, the student will be admitted with support.

4. The Chemistry Department will continue its rigorous monitoring of the quality of GTA performance using student evaluations and the evaluations of the supervising professors. Chemistry does insist upon quality performance of its GTAs.

The Chemistry Department has noted the following items as important:

The course **IEPA 098NC. COMMUNICATION FOR IGTAs (3)** must be offered at a time when GTAs can attend without interfering with their class and teaching schedules.

The mechanism of appealing should be as simple as possible, such as a blanket email covering all students for a given year, rather than separate letters for each student.

Materials linked from the November 6, 2009 Graduate Council Agenda

Letter from Provost Randhawa to Fisk and Loveland re iBT/Chemistry issue.

Martin and Walt,

At a recent meeting of the External Advisory Board of the Department of Chemistry, the issue of flexibility on testing for English proficiency for GTAs was raised. Kevin has summarized it below. We (OSU) need to set and maintain our standards on English proficiency for admission and for serving as GTAs. I think the question was around “flexibility” and I do not know the issue well enough to comment on it.

I would appreciate a conversation/follow-up with Kevin Gable, Chair of Chemistry on this issue, who I have copied on my email.

Thanks,

Sabah

The Graduate School's response to the elimination of the English Language Institute was to impose a required score on the internet-based TOEFL (iBT) prior to them allowing a student to receive GTA support. This is in stark contrast to prior practice of evaluating a student once they were here (the SPEAK test, formerly administered by the ELI) and implementing remedial action as needed (results of the SPEAK test resulted in advisory recommendations that we took to heart but were not mandatory).

The result of this action has been that all of our incoming international students--15 of them--failed to meet the Graduate School's new requirement. We have been granted latitude to admit and hire them this fall only, and all of them are enrolled in an INTO class on remedial English (at Department expense--I'll be unable to support student travel to meetings this year). This despite the fact that we traveled to the students' home countries and interviewed them in person before committing to bringing them into the program. The Graduate School has completely discounted both our direct experience with the students and our track record for getting new international GTAs up to speed.

We have been seeking more flexible alternatives (that include performance standards for the GTAs) through the Graduate Council. Walt Loveland would be a good person to consult as he knows the full history through his participation on the Graduate Council. We are particularly concerned that other schools who have used the fixed test score standard have had to lower the bar on student quality in order to admit enough domestic students to fill the need--and then wind up terminating those students after one or two years because they are academically uncompetitive.

July 28, 2009

Review Panel Report
Graduate Program in Biological & Ecological Engineering
Oregon State University

1. Overall Recommendation

Maintain in the near-term, expand in the long-term.

2. Summary of Findings and Recommendations

1) The faculty administering the BEE graduate program at Oregon State University appear to be strong, capable, and highly motivated. Their morale is good and they work in a collegial atmosphere. The graduate students are very positive about the program and the faculty. We found little remaining acrimony from previous upheavals involving the department and its academic programs.

2) Our review was intended to strictly focus on the Biological and Ecological Engineering graduate program, but because there are such intimate links with the Water Resources Engineering program, it is difficult for us to consider the two programs in isolation and perhaps not instructive to do so.

3) The College of Engineering appears not to provide an instructional budget to the department, yet students graduate with degrees from the college and the college counts these students in their student number statistics. Greater investment in the department's instructional programs by the College of Engineering is warranted.

4) The BEE faculty and graduate students are a fundamental part of water resources research at OSU, which includes science, engineering, and policy/management components. As engineers, BEE faculty should play a leading role as problem solvers in this research, both in their own graduate group and as part of the Water Resources Graduate Program, thus serving to strengthen the overall water resource activities across campus. The College of Engineering needs to invest in water resource engineering FTE. The loss of critical water resources engineering FTE over the last few years is having a serious impact on teaching core classes, and it is beginning to impact OSU's water resources leadership position. The university needs to demonstrate a collective commitment to excel in water resources and a critical element of this must be investment by the College of Engineering in water resources engineering FTE.

5) Similarly, the BEE faculty and graduate students are a fundamental part of biological engineering research at OSU. The conceptual unit of organization should be the *discipline* of biological engineering (i.e., engineering with the core science biology), not the various *application areas* such as ecological engineering, biomedical engineering, bioprocessing, etc. Recognizing that the unit of organization for the program is

biological engineering provides a unifying framework to view all the research areas of the faculty, which would otherwise appear quite disparate.

The BEE Department should meet with the Chemical, Biological, and Environmental Engineering group to develop a joint vision, mission, and goals, aligned with the university's mission. Ultimately, there should be one school or college-level group of biological engineering, containing elements of ecological engineering, biomedical engineering, bioprocess engineering, and others as the program expands.

6) The department faculty appeared unprepared for this graduate program review, although we recognize that the department has undergone considerable introspection and restructuring the past seven years and is anxious to move forward. Nevertheless, we feel they did not recognize the review as an opportunity to leverage their position with the campus administration or to use the review team as an external voice to advocate their program. The graduate students appeared unfamiliar with the self-study and not to have been consulted during preparation for the review. The self study document was missing critical information for assessment of the program, which the department later provided during the site visit, and some of the faculty CV's were quite dated. We feel that if program wants to be taken more seriously by campus units and the College of Engineering in particular (as they indicated to our team), they must do a better job at presenting their program.

7) The department should develop and articulate a plan for recruitment of high quality graduate students (in their words, "the best and brightest"). Issues of diversity should be addressed in this plan, including increasing the participation of female and international students. Some mechanism should be found to allow expeditious offers of support to outstanding graduate applicants, even before grant awards are known for certain, and the faculty should not fear the consequences of taking such risks.

8) Requirements for entry into the graduate program are quite flexible and do not include standard engineering preparation. While the review team was skeptical of this at first, we were convinced by both the students and the faculty that this flexibility allows the program to accommodate graduate students with a wide range of backgrounds, research interests, and professional goals.

9) The graduate program faculty should provide greater opportunities for their students to gain teaching experience, either as formal teaching assistants or through informal teaching arrangements. The faculty should actively encourage students with academic careers aspirations to gain such experience. We recognize the limited availability of formal teaching assistantships in small programs, but the program could facilitate collection and dissemination of campus-wide opportunities. The program should also consider ways to enhance the value of in-program teaching experiences for those seeking academic careers, such as collecting separate course evaluation data for graduate student teaching contributions to courses.

10) The program should consider adding a graduate student member (in some capacity) to their Graduate Program Committee to improve communications between the faculty and the graduate students.

11) While current faculty numbers are adequate to support the graduate programs in Biological & Ecological Engineering and Water Resources Engineering, as the new undergraduate major in Ecological Engineering gains footing and grows, the faculty will likely have difficulty maintaining graduate course offerings and expanding undergraduate offerings. As the undergraduate major expands, the student numbers should drive future requests for faculty FTE.

12) The department should encourage graduate students to apply for university and external awards to enhance the visibility of the program and highlight student achievements. As described in the OSU Graduate Catalog, the program directly administers nine awards. In addition, the department should compete for Laurels Scholarships block grants, which if successful will allow the funds to be distributed directly to their students.

13) The department should consider the development of a National Science Foundation Research Experience for Undergraduates (REU) program that would enhance recruiting success of undergraduates and underrepresented groups. BEE's current involvement in the OSU Ecoinformatics REU is valuable, but there may be opportunities for additional programs that would eventually feed into the graduate program.

14) The department should reactivate their external advisory group, which has been inactive for several years.

15) The department requested feedback on whether they should allocate resources to a departmental seminar series. We think that the department should have a seminar series for the benefit of its graduate students and faculty. This could be accomplished at very little cost by using on-campus human resources.

16) The department requested feedback on whether they should explore a distance education model for delivering courses and programs. We think that at the graduate level, this is more a distraction than a help – graduate research education depends primarily on one-to-one mentoring.

3. Detailed Findings

Introduction

A Review Panel was assembled to review the Biological & Ecological Engineering Master's and Doctoral Program, Biological & Ecological Engineering Department, at Oregon State University. Members of the Review Panel included:

- Michael J. Delwiche, Professor, Chair, Biological & Agricultural Engineering, UC Davis-Chair (External)
- Joseph P. Danko, Vice President, Major Projects Group, Energy & Industrial Systems, CH2M Hill, Corvallis, Oregon (External)
- Rick Colwell, College of Oceanic and Atmospheric Sciences (Internal)
- Nancy J. King, College of Business (Internal)

The Program Review was formally requested by the Oregon State University Graduate School. The purpose of the review is evaluative and it provides a mechanism for constructive change to strengthen the graduate education in the program of interest and for considering whether the program is aligned with its own mission and goals, as well as those of the academic college(s) and the university. Guidelines for the review and a Review Panel Report Outline were provided in "Guidelines for the Review of Graduate Programs", Graduate Council, Oregon State University, May, 2009. A program review or self assessment document was prepared by the Oregon State University Biological & Ecological Engineering Department, College of Agricultural Sciences and provided to the Review Panel members prior to the May 26, 2009 on-site visit. A productive onsite visit was conducted as planned with the exception that the Dean of the College of Engineering (or his representative) was not available to meet with the Review Panel during the onsite visit. We do not think that the lack of this meeting precluded a thorough review of the program. The Review Panel met with Larry Curtis, Associate Dean, College of Agricultural Sciences and John Bolte, Department Head of the Biological & Ecological Engineering Department. John Bolte presented a summary of the written report and documentation in a self-study format to the members of the Panel. All participants in the review were reasonably well informed about the review process and were very helpful and open in their comments and answers to Review Panel questions. The Panel members appreciated all aspects of the conduct of the on-site review. Meetings with all groups provided thorough discussions leaving Panel members satisfied that major issues were addressed and additional formal sessions were not necessary. Details of the on-site review schedule were provided in a Site Visit Agenda. This and the Self Study Document are available from Dr. John Bolte, OSU College of Agricultural Sciences. The remainder of this report is organized to include inputs, productivity, outcomes, and conclusions.

Inputs

Program Mission

The mission of the department, from which we infer the mission of the graduate program, "is to achieve national and international recognition as a center of excellence for integrated research and education in the programs broadly defined as Ecological Engineering, Biological Engineering, and Water Resources Engineering, while

maintaining strong outreach links to the agricultural and natural resources communities.” While this was nominally a review of the graduate program in the Department of Biological and Ecological Engineering (BEE), the faculty are intimately connected with the campus-wide graduate program in Water Resources Engineering (WRE), and it is difficult not to consider the totality of their efforts in a review of graduate activities, so we will not make the distinction.

The faculty have common and over-lapping research interests in ecological engineering, environmental engineering, biological engineering, and water resources engineering. They identify constituencies of the program as environmental/ecological engineering consulting firms, ecotechnology providers, innovative new industries in biologically-based and ecologically-based areas, and public resources management agencies. It is interesting that there was little explicit mention of agriculture and the agricultural industries, challenges arising from the urban-agriculture interface, and opportunities for sustainable development and coexistence. Given the support that they receive from the College of Agricultural Sciences, they might consider inclusion of agricultural industries as a part of their constituencies.

The program articulates four goals:

- 1) to align with emerging trends and opportunities in the area of biological and ecological engineering, including bio-based fuels and products, bioprocessing, bio-remediation, and ecosystem engineering,
- 2) to pursue excellence and innovation in research, academic programs, and outreach,
- 3) to develop engineering leaders able to address society’s critical environmental problems, and
- 4) to foster an inclusive and supportive environment for graduate education in research areas responsive to societal needs.

The mission and goals of the department’s graduate program appear consistent with those of the College of Agricultural Sciences, the College of Engineering, and the Water Resources Graduate Program.

Admissions Selectivity and Quality of Students

The graduate program in BEE is small, with a five-year average enrollment of 12 students. Student demographics show that the program is predominantly non-resident, white, and male. On average over the past five years, 10 students applied to the program, 5 of these were rejected, 4 students withdrew their application or refused the offer, and 3 students matriculated. There was a spike in applications in 2008, probably due to the down-turn in the national economy. The quality of the applicant pool was fairly strong based on undergraduate grade-point averages and quantitative GRE scores.

The program needs to find ways to improve the matriculation rate of highly-qualified admitted students - in their words, “the best and the brightest.” Timely offers of financial support are key to improving recruitment. Most students are supported by grant funds and the faculty often are unsure of the status of their grant applications when offers need to be made. Some institutional back-up mechanism should be found to allow faculty to

make offers to highly qualified applicants, without fear of the consequences if their anticipated funding does not materialize.

In the longer term, the new undergraduate major in Ecological Engineering should serve as a feeder program into the Biological and Ecological Engineering graduate program, primarily in the natural resource areas.

Curriculum Strength

The graduate curriculum reflects the three basic areas of activity in the department: water resources engineering, ecological engineering, and bioprocessing. Some of the courses are offered at the senior/graduate level, while others are graduate level only. The rationale for one over the other was not explained to us. Given the small number of graduate students in the program, the range of courses is not unreasonable. We heard no major complaints about the range or rigor of the courses, although there was some minor, and to our ear normal, grumbling. The students liked the comparatively few number of required technical classes (just BEE529), especially compared with the five courses required by the other biological engineering program on campus. They appreciated the flexibility in requirements so they could develop a program appropriate for their own needs and interests. There is an adequate number of faculty to deliver the graduate program in its current size, but as the undergraduate program grows and takes more time to deliver, the current faculty will be stretched too thinly.

Facilities and Infrastructure

Departmental facilities and infrastructure are old, but in reasonably good condition. The graduate students all have offices. Newly renovated research laboratories are intended to serve multiple faculty programs with the intention of creating shared space. One significant deficiency mentioned by the graduate students was the quality of the water supply for the main BEE building.

Quality of Organizational Support

The departmental faculty are satisfied with the organizational support they receive from the College of Agricultural Sciences and the Water Resources Graduate Program, but feel marginalized by the College of Engineering. In fact, the review team was scheduled to meet the administration from both colleges, but the College of Engineering was unable to send a representative. Considerable frustration was evident that the College of Engineering counts undergraduate and graduate students in their student numbers and the student transcripts specify College of Engineering, yet the department receives no budget from this college for academic programs.

Productivity

Level and Quality of Student Performance

The review team learned that the BEE program evolved out of discussions in the 1980's aimed at determining how students can be trained to deal with complex systems. At that time it was determined that providing fundamental knowledge but also the flexibility to allow students to develop their own programs was essential. The student's committee then becomes a key aspect in guiding the student. To match this approach, the

requirements for entry into the BEE graduate program are flexible and do not include standard engineering preparation. This was a concern of the review team at the outset of the review; however, during the review it became apparent that this flexibility allows the program to accommodate graduate students with a wide range of backgrounds, research interests, and professional goals. This appears to be an important attribute of the program as it spans between colleges at the university and also as it accommodates a range of research interests as noted in the Venn diagram in the program review materials. This perspective is also evident by the statement made by one of the students: “everyone comes with a different background so people feel that they are not the traditional graduate student.” Despite the unique aspect of BEE students, it was striking to the review team that BEE does not track student performance. The review team recommends that the BEE program begin to track student performance.

One faculty member made a strong statement indicating that alumni from the program are in amazing positions of leadership outside of the university, but there were no examples provided of such leadership and this observation is unsupported by the report or information given during the review. Certainly, the review team felt that there was a lack of recognition of the accomplishments of the students in the BEE program. Such recognition would be possible by submitting the students’ work to various competitions that seek to commend outstanding achievements by graduate students. As an example, the department should encourage graduate students to apply for university awards (e.g., the WAGS/UMI Distinguished Master’s Thesis Award or the CGS/UMI Distinguished Dissertation Award) and external awards to enhance the visibility of the program and to highlight student achievements.

Level and Quality of Faculty Performance

The faculty in the BEE graduate program appear to be strong, capable, and highly motivated. They are dedicated to the program, morale is good, and they work in a collegial manner. The graduate students are very positive about the program and as a whole the faculty members are considered to be approachable. The consensus on the part of the students is that the main office is responsive, open, cooperative, and helpful to students.

For a relatively small group, the BEE faculty members seem to be doing well in securing extramural funding. The basic strategy is to rely upon the drive of the individual researchers to find and attract new students, and this appears to be generally successful. New faculty members in the BEE program have recently been successful with grants and there is an expectation that the number of students will increase accordingly. Although the young faculty members are left alone to do what is necessary to develop their own students, it is clear that the faculty nurture each other. And the mentoring committee that is made available to the new faculty is viewed as an asset. The BEE faculty members express the attitude that research collaboration across campus is without barriers, so there is real freedom to develop relationships with faculty from other OSU units. One possible concern is that BEE faculty appear to be over-subscribed to teaching.

BEE faculty projects remain aligned with OSU directions and federal directions with research focused on three large areas of expected growth in the future (i.e., transformative fuel technologies, water issues, ecosystem services). There seems to be an active and creative approach to dealing with some of the coming budget problems and the strategy involves working with other units to determine joint efforts.

The department seemed unprepared for this review, and it may not have recognized this as an opportunity to use the review team as their advocate. The self-study was not widely discussed among the faculty and the graduate students were not consulted during preparation for the review. The self-study document was missing critical information for assessment of the program (e.g., surveys of recent graduates, sample programs of study, current CVs of the faculty, accomplishments of current and recent graduate students, academic performance metrics, college organization charts, etc.). Such information should be incorporated into future reviews and during the assembly of the review packet the faculty should consider how such a review can be used to support BEE goals. To this end, instituting a faculty retreat would be an effective way to establish a common vision around which the group could align and this would help the faculty to present their program to those outside the group. This activity could also be enhanced by reactivation of the BEE external advisory group, which has been inactive for several years.

Viability of Scholarly Community for Students

Overall the students in the program express a high degree of satisfaction in their education in the BEE program. Nevertheless, the review team saw ways in which the community within which the students interact and develop could be improved. During the review, the students expressed a desire to have more formalized teaching opportunities. Making such opportunities available seems to represent an on-going discussion in the BEE program. There was some consideration that students may not be actively encouraged to teach because it takes time away from their research responsibilities. Further confounding the situation is that BEE students may have fewer teaching opportunities than other graduate students as a result of the program being “shared” between two colleges. A student TA requirement may not be the best solution in the current situation, but this should be considered if additional TA opportunities are identified. The BEE undergraduate program may present such TA opportunities in the near future. Training teaching skills would be an important option to offer interested students. The flexibility inherent to each BEE student’s program should incorporate a consideration of whether the student needs or wants to pursue teaching opportunities according to the goals of their individualized program.

When our team first met with the graduate students, they seemed detached from the program review. However, once in attendance they became more active participants. This demonstrates their interest in being included in the development and planning of the BEE program. Inclusion of students on various BEE committees (e.g., adding a graduate student member to the Graduate Program Committee or student involvement in the writing of the self-study) would help to ensure graduate student participation and commitment to the program.

The students generally agreed that affiliation with both colleges (engineering and agriculture) was good. However, the students indicated a lack of strong connection to the College of Engineering. One student mentioned that they had visited OSU during an “engineering weekend” but that the BEE schedule of events was not connected to the College of Engineering schedule. A tighter affiliation with the College of Engineering would give the students a larger sense of place within the relatively small BEE program. A first step could be the sharing of seminars with some groups within the College of Engineering.

It would also appear that while the BEE students’ experience has been on the whole quite positive, some aspects of how students are distributed through the program by gender and country of origin could be improved. By consciously including individuals of diverse background in the BEE decision-making process this concern could be allayed.

Outcomes

Professional Viability of Graduates

Graduates from OSU’s BEE graduate program have had no trouble finding positions post-graduation. The focus of BEE graduates on water resources systems and engineering and ecological and biological engineering are in high demand in both the public and private sectors. Based on the data provided in the BEE Self Study document, 86% (13 of 15) of the students had a committed position at the time of graduation. All students appear to be committed to positions related to their degree. Positions include: consulting in private sector, regulatory oversight for state and federal entities, and private sector biological engineering firms. Approximately 40 percent of the graduates remained in academia following their graduation from the BEE program.

Satisfaction of Faculty and Students

Students are generally satisfied with the BEE graduate program based on results from the BEE graduate review committee’s meeting with approximately 15 graduate students and results of the student survey. The BEE front office works well together as a team and strongly supports the students. John Bolte was specifically noted for his leadership and strong approachability. Students also cited the collegiality of faculty and staff supporting each other and the interests of students. The flexibility offered in BEE to pursue core engineering courses offered in the school of Chemical, Biological, and Environmental Engineering (CBEE) or to focus more in life science systems was noted as a positive by students who were designing graduate programs to meet their unique objectives. Students felt encouraged to pursue engineering courses outside of BEE and those interviewed stated that they did not have any problems getting placed in engineering courses offered throughout the College of Engineering.

Low satisfaction was noted in the area of providing opportunities for graduate teaching. Numerous students cited a desire to gain experience as Teaching Assistants. They wanted to be educated in “how to teach” as well as be provided opportunities to teach. This would enable them to assess their own desire to pursue a career in teaching as well as build their resume experience in teaching.

A number of students cited the need to repair water pipes in the BEE labs. Current water lines are heavily corroded resulting in mineral deposits that plague on-going research projects that demand a clean water supply. Repairs to these facilities need to be a high priority or they will impact on-going research and could discourage future graduate student enrollment.

BEE faculty described an environment of collegiality, nurturing and mentorship for newer faculty members. They appear to work well together to provide a flexible structure for graduates to excel in both life sciences and engineering. Their motivation and dedication to develop their students is supported both by the post-graduate placement of their students and direct feedback from the students.

BEE faculty members are disappointed at the lack of commitment to excel in water resources currently displayed by the College of Engineering. The loss of critical water resources engineering FTE over the last few years is having a serious impact on teaching core classes, and it is beginning to impact OSU's water resources leadership position. The BEE Department is a fundamental part of water resources research at OSU. However, the BEE Department is not in a position to hire critical water resources engineering faculty. The College of Engineering needs to invest in water resources engineering FTE. The university needs to demonstrate a collective commitment to excel in water resources and a critical element of this must be investment by the College of Engineering in water resources engineering FTE.

Similarly, the BEE Department is a fundamental part of biological engineering research at OSU. The conceptual unit of organization (i.e., umbrella) should be the discipline of biological engineering, not the various application areas such as ecological engineering, biomedical engineering, bioprocessing, etc. The BEE Department should meet with the Chemical, Biological, and Environmental Engineering group to develop a joint vision, mission, and goals, aligned with the university's mission. Ultimately, there should be one school or college-level group of biological engineering, containing elements of ecological engineering, biomedical engineering, bioprocess engineering, and others as the program expands. This will better utilize OSU resources and capture the synergy that currently exists in the school of CBEE and the BEE department.

Rankings/Ratings

There was no information provided to the BEE Graduate Review committee on the ranking of OSU's BEE Graduate Program compared to other programs. The program was not rated competitively against peers. Furthermore, accreditation of the graduate program is not an issue since engineering programs are only accredited at the undergraduate level.

Conclusion

The faculty administering the BEE graduate program at Oregon State University appear to be strong, capable, and highly motivated. Their morale is good and they work in a collegial atmosphere. The graduate students are very positive about the program and the

faculty, their quality and performance are strong, and they have little trouble finding professional placement.

Subject: Graduate Review for BPP
Reply-To: Lynda.Ciuffetti@oregonstate.edu

Hi Marty,

Hope all is well with you and things are going ok for you in your new position.

It turns out because of all the reorganization that is going on, CAS has decided that BPP will not be required to do the planned upcoming CSREES review until we know what is going to happen with the departmental structures. As you know, BPP was hoping to conduct the CSREES, Undergraduate, and Graduate Programs reviews this coming spring (2010). Given that we will not conduct our CSREES review this spring and due to all the reorganization that is happening both in CAS and COS, Stella Coakley (our Associate Dean) in CAS, has suggested that we postpone our UG and GRAD reviews. The reason for this is that we will be under discussion with CAS departments (and potentially with the College of Forestry) about the potential of a cross unit (and potentially cross College) undergraduate and graduate programs in the plant sciences. As such, it is important that the faculty put their efforts into this potential reorganization rather than a review of a program that may not exist this time next year. BPP would like to put off the review of our graduate program until we know if we will continue to have our program.

Please let me know if you are in agreement with this request. If you need to talk further, please let me know.

Best,

Lynda

RE: OSU Graduate Council Consideration: Deferral of Program Review

It is the request of College of Health and Human Sciences and Department of Public Health to defer the scheduled graduate review of the degrees in Public Health. The rationale to do so is based on our College plans to redesign our graduate programs in Public Health (MPH and PhD degrees) to be across three departments (not within one department) beginning July 1, 2010. Therefore the context and faculty contributions to the graduate degree offerings will change substantially during the coming academic year. A review now would not be relevant for our planned transformation of these of graduate programs. I will note that we anticipate an increase in Category I proposals for new and changing degree offerings in Public Health, and therefore with planned rapid change we do not believe it is in the best interest of the Graduate Council nor the faculty members and leadership in Public Health to engage in a review of programs that will be changing in the near future.

It should also be noted by the Graduate Council, that recent reviews (2008) of the Oregon MPH degree, a collaborative program with Portland State University and Oregon Health and Science University, recently completed a review and received full accreditation status from the Council for Education of Public Health. In addition, significant work has already been accomplished in preparation for the Graduate Council review in 2009-2010, though it seems to be not an efficient use of Department time and resources to continue planning on this review at this time. It also seems to be an unnecessary burden for the Graduate Council.

While it is understood that the Graduate Council would need to approve this request, we would ask you to tentatively delay the planned review until this request can be reviewed and acted on by the Graduate Council.

Satisfactory Progress

Background

On October 27, 2008, the Graduate Council discussed university and departmental satisfactory progress guidelines and their relationship to dismissal of graduate students. <http://oregonstate.edu/senate/committees/gradcncl/min/20081027.pdf>. Following a survey of graduate program directors (http://oregonstate.edu/senate/committees/gradcncl/agen/20090601_SatisfactoryProgress_by_Program.xls), the Council continued its discussion on June 1, 2009. The Council requested a proposal to consider at a subsequent meeting. In this document, a process for determining satisfactory progress and dismissing students who are unable to comply is described. Additional information in this document includes the current catalog language on dismissal, a document from the University of Arizona that provides assistance to units developing guidelines, and excerpts from language on dismissals for unsatisfactory progress at Colorado State University, the University of Washington, The Pennsylvania State University, and the University of California at Berkeley.

Process for programs to follow to determine and support satisfactory progress

- The program develops satisfactory progress guidelines.
- The program notifies students of the guidelines in a booklet or on a program web site.
- The program evaluates the progress of students regularly (at least annually, preferably more often).
- The program informs students who are deficient in meeting satisfactory progress guidelines of their deficiencies and explains steps needed to comply with the guidelines.
- If deficiencies persist, the program notifies the student in writing (letter, memo or email) that the student is being recommended to the Graduate School for dismissal.
- The Graduate School sets a registration hold on the student.
- The student may appeal to the program for reconsideration or may apply for admission to a different degree program. If the appeal is successful or if the student is accepted into a different program, the registration hold is removed.

Current Oregon State University catalog language on dismissals

<http://catalog.oregonstate.edu/ChapterDetail.aspx?key=38>

"Advanced-degree students (regularly, conditionally, and provisionally admitted) are expected to make satisfactory progress toward a specific academic degree. This includes maintaining a GPA of 3.00 or better for all courses taken as a graduate

student and for courses included in the graduate program, meeting departmental or program requirements, and participating in a creative activity such as a thesis.

If a student is failing to make satisfactory progress toward an academic degree, as determined by the major department/program or the Graduate School, the student may be dismissed from the Graduate School.

Any doctoral student who fails the preliminary oral examination with a committee recommendation that the student's work toward this degree be terminated may be dismissed from the Graduate School.

Any student who fails a final oral examination may be dismissed from the Graduate School.

Academic dishonesty and other violations of the Student Conduct Regulations may serve as grounds for dismissal from the Graduate School."

Possible Criteria for Satisfactory Academic Progress (from the University of Arizona)

<http://grad.arizona.edu/mock.grad.arizona.edu/node/360>

- 1) Specific (core) courses that
 - a) Must be completed by a certain time and/or
 - b) Must be completed with a certain GPA and/or
 - c) May not be [repeated for grade replacement]
- 2) Internships/clinical experiences/practica that have evaluation beyond the grade or that must be completed by a certain time
- 3) Annual evaluation that goes beyond GPA, such as judgment by advisor (and/or others) as to research potential and/or specific skills (e.g., clinical, writing, laboratory)
- 4) Must have completed various milestones by certain times (e.g., approved prospectus, successful passing of qualifying exams, comprehensive exams, constitution of thesis or dissertation committee, capstone courses, clinical or internship requirements)
- 5) More stringent time to degree than Graduate College's policy
- 6) Specific grade requirements such as
 - a) Minimum GPA in major requires a higher than 3.0 GPA or
 - b) No courses below a B in major, or specific courses
 - c) Minimum cumulative GPA above the Grad College requirement
- 7) Rules for comprehensive exams (master's and orals), such as
 - a) When they must be taken
 - b) Repeatable? Under what circumstances?
 - c) Relation between written and oral, e.g.,
 - i) How much time between
 - ii) What constitutes a PASS for written
 - iii) Whether or not writtens may be re-taken, if so, just failed questions or whole exam
 - d) How/who grades exams. Criteria for PASS
 - e) Any special program requirements (such as a grad rep, specified length, etc.)

Scholastic Standards at Colorado State

<http://graduateschool.colostate.edu/documents/bulletin/Graduate-Study.pdf>

"In addition, good academic standing requires satisfactory progress in the overall graduate program. Students' individual graduate advisory committees may render judgments as to whether satisfactory progress is being made toward the degree, taking into account all aspects of academic performance and promise, not necessarily course work alone. A positive judgment is required to remain in good academic standing."

Colorado State provides for a probationary period after which the student can be dismissed. Dismissal is also possible under some circumstances without first going through a term on probation.

"A student's graduate advisory committee or an appropriate departmental graduate committee may recommend immediate dismissal upon a finding that the student is making unsatisfactory progress toward the degree and that satisfactory progress cannot reasonably be anticipated. Such a recommendation must be documented in writing with substantive justification for this action in lieu of probation. It must be referred to the Department Head for approval and the Vice Provost for Graduate Affairs for final action. The student may appeal such an immediate dismissal through the existing Graduate School appeals procedure. Departments which invoke this process must have published guidelines explaining the performance indicators which lead to immediate dismissals."

Continuation or Termination of Students in the Graduate School (Univ of Washington)

<http://www.grad.washington.edu/policies/memoranda/memo16.shtml>

"Admission to the Graduate School allows students to continue graduate study and research at the University of Washington only as long as they maintain satisfactory performance and progress toward completion of their graduate degree program. The definition of satisfactory performance and progress toward completion of the degree program may differ among degree offering units; therefore, **it is imperative that each graduate unit has these requirements in writing, and distributes them to each graduate student.** The following information should be included:

1. General expectations for graduate student performance within the academic unit, including, but not limited to, required coursework and length of time allowed for completion of various phases of the program.
2. The identification of persons in departments, colleges, schools, and groups who are responsible for both the evaluation of graduate student progress and for informing students about the fulfillment of these requirements, and when such evaluations are to be made.
3. Criteria by which performance and progress are to be evaluated, including areas which may or may not be negotiated.

4. Under what circumstances the graduate unit will recommend to the Dean of the Graduate School the alteration of a student's standing--i.e., conditions that warrant probation and final probation (see Suggested Guidelines for Change of Status Action), and length of time the academic unit will tolerate low scholarship or unsatisfactory performance and progress.
5. Procedures for appealing evaluations recommended to the Graduate School by the graduate program."

The memorandum spells out the required review process. Students with GPA at or above 3.00 are to be reviewed annually. Students with low GPA or having other difficulties are to be reviewed term by term. Examples are given of material that should be reviewed. At the end of the review, the program has several options: No action, Warn, Probation, Final Probation, and Drop. Recommendations for probation, final probation or drop are submitted to the Dean of the Graduate School. The Graduate School provides the student with a decision in a formal letter.

Penn State Procedures for Termination of the Degree Program of a Graduate Student for Unsatisfactory Scholarship

"When a program chair or program committee determines that the program of a graduate student must be terminated for unsatisfactory scholarship, the student must be given advance notice, in writing, which in general terms shall advise the student of the academic reasons for the termination. Examples of unsatisfactory scholarship may include, but are not limited to, inadequate GPA, failure to obtain satisfactory grades in required courses for the program, or failing the candidacy, comprehensive, or final oral examination."

Penn State lays out precise communication steps that are required before unsatisfactory progress leads to termination of a degree program. After all required steps are followed, the decision is submitted to the Graduate School. The student may submit an appeal of the department/program decision to the Graduate Dean. "The standard of review by the Graduate School is whether the decision to terminate for unsatisfactory scholarship was arbitrary and capricious. The terms "arbitrary and capricious" mean that the decision to terminate is not supportable on any rational basis, or that there is no evidence upon which the decision may be based. The Graduate School does not review faculty judgments as to the quality of a student's academic performance, but only whether a program's decision was arbitrary and capricious." Additional communication steps are described by Penn State before final degree termination takes place.

Departmental Review of Student Progress at the University of California at Berkeley <http://www.grad.berkeley.edu/policies/ggp/ggp.pdf>

"Departments are responsible for monitoring their students' overall progress toward graduate degrees. Departments should evaluate graduate students at the middle and end of their first year of graduate study and annually thereafter. The yearly evaluation gives faculty an opportunity to review the performance of each student and, more importantly, to provide students with timely information about the

faculty's evaluation of their progress and performance. The Graduate Division further advises that the results of all evaluations be sent to the students in writing. A negative evaluation may be considered a letter of warning if it includes the information required by the Graduate Council (see "Warning Letters," below) and a copy should be sent to the Graduate Division.

In fairness to students and to avoid problems later on, departments should let students know — by published materials, by written evaluations, or both — what the faculty considers to be satisfactory progress.

Criteria for evaluating student progress. The definition of adequate progress is intentionally flexible. With the approval of the Graduate Council, departments may establish progress requirements beyond those set by the Graduate Division. Such requirements may include:

- 1) a grade-point average above a 3.0;
- 2) no Incompletes or a fixed number of Incompletes;
- 3) specific courses completed in a timely fashion and at a given level of performance;
- 4) a master's degree completed en route to a doctorate;
- 5) departmental preliminary exams passed before admission to the qualifying exam;
- 6) an acceptable thesis or dissertation prospectus submitted before advancement to candidacy;
- 7) acceptance by a regular faculty member who agrees to supervise the student's research and to serve as chair of the dissertation committee; and
- 8) certain general requirements, such as passing the qualifying exam, completed within a clearly specified period.

Action regarding insufficient progress. If a department assesses a student's performance as below standard, it may 1) send the student a warning letter, with a copy to the Graduate Division, apprising the student of his or her insufficient academic progress (see "Warning Letters" in the section directly below), or 2) write to the Graduate Division to place the student on formal probation, with the consequence that the student is ineligible to receive a fellowship or hold an academic appointment (see E1.8 "Academic Probation"). Placement of a student on formal probation is required before the student can be dismissed from the program except in instances when a student fails a comprehensive, preliminary, or qualifying examination."

The Guide to Graduate Study at the University of California goes on to provide detailed explanations of the meaning of warnings and probation. Steps for dismissal are quite detailed and include a process for appeal of termination decisions.

Forward: This document is prepared for the OSU Graduate School by the review committee in response to a review of a self-study conducted by the Department of Teacher Education regarding its graduate programs. Findings are based on the material provided and a site visit involving interviews with administration, faculty, staff, and students. This report is written in response to the stated graduate school standards and in compliance with format and procedure directives from the OSU Graduate School. Since the committee was provided with separate self study reports for the counseling and teacher education programs, the committee has responded in kind with separate sections devoted to counseling education and teacher education.

The visitation team met with Sally Francis, Graduate Dean, on Sunday evening, June 7, to review the charge to the review committee and to address any questions or concerns of the reviewers.

Monday, June 8 the following schedule was followed:

8:00 - 8:45 am Meet with TCE Department Chair SueAnn Bottoms, Michael Dalton and Mark Stauffer, Power Point Presentation and Overview, Ed Hall (Ed Hall 107)

8:45 - 9:30 am Dean, Sam Stern (Ed Hall 215A)

9:30 - 10:15 am [Program Administration] Meet with Program Leads - Ed Hall 107:

1. Cass Dykeman, Counseling
2. Jean Moule, Immersion
3. Nora Cohen, 2-year
4. Ken Winograd, 2-year
5. Sue Helback, EdM
6. Kathleen Cowin, MAT Cascades
7. Kathy Biles, Cascades Counseling
8. Sara Williams, Administrative Assistant

10:15 - 10:30 am Break

10:30 - 12:00 pm [Curriculum] Meet with Program Faculty - Ed Hall 107

1. Kathy Biles
2. Gene Eakin
3. Tom Guss

4. Deb Rubel
5. Kay Stephens
6. Joyce Mphande-Finn
7. Daniel Stroud
8. Kathryn Ciechanowski
9. Karen Higgins
10. Lori Blackman
11. Liz White
12. Linda Wallace
13. Jay Casbon
14. Candace Brey
15. Cass Dykeman
16. Jean Moule
17. Nora Cohen
18. Ken Winograd
19. Sue Helback
20. Kathleen Cowin

|----------------|---|
| 12:00-1:00 pm | Working lunch for Review Panel (Ed Hall 109) |
| 1:00 - 1:45 pm | Campus Tour (College of Education Ambassadors) |
| 1:45 - 2:45 pm | Work time for Review Panel (Ed Hall 109) |
| 2:45 - 3:00 pm | Break |
| 3:00 - 3:30 pm | Meet with TCE Department Chair SueAnn Bottoms, Michael Dalton, and Mark Stauffer, Ed Hall 109 |
| 4:00 - 5:00 pm | Graduate Students (Conference call (Room 109) students will call in from their intern/practica locations) |
| 5:00 – 6:00 pm | Executive Session Ed Hall 109 |

Counselor Education Emphasis

1. Overall Recommendation

Reduce and/or restructure with attention given to recommendations from the self study and the graduate school review team's recommendations

2. Summary of Findings and Recommendations

The Counselor Education program is one of the oldest and most established counselor training programs in the country, having initiated counselor education courses in 1916 and degree programs in 1929. It is nationally accredited by CACREP (The Council on Accreditation for Counseling and Related Educational Programs) and was recently reaccredited for seven years, the maximum granted by CACREP. The program is also accredited by NCATE (the National Council for Accreditation of Teacher Education).

The counseling master's programs have two areas of emphasis and students select one of the two, either community counseling or school counseling. The community counseling program will be undergoing change in the near future as CACREP is stopping accreditation of community and instead is accrediting mental health counseling programs. The faculty indicated they would be developing the mental health program offering in the future in time to be ready for the next CACREP accreditation visit. The two master's programs admit approximately 50 students per year. The admissions standard for the master's programs is low, with students who earn an undergraduate grade point average of 3.0 being admitted; if they have a lower gpa they may still be considered for admission. Graduates of the program appear to do well, for they have a "pass rate" of approximately 97% on a national standardized examination, and most obtain relevant employment and state certification or licensure.

The doctoral program in counseling admits approximately 6-10 students per year and is a part-time program, requiring students to complete two courses a quarter for two years, followed by an internship. The program is a blend of on-line and face-to-face, and it is also a CACREP accredited program. Graduates of the program appear to do well in employment, with the majority taking faculty roles in colleges and universities.

Students in both the masters and doctoral programs report satisfaction with their programs and indicate there are good relationships between faculty and students; further the students are, overall, quite satisfied with their programs, based upon follow up surveys and self report of students. However, a limited number of students participated in the follow up evaluation.

It is recommended that, based upon student outcomes (test scores, employment, satisfaction) and national accreditation (CACREP, NCATE) the programs should be continued, but there are suggested steps that faculty are encouraged to take to address specific areas of program integrity. The areas of concern and recommended steps are described below.

3. Detailed Findings

Introduction

Each of the programs reviewed at the masters and doctoral level presented mission statements and the missions as stated were in agreement with the mission statement of the college and the University. The mission seems to be relevant, appropriate, and reflects the commitment that OSU has to the public and to addressing the educational needs of the state and region.

While there is a clearly stated mission, there is concern about the specific lack of direction for the counselor education program, for while there is a mission statement and goals, there does not seem to be a specific plan to carry out the mission. Rather, there seems to be an attempt to use new delivery models (on-line, e-campus) to attempt to deliver as much program as possible with the limited resources available. It may be beneficial to step back and re-focus on the direction of the programs within the college to determine strengths, niche, and other relevant topics, followed by a strategic plan that clearly identifies goals and resources. There seems to be an inadequacy of resources to fulfill the stated mission with the quality expected of a national leading counselor preparation program.

Quality of Students and Admissions Selectivity

The admissions process seems to be missing a pre-screening piece. Currently the admissions process seems to be more oriented toward a self-selection experience, for applicants identify their interests, meet with faculty to discuss their intentions, and then the majority of applicants who follow through are admitted. It may be more beneficial to establish an application and pre-screening process. For example, instead of spending time interviewing an extensive number of applicants for a program, time might be better spent with re-designing the materials in a clear

format that lays out the expectations and time commitment required of the program, including the expected admissions standards. A first level paper-screen might then result in fewer face-to-face interviews being required. The current process is time consuming and focuses away from other duties that may be more beneficial to the school and personnel. A restructured procedure may also help by tightening the selection and admissions process, resulting in fewer admissions but of students who better suited to the programs, thus reducing the numbers of students that do not matriculate for whatever reason. While the graduates of the program appear to do well in placement and employment, there is some level of program-leaving, which indicates that the program may not be targeting the students most appropriate for the program. When as many as one-third do not finish a program, a follow-up survey, study, or exit interview should be conducted.

The graduates do well on national examinations and state and regional placement, which is indicative of talented graduates. On the other hand, most graduate programs require additional criteria of potential success in graduate training, including Graduate Record Examination scores and other indices of potential success.

Level of Financial Support for Students

An area of concern expressed by students was the minimal level of funding available. The programs are presented as part-time graduate programs available to students who are currently employed in relevant work settings, but the lack of sufficient assistantships and other forms of financial aid was voiced by students in the follow-up report completed by graduates. This lack of financial support for students also impacts the quality and experience of doctoral students, for there is a very limited opportunity for students to engage in scholarship, research, and teaching with their advisors or other faculty.

Curriculum Strength

The masters and doctoral programs are nationally accredited, demonstrating that they meet the curricula expectations of at least two national accrediting agencies. The course syllabi appear to have clearly defined objectives and outcomes, and the coursework appears to have sufficient rigor. Clearly the students accomplish sufficient learning to master the national standardized examination required for licensure, and so their achievement appears to be satisfactory.

Quality of Personnel and Adequacy to Achieve Mission and Goals

For the large number of students enrolled, there are insufficient numbers of tenure track faculty available for teaching, research, and mentoring. For 2008 there are four faculty with .500 teaching assignments (full load) and an additional 3 with a lower load (.250 or .125). On the other hand, there are significant numbers of term-to-term faculty employed to offer the courses necessary to staff the programs. Currently, given the number of doctoral students enrolled, the tenure track faculty who are eligible for advising and dissertation direction are supervising large numbers of doctoral students, as many as ten students per faculty member. In their self-study report the faculty identify their shortage of sufficient positions to adequately cover the research supervision and the teaching demands. This has resulted in the move to employ faculty from other institutions to assist with research projects of graduate students or to allowing non-tenure track faculty to direct the student research programs. Additionally, while the plan to develop an alternative dissertation model may be for educational purposes, the faculty move to change the dissertation requirement from a standard dissertation to a series of articles may also be reflective of the inability of faculty to adequately supervise doctoral research programs that result in a fully developed dissertation. The decision to alter the dissertation model should be based on educational expectations rather a limitation of sufficient numbers of faculty.

With approximately 100 graduate students being admitted each year, and with heavy course- oriented degree programs and minimal support staff, the burden on the tenure/tenure-track faculty is exceptional. Research and scholarly activity have largely vanished among the tenure-track faculty members. The “in-print, refereed” publications of the tenure/tenure-track faculty amount to slightly more than 1 paper per faculty member in a five year period. The journals in which the articles appear are not, for the most part, top-tier, but second or third tier. This is not commensurate with a research university and bespeaks more of a “service and teaching emphasis” rather than a research intensive or research extensive graduate program. Again, though, the CACREP and NCATE accreditation visits may have resulted in more in-depth analyses of the scholarship and there may be more substantive work than was identified by this current review team.

The mission of the College of Education includes preparing professionals who excel as educational leaders. This should apply to their faculty and staff first, as they are the leaders and mentors for students. It appears that the workload made it nearly impossible for the current tenure-track faculty to adequately conduct research, remain abreast of current trends and best practices, and keep up with the increasing demands put on schools. While the faculty have managed to do a credible job with

what they have been doing, the longevity of continuing in the same manner may be fairly short and may be reflected in the recent departure of some of the faculty. Faculty and staff we met reported extensive work requirements and high expectations for productivity in teaching and supervision, but with few resources for professional renewal, ongoing scholarly productivity, or innovative approaches to educational practice, beyond the on-line model being developed and delivered. Several faculty suggested that there could be a better use of time; for example having an assistant who would do some of the program processes, including admissions, rather than high paid faculty who engage in administrative or clerical work out of necessity. This may also assist in the student funding issue described earlier.

With the commitment to research, scholarship, and social justice that is advocated by the counseling faculty there is concern about the practice of having instructors supervise Ph.D. dissertations and there is unease over the employment of approximately 65 term-to-term instructors, who are paid <0.50 FTE, making them ineligible for benefits. Many of these people seem to have been employed for multiple years in this category with one person citing ten or more years of employment. This employment model appears to be in conflict with AAUP guidelines on teaching faculty.

The counseling programs have valuable faculty who care very much about their teaching and supervision and they are well-regarded by their students. For the tenure track faculty, though, there is a concern about how they will be able to maintain an adequate program of scholarly research sufficient for them to attain tenure and promotion, and how they will advance themselves as scholars within their field. A reexamination of the plan to employ so many term-to-term instructors may result in an action that would lead to pooling resources to provide for fewer part-time faculty and the employment of more full-time, research/teaching/supervision faculty. Several of the term-to-term positions may be combined to create 1.0 FTE positions that provide benefits. Additionally, Ecampus needs to support staff positions, such as a graduate advisor, to take this and similar chores off of the faculty (along with providing aid for the students in the program). The number of students in the program should be reduced to align better with the number of tenure/tenure-track faculty.

Currently there are, realistically, too many part-time or term-to-term faculty to get a true picture of how they truly teach other than student evaluations Without taking

time to step back and do strategic planning, and without consistent leadership that guides the work and helps faculty stay on target with the mission, the viability of the programs will likely suffer.

All of the steps suggested for reducing term-to-term faculty and increasing the number of tenure track faculty will reduce the net revenue of the College and the TCE department but should result in significant improvements in faculty morale, faculty productivity of scholarship and teaching. Some of the decreased or “missing” revenue resulting from fewer students and additional tenure-track faculty may be recovered from the increased productivity of faculty through research grants and service contracts.

We did not have sufficient information about the three faculty in Bend, such as what credentials they possess, who oversees their work, whether they are tenure track or term-to-term instructors, and the degree of collaboration among the faculty of the various programs. This should be clarified.

Level and Quality of Infrastructure

The counseling programs need to establish a more sophisticated data utilization system. Many programs have developed student information sources that track student progress from the time they apply, all through the academic program, and following up with graduation, licensure, employment, and related information. This information is often used for program evaluation and improvement and includes ongoing sampling of student engagement and recommendations. The counseling faculty did have a survey that students took immediately upon completion of their program, but there was little additional information provided. Perhaps there was substantially more information available from other accreditation visits (CACREP; NCATE) but it was not presented as part of this review. Follow up surveys of one, three and five years out would be informative. This would give the programs an idea of whether graduates stayed in the field, utilized what was taught, or if there were areas for which the graduates were not prepared. Additionally, while there were interviews with supervisors, there was no follow up data on employer satisfaction, job performance, and related information. There was a comment that preparedness was an area of concern for the faculty across the several programs, but there was no follow-up information provided about a plan to address the concerns.

Quality of Organizational Support

Currently there is a need for increased support for the counseling programs. The facilities are presently undergoing a major external renovation and internal

modernization is planned. There is also a need for increased availability of instructional technology updating to keep the extensive on-line programs current and advancing, for as the College moves to increased on-line curricular offerings, there will need to be enhanced technology to foster the delivery of the programs.

Administrators provide support for the programs, but there is a need for overall strategic planning to address resource shortages across the faculty lines.

4. Conclusion:

The graduate programs in counseling are nationally accredited and have a long and rich history of providing counselor education in the state and region. The students appear to be academically capable, though the admissions criteria rely upon individual interviews, an undergraduate gpa of 3.0, and self-selection for the programs, which is insufficient for today's accountability-oriented educational environment. The graduates of the program do well on their professional examinations. The faculty come from very good educational backgrounds and are highly committed to their educational programs. There are insufficient numbers of tenure-track faculty and the ones who are there are under-resourced for adequate scholarship and programs of research, resulting in them taking on a stronger identity as teachers and supervisors rather than as scholar/practitioners or academics with research programs. A strategic review of the programs, students, faculty, procedures, and resources would be beneficial for examining ways of aligning the missions, objectives, goals, and outcomes of each of the programs with the University, the College, and the individual programs.

Teacher Education Emphasis

1. Overall Recommendation

Reduce and/or restructure with attention given to recommendations from the Self Study and the graduate school review team's recommendations.

2. Summary of Findings

Oregon State University has been preparing educators for nearly 100 years resulting in more than 14,000 graduates. The current College of Education was reestablished as an academic unit in 2002. In its earliest form, it was the Department of Industrial Pedagogy and it has been part of the College of Home Economics and Education, the New School of Education, and perhaps other forms. It has three departments: 4-H Youth Development Education, Adult Education and Higher Education Leadership Department, and Teacher and Counselor Education. In the latter, two master degrees (MAT and EdM) are the focus of this review. There are three delivery models for the MAT and EdM is provided on-line. The unit has a doctorate in Teacher Leadership, but the Teacher Education Self Study Notebook did not address this degree and the review team only acquired information about it from interviews. The visit occurred following an National Council for Accreditation of Teacher Education site visit (NCATE) and a Oregon Teacher and Standards (TSPC) site visit with the results of these visits pending.

3. Detailed Findings

Introduction

The fit of the mission of the program and its relationship to the mission of the academic college and the University mission.

The unit provides a strong conceptual framework on which practice is based that includes four core values:

1. Ethics and Professionalism
2. Reflective Practitioner
3. Lifelong Learning
4. Diversity and Equity

Moreover, it emphasizes the knowledge, skills and dispositions associated with teaching and learning, the K-12 learner, assessment, and the content subject matter. This framework is compatible with national and state standards, the mission of the College of Education and the institution. While the institutional

and college missions and the unit conceptual framework have a degree of alignment, the observation is that the conceptual framework may drive instruction and curriculum, but it is unclear how it drives assessment practices in the unit.

The mission of the College of Education is “to be one of the most exemplary education units in the world”. This mission is guided by creativity, connection, culture, and caring. How these college values are related to the unit conceptual framework values is perhaps implied, but there is no specific documentation showing explicit linkage from mission to framework to practice (curriculum, instruction, and assessment). This linkage might provide greater focus and enhanced effectiveness. While mission statements are by nature lofty, it was the observation of the team that resources are inadequate to support current programming and definitely inadequate for becoming “one of the most exemplary education units in the world.”

Quality of Students and Admissions Selectivity

Admission requirements for the MAT are clearly identified and consistent with many other programs found in the State of Oregon. The requirements appear to be consistent across all three MAT program delivery models. Requirements increase as the candidate approaches clinical practice. The required NCATE Key Assessment table was provided for the MAT program. Attrition in the campus models appears to be about 15% for the years reported. The Cascades cohort model appears to have an attrition rate of about 3% for two years. Attrition rates are cited here as they are often indicative of admission decision success or failure. Team members commented that unit rejection rates appeared low, questioning if the criteria were discriminating.

Admission criteria to the EdM program were found in the required NCATE Key Assessment table and verified through interviews. While the entry criteria seem mostly appropriate, the team expressed concern that no nationally recognized graduate school admission test was required. Attrition in the EdM program is at 13%, but the data collection categories are not consistent across all programs, so while there may be little reason to compare attrition rates across two different degree programs, the inconsistency of measures would make it absolutely meaningless. Again, team members commented that unit rejection rates appeared low, questioning if the criteria were discriminating.

While admission criteria appear standard and observed, rejection rates are low, attrition rates are variable, and there is no cumulative data provided in the Self Study on the admitted students, i.e. average UG GPA, test scores, etc., to examine trends related to profiling admitted students. The review team expressed concerns about the lack of candidate selectivity in some programs.

Interviews with faculty suggest that low rejection rates at admission are associated with a discernment process during the pre-admission advising sessions.

Level of Financial Support for Students

The Self Study indicates that there are no graduate assistantships and graduate students enrolled through Ecampus are not eligible for scholarships. Graduate students applying for on campus graduate programs are eligible for scholarships and the financial support is through the College of Education. In general, faculty interviews indicated inadequate funding for graduate student tuition relief, although scholarships and awards are reported in Appendix D of the Self-Study.

Curriculum Strength

The curriculum in the MAT program appears to address national and state standards and reflect solid professional practice. Curriculum strength at the course level appears well planned with syllabi providing adequate information about the course. Many of the syllabi provide paragraphs describing the relationship of course content to the standards. Some syllabi provide a discussion of the linkages to the unit conceptual framework. Many of the syllabi provide adequate rubrics and protocols for assessment and evaluation. Many individual course assessments/assignments are implicitly linked to the objectives of the course, the unit conceptual framework, and standards, but explicit linkage from conceptual framework to national standards to course objectives to assessment is less frequent. When such linkages are noted in course objectives for example, a key for interpretation is sometimes missing. Such explicit linkage could provide greater focus for students and data about specific course effectiveness in assisting candidate attainment of program outcomes, specifically the knowledge, skills, and dispositions of the unit's conceptual framework. In summary, there is variance in the breadth and depth of information provided to candidates.

Curriculum strength at the program level is positive according to the graduate survey results summarized in Appendix D, although the summary does not

indicate which comments are EdM or MAT, so specific program assessment is limited. In the Self-Study, the data were disaggregated, but the frequencies are not sufficient for valid and reliable conclusions. The MAT is an initial preparation program with numerous assessments described in the various MAT handbooks, Self Study and exhibits. This excellent overview of assessments suggests that the unit provides comprehensive assessment and evaluation practices. No data associated with the assessments was provided. The data associated with the assessments could be used in program evaluation providing a measure of curricular strength beyond the graduate survey self-reported results. Collecting, aggregating and disaggregating data from these various assessments might provide additional data about curricular strength and other program qualities and outcomes. The graduate survey data does provide a metric of the self-reported attainment of knowledge, skills, and dispositions outlined in the conceptual framework. Many of the assessments in courses and program benchmarks could provide useable data for examining program effectiveness beyond graduate self-reported data. Using multiple measures reflects best practice.

The EdM degree appears to have its own conceptual framework (EdM Handbook page 18-19) and program outcomes. It is not explicit about how the EdM conceptual framework and the program outcomes are related to the unit's conceptual framework or state or national standards for advanced practice. All previous statements about the qualities of syllabi, in the MAT program appear to be true of the syllabi in the EdM program. In short, some are detailed and provide the student with the general structure and content of the course, but explicit information about the alignments of conceptual frameworks, objectives, class sessions and assessments are infrequent.

This issue has been wisely noted by the faculty in its own Self Study. In the short term program goals section, the faculty has indicated the need for alignment in recommendations 3 and 5 (Self-Study p. 37 and 38). The team recommends that each program be reviewed for alignment and that the data related to the various assessments be collected, analyzed, and used in driving program direction. This should precede any program or service expansion endeavor. The graduate survey was the only assessment with data provided, beyond enrollment and exit statistics. The team also had questions about the quality of the survey data. Data from multiple assessments for each assessment benchmark are necessary to reflect current best practice.

Quality of Personnel and Adequacy to Achieve Mission and Goals

For the number of students enrolled, there are insufficient numbers of tenure track faculty available for teaching, research, and mentoring. In such heavy course- oriented graduate degree programs with minimal support staff, etc., the burden on the tenure/tenure-track faculty is too large. Research and scholarly activity have suffered, yet the faculty appear committed and resourceful in their dedication to the candidates and programs. Additionally, it appears there are too many part-time or term-to-term faculty to get a true picture of how they teach other than student evaluations. Concerns about the unit's ability to provide cohesive learning experiences because of the number of part time faculty were discussed by the review team. Without taking time to step back and do strategic planning, and without consistent leadership that guides the work and helps faculty stay on target with the mission, the viability of the programs will likely suffer.

Through interviews, the review team noted that fixed term instructors are chairing dissertation committees. This practice seems ill-advised for a research intensive university and should cease.

The review team believes that some of the issues associated with the previously mentioned challenges could be to direct Ecampus to support the unit directly, since the unit is using Ecampus for many course offerings. In particular, Ecampus could fund one or more graduate advisor/grad admissions positions to relieve the burden of the faculty and provide the missing student aid previously mentioned.

The review teams offers these additional suggestions: 1) condense the 65 non-benefits positions to a lesser number of positions that pay benefits, 2) hire new tenure track faculty and reduce the program size so that the load on the faculty is appropriate. Clearly this suggestion is difficult in this fiscal climate, but without some movement in this direction, the program will continue to be compromised and faculty productivity will not address all aspects of the university's mission. These issues are the primary reason for the review team's general recommendation for reduction and or restructuring.

The team did not have sufficient information about the three faculty members in Bend related to the OSU unit. For example, it was unclear who oversees their work, whether they are tenure track or term-to-term instructors, what budgetary resources are available, what governance structure exists, and the degree of collaboration among the faculty of the various programs. This warrants clarification. Faculty interviews provided some information, but Cascade budgetary and personnel authority and the relationship with the College

of Education Dean was not established within the time parameters of the review.

Level and Quality of Infrastructure

Education Hall is over 100 years old. The facility appears to be held together by a complete exterior wrap in cyclone fencing material. Inside there are classrooms, one that appears to be preferred, offices, and basic facilities. Fresh paint and interesting displays are invitational. The historic nature of the building is appreciated, but repairs and remodeling could enhance the learning experience and faculty productivity. Many courses are held in facilities off-campus, in Bend, or on-line, so the Education Hall is not the only learning environment for the College.

A robust data system would assist the faculty in program evaluation and candidate assessment from pre-admission to post-graduation benchmarks. Currently, assessment information and data are limited and therefore the use of data in making data driven decisions are limited and or compromised.

In general, the amount of instructional technology needs to be increased so that on line and in-classroom programs can remain current and advance.

Quality of Organizational Support

It appears to the review committee that there is adequate formal administrative support as outlined in the organizational charts, but some leadership roles are assumed by faculty which the review team believes contributes to the taxing load on the faculty. The review team expressed concerns about the governance issues related to the Cascade campus based program.

Productivity

Level and Quality of Student Performance

Since 2008, all candidates have been required to complete an exit survey at the time of program completion. Since that date, 130 candidates have completed the survey; eighty-six are graduate candidates. The frequencies of response in some programs are too low to ascertain valid and reliable data and Tables 8-10 in the Self-Study may combine initial and advanced teacher preparation results.

Given that teacher candidates in Oregon cannot complete an initial teacher preparation without meeting testing requirements for licensure, it is noted that

initial preparation candidates/completers meet that standard. There is no additional aggregated or disaggregated data in the Self Study or related exhibits that indicate that average scores on such key assessments as work samples I and II, three way evaluation scores for clinical practice, portfolio scores, GPAs, or binary data about meeting program benchmarks on time, etc.

The Self Study did indicate that five to ten graduate candidates each year participate with faculty state level conferences.

The review team notes that many assessments are required of students. Copies of the assessments and the related forms were provided in the exhibits, but no data on the assessments beyond the graduate survey were provided. This void compromises the team's ability to comment further on the level and quality of student performance. Although student interviews, while limited in number, revealed program satisfaction among the candidates.

Level and Quality of Faculty Performance

OSU standards suggest that faculty members are to spend no less than .15 FTE on research, scholarship, or other creative activities. Interview results indicate that most faculty members must devote time beyond the full-time equivalency to accomplish this standard. Members of the review team concluded that the amount of evidence of research, scholarship, and other creative activities is not optimal for the stated goal of becoming one of the top ten land grant universities in the United States. The faculty has scholarly achievements in books, chapters, and articles, presentations, and grants.

Faculty members engage in service. A review of vita and the evidence in the Self Study indicate faculty are active in professional associations, scholarly societies, advisory boards, state committees and commissions, and school boards.

The review has previously noted serious concerns about adequate numbers of full-time tenured and tenure track faculty to support the array of programs. The review team provided some recommendations for consideration.

Viability of Scholarly Community Within Which Students Can Interact

A scholarly community exists within which students may interact. The quality of the community is stretched by inadequate numbers of full-time tenure track faculty, a reliance on part-time fixed term faculty, and the admission of too many candidates for faculty size. It is compromised by an apparent need to explore

more off-campus sites which will eventually commit faculty to more travel time, thus stretching the viability of the scholarly community. The plans for program expansion to other locations that were revealed in the interviews and other documents, seem ill-advised until curricula are aligned, faculty FTE increased, and strategic planning reviewed, etc. In fact, the recommendations and the short term goals for the programs outlined on pages 36-38 of the Self Study should be addressed before program expansion is considered. The Self Study recommendations do not suggest program expansion, but such expansion endeavors were discussed at some length during the interviews.

There appears to be a spirit of community among the faculty, staff, and administration. Interviews with candidates indicate program satisfaction and a high level of engagement in clinical aspects of the MAT program, but there was not sufficient information to conclude that the students felt they were partners in a viable scholarly community. Student interviews were very limited so substantive conclusions were not formed by the review team.

4. Conclusion:

The graduate programs in teacher education are nationally accredited by NCATE and state accredited by TSPC; renewals of these accreditations are pending. The candidates appear to meet admission requirements, stay in their respective programs with some attrition, complete their programs and aggregated data from the graduate survey results suggest candidates are satisfied. Further, candidate interviews indicated they were very enthusiastic about the clinical aspect of the program and their chosen profession. Faculty appear committed and enthusiastic about their work, but collectively indicate that the lack of resources and over extension of administrative and instructional duties compromise the research agenda. Clearly, faculty members are teachers, advisors and supervisors first, with research taking second place, a noble ordering of priorities, but this may not be in keeping with university and college mission statements. The review team has noted concerns in this area. While nationally and state accredited, there was an absence of candidate and program assessment data in the exhibits and Self Study available to the team in the time parameters of this review which compromises the ability to assess the level and quality of student performance or program quality beyond the limited data in the graduate survey. A substantive strategic review that carefully examines all programs, resources, policies, procedures and considers all Self Study recommendations and implements the suggestions from the review committee

would be beneficial in aligning missions, conceptual frameworks, objectives, goals, outcomes, and assessments of each of the programs with University and College missions, plus national and state standards.

The review team recognizes that interviews, exhibits, a Self Study, and a brief site visit have limitations in presenting a comprehensive view of the graduate programs in teacher education. The observations, suggestions, recommendations and opinions in this report are based upon a limited review. However, many of the observations of the team reaffirm the recommendations as found in the Self Study. The conclusion of the review team is to maintain these programs, but with strong encouragement to implement the recommendations in the Self Study and those found in this response before considering any program or location expansion.

Response to the Graduate Council comments (Badege, Steve and Alfonso)

From: Bradoch, Alfonso

To: Bishaw, Badege
Subject: RE: Comments from the OSU Graduate Council

Dear Graduate Council Members,

As was articulated in the program proposal, and also addressed to the Faculty Senate Budget Committee, Extended Campus supports the development of the MNR degree program. Extended Campus has committed to providing financial support to the program, as articulated in the MOU. The allocation of Ecampus funds for this program continues to have the support of the Provost. The interdisciplinary nature of the program, and the content area both fit within OSU's stated strategic plan, which guides Ecampus' programmatic objectives and support.

Discussions had taken place regarding the 'placement' of this program, given its interdisciplinary nature, with the Graduate School as an option. The College of Forestry welcomed the program as a 'natural' fit. The current budget uncertainty surrounding the College of Forestry, and the University as a whole, certainly should be a consideration, but until there is greater clarity regarding the budget and how that will impact the colleges and department, I would hope this proposal would be judged on its overarching academic and societal merits.

Best regards,

Alfonso Bradoch
Director, Department and Student Services
OSU Extended Campus
4943 The Valley Library
Corvallis, OR 97331-4504
541-737-9116

Response to the Graduate Council comments continue

- The College of Forestry Department of Forest Ecosystems and Society will provide a 0.25 FTE Director for the MNR degree. It is usual to have a quarter time Director appointment to interdisciplinary program on campus. In addition, salary and OPE for the following instructors Steve Radosevich, Randy Rosenberg, Paul Doescher, Loren Kellogg, Rick Fletcher and any other faculty who are on 12 month appointment and who participate in the MNR curriculum will be paid by the College of Forestry.
- The MOU between Ecampus and the College of Forestry (Appendix F) includes the true costs of offering the program and including the cost of developing and delivering the new courses (page 120).

- Dr. Badege Bishaw is appointed to be the Director of both the SNR and MNR programs as of June 1, 2009.
- We agreed with the graduate council that the Director of the MNR degree should not be involved in every student committee. However, the Director will be responsible for all follow up of a student's study program. Thus, we have deleted the statement and incorporated the necessary change in the Category I proposal.
- It is truly unfortunate that faculty in the social sciences is so thinly spread and that they believe it is impossible for them to add additional courses. However, we are not proposing that new courses in the human dimensions/social component be added to accommodate the MNR; only an increase in enrollment in existing courses is anticipated. Hiring new faculty remains in the purview and responsibility of the Dean and Department Head of the respective Colleges and Departments.
- The PSM program is removed from the MNR Category I proposal as area of emphasis.
- The core curriculum is listed in Tables 1 and 2 on pages 5-7 the Category I proposal. Like any graduate degree the student and his/her advisory committee will select and decide the core courses based on the student background and area of specialization. This is in consistence with the Graduate Council guidelines.
- Since the undergraduate Natural Resource Program and the SNR Graduate Certificate are housed in the College of Forestry, for those reasons we have been consistent in housing the MNR in the College of Forestry. In addition, the efforts to create the MNR program have been accomplished by faculty in the College of Forestry, thus the administration of the college is reluctant to place the MNR in some other place.

Subject: Comments from the OSU Graduate Council

Dear Badege, Steve, and Alfonso,

Thank you for meeting with the Graduate Council to present the Category I proposal concerning the Interdisciplinary Master of Natural Resources. We appreciated the time that you spent with us to discuss this proposal and to answer our questions. The following are some areas of concern that we would like you to address in a revision of the proposal:

One area of concern was that of the budget for this program. The question was raised regarding whether or not the MOU is still in effect given the current financial crisis. Given the absence of financial support from the College of Forestry, the location of the program in the College of Forestry was questioned. The budget should reflect the true costs of offering the program including the cost of developing and delivering the new courses. In addition, Council expressed some concern about the MNR budget compared to that of the SNR undergraduate program and the salary base of the faculty identified in the budget.

A second area of concern was the naming of the director for the program. In addition, the Council questioned the proposed FTE for the directorship given that the proposal indicates that the Director will serve on every student's committee. Furthermore, requiring every student to include the program director as a committee member is inappropriate and not common practice in graduate education at OSU. A related issue involved the advising of the students and the role of the program director and major professor.

A third area of concern involved the composition of the coordinating committee. Concern was expressed about the social sciences element of the proposal given that faculty members are already stretched too thinly. Brent Steel's memo is relevant to this point. How will this issue be addressed within the proposal?

Concern was expressed about the use of the PSM certificate as an area of concentration for the MNR. The PSM certificate is not based on content but on skills and, therefore, is not appropriate as a concentration. This should be removed from the proposal.

The Council thought that the core of the curriculum needed to be defined. Course designations also needed to be worked out because forestry courses are still listed as FOR but the proposal lists them as FES.

Finally, the proposal indicates that this program will be housed in the College of Forestry. Given that it is an interdisciplinary program, we wondered if it would be better placed within the Graduate School.

We look forward to seeing a revision of your proposal so that the Council can undertake further consideration and action.

Sincerely,
Darlene

1. Program Overview

a. Proposed CIP number: 03.0201

b. Brief overview of the proposed program, including description of the academic area and a rationale for offering the program at this time

Managing natural resources is a complex problem involving production, ecological, social, economic and ethical systems, which affect and, in turn, are affected by the others. The proposed Master of Natural Resources (MNR) degree is designed to engage university scientists and world-wide natural resource professionals in a process that integrates diverse perspectives about natural resource situations at the state, regional, national, and international levels. The MNR degree will assist agency and industry personnel meet their self-improvement goals. It will be helpful to anyone looking for an advanced degree in natural resource management, especially people with at least two years of experience in a natural resource disciplines.

The proposed 45-credit MNR curriculum is organized into three sections: core (18 credits), area of emphasis (18 credits), and capstone project (9 credits). It will be taught as a distance, on-line curriculum, although it may be possible for some students to work toward the MNR degree while in-residence at Oregon State University (OSU). Most of the courses proposed for the MNR degree are already taught both in-residence and online, although some modification to certain in-residence courses will be necessary for them to be included in the proposed on-line curriculum. In addition, courses from the Natural Resources Distance Learning Consortium (Appendix E) can be used to augment courses currently taught through OSU Extended Campus (Ecampus). Faculty members listed below already teach online courses at OSU and will be asked to serve on the Graduate Faculty of this degree program. The MNR degree will be offered as a non-thesis option only, similar to a Master of Business Administration, Master of Agriculture, or Master of Forestry.

The MNR degree will facilitate learning by natural resource professional men and women who work in settings that require integrating multiple disciplines to find solutions to natural resource issues. There is an increasing recognition that natural resource problems are multifaceted. Thus, current disciplinary-based thinking must be complemented with knowledge about, and experience with, additional ways of framing and resolving problems. This type of learning methodology is not common in modern in-residence, university teaching, so pedagogical techniques that bring together new ideas, methods, and ways of thinking must be developed and tested. We intend to integrate multiple disciplines through the curriculum, assignments, and case study projects tailored to the student's own design, student work groups and mentors, and evaluation of instruction. Students achieving the MNR degree will integrate concepts and approaches developed throughout the entire program into a final case study project. Students also will learn about the various disciplinary components that make up a natural resource problem and the solution to it.

None of the programs offered by the Oregon University System (OUS) provide for a graduate-level curriculum in natural resources. Most programs that address issues and questions of natural resources are at minimum two-year degrees that require a thesis. The intensity, breadth, and

integrative components of the proposed MNR make this a unique effort to OSU and within the OUS.

We base the need for the Master of Natural Resources degree on correspondence and inquiries from students about the Sustainable Natural Resources (SNR) Graduate Certificate. The SNR Graduate Certificate is an 18-credit program developed by OSU professors through grant funding from OSU Extended Campus. In the single year since SNR courses were offered in winter 2007, it successfully attracted graduate students from government, industry and the private sector, and inquiries from potential students in 31 states and 25 countries. Currently, there are 26 students enrolled in the SNR courses and 18 enrolled in the Certificate program. In addition there have been 154 inquiries to Ecampus and 54 additional inquiries to the College of Forestry about the Certificate. Most of these students inquire about further training such as an on-line Master of Natural Resources degree. At this time there is no degree at OSU that satisfies this request, and only four online MNR programs exist in the entire country. Thus the intent of this proposal is to assist OSU in filling this instructional gap.

The combination of university personnel and other state-wide support puts OSU in a unique position to sponsor an MNR degree. For example, OSU is internationally recognized for its Land Grant University extension, research, and teaching in natural resources and ecology, as well as its National Sea, Space, and Sun Grant Programs. In addition, the State of Oregon is one of the first in the U.S. to implement forest practices laws, environmental protection, and comprehensive statewide land use planning legislation. Oregon Department of Forestry was the first state agency to use the Montreal Process Criteria and Indicators sustainability framework to assess the status of forestlands across the state.

c. When will the program be operational, if approved?

If approved, the program will become operational in fall 2010. We will begin promoting the Master of Natural Resources degree as soon as we receive its approval. The first student will graduate from the program during academic year 2011-2012.

2. Course of Study

a. Briefly describe the proposed curriculum

The MNR curriculum is organized into three main sections: core (18 credits), area of emphasis (18 credits) that may be one of the Graduate Certificates at OSU, and capstone project (9 credits), following the format of the highly successful undergraduate degree in Natural Resources. According to the Graduate School Policy, 50% of the courses in the MNR degree program will be stand-alone graduate courses. The MNR will be taught as a distance education, on-line curriculum with the core area divided into four sections: overview/introduction (3 credits), ecology/production (6 credits), human systems (6 credits), and methodology (3 credits). Most of the courses listed below are taught in-residence as well as online. Students enrolled in the MNR degree may take courses in either manner, online or in-residence, depending on their location and personal situations.

Table 1: Overall Programmatic Framework*

| MNR SECTIONS | THEMES | | | |
|--------------------------------------|--|--------------------|--------------------------------------|------------------|
| | Overview/
Introduction | Ecology/Production | Human Systems | Methodology |
| Core (18 credits) | <i>3 credits</i> | 6 credits | <i>6 credits in 3 or more areas:</i> | <i>3 credits</i> |
| <i>provides breadth</i> | | | Economics | |
| | | | Policy | |
| | | | Sociology | |
| | | | Ethics | |
| | | | Communication | |
| Area of Emphasis (18 credits) | <i>May be a certificate:</i> | | | |
| | Geographic Information Systems (GIS) | | | |
| | Marine Resources Management (MRM) | | | |
| | Sustainable Natural Resources (SNR) | | | |
| | Water Conflict Management and Transformation (WCMT) | | | |
| | Fisheries Management | | | |
| | <i>Or no certificate – student designs option</i> | | | |
| Capstone Project (9 credits) | Master's Case Study** Choose one option:
<i>Option 1: 9 credits of MNR 506</i>
<i>Option 2: 6-7 credits of MNR 506 plus 2-3 credits from an Independent Study Project or internship that was completed as part of an 18-credit graduate certificate.</i> | | | |

* See Table 2 (below) for course offerings

** Nine total credits of Capstone Project are required. If the Area of Emphasis chosen by the student is a graduate certificate that includes a Capstone Project. Up to 3 credits from a certificate may be used to satisfy an equivalent number of credits of the required 9 credits of the MNR Capstone Project. The remaining 6–8 Capstone Project credits must be satisfied by MNR 506 (Table 4). If option 2 (above, Table 1) is chosen, the student must take an additional Core course to make up for the substituted 1–3 credits (so that the Certificate Project or Internship credits will not be counted twice toward the 45 credits required for the MNR degree).

Table 2: MNR Curriculum by section (Core courses, area of emphasis, and Capstone Project)

| CORE COURSES (18 credits from three thematic areas) Provides breadth. <i>Must be courses that are not already being used to satisfy units in area of emphasis.</i> | | | |

| MNR 506 | Master's Case Study (Capstone Project) | 9 |
| MNR 511 | Introduction to Sustainable Natural Resources | 3 |

Student Advising

As a graduate degree program, every student enrolled in the MNR must have a Graduate Advisory Committee (GAC) to determine a course of study. The student's graduate advisory committee will consist of a professor from the student's chosen area of emphasis, one other professor, reflecting either breadth (core area) or depth (area of emphasis) of the student's curriculum and Graduate School representative. The faculty member directing the student's area of emphasis would serve, in most cases, as the student's primary advisor/mentor.

The GAC will meet on-line at the beginning of the student's academic program to establish a viable study plan (list of courses). The GAC also will meet on-line at least once more at the conclusion of the degree to discuss the merits of the MNR capstone project that will be submitted by each student.

Successful completion of a final oral examination is required for all master's degrees (Graduate Catalog: Policies Governing Master's Degree Programs). Students are required to meet at

Oregon State University for this examination with his/her GAC to defend the course of study and Capstone Project.

Admission Requirements

For admission, students will be required to have earned at least the equivalent of a Bachelor of Arts (B.A.) or Bachelor of Science (B.S.) in one of the following areas of study: natural and life sciences, natural resource management, forestry, agriculture, fisheries, wildlife, environmental studies, environmental sciences, public policy, or social sciences. College transcripts will be required as part of the admission process. This course-work grounding will make it feasible to master material in the other areas of study.

Graduate credits earned at OSU prior to admission to the MNR program may be applied toward the MNR degree as transfer credits if they meet the requirements outlined in Table 2 and comply with current OSU Graduate School credit transfer policies.

In addition, it will be necessary for students to have worked professionally for at least two years in one of the following areas: natural resource management, natural resource policy, environmental science, or environmental policy. Professional experience serves two purposes. First, experience gives each student a real-world background that will be useful to place the academic material in context and can be shared with other students to contribute to the overall learning experience. Second, each student will be required to use his/her experience to develop a Capstone Project, the completion of which is a degree requirement (page 8). A description of each student's professional experience will be required for admission.

Domestic students will be required to submit GRE scores, and international students will be required to submit both GRE and TOEFL scores for admission, along with at least two letters of recommendation. Students will be selected for admission by a three-person admission committee consisting of the MNR director and two other faculty members.

b. Describe new courses, include course numbers, titles, credit hours, and course descriptions

We have introduced four new courses in the MNR curriculum, this includes: (i) MNR 5XX Introduction to Sustainable Natural Resources (3 credits), (ii) FES 5XX Below-ground Ecosystems (3 credits), (iii) FES 5XX Carbon Sequestration in Forests: Principles, Policy, and Possibilities (2 Credits) and (iv) MNR 506 Master's Case Study (9 credits). Funding for the development of these courses and modifications of other courses for online instruction are funded through an MOU with Ecampus (Appendix F).

MNR 5XX Introduction to Sustainable Natural Resources (3 credits)

Prerequisite: Bachelor's degree. Undergraduate biology or ecology course recommended.

This is an introductory overview course and a degree requirement for all students seeking a Master of Natural Resources degree. It should be taken during the first term that a student enrolls in the program.

Course Content – Goals and Objectives

The purpose of this course is to present students, regardless of their disciplinary background, with an overview of the interdisciplinary aspects of natural resource management. We will discuss concepts and principles related to the economic, environmental, social, cultural, ethical, and policy components of resource management, and evaluate different methods of balancing competing interests in order to manage natural resources sustainably. We will examine global natural resource issues and international collaborative efforts to address them, through the lens of sustainable development. Key drivers of natural resource policy and key stressors of natural resources and ecosystems will be analyzed. The course will conclude with an analysis of the role of ethics, social justice and communication in the management of natural resources, and an overview of graduate certificate programs available within the MNR degree. Through this multifaceted introduction, students will discover a particular area of emphasis on which they would like to focus during their MNR degree.

Measurable Student Learning Outcomes

By the end of MNR 5XX, students will demonstrate their ability to:

- Identify and characterize multiple aspects of sustainable natural resource management
- Analyze key drivers of natural resource policy and key stressors on natural systems
- Evaluate methods of balancing competing interests in natural resource management
- Comprehend the complexity of global natural resource issues, international collaboration and the role of natural resource management in sustainable development
- Analyze ethical aspects and broad social impacts of natural resource management decisions.

Student mastery of the above outcomes will be demonstrated through weekly substantial and thoughtful reflections on assigned readings (e.g. five 2 – 3 page papers posted on the on-line discussion board and thoughtful weekly responses to other students' postings), and submission of a term paper (12 – 15 pages) that integrates the concepts and principles presented throughout the course and applies those principles to an analysis of a current natural resources management issue. Grades will be based on quality of writing, organization of ideas, understanding of basic concepts and principles, and ability to extend beyond what is currently known or thought.

FES 5XX Below-ground Ecosystems (3 credits):

Prerequisite: Undergraduate-level Biology or Ecology.

This course describes the physical and biological components of below-ground ecosystems and their interactions. It examines the relationships between producers and decomposers in the soil. The main topics of the course are briefly described below:

Soil food web. Examines producer and decomposer organisms and their relationships in different soil systems. The role that soil microorganisms play in the carbon flow of below-ground ecosystems is analyzed. Stability between producers and consumers is essential in any terrestrial

ecosystem. Competition for carbon sources among consumers regulates the stability of their populations.

Vegetation and soil processes. Plants are the major energy (carbon) producers that sustain the heterotrophic microorganism populations in the soil. Plant species diversity influences the type of soil microorganisms present in the soil. Nitrogen fixation, mycorrhizal activities and decomposition depend directly on the above-ground plant communities.

Function of soil biological diversity. Diversity of soil microorganisms provides resiliency to below-ground ecosystems. All microorganism species have an ecological niche that is essential to maintain the soil processes in the ecosystem. Population fluctuation of any species may affect the soil processes in time and space but their function could be sustained by other species with similar niches.

Land use and its effects on soil processes. Diverse human activities may modify soil processes and cause instability of soil ecosystems. The degree to which soil processes are affected depends on the severity and length of disturbance. Both agriculture and forestry practices have short- and long-term effects on soil ecosystems. Populations of soil microorganisms undergo constant fluctuations that affect the above-ground vegetation and the soil physical properties, thereby changing the landscape.

FES 5XX Carbon Sequestration in Forests: Principles, Policy, Possibilities (2 Credits).

Prerequisite: Undergraduate-level Biology or Ecology.

In this course we will examine the processes controlling the sequestration of carbon in the forest system including the forest itself and wood products. We will also examine how forests can be managed to sequester carbon as well as the important economic, policy, and other constraints. Lectures, readings, discussion, simulation models, and home work will be used to cover the material.

Topics included will be: 1) the importance of the carbon cycle and relevance to global change; 2) how the carbon cycle works at different time and space scales; 3) how the carbon cycle is measured at different time and space scales; 4) parts of the forest carbon cycle; 5) Use of simulation models; 6) manipulating the store of carbon in forests; 7) scaling, and uncertainty specific to the carbon problem; 8) economics of forest carbon sequestration; 9) policies to manage forest carbon sequestration.

The objective of each part of course:

Readings will be diverse, covering the basic carbon cycle (biological and geological); the impacts to climate, ocean, terrestrial, and social systems; how these systems function in controlling the carbon cycle; and policies to manage forest carbon sequestration. In addition to learning about the topic, reading will help the student develop skills to read quickly.

Lectures will provide the needed background to understand the readings and begin thinking about how the carbon cycle can be managed.

Online discussions will be used to build skills to summarize and critique key science findings. Students will be graded on their ability to articulate the subject matter and participate in an interesting discussion.

Homework, aside from reading, will help students think through important issues and understand the basics of modeling and uncertainty analysis. Student also will use of a simple, but integrated model to test ideas about carbon sequestration in forests.

A final report allows the student to integrate the information from lectures, discussions, readings, and laboratory and homework into a coherent analysis of a problem. The grade will be based on the quality of the writing, organization of the report, understanding of basic principles, and ability to extend the problem beyond what is currently known or thought.

Learning outcomes:

After completing this course students will be able to:

Describe the major global changes associated with increased atmospheric carbon dioxide and other greenhouse gases and identify key uncertainties and risks.

Describe the global carbon cycle and recognize the differences between the biological and geological carbon cycle.

Describe the elements of the carbon cycle ecosystems (stands), landscapes, and global scales as well as describe in general terms how each is measured and what its major controls are.

Design experiments to test the effect of alternative management systems on carbon sequestration

Integrate the policy, economic, and ecological constraints on dealing with the carbon cycle.

MNR 506 Master's Case Study (9 credits):

Course description: Students will identify an important natural resource problem within their country, region, or organization, and a particular area of land, water, or a wildlife species/habitat for which the problem is especially significant. Students will learn to pose, frame, and analyze the various components of the problem and, at the end of the term, present possible resolutions.

Approach: After approval of a natural resource problem by MNR 506 Instructor, students will identify a faculty mentor from the pool of MNR instructors who have agreed to serve as mentors. List of faculty; pages 17-21. The mentor will assist the student in posing, framing, and analyzing the natural resource problem. Students must work through a set of eight weekly assignments relating to course instruction and reading material to assure that satisfactory progress is made throughout the term. The class will discuss and provide feedback with each other, professors and mentors on each assignment and the overall case study project. Thus students will learn about other natural resource problems and issues while working on their own project. A final written

report must be submitted to the faculty mentor and Program Director/ Advisor at the end of the term.

Learning outcomes

- Develop a practical case study in sustainable natural resource management.
- Develop a procedure to implement the case study by the student's organization or agency.
- Incorporate principles, concepts, and approaches learned throughout the entire curriculum.

Final Examination

Successful completion of a final oral examination is required for all master's degrees (Graduate Catalog: Policies Governing Master's Degree Programs). Students are required to meet at Oregon State University for this examination with his/her Graduate Advisory Committee to defend the course of study and Capstone Project (MNR 506).

c. Provide a discussion of any nontraditional learning modes to be utilized in the new courses, including, but not limited to: (1) the role of technology, and (2) the use of career development activities such as practica or internships.

The MNR degree is envisioned to be on-line, although some students may opt to take some of the listed classes in-residence. Thus we expect a high level of use of on-line teaching technologies in each of the four new courses (FES 5XX, FES 5XX, MNR 506, MNR 511) as well as in the existing courses which comprise this degree program. In addition, the development of the new MNR 506 course (above) will provide practical experience and the opportunity for students to prepare a work plan for resolving natural resource problems. This Capstone Project portion of the MNR degree may be completed as a practicum or internship which will help students hone their skills in addressing real-world problems faced by land managers.

The MNR 506 Master's Case Study project (Capstone Project) is a problem-solving experience. It will be conducted by all Master of Natural Resources students as the capstone of their academic program at Oregon State University. Case study projects provide students with experience that approximates a future work environment while also providing client organizations with solutions to complex natural resource issues and useful products. This project focuses the substantial capabilities of our students and faculty on real-world natural resource problems faced by agencies, institutions, and organizations. Project ideas may be generated by faculty, students, or the student's organization or agency.

d. What specific learning outcomes will be achieved by students who complete the course of study?

The proposed MNR degree is an integrated curriculum with courses, a case study, and readings coordinated throughout the Program by the MNR Director. Students will work on a Capstone Project throughout the MNR course of study with a graduate committee (GAC) consisting of a major professor from the student's chosen area of emphasis, one other faculty mentor and Graduate School representative who will help each student frame and analyze a problem important to his/her country, organization, or region. The experience of students working on similar but separate natural resource problems is an important integrative aspect of this degree.

Each student will come to the MNR degree with an idea for the degree project from his/her home organization or country (see MNR 506 above). Students will also learn about case study methods, provide written progress updates, and make a final report that will be available to the entire MNR degree membership. Specific learning outcomes for the overall MNR degree include:

- Demonstrated skill in integrative thinking and collaborative learning across several disciplines within the natural resource professions.
- Familiarity with a wide variety of disciplinary knowledge and capacity to apply knowledge to natural resource problems at multiple scales.
- Ability to construct a study project about a specific policy issue using multiple data collection techniques, cross-disciplinary interactions, and integrated analysis methods.

e. Is there a maximum time allowed for a student to complete this program? If so, please explain.

There is no maximum time allowed to complete the MNR degree, other than the seven year limit already imposed by the Graduate School. We expect that full time students could complete the program in about two years (six academic terms, excluding summer term).

3. Accreditation of the Program

There is currently no organization that accredits this type of degree. There are some organizations that accredit traditional disciplines in the Natural Resources, such as the Society of American Foresters and Society of Range Management. However, these organizations are highly disciplinary in orientation and commonly review entire departments or colleges, rather than only components of them.

a. If applicable, identify any accrediting body or professional society that has established standards in the area in which the proposed program lies.

NA

b. If applicable, does the proposed program meet professional accredited standards? If it doesn't, in what particular area(s) does it appear to be deficient? What steps would be required to quantify the program for accreditation? By what date is it anticipated that the program will be fully accredited?

NA

4. Evidence of Need

a. What evidence does the institution have of need for the program? Please be explicit. (Needs assessment information may be presented in the form of survey data; summaries of focus groups or interviews; documented requests for the program from students, faculty, external constituents, etc.).

Conversations with professionals from around the country and with current and prospective students in the Sustainable Natural Resources Graduate Certificate alerted us to the need for the MNR degree at Oregon State University. There were 154 inquiries to Ecampus about the Graduate Certificate in 2007 and 2008. In addition, there were 54 queries to the College of Forestry (CoF) as of November 2006. Most potential students inquiring to CoF ask about the availability of an online Master of Natural Resources degree. Currently, there is no online MNR degree at OSU. Only four institutions in the U.S. offer degree programs that are similar to this proposal: Virginia Polytechnic Institute and State University, University of Idaho, Utah State University and Texas A&M University.

With this background information, we conducted three meetings with faculty representatives from the Colleges of Agriculture, Forestry, Liberal Arts, and Science, and Departments of Agricultural and Resource Economics, Fisheries and Wildlife, Rangeland Ecology and Management, Environmental Science, Forest Science, Geoscience, Sociology, and Marine Resource Management about the development of an MNR degree at OSU. These meetings took place on August 6, 20, and 27, 2007 (Appendix C). There was unanimous support for an on-line offering of the MNR. However some concerns were expressed by two faculty members about offering a new in-residence degree at OSU (Appendix C).

We also discussed our proposed MNR degree with eleven representatives of the Natural Resources Distance Learning Consortium who participated in the 7th Biennial Conference on University Education in Natural Resources (held in Corvallis on March 13-15, 2008). Present were educators from California State University at Sacramento, Mississippi State University, North Carolina State University, Northern Arizona University, Stephen F. Austin State University, The Pennsylvania State University, University of Idaho, University of Montana, University of Tennessee at Martin, Utah State University, Virginia Polytechnic Institute and State University, and Washington D.C. offices of the U.S. Forest Service, Bureau of Land Management, and U.S. Army Corps of Engineers, as well as Oregon State University (Appendix D). There was overwhelming support for this degree, especially online, by the representatives of these organizations. The Washington D.C. representatives of USFS and BLM spoke convincingly of the immediate need for an advanced degree in Natural Resources or a related discipline to be available to federal employees working in natural resource fields (Appendix D).

In addition, we discussed the Master of Natural Resources online degree program with Dr. Melaku Bekele, Dean of the Wondo Genet College of Forestry and Natural Resources at Hawassa University in Ethiopia (Appendix D). He believes that the online MNR program would be a very valuable resource for his faculty and for other natural resource professionals worldwide who cannot afford to come to the United States to attend an in-residence advanced degree program. He offered to facilitate further collaboration between OSU, USAID and Wondo Genet College of Forestry and Natural Resources.

- b. Identify statewide and institutional service-area employment needs the proposed program would assist in filling. Is there evidence of regional or national need for additional qualified individuals such as the proposed program would produce?**

Increasingly, natural resource management practices are being certified through third party organizations, which define operational indicators of sustainability, productivity, or risk and then help organizations find ways to assess progress towards such goals. There is a need in both certification organizations and natural resource agencies/companies for individuals who understand the complexity of natural resource systems in order to determine the impacts of current and planned management practices. Oregon's continued leadership in natural resource management will require individuals with the knowledge, experience, and networks that can be gained from degree programs such as the proposed MNR. Also see 4a (above) and Appendix D.

c. What are the number and characteristics of students to be served? What is the estimated number of graduates of the proposed program over the next five years? On what information are these projections based?

The MNR degree is designed primarily for people working in the disciplines of natural resource management, natural resource policy, environmental science, or environmental policy. We expect to enroll about 20 students per year, after an initial lag time of 2 to 3 years during which time enrollments will build. This expectation is based on current Ecampus and CoF inquiries about the SNR Certificate and availability of a master's degree in natural resources (Appendix D). Without the MNR degree, it is unlikely that these professionals would attend OSU, since all indicate that they are locked into a location or level with their agency or company. It is therefore impossible for them to physically move, even for one term. All existing in-residence graduate programs at OSU and other institutions require a minimum of two years to complete.

d. Are there any other compelling reasons for offering the program?

There is increasing recognition that natural resource problems are multi-faceted and complex; current disciplinary-based thinking must be complemented with knowledge about and experience with additional ways of framing and resolving problems. The MNR is designed to facilitate the learning of all students, especially professionals, who must work in settings that require the integration of multiple disciplines and viewpoints in order to find solutions to natural resource issues. This type of learning situation is not common in the modern university. This MNR is designed to integrate multiple disciplines through curriculum requirements, assignments, a case study project of the student's own design, and evaluation of student work by mentors, professors and other students.

e. Identify any special interest in the program on the part of local or state groups (e.g., business, industry, agriculture, professional groups).

Conversations and informal correspondence with forest certifiers, nonprofit organizations, companies and educational organizations strongly support development of this MNR degree at OSU. This effort is perceived as building on and extending existing strengths of OSU into educational areas, i.e. natural resource sustainability, currently not addressed by other institutions. Students that have inquired about the SNR Certificate and represent potential students for the MNR degree are listed in Appendix D. Other people with whom we have specifically discussed this degree are also included in Appendix D.

- f. Discuss considerations given to making the complete program available for part-time, evening, weekend, and/or place-bound students.**

With the development of the MNR degree through Extended Campus, part-time, evening and weekend professional non-residents, as well as residents, will have the opportunity to participate in the program while continuing with their careers and family commitments.

5. Similar Programs in the State

None

- a. List all other closely related OUS programs.**

None of the programs offered by the Oregon University System provide for a graduate level curriculum that appeals to or can be completed by working professionals. The intensity, breath and integrative components of the proposed MNR graduate degree program are a unique effort to OUS.

- b. In what way, if any, will resources of other institutions (another OUS institution or institutions, community college, and/or private college/university) be shared in the proposed program?**

All of the resources required for the MNR degree are located at Oregon State University. However, it is possible that some on-line students may wish to access information at other colleges or universities in the state, or elsewhere, for example through the Natural Resources Distance Learning Consortium (Appendix E).

- c. Is there any projected impact on other institutions in terms of student enrollment and/or faculty workload?**

There is no projected impact on other institutions because all of the resources required for the proposed Graduate Program are located at OSU. All of the proposed courses already exist with the exception of four new courses, and seven that require some modification for on-line delivery.

6. Resources

- a. Identify program faculty, briefly describing each faculty member's expertise/specialization. Separate regular core faculty from faculty from other departments and adjuncts. Collect current vitae for all faculty, to be made available to reviewers upon request.**

Core Faculty – Coordinating Committee

Badege Bishaw, Ph.D. (Instructor, Forest Ecosystems and Society) specializes in agroforestry, sustainable forestry, and international forestry. His major project work includes agroforestry and

international forestry teaching, research, and outreach in Ethiopia, South Africa, Kenya and Ghana. He served as Director of the International Programs for the College of Forestry, Oregon State University from 2004- 2007. He has been a core team member of the Sustainable Forests Partnership at OSU since 1994, and Vice President for the national Sustainable Forests Partnership (2006 – present). He was co-director of two USAID-funded Higher Education Partnerships between Oregon State University and South African and Ethiopian universities and research institutions. Through these collaborative efforts he has developed a curricula for Agroforestry and Natural Resource education, research and outreach programs in South Africa and Ethiopia. He teaches courses in International Forestry and Planning Agroforestry Projects.

Paul S. Doescher (Professor, Forest Ecosystems and Society) has taught at Oregon State University since 1982. Currently, he is Director of the Undergraduate Natural Resources Degree Program and President-elect of the OSU Faculty Senate. His current research emphasizes ecology and restoration of native species on arid and forest ecosystems subjected to wildfire and invasion by exotic plants. Past research has focused on physiological ecology of rangeland and forest species and reforestation of southwest Oregon forests. Currently he teaches courses in Natural Resources, Forest Ecology and Ecological Restoration. Past coursework included coursework in Rangeland Management, Arid Land Plants, Arid Land Biomes and Arid Land Plant Physiology.

Steven Radosevich (Emeritus Professor, Forest Ecosystems and Society) is also Adjunct Professor of Crop and Soil Science and of Philosophy at Oregon State University. He is the author of the only textbook on the ecology of weeds and invasive plants (3rd edition), over 150 scientific papers, and a book of essays about farming, forestry and family in the Pacific Northwest. His current research includes population biology and ecology of invasive plant species, influence of humans on plant succession, forest restoration, and the ethics of natural resource development. He established the OSU Sustainable Forestry program in 1995. His teaching includes the graduate course in Biology of Invasive Plants and the on-line overview and capstone courses in Sustainable Natural Resources (SNR).

Graduate Teaching Faculty

The graduate faculty for the MNR program will consist of faculty currently teaching online graduate courses that are relevant to the MNR program (Table 5). We contacted each person listed in Table 5 to affirm his/her interest in being a graduate faculty member of the MNR degree and inform the Graduate School of positive responses when this Category I proposal is approved.

A list of courses for the proposed MNR degree is provided on pages 5 through 8 of this proposal. Each of these courses is currently taught at OSU, and most of them are already taught on-line by approved teaching faculty. All of these courses and instructors have approved Category II proposals and teach the courses as regular, permanent courses at OSU. Curriculum vitae for instructors are available.

This list of teaching faculty does not include names of all faculty teaching in the previously approved certificate programs listed in Table 1, which may be used to satisfy the Area of Emphasis as part of the MNR degree requirements.

Table 5. Master of Natural Resources teaching and mentoring faculty

| Department | Faculty and Specialization |
|--|--|
| <i>Agricultural & Resource Economics</i> | Penelope Diebel , Associate Professor
Agricultural Policy, Natural Resource Economics |
| <i>Communications</i> | Gregg Walker , Professor
Collaborative Learning, Conflict Management, Decision-Making, Communication |
| <i>Chemistry</i> | Walter Loveland , Professor
Nuclear Chemistry Techniques Applied to Environmental Problems |
| <i>Crop & Soil Sciences</i> | Kimberly Hannaway , Instructor
Sustainable Agriculture, Forage |
| <i>Fisheries & Wildlife</i> | Bruce Dugger , Assistant Professor
Waterbird Ecology, Conservation and Management; Wetland Ecology

Robert Lackey , Professor
Ecological Policy; Science, Policy, and Environmental Protection

Randy Moore , Instructor
Wildlife Ecology, Avian Biology

Doug Robinson , Associate Professor
Avian Ecology, Tropical and Aridlands Ecology

David Sampson , Professor
Marine Biological Resources, Modeling Fishery Systems |
| <i>Forest Ecosystems & Society</i> | Badege Bishaw , Instructor
Sustainable Forestry; Agroforestry

Efren Cázares , Assistant Professor
Mycorrhizal Ecology, Below-ground Ecosystems

Paul Doescher , Professor
Ecology and restoration of native species, rangeland, physiological ecology

Rick Fletcher , Instructor
Sustainable Silviculture, Forest Certification |

Dave Perry, Professor Emeritus
Sustainable Ecological Principles, Ecosystem Structure and Processes

Steven Radosevich, Professor Emeritus
Ecology of invasive plants, sustainable forestry

Mark Reed, Senior Instructor
Ecological Restoration

Mark Harmon, Professor
Ecosystem succession processes, nutrient cycling, carbon

Dave Stemper, Instructor
Environmental Interpretation

Forest Engineering & Resource Management **John Bailey**, Associate Professor
Silviculture, Fuels and Fire Management, Adaptive Ecosystem Management

Loren Kellogg, Professor
Forest Operations, Interaction of Harvesting and Silvicultural Systems

Geosciences **Roger Nielsen**, Professor
Analytical Geochemistry, Igneous Petrology

Dawn Wright, Professor
GIScience, Ocean Informatics, Marine and Coastal Geography, Coral Reefs

Nuclear Engineering & Radiation Health Physics **Kathryn Higley**, Professor
Radiation Biology, Radiochemistry, Radioecology, Societal Aspects of Nuclear Technology

Philosophy **Madronna Holden**, Instructor
World Views, Environmental Values, Ecofeminism

Tony Vogt, Instructor
Environmental Ethics

Political Science **Robert Sahr**, Associate Professor
Political Communication and Public Opinion

Brent Steel, Professor
Sustainability Science, International Environmental Politics and Policy, Public Policy

Sociology

Lori Cramer, Associate Professor
Rural Sociology, Natural Resource and Environmental Sociology

Mark Edwards, Associate Professor
Research Methods and Statistics, Public Policy, Food Insecurity

Denise Lach, Associate Professor
Environmental Natural Resource Sociology, Water Conflict and
Dispute Resolution

Courtesy and Adjunct Faculty

Some adjunct faculty teaching in the online Certificates are included in this proposal for an MNR degree. Each of the courses and instructors teaching in the Certificate programs has been approved through the Category II process. In addition, faculty and other qualified personnel (e.g. agency or other university personnel) not teaching online course in the MNR may serve as Graduate Advisory Committee as proposed by the guidelines for graduate degrees (Graduate Guidelines)

Joe Kerkvliet, Adjunct Professor
Economics of Sustainable Natural Resources

Leon Liegel, Research Associate
Alternative Forest Products, Inventory & Monitoring

Jack Mortenson, Adjunct Professor
Wildlife Diseases

Mark Spence, Adjunct Instructor
Historical Landscape Ecology

Pam Van Londen, Adjunct Instructor
Computer science, technology and art

Program Administration

The MNR degree will be housed in the College of Forestry and administered by a committee consisting of its Director and the Directors of each certificate (areas of emphasis for the MNR degree) because certificates are housed in various Colleges and Departments at OSU. In addition the Administrative Committee will be supplemented with two at-large members who represent colleges with a strong teaching component in the MNR degree. The Administrative Committee will meet annually and terms of appointment will be selected among its membership.

The Committee will submit an annual progress report to each participating College Dean and ECampus about student enrollment and financial status of the degree program. We expect the MNR program to be self-sufficient within 3-5 years.

- b. Estimate the number, rank, and background of new faculty members who would need to be added to initiate the proposed program in each of the first four years of the proposed program's operation. What commitment does the institution make to meet these needs?**

None

Program Funding: This degree will be funding neutral or profitable for all colleges and departments in the program. A budget for the proposed MNR degree was developed by Ecampus and the College of Forestry staff for the first four years of this degree program (Appendix A, Section A and C). This budget is based on the distribution of funds received from Ecampus administration, tuition for online courses and projected fixed annual expenses (overhead) for a part time Director/Advisor and administrative assistant.

We propose that online course tuition be shared among the participating Departments or Graduate Certificates according to the present Ecampus formula (Appendix A, Section C). All departmental participation for the degree is based on courses already taught online, we do not propose any revenue sharing among departments or colleges, other than that which already exists with Ecampus. Thus, no MOU is required between College of Forestry and participating departments. In addition, Ecampus administration will provide significant support up to self-sufficiency for the first three years of the Program (Appendix A, Section E, letters from Provost Randhawa and Interim Associate Provost King) since the MNR degree will benefit the entire OSU campus.

We expect tuition revenue to support overhead costs as the MNR degree builds momentum. Ecampus will provide funding (Appendix A, Section E) to defray overhead costs during the initial three years of the degree program. This funding will continue until the degree program reaches financial self-sufficiency based on enrollment-generated revenue. The MNR degree is expected to be self-sufficient from student online tuition within 3 years (Appendix A, Section A and B). Twenty students taking 12 credits of MNR only courses or 13.28 students taking 18 credits of COF and MNR courses are necessary to break even (see appendix A, Section A and B). The MNR Program will be housed in the College of Forestry and the revenue generated from COF and MNR courses will flow to the college for program administration and instructor pay. Short-term funding for administrative costs of the MNR degree is supported by Ecampus administration, online tuition and the College of Forestry.

The campus benefit from this degree program is expected to be \$12,546 ($\278.80×45 credits) for every student that completes the degree. Of this \$12,546, 50% goes to Ecampus and 50% goes to the Department. Faculty Salary and OPE ($\$129.20 \times 45$ credits) \$5,814 is covered by student tuition.

- c. Estimate the number and type of staff support needed, if any, in each of the first four years of the program.**

One 0.25 FTE MNR degree Director; we also propose one 0.20 FTE MNR degree clerical support (Appendix A, Section A)

Job Description MNR Director

Coordinates the teaching and administrative activities of the MNR, chairs the MNR Administrative Committee, work closely with Ecampus and administers funding of the MNR program, chairs Admission committee, ensures quality and completeness of student course work and capstone project and attends student defense of the capstone project. Prepares an annual progress report of the degree and submits it to the Deans of each college and Ecampus.

- d. Describe the adequacy of student and faculty access to library and department resources (including, but not limited to : printed media, electronically published materials, videotapes, motion pictures, CD-ROM and online databases, and sound files) that are relevant to the proposed program (e.g., if there is a recommended list of materials issued by the American Library Association or some other responsible group, indicate to what extent access to such holdings meets the requirements of recommended list).**

All facilities are present at OSU or on-line and are adequate.

- e. How much, if any, additional financial support will be required to bring access such reference materials to an appropriate level? How does the institution plan to acquire these needed resources?**

No additional funding is needed. The MNR is expected to be self-sustaining from tuition within 2 to 3 years after its initiation (Appendix A).

- f. Identify any unique resources (in terms of buildings, laboratories, computer hardware/software, internet or other online access, distributed-education capacity, special equipment, media, and/or other materials), beyond those now on hand, necessary to offer this program. How does the institution propose that these additional resources will be offered?**

None. However, During the time this proposal was being prepared, the College of Forestry was reorganizing into three departments. The former Department of Forest Science has been combined with part of the former Department of Forest Resources, which are now called the Department of Forest Ecosystems and Society, effective July 1, 2008. For any references to Forest Science or Forest Resources in this proposal, please substitute Forest Ecosystems and Society (FES). For example, course names beginning with FS or FOR have not been changed as of December 2008, so for now the list of courses for the MNR degree uses the designators FS and FOR.

Appendix A – Budget and Financial Planning

Proposed Administrative Expenses for MNR degree

A. *Proposed Administrative Expenses*

| Position | Expense (\$/year) |
|---------------------|--------------------------|
| Director | |
| FTE (0.25) | 13,866 |
| OPE (@52%) | 7,210 |
| Clerical support | |
| FTE (0.2) | 9,352 |
| OPE (@ 56%) | 5,236 |
| Total | 35,664 |
|
Ecampus support |
-30,000 |
| Total | 5,664 |

- B. **Break even enrollments.** The break even calculation described here is based on the Ecampus funding model. Ecampus tuition revenue is shared across three campus segments in an 80-10-10 split, allocated to the academic department-Ecampus-Central Administration respectively. Tuition is set in alignment with main campus tuition (see Section C for details).

Break even enrollments described (below) assumes 4 years (12 academic terms) to complete a degree. When each student takes only 12 required MNR credits plus 33 credits from other online courses (Tables 2, 3 and 4), only 3.17 new students are needed for the degree to meet the proposed administrative expenses (above) during the first three years. After 3 years 19.92 new students are needed each year to meet the proposed administrative expenses.

| Credits /student | # of students | revenue generated /year |
|--|----------------------|--------------------------------|
| 12 credits of MNR only during year 1-3 | 3.17 | 5,676.00 |
| 12 credits of MNR only after year 3 | 19.92 | 35,665.00 |

CoF and MNR Courses and Revenue

| Course | Title | Credits | \$/course |
|---------------|---------------------------------|----------------|------------------|
| MNR 5xx | Introduction to | | |
| | Sustainable Natural Resources | 3 | 447.60 |
| MNR 506 | Case Study | 9 | 1,342.80 |

C. OSU Extended Campus Tuition Revenue Sharing and Instructor Pay

Academic Year 2009

The tuition revenue sharing model for Ecampus credit courses has been in place since Summer Term 2003. The college/academic department receives 80% of the tuition revenue generated by each course (separate from the distance education and technology fees) through budget transfers at the end of each term. The academic department can choose to both hire and pay course instructors directly or may elect to have Ecampus pay instructors who have been approved by the department. **The instructor wage and payroll benefit expenses processed by Ecampus are charged directly into indexes designated by each college.**

Instructors will be paid up to a maximum of 180 SCH per term (60 students in 3 credit courses; 45 students in 4 credit courses).

- The 180 SCH limit will be calculated per instructor, not per course.
- Pay rates will remain the same: \$55 per undergraduate SCH and \$85 per graduate SCH.
- These SCH can be a mix/match of undergraduate or graduate, but the maximum is 180 SCH.
- At 180 undergraduate SCH, the pay would equal \$9,900.
- If all 180 SCH were graduate level, the maximum pay would be \$15,300 (very unlikely due to lower enrollments in graduate courses).
- PEBB benefits (health insurance) will not be initiated by Ecampus pay. (180 SCH will be equivalent to 0.49 FTE)
- This 180 SCH cap will also apply to the maximum allowed for overload pay.

Fall 2008, Winter 2009, Spring 2009, Summer 2009 Ecampus Tuition

| Course Level
& SCH | OSU Tuition* | OSU Tuition X
80%
=
Department
Allocation | OSU Tuition X 10%
=
Program Inventory
Development | OSU Tuition X 10%
=
OSU Central
Administrative
Services |
|-----------------------|--------------|---|--|---|
| Undergraduate | | | | |
| 1 SCH | \$128 | \$102.40 | \$12.80 | \$12.80 |
| 3 SCH | \$384 | \$307.20 | \$38.40 | \$38.40 |
| Graduate | | | | |
| 1 SCH | \$348 | \$278.40 | \$34.80 | \$34.80 |
| 3 SCH | \$1044 | \$835.20 | \$104.40 | \$104.40 |

Graduate and undergraduate tuition rates are consistent with the published tuition rates for a single three credit course on both the Corvallis and Cascades campuses.

Students also pay a technology fee and a distance education fee. The Technology Fee is fee revenue to the OSU TRF fund. The Distance Education Fee covers items necessary to the delivery of distance courses such as the development and production of online and video courses, Blackboard licensing fee, financial and registration services, and online student services. The distance education fee replaces the fees that on-campus, resident students pay such as student health services, athletic fees, incidental fees, and residence building fees.

Under the Ecampus Revenue Allocation Model (ERAM), state budget dollars available to the College/Department will be based on BAM formula weighted values and the prior year SCH/FTE production of the program running through Ecampus. These state funds will be distributed to the College/Department as budget at the beginning of the academic year (i.e. Fall Term).

C. Natural Resources Masters Degree Budget Draft Derived From Existing Ecampus Funding Model

| | | | | | |
|--|--|---------------------|---------|-----------------|---------------|
| There are 117 graduate credits offered on-line available for the MNR degree. | | | | | |
| Under the current proposal there are 28 credits with the COF and MNR designator. | | | | | |
| Calculations per Ecampus - FY09 graduate tuition amounts | | | | | |
| Note: In addition to tuition, students also pay a technology resource fee - 1KR - (\$3 per credit) and a distance education fee (\$15 per credit). The Technology Fee is fee revenue to the OSU TRF fund. The Distance Education Fee covers items necessary to the delivery of distance courses such as the development and production of online and video courses, Blackboard licensing fee, financial aid registration services, and online student services. The distance education fee replaces the fees that on-campus, resident students pay such as student health services, athletic fees, incidental fees, and residence building fees. | | | | | |
| Income | | Tuition per one SCH | | SCHs per degree | per degree |
| | | 428.00 | | 28 | 11,984.00 |
| | | | | 28 | |
| Distribution per student credit hour (SCH) as follows: | | | | 28 | |
| | Academic Dept | 278.40 | | 28 | 7,795.20 |
| | OSU TRF fund | 5.80 | | 28 | 140.00 |
| | OSU Central Admin Prog. Inventory Develop. reserve | 34.80 | | 28 | 974.40 |
| | | 34.80 | | 28 | 974.40 |
| | EC Distance Ed. Fee | 75.00 | | 28 | 2,100.00 |
| | | 428.00 | | | |
| Academic Dept Distribution per SCH: | | | | 278.40 | |
| Less: Teaching Expense of 129.20 | | | | | |
| | Fac. Sal. | | | 85.00 | |
| | Fac. OPE per FS Dept. calculation | | | 44.20 | 0.52 OPE Rate |
| Net resources available to dept. per SCH after instructor pay | | | | 149.20 | |
| Fixed expense information provided by Forest Science Dept: | | | | | |
| | | | | 13,866.00 | 0.25 FTE |
| | | | | 7,210.00 | |
| | | | | 9,352.00 | 0.20 FTE |
| | | | | 5,236.00 | |
| | | | | 35,664.00 | |
| Annual overhead expense of \$35,664 / \$149.20 = Break-Even SCH of 239.04. | | | | | |
| 239.04 units (SCH) / 28 SCH = 8.53 full-time students completing the MNR program, if students take 28 credits of MNR and COF courses. | | | | | |
| Assumption 1: Tuition revenue for all COF and MNR courses (\$278.40/SCH) taken by MNR students will flow to the COF | | | | | |
| Assumption 2: Instructional expense (faculty salary & OPE) for COF and MNR courses taken by MNR students will be paid by COF | | | | | |
| The break-even number of MNR program student credit hours is 239.04 per year. | | | | | |
| Impact on net revenue with the following increase in students. Each student unit = 28 credits. | | | | | |
| Full-time students @ 28 SCH each: | | 10 | 20 | 30 | 40 |
| Net revenue to COF after fixed and variable expense: | | | | | |
| 100 % revenue flow to the College of Forestry | 77,952 | 155,904 | 233,856 | 311,808 | |
| 100 % instructor expense paid by the College of Forestry | 36,176 | 72,352 | 108,528 | 144,704 | |
| 100 % overhead expense paid by the College of Forestry | 35,664 | 35,664 | 35,664 | 35,664 | |
| Ecampus contribution | 30,000 | 30,000 | 30,000 | 30,000 | |
| Net to College of Forestry | 36,112 | 77,888 | 119,664 | 161,440 | |
| Modifications to Assumption 1 and 2 will change both the break-even point and the net revenue after reaching the break-even point. | | | | | |
| Assumption 3: Calculations below assume all fixed expenses are paid by College of Forestry (director and coordinator). | | | | | |
| Assumption 4: Years 2, 3, and 4 show projected program growth. | | | | | |
| Assumption 5: Tuition revenue and variable and overhead expense remains constant for this illustration. | | | | | |
| 5 full-time degree students @ 28 SCH = 10 half-time students | | Year 1 | Year 2 | Year 3 | Year 4 |
| 100 % revenue flow to the College of Forestry | | 38,976 | | | |
| 100 % instructor expense paid by the College of Forestry | | 18,088 | | | |
| 100 % overhead expense paid by the College of Forestry | | 35,664 | | | |
| Ecampus contribution | | 30,000 | | | |
| Net to College of Forestry | | 15,224 | | | |
| 10 full-time degree students @ 28 SCH = 20 half-time students | | | | | |
| 100 % revenue flow to the College of Forestry | | 77,952 | | | |
| 100 % instructor expense paid by the College of Forestry | | 36,176 | | | |
| 100 % overhead expense paid by the College of Forestry | | 35,664 | | | |
| Ecampus contribution | | 30,000 | | | |
| Net to College of Forestry | | 36,112 | | | |

E. Communications with Provost Sabah Randhawa about MNR Budget January 30, 2009

From: Radosevich, Steven R.
Sent: Friday, January 30, 2009 3:43 PM
To: Randhawa, Sabah
Cc: Bishaw, Badege; King, Dave; Bradoch, Alfonso
Subject: RE: MNR Proposal

Good afternoon, Dr Randhawa. I am sorry to have not gotten back to you sooner. However, I am on campus infrequently anymore and I wanted to discuss this matter with Badege Bishaw first. We are into the first phases of the Category I approval process, particularly the Budgets and Fiscal Planning Committee. Dr. Warner has been most helpful in this respect. We are making some changes to the document to be more clear about how the administrative costs will be met. In addition we are including an email that Dr. David King sent to you and me (Nov. 6, 2008) indicating the source of funds during the first three years.

As we proceed through this process, Badege and I will include you, Dr. King, and Dr. Bradoch in any modifications to the Category I proposal that are necessary. sr

From: Randhawa, Sabah
Sent: Thursday, January 29, 2009 10:22 PM
To: Radosevich, Steven R.; Bishaw, Badege
Subject: MNR Proposal
Importance: High

Steve and Badege,

I understand that the FS Budgets and Fiscal Planning Committee have asked you for clarification on budget-related items in the proposal. One of the questions that has been brought to my attention is administrative support for the program during the start-up phase and in particular, the ability of University to support a new program in a difficult fiscal environment when we will be going through a major budget reduction in the next few months. I realize that we had earlier discussions about this issue. I think it is important that the source of funds for administrative support (as coming from eCampus portion of the revenue and development funds) is identified in the proposal, both for transparency as well as to address the concern that precious few E&G dollars will be directed to new programs when existing programs are being downsized.

I would suggest that you provide this clarification to the FS B&FP Committee. Alternatively, if you would like, I would be glad to do so. Please let me know.

Sabah

**Communications with Provost Sabah Randhawa about MNR Budget
November 16, 2008**

From: Randhawa, Sabah
Sent: Sun 11/16/2008 12:25 PM
To: Radosevich, Steven R.
Cc: King, Dave
Subject: Proposed MNR Degree

Steve,

I appreciate the effort that you and your colleagues are investing in developing an interdisciplinary Masters Program in Natural Resources. Per our earlier discussions, the University will provide \$30,000 towards the administration of the program for a period of up to three years at the inception of the program. It is expected that the participating academic units will match the institutional support with an equivalent amount towards a projected \$60,000 program administrative costs. It is my understanding that the business model calls for student enrollment projections that will result in a self-support situation after three years.

Sabah

Sabah Randhawa

Cc: Heiligman, Nancy; Reed, Scott; Bradoch, Alfonso; Templeton, Lisa; Fisher, Dianna; Babcock, Carol; Radosevich, Steven R - ONID; Bishaw, Badege
Subject: RE: Proposal to initiate Masters in Natural Resources

Dave—Thank you very much for your willingness to partner with the academic units in supporting the program in the development/start-up phase.

Steve—Please modify the Category I budget for administering the program, per Dave's email below. With this change, the proposal can move through the approval process.

Thanks,

Sabah

Subject: RE: Proposal to initiate Masters in Natural Resources
Importance: High

Sabah,

Extended Campus will provide the bridge funding needed (est. \$30,000) along with the departments involved to cover the masters program in Natural Resources until it can become self sufficient. We are keenly interested in the program's success and have been willing all along to try to do what was needed to make that happen.

I'm sure you understand the concerns expressed by the supporters of this program are as much about interdisciplinary programs in general as they are this particular Extended Campus supported online program.

The Curriculum Council is set to discuss the online MNR tomorrow. Dianna Fisher is representing Ecampus at that meeting. I'll make sure she understands we are willing and ready to support the online master of Natural Resources program, if that has any value in the Council's discussion.

Subject: Proposal to initiate Masters in Natural Resources

Dave,

Nancy and I have been discussing the budget associated with the interdisciplinary academic proposal for a masters program in Natural Resources. As you know, this is a program fully delivered via eCampus that is expected to self sufficient in 3-5 years. The issue has been support for the administration of the program (about \$60,000) during the start-up phase of the program. The participating departments are willing to pick up 50% of the administrative costs. We would like to see eCampus pick up the remaining 50% for a period not to exceed three years. Were you to do so, what will be the effective return to eCampus and how will this work for eCampus fiscal sustainability?

Thanks,

Sabah

**Communications with Provost Sabah Randhawa about MNR Budget
September 15, 2008**

From: Radosevich, Steven R.
Sent: Monday, September 15, 2008 11:06 AM
To: Randhawa, Sabah; Bradoch, Alfonso
Cc: Adams, Tom; King, Dave; Bishaw, Badege; Reed, Scott
Subject: RE: Masters of Natural Resources

Hello Dr. Randhawa. Dave King and Alfonso Bradoch were members of the team that created the funding model for the MNR Cat I proposal (See Appendix A). It is based on the current allocation of e-campus funds and on administrative costs (that I determined by consulting with the FS administrative assistant) to run the MNR degree on a sustained basis--about \$60,000/year. In addition, we are proposing 3 options in the CAT 1 for funding the administrative costs for the MNR degree. These options are listed below (See also page 21). The one that we favor, considering the recently completed liaison with the draft Cat I proposal, is option 2 which we visited with you about several weeks ago.

We also expect a short-fall in revenue to support overhead costs as the MNR degree builds momentum. E-Campus has agreed to provide supplemental funding to help defray overhead costs during the initial years of the degree program. This supplemental funding will continue until the degree program reaches financial self-sufficiency based on enrollment-generated revenue, at which time the supplemental funding will be paid back to E-campus according to the same procedure as described in the 3 options.

As you suggest, I will attempt to set up a meeting with Drs. Loveland and Heiligman within the week and inform you of that outcome. sr

Funding models:

We propose three funding models for the MNR degree. The following options are considered:

(1) Department revenue sharing. We propose that on-line course tuition be shared among the participating Departments or Graduate Certificates according to the present E-campus formula (Appendix A [attachment above]). In addition, to meet the overhead costs of the MNR degree we propose that tuition received from students in the MNR degree be allocated according to student-contact hour and funds be removed by E-Campus until overhead costs for administration of the MNR degree are met. Once administrative costs for the degree are achieved, proceeds from tuition will be allocated according to the existing E-Campus formula (Appendix A; attachment above). An MOU is attached (Appendix F) that specifies this funding agreement. Although this is our proposed funding model for the MNR degree, some concerns were raised during the liaison process.

(2) Department revenue share plus Campus Administration support. In addition to department's revenue and cost sharing, campus administration should provide some support since the MNR degree will benefit the entire OSU campus. This kind of support already exists for other interdisciplinary graduate programs on campus (e.g. Environmental Sciences). This is similar as

option 1, except that campus administration provides a significant level of support (e.g. 50%) of the annual administrative costs of the MNR degree. We believe that all departments will agree to cost sharing of MNR administration under this option.

Thus the manner of funding the MNR degree and other on-line interdisciplinary degrees is the subject of discussion by the Provost and Deans of Colleges affected by the proposed degree. We expect to have the question of campus-wide support and financial sustainability of on-line interdisciplinary degree programs resolved by the completion of this Category I process.

(3) In the event no resolution is reached with option 2, we will proceed with option 3 for funding the MNR administration costs. Some departments who are unwilling to contribute to administrative overhead will be removed from the MNR program and their courses will be removed from the MNR curriculum. Students will select such courses from a list proposed by the Natural Resources Distance Learning Consortium for graduate education.

c. Estimate the number and type of staff support needed, if any, in each of the first four years of the program.

One 0.5 FTE MNR degree Director/Advisor (Appendix A) and 0.20 FTE MNR degree administrative support (Appendix A)

Steve,

I am sorry I have not been able to respond to the emails on this proposed programs earlier. Before I bring this up with the relevant deans, is there a "revenue/cost model" that you all (proposers/eCampus) are proposing for initiating and sustaining this proposal? I am afraid that if I discuss this with the deans, the question that will be asked is the model that is being proposed and its implications for units/colleges, and that will bring us back to the drawing board. I suggest that some members of the proposal development team work with Dave to develop a straw budget model for the program. I think you have elements of the model already developed; the key issue is building an administrative component and how it is to be sustained over time. It will also be helpful to get Nancy Heiligman's input and perspective into that model. Walt Loveland, who chaired the University Budget Committee (UBC) the past two years, including extensive discussions on funding of interdisciplinary programs, may also be helpful in this regard. Having a model with input from the Budget's Office and the UBC will help to move this along.

Subject: RE: Masters of Natural Resources

Good morning Sabah.

I was only able to attend the meeting with Dr. Boggess, but I suspect his reactions and concerns were mirrored in the meetings with the other Deans. As Steve commented, Dr. Boggess saw the value of this program and agreed that the Graduate School was the best 'home' for this program, but as anticipated he too was concerned over how the program would achieve sustainability. He commented that the issue of how to budgetarily sustain interdisciplinary programs has been an ongoing question for OSU. He understood, however, that Ecampus' unique funding model provides opportunity for creation of a funding model that could solve this conundrum, at least for those interdisciplinary programs offered via Ecampus. He also commented that undergraduate interdisciplinary programs, such as the Natural Resources Bachelor's degree, suffer from the same sustainability issues and understood that these too must be addressed. That said, Dr. Boggess seemed supportive of the proposed Masters of Natural Resources and the effort to create a funding pathway.

Sabah. All of the Deans supported our Category 1 proposal. They liked the concept presented in the Category 1 of an Interdisciplinary degree, especially one offered on-line. Several were surprised that OSU offers so many graduate courses on-line. They all seemed to realize that the degree being proposed should become self-sufficient a few years after it starts. However all of them also indicated that budgets were very tight and that a mechanism needed to be found that supported interdisciplinary programs for the good of the campus. None seemed to have a very good notion of how to do this.

All of the Deans liked the idea of having the program housed in the Graduate School, rather than in a specific College or Department. Dr Francis, however, was concerned that her budget could not handle any more interdisciplinary programs. Each Dean offered some specific ideas on how the Cat I could be improved (which we took note of) , but none had any specific suggestions for creating or improving the funding model.

Badege Bishaw was present with me at all of the meetings. Other listed above were present at one or more meeting. Perhaps they also can share their insights about the meetings with you. I will be gone all of the coming week. Thank you for asking for more detail. sr

Dr. Randhawa. We have met with both Drs. Loveland and Heiligman about the funding model for the proposed MNR program as you suggested. Alfonso Bradoch and Badege Bishaw attended the meeting with Dr. Loveland and we were joined by Paul Doescher and Carol Lehto for the meeting with Dr. Heiligman. Both Drs. Loveland and Heiligman were supportive of developing a funding model that involves support for the administrative costs of the MNR degree by central administration. It was suggested that the long term sustainability of this interdisciplinary degree (after the next year or perhaps two) be funded from the 10% of funds received by central administration from e-campus tuition. Dr. Loveland indicated that he would be contacting you via email concerning this matter, while Dr. Heiligman indicated that long-term funding of the MNR degree should be an issue for discussion at the next budget committee meeting. This suggestion is basically option 2 that we propose in our existing Category I proposal and the one-page information sheet that we provided you before our meeting with you last month.

I have attached copies of both documents. sr

Collection Development**

Library Evaluation for Category I Proposal

New Instructional Program for Master of Natural Resources (MNR)

Title of Proposal

Multiple

Department

Forestry, Agricultural Sciences, Liberal Arts, COAS, Science

College

The subject librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

- ☐ inadequate to support the proposal (see budget needs below)
☒ marginally adequate to support the proposal
☐ adequate to support the proposal

Estimated funding needed to upgrade collections or services to support the proposal (details are attached)

Year 1:

OSU Libraries Evaluation of Collection and Access to Support New Instructional Program for Master of Natural Resources (MNR)

Overview

The request for a library assessment for this new instructional program leading to a Master of Natural Resources has arrived at a critical time. It has been our practice to assess the current/historical strength of the collection and look at collecting levels specific subject areas and from that information infer if added resources are needed.

OSUL budget has been flat for the past five years during which time the price of serials/journals (the lion's share to the OSUL materials budget) has increased at an annual rate of 5-8%. As a result, our monographs budget has been cut by 50%. Although our monographs budget has been reduced, we have mitigated this situation with increased reliance on Interlibrary Loan (ILL) and resource sharing through Summit and with other libraries. We are pursuing collaborative collection development with libraries in the Orbis Cascades Alliance to focus our buying power on what matters most to Oregon State University and to avoid unnecessary duplication of titles among the institutions. In the current economy we can expect cuts to the library budgets at the University of Oregon, University of Washington, Portland State University, and Washington State University, on whose collections in natural resources and public policy our OSU students and faculty depend. It is inaccurate to say: "all of the resources required for the MNR degree are located at Oregon State University," (p. 18) though it is understood that this statement refers to the curriculum offered.

OSUL has been shoring up the collection using money from gift funds for the past 5 years. This was never intended to be more than a stop gap and beginning in AY 2008/09 OSUL began another round of cuts of its serial collection. We are planning for an additional cut of some 30% cut to the serials collection over the 2009/11 biennium. For example, crop/soils, fisheries, wildlife, forestry, and rangeland serials will be cut by over \$19,000 in the next two years. In addition we will cut the general biology fund which underwrites these areas by \$84,000. These cuts are not temporary. They need to be sustained in subsequent years. There is no way to protect the Natural Resources serials/journal collection from these cuts. Assuming a flat budget, in subsequent years we will need to cut an additional 5-8% annually to keep up with inflation. Any strengthening of the collection in one area will need to be the result of sustained new funding or by further cuts. The reality is that if this or any other program wants to move forward, the forward movement must consider that OSUL will be supporting access to content through a combination of some journal subscriptions and an increased use of resource sharing, specifically a heavy reliance on ILL and/or document delivery.

OSU Libraries (OSUL) has not had the opportunity to comment on the burgeoning extended campus programs and library service/collections. Extended campus programs highlight the need for "electronic access" to the library collection and where this is not possible physical document delivery. While Extended Campus has provided a base figure for this for the past three years, that amount is not linked to increased enrollment nor is it linked to the ; costs of building an electronically accessible collection. E-access to monographs ~ is a desirable future for such a program. When available, providing multiple users access to an e-book requires payment of an additional 50%.

The emphasis on this bleak picture is to make clear the point that even though our assessment indicates the collection is marginally adequate, maintaining "marginal" adequacy is an optimistic goal. The bad and the good news is that OSUL is not alone and has been collaborating within the Orbis/Cascades Alliance and the Greater Western Library Alliance for several years to negotiate affordable collections. There are also glimpses of a solution in the form of a truly shared research collection within OUS.

Collection Assessment for MNR

In 2003 OSUL provided a library review for the Certificate in Sustainable Natural Resource program which at that time was planned as an in-residence certificate. OSUL received no additional funds for the collection though we noted that our area of greatest weakness when compared with our peers for this program was in the social aspects of natural resource management and sustainability. In the 2006 library assessment for the Applied Economics Program found the library collection to be only marginally adequate.

Government Documents:

US Federal and State agencies' documents are the heart of any natural resources collection. In this area, OSUL has always had a strong collection and there is little reason to believe it will be diminished in the future. OSUL recently joined with the libraries at UO, PSU and the State Library of Oregon to provide a full but distributed repository of government documents. The agencies for which OSUL is the full depository for Oregon are:

- U.S. Dept. of Agriculture (USDA)
- National Oceanic and Atmospheric Administration (NOAA)
- National Oceanographic Data Center
- National Marine Fisheries Service
- Oceanic and Atmospheric Research Office .Federal Aviation Administration (FM)
- Dept. of the Interior (which includes the Forest Service, National Parks Service, Bureau of Land Management, and so on)
- National Aeronautics and Space Administration (NASA)
- National Science Foundation (NSF)
- Federal Mine Safety and Health Review Commission .
- Nuclear Regulatory Commission (NRC).
-

Students interested in Oregon will find a wide array of documents from state agencies as well. Most state and federal agency documents are published electronically now though not all are provided a persistent URL. The State Library in Oregon is attempting to provide this service. Government documents from other countries are more likely to need interlibrary loan.

Public Domain, Open Access and Copyright:

Researchers employed by US federal agencies cannot transfer copyright to publishers (even for-profit journal publishers). For that reason databases like the US Forest Service's *TreeSearch* can become a site for "one stop shopping." OSU researchers can participate in this de-commoditization of research findings by being aware of author rights. In most cases it is possible

to retain the right to deposit pre- and/or post-prints of their scholarly writing in the ScholarsArchive@OSU, our institutional repository (<http://ir.library.oregonstate.edu/dspace/>). In that way the content of their research findings will be freely available in perpetuity.

Monographs (See Appendix I):

We looked at the number records in the OSUL catalog compared with Summit (the library for the Orbis/Cascades Alliance) and WorldCat. The latter serves as "the universe" of cataloged material.

A few relevant call number ranges were examined and revealed the shift to policy as an area of collecting emphasis since 2005. A comparison of policy related natural resources monographs added to the OSUL in comparison to Summit and World Cat holdings shows that we are now collecting at a level that is on par with institutions having a longer history of public policy program emphasis (UW, UO, etc.). However, to build a public policy collection that is truly on a par with these institutions, we should be collecting at an even higher rate in order to catch up.

While it is clear that the OSUL collection is adequate in most natural resource areas the fact that students have access to the Summit holdings serves them well by providing a venue for direct borrowing of titles not owned by OSUL. The figures for WorldCat provide sufficient proof that no library can stand alone in providing monographs and highlight the fact that all graduate students and their faculty must anticipate use of Interlibrary Loan for at least some of their monograph needs.

Collecting electronic books, e-books would be the preferred format for this program.

Unfortunately as is the case for e-journals, as libraries elect to provide their users with e-access to books they also enter into licensing agreements that prevent them from providing access to users outside their institution (e.g. OSU users cannot view e-books in the UW collection unless we also have purchased the same title). So in supporting e-campus programs with e-book purchases we can at best buy 2 books where we could once have purchased 3 and, other things being equal, in doing so, we are not adding to the greater Orbis/Cascades consortium collection.

Core Journals for this program (see Appendix II):

Defining the set of journals needed to support this program is problematic in its diversity. Rather than looking at the "top-ranked" journals in all of the disciplines represented by this proposal, we elected to survey the writings of the graduate faculty members named in the proposal (p. 19-22). Using the Web of Science (only peer-reviewed content), we identified all articles published by these individuals and also those articles which cited those articles. From that set, we compiled a list of journals and noted the number of times a journal was mentioned. Since different disciplines and journals have differing rates of citation in general, we did not count number of times cited, rather number and title of journals citing the OSU author's articles.

Using five mentions as a threshold, we compiled a list of 65 journal titles noted in Appendix II. The current cost of maintaining access to these titles requires an investment of over \$116,000 in addition to retaining subscription to other resources (JSTOR, BioONE.1, ASABE, and Annual Reviews) which bring this total to \$158,777.

Of these 65 titles, three (*Climate Research*, *EcoScience* and *Forestry*) are not/no longer in the collection as of 2009 and would require an additional annual investment of \$1534 to reinstate. The good news is that OSUL provides electronic access to the other 62 titles. In addition the journal *Land Use Policy* (\$1015) which we received as part of a package but which we will need to purchase in 2010, has been requested to bolster the applied economics program by a member of the forestry faculty. Given the extended campus audience for this program, adding access to complete backset packages (where available) would be a desirable goal. This could be achieved with one time funding, and might include:

- Complete back set of tri-society journals online for \$1000 + \$1 DO/year maintenance fee would be treated as a "serial" expense.
- Complete backset of NRC journals (Canadian Research Journals): \$11,000

Subject-Specific Indexes and Abstracts

The library subscribes to various databases that provide access to the literature (both popular and scholarly which support this proposal and the study of natural resources and their management. Examples include the following:

- *Aquatic Science and Fisheries Abstracts (ASFA)*, 1972-present
- *CAB Abstracts* (1972-present)
- EBSCOHost: *Newspaper Source* (good for tracking public opinion)
- *Lexis Nexis Academic* (access to legal literature)
- *Web of Science (Science and Social Science Citation Index)*, (1970- present)

A complete list of available databases is found at:

(<http://osulibrary.oregonstate.edu/research.php.db.php?arg=A>

<http://osulibrary.oregonstate.edu/research>)

A database which is missing our collection and would be most a most desirable addition to improve access to public policy literature is the *Public Affairs Index (1973 to present)* at an annual cost of \$4,350.

Access costs:

Access to finding aids like the databases above, does not assure access to the references found however, since it is our practice to subscribe to the online-only versions of journals, other things being equal, there should be little difference between the access afforded an on-campus student and an extended campus student. But areas of research interest are likely to be local and for that reason we can assume that students outside the state and certainly outside the country will be interested in access to material not in (or accessible from) the OSUL website. For such interlibrary loan activity, the current average cost to the library is \$28/article. We anticipate the reliance on interlibrary loan to increase as serials titles are cut, though there is no reason to assume this will be felt more acutely by students in the natural resources.

Library staff and expertise:

Bonnie Avery is the subject librarian for the Natural Resources program. In that capacity, she provides instruction as requested either In-class or via the web, responds to reference inquiries, and develops materials to assist faculty members and students in their research.

The collection in natural resources is built by Bonnie Avery (Forestry and Rangeland Resources), Laurie Bridges (Business and Economics), May Chau (Agriculture), Valery King (Social Sciences), Margaret Mellinger (Engineering), Hannah Rempel (Biological Sciences) and Andrea Wirth (Geosciences). Providing access to items not owned by OSUL is the domain of the Interlibrary Loan and Summit staff both at OSUL and at lending libraries. Additional services for on campus students include the physical attributes of the libraries including excellent computer facilities, study areas for individual and group work, and practice rooms for students.

Extended campus students also need document delivery services from the OSUL collection. In this regard they have an advocate and troubleshooter in Maureen Kelly, the extended campus librarian at the OSU Cascades campus. Extended campus students and faculty can select a version of the OSUL website which highlights their needs.

In Summary

At this moment in time the OSUL collection is marginally adequate to support the MNR proposal. Areas of inadequacy are primarily in the social science/public policy area where we have not traditionally needed to build a graduate level collection. Given the extended campus focus of this program, purchasing backsets to some of the major journal packages not currently available would be advisable. This would require a one-time investment. Finally, as we bring the OSUL journal budget under control, there is some reason to believe that the monographs budget would returned to its former level.

There is one action each MNR faculty could take immediately in order to become part of the long-term solution to the problem of how to pay for access to scholarly information. This is to understand their author rights and more specifically include the right to "self-archive" (preferably in the OSU ScholarsArchive@OSU) when signing away their copyright to a journal publisher. Information about author rights can be found at: <http://www.arl.org/sparc/author/index.shtml>

While not required, to bring the OSUL collection up from marginal to adequate to support this program would cost an additional annual investment of \$2550 for journals, \$4450 for databases and platform fees, \$2800 for additional monographs in the area of public policy and a one-time investment of \$12,000 for journal backsets. Beyond that, in order to purchase e-book with a multiple user license when available, OSUL would need an increase of an additional 50% in its monographs funds for various fund codes.

Submitted with respect,
Bonnie Avery
Natural Resources Librarian
2/27/09

Appendix C – Liaison with OSU Instructional Units

MNR Exploratory Group Meetings

Liaison Letter

Liaison Responses and communication

Reply and commentary to Liaison

We indicate below questions and our responses to a draft Category I proposal from various OSU Schools and Departments (7 departments and 3 graduate programs). We have addressed questions either in these responses or directly on the revised Category I proposal from the Graduate School.

Summary of Master of Natural Resources Exploratory Group Meeting August 6, 2007

Present: Steve Radosevich (FS), Paul Doescher and Susan Morré (FR), Bill Lunch (PS), Gregg Walker (COMM), Ursula Bechert (PSM), Stan Gregory and Samuel Chan (FW), Jim Johnson (Forestry Extension), Lynette de Silva (Geosciences), and Paula Minear and Alfonso Bradoch (Ecampus)

Status of MNR degree development: exploring development of online and onsite program, no Category 1 proposal yet. Have been receiving 4 – 5 requests per week from students interested in an MNR degree, both online (from people who are unable to leave a location or job to come to OSU), and onsite from people who want an advanced degree in natural resources. Many are seeking job advancement and feel this is the key for them.

A handout of current certificate programs and potential MNR degree components, and an analysis of current online offerings reveal many relevant courses and certificates are already available onsite, and some are already available online, while others would need to be adapted to online teaching. Survey shows online graduate certificate programs seen as nimble, flexible, and relevant. A 45-credit non-thesis MNR could have 18 credits from one of the existing certificate programs for depth, 6 credits of Ecology/Production, 9 credits of Human Systems (choose 3 areas from Policy, Economics, Sociology, Ethics, Communication), and 6 credits of Methodology (Statistics and Research Methods). OSU is in the process of joining the Distance Learning Consortium, and perhaps in the beginning the economics and statistics courses could be taken from other members of the Consortium, until an online course is developed here. Lisa Ganio may be interested in developing an online statistics methods course. Fifteen credits can be transferred to a master's degree at OSU.

Benefits of developing an online MNR degree: The demand from agencies and students exists – there is a demonstrated need to combine knowledge in natural resources, communications, sociology, business, and economics to reach consensus on current and future issues. Although there are already Masters of Public Policy, Marine Fisheries Management, Environmental Science, and Water Resources at OSU, the distance education component is unique to this MNR proposal.

Discussion points:

1) NR currently has no core at OSU. Courses are very interdisciplinary and spread out across many departments and colleges at OSU, and communication among us has much room for improvement. Programs are diffuse, not well integrated, and it is difficult for potential students and their parents to clearly understand what all is available and get degree program information to guide enrollment decisions. There needs to be a good web portal and online advising to more effectively provide information to students. Reply: University Advancement has set up a new unit for web marketing to integrate programs, and the Registrar wants a web portal (cost: \$300,000).

2) Students don't get the same experience online as onsite. Are all-online degrees something we want to offer? Conclusion: onsite is first choice for those who can come here; online is an important alternative for those who are unable to physically relocate here. Offer courses online and onsite to meet needs. Important for online MNR to have a two week face-to-face component in the field.

3) There is a proliferation of MNR degrees already across the country. Conclusion: Several MNR programs exist at other universities and are successful, but hardly any are available entirely online. The two-week field component would differentiate us from other universities. Those who cannot travel can do an internship in their own community. OSU is losing natural resources students to Portland State University and we need to offer what is in demand in the 21st century to stay relevant. We can offer separate degree designations in different tracks (Environmental Science, Geosciences, Environmental Economics, etc.).

4) Agencies need to make the distinction between non-thesis and thesis masters because they differ in depth of science and research background. Conclusion: that doesn't diminish the need for or value of a non-thesis MNR; an applied research project or internship can be rigorous; it is as relevant as an MBA or MEA, which are both non-thesis; many employees of government agencies need the credentials of a master's degree to supplement their experience in order to advance. Both thesis and non-thesis master's degrees increase critical thinking skills and employability. Agencies need employees who can integrate disciplines to solve complex natural resource problems.

5) Need to integrate colleges, avoid duplicating already existing programs, and move away from protecting territory. Who is the university? It is us. We need to fix the old system to allow/support interdisciplinary degrees, but how do we solve the issue of departments competing with each other for dollars and protecting their turf? Department heads and deans need to support interdisciplinary degrees, but the current administrative structure is inflexible and resources are limited. Under current structure, NR programs generate \$1.5 million through Ecampus (by far the largest online undergraduate enrollment is NR), which is returned to departments, and \$800,000 onsite, with no money returned to the NR program. We need structural changes. Meaningful change usually comes from groups like us, not from the top. Timing is good with focus on creating web portal already. Name recognition is critical – marketing is tied to the psychology of choosing one degree program over another. PSM does not take the place of MNR.

Action items:

1) The MNR Exploratory Group members are encouraged to suggest additional current courses for onsite MNR degree.

2) Stan Gregory will be the champion for creating the web portal, with help from Ursula Bechert.

3) Send a short paragraph to Susan (Susan.Morre@oregonstate.edu) describing your current natural resource programs, to aid in the development of a Category 1 proposal and the

development of an OSU web portal and online advice to help students and parents understand available choices in NR courses and programs.

4) MNR Exploratory Group standing meeting is every Monday at 10 am in Richardson 109B. All are welcome to attend. Most of group is available to attend on August 20. Bring ideas.

Master of Natural Resources Exploratory Group Summary of 8/20/2007 Meeting

Present: Paul Doescher, Steve Radosevich, Ursula Bechert, Badege Bishaw, Lynette de Silva, Michael Harte, Selina Heppell, Denise Lach, Susan Morré

Discussion points:

- Can a student get both a certificate and an MNR? Think yes, because can get MRM certificate and then a Master of Science. (Paul will check with Sally Francis at the Graduate School and the Graduate Council.)
- Discuss course list and potential additions: capstone project has a big writing component, so perhaps add a writing component in methodology (none currently online); Fisheries Biology and some Communications courses are writing intensive
- Who will advise MNR students? Consider cohort advising (Aaron Wolfe found it worked), instructors, or ask provost to add FTE, merit, or \$ incentives for advising; Ex: undergrad NR has master advisor, Ecampus advisor, and program director helps; MRM program has .25FTE advisor for 30 students
- Need deans of all participating colleges on board up front and work together; then talk to provost
- Although other programs with some overlap, need MNR for marketing value, recognize demand is there; job descriptions/career paths for NR specialists
- MNR with concentrations in certificate areas GIS, SNR, Water conflict, etc.
- Deans Bloomer and Francis recognize MNR could fill need for umbrella for interdisciplinary programs with overlapping areas and diffuse NR offerings that need better coordination/comm.
- Could drop some existing programs in favor of MNR (ex: Environmental. Sciences NR concentration)
- MNR would be terminal degree like MF, MBA, M Fine Arts
- Very positive response from USFS and BLM to online MNR idea
- Undergrad NR has helped develop relationship with agencies, contacts, potential funding sources to help meet their personnel needs; Land Grant University has obligation to meet workforce needs, train competent land managers, is professional.
- Over \$2.5 million generated for university by undergrad NR students, need new funding model for interdisciplinary programs to get student credit hour \$ to support programs instead of returning all to departments
- Ecampus likely \$75,000 for online MNR program development, many courses already exist
- MNR will need dedicated director, personnel to teach and advise
- Category I process – what budget needed to make it work?

Concerns:

- Some programs already at full capacity, hard to find advisors among busy faculty for internship and capstone projects (see suggestions above to address this concern)
- Many grad courses taught by courtesy faculty, but advised by tenure faculty
- Need budget line for office supplies/services so stop using Ecampus money to backfill cuts (need more \$ from legislature)

- Maintain quality of existing programs, not overburden faculty, where young faculty best spend time

Consensus: Overall really good idea worth pursuing, with support from coordinators of MRM, MFM, PSM, SNR, and WCMT as part of potential concentrations. Next: identify important mechanism, components and processes to move forward; meet with deans, then provost; identify key faculty.

Master of Natural Resources Exploratory Group Summary of August 27, 2007 Meeting

Present: Steve Radosevich, Paul Doescher, Badege Bishaw, Jim Johnson, Susan Morré (all College of Forestry); Roger Nielson (Department Head, Geosciences); Mike Borman (Interim Department Head, Rangeland Resources), Andrew Plantinga (Agricultural Resources Economics)

Reiterate marketing value of MNR name and current demand from students, agencies, employees

- Overview of Sustainable Natural Resources Graduate Certificate, 3-4 inquiries per week about a MNR online.
- Undergraduate NR degree most popular by far online and onsite. Numerous requests for MNR from these undergrads.
- Important to offer online and onsite, could be at same time.

Review of draft MNR degree components handout – missing online Economics, Statistics, Communications and Writing components; consider developing online version of:

- Bill Jaeger's AREC 534 NR Economics would be logical for MRM, FW, Geosciences, Forestry concentrations
- Roger Nielson's GEO 518 Technical Writing course
- Potentially one of Gregg Walker's communications courses?
- Lisa Ganio's Statistics course?

Discussed NR Distance Learning Consortium – joint venture agreement between US Forest Service and Virginia Tech, has about a dozen participating institutions; currently 80 students enrolled; students register at one institution, can take classes at any of Consortium institutions; OSU was invited and is in process of joining Consortium. Of members, University of Idaho has all-online degree, Virginia Tech partly online, Stephen F. Austin has NR Interpretation focus.

Ecampus has up to \$75,000 available for development of online MNR, need to respond to RFP. Category I is mechanism to use, and buy-in from Colleges at the dean level is critical first step; how to convince Colleges that this is important? Adds value because:

- Agencies are converting technical positions to professional ones, so there is need for advancement training; currently Univ. of Washington is providing 2-wk. short training courses for credit and getting lots of agency students enrolled
- MNR provides training, new skill set with demonstrated demand for career advancement and more sustainable natural resource management.
- MNR is a mechanism to reach students who would not otherwise come to OSU.
- MNR provides outlet for graduate certificate programs to result in a masters degree, and money flows back to departments.
- Ecampus courses return hundreds of thousands of dollars each year to university administration from student course fees, and departments are told to use Ecampus money to fund other dept. needs.

Details to figure out:

- Need financial structure in place for program administration to sustain interdisciplinary programs like this; perhaps add .25 FTE for program administration?
- Need time commitment and compensation mechanism. Advising done by whom? Who funds? Similar need as MAg and MF for capstone course advising. Existing concern about Environmental Sciences and MAIS students: advising takes up faculty time from department but only returns a few hundred dollars to department, only worth it if faculty member is interested in student's research. Potential solutions: Cohort advising; core 5-credit course that underwrites cost of program.
- What commitments are required from departments and provost to have a quality program?

All present agreed that the MNR is a good idea well worth pursuing. Paul will meet with provost next month about better funding for both the undergraduate NR program and the MNR, and will meet with Sally Francis of the Graduate School to see what is feasible.

MNR QUESTIONS FROM AUGUST 2007 MEETINGS

Prepared by Susan Morré

19 September 2007

1) Is there a good reason to develop a new Master of Natural Resources degree online and on campus? Is there a demonstrated need for an MNR degree?

A: There is a large demand from agencies, undergraduate students in the NR program, and online inquiries for a MNR degree. Marketing of the program will be facilitated by the “Natural Resources” name.

2) Are there other related degree programs that this would duplicate or overlap?

A: There are other courses in various aspects of natural resource education, but they are diffuse, spread across many departments, and there is no convenient web portal or other information source that provides comprehensive information. We propose to develop a NR web portal that will link information for all NR-related certificate and degree programs to help potential students and their parents more easily find what NR programs are available at OSU. An associated online advising program would assist in providing this information to students to guide enrollment decisions.

3) Are online degrees something we want to offer?

A: On campus courses are often the first choice for those who can come here; online courses are an important alternative for those who are unable to physically relocate here. We propose to offer MNR courses online and onsite to meet expressed needs. It would be important for an online MNR program to have a two week face-to-face component in the field.

4) Are there already enough MNR degrees at other U.S. universities?

A: Several MNR programs exist at other universities and are successful, but hardly any are available entirely online. The two-week field component would differentiate us from other universities. Those who cannot travel can do an internship in their own community. OSU is losing natural resources students to Portland State University and we need to offer what is in demand in the 21st century to stay relevant. We can offer separate degree designations in different tracks (Environmental Science, Geosciences, Environmental Economics, etc.).

5) Are agencies capable of distinguishing between non-thesis and thesis masters if the MNR is a non-thesis degree?

A: Both thesis and non-thesis masters degrees increase critical thinking skills and employability. Agencies need employees who can integrate disciplines to solve complex natural resource problems. A non-thesis MNR has value for several reasons: an applied research project or internship can be rigorous; it is as relevant as an MBA or MEA, which are both non-thesis; many employees of government agencies need the credentials of a master’s degree to supplement their experience in order to advance.

6) How do we solve the problem of different colleges and departments competing for money from interdisciplinary programs?

A: We need to fix the old system to allow/support interdisciplinary degrees. Department heads and deans need to support interdisciplinary degrees, but the current administrative structure is inflexible and resources are limited. Under current structure, NR programs generate \$1.5 million through Ecampus (by far the largest online undergraduate enrollment is NR), which is returned to departments, and \$800,000 onsite, with no money returned to the NR program. We need structural changes. Meaningful change usually comes from groups like us, not from the top. Timing is good with focus on creating web portal already. Name recognition is critical – marketing is tied to the psychology of choosing one degree program over another. PSM does not take the place of MNR.

7) Who is the university?

A: It is us.

Correspondence with the Curriculum Liaison

Subject: Curriculum Liaison for Category I Proposal: Master of Natural Resources Program

From: Bishaw, Badege

Date: Friday, August 15, 2008 9:54 AM

To: Boggess, Bill; Bloomer, Sherman - COS; Roper, Larry D; Francis, Sally K - ONID; Salwasser, Hal; Green, Cary; Capalbo, Susan; Karow, Russell; Edge, W. Daniel; Borman, Michael M - ONID; Blaustein, Andrew R - ONID; Nielsen, Roger; Kimerling, A. Jon; Lunch, William M - ONID; Kaplan, Jonathan - ONID; Gallagher, Sally K - ONID; Iltis, Robert S - ONID; Adams, Darius M - ONID; Adams, Tom

Cc: Radosevich, Steven R.; Doescher, Paul; Steel, Brent; Lach, Denise; Walker, Gregg; Bradoch, Alfonso; Shellhammer, Gina

The attached Category I proposal describes a new instructional program leading to Master of Natural Resources degree. This will be an interdisciplinary degree, offered primarily online, that brings together specific courses from various departments in the College of Forestry, Agricultural Sciences, Science, and Liberal Arts. With this new program, your unit might be proposed to teach one or more courses.

In accordance with the liaison criteria in the Curricular Procedures Handbook, this memo serves as notification to your (college/department/program) of our intent to make this curricular change.

Please review the attached proposal and send your comments, concern, or support to Badege Bishaw (badege.bishaw@oregonstate.edu) by Friday August 29, 2008. Your timely response is appreciated.

Please note that a lack of response will be interpreted as support.

Thank you for your time and input.

Sincerely,

Badege Bishaw

Cc: Fisk, Martin
Subject: Comments on Category I proposal

Badege and Steve,

Thanks for sharing the draft Category I proposal for a new master's degree program in natural resources. I have taken a quick look at the proposal and am generally supportive of the idea. I am writing now to communicate my concerns. Martin Fisk is copied because there are a number of policy issues about which he can provide advice.

- What modifications will need to be made in order to offer a graduate degree fully online? What policies will the Graduate Council need to revise?
- The option of a 3-credit internship is offered. There are many who would argue that 3 credits is insufficient to support any meaningful internship experience at the graduate level. Some description of what such an internship would look like would be very valuable.
- Table 2, page 6, indicates 1-16 credits in CSS 599. I believe this should be 6 credits.
- Keep in mind that students' programs will need to have 50% of all credits at the stand-alone, graduate only level.
- Table 1, page 5, last row--what is a "certificate project?" This needs explanation.
- Table 1, page 5 and elsewhere in the document, the PSM certificate is listed as a possible area of emphasis. I very strongly object to this. First, this certificate does not now exist. But, more importantly, this certificate comprises a group of skills courses in areas of communication, ethics, marketing, and so forth. It is a very important set of skills, but it does *NOT* represent an area of emphasis that would be academically sound as the foundation for a master's degree. In my opinion, a list of true areas of emphasis should be presented, not a list of certificates. Using the present approach suggests that this degree is nothing more than a marketing scheme to springboard off these certificates. Instead, some actual areas of emphasis should be identified. Then, a note could certainly be added indicating that incorporating a certificate within a degree program is acceptable. The latter is a very different philosophical approach.
- Every master's student must have a major professor and a committee that oversees his/her work. The major professor is the person who signs the program of study along with the director of the degree.
- Why would the major professor not be the person who oversees the case study or the internship? Why would each student seek a "mentor" rather than be guided by the major professor?
- A program setting meeting should be required for students in this degree as is required of the MAIS degree.

- Only 15 credits earned prior to admission to a master's degree program may be included on the program of study.
- The Graduate School has no standard or requirement for the GRE examination. This should be set by the graduate faculty who offer the degree.
- The program should have an admissions committee and/or a curriculum committee.
- The program must establish a graduate faculty. This needs to be explicitly defined and identified--it can not be whoever happens to be teaching in other certificate programs. Criteria for membership need to be defined and a list of initial faculty members listed.
- Again, the program administrative FTE is very generous compared to the other interdisciplinary graduate degrees at OSU. Perhaps your funding model will permit this level.

These, in addition to the comments I shared when we met, constitute my current concerns with the draft proposal. As it moves forward, I will discuss it more fully with Martin Fisk and let you know if there are additional issues that we believe need to be addressed.

Good luck with this project and let me know how we might be of assistance.

Sally

Sally K Francis
Dean, Graduate School
300 Kerr Administration Building
Oregon State University

Response to Dr. Sally Francis: Graduate School

Bullet #1

We do not have this information; perhaps the Dean of the Graduate School can inform us about any possible policy changes;

Bullet #2

See clarification on page 5; Table 1.

Bullet #3

We checked on Extended Campus online course catalog for CSS 599 and it has 1-16 credits. However, we modified the listing in the MNR degree program to allow 1 – 3 credits to fit the number of credits required in that section.

Bullet#4

Some of the courses proposed in the Cat I proposal are independent graduate credits and student will take those courses to satisfy Graduate School requirements.

Bullet#5

See amendment on page 5.

Bullet#6

Dr. Francis objects to include the PSM Certificate as area of emphasis. However, other Deans and professors request that it be included in the MNR degree. We leave it in the present category I proposal but expect further discussion. We expect that some courses taught within the PSM program will begin to be popular with students enrolled in the MNR degree.

Bullet #7

See addition page 8.

Bullet #8

See addition page 8.

Bullet #9

See addition page 8.

Bullet #10

This comment is not different than any graduate degree; Graduate School Policy (Reference Graduate Catalog).

Bullet #11

See admissions Para 1, page 9.

Bullet #12

See admissions Para 1 and 3, page 9.

Bullet #13

Graduate Faculty; see addition pages 16 through 20.

Bullet #14

Funding model: Given the amount of administration the Director must perform, e.g. student admissions, membership on each student committee, liaison with various certificates, liaison with Extended Campus, chair administration advisory committee; we feel the load administrative support expected is appropriate.

Subject: MNR Category I proposal comments from the Department of Geosciences

Bishaw, I have attached comments from several Department of Geosciences faculty members who are involved with the study of natural resources. I hope these comments will be of help to you as you further

develop your proposal. I know that several of our faculty will be happy to discuss this proposal further with you.

Sincerely,

A. Jon Kimerling
Interim Chairman
Department of Geosciences

Department of Geosciences comments on Master of Natural Resources Category I proposal

This proposed MS program allegedly (if read closely) is for professionals, but this is not clearly stated up front. Also, apparently this will be an online degree, but this is not clear from the proposal. On the cover it looks as though it involves lots of colleges, but it is to be administered by 3 COF faculty (one of whom is retired), and none of the other colleges are represented. A number of sections of the proposal are incomplete.

It is not appropriate for the College of Forestry to create an additional interdisciplinary degree in natural resources at OSU without more in-depth involvement in administration and student advising with the other colleges and departments, including Science, Agriculture, and Liberal Arts. Shared administration is not only needed to provide adequate balance for a variety of student backgrounds, but also to make the program feasible. For student advising, we strongly urge the designers of this new degree to use the model for the Water Resources graduate program, in which students select their advisors from a range of colleges and the department of the student's advisor gets credit for advising that student.

The proposal does not address the impacts and implications of climate change on natural resources. In fact, the word "climate" appears nowhere in the proposal. I attach a link to letter that appeared in the journal Science earlier this year (<http://www.sciencemag.org/cgi/content/full/319/5863/573>) on the idea that climate stationarity is no longer a valid assumption and (in the context of water resources) that managers must recognize this in order to develop flexible and informed approaches to resource management. While the piece focuses on water resources, the same can be said of forest, wildlife, and other natural resources.

The impacts of the Masters program on the Water Resources Policy and Management program has not been considered. The lack of accreditation of the proposed degree means that the two degrees (Water Resources Policy and Management and Natural Resources) although they have similar titles, are quite different in terms of status and possibly in terms of academic rigor.

How does this program compare with other similar programs around the country? There was an in-state comparison but because of the Ecampus aspect, it would be logical to assume that the program would attract out-of-state students. We need to know how this program would stack up against others.

Why isn't Geography listed as one of the Human Systems areas along with Sociology, Policy, Ethics, Communication, etc.? We have grad courses relevant to the human dimensions of NRM also.

I think there is a grad certificate in Rural Sustainability, too, that could be a good option along with the other certificate programs in the Areas of Emphasis section. I would reiterate what Brent Steel's letter says about this – check with Bruce Weber in AREC re: current status of this program: "There is a Rural Studies Graduate Certificate under development as part of the Sustainable Rural Communities Initiative. It would be an excellent area of emphasis for the degree."

GEO 599 – Special Topics – is listed as an option for fulfilling part of the policy requirement. Where did that come from? My Land Use class (423/523) deals with NRM policy, as does 420/520 (Geog of Resource Use) – they might be better GEO courses to include than 599.

I think the Methodology courses students can choose from should include at least one qualitative methods option – Jo Tynon in the COF teaches one I believe, as does Kate MacTavish in HDFS. If the program is to do justice to “human systems,” students should learn how to interpret qualitative data as well as quantitative data.

In terms of other similar programs across the state, it might be worth at least mentioning U of O's MS and PhD program in Environmental Studies (<http://envs.uoregon.edu/>), although the online feature of the proposed OSU program certainly makes it unique.

The contact person for the GIS Certificate Program probably should not be Roger Nielsen but Dawn Wright.

The Geosciences department would welcome a truly interdisciplinary degree in Natural Resources, but the current proposal is excessively narrowly focused on existing resources within the College of Forestry.

Comments submitted on behalf of the Department of Geosciences by:

A. Jon Kimerling
Interim Chairman
Department of Geosciences

August 28, 2008

Response to Dr. Jon Kimerling: **Department of Geosciences**

Paragraph 2

Proposed degree will be offered primarily online and to natural resource professionals (see page 3, paragraphs 1 through 3). Also see Student Advising on page 8. For administration see Program Administration on page 20.

Paragraph 3

See addition of new course FES XXX Climate Change, Forests and Carbon Management taught by Harmon (page 9).

Paragraph 4

The MNR degree is primarily online whereas the Water Resources Policy and Management (WRPM) degree is in-residence. We believe conflict is minimal for this reason. The MNR degree is offered to natural resource professionals who can not come to the OSU Campus for even a short time, in contrast to the WRPM degree. Students could specialize in Water Conflict Management and Transformation (WCMT) in the MNR degree. No conflict was noted with the Director of WCMT certificate.

Paragraph 5

See letter of support from Evans; Virginia Tech. University (Appendix D)

Paragraph 6

Courses in Geosciences are suggested in the Human Dimension depth area. Four courses are offered by Geosciences but two of these are suggested for use in methodology. How can a student fulfill a requirement with only two courses offered?

Paragraph 7

As soon as the Rural Sustainability graduate certificate is approved we will include it as an area of emphasis.

Paragraph 8

Regrettably GEO 599 is the only one of these courses offered by Geosciences that is online. When other courses such as GEO 503 and GEO 520 are offered to online students, they will be incorporated into the MNR degree.

Paragraph 9

We will talk to Tynon and MacTavish to assess their interest in teaching their courses online. However, FS 523 and STAT 511 and STAT 512 are concerned with qualitative as well as quantitative data.

Paragraph 10

The Cat I requests that State System Programs similar to the MNR be identified. As such these are none.

Paragraph 11

We added Dawn Wright as contact person for GIS Certificate Program.

Paragraph 12

A listing of all online courses is provided in the Cat I proposal. College of Forestry represents only 8 of the 43 possible classes student may chose from, i.e. 18%. Hardly a dominate component!

> Thank you for your e-mail and suggestion. It is okay with me Mary can review the Cat I proposal for MNR program.

> I have attached with this e-mail the latest revised version of the Cat I proposal for Mary to review.

> Thanks for your cooperation.

August 26, 2008

To: Curriculum Liaison for the Category I proposal: Master of Natural Resources Program

From: Mary Santelmann, Director, Water Resources Graduate Program

Subject: Response to Category I Proposal to Initiate a New Instructional Program for a Master of Natural Resources Degree

This proposal for an online graduate degree in Natural Resources (MNR) makes a good case that such a degree is desired by many prospective students. The authors are responding to the strong interest expressed by some Federal agencies in developing opportunities for working professionals to use distance education in pursuit of a graduate degree. However, as it stands, the proposed program is poorly developed, unlikely to succeed in providing the innovative interdisciplinary education it aspires to deliver, and it does not have a feasible budget plan.

I have several serious concerns about this proposal. The first is that it does not have a cohesive, well-constructed curriculum with introductory courses uniquely designed to address the need for interdisciplinary training of resource management professionals. The proposed curriculum design is an assemblage of coursework from various units with a vaguely described "capstone" project whose success will rely on the good will and energy of prospective advisors who are presumably to be recruited from among the instructors teaching the online courses these students take.

Lack of a substantial set of faculty members committed to advising students in this degree program is another serious obstacle to its success. When students have difficulty in finding faculty members willing to advise them, or feel they do not get enough time and attention from their advisor, they become disgruntled and angry. Advising is a critically important element of any graduate degree program, and more concrete plans for advising are needed.

Another concern is that I do not believe that OSU has the funding or resources required to deliver this program. We are limited in the number of faculty members who teach online courses and would be asked to advise these students, by the ability of our instructional faculty to take on large numbers of students in existing online courses, and we are very limited in financial resources available for administration of existing interdisciplinary programs. The online degree program proposed here would stretch inadequate resources even further.

I am also concerned that the proposed degree may not meet our desired standards for graduate education (no thesis, no overview core courses specifically designed to meet the needs of students in such a program, and courses delivered almost entirely online). In addition, because the coursework could be delivered entirely online, unless specific precautions are taken to ensure the identity of the person completing the course, there is the potential for students who are less than honest to receive credit – or even a MS degree - for work that is not their own.

The proposed curriculum is still relatively vague. I am not yet convinced that as proposed here, this program could deliver the graduate education that students deserve or that employers expect from someone with an MS from Oregon State University.

I have expanded upon these concerns below.

1. Lack of courses developed specifically for the MNR students: The authors of the proposal make a good case for the need for innovative new programs that can assist graduate students in learning how to work on interdisciplinary projects and teams (section 4d, page 13) however, the curriculum described is based on existing courses, with one new course listed (FS XXX below-ground Ecosystems), and a capstone project that is very similar to what is currently offered through the Environmental Sciences PSM program or any non-thesis option in existing interdisciplinary degree programs at OSU

2. Lack of advisors committed to advising students in an online interdisciplinary program

On page 3, the proposal states that students would select advisors from those who teach online courses used in the program. Have the faculty members who teach these online courses been asked if they wish to advise distance students in a graduate degree program? Only three core faculty members are listed and one teaching faculty member – the remainder of this section is not complete. How many students would these four faculty members be willing to advise?

Instructors are already expressing concern that they are undercompensated for time and effort invested in teaching Ecampus courses. If the prospect of being asked constantly to advise distance students is added to the equation, we may see attrition in the ranks of those who are currently teaching online courses. In my experience, there are many students in the Environmental Sciences Professional Masters Program and in the interdisciplinary Environmental Sciences MS program who have difficulty finding advisors, even when they are on campus and can visit prospective advisors in person. I suspect that unless specific advising assignments are made when students enroll, that the MNR students will have an extremely difficult time finding advisors and that in many cases, advising these students on their capstone projects will require more time and effort than advising graduate students face to face, since the project will be their only interactive experience with faculty.

3. Budget : The proposed program leans heavily on the Ecampus courses developed by other departments and programs and requests that tuition revenue from MNR students taking the course that is returned to the unit teaching these online courses be shared with their program (page 16). I have several objections to this budget model. First, these Ecampus courses have been developed and are being taught by dedicated faculty members specifically for the purpose of helping fund their own innovative programs. The budget model proposed here would undermine the funding of the excellent interdisciplinary programs we currently offer. Second, this will quickly become an administrative nightmare for the administration of the budgets of units that teach Ecampus courses, adding to the time and effort spent in administering the courses for the sole purpose of taking resources away from the units teaching them. Finally, I am

concerned that existing interdisciplinary programs are already underfunded. If additional resources are made available for interdisciplinary graduate programs, the best use of these resources would be to develop and strengthen existing interdisciplinary programs. In summary, while elements of the proposal form the nucleus of a potentially good idea, the current proposal is incomplete, poorly conceived, and should not be approved.

Sincerely,

Mary V. Santelmann, Director
Water Resources Graduate Program

Response to Dr. Mary Santelmann, Water Resources Graduate Program

Paragraph 1 & 2

We developed the MNR degree following the design of the highly successful Undergraduate Program in Natural Resources. Students in the MNR program are required to take several (18 credits) of Core courses which represent integration among the human and biological sciences. In addition students are asked to integrate both Core course information and Methodology with a selected Area of Emphasis into a Capstone project that is administered by a graduate committee. See 5, 6, 7, 8, 17 and 20.

The Capstone course for the MNR as well as others has yet to be fully developed. This will eventually require a full CAT II proposal.

Paragraph 3

See addition on page 21.

Paragraph 4

The funding model as proposed in Cat I is under significant discussion by the Provost and Deans of the various colleges involved in the MNR degree. However, we offer 3 possible options for funding (see page 21). At this point we are unable to foretell the Provost and Dean's decision about online interdisciplinary degree programs since it is under active discussion now. In addition, each graduate student in the MNR program will have a Graduate Advisory Committee (see page 8). The person on the Graduate Advisory Committee that assumes the primary advisory role will receive up to 6 credits of graduate tuition for that assistance.

Paragraph 5

All surveys about online versus in-residence instruction indicate that distance education is at least as rigorous and as honest as in-residence instruction. This question is philosophically based and should be directed to the Office of Admission and Distance Education. Please see letter from Evans, Virginia Polytechnical and State University, on the value of Distance education, the proposed curriculum, and need for this degree by professionals.

From: Gallagher, Sally
Sent: Friday, August 29, 2008 10:51 AM
To: Bishaw, Badege
Cc: Cramer, Lori; Lach, Denise; Steel, Brent
Subject: FW: MNR program

After further discussion with faculty in the department, I would like to add additional detailed comments in response to the proposed MNR program.

The Sociology Department is supportive of the Master's in Natural Resources (MNR) program as it recognizes students' increasing interest in programs that provide interdisciplinary approaches. As proposed, the curriculum looks adequate (under Sociology, the Consensus and Natural Resources course should include the SOC designator (SOC/FW/FOR 585). However, we have two major concerns with implementation of the MNR as proposed in the Category I proposal and one note about "truth in advertising:"

1. As described in the paragraph below taken from the proposal, it is suggested that the MNR be funded through capture of Ecampus overhead costs of MNR students regardless of the program or department in which the e-class is taught. While it is indicated that once Forestry administrative costs are met, the various departments will receive their appropriate overhead, it may take years until the administrative costs are recouped and it is unfair and inequitable that the participating teaching units carry this burden. Overhead costs from Ecampus classes taught by faculty in Sociology as overload (i.e., in addition to their normal class load) are now used to fund programs and activities in the Sociology department including teaching assistants, travel, and miscellaneous supplies (long distance calls, copies, etc.) that are not included in the budget we receive from the College of Liberal Arts. Removing the overhead costs from MNR students eliminates any incentive for including these students in our graduate classes. If this funding model is approved, Sociology will not participate in the MNR degree program.

We propose that online course tuition be shared among the participating Departments or Graduate Certificates according to the present Ecampus formula (Appendix A). However to meet the overhead costs of the MNR degree we propose that tuition received from students in the MNR degree be allocated according to student-contact hour and funds be removed by Ecampus until overhead costs for administration of the MNR degree are met. Once administrative costs for the degree are achieved, proceeds from tuition will be allocated according to the existing Ecampus formula (Appendix A). An MOU is attached (Appendix F) that specifies this funding agreement.

2. As described in the Category I Proposal, students will work with a "mentor" to complete a project and project paper. As discussed earlier with the proposers (and included in the comments from Brent Steel in the liaison section of the proposal), the number of social science/human dimensions faculty who can work with students is very limited. There are several existing interdisciplinary graduate programs including the MPP, Water Resources, Marine Resources, and Environmental Sciences as well as disciplinary programs including Geosciences, Forestry, Economics, and Applied Anthropology that all require faculty working in the human-dimensions

of natural resource and environment to serve as advisors/mentors for graduate students. It is increasingly difficult to provide first-class educational experiences for all of our graduate students and it will only get worse as programs continue to proliferate unless some attention is paid to the need for faculty in these fields. It would be a disservice to new students to accept them in to a graduate program, accept their tuition money, and then not be able to find enough faculty able to serve as mentors/advisors. Maybe Forestry is willing to take the lead in a campus-wide conversation about the need for social scientists and others working in the human dimensions of natural resources and the environment. To participate in the program, Sociology would need at least one additional faculty line to meet demand for courses within our curriculum, as we imagine would be the case in other participating CLA departments, particularly Political Science.

Finally, as described in the Category I proposal, the MNR is designed primarily to "assist agency and industry professionals meet their self-improvement goals" and is not structured as a traditional thesis-based Master's Degree. While we recognize the value of providing education to a wide range of students, we also believe that it is critical to ensure that employers and others understand that this MNR degree does not require the design and implementation of an individual research project (the traditional outcome of a Master's degree). Programs at OSU and other universities that provide professionally-oriented degrees label them as such as (e.g. , Professional Science Master's Degree) and we recommend that the Master's in Natural Resources also be labeled as a Professional degree.

Sally K. Gallagher
Professor of Sociology & Chair
Department of Sociology
Fairbanks 307
Oregon State University
Corvallis, OR 97331
(541) 737-5367
sgallagher@oregonstate.edu

Response to Dr. Sally Gallagher, Department of Sociology

Paragraph 1

We are attempting to resolve this issue about meeting overhead costs for the MNR degree. In the revised Category I proposal three options are proposed. These include:

1) A funding model as initially proposed.

We propose that online course tuition be shared among the participating Departments or Graduate Certificates according to the present Ecampus formula (Appendix A). In addition, to meet the overhead costs of the MNR degree we propose that tuition received *from students in the MNR degree* be allocated according to student-contact hour and funds be removed by Ecampus until overhead costs for administration of the MNR degree are met. Once administrative costs for the degree are met, proceeds from tuition will be allocated according to the existing Ecampus formula (Appendix A). An MOU is attached (Appendix F) that specifies this funding agreement.

- 2) Overhead costs are shared by participating departments and central administration.
- 3) Courses offered by OSU departments that choose to not participate in the MNR degree will not be included in the MNR degree and students will select such courses from a list proposed by the Natural Resources Distance Learning Consortium for graduate education (see Evans letter in Appendix D and course list in Appendix E).

Paragraph 2

We agree with your concern. However, the College of Forestry and MNR have little to do with hiring additional faculty, so there is little that we can do in this regard. However, the Provost has initiated a discussion the Deans of the participating colleges in the MNR program to consider funding of interdisciplinary degrees such as the MNR. We have amended the Category I to better reflect the role of instructors participating in the MNR degree. Please see page 16 - 20 of the revised Category I proposal.

Paragraph 3

Please see page 3, paragraph 2. It is quite common at OSU and other academic institutions to offer non-thesis Masters degrees. OSU offers, for example, Master of Agriculture (MAg), Master of Forestry (MF) and Master of Business Administration (MBA). These degrees are not professional degrees, although they are offered for professionals in specific fields. Thus, the MNR degree is simply a non-thesis option for a Masters degree.

To: Steel, Brent; Radosevich, Steven R.; Bishaw, Badege

Cc: Gallagher, Sally K - ONID; Lach, Denise

Subject: RE: MNR Feedback

Steve & Badege:

I simply want to underscore and reiterate the points Brent has made. The idea for a Master's in Natural Resources is an excellent one that draws upon OSU's strengths, so I'm supportive.

But as I said at our meeting on Tuesday, I have some reservations about another graduate program drawing on OSU's faculty the natural resources / environmental area and disciplines, given the limits we discussed. After I had to leave, Brent reports on an in-depth discussion of the budget model and on that score as well, I agree completely with him. The amount your proposal recommends for faculty who would teach online is less than is currently being offered in similar programs and would not provide incentives for participation. It would also be a problem for departments that have the relevant faculty, so at least in Poli Sci, I would reluctantly have to recommend against participation unless the numbers change in subsequent iterations.

But keep at it -- the fundamental concept is sound; it just needs tweaking (and more bodies).

The Best,

Bill

Sent: Tuesday, June 03, 2008 7:52 PM

To: Radosevich, Steven R.; Bishaw, Badege

Cc: Lunch, William; Gallagher, Sally K - ONID; Lach, Denise

Subject: MNR Feedback

Dear Steve and Badege,

Thank you for meeting with us social scientists yesterday concerning the new proposal for a Master of Natural Resources (MNR) distance degree. This is an excellent initiative that has the potential to attract an enormous number of new graduate students to OSU. I strongly support this proposal and believe OSU should develop the degree. However, I have some concerns about our/my ability to participate in the degree program.

First, the number of human-dimensions of natural resources/environmental faculty (social scientists) available to participate as faculty mentors or committee members is severely limited due to the proliferation of environmental and natural resource programs, degrees, and certificates at OSU and the limited number of faculty. As an example, this year I've been on and/or chaired 18 graduate committees in departments and programs such Geosciences, Environmental Science (PhD program), Water Policy and Management, Marine Resource Management, Education (environmental education), Master of Public Policy (MPP), and AREC. All of these students are pursuing topics dealing with the human dimensions of environmental/natural resource issues. There are too many students for the faculty we now have. I have had to discontinue working with students in many of these programs due to work load. Our MPP program—which has an environmental policy track—is growing rapidly as well further limiting the ability of faculty in Sociology and Political Science to participate in other programs. The sustainability of all these programs and many new certificate programs not listed here are in jeopardy given existing staff.

Second, the budgeting model proposed for the MNR is problematic. The two Ecampus courses you have listed from Political Science (PS 575 and PS 577) are taught by myself to help support the MPP program, which I direct. The MPP program has been entirely funded by grants, contracts and Ecampus revenues the last 6 years (including Ecampus tuition and ERAM). I take no salary for the Ecampus courses and use the generated revenues to support graduate students in our program. Currently, I receive approximately \$99 per credit hour for an undergraduate student (instructor pay and department allocation) plus ERAM. Your proposal would pay \$85 per credit hour for a MNR student with Forest Science taking the departmental allocation (I don't know what happens with ERAM in the proposal). This is not a rational situation for our program and I would not participate in such an arrangement. Teaching overtime for no pay and less revenue is not a good incentive. I would rather limit enrollment to undergraduates. I imagine this will be the case for some other departments/programs as well.

From my perspective, this program would require additional human dimensions faculty for committees and instruction. There are far too few of us to continue supporting all these human dimensions programs and provide quality graduation education. Maybe Forestry could allocate

more faculty resources to support this program? Secondly, I would strongly encourage a new budget model that does not rely on other departments and programs to subsidize this degree. This is very problematic. I could go into more detail on both of these matters if you wish.

Finally, if the faculty and budget situations were resolved, I have several suggestions for the proposal:

>Add Prof. Roger Hammer's (sociology) planned online methods course to the methods requirement.

>There is a Rural Studies Graduate Certificate under development as part of the Sustainable Rural Communities Initiative. It would be an excellent area of emphasis for the degree (once again, if a different budget model were in place).

I hope these comments are useful. This is a great idea with enormous potential.

Respectfully,

Brent S. Steel

<http://ruralstudies.oregonstate.edu/>

Response to Dr. William Lunch and Dr. Brent Steel, Department of Political Science

Please see comments in response to Gallagher's letter. In addition, we have amended the initial Cat I. to reflect 3 options for funding equitably participation in the MNR degree. Hopefully, option 2 will be chosen by the Deans and Provost to fund the overhead costs of the MNR degree by the conclusion of the Cat I process. In the event neither option 1 nor 2 are chosen by the Provost, we intend to proceed with the MNR degree using option 3.

Subject: RE: Comments on MNR Degree

Steve,

As I mentioned in my message, waiving the department share is OK as long as our instructors are paid. A couple more points now I have slept on it some. First, would you envision that the overhead would be covered on an annual basis, or on a quarterly basis? I think everyone being assessed an overhead fee (based on enrollment in individual classes) on an annual basis would be the most equitable approach to keep folks from gaming the system. Under an optimistic scenario the overhead might be covered by fall and winter enrollment. If the overhead is assessed on an annual basis, it will keep me from offering my classes predominately in the spring to avoid the overhead--does that make sense? Second, you mention that overhead would only be assessed for students that declare a MNR degree and certificates could be used in the degree. I am guessing that there are some certificate programs that may depend on the department share as well. What would your proposal do in that case?

Subject: Comments on MNR Degree

Steve,

Thanks for the visit this morning with regards to the MNR program. I like your degree program proposal and your justification. I believe that the 18/18/9 units for core/emphasis/independent study would provide students with both flexibility as well as important interdisciplinary training.

Note that FW /FOR 585 is also cross-listed with SOC and actually taught by Lori Cramer in SOC on alternate years.

I have given the tuition sharing model you have proposed some additional thought and believe that it would not work for us. With 2 exceptions, our on-line Graduate classes are taught by adjunct or courtesy faculty who's only salary comes from the tuition they receive on a per SCH basis. These folks will not have any interest in teaching those classes if they are not going to receive compensation. The departments receive a small amount above the per-SCH tuition that is paid to the faculty and I would be willing to donate that in support of the program. I suggest that the initial overhead costs should be borne by E-campus.

Thanks for providing me the opportunity to comment on your proposal in this initial phase.

Let me know if you have questions.

Subject: RE: Curriculum Liaison for Category I Proposal: Master of Natural Resources Program

Badege:

Thanks for the opportunity to comment on this proposal. Several members of the FERM department provided input which I am summarizing.

The administrative structure of the new program is unclear. Will it be housed in the Grad School, as is the case with some existing multi-departmental graduate programs, or in some other place? What administrative officials in the University have signed-off on this proposal? Has this program, and particularly the funding arrangements, been fully vetted with the appropriate college deans, the Dean of the Graduate School and the Provost?

The budget accompanying the proposal seems to suggest that long-term Ecampus receipts will cover the administrative costs of the program, but who will provide the start-up monies and how will they be reimbursed? How will overall Ecampus revenues to the program be split between participating departments/college? The details of this arrangement need to be spelled out. [Should update budget references to reflect the recent COF reorganization.]

Proposal needs to be clearer about specific agreements to create online versions of key courses now taught only on-campus and the faculty who have agreed to develop these courses.

Reliance on available online courses limits the scope of studies, e.g., there is no forest ecology course.

Details: "Sustainable Silviculture" course - there are some changes in the works that are not reflected in the proposal (e.g., course name change and increase to 3 credits).

Response to Dr. Darius Adams Department of FERM

Paragraph 1

- At this point it is unclear where the Provost wants the MNR degree housed. It is most likely that it will be based in the Graduate School.
- We are still in the Liaison process. Those Deans in the participating Colleges will be asked once the Liaison process is completed.

Paragraph 2

Please see pages 20-22 of the revised MNR Category I proposal and responses to Gallagher and Lunch and clarification in funding of the Category I proposal. In addition, Extended Campus will commit additional supplemental funding to help defray overhead costs during the initial years of the program offering.

Paragraph 3

All courses listed in Table 3 are now being revised for online presentation. In addition, professors for new courses have been consulted and have agreed to create a new course for the MNR degree.

Paragraph 4

SNR 530 is taught by Dave Perry and is almost exclusively Forest Ecology.

Paragraph 5

We can not discuss in this Category I “changes that are in the works”. However, we know that SNR 531 is currently in the Cat II process with modifications to make it a 3 credit course.

Subject: RE: Curriculum Liaison for Category I Proposal: Master of Natural Resources Program

Badege and Tom--

Although I don't have official responsibility for reviewing CAT I proposals, I have several observations on this one that might prove helpful in constructing the final proposal:

1) It's still not clear to me where this program will be housed and who will oversee administration of it. Unless I'm not recalling correctly, the COF (FEC) has not yet approved it (pending a business and administration plan)--but perhaps circulating this draft proposal is preliminary to securing that approval. Where will the \$\$ come from to support the proposed administrative structure?

2) If this is truly an interdisciplinary program, I think it needs STRONG letters of support from the partners. The cover letter indicates that no response will be interpreted as approval; in this case, I don't think that's good enough.

3) the proposal indicates in several places that "independent study" is part of the program. I'm not sure what that means (in terms of official coursework) or how it will be documented. It seems to me that it could fall under: 501, 505, 506, or 510 (and perhaps others), but each of these has a separate and distinct meaning--and some are used differently in different departments. Also there's language about "3 credits can be satisfied by either an internship or up to a 6-credit certificate project" that is not clear to me.

4) The degree requires student group work. How will student group work be facilitated via distance?

5) One statement says "none of the programs offered by OSU provide graduate-level curricula in natural resources." I think I know what you mean, but I think many others could object to this particular characterization.

6) course choices in "ecology and production" seem too limited

7) MNR 506--since courses are offered by departments, what department will offer this? Whose curriculum committee will oversee it (and any other MNR courses that might be proposed)?

8) learning outcomes: vary in quality and measurability. I don't think they're sufficient to pass muster of the Curriculum Council.

9) most web links to certificate programs don't take the reader directly to the appropriate certificate programs, but rather to a more generic site that needs to be waded through to find the right link.

Hope some of this helps. --Ed

Dr. Edward C. Jensen
Associate Dean for Academic Affairs
College of Forestry
Oregon State University
Corvallis, OR 97331

Phone: 541-737-2519
FAX: 541-737-2668

Response to Dr. Edward Jensen, COF

Paragraph 1

See response to Adams letter

Paragraph 2

See response to Adams letter

Paragraph 3

Please see response to Francis letter and modification in Category I proposal, page 5.

Paragraph 4

Doesn't require student group work; where did you get that notion?

Paragraph 5

There are currently no online graduate degrees offered at OSU, other than certificates.

Paragraph 6

There are 18 courses in the Ecology and Production; we think this is sufficient for the students to choose from.

Paragraph 7

Courses are also offered by programs. This course will have its own designator MNR 506.

Paragraph 8

This is a Category II matter (course context); not one of Cat I, which pertains to curriculum.

Paragraph 9

Will check to be sure direct links are provided where available.

Subject: RE: MNR Cat I

Just so we have something to chew on prior to this meeting, here are several concerns--either mine or those of others with whom I've spoken:

1) who at the College level signs off on this CAT I proposal? Will it be a single Dean regardless of whether it's COF, or CAS, or COS, or CLA, or COAS... or all of them who choose to self-identify as participants in the MNR program, or the Graduate School, or.....? It's not just a question of who signs on the dotted line, but who takes responsibility for fully reviewing the program. The answer is not clear to me (but perhaps it is to others).

2) who will provide administration and support for this program and where will the \$\$ come from and how will they be allocated to those who actually mentor students and teach classes? I've heard that it may be centered in the Graduate School, but I'm not really sure what that means in terms of actual work to be done. Has this been determined yet? The NR undergrad program continues to struggle with these issues and I think they should be resolved for MNR before it moves through the CAT I process.

3) I've heard a number of folks express concerns over the apparent rigor of the program.

- Many (perhaps most) of the courses do not have prerequisites--and this seems different from most graduate programs. Is this a correct perception? If it makes sense for this program, let's discuss why so that we're on the same page. What I've heard so far is that it will discourage prospective students from entering the program, but is that sufficient rationale? With few prerequisites, it causes people to ask what distinguishes this from an undergrad program (don't shoot the messenger--I'm just relaying what I've heard from others).
- I don't recall seeing any minimum qualifications for entry into the program (other than a BA/BS and appropriate grades, and perhaps GREs). For example, will entering students either be expected to have, or develop once admitted, some set of "competencies" in certain specific areas--even if this means taking some undergrad courses?
- I've also heard concerns that there's a high potential for a "mix and match" approach to selecting courses based on a limited number of choices--and that this may leave major holes in the background of graduates. I think this would be good to discuss.

No need for an e-mail exchange on this, I'm just trying to seed the discussion that will occur next week. --

Subject: RE: MNR Cat I

Ed. Unfortunately I don't think anyone answered your questions fully at our recent meeting about the MNR Category 1 proposal on 9/22. Thanks for your time and effort. I will attempt to answer your questions now, or to at least provide my perspective.

1. We are planning to have each of the Deans of the various Colleges that will benefit from the MNR degree sign the Category 1 proposal. This matter is also being considered by Provost Randhawa, who may chose to place the degree in the Graduate School. (He favors this option, since the proposed degree is an interdisciplinary program.) Of course, this option could be superseded if a College wanted strongly for the degree to be housed with it.

All Category 1 proposals receive an in-depth review by the Graduate Council, Curriculum Council, Budget Committee and probably some other committees that I can't think of right now, then it is forwarded to the faculty senate and OUS administration for their review. All this is stated in the guidelines for preparation of Cat 1 proposals.

2. All this is stated in the draft MNR Category 1 proposal. However, the answers may be obscure there because we are forced to submit the Cat 1 according to a format that is provided in the guidelines.

The degree program is intended to be self-supporting from on-line tuition. The actual administrative costs for the degree are quite small and are outlined in the Cat 1 proposal. Because we anticipate a "ramp-up" period of 1 to 3 years before the degree is at capacity, E-Campus will provide start-up funds for this ramp-up period. The degree program would pay the start-up funding back to E-Campus as the degree becomes fully functional. E-Campus has projected for us that this will take about 20 full-time or 40 part-time students. The SNR Certificate attained 20 students in one-year.

Three funding options are presented in the draft MNR Category 1 proposal for administrative costs of the degree. Option 1 has received some objections from certain departments, notably in Liberal Arts (only 2 departments). For this reason, option 2 is being considered by Provost Randhawa. In the event that OSU central administration does not provide a solution to the temporary funding of administrative expenses (the degree will eventually be self-supporting, in about 3 years), we intend to proceed with option 3.

Instructors who actually teach classes will receive \$85 per student contact hour according to the E-Campus pay schedule for Instructors. These funds can either go directly to the instructor, as over-load pay, or directly to the department as instructed by that department. In addition, up to 3 units of pay from

MNR 506 will go to each student's mentor, who will be a member of the student's GAC (Graduate Advisory Committee). Since the MNR degree is a graduate degree, each student must have a GAC, which determines student course work, area of emphasis, etc. In addition, there will be an Admissions Committee and an Advisory Committee for the degree program that will provide student admission and oversight, respectively. All this is described in the draft MNR Category 1 proposal.

3. All of these questions (3) relate to course rigor (of on-line courses) and how courses will be selected. I must point out that all of the courses listed in the MNR Category 1 proposal are approved courses, i.e. they have all gone through the Category II process. Some require prerequisites, some do not. It is not a matter for any of us to determine how instructors teach their courses. Since all of the courses listed have undergone Category II review, we presume that they all fit the standards imposed by the University for course instruction.

All students, because the MNR degree is a graduate degree, are required to have a GAC. This committee, along with the student, selects the courses of study. In addition the list of courses taught at OSU is augmented by the courses offered through the Consortium for Graduate Studies (see appendix in the draft MNR Category 1 proposal), in case an appropriate course cannot be found at OSU. The requirement for a GAC is a University requirement, regardless of where or what previous degree is held by the student. I hope you and others are not confusing an undergraduate degree program with the rigor that is imposed by the GAC in a graduate degree.

If you or others need further clarification, we will be happy to meet with you again. sr

Subject: Category I Proposal: Master of Natural Resources Program - please read

Hi Badege,

I have attached comments for the Category I proposal for a Masters of Natural Resources Program in Forestry that I received from faculty members in Botany and Plant Pathology. Sorry this is a bit late but I hope it will still be helpful.

Best regards,

Lynda Ciuffetti

Comments on Category I proposal for MNR: Bruce McCune

Positives:

- Adds flexibility to OSU masters degree options
- Adds possibility for distance-based masters in natural resources

Negatives

- The curriculum seems light on methods; for jobs people need good training in using tools of the trade. I see only 3 credits of this.
- The choice of core classes seems quite limited – some seem too specific for the core: e.g., Principles of Wildlife Diseases and Special Topics in CSS.

(Nothing wrong with these courses, but I'm not sure I see how they are "core".)

- No fire ecology in the core?
- Graduates run the risk of having little depth in any one area – like a slightly glorified BA degree.

Comments on Category I proposal for MNR: Mark Wilson

I have a few comments about the CAT I proposal for a Masters of Natural Resources. The organizers invited me to participate in the 2007 discussions for this new program, but I was unable to attend. I hope my comments don't now sound like sandbagging.

1. Some courses listed in the "core" often seem like a stretch to fit with natural resources. Two examples are RHP 583 Radiation Biology and WS 525 Gender and Technology.
2. The areas of emphasis largely describe certificates earned with 18 credits. The exception is the Professional Science Masters program, which has curricula of 50+ credits. The proposal does not describe how students should cut the existing requirements in third.
3. On page 15, the proposal states that "we propose that tuition received from students in the MNR degree be allocated according to student-contact hour and funds be removed by E-Campus until overhead costs for administration of the MNR degree are met." I am not sure what this means in practice. I am concerned, however, that this policy would decrease the tuition received by departments or instructors for courses not otherwise involved in the MNR program. Those courses should not be penalized financially for serving students in the MNR program.
4. Field experience seems to be virtually nonexistent in the current proposal. A spot-check of the listed courses in the core showed only one course with a field component. The special field experience noted in 2007 discussions ("It would be important for online MNR to have a two week face-to-face component in the field.") is missing from the current proposal.
The proposal should, at least, explain how its curriculum can be successful without tying its content to the experience of natural resources in the field. Perhaps the capstone course, MNR 506, which is described as a real-world case study, is intended to provide this link. Perhaps the organizers believe that the target audience already has sufficient field experience to relate on their own the online content to field conditions.
The proposal would be stronger, however, if it tackled these issues explicitly. I would also be encouraged if the MNR program had a policy that its core courses will incorporate pedagogic techniques that helped students relate their book learning to their previous field experiences.

Comments on Category I proposal for MNR: Aaron Liston

I am director of the Applied Systematics in Botany track of the Professional Science Master's program. Since 2005, 5 students have successfully completed the program and received a non-thesis master's in Botany and Plant Pathology. One student is currently enrolled in the program. Thus the program averages 1.25 students per year. Students have taken 1-2 years to complete their degree, and there has been no attrition.

About two years ago, I was at an initial meeting that eventually led to this proposal. Ursula Bechert represented the Professional Science Master's program at future meetings, and I was not involved in the development of the current proposal. However, I think the proposal is very worthwhile. In fact, I would like to propose the Applied Systematics program in the Department of Botany and Plant Pathology be considered an additional "Area of Emphasis" available to Master's of Natural Resources Students. In my opinion, the proposed MNR curriculum would better meet the needs of the Applied Systematics students who currently take the PSM "Professional Cohort Courses". I also think it would enhance the Applied Systematics program by having the current Internship requirement followed up by MNR 506, Master's Case Study. One significant difference between the Applied Systematics curriculum and the other MNR areas of emphasis is that none of the core courses are offered through E-campus. The required core courses all depend on the examination and identification of plant and fungal specimens in the laboratory, and it is difficult to envision making these courses available online. Would it be acceptable to have a MNR program that required on campus courses?

Sincerely,

Aaron Liston

Professor of Botany and Plant Pathology

Director, Applied Systematics Program

Appendix I. Existing Applied Systematics Program Curriculum (51 credits required)

Required Core Courses (19 credits total)

BOT 516 Aquatic Botany (4)

Internship (6 credits minimum)

Response to comments by Botany and Plant Pathology Department**Bruce McCune.**

Positives--Thank you for the positive comments.

Negatives--

- This new proposal lists 7 methods courses, totaling 26 units. All these courses are offered on-line. It is, of course, up to the Graduate Advisory Committee (GAC) of each graduate student in the MNR degree program to determine which course(s) will be taken to satisfy the Methodology requirement.
- The selection of courses for each graduate student in the MNR degree program is determined by the GAC. Courses listed in the current Category I proposal are all offered on-line by OSU. This list is also augmented by the list of courses offered through the Consortium of Graduate Studies (Appendix E). In the special case of CSS 599, the appropriateness of this course will be determined by the GAC and depend on the topic taught that particular term.
- FOR 445/545 is primarily about fire ecology. We could add FOR/RNG 536 Wildland Fire Science & Management (4 credits, John Bailey) and FOR 554 Managing at the Wildland-Urban Interface (3 credits, Bruce Shindler) if instructors are willing to adapt existing courses for online offering.
- The Depth requirement is satisfied by at least 18 units of "Area of Emphasis", which also maybe a graduate Certificate. This amounts to 40 percent of the MNR degree.

Mark Wilson.

- The selection of courses of each graduate student in the MNR degree program is determined by the GAC. Courses listed in the current Category I proposal are all offered on-line by OSU. This list is also augmented by the list of courses offered through the Consortium of Graduate Studies (Appendix E).
- It is up to the GAC to determine how specific courses will be added or cut from an existing Certificate program (e.g. PSM Certificate) to determine an "Area of Emphasis" in the MNR degree. Students could, of course, opt for the entire Certificate if they wish.
- Three funding models are currently proposed in the current version of the MNR Category I proposal (page 21). We currently favor model 2, which is being seriously considered by Provost Randhawa and the Council of Deans that will benefit from this program.
- We have addressed this issue explicitly in the Category I proposal (pages 9-12). Field experience is not a requirement for this graduate degree. However, our experience with

the Sustainable Natural Resources Certificate indicates that nearly all students in the Program have at least two years of professional experience. This experience is of great value to all students taking SNR 506 and we suspect for MNR 506, as well. An in-residence requirement for face-to-face field experience is, unfortunately, untenable for an on-line degree.

Aaron Liston.

We believe that the graduate program in Applied Systematics would be an excellent “Area of Emphasis” for the MNR degree. Unfortunately few of the courses required by the Applied Systematics Program are offered on-line. It would be up to a student that is in-residence and his/her GAC to determine if Applied Systematics would be an acceptable area of emphasis. While we have no objections to this suggestion, it would probably require a modification to the current Category I proposal since the MNR degree is proposed as being primarily on-line.

Dr. Badege Bishaw
Oregon State University College of Forestry
208 Richardson Hall
Corvallis, Oregon 97331

Dear Dr. Bishaw:

This letter is in support of the CAT I Proposal for Oregon State University to develop an online Master of Natural Resources degree program. There is a clear and well defined need for more on-line professional degree programs in Natural Resources education, at this time and in the future.

Six years ago, Virginia Tech's College of Natural Resources developed a Master of Natural Resources (MNR) degree program at the Northern Virginia Campus, with the objective of providing a Graduate degree program to meet the needs of working professionals throughout the metro-Washington, DC area. At the time of the MNR program's initiation, a Natural Resources Distance Learning program was also undertaken as a joint venture between USDA Forest Service and Virginia Tech. The distance program was designed to meet the needs of working professionals throughout the US who are employed by USDA Forest Service and other Federal land management agencies (eg., DOI National Park Service, Bureau of Land Management, Fish and Wildlife Service) and DOD US Army Corps of Engineers, as well as state and county land management employees seeking advanced degree opportunities for professional and career enhancement. As Virginia Tech's residential and distance learning programs evolved, it was clear that no single natural MNR program could develop and provide all of the courses to meet all our student and future student needs.

Three universities met, five years ago, at Blacksburg, VA, to form the Natural Resources Distance Learning Consortium. An analysis of distance learning in the natural resources showed less than 5 percent of the courses offered at Colleges of Natural Resources were offered on-line. The group began to identify other universities that were interested in developing or had developed distance learning programs. In this short period, 10 universities have joined the Consortium, including Oregon State University. This has

enabled students to seek courses they want or need for career advancement, career change or professional growth and development. The Consortium provides access to member Universities through a single web site.

Among the key issues supporting growth and need for distance learning graduate natural resource programs for professional development are changes in the US Office of Personnel Management classification of two job series: Wildland Fire Management, and Recreation. Federal employees in these career areas are required to take up to 24 credits of courses to be classified into the professional series from technician series. These are college graduates, with as much as 30 years experience, who need additional course work for career advancement. This has become one of the key motivators for the development of the Natural Resources Distance Learning Consortium.

Secondly, a report developed jointly among the Natural Resources Professional Societies indicated that approximately 10,000 natural resources professionals would be retiring over a span of the next 10 years (2001 - 2011). This indicated to the Consortium that many employees would be seeking additional graduate courses to improve their competitive base for promotion into the positions vacated by retirement. Professional on-line degree programs, such as a Master of Natural Resources, meet this need. These working professionals need access to distance learning courses for three reasons: 1) they cannot afford to take off work for 2 years; 2) they cannot uproot their families and move to a University campus; and 3) they cannot afford the costs of temporary housing while pursuing their professional Masters degree.

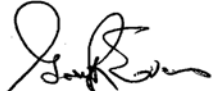

The third key issue, identified by the Federal land management agency partners is the rising costs of on-site training to continually upgrade the technical quality and rapidly changing rules and regulations. In discussions with the training coordinators of several agencies, they have indicated that it costs over \$1800.00 per person per week for travel and per diem—not including the cost of training. Consortium Universities delivering distance learning courses are in the position of working to provide parts of training and education on-line, thus cutting training budget costs.

Each Consortium member offers a unique set of on-line courses to students. This is due to the fact that faculty across the country are not all interested in teaching on-line. A Master of Natural Resources program at Oregon State clearly expands the courses

available to a rapidly growing student body, within the US and now throughout the English speaking world.

Oregon State University, as a member of the Natural Resources Distance Learning Consortium, has a unique opportunity to develop their Master of Natural Resources Program.

Respectfully,

Gary R. Evans, Ph.D.
Director

In Reply Refer To:

1400-410 (TC 100)

Dr. Badege Bishaw
321 Richardson Hall
Oregon State University
Corvallis, OR 97331

Dear Dr. Bishaw:

Over five years ago the U.S. Forest Service and the DOI Bureau of Land Management began collaborative efforts with a small group of universities in an effort to advance the agencies' employee development programs through technology enhanced education. The focus of those collaborations were disciplines that are at the heart of the agencies' work – natural resource management.

As the chief learning officer for the DOI Bureau of Land Management, I am responsible for the employee development of over 11,000 employees in over fifty job series. From the Bureau's perspective, the collaboration initiated by the U.S. Forest Service has come at a perfect time. The Bureau, like most federal agencies, is struggling with travel ceilings and increasing time demands on employees. The result is that fewer employees are being allowed to travel for training while the amount of turnover in the federal government ranks continues to grow as each baby boomer reaches retirement age. The Bureau faces employee retirement and turnover rates as high as 40 to 50% in many of its natural resource management professions.

The only answer to meeting our staffing and development needs for the next decade and beyond is for federal training programs to embrace distance learning and stronger working relationships with higher education institutions across the country.

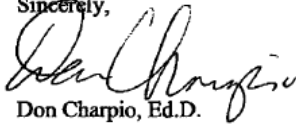

The Executive Leadership Team of the Bureau of Land Management has embraced distance learning as one of the fundamental answers to our employee development needs. The Team has challenged me to move the Bureau's training program to an 80 to 20 ratio of distance learning to instructor-lead training, and to work more as a broker of training opportunities as opposed to the primary provider.

The Natural Resource Distance Learning Consortium can play a significant role in helping the Bureau meet the challenges set by the Executive Leadership Team, but only if it grows and advances greater diversity in its distance learning offerings.

Over the past five years I have watched the interest and membership in the Consortium grow steadily, and the universities strive to advance their programs by working with the agencies to address areas of common interest. As one of the country's leading institutions in developing the next generation of natural resource management professionals, Oregon State would be an excellent addition to the Consortium. Given the University's rapid advances and unique approach to financing distance learning, I know the Bureau of Land Management's employee development program could benefit greatly from having a stronger working relationship with the University. I hope that University officials will give serious consideration to the opportunity to join this growing family of national and internationally renowned universities.

Thanks for hosting the last meeting of the Consortium; I hope to see you at our next meeting. Please call upon me if I can be of any assistance in answering questions about the direction and needs of the Bureau's employee development and succession planning programs.

Sincerely,

A handwritten signature in black ink, appearing to read "Don Charpio". The signature is fluid and cursive, with a large initial "D" and "C".

Re. 531/1.23/08

29/09/08

Dear Dr Badege Bishaw,
OSU, College of Forestry
Corvallis

Subject: New On line Master's Program

I thank you for sending us the proposal to initiate a New Instructional Program for a Masters of Natural Resources.

We have gone through the draft document with utmost attention. We found the program to be in the interest areas of our College. As you might know, Wondo Genet College of Forestry and Natural Resources (WGCF-NR) has initiated a number of masters programs in forestry, wildlife, watershed management, natural resource economics, etc. The program you are developing will certainly contribute to alleviate the existing need of trained man power in our country in NRM.

In your effort to internationalize the program, WGCF-NR would like to be an active partner. We hope that our role in the program will be clearly set in the final document to which we would like to express our interests and opinions.

With Regards,

Abdella Gure (Dr)

Dr. Badege Bishaw
Department of Ecosystems and Society
321 Richardson Hall
Oregon State University
Corvallis, OR 97331

Dear Dr. Bishaw,

I am writing as a student to express my enthusiasm for the online Masters of Natural Resources program currently under development here at Oregon State University. This is an important program that will strengthen the University's ability to reach students and develop high-quality courses for working professionals.

I am a second-year PhD student at Oregon State and I took my first online course this summer through the Department of Botany and Plant Pathology. This was a methods course that was highly challenging and exceeded my expectations in terms of how much I learned and its relevance to my studies. The online nature of the course gave me the flexibility I needed to be able to take this class over the summer.

As an older student who has worked in the fields of education and natural resources management for over ten years, I can attest to the difficulty of finding applied, online technical courses that provide working professionals with quality coursework to enhance their knowledge base or work towards a higher degree. Your program sounds as though it will help fill this gap, and I look forward to hearing about its progress in the future.

Sincerely,

Kathleen Guillozet
PhD Student
Forest Ecosystems and Society
Oregon State University

Natural Resources Distance Learning Consortium Strategic Planning 2008

Over the past 5 years, the Consortium has focused on looking ahead to the capabilities offered in distance education and distance academic training. The first discussions generated the question what do we want to become? The second issues that continue to evolve, today, focus on the "Next Five Years", looking forward.

What Do We Want to Become?

Foremost in this discussion was the overriding principle: to "Meet our Student Needs." We looked, and continue to look at our Students as both current and potential learners, utilizing distance learning as a means of acquiring upper division and graduate courses that may enhance their professional growth and development. We have agreed that our current and future role is to offer this education opportunity to the place bound career professional or technician working in natural resources. This arena includes public land managing agencies (including all levels from federal lands to county or local lands) as well as those seeking academic growth and development and training in non-governmental organizations and professional societies.

We see our role as offering graduate education, graduate degrees and certificates of graduate studies, as well as training or continuing education, for place bound students who are constrained by geography, family, work, time and finances.

Our Objectives are to sustain, among consortium members, an organization capable of supporting academic structure with:

- transparency of requirements
- universality of access
- reciprocity among consortium members
- maintenance of academic rigor across courses and training modules
- support for course quality and evaluation among our university peers, as well as among our student communities and client groups.

We strive to add value to educational outcomes for our students.

We seek, collectively, to strengthen our marketing of distance education.

We will continue to strengthen the value of the Consortium through our partnerships, including university departments and colleges offering natural resources programs, non-governmental organizations, public land management agencies, organizations, and professional societies.

Our Products are educated persons with Graduate Professional Degrees, Certificates of Graduate Studies in Natural Resources, and Continuing Education and Professional credits.

Our long term strengths within the Consortium include:

- networking among and between institutions and organizations .
- fostering networking among faculty
- sponsoring presentations and sessions at professional meetings.

Distance Learning technology is a very rapidly growing and changing field in which the Consortium will maintain open communication through working or discussion sessions at meetings.

The Five Year Plan – 2009- 2013

Consortium representatives began our Five Year Plan discussions during the Spring 2007 meeting at Stephen F. Austin State University. We asked, "What should the next 5 years look like?"

Our Goal is strengthening our forward-looking Academic focus and identifying long term objectives that are the hallmark of the Natural Resources Distance Learning Consortium. Over the next five years, we must look at key objectives, start to prioritize them, and consider options and opportunities for implementing them.

Several issues were raised in discussions over the past 5 years that are part of the evolution of the Natural Resources Distance Learning Consortium:

- developing on-line mechanisms for broader student access
- evolving an on-line forum between agencies (Federal, State and local) and Consortium universities to evolve a vision and path toward strengthening both the academic and professional development sides of the Consortium
- new visions of course flexibility in natural resources graduate education if necessary to accommodate a unique group of potential students -the working professionals -who may not have the single semester

work assignments that allow them to complete courses within the academic calendar. Is there a place for the "super semester" and how do we define and develop it?

On-line forum -It is necessary to support the evolution of natural resources distance learning- distance education; distance training; modules, units, lessons to be delivered on-line and augmentation through hands-on modules completed at specific locations. Consortium members are beginning to see the evolution of this vision and we now need to discuss the concepts. Today's challenge is developing a natural resources model that includes:

- adding the "lab component"
- expanding the diffusion of "best practices for natural resources education and training"
- enhancing learning processes with critical update activities related to changes in natural
- resource related policies, laws, and pedagogy.

Reciprocity -High among issues for consideration is whether unequal tuition is seen as a barrier to those institutions with high tuition costs and a benefit to lower tuition universities. There also are questions of price sensitivity and whether or not this is a deterrent to students, thus we posed the question; "Do students shop for a degree, a certificate or training based on price or need and availability?"

Transparent Guidelines - Consortium members are very supportive that guidelines among the members be developed and maintained to be as transparent as possible to our distance learning clients. Preliminary discussions indicate that this appears feasible at the outset and it is incumbent to continue working toward this goal.

Balance of Course Credit - Consortium members raised questions of balance in course credits among member universities. At this time, it is clearly an open question and one to be pursued without prejudice in the future.

Strengthen Marketing - A part of the future planning process must seek to define marketing of the Consortium and its members to those interested in pursuing academic degrees, certificates of graduate studies, or training.

Credit Transfer among Consortium Members - Both current discussions and future plans need to incorporate some agreement, if attainable, about the number of course credits that may be transferred among Consortium Universities for students to apply toward their degree programs. Early discussions indicate that a current list of guidelines needs to be developed for future discussions. An additional point was raised about the maximum number of transfer credits for Certificates of Graduate Study and for Professional Masters degrees.

External Committee Members - May external committee members serve on professional degree programs committees? It was pointed out that our current students have asked for committee members from other universities. No substantive discussions have taken place at this time. Should this be a part of the Consortium's long range planning process?

The "Star Pack"? Identify "Star Faculty" in a specific academic area and encourage their involvement in development and teaching of specific distance courses. Some initial points include seeking access to world experts and including them in distance education courses, as well as apprenticing and developing faculty.

A central issue and one that will require significant work is to create compelling, seamless processes for Natural Resources education graduate programs among Consortium University members. The model exists with the Great Plains IDEA program, and we can build upon it.

Perhaps the most open-ended question to the members is "How big do we want to become?" This requires input from all our Consortium members (Universities, Agencies, Professional Societies) and from colleagues. It is necessary to profile our "future student" and plan for their future education opportunities. The Consortium should clarify the resident vs. distance learning student models -how are they similar, how are they different, and how do these influence the way we design and develop academic curricula and professional development curricula?

Additional questions and topics for future discussion should include:

- Incorporating laboratory or laboratory design activities into courses. This will be critical in such areas as wild land fire management where managers and leaders in the fire environment are moving from technical training to professional command education.
- Defining phases or modules of courses that may be resident-focused, as well as those that may be accomplished by non-resident education. Among the options to be considered are use of web conferences, field laboratory activities, and field time to compress course activities into manageable learning experiences, and use of remotely transmitted video for specific components of learning modules.

Appendix E – List of Natural Resources Courses available through
the Natural Resources Distance Learning Consortium

Appendix E. Online Masters Degrees, Graduate Certificates, and Graduate Courses offered by members of the Natural Resources Distance Learning Consortium

Downloaded 15 September 2008 from <http://nrdlc.iddl.vt.edu/index.php>

Members include: Virginia Tech, University of Idaho, Penn State, Stephen F. Austin University, University of Montana, University of Tennessee Martin, and new members Oregon State University and North Carolina State University. USDA Forest Service and Bureau of Land Management are also members.

MASTERS DEGREES

| NAME | MEMBER INSTITUTION |
|---|---|
| Master of Natural Resources | University of Idaho |
| Master of Geographic Information Systems | Penn State World Campus |
| Master of Natural Resources | Virginia Polytechnic Institute and State University |
| Master of Science in Agriculture & Natural Resources Systems Management | University of Tennessee at Martin |
| Master of Science in Resource Interpretation Thesis Based | Stephen F. Austin State University |
| Master of Science in Resource Interpretation Non-Thesis Based | Stephen F. Austin State University |

CERTIFICATES OF GRADUATE STUDY

| NAME | MEMBER INSTITUTION |
|---|---|
| Restoration Ecology Certificate | University of Idaho |
| Postbaccalaureate Certificate in Geographic Information Systems | Penn State World Campus |
| Certificate of Graduate Study in Natural Resources | Virginia Polytechnic Institute and State University |
| Fire Ecology, Management, and Technology (UG) | University of Idaho |
| Fire Ecology, Management, and Technology (GRAD) | University of Idaho |
| Undergraduate Certificate of Achievement in Weather Forecasting | Penn State World Campus |
| Postbaccalaureate Certificate in Community and Economic Development | Penn State World Campus |
| Undergraduate Certificate in Turfgrass Management | Penn State World Campus |
| Advanced Undergraduate Certificate In Turfgrass Management | Penn State World Campus |
| Certificate in Resource Interpretation | Stephen F. Austin State University |

Courses

Course List

| NAME | DEPT | INSTRUCTOR | NEXT | CUS | MEMBER |
|---|-------------------------------------|-------------------|---------------|-----|------------------------------------|
| Introduction to Statistical Program Packages (STAT 480) | Statistics | TBA | not scheduled | 1 | Penn State World Campus |
| Acquiring and Integrating Geospatial Data (GIS 488) | Geographic Information Systems | TBA | 10/2008 | 3 | Penn State World Campus |
| Advanced Media and Graphics (FOR 574) | College of Forestry | Stephens Williams | 1/2008 | 3 | Stephen F. Austin State University |
| Advanced Natural Resources Economics (NRM 730) | Natural Resources Management | Mehlhorn | 8/2008 | 3 | University of Tennessee at Martin |
| Advanced Precision Technologies for Agriculture and Natural Resources Management (AGET 782) | Agricultural Engineering Technology | TBA | not scheduled | 3 | University of Tennessee at Martin |
| Advanced Professional Interpretation (FOR 580) | College of Forestry | Stephens Williams | 1/2008 | 3 | Stephen F. Austin State University |
| Advanced Soil and Water Conservation Engineering (AGET 720) | Agricultural Engineering Technology | Burcham | 8/2008 | 3 | University of Tennessee at Martin |
| Advanced Topics in Weather Forecasting (METEO 410) | Meteorology | TBA | 8/2008 | 3 | Penn State World Campus |
| Agricultural Management (AGEC 671) | Agricultural Economics | TBA | not scheduled | 3 | University of Tennessee at Martin |
| Agricultural Risk Analysis and Decision Making (AGEC 750) | Agricultural Economics | Mehlhorn | 1/2009 | 3 | University of Tennessee at Martin |

| | | | | | |
|---|-------------------------------------|-------------------|---------------|-----|---|
| Alternative Forest Products (SNR 533) | Ecampus | TBA | 1/2009 | 1 | Oregon State University |

Appendix F: MOU between CoF and E-Campus

MOU for new Online Program Development between OSU College of Forestry, Forest Science Department and OSU Extended Campus

Natural Resources Masters Degree

OSU Extended Campus welcomes this opportunity to make this graduate degree available to a worldwide audience. The Master of Natural Resources degree will be an important addition to OSU online programs and will be an asset to students in many different areas of study.

Program Personnel

The College of Forestry agrees to assign a coordinator to serve as the main contact person to coordinate development of this degree with Ecampus.

Funding Overview

Total Funding = \$131,000

Disbursed in two major phases:

Phase 1: \$46,000 for program coordination towards the preparation, submission and approval of the MNR Category I proposal.

35% upon acceptance and approval of this MOU and Development Plan, which includes:

- the detailed timeline for CAT I proposal submission and approval;
- assignment of instructors/course developers to each course;
- timeline for course design, development, delivery.

55% upon submission of the CAT I proposal

10% upon CAT I full approval

Phase 2: \$85,000 for course development, coordination and program delivery (upon CAT I approval).

44% for course development coordination, disbursed upon full CAT I approval

41% for course development

- All courses to be completed within one year of the CAT I approval, with the initial offering of the program during fall term, 2010.

15% transferred upon completion of the project and acceptance of the final report.

Details of Budget Transfer per Program Component

Budget will be transferred to the College of Forestry as follows, except where otherwise indicated:

Phase 1 - Category I proposal, submission and curricular approval coordination: \$46,000

On signing of agreement: _____ 35% of Phase 1 Funding = **\$16,100**

On submission of the CAT I proposal: _____ 55% of Phase 1 Funding = **\$25,300**

On CAT I full approval: _____ 10% of Phase 1 Funding = **\$4,600**

Total Phase 1 funding: _____ 100% of Phase 1 Funding = **\$46,000**

- The College of Forestry, in collaboration with College of Liberal Arts, College of Agricultural Sciences, and the College of Science will prepare and submit a Category I proposal for the Master of Natural Resources towards successful completion of the curricular approval process.
- The Category I proposal will be developed during spring 2008 and submitted to the Graduate School in fall 2008.
- Approval of the Cat I proposal is expected to happen after one year in fall 2009.
- Course development will start after approval of CAT I proposal (fall 2009) and will be completed summer 2010.

- The program will begin offering the courses during fall term, 2010 and offer the full degree by winter or spring term, 2012 (Pending approval of CAT I).
- Each course will be offered a minimum of two terms per year to allow for successful student progress towards completion of the degree. The sequence and timing of course design, development, and offering are delineated in the Development Plan below (Table 1). Preliminary syllabi for each of the courses are to be submitted with the Development Plan.

Phase 2 - Course Design and Development (upon CAT I full approval): \$85,000

Course development coordination: _____ 44% of Phase 2 Funding = **\$37,250**

Course development: _____ 41% of Phase 2 Funding = **\$35,000**

- Course development will start after CAT I approval, projected for fall, 2009 and will be completed by summer term, 2010.
- Course development funds will be disbursed per course based on the number of credits for the course. Course development funds will be paid to the academic department in which the course resides. Funds will be disbursed once a course is deemed complete and up to standards, and has been reviewed by the appropriate designee of the College.
- 7 courses @ 3-4 credits each = 23 credits total (see Development Plan)
- Funding available upon completion of each course = \$5000 per course

End-of-Project Report: _____ 15% of Phase 2 funding = **\$12,750**

Total Phase 2 funding: _____ 100% of Phase 2 funding = **\$85,000**

- The College of Forestry in collaboration with College of Liberal Arts, College of Agricultural Sciences, and the College of Science will develop seven courses, begin offering the courses during fall term of 2010 and offer the full degree by winter or spring term 2012. Each course will be offered a minimum of two terms per year. The sequence and timing of course design, development, and offering are delineated in the Development Plan below. Preliminary syllabi for each of the courses are to be submitted with the Development Plan.
- Courses will be collaboratively planned, designed, and developed by the content providing faculty (Course Developer) or their representatives and the Ecampus Project Development and Training unit (PDT). The Ecampus contact for course development is: Dianna Fisher, Director of Project Development and Training dianna.fisher@oregonstate.edu - 541-230-4029.
- All courses making up the distance degree will be focused on outcome-based learning and aligned with the accrediting standards for learning outcomes established by the OSU Office of Academic Programs. All courses in the proposed program will be developed using the best practices framework for instructional design for distance education courses and programs, aligned with OSU and national standards for distance education courses and programs, employing the Blackboard course management system. Courses will be reviewed by designee(s) from the relevant Colleges and Ecampus upon completion.
- The Course Developer will engage in continued collaboration with the PDT from project inception and will ensure course completion and approval of the course at least 2 weeks prior to the initial term start. Completion status of the course is determined by the Extended Campus Director of Project Development and Training. If the course is not complete in Blackboard and ready to be taught at least 2 weeks prior to the start of initial term, the PDT Director will consult with the Program Director concerning advisability of course cancellation.
- As delineated in the existing MOU with the College of Forestry, Ecampus will provide (at no project cost) basic course development and production including: instructional design with best practices covering accessibility and copyright, project management, media development, Blackboard course development, training, marketing, and on-going student and instructor support.

Use of Course and Materials

The Course Developer will have control of the substantive and intellectual content of materials subject to review and approval of the Department/College. Course Developer shall receive credit as a named author or a principal developer of the course. Additional authors may be added in accordance with their contribution to the course and as determined by the Course Developer. Course Developer has the right to remove his or her name from the course at any time, in coordination with the academic department and Extended Campus. The Department can appoint others to teach the courses. Consistent with the rules of the State Board of Higher Education, the Board owns the course and materials and OSU shall have the exclusive right to offer the course, whether through internet, video transmission, IP Video, interactive TV, or by other means, to any student at any location.

Sustainability of Program

In order to insure the sustainability of the Master of Natural Resources degree as a viable program into the future, the Program will:

- Initiate discussions with the Graduate School, the Forest Science Department, the College of Forestry, and in collaboration with the Colleges associated with the courses to be offered as part of this program,
- Establish agreements for a formalized budget model designed to provide funding for reoccurring costs necessary to support the Program and academic advising needs of the program;
- Summarize these agreements as part of the 'Plans for Program Sustainability' within the End-of-Project Report described below.

End-of-Project Report: 15% of funding

Please submit a final report after completion of the project to include:

- Description of the development process,
- Two-year schedule for continued course and program delivery,
- Student feedback on the experience taking the courses,
- Data on course evaluation,
- Faculty response to the development activity,
- Final expense report,
- Plans for program sustainability.

After submission and acceptance of the final report, the Ecampus review team will verify that all program components are in place upon which time the remaining funds will be released.

Supplemental Funding

In addition to the funding defined in this MOU, Ecampus will commit to additional supplemental funding to help defray overhead costs during the initial years of program offering, until the program achieves financial self-sufficiency based on enrollment-generated revenue. The supplemental funding will be provided to the Department of Forest Sciences to help defray costs associated with program staffing comprised of a Program Director and a Program Coordinator. The terms of this supplemental funding, including the amount of funding and its duration, will be delineated in an addendum to the overarching program MOU. The addendum will be drafted upon receipt by Ecampus information on projected enrollments for the initial years of the program offering, and once the program proposers have obtained formal agreements/disagreements regarding revenue sharing from the various academic departments to be associated with the program.

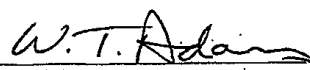

Signatures below indicate acceptance of these terms and conditions.

Hi Darlene,

Could Bella Bose's proposal attached below be an agenda item for the next GC meeting?
Perhaps we could invite him to present this to the Council.

thanks

Vinod

Subject: Graduate council - 5 year BS/MS program

Reply-To: Bella Bose <bose@eeecs.oregonstate.edu>

Vinod,

We thought of giving an option to our undergraduate students to finish their MS degree also within a total of 5 years. I sent this request to Sally and Martin and they thought that I need to inform you also since you represent the COE. Please see attached the letter. At present the graduate school allows to reserve up to 15 hours of graduate credits. We request that this be increased to 21 for the students in this program. If you have any questions please let me know and I will try to answer. Thanks.

-Bella

April 1, 2009

Dean Sally Francis, Graduate School and
Graduate Council Members

Dear Dean Sally Francis and the Graduate Council Members,

We plan to introduce a 5-year B.S./M.S. program for top students entering our undergraduate programs (ECE and CS-Computer Systems), and we request that you allow students in these programs to reserve up to 21 graduate credits during their undergraduate study. At present, the graduate school allows students to reserve at most 15 graduate credits.

In the past few years, we have had many very strong students entering our undergraduate programs. For example, close to 30 Dean's Scholars joined our programs in Fall 2008. These students have a high school GPA close to 4.00 and a SAT Math/Verbal score of more than 1300 (out of 1600 possible).

Many of those students begin their freshman year with more than 20 college credit hours (advanced placement, IB, transfer) from high school. Because of the structure of our undergraduate and graduate programs, these students must start both their undergraduate and graduate studies in Fall term, so they easily run short of required undergraduate coursework during their senior year. (In Fall 2006, we reduced our B.S. requirements to 180 credits.)

The 5-year B.S./M.S. program is quite attractive to these students. When we mentioned it to some of our undergraduate students, they were quite interested in this option.

There are many benefits in offering this program:

1. The students will be involved in research even at the undergraduate level.
2. We can keep our top students in our graduate program and modestly

increase the graduate enrollment.

We believe that the increased graduate enrollment will likely offset the small amount of lost tuition that may result from having students take up to 6 extra graduate credits while they are undergraduates.

We sincerely request that you grant this request, to allow students pursuing the B.S./M.S. in ECE and CS-Computer Systems to reserve 21 credits of graduate coursework taken while they are completing their undergraduate programs.

Sincerely yours,

A handwritten signature in dark ink, appearing to read "B. Bose" with a stylized flourish at the end.

Bella Bose

Professor and Associate Director

GRADUATE ENROLLMENT RECOMMENDATIONS

Spring, 2009

The Graduate Enrollment Management Task Force was appointed by the Dean of the Graduate School in fall, 2008. Members of the Task Force include Scott Ashford, Tony Wilcox (representing Executive Committee of Faculty Senate), Becky Warner, Valerie Rosenberg, Eric Yahnke, Walt Loveland (representing Graduate Council), Donna Champeau, Larry Curtis, and Rosemary Garagnani. The Task Force was charged to

- Set overall graduate enrollment targets both in absolute numbers and in proportion to total enrollment;
- Set targets for enrollment by degree level and by demographics including citizenship;
- Establish strategic foci for graduate enrollment targets that are aligned with OSU's areas of strength; and
- Recommend strategies for achieving the targets that are set.

As a research university, OSU is deeply committed to excellence in graduate education. Strong graduate programs are essential to the institution's ability to deliver its three-part mission, are critical in OSU's goal of achieving top ten land grant status, and are key to Oregon's prosperity. In a recent op-ed, Debra Stewart, President of the Council of Graduate Schools, stated, "The future of the country depends on making a renewed commitment to graduate education to produce the future innovators, discoverers and leaders necessary to address current and future problems" (*Washington Times*, 1/15/09). Strong graduate programs depend on a number of factors including not only our ability to be competitive in recruiting the highest quality graduate students but also our ability to build viable intellectual communities of graduate students with adequate critical mass in terms of enrollment. A graduate enrollment plan is needed to focus our graduate enrollment goals moving forward.

OSU, along with other very high research universities, holds scholarship and graduate education as central to its mission. This document presents a proposal that recommends a graduate student enrollment target for OSU over the next five years culminating in the year 2013-14 at an **enrollment mix of 20% graduate and 80% undergraduate or 4100 graduate students**, an increase of about 900 students over 2008-09 graduate enrollment (see Table 2, page 9). This recommendation is in alignment with prior graduate enrollment targets. In 2000 a University Issue Group recommended that OSU establish a target of 20% graduate to total OSU enrollment by 2011 and in 2001 another work group recommended that OSU pursue an aggressive enrollment strategy to achieve a graduate enrollment of about 18% of total enrollment. In addition, the Task Force recommends that the ratio of PhD student to Graduate Faculty should be 2:1 by 2013-014 and eventually reach a 3:1 ratio. Given that there are currently 1208 faculty members at OSU who have been authorized to direct doctoral dissertations, this recommendation would result in a target of 2416 PhD students or 59% of the targeted graduate enrollment of 4000. In fall, 2008, of a total graduate enrollment of 3204, 1101 were PhD students or 34% of total graduate enrollment (see Table 3, page 10). The Task Force declined to set a target for graduate enrollment according to citizenship. While the Task Force fully recognizes and supports the

importance of all forms of diversity, including strong international participation, within graduate programs it believes that the overall goal must be to attract the very best qualified graduate students possible regardless of citizenship.

These goals are aligned with the enrollment targets of the College of Engineering (COE). COE plans to reach a total graduate student to total student ratio of 23%. Within this target, a ratio of PhD student to faculty member of 3:1 and a master's student to faculty member ratio of 5:1 are planned. The 20% target also is in alignment with graduate enrollment at benchmark institutions. The proportion of graduate student enrollment at OSU's comparator and aspirational top ten land-grant institutions is shown in Table 4 (page 11). The data reveal that the average graduate enrollment at these institutions and at the top ten land-grant institutions was 20% of total enrollment. The proportion of graduate enrollment at peer institutions ranged from 14.5% at Pennsylvania State University to 28.5% at Cornell University. In comparison, fall, 2007, graduate enrollment at OSU was 15.5% of total enrollment.

Figure 1 (page 3) illustrates the Task Force's 20% graduate enrollment target (blue) alongside projected total enrollment at OSU (total, graduate, and non-degree graduate). Black, red, and green lines depict *actual* enrollment from fall, 1995, through fall, 2008; from fall, 2009, forward, the black, red, and green lines depict *projected* enrollment. Fall, 2008, total enrollment was 20,320 and is projected to reach 21,056 by fall, 2013, the target year for this report. Similarly, fall, 2008, graduate enrollment was 3095 and would need to reach 4100 by fall, 2013, to achieve the proposed 20% target.

Figure 1 OSU Projected Enrollment

Rationale

The rationale for targeting an enrollment of 20% graduate students is based on:

- Top ten land-grant status is partially dependent on strong graduate programs. Top ten land-grant institutions maintain a graduate population of 20% of total enrollment. Peer data are presented in Table 4.
- Expanding OSU's graduate enrollment will produce more recipients of advanced degrees who can be predicted to contribute directly to economic development and innovation. About 60% of advanced degree recipients stay and work in Oregon.
- The master's degree is rapidly becoming the entry level degree for a growing number of jobs leading to an increase in master's enrollments nationally. There is an opportunity to respond to this need.
- Strong graduate programs spark the research enterprise of the University.
- Undergraduate programs are enriched by the presence of strong graduate programs.
- Online graduate programs are an attractive growth area. OSU has built capacity to expand its offerings in this format.
- Graduate programs contribute substantially to the diversity of the student population, particularly by attracting international students. The INTO partnership creates an opportunity to expand international enrollment.

- Knowledge-based industries require well educated workers. There is an opportunity to respond to this need through expanded graduate enrollment.

SWOT

Members of the Task Force identified strengths, weaknesses, opportunities and threats – SWOT – to increasing graduate enrollment. Table 1 (see page 7) presents the strengths, weaknesses, opportunities, and threats that were identified relative to OSU’s potential for achieving the 20% graduate enrollment target. Obvious *strengths* include OSU’s classification as a major research university with strong research faculty and research facilities, experience in online programming, and an array of graduate programs in areas of demand for graduates. On the other hand, *weaknesses* identified include little diversity within the local community, lack of graduate programming in the social sciences and humanities, cost of graduate student support, and certain organizational weaknesses. *Opportunities* to support achieving the 20% goal include the historic growth in graduate enrollments during poor economic cycles, economic stimulus funds to NSF and NIH that could support graduate assistants, certain increased funding opportunities, and the “Obama” effect. Finally, threats include probable severe budget cuts in the next 2-4 years and resultant loss of faculty and student support.

Focused Conversation

The Task Force invited several guests to discuss specific opportunities for increasing enrollment in selected graduate programs. Guests included:

Ilene Kleinsorge, Dean, College of Business
 Larry Rodgers, Dean, College of Liberal Arts
 David King, Associate Provost, Outreach and Engagement
 Marie Harvey, Chair, Department of Public Health
 Ursula Bechert, Director, Off-Campus Programs, College of Science

This conversation revealed that there are definite growth opportunities in the areas of Public Health, Business Administration, Liberal Arts and the Professional Sciences Master’s (PSM) program. E-campus offerings could be part of any of these areas as well as international student opportunities. In addition, all of these areas integrate very well with OSU’s 2009 Strategic Plan’s signature areas—Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress.

The Public Health and Business Administration programs are evident in the second two of the signature areas, and there is already a statewide PSM initiative in place for Renewable Energy. In addition, the Public Health program is currently positioned to be the only offering in the State of Oregon. The Liberal Arts programs and E-campus offerings align with the Strategic Plan’s action commitment to lead in the development of a globally competitive workforce and an informed and capable citizenry. Given the small amount of existing graduate programs in Liberal Arts programs, there is great opportunity for growth, and E-campus offerings can allow OSU to increase all of its offerings in a very cost-effective and nimble manner.

Strategies for Achieving 20% Target

In 1999, a work group made up of Sherm Bloomer, Bob Bontrager, Sally Francis, Henry Sayre, Rob Specter, and chaired by Sabah Randhawa stated, "The enrollment goals recommended...will only be possible if we can maintain and improve the quality of the educational and campus experience we offer all students. This will require a substantial investment of resources...." The group estimated that an investment of about \$7M (biennial) per 1000 additional students would be required to reach its stated enrollment goals, presenting a significant challenge.

In today's financial climate, this challenge is even more pronounced and the strategies more constrained. The Task Force assumes that some capacity to absorb additional graduate student enrollment currently exists. The basis for this assumption derives from a campus wide capacity survey conducted in 2000 by an Issue Group charged to develop graduate enrollment recommendations. The results of the capacity survey indicated that 439 (104 PhD and 335 master's) *additional* graduate students could be served given *no* additional resources. Therefore, the Task Force envisions that the 20% goal could be partially reached without new costs. However, 2-3 years into the plan, incremental costs would accrue as a result of the increase in graduate student enrollment.

- Encourage increased funding of graduate students through increased grant activity and the hiring of graduate research assistants instead of faculty research assistants on grant funds.
- Increase the number of externally funded graduate fellowships.
- Increase the minimum graduate assistant appointment from 0.20 to 0.30 by 2013-14, or as close to 0.49 as possible, in order to attract the highest quality graduate students.
- Establish the ability to make multiple-year offers to enhance success in recruiting graduate students.
- Increase efforts to improve graduate student retention and completion rates.
- Maximize the use of tuition remission budgets to leverage external funds that support graduate students.
- Develop incentives to reward programs for increasing graduate enrollments.
- Provide centralized assistance and support for enhancing program level recruiting campaigns with focus on web based approaches.
- Offer a lower tuition rate at later stages of doctoral work.
- Develop more graduate programs that use hybrid delivery mechanisms combining face-to-face and online approaches.

| Table 1. SWOT Analysis | | | | |
|--|--|--|---|---|
| TOPIC | STRENGTHS | WEAKNESSES | OPPORTUNITIES | THREATS |
| Professional Science Master's Degree (PSM) | Already have 4 PSM degrees and initiative is underway through OUS to establish a statewide PSM initiative as in CA and NY. OSU will play major role. | Lack of visibility/marketing of existing PSM degrees at OSU. | \$15 million will be available from NSF to support PSM program development. | Reluctance of faculty in sciences to embrace this approach to graduate science education. |
| Financial climate | OSU is a land grant, research university where graduate education is central to the mission. | | Short-term stimulus dollars will be available from NSF and NIH that could support graduate students. | Budget cuts. Will the financial crisis impact graduate student stipends? |
| | | | New GI Bill benefits will support graduate study. | |
| Graduate curriculum | OSU offers many graduate programs in fields with high demand (eg, engineering, teaching, etc.). | | Oregon needs a highly educated workforce; workforce development acts such as the federal "Trade Act" program funding for students.
http://www.doleta.gov/tradeact/ | |
| Research infrastructure | OSU has world class research facilities (e.g. Wave Lab) to support graduate study. | | Proposed increase in sustainable energy due to Federal stimulus | |
| Diversity | | There is a lack of diversity within the OSU/Corvallis community. | The "Obama Effect" may have positive effect on recruitment of diverse populations. | Budget cuts may negatively impact our ability to aggressively recruit under-represented students. |
| Reputation/ ratings | OSU offers top ranked graduate programs in agricultural sciences and conservation biology. | OSU lacks strong reputation outside of region (except in a few areas). | Jane Lubchenco's appointment to NOAA will be a reputation boost. | |

| | | | | |
|--------------------------|---|--|--|---|
| Curricular offerings | | Some OSU graduate programs overlap with offerings at other OUS campuses. | | |
| Infrastructure | The existing structure for web delivery (E-campus) is well developed. | | Increased opportunities for funding in human sciences research are anticipated. | |
| Economic crisis | | | The economic crisis may drive people to graduate study. | Budget cuts may cause loss of essential faculty and staff. Currently OSU is in a hiring "freeze." |
| Student support | | OSU faculty do not consider graduate students 'cost effective and tend to hire postdocs | | |
| Public Health | OSU offers the only PhD program in Public Health in Oregon; there is a strong Oregon MPH Program. | That OSU has no school/college of public health is a funding and recruitment disadvantage. | There is a need for a school of public health and additional graduate offerings in Oregon since the only schools are located at UW, California and Arizona. | No funds to support this initiative. Pressure from OHSU and PSU. |
| International | | | Iraqi government plans to send students to study abroad (10,000 students per year for five years, approximately 30% at graduate level). | |
| Technical infrastructure | | Administrative functions through Banner are inflexible and not responsive to quick changes. This hinders our ability to move swiftly when opportunities arise. | The budget situation could be an opportunity to begin dialogue about need for adequate technical staffing and infrastructure at OSU. (Banner as an Enterprise Resource Planning [ERP] is not the root of the problem). | |

| | | | | |
|---|--|--|--|--|
| Graduate programs in social sciences and humanities | | OSU is limited in offering graduate programs in the social sciences and humanities. | New programs in social sciences and humanities could be developed. | New graduate programs in social sciences and humanities at OSU may not receive OUS approval. |
| Graduate programs in business | | Are there fewer tenured professors in business? OSU is not located in an urban setting attractive to MBA students. | The INTO pathway program could double the number of MBA students. | UO offers the MBA and the PhD in business. |
| Faculty capacity | Not all graduate faculty members are as engaged in graduate education as are others. | Our PhD student to graduate faculty ratio is 1:1 compared to our peers that are 1:2+. | | |

1. Program Overview

a. Proposed CIP number: 03.0201

b. Brief overview of the proposed program, including description of the academic area and a rationale for offering the program at this time

Managing natural resources is a complex problem involving production, ecological, social, economic and ethical systems, which affect and, in turn, are affected by the others. The proposed Master of Natural Resources (MNR) degree is designed to engage university scientists and world-wide natural resource professionals in a process that integrates diverse perspectives about natural resource situations at the state, regional, national, and international levels. The MNR degree will assist agency and industry personnel meet their self-improvement goals. It will be helpful to anyone looking for an advanced degree in natural resource management, especially people with at least two years of experience in a natural resource disciplines.

The proposed 45-credit MNR curriculum is organized into three sections: core (18 credits), area of emphasis (18 credits), and capstone project (9 credits). It will be taught as a distance, on-line curriculum, although it may be possible for some students to work toward the MNR degree while in-residence at Oregon State University (OSU). Most of the courses proposed for the MNR degree are already taught both in-residence and online, although some modification to certain in-residence courses will be necessary for them to be included in the proposed on-line curriculum. In addition, courses from the Natural Resources Distance Learning Consortium (Appendix E) can be used to augment courses currently taught through OSU Extended Campus (Ecampus). Faculty members listed below already teach online courses at OSU and will be asked to serve on the Graduate Faculty of this degree program. The MNR degree will be offered as a non-thesis option only, similar to a Master of Business Administration, Master of Agriculture, or Master of Forestry.

The MNR degree will facilitate learning by natural resource professional men and women who work in settings that require integrating multiple disciplines to find solutions to natural resource issues. There is an increasing recognition that natural resource problems are multifaceted. Thus, current disciplinary-based thinking must be complemented with knowledge about, and experience with, additional ways of framing and resolving problems. This type of learning methodology is not common in modern in-residence, university teaching, so pedagogical techniques that bring together new ideas, methods, and ways of thinking must be developed and tested. We intend to integrate multiple disciplines through the curriculum, assignments, and case study projects tailored to the student's own design, student work groups and mentors, and evaluation of instruction. Students achieving the MNR degree will integrate concepts and approaches developed throughout the entire program into a final case study project. Students also will learn about the various disciplinary components that make up a natural resource problem and the solution to it.

None of the programs offered by the Oregon University System (OUS) provide for a graduate-level curriculum in natural resources. Most programs that address issues and questions of natural resources are at minimum two-year degrees that require a thesis. The intensity, breadth, and

integrative components of the proposed MNR make this a unique effort to OSU and within the OUS.

We base the need for the Master of Natural Resources degree on correspondence and inquiries from students about the Sustainable Natural Resources (SNR) Graduate Certificate. The SNR Graduate Certificate is an 18-credit program developed by OSU professors through grant funding from OSU Extended Campus. In the single year since SNR courses were offered in winter 2007, it successfully attracted graduate students from government, industry and the private sector, and inquiries from potential students in 31 states and 25 countries. Currently, there are 26 students enrolled in the SNR courses and 18 enrolled in the Certificate program. In addition there have been 154 inquiries to Ecampus and 54 additional inquiries to the College of Forestry about the Certificate. Most of these students inquire about further training such as an on-line Master of Natural Resources degree. At this time there is no degree at OSU that satisfies this request, and only four online MNR programs exist in the entire country. Thus the intent of this proposal is to assist OSU in filling this instructional gap.

The combination of university personnel and other state-wide support puts OSU in a unique position to sponsor an MNR degree. For example, OSU is internationally recognized for its Land Grant University extension, research, and teaching in natural resources and ecology, as well as its National Sea, Space, and Sun Grant Programs. In addition, the State of Oregon is one of the first in the U.S. to implement forest practices laws, environmental protection, and comprehensive statewide land use planning legislation. Oregon Department of Forestry was the first state agency to use the Montreal Process Criteria and Indicators sustainability framework to assess the status of forestlands across the state.

c. When will the program be operational, if approved?

If approved, the program will become operational in fall 2010. We will begin promoting the Master of Natural Resources degree as soon as we receive its approval. The first student will graduate from the program during academic year 2011-2012.

2. Course of Study

a. Briefly describe the proposed curriculum

The MNR curriculum is organized into three main sections: core (18 credits), area of emphasis (18 credits) that may be one of the Graduate Certificates at OSU, and capstone project (9 credits), following the format of the highly successful undergraduate degree in Natural Resources. According to the Graduate School Policy, 50% of the courses in the MNR degree program will be stand-alone graduate courses. The MNR will be taught as a distance education, on-line curriculum with the core area divided into four sections: overview/introduction (3 credits), ecology/production (6 credits), human systems (6 credits), and methodology (3 credits). Most of the courses listed below are taught in-residence as well as online. Students enrolled in the MNR degree may take courses in either manner, online or in-residence, depending on their location and personal situations.

Table 1: Overall Programmatic Framework*

| MNR SECTIONS | THEMES | | | |
|--------------------------------------|--|--------------------|--------------------------------------|------------------|
| | Overview/
Introduction | Ecology/Production | Human Systems | Methodology |
| Core (18 credits) | <i>3 credits</i> | 6 credits | <i>6 credits in 3 or more areas:</i> | <i>3 credits</i> |
| <i>provides breadth</i> | | | Economics | |
| | | | Policy | |
| | | | Sociology | |
| | | | Ethics | |
| | | | Communication | |
| Area of Emphasis (18 credits) | <i>May be a certificate:</i> | | | |
| | Geographic Information Systems (GIS) | | | |
| | Marine Resources Management (MRM) | | | |
| | Professional Science Masters (PSM) | | | |
| | Sustainable Natural Resources (SNR) | | | |
| | Water Conflict Management and Transformation (WCMT) | | | |
| | Fisheries Management | | | |
| | <i>Or no certificate – student designs option</i> | | | |
| Capstone Project (9 credits) | Master's Case Study** Choose one option:
<i>Option 1: 9 credits of MNR 506</i>
<i>Option 2: 6-7 credits of MNR 506 plus 2-3 credits from an Independent Study Project or internship that was completed as part of an 18-credit graduate certificate.</i> | | | |

* See Table 2 (below) for course offerings

** Nine total credits of Capstone Project are required. If the Area of Emphasis chosen by the student is a graduate certificate that includes a Capstone Project. Up to 3 credits from a certificate may be used to satisfy an equivalent number of credits of the required 9 credits of the MNR Capstone Project. The remaining 6–8 Capstone Project credits must be satisfied by MNR 506 (Table 4). If option 2 (above, Table 1) is chosen, the student must take an additional Core course to make up for the substituted 1–3 credits (so that the Certificate Project or Internship credits will not be counted twice toward the 45 credits required for the MNR degree).

Table 2: MNR Curriculum by section (Core courses, area of emphasis, and Capstone Project)

| CORE COURSES (18 credits from three thematic areas) Provides breadth. <i>Must be courses that are not already being used to satisfy units in area of emphasis.</i> | | | |
|---|---|---------|----------------|
| THEME: Overview/Introduction (3 credits) | | | |
| Course | Title | Credits | Offered online |

Student Advising

As a graduate degree program, every student enrolled in the MNR must have a Graduate Advisory Committee (GAC) to determine a course of study. The student's graduate advisory committee will consist of the MNR Director/Advisor, a professor from the student's chosen area of emphasis and one other professor, reflecting either breadth (core area) or depth (area of emphasis) of the student's curriculum. The faculty member directing the student's area of emphasis would serve, in most cases, as the student's primary advisor/mentor.

The GAC will meet on-line at the beginning of the student's academic program to establish a viable study plan (list of courses). The GAC also will meet on-line at least once more at the

conclusion of the degree to discuss the merits of the MNR capstone project that will be submitted by each student.

Successful completion of a final oral examination is required for all master's degrees (Graduate Catalog: Policies Governing Master's Degree Programs). Students are required to meet at Oregon State University for this examination with his/her GAC to defend the course of study and Capstone Project.

Admission Requirements

For admission, students will be required to have earned at least the equivalent of a Bachelor of Arts (B.A.) or Bachelor of Science (B.S.) in one of the following areas of study: natural and life sciences, natural resource management, forestry, agriculture, fisheries, wildlife, environmental studies, environmental sciences, public policy, or social sciences. College transcripts will be required as part of the admission process. This course-work grounding will make it feasible to master material in the other areas of study.

Graduate credits earned at OSU prior to admission to the MNR program may be applied toward the MNR degree as transfer credits if they meet the requirements outlined in Table 2 and comply with current OSU Graduate School credit transfer policies.

In addition, it will be necessary for students to have worked professionally for at least two years in one of the following areas: natural resource management, natural resource policy, environmental science, or environmental policy. Professional experience serves two purposes. First, experience gives each student a real-world background that will be useful to place the academic material in context and can be shared with other students to contribute to the overall learning experience. Second, each student will be required to use his/her experience to develop a Capstone Project, the completion of which is a degree requirement (page 8). A description of each student's professional experience will be required for admission.

Domestic students will be required to submit GRE scores, and international students will be required to submit both GRE and TOEFL scores for admission, along with at least two letters of recommendation. Students will be selected for admission by a three-person admission committee consisting of the MNR director and two other faculty members.

b. Describe new courses, include course numbers, titles, credit hours, and course descriptions

We have introduced four new courses in the MNR curriculum, this includes: (i) MNR 5XX Introduction to Sustainable Natural Resources (3 credits), (ii) FES 5XX Below-ground Ecosystems (3 credits), (iii) FES 5XX Carbon Sequestration in Forests: Principles, Policy, and Possibilities (2 Credits) and (iv) MNR 506 Master's Case Study (9 credits). Funding for the development of these courses and modifications of other courses for online instruction are funded through an MOU with Ecampus (Appendix F).

MNR 5XX Introduction to Sustainable Natural Resources (3 credits)

Prerequisite: Bachelor's degree. Undergraduate biology or ecology course recommended.

This is an introductory overview course and a degree requirement for all students seeking a Master of Natural Resources degree. It should be taken during the first term that a student enrolls in the program.

Course Content – Goals and Objectives

The purpose of this course is to present students, regardless of their disciplinary background, with an overview of the interdisciplinary aspects of natural resource management. We will discuss concepts and principles related to the economic, environmental, social, cultural, ethical, and policy components of resource management, and evaluate different methods of balancing competing interests in order to manage natural resources sustainably. We will examine global natural resource issues and international collaborative efforts to address them, through the lens of sustainable development. Key drivers of natural resource policy and key stressors of natural resources and ecosystems will be analyzed. The course will conclude with an analysis of the role of ethics, social justice and communication in the management of natural resources, and an overview of graduate certificate programs available within the MNR degree. Through this multifaceted introduction, students will discover a particular area of emphasis on which they would like to focus during their MNR degree.

Measurable Student Learning Outcomes

By the end of MNR 5XX, students will demonstrate their ability to:

- Identify and characterize multiple aspects of sustainable natural resource management
- Analyze key drivers of natural resource policy and key stressors on natural systems
- Evaluate methods of balancing competing interests in natural resource management
- Comprehend the complexity of global natural resource issues, international collaboration and the role of natural resource management in sustainable development
- Analyze ethical aspects and broad social impacts of natural resource management decisions.

Student mastery of the above outcomes will be demonstrated through weekly substantial and thoughtful reflections on assigned readings (e.g. five 2 – 3 page papers posted on the on-line discussion board and thoughtful weekly responses to other students' postings), and submission of a term paper (12 – 15 pages) that integrates the concepts and principles presented throughout the course and applies those principles to an analysis of a current natural resources management issue. Grades will be based on quality of writing, organization of ideas, understanding of basic concepts and principles, and ability to extend beyond what is currently known or thought.

FES 5XX Below-ground Ecosystems (3 credits):

Prerequisite: Undergraduate-level Biology or Ecology.

This course describes the physical and biological components of below-ground ecosystems and their interactions. It examines the relationships between producers and decomposers in the soil. The main topics of the course are briefly described below:

Soil food web. Examines producer and decomposer organisms and their relationships in different soil systems. The role that soil microorganisms play in the carbon flow of below-ground ecosystems is analyzed. Stability between producers and consumers is essential in any terrestrial ecosystem. Competition for carbon sources among consumers regulates the stability of their populations.

Vegetation and soil processes. Plants are the major energy (carbon) producers that sustain the heterotrophic microorganism populations in the soil. Plant species diversity influences the type of soil microorganisms present in the soil. Nitrogen fixation, mycorrhizal activities and decomposition depend directly on the above-ground plant communities.

Function of soil biological diversity. Diversity of soil microorganisms provides resiliency to below-ground ecosystems. All microorganism species have an ecological niche that is essential to maintain the soil processes in the ecosystem. Population fluctuation of any species may affect the soil processes in time and space but their function could be sustained by other species with similar niches.

Land use and its effects on soil processes. Diverse human activities may modify soil processes and cause instability of soil ecosystems. The degree to which soil processes are affected depends on the severity and length of disturbance. Both agriculture and forestry practices have short- and long-term effects on soil ecosystems. Populations of soil microorganisms undergo constant fluctuations that affect the above-ground vegetation and the soil physical properties, thereby changing the landscape.

FES 5XX Carbon Sequestration in Forests: Principles, Policy, Possibilities (2 Credits).

Prerequisite: Undergraduate-level Biology or Ecology.

In this course we will examine the processes controlling the sequestration of carbon in the forest system including the forest itself and wood products. We will also examine how forests can be managed to sequester carbon as well as the important economic, policy, and other constraints. Lectures, readings, discussion, simulation models, and home work will be used to cover the material.

Topics included will be: 1) the importance of the carbon cycle and relevance to global change; 2) how the carbon cycle works at different time and space scales; 3) how the carbon cycle is measured at different time and space scales; 4) parts of the forest carbon cycle; 5) Use of simulation models; 6) manipulating the store of carbon in forests; 7) scaling, and uncertainty specific to the carbon problem; 8) economics of forest carbon sequestration; 9) policies to manage forest carbon sequestration.

The objective of each part of course:

Readings will be diverse, covering the basic carbon cycle (biological and geological); the impacts to climate, ocean, terrestrial, and social systems; how these systems function in controlling the carbon cycle; and policies to manage forest carbon sequestration. In addition to learning about the topic, reading will help the student develop skills to read quickly.

Lectures will provide the needed background to understand the readings and begin thinking about how the carbon cycle can be managed.

Online discussions will be used to build skills to summarize and critique key science findings. Students will be graded on their ability to articulate the subject matter and participate in an interesting discussion.

Homework, aside from reading, will help students think through important issues and understand the basics of modeling and uncertainty analysis. Student also will use of a simple, but integrated model to test ideas about carbon sequestration in forests.

A final report allows the student to integrate the information from lectures, discussions, readings, and laboratory and homework into a coherent analysis of a problem. The grade will be based on the quality of the writing, organization of the report, understanding of basic principles, and ability to extend the problem beyond what is currently known or thought.

Learning outcomes:

After completing this course students will be able to:

Describe the major global changes associated with increased atmospheric carbon dioxide and other greenhouse gases and identify key uncertainties and risks.

Describe the global carbon cycle and recognize the differences between the biological and geological carbon cycle.

Describe the elements of the carbon cycle ecosystems (stands), landscapes, and global scales as well as describe in general terms how each is measured and what its major controls are.

Design experiments to test the effect of alternative management systems on carbon sequestration

Integrate the policy, economic, and ecological constraints on dealing with the carbon cycle.

MNR 506 Master's Case Study (9 credits):

Course description: Students will identify an important natural resource problem within their country, region, or organization, and a particular area of land, water, or a wildlife species/habitat for which the problem is especially significant. Students will learn to pose, frame, and analyze the various components of the problem and, at the end of the term, present possible resolutions.

Approach: After approval of a natural resource problem by the Program Director/Advisor, students will identify a faculty mentor from the pool of MNR instructors who have agreed to serve as mentors. List of faculty; pages 17-21. The mentor will assist the student in posing, framing, and analyzing the natural resource problem. Students must work through a set of eight weekly assignments relating to course instruction and reading material to assure that satisfactory progress is made throughout the term. The class will discuss and provide feedback with each

other, professors and mentors on each assignment and the overall case study project. Thus students will learn about other natural resource problems and issues while working on their own project. A final written report must be submitted to the faculty mentor and Program Director/Advisor at the end of the term.

Learning outcomes

- Develop a practical case study in sustainable natural resource management.
- Develop a procedure to implement the case study by the student's organization or agency.
- Incorporate principles, concepts, and approaches learned throughout the entire curriculum.

Final Examination

Successful completion of a final oral examination is required for all master's degrees (Graduate Catalog: Policies Governing Master's Degree Programs). Students are required to meet at Oregon State University for this examination with his/her Graduate Advisory Committee to defend the course of study and Capstone Project (MNR 506).

c. Provide a discussion of any nontraditional learning modes to be utilized in the new courses, including, but not limited to: (1) the role of technology, and (2) the use of career development activities such as practica or internships.

The MNR degree is envisioned to be on-line, although some students may opt to take some of the listed classes in-residence. Thus we expect a high level of use of on-line teaching technologies in each of the four new courses (FES 5XX, FES 5XX, MNR 506, MNR 511) as well as in the existing courses which comprise this degree program. In addition, the development of the new MNR 506 course (above) will provide practical experience and the opportunity for students to prepare a work plan for resolving natural resource problems. This Capstone Project portion of the MNR degree may be completed as a practicum or internship which will help students hone their skills in addressing real-world problems faced by land managers.

The MNR 506 Master's Case Study project (Capstone Project) is a problem-solving experience. It will be conducted by all Master of Natural Resources students as the capstone of their academic program at Oregon State University. Case study projects provide students with experience that approximates a future work environment while also providing client organizations with solutions to complex natural resource issues and useful products. This project focuses the substantial capabilities of our students and faculty on real-world natural resource problems faced by agencies, institutions, and organizations. Project ideas may be generated by faculty, students, or the student's organization or agency.

d. What specific learning outcomes will be achieved by students who complete the course of study?

The proposed MNR degree is an integrated curriculum with courses, a case study, and readings coordinated throughout the Program by the MNR Director/Advisor. Students will work on a Capstone Project throughout the MNR course of study with a graduate committee (GAC)

consisting of the MNR Director/Advisor or designate and two faculty mentors who will help each student frame and analyze a problem important to his/her country, organization, or region. The experience of students working on similar but separate natural resource problems is an important integrative aspect of this degree. Each student will come to the MNR degree with an idea for the degree project from his/her home organization or country (see MNR 506 above). Students will also learn about case study methods, provide written progress updates, and make a final report that will be available to the entire MNR degree membership. Specific learning outcomes for the overall MNR degree include:

- Demonstrated skill in integrative thinking and collaborative learning across several disciplines within the natural resource professions.
- Familiarity with a wide variety of disciplinary knowledge and capacity to apply knowledge to natural resource problems at multiple scales.
- Ability to construct a study project about a specific policy issue using multiple data collection techniques, cross-disciplinary interactions, and integrated analysis methods.

e. Is there a maximum time allowed for a student to complete this program? If so, please explain.

There is no maximum time allowed to complete the MNR degree, other than the seven year limit already imposed by the Graduate School. We expect that full time students could complete the program in about two years (six academic terms, excluding summer term).

3. Accreditation of the Program

There is currently no organization that accredits this type of degree. There are some organizations that accredit traditional disciplines in the Natural Resources, such as the Society of American Foresters and Society of Range Management. However, these organizations are highly disciplinary in orientation and commonly review entire departments or colleges, rather than only components of them.

a. If applicable, identify any accrediting body or professional society that has established standards in the area in which the proposed program lies.

NA

b. If applicable, does the proposed program meet professional accredited standards? If it doesn't, in what particular area(s) does it appear to be deficient? What steps would be required to quantify the program for accreditation? By what date is it anticipated that the program will be fully accredited?

NA

4. Evidence of Need

- a. What evidence does the institution have of need for the program? Please be explicit. (Needs assessment information may be presented in the form of survey data; summaries of focus groups or interviews; documented requests for the program from students, faculty, external constituents, etc.).**

Conversations with professionals from around the country and with current and prospective students in the Sustainable Natural Resources Graduate Certificate alerted us to the need for the MNR degree at Oregon State University. There were 154 inquiries to Ecampus about the Graduate Certificate in 2007 and 2008. In addition, there were 54 queries to the College of Forestry (CoF) as of November 2006. Most potential students inquiring to CoF ask about the availability of an online Master of Natural Resources degree. Currently, there is no online MNR degree at OSU. Only four institutions in the U.S. offer degree programs that are similar to this proposal: Virginia Polytechnic Institute and State University, University of Idaho, Utah State University and Texas A&M University.

With this background information, we conducted three meetings with faculty representatives from the Colleges of Agriculture, Forestry, Liberal Arts, and Science, and Departments of Agricultural and Resource Economics, Fisheries and Wildlife, Rangeland Ecology and Management, Environmental Science, Forest Science, Geoscience, Sociology, and Marine Resource Management about the development of an MNR degree at OSU. These meetings took place on August 6, 20, and 27, 2007 (Appendix C). There was unanimous support for an on-line offering of the MNR. However some concerns were expressed by two faculty members about offering a new in-residence degree at OSU (Appendix C).

We also discussed our proposed MNR degree with eleven representatives of the Natural Resources Distance Learning Consortium who participated in the 7th Biennial Conference on University Education in Natural Resources (held in Corvallis on March 13-15, 2008). Present were educators from California State University at Sacramento, Mississippi State University, North Carolina State University, Northern Arizona University, Stephen F. Austin State University, The Pennsylvania State University, University of Idaho, University of Montana, University of Tennessee at Martin, Utah State University, Virginia Polytechnic Institute and State University, and Washington D.C. offices of the U.S. Forest Service, Bureau of Land Management, and U.S. Army Corps of Engineers, as well as Oregon State University (Appendix D). There was overwhelming support for this degree, especially online, by the representatives of these organizations. The Washington D.C. representatives of USFS and BLM spoke convincingly of the immediate need for an advanced degree in Natural Resources or a related discipline to be available to federal employees working in natural resource fields (Appendix D).

In addition, we discussed the Master of Natural Resources online degree program with Dr. Melaku Bekele, Dean of the Wondo Genet College of Forestry and Natural Resources at Hawassa University in Ethiopia (Appendix D). He believes that the online MNR program would be a very valuable resource for his faculty and for other natural resource professionals worldwide who cannot afford to come to the United States to attend an in-residence advanced degree program. He offered to facilitate further collaboration between OSU, USAID and Wondo Genet College of Forestry and Natural Resources.

b. Identify statewide and institutional service-area employment needs the proposed program would assist in filling. Is there evidence of regional or national need for additional qualified individuals such as the proposed program would produce?

Increasingly, natural resource management practices are being certified through third party organizations, which define operational indicators of sustainability, productivity, or risk and then help organizations find ways to assess progress towards such goals. There is a need in both certification organizations and natural resource agencies/companies for individuals who understand the complexity of natural resource systems in order to determine the impacts of current and planned management practices. Oregon's continued leadership in natural resource management will require individuals with the knowledge, experience, and networks that can be gained from degree programs such as the proposed MNR. Also see 4a (above) and Appendix D.

c. What are the number and characteristics of students to be served? What is the estimated number of graduates of the proposed program over the next five years? On what information are these projections based?

The MNR degree is designed primarily for people working in the disciplines of natural resource management, natural resource policy, environmental science, or environmental policy. We expect to enroll about 20 students per year, after an initial lag time of 2 to 3 years during which time enrollments will build. This expectation is based on current Ecampus and CoF inquiries about the SNR Certificate and availability of a master's degree in natural resources (Appendix D). Without the MNR degree, it is unlikely that these professionals would attend OSU, since all indicate that they are locked into a location or level with their agency or company. It is therefore impossible for them to physically move, even for one term. All existing in-residence graduate programs at OSU and other institutions require a minimum of two years to complete.

d. Are there any other compelling reasons for offering the program?

There is increasing recognition that natural resource problems are multi-faceted and complex; current disciplinary-based thinking must be complemented with knowledge about and experience with additional ways of framing and resolving problems. The MNR is designed to facilitate the learning of all students, especially professionals, who must work in settings that require the integration of multiple disciplines and viewpoints in order to find solutions to natural resource issues. This type of learning situation is not common in the modern university. This MNR is designed to integrate multiple disciplines through curriculum requirements, assignments, a case study project of the student's own design, and evaluation of student work by mentors, professors and other students.

e. Identify any special interest in the program on the part of local or state groups (e.g., business, industry, agriculture, professional groups).

Conversations and informal correspondence with forest certifiers, nonprofit organizations, companies and educational organizations strongly support development of this MNR degree at OSU. This effort is perceived as building on and extending existing strengths of OSU into educational areas, i.e. natural resource sustainability, currently not addressed by other institutions. Students that have inquired about the SNR Certificate and represent potential

students for the MNR degree are listed in Appendix D. Other people with whom we have specifically discussed this degree are also included in Appendix D.

f. Discuss considerations given to making the complete program available for part-time, evening, weekend, and/or place-bound students.

With the development of the MNR degree through Extended Campus, part-time, evening and weekend professional non-residents, as well as residents, will have the opportunity to participate in the program while continuing with their careers and family commitments.

5. Similar Programs in the State

None

a. List all other closely related OUS programs.

None of the programs offered by the Oregon University System provide for a graduate level curriculum that appeals to or can be completed by working professionals. The intensity, breadth and integrative components of the proposed MNR graduate degree program are a unique effort to OUS.

b. In what way, if any, will resources of other institutions (another OUS institution or institutions, community college, and/or private college/university) be shared in the proposed program?

All of the resources required for the MNR degree are located at Oregon State University. However, it is possible that some on-line students may wish to access information at other colleges or universities in the state, or elsewhere, for example through the Natural Resources Distance Learning Consortium (Appendix E).

c. Is there any projected impact on other institutions in terms of student enrollment and/or faculty workload?

There is no projected impact on other institutions because all of the resources required for the proposed Graduate Program are located at OSU. All of the proposed courses already exist with the exception of four new courses, and seven that require some modification for on-line delivery.

6. Resources

a. Identify program faculty, briefly describing each faculty member's expertise/specialization. Separate regular core faculty from faculty from other departments and adjuncts. Collect current vitae for all faculty, to be made available to reviewers upon request.

Core Faculty – Coordinating Committee

Badege Bishaw, Ph.D. (Instructor, Forest Ecosystems and Society) specializes in agroforestry, sustainable forestry, and international forestry. His major project work includes agroforestry and international forestry teaching, research, and outreach in Ethiopia, South Africa, Kenya and Ghana. He served as Director of the International Programs for the College of Forestry, Oregon State University from 2004- 2007. He has been a core team member of the Sustainable Forests Partnership at OSU since 1994, and Vice President for the national Sustainable Forests Partnership (2006 – present). He was co-director of two USAID-funded Higher Education Partnerships between Oregon State University and South African and Ethiopian universities and research institutions. Through these collaborative efforts he has developed a curricula for Agroforestry and Natural Resource education, research and outreach programs in South Africa and Ethiopia. He teaches courses in International Forestry and Planning Agroforestry Projects.

Paul S. Doescher (Professor, Forest Ecosystems and Society) has taught at Oregon State University since 1982. Currently, he is Director of the Undergraduate Natural Resources Degree Program and President-elect of the OSU Faculty Senate. His current research emphasizes ecology and restoration of native species on arid and forest ecosystems subjected to wildfire and invasion by exotic plants. Past research has focused on physiological ecology of rangeland and forest species and reforestation of southwest Oregon forests. Currently he teaches courses in Natural Resources, Forest Ecology and Ecological Restoration. Past coursework included coursework in Rangeland Management, Arid Land Plants, Arid Land Biomes and Arid Land Plant Physiology.

Steven Radosevich (Emeritus Professor, Forest Ecosystems and Society) is also Adjunct Professor of Crop and Soil Science and of Philosophy at Oregon State University. He is the author of the only textbook on the ecology of weeds and invasive plants (3rd edition), over 150 scientific papers, and a book of essays about farming, forestry and family in the Pacific Northwest. His current research includes population biology and ecology of invasive plant species, influence of humans on plant succession, forest restoration, and the ethics of natural resource development. He established the OSU Sustainable Forestry program in 1995. His teaching includes the graduate course in Biology of Invasive Plants and the on-line overview and capstone courses in Sustainable Natural Resources (SNR).

Graduate Teaching Faculty

The graduate faculty for the MNR program will consist of faculty currently teaching online graduate courses that are relevant to the MNR program (Table 5). We contacted each person listed in Table 5 to affirm his/her interest in being a graduate faculty member of the MNR degree and inform the Graduate School of positive responses when this Category I proposal is approved.

A list of courses for the proposed MNR degree is provided on pages 5 through 8 of this proposal. Each of these courses is currently taught at OSU, and most of them are already taught on-line by approved teaching faculty. All of these courses and instructors have approved Category II proposals and teach the courses as regular, permanent courses at OSU. Curriculum vitae for instructors are available.

This list of teaching faculty does not include names of all faculty teaching in the previously approved certificate programs listed in Table 1, which may be used to satisfy the Area of Emphasis as part of the MNR degree requirements.

Environmental Natural Resource Sociology, Water Conflict and
Dispute Resolution

Courtesy and Adjunct Faculty

Some adjunct faculty teaching in the online Certificates are included in this proposal for an MNR degree. Each of the courses and instructors teaching in the Certificate programs has been approved through the Category II process. In addition, faculty and other qualified personnel (e.g. agency or other university personnel) not teaching online course in the MNR may serve as Graduate Advisory Committee as proposed by the guidelines for graduate degrees (Graduate Guidelines)

Joe Kerkvliet, Adjunct Professor
Economics of Sustainable Natural Resources

Leon Liegel, Research Associate
Alternative Forest Products, Inventory & Monitoring

Jack Mortenson, Adjunct Professor
Wildlife Diseases

Mark Spence, Adjunct Instructor
Historical Landscape Ecology

Pam Van Londen, Adjunct Instructor
Computer science, technology and art

Program Administration

The MNR degree will be housed in the College of Forestry and administered by a committee consisting of its Director/Advisor and the Directors of each certificate (areas of emphasis for the MNR degree) because certificates are housed in various Colleges and Departments at OSU. In addition the Administrative Committee will be supplemented with two at-large members who represent colleges with a strong teaching component in the MNR degree. The Administrative Committee will meet annually and terms of appointment will be selected among its membership.

The Committee will submit an annual progress report to each participating College Dean and ECampus about student enrollment and financial status of the degree program. We expect the MNR program to be self-sufficient within 3-5 years.

- b. Estimate the number, rank, and background of new faculty members who would need to be added to initiate the proposed program in each of the first four years of the proposed program's operation. What commitment does the institution make to meet these needs?**

None

Program Funding: This degree will be funding neutral or profitable for all colleges and departments in the program. A budget for the proposed MNR degree was developed by ECampus and the College of Forestry staff for the first four years of this degree program (Appendix A, Section A and C). This budget is based on the distribution of funds received from ECampus administration, tuition for online courses and projected fixed annual expenses (overhead) for a part time Director/Advisor and administrative assistant.

We propose that online course tuition be shared among the participating Departments or Graduate Certificates according to the present ECampus formula (Appendix A, Section C). All departmental participation for the degree is based on courses already taught online, we do not propose any revenue sharing among departments or colleges, other than that which already exists with ECampus. Thus, no MOU is required between College of Forestry and participating departments. In addition, ECampus administration will provide significant support up to self-sufficiency for the first three years of the Program (Appendix A, Section E, letters from Provost Randhawa and Interim Associate Provost King) since the MNR degree will benefit the entire OSU campus.

We expect tuition revenue to support overhead costs as the MNR degree builds momentum. ECampus will provide funding (Appendix A, Section E) to defray overhead costs during the initial three years of the degree program. This funding will continue until the degree program reaches financial self-sufficiency based on enrollment-generated revenue. The MNR degree is expected to be self-sufficient from student online tuition within 3 years (Appendix A, Section A and B). Twenty students taking 12 credits of MNR only courses or 13.28 students taking 18 credits of COF and MNR courses are necessary to break even (see appendix A, Section A and B). The MNR Program will be housed in the College of Forestry and the revenue generated from COF and MNR courses will flow to the college for program administration and instructor pay. Short-term funding for administrative costs of the MNR degree is supported by ECampus administration, online tuition and the College of Forestry.

The campus benefit from this degree program is expected to be \$6,714 (\$149.20 X 45 credits) for every student that completes the degree.

- c. Estimate the number and type of staff support needed, if any, in each of the first four years of the program.**

One 0.25 FTE MNR degree Director/Advisor; we also propose one 0.20 FTE MNR degree clerical support (Appendix A, Section A)

Job Description MNR Director/Advisor

Coordinates the teaching and administrative activities of the MNR, chairs the MNR Administrative Committee, work closely with Ecampus and administers funding of the MNR program, chairs Admission committee, ensures quality and completeness of student course work and capstone project, sits on every student graduate committee and attends student defense of the capstone project. Prepares an annual progress report of the degree and submits it to the Deans of each college and Ecampus.

- d. Describe the adequacy of student and faculty access to library and department resources (including, but not limited to : printed media, electronically published materials, videotapes, motion pictures, CD-ROM and online databases, and sound files) that are relevant to the proposed program (e.g., if there is a recommended list of materials issued by the American Library Association or some other responsible group, indicate to what extent access to such holdings meets the requirements of recommended list).**

All facilities are present at OSU or on-line and are adequate.

- e. How much, if any, additional financial support will be required to bring access such reference materials to an appropriate level? How does the institution plan to acquire these needed resources?**

No additional funding is needed. The MNR is expected to be self-sustaining from tuition within 2 to 3 years after its initiation (Appendix A).

- f. Identify any unique resources (in terms of buildings, laboratories, computer hardware/software, internet or other online access, distributed-education capacity, special equipment, media, and/or other materials), beyond those now on hand, necessary to offer this program. How does the institution propose that these additional resources will be offered?**

None. However, During the time this proposal was being prepared, the College of Forestry was reorganizing into three departments. The former Department of Forest Science has been combined with part of the former Department of Forest Resources, which are now called the Department of Forest Ecosystems and Society, effective July 1, 2008. For any references to Forest Science or Forest Resources in this proposal, please substitute Forest Ecosystems and Society (FES). For example, course names beginning with FS or FOR have not been changed as of December 2008, so for now the list of courses for the MNR degree uses the designators FS and FOR.

Appendix A – Budget and Financial Planning

Proposed Administrative Expenses for MNR degree

A. *Proposed Administrative Expenses*

| Position | Expense (\$/year) |
|---------------------|--------------------------|
| Director | |
| FTE (0.25) | 13,866 |
| OPE (@52%) | 7,210 |
| Clerical support | |
| FTE (0.2) | 9,352 |
| OPE (@ 56%) | 5,236 |
| Total | 35,664 |
|
Ecampus support |
-30,000 |
| Total | 5,664 |

- B. **Break even enrollments.** The break even calculation described here is based on the Ecampus funding model. Ecampus tuition revenue is shared across three campus segments in an 80-10-10 split, allocated to the academic department-Ecampus-Central Administration respectively. Tuition is set in alignment with main campus tuition (see Section C for details).

Break even enrollments described (below) assumes 4 years (12 academic terms) to complete a degree. When each student takes only 12 required MNR credits plus 33 credits from other online courses (Tables 2, 3 and 4), only 3.17 new students are needed for the degree to meet the proposed administrative expenses (above) during the first three years. After 3 years 19.92 new students are needed each year to meet the proposed administrative expenses.

| Credits /student | # of students | revenue generated /year |
|--|----------------------|--------------------------------|
| 12 credits of MNR only during year 1-3 | 3.17 | 5,676.00 |
| 12 credits of MNR only after year 3 | 19.92 | 35,665.00 |

CoF and MNR Courses and Revenue

| Course | Title | Credits | \$/course |
|---------------|---------------------------------|----------------|------------------|
| MNR 5xx | Introduction to | | |
| | Sustainable Natural Resources | 3 | 447.60 |
| MNR 506 | Case Study | 9 | 1,342.80 |
| FS 548 | Biology of Invasive Plants | 3 | 447.60 |
| FES 5xx | Below-ground Ecosystems | 3 | 447.60 |
| FES 5xx | Carbon sequestration in forests | 2 | 298.40 |
| FOR 445 | Ecological restoration | 4 | 596.80 |
| FS 523 | Natural Resources data analysis | 4 | 596.80 |
| Totals | | 28 | 4,177.60 |

C. OSU Extended Campus Tuition Revenue Sharing and Instructor Pay

Academic Year 2009

The tuition revenue sharing model for Ecampus credit courses has been in place since Summer Term 2003. The college/academic department receives 80% of the tuition revenue generated by each course (separate from the distance education and technology fees) through budget transfers at the end of each term. The academic department can choose to both hire and pay course instructors directly or may elect to have Ecampus pay instructors who have been approved by the department. **The instructor wage and payroll benefit expenses processed by Ecampus are charged directly into indexes designated by each college.**

Instructors will be paid up to a maximum of 180 SCH per term (60 students in 3 credit courses; 45 students in 4 credit courses).

- The 180 SCH limit will be calculated per instructor, not per course.
- Pay rates will remain the same: \$55 per undergraduate SCH and \$85 per graduate SCH.
- These SCH can be a mix/match of undergraduate or graduate, but the maximum is 180 SCH.
- At 180 undergraduate SCH, the pay would equal \$9,900.
- If all 180 SCH were graduate level, the maximum pay would be \$15,300 (very unlikely due to lower enrollments in graduate courses).
- PEBB benefits (health insurance) will not be initiated by Ecampus pay. (180 SCH will be equivalent to 0.49 FTE)
- This 180 SCH cap will also apply to the maximum allowed for overload pay.

Fall 2008, Winter 2009, Spring 2009, Summer 2009 Ecampus Tuition

| Course Level
& SCH | OSU Tuition* | OSU Tuition X
80%
=
Department
Allocation | OSU Tuition X 10%
=
Program Inventory
Development | OSU Tuition X 10%
=
OSU Central
Administrative
Services |
|-----------------------|--------------|---|--|---|
| Undergraduate | | | | |
| 1 SCH | \$128 | \$102.40 | \$12.80 | \$12.80 |
| 3 SCH | \$384 | \$307.20 | \$38.40 | \$38.40 |
| Graduate | | | | |
| 1 SCH | \$348 | \$278.40 | \$34.80 | \$34.80 |
| 3 SCH | \$1044 | \$835.20 | \$104.40 | \$104.40 |

Graduate and undergraduate tuition rates are consistent with the published tuition rates for a single three credit course on both the Corvallis and Cascades campuses.

Students also pay a technology fee and a distance education fee. The Technology Fee is fee revenue to the OSU TRF fund. The Distance Education Fee covers items necessary to the delivery of distance courses such as the development and production of online and video courses, Blackboard licensing fee, financial and registration services, and online student services. The distance education fee replaces the fees that on-campus, resident students pay such as student health services, athletic fees, incidental fees, and residence building fees.

Under the Ecampus Revenue Allocation Model (ERAM), state budget dollars available to the College/Department will be based on BAM formula weighted values and the prior year SCH/FTE production of the program running through Ecampus. These state funds will be distributed to the College/Department as budget at the beginning of the academic year (i.e. Fall Term).

C. Natural Resources Masters Degree Budget Draft Derived From Existing Ecampus Funding Model

| | | | | | |
|--|--|---------------------|---------|-----------------|---------------|
| There are 117 graduate credits offered on-line available for the MNR degree. | | | | | |
| Under the current proposal there are 28 credits with the COF and MNR designator. | | | | | |
| Calculations per Ecampus - FY09 graduate tuition amounts | | | | | |
| Note: In addition to tuition, students also pay a technology resource fee - 1KR - (\$3 per credit) and a distance education fee (\$15 per credit). The Technology Fee is fee revenue to the OSU TRF fund. The Distance Education Fee covers items necessary to the delivery of distance courses such as the development and production of online and video courses, Blackboard licensing fee, financial aid registration services, and online student services. The distance education fee replaces the fees that on-campus, resident students pay such as student health services, athletic fees, incidental fees, and residence building fees. | | | | | |
| Income | | Tuition per one SCH | | SCHs per degree | per degree |
| | | 428.00 | | 28 | 11,984.00 |
| | | | | 28 | |
| Distribution per student credit hour (SCH) as follows: | | | | 28 | |
| | Academic Dept | 278.40 | | 28 | 7,795.20 |
| | OSU TRF fund | 5.80 | | 28 | 140.00 |
| | OSU Central Admin Prog. Inventory Develop. reserve | 34.80 | | 28 | 974.40 |
| | | 34.80 | | 28 | 974.40 |
| | EC Distance Ed. Fee | 75.00 | | 28 | 2,100.00 |
| | | 428.00 | | | |
| Academic Dept Distribution per SCH: | | | | 278.40 | |
| Less: Teaching Expense of 129.20 | | | | | |
| | Fac. Sal. | | | 85.00 | |
| | Fac. OPE per FS Dept. calculation | | | 44.20 | 0.52 OPE Rate |
| Net resources available to dept. per SCH after instructor pay | | | | 149.20 | |
| Fixed expense information provided by Forest Science Dept: | | | | | |
| | | | | 13,866.00 | 0.25 FTE |
| | | | | 7,210.00 | |
| | | | | 9,352.00 | 0.20 FTE |
| | | | | 5,236.00 | |
| | | | | 35,664.00 | |
| Annual overhead expense of \$35,664 / \$149.20 = Break-Even SCH of 239.04. | | | | | |
| 239.04 units (SCH) / 28 SCH = 8.53 full-time students completing the MNR program, if students take 28 credits of MNR and COF courses. | | | | | |
| Assumption 1: Tuition revenue for all COF and MNR courses (\$278.40/SCH) taken by MNR students will flow to the COF | | | | | |
| Assumption 2: Instructional expense (faculty salary & OPE) for COF and MNR courses taken by MNR students will be paid by COF | | | | | |
| The break-even number of MNR program student credit hours is 239.04 per year. | | | | | |
| Impact on net revenue with the following increase in students. Each student unit = 28 credits. | | | | | |
| Full-time students @ 28 SCH each: | | 10 | 20 | 30 | 40 |
| Net revenue to COF after fixed and variable expense: | | | | | |
| 100 % revenue flow to the College of Forestry | 77,952 | 155,904 | 233,856 | 311,808 | |
| 100 % instructor expense paid by the College of Forestry | 36,176 | 72,352 | 108,528 | 144,704 | |
| 100 % overhead expense paid by the College of Forestry | 35,664 | 35,664 | 35,664 | 35,664 | |
| Ecampus contribution | 30,000 | 30,000 | 30,000 | 30,000 | |
| Net to College of Forestry | 36,112 | 77,888 | 119,664 | 161,440 | |
| Modifications to Assumption 1 and 2 will change both the break-even point and the net revenue after reaching the break-even point. | | | | | |
| Assumption 3: Calculations below assume all fixed expenses are paid by College of Forestry (director and coordinator). | | | | | |
| Assumption 4: Years 2, 3, and 4 show projected program growth. | | | | | |
| Assumption 5: Tuition revenue and variable and overhead expense remains constant for this illustration. | | | | | |
| 5 full-time degree students @ 28 SCH = 10 half-time students | | Year 1 | Year 2 | Year 3 | Year 4 |
| 100 % revenue flow to the College of Forestry | | 38,976 | | | |
| 100 % instructor expense paid by the College of Forestry | | 18,088 | | | |
| 100 % overhead expense paid by the College of Forestry | | 35,664 | | | |
| Ecampus contribution | | 30,000 | | | |
| Net to College of Forestry | | 15,224 | | | |
| 10 full-time degree students @ 28 SCH = 20 half-time students | | | | | |
| 100 % revenue flow to the College of Forestry | | 77,952 | | | |
| 100 % instructor expense paid by the College of Forestry | | 36,176 | | | |
| 100 % overhead expense paid by the College of Forestry | | 35,664 | | | |
| Ecampus contribution | | 30,000 | | | |
| Net to College of Forestry | | 36,112 | | | |

C. Natural Resources Masters Degree Budget Draft Derived From Existing Ecampus Funding Model

| | Year 1 | Year 2 | Year 3 | Year 4 |
|---|--------|---------|---------|---------|
| 20 full-time degree students @ 28 SCH = 40 half-time students | | | | |
| 100 % revenue flow to the College of Forestry | | 155,904 | | |
| 100 % instructor expense paid by the College of Forestry | | 72,352 | | |
| 100 % overhead expense paid by the College of Forestry | | 35,664 | | |
| Ecampus contribution | | 30,000 | | |
| Net to College of Forestry | | 77,888 | | |
| 30 full-time degree students @ 28 SCH = 60 half-time students | | | | |

E. Communications with Provost Sabah Randhawa about MNR Budget January 30, 2009

From: Radosevich, Steven R.
Sent: Friday, January 30, 2009 3:43 PM
To: Randhawa, Sabah
Cc: Bishaw, Badege; King, Dave; Bradoch, Alfonso
Subject: RE: MNR Proposal

Good afternoon, Dr Randhawa. I am sorry to have not gotten back to you sooner. However, I am on campus infrequently anymore and I wanted to discuss this matter with Badege Bishaw first. We are into the first phases of the Category I approval process, particularly the Budgets and Fiscal Planning Committee. Dr. Warner has been most helpful in this respect. We are making some changes to the document to be more clear about how the administrative costs will be met. In addition we are including an email that Dr. David King sent to you and me (Nov. 6, 2008) indicating the source of funds during the first three years.

As we proceed through this process, Badege and I will include you, Dr. King, and Dr. Bradoch in any modifications to the Category I proposal that are necessary. sr

From: Randhawa, Sabah
Sent: Thursday, January 29, 2009 10:22 PM
To: Radosevich, Steven R.; Bishaw, Badege
Subject: MNR Proposal
Importance: High

Steve and Badege,

I understand that the FS Budgets and Fiscal Planning Committee have asked you for clarification on budget-related items in the proposal. One of the questions that has been brought to my attention is administrative support for the program during the start-up phase and in particular, the ability of University to support a new program in a difficult fiscal environment when we will be going through a major budget reduction in the next few months. I realize that we had earlier discussions about this issue. I think it is important that the source of funds for administrative support (as coming from eCampus portion of the revenue and development funds) is identified in the proposal, both for transparency as well as to address the concern that precious few E&G dollars will be directed to new programs when existing programs are being downsized.

I would suggest that you provide this clarification to the FS B&FP Committee. Alternatively, if you would like, I would be glad to do so. Please let me know.

Sabah

To: Radosevich, Steven R.
Cc: King, Dave
Subject: Proposed MNR Degree

Steve,

I appreciate the effort that you and your colleagues are investing in developing an interdisciplinary Masters Program in Natural Resources. Per our earlier discussions, the University will provide \$30,000 towards the administration of the program for a period of up to three years at the inception of the program. It is expected that the participating academic units will match the institutional support with an equivalent amount towards a projected \$60,000 program administrative costs. It is my understanding that the business model calls for student enrollment projections that will result in a self-support situation after three years.

Dave—Thank you very much for your willingness to partner with the academic units in supporting the program in the development/start-up phase.

Steve—Please modify the Category I budget for administering the program, per Dave's email below. With this change, the proposal can move through the approval process.

Thanks,

Sabah

Sabah,

Extended Campus will provide the bridge funding needed (est. \$30,000) along with the departments involved to cover the masters program in Natural Resources until it can become self sufficient. We are keenly interested in the program's success and have been willing all along to try to do what was needed to make that happen.

I'm sure you understand the concerns expressed by the supporters of this program are as much about interdisciplinary programs in general as they are this particular Extended Campus supported online program.

The Curriculum Council is set to discuss the online MNR tomorrow. Dianna Fisher is representing Ecampus at that meeting. I'll make sure she understands we are willing and ready to support the online master of Natural Resources program, if that has any value in the Council's discussion.

Subject: Proposal to initiate Masters in Natural Resources

Dave,

Nancy and I have been discussing the budget associated with the interdisciplinary academic proposal for a masters program in Natural Resources. As you know, this is a program fully delivered via eCampus that is expected to self sufficient in 3-5 years. The issue has been support for the administration of the program (about \$60,000) during the start-up phase of the program. The participating departments are willing to pick up 50% of the administrative costs. We would like to see eCampus pick up the remaining 50% for a period not to exceed three years. Were you to do so, what will be the effective return to eCampus and how will this work for eCampus fiscal sustainability?

Thanks,

Sabah

**Communications with Provost Sabah Randhawa about MNR Budget
September 15, 2008**

From: Radosevich, Steven R.
Sent: Monday, September 15, 2008 11:06 AM
To: Randhawa, Sabah; Bradoch, Alfonso
Cc: Adams, Tom; King, Dave; Bishaw, Badege; Reed, Scott
Subject: RE: Masters of Natural Resources

Hello Dr. Randhawa. Dave King and Alfonso Bradoch were members of the team that created the funding model for the MNR Cat I proposal (See Appendix A). It is based on the current allocation of e-campus funds and on administrative costs (that I determined by consulting with the FS administrative assistant) to run the MNR degree on a sustained basis--about \$60,000/year. In addition, we are proposing 3 options in the CAT 1 for funding the administrative costs for the MNR degree. These options are listed below (See also page 21). The one that we favor, considering the recently completed liaison with the draft Cat I proposal, is option 2 which we visited with you about several weeks ago.

We also expect a short-fall in revenue to support overhead costs as the MNR degree builds momentum. E-Campus has agreed to provide supplemental funding to help defray overhead costs during the initial years of the degree program. This supplemental funding will continue until the degree program reaches financial self-sufficiency based on enrollment-generated revenue, at which time the supplemental funding will be paid back to E-campus according to the same procedure as described in the 3 options.

As you suggest, I will attempt to set up a meeting with Drs. Loveland and Heiligman within the week and inform you of that outcome. sr

Funding models:

We propose three funding models for the MNR degree. The following options are considered:

(1) Department revenue sharing. We propose that on-line course tuition be shared among the participating Departments or Graduate Certificates according to the present E-campus formula (Appendix A [attachment above]). In addition, to meet the overhead costs of the MNR degree we propose that tuition received from students in the MNR degree be allocated according to student-contact hour and funds be removed by E-Campus until overhead costs for administration of the MNR degree are met. Once administrative costs for the degree are achieved, proceeds from tuition will be allocated according to the existing E-Campus formula (Appendix A; attachment above). An MOU is attached (Appendix F) that specifies this funding agreement. Although this is our proposed funding model for the MNR degree, some concerns were raised during the liaison process.

(2) Department revenue share plus Campus Administration support. In addition to department's revenue and cost sharing, campus administration should provide some support since the MNR degree will benefit the entire OSU campus. This kind of support already exists for other interdisciplinary graduate programs on campus (e.g. Environmental Sciences). This is similar as

option 1, except that campus administration provides a significant level of support (e.g. 50%) of the annual administrative costs of the MNR degree. We believe that all departments will agree to cost sharing of MNR administration under this option.

Thus the manner of funding the MNR degree and other on-line interdisciplinary degrees is the subject of discussion by the Provost and Deans of Colleges affected by the proposed degree. We expect to have the question of campus-wide support and financial sustainability of on-line interdisciplinary degree programs resolved by the completion of this Category I process.

(3) In the event no resolution is reached with option 2, we will proceed with option 3 for funding the MNR administration costs. Some departments who are unwilling to contribute to administrative overhead will be removed from the MNR program and their courses will be removed from the MNR curriculum. Students will select such courses from a list proposed by the Natural Resources Distance Learning Consortium for graduate education.

c. Estimate the number and type of staff support needed, if any, in each of the first four years of the program.

One 0.5 FTE MNR degree Director/Advisor (Appendix A) and 0.20 FTE MNR degree administrative support (Appendix A)

Subject: RE: Masters of Natural Resources

Steve,

I am sorry I have not been able to respond to the emails on this proposed programs earlier. Before I bring this up with the relevant deans, is there a "revenue/cost model" that you all (proposers/eCampus) are proposing for initiating and sustaining this proposal? I am afraid that if I discuss this with the deans, the question that will be asked is the model that is being proposed and its implications for units/colleges, and that will bring us back to the drawing board. I suggest that some members of the proposal development team work with Dave to develop a straw budget model for the program. I think you have elements of the model already developed; the key issue is building an administrative component and how it is to be sustained over time. It will also be helpful to get Nancy Heiligman's input and perspective into that model. Walt Loveland, who chaired the University Budget Committee (UBC) the past two years, including extensive discussions on funding of interdisciplinary programs, may also be helpful in this regard. Having a model with input from the Budget's Office and the UBC will help to move this along.

Cc: Adams, Tom; King, Dave; Bishaw, Badege
Subject: RE: Masters of Natural Resources

Good morning Sabah.

I was only able to attend the meeting with Dr. Boggess, but I suspect his reactions and concerns were mirrored in the meetings with the other Deans. As Steve commented, Dr. Boggess saw the value of this program and agreed that the Graduate School was the best 'home' for this program, but as anticipated he too was concerned over how the program would achieve sustainability. He commented that the issue of how to budgetarily sustain interdisciplinary programs has been an ongoing question for OSU. He understood, however, that Ecampus' unique funding model provides opportunity for creation of a funding model that could solve this conundrum, at least for those interdisciplinary programs offered via Ecampus. He also commented that undergraduate interdisciplinary programs, such as the Natural Resources Bachelor's degree, suffer from the same sustainability issues and understood that these too must be addressed. That said, Dr. Boggess seemed supportive of the proposed Masters of Natural Resources and the effort to create a funding pathway.

Sabah. All of the Deans supported our Category 1 proposal. They liked the concept presented in the Category 1 of an Interdisciplinary degree, especially one offered on-line. Several were surprised that OSU offers so many graduate courses on-line. They all seemed to realize that the degree being proposed should become self-sufficient a few years after it starts. However all of them also indicated that budgets were very tight and that a mechanism needed to be found that supported interdisciplinary programs for the good of the campus. None seemed to have a very good notion of how to do this.

All of the Deans liked the idea of having the program housed in the Graduate School, rather than in a specific College or Department. Dr Francis, however, was concerned that her budget could not handle any more interdisciplinary programs. Each Dean offered some specific ideas on how the Cat I could be improved (which we took note of) , but none had any specific suggestions for creating or improving the funding model.

Badege Bishaw was present with me at all of the meetings. Other listed above were present at one or more meeting. Perhaps they also can share their insights about the meetings with you. I will be gone all of the coming week. Thank you for asking for more detail. sr

Subject: RE: Masters of Natural Resources

Dr. Randhawa. We have met with both Drs. Loveland and Heiligman about the funding model for the proposed MNR program as you suggested. Alfonso Bradoch and Badege Bishaw attended the meeting with Dr. Loveland and we were joined by Paul Doescher and Carol Lehto for the meeting with Dr. Heiligman. Both Drs. Loveland and Heiligman were supportive of developing a funding model that involves support for the administrative costs of the MNR degree by central administration. It was suggested that the long term sustainability of this interdisciplinary degree (after the next year or perhaps two) be funded from the 10% of funds received by central administration from e-campus tuition. Dr. Loveland indicated that he would be contacting you via email concerning this matter, while Dr. Heiligman indicated that long-term funding of the MNR degree should be an issue for discussion at the next budget committee meeting. This suggestion is basically option 2 that we propose in our existing Category I proposal and the one-page information sheet that we provided you before our meeting with you last month.

I have attached copies of both documents. sr

Appendix B – Library Evaluation

Appendix C – Liaison with OSU Instructional Units

MNR Exploratory Group Meetings

Liaison Letter

Liaison Responses and communication

Reply and commentary to Liaison

We indicate below questions and our responses to a draft Category I proposal from various OSU Schools and Departments (7 departments and 3 graduate programs). We have addressed questions either in these responses or directly on the revised Category I proposal from the Graduate School.

Summary of Master of Natural Resources Exploratory Group Meeting August 6, 2007

Present: Steve Radosevich (FS), Paul Doescher and Susan Morré (FR), Bill Lunch (PS), Gregg Walker (COMM), Ursula Bechert (PSM), Stan Gregory and Samuel Chan (FW), Jim Johnson (Forestry Extension), Lynette de Silva (Geosciences), and Paula Minear and Alfonso Bradoch (Ecampus)

Status of MNR degree development: exploring development of online and onsite program, no Category 1 proposal yet. Have been receiving 4 – 5 requests per week from students interested in an MNR degree, both online (from people who are unable to leave a location or job to come to OSU), and onsite from people who want an advanced degree in natural resources. Many are seeking job advancement and feel this is the key for them.

A handout of current certificate programs and potential MNR degree components, and an analysis of current online offerings reveal many relevant courses and certificates are already available onsite, and some are already available online, while others would need to be adapted to online teaching. Survey shows online graduate certificate programs seen as nimble, flexible, and relevant. A 45-credit non-thesis MNR could have 18 credits from one of the existing certificate programs for depth, 6 credits of Ecology/Production, 9 credits of Human Systems (choose 3 areas from Policy, Economics, Sociology, Ethics, Communication), and 6 credits of Methodology (Statistics and Research Methods). OSU is in the process of joining the Distance Learning Consortium, and perhaps in the beginning the economics and statistics courses could be taken from other members of the Consortium, until an online course is developed here. Lisa Ganio may be interested in developing an online statistics methods course. Fifteen credits can be transferred to a master's degree at OSU.

Benefits of developing an online MNR degree: The demand from agencies and students exists – there is a demonstrated need to combine knowledge in natural resources, communications, sociology, business, and economics to reach consensus on current and future issues. Although there are already Masters of Public Policy, Marine Fisheries Management, Environmental Science, and Water Resources at OSU, the distance education component is unique to this MNR proposal.

Discussion points:

1) NR currently has no core at OSU. Courses are very interdisciplinary and spread out across many departments and colleges at OSU, and communication among us has much room for improvement. Programs are diffuse, not well integrated, and it is difficult for potential students and their parents to clearly understand what all is available and get degree program information to guide enrollment decisions. There needs to be a good web portal and online advising to more effectively provide information to students. Reply: University Advancement has set up a new unit for web marketing to integrate programs, and the Registrar wants a web portal (cost: \$300,000).

2) Students don't get the same experience online as onsite. Are all-online degrees something we want to offer? Conclusion: onsite is first choice for those who can come here; online is an important alternative for those who are unable to physically relocate here. Offer courses online and onsite to meet needs. Important for online MNR to have a two week face-to-face component in the field.

3) There is a proliferation of MNR degrees already across the country. Conclusion: Several MNR programs exist at other universities and are successful, but hardly any are available entirely online. The two-week field component would differentiate us from other universities. Those who cannot travel can do an internship in their own community. OSU is losing natural resources students to Portland State University and we need to offer what is in demand in the 21st century to stay relevant. We can offer separate degree designations in different tracks (Environmental Science, Geosciences, Environmental Economics, etc.).

4) Agencies need to make the distinction between non-thesis and thesis masters because they differ in depth of science and research background. Conclusion: that doesn't diminish the need for or value of a non-thesis MNR; an applied research project or internship can be rigorous; it is as relevant as an MBA or MEA, which are both non-thesis; many employees of government agencies need the credentials of a master's degree to supplement their experience in order to advance. Both thesis and non-thesis master's degrees increase critical thinking skills and employability. Agencies need employees who can integrate disciplines to solve complex natural resource problems.

5) Need to integrate colleges, avoid duplicating already existing programs, and move away from protecting territory. Who is the university? It is us. We need to fix the old system to allow/support interdisciplinary degrees, but how do we solve the issue of departments competing with each other for dollars and protecting their turf? Department heads and deans need to support interdisciplinary degrees, but the current administrative structure is inflexible and resources are limited. Under current structure, NR programs generate \$1.5 million through Ecampus (by far the largest online undergraduate enrollment is NR), which is returned to departments, and \$800,000 onsite, with no money returned to the NR program. We need structural changes. Meaningful change usually comes from groups like us, not from the top. Timing is good with focus on creating web portal already. Name recognition is critical – marketing is tied to the psychology of choosing one degree program over another. PSM does not take the place of MNR.

Action items:

1) The MNR Exploratory Group members are encouraged to suggest additional current courses for onsite MNR degree.

2) Stan Gregory will be the champion for creating the web portal, with help from Ursula Bechert.

3) Send a short paragraph to Susan (Susan.Morre@oregonstate.edu) describing your current natural resource programs, to aid in the development of a Category 1 proposal and the

development of an OSU web portal and online advice to help students and parents understand available choices in NR courses and programs.

4) MNR Exploratory Group standing meeting is every Monday at 10 am in Richardson 109B. All are welcome to attend. Most of group is available to attend on August 20. Bring ideas.

Master of Natural Resources Exploratory Group Summary of 8/20/2007 Meeting

Present: Paul Doescher, Steve Radosevich, Ursula Bechert, Badege Bishaw, Lynette de Silva, Michael Harte, Selina Heppell, Denise Lach, Susan Morré

Discussion points:

- Can a student get both a certificate and an MNR? Think yes, because can get MRM certificate and then a Master of Science. (Paul will check with Sally Francis at the Graduate School and the Graduate Council.)
- Discuss course list and potential additions: capstone project has a big writing component, so perhaps add a writing component in methodology (none currently online); Fisheries Biology and some Communications courses are writing intensive
- Who will advise MNR students? Consider cohort advising (Aaron Wolfe found it worked), instructors, or ask provost to add FTE, merit, or \$ incentives for advising; Ex: undergrad NR has master advisor, Ecampus advisor, and program director helps; MRM program has .25FTE advisor for 30 students
- Need deans of all participating colleges on board up front and work together; then talk to provost
- Although other programs with some overlap, need MNR for marketing value, recognize demand is there; job descriptions/career paths for NR specialists
- MNR with concentrations in certificate areas GIS, SNR, Water conflict, etc.
- Deans Bloomer and Francis recognize MNR could fill need for umbrella for interdisciplinary programs with overlapping areas and diffuse NR offerings that need better coordination/comm.
- Could drop some existing programs in favor of MNR (ex: Environmental. Sciences NR concentration)
- MNR would be terminal degree like MF, MBA, M Fine Arts
- Very positive response from USFS and BLM to online MNR idea
- Undergrad NR has helped develop relationship with agencies, contacts, potential funding sources to help meet their personnel needs; Land Grant University has obligation to meet workforce needs, train competent land managers, is professional.
- Over \$2.5 million generated for university by undergrad NR students, need new funding model for interdisciplinary programs to get student credit hour \$ to support programs instead of returning all to departments
- Ecampus likely \$75,000 for online MNR program development, many courses already exist
- MNR will need dedicated director, personnel to teach and advise
- Category I process – what budget needed to make it work?

Concerns:

- Some programs already at full capacity, hard to find advisors among busy faculty for internship and capstone projects (see suggestions above to address this concern)
- Many grad courses taught by courtesy faculty, but advised by tenure faculty
- Need budget line for office supplies/services so stop using Ecampus money to backfill cuts (need more \$ from legislature)

- Maintain quality of existing programs, not overburden faculty, where young faculty best spend time

Consensus: Overall really good idea worth pursuing, with support from coordinators of MRM, MFM, PSM, SNR, and WCMT as part of potential concentrations. Next: identify important mechanism, components and processes to move forward; meet with deans, then provost; identify key faculty.

Master of Natural Resources Exploratory Group Summary of August 27, 2007 Meeting

Present: Steve Radosevich, Paul Doescher, Badege Bishaw, Jim Johnson, Susan Morré (all College of Forestry); Roger Nielson (Department Head, Geosciences); Mike Borman (Interim Department Head, Rangeland Resources), Andrew Plantinga (Agricultural Resources Economics)

Reiterate marketing value of MNR name and current demand from students, agencies, employees

- Overview of Sustainable Natural Resources Graduate Certificate, 3-4 inquiries per week about a MNR online.
- Undergraduate NR degree most popular by far online and onsite. Numerous requests for MNR from these undergrads.
- Important to offer online and onsite, could be at same time.

Review of draft MNR degree components handout – missing online Economics, Statistics, Communications and Writing components; consider developing online version of:

- Bill Jaeger's AREC 534 NR Economics would be logical for MRM, FW, Geosciences, Forestry concentrations
- Roger Nielson's GEO 518 Technical Writing course
- Potentially one of Gregg Walker's communications courses?
- Lisa Ganio's Statistics course?

Discussed NR Distance Learning Consortium – joint venture agreement between US Forest Service and Virginia Tech, has about a dozen participating institutions; currently 80 students enrolled; students register at one institution, can take classes at any of Consortium institutions; OSU was invited and is in process of joining Consortium. Of members, University of Idaho has all-online degree, Virginia Tech partly online, Stephen F. Austin has NR Interpretation focus.

Ecampus has up to \$75,000 available for development of online MNR, need to respond to RFP. Category I is mechanism to use, and buy-in from Colleges at the dean level is critical first step; how to convince Colleges that this is important? Adds value because:

- Agencies are converting technical positions to professional ones, so there is need for advancement training; currently Univ. of Washington is providing 2-wk. short training courses for credit and getting lots of agency students enrolled
- MNR provides training, new skill set with demonstrated demand for career advancement and more sustainable natural resource management.
- MNR is a mechanism to reach students who would not otherwise come to OSU.
- MNR provides outlet for graduate certificate programs to result in a masters degree, and money flows back to departments.
- Ecampus courses return hundreds of thousands of dollars each year to university administration from student course fees, and departments are told to use Ecampus money to fund other dept. needs.

Details to figure out:

- Need financial structure in place for program administration to sustain interdisciplinary programs like this; perhaps add .25 FTE for program administration?
- Need time commitment and compensation mechanism. Advising done by whom? Who funds? Similar need as MAg and MF for capstone course advising. Existing concern about Environmental Sciences and MAIS students: advising takes up faculty time from department but only returns a few hundred dollars to department, only worth it if faculty member is interested in student's research. Potential solutions: Cohort advising; core 5-credit course that underwrites cost of program.
- What commitments are required from departments and provost to have a quality program?

All present agreed that the MNR is a good idea well worth pursuing. Paul will meet with provost next month about better funding for both the undergraduate NR program and the MNR, and will meet with Sally Francis of the Graduate School to see what is feasible.

MNR QUESTIONS FROM AUGUST 2007 MEETINGS

Prepared by Susan Morré

19 September 2007

1) Is there a good reason to develop a new Master of Natural Resources degree online and on campus? Is there a demonstrated need for an MNR degree?

A: There is a large demand from agencies, undergraduate students in the NR program, and online inquiries for a MNR degree. Marketing of the program will be facilitated by the “Natural Resources” name.

2) Are there other related degree programs that this would duplicate or overlap?

A: There are other courses in various aspects of natural resource education, but they are diffuse, spread across many departments, and there is no convenient web portal or other information source that provides comprehensive information. We propose to develop a NR web portal that will link information for all NR-related certificate and degree programs to help potential students and their parents more easily find what NR programs are available at OSU. An associated online advising program would assist in providing this information to students to guide enrollment decisions.

3) Are online degrees something we want to offer?

A: On campus courses are often the first choice for those who can come here; online courses are an important alternative for those who are unable to physically relocate here. We propose to offer MNR courses online and onsite to meet expressed needs. It would be important for an online MNR program to have a two week face-to-face component in the field.

4) Are there already enough MNR degrees at other U.S. universities?

A: Several MNR programs exist at other universities and are successful, but hardly any are available entirely online. The two-week field component would differentiate us from other universities. Those who cannot travel can do an internship in their own community. OSU is losing natural resources students to Portland State University and we need to offer what is in demand in the 21st century to stay relevant. We can offer separate degree designations in different tracks (Environmental Science, Geosciences, Environmental Economics, etc.).

5) Are agencies capable of distinguishing between non-thesis and thesis masters if the MNR is a non-thesis degree?

A: Both thesis and non-thesis masters degrees increase critical thinking skills and employability. Agencies need employees who can integrate disciplines to solve complex natural resource problems. A non-thesis MNR has value for several reasons: an applied research project or internship can be rigorous; it is as relevant as an MBA or MEA, which are both non-thesis; many employees of government agencies need the credentials of a master’s degree to supplement their experience in order to advance.

6) How do we solve the problem of different colleges and departments competing for money from interdisciplinary programs?

A: We need to fix the old system to allow/support interdisciplinary degrees. Department heads and deans need to support interdisciplinary degrees, but the current administrative structure is inflexible and resources are limited. Under current structure, NR programs generate \$1.5 million through Ecampus (by far the largest online undergraduate enrollment is NR), which is returned to departments, and \$800,000 onsite, with no money returned to the NR program. We need structural changes. Meaningful change usually comes from groups like us, not from the top. Timing is good with focus on creating web portal already. Name recognition is critical – marketing is tied to the psychology of choosing one degree program over another. PSM does not take the place of MNR.

7) Who is the university?

A: It is us.

Correspondence with the Curriculum Liaison

Subject: Curriculum Liaison for Category I Proposal: Master of Natural Resources Program

From: Bishaw, Badege

Date: Friday, August 15, 2008 9:54 AM

To: Boggess, Bill; Bloomer, Sherman - COS; Roper, Larry D; Francis, Sally K - ONID; Salwasser, Hal; Green, Cary; Capalbo, Susan; Karow, Russell; Edge, W. Daniel; Borman, Michael M - ONID; Blaustein, Andrew R - ONID; Nielsen, Roger; Kimerling, A. Jon; Lunch, William M - ONID; Kaplan, Jonathan - ONID; Gallagher, Sally K - ONID; Iltis, Robert S - ONID; Adams, Darius M - ONID; Adams, Tom

Cc: Radosevich, Steven R.; Doescher, Paul; Steel, Brent; Lach, Denise; Walker, Gregg; Bradoch, Alfonso; Shellhammer, Gina

The attached Category I proposal describes a new instructional program leading to Master of Natural Resources degree. This will be an interdisciplinary degree, offered primarily online, that brings together specific courses from various departments in the College of Forestry, Agricultural Sciences, Science, and Liberal Arts. With this new program, your unit might be proposed to teach one or more courses.

In accordance with the liaison criteria in the Curricular Procedures Handbook, this memo serves as notification to your (college/department/program) of our intent to make this curricular change.

Please review the attached proposal and send your comments, concern, or support to Badege Bishaw (badege.bishaw@oregonstate.edu) by Friday August 29, 2008. Your timely response is appreciated.

Please note that a lack of response will be interpreted as support.

Thank you for your time and input.

Sincerely,

Badege Bishaw

Cc: Fisk, Martin
Subject: Comments on Category I proposal

Badege and Steve,

Thanks for sharing the draft Category I proposal for a new master's degree program in natural resources. I have taken a quick look at the proposal and am generally supportive of the idea. I am writing now to communicate my concerns. Martin Fisk is copied because there are a number of policy issues about which he can provide advice.

- What modifications will need to be made in order to offer a graduate degree fully online? What policies will the Graduate Council need to revise?
- The option of a 3-credit internship is offered. There are many who would argue that 3 credits is insufficient to support any meaningful internship experience at the graduate level. Some description of what such an internship would look like would be very valuable.
- Table 2, page 6, indicates 1-16 credits in CSS 599. I believe this should be 6 credits.
- Keep in mind that students' programs will need to have 50% of all credits at the stand-alone, graduate only level.
- Table 1, page 5, last row--what is a "certificate project?" This needs explanation.
- Table 1, page 5 and elsewhere in the document, the PSM certificate is listed as a possible area of emphasis. I very strongly object to this. First, this certificate does not now exist. But, more importantly, this certificate comprises a group of skills courses in areas of communication, ethics, marketing, and so forth. It is a very important set of skills, but it does *NOT* represent an area of emphasis that would be academically sound as the foundation for a master's degree. In my opinion, a list of true areas of emphasis should be presented, not a list of certificates. Using the present approach suggests that this degree is nothing more than a marketing scheme to springboard off these certificates. Instead, some actual areas of emphasis should be identified. Then, a note could certainly be added indicating that incorporating a certificate within a degree program is acceptable. The latter is a very different philosophical approach.
- Every master's student must have a major professor and a committee that oversees his/her work. The major professor is the person who signs the program of study along with the director of the degree.
- Why would the major professor not be the person who oversees the case study or the internship? Why would each student seek a "mentor" rather than be guided by the major professor?
- A program setting meeting should be required for students in this degree as is required of the MAIS degree.

- Only 15 credits earned prior to admission to a master's degree program may be included on the program of study.
- The Graduate School has no standard or requirement for the GRE examination. This should be set by the graduate faculty who offer the degree.
- The program should have an admissions committee and/or a curriculum committee.
- The program must establish a graduate faculty. This needs to be explicitly defined and identified--it can not be whoever happens to be teaching in other certificate programs. Criteria for membership need to be defined and a list of initial faculty members listed.
- Again, the program administrative FTE is very generous compared to the other interdisciplinary graduate degrees at OSU. Perhaps your funding model will permit this level.

These, in addition to the comments I shared when we met, constitute my current concerns with the draft proposal. As it moves forward, I will discuss it more fully with Martin Fisk and let you know if there are additional issues that we believe need to be addressed.

Good luck with this project and let me know how we might be of assistance.

Sally

Sally K Francis
Dean, Graduate School
300 Kerr Administration Building
Oregon State University
(541) 737-4881

Response to Dr. Sally Francis: Graduate School

Bullet #1

We do not have this information; perhaps the Dean of the Graduate School can inform us about any possible policy changes;

Bullet #2

See clarification on page 5; Table 1.

Bullet #3

We checked on Extended Campus online course catalog for CSS 599 and it has 1-16 credits. However, we modified the listing in the MNR degree program to allow 1 – 3 credits to fit the number of credits required in that section.

Bullet#4

Some of the courses proposed in the Cat I proposal are independent graduate credits and student will take those courses to satisfy Graduate School requirements.

Bullet#5

See amendment on page 5.

Bullet#6

Dr. Francis objects to include the PSM Certificate as area of emphasis. However, other Deans and professors request that it be included in the MNR degree. We leave it in the present category I proposal but expect further discussion. We expect that some courses taught within the PSM program will begin to be popular with students enrolled in the MNR degree.

Bullet #7

See addition page 8.

Bullet #8

See addition page 8.

Bullet #9

See addition page 8.

Bullet #10

This comment is not different than any graduate degree; Graduate School Policy (Reference Graduate Catalog).

Bullet #11

See admissions Para 1, page 9.

Bullet #12

See admissions Para 1 and 3, page 9.

Bullet #13

Graduate Faculty; see addition pages 16 through 20.

Bullet #14

Funding model: Given the amount of administration the Director must perform, e.g. student admissions, membership on each student committee, liaison with various certificates, liaison with Extended Campus, chair administration advisory committee; we feel the load administrative support expected is appropriate.

Subject: MNR Category I proposal comments from the Department of Geosciences

Bishaw, I have attached comments from several Department of Geosciences faculty members who are involved with the study of natural resources. I hope these comments will be of help to you as you further

develop your proposal. I know that several of our faculty will be happy to discuss this proposal further with you.

Sincerely,

A. Jon Kimerling
Interim Chairman
Department of Geosciences

Department of Geosciences comments on Master of Natural Resources Category I proposal

This proposed MS program allegedly (if read closely) is for professionals, but this is not clearly stated up front. Also, apparently this will be an online degree, but this is not clear from the proposal. On the cover it looks as though it involves lots of colleges, but it is to be administered by 3 COF faculty (one of whom is retired), and none of the other colleges are represented. A number of sections of the proposal are incomplete.

It is not appropriate for the College of Forestry to create an additional interdisciplinary degree in natural resources at OSU without more in-depth involvement in administration and student advising with the other colleges and departments, including Science, Agriculture, and Liberal Arts. Shared administration is not only needed to provide adequate balance for a variety of student backgrounds, but also to make the program feasible. For student advising, we strongly urge the designers of this new degree to use the model for the Water Resources graduate program, in which students select their advisors from a range of colleges and the department of the student's advisor gets credit for advising that student.

The proposal does not address the impacts and implications of climate change on natural resources. In fact, the word "climate" appears nowhere in the proposal. I attach a link to letter that appeared in the journal Science earlier this year (<http://www.sciencemag.org/cgi/content/full/319/5863/573>) on the idea that climate stationarity is no longer a valid assumption and (in the context of water resources) that managers must recognize this in order to develop flexible and informed approaches to resource management. While the piece focuses on water resources, the same can be said of forest, wildlife, and other natural resources.

The impacts of the Masters program on the Water Resources Policy and Management program has not been considered. The lack of accreditation of the proposed degree means that the two degrees (Water Resources Policy and Management and Natural Resources) although they have similar titles, are quite different in terms of status and possibly in terms of academic rigor.

How does this program compare with other similar programs around the country? There was an in-state comparison but because of the Ecampus aspect, it would be logical to assume that the program would attract out-of-state students. We need to know how this program would stack up against others.

Why isn't Geography listed as one of the Human Systems areas along with Sociology, Policy, Ethics, Communication, etc.? We have grad courses relevant to the human dimensions of NRM also.

I think there is a grad certificate in Rural Sustainability, too, that could be a good option along with the other certificate programs in the Areas of Emphasis section. I would reiterate what Brent Steel's letter says about this – check with Bruce Weber in AREC re: current status of this program: "There is a Rural Studies Graduate Certificate under development as part of the Sustainable Rural Communities Initiative. It would be an excellent area of emphasis for the degree."

GEO 599 – Special Topics – is listed as an option for fulfilling part of the policy requirement. Where did that come from? My Land Use class (423/523) deals with NRM policy, as does 420/520 (Geog of Resource Use) – they might be better GEO courses to include than 599.

I think the Methodology courses students can choose from should include at least one qualitative methods option – Jo Tynon in the COF teaches one I believe, as does Kate MacTavish in HDFS. If the program is to do justice to “human systems,” students should learn how to interpret qualitative data as well as quantitative data.

In terms of other similar programs across the state, it might be worth at least mentioning U of O's MS and PhD program in Environmental Studies (<http://envs.uoregon.edu/>), although the online feature of the proposed OSU program certainly makes it unique.

The contact person for the GIS Certificate Program probably should not be Roger Nielsen but Dawn Wright.

The Geosciences department would welcome a truly interdisciplinary degree in Natural Resources, but the current proposal is excessively narrowly focused on existing resources within the College of Forestry.

Comments submitted on behalf of the Department of Geosciences by:

A. Jon Kimerling
Interim Chairman
Department of Geosciences

August 28, 2008

Response to Dr. Jon Kimerling: **Department of Geosciences**

Paragraph 2

Proposed degree will be offered primarily online and to natural resource professionals (see page 3, paragraphs 1 through 3). Also see Student Advising on page 8. For administration see Program Administration on page 20.

Paragraph 3

See addition of new course FES XXX Climate Change, Forests and Carbon Management taught by Harmon (page 9).

Paragraph 4

The MNR degree is primarily online whereas the Water Resources Policy and Management (WRPM) degree is in-residence. We believe conflict is minimal for this reason. The MNR degree is offered to natural resource professionals who can not come to the OSU Campus for even a short time, in contrast to the WRPM degree. Students could specialize in Water Conflict Management and Transformation (WCMT) in the MNR degree. No conflict was noted with the Director of WCMT certificate.

Paragraph 5

See letter of support from Evans; Virginia Tech. University (Appendix D)

Paragraph 6

Courses in Geosciences are suggested in the Human Dimension depth area. Four courses are offered by Geosciences but two of these are suggested for use in methodology. How can a student fulfill a requirement with only two courses offered?

Paragraph 7

As soon as the Rural Sustainability graduate certificate is approved we will include it as an area of emphasis.

Paragraph 8

Regrettably GEO 599 is the only one of these courses offered by Geosciences that is online. When other courses such as GEO 503 and GEO 520 are offered to online students, they will be incorporated into the MNR degree.

Paragraph 9

We will talk to Tynon and MacTavish to assess their interest in teaching their courses online. However, FS 523 and STAT 511 and STAT 512 are concerned with qualitative as well as quantitative data.

Paragraph 10

The Cat I requests that State System Programs similar to the MNR be identified. As such these are none.

Paragraph 11

We added Dawn Wright as contact person for GIS Certificate Program.

Paragraph 12

A listing of all online courses is provided in the Cat I proposal. College of Forestry represents only 8 of the 43 possible classes student may chose from, i.e. 18%. Hardly a dominate component!

Subject: RE: Curriculum Liaison for Category I Proposal: Master of Natural Resources Program

Dear Badege, Sally and Martin,

Attached is my response to the Category I proposal for the MNR program. Thank you for the opportunity to comment.

I would also like to suggest that it is important to circulate such proposals at a time when those who may be impacted are on campus to read and consider the proposal. I know that several faculty members who might wish to comment are out of town during August.

Please let me know if you need any further response.

Sincerely,

Mary Santelmann

Quoting "Bishaw, Badege" <badege.bishaw@oregonstate.edu>:

> Dear Sally;

> Thank you for your e-mail and suggestion. It is okay with me Mary can review the Cat I proposal for MNR program.

> I have attached with this e-mail the latest revised version of the Cat I proposal for Mary to review.

> Thanks for your cooperation.

August 26, 2008

To: Curriculum Liaison for the Category I proposal: Master of Natural Resources Program

From: Mary Santelmann, Director, Water Resources Graduate Program

Subject: Response to Category I Proposal to Initiate a New Instructional Program for a Master of Natural Resources Degree

This proposal for an online graduate degree in Natural Resources (MNR) makes a good case that such a degree is desired by many prospective students. The authors are responding to the strong interest expressed by some Federal agencies in developing opportunities for working professionals to use distance education in pursuit of a graduate degree. However, as it stands, the proposed program is poorly developed, unlikely to succeed in providing the innovative interdisciplinary education it aspires to deliver, and it does not have a feasible budget plan.

I have several serious concerns about this proposal. The first is that it does not have a cohesive, well-constructed curriculum with introductory courses uniquely designed to address the need for interdisciplinary training of resource management professionals. The proposed curriculum design is an assemblage of coursework from various units with a vaguely described "capstone" project whose success will rely on the good will and energy of prospective advisors who are presumably to be recruited from among the instructors teaching the online courses these students take.

Lack of a substantial set of faculty members committed to advising students in this degree program is another serious obstacle to its success. When students have difficulty in finding faculty members willing to advise them, or feel they do not get enough time and attention from their advisor, they become disgruntled and angry. Advising is a critically important element of any graduate degree program, and more concrete plans for advising are needed.

Another concern is that I do not believe that OSU has the funding or resources required to deliver this program. We are limited in the number of faculty members who teach online courses and would be asked to advise these students, by the ability of our instructional faculty to take on large numbers of students in existing online courses, and we are very limited in financial resources available for administration of existing interdisciplinary programs. The online degree program proposed here would stretch inadequate resources even further.

I am also concerned that the proposed degree may not meet our desired standards for graduate education (no thesis, no overview core courses specifically designed to meet the needs of students in such a program, and courses delivered almost entirely online). In addition, because the coursework could be delivered entirely online, unless specific precautions are taken to ensure the identity of the person completing the course, there is the potential for students who are less than honest to receive credit – or even a MS degree - for work that is not their own. The proposed curriculum is still relatively vague. I am not yet convinced that as proposed here, this program could deliver the graduate education that students deserve or that employers expect from someone with an MS from Oregon State University.

I have expanded upon these concerns below.

1. Lack of courses developed specifically for the MNR students: The authors of the proposal make a good case for the need for innovative new programs that can assist graduate students in learning how to work on interdisciplinary projects and teams (section 4d, page 13) however, the curriculum described is based on existing courses, with one new course listed (FS XXX below-ground Ecosystems), and a capstone project that is very similar to what is currently offered through the Environmental Sciences PSM program or any non-thesis option in existing interdisciplinary degree programs at OSU

2. Lack of advisors committed to advising students in an online interdisciplinary program

On page 3, the proposal states that students would select advisors from those who teach online courses used in the program. Have the faculty members who teach these online courses been asked if they wish to advise distance students in a graduate degree program? Only three core faculty members are listed and one teaching faculty member – the remainder of this section is not complete. How many students would these four faculty members be willing to advise?

Instructors are already expressing concern that they are undercompensated for time and effort invested in teaching Ecampus courses. If the prospect of being asked constantly to advise distance students is added to the equation, we may see attrition in the ranks of those who are currently teaching online courses. In my experience, there are many students in the Environmental Sciences Professional Masters Program and in the interdisciplinary Environmental Sciences MS program who have difficulty finding advisors, even when they are on campus and can visit prospective advisors in person. I suspect that unless specific advising assignments are made when students enroll, that the MNR students will have an extremely difficult time finding advisors and that in many cases, advising these students on their capstone projects will require more time and effort than advising graduate students face to face, since the project will be their only interactive experience with faculty.

3. Budget : The proposed program leans heavily on the Ecampus courses developed by other departments and programs and requests that tuition revenue from MNR students taking the course that is returned to the unit teaching these online courses be shared with their program (page 16). I have several objections to this budget model. First, these Ecampus courses have been developed and are being taught by dedicated faculty members specifically for the purpose of helping fund their own innovative programs. The budget model proposed here would undermine the funding of the excellent interdisciplinary programs we currently offer. Second, this will quickly become an administrative nightmare for the administration of the budgets of units that teach Ecampus courses, adding to the time and effort spent in administering the courses for the sole purpose of taking resources away from the units teaching them. Finally, I am

concerned that existing interdisciplinary programs are already underfunded. If additional resources are made available for interdisciplinary graduate programs, the best use of these resources would be to develop and strengthen existing interdisciplinary programs. In summary, while elements of the proposal form the nucleus of a potentially good idea, the current proposal is incomplete, poorly conceived, and should not be approved.

Sincerely,

Mary V. Santelmann, Director
Water Resources Graduate Program

Response to Dr. Mary Santelmann, Water Resources Graduate Program

Paragraph 1 & 2

We developed the MNR degree following the design of the highly successful Undergraduate Program in Natural Resources. Students in the MNR program are required to take several (18 credits) of Core courses which represent integration among the human and biological sciences. In addition students are asked to integrate both Core course information and Methodology with a selected Area of Emphasis into a Capstone project that is administered by a graduate committee. See 5, 6, 7, 8, 17 and 20.

The Capstone course for the MNR as well as others has yet to be fully developed. This will eventually require a full CAT II proposal.

Paragraph 3

See addition on page 21.

Paragraph 4

The funding model as proposed in Cat I is under significant discussion by the Provost and Deans of the various colleges involved in the MNR degree. However, we offer 3 possible options for funding (see page 21). At this point we are unable to foretell the Provost and Dean's decision about online interdisciplinary degree programs since it is under active discussion now. In addition, each graduate student in the MNR program will have a Graduate Advisory Committee (see page 8). The person on the Graduate Advisory Committee that assumes the primary advisory role will receive up to 6 credits of graduate tuition for that assistance.

Paragraph 5

All surveys about online versus in-residence instruction indicate that distance education is at least as rigorous and as honest as in-residence instruction. This question is philosophically based and should be directed to the Office of Admission and Distance Education. Please see letter from Evans, Virginia Polytechnical and State University, on the value of Distance education, the proposed curriculum, and need for this degree by professionals.

From: Gallagher, Sally
Sent: Friday, August 29, 2008 10:51 AM
To: Bishaw, Badege
Cc: Cramer, Lori; Lach, Denise; Steel, Brent
Subject: FW: MNR program

After further discussion with faculty in the department, I would like to add additional detailed comments in response to the proposed MNR program.

The Sociology Department is supportive of the Master's in Natural Resources (MNR) program as it recognizes students' increasing interest in programs that provide interdisciplinary approaches. As proposed, the curriculum looks adequate (under Sociology, the Consensus and Natural Resources course should include the SOC designator (SOC/FW/FOR 585). However, we have two major concerns with implementation of the MNR as proposed in the Category I proposal and one note about "truth in advertising:"

1. As described in the paragraph below taken from the proposal, it is suggested that the MNR be funded through capture of Ecampus overhead costs of MNR students regardless of the program or department in which the e-class is taught. While it is indicated that once Forestry administrative costs are met, the various departments will receive their appropriate overhead, it may take years until the administrative costs are recouped and it is unfair and inequitable that the participating teaching units carry this burden. Overhead costs from Ecampus classes taught by faculty in Sociology as overload (i.e., in addition to their normal class load) are now used to fund programs and activities in the Sociology department including teaching assistants, travel, and miscellaneous supplies (long distance calls, copies, etc.) that are not included in the budget we receive from the College of Liberal Arts. Removing the overhead costs from MNR students eliminates any incentive for including these students in our graduate classes. If this funding model is approved, Sociology will not participate in the MNR degree program.

We propose that online course tuition be shared among the participating Departments or Graduate Certificates according to the present Ecampus formula (Appendix A). However to meet the overhead costs of the MNR degree we propose that tuition received from students in the MNR degree be allocated according to student-contact hour and funds be removed by Ecampus until overhead costs for administration of the MNR degree are met. Once administrative costs for the degree are achieved, proceeds from tuition will be allocated according to the existing Ecampus formula (Appendix A). An MOU is attached (Appendix F) that specifies this funding agreement.

2. As described in the Category I Proposal, students will work with a "mentor" to complete a project and project paper. As discussed earlier with the proposers (and included in the comments from Brent Steel in the liaison section of the proposal), the number of social science/human dimensions faculty who can work with students is very limited. There are several existing interdisciplinary graduate programs including the MPP, Water Resources, Marine Resources, and Environmental Sciences as well as disciplinary programs including Geosciences, Forestry, Economics, and Applied Anthropology that all require faculty working in the human-dimensions

of natural resource and environment to serve as advisors/mentors for graduate students. It is increasingly difficult to provide first-class educational experiences for all of our graduate students and it will only get worse as programs continue to proliferate unless some attention is paid to the need for faculty in these fields. It would be a disservice to new students to accept them in to a graduate program, accept their tuition money, and then not be able to find enough faculty able to serve as mentors/advisors. Maybe Forestry is willing to take the lead in a campus-wide conversation about the need for social scientists and others working in the human dimensions of natural resources and the environment. To participate in the program, Sociology would need at least one additional faculty line to meet demand for courses within our curriculum, as we imagine would be the case in other participating CLA departments, particularly Political Science.

Finally, as described in the Category I proposal, the MNR is designed primarily to "assist agency and industry professionals meet their self-improvement goals" and is not structured as a traditional thesis-based Master's Degree. While we recognize the value of providing education to a wide range of students, we also believe that it is critical to ensure that employers and others understand that this MNR degree does not require the design and implementation of an individual research project (the traditional outcome of a Master's degree). Programs at OSU and other universities that provide professionally-oriented degrees label them as such as (e.g. , Professional Science Master's Degree) and we recommend that the Master's in Natural Resources also be labeled as a Professional degree.

sgallagher@oregonstate.edu

Response to Dr. Sally Gallagher, Department of Sociology

Paragraph 1

We are attempting to resolve this issue about meeting overhead costs for the MNR degree. In the revised Category I proposal three options are proposed. These include:

1) A funding model as initially proposed.

We propose that online course tuition be shared among the participating Departments or Graduate Certificates according to the present Ecampus formula (Appendix A). In addition, to meet the overhead costs of the MNR degree we propose that tuition received *from students in the MNR degree* be allocated according to student-contact hour and funds be removed by Ecampus until overhead costs for administration of the MNR degree are met. Once administrative costs for the degree are met, proceeds from tuition will be allocated according to the existing Ecampus formula (Appendix A). An MOU is attached (Appendix F) that specifies this funding agreement.

- 2) Overhead costs are shared by participating departments and central administration.
- 3) Courses offered by OSU departments that choose to not participate in the MNR degree will not be included in the MNR degree and students will select such courses from a list proposed by the Natural Resources Distance Learning Consortium for graduate education (see Evans letter in Appendix D and course list in Appendix E).

Paragraph 2

We agree with your concern. However, the College of Forestry and MNR have little to do with hiring additional faculty, so there is little that we can do in this regard. However, the Provost has initiated a discussion the Deans of the participating colleges in the MNR program to consider funding of interdisciplinary degrees such as the MNR. We have amended the Category I to better reflect the role of instructors participating in the MNR degree. Please see page 16 - 20 of the revised Category I proposal.

Paragraph 3

Please see page 3, paragraph 2. It is quite common at OSU and other academic institutions to offer non-thesis Masters degrees. OSU offers, for example, Master of Agriculture (MAg), Master of Forestry (MF) and Master of Business Administration (MBA). These degrees are not professional degrees, although they are offered for professionals in specific fields. Thus, the MNR degree is simply a non-thesis option for a Masters degree.

Subject: RE: MNR Feedback

Steve & Badege:

I simply want to underscore and reiterate the points Brent has made. The idea for a Master's in Natural Resources is an excellent one that draws upon OSU's strengths, so I'm supportive.

But as I said at our meeting on Tuesday, I have some reservations about another graduate program drawing on OSU's faculty the natural resources / environmental area and disciplines, given the limits we discussed. After I had to leave, Brent reports on an in-depth discussion of the budget model and on that score as well, I agree completely with him. The amount your proposal recommends for faculty who would teach online is less than is currently being offered in similar programs and would not provide incentives for participation. It would also be a problem for departments that have the relevant faculty, so at least in Poli Sci, I would reluctantly have to recommend against participation unless the numbers change in subsequent iterations.

But keep at it -- the fundamental concept is sound; it just needs tweaking (and more bodies).

The Best,

Bill

Subject: MNR Feedback

Dear Steve and Badege,

Thank you for meeting with us social scientists yesterday concerning the new proposal for a Master of Natural Resources (MNR) distance degree. This is an excellent initiative that has the potential to attract an enormous number of new graduate students to OSU. I strongly support this proposal and believe OSU should develop the degree. However, I have some concerns about our/my ability to participate in the degree program.

First, the number of human-dimensions of natural resources/environmental faculty (social scientists) available to participate as faculty mentors or committee members is severely limited due to the proliferation of environmental and natural resource programs, degrees, and certificates at OSU and the limited number of faculty. As an example, this year I've been on and/or chaired 18 graduate committees in departments and programs such Geosciences, Environmental Science (PhD program), Water Policy and Management, Marine Resource Management, Education (environmental education), Master of Public Policy (MPP), and AREC. All of these students are pursuing topics dealing with the human dimensions of environmental/natural resource issues. There are too many students for the faculty we now have. I have had to discontinue working with students in many of these programs due to work load. Our MPP program—which has an environmental policy track—is growing rapidly as well further limiting the ability of faculty in Sociology and Political Science to participate in other programs. The sustainability of all these programs and many new certificate programs not listed here are in jeopardy given existing staff.

Second, the budgeting model proposed for the MNR is problematic. The two Ecampus courses you have listed from Political Science (PS 575 and PS 577) are taught by myself to help support the MPP program, which I direct. The MPP program has been entirely funded by grants, contracts and Ecampus revenues the last 6 years (including Ecampus tuition and ERAM). I take no salary for the Ecampus courses and use the generated revenues to support graduate students in our program. Currently, I receive approximately \$99 per credit hour for an undergraduate student (instructor pay and department allocation) plus ERAM. Your proposal would pay \$85 per credit hour for a MNR student with Forest Science taking the departmental allocation (I don't know what happens with ERAM in the proposal). This is not a rational situation for our program and I would not participate in such an arrangement. Teaching overtime for no pay and less revenue is not a good incentive. I would rather limit enrollment to undergraduates. I imagine this will be the case for some other departments/programs as well.

From my perspective, this program would require additional human dimensions faculty for committees and instruction. There are far too few of us to continue supporting all these human dimensions programs and provide quality graduation education. Maybe Forestry could allocate

more faculty resources to support this program? Secondly, I would strongly encourage a new budget model that does not rely on other departments and programs to subsidize this degree. This is very problematic. I could go into more detail on both of these matters if you wish.

Finally, if the faculty and budget situations were resolved, I have several suggestions for the proposal:

>Add Prof. Roger Hammer's (sociology) planned online methods course to the methods requirement.

>There is a Rural Studies Graduate Certificate under development as part of the Sustainable Rural Communities Initiative. It would be an excellent area of emphasis for the degree (once again, if a different budget model were in place).

I hope these comments are useful. This is a great idea with enormous potential.

Response to Dr. William Lunch and Dr. Brent Steel, Department of Political Science

Please see comments in response to Gallagher's letter. In addition, we have amended the initial Cat I. to reflect 3 options for funding equitably participation in the MNR degree. Hopefully, option 2 will be chosen by the Deans and Provost to fund the overhead costs of the MNR degree by the conclusion of the Cat I process. In the event neither option 1 nor 2 are chosen by the Provost, we intend to proceed with the MNR degree using option 3.

Hi Dan. I'm glad my earlier message clarified the situation about paying instructors, and that you are willing to waive your department's share of the on-line tuition until our expenses are met to administer the degree. I hadn't thought much how that would be accomplished, but you make a good case for an annual assessment. I'm sure we can incorporate that into the Cat I proposal. Thanks for being so helpful and thoughtful about this opportunity. sr

Subject: RE: Comments on MNR Degree

Steve,

As I mentioned in my message, waiving the department share is OK as long as our instructors are paid. A couple more points now have slept on it some. First, would you envision that the overhead would be covered on an annual basis, or on a quarterly basis? I think everyone being assess an overhead fee (based on enrollment in individual classes) on an annual basis would be the most equitable approach to keep folks from gaming the system. Under an optimistic scenario the overhead might be covered by fall and winter enrollment. If the overhead is assessed on an annual basis, it will keep me from offering my classes predominately in the spring to avoid the overhead--does that make sense? Second, you mention that overhead would only be assessed for students that declare a MNR degree and certificates could be used in the degree. I am guessing that there are some certificate programs that may depend on the department share as well. What would your proposal do in that case?

Subject: RE: Comments on MNR Degree

Hello Dan. Thanks for your comments about the proposed MNR degree. Unfortunately, I think the proposal or my description of it has mislead you. We do not intend to change the fee schedule to instructors at all, and we are only requesting that a portion of the tuition returned to the departments, after instructor pay is met, be used to meet our administrative (director/advisor etc) expenses for

6/6/2008

the degree. I hope this clarification make the proposal seem more feasible to you. sr

Subject: Comments on MNR Degree

Steve,

Thanks for the visit this morning with regards to the MNR program. I like your degree program proposal and your justification. I believe that the 18/18/9 units for core/emphasis/independent study would provide students with both flexibility as well as important interdisciplinary training.

Note that FW /FOR 585 is also cross-listed with SOC and actually taught by Lori Cramer in SOC on alternate years.

I have given the tuition sharing model you have proposed some additional thought and believe that it would not work for us. With 2 exceptions, our on-line Graduate classes are taught by adjunct or courtesy faculty who's only salary comes from the tuition they receive on a per SCH basis. These folks will not have any interest in teaching those classes if they are not going to receive compensation. The departments receive a small amount above the per-SCH tuition that is paid to the faculty and I would be willing to donate that in support of the program. I suggest that the initial overhead costs should be borne by E-campus.

Thanks for providing me the opportunity to comment on your proposal in this initial phase.

Let me know if you have questions.

Subject: RE: Curriculum Liaison for Category I Proposal: Master of Natural Resources Program

Badege:

Thanks for the opportunity to comment on this proposal. Several members of the FERM department provided input which I am summarizing.

The administrative structure of the new program is unclear. Will it be housed in the Grad School, as is the case with some existing multi-departmental graduate programs, or in some other place? What administrative officials in the University have signed-off on this proposal? Has this program, and particularly the funding arrangements, been fully vetted with the appropriate college deans, the Dean of the Graduate School and the Provost?

The budget accompanying the proposal seems to suggest that long-term Ecampus receipts will cover the administrative costs of the program, but who will provide the start-up monies and how will they be reimbursed? How will overall Ecampus revenues to the program be split between participating departments/college? The details of this arrangement need to be spelled out. [Should update budget references to reflect the recent COF reorganization.]

Proposal needs to be clearer about specific agreements to create online versions of key courses now taught only on-campus and the faculty who have agreed to develop these courses.

Reliance on available online courses limits the scope of studies, e.g., there is no forest ecology course.

Details: "Sustainable Silviculture" course - there are some changes in the works that are not reflected in the proposal (e.g., course name change and increase to 3 credits).

Response to Dr. Darius Adams Department of FERM

Paragraph 1

- At this point it is unclear where the Provost wants the MNR degree housed. It is most likely that it will be based in the Graduate School.
- We are still in the Liaison process. Those Deans in the participating Colleges will be asked once the Liaison process is completed.

Paragraph 2

Please see pages 20-22 of the revised MNR Category I proposal and responses to Gallagher and Lunch and clarification in funding of the Category I proposal. In addition, Extended Campus will commit additional supplemental funding to help defray overhead costs during the initial years of the program offering.

Paragraph 3

All courses listed in Table 3 are now being revised for online presentation. In addition, professors for new courses have been consulted and have agreed to create a new course for the MNR degree.

Paragraph 4

SNR 530 is taught by Dave Perry and is almost exclusively Forest Ecology.

Paragraph 5

We can not discuss in this Category I "changes that are in the works". However, we know that SNR 531 is currently in the Cat II process with modifications to make it a 3 credit course.

Subject: RE: Curriculum Liaison for Category I Proposal: Master of Natural Resources Program

Badege and Tom--

Although I don't have official responsibility for reviewing CAT I proposals, I have several observations on this one that might prove helpful in constructing the final proposal:

1) It's still not clear to me where this program will be housed and who will oversee administration of it. Unless I'm not recalling correctly, the COF (FEC) has not yet approved it (pending a business and administration plan)--but perhaps circulating this draft proposal is preliminary to securing that approval. Where will the \$\$ come from to support the proposed administrative structure?

2) If this is truly an interdisciplinary program, I think it needs STRONG letters of support from the partners. The cover letter indicates that no response will be interpreted as approval; in this case, I don't think that's good enough.

3) the proposal indicates in several places that "independent study" is part of the program. I'm not sure what that means (in terms of official coursework) or how it will be documented. It seems to me that it could fall under: 501, 505, 506, or 510 (and perhaps others), but each of these has a separate and

distinct meaning--and some are used differently in different departments. Also there's language about "3 credits can be satisfied by either an internship or up to a 6-credit certificate project" that is not clear to me.

4) The degree requires student group work. How will student group work be facilitated via distance?

5) One statement says "none of the programs offered by OSU provide graduate-level curricula in natural resources." I think I know what you mean, but I think many others could object to this particular characterization.

6) course choices in "ecology and production" seem too limited

7) MNR 506--since courses are offered by departments, what department will offer this? Whose curriculum committee will oversee it (and any other MNR courses that might be proposed)?

8) learning outcomes: vary in quality and measurability. I don't thin they're sufficient to pass muster of the Curriculum Council.

9) most web links to certificate programs don't take the reader directly to the appropriate certificate programs, but rather to a more generic site that needs to be waded through to find the right link.

Hope some of this helps. --Ed

Subject: RE: MNR Cat I

Just so we have something to chew on prior to this meeting, here are several concerns--either mine or those of others with whom I've spoken:

1) who at the College level signs off on this CAT I proposal? Will it be a single Dean regardless of whether it's COF, or CAS, or COS, or CLA, or COAS... or all of them who choose to self-identify as participants in the MNR program, or the Graduate School, or.....? It's not just a question of who signs on the dotted line, but who takes responsibility for fully reviewing the program. The answer is not clear to me (but perhaps it is to others).

2) who will provide administration and support for this program and where will the \$\$ come from and how will they be allocated to those who actually mentor students and teach classes? I've heard that it may be centered in the Graduate School, but I'm not really sure what that means in terms of actual work to be done. Has this been determined yet? The NR undergrad program continues to struggle with these issues and I think they should be resolved for MNR before it moves through the CAT I process.

3) I've heard a number of folks express concerns over the apparent rigor of the program.

- Many (perhaps most) of the courses do not have prerequisites--and this seems different from most graduate programs. Is this a correct perception? If it makes sense for this program, let's discuss why so that we're on the same page. What I've heard so far is that it will discourage prospective students from entering the program, but is that sufficient rationale? With few prerequisites, it causes people to ask what distinguishes this from an undergrad program (don't shoot the messenger--I'm just relaying what I've heard from others).
- I don't recall seeing any minimum qualifications for entry into the program (other than a BA/BS and appropriate grades, and perhaps GREs). For example, will entering students either be expected to have, or develop once admitted, some set of "competencies" in certain specific areas--even if this means taking some undergrad courses?
- I've also heard concerns that there's a high potential for a "mix and match" approach to selecting courses based on a limited number of choices--and that this may leave major holes in the background of graduates. I think this would be good to discuss.

No need for an e-mail exchange on this, I'm just trying to seed the discussion that will occur next week. --

Subject: RE: MNR Cat I

Ed. Unfortunately I don't think anyone answered your questions fully at our recent meeting about the MNR Category 1 proposal on 9/22. Thanks for your time and effort. I will attempt to answer your questions now, or to at least provide my perspective.

1. We are planning to have each of the Deans of the various Colleges that will benefit from the MNR degree sign the Category 1 proposal. This matter is also being considered by Provost Randhawa, who may chose to place the degree in the Graduate School. (He favors this option, since the proposed degree is an interdisciplinary program.) Of course, this option could be superseded if a College wanted strongly for the degree to be housed with it.

All Category 1 proposals receive an in-depth review by the Graduate Council, Curriculum Council, Budget Committee and probably some other committees that I can't think of right now, then it is forwarded to the faculty senate and OUS administration for their review. All this is stated in the guidelines for preparation of Cat 1 proposals.

2. All this is stated in the draft MNR Category 1 proposal. However, the answers may be obscure there because we are forced to submit the Cat 1 according to a format that is provided in the guidelines.

The degree program is intended to be self-supporting from on-line tuition. The actual administrative costs for the degree are quite small and are outlined in the Cat 1 proposal. Because we anticipate a "ramp-up" period of 1 to 3 years before the degree is at capacity, E-Campus will provide start-up funds for this ramp-up period. The degree program would pay the start-up funding back to E-Campus as the degree becomes fully functional. E-Campus has projected for us that this will take about 20 full-time or 40 part-time students. The SNR Certificate attained 20 students in one-year.

Three funding options are presented in the draft MNR Category 1 proposal for administrative costs of the degree. Option 1 has received some objections from certain departments, notably in Liberal Arts (only 2 departments). For this reason, option 2 is being considered by Provost Randhawa. In the event that OSU central administration does not provide a solution to the temporary funding of administrative expenses (the degree will eventually be self-supporting, in about 3 years), we intend to proceed with option 3.

Instructors who actually teach classes will receive \$85 per student contact hour according to the E-Campus pay schedule for Instructors. These funds can either go directly to the instructor, as over-load pay, or directly to the department as instructed by that department. In addition, up to 3 units of pay from MNR 506 will go to each student's mentor, who will be a member of the student's GAC (Graduate Advisory Committee). Since the MNR degree is a graduate degree, each student must have a GAC, which determines student course work, area of emphasis, etc. In addition, there will be an Admissions

Committee and an Advisory Committee for the degree program that will provide student admission and oversight, respectively. All this is described in the draft MNR Category 1 proposal.

3. All of these questions (3) relate to course rigor (of on-line courses) and how courses will be selected. I must point out that all of the courses listed in the MNR Category 1 proposal are approved courses, i.e. they have all gone through the Category II process. Some require prerequisites, some do not. It is not a matter for any of us to determine how instructors teach their courses. Since all of the courses listed have undergone Category II review, we presume that they all fit the standards imposed by the University for course instruction.

All students, because the MNR degree is a graduate degree, are required to have a GAC. This committee, along with the student, selects the courses of study. In addition the list of courses taught at OSU is augmented by the courses offered through the Consortium for Graduate Studies (see appendix in the draft MNR Category 1 proposal), in case an appropriate course cannot be found at OSU. The requirement for a GAC is a University requirement, regardless of where or what previous degree is held by the student. I hope you and others are not confusing an undergraduate degree program with the rigor that is imposed by the GAC in a graduate degree.

If you or others need further clarification, we will be happy to meet with you again. sr

Subject: Category I Proposal: Master of Natural Resources Program - please read

Hi Badege,

I have attached comments for the Category I proposal for a Masters of Natural Resources Program in Forestry that I received from faculty members in Botany and Plant Pathology. Sorry this is a bit late but I hope it will still be helpful.

Best regards,

Lynda Ciuffetti

Comments on Category I proposal for MNR: Bruce McCune

Positives:

- Adds flexibility to OSU masters degree options
- Adds possibility for distance-based masters in natural resources

Negatives

- The curriculum seems light on methods; for jobs people need good training in using tools of the trade. I see only 3 credits of this.
- The choice of core classes seems quite limited – some seem too specific for the core: e.g., Principles of Wildlife Diseases and Special Topics in CSS. (Nothing wrong with these courses, but I'm not sure I see how they are "core".)
- No fire ecology in the core?

- Graduates run the risk of having little depth in any one area – like a slightly glorified BA degree.

Comments on Category I proposal for MNR: Mark Wilson

I have a few comments about the CAT I proposal for a Masters of Natural Resources. The organizers invited me to participate in the 2007 discussions for this new program, but I was unable to attend. I hope my comments don't now sound like sandbagging.

1. Some courses listed in the "core" often seem like a stretch to fit with natural resources. Two examples are RHP 583 Radiation Biology and WS 525 Gender and Technology.
2. The areas of emphasis largely describe certificates earned with 18 credits. The exception is the Professional Science Masters program, which has curricula of 50+ credits. The proposal does not describe how students should cut the existing requirements in third.
3. On page 15, the proposal states that "we propose that tuition received from students in the MNR degree be allocated according to student-contact hour and funds be removed by E-Campus until overhead costs for administration of the MNR degree are met." I am not sure what this means in practice. I am concerned, however, that this policy would decrease the tuition received by departments or instructors for courses not otherwise involved in the MNR program. Those courses should not be penalized financially for serving students in the MNR program.
4. Field experience seems to be virtually nonexistent in the current proposal. A spot-check of the listed courses in the core showed only one course with a field component. The special field experience noted in 2007 discussions ("It would be important for online MNR to have a two week face-to-face component in the field.") is missing from the current proposal.
The proposal should, at least, explain how its curriculum can be successful without tying its content to the experience of natural resources in the field. Perhaps the capstone course, MNR 506, which is described as a real-world case study, is intended to provide this link. Perhaps the organizers believe that the target audience already has sufficient field experience to relate on their own the online content to field conditions.
The proposal would be stronger, however, if it tackled these issues explicitly. I would also be encouraged if the MNR program had a policy that its core courses will incorporate pedagogic techniques that helped students relate their book learning to their previous field experiences.

Comments on Category I proposal for MNR: Aaron Liston

I am director of the Applied Systematics in Botany track of the Professional Science Master's program. Since 2005, 5 students have successfully completed the program and received a non-thesis master's in Botany and Plant Pathology. One student is

currently enrolled in the program. Thus the program averages 1.25 students per year. Students have taken 1-2 years to complete their degree, and there has been no attrition.

About two years ago, I was at an initial meeting that eventually led to this proposal. Ursula Bechert represented the Professional Science Master's program at future meetings, and I was not involved in the development of the current proposal. However, I think the proposal is very worthwhile. In fact, I would like to propose the Applied Systematics program in the Department of Botany and Plant Pathology be considered an additional "Area of Emphasis" available to Master's of Natural Resources Students. In my opinion, the proposed MNR curriculum would better meet the needs of the Applied Systematics students who currently take the PSM "Professional Cohort Courses". I also think it would enhance the Applied Systematics program by having the current Internship requirement followed up by MNR 506, Master's Case Study. One significant difference between the Applied Systematics curriculum and the other MNR areas of emphasis is that none of the core courses are offered through E-campus. The required core courses all depend on the examination and identification of plant and fungal specimens in the laboratory, and it is difficult to envision making these courses available online. Would it be acceptable to have a MNR program that required on campus courses?

Sincerely,

Aaron Liston

Professor of Botany and Plant Pathology

Director, Applied Systematics Program

Appendix I. Existing Applied Systematics Program Curriculum (51 credits required)

Required Core Courses (19 credits total)

PSM 567 Innovation Management (3)
Internship (6 credits minimum)

Response to comments by Botany and Plant Pathology Department

Bruce McCune.

Positives--Thank you for the positive comments.

Negatives--

- This new proposal lists 7 methods courses, totaling 26 units. All these courses are offered on-line. It is, of course, up to the Graduate Advisory Committee (GAC) of each graduate student in the MNR degree program to determine which course(s) will be taken to satisfy the Methodology requirement.
- The selection of courses for each graduate student in the MNR degree program is determined by the GAC. Courses listed in the current Category I proposal are all offered on-line by OSU. This list is also augmented by the list of courses offered through the Consortium of Graduate Studies (Appendix E). In the special case of CSS 599, the appropriateness of this course will be determined by the GAC and depend on the topic taught that particular term.
- FOR 445/545 is primarily about fire ecology. We could add FOR/RNG 536 Wildland Fire Science & Management (4 credits, John Bailey) and FOR 554 Managing at the Wildland-Urban Interface (3 credits, Bruce Shindler) if instructors are willing to adapt existing courses for online offering.
- The Depth requirement is satisfied by at least 18 units of “Area of Emphasis”, which also maybe a graduate Certificate. This amounts to 40 percent of the MNR degree.

Mark Wilson.

- The selection of courses of each graduate student in the MNR degree program is determined by the GAC. Courses listed in the current Category I proposal are all offered on-line by OSU. This list is also augmented by the list of courses offered through the Consortium of Graduate Studies (Appendix E).
- It is up to the GAC to determine how specific courses will be added or cut from an existing Certificate program (e.g. PSM Certificate) to determine an “Area of Emphasis” in the MNR degree. Students could, of course, opt for the entire Certificate if they wish.
- Three funding models are currently proposed in the current version of the MNR Category I proposal (page 21). We currently favor model 2, which is being seriously considered by Provost Randhawa and the Council of Deans that will benefit from this program.
- We have addressed this issue explicitly in the Category I proposal (pages 9-12). Field experience is not a requirement for this graduate degree. However, our experience with the Sustainable Natural Resources Certificate indicates that nearly all students in the Program have at least two years of professional experience. This experience is of great value to all students taking SNR 506 and we suspect for MNR 506, as well. An in-residence requirement for face-to-face field experience is, unfortunately, untenable for an on-line degree.

Aaron Liston.

We believe that the graduate program in Applied Systematics would be an excellent “Area of Emphasis” for the MNR degree. Unfortunately few of the courses required by the Applied Systematics Program are offered on-line. It would be up to a student that is in-residence and his/her GAC to determine if Applied Systematics would be an acceptable area of emphasis. While we have no objections to this suggestion, it would probably require a modification to the current Category I proposal since the MNR degree is proposed as being primarily on-line.

Dr. Badege Bishaw
Oregon State University College of Forestry
208 Richardson Hall
Corvallis, Oregon 97331

Dear Dr. Bishaw:

This letter is in support of the CAT I Proposal for Oregon State University to develop an online Master of Natural Resources degree program. There is a clear and well defined need for more on-line professional degree programs in Natural Resources education, at this time and in the future.

Six years ago, Virginia Tech's College of Natural Resources developed a Master of Natural Resources (MNR) degree program at the Northern Virginia Campus, with the objective of providing a Graduate degree program to meet the needs of working professionals throughout the metro-Washington, DC area. At the time of the MNR program's initiation, a Natural Resources Distance Learning program was also undertaken as a joint venture between USDA Forest Service and Virginia Tech. The distance program was designed to meet the needs of working professionals throughout the US who are employed by USDA Forest Service and other Federal land management agencies (eg., DOI National Park Service, Bureau of Land Management, Fish and Wildlife Service) and DOD US Army Corps of Engineers, as well as state and county land management employees seeking advanced degree opportunities for professional and career enhancement. As Virginia Tech's residential and distance learning programs evolved, it was clear that no single natural MNR program could develop and provide all of the courses to meet all our student and future student needs.

Three universities met, five years ago, at Blacksburg, VA, to form the Natural Resources Distance Learning Consortium. An analysis of distance learning in the natural resources showed less than 5 percent of the courses offered at Colleges of Natural Resources were offered on-line. The group began to identify other universities that were interested in developing or had developed distance learning programs. In this short period, 10 universities have joined the Consortium, including Oregon State University. This has

enabled students to seek courses they want or need for career advancement, career change or professional growth and development. The Consortium provides access to member Universities through a single web site.

Among the key issues supporting growth and need for distance learning graduate natural resource programs for professional development are changes in the US Office of Personnel Management classification of two job series: Wildland Fire Management, and Recreation. Federal employees in these career areas are required to take up to 24 credits of courses to be classified into the professional series from technician series. These are college graduates, with as much as 30 years experience, who need additional course work for career advancement. This has become one of the key motivators for the development of the Natural Resources Distance Learning Consortium.

Secondly, a report developed jointly among the Natural Resources Professional Societies indicated that approximately 10,000 natural resources professionals would be retiring over a span of the next 10 years (2001 - 2011). This indicated to the Consortium that many employees would be seeking additional graduate courses to improve their competitive base for promotion into the positions vacated by retirement. Professional on-line degree programs, such as a Master of Natural Resources, meet this need. These working professionals need access to distance learning courses for three reasons: 1) they cannot afford to take off work for 2 years; 2) they cannot uproot their families and move to a University campus; and 3) they cannot afford the costs of temporary housing while pursuing their professional Masters degree.

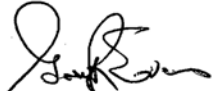

The third key issue, identified by the Federal land management agency partners is the rising costs of on-site training to continually upgrade the technical quality and rapidly changing rules and regulations. In discussions with the training coordinators of several agencies, they have indicated that it costs over \$1800.00 per person per week for travel and per diem—not including the cost of training. Consortium Universities delivering distance learning courses are in the position of working to provide parts of training and education on-line, thus cutting training budget costs.

Each Consortium member offers a unique set of on-line courses to students. This is due to the fact that faculty across the country are not all interested in teaching on-line. A Master of Natural Resources program at Oregon State clearly expands the courses

available to a rapidly growing student body, within the US and now throughout the English speaking world.

Oregon State University, as a member of the Natural Resources Distance Learning Consortium, has a unique opportunity to develop their Master of Natural Resources Program.

Respectfully,

Gary R. Evans, Ph.D.

Dr. Badege Bishaw
321 Richardson Hall
Oregon State University
Corvallis, OR 97331

Dear Dr. Bishaw:

Over five years ago the U.S. Forest Service and the DOI Bureau of Land Management began collaborative efforts with a small group of universities in an effort to advance the agencies' employee development programs through technology enhanced education. The focus of those collaborations were disciplines that are at the heart of the agencies' work – natural resource management.

As the chief learning officer for the DOI Bureau of Land Management, I am responsible for the employee development of over 11,000 employees in over fifty job series. From the Bureau's perspective, the collaboration initiated by the U.S. Forest Service has come at a perfect time. The Bureau, like most federal agencies, is struggling with travel ceilings and increasing time demands on employees. The result is that fewer employees are being allowed to travel for training while the amount of turnover in the federal government ranks continues to grow as each baby boomer reaches retirement age. The Bureau faces employee retirement and turnover rates as high as 40 to 50% in many of its natural resource management professions.

The only answer to meeting our staffing and development needs for the next decade and beyond is for federal training programs to embrace distance learning and stronger working relationships with higher education institutions across the country.

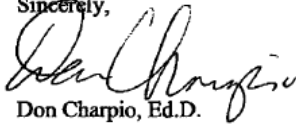

The Executive Leadership Team of the Bureau of Land Management has embraced distance learning as one of the fundamental answers to our employee development needs. The Team has challenged me to move the Bureau's training program to an 80 to 20 ratio of distance learning to instructor-lead training, and to work more as a broker of training opportunities as opposed to the primary provider.

The Natural Resource Distance Learning Consortium can play a significant role in helping the Bureau meet the challenges set by the Executive Leadership Team, but only if it grows and advances greater diversity in its distance learning offerings.

Over the past five years I have watched the interest and membership in the Consortium grow steadily, and the universities strive to advance their programs by working with the agencies to address areas of common interest. As one of the country's leading institutions in developing the next generation of natural resource management professionals, Oregon State would be an excellent addition to the Consortium. Given the University's rapid advances and unique approach to financing distance learning, I know the Bureau of Land Management's employee development program could benefit greatly from having a stronger working relationship with the University. I hope that University officials will give serious consideration to the opportunity to join this growing family of national and internationally renowned universities.

Thanks for hosting the last meeting of the Consortium; I hope to see you at our next meeting. Please call upon me if I can be of any assistance in answering questions about the direction and needs of the Bureau's employee development and succession planning programs.

Sincerely,

A handwritten signature in black ink, appearing to read "Don Charpio". The signature is fluid and cursive, with a large initial "D" and "C".

Dear Dr Badege Bishaw,
OSU, College of Forestry
Corvallis

Subject: New On line Master's Program

I thank you for sending us the proposal to initiate a New Instructional Program for a Masters of Natural Resources.

We have gone through the draft document with utmost attention. We found the program to be in the interest areas of our College. As you might know, Wondo Genet College of Forestry and Natural Resources (WGCF-NR) has initiated a number of masters programs in forestry, wildlife, watershed management, natural resource economics, etc. The program you are developing will certainly contribute to alleviate the existing need of trained man power in our country in NRM.

In your effort to internationalize the program, WGCF-NR would like to be an active partner. We hope that our role in the program will be clearly set in the final document to which we would like to express our interests and opinions.

With Regards,

Abdella Gure (Dr)

Oregon State University
Corvallis, OR 97331

Dear Dr. Bishaw,

I am writing as a student to express my enthusiasm for the online Masters of Natural Resources program currently under development here at Oregon State University. This is an important program that will strengthen the University's ability to reach students and develop high-quality courses for working professionals.

I am a second-year PhD student at Oregon State and I took my first online course this summer through the Department of Botany and Plant Pathology. This was a methods course that was highly challenging and exceeded my expectations in terms of how much I learned and its relevance to my studies. The online nature of the course gave me the flexibility I needed to be able to take this class over the summer.

As an older student who has worked in the fields of education and natural resources management for over ten years, I can attest to the difficulty of finding applied, online technical courses that provide working professionals with quality coursework to enhance their knowledge base or work towards a higher degree. Your program sounds as though it will help fill this gap, and I look forward to hearing about its progress in the future.

Sincerely,

Kathleen Guillozet

Natural Resources Distance Learning Consortium Strategic Planning 2008

Over the past 5 years, the Consortium has focused on looking ahead to the capabilities offered in distance education and distance academic training. The first discussions generated the question what do we want to become? The second issues that continue to evolve, today, focus on the "Next Five Years", looking forward.

What Do We Want to Become?

Foremost in this discussion was the overriding principle: to "Meet our Student Needs." We looked, and continue to look at our Students as both current and potential learners, utilizing distance learning as a means of acquiring upper division and graduate courses that may enhance their professional growth and development. We have agreed that our current and future role is to offer this education opportunity to the place bound career professional or technician working in natural resources. This arena includes public land managing agencies (including all levels from federal lands to county or local lands) as well as those seeking academic growth and development and training in non-governmental organizations and professional societies.

We see our role as offering graduate education, graduate degrees and certificates of graduate studies, as well as training or continuing education, for place bound students who are constrained by geography, family, work, time and finances.

Our Objectives are to sustain, among consortium members, an organization capable of supporting academic structure with:

- transparency of requirements
- universality of access
- reciprocity among consortium members
- maintenance of academic rigor across courses and training modules
- support for course quality and evaluation among our university peers, as well as among our student communities and client groups.

We strive to add value to educational outcomes for our students.

We seek, collectively, to strengthen our marketing of distance education.

We will continue to strengthen the value of the Consortium through our partnerships, including university departments and colleges offering natural resources programs, non-governmental organizations, public land management agencies, organizations, and professional societies.

Our Products are educated persons with Graduate Professional Degrees, Certificates of Graduate Studies in Natural Resources, and Continuing Education and Professional credits.

Our long term strengths within the Consortium include:

- networking among and between institutions and organizations .
- fostering networking among faculty
- sponsoring presentations and sessions at professional meetings.

Distance Learning technology is a very rapidly growing and changing field in which the Consortium will maintain open communication through working or discussion sessions at meetings.

The Five Year Plan – 2009- 2013

Consortium representatives began our Five Year Plan discussions during the Spring 2007 meeting at Stephen F. Austin State University. We asked, "What should the next 5 years look like?"

Our Goal is strengthening our forward-looking Academic focus and identifying long term objectives that are the hallmark of the Natural Resources Distance Learning Consortium. Over the next five years, we must look at key objectives, start to prioritize them, and consider options and opportunities for implementing them.

Several issues were raised in discussions over the past 5 years that are part of the evolution of the Natural Resources Distance Learning Consortium:

- developing on-line mechanisms for broader student access
- evolving an on-line forum between agencies (Federal, State and local) and Consortium universities to evolve a vision and path toward strengthening both the academic and professional development sides of the Consortium
- new visions of course flexibility in natural resources graduate education if necessary to accommodate a unique group of potential students -the working professionals -who may not have the single semester

work assignments that allow them to complete courses within the academic calendar. Is there a place for the "super semester" and how do we define and develop it?

On-line forum -It is necessary to support the evolution of natural resources distance learning- distance education; distance training; modules, units, lessons to be delivered on-line and augmentation through hands-on modules completed at specific locations. Consortium members are beginning to see the evolution of this vision and we now need to discuss the concepts. Today's challenge is developing a natural resources model that includes:

- adding the "lab component"
- expanding the diffusion of "best practices for natural resources education and training"
- enhancing learning processes with critical update activities related to changes in natural
- resource related policies, laws, and pedagogy.

Reciprocity -High among issues for consideration is whether unequal tuition is seen as a barrier to those institutions with high tuition costs and a benefit to lower tuition universities. There also are questions of price sensitivity and whether or not this is a deterrent to students, thus we posed the question; "Do students shop for a degree, a certificate or training based on price or need and availability?"

Transparent Guidelines - Consortium members are very supportive that guidelines among the members be developed and maintained to be as transparent as possible to our distance learning clients. Preliminary discussions indicate that this appears feasible at the outset and it is incumbent to continue working toward this goal.

Balance of Course Credit - Consortium members raised questions of balance in course credits among member universities. At this time, it is clearly an open question and one to be pursued without prejudice in the future.

Strengthen Marketing - A part of the future planning process must seek to define marketing of the Consortium and its members to those interested in pursuing academic degrees, certificates of graduate studies, or training.

Credit Transfer among Consortium Members - Both current discussions and future plans need to incorporate some agreement, if attainable, about the number of course credits that may be transferred among Consortium Universities for students to apply toward their degree programs. Early discussions indicate that a current list of guidelines needs to be developed for future discussions. An additional point was raised about the maximum number of transfer credits for Certificates of Graduate Study and for Professional Masters degrees.

External Committee Members - May external committee members serve on professional degree programs committees? It was pointed out that our current students have asked for committee members from other universities. No substantive discussions have taken place at this time. Should this be a part of the Consortium's long range planning process?

The "Star Pack"? Identify "Star Faculty" in a specific academic area and encourage their involvement in development and teaching of specific distance courses. Some initial points include seeking access to world experts and including them in distance education courses, as well as apprenticing and developing faculty.

A central issue and one that will require significant work is to create compelling, seamless processes for Natural Resources education graduate programs among Consortium University members. The model exists with the Great Plains IDEA program, and we can build upon it.

Perhaps the most open-ended question to the members is "How big do we want to become?" This requires input from all our Consortium members (Universities, Agencies, Professional Societies) and from colleagues. It is necessary to profile our "future student" and plan for their future education opportunities. The Consortium should clarify the resident vs. distance learning student models -how are they similar, how are they different, and how do these influence the way we design and develop academic curricula and professional development curricula?

Additional questions and topics for future discussion should include:

- Incorporating laboratory or laboratory design activities into courses. This will be critical in such areas as wild land fire management where managers and leaders in the fire environment are moving from technical training to professional command education.
- Defining phases or modules of courses that may be resident-focused, as well as those that may be accomplished by non-resident education. Among the options to be considered are use of web conferences, field laboratory activities, and field time to compress course activities into manageable learning experiences, and use of remotely transmitted video for specific components of learning modules.

Appendix E – List of Natural Resources Courses available through
the Natural Resources Distance Learning Consortium

Appendix E. Online Masters Degrees, Graduate Certificates, and Graduate Courses offered by members of the Natural Resources Distance Learning Consortium

Downloaded 15 September 2008 from <http://nrdlc.iddl.vt.edu/index.php>

Members include: Virginia Tech, University of Idaho, Penn State, Stephen F. Austin University, University of Montana, University of Tennessee Martin, and new members Oregon State University and North Carolina State University. USDA Forest Service and Bureau of Land Management are also members.

MASTERS DEGREES

| NAME | MEMBER INSTITUTION |
|---|---|
| Master of Natural Resources | University of Idaho |
| Master of Geographic Information Systems | Penn State World Campus |
| Master of Natural Resources | Virginia Polytechnic Institute and State University |
| Master of Science in Agriculture & Natural Resources Systems Management | University of Tennessee at Martin |
| Master of Science in Resource Interpretation Thesis Based | Stephen F. Austin State University |
| Master of Science in Resource Interpretation Non-Thesis Based | Stephen F. Austin State University |

CERTIFICATES OF GRADUATE STUDY

| NAME | MEMBER INSTITUTION |
|---|---|
| Restoration Ecology Certificate | University of Idaho |
| Postbaccalaureate Certificate in Geographic Information Systems | Penn State World Campus |
| Certificate of Graduate Study in Natural Resources | Virginia Polytechnic Institute and State University |
| Fire Ecology, Management, and Technology (UG) | University of Idaho |
| Fire Ecology, Management, and Technology (GRAD) | University of Idaho |
| Undergraduate Certificate of Achievement in Weather Forecasting | Penn State World Campus |
| Postbaccalaureate Certificate in Community and Economic Development | Penn State World Campus |
| Undergraduate Certificate in Turfgrass Management | Penn State World Campus |
| Advanced Undergraduate Certificate In Turfgrass Management | Penn State World Campus |
| Certificate in Resource Interpretation | Stephen F. Austin State University |

Appendix F: MOU between CoF and E-Campus

MOU for new Online Program Development between OSU College of Forestry, Forest Science Department and OSU Extended Campus

Natural Resources Masters Degree

OSU Extended Campus welcomes this opportunity to make this graduate degree available to a worldwide audience. The Master of Natural Resources degree will be an important addition to OSU online programs and will be an asset to students in many different areas of study.

Program Personnel

The College of Forestry agrees to assign a coordinator to serve as the main contact person to coordinate development of this degree with Ecampus.

Funding Overview

Total Funding = \$131,000

Disbursed in two major phases:

Phase 1: \$46,000 for program coordination towards the preparation, submission and approval of the MNR Category I proposal.

35% upon acceptance and approval of this MOU and Development Plan, which includes:

- the detailed timeline for CAT I proposal submission and approval;
- assignment of instructors/course developers to each course;
- timeline for course design, development, delivery.

55% upon submission of the CAT I proposal

10% upon CAT I full approval

Phase 2: \$85,000 for course development, coordination and program delivery (upon CAT I approval).

44% for course development coordination, disbursed upon full CAT I approval

41% for course development

- All courses to be completed within one year of the CAT I approval, with the initial offering of the program during fall term, 2010.

15% transferred upon completion of the project and acceptance of the final report.

Details of Budget Transfer per Program Component

Budget will be transferred to the College of Forestry as follows, except where otherwise indicated:

Phase 1 - Category I proposal, submission and curricular approval coordination: \$46,000

On signing of agreement: _____ 35% of Phase 1 Funding = **\$16,100**

On submission of the CAT I proposal: _____ 55% of Phase 1 Funding = **\$25,300**

On CAT I full approval: _____ 10% of Phase 1 Funding = **\$4,600**

Total Phase 1 funding: _____ 100% of Phase 1 Funding = **\$46,000**

- The College of Forestry, in collaboration with College of Liberal Arts, College of Agricultural Sciences, and the College of Science will prepare and submit a Category I proposal for the Master of Natural Resources towards successful completion of the curricular approval process.
- The Category I proposal will be developed during spring 2008 and submitted to the Graduate School in fall 2008.
- Approval of the Cat I proposal is expected to happen after one year in fall 2009.

- Course development will start after approval of CAT I proposal (fall 2009) and will be completed summer 2010.
- The program will begin offering the courses during fall term, 2010 and offer the full degree by winter or spring term, 2012 (Pending approval of CAT I).
- Each course will be offered a minimum of two terms per year to allow for successful student progress towards completion of the degree. The sequence and timing of course design, development, and offering are delineated in the Development Plan below (Table 1). Preliminary syllabi for each of the courses are to be submitted with the Development Plan.

Phase 2 - Course Design and Development (upon CAT I full approval): \$85,000

Course development coordination: _____ 44% of Phase 2 Funding = **\$37,250**

Course development: _____ 41% of Phase 2 Funding = **\$35,000**

- Course development will start after CAT I approval, projected for fall, 2009 and will be completed by summer term, 2010.
- Course development funds will be disbursed per course based on the number of credits for the course. Course development funds will be paid to the academic department in which the course resides. Funds will be disbursed once a course is deemed complete and up to standards, and has been reviewed by the appropriate designee of the College.
- 7 courses @ 3-4 credits each = 23 credits total (see Development Plan)
- Funding available upon completion of each course = \$5000 per course

End-of-Project Report: _____ 15% of Phase 2 funding = **\$12,750**

Total Phase 2 funding: _____ 100% of Phase 2 funding = **\$85,000**

- The College of Forestry in collaboration with College of Liberal Arts, College of Agricultural Sciences, and the College of Science will develop seven courses, begin offering the courses during fall term of 2010 and offer the full degree by winter or spring term 2012. Each course will be offered a minimum of two terms per year. The sequence and timing of course design, development, and offering are delineated in the Development Plan below. Preliminary syllabi for each of the courses are to be submitted with the Development Plan.
- Courses will be collaboratively planned, designed, and developed by the content providing faculty (Course Developer) or their representatives and the Ecampus Project Development and Training unit (PDT). The Ecampus contact for course development is: Dianna Fisher, Director of Project Development and Training dianna.fisher@oregonstate.edu - 541-230-4029.
- All courses making up the distance degree will be focused on outcome-based learning and aligned with the accrediting standards for learning outcomes established by the OSU Office of Academic Programs. All courses in the proposed program will be developed using the best practices framework for instructional design for distance education courses and programs, aligned with OSU and national standards for distance education courses and programs, employing the Blackboard course management system. Courses will be reviewed by designee(s) from the relevant Colleges and Ecampus upon completion.
- The Course Developer will engage in continued collaboration with the PDT from project inception and will ensure course completion and approval of the course at least 2 weeks prior to the initial term start. Completion status of the course is determined by the Extended Campus Director of Project Development and Training. If the course is not complete in Blackboard and ready to be taught at least 2 weeks prior to the start of initial term, the PDT Director will consult with the Program Director concerning advisability of course cancellation.
- As delineated in the existing MOU with the College of Forestry, Ecampus will provide (at no project cost) basic course development and production including: instructional design with best

practices covering accessibility and copyright, project management, media development, Blackboard course development, training, marketing, and on-going student and instructor support.

Use of Course and Materials

The Course Developer will have control of the substantive and intellectual content of materials subject to review and approval of the Department/College. Course Developer shall receive credit as a named author or a principal developer of the course. Additional authors may be added in accordance with their contribution to the course and as determined by the Course Developer. Course Developer has the right to remove his or her name from the course at any time, in coordination with the academic department and Extended Campus. The Department can appoint others to teach the courses. Consistent with the rules of the State Board of Higher Education, the Board owns the course and materials and OSU shall have the exclusive right to offer the course, whether through internet, video transmission, IP Video, interactive TV, or by other means, to any student at any location.

Sustainability of Program

In order to insure the sustainability of the Master of Natural Resources degree as a viable program into the future, the Program will:

- Initiate discussions with the Graduate School, the Forest Science Department, the College of Forestry, and in collaboration with the Colleges associated with the courses to be offered as part of this program,
- Establish agreements for a formalized budget model designed to provide funding for reoccurring costs necessary to support the Program and academic advising needs of the program;
- Summarize these agreements as part of the 'Plans for Program Sustainability' within the End-of-Project Report described below.

End-of-Project Report: 15% of funding

Please submit a final report after completion of the project to include:

- Description of the development process,
- Two-year schedule for continued course and program delivery,
- Student feedback on the experience taking the courses,
- Data on course evaluation,
- Faculty response to the development activity,
- Final expense report,
- Plans for program sustainability.

After submission and acceptance of the final report, the Ecampus review team will verify that all program components are in place upon which time the remaining funds will be released.

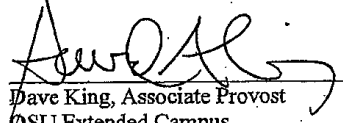

Supplemental Funding

In addition to the funding defined in this MOU, Ecampus will commit to additional supplemental funding to help defray overhead costs during the initial years of program offering, until the program achieves financial self-sufficiency based on enrollment-generated revenue. The supplemental funding will be provided to the Department of Forest Sciences to help defray costs associated with program staffing comprised of a Program Director and a Program Coordinator. The terms of this supplemental funding, including the amount of funding and its duration, will be delineated in an addendum to the overarching program MOU. The addendum will be drafted upon receipt by Ecampus information on projected enrollments for the initial years of the program offering, and once the program proposers have obtained formal agreements/disagreements regarding revenue sharing from the various academic departments to be associated with the program.

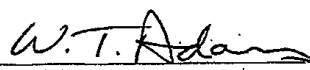

Signatures below indicate acceptance of these terms and conditions.

**OSU Libraries
Collection Development**

Library Evaluation for Category I Proposal

New Instructional Program for Master of Natural Resources (MNR)

Title of Proposal

Multiple

Department

Forestry, Agricultural Sciences, Liberal Arts, COAS, Science

College

The subject librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

☐ inadequate to support the proposal (see budget needs below)

☒ marginally adequate to support the proposal

☐ adequate to support the proposal

Estimated funding needed to upgrade collections or services to support the proposal (details are attached)

Year 1:

Ongoing (annual):

OSU Libraries Evaluation of Collection and Access to Support New Instructional Program for Master of Natural Resources (MNR)

Overview

The request for a library assessment for this new instructional program leading to a Master of Natural Resources has arrived at a critical time. It has been our practice to assess the current/historical strength of the collection and look at collecting levels specific subject areas and from that information infer if added resources are needed.

OSUL budget has been flat for the past five years during which time the price of serials/journals (the lion's share to the OSUL materials budget) has increased at an annual rate of 5-8%. As a result, our monographs budget has been cut by 50%. Although our monographs budget has been reduced, we have mitigated this situation with increased reliance on InterLibrary Loan (ILL) and resource sharing through Summit and with other libraries. We are pursuing collaborative collection development with libraries in the Orbis Cascades Alliance to focus our buying power on what matters most to Oregon State University and to avoid unnecessary duplication of titles among the institutions. In the current economy we can expect cuts to the library budgets at the University of Oregon, University of Washington, Portland State University, and Washington State University, on whose collections in natural resources and public policy our OSU students and faculty depend. It is inaccurate to say: "all of the resources required for the MNR degree are located at Oregon State University," (p. 18) though it is understood that this statement refers to the curriculum offered.

OSUL has been shoring up the collection using money from gift funds for the past 5 years. This was never intended to be more than a stop-gap and beginning in AY 2008/09 OSUL began another round of cuts of its serial collection. We are planning for an additional cut of some 30% cut to the serials collection over the 2009/11 biennium. For example, crop/soils, fisheries, wildlife, forestry, and rangeland serials will be cut by over \$19,000 in the next two years. In addition we will cut the general biology fund which underwrites these areas by \$84,000. These cuts are not temporary. They need to be sustained in subsequent years. There is no way to protect the Natural Resources serials/journal collection from these cuts. Assuming a flat budget, in subsequent years we will need to cut an additional 5-8% annually to keep up with inflation. Any strengthening of the collection in one area will need to be the result of sustained new funding or by further cuts. The reality is that if this or any other program wants to move forward, the forward movement must consider that OSUL will be supporting access to content through a combination of some journal subscriptions and an increased use of resource sharing, specifically a heavy reliance on ILL and/or document delivery.

OSU Libraries (OSUL) has not had the opportunity to comment on the burgeoning extended campus programs and library service/collections. Extended campus programs highlight the need for "electronic access" to the library collection and where this is not possible physical document delivery. While Extended Campus has provided a base figure for this for the past three years, that amount is not linked to increased enrollment nor is it linked to the costs of building an electronically accessible collection. E-access to monographs is a desirable future for such a program. When available, providing multiple users access to an e-book requires payment of an additional 50%.

The emphasis on this bleak picture is to make clear the point that even though our assessment indicates the collection is marginally adequate, maintaining "marginal" adequacy is an optimistic goal. The bad and the good news is that OSUL is not alone and has been collaborating within the Orbis/Cascades Alliance and the Greater Western Library Alliance for several years to negotiate affordable collections. There are also glimpses of a solution in the form of a truly shared research collection within OUS.

Collection Assessment for MNR

In 2003 OSUL provided a library review for the Certificate in Sustainable Natural Resource program which at that time was planned as an in-residence certificate. OSUL received no additional funds for the collection though we noted that our area of greatest weakness when compared with our peers for this program was in the social aspects of natural resource management and sustainability. In the 2006 library assessment for the Applied Economics Program found the library collection to be only marginally adequate.

Government Documents:

US Federal and State agencies' documents are the heart of any natural resources collection. In this area, OSUL has always had a strong collection and there is little reason to believe it will be diminished in the future. OSUL recently joined with the libraries at UO, PSU and the State Library of Oregon to provide a full but distributed repository of government documents. The agencies for which OSUL is the full depository for Oregon are:

- U.S. Dept. of Agriculture (USDA)
- National Oceanic and Atmospheric Administration (NOAA)
- National Oceanographic Data Center
- National Marine Fisheries Service
- Oceanic and Atmospheric Research Office
- Federal Aviation Administration (FAA)
- Dept. of the Interior (which includes the Forest Service, National Parks Service, Bureau of Land Management, and so on)
- National Aeronautics and Space Administration (NASA)

- National Science Foundation (NSF)
- Federal Mine Safety and Health Review Commission
- Nuclear Regulatory Commission (NRC).

Students interested in Oregon will find a wide array of documents from state agencies as well. Most state and federal agency documents are published electronically now though not all are provided a persistent URL. The State Library in Oregon is attempting to provide this service. Government documents from other countries are more likely to need interlibrary loan.

Public Domain, Open Access and Copyright:

Researchers employed by US federal agencies cannot transfer copyright to publishers (even for-profit journal publishers). For that reason databases like the US Forest Service's *TreeSearch* can become a site for "one stop shopping." OSU researchers can participate in this de-commodification of research findings by being aware of author rights. In most cases it is possible to retain the right to deposit pre- and/or post-prints of their scholarly writing in the ScholarsArchive@OSU, our institutional repository (<http://ir.library.oregonstate.edu/dspace/>). In that way the content of their research findings will be freely available in perpetuity.

Monographs (See Appendix I):

We looked at the number records in the OSUL catalog compared with Summit (the library for the Orbis/Cascades Alliance) and WorldCat. The latter serves as "the universe" of cataloged material.

A few relevant call number ranges were examined and revealed the shift to policy as an area of collecting emphasis since 2005. A comparison of policy related natural resources monographs added to the OSUL in comparison to Summit and WorldCat holdings shows that we are now collecting at a level that is on par with institutions having a longer history of public policy program emphasis (UW, UO, etc.). However, to build a public policy collection that is truly on a par with these institutions, we should be collecting at an even higher rate in order to catch up.

While it is clear that the OSUL collection is adequate in most natural resource areas the fact that students have access to the Summit holdings serves them well by providing a venue for direct borrowing of titles not owned by OSUL. The figures for WorldCat provide sufficient proof that no library can stand alone in providing monographs and highlight the fact that all graduate students and their faculty must anticipate use of Interlibrary Loan for at least some of their monograph needs.

Collecting electronic books, e-books would be the preferred format for this program. Unfortunately as is the case for e-journals, as libraries elect to provide their users with e-access to books they also enter into licensing agreements that

prevent them from providing access to users outside their institution (e.g. OSU users cannot view e-books in the UW collection unless we also have purchased the same title). So in supporting e-campus programs with e-book purchases we can at best buy 2 books where we could once have purchased 3 and, other things being equal, in doing so, we are not adding to the greater Orbis/Cascades consortium collection.

Core Journals for this program (see Appendix II):

Defining the set of journals needed to support this program is problematic in its diversity. Rather than looking at the "top-ranked" journals in all of the disciplines represented by this proposal, we elected to survey the writings of the graduate faculty members named in the proposal (p. 19-22). Using the Web of Science (only peer-reviewed content), we identified all articles published by these individuals and also those articles which cited those articles. From that set, we compiled a list of journals and noted the number of times a journal was mentioned. Since different disciplines and journals have differing rates of citation in general, we did not count number of times cited, rather number and title of journals citing the OSU author's articles.

Using five mentions as a threshold, we compiled a list of 65 journal titles noted in Appendix II. The current cost of maintaining access to these titles requires an investment of over \$116,000 in addition to retaining subscription to other resources (JSTOR, BioONE.1, ASABE, and Annual Reviews) which bring this total to \$158,777.

Of these 65 titles, three (*Climate Research*, *EcoScience* and *Forestry*) are not/no longer in the collection as of 2009 and would require an additional annual investment of \$1534 to reinstate. The good news is that OSUL provides electronic access to the other 62 titles. In addition the journal *Land Use Policy* (\$1015) which we received as part of a package but which we will need to purchase in 2010, has been requested to bolster the applied economics program by a member of the forestry faculty.

Given the extended campus audience for this program, adding access to complete backset packages (where available) would be a desirable goal. This could be achieved with one time funding, and might include:

- Complete back set of tri-society journals online for \$1000 + \$100/year maintenance fee would be treated as a "serial" expense.
- Complete backset of NRC journals (Canadian Research Journals): \$11,000

Subject-Specific Indexes and Abstracts

The library subscribes to various databases that provide access to the literature (both popular and scholarly which support this proposal and the study of natural resources and their management. Examples include the following:

- *Aquatic Science and Fisheries Abstracts (ASFA)*, 1972-present
- *CAB Abstracts* (1972-present)
- EBSCOHost: *Newspaper Source* (good for tracking public opinion)
- *Lexis Nexis Academic* (access to legal literature)
- *Web of Science (Science and Social Science Citation Index)*, (1970-present)

A complete list of available databases is found at:

(<http://osulibrary.oregonstate.edu/research.php/db.php?arg=A>

<http://osulibrary.oregonstate.edu/research>)

A database which is missing our collection and would be most a most desirable addition to improve access to public policy literature is the *Public Affairs Index* (1973 to present) at an annual cost of \$4,350.

Access costs:

Access to finding aids like the databases above, does not assure access to the references found however, since it is our practice to subscribe to the online-only versions of journals, other things being equal, there should be little difference between the access afforded an on-campus student and an extended campus student. But areas of research interest are likely to be local and for that reason we can assume that students outside the state and certainly outside the country will be interested in access to material not in (or accessible from) the OSUL website. For such interlibrary loan activity, the current average cost to the library is \$28/article. We anticipate the reliance on interlibrary loan to increase as serials titles are cut, though there is no reason to assume this will be felt more acutely by students in the natural resources.

Library staff and expertise:

Bonnie Avery is the subject librarian for the Natural Resources program. In that capacity, she provides instruction as requested either in-class or via the web, responds to reference inquiries, and develops materials to assist faculty members and students in their research.

The collection in natural resources is built by Bonnie Avery (Forestry and Rangeland Resources), Laurie Bridges (Business and Economics), May Chau (Agriculture), Valery King (Social Sciences), Margaret Mellinger (Engineering), Hannah Rempel (Biological Sciences) and Andrea Wirth (Geosciences). Providing access to items not owned by OSUL is the domain of the Interlibrary Loan and Summit staff both at OSUL and at lending libraries. Additional services for on campus students include the physical attributes of the libraries including excellent computer facilities, study areas for individual and group work, and practice rooms for students.

Extended campus students also need document delivery services from the OSUL collection. In this regard they have an advocate and troubleshooter in Maureen Kelly, the extended campus librarian at the OSU Cascades campus. Extended campus students and faculty can select a version of the OSUL website which highlights their needs.

In Summary

At this moment in time the OSUL collection is marginally adequate to support the MNR proposal. Areas of inadequacy are primarily in the social science/public policy area where we have not traditionally needed to build a graduate level collection. Given the extended campus focus of this program, purchasing backsets to some of the major journal packages not currently available would be advisable. This would require a one-time investment. Finally, as we bring the OSUL journal budget under control, there is some reason to believe that the monographs budget would returned to its former level.

There is one action each MNR faculty could take immediately in order to become part of the long term solution to the problem of how to pay for access to scholarly information. This is to understand their author rights and more specifically include the right to "self-archive" (preferably in the OSU ScholarsArchive@OSU) when signing away their copyright to a journal publisher. Information about author rights can be found at: <http://www.arl.org/sparc/author/index.shtml>

While not required, to bring the OSUL collection up from marginal to adequate to support this program would cost an additional annual investment of \$2550 for journals, \$4450 for databases and platform fees, \$2800 for additional monographs in the area of public policy and a one-time investment of \$12,000 for journal backsets. Beyond that, in order to purchase e-book with a multiple user license when available, OSUL would need an increase of an additional 50% in its monographs funds for various fund codes.

Submitted with respect,
Bonnie Avery
Natural Resources Librarian

April 17, 2009

To: Dan Dowhower
Academic Planning and Assessment Coordinator
Kerr Administration Building

Dear Dan,

BFP reviewed the Category I proposal entitled Interdisciplinary Master of Natural Resources (MNR) Degree.

Committee members added the following comments and questions from our meeting regarding the feasibility of the program from a finance perspective:

1. There does not appear to be a “core” curriculum.
2. Would program be sustainable if it could not support director (after three years’ start up)?
3. Ecampus does not specify the same three year cut-off for director. This should be clarified.
4. Cost to develop new courses is not clear in narrative, but is referenced in Appendix F. What is actual agreement to pay cost of course development?
5. Appendix F is a general MOU that some B&FP members considered a “blank check,” and one made a year ago, in a very different budget climate. Should MOU be updated?
6. It is duly noted that, despite the above, p23E indicates “no additional funding is needed....within 2-3 years after its initiation.”

Because of the potential to set precedent, the above issues merit recognition.

The Budget and Fiscal Planning Committee **recommends the proposal be forwarded** at this time to the appropriate committee for review.

Please contact Frost (author) for any questions with the above.

Sincerely,

Robert Frost and Rebecca Warner
Co-Chairs, Faculty Senate Budgets and Fiscal Planning Committee

NSF – Graduate STEM Fellows in K-12 Education (NSF-GK-12)

NSF 09-549

<http://www.nsf.gov/pubs/2009/nsf09549/nsf09549.htm>

The Incentive Funds Program in the Research Office is requesting Letters of Intent for the National Science Foundation – Graduate STEM Fellows in K-12 Education (NSF-GK-12) Program.

Research Office Letter of Intent submission deadline: Friday, May 1, 2009

Letters of Intent to the Research Office should be submitted electronically as an MSWord or PDF document to Debbie Delmore at debbie.delmore@oregonstate.edu.

The NSF-GK-12 program limits to one (1) the number of proposals that can be submitted by Oregon State University. In an effort to provide the highest level of excellence and viability for funding, the Faculty Senate Graduate Council will review all Letters of Intent and rank order them for the Vice President of Research. In consultation with the Dean of the Graduate School, the Vice President for Research will select the proposal to represent Oregon State and submit their proposal to the NSF-GK-12 program.

NSF Letter of Intent Due Date(s) (required):

May 19, 2009

NSF Full Proposal Deadline(s) (due by 5 p.m. proposer's local time):

June 29, 2009

Guidance for preparation of Letter of Intent to the Research Office:

The Letter of Intent is limited to four single-spaced page (no smaller than Times New Roman 12 font) with the first being a cover page containing the following:

- Title of Project
- PI/Co-PI
- Science, Technology, Engineering, and Mathematics (STEM) Faculty advisors and departments involved
- Number of STEM graduate fellows per year
- Number of K-12 classes anticipated to be served per year
- Number of K-12 teachers working with the fellows
- Number of Schools and School District Partners
- Target audience of the project (elementary, middle, or high school grades)
- Setting (urban, suburban or rural)
- NSF supported STEM discipline(s) or theme(s) involved

The next three pages are a Project Description that should give the reviewers sufficient information to assess likelihood of the project receiving NSF funding. As a minimum, the following elements should be addressed:

- Goals and Objectives
- Project Plan
- Recruitment and Selection
- Organization, Management and Institutional Commitment
- Evaluation
- List of Faculty Participants
- School District Involvement

Information: Debbie Delmore at debbie.delmore@oregonstate.edu or 737-8390

Overall Recommendation:

The Review Panel recommends that the Oregon State University Master of Agriculture Program in the College of Agricultural Sciences be maintained with limited restructuring towards the overall objective of revitalization and increased participation/subscription.

Summary of Findings and Recommendations:

The Masters of Agriculture (MAg) Degree Program has the potential to serve a significant and unique group of students. The Program can benefit the College and specifically those units, faculty, and students whose objectives are in alignment with the mission of the Program. The Masters of Agriculture Program is not likely to be useful for all the departments and/or disciplines represented in the College and this is understandable.

The Masters of Agriculture Program (MAg) is not well understood at the unit and faculty level, even in those units where the program has potential. A multi faceted (internal and external) marketing campaign is needed and this should not be too expensive or time consuming. The internal component should be informational and educational and the external program focused on the recruiting.

Students who find the MAg program meets their needs may tend to have unique backgrounds or specific career goals. Efforts to recruit students into the Program will have to take this into account. Faculty knowledge about the program and interest in meeting the unique needs of students will therefore be important to the success of the Program.

The Program has suffered from the absence of administrative leadership. It appears that Dr. Cary Green's appointment and responsibilities have already had a positive impact and his leadership of this College-level program should continue. Administration of the Program is not a full-time job. The administrative assistants of department heads/chairs of those departments that find the program useful should be encouraged to assist Dr. Green.

As with any graduate program, funding for assistantships stimulates interest and growth. Currently some funding is provided by individual faculty members for individual students. Even a very modest mechanism for funding MAg graduate students could stimulate interest and participation.

The "Detailed Findings" section of the report is organized per the outline provided in the Guidelines with modifications to insure focus on issues unique to the Oregon State University Masters of Agriculture Program.

Detailed Findings:

Introduction:

A Review Panel was assembled to review the Masters of Agriculture Degree Program, at Oregon State University. Members of the Panel included:

- Edwin L. Miller, Associate Dean, Oklahoma State University– Chair (External)
- Geoff Horning, Executive Director, Agri-Business Council of Oregon (External)
- Chrissa Kioussi, Pharmacy (Internal)
- Kathy O'Reilly, Veterinary Medicine (Internal)

The Program Review was formally requested by the Oregon State University Graduate School. Guidelines for the review and a Review Panel Report Outline were provided in “Guidelines for the Review of Graduate Programs”, Graduate Council, Oregon State University, May, 2008. An excellent and appropriately brief program review or self assessment document was prepared by the Oregon State university College of Agricultural Sciences and provided to Team members prior to the December 8 and 9, 2008 on-site visit,.

A productive on-site visit was conducted as planned. The Review Panel met with Stella Coakley, Associate Dean, College of Agricultural Sciences; Larry Curtis, Associate Dean, College of Agricultural Sciences (CAS) and Cary Green, Assistant Dean and Head Advisor, College of Agricultural Sciences. Cary Green presented a summary of the written report and documentation in a self-study format, to the members of the Panel. The OSU College of Agriculture self-study team included Mike Borman, Head of Rangeland Ecology and Management; Russ Karow, Head of Crop and Soil Science; Jim Males, Head of Animal Sciences and Greg Thomson, Head of General Agriculture and Agricultural Education.

All participants in the review were reasonably well informed about the review process and were very helpful and open in their comments and answers to Review Panel questions. The Panel members appreciated all aspects of the preparation and conduct of the on-site review. Meetings with all groups were on time and thorough discussions in all sessions left Panel members satisfied that major issues were addressed and additional formal sessions were not necessary.

Details of the on-site review schedule were provided in a Site Visit Agenda. This and the Self Study Document are available from Dr. Cary Green, OSU College of Agricultural Sciences. At the request of the Panel, the previous Master of Agriculture, Graduate Council Review report dated October 4, 1995 was provided (attached). In addition a questionnaire for CAS department heads was developed and submitted to Dr. Green by the Panel following the on-site visit and is provided as an attachment to this report.

Inputs:

- Fit of the mission: The mission of the Program is expressed in the objective statement for graduate students who would subscribe to the Program. Further, the goal of the MAg Program appears to support the mission and goals of the CAS. Specific reference is made to those goals in the CAS Strategic Plan that are enhanced through the MAg Program and that the MAg relates to the relevance of academic offerings, graduate

enrollment, and the teaching, research and outreach goals and objectives of the CAS.

While no specific reference is made regarding the University Mission or Strategic Plan, there are good indicators that the University, through the Graduate School, supports the Program and is interested in its enhancement and success. A short reference to the Graduate School and University Mission would be helpful as the Guidelines for Review suggest.

- Quality of students: Three students were interviewed during the on-site visit. All appeared to be well directed and each communicated very effectively. No assessment was made concerning their academic qualifications for admission to the program but all indicated they were making good progress or had completed the program of study. While the program does not require a Thesis, many of the students are conducting research and preparing thesis (with a little t). This indicates that many of the students are exceeding the requirements of the program and are not using the program as a fall back option.

The variety of reasons why and how the MAg Program met the educational and professional objectives of the students interviewed was most enlightening. The reasons were unique yet had a common theme concerning the professional goals of the individual students. They were not interested in pursuing the PhD in the future. They were interested in their individual research projects but not interested in research as a long-term professional pursuit. They appreciated the breadth, depth and flexibility of the coursework the program allows. The review Panel members were impressed by the thoughtfulness and tenacity of the students and felt this was an indication of quality.

- Admission selectivity: No measure of selectivity was provided nor was this a particular focus of the review. There is no reason to believe that the quality of potential students is a limiting factor to the MAg Program.

There is concern that students are in the MAg program because they have experienced problems in a Master of Science program. The students interviewed specifically wanted the MAg Program as it met their educational and career goals. The Review Panel agrees that the MAg Program should not be used as a second option. The non-thesis MS program is available for students who do not wish to complete the MS with thesis option. Requiring prospective MAg students to prepare a statement of purpose as a component of the application process could help insure that they examine the goals and objectives of the MAg Program and not select the MAg as a second choice or as a default.

While not related directly to the selectivity issue, there are admission policies and procedures which should be implemented with the objective of eliminating student confusion, frustration, and feelings of rejection, reduce faculty frustration and improve student and advisor relationships from the start. Admission to the Graduate School is the first important step in the admissions process and helps insure the overall quality of applicants. Admission to the Graduate School should not imply admission into the MAg Program. The second distinct step in the admission process is admission to the

Program. This step should require submission of the statement of purpose (above), the identification of a major area of concentration, and perhaps even the identification of an advisor. Implicit then is a conversation between the prospective student and the potential faculty advisor before final admission decision is made.

- Level of financial support of students: There are no assistantships reserved specifically for the MAg program and MAg students. The Review Panel did not determine if research assistantships are available from base funding through the College or the Experiment station so no comparison is appropriate. Students and faculty interviewed indicated that funds are available in some circumstances either through research grants or to assist in academic activities, we assume teaching or research.

Students indicated some but not severe frustration concerning assistantship support or other part-time employment related to their degree programs. Students interviewed did receive some support through projects managed by their faculty advisors. It is assumed that some sustained level of assistantship support to the Program would lead to higher enrollments.

- Curriculum Strength: The MAg is a very flexible graduate program, which is tailored to individual student's interests. This is both a strength and a weakness. The most recent review of the program noted this as well. That review noted that the strength of the MAg is that students presumably have the flexibility to structure a program of study that meets their individual interests and professional aspirations. Because there is not a prescribed core of courses, potential MAg students looking for more structure may find this problematic. In most cases MAg students will need to have a good and knowledgeable mentor to get a solid start in the program. There may be conflicting information concerning program requirements in the College's web page and among the faculty and administration and this requires immediate attention.

The Review Panel did not examine in any detail the strength of the courses available to students nor was this a specific focus of this review. Students interviewed did not express any dissatisfaction with the availability or breadth of courses available through the College or the University. MAg students should find the quality and breadth of graduate courses offered through the academic departments of the College and the University satisfactory to meet their needs as graduate education at Oregon State University is generally considered to be of high quality.

- Quality of personnel and adequacy to meet Program mission and goals: The quality faculty and staff needed to meet the Program goals and objectives do not limit the program in any significant way. This observation is based on the historical and current success of the College's traditional undergraduate and graduate programs. From comments of current MAg students it is clear that a lack of understanding of the program across the College makes it very difficult for students to learn about the program, make connections with potential faculty members, and to develop plans of study. In fact, each

of the students interviewed indicated great frustration with breaking into the program and indicated that without individual persistent efforts they would not be in the Program. Yet they were pleased with the program and the flexibility it provides.

- Level and quality of infrastructure: The basic, facilities, equipment and installations on the Oregon State University campus and available to the CAS appear to be more than adequate to accommodate the MAg program.
- Quality of organizational support: A lack of organizational support has limited the MAg Program. This support starts with the identification of an individual in the administration who has immediate and direct responsibility for the Program. It appears that with the hire of Dr. Cary Green as Assistant Dean for Academic Programs, this important commitment has been made by the CAS. It is clear from the self assessment report that Dr. Green and those who assisted him with the internal evaluation of the Program understand the importance of organizational support and have identified some of the highest priorities for future success. These are addressed in the following section.
- Extent or level of organizational support: There are several major issues regarding the MAg Program that are the responsibility of the administration but are not related to administrative quality. These include internal understanding or familiarity, program marketing, shared responsibility, learning outcomes and program assessment.
 - It is clear that few faculty members understand the MAg Program, its overall goals, how it is to operate at all levels, and how it may serve the needs of individual students. The Review Panel did not investigate or determine through survey the general level of knowledge level but the input from current students clearly indicated major issues in this area. Simple tools such as a program flow-sheet or guide could be helpful.
 - Internal and external marketing will be necessary for the program to be successful. Internal marketing will help faculty and staff better understand the Program. External Marketing will help potential students learn about the program. Unlike traditional research-oriented graduate programs, that are visible and generally promoted by the faculty among high-potential undergraduate students, the MAg Program is not widely promoted by the faculty and targets students with unique professional goals.
 - Shared responsibility between the CAS and CAS departments for the MAg program is critical. While this is a program offered under the auspices of the College, Departments have a responsibility to promote and support the program as a part of their teaching mission. In some disciplines, the MAg goals and objectives simply do not apply. For example, the MAg program is not likely a good fit for biochemistry. However, for those disciplines where opportunities in respective professions are strong, the program should be viable.
 - Learning outcomes and outcomes assessment must be integral to the program

and therefore a high priority. This issue was clearly identified in the self-assessment report and it appears that there is an administrative commitment to assessment of the MAg program and MAg students. It should be recognized that the MAg program may be used in unique ways across various disciplines. Learner and program assessment should take this variability into account and the College administration will need the assistance of cooperating departments to make sure a good fit is achieved; another area of shared responsibility.

Productivity:

- Level and quality of student performance: Students interviewed appeared to be of high quality, motivated and well directed. No long-term analysis of student quality was provided nor was this a high priority for this particular review.
- Level and quality of faculty performance: The one faculty member interviewed was well informed about the program, enthusiastic about the objectives of the program and how it serves students, and was evidently an excellent graduate advisor. The lack of faculty participation in the site visit may indicate a lack of awareness of the MAg Program within CAS.
- Program productivity (enrollment): As identified in the self-assessment report, enrollment in the Program is currently considered low and historically has averaged slightly fewer than 4 students in the fall term over the past 15 years. The number of MAg degrees awarded has dramatically decreased over the past 10 years with 14 graduates in 1994-1995 to zero in 2005-2006. There are a number of factors discussed in this report that may contribute to low program productivity.

While it is difficult to speculate, it would appear that a college of the size and scope of CAS that enjoys a reasonably strong agricultural and natural resource economic base in the state should be able to attract and sustain an average program enrollment of at least 10 students. The Review Panel did not determine if the University or the Graduate School have enrollment or productivity guidelines or policies but no formal low-productivity or low enrollment reports were provided in the self-study.

The College administration and internal review team identified student recruitment as one of the priority strategies for increasing enrollment and the Review Panel would concur. Specific recommendations for recruiting are left to the College as several good ideas were presented in the self-study. In creating a marketing plan it should be kept in mind that students interested in the MAg program will come from some unique situations and directions and may not come primarily from the current crop of

CAS graduating seniors. Further, there should be some common characteristics, goals and objectives among MAg students within disciplinary areas. Marketing should therefore be a joint College and Departmental or disciplinary effort to take advantage of the differing sources and objectives of potential MAg students among the supporting disciplines.

- Viability of the scholarly community: All indications are that the quality of the scholarly community at Oregon State University and in the CAS are excellent. Once in the program students interviewed expressed strong support of the faculty.

Outcomes:

- Professional Viability of graduates: This was not a focus of this program review. However, as the administration addresses outcomes assessment, professional viability is an important criterion to include and all indications are that this is recognized.
- Satisfaction of students and graduates: Those students interviewed expressed satisfaction with the program, discounting the difficulties they had with admission, finding an advisor, and developing a program of study. Once again, admission and standard policies and procedures must be well developed and communicated.
- Rankings and ratings: There are no official ratings or rankings for Masters of Agriculture programs. Further, such programs, where they exist, are designed to address opportunities generally unique to the students, programs, colleges, states and regions in which they exist. This is certainly the case regarding Oregon State University.

Conclusions:

The Oregon State University Master of Agriculture Program in the College of Agricultural Sciences has languished for a lack of sponsorship and leadership at the College and Departmental levels. Leadership for the program has recently been established and appears to be well focused. The Self Study Report and input gathered during the site visit by the Review Panel indicate that factors contributing to low enrollments and associated issues that limit the potential of the Master of Agriculture Program are well understood internally. Further there is a commitment to the Program with the understanding that it will be attractive to some departments

and not to others, serves students with unique professional goals and objectives, and must be promoted at the College and departmental levels to be successful.

The Review Panel recommends the Master of Agriculture Program be retained. Steps to improve the Program are presented and include the following:

- Retention and support of the new College-level leadership.
- Internal communication and education about the Program.
- Assignment at the Departmental level of an expert on the Program, most likely the Department Head and/or Graduate Coordinator.
- Marketing and communication of the program externally.
- Clear communication internally and externally about the steps for Program admission and advisement.
- Securing some level of financial support for Master of Agriculture students.
- Insuring positive annual appraisal feedback for faculty who successfully advise Master of Agriculture students.
- Design and conduct an outcomes assessment program/process for the Master of Agriculture Program.

There are certainly other steps that can be taken to improve the Master of Agriculture Program at Oregon State University and with the current leadership those steps will be recognized and implemented. With the current economic downturn, it is not likely that significant new resources will be available to the Program. However, many if not most of the recommendations do not require new resources but simply basic communication.

Followup Report to Graduate Council 2006 Review of Graduate Program in Genetics

In May 2006, the Graduate Council conducted a site review of the Genetics Program. The review team consisted of Alex Sanchez (chair), David Cann, and Greg Perry (all OSU faculty), along with Stanton Gelvin of Purdue University and Mary-Dell Chilton from industry (Syngenta). This followup review was conducted by Greg Perry and included Barbara Taylor (MCB Program Director), Walt Ream (former Director of Genetics), and Stella Coakley (Associate Dean, College of Agricultural Sciences).

The review prompted a number of changes within the Genetics Program. The most significant change involves the organizational structure of the program itself. In the review, the team recommended that

9a. The MCB Program should be expanded into a broader “umbrella” program, which should be re-named. The expanded umbrella program would continue to have a common graduate admissions process and administrative assistant. The MCB Program as it currently exists would remain largely intact within this umbrella, with its current curriculum and rotation system maintained.

Effective July 1, 2008, the MCB and Genetics Programs were administratively merged and placed under the leadership of the MCB Director (Barbara Taylor). Gail Millimaki now serves as the administrative assistant for both programs. The graduate admissions process has also been merged, so that one committee evaluates applications for both programs. The limited financial support available to incoming students is given to the best applicants in the overall pool, rather than allocating a minimum amount of support to each program. The fields within Genetics also have shifted some toward the MCB program, bringing both programs into closer alignment.

The review team recommended that, in conjunction with a merger, that the Genetics Program become another track within the MCB program (which already has a number of specialty tracks). This issue has yet to be resolved by the faculty involved in Genetics and MCB. They are considering maintaining the status quo, creating a track within the MCB degree name, or dropping the Genetics Program altogether. On the surface, dropping the program seems like a plausible option. Currently, there are only 4 students in the Genetics program, compared to 36-40 in the MCB program. Operating two separate programs does create more administrative costs when going through the student admission process. On the other hand, the Genetics program name does attract some good students. On the whole, Taylor, Ream and Coakley all favored keeping the current degree or making it a track within MCB. The CAS remains strongly committed to maintaining its financial support for Genetics.

Recommendation: The combined MCB – Genetics faculty need to formally address and resolve the status of the Genetics degree within MCB. This should be done in a timely fashion, such that whatever revisions are adopted can be put into place within the next 12 months.

Some other issues raised in the review have also been resolved. Recommendation #6 in the 2006 review raised the concern about teaching faculty who were being asked to take on Genetics

classes as an overload responsibility. This issue has largely been resolved by the recent Provost's Initiative in Computational and Genome Biology, which provided money to hire a number of faculty in the MCB area. Some of these new faculty have specific appointments to teach the core classes in MCB, which also function as core courses in Genetics.

Recommendation #5 expressed concerns about the funding base for Genetics. Although the program remains underfunded, the merger with MCB has created some cost savings that will help Genetics and MCB. A concern in the funding area is whether the CAS will continue providing the bulk of funding for the Genetics Program, given there are no CAS students currently in the program.

Recommendations #1 and #2 reflect student concerns about the program. It appears from this review meeting that student issues about core Genetics classes have been addressed. The frustration from students about not feeling part of a "program" are more problematic. The small number of students and the fact that they are dispersed across departments and labs makes it difficult to create this sense of community. Offering a class that involves just these four students seems a poor use of university resources and would probably not be particularly effective for a number of reasons. This issue should be included when the MCB-Genetics faculty decide on the future of the Genetics degree.

Recommendations #3, #4, #10, and #14 largely relate to student numbers and quality. These issues should be central to the future meeting regarding the future of the Genetics program. It appears that the merged admissions process is going to reduce the number of weaker Genetics students coming into the program, so a recruitment plan will need to be formulated if Genetics is to continue to exist as a graduate program.

Recommendations #11, #12 and #13 stemmed from a concern that students were taking too long to complete their degree programs. One student who took particularly long to finish her program has now graduated. Her time in program apparently skewed the averages for the overall cohort of Genetics students. Barb believes that things have improved in this area.

Recommendation: If the Genetics Program is kept as a separate degree, the program director should develop a handbook of policies and procedures to guide students in the program.

FOLLOW-UP REVIEW OF THE FOREST SCIENCE GRADUATE PROGRAM

PRASAD TADEPALLI

3/4/2009

This follow-up report on the review of the forest science graduate program is the result of a meeting with Tom Adams, the interim head of the department of Forest Ecosystems and Society, and their graduate program coordinator, Lisa Ganio on February 24, 2009. The original review of the forest science program took place in the spring of 2006. The forest science program was then part of the forest science department and was found to be a thriving program with dedicated faculty and staff, high quality research by the graduate students and excellent facilities and support staff. The department was reputed to be one of the best in the country and highly productive in publications and research.

The college of forestry underwent a major overhaul since the last review. The departments of Forest Resources, Forest Engineering, and Forest Science were merged into the departments of Forest Engineering, Resources and Management (FERM), and Forest Ecosystems and Society (FES). Most of the faculty in the original Forest Science department moved to the department of Forest Ecosystems and Society. The Forest Science program is currently housed in this department and the current graduate students in this program are well-taken care of.

While this huge reorganizational effort was motivated largely by the fiscal problems faced at the college level and was very important to address, it also interfered with the department's response to addressing some of the issues raised in the graduate review. As stated in the attached modified revision plan by the interim head of the department of FES, the faculty met in the fall of 2006 and formed various committees to comprehensively address the several issues raised in the graduate program review. As it soon became apparent that even the survival of the graduate program was in doubt, these tasks were put on the back burner.

Nevertheless, the faculty and students took a number of positive steps to address some of the concerns raised in the original review.

1. **Communication:** To encourage communication of research results among the graduate students, the students initiated a one-day Forest Science Graduate Student Symposium. It also helps the students polish their presentation skills. Apparently the symposium has been a huge success and will be occurring during this spring for the third time.
2. **Curriculum:** The plant sciences curriculum at the graduate level has been a weakness throughout the university. Recently the provost has taken an interest in this issue and appointed a committee of plant science department heads to make recommendations. Forest science program stands to benefit from a stream-lined curriculum in the plant sciences. A major overhaul of the forest science curriculum which was recommended in the review was not pursued due to the reorganization, but will be the major focus after the dust settles and the department decides on the future of its programs. Since the review, graduate Forest Science courses in agroforestry and climate change have been added to the curriculum, and forest science faculty participate in fire ecology courses offered primarily through FERM. In addition, Forest Science faculty have had leadership in the development of two new on-line graduate programs: the 18-credit Sustainable Natural Resource Certificate and the Master's in Natural Resources (currently in Category I review). Both of these programs are administered by FES.
3. **Diversity and Hiring:** The department hired Brenda McComb, a wildlife biologist, as the head of the department. The college now has a diversity action plan that includes the goal of being proactive in hiring.

4. **Space Issues:** The department developed a policy for allocating space among the offices and labs and deciding who is responsible for space management. The plan includes ways of assigning office space to graduate students. The new reorganization led to the development of a college-wide meeting space for all graduate students in the college. All graduate student computer labs are shared by all students in the college. The development of controlled growth facility was put on hold.

In summary, the college of forestry and the forest science program have been in “a state of uncertainty and upheaval” since the last review of the forest science program. The threat of the wiping out of the college reserves by 2010 is still very much a concern in spite of the college reorganization. However, the new organization gives the department and the faculty a chance to creatively rethink their programs and possibly consolidate multiple related programs into one, or create multiple tracks within each program with different specializations. The arrival of the new department head is quite timely and no doubt will give additional impetus to designing these new programs from the ground-up in a way that simultaneously addresses the concerns raised in the original report while also taking advantage of the opportunities that arise from the new organization of the college.

**GRADUATE PROGRAM REVIEW OF THE FOREST SCIENCE DEPARTMENT
SUMMARY OF REVIEW TEAM RECOMMENDATIONS AND RESPONSE ACTION PLAN**

August 18, 2006

Revised by Tom Adams on February 24, 2009

Introduction

The following is a plan for how the department will address recommendations arising from the Graduate Council's review of the Forest Science Graduate Program in April, 2006. This plan is tentative because the faculty as a whole has not had a chance to discuss it. In addition, we have yet to receive the report of the CSREES review which was conducted at the same time as the Graduate Program review. However, based on the oral presentation by the CSREES review team in April, issues expected to be raised in the CSREES report are likely to be largely the same as those identified by Graduate Program Review team.

We have scheduled a two-day faculty retreat in September to discuss the recommendations and to decide on appropriate approaches to dealing with each of them. Committees will be assigned at this time to address the higher priority issues with progress reports and discussions at regular faculty meetings in the fall and winter quarters. The faculty will then meet again at a retreat in the spring to finalize specific actions addressing the recommendations.

Note: The Forest Science faculty did meet in the fall of 2006 (9/14-15) for a two-day retreat to organize how to address the issues resulting from the review. Several committees were formed, including Curriculum Improvement, Department Mission and Goals, Communication, Interactions with Extension, and Facilities. These committees all started working on their various assignments. Shortly after the first of the year it became apparent that the College was to undergo a major restructuring of departments. At this time it wasn't even clear whether a Forest Science graduate program would survive. Given the uncertainties and the need to focus energies on the larger reorganization effort, the Department Head suspended further strategic planning for the Forest Science Department. The College reorganization resulted in the reduction of the number of departments from four to three, including two new departments. In the revised structure, most of the Forest Science faculty were located in the Forest Ecosystems and Society (FES) Department along with social science faculty from the former Forest Resources Department. A small number of FS faculty were assigned to the other new department, Forest Engineering, Resources and Management (FERM).

Summary of Recommendations and Proposed Actions

1) Department Mission and Goals

Recommendation

Develop a vision and strategic plan for a fiscally viable department. Integrate the plan across the teaching, extension and research missions, and make sure it is well aligned with the University and College strategic plans.

Proposed Action

This recommendation is timely given that the last comprehensive strategic plan for the department was written more than 13 years ago. Although the department has engaged in a number of strategic planning efforts in the past 5 years, including revision of the graduate curriculum, updating the Staffing Plan, and participating in the College strategic planning process, we need to review our mission statement, departmental goals and programs in the light of the current realities (i.e., makeup of faculty, research needs, changing student interests and needs, fiscal constraints, etc.). Issues raised in the Graduate Program Review will help provide focus to this planning process. We expect to have a revised strategic plan prepared by summer 2007.

A major goal of the College in the next few years will be to deal with a potentially catastrophic fiscal situation. Presently, funds required to operate the College each year exceed income by approximately 30%. Fortunately, we have cash reserves to make up this difference, but without new revenue sources or drastically curtailed expenditures these reserves will be exhausted by 2010. The professorial staffing in the Department is 25% less than it was a few years ago, and despite these cuts in staffing we are barely able to maintain programs at the current level, yet meet ever expanding personnel costs. Further reductions to balance the budget by 2010 would have dire consequences for the Department and College. The College is certainly among the premiere forestry institutions in the world and the Department is recognized as among the best research and graduate education programs in forest biology. We cannot make further cuts without significantly reducing the quality of graduate education and research support we provide for our various stakeholders. Without new revenues, the consequences of the cuts required to balance the budget in 2010 would mean a greatly diminished College of Forestry at OSU, both in capacity and reputation. A vigorous campaign has been launched to raise the additional revenues necessary to maintain and build the College. As a department we need to be strong supporters and contributors to solving this budgetary dilemma. In addition, our strategic plan needs to be flexible enough to deal with any further fiscal constraints as well as to take advantage of growth opportunities.

Note: Despite the recent reorganization (which was largely done to save on administrative costs), the College still faces a significant financial crisis. A College-level strategic planning effort is underway to inform the College Executive Committee on how to deal with cuts related to bringing College expenses in line with revenues. There are also a large number of issues resulting from the reorganization concerning the Forest Science graduate program, including what it should like and how it should be managed in the future (if continued).

2) Culture and Communication

Recommendations

- a. Foster a continued commitment to forests as a whole, leading to an expansive, forward-looking vision of forestry. The two camps of forest science must be bridged by pursuing the common ground between production-oriented research and more fundamental ecological/biological research.
- b. Foster cross-department communication by encouraging group research projects with multiple PIs, and by having a college-wide colloquium or annual mini symposium to exchange and debate research and views within the College and Forest Science.
- c. Increase awareness across the department on what students are working on by having a student seminar series in which students present proposed research.

d. Develop strategies for articulating the department's research vision to clients and stakeholders and increasing effectiveness of transferring scientific information to users.

Proposed Actions

The recent conflict surrounding the Science paper on the effects of post-fire logging certainly forces us to examine the culture of the department and college. Collectively, the department has a broad, forward-looking vision of forests and forestry. This is evident in the variety of graduate education programs we offer, preparing students for an array of careers ranging from practical silviculture to basic and applied research in various disciplines of forest science. It is also evident in the wide range of research we undertake, spanning scales from genes to landscapes, a broad spectrum of biological disciplines, and basic to applied questions. We have also been very successful in leading interdisciplinary research efforts, involving investigators across departments in the University, other universities, and public agencies (e.g., Andrews LTER, AmeriFlux, CFER, Ecosystem Informatics, etc.).

As variously described in the report, two "camps" or "tribes" can be recognized within the department, one which emphasizes forest biology research related to commodity production of forests (e.g., the research coops) and the other which emphasizes more fundamental research on forest ecology (e.g., Andrews LTER, global climate change program). Such a characterization oversimplifies the situation because individual faculty's research can span a broad spectrum from fundamental to applied, and there is often good collaboration between those interested in more fundamental aspects of forest ecology and those more interested in solving management issues. Nevertheless, the review report is correct in identifying the need to do a better job in bridging the differences between these groups, by fostering increased understanding and respect for alternative viewpoints, interchange of ideas, and when feasible, integration of research.

Among the various approaches to building bridges between these department members that will be discussed in the coming year are:

- * Develop a graduate core curriculum that utilizes many of the professorial faculty in the department to introduce forest science principles, integrating knowledge and research approaches across biological disciplines necessary to understand forest ecosystem function as well as management of forests for a variety of uses.
- * Encourage communication among faculty and students through colloquia addressing controversial issues, establishing a seminar series where students present proposed research (e.g., devote the spring seminar to student presentations), establishing a yearly departmental research symposium (e.g., like what is done in Fisheries and Wildlife), and/or joint research projects. Improved communication is also an objective of recommendations posed by the College's Committee on Academic Freedom and Responsibility (CAFR); departmental actions will be coordinated with overall College efforts.

Note: One tangible result of the review was the initiation of a one-day Forest Science Graduate Student Symposium. This symposium is organized by the students and features presentations of their research results. The symposium also includes a poster session where all new students are required to present their thesis research ideas. The symposium serves two major purposes: 1) Enhance communication within and outside the department on what research is being done and being contemplated; and, 2) The opportunity for students to polish and practice presentation skills. The symposium will occur for the third time this spring. It has been a huge success.

Another issue that arose in the review is that many of our stakeholders may have a poor understanding of the breadth of research we do in the department and its relevance to their needs. We need to develop means to promote our programs and enhanced understanding and appreciation of what we do. Different research programs in the department have individual outreach efforts for targeted clientele (e.g., research coops, Andrews LTER, CFER), but we don't have a department-wide strategy for public relations and outreach. We need to employ our Extension faculty to help us in developing such a strategy.

Note: One approach I was hoping to pursue was the initiation of a Forest Science Department advisory committee. This was not followed up on because of the reorganization, but will be a strong recommendation for the new departments in the future.

3) Curriculum and Students

Recommendations

- a. Examine the needs of the graduate curriculum and collaborate with other related departments and colleges in the University and elsewhere to develop a strong set of support courses that serves the needs of Forest Science and related departments on campus. Collectively convince the administration to commit resources to cover these needs on a regular basis. Develop creative solutions such as modules, short courses, and video conference courses with other universities.
- b. Develop a strong set of stand alone graduate courses covering the broad spectrum of Forest Science. Get the Administration's commitment to increase teaching FTE to an adequate level to offer these courses.
- c. Explore means to add courses in fire ecology and soil science.
- d. Improve the ability for students to obtain teaching experience. For example, encourage/facilitate volunteer teaching experience, and explore partnering with Education to develop a science education course.
- e. Foster student development of communication skills, for example, by offering workshops or through a core departmental course.
- f. Increase number of graduate students to be in line with faculty size and research funding.

Proposed Actions

Recommendation 3a addresses the decreasing availability of basic-biology graduate courses supporting programs in the department and other plant science majors across campus. The list includes courses in basic physiology, pathology, entomology, taxonomy and soils. Courses formerly offered have been discontinued because faculty teaching these courses have retired and not been replaced. In addition, similar courses formerly offered in a number of departments (e.g., various plant breeding courses) now are only infrequently taught, if ever, because of dwindling numbers of students in any one of the disciplines. There have been a couple of recent aborted attempts to address these cross-campus issues through the graduate school and by a collective effort of plant science Department Heads. The idea has been to create joint courses (or curricula) across the plant sciences that collectively would meet our needs, but this strategy will not be successful without resources to help in planning and to hire the needed teaching faculty. The alternative is to decide to no longer offer graduate programs where

supporting courses cannot be provided. Department Heads in Forest Science, Botany and Plant Pathology, Horticulture and Crop and Soil Science are currently supporting a post doc to help develop a joint plant breeding curriculum.

Note: The issue of declining basic plant biology offerings at the graduate level on campus has been addressed in a number of ways the last several years, but with little progress. Recently, the Provost has taken an interest in this issue, as well as in the health of plant science programs, in general, on campus, and has commissioned a committee of plant science department heads to develop recommendations. I am sure that reviews such as this one for Forest Science (and some similar issues raised in the Horticulture Department review a few years ago), stimulated the Provost to action. Anita Azarenko, Department Head in Horticulture is chairing the committee.

The department already has a "... set of stand alone graduate courses covering the broad spectrum of Forest Science" (Recommendation 3b), although a number of these courses are offered only infrequently because of insufficient numbers of students. As part of the strategic planning exercise above, we need to address whether it is wise to continue to try to support the broad spectrum of graduate degree specialties and course offerings in the department. An expanded departmental core curriculum (mentioned above) would integrate subject matter across forest science disciplines and might attract students from outside the department as well as within.

Note: Not pursued because of the reorganization. But, a major overall of the Forest Science curriculum is due if this program is to continue into the future.

The Department of Forest Resources is in the process of developing a series of courses in forest fire ecology and management (Recommendation 3c). Faculty in Forest Science are being consulted in the process and may contribute to these courses in the future. Two Forest Science graduate students and a faculty member are contributing to two Fire Ecology and Management courses offered through Forest Resources and Forest Science in fall 2006. The ability to offer courses in forest soils is problematic. Forest soils and below ground ecosystems were areas of strength in the Forest Science Department up until a few years ago when positions vacated by retirement were left unfilled due to lack of resources. Recently, the department initiated a search to fill a faculty position in forest soil biogeochemistry, with support from the Provost's Subsurface Biosphere Initiative. Despite attracting a number of excellent applicants, the search was aborted because of the budget crisis in the College. In addition, the last trained soil scientist on the College faculty (in Forest Engineering) departed this summer for a position elsewhere, so we are left without coverage in this critical subject area. Filling at least two forest soil positions is a critical need in the College, but will be impossible without additional resources.

Note: There is still a void in forest soils expertise with no hope this situation will change in the near future. A couple of graduate courses in forest fire ecology and management are now being offered; faculty in both FES and FERM are involved. A very strong interest group in forest fire ecology has developed within the College. The group includes both graduate students and faculty that meet on a weekly basis to discuss the literature and mutual research efforts.

Providing our students teaching experience has been a challenge (Recommendation 3d). There are three one-term teaching assistant slots available in department and we do encourage students to fill teaching assistant slots elsewhere in the College and across campus, when available, or to volunteer to help teach courses. We have also offered a teaching practicum for a number of years where students learn basic teaching skills and have an opportunity to develop a 1-credit course of their own. Barbara Bond, who

has taught this practicum, is well qualified to teach this course. We did not offer the practicum this year in lieu of a graduate-level teaching course offered in the College of Agricultural Sciences. Several students in the department took this course. We need to follow up and see whether the Ag course would meet our needs in the future. Other than doing a better job in encouraging students to take advantage of the several opportunities already available for teaching experience, it seems like we are doing about as much as we can to meet this need.

All of our courses incorporate opportunities for students to practice written and/or oral communication, but with minimal formal instruction in communication skills (Recommendation 3e). A few years ago, the College's Communications and Media Center staffs offered periodic communication workshops, but these have largely gone away with budget-driven reductions in both groups. It might be possible to include oral presentation training in a student seminar course. In addition, we might be able to provide workshops for our faculty on how they could better incorporate communication skills development in their courses. We will discuss mechanisms for enhancing training in communication skills when we address potential curriculum revisions this fall and winter.

We specifically asked the Graduate Program Review team to comment on the number of graduate students in the department (Recommendation 3f), since this number has declined as the number of faculty have declined in recent years. The report suggests that we should aim for at least four students per faculty; but where we are with student numbers depends on how you count. In February of this year we had 63 students; an average of 4.2 students per on-campus tenure/tenure track (T/TT) faculty member. The average is even greater if one excludes the Department Head (DH) and one full-time Extension Specialist (ES) from the on-campus T/TT faculty. This number of students, however, includes those with major professors that are adjunct or courtesy faculty (18 students); the number of students per major professor among the 13 on-campus T/TT faculty (not including the DH and ES) ranges 1-6 (mean 3.5, total 45). It is suggested in the report that departmental faculty have invested in Faculty Research Assistants and post docs at the expense of training graduate students. It should be noted, however, that FRAs and post docs often play an important role in graduate student development, especially in providing day-to-day instruction on data collection, analyses, etc. In addition, training of FRAs and post docs contributes to the education mission of the department, and the program continuity provided by support faculty is a major reason why the department has been highly successful in research funding. This funding also accounts for the fact that most students in the department have a GRA (only a few are on fellowships; there are no state-supported GRAs). Clearly, given the Review Team's recommendation, we will re-examine our student numbers, but this has to be done in light of maintaining both strong research and education programs in the department.

Note: Student numbers have dropped even a little more since the review, but we have also lost additional faculty.

4) Diversity and Hiring

Recommendations

- a. Implement a diversity plan including a strong preference for hiring external candidates.
- b. Reform the faculty search process so that the search committee acts on behalf of the faculty to conduct a broad search, then summarizes and prioritizes the applications, while the faculty as a whole provides consensus on the candidates to interview and the final recommendation.

Proposed Actions

Diversifying the faculty and staff (Recommendation 4a) is a major goal of the College's Diversity Action Plan and the department will be actively pursuing this goal with the rest of the College. Details of how to accomplish this goal will be addressed by the College's Building Community Committee in the coming year. In addition, recent discussions in the department reaffirmed the need to diversify our faculty, including its "age structure" by emphasizing early career candidates in future hires. The department completed a professorial faculty search and hire process in June that was very similar to Recommendation 4b. We will review the process this fall and decide whether to modify it further. This most recent hire is a recent Ph.D. and Canadian citizen with no previous ties to OSU.

Note: The College has a Diversity Action Plan that includes goals for being more proactive in fostering diversity (especially racial and ethnic diversity) in the student body and faculty. Specific actions for achieving these goals, however, have yet to be fleshed out. As indicated above, the Department went through a successful hiring process in the summer of 2006. The new FES Department just went through a search process for a new department head that led to the hiring of a female wildlife biologist from Massachusetts.

5) Facilities

Recommendations

- a. Try to find support for a controlled environment growth facility capitalizing on existing and new funding opportunities.
- b. Optimize use of existing space by: relocation of storage materials and non-technical field equipment to lower quality space, and, by grouping graduate students into larger multiuse offices.

Proposed Actions

A committee has been named to oversee the department's growth facilities which consist of a greenhouse complex and raised nursery beds adjacent to the Oak Creek building on campus. This committee will be tasked with examining the department's need for environmental growth chambers and identifying potential mechanisms for funding (Recommendation 5a). A second committee has recently been named to provide advice on space issues in the department. This committee will be tasked recommending means for improving the efficiency of lab usage and storage in the department (Recommendation 5b). The Associate Department Head has been working with the students in identifying a "package" of work-space options that will better meet their needs, while releasing some current student offices for other purposes. A plan has been developed and will be made operational this fall.

Note: No progress has been made on upgrading growth facilities. This was another issue put on the back burner during the reorganization. It can also be said, that while the lack of these facilities has been a persistent deficiency in the College, it has been difficult to raise enough interest in the faculty to pursue this need with the gusto required to be successful. The Department did develop a "Space Allocation" policy that outlines how offices and labs are assigned, and who is responsible for the management of the labs. We also developed a plan for assigning office space to graduate students that allowed for a variety of options to them. This plan is largely in place in FES. In addition, one result of the earlier plan was to establish a graduate student meeting space that they could call their own. With

the reorganization, this concept has evolved into a facility that is open to all graduate students in the College. In addition, all graduate student computer labs in the college are now shared by all graduate students (rather than assigned specifically to students in anyone department). We hope that these arrangements will foster interaction and communication by graduate students across all the disciplines in the College.

Final Note: The College of Forestry has been in a constant state of uncertainty and upheaval since the Forest Science Graduate Program review in spring of 2006. This has largely been driven by our financial crisis which followed closely on the heels of the controversy regarding the publication of the article in Science on the impacts of salvage harvesting. Although the ultimate fallout from the financial situation is not clear, the reorganization has been met with optimism and has certainly created an opportunity to take a new look at how we conduct graduate education in the college. A serious move in dealing with graduate education awaits the arrival of the new department heads in FES and FERM. Surely, the Forest Science graduate program will evolve, perhaps dramatically, under the new College structure. It will be interesting to see where we end up!

Request to Have American Sign Language Used to Satisfy the Second Language Requirement for the MA Degree

Rationale:

- ASL is a comprehensive linguistic system. The Linguistic Society of American states that “sign languages used by deaf communities are full-fledged languages with all the structural characteristics and range of expression of spoken languages.”
- According to the Modern Language Association, American Sign Language (ASL) ranks fourth, after Spanish, French and German, in total student enrollments in U.S. institutions of Higher Education.
- The Oregon State Board of Education passed a recommendation to accept ASL as satisfying the language requirement in Oregon’s public schools. The minutes of the Board meeting of February 20th, 1998 included the following language in the section *Admission Policy for 1999-2000 Academic Year*:

All Institutions: two years of same high school-level second language or two terms of a college-level second language or acceptable performance on approved assessment options. American Sign Language (ASL) is acceptable in meeting the second language requirement. Second language requirement applies to transfer students graduating from high school in 1997 and thereafter.

- On April 18, 2003, the Oregon University System approved requirements for the Associate of Science/Oregon Transfer Degree in Business (AS/OT Business). The language is as follows:

Transfer Status

Any student who holds Associate of Science/Oregon Transfer in Business (AS/OT-Bus) conforms to the guidelines set forth herein, and who transfers to any institution in the Oregon University System, will have met the lower-division general education requirements of that institution's baccalaureate degree programs. Students transferring with this degree will have junior standing for registration purposes.

For transfer students graduating from high school in 1997 and thereafter, the Oregon University System has a second language admission requirement: two terms of a college-level second language with an average grade of C- or above, OR two years of the same high school-level second language with an average grade of C- or above, OR satisfactory performance on an approved second language assessment of proficiency. Demonstrated proficiency in American Sign Language meets this second language admission requirement.

- OSU accepts ASL as satisfying the second language entrance requirement.
- Over 150 United States universities accept ASL in fulfillment of second language requirements for the Bachelor of Arts degree, including Portland State University, Western Oregon University, and the University of Oregon. Now is the time for Oregon State University to join our sister institutions in recognizing ASL as satisfying the degree requirement for foreign (second) language competence.

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs and Academic Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☐ New degree program
- ☒ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☐ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Title of Proposal:

Effective Date:

Graduate Certificate in Management for Science Professionals Fall 2008

Department/Program:

College:

College of Science

Science

I certify that the above proposal has been reviewed and approved by the appropriate Department and College committees:

A New Instructional Program for a Graduate Certificate in Management for Science Professionals

Revised January 2009
(major revisions underlined)

**Oregon State University
College of Science**

1. Certificate Program Overview

a. Proposed CIP number: 301801

b. Brief overview including description and rationale:

People working in science or science-related fields typically have received no formal training in management, communications, ethics or professional technical skills during their graduate study. However, a variety of individuals employed as researchers in managerial positions, small business owners, veterinarians, pharmacologists, private consultants, or government employees often need such skills to perform their everyday work. This 19-credit graduate certificate is designed specifically for science majors and mid-career professionals. Recipients of the certificate will successfully develop and manage private science-based practices in medicine and biology, effectively run research laboratories, broadly communicate with diverse groups of people, and think critically about the work in which they are engaged.

The courses required to earn the proposed graduate certificate are also required of all Professional Science Master's (PSM) students at Oregon State University (OSU). The PSM is a unique science graduate degree because students are required to complete an internship in lieu of thesis research and take courses in communications, business management, and ethics in addition to disciplinary science courses. At OSU, PSM program options are currently offered in Applied Biotechnology, Applied Physics, Environmental Sciences, and Applied Systematics in Botany. Graduates better understand the applications of their science.

The Graduate Certificate in Management for Science Professionals consists of eight courses emphasizing four key topic areas:

- project management, finance, marketing and organizational principles (9 credits in which courses are taught sequentially),
- communications (3 credits),
- ethics (3 credits), and
- professional skills (4 credits taught over 3 terms).

An online version of this graduate certificate program is planned, which will:

- enable entire PSM programs at OSU to be offered via distance education,
- increase student recruitment, including non-PSM degree seeking students who may wish to earn the graduate certificate,
- create opportunities for curriculum sharing with other PSM programs in the U.S., and
- increase capacity to develop additional PSM degree programs at OSU.

Graduates of this certificate program will receive formal recognition for completing the professional training, which currently can only be achieved through an assemblage of disjointed courses or an intensive MBA Program.

c. When will the program be operational, if approved?

Fall 2009

2. Course of Study

a. Briefly describe proposed curriculum.

Course topics were developed based on feedback received from industry representatives during PSM program development workshops held at OSU in June 2001 and December 2003. Additional information from other universities, OSU students, non-governmental organizations, and government agencies obtained during annual workshops for the last several years has continued to upgrade and augment the curriculum.

We are requesting a new course designator (PSM). The Graduate Certificate consists of 19 credits:

- PSM 565 Accounting and Finance for Scientists (3 credits)
- PSM 566 Management and Marketing Scientific Technologies (3 credits)
- PSM 567 Innovation Management (3 credits)
- COMM 550 Communication and the Practice of Science (3 credits)
- PHL 547 Research Ethics (3 credits)
- PSM 511 Professional Skills I (1 credit)
- PSM 512 Professional Skills II (1 credit)
- PSM 513 Professional Skills III (2 credits)

b. Describe new courses; include proposed course numbers, titles, credit hours, and course descriptions.

Existing courses include Communication and the Practice of Science (COMM 550), which is currently offered under Topics in Speech Communication through the Department of Speech Communication (COMM 512). Research Ethics (PHL 547) is currently offered through the Department of Philosophy.

Management classes (PSM 565, 566, 567) are specially designed for science majors to provide a practical understanding of business skills in accounting, marketing and entrepreneurship that will be useful in the workplace. The Professional Skills series (PSM 511, 512, 513) evolved to address a variety of specific training needs identified by both graduate students and employers, and importantly serve to integrate the diverse knowledge bases grounded in science and management that these students acquire.

Complete descriptions of all courses for the PSM certificate are attached as Appendix A.

c. Provide a discussion of any non-traditional learning modes to be utilized in the new courses, including, but not limited to: 1) the role of technology, 2) the use of career development activities such as internships.

An online version of this graduate certificate will be offered, and a development grant from e-campus has already been awarded pending approval of this Category I proposal. The ability to offer the certificate on-line will significantly increase student access beyond the OSU campus and create opportunities for curriculum-sharing with other universities interested in developing complementary professional programs of study.

The Graduate Certificate in Management for Science Professionals fosters career development and expansion of scientific skills to produce graduates capable of effectively and productively interacting with co-workers in business and scientific fields. The management courses were designed after careful consideration regarding content, learning sequence, and presentation style. Professors and students at five universities that also offer PSM programs with professional training components were visited in 2004 and queried about teaching style and learning effectiveness. Integration, synthesis, and application characterize successful teaching methods, particularly when educating science-based students in business concepts. Integrative learning occurs when students are asked questions like, "Which company would you buy stock in?" Answering such questions requires them to understand financial statements, market trends, leveraging, and other business concepts, not typically taught to science-based students. There is a steep learning gradient that exists as students progress from didactic lectures to demonstrations and finally hands-on learning opportunities. When students work in teams on various projects, they must synthesize their communication, business, and scientific skills.

The PSM 511 class requires students to complete service learning projects (examples in Appendix B), which engage them in their communities and create opportunities to apply their skills and interests in meaningful ways. Students determine the duration, breadth and depth of their individual projects. In PSM 512, students create individual professional multi-media portfolios. They are also introduced to foundations of career development concepts and skills. The PSM 513 spring-term course is designed around case study projects, which serve as integrative experiences where students apply their collective business, communication, and scientific skills. These projects are developed and mentored by working professionals from various organizations and disciplines (examples in Appendix B). Student teams develop project management plans, work together to solve real-time problems, and then share results through final reports and on-site presentations.

Unlike most graduate-level courses, comprised of similar discipline-cohorts, this certificate program includes students representing a wide range of science-based careers. It sets the stage for interdisciplinary communication and broad-based learning opportunities.

d. What specific learning outcomes will be achieved by students who complete this course of study?

Certificate graduates will have an understanding of:

- Basic concepts in practical accounting and finance, marketing, project management, and entrepreneurship,
- Interpersonal and organizational communication styles,
- Ethical issues in scientific and social settings, and
- How to apply scientific knowledge in a variety of settings and by working as part of a multi-disciplinary team.

Specific course learning outcomes include students' ability to:

PSM 565: Accounting and Finance for Scientists

- Apply fundamental accounting principles for different types of organizations and interpreting financial statements of these organizations
- Use activity-based cost analysis and performance measurement analytics
- Follow business cycle fluctuations, free market dynamics, and inflation trends

PSM 566: Management and Marketing Scientific Technologies

- Draft a project management plan that includes work breakdown structures, time and cost components, project control and quality parameters
- Adapt marketing concepts (research, target positioning, pricing, and methods of promotion) to develop new products or services

PSM 567: Innovation Management

- Develop a business plan to commercialize a new technology, product or service
- Structure small business enterprises and non-profit organizations
- Apply sustainable business practices

COMM 512: Communication and the Practice of Science

- Write and give presentations on various topics to diverse audiences
- Work effectively in teams, engage in collaborative decision-making, and negotiate
- Engage in different styles of interpersonal communication and understand organizational communication strategies

PHL 547: Research Ethics

- Adapt problem-solving methodologies to deal with ethical issues in scientific, business, and social settings
- Explore organizational business and cultural values and how they affect the practice of science and conservation
- Apply guidelines relating to patent, trademark, copyright, and authorship issues

PSM 511: Professional Skills

- Be an effective, adaptable speaker through repeat formal peer-evaluation
- Draft effective professional written communications through a group process
- Connect with local communities in ways that utilize and integrate professional and scientific skills and interests

PSM 512: Professional Skills

- Lead working teams in a variety of scientific settings
- Write effective job descriptions as well as conduct and participate in job interviews
- Create basic professional communication pieces

PSM 513: Professional Skills

- Draft effective project management plans
- Integrate and apply scientific, business management, and ethics training in team-based projects
- Communicate effectively across science disciplines

- e. **Is there a maximum time allowed for a student to complete this program? If so, please explain.**

Students can work through the program in a timeframe that fits their own schedule, although ideally they will complete the certificate in one academic year, working with the same cohort of students. Individuals will be bound by normal Graduate School guidelines and timelines (e.g., completing a Master's degree within a 7-year time period).

3. Accreditation of the Program

- a. If applicable, identify any accrediting body or professional society that has established standards in the area in which the proposed program lies.**

There is currently no organization that accredits this type of graduate certificate.

- b. If applicable, does the proposed program meet professional accreditation standards?**

N/A

4. Evidence of Need

- a. What evidence does the institution have of need for the program? Please be explicit.**

The PSM degrees at OSU (<http://psm.science.oregonstate.edu>) require courses currently offered through the proposed graduate certificate, and clearly address the needs recognized and articulated by key organizations like the Alfred P. Sloan Foundation and the Council of Graduate Schools (CGS) (<http://sciencemasters.com/>)-- see below.

The Graduate Certificate in Management for Science Professionals packages the additional training (also known as "plus" courses) provided in the PSM degree. Students majoring in scientific disciplines are drawn to these types of courses because they recognize how the training enhances their career options by adding value and versatility to their skills-base. We receive at least 10 to 12 inquiries per year from students interested in taking the "plus" PSM courses. Letters of support for this graduate certificate from the Dean of the College of Forestry and Associate Dean of the College of Agricultural Sciences (Appendix C) indicate interest from these scientific disciplines. Veterinary and pharmacy students also benefit from this training; however, their heavy course loads preclude their participation until graduation.

As an online option, this graduate certificate represents another step towards making entire PSM degree programs available via distance education.

- b. Identify statewide and institutional service-area employment needs the proposed program would assist in filling. Is there evidence of regional or national need for additional qualified individuals such as the proposed program would produce? If yes, please specify.**

Over 8 years ago, the Alfred P. Sloan Foundation provided seed money for development of PSM degrees at major universities. OSU was one of the grant recipients. These non-thesis Master of Science degrees emphasize interdisciplinary studies that integrate natural sciences and mathematics with training in management, communication, and

professionalism. Students acquire skills in analytical thinking, problem solving, and gain real-world experience through internships. Packaging the professional plus courses as a graduate certificate program will: 1) allow us to access e-campus funds to convert this curriculum into a distance learning option, 2) facilitate development of entire online PSM programs at OSU, 3) increase access to this training opportunity among working science professionals as well as PSM students at other universities, and 4) help recover costs for delivery of these courses through increased tuition revenues.

The value of PSM programs have been recognized by different organizations through time. A quote from USA Today (19 July 2004, cover story) summarizes the PSM degree in this way:

"The PSM is being called the MBA for scientists and mathematicians. It's an education aimed at future managers who will be able to move comfortably in the business of science..."

The CGS' report "Graduate Education: The Backbone of American Competitiveness and Innovation" (26 April 2007) recommends:

"...support for innovative graduate education programs, such as professional master's degrees, which respond to workforce needs..."

(http://www.cgsnet.org/portals/0/pdf/GR_GradEdAmComp_0407.pdf).

There is a regional and national need to provide this type of training to people with careers in science and mathematics. Organizations need people who are comfortable in the worlds of both science and business; graduates will be better able to contribute to running private veterinary or medical practices, managing small science-based start-ups, or serving in managerial research positions for larger companies or agencies. Letters of support for this graduate certificate come from a variety of government agencies, industries, and small businesses interested in hiring these graduates and attest to this need (Appendix C).

Oregon was recently chosen as one of five states to participate in the "National Governor's Association Policy Academy on State Strategies to Meet Emerging Workforce Needs through the Professional Science Masters Program". The goals of the academy are to:

- Identify high-skills workforce gaps that PSM programs can help address,
- Assess the viability of implementing a statewide PSM strategy, and
- Create an action plan for a statewide PSM program that is linked to other ongoing Science, Technology, Engineering, and Mathematics related activities and programs at the K-12 and post-secondary level.

It is anticipated that this Graduate Certificate in Management for Science Professionals will be available in an online format in the fall of 2009 and could augment PSM program development at institutions across the state. A copy of Oregon's proposal (which further specifies service-area employment needs), letter of support from Governor Kulongoski, and letter of approval from the NGA are enclosed in Appendix D.

c. What are the numbers and characteristics of students to be served? What is the estimated number of graduates of the proposed program over the next five years? On what information are these projections based?

Currently, OSU accepts between 10-15 new PSM students annually into its Applied Systematics in Botany, Applied Physics, Environmental Sciences, and Applied

Biotechnology programs, and all of these students are required to complete the certificate program. More PSM programs in chemistry, fisheries and wildlife, alternative energies, and bioinformatics are envisioned and each should have capacity for approximately 10 students per year. Conservatively, we estimate that another 50 to 60 non-PSM students will register for the certificate each year (on campus and via distance education) in about 3 years, given that there are currently over 120 PSM programs offered at more than 60 universities across the U.S. (map below), and these programs potentially represent significant numbers of students interested in OSU's Certificate in Management for Science Professionals.

As an online option, PSM students from other universities gain access to OSU's "plus" curriculum required for their degree programs. In addition to professional training needs for new PSM programs developed at academic institutions in Oregon through the NGA initiative, PSM program directors from institutions in other states have also expressed an interest in OSU's professional PSM curriculum. The National PSM Association (NPSMA) recently conducted a Best Practices and Educational Metrics survey, which received responses from 40 universities representing 62 PSM programs. Survey respondents indicated a strong interest in curriculum sharing among institutions offering PSM degrees. Development of the "plus" training required has been a challenge for many institutions, which our certificate could easily overcome by sharing relevant courses via distance education. All PSM programs are required to have "plus" courses as defined by the CGS: [http://sciencemasters.com/portals/0/pdfs/Guidelines for PSM Affiliation.pdf](http://sciencemasters.com/portals/0/pdfs/Guidelines%20for%20PSM%20Affiliation.pdf).

However, the Graduate Certificate in Management for Science Professionals would also be available to non-PSM students. Individuals who recently completed their undergraduate training often seek graduate degrees to learn additional skills. Others want to re-tool in their existing fields or advance in their current positions of employment. These students would all be able to register for this graduate certificate.

Traditional courses offered on campus have a capacity of approximately 20 students. Additional students can only be accepted if more sections are added. However,

significantly greater numbers of students could be accommodated through an online offering of the Graduate Certificate in Management for Science Professionals, as currently envisioned.

d. Are there any other compelling reasons for offering the program?

The Graduate Certificate in Management for Science Professionals is unique and addresses a compelling need in the field of science and mathematics.

Collectively, the classes that comprise the Graduate Certificate in Management for Science Professionals are offered at the graduate level, because they are designed for individuals who have already earned their undergraduate degree in science or math and are interested in advancing their careers through additional graduate level training. It is important to note that the business management series does not replace or comprise part of an MBA degree, just as other certificate components do not contribute to minors in specific topics (e.g., communication). However, we have found that many of our PSM students have heightened interest in certain topics after taking these professional courses, so that some choose to take additional communication courses and a few even earn an MBA after graduating with their master's degree from a PSM program.

To acquire the skills this certificate offers, individuals in the past have had to cobble together coursework from a myriad of sources often spending more time than desired on specific topics. The Professional Skills series of courses perhaps represents the broadest array of disparate topics. To emulate the proposed curriculum, students would have to independently organize a variety of activities with different organizations and existing courses. Importantly, these students would not benefit from the collaborative processes involved such as peer evaluation nor would they have opportunities to integrate what they are learning through the projects required each term in the PSM Professional Skills series. The goal of the Graduate Certificate in Management for Science Professionals is to produce "T-shaped" individuals who have depth in a particular field of science or math and breadth in a variety of "plus" course topics that enable them to understand the applications of their work in science and function as versatile employees. As such, the PSM 511, 512, and 513 series of classes is offered at the graduate level because they integrate their content with topics applied to their training in science and math. Utilizing Bloom's Taxonomy to compare graduate- versus undergraduate-level training, collectively these courses ask students to analyze (not just remember), evaluate (instead of simply understand), and create (versus merely apply) their knowledge so that they can adapt their skills to a variety of employment settings. By emphasizing a hands-on, integrative learning approach, students develop competence in all three learning domain structures (cognitive/knowledge; affective/attitude, and psychomotor/skills).

The PSM 565, 566 and 567 classes were similarly created from a stated need by employers of science master's degree recipients. Graduates with an understanding of the business applications of their work in science are viewed as more valuable than traditional graduate degree holders. Multiple discussions contributed to the design of these classes, which cover key topics identified as important by employers. We needed to develop a few classes that would educate science and math majors in the basics of accounting, project management, marketing, and entrepreneurship, unlike the Master of Business and Engineering degree, which requires a minimum of 18 hours of credit in graduate level and 15 credit hours of pre-requisite course requirements in business administration (33 credits

total). We initially worked with the College of Business to design these courses but eventually decided to hire a special instructor who had earned graduate degrees in both science and business administration. This facilitated our goal of creating courses specifically for science and math majors.

As stated earlier, this certificate is designed at the graduate-level for individuals who have completed an undergraduate degree in science or mathematics, and these classes are part of the required curriculum for PSM students. Employers of science Master's graduates also emphasized the need for training in interpersonal and organizational communication, and COMM 550 is a class that evolved from those conversations. We worked with Gregg Walker, the previous Chair of the Department of Speech Communication, to include appropriate topics. New Media Communications is another department in the College of Liberal Arts designed to prepare students for a career in media, not in science. Course options in this program emphasize this perspective and would not meet the needs of the Graduate Certificate in Management for Science Professionals. Jeff Hale, the Director of New Media Communications, agreed that "The New Media Communications program does not have coursework that would be relevant to your students" (12 December 2008 email). Similarly, the Adult Education program "will prepare you to work either: as a development and training specialist... or as an instructional specialist and master teacher/trainer" and the Community College leadership Program "prepares faculty and administrators for leadership roles in technical and community colleges, higher education settings and similar organizations" (OSU website). Our graduate certificate program is designed for science majors. We make students enrolled in the Environmental Sciences PSM program emphasizing environmental education aware of the Education Double Degree option, but this type of training is not in the focus of the general "plus" course training.

Importantly, precedents for this type of graduate-level training have been set at other universities throughout the U.S. and examples include:

- Michigan State University (http://grad.msu.edu/all/bus_mgt.htm),
- University of Utah (<http://web.utah.edu/pmst/coursework.html>), and
- University at Buffalo (<http://professionalmasters.cas.buffalo.edu/>).

e. Identify any special interest in the program on the part of local or state groups (e.g., business, industry, agriculture, professional groups).

Special interest in the type of training offered through this graduate certificate has been expressed by numerous individuals, agencies, and organizations. A letter of support from Senator Ron Wyden (Appendix C) acknowledges that "the Graduate Certificate in Management for Science Professionals will enable individuals to bridge the gap between business and science in a variety of workforce sectors..." Congresswoman Darlene Hooley shares that opinion and offers that "expanding the PSM programs to include a Graduate Certificate will provide a wonderful opportunity for students outside the PSM program area who are interested in gaining critical professional skills."

Professional associations such as Associated Oregon Industries (AOI), which represents more than 20,000 businesses in the state, and the Oregon Bioscience Association (OBA) are both strong proponents of OSU's PSM program and the proposed graduate certificate. John Ledger, Vice President for External Affairs of AOI, and Bob Lanier, Executive Director of OBA, both serve on the OSU PSM Advisory Board.

Large and small businesses (e.g., Hewlett Packard, Chemica Technologies, Inc. and ViewPlus Technologies) are interested in the proposed Graduate Certificate in Management for Science Professionals, as are state government agencies (Oregon Department of Fish & Wildlife), and those affiliated with agriculture and forest industry sectors (see letters of support in Appendix C).

And finally, other academic institutions interested in developing new PSM programs through the NGA initiative are likely to have a strong interest in OSU's Graduate Certificate in Management for Science Professionals.

f. Discuss considerations given to making the complete program available for part-time, evening, weekend, and/or place bound students.

The \$75,000 grant from e-campus will help create an online version of the Graduate Certificate in Management for Science Professionals, thereby allowing access for individuals who would simply like to work on the certificate part-time (5-7 units/term to finish in one academic year) or full-time (in conjunction with another graduate program). Students would then be able to complete the certificate by working online whenever and wherever they currently live.

While exploring what types of teaching styles worked best for this type of curriculum and audience, we came across an excellent example of an online master's degree program at Michigan State University. That program requires students (from all over the world) to gather on campus for 3-4 weeks at the beginning of their degree program to learn about challenging topics in person and meet and connect with one another. We plan to develop our online graduate certificate curriculum using a similar hybrid format.

5. Similar Programs in the State

a. List all other closely related OUS programs.

The Graduate Certificate in Management for Science Professionals provides an exposure in an applied approach to topics that are taught in-depth in all MBA programs. Currently no program exists for science majors like the one being proposed. Letters from Oregon state legislators, previously referenced, underscore the value of the Graduate Certificate in Management for Science Professionals.

In the Pacific Northwest, OSU is currently the only university offering PSM programs and this certificate is similarly unique.

b. In what way, if any, will resources of other institutions (another OUS institution or institutions, community college, and/or private college/university) be shared in the proposed program?

All resources necessary for the Graduate Certificate in Management for Science Professionals are located at OSU.

c. Is there any projected impact on other institutions in terms of student enrollment and/or faculty workload?

There are no projected impacts on other institutions in terms of student enrollment and/or faculty workload; however, as an online option, PSM students from other universities can gain access to OSU's "plus" curriculum, particularly if these courses are formally recognized by and transferable to their individual degree programs (see 4.c. above).

6. Resources

- a. **Identify program faculty, briefly describing each faculty member's expertise/specialization. Separate regular core faculty from faculty from other departments and adjuncts. Collect current vitae for all faculty, to be made available to reviewers upon request.**

Core Faculty:

Gregory Kivenzor; College of Science, OSU (**PSM 565, 566, 567**)

Instructor. Has graduate training and experience in both business management and science sufficient for teaching "plus" courses in accounting, management, marketing and entrepreneurship with applications in science-related fields (not accredited by the AACSB); will also assist with outreach and development of internship opportunities for OSU's PSM Program.

Gregg Walker; Speech Communications, OSU (**COMM 512**)

Professor. Previous chair of the Department of Speech Communication, adjunct professor of Forest Resources, and Director of the Peace Studies program; teaches courses in conflict management, bargaining and negotiation, mediation, international negotiation, natural resources decision making, and peace studies; conducts training programs on collaborative decision making, designs collaborative public participation processes, facilitates collaborative learning community workshops about natural resource and environmental policy issues, and researches community-level collaboration efforts.

Jonathan Kaplan; Philosophy, OSU (**PHL 547**)

Associate Professor. Explores the relationship between developmental and evolutionary biology, especially the importance of non-genetic heritable variations in developmental resources for evolutionary innovations; teaches biomedical ethics, scientific reasoning, philosophy of biology, and reasoning and writing.

Ursula Bechert; College of Science, OSU (**PSM 511, 512, 513**)

Director of Off-Campus Programs. Teaches professional development courses for graduate science majors; directs development of PSM programs as well as international programs; research in reproductive biology of wildlife species, development of novel diagnostic and population management tools, nutritional and pharmacological studies; international collaborative research in southern Africa.

- b. **Estimate the number, rank, and background of new faculty members who would need to be added to initiate the proposed program in each of the first four years of the proposed program's operation (assuming the program develops as anticipated). What commitment does the institution make to meet these needs?**

One new faculty member will be required to deliver this certificate program at OSU. This person will be hired as an instructor during the first year of the certificate. He/she should have a graduate degree (MS or PhD) in science and an MBA or formal training in business management. Work experience in industry, research and/or academia is desirable. In addition to teaching accounting, management, marketing and entrepreneurship with applications in science-related fields (PSM 565, 566, and 567), this individual will assist with outreach and development of internship opportunities for PSM students at OSU.

A letter from the Dean of the College of Science (Appendix E) confirms the institution's commitment to meet this need. No other additional hires are needed for this certificate.

c. Estimate the number and type of support staff needed, if any in each of the first four years of the program.

No additional support staff will be needed to develop and deliver this certificate. A grant from e-campus (\$75,000) will facilitate conversion of traditional courses to online options. Recruitment efforts will be folded into current PSM student recruitment activities. An existing 0.2 FTE PSM Coordinator position will assist with the student application process. Applicants need to have earned an undergraduate degree in a field of study in science or mathematics, and/or have been admitted to a PSM program.

d. Describe the adequacy of student and faculty access to library and department resources that are relevant to the proposed program.

Information can be readily accessed by students enrolled in the Certificate Management for Science Professionals Program on the OSU campus.

e. How much, if any, additional financial support will be required to bring access to such reference materials to an appropriate level? How does the institution plan to acquire these needed resources?

No further acquisitions are required. Reference material currently available is adequate.

f. Identify any unique resources, beyond those on hand, necessary to offer this program. How does the institution propose that these additional resources will be provided?

No unique resources are required.

APPENDICES

Appendix A: Course Descriptions

List of Proposed Courses:

- PSM 511: Professional skills I (1 unit)
- PSM 512: Professional skills II (1 unit)
- PSM 513: Professional skills III (2 units)
- COMM 512: Communication and the practice of science (3 units)
- PHL 547: Research ethics (3 units)
- PSM 565: Accounting and finance for scientists (3 units)
- PSM 566: Management and marketing scientific technologies (3 units)
- PSM 567: Innovation management (3 units)

Appendix B: Service-Learning and Case Study Project Examples

Appendix C: Letters of Support

Oregon State University

Sherman Bloomer, Dean, College of Science
Ilene Kleinsorge, Dean, College of Business and Sherman Bloomer, Dean, College of Science
Stella Coakley, Associate Dean, College of Agricultural Sciences
Hal Salwasser, Dean, College of Forestry
Mark Merickel, Associate Dean, Extended Campus
Courtney Campbell, Chair, and Jonathan Kaplan, Associate Professor, Dept. of Philosophy
Charlotte Headrick, Acting Chair, Department of Speech Communication
Jeffrey Hale, Assistant Dean, External Relations – College of Liberal Arts & Interim Director, New Media Communications

Government Representatives

Ron Wyden, U.S. Senator, Oregon
Darlene Hooley, State Representative, Oregon
Doris Matsui, State Representative, California
Jennifer Bond, Senior Advisor, Council on Competitiveness

Industry and Government Agency Advisors

John Ledger, Vice President of External Affairs, Associated Oregon Industries
Takuji Tsukamoto, President and CSO, Chemica Technologies, Inc.
Linda Amedo, Business Systems Manager, Hewlett-Packard Company
John Gardner, President, ViewPlus Technologies
Charlie Corrarino, Conservation and Recovery Program Manager, Oregon Department of Fish and Wildlife

Appendix D: NGA Proposal and Letters of Support and Approval

Appendix E: Budget

Appendix F: Instructor CVs

Appendix A: Course Descriptions

PSM 511: Professional Skills I (1 unit)

Instructor: Ursula Bechert

Offered: Fall term

Course description: Students create their own multi-media portfolios, initially refocusing career goals and learning how to draft professional documents through a collaborative peer-review process. They practice public speaking, and initiate a service-learning project that engages them in the community and complements their scientific discipline.

Approach: The class meets weekly for one hour and provides students a chance to further focus their career goals through group discussions, networking, exploring potential employment opportunities, and completing a service-learning project. Students also learn through the process of evaluating each others' work, engaging in reviews of professional documents, and providing objective feedback on presentations. Active learning integrates and applies knowledge to topics in science and math.

PSM 512: Professional Skills II (1 unit)

Instructor: Ursula Bechert

Offered: Winter term

Course description: The course includes workshops on leadership, making working groups effective, and conducting and giving interviews. Students also develop their own multi-media portfolios and continue working on their service-learning projects, if they did not complete them fall term.

Approach:

This class meets weekly for one hour and, through group discussions and individual tests, allows each student to explore the qualities that define their own style of leadership. Students learn team building techniques through experiential group activities that complement lectures. They also develop interview skills through opportunities to serve as both the interviewer and as the person being interviewed. Students use job descriptions they drafted based on personal career interests. Facilities at Career Services on the OSU campus are used to videotape interviews, giving each student unique insight into how they present themselves. Each student also learns how to create their own multi-media portfolio.

PSM 513: Professional Skills III (2 units)

Instructor: Ursula Bechert

Offered: Spring term

Course description: The class provides an integrative learning experience by giving students opportunities to apply their collective management, communication, and scientific skills to real-time case study projects. These projects are developed and mentored by working professionals from various disciplines. Student teams work together to solve problems and share results through final reports and on-site presentations. One or two projects are completed per term, based on the amount of work involved per project.

Approach:

The class meets weekly for two hours, and students are expected to work together outside class time based on project needs. Off-campus mentors initially make presentations and share background information about particular projects. Specific objectives are then addressed by the class working together. A project management plan, drafted by the students, further details individual responsibilities and guides team efforts. Project outputs include a final report and presentation.

Thus, students develop interdisciplinary communication and teamwork skills; enhance their creative thinking, writing, presentation, and public speaking skills; build self-confidence by applying concepts previously learned in separate classes; and further expand and integrate knowledge particularly with respect to management and science. Guided team and self evaluations provide insightful feedback for each student about his/her performance as a team member at the conclusion of the project.

COMM 512: Communication and the Practice of Science (3 units)

Instructor: Gregg Walker

Offered: Fall term

Course description: Topics in this class include teamwork and collaborative decision-making; interpersonal and organizational communication; writing for and making presentations to diverse audiences; negotiation and consensus building; as well as persuasion and influence.

Approach:

The class meets twice weekly for 1½ hours to encourage discussions. Gregg Walker serves as the lead instructor and four other faculty members contribute to the course based on their areas of expertise. Students explore different communication styles and give a formal presentation at the end of the term.

PHL 547: Research Ethics (3 units)

Instructor: Jonathan Kaplan

Offered: Winter term

Course description: The course provides a basic understanding of: 1) responsible conduct in scientific research (e.g., guidelines relating to patent, trademark, copyright, and authorship issues), 2) scientific ethics and corporate culture, and 3) cultural impacts on decision-making processes, science, and societal values. In addition, the course covers recent trends such as the increased politicalization of science and the difficulties engendered by particularly strong economic incentives (e.g., start-up pharmaceutical and biotechnology companies).

Approach:

The class meets twice weekly for 1½ hours to encourage discussions. Various case studies, both historical and recent, are used to introduce and illustrate particular kinds of ethical problems that arise in scientific research and in the commercialization of particular kinds of results. Students become familiar with ethical problems they might face in their professions, identify ethically problematic situations, explain what aspects of those situations are ethically problematic, and then explain *why* those situations are ethically problematic.

PSM 565: Accounting and Finance for Scientists (3 units)

Instructor: Gregory Kivenzor

Offered: Fall term

Course description: The course frames accounting and financial issues, including the broader environment in which a variety of enterprises operate (e.g., corporations to non-profit organizations). Fundamental principles of accounting and financial analysis for different types of organizations are covered. Lectures on micro- and macro-economics include inflation, business cycle fluctuations, and free market dynamics.

Approach:

The class meets twice weekly for 1½ hours. Students are assigned to 3-4 person teams, based on their different disciplinary backgrounds, to encourage communication skill-building opportunities. At the beginning of the term, each team chooses a company that serves as a model to illustrate key concepts (e.g., human resource management) that students explore through specific projects.

PSM 566: Management and Marketing Scientific Technologies (3 units)

Instructor: Gregory Kivenzor

Offered: Winter term

Course description: Project management emphasizes work breakdown structures, time and cost management, project control and quality, and human resources. Frameworks for management within a variety of entities (from non-profit organizations to large corporations) involved in science or science technologies are explored. Methods of market research, segmentation, target marketing and positioning, new product development, produce life cycles, pricing, and promotion and distribution are addressed. The importance of the global market and cultural factors that affect marketing strategies are included.

Approach:

The class meets twice weekly for 1½ hours. Students are assigned to 3-4 person teams based on their different disciplinary backgrounds to encourage communication skill-building opportunities. At the beginning of the term, each team chooses a company that serves as a model to illustrate key concepts (e.g., human resource management) that students explore through specific projects.

PSM 567: Innovation Management (3 units)

Instructor: Gregory Kivenzor

Offered: Spring term

Course description: Commercialization of new scientific technologies, products and processes, technology transfer mechanisms, entrepreneurship, and development of a business plan are key topics. Legal topics include intellectual property; structuring small business enterprises, partnerships and corporations; regulatory issues; and sustainable business practices. Other topics include intellectual property management, management of scientists and engineers, business assessment based on the triple-bottom-line, and actual commercialization of products and services.

Approach:

The class meets twice weekly for 1½ hours. Students are assigned to 3-4 person teams based on their different disciplinary backgrounds to encourage communication skill-building opportunities. At the beginning of the term, each team chooses a company that serves as a model to illustrate key concepts (e.g., human resource management) that students explore through specific projects.

Appendix B: Service-Learning and Case Study Project Examples

Previous examples of service-learning projects completed by PSM students include:

- Organization and promotion of the biofuels learning center: A team of PSM Applied Physics students collaborated with the OSU campus Biodiesel Initiative to develop a Biofuels Learning Center. The students defined the goals and organization of the Center, produced an informational brochure, and created a website for the Center.
- Education garden for Waldorf Elementary School: An Environmental Sciences PSM student wrote a proposal to make an education garden at a local K-8 school. The school accepted the proposal and granted space for the garden. A local nursery helped design and develop the garden, and future plans included securing outside funding for an onsite greenhouse.
- High school biotechnology curriculum: A team of Applied Biotechnology PSM students designed curriculum for high school students to help them learn more about biotechnology and genetic engineering, which they planned to offer through the OSU Saturday Academy.
- Conservation of the Fender's Blue Butterfly: In cooperation with the Institute for Applied Ecology, a student in the Applied Systematics – Botany PSM program mentored four Philomath high school students throughout the year on habitat restoration projects to conserve the endangered Fender's Blue Butterfly.

Some previous examples of case study projects are listed below:

- Black & Veatch, an environmental consulting firm, asked PSM students to create a business development plan to attract two new potential clients in the Portland OR and Vancouver WA region. Their final report and presentation were delivered at the Black & Veatch office in Lake Oswego.
- Anderson Risk Analysis, Inc. mentored students on a project conducted for the Salem Water/Wastewater Management Taskforce. The Taskforce and Mayor of Salem listened to the PSM students' presentation on how Salem could reduce its mercury discharges into the Willamette River by 27 percent.
- Willamette National Forest challenged PSM students with two ethical case studies focused on the conservation of spotted frogs and spotted owls. Panel discussions were set-up by the students to share viewpoints and conservation plans of different stakeholders including the USGS, USFWS, ODFW, as well as members of the general public.

Subject: Re: fall course - PSM program
Hi Gina:

Here's the exchange Ilene and I had about these courses at the end of April. I've copied her on this as well so she's aware we are going forward with implementation of the courses and the associated certificate.

Let me know if we need more documentation.

Thanks,
Sherm

To: "Bloomer Sherman" <bloomers@science.oregonstate.edu>
Subject: RE: Professional Science Masters Curriculum

Sherm,

As long as this does not end up being a major but is a certificate, we have no problems with the proposed curriculum or offerings. I checked with AACSB last week and was encouraged to find that your plan would not cause problems for the COB. Of course they didn't understand why the resources were not available to the COB to deliver for you, but that is not in my control and I will not be held accountable for making it so.

Ilene

From: Bloomer Sherman [<mailto:bloomers@science.oregonstate.edu>]
Sent: Wed 4/18/2007 9:57 AM
To: Kleinsorge, Ilene - COB
Subject: Professional Science Masters Curriculum

Ilene:

Thanks for the conversation a couple weeks ago about the Professional Science Masters curriculum. I really do appreciate the efforts COB went to in exploring these courses and I also understand the difficulties they present.

My understanding is that COS will go ahead and work with Ecampus to develop and staff a three course series intended to familiarize STEM students with the key concepts they will encounter in the private or public sector workplace. I've attached a working outline of what those three courses might look like and how we would talk about the, so as to make it clear these are not business courses and not intended for anyone thinking about business as the focus of their professional career. I want to be very clear about who these are for and how we'll use them.

Let me know if this seems OK to work from. If so I'll get the next steps going for Fall and will keep you posted on where we are and how the courses are shaping up.

Many thanks,
Sherm

April 25, 2007

Dr. Ursula Bechert
Director of Off-Campus Programs
College of Science
Oregon State University
CAMPUS

Dear Dr. Bechert,

This letter is written in strong support of the Category I proposal for the development of a "Graduate Certificate in Management for Science Professionals." As you know, I was the P.I. on the Alfred P. Sloan Foundation grant to Oregon State University (OSU) that resulted in the development of the Professional Science Masters Program at OSU. From my experience with the program, I have seen the value of offering the management opportunities to science students and believe that many more of our students could benefit from this aspect of the Professional Science Masters (PSM) Program. I am also aware of how other institutions have struggled (as we have) with establishing and sustaining the management aspect of this unique program.

I believe that developing a Graduate Certificate Program would allow non-PSM degree seeking students in other science-related disciplines to also benefit (e.g., veterinary students and veterinarians). By opening enrollment of this program to a broader audience, it should be possible to help recover costs of development and delivery of the management aspect. We know that other PSM programs are interested in curriculum sharing and that several will benefit from the certificate program once it is offered online. I understand that the online version will be developed as soon as the Category I proposal is approved and I believe that aspect will be of great value to our campus overall.

As you know, the College of Agricultural Sciences has been a partner in the development of the PSM programs and we see opportunities for additional units to be involved in these programs in the future. There is additional value in making the management related courses available online and in encouraging traditional thesis seeking Masters and Ph.D. students to obtain additional expertise in this area of professional development. We know from the experiences to date with developing the PSM program that just offering business courses developed for other purposes does not work well for the students.

In summary, I support the direction that you are taking with the Category I proposal to develop this new program. Please let me know if there are questions that arise about this proposal that I am able to answer.

Sincerely,

A handwritten signature in cursive script that reads "Stella Melugin Coakley".

23 April 2007

Dr. Ursula Bechert
College of Science
Oregon State University
2082 Cordley Hall
Corvallis OR 97331

Dear Dr. Bechert:

I support your proposal to create a Graduate Certificate Program in Management for Science Professionals, which springs from the Professional Science Master's (PSM) degree programs that you've been developing.

The College of Forestry sees real value in providing additional training opportunities in business management, communications, and ethics to students enrolled in our graduate programs. In fact, our on-line Sustainable Natural Resources curriculum is an elective option within the PSM degree in Environmental Sciences.

Graduates from the College of Forestry find employment with a variety of organizations, including federal and state natural resource agencies as well as private companies. The development of the additional skills that you describe in your proposal will make our students more competitive and versatile employees and natural resource managers. As we have begun looking into this type of opportunity ourselves, we encounter great interest throughout the region, nation, and world in the business and science courses that would be available in your program. Natural resource management is in the process of substantial change and a Graduate Certificate such as you propose would be extremely beneficial to forest and other natural resource managers.

You have our support in developing a Graduate Certificate Program in Management for Science Professionals at OSU.

Best wishes,

A handwritten signature in black ink, appearing to read "Hal Salwasser", written over a light gray grid background.

FROM: Mark Merickel, PhD
Associate Dean, OSU Extended Campus

SUBJECT: Letter of Support for Category 1 proposal, Graduate Certificate in
Management for Science Professionals

OSU Extended Campus fully supports the establishment of an OSU Graduate Certificate in Management for Science Professionals. We have other highly successful programs for professionals in various fields of science, know how to market to this audience, and have established a reputation nationally for high quality, accessible courses and programs. Bringing this program to an extended audience nationally and internationally reinforces our goal of improving access to OSU programs.

The online version of this graduate certificate would be marketed nationally and would be of interest to students in other Professional Science Masters programs across the country. (Nationwide program information—<http://www.sciencemasters.com/>). In addition, we anticipate enrollment in the individual courses by working professionals who are managing science programs and wish to upgrade their skills in core areas essential to their management success.

Upon curricular approval Ecampus will provide assistance with program planning, marketing, course design and development, Blackboard training, and supporting services

to students at no cost to the college or department and will return tuition revenue to the program according to the established Ecampus revenue-share model. We will support development of the online courses within this program by providing funding for the content provider for each course. With careful planning and with anticipated enrollment, this program will be self-sustaining under this model.

April 20, 2007

To whom it may concern:

We are writing in support of the Category I proposal to create a Graduate Certificate Program (19-credits), "Graduate Certificate in Management for Science Professionals," based on the Professional Science Masters (PSM) degree cohort curriculum.

As part of the PSM cohort curriculum, students are required to take Philosophy 547, "Research Ethics," which one of us (Jonathan Kaplan) has taught for the past two years. The response from the PSM students has been quite positive - the comments on the qualitative student evaluations this year included such remarks as "a great, thought-provoking class" "I really enjoyed this class even though I was a bit apprehensive about taking a philosophy course" and "very stimulating, relevant, and interesting." It is clear from these experiences in 547 that students from technical backgrounds have not been exposed to rigorous, sustained thinking about the ethical issues engendered by scientific research, and that, while initially skeptical of the value of such work, come to appreciate the importance of taking these kinds of issues seriously.

Creating a Graduate Certificate Program that, as part of preparing students in the sciences to work effectively in the private sector, includes a required ethics component, would benefit the OSU community in a number of ways. First, of course, those students taking advantage of the Certificate Program would benefit by gaining the expertise necessary to work effectively as both research scientists and business people, while maintaining a focus on the ethical issues inherent in their careers. Second, the businesses in which these students end up working will no doubt benefit by having hired people who have, at the very least, been asked to think seriously about what ethical conduct in research settings involves. And finally, such a program would send a strong message that ethical training, and ethical behavior, is a critical part of good management practice in the sciences, something that, unfortunately, has not always been seen as obvious, nor always practiced.

In short, the proposal to create a "Graduate Certificate in Management for Science Professionals" Graduate Certificate Program, based on the Professional Science Masters (PSM) degree cohort curriculum, is well worth supporting.

Sincerely,

 
Dr. Courtney Campbell, Department Chair, Philosophy Department

DBPP- 2082 Cordley Hall
Corvallis, OR 97331

Dear Prof. Bechert:

The Department of Speech Communication supports the Category I proposal from the College of Science to create a Graduate Certificate Program in Management for Science Professionals which includes COMM 512-036, Communication and Practice of Science. We believe the inclusion of COMM 512-036 strengthens an already strong proposal. We will continue to teach this class as long as we continue to receive funding from the College of Science.

Sincerely,

Subject: RE: PSM program

Ursula, this looks like a wonderful applied program for professionals in scientific and technological fields. The New Media Communications program does not have coursework that would be relevant to your students. However, your program may be an option for our students that want to focus on scientific visualization as a career path in new media. We are supportive of your Cat I proposal and look forward to the implementation of this program.

Subject: PSM program

Hi Jeff,

Thanks for returning my call this morning. I appreciated your feedback regarding potential course overlap between your New Media Communications program and our Professional Science Master's program (<http://psm.science.oregonstate.edu/>). Thanks for suggesting a reply to this email as a letter of liaison to acknowledge the lack of overlap and differences.

It looks like you've developed a wonderful program, and I really liked your website. Perhaps a few of your students might be interested in taking some of the professional courses we've created, especially if they're planning to start or manage a media company. I hope that your Cat I proposal process goes smoothly.

Best wishes for the holidays-- Ursula

Corvallis OR 97331

Dear Dr. Bechert:

It is a critical time for the United States. Everywhere we look, we see evidence of the global competition that American companies are facing. Unfortunately, we also see evidence that American companies are struggling because their employees lack the training necessary to compete in this global marketplace.

I am proud to say that the State of Oregon and the Oregon University system have been on the forefront in fighting to improve this situation. In particular, a tremendous amount of effort has been focused on ensuring Oregon's students get the math and science education, skills and knowledge that they will need to succeed. Oregon State University's Graduate Certificate Program in Management for Science Professionals is an important part of this effort.

This Graduate Certificate Program will help us become more competitive in science and math by providing individuals interested in working in science-related fields with training in business management, communications, ethics and professional technical skills. People working in research facilities, private practices or consulting firms, government agencies, and other industries often need such skills in their everyday work, but they have no way to acquire this training within their current professions. The Management for Science Professionals Graduate Certificate Program will enable individuals to bridge the gap between business and science in a variety of workforce sectors, and will arm their employers with the able workers needed to succeed in the 21st Century marketplace.

Oregon State University's Graduate Certificate Program in Management for Science Professionals should be applauded and emulated.

Sincerely,

RON WYDEN
United State Senator

Corvallis, OR 97331

Dear Dr. Bechert:

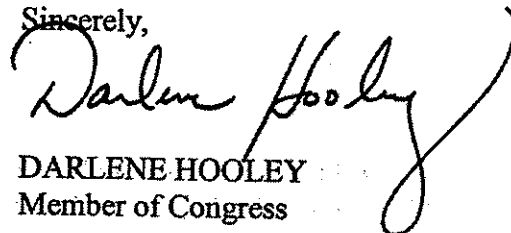

I am excited to learn about Oregon State University's success with the Professional Science Master's (PSM) programs. I first learned of this program in 2005, when it was being developed. I have been a long time supporter of science based education and am encouraged to see this program growing.

Expanding the PSM programs to include a Graduate Certificate Program will provide a wonderful opportunity for students outside the PSM program area who are interested in gaining critical professional skills.

In this global economy, we should take every opportunity to arm our graduates with the tools they need to thrive and compete. We also compete at the university level for the best and brightest students and this program is one more way we can continue to recruit students to Oregon State University.

Thank you for keeping me informed about the growth of this exciting program. Please let me and my staff know how we can continue to support the important work you are doing.

Sincerely,

Dear Ursula:

As a supporter of scientific research and increasing science, technology, engineering and math education in our nation's schools, I wanted to update you on important developments in Washington.

Science and technology issues, such as global warming and alternative energy, are crucial to our nation's competitiveness and security. As research into such pressing issues continues I believe our nation's researchers should be encouraged to effectively communicate new discoveries to the public. That is why I am proud to report that the House of Representatives incorporated a program I introduced—the Scientific Communications Act of 2007 (H.R. 1453)—into the National Science Foundation reauthorization bill (H.R. 1867). This bill will create a NSF grant program to train science graduate students to communicate more effectively with policymakers, business leaders, and other non-scientists in order to capitalize on the federal government's enormous annual investment in scientific research. I look forward to working with my colleagues in the Senate to ensure this legislation becomes law.

Late last month, the House also passed two bills that will advance STEM education and research in our country and ensure that the U.S. workforce remains competitive in the global economy. One of those bills, H.R. 362, will expand programs that help put qualified STEM teachers in our classrooms, improve teaching methods, and will create a panel of experts to identify and develop a new set of K-12 STEM curriculum for use in our public schools. Following the recommendations made in the National Academy of Sciences landmark report, *Rising Above the Gathering Storm*, H.R. 363 will strengthen the federal government's long-term basic research programs. The bill supports outstanding young researchers through grants at the NSF and the Department of Energy, while also establishing a national coordination office to identify, prioritize and fund research infrastructure at universities and national laboratories.

If you have any questions about these or any other issue, please do not hesitate to contact my office at (916) 498-5600.

Sincerely,

DORIS O. MATSUI

Ursula Bechert, DVM, PhD
Director of Off-Campus Programs
College of Science
Oregon State University
DBPP-2082 Cordley Hall
Corvallis, OR 97331

Dear Dr. Bechert:

I am writing in support of the development of a Graduate Certificate in Management for Science Professionals at OSU. I understand that this certificate program would be designed for science majors and emphasize organizational finance, marketing and entrepreneurship, communications, ethics and professional skills. My work with the Council on Competitiveness has made me keenly aware of the need for this type of training. The Council on Competitiveness is a private nonprofit organization comprised of CEOs, university presidents and labor leaders focused on fostering innovation-based growth and global competitiveness. As part of our National Innovation Initiative, the Council recommended the development and support of these types of PSM programs. We believe PSM programs and this type of training are essential for national competitiveness and regional economic growth as well. In my collaboration with the Council on Graduate Schools in support of PSM programs throughout the nation, I have seen a large demand for graduate certificate programs in communication, ethics and business skills, not only within the PSM programs, but by students in many different fields of science who are preparing for a research career and pursuing a Ph.D.

During my many years working at the National Science Foundation as the Director of Science and Engineering Indicators, I became convinced that providing business and communication skills for scientists and engineers is an important way of capturing and transmitting innovative ideas and products. Additionally, my colleagues at the National Science Foundation and other federal and state technical agencies needed and used such skills in our work responsibilities as science administrators on a daily basis. These skill sets are very important not only for entrepreneurs and business professionals, but also for scientists and engineers in all occupations, because they need to be prepared to enter the workforce in many different sectors.

I was very impressed with the OSU PSM programs and students when I recently participated in the two-day OSU industry advisory meeting for your PSM programs. I believe that instituting a "Graduate Certificate in Management for Science Professionals" would strengthen the PSM programs and also meet a broader need at OSU and the Corvallis community. Indeed, I believe that the curriculum would be of broader interest throughout Oregon and the nation.

Good luck in your efforts to formalize such a graduate certificate program. I believe that it will be a big success.

Sincerely,

Dear Dr Bechert:

I was very pleased to see the proposal for Graduate Certificate program for Science Professionals in Management.

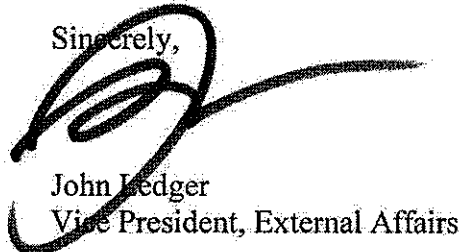

As you know, AOI is Oregon's largest and oldest comprehensive business association, with members ranging from Intel to single-person small businesses. Many of our members are research and consulting companies, especially high-tech and environmental.

Our members often seek managers, or those with management potential, with master's degrees in science, engineering and mathematics. Unfortunately, most employees with scientific background have little or no managerial training, a very real deficit. So the proposed curriculum looks very germane to today's business needs.

I believe graduates from such a program, who must now compete with applicants throughout the nation or worldwide, would be very attractive to Oregon employers.

Please feel free to cite AOI as a strong endorser of your proposal.

Sincerely,

John Hedger
Vice President, External Affairs

JL:kah

April 20th, 2007

Dr. Ursula Bechert
College of Science
Oregon State University
2082 Cordley Hall
Corvallis OR 97331

Dear Dr. Bechert:

I have been a long-time, enthusiastic supporter of the Professional Science Master's (PSM) Program at Oregon State University (OSU), because I understand the value of merging training in business management, communications, ethics and professional technical skills with a science-based graduate degree. At Chemica Technologies, Inc., we value scientists who understand how their work fits within the broader context of the world of business. These individuals are more effective contributors to team projects and are versatile employees.

Oregon State University's Graduate Certificate Program in Management for Science Professionals will broaden access to this type of training to non-PSM degree-seeking individuals, which is excellent. Additionally, I understand that other universities offering PSM degrees are interested in curriculum sharing opportunities, and OSU's Graduate Certificate Program in Management for Science Professionals would certainly be of interest as an online option.

The Graduate Certificate Program will enable individuals to bridge the gap between business and science in a variety of workplaces, and I really appreciate your devoted effort to further develop and promote this substantial program to fill a long time need in many industries.

I strongly support the PSM program at OSU.

Sincerely,

A handwritten signature in black ink, appearing to read "Takuji Tsukamoto", written over a horizontal line.

Dr. Takuji Tsukamoto
President/CSO
Chemica Technologies, Inc.
325 SW Cyber Dr.
Bend, OR 97702-1076

To: Ursula Bechert, DVM, PhD

April 20, 2007

Dr. Bechert,

I was excited to learn of your proposal to create a Graduate Certificate Program from the PSM cohort curriculum that is designed specifically for science majors not included in the PSM program. I am also very supportive of your proposal to develop an online version of this certificate program as I believe this would be an attractive learning option for many students, especially adult learners who are returning for higher level academic degrees.

As you are aware, I am a big proponent of students in science or science-related fields receiving some type of formal training in management, communications, ethics and professional technical skills.

Employers, such as Hewlett Packard, appreciate technical candidates who have a basic understanding of finance and marketing principles, have been exposed to the potential business practices companies might use when managing in an innovative environment, have a grounding in business ethics and know multiple methods for communication. Applicants with this type of background are typically more successful in the interviewing process than those who do not.

I would like to provide my support for your proposal as I believe programs such as this are in the best interest for companies such as ours – now and into the future. Please let me know if there is anything more I can do to help in gaining the approval you need to move forward on this.

Regards,
Linda Amedo

Dr. Ursula Bechert
Director of Off-Campus Programs, College of Science
Oregon State University
Corvallis, OR 97331

Dear Ursula:

I am happy to hear about the new proposal for a Graduate Certificate in Management for Science Professionals. Since it will require courses that are already in place for the Professional Science Master degree program, it should require minimal extra effort for a possibly significant reward to OSU.

The courses required to earn the certificate would be very valuable for a scientist in virtually any business situation. Even scientists intending to pursue academic careers could profit considerably if ever they should become involved with a spin-off or other cooperative venture with a small company.

I approve this initiative wholeheartedly.

Re: Letter of support for Graduate Certificate Program

Dear Dr. Bechert,

Per your request I would like to express support from the Oregon Department of Fish and Wildlife (ODFW) for your proposal to create a Graduate Certificate in Management for Science Professionals.

ODFW employs over 1,000 managers, biologists and administrative support staff. Most of our biologists receive their formal education in one of the life sciences such as fishery or wildlife biology. On the job training for ODFW biologists focuses on collecting and interpreting data from a suite of fish or wildlife species. Most ODFW managers are recruited from within the rank of our biological staff and have little formal training to manage human and financial resources. There are several reasons why the Graduate Certificate in Management for Science Professionals is appealing. First, the list of courses you provided is consistent with management skills necessary to become an effective manager. Second, the courses are offered throughout the year and the program can be completed in eight months. Finally, since many ODFW employees live in remote portions of the state, an on line, distance learning option is highly desirable.

Good luck developing the program and feel free to contact me should you have any questions.

Sincerely,

Charlie Corrarino
Conservation and Recovery Program Manager

Appendix D: NGA Proposal and Letters of Support and Approval

State Strategies to Meet Emerging Workforce Needs through the Professional Science Masters Program

OREGON'S CHALLENGE

According to business leader participants in a recent survey by Monitor, Oregon is a great place to live but lacks a sufficient skilled labor pool, most particularly lacking in specialists in engineering and the sciences. The same survey found that responding companies in Oregon interact with the state's universities at twice the rate of others in the United States and globally, indicating a strong level of collaboration and partnership. The Monitor analysis further urged the state to position itself by:

- Creating jobs to provide opportunity for the state's rapid population growth (Oregon: 7.9% compared to the U.S.: 6.1%);
- Raising average wages (Oregon: \$37,711 compared to the U.S.: \$42,405) by focusing on maintaining innovation levels (Oregon: 17.91 patents/10,000 workers versus the U.S.: 8.96 patents/10,000 workers);
- Expanding high-end manufacturing (e.g., IT products, analytical instruments, heavy machinery and machine tools); and
- Fostering non-urban development by maintaining the state's strong positions in agriculture-related clusters (e.g., wine, forest products, and furniture).

Two of the primary strategies that were recommended for the state to differentiate itself were: (1) to improve education from prekindergarten through university levels, with particular emphasis on higher education, and (2) to increase support of entrepreneurship to bolster home-grown industries.

The just released workforce demand projections from the Oregon Employment Department show a growing need for advanced education in many occupational groups. The table below summarizes the science, technology, engineering, and mathematics (STEM) occupation projections where the positions will be filled with an applicant that at a minimum must have a bachelor's degree, but where the competitive candidate will have a master's degree.

**STEM Employment Trends
For Occupations with Master's Degree Hiring Preference**

| Occupation Group | Employment | | | | 10-Year Occupational Projections | | | 2006 Master's |
|---|---------------|---------------|--------------|-------------|----------------------------------|--------------|--------------|-----------------|
| | 2006 | 2016 | Change | % Change | Growth | Replace | Total | Degrees Awarded |
| Computer Specialists | 1,295 | 1,475 | 180 | 13.9% | 180 | 145 | 325 | 73 |
| Mathematical Science | 924 | 1,047 | 123 | 13.3% | 123 | 268 | 391 | 56 |
| Engineering | 18,340 | 19,735 | 1,395 | 7.6% | 1,413 | 3,952 | 5,365 | 273 |
| Life Sciences | 2,763 | 2,955 | 192 | 6.9% | 192 | 765 | 957 | 59 |
| Physical Sciences | 2,531 | 2,858 | 327 | 12.9% | 327 | 622 | 949 | 91 |
| Total | 25,853 | 28,070 | 2,217 | 8.6% | 2,235 | 5,752 | 7,987 | 552 |
| Source: Oregon Employment Department Workforce and Economic Research (January 2008) and Oregon University System 2006 Fact Book | | | | | | | | |

This table highlights the workforce impact that the retirement of highly educated baby boomers will have on the demand for critical occupations in the coming decade. Current trend data for Oregon and the

United States raises further concerns because the overall educational attainment between young and older adults finds that the higher education levels are held by the older age group. This trend does not bode well for future economic vitality.

The Governor's Office, the State Board of Higher Education, the State Board of Education, and the Workforce Investment Board presently have several initiatives underway to expand and improve the state's education delivery system overall and specific STEM educational/research opportunities available to Oregonians. These include:

Unified Educational Enterprise (UEE) Subcommittee of the Joint Boards: One of the fundamental responsibilities of this group is to respond to the Legislature's call for postsecondary education sectors to cooperate on alignment initiatives. The UEE is on track to analyze the current enterprise alignment and identify gaps within it.

Key Elements of an Aligned Education Enterprise:

- Advance a standards-based education system based on agreed upon common core proficiencies with rigorous standards and learning outcomes for all students PreK-20;
- Develop clearly defined and articulated pathways that allow all students of all ages to smoothly enter and exit the education enterprise and make informed decisions regarding education and training options and opportunities;
- Facilitate development of clear, consistent, frequent, and cross-sector communication that informs students of their options and opportunities (communication includes parents, teachers, counselors, teachers, faculty, administrators, Boards, and other stakeholders);
- Study and advise on integrated data systems that allow for transfer of student records including learning and achievement across systems and institutions; and
- Make recommendations for achieving a coherent PK-20 system, with a unified vision, common language, clear agreements, up-to-date policies, and well engineered structures.

Post-secondary Quality Education Commission (PSQEC): The Governor has established the Commission to build a model for understanding the needs of the full post-secondary education system.

The commission is to:

- Identify the key issues to address in completing a model that identifies the particular needs of community college and university students;
- Determine the key values encompassing the mission of post-secondary education in Oregon, including access to education, educational quality, student success, professional compensation, research, service, innovation, technical/career and adult basic education;
- Solicit input from educators, education policy experts and others about the elements of the model; and from the public, input regarding educational priorities in the model;
- Develop the model based on research, data, public input and experience; and
- Communicate with stakeholders regarding model development.

Engineering & Technology Industry Council (ETIC): This council was established in 1997 to plan and oversee improvements in engineering programs with a focus on better serving industry's needs. This marked the first time that the state universities and the private sector worked in full collaboration to co-fund and direct efforts to grow the capacity and excellence of Oregon's engineering and technology programs and the number of skilled workers produced through these efforts. The voting members of ETIC are industry executives who meet regularly with leaders from Oregon public university campuses to develop strategic plans and associated implementation plans. The industry members serve a fiduciary role by holding the campuses accountable for producing results based on an objective set of metrics.

ETIC investments have grown a cadre of engineers and technology workers for all of Oregon's industries, from high tech to agriculture, from tourism to forestry, and other key sectors of our economy such as energy, medical, transportation, manufacturing, and financial services. ETIC investments have been leveraged by private dollars, providing two dollars in private support in funding, equipment, scholarships and other support for every dollar of public investment. ETIC investments have established a solid base that will enable Oregon to meet its goals of more than doubling the number of engineering degrees and increasing externally funded research more than five-fold by 2020.

The Oregon Innovation Council (Oregon InC): Created in 2005 by the Governor to make recommendations on how the public sector can stimulate Oregon's economy, Oregon InC was recently awarded \$28.2 million by the 2007 Oregon Legislature to implement four industry initiatives and three signature research centers. Manufacturing, food processing, seafood, and the nascent wave energy industry represent the industry initiatives. The research initiatives include ongoing support for the state's first successful signature research center, the Oregon Nanoscience and Microtechnologies Institute (ONAMI), as well as the formation of two additional signature research centers: the Bio-Economy and Sustainable Technologies (BEST) Center, which will focus on bio-products, bio-fuels and green development; and the Oregon Translational Research and Drug Development Institute (OTRADI), which will focus on infectious disease research.

This package is designed to build on Oregon's competitive advantages, enhance diverse industries, and create competitive jobs and opportunity in every corner of the state. Further, it is the product of an unprecedented partnership between the business community, state government, the venture capital community and higher education.

The Oregon Business Plan: In 2002, government, business, and academic leaders came together to form the Oregon Business Plan initiative: a comprehensive plan to grow the economy of the state through the identification of key issues that are relevant to growing business in Oregon. Updated yearly and supported by the **Oregon Business Council** (a private non-profit organization consisting of 47 chief executives from some of Oregon's largest businesses), the Oregon Business Plan is a model for broad inclusiveness and has a remarkable history of success in the state legislature, in economic impacts and in job creation. Cluster methodology is the strategic underpinning of the Oregon Business Plan, and since 2002, a large network of clusters has developed to feed the Oregon Business Plan and to help train industry and economic development professionals to use the tools and strategies of cluster development.

Governor's Employer Workforce Training Fund (EWTF): The EWTF was created in 2003 when the Governor directed that a portion of Workforce Investment Act funds go to support incumbent worker training with an emphasis on industry clusters. Regional Workforce Response Teams (made up of workforce and economic development practitioners) are encouraged to utilize their local EWTF resources to support the workforce needs of local industry cluster groups while the state portion of the EWTF resources has been used to support statewide industry sectors (like healthcare and manufacturing) and assist in training the local practitioners in the regions on how to use the cluster-oriented approach. In addition, the fifteen workforce regions each received additional funds from EWTF to expand their capacity to use the cluster approach to respond to cluster-based workforce needs. EWTF investments total approximately \$20 million over the past four years.

Oregon's 2007 Legislative Session approved an unprecedented 18% increase in education funding for Pre-K, K-12, Community Colleges, and Oregon Universities, plus targeted investments in high-demand occupational programs in healthcare and engineering. These resources will support the education and training needs of businesses along with the Oregon InC investments.

GOALS & EXPECTED OUTCOMES FOR THE PSM POLICY ACADEMY PROCESS

In *Priming the Talent Pipeline: Oregon's Future Workforce Needs Analysis*, commissioned by the Oregon Workforce Investment Board as its strategic plan, a number of key strategies are identified to: (1) place greater emphasis on lifelong learning over the course of an individual's career, (2) increase levels of entrepreneurship, and (3) put greater emphasis on technical professionals developing hybrid skill sets. These broader skill sets include knowledge about supply chain management, quality and process control, data and decision support tools, customer service, company/market needs, and global commercial awareness. Offshore outsourcing is raising skill requirements for innovation, new product design and project management.

There are currently four PSM programs at Oregon State University (OSU) in Applied Biotechnology, Applied Physics, Environmental Sciences, and Applied Systematics in Botany that were initiated with a \$400,000 grant from the Alfred P. Sloan Foundation in 2002. Program development was based on feedback from local industry and follows the precedent set by ETIC for industry involvement by engaging an Advisory Board and organizing annual workshops. The last workshop, held at OSU in late November 2007, explored how new PSM programs at OSU could positively impact workforce development needs. Allen Alley, the Deputy Chief of Staff for Governor Kulongoski, was the keynote speaker. Potential programs in several STEM disciplines were recommended and paralleled the needs summarized in the employment trends table on page one.

Currently, these are the only PSM programs in the Pacific Northwest. Expansion of PSM programs will give Oregonians a new advanced education choice that will keep them competitive in the rapidly changing workforce. Importantly, PSM graduates prefer to remain in the state with approximately 68% of OSU's cohorts staying in Oregon and 77% in the Pacific Northwest. Similar trends have been noted elsewhere (e.g., 55% of Penn State University's PSM graduates remain in the state). These programs also appeal to minorities and women; approximately 50% of PSM enrollment at OSU is comprised of women.

Our goals in participating in the PSM Policy Academy Process are to learn how other states have implemented system-wide, economically viable PSM programs and to initially identify and prioritize development of specific PSM programs in Oregon to address future workforce needs. We plan to create task forces using experts from the Oregon Employment Department, UEE, ETIC, Oregon InC, and Oregon Business Plan initiative representatives, and members of the OSU PSM Advisory Board as well as the NGA Policy Academy home team. These groups will gather information from representative industries and then work together to publish a report of these findings.

An action plan for development of new PSM programs in the state will draw from the collective knowledge and resources of Oregon's initiatives described earlier, the Oregon University System, and PSM program experience at OSU. The professional curriculum offered at OSU for its PSM programs represents several years of development involving input from industry as well as other universities. Students take a series of eight courses, which include a year of business training (accounting and finance; project management and marketing; innovation management), courses in communications, research ethics, and a series of professional skills seminars. These courses will be available in an online format in the fall of 2009 and could augment PSM program development at institutions across the state. Various partnerships will encourage development of economically viable programs (e.g., joint degree programs between academic institutions). By working together with groups like the UEE, a pipeline to produce future PSM graduates can be created.

A PSM start-up grant fund will then be established, with co-funding from representative industries, to support development of new programs at Oregon's academic institutions. Nationally, PSM programs in the biosciences predominate, representing over a third of the PSM degrees granted in 2006 (Council of

Graduate Schools, February 2008). Oregon InC's initiatives and research centers reflect this growing area of interest, and could help spearhead cooperative partnerships with industry to further development of PSM programs in the state. It is also anticipated that Congress will include appropriations for PSM programs at the National Science Foundation (NSF) in legislation for 2009. This forward momentum will be beneficial to Oregon institutions seeking support for program development from NSF in the future.

Oregon businesses are dominated by many medium and small firms that will need to hire professionals with broad skill sets envisioned by PSM programs. The PSM movement has the potential to not only produce graduates capable of bridging the gap in communication between the research and marketing arms of industry, but between industry and academic institutions as well. The PSM alumni from OSU have shown a strong interest in networking among other PSM cohorts, maintaining ties to OSU, as well as promoting the PSM at their place of employment. The opportunity to further develop PSM programs in Oregon at this time are perfect, given the work that has already been done and the initiatives to expand and improve the state's education delivery system that are currently underway.

PROPOSED TEAM COMPOSITION

The core team is comprised of highly effective and skilled individuals with knowledge and authority to get things done. (Contact details are included in the Appendix.)

Bruce Schafer, Team Lead: Bruce is the Director of Industry Affairs for the Chancellor's Office of the Oregon University System and the Executive Director of the Engineering & Technology Industry Council. Prior to joining the Oregon University System in 1999, Bruce was the President and founder of PC-Kwik Corporation, which was licensed to major personal computer manufacturers. Prior to founding PC-Kwik, Bruce served as an engineering and marketing manager at Intel Corporation. Bruce will be working with provosts and deans from colleges across the Oregon University System to identify programs with the strongest support from employers, students, and schools that would be best candidates for the PSM program.

Senator Richard Devlin, Senate Majority Leader: Senator Devlin is serving as chair of the Senate Committee on Rules and Executive Appointments and is also a member of the Senate Committee on Commerce and Labor. Senator Devlin has extensive experience with budget and education issues, having served on the Joint Ways and Means Committee for several legislative sessions. Senator Devlin will help guide the PSM initiative through the cross-sector legislative priority-setting process blending this critical need between graduate education and economic development.

Margie Lowe, Governor's Higher Education Policy Advisor: With over two decades experience in management of budget and policy issues in multiple programs areas, Margie has spent the past four years focused on implementing strategies to make postsecondary education more affordable and successful for all Oregonians. She has effectively worked with agency officials, stakeholder groups, and legislators to implement innovative programs in education and human services. Margie will be working with executive branch agencies for employment, economic development, workforce development, and higher education to assure full support from critical stakeholders.

Steve Mahon, General Manager for TriQuint Semiconductor: Steve has 26 years experience in the semiconductor industry specializing in GaAs based integrated circuit processing and microwave acoustics. Currently, Steve oversees design, development and manufacturing of bulk acoustic wave (BAW) microwave filters. He holds bachelor's and master's degrees in electrical engineering. Steve's role with TriQuint Semiconductor and its affiliation with the University of Oregon's Material Science Institute's graduate internship program causes him to be particularly interested in improving Oregon's ability to produce graduates with degrees that combine science, business, and communication.

Ursula Bechert, Director of Off-Campus Programs, College of Science: Since January 1998, Ursula has been working at OSU to develop research and educational programs in the sciences. She has been leading development of the PSM programs at OSU since 2002, and is currently the Vice President of the National PSM Association (NPSMA). Ursula chairs the NPSMA's Strategic Planning Committee and serves on its Board Development and Best Practices committees. She has a degree in veterinary medicine and a PhD in reproductive endocrinology, and as an OSU faculty member, understands what is involved in conducting research, teaching, and building educational programs from the ground up. Ursula will be working with home team members and industry representatives to gather information about potential Oregon PSM program needs, and will also help to initiate and mentor new PSM programs at other institutions in the state.

Home-team members will work with and support the efforts of the core team. All of the individuals listed have been serving in an advisory capacity guiding growth and development of OSU's PSM programs.

Linda Amedo, Manager of Business Systems and Industrial Engineering, Hewlett Packard: Linda has been with Hewlett Packard since 1978, and is currently managing a team responsible for providing systemic improvements in business performance through the use of their business process and modeling expertise and analytical and project management capabilities. She also serves on the Advisory Boards for the College of Engineering and the PSM Program at OSU.

Charlie Corrarino, Conservation and Recovery Program Manager, Oregon Department of Fish and Wildlife: Charlie is responsible for oversight of native fish conservation issues and implementation of Oregon's Native Fish Conservation Policy, and he collaborates with the OSU Department of Fisheries and Wildlife on the operation of the Oregon Hatchery Research Center.

Bob Lanier, Executive Director, Oregon Biosciences Association: Bob serves as the President of MouldWorks, which is based at the University of Oregon. He has served in a variety of entrepreneurial positions in the past, including Director of Business Development for Partner LABfx, Director of Sales and Marketing for Neo-Genesis, and Co-Founder/Director of International Sales for Antalys, an AI oriented software consulting company, which was acquired by Baan Enterprise Systems in 1997.

John Ledger, Vice President for External Affairs at Associated Oregon Industries: Associated Oregon Industries (AOI) is Oregon's largest business organization. John is the editor of the Business ViewPoint magazine, oversees all public and other external relations for AOI, and lobbies the Oregon legislature on environmental and transportation issues. He originated and authored the legislation creating the Oregon Sustainability Board, the first of its type in the nation.

Hans Neukomm, retired Vice President and Director of the Energy Services Division, CH2M Hill: In 1998, Hans was appointed to the Oregon Energy Facility Siting Council and in 2005-06, he served as the Council's Chair. Hans is very active in community service for which he received the State of Oregon's Economic and Community Development Award for Outstanding Community Leadership in 2002. He serves on the Board of the Good Samaritan Hospital and the Linn-Benton Community College Foundations, on the OSU PSM Advisory Board, and is a Past Chairman of the Corvallis-Benton County Economic Development Partnership.

This team of industry experts will be augmented with appropriate executive branch partners as planning needs evolve. This will include participants from the Oregon University System, the Employment Department, Economic and Community Development Department, and the Community Colleges and Workforce Development Department.

APPENDIX – PSM CORE TEAM ROSTER

Bruce Schafer, Team Lead

Director, Industry Affairs, Office of the Chancellor

THEODORE R. KULONGOSKI
Governor

March 3, 2008

Chris Hayter
National Governor's Association, Hall of the States
444 North Capitol Street, Suite 267
Washington, DC 20001-1512

Dear Mr. Hayter:

The prospect of being one of the states chosen for inclusion in *NGA's Policy Academy on State Strategies to Meet Emerging Workforce Needs through the Professional Science Masters Program* is an exciting opportunity for Oregon's higher education system. Oregon's efforts to expand and improve the state's education delivery system and specifically our (STEM) educational/research opportunities including the four Professional Science Masters (PSM) programs at Oregon State University (OSU), positions us well for the opportunities of this particular Policy Academy.

Our state's innovative approach to the implementation of cluster-based economic development is complemented by several education-focused initiatives described in the proposal. Employment needs for master's level STEM occupations are expected to increase significantly over the next decade, particularly in the computer, mathematical and physical sciences. Expanding the number of PSM degree options available in Oregon will help us fill these workforce needs by providing industries with scientifically trained managers. Individuals with a PSM degree complete their studies with both expanded skills in their science discipline and new professional skills in business management, communications and ethics; they also will have gained practical experience through internships making them ideally suited for key emerging industry positions. And master's graduates are more likely to remain in the state than those earning other types of graduate degrees.

This NGA Policy Academy will help us explore specific Oregon PSM program needs and promote development of these new programs in cooperation with industries destined to hire the PSM graduates. Bruce Schafer, Director of Industry Affairs for the Oregon University System Chancellor's Office, is in a key position to direct implementation of statewide adoption of PSM programs and is enthusiastic about serving as the leader of the core team. Oregon State University presently has the only PSM programs in the Pacific Northwest; their Director, Ursula Bechert, is eager to expand PSM programs throughout the Oregon University System.

Chris Hayter
March 3, 2008
Page Two

I have selected three partners to serve with Bruce and Ursula on Oregon's core team; they are committed to rolling up their sleeves and spending a significant amount of time on this project, including, but not limited to, participation in these activities:

- o Advance preparation with the team prior to the Policy Academy;
- o Attendance at the two-day Policy Academy Workshop held June 2 and 3, 2008 in Sacramento CA;
- o Implementation of the plan, including creation of a PSM start-up fund for academic institutions; and
- o A one-day site visit from NGA project staff in the fall of 2008 to review progress of the plan.

The adoption of statewide PSM programs will raise awareness of these innovative programs and help Oregon respond to critical workforce needs. I understand that the work done in the Policy Academy will, ultimately, have far reaching effects, so I am fully committed to providing the support necessary to sustaining the gains realized through this process. Thank you for your consideration of this proposal; I look forward to Oregon's selection.

Sincerely,

THEODORE R. KULONGOSKI
Governor

The Honorable Theodore R. Kulongoski
Governor
State of Oregon
900 Court Street NE, Room 254
Salem, OR 97301-4047

Dear Governor Kulongoski:

I am pleased to inform you that Oregon has been selected to participate in the NGA Center for Best Practices Policy Academy: *State Strategies to Meet Emerging Workforce Needs Through the Professional Science Masters Program*. Your state's proposal demonstrated a clear vision, relevance to other ongoing activities in your state, and a strong commitment to action. Four other states were selected to participate.

As part of the Academy, your state team will receive an orientation conference call, participate in a national Policy Academy meeting, and receive an in-state follow-up meeting to develop and refine a state action plan. In addition, Center staff and Academy faculty will be available throughout the nine-month process. The NGA Center will cover the costs of transportation and lodging for up to five individuals per state for participation in the PSM Academy meeting. Your state may send up to one additional team members at your own expense.

This Policy Academy will begin in April 2008 and continue through December 2008. A national Policy Academy meeting will be held June 2-3 in Sacramento, CA followed up by in-state site visits this fall.

We will be in contact with your designated team leader, Bruce Schafer, to coordinate next steps in the coming weeks. In the meantime, please contact Chris Hayter of the NGA Center at 202-624-7833 or chayter@nga.org if you have any questions.

We look forward to working with your state team on this important project.

Sincerely,

John Thomasian
Director, NGA Center for Best Practices

* See current OPE tables at <http://oregonstate.edu/dept/budgets/budgetandtables.htm>

Faculty support is for 0.5 instructor for management courses, partial FTE for communications and philosophy courses; the management courses will grow once online and will move from the 0.5 FTE position to 1.0 FTE by the 3rd year (see below).
Support FTE is Ursula Becher, some course delivery and program management.
Service and supplies is office, phone, incidental funds.
Other is costs of Annual Partners Conference and meetings and some recruitment activity.

Note a number of these costs have been in part defrayed by private funds from the OSU Foundation.

PROFESSIONAL PREPARATION

| | | |
|----------------------------------|------|--|
| Ph.D. in Animal Sciences | 1998 | Oregon State University |
| D.V.M. - Veterinary Medicine | 1991 | Washington and Oregon State Universities |
| B.S. in Bioveterinary Science | 1985 | Utah State University |
|
 | | |
| Journey into Leadership Training | 2003 | W.K. Kellogg Critical Issues Program |
| Immobilization of Wildlife | 1999 | Safe Capture International |

POSITIONS

| | |
|-----------|--|
| 2004- | Director of Off-Campus Programs, College of Science, Oregon State University (OSU) |
| 2002-2004 | Program Coordinator, Professional Science Master's, College of Science, OSU |
| 1998-2002 | Assistant Professor Senior Research, College of Veterinary Medicine, OSU |
| 1992-1997 | Associate Veterinarian, clinics primarily in the Willamette Valley, Oregon |

SYNERGISTIC ACTIVITIES

Current:

- Oversee development and management of graduate programs with major off-campus components:
 - Professional Science Master's (PSM) Programs (<http://professionalmasters.science.orst.edu>) initiated with a \$400,000 grant from the Alfred P. Sloan Foundation; involved faculty from five major colleges on campus as well as numerous industry and agency representatives to guide development of curricula.
 - International research and exchange programs for faculty and students in the College of Science.
- Founded and serve as Executive Director of NW Wildlife Conservation, Inc. (since 1998), a non-profit organization created to foster regional partnerships in the Pacific Northwest for global conservation through research and education.
- Conduct research through a faculty appointment in the Department of Animal Sciences at OSU. Projects focus on reproductive biology of wildlife species (particularly elephants) and development of novel diagnostic and population management tools through collaborative relationships in southern Africa, as well as nutritional and pharmacological studies with captive wildlife species.
- Professional and community service positions:
 - Vice President of the National PSM Association since June 2007.

- Member of the Ecology, Evolutionary, Environmental, and Organismal Biology Panel for the Science Foundation of Ireland (SFI) for the past two years, and chaired the SFI Women in Science Panel in 2006.
- Representative on the OSU International Advisory Council for the College of Science for the past two years.
- Contributing member of professional organizations including the Society for Conservation Biology, the Wildlife Disease Association, and the American Association of Zoo Veterinarians (AAZV).
- Volunteer Youth Director for high school students at a local community church since 2007.
- Member of the Institutional Animal Care & Use Committees for the Oregon Zoo (1998-2000) and Wildlife Safari (1999-2002).
- Member of OSU's Faculty Hearing Committee (2004-06), Graduate School Financial Aid Committee (2005), and College of Veterinary Medicine Public Relations Committee (1998-2002).

Previous:

- Developed a Zoo and Wildlife Medicine Program for the College of Veterinary Medicine at OSU (1998-2002). Activities included:
 - Creating and advising a Student Chapter of the AAZV.
 - Mentoring students in a variety of different research projects.
 - Supervising a cooperative program with Chintimini Wildlife Rehabilitation Center and facilitating development of new preceptorship and internship programs at the Oregon Zoo and Wildlife Safari.
 - Teaching three new senior block electives (Wildlife Rehabilitation, Free-ranging Wildlife, and Zoo Medicine; VM 781-22, 23 and 24).
 - Practiced as a full- or part-time veterinarian in private clinics and wildlife parks in Oregon (1992-97):
 - Examined patients, performed orthopedic and soft-tissue surgeries, handled emergencies, and developed preventive medicine programs.
 - Volunteered as a veterinarian in Kenya for one month (1994) to work with the Masai and their livestock.
 - Gained business and managerial experience by working as a:
 - Marketing consultant for Bonney Enterprises, Inc. (1987) to create a landscaping business for an established corporation that provided employment to mentally handicapped adults.
 - Sales manager for Ilsa's Konditorei & Café, Inc. (1985-86) to train personnel and generally advertise and promote the business.
 - Owner of a janitorial company that serviced residential and commercial sites on a contract basis (1982-86) while completing my undergraduate degree.
-

SPECIAL RECOGNITION AND SKILLS

- Offered a position as an Adjunct Scholar for the Charlie Bild VIP Program in the College of Veterinary Medicine, University of Florida (2002 and 2004)
- Invitation to join the Alpha Gamma Chapter of the Society of Phi Zeta Veterinary Honor Society (2000)
- Speak German fluently; SCUBA certified; special training in communication and counseling

GRANT AWARDS

Research (>\$500,000 total)

| Year | Title | Amount | Funding Agency |
|---------|---|-----------|---|
| 2005 | Beavers and persistent organochlorine pollutants in estuarine and riparian ecosystems (PI) | \$10,000 | Oregon Sea Grant |
| 2005 | Formulations of a long-lasting, single-dose contraceptive vaccine in captive African elephants (PI) | \$12,000 | International Elephant Foundation & Elephant Care International |
| 2005 | Maintenance of a forest ecosystem in Northern Siberut through development of sustainable conservation-based economies (Co-PI) | \$120,000 | Critical Ecosystem Partnership Fund |
| 2004 | Biology and conservation of the Mentawai Island primates in the Peleonan Forest, Northern Siberut, Indonesia (Co-PI) | \$25,000 | Margot Marsh Biodiversity Foundation |
| 2003 | Ecology, population structure and movements of elephant populations in northern Botswana (Co-PI) | \$89,944 | USFWS |
| 2002 | U.S.-Botswana planning visit for wetlands management & hippo research workshop (PI) | \$7,073 | NSF and Conservation International |
| 2002 | Pharmacokinetics and clinical efficacy of terbinafine against Aspergillosis in avian species (PI) | \$29,868 | Morris Animal Foundation |
| 2001-02 | Veterinary student projects in physiology & nutrition involving elephants, hippos, and pygmy rabbits (PI) | \$19,415 | Merck-Merial Animal Health Program |
| 2001 | Monitoring environmental stress in African elephants through analysis of stress-activated proteins (PI) | \$33,628 | USFWS |

SELECT INVITED LECTURE AND PRESENTATION TOPICS

- 2006 "Wildlife Conservation in Northern Botswana" for the OSU International Environmental Issues Seminar Series (invited speaker annually for 5 years)
- 2005 "Career Opportunities in Zoo and Wildlife Medicine" for the OSU Pre-Veterinary Club
- 2004 "Pharmacokinetics & Clinical Efficacy of Terbinafine against Aspergillosis in Avian Species" at the AAZV Conference in San Diego CA
- 2003 "Professional Master's Degree Programs in the Sciences at OSU" at the Association for the Study of Higher Education Conference in Portland OR
- "Pharmacokinetics of Orally Administered Ibuprofen in Elephants" at the AAZV Conference in Minneapolis MN
- "Building Capacity for the Sustainable Management of Natural Resources in Northern Botswana" at the Higher Education Partnerships for International Development Conference in Washington D.C.
- 2002 "Monitoring Stress in Wild African Elephant Populations: Potential Management Implications" at the AAZV Conference in Milwaukee WI
- "Use of Ibuprofen in African & Asian Elephants" at the Cross-Species Approach to Pain and Analgesia Workshop in Warrenton VA
- Chair of the 3rd Annual NW Wildlife Conservation Conference in Corvallis OR
- 2001 "Wildlife Conservation in Botswana" at OSU's 2nd Annual International Education Week
- "Collaborative Research Initiatives in Northern Botswana" at the International Joint Conference, Society for Tropical Veterinary Medicine and Wildlife Disease Association in Pilanesberg National Park, South Africa
- "Nutritional Comparisons among Carcass & Commercial Diets for Captive Cheetahs" at the 2nd Annual NW Wildlife Conservation Conference in Winston OR
- 1999 Chair of the 1st Annual NW Wildlife Conservation Conference in Portland OR
- Section Chair at the North American Conference on Elephant Foot Care and Pathology at the Oregon Zoo in Portland OR
- 1998 "Factors Affecting Prolactin Secretion in the African Elephant" (poster) at the Society for the Study of Reproduction Conference in College Station TX
- 1996 "Carfentanil Citrate as an Oral Anesthetic Agent for Brown Bears" at the AAZV Conference in Puerto Vallarta, Mexico

Guest Lectures for Courses at OSU

- 2001 "Wildlife Rehabilitation" (VM 738) for the College of Veterinary Medicine
- 1999 "Reproductive Physiology of Elephants" (VM 718) for the College of Veterinary Medicine
- 1997 "Zoonotic Diseases of Wildlife" (FW 499/599) for the Department of Fisheries of Wildlife
- 1993 "Exotic Animal Medicine" (VM 776) for the College of Veterinary Medicine
- 1992 "Reproductive Diseases of Domestic Livestock" (ANS 316) for the Department of Animal Sciences

NEW COURSE DEVELOPMENT & TEACHING

Professional Science Seminar Series (PSM 511, 512 and 513)

Developed and currently teach three classes that were created as part of a 19-credit Graduate Certificate Program in Management for Science Professionals (a requirement of the PSM Program at OSU) to provide formal training in business management, communications, ethics and professional skills for individuals in science-related fields. Personal teaching style emphasizes hands-on learning opportunities that complement didactic and demonstrative instruction. Students complete service learning projects, create their own multi-media portfolios, develop skills to conduct and give interviews, explore leadership styles, and enhance teamwork skills.

Wildlife Rehabilitation (VM 781-22)

Taught for 3 years as a 1-week block elective (i.e., full-time) to senior veterinary students. Daily classes were structured as morning lectures and afternoon workshops. Topics included: philosophy of wildlife rehabilitation; zoonotic diseases; orphaned wildlife; handling and immobilization of wildlife; medicine of raptors, waterfowl, and small mammals; wildlife forensics; and wildlife laws, regulations and policies.

Zoo Medicine (VM 781-23)

Taught for 3 years as a 2-week block elective to senior veterinary students. Daily classes were structured as morning lectures and afternoon workshops or fieldtrips to regional zoos, wildlife parks, and research facilities. Topics included: role of zoo veterinarians; classification of mammals; biodiversity crisis and conservation; preventive medicine; allometric scaling; handling and immobilization of zoo animals; zoonotic diseases; aquaculture medicine; dentistry; and medicine of: terrestrial carnivores, elephants, equids, rhinoceros and tapirs, artiodactylids, amphibians, marine mammals, monotremes and marsupials, primates, and exotic birds.

Free-Ranging Wildlife Medicine (VM 781-24)

Taught for 2 years as a 1-week block elective to senior veterinary students with a similar course structure emphasizing a hands-on, experiential learning style through workshops and fieldtrips. Topics included: role of the wildlife veterinarian; zoonotic diseases; wildlife law; infectious diseases of wild mammals; handling and immobilization of native wildlife; and principles of disease management.

RECENT WORKSHOPS AND PROJECTS (partial list)

Workshops

- Walker, Gregg B., and Steven E. Daniels (2006, May). Enhancing the Coastal Manager's Ecosystem Management Toolkit: An Introduction to the Collaborative Learning Approach. Workshop presented at The Coastal Society 20th International Conference, St. Petersburg Beach, FL.
- Senecah, Susan E., and Walker, Gregg B. (2005, September). A taste of . . . the Collaborative Learning approach for resolving Multi-party conflicts. Workshop presented at the Association for Conflict Resolution annual conference, Minneapolis, MN.
- Walker, Gregg B., and Daniels, Steven E. (2005, September). Public Involvement and Community Decision-Making in the Mt. Hood National Forest Region: An Introduction to the Collaborative Learning Approach. A training workshop presented to the Mt. Hood National Forest staff and key stakeholders, Estacada and Welches, OR.
- Walker, Gregg B., and Daniels, Steven E. (2004, 20-22 October and 17-19 November). *Systems Thinking and Situation Mapping: Ideas from Collaborative Learning*. An instructional module presented at the "Collaborative Problem-Solving and Organizational Change Workshop for Washington Department of Fish and Wildlife Managers," conducted by the Natural Resources Leadership Academy of Washington State University, Olympia, WA.
- Walker, Gregg B., and Daniels, Steven E. (2004, 20-22 October and 17-19 November). *Assessing Collaborative Potential: The Progress Triangle*. An instructional module presented at the "Collaborative Problem-Solving and Organizational Change Workshop for Washington Department of Fish and Wildlife Managers," conducted by the Natural Resources Leadership Academy of Washington State University, Olympia, WA.
- Walker, Gregg B., and Daniels, Steven E. (2004, 20-22 October and 17-19 November). *Communicating, Knowing, and Learning*. An instructional module presented at the "Collaborative Problem-Solving and Organizational Change Workshop for Washington

- Department of Fish and Wildlife Managers ,” conducted by the Natural Resources Leadership Academy of Washington State University, Olympia, WA.
- Walker, Gregg B. (2004, 12 May). *Improving Public Participation: Fundamentals of Collaborative Learning*. Two hour program presented at the National Conference on Communications and Public Affairs, U.S. Army Corps of Engineers, Seattle, WA.
- Walker, Gregg B. (2004, 10-11 May). *Improving Public Participation in Environmental Conflicts: The Collaborative Learning Approach*. A two-day instructional module presents as part of the graduate seminar on Environmental and Public Policy Conflict Resolution, the Program on the Analysis and Resolution of Conflict of the Maxwell School of Government and Public Service, Syracuse University, Syracuse, NY.
- Walker, Gregg B. (2004, March 24). *Collaborative Learning and Collaborative Potential: Applications to Regional Sediment Management and Grays Harbor*. Workshop presented to the U.S. Army Corps of Engineers Seattle District, USACE Seattle District Headquarters, Seattle, WA.
- Walker, Gregg B. (2003, March). *Decision Processes, Systems, and Assessing Collaborative Potential: Ideas from Collaborative Learning*. Training program presented at the Fire Learning Network Workshop, The Nature Conservancy, Little Rock, AR.
- Walker, Gregg B., and Daniels, Steven E. (2002, October). *Understanding Decision Processes And Assessing Collaborative Potential and Roles: Ideas from Collaborative Learning*. Training program presented at the Aridlands Grazing Network Workshop, The Nature Conservancy, Joseph, OR.

Projects

- Protecting Tribal Harvests: Policy Work Teams at the EPA Tribal Leaders Summit*, Confederated Tribes of the Umatilla Reservation, August 2006. Working with Kathleen Feehan, Water Quality Specialist for the Confederated Tribes of the Umatilla Reservation, I designed and directed policy work team sessions for Tribal Leaders Summit participants.
- Mixing Zone Workshop*, Salem, Oregon, March, 2006, sponsored by the Oregon Department of Environmental Quality and OSU Institute for Natural Resources. I helped design the day-long workshop of ninety participants, facilitated the workshop, and directed the afternoon's Collaborative Learning activities. The workshop also included my presentation, "The Collaborative Learning Approach to Environmental Policy Decision-making: A Quick View."
- Communities, Desired Conditions, and Collaborative Learning: Forest Planning under the New Rule, March 2005 – present*. Comprehensive Collaborative Learning training, assessment, community workshop, and Cooperators project conducted for the Bridger-Teton National Forest, Jackson, WY (with Steve Daniels of Utah State University).
- Community-based Collaboration and Kenai Winter Access Planning: A Collaborative Learning Approach*, January 2005-May 2006. Collaborative Learning training, assessment, coaching, and community workshop activities to address winter activities on the Kenai Peninsula, Chugach National Forest, Alaska (with Steve Daniels of Utah State University).
- Improving Public Lands Management, Planning, and Decision-Making: An Introduction to Collaborative Learning*, April, May, and August 2003; September 2004, May 2005. This forest plan revision project featured comprehensive Collaborative Learning training, assessment, and community workshops conducted for the Allegheny National Forest, Warren, PA (with Sue Senecah of SUNY-ESF and Steve Daniels of Utah State University).
- The Mouth of the Columbia River Regional Sediment Management Demonstration Initiative: A Collaborative Learning Approach to Stakeholder Involvement*, September 2003-September 2004. Sponsored by the Portland and Seattle Districts of the U.S. Army Corps of Engineers, this comprehensive Collaborative Learning (CL) project that included conversations with over seventy stakeholders, CL training workshops for stakeholders and

Corps personnel, and a CL community workshop on the science and organization of RSM (with assistance from Pat Corcoran of Oregon Sea Grant, Steve Daniels of Utah State University, Corrine Gobeli of Oregon State University, and present and former graduate students).

Improving Public Lands Management: Fundamentals of the Collaborative Learning Approach, November 2002. Comprehensive Collaborative Learning training and community workshop project conducted for the Shawnee National Forest, Harrisburg, IL (with Steve Daniels of Utah State University).

Collaboration, Systems Thinking, Facilitation, and Community Decision-making, March 2002. Three day workshop presented to the University of Nevada Cooperative Extension Service, Las Vegas, NV (with Steve Daniels of Utah State University and Pat Corcoran of Oregon Sea Grant Extension)

Improving Public Land Management: An Introduction to Collaborative Learning, USDA Forest Service, Region 2, Fort Collins, CO, 06-07 September 2001.. This was a two-day introductory training course prepared for and presented to planning staff from Colorado and Wyoming (Region 2) national forests (with Steve Daniels, Director, Western Rural Development Center, Utah State University).

Planning, Participation, and Public Land Management: The Collaborative Learning Approach, USDA-Forest Service, Region 9, Milwaukee, Wisconsin. Two and one-half day introductory training course about the philosophy, framework, and techniques of Collaborative Learning. The course was presented to the senior planners from the national forests of Region 9—the Midwest, Mideast, and Northeast United States (with Steve Daniels, Director of the Western Rural Development Center, Utah State University, formerly of the Department of Forest Resources, Oregon State University).

Improving Public Land Management: The Collaborative Learning Approach, USDA-Forest Service Eastern and Southern Regions [Regions 9 and 8] University, Cincinnati, Ohio, 29-31 January 2001. This was a three day course in the theory and practice of Collaborative Learning in public land management, decision making, public participation, and conflict resolution (with Steve Daniels).

People, Watersheds, and River Parks: A Collaborative Learning Design and Facilitation Training, College Station Texas, June-July 2000. This project was sponsored and hosted by the Center for Public Leadership Studies, George Bush School of Government and Public Service at Texas A & M University. Funded by the San Antonio Water System and the San Antonio River Authority, the project included two separate 2-day training programs. The first, held in June, presented an introduction to Collaborative Learning. The subsequent July training emphasized how to design and facilitate Collaborative Learning activities (with Steve Daniels of Utah State University).

Collaboration and Community-Based Watershed Management: Training and Critique, Ashton, Idaho, April 1999. This project included an assessment of the Prepared for The Henry's Fork Watershed Council and a one-day training on facilitating multi-party collaboration, sponsored by the Henry's Fork Foundation & the Fremont-Madison Irrigation District (with Steve Daniels).

Public Participation, Collaborative Learning, and the South Deep Area, Colville National Forest, Colville, WA, December 1998 through April 1999. This project included a two-day "Introduction to Collaborative Learning" training for Colville National Forest staff and Colville area community leaders. The project also featured a day-long citizen workshop on the South Deep area (with Steve Daniels, and Keith Blatner and Matthew Carroll of Washington State University).

Public Participation, Planning, and the Chugach National Forest, Anchorage, AK, August 1997 to 1999. This project included both introductory and basic training programs on Collaborative Learning as a basis for public participation activities and interdisciplinary team

work as part of the forest plan revision process. In addition to training, the project featured the design and facilitation of Collaborative Learning citizen workshops, and situation assessment interviews (with Steve Daniels).

Collaborative Learning, Citizen Involvement, and Forest Policy: A Facilitator Training, sponsored by the Great Lakes Forestry Alliance and Wisconsin Rural Partners, Inc., 18-20 February, 1998. This project consisted of an introductory workshop, "Natural Resource Land Use Conflict Resolution: Opportunities for Communities," for community leaders. That workshop was followed by "Collaborative Learning, Involved Citizens, Natural Resource Dependent Communities, and Forest Policy," an advanced facilitator training program connected to the January 1997 workshop on "public participation and land use conflict resolution."

PROFESSIONAL PROFILE

- Entrepreneur, educator and businessman with broad background and diverse experience
- Communicator with extensive experience in cross-cultural dialog with consumers and business customers in America, Europe and Asia
- Researcher seeking new approaches and innovative solutions
- Author of over 50 published papers, international presentations and patented inventions

EDUCATION

MBA, University of Connecticut, School of Business Administration, Stamford, CT, 2000

- Concentration: Global Marketing and Management

Ph.D., State University of Geodesy and Aerial Surveying, Moscow, Russia, 1987

- Concentration: Technical Sciences
- Dissertation title: *Research of the Holographic Measurement Methods*

M.S., Environmental University, Odessa, Ukraine, 1976

- Concentration: Applications in Computer Sciences
- Thesis title: *Data Processing System for the World Weather Data Center*

Professional development: Classes and courses in Leadership Psychology, Negotiations, Presentation Skills, Visual Basic Programming, Project Management, Database Management.

GLOBAL MARKETPLACE EXPERIENCE

Worked, taught in or traveled to 30+ countries:

- 22 in Europe
- 5 in North America
- 5 in Asia

Fluent in three languages, have basic knowledge of three more.

Quickly establish cross-cultural communications leading to development of long-term business relations.

TEACHING EXPERIENCE

2007 Adjunct Associate Professor
Worcester State College, Worcester, MA

- Developed a course on Global Market Forecasting and will teach on-campus and online classes for the Division of Graduate and Continued Studies at WSC
- Use Blackboard software as a main tool to enhance student learning experience
- Continue research of brand marketing in transitional economies. Submitted a paper discussing this subject to Academy of Marketing Science Review.

2006 Adjunct Faculty
Whittemore School of Business and Economics, UNH, Durham, NH

- Taught a course of Market Opportunity Analysis to two sections of full and part-time students with business majors. Extensively used Blackboard and WebCT tools for lecturing, student project management and examination purposes
- Complemented lectures with real-life team and individual student projects
- Actively communicated face-to-face and electronically with colleagues and students
- Conducted research of the management decision making based on sales analysis and forecasting in B2B and B2C markets
- Researched consumer behavior in countries with transitional economies to develop effective strategies in brand marketing
- Researched applications of clean energy technologies in residential housing markets and RFID marketing tools.

2005 Invited Lecturer
Shanghai Microelectronics Equipment Co., Shanghai, China

- Taught Business and Technology Aspects of the Contemporary Semiconductor Manufacturing Markets to Chinese scientists and engineers (mostly Ph.D. level).

1979-1991 Graduate Thesis Mentor, Scientific Advisor
Polytechnic Institute, Odessa, Ukraine

- Served as a thesis mentor (scientific advisor) and internship supervisor to graduate students in Computer Sciences. Guided graduate research, reviewed and approved Masters theses, participated in thesis defense of 12 graduate students, 11 of whom graduated with high honors.

1988-1990 Adjunct Professor
College of Cultural Studies, Odessa, Ukraine

- Taught continuing education graduate and undergraduate students a course Use of Photography in Advertising.

INDUSTRY EXPERIENCE AND SELECTED ACCOMPLISHMENTS

2003-Present Founder and Chief Strategist

BiFoS, LLC - Bi-Focal Strategies, Merrimack, NH (privately held)

Advise presidents and owners of small and mid-size client companies on business strategy.

- Analyze respective markets and uncover new opportunities in the US, UK, China and Russia
- Identify the most effective marketing and sales initiatives to achieve overall business objectives
- Proposed and implemented cross-specialty marketing approach involving several companies
- Develop new product roadmaps and help to implement derived business strategies
- Analyze cash flows to determine the product/service profit drivers
- Helped the DoD prime contractor to successfully reshape organizational strategy
- Helped to optimize the company profit margins via pricing strategy and loss-cutting techniques.

2003-2004 Manager, Member of Executive Team

Greenerd Press & Machine Company, Nashua, NH (privately held)

- Identified new market opportunities, developed the company technology roadmap to increase competitiveness and profit margins of the products - sophisticated hydraulic presses
- Spearheaded development of the new SPC-capable control system strategy to win new customers
- Met with key customers, presenting new products, negotiated specifications, helped to close sales
- Established and enhanced collaboration with Sales, Manufacturing and Purchasing departments
- Implemented pre-quote analysis of the sophisticated projects, boosted support of sales and service
- Managed development and promotion of 12 new products, including 3 unique ones
- Energized and motivated engineers, making their role in the product design and implementation pivotal to the whole organization

2002-2003 Vice President of R & D, Member of Executive Committee

Acu-Rite Companies, Jamestown, NY (subsidiary of \$700 mil multinational Heidenhain GmbH)

- Developed and communicated a product roadmap to enhance the market share
- Coordinated product development activities with Sales, Marketing and Manufacturing functions
- Identified and discussed future product requirements with customers. Supported sales activities at domestic, European and Asian subsidiaries
- Conceptualized a new product targeting the Mainland China market
- Had budget - over \$1 mil - and hiring authority over the Engineering organization - 23 engineers and technicians. A two-tier organization included four engineering groups, prototype and testing labs with matrix teams
- Led the development of 3 new products
- Shaped and coached a team of R&D, Quality and Manufacturing specialists redesigning the production technology to increase an important product yield from 70 to 95%, reducing the rework costs at the same time
- Collaborated with Quality department to ensure ISO 9001 compliance in design and manufacturing.

1997-2002 Leader/Architect, Control Systems

ASML-CT (formerly SVG), Wilton, CT (subsidiary of \$9 bil multinational ASML)

- Led five cross-functional and cross-disciplinary teams of 3 to 5 Ph.D. and MS-level specialists. Leveraged matrix environment to better utilize resources.
- Identified new opportunities in emerging technologies: developed the best-in-the-industry dose control systems for 5 generations of lithographic machines, implemented in 1998-2003
- Translated marketing requirements into strategic technical solutions. Developed and negotiated systems specifications and budgets
- Developed Visual Basic models describing and predicting behavior of sophisticated processes
- Delivered six presentations at international conferences and national workshops
- Presented new designs to major customers: Intel, IBM, Motorola, Samsung, etc.
- Coached engineers and technicians

1995-1996 Electronic Publishing Production Supervisor

Research Institute of America, New York, NY (subsidiary of \$7 bil Thomson Holdings)

- Hired and trained the new production team
- Played a key role in a team, launching 12 new products: supervised multiple releases
- Co-developed and implemented the TQM system and reduced annual production costs by more than \$200,000.

1994-1995 Manager of Operations

Beta Business Products, Inc., New York, NY (privately held)

- Took over the ailing division, bearing full budget and partial P&L authority
- Built new team: hired, trained and coached 25 employees
- Supported sale force, conducted customer presentations
- Re-engineered the organization and production technology to reduce costs
- Evaluated, scheduled and budgeted projects
- Developed imaging database management systems
- Outsourced labor-intensive work to a Philippines partner.

1992-1994 Sales & Marketing Director

HiTech Innovative Manufacturing, Odessa, Ukraine (VC-funded startup)

- Developed effective marketing and sales approach to advertising and promotion utilizing innovations in desktop publishing and color printing
- Had full P&L, budgetary and hiring authority
- Established strategic and tactical objectives, developed organizational structure
- Developed and implemented marketing plans, analyzed ROI, arranged proper financing.

1989-1992 Head of Department, Member of Executive Staff

Special Projects Institute for Printing Equipment, Odessa, Ukraine (nationwide corp.)

- Developed multi-channel marketing strategy to reach out multiple end users through the partner networks
- Tripled the volume of business within two years to \$10 million
- Had full P&L, budgetary (up to \$3.4 mil) and hiring authority

- Served as a Principal Investigator of numerous commercial and governmental projects
- Managed large governmental programs involving 60 to 80 employees
- Extensively communicated with customers
- Developed and implemented new systems and MEMS technologies for electronic industry
- Published new research results and presented at national and international conferences.

1976-1988

Researcher, Sr. Research Scientist

Research Institute for Machine Tools and Instrumentation, Odessa, Ukraine

- Served as a Principal Investigator of numerous commercial and governmental projects
- Conducted research in optics, lasers and holography applications for digital imaging
- Developed mathematical digital and analog models describing sophisticated processes
- Presented research results at national scientific conferences and symposia
- Developed sensors, encoders and control systems for precise machine tools and robots
- Published papers in professional journals and conference proceedings

HONORS AND AWARDS

- Hall of Fame Inductee - UConn School of Business
- GE Capital Fellowship for Global Marketing research and presentations
- Multiple research awards, fellowships and honorable mentions
- Silver Medal at Business and Science Show
- Bronze Medal at Business and Science Show
- M.S. degree with Highest Honors

PROFESSIONAL AFFILIATIONS AND MEMBERSHIPS

Academy of Marketing Science
 UConn School of Business, Alumni & Friends Society
 SME, Southern NH Chapter
 Merrimack Valley Venture Forum
 NH Business & Industry Association
 Toastmasters International

Fellow
 Strategy Committee Chairman
 Marketing Committee Chairman
 Program Committee Member
 Energy Committee Member
 Competent Communicator

TEACHING INTERESTS

- New product development and risk management
- Brand marketing in the countries with transitional economies
- Global marketing in technology-intensive environment
- Emerging B2B markets
- Positioning as a marketing strategy
- Market forecasting

(see more details in a separate Teaching Philosophy Statement)

RESEARCH AND PUBLICATIONS

Paper submitted and invited for a second round of reviews for a special issue 'Cross-Cultural Issues in Marketing Research':

Kivenzor, Gregory. "Brand Equity Aberrations: Heritage Brand Perception Effects in Russian Markets." *Academy of Marketing Science Review*, 2007.

Ongoing research of the consumer behavior and purchasing decision making in the countries with transitional economies. Analysis of brand marketing effectiveness and issues in customer relations management.

A full list of technical publications, including 5 in refereed journals, 12 in conference and symposia proceedings and 15 patented inventions will be furnished upon request.

FUTURE RESEARCH INTERESTS

Research interests cover several areas with either emerging technologies or the existing technologies serve as enablers of new applications.

The following topics become ever important for both domestic and international markets and shall benefit from an in-depth theoretical research:

1. Market research and forecasting of renewable energy sources (fuel cell, solar, wind, etc.) for small business and residential use
2. Real-time sales analysis and forecasting on the global marketplace using active RFID reporting.

(see more details in a separate Research Statement)

Professional Experience and Education:

| | |
|----------------|---|
| 2006 - present | Associate Professor of Philosophy, Philosophy Department, Oregon State University. |
| 2003 - 2006 | Assistant Professor of Philosophy, Philosophy Department, Oregon State University. |
| 1998 - 2003 | Assistant Professor of Philosophy, Philosophy Department, University of Tennessee, Knoxville. |
| 1997 - 1998 | Lecturer, Philosophy Department, Stanford University. |
| 1996 - 1997 | Post-Doctoral Fellow with the <u>Stanford Biomedical Ethics Center's Program in Genomics, Ethics and Society</u> , Stanford University. |
| 1991 - 1996 | Stanford University. Ph.D. in Philosophy, awarded September 1996. |
| 1987 - 1991 | University of California, Irvine. B.A. with Honors in Philosophy. |

Areas of Specialization:

Philosophy of Biology, Philosophy of Science, Political Philosophy

Areas of Competence:

Biomedical Ethics, Environmental Ethics, Philosophy of Economics, Epistemology, Metaphysics, Wittgenstein

Publications:

Books:

2006. *Making Sense of Evolution* (co-written with Massimo Pigliucci, Department of Ecology and Evolution, State University of New York at Stony Brook). University of Chicago Press.

2000. *The Limits and Lies of Human Genetic Research*. Routledge Press.

Peer-Reviewed Journal Articles:

2007. "Housing Discrimination as a Basis for Black Reparations" Jonathan Kaplan and Andrew Valls. *Public Affairs Quarterly* 21(3): 255-274.

2006. "Misinformation, Misrepresentation, and Misuse of Human Behavioral Genetics Research." *Law and Contemporary Problems*. 69(1-2): 47-80.

2003. "On the Concept of Biological Race and its Applicability to Humans." Jonathan Kaplan and Massimo Pigliucci. *Philosophy of Science* 70(5): S1161-S1172.

2002. "Historical Evidence and Human Adaptations." *Philosophy of Science* 69(3): S294-S304.

2001. "Import Bans and Tying One's Hands: Weakness of Will as a Justification for Trade Restrictions." *Public Affairs Quarterly* 15(4): 355-372.

2001. "Accidental Germ-Line Modifications Through Somatic Cell Gene Therapies: Some Ethical Considerations." Jonathan Kaplan and Ina Roy. *The American Journal of Bioethics* 1(3): *In Focus* section.

2001. "Genes 'For' Phenotypes: A Modern History View." Jonathan Kaplan and Massimo Pigliucci, *Biology and Philosophy* 16(2): 189-213.

2000. "The fall and raise of Dr. Pangloss: adaptationism and the Spandrels paper 20 years later." Massimo Pigliucci and Jonathan Kaplan, *Trends in Ecology and Evolution*, 15(2): 66-70.

2000. "Reply to Thomas Getty." Massimo Pigliucci and Jonathan Kaplan, *Trends in Ecology and Evolution*, 15(6): 249.

1999. "Decision-Analysis and Risk: A Discussion of Decision-Analysis' Engagement with the Conceptual Difficulties." *Genetic Testing* 3(1): 73-79.

Book Chapters:

(Forthcoming) "Spandrels, Pendentives, and Squinches: Architecture, Adaptation, and History." Forthcoming in *Twenty Five Years of Spandrels* edited by Denis Walsh. Oxford University Press.

(In Press) "Phenotypic Plasticity and Reaction Norms." *A Companion to Philosophy of Biology*, edited by Sahotra Sarkar and Anya Plutynski. Blackwell Publishing.

2007. "Children of One's Own: Genes, Parenthood, and the Illusion of Control." *The Influence of Genetics in Scientific and Philosophical Thinking* edited by A. Fagot-Largeault and J. M. Torres. Kluwer-Springer Press.

2007. "Violence and Public Health: Exploring the Relationship Between Biological Perspectives on Violent Behavior and Public Health Approaches to Violence Prevention." *Establishing Medical Reality: Essays in the Metaphysics and Epistemology of Biomedical Science* edited by Harold Kincaid and Jennifer McKittrick. Springer Dordrecht. pp. 199-214.

2005. "Rational Decision Making: Descriptive, Prescriptive, or Explanatory?" In *A Companion to Rationalism*, edited by Alan Nelson. Blackwell Publishing. pp. 425-449.

2003. "Davidson and Wittgenstein on Knowledge, Communication and Social Justice." Sharyn Clough and Jonathan Kaplan. In C. Prado (ed) *A Dubious Estrangement: Analytic and Continental Philosophy*. Humanity Books, Amherst. pp. 139-154.

Reviews:

(In Press). *Genetics and Criminal Behavior*, edited by David Wasserman and Robert Wachbroit (Cambridge University Press, 2001). *Politics and the Life Sciences*.

2007. *Evolution and the Levels of Selection* by Samir Okasha (Oxford University Press 2006). *Notre Dame Philosophical Reviews*.

2007. *Darwinian Reductionism* by Alex Rosenberg (Chicago, IL: University of Chicago Press 2006). *Quarterly Review of Biology*. 82(2):140.

2006. *Who's Afraid of Charles Darwin?*, by Griet Vandermassen (Landham, MD: Rowman and Littlefield Publishers, Inc.). *Metascience*. 15:177-181.

Reviews, continued.

2006. *Making Modern Science: A Historical Survey*, by Peter J Bowler and Iwan Rhys Morus. (University of Chicago Press, 2005). *Quarterly Review of Biology* 81:158-159.

2005. *Philosophy of Experimental Biology*, by Marcel Weber (New York: Cambridge University Press, 2005). *Philosophy in Review*. 25(6): 411-413.

2004. *The Song Sparrow and the Child: Claims of Science and Humanity*, by Joseph Vining (University of Notre Dame Press, 2004). *Journal of the American Medical Association*. 292(12): 1493.

2004. *Functions: New Essays in the Philosophy of Psychology and Biology*, edited by André Ariew, Robert Cummins, and Mark Perlman (Oxford University Press, 2002). *Philosophical Psychology* 17(3): 433-436.

2003. *What Genes Can't Do*, by Lenny Moss (The MIT Press, 2002). *Notre Dame Philosophical Reviews* (<http://ndpr.nd.edu/review.cfm?id=1353>).

2003. *Genes: A Philosophical Inquiry*, by Gordon Graham (Routledge, 2002). *Notre Dame Philosophical Reviews* (<http://ndpr.nd.edu/review.cfm?id=1276>).

2001. *Beyond Cloning: Religion and the Remaking of Humanity*, edited by Ronald Cole-Turner (Trinity Press, 2001). *American Journal of Bioethics*. 1(3): 68-69.

1996. "Problematizing Reifications and Naturalizations: Out of Focus at *The Henry R. Luce Professorship of Biotechnology and Society's* Symposium: 'Genetics and the Human Genome Project: Where Scientific and Public Cultures Meet'" *Stanford Humanities Review* Volume 5, 126-131.

Presented Papers (Invited):

2007. "Evolutionary Psychology, meet Developmental Systems Theory." Presented at Stanford University's Department of Anthropological Sciences Colloquium Series. January 12th, 2007.

2006. "Giving up the Adaptive Landscape Metaphor." Presented at the University of California, Irvine's Department of Logic and Philosophy of Science Colloquium Series. May 4th, 2006.

2006. "Evolution and Developmental Resources: from Variation to Stability and Back Again." Presented at the Franklin & Marshall College Philosophy Department's Colloquium series. April 6th, 2006.

Presented Papers (Invited), continued.

2006. "Inside/Outside: External Resources and the Individual in the Fragile Science." Author meets critics commentary on Robert Wilson's *Genes and the Agents of Life*. *American Philosophical Association*, Pacific Division. March 2006.

2005. "Evolution and developmental resources: from variation to stability and back again" A plenary talk presented at the fourth biennial conference on the "Developmental Basis of Evolutionary Change" at the University of Chicago. October 20-23, 2005.

2005. "Devo-Evo and the Limits of Contemporary Behavior Genetics Research Techniques: A Reply to Kenneth Schaffner." Presented at the First Annual Queensland Biohumanities Conference. Brisbane, Australia. October 15-16, 2005.

2005. "Is it Time to Give up Adaptive Landscapes?" Presented at the University of Houston's Department of Biology and Biochemistry Colloquium / Seminar series. September 7th, 2005.

2005. "Misinformation, Misrepresentation, and Misuse of Human Behavioral Genetics Research." Presented at the Duke University Law School's symposium, "The Impact of Behavioral Genetics on Criminal Law," April 2005.

2005. "The End of Adaptive Landscapes?" Presented at the University of British Columbia's Philosophy Colloquium series, January 2005.

2004. "Violence and Public Health: Exploring the Relationship Between Biological Perspectives on Violent Behavior and Public Health Approaches to Violence Prevention." Presented at Pennsylvania State University conference, "Beyond Science and Values," April 2004; the *Center for Ethics and Values in the Sciences* conference on "Philosophical Issues in the Biomedical Science," University of Alabama Birmingham, May 2004.

2003. "MAOA and Violence: The Gene and the Environment." Presented at the *Center for Ethics and Values in the Sciences* colloquium series, University of Alabama Birmingham, March 2003.

2003. "The Targets and Units of Selection: Physical Processes and Statistical Bookkeeping in Biological Evolution." University of Cincinnati Philosophy Department, February 2003; Oregon State University Philosophy Department, February 2003; Lewis and Clark College Philosophy Department, October 2004.

2001. "Import Bans and Tying One's Hands: Weakness of Will and Import Restrictions." Philosophy Department Colloquium, University of California at Irvine, April 2001.

Presented Papers (Invited), continued.

2000. "Social Justice, Economic Choices, and Health Care Expectations." Bioethics Fullerton Conference, "The Humanities in Medical Education," April 2000.

2000. "Distant Relatives and Extinct Relations: Troubles for the Historical Approach to Human Adaptation." *American Philosophical Association*, Pacific Division Meeting, April 2000.

1996. "Wittgenstein on the Soul." *American Philosophical Association*, Pacific Division Meeting, April 1996 (Commentator).

Presented Papers (peer reviewed):

2006. "Evolutionary Innovations and Developmental Resources: From Stability to Variation and Back Again." *Philosophy of Science Association*. Biennial Meeting, November 2006.

2006. "The End of the Adaptive Landscape Metaphor." *Scientific Images: An American Philosophical Association Pacific Division Mini-Conference*. March 2006.

2003. "Spandrels, Pendentives, and Squinches: Architecture, Adaptation, and History." Duke University Center for the Philosophy of Biology, Second Annual Conference on Recent Work in Biology and Philosophy, April, 2003.

2002. "Social Justice, Economic Choices, and Health Care Expectations." *American Philosophical Association*, Eastern Division Meeting, December 2002.

2002. "On the Concept of Biological Race and its Applicability to Humans." With Massimo Pigliucci. *Philosophy of Science Association* Biennial Meeting, November, 2002.

2001. "Ethics and Evolution." *International Society for the History, Philosophy, and Social Studies of Biology* Biennial Meeting, July 2001.

2001. "'Scientific' Decision Making: Decision Analysis and Evidence-Based Medicine." Center for Ethics and Values in the Sciences conference, "Value Free Science: Ideal or Illusion?" University of Alabama, Birmingham, February 2001.

2000. "Mental Illness and the Ways of Contingency: Context Sensitivity, Social Norms, and the Biology of Construction." *American Philosophical Association*, Eastern Division Meeting, December 2000.

2000. "Historical Evidence and Human Adaptations." *Philosophy of Science Association*, Biennial Meeting, November 2000.

Presented Papers (peer reviewed) (continued):

1999. "Evolutionarily Meaningful Environments and the Gene-Phenotype Relationship: The Problem With Standard Environments." *American Philosophical Association*, Eastern Division Meeting, December 1999.

1999. "ADD/ADHD and the Genetic Disease Concept." with Alan Rubel, *American Society for Bioethics and Humanities* Conference, October 1999.

1999. "Decisions and the Culture of Deciding." *Inland Northwest Philosophy Conference* "Reason and Rationality," April 1999.

1998. "Scientific Explanations, Political Pluralism, Ontological Commitments, and What Killed the Dinosaurs." *Inland Northwest Philosophy Conference* "Realism and Anti-Realism," April 1998.

1998. "Genetic Determinism and the PKU Myth." *American Philosophical Association*, Pacific Division Meeting, April 1998.

Other Professional Activities:

Respondent: "Making Sense of Evolution" Panel discussion. Oregon State University. April 7, 2007.

Participant and Presenter: "Recent CLA Research on Race and Racism." Oregon State University October, 21st 2006.

Participant and Presenter: "3rd Annual Pacific American Philosophical Association Mini Conference," a campus presentation by the OSU Philosophy Club. April 2006.

Panel member: "Research Ethics Forum." Oregon State University, March 2nd 2006.

Conference organizer (with Sharyn Clough): "2nd Annual Pacific American Philosophical Association Mini Conference," a campus presentation by the OSU Philosophy Club. April 2005.

Discussant "Roundtable on Race: The Case of John Locke," Oregon State University. (<http://oregonstate.edu/~cloughs/CloughRace1.html>). February 2005.

Discussant "Roundtable on Race and Racism: An Interdisciplinary Conversation," Oregon State University. (<http://oregonstate.edu/~cloughs/CloughRace1.html>). November 2004

Other Professional Activities (Continued).

Conference organizer (with Sharyn Clough) and discussant: "1st Annual Pacific American Philosophical Association Mini Conference," a campus presentation by the OSU Philosophy Club. April 2004.

Participant and collaborator, "Representing Genes" project, funded by the NSF and other granting agencies. Principle investigators: Karola Stotz, and Paul Griffiths, University of Pittsburgh, PA. Conferences in February 2004, and January 2003.

Teaching Experience (courses taught, 1995-2006):

- "Research Ethics" (a graduate seminar) OSU, 2006-present.
- "(Why) Are We Rational?" (an Oregon State University Honors College colloquium) co-taught with Andrew Stivers (OSU Department of Economics) OSU, Winter 2005.
- "Ethics" (an introductory course) OSU, 2004-present.
- "Scientific Reasoning" (an undergraduate course) OSU, 2003-present.
- "Philosophy of Biology" (both as a graduate seminar and as an advanced undergraduate course) OSU, 2003-present; University of Tennessee Knoxville (UTK), 1998-2003; Stanford University, 2002.
- "Reasoning and Writing" (an introductory course) OSU, 2003-present.
- "Philosophy of Science" (both as a graduate seminar and as an advanced undergraduate course) UTK, 1998-2003.
- "Special Topics in Advanced Biological Practice" (an advanced graduate seminar) co-taught with Massimo Pigliucci (Dept. Evolutionary Biology, SUNY Stonybrook) UTK, 2002-2003.
- "Wittgenstein: Interpretation and Method" (both as an advanced undergraduate course and as a graduate course) UTK, 2003; Stanford, 1996.
- "Philosophical Foundations of Democracy" (an advanced undergraduate course) UTK, 2000- 2003.
- "The Philosophy of Madness: Conceptual Issues in Mental Disease" (a graduate seminar) UTK, 2002.
- "The Human Condition: Value and Reality" (an introductory course) UTK, 2000-2002
- "The Philosophy and Science of Evolutionary Biology" (a graduate seminar) co-taught with Massimo Pigliucci. UTK, 2001.
- "The Human Condition: Knowledge and Reality" (an introductory course) UTK, 1998-2000.
- "Topics in Contemporary Philosophy: Rorty, Davidson, and Hacking on Contingency" (an advanced graduate seminar) UTK, 1999.
- "The Philosophy and Literature of Post-Modernism" (an advanced undergraduate course) Stanford, 1997.
- "The Philosophy and Literature of Existentialism and Post-Modernism," (an advanced undergraduate course) co-taught with Stephen Käufer. Stanford, 1995.

Additional Teaching Interests:

- "Ethical, Social and Political Issues in Agricultural Practice and Food Production"
- "Biodiversity: Ethical Crises and Conceptual Difficulties"
- "Political Philosophy"

Professional Service:

University/Departmental and Related:

| 2003 | Writing Intensive Curriculum Seminar, Oregon State University. |
| 2001 | Innovative Technology Center Workshop on basic HTML, University of Tennessee. |
| 2000 | Innovative Technology Center Workshop on Blackboard System, University of Tennessee. |

Fellowships Held, Grants Received, and Awards:

- 2007: Senior Personnel member on NSF grant application for "REU Site for Oregon Marine Science: From upper estuaries to the deep." Principal Investigators: George W Boehlert and Robert A Duncan. Total grant amount: \$300,000 over 3 years. I am responsible for the "Research Ethics Component" of the grant, which totals approximately \$12,000 for three years. Awarded 2007.
- 2005: OSU College of Liberal Arts Research Grant (\$9,102), with Andrew Valls (Department of Political Science), for our proposal "Housing Discrimination as a Basis for Black Reparations."
- 2004: OSU Philosophy Department "Service Award"
- 2003: National Endowment for the Humanities Fellowship (\$3,250), Summer Institute on Science and Values, University of Pittsburgh.
- 2002 - 2003: Matchette Foundation Grant (\$3,000), Principal Investigator and Grant Writer
- 2001 - 2002: Haines-Morris Grant (\$8000), Co-Principal Investigator and Grant Writer
- 1991 - 1996: Andrew W. Mellon Doctoral Fellowship in the Humanities

**OSU Libraries
Collection Development**

Library Evaluation for Category I Proposal

Proposal to offer a Graduate Certificate in Management for Science Professionals

Title of Proposal

Departments

College of Science

The subject librarians responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

☐ inadequate to support the proposal (see budget needs below)

☐ marginally adequate to support the proposal

☒ adequate to support the proposal

Comments and Recommendations:

Collection is currently adequate; however there is concern for the libraries ability to support growth and diversification of collection while maintaining a strong core.

**Oregon State University Libraries
Evaluation of the Collection Supporting:
Proposal to offer a Graduate Certificate in Management for Science Professionals**

Oregon State University
College of Science
Professional Science Masters Program

This library assessment reviews the monographic and serials collections as related to the Professional Science Masters Program in the College of Science and the emphases on business, finance, communications, economics, and marketing.

We compared Oregon State University Libraries' monographic collections to those of Michigan State University, North Carolina State University, and the University of Connecticut. Michigan State University was mentioned as a peer program in the proposal and North Carolina State University and the University of Connecticut were listed on the national PSM website. In general we find that the monograph collection is adequate to support masters-level work; the lack of books in some areas, such as finance, can be filled by our consortial lending agreements with other Pacific Northwest Libraries through the Orbis Cascade Alliance.

For serials, we measured the depth of OSU collections using the ISI-Thompson *Journal Citation Report* (JCR) list of the top 10 titles (each) in business, finance, communications, economics, and marketing. OSU Libraries currently subscribes to forty of the top fifty journals listed for business, finance, communications, economics, and marketing listed in JCR. To measure the breadth of OSU's journal collection, we noted where core faculty for the Graduate Certificate in Management for Science Professionals have published and whether OSU Libraries subscribes to these titles.

Monographs:

We compared Oregon State University Libraries monographic collections to those of Michigan State University, North Carolina State University, and the University of Connecticut. The OSU holdings were compared against the average unique holdings from the three institutions. OSU Libraries' holdings were generally found to be adequate. Three areas were found to be lacking, finance, law, and web design, which can be supplemented through our consortial lending agreement with the Orbis Cascade Alliance. Books that are requested through the Orbis Cascade union catalog are delivered to OSU Libraries within three working days. Appendix A shows the monographic holdings in the main areas of emphasis for the Professional Science Masters program's Graduate Certificate in Management for Science Professionals at OSU as compared to Michigan State University, North Carolina State University, and the University of Connecticut.

Interlibrary Loan Activity:

Typically Interlibrary Loan (ILL) statistics are examined to gauge the need for new titles. However, because this is a new certificate that has many touch points (business, finance, economics, communications and marketing) interlibrary loan statistics will only be useful once students and faculty from the PSM certificate program begin requesting items through our ILL program. ILL statistics should be examined after the program has been established for several

years, and the collection should be adjusted accordingly.

Government Documents:

OSU Libraries is a federal depository for government documents. Many of the government documents that are useful for business, finance, communications, economics, and marketing are freely available online and are represented in the OSU Libraries online catalog.

Serials/Journals:

We compared the OSU Libraries' journal holdings against the list of ten top business, finance, communications, economics, and marketing journals listed in Thompson-ISI's *Journal Citation Report (JCR)*. The JCR assigns an "impact factor" providing a means to compare or evaluate a journal's relative importance in the field. OSU Libraries currently subscribes to forty of the top fifty journals listed. We no longer subscribe to *Marketing Science*, *Entrepreneurship Theory and Practice*, and the *Review of Financial Studies*. We do not hold the *International Journal of Language and Communication Disorders*, *Journal of Health Communication*, *Health Communication*, *Media Psychology*, *Political Communication*, *World Bank Research Observer*, and the *Journal of Economic Geography*. It may not be important to add the *International Journal of Language and Communication Disorders*, the health communication journals, *Political Communication*, the *World Bank Research Observer*, or the *Journal of Economic Geography*, as these are not the main focus areas of the PSM department. However, it may be worth re-subscribing to *Marketing Science* (\$355 for print and online combined annual subscription), *Entrepreneurship Theory and Practice* (\$343 premium online annual subscription), and the *Review of Financial Studies* (\$285 for online annual subscription) as these marketing and finance journals may fit within the research scope of the PSM program.

The list of journals and our holdings can be found in Appendices B-F.

Electronic Access to Journals:

OSU Libraries' recent subscriptions to online journal packages, such as Springer, Wiley, and Elsevier have expanded electronic access and in most cases cover the years 1996-to the present.

Subject-Specific Indexes and Abstracts:

OSU Libraries subscription databases that can be useful for the Graduate Certificate in Management in Professional Science include:

- *Business Source Premier* - provides full text for nearly 3,300 scholarly business journals, including full text for more than 1000 peer-reviewed business publications including company profiles, industry profiles and market research reports. Coverage includes virtually all subject areas related to business, and includes indexing as far back as 1922.
- *LexisNexis Academic* - provides access to current business news, industry and market news, accounting literature, company financial reports and profiles, SEC filings, and legal research.
- *ComAbstracts* - indexes articles in the primary profession literature of Communications as far back as 1937.
- *Academic Source Premier* - provides full text for nearly 4,600 scholarly publications, including full text for more than 3,500 peer-reviewed journals. Coverage spans virtually every area of academic study and offers information dating as far back as 1975.

Faculty publishing:

As a measure of breadth we checked the online curriculum vitae of the core faculty listed in the Category I Proposal to see what journals they were publishing in to see if OSU Libraries subscribes to these journals. The core faculty listed are Gregg Walker, Jonathan Kaplan, and Ursula Bechert; we were unable to locate a vitae for Ursula Bechert. We identified fourteen journals in which Walker and Kaplan have been published. OSU Libraries currently subscribes to eleven of these publications, although not always with full runs of the journal. Appendix G lists these titles and OSU holdings.

Subject Librarian Support:

OSU Libraries has a Business & Economics librarian, Laurie Bridges. Laurie Bridges is the main contact for business, finance, economics, and marketing. The OSU Libraries has several science librarians, Bonnie Avery, Alison Bobal, May Chau, and Hannah Gascho Rempel, who are the main contacts for the biological sciences. The Communications librarian is Loretta Rielly.

Summary:

OSU Libraries' collections are adequate to support the Graduate Certificate in Management for Science Professionals as proposed. However, we would like to encourage the renewal of three journal subscriptions: *Marketing Science*, *Entrepreneurship Theory and Practice*, and *Review of Financial Studies*. The combined annual cost of these three journals is \$983. We recommend that the College of Science work with the library to ensure that the collections we do have are of the highest impact, and that students and new faculty for the Graduate Certificate in Professional Science Management have access to the journals, books, working papers, and data they need to do the work of a top-ten land grant institution.

Respectfully submitted by:

Laurie Bridges
Assistant Professor and Librarian,
Oregon State University Libraries
2007

Appendix A: Monograph Holding Levels and Comparisons.

| PSM Subject Heading | OSU Holdings | Comparator School Holdings ^{a, b} | Average of Unique Comparator School Holdings | OSU Holdings as percent of average comparator holdings ^c |
|------------------------------------|--------------|--|--|---|
| Accounting | 1,740 | 5,787 | 1,929 | 90% |
| Communications | 32 | 127 | 42 | 76% |
| Economics | 3,659 | 11,021 | 3,674 | 100% |
| Finance | 3,850 | 22,883 | 7,628 | 50% |
| Law | 2,067 | 11,600 | 3,867 | 53% |
| Management | 8,633 | 26,890 | 8,963 | 96% |
| Marketing | 2,835 | 8,073 | 2,691 | 105% |
| Research - Moral & Ethical Aspects | 152 | 321 | 107 | 142% |
| Technology | 1,926 | 4,570 | 1,523 | 126% |
| Web Design | 83 | 597 | 199 | 42% |

^aThe three comparator schools selected were the University of Connecticut, Michigan State University, and North Carolina State University.

^bHoldings indicate a unique monographic holding from one of any of the three schools. This calculation is performed to remove overlaps between the three collections.

^cA percentage higher than 100% indicates that OSU owns more unique monographs in the subject heading area than the three comparator schools.

September 23, 2008

To: Ursula Susan Bechert
College of Science
2082 Cordley Hall

From: Robert Frost, Co-Chair
Budgets and Fiscal Planning Committee

The Budgets and Fiscal Planning Committee of the Faculty Senate met in the spring and reviewed the CAT 1 proposal for the Graduate Certificate in Management for Science Professionals.

Prior to forwarding the proposal to the Curriculum Council, the committee had only a few specific requests. Please send a revised proposal to address the following:

1. Please provide a detailed budget that shows how funding would be utilized overall developmental phase and actual program operation. Specific attention should be given to:
 - (a) identify the actual cost of instruction and administration for this certificate program;
 - (b) make explicit where the sources for these costs would be coming from or subsidized from; and
 - (c) include an e-campus aspect of this budget that shows development grant revenue, tuition revenue based on enrollment projections, expenditures, and how the e-campus budget relates to, or subsidizes, the on-campus version of this certificate program.
2. An indication of budget review/approval by COS Dean or appropriate staff would be helpful as well.

Once we've received the revised proposal, we will review it quickly. If you have any questions, feel free to contact me.

Cc: Becky Warner, Co-Chair, BFP
Dan Dowhower, Academic Programs
Vickie Nunnemaker, Faculty Senate

Becky, Robert:

I apologize for the delay in getting some answers to you about the CAT 1 proposal for the Graduate Certificate in Management for Science Professionals. The budget questions got passed to me, as the College has been the principal sponsor of the program since the end of the Sloan grant. I have tried to address the committee's specific questions below. I hope this will serve as an appropriate addendum to the proposal to address your questions.

Please provide a detailed budget that shows how funding would be utilized overall developmental phase and actual program operation. Specific attention should be given to:

- identify the actual cost of instruction and administration for this certificate program;

The Professional Science Masters program currently exists and is being delivered in conjunction with degrees in environmental science, applied physics, systematics, and biotechnology. The program costs currently committed include:

| | |
|---|-----------------|
| Program director, coordinator (0.5 FTE) | |
| internship oversight, professional | |
| development course | \$32,000 (+OPE) |
| Communication course: | \$5,000 |
| Ethics/philosophy courses: | \$15,000 |
| Management courses (3 x 2) and | \$30,000 (+OPE) |
| management course development | \$ |
| Biotech internship coordination (0.2 FTE) | \$17,000 |
| Advertising, media, fundraising materials | \$7,500 |

The management courses already include delivery in Ecampus format, with one CRN number for on-campus students (i.e. through normal enrollment) and one CRN number for true distance students. The funds provided to Philosophy include support this year for delivery of the on-campus and an ecampus version of the course.

Addition of the fully online version will require addition of an additional section for the communications course (\$5000-7000 depending on enrollment). As the program grows, the coordinator position will likely require an additional 0.5 FTE, either to one full-time position or two half-time positions to manage the internship coordination and oversight.

- make explicit where the sources for these costs would be coming from or subsidized from; and

The College of Science is supporting all of these costs excepting the costs for the biotech internship coordinator, which are provided by the College of Agricultural Sciences. The College sees the development of PSM as an important strategic step in developing the science and technology workforce the nation needs. We have been, and remain, committed to the costs of making the program go.

The support for the on-campus program will be ongoing, and provides a base that makes the implementation of a distance version much less costly. The reason to pursue a distance version is the emerging national interest in PSM. The development and delivery of the cohort curriculum, particularly the management component, is challenging. We have been a leader here and have an opportunity to provide a curricular program to other institutions that are trying to develop a PSM.

- include an e-campus aspect of this budget that shows development grant revenue, tuition revenue based on enrollment projections, expenditures, and how the e-campus budget relates to, or subsidizes, the on-campus version of this certificate program.

We are pursuing the Ecampus version of the program to:

- 1) increase opportunities for Oregonians to pursue the degree as many of our students are in companies now; an online component would facilitate their pursuit of the program, but would still require an on-campus stay, given the degrees we have
- 2) Provide a stand alone component that scientists and engineers currently employed could use to augment their skills in management and team projects
- 3) Provide a curricular component that other institutions (including those in Oregon) could use as building blocks for a PSM program

The additional costs for starting that online version are largely course development (these are included in the pending grant from Ecampus), delivery of an online section of the communications course (\$7000) and an online version of the professional skills/case study course (\$7000). In addition, the goal is to eventually recoup the costs of the online courses in ethics and management, and an appropriate portion of the internship coordinator position.

A pretty conservative budget projection for the program is:

Initial projections for PSM Online Certificate

This considers only students registered through Ecampus

Ecampus program costs:

| | |
|-----------------------------|--------|
| 0.25 coordinator: | 22,880 |
| Management courses: | 21,450 |
| Communication course: | 7,000 |
| Ethics Course: | 7,000 |
| Advertising/media: | 5,000 |
| Professional Skills Course: | 7,000 |
| 0.1 Internship coordinator: | 8,500 |

Total: 78,830

(The coordinator and management course positions incur OPE)

| | Student Cohort | Annual Credits | 80% Ecampus
Tuition | (Subsidy)/
Surplus |
|------|----------------|----------------|------------------------|-----------------------|
| FY09 | 5 | 30 | 8,352 | (70,478) |
| FY10 | 20 | 120 | 33,408 | (45,422) |
| FY11 | 35 | 210 | 58,464 | (20,366) |
| FY12 | 60 | 360 | 100,224 | 21,394 |

The student cohort is the number of students enrolled in the program.

We have assumed those students will take only 2 of the 6 program courses in a given year. This would be characteristic of students working while pursuing the certificate. Students pursuing this as part of a PSM degree at another institution will likely take the full six courses in a year, but we're being conservative.

Once student numbers reach this level, the coordinator position for this part will likely need to increase another 0.25 FTE for a total of 0.5 FTE.

We have been quite conservative here, assuming that most students will pursue this part-time. This is consistent with what we see in current Ecampus use and is the most likely current audience. As the visibility of PSM programs increases, we expect to see significantly more growth in students pursuing the program full time in conjunction with other university PSM programs.

The immediate fiscal goal is to cover costs related to this part of the program. When fully successful, the program will also create net revenues that will be used to expand the curriculum to be more closely tailored to specific audiences (we already have requests for one of the management courses to focus on regulatory requirements and processes for example; we just don't have the student base yet to create such course diversity).

- An indication of budget review/approval by COS Dean or appropriate staff would be helpful as well.

This program has the full support of the Dean and the College. We are committed to underwriting the costs of this program until the student numbers are such that it is self-sufficient. We remain committed to the on campus version of the PSM as well and are actively working to expand the number of degree options available to students.

Please let me know if you have other questions.

Best regards,
Sherm

Current Academic Regulations are online at
<http://catalog.oregonstate.edu/ChapterDetail.aspx?key=75#Section2891>

The yellow shaded sections represent revisions proposed since the last review.

AR 20. Repeated Courses

~~Courses may be repeated once for grade replacement. Both grades will appear on the academic record, but only the second grade will be counted in the cumulative grade point average and toward graduation requirements. Courses taken more than two times will appear on the academic record but not count in the cumulative grade point average. Regardless of the number of times a course is repeated, credits earned will be counted only once for graduation requirements. Recognized repeatable courses, such as activity courses, research, seminars, and selected topics, do not come under this restriction. A student receiving an A–F grade can only replace such a grade in the GPA calculation with another A–F grade (not with an S/U grade.)~~

Recommended Wording For AR 20. Repeated Courses (Updated: 12/10/08)

If a student repeats an Oregon State University course, the grade from each attempt¹ will appear on the student's academic record but only **the grade from** the second attempt will count toward the student's institutional credits, requirements, and grade point average². An academic unit³ may, however, include subsequent attempts after the second attempt in their calculation and clearance of unit degree requirements and degree grade point average. A course may not be repeated on an S/U basis if it was taken previously on a normal grade basis⁴.

¹ An attempt comprises a final grade in a course where the grade is: "A", "A-", "B+", "B", "B-", "C+", "C", "C-", "D+", "D", "D-", "F", "S", "U", "P", "NP" or an "I/Alternate Grade (where the Alternate Grade is one of these grades).

² Recognized repeatable courses **as defined in the Oregon State University course catalog**, such as activity courses, research, seminars, and selected topics, do not come under this restriction. Additionally, if a course has been approved as a multiple repeatable course for credit and grade points, each attempt will be included in the institutional credits and grade point average until it reaches its defined limit (total allowable attempts or credit maximums for the course). Further, the Office of the Registrar will include all courses from the first repeat taken until it reaches the maximum total allowable attempts or credit maximums for the course. All subsequent repeats after the repeat maximum has been reached will be excluded from both institutional credits earned and grade point average calculations.

³ **Academic Unit: College, School, or Department.**

⁴ Normal Grade Basis is defined as any grade of "A", "A-", "B+", "B", "B-", "C+", "C", "C-", "D+", "D", "D-", "F", or any "I/Alternate Grade" (where the Alternate Grade is one of these grades).

Bolded text indicates proposed additions and strike-through sections indicate proposed deletions.

AR 23. Special Examination for Credit

A regularly enrolled student in good standing, either graduate or undergraduate, currently registered at Oregon State University and wishing credit for an OSU course for which a grade has not been previously received, may petition for credit examination under the following conditions:

- a. The application for such examination shall be presented on an Official Student Petition and shall bear the approvals of the dean of the student's college, the dean of the college in which the course is offered, and head of the department in which the course is offered. **Petitions for special examination for credit may be approved or denied at the sole discretion of the department/college or the faculty member offering the course, taking into account both the academic merit of the petition and the department/college's ability to deploy adequate resources to prepare, administer, and grade such an examination.**
- b. In no case may such examination be based on work used for graduation from high school, or in a foreign language that is the mother tongue of the applicant, or in courses not listed in the Oregon State University *General Catalog*.
- c. Grades earned in special examinations shall be submitted and recorded in the same way as for regularly registered courses.
- d. A student may not petition for credit by special examination for a course in any term in which the student is or has been enrolled in the course after the add/drop deadline for that term.
- e. An examination for credit will not be approved for courses below the level for which college credit has previously been granted.
- f. ~~All special examinations must be authorized by the Academic Requirements Committee,~~ and **no** examination may be taken until the applicant has received a permit from the Registrar's Office, for which a fee of \$80 will be charged.²

² As an alternative to departmental examinations, students may seek credit through the College Level Examination Program (CLEP) to the College Entrance Examination Board. CLEP includes nationally normed subject matter examinations and general examinations covering material included in a number of relatively standard courses taught in colleges and universities throughout the United States. Some of these subject matter examinations and general examinations have been accepted by departments at this institution. Policy guidelines have been established that make it possible for admitted and enrolled students to (a) transfer credits earned through these accepted CLEP subject matter and general examinations to this institution, providing certain criteria are met, and (b) earn credits through accepted CLEP subject matter and general examinations providing certain criteria are met. Further information about CLEP can be obtained from Counseling and Psychological Services (CAPS), 5th floor, Snell-MU East.

Bolded text indicates proposed additions and strike-through sections indicate proposed deletions.

AR 24. Special Examination for Waiver (Undergraduate Students)

A student may petition for examination to waive a course under the following conditions:

- a. The application for examination to waive a course shall be presented on an Official Student Petition and shall bear the recommendations of the dean of the student's college, the dean of the college in which the course is offered, and head of the department in which the course is offered. **Petitions for special examination for credit may be approved or denied at its sole discretion by the department/college offering the course, taking into account both the academic merit of the petition and the department/college's ability to deploy adequate resources to prepare, administer, and grade such an examination.**
- b. ~~All examinations for waiver must be authorized by the Academic Requirements Committee, and no~~ **No** examination may be taken until the applicant has received a permit from the Registrar's Office, for which a fee of \$80 will be charged.
- c. A minimum grade of C (or equivalent) must be attained in an examination for waiver.
- d. Credit will not be granted for courses waived.
- e. This regulation does not invalidate the right of a dean of a college or head of a department to waive a course requirement of a particular college or department.

There is currently no AR 31; this is a proposal for a new Academic Regulation.

Proposed AR 31 Academic Absolution Policy

An Oregon State University student may petition once with the Registrar to exclude OSU courses from the calculation of institutional requirements, units, and grade point average, under a condition of academic absolution defined below:

Conditions to qualify:

The student must have an absence from OSU that begins after the end of his or her last term of attendance and exceeds 10 academic years before re-admittance to a degree program at OSU. Prior to applying for academic absolution, a student must, after re-enrolling in the University, have successfully completed a minimum of 24 letter-graded units over two consecutive terms, and earned a grade point average of at least 2.5 or higher in these terms. The student must also provide a signed letter of recommendation (i.e., from a current OSU college Dean, department chair, college head advisor, or a current faculty member within the discipline the student is currently engaged to complete) advocating on his or her behalf for academic absolution.

Effect of the academic absolution:

- Upon meeting all of the conditions of qualification, the student may select from one to three contiguous academic terms (not to exceed 48 total units)¹ from his or her previous enrollment at OSU for the application of academic absolution.
- The grades² from all courses taken during the terms that are proposed for academic absolution will be excluded from meeting institutional requirements and the calculation of institutional units and grade point average.
- All grades representing the student's academic history at OSU will appear on his or her academic record (transcript), but all academic absolution approved courses will be coded as "excluded" similar to a repeated course. Additionally, a comment of "Academic Absolution" will be appended to each term that qualifies under academic absolution.
- All courses excluded under academic absolution, will also be excluded from the calculation of course repeats defined by AR 20.

¹ The combined total eligible units allowed under Academic Absolution are 48 total units, and must count all of the courses in any given combination of terms. If, for example, a student selects three terms of course work that exceeds 48 units, only the two contiguous terms that fit within the allowable 48 total units, can have the academic absolution rule applied.

² Valid grades can include outstanding "I" (incomplete) grades that have not been resolved.

Proposal for a Concurrent JD-MS and JD-PhD between the University of Oregon School of Law and Oregon State University's WRGP

Overview

The Water Resources Graduate Program requests that the Graduate Council consider the proposal to modify Graduate School policy to allow Water Resources graduate students to participate in a concurrent JD-MS degree program with the School of Law at the University of Oregon. Specifically, we request that students enrolled in the concurrent degree program be allowed to transfer up to 15 credits of relevant coursework from the University of Oregon School of Law to their graduate program of study at Oregon State University. This document provides information to place this request in the context of current practices at other peer institutions and to address potential concerns.

Introduction

Our graduates are entering a world in which hydrologists, water resource engineers, and policymakers must have an understanding of the legal context in which their actions are taking place, and lawyers must be knowledgeable in disciplines beyond the law and capable of thinking critically and broadly. A concurrent degree program could provide this type of training. Students in the JD-MS program would combine the knowledge and skills learned in OSU graduate courses and U of O law courses in an individualized program of study, decreasing the time required to complete both degrees by one year.

The proposed concurrent degree program would permit students to complete both degrees in a coordinated sequence, in four rather than five years. Graduate students in the Water Resources Graduate Program are preparing for careers in which knowledge of the law is an important component of the body of knowledge required in their profession. By partnering with the University of Oregon School of Law, we can provide graduate students with access to up to date courses taught by law professors at an accredited Law School, with expertise in the subject matter they teach, without requiring OSU to duplicate courses already available at another University in the OUS system. The Director of the Water Resources Graduate Program, the student's graduate committee, and the major professor would carefully review the program of study for each student choosing to participate in the concurrent degree program to ensure that graduates of the concurrent MS-JD degree program meet the requirements for the graduate degree.

Maintaining Academic Rigor

Many of the institutions which offer concurrent JD-MS program options are among the highly selective, academically rigorous educational institutions in the U.S. (Table 1). The establishment of a concurrent JD-MS program between the School of Law at the University of Oregon and Oregon State University's Water Resources Graduate Program would place us among an elite group of institutions offering such concurrent degrees, enhance the stature of our graduate programs, and help us recruit the very best students. Concurrent JD-MS program are often of interest to prospective Native American students, thus, establishing such a program would be likely to assist us in enhancing diversity within the program as well.

Dr. M.V. Santelmann, Director
Water Resources Graduate Program

9 January, 2009

Precedent Within the OUS system for Transfer of Credit from U of O School of Law

The University of Oregon Environmental Sciences program has already established a concurrent JD-MS program with the School of Law, allowing transfer of 18 credits from the Environmental Sciences graduate program to the Law program, and 15 quarter credits from the Law program to the graduate program in Environmental Sciences.

Concurrent Degree Program Agreements Between Institutions

Several institutions have developed concurrent or joint degree programs with other institutions. For example, Tufts University and the University of Virginia collaborate with each other and with Harvard Law School, Princeton University, and Johns Hopkins University to offer concurrent graduate degrees with the JD. Yale collaborates with its own Law School as well as the Vermont Law School and Pace University School of Law.

Summary

By modifying the policy currently described in the Oregon State University Graduate Catalog to allow students in the interdisciplinary Water Resources Graduate Program to transfer up to 15 credits of course work taken at the University of Oregon School of Law into their graduate program of study at Oregon State University, the Graduate Council will make it possible for OSU to become one of an elite set of institutions offering an option for concurrent JD-MS degrees.

I. Review of COAS: Overall Recommendation and Introduction

The Review Team consisting of James Yoder (Woods Hole Oceanographic Institution), Margaret Delaney (UC Santa Cruz), Thomas Leschine (University of Washington), Rod Harter (Nutrition and Exercise Sciences – OSU) and Luca Lucchese (Electrical Engineering and Computer Sciences – OSU) met with Dean Sally Francis during the evening of January 24 and then spent all day on January 25 in meetings with Associate Dean Robert Duncan and staff, Dean Mark Abbott, representatives from COAS faculty, representatives from COAS graduate students, and the COAS Graduate Admissions Committee. The Review Team was also provided with an excellent and well-prepared self-study report prior to the on-campus meetings.

The Review Team recommends that OSU sustain the COAS graduate program and the faculty at approximately its current size. Because of anticipated faculty retirements and the need for new faculty to have sufficient time to establish a funding base for their research programs, maintaining the COAS faculty at approximately the same size requires following the COAS-generated hiring plan for new faculty. On the other hand, this is not the right Federal science funding environment for expanding a faculty that relies on significant salary support from Federal grants. The atmospheric sciences group is small, however, and probably needs to grow to some extent to reach a critical mass of faculty. The MRM faculty also needs to grow, and the intention that two of the hoped-for new hires of the next five years be science faculty who would represent areas with which MRM would find strong affinity seems a good strategy to build MRM given present constraints on available state salary support. The Review Committee was provided a copy of COAS faculty hiring priorities and notes that 4 out of the next 10 hires are in the area of atmospheric science or the interaction of atmospheric with ocean science. The excellence of the COAS faculty and graduate program (OSU's oceanography program ranked 5th in the nation the last time the NRC ranked graduate programs) and breadth of the COAS mission, argues against a significant reduction in faculty.

State funds, including returned overhead funds, for COAS are highly leveraged with Federal funds. COAS has an excellent faculty with a national/international reputation, and the college produces excellent graduate students. Given the high degree of leveraging and the high quality of the program, OSU has one of the best deals, if not the best deal, in the country for an ocean/atmospheric science program at a State university.

II. Summary of Recommendations

A. COAS and Its Faculty

- **COAS should continue to receive base state support and the more favorable overhead return rate specific to COAS among OSU's units. COAS should receive the support it needs to maintain itself at least its current faculty size (p. 5).**
- **OSU needs to re-assign a development officer to COAS to help raise funds for Fellowships and for other needs (p. 17).**
- **Long-term space requirements need to be addressed. Co-location of students and faculty advisors is a desirable thing. Moreover, central locations for students in every building would be a major addition to student interactions (p. 19).**
- **OSU should support the COAS hiring plan, including the need for adequate start-up packages. COAS should revisit faculty hiring priorities as hiring proceeds. While it is tempting to say that MRM should direct future hires toward faculty who can extend its reach in ocean and coastal policy, given the highly leveraged nature of faculty appointments within COAS (with assistant professors, once established, expected to raise 70% of their salary) it is advisable for MRM to focus instead on faculty who can expand the scope of scientific work in areas that have direct policy implication. Current commitments to hire in the areas of climate change and coastal hazards and in marine and estuarine conservation biology thus seem good directions that**

will reinforce the existing successful model and continue to promote integration of MRM with ocean science (p. 14).

- **Strive to develop more open and regular lines of communication among COAS administration, faculty and graduate students (p. 19).**
- **Encourage COAS faculty, particularly new faculty, to take advantage of OSU programs to train faculty in teaching techniques. Research faculty tend to be out of touch with developments in pedagogy, yet graduate students have been exposed to new science teaching techniques (e.g. inquiry-based learning) as undergraduates (p. 23).**
- **Emphasize to students the importance of participating in the nomination process for the faculty teaching award (Pattullo Award) and the mentoring award (Dymond Award) (p.24).**
- **Communicate early and often about the ongoing work of the Earth Systems Science task force to COAS faculty to engage them and to hear their concerns and goals. Consider carefully the financial issues for COAS in moving away from their highly leveraged, largely research focused model to a more traditional faculty support and teaching expectation model if this is part of the Earth System Science model (p. 12).**

B. Graduate Students: Recruitment and Education.

- **Continue to host the COAS Open House for applicants (p. 7)**
- **Continue to proactively recruit graduate students from underrepresented groups (p. 8).**
- **Examine the issues around core course curriculum with fresh eyes. Focus on course content, year-to-year consistency, and teaching quality issues in these critical classes (p. 9).**
- **Consult with students and faculty about the structure and importance of the student seminar series and work to increase attendance (p. 10).**
- **Pursue getting educational days of ship time for student program (p. 10).**

- **Examine the graduate curriculum for a possible overhaul, including streamlining and increasing predictability of offerings. Although this task may seem daunting, it is likely that a more structured approach could improve the availability and predictability of timing of advanced electives, create teaching ties between faculty for more advanced courses, and avoid very low enrollment classes. Reasonable financial support for an individual to take on this task would likely get this off the ground quickly (p.10).**
- **Encourage COAS science-track students to avail themselves more widely of policy, economics and other social science aspects of the MRM curriculum (p. 13).**
- **Continue to explore new avenues of student funding support (p. 14).**
- **All COAS students need access to the internet from their desks. If for security reasons, access to OSU_PUB is not accessible for some students from some COAS buildings, these students must be provided with an IP address to access the internet and standard software via the COAS computer facility (p 16).**
- **Resolve the graduate student health insurance issue, so that graduate students can receive uninterrupted coverage throughout the year, including for those who are not registered for coursework in the summer (p. 18).**

III. Detailed Findings

1. INPUTS

1.1 The Fit of the Mission and Its Relationship to the Mission of the Academic college and University Mission.

The College of Oceanic and Atmospheric Sciences (COAS) is one of the premier oceanography schools in the country and the world, with high-quality faculty, researchers, post-doctoral scholars, and graduate students. The COAS mission,

combining academic education, technology support, and scientific research, contributes to the broad understanding of the oceans, the atmosphere, and the solid Earth. COAS is unique in the state of Oregon, and its contributions are important to the academic stature and visibility of OSU nationally and internationally. COAS is highly “leveraged,” with faculty raising a significant portion of their base salaries and virtually all graduate student support from external funding sources. COAS represents an incredible bargain for OSU, with high return of quality and impact supported by relatively limited state support.

Recommendation: COAS should continue to receive base state support and the more favorable overhead return rate specific to COAS among OSU’s units. COAS should receive the support it needs to maintain itself at least at its current faculty size.

1.2 College Diversity

As for most oceanographic institutions, women representation on the COAS faculty is low – about 17%. Other oceanographic institutions, such as at University of Rhode Island and Lamont Doherty Earth Observatory (Columbia University) have tried to increase numbers of women faculty by successfully competing for the NSF ADVANCE program. This might be an option for COAS to try, or maybe it has?

Faculty from underrepresented groups are often absent from the faculty of oceanographic institutions. The Review Committee noted that COAS has 2 Hispanics on its faculty.

1.3 Quality of students

COAS graduate students come from different backgrounds. Some come immediately following undergraduate work, some after several years of work experience, and others already have a master’s degree. The reasons why they typically apply to COAS are the national ranking of COAS, the reputation of many of its faculty members, and their interest in research themes being conducted at COAS. The table relative to the applicant

characteristics for 2001-2007, provided in the self-study report, shows the very high quality of the applicants to the graduate program. The average GPA for the admitted students is 3.54 and the average GPA for those who matriculate is 3.49. One should keep in mind that the minimum GPA required for admission to OSU graduate programs is 3.0. Applicants are not required to achieve a specific GRE score or to take a GRE subject test. However, for the matriculated applicants the average GRE scores, during the period 1997-2007, are 550 (verbal) and 666 (quantitative). These numbers are noticeably higher than the national averages which are, respectively, 467 and 591, thus attesting to the quality of the COAS students.

International applicants must show proficiency in English by providing their TOEFL scores. In addition to this, the COAS Graduate Admissions Committee (GAC) contacts the international applicants by phone to verify language proficiency. In the case of very good applicants with TOEFL scores below average or who do not show sufficient proficiency during phone conversations, faculty members have the option of utilizing the English Language Institute at OSU either to prepare candidates for graduate school or as an additional prerequisite for admission. Another metric for assessing the quality of COAS students is provided by the large numbers of honors courses, scholarships, and fellowships along with awards received from state, national, or international institutions.

During the COAS review, two different groups of COAS students were interviewed. In the discussions which ensued, they provided several good points of constructive criticism (both in written form and orally), showing a strong involvement in the college life and commitment to improving its graduate program.

1.4 Admission Selectivity

The COAS admission process is very selective. Applicants are expected to have a minimum GPA of 3.0. In case of lower GPA scores, the Graduate Admissions Committee (GAC) can submit a petition provided that the candidate shows strengths in other areas such as outstanding research capabilities or exceptional GRE scores. As pointed out in

the previous section, the GAC has no minimum requirements for GRE scores. However, these scores do play a role in the selection process.

The Student Programs office and the GAC lead the selection process. The Graduate Admissions Committee (GAC) is composed of one faculty representative nominated by each discipline. The faculty representatives are in charge of managing the application review process for applicants in their area. All student applications are divided into three categories which are color-coded as green, yellow, and red. The applicants with a green code are given highest priority. Those with a yellow code are deemed acceptable and put on a stand-by list; offers to this pool are made contingent upon funding available from faculty members and offers already made to green applicants. Applicants with a red code are considered not ready for, or not up to the standards of, the COAS graduate program.

The Student Programs and the GAC are very proactive in contacting the top candidates early and attracting them to COAS. Also the red applicants are notified early about the negative outcome of their applications so that they can apply to other schools. The expeditious handling of notifications to green candidates allows for a prompt replacement of possible offer declinations by proceeding with offers to candidate from the yellow pool.

Evaluations of the applicants are based on academic achievement (GPA scores), TOEFL and GRE scores, previous research experience, letters of recommendation, and the student's statement of interest and motivation. At least three faculty members are responsible for reviewing the applications. Top U.S. candidates are invited to Corvallis to attend a COAS Open House which is held in early March. This kind of recruiting tool has been proven successful in attracting the best candidates by informing them with regard to research opportunities at COAS, faculty and current students, OSU and Corvallis.

Recommendation: Continue to host the COAS Open House for applicants.

The number of applications has remained consistent with the national trend in sciences, which shows a decline starting around year 2000. During the period 1997-2007, the number of applicants has decreased but the overall number of matriculating applicants has remained constant (30-50%). MRM is a popular masters'-only program that has historically accounted for a high percentage of masters admissions to COAS. With the appointment of the new MRM director in 2005, a decision was made to reduce to about 10 the number of applicants accepted annually into the MRM track, likely accounting for some of the reduction in students matriculating annually. The intent was to better match incoming students with available research support and the capacity of COAS faculty to provide supervision. As a final note, COAS is very proactive in recruiting minority students. Through a partnership with OSU Graduate School, COAS markets its programs to under-represented minority students by using the Society for Advancement of Chicanos and Native American Students, the McNair Scholar Program, the California Diversity Forum, and some minority-base fellowships.

Recommendation: Continue to proactively recruit graduate students from underrepresented groups.

1.5 Curriculum Strength

COAS sponsors four graduate programs: (1) Oceanography (MS, MA, and Ph.D.), (2) Atmospheric Sciences (MS, MA, and Ph.D.), and (3) Geophysics (MS, MA, and Ph.D.), and (4) Marine Resource Management (MS and MA). The student population is ~90, with ~45% of the students as master's students. The Oceanography and Marine Resource Management programs are the larger programs, with smaller Atmospheric Sciences and Geophysics graduate programs. The academic programs are generally sound, with appropriate foundation and advanced courses for students.

We engaged in discussions about curricular strength with all the constituency groups. Different groups identified many of the same issues as areas on which to focus. On a positive note, students commented in particular about the value of the proposal writing

class required for graduate students in Marine Geology and Geophysics, and thought all students should be encouraged to take such a class.

We identified several curricular issues in the course of our discussions, as follows.

Core courses. As in many oceanographic education programs, core courses in the various oceanography sub-disciplines (physical oceanography, biological oceanography, chemical oceanography, marine geology) along with an atmospheric sciences course serve as the foundation courses. Students and faculty raised a number of issues with regard to core course design and quality, core course consistency from year-to-year, course overlap, and core course teaching quality. The issue of redesigning the core courses to a more integrated sequence has been visited many times in the past, and it may be time to do so again. We think the other three issues are more pressing. Students expressed concern about the consistency of core course content from year to year, as instructors change, and they expressed a need for greater evaluation of how the various core courses articulate with each other (e.g., eliminate unneeded overlaps, look for possibilities for continuity or expansion of topics between courses, etc.). The inconsistent quality of core course instruction was also raised in student discussions as an area of concern. Students wanted a focus on teaching quality in these (and other courses), suggesting COAS institute incentives for good teaching. They found that bad teaching habits persisted from year to year, and they encouraged instructors to use the OSU resources available for improving teaching. They did not find that student evaluations of teaching were effective in addressing issues of teaching quality, for two reasons: (1) they were unaware of what happened to the evaluations after filling them out, and (2) the small size of classes meant that anonymity was not really guaranteed in filling out evaluations. With regard to the first issue, we received a clear description from the Student Programs Office about how the teaching evaluations are used, and this needs to be more apparent to the students. The second issue is difficult if not impossible to resolve, since most graduate courses are taught to only a few students.

Recommendation: Examine the issues around core course curriculum with fresh eyes. Focus on course content, year-to-year consistency, and teaching quality issues in these critical classes.

Student seminar. The student seminar series (Fridays, 4 p.m.) was identified as an issue by students, given that it is not well attended by students who are not enrolled. The participation by enrolled students includes written feedback, videotaping, and questions from the audience. Student seminars are not widely attended by faculty, and this was also identified as an area of concern.

Recommendation: Consult with students and faculty about the structure and importance of the student seminar series and work to increase attendance.

Sea-going experience for students. Some faculty identified the need for institutional support to provide more opportunities for sea-going experience for graduate students, as an integral part of oceanographic education.

Recommendation: Pursue getting educational days of ship time for student program.

Curricular stability, advanced electives, and small classes. These three issues were often raised separately, but we group them here because we think they are related. Students and faculty raised the issue of curricular stability, the predictability of what classes will be available when in each academic year, especially for more advanced graduate classes. Faculty questioned whether they could offer sufficient breadth of courses, with some resulting in small class size. Some sub-disciplines were more impacted by this, but all face this issue. Many research project obligations are driven by nationally and internationally scheduled research vessels and facilities, and faculty have little to no control over this. The volatility in scheduling of the more advanced graduate courses in particular left students finding themselves less than well-prepared for the disciplinary exams.

Recommendation: Examine the graduate curriculum for a possible overhaul, including streamlining and increasing predictability of offerings. Although this task may seem daunting, it is likely that a more structured approach could improve the availability and predictability of timing of advanced electives, create teaching ties between faculty for more advanced courses, and avoid very low enrollment classes. Reasonable financial support for an individual to take on this task would likely get this off the ground quickly.

Environmental Sciences and other contributions to undergraduate education. An interesting topic underlying some discussions was “What is the appropriate role of COAS in undergraduate education at OSU?” Among oceanographic institutions, COAS represents a middle ground model in the balance of hard money support from the institution and teaching expectations vs. soft money research support. For example, WHOI researchers are almost entirely soft money funded, with no formal teaching expectation unless by choice, while Scripps Institution of Oceanography (UC San Diego) faculty members receive the typical faculty member 9-month hard money support with some teaching expected. (Note the SIO also has many soft money funded researchers.) COAS faculty already contribute to undergraduate education at OSU, along with their primary focus on graduate education.

Some COAS faculty, along with other geosciences faculty at OSU, are engaged in a recent task force discussion about an “Earth System Science Program” development, one of five areas identified as high priority by OSU. This would result in an undergraduate major, as well as possible restructuring of the graduate programs in COAS. An Earth Systems Science Center was estimated to need \$100M. There is little general knowledge about the work of the task force, as it appears to be in formative stages working through vision and definitions. This ambiguity was reflected in the self study documents. Among those who were aware of Earth System Science discussions, some saw it as a way to increase state support for COAS faculty, and this would come with increased teaching loads. There was also the perception that an Earth System Science undergraduate major

could result in greater availability of teaching assistantships to support graduate students and give them relevant professional experience. Some faculty saw the pedagogical and societal value of being more engaged in undergraduate education, while others thought that this was not the appropriate focus for COAS and would likely result in a declining size.

Recommendation: Communicate early and often about the ongoing work of the Earth Systems Science task force to COAS faculty to engage them and to hear their concerns and goals. Consider carefully the financial issues for COAS in moving away from their highly leveraged, largely research focused model to a more traditional faculty support and teaching expectation model if this is part of the Earth System Science model.

The MRM curriculum is somewhat thin in the exposure students get to ocean law and policy compared to other similar programs, particularly its nearest neighbor program at the University of Washington. MRM has nevertheless come to occupy an interesting niche among programs of its type, with a curriculum more similar to that offered at Duke's Nicholas School of the Environment and Earth Sciences (Master in Environmental Management) program than curricula at UW, URI or the University of Delaware. Graduates are immersed more deeply in scientific and technical training than their counterparts in most of these other programs, for example receiving training in the use of GIS and applying it in thesis work, and this appears to make them highly competitive for positions in the field with a resource management orientation.

Some MRM students complained about the difficulty of having to rely on a combination of distance learning and highway travel for the required ocean law class that is taught at the University of Oregon. It is unclear what can be done to improve this situation given the absence of a law faculty at OSU. The highly compartmentalized and specialized nature of law programs makes this a difficulty for any program that lacks faculty trained in ocean and coastal law within its ranks, and the recruiting of such faculty seems unlikely given the long-established structure of faculty hiring within COAS. MRM

might do well in the longer run to explore other ways to collaborate with its neighbor institutions, such as Marine Affairs at the University of Washington, in the possible joint offering of courses that take advantage both of the internet, as well as geographic proximity that would support at least a few face-to-face sessions across programs.

These questions aside, the fact that the COAS graduate curriculum comes with expectations that all students will cross disciplines to some degree in their course work seems to be resulting in students and faculty alike having highly integrative perspectives on ocean science. The MRM program in particular seems more strongly embraced as embodying a set of ideas that all students in ocean science should be exposed to, compared to other institutions that have both ocean science and ocean policy programs. It was heartening to hear the Dean express the hope that COAS science students would in the future avail themselves more widely of policy, economics and other social science aspects of the MRM curriculum.

Recommendation: Encourage COAS science-track students to avail themselves more widely of policy, economics and other social science aspects of the MRM curriculum.

1.6 Quality of Personnel and Adequacy to Achieve Mission and Goals

COAS has high quality faculty and high quality student applicants and enrollees. There are also post-doctoral scholars and researchers, as well as computing staff, contributing to the research and academic environment. The Student Program Office is now led by Associate Dean Duncan, from among the regular faculty ranks, and we perceive this as an important commitment to the graduate programs. COAS appears supported by a relatively small number of high quality staff.

The size of the COAS faculty seems appropriate. COAS faculty have thought carefully about faculty recruitment priorities and need for faculty renewal through new hires in a timely and ongoing manner. This is critical to sustain the COAS financial support model,

with graduate student and faculty support leveraged from the state base support with external funding. Faculty hiring is particularly needed to mitigate impending faculty retirements. There are specific needs in atmospheric sciences, where the faculty numbers may be below critical strength. Collaboratively identifying priorities and conducting searches between atmospheric sciences and the physical oceanography areas may help build strength. This is important to the recruitment and support of appropriate numbers of students in atmospheric sciences and other particular areas. The number of students overall is appropriate, but some areas appear to have fewer students than desired. Faculty hiring in targeted areas can help build disciplinary strength necessary for program visibility and impact and thus student recruitment and success.

Recommendation: OSU should support the COAS hiring plan, including the need for adequate start-up packages. COAS should revisit faculty hiring priorities as hiring proceeds. While it is tempting to say that MRM should direct future hires toward faculty who can extend its reach in ocean and coastal policy, given the highly leveraged nature of faculty appointments within COAS (with assistant professors, once established, expected to raise 70% of their salary) it is advisable for MRM to focus instead on faculty who can expand the scope of scientific work in areas that have direct policy implication. Current commitments to hire in the areas of climate change and coastal hazards and in marine and estuarine conservation biology thus seem good directions that will reinforce the existing successful model and continue to promote integration of MRM with ocean science.

The size of the student population also seems in correct scale to COAS. A vulnerability for the graduate program is the nearly complete dependence of student financial support on external funding raised by faculty for specific research programs. The Student Program Office is clearly active in trying to get more diverse support for students, including having adjusted the application deadline in order to make COAS applicants more competitive for OSU fellowships.

Recommendation: Continue to explore new avenues of student funding support.

COAS has learned to do a lot with relatively little, the result of having at its core a highly leveraged faculty in which individuals are expected to raise 60% or more of their annual salary on grants and contracts. The result seems to be a faculty that has learned to be highly resourceful and is very competitive in research funding. Although students complained about inconsistencies in the mentoring they received from faculty advisors, the professional staff hired to track student project and provide career-related advice is highly professional. The “flat” structure of the college produces great economies of scale, whereby one or two individuals provide services that are often duplicated in each program in compartmentalized colleges.

1.7 Level and Quality of Infrastructure

COAS has state-of-the art facilities for graduate education and research. COAS operates several analytical laboratories (Geochemistry Labs, Physics Labs, Biology/Biochemistry Labs, Geophysics Labs, other miscellaneous labs), field equipment, a rock and sediment core repository, and two research vessels, the RV Elakha and the RV Wecoma, which operate out of the COAS ship operations facility, located at the Hatfield Marine Science Center in Newport, OR. COAS can boast a state-of-the-art cooperative computing environment which supports all research and most educational efforts. The college has several massively parallel supercomputers, over 140 UNIX workstations, and over 200 PCs and Macs within the COAS network. This represents the largest oceanography supercomputing center in the U.S.

A serious problem raised by the graduate students interviewed is the access to the web and the overall COAS computer network infrastructure. Connectivity to the web through OSU_PUB, OSU’s public wireless network, is not guaranteed in many parts of COAS buildings (for computer security reasons) and, if present, it is spotty and unreliable. This represents a problem not only for graduate students but also for temporary visitors and visiting scholars who cannot access the web through their personal laptops. Other issues raised are the students’ difficulty some students have in securing IP addresses for

Ethernet access to the network (they have to be paid through grant support by the students' supervisors) and the lack of a reliable and efficient communication link between the Hatfield Marine Science Center and the COAS facilities in Corvallis. Finally, the COAS intranet is an underutilized resource for documentation and calendar notifications. The College should encourage the use of this infrastructure as well as increase the amount of useful information available on the intranet.

Recommendation: All COAS students need access to the internet from their desks. If for security reasons, access to OSU_PUB is not accessible for some students from some COAS buildings, these students must be provided with an IP address to access the internet and standard software via the COAS computer facility.

1.8 Level of Financial Support of Students

Most of the financial support of graduate students is from grants or from federally-funded fellowships. Compared to other graduate programs in oceanography around the country, COAS receives very little graduate student support from OSU. For example, the University of Rhode Island provides 15 fully funded, year-around graduate research and teaching graduate assistantships to an oceanography program approximately the same size as COAS. This is approximately 5X to 8X better university-provided support than what OSU provides to COAS.

The COAS administration and faculty are very interested in having the capability to offer Fellowships to first year students. Raising private funds for graduate fellowships takes a sustained and focused fund raising effort led by a professional fund raiser. Having a half-time development officer assigned to COAS is a high priority for the COAS administration, and the rationale for having such a person assigned to COAS certainly made sense to the Review Committee. The College uses TA's as supplemental recruitment tools, but students typically get no more than a single quarter of support. About 15 quarters of TA support are currently available, and the college is in the process of capturing an additional 7 quarters from central administration. Faculty and

administration both commented however that the ultimate solution to recruiting the best students is to have fellowship money available that doesn't lock students into a research project prematurely, as GRA support tends to do, and which leaves sufficient time for a student to develop a relationship with a faculty mentor and commitment to a particular research project.

Recommendation: OSU needs to re-assign a development officer to COAS to help raise funds for Fellowships and for other needs.

The Review Committee noted that COAS recently initiated a Research Experience for Undergraduates (REU) summer program. Other institutions have found REU programs to be an excellent source of graduate students. Furthermore, faculty are often more willing to provide GRA support for a first-year graduate student who is an alumni of the institution's REU program. Unlike many first-year graduate students, REU alumni are a known entity to their former host investigator and often come with the skills and interest they need to make an immediate contribution to a research group. Hence, they are often attractive to faculty who are normally reluctant to use GRA support on first year students. The cost of supporting a summer REU student is low compared to a graduate student, and private donors often are attracted by the possibility of providing undergraduate students with a research opportunity. Private funds could also be sought to expand the NSF-funded REU program with the goal of expanding the possibilities for GRA support of first year graduate students.

The graduate students mentioned problems with summer health insurance and referred to it as a "terrible situation." Students lose their university-subsidized health insurance if they cease to be supported by a GRA or GTA at any time, but commonly during the summer when many are supported by student wage appointments (in order to save tuition costs). They then must make alternate arrangements for health insurance, either purchasing a COBRA plan or electing another short-term health plan. COAS needs a clear statement for students and faculty about the options for summer support, implications for health coverage, and available remedies.

The current health care system at OSU for graduate students seems out of sync with the level of attention focused on graduate student benefits in many U.S. research universities. Our understanding is that the Graduate School is trying to remedy the current summer health care situation for graduate students, and the Review Committee believes that attention to this issue should be a high priority. Our experience is that health care is of increasing concern to graduate students, and the lack of a good health care plan may make it more difficult to attract and retain high quality students.

Recommendation: Resolve the graduate student health insurance issue, so that graduate students can receive uninterrupted coverage throughout the year, including for those who are not registered for coursework in the summer.

A significant reduction in the number of course credits required for the MRM degree, spearheaded by the new MRM director, has made MRM students more competitive for highly valued GRA awards than formerly, when most faculty perceived them to be too burdened with course work to function effectively as graduate researchers. This has also resulted in more MRM students following the thesis track to their degrees, a highly beneficial change that leaves graduates more competitive for jobs in the field. Because this change has also been coupled with a decision to hold MRM admissions to about 10 students per year, a number roughly in line with available research support, a higher percentage of MRM students are funded than formerly and the students who matriculate to MRM are better equipped to engage in science-based thesis research. Moreover, the thesis work that MRM students do seems better integrated with research themes that prevail in the college's science programs. A possible disadvantage is that there may be important regional policy arenas in which students don't work because the topical focus is not well aligned with the research COAS faculty do. MRM retains relationships with faculty and researchers elsewhere at OSU and at places like the South Slough National Estuarine Research Reserve. These individuals also provide students with research guidance; though it is possible that fewer students are availing themselves of opportunities to work in external marine resource management and policy organizations as a result of enhanced funding opportunities inside COAS.

1.9 Space

The fast growth of COAS over the last three decades has created shortages in office spaces, labs, and technical research space. Reallocation of underutilized space on campus has been the primary tool used by COAS to find the facilities. As a consequence, COAS is currently spread across five (not three) buildings: Burt Hall, Weniger Hall, Strand Hall, Western Avenue core repository and cruise staging, and the COAS Administration building. Space for student and faculty offices and labs has been allocated on the fifth floor of Weniger Hall. COAS students, faculty and administrators all mentioned additional space as a critical need, and in particular, the need for a building in which all members of the COAS faculty and students can be consolidated. This will likely require a new building, and the Review Committee understands that such a building would require private as well as public funds. Raising private funds for a new building is further justification for a Development Officer assigned to COAS.

The graduate students with whom we spoke want more input into space decisions and specifically mentioned co-locating student offices in central locations to improve student interactions. The Review Committee also recognizes that student office space near the student's laboratory is also a priority for many graduate students, and it is not always possible to have a central area for student offices that is close to all of their laboratory work spaces.

Recommendation: Long-term space requirements need to be addressed. Co-location of students and faculty advisors is a desirable thing. Moreover, central locations for students in every building would be a major addition to student interactions.

1.10 Quality of Organizational Support

Administrative model. The College currently operates with the leanest of administrative organizational models, with a full-time dean, one part-time associate dean for student programs (0.8 FTE), a director of special projects, and no department heads/chairs. While this model may be organizationally efficient and cost-effective, it was apparent from our conversations with faculty that many were not well informed as to current COAS initiatives or plans for new curricular development.

Recommendations: Strive to develop more open and regular lines of communication among COAS administration, faculty and graduate students.

With regard to student recruitment, the Office of Student Programs and the Graduate Admissions Committee have developed an impressive graduate student recruitment program and materials. Of particular note is the successful practice of funding the visits of the top 12 to 15 prospective graduate students to campus in March of each year for a 3-day Open House. Outcomes data reveal that between 33 to 50% of the participants in this annual weekend recruiting program matriculate into one of the College's graduate programs.

At the beginning of each academic year, the College sponsors a five-day "COAS New Student Orientation" that provides incoming students with a comprehensive overview of the academic programs, computing capabilities, and tours of the various COAS facilities, both in Corvallis and at the Hatfield Marine Science Center in Newport.

Computer labs. The College supports a series of computer laboratories available to students and faculty for data reduction and analysis, as well as the creation of presentation graphics. While the Burt Hall computer labs were impressively equipped, we did not observe any graduate students or faculty using these facilities during our tour. It is unclear the extent to which these labs are utilized, and our conversations with graduate students revealed some significant concerns regarding the lack of critical software programs and updates, as well as wireless access to the COAS computing network.

Database management. The operation of this world-class, centrally-located supercomputer network and research database housed in Burt Hall is overseen by a full-time computer systems manager. The technology observed at this data storage facility was state of the art, with the average lifespan of the servers and mainframe components in the 3 to 5 year range.

2. PRODUCTIVITY

Much of the material related to student performance, faculty performance and the viability of the scholarly community are covered in other sections. In general, the COAS students with whom we spoke believe they are getting an excellent education and were pleased that they chose this particular ocean science program. COAS graduates are visible on the faculty of other oceanographic institutions, in postdoctoral programs and in program management positions in Federal agencies. The COAS faculty are also well known nationally and internationally with many outstanding researchers among them. For example, the satellite ocean remote sensing group is generally considered the best among all U.S. institutions.

3. OUTCOMES

3.1 Professional Viability of Graduates

COAS graduates continue to professional positions in a variety of settings. It was harder to evaluate this for some aspects of the program (e.g., atmospheric sciences which has only a small number of students compared to other COAS components). The students recognized the value of the grant writing course required for marine geology and

geophysics students. The relatively limited number of teaching assistantships available to students limit their ability to gain experience and confidence in this role.

Several people commented that the College's ability to assist its graduates with professional placement is somewhat limited and should be strengthened. Two limitations mentioned were the lack of staffing in the COAS Dean's office to work on placement and the low level of attention accorded in the past to maintaining a strong alumni network. Although less than half of the alumni who responded to the COAS self-study survey indicated that they had been assisted by COAS faculty, staff or other alums in finding professional employment, this might be a glass half empty, glass half full situation. An inspection of information provided in the Self Study [Table K] suggests that students are finding excellent employment opportunities comparable to those of graduates elsewhere.

3.2 Satisfaction of Students and Graduates

Student discussions raised substantive issues about teaching quality and advising quality. Students and faculty differed in their perceptions of the role of teaching performance in promotion and tenure decisions. Faculty thought that teaching quality was important in professional advancement, especially for early advancement and in recruiting students. Students did not think that good teaching or advising were promoted or valued. Students seemed unaware of the "Peer Review of Teaching" committee and its role in faculty evaluation. Students suggested instituting a teaching award in COAS, and this seems a straightforward thing to do.

Students wanted faculty to be more aware of what is found in the student handbook, and they recommended the development of a "Handbook for Faculty" about teaching and advising. For advising issues, it might be useful to identify a graduate coordinator by discipline and to have an ombudsman for students to consult. Students particularly wanted faculty advisors to be aware of guidelines, best practices, and things to avoid. A concrete example was the concern over student health insurance in the summer and the

need for advisors to understand the implications of the choices they make about how to pay students in the summer.

Student exams include a discipline-based qualifying exam and a comprehensive exam (thesis proposal based, oral exam). Students expressed the most concerns about the disciplinary exam. The content seemed somewhat nebulous, and there were perceived difficulties of appropriate scheduling with enough advance notice, especially in some areas (e.g., MGG). This issue related back to the concerns about core course content and consistency from offering to offering. Students generally thought the comprehensive exam was fair, and that it tested students on something they need to do (their research).

We did not receive much information about the satisfaction of COAS graduates, so we did not evaluate this area. Both faculty and students identified a changing mix of career goals for graduate students (a widespread development), along with the need for providing better information to students about career pathways and preparation for them.

The Student Programs Office, Associate Dean Bob Duncan, and Robert Allan are all clearly dedicated, enthusiastic, and thoughtful in their dealings with the graduate programs and graduate students. Recent changes include annual tracking of students, career planning (including working with the OSU Career Office), the COAS Alumni Speaker Series, exit interviews with students, and working on recruitment strategies. These are valuable developments, with immediate and longer-range payoffs anticipated. Students expressed a desire that options other than seminars be used for conveying career information, feeling they were a bit overloaded with seminars.

Recommendation: Encourage COAS faculty, particularly new faculty, to take advantage of OSU programs to train faculty in teaching techniques. Research faculty tend to be out of touch with developments in pedagogy, yet graduate students have been exposed to new science teaching techniques (e.g. inquiry-based learning) as undergraduates.

Emphasize to students the importance of participating in the nomination process for the faculty teaching award (Pattullo Award) and the mentoring award (Dymond Award).

3.3 Rankings and Ratings

We fully expect COAS to remain among the top oceanographic programs in the ongoing NRC rankings. The faculty's success in obtaining large amounts of external funds, including virtually all graduate student support, is a direct indication of the high quality and persistent efforts of the faculty in the currently difficult funding climate.

Graduate Program Review Process

Graduate Council
Oregon State University

INTRODUCTION

It is the policy of Oregon State University to conduct regular reviews of graduate level academic programs. Various types of reviews are conducted at the university, including reviews at the time new programs are proposed, professional licensing and/or accreditation reviews, and research program reviews. In addition, the Oregon University System (OUS) requires reviews of new programs within their first several years of operation. Graduate Council Program Reviews are institution initiated and they are evaluative. Importantly, they provide an opportunity for programs to reflect on the nature of their graduate instruction and develop approaches to enhancing program quality.

A Graduate Council Program Review provides a mechanism for constructive change. It provides the program an opportunity to review, to evaluate, and to plan in a deliberative and collegial setting. Program reviews can assist in evaluating alignment of the program with institutional and college missions, goals, and strategic directions; alignment with national trends; adequacy of resources; quality of the learning environment and the extent to which learning outcomes are achieved; areas where OSU can further develop its strengths in graduate education; and potential areas for collaborative & interdisciplinary projects for the ultimate purpose of improving the quality of graduate programs.

The Graduate Council Program Review process encourages programs to reflect on and answer the following questions²:

- Who are you?
- What do you do? Why do you do it?
- How well do you do it and who thinks so?
- What difference does it make whether you do it or not? How do you know?
- Do your students, faculty, university, or disciplinary trends demand that you do something different?
- What strategies do you use to enhance diversity within your program?
- How do you intend to evolve into the future, given where you are now?
- How will you evaluate your progress and success?

Review Criteria Graduate Council Program Reviews are evaluative in nature. As such, Program Reviews assess the following three components within the context of the alignment of the mission and goals of the program to the mission and goals of the academic college(s) and the University mission:

1. Inputs—the adequacy of the total resources entering into or supporting the program.
2. Productivity—the level of program performance including the breadth and depth of its capacity to fulfill its mission and goals.

² From Michigan State University

3. Outcomes—the quality of the outcomes that result from the existence of the program. The review criteria include: a) quality of inputs, b) level of productivity, and c) quality of outcomes. Input assessment refers to the reporting and evaluation of program inputs or resources including context, students, selectivity, curriculum, financial support, personnel, facilities, diversity and organizational support. Analysis of productivity includes both student and faculty performance metrics including student and faculty honors and awards, student and faculty scholarly productivity, student persistence/attrition, curricular productivity, and it refers to the level of performance attained relative to the mission and goals of the program. Outcomes assessment refers to the evaluation of the quality of the outcomes or impacts that result from offering the program including the professional viability of graduates, their satisfaction, and national rankings. **Data relative to the three review criteria should be collected and maintained on a continuous basis by the unit.**

The results of a Graduate Council Program Review are the formal written report of the Review Panel and an action plan developed by the program that will guide the improvement of the program. The outcome expected is quality enhancement.

Graduate program reviews are conducted on a decennial schedule. Supplemental Interim Reviews may be conducted as requested by the unit, by the college dean, or as deemed appropriate by the Dean of the Graduate School or the Graduate Council.

The following is a snapshot of the review process.

- Program director (or department chair if appropriate) and college dean are notified of scheduled reviews five years in advance and annually thereafter.
- Program director begins preparation of a self-study document.
- Review Panel members are appointed by the Dean of the Graduate School
- The site visit date is established.
- Copies of the self-study document are submitted to the Dean of the Graduate School two weeks in advance of the site visit date.
- The self-study is distributed by the Graduate School to Review Panel members.
- The Review Panel and Dean of the Graduate School review the site visit agenda, the self-study, and areas of focus for the site visit interviews the evening prior to the date of the site visit.
- A day-long site visit with administrators, faculty, graduate students, and staff involved with the program is conducted.
- The Review Panel submits first draft of written report within three weeks of the site visit.
- The review report is formally accepted by the Graduate Council.
- The review report is forwarded to the Provost.
- The program director prepares an action plan that addresses the recommendations in the review report.
- The review report and the action plan are discussed by the Provost, Graduate Dean, program director, college dean(s), and representative of the Graduate Council.
- The outcome of the review process is communicated by the Graduate Dean to the members of the Review Panel.
- A follow-up review by the Graduate Council is typically conducted after three years to assure implementation of the action plan approved by the Provost.

The purpose of this document is to guide both the programs being reviewed and the reviewers in the successful conduct of valuable reviews that lead to the enhancement of program quality.

Guidelines for Graduate Council Program Reviews: Information for *Programs*

General Overview The Graduate School has responsibility for the quality of graduate programs at Oregon State University. Following a standard format, intensive reviews of graduate programs are conducted through the Graduate Council. Graduate Council Intensive Program Reviews involve the preparation of a full self-study, a one day site visit by a panel of reviewers, and the approval of a formal report by the Graduate Council.

Timing of Reviews Graduate Council Intensive Program Reviews are conducted on a 10-year cycle or more frequently as appropriate. The Dean of the Graduate School is responsible for scheduling program reviews. A 5-year schedule of the proposed timing of program reviews is distributed to the relevant program directors and academic college deans five years in advance and annually thereafter. Requests for changes to this schedule may be directed to the Dean of the Graduate School. Tentative specific timelines are agreed upon in coordination with the program, the Graduate Council, the prospective reviewers, Graduate School staff, and in coordination with other reviews that may coincide with the Graduate Council Intensive Program Reviews ~~such as Undergraduate Academic Program Reviews (UAPR) conducted by the Curriculum Council or Cooperative States Research, Education, and Extension Service (CSREES) reviews.~~

Postponement Programs may request a postponement of a scheduled Intensive Program Review by presenting a compelling case to the Graduate School for the Dean's review and approval. If approved, postponement is normally granted for one year only.

Self-Study Document The primary benefit of the program review process lies in the opportunity for self-analysis and the use of this analysis along with the report of the Review Panel in subsequent program enhancement. Thus, a major component of the program review process is the process involved in the preparation of a self-study document which serves as the primary source of information for the Review Panel. The program director (or department chair if appropriate) is responsible for guiding the preparation of the self-study and assembling data and materials pertinent to the review. The self-study document should be prepared in close collaboration with the faculty, students, staff, and leadership of the program unit. The program director is responsible for insuring that all graduate faculty members have an opportunity to participate in the development of the self-study or have an opportunity to review the final document.

The self-study should include thorough narrative and tabular descriptions of the program and a thorough self assessment of program strengths, weaknesses, needs, and opportunities for each section. Each section must be prefaced with a narrative description and interpretation of the data

Inserted: ¶
¶

Inserted: such as the Curriculum Council's Undergraduate Academic Program Reviews (UAPR). The Graduate Council does *not* generally recommend that a Graduate Council Intensive Program Review be held in conjunction with a Cooperative States Research, Education, and Extension Service (CSREES) review. Units considering coordinating CSREES and Graduate Council program reviews should consult the Dean of the Graduate School.

Formatted: Font: 12 pt, Not Bold, Font color: Auto

Inserted: The Graduate Council will review the self-study document and may elect to cancel or postpone the Graduate Program Review if the document is not received by the agreed deadline and/or if the document lacks essential content.

and should include, if available, comparison to national and/or peer institution statistics. It is critical to interpret the data for the Review Panel members so that they can understand what is leading to the program's self-recommendations.

An outline of the contents of the self-study document is presented in Appendix I. Model tables for presenting data to be included in the self-study are also provided as appendices. Additional data or materials may be included to provide a thorough representation of the program under review. Examples of effective self-study documents are available for review in the Graduate School.

The self-study should begin by presenting the review context. The mission statement of the program should be stated and its relationship to the mission of the college and the University should be presented. The major short and long term goals of the program should be presented as well as the program's strategic plan and diversity plan. Issues that are confronting the program should be described as well as points of pride.

The self-study should present complete and accurate data on inputs, productivity, and outcomes as well as narrative interpretation of these data in answering the questions on page 1 of this document. The program will conduct two surveys prior to the site visit: 1) survey of current graduate students and 2) survey of graduate alumni. Additionally, the Graduate School will provide the program with results from its annual exit survey of degree recipients. To ensure respondent confidentiality, do not include original questionnaires in the self-study or appendices. These data should be tabulated and interpreted in the narrative of the self-study.

Nine (9) copies of the self-study must be delivered to the Graduate School two weeks in advance of the scheduled site visit date. The program also should provide the college dean(s), graduate faculty, students, and others, as appropriate, with a copy of the self-study or access to a copy. Additional copies (minimum 4) may be needed if an Undergraduate Academic Program Review or other review is being conducted concurrently with the Graduate Council Program Review. It is the responsibility of the program director to determine any needs and requirements of other review agencies. Contact the Office of Academic Programs for information about Undergraduate Academic Program Reviews (UAPR).

The Review Panel The Review Panel is appointed by the Dean of the Graduate School. The Graduate Dean works with the program director to identify external panelists, and with the chair of the Graduate Council to assign Graduate Council panelists. The Review Panel is composed of one member of the Graduate Council, two additional members of the OSU Graduate Faculty, at least one external academic disciplinary peer, and at least one prospective employer of degree recipients. Additional external panelists may be desirable. Usually, the external academic disciplinary peer member of the Review Panel is designated to chair the Panel. The Dean and Associate Dean of the Graduate School accompany the Review Panel during the site visit to assist in the review.

To form the Panel, the Graduate Dean solicits nominations of external reviewers from the program director. Nominations of external reviewers must include each nominee's complete name, title, address, telephone number, email address, and URL of the individual's academic

department or corporation. The nominees should include a minimum of three academic peers and a minimum of three prospective employers, listed separately. It may be appropriate for some programs to submit the names of people in academia as prospective employers because most of the graduates of their programs find employment as faculty members in academia.

Generally *not* considered for appointment to the Review Panel are former mentors or close personal friends of OSU faculty members, former OSU students, former OSU employees, individuals who have applied or are likely to apply for a position at OSU, or individuals from institutions substantially different in character from OSU who would be less likely to understand local circumstances. The Graduate Dean may consult with the academic dean regarding the selection of reviewers from among those nominated. The credibility of the review will be enhanced by identifying thoughtful, experienced, knowledgeable, and objective external reviewers.

The external disciplinary peer reviewer should be a highly knowledgeable academician and recognized leader in the field under review. Academic peer reviewers should understand university operations and graduate education and have the ability to realistically evaluate the program's strengths and weaknesses relative to similar programs at comparable institutions, the program's operations, plans for growth and development, and the professional activities of faculty members.

The external employer panelist should also be a highly knowledgeable and reputable leader in his/her field and should have a high degree of familiarity with the current and future needs for advanced degree employees in the field, be very knowledgeable about industry trends, and be familiar with graduates of the program and of similar programs.

~~When~~ a graduate program review ~~coincides~~ with an external review, such as a Cooperative States Research, Education, and Extension Service (CSREES) or accreditation review, the Graduate Dean may elect to appoint an external disciplinary peer member of the external review panel to the internal review panel. Thus, there is an external disciplinary peer member who serves in common on both reviews. Similarly, one of the internal graduate faculty Review Panel members ~~may~~ participate in the external review.

Expenses of the external reviewers, including travel, lodging, meals, any honorarium, and all other costs associated with the conduct of the review are the responsibility of the unit whose program is being reviewed. In some colleges, these costs are managed centrally in the dean's office. Travel, lodging, meals & refreshments, and meeting room arrangements are made by the program.

The Dean of the Graduate School appoints the remaining internal members of the Review Panel. Internal members of the Panel should be from colleges other than that of the program under review. Whereas internal Panel members may vary in their familiarity with the subject matter of the program, all should be well versed in the practice of graduate education.

Site Visit Following review of the self-study report the Review Panel will conduct a site visit of the program. The site visit is typically one day in length, but may be extended if deemed

Inserted: If The Graduate Dean has approved conducting

Formatted: Font: (Default) Times New Roman, 12 pt

Formatted: Font: (Default) Times New Roman, 12 pt

Inserted: be invited to

Formatted: Font: (Default) Times New Roman, 12 pt, Font color: Auto

desirable by the Panel or program or if another review is involved. The schedule and agenda of the site visit will be developed by the Graduate School in consultation with the director of the program being reviewed. Arrangements for scheduling participants and for locating space are the responsibility of the program in consultation with the Graduate School.

The visit includes interviews with the college dean(s), the program director, faculty, staff, graduate students, and others as appropriate. The program director does not participate in the separate interviews other than his/her own session with the Review Panel. Confidentiality must be maintained in all discussions. It is helpful to schedule time with students early in the day so that the Panel can further examine any issues or concerns that may be raised by students over the course of the day's agenda. Additional materials may be requested by the Panel and reviewed at this time if appropriate. Time should also be arranged for any faculty or staff member or graduate student who wishes to have a private meeting with the Review Panel. The Panel usually observes the research and instructional facilities of the program.

The opportunity should be extended for additional feedback to the Panel after the site visit, to allow input from faculty and students who may not be present at the site visit or who may have follow-up comments. This data should be delivered to the Panel Chair no later than one week after the site visit.

At the conclusion of the site visit the Panel, in executive session, reviews its findings and discusses its sense of the review. This is a particularly important opportunity to capture the observations of the external reviewer(s). Following this discussion the Panel should agree upon format, content, and assignments for preparing various components of its formal report.

In addition, the college dean and/or the Dean of the Graduate School may wish to confer with the external reviewer prior to his or her departure.

The following is an outline of a typical site visit.

DAY ONE

6:00 - 8:30 pm Pre-review dinner with Graduate Dean and Review Panel

DAY TWO

8:00 - 8:45 am Program Director

8:45 - 9:30 am College Dean(s)

9:30 -10:15 am Program committee(s) (e.g., admission committee, graduate committee)

10:15 -10:30 am Break

10:30 -12:00 pm Graduate students

12:00 -1:00 pm Working lunch for Review Panel

1:00 - 1:45 pm Facilities tour

1:45 - 2:45 pm Program faculty

2:45 - 3:00 pm Break

3:00 - 3:30 pm Program committee(s), faculty, graduate coordinator, staff, as appropriate

3:30 - 4:00 pm Program Director

4:00 - 5:00 pm Executive session

Review Panel Report Based on the site visit and analysis of the materials presented in the self-study document, the Review Panel prepares a formal report of its findings (see Appendix II) within three weeks of the site visit. The report provides both evaluation and constructive recommendations and it is important to note that the final document will be public record. The report should address the quality, vitality, and direction of the program and the extent to which the program is achieving its stated mission and goals. It should also analyze and evaluate inputs, productivity, and outcomes by assessing specific indicators such as the quality of the students applying to and entering the program, the instructional and scholarly productivity of the faculty, the program's commitment to diversity, the placement of graduates of the program, and the continued relevance of the graduate program.

The report should contain recommendations concerning the future of the program including its structure and scope of activities. These recommendations could range from a recommendation to discontinue a program to a recommendation to greatly expand its scope. A recommendation might be to change the direction, structure, or activities of the graduate program in order to improve its quality, increase its effectiveness, or to utilize the University's resources more efficiently.

The initial draft is submitted by the Panel Chair to the Dean of the Graduate School. The Dean of the Graduate School will submit the draft report to the program director for review of errors in factual content. Corrections of fact suggested by the program director are submitted to the Graduate Dean who forwards them to the chair of the Review Panel. After factual information has been confirmed the final report is submitted by the Review Panel Chair simultaneously to the Dean of the Graduate School and to the program director. It is the responsibility of the director to provide a copy of the report to the college dean(s) and others as appropriate.

Consideration of the Review Panel Report The chair of the Graduate Council will arrange for the report to be presented at a regular meeting of the Graduate Council where it is formally considered. The program director and academic college dean(s) will be invited to the Graduate Council meeting to comment on the report. The Council may accept the report as distributed, accept the report with revisions, or send the report back to the Review Panel for further work prior to final action. After the Graduate Council has accepted the report, the report is forwarded by the Graduate Dean to the Provost.

Action Plan An action plan should be prepared by the program director specifying timely, positive measures to address each of the Review Panel's recommendations to improve program quality. The Provost, the Graduate Dean, the academic college dean(s), a representative of the Graduate Council, and the program director meet to review and accept the action plan. The agenda for the meeting with the Provost includes a brief presentation of major recommendations by the Graduate Council representative, brief comments by the program director, brief comments by the college dean(s), followed by full discussion of the proposed action plan with the Provost. The meeting is scheduled for one hour. At the conclusion of the meeting, the Provost signs off on the action plan, specifying any additional issues to be addressed and actions to be taken. At an agreed upon date, typically three years later, the Graduate Council will conduct a follow-up review to determine if the planned actions have been implemented (see "Follow-up" section below).

Follow-up Annually, the Graduate Council appoints committees whose charge is to re-examine recent Graduate Council Intensive Program Reviews and the action plans that resulted, and determine from the responsible parties if the planned actions have been implemented. Reports of these follow-up reviews are shared with the Graduate Dean, who forwards copies to the program director, academic dean(s) and Provost. Follow-up review reports are approved by the Graduate Council. Outcomes of the follow-up review could range from a conclusion that the action plan was appropriate and its implementation is well under way to a recommendation that insufficient progress has been made and a need exists for further conversation among the program leader, college dean(s), Graduate Dean, and the Provost regarding the future of the program.

Program Checklist

FIVE YEARS IN ADVANCE OF THE REVIEW

- ☐ Program first notified of the academic year of the review.
- ☐ Program begins collecting data needed for completion of self-study (see appendices).
- ☐ Program attends Annual Graduate Council Program Review Workshop presented by The Graduate School.

SIX MONTHS TO ONE YEAR IN ADVANCE OF THE REVIEW

- ☐ Faculty in charge of writing self-study meet with Graduate Dean for guidance in preparing the self-study.
- ☐ Program conducts two surveys (see Appendices):
 - ____ survey of current graduate students
 - ____ survey of graduate alumni
- ☐ Graduate Dean provides program with data from its annual exit survey of degree recipients.

ONE TO TWO TERMS IN ADVANCE OF THE REVIEW

- ☐ Program nominates external reviewers (3 academic peers/3 prospective employers) and forwards names and contact information to Graduate Dean, including:
 - ____ complete name
 - ____ title
 - ____ address
 - ____ telephone number(s)
 - ____ email address
 - ____ URL
- ☐ Program forwards site visit “black-out” dates (and preferred dates) to Graduate Dean.
- ☐ Graduate Dean establishes date of site visit.
- ☐ Program arranges external reviewers’ travel, lodging, and for payment of any honorarium, as necessary.
- ☐ Program works with Graduate Dean to establish site visit agenda.
- ☐ Program is responsible for scheduling site visit participants³, facility tours, locating space for the meetings, and for arranging meals and refreshments for the site visit.

TWO WEEKS IN ADVANCE OF THE SITE VISIT

- ☐ *The program director (or department chair if appropriate) must sign off on the self-study cover sheet indicating that the program’s graduate faculty had the opportunity to participate in the document’s development or had an opportunity to review the final document.*

³ Program Chair, faculty, staff, graduate students, others as appropriate.

- ☐ Program forwards 9 (nine) copies⁴ of self-study to Graduate Dean who forwards them on to the Review Panel members.
- ☐ Program forwards copies of self-study to the college dean(s), program faculty, and others as appropriate.

THE DAY OF THE SITE VISIT

- ☐ Program participates in site visit and is on call to provide any additional information, attend to last-minute needs, etc.

THREE WEEKS AFTER THE SITE VISIT

- ☐ Initial draft of the Review Panel's report is forwarded to program by Graduate Dean.
 - ☐ *Program responds to Graduate Dean with any corrections in factual content within one week.*

UPON COMPLETION OF REPORT

- ☐ Program receives Final Report from the Review Panel Chair.
- ☐ Program forwards copy of report to the College Dean(s) and others as appropriate.
- ☐ Graduate Dean submits report to the members of the Graduate Council for a 2-week review period.
- ☐ Report placed on the Graduate Council agenda.
- ☐ Report approved by Graduate Council.
- ☐ Graduate Dean forwards approved report to the Provost.
- ☐ Program begins preparing an action plan in response to the recommendations made in the final report.
- ☐ Graduate Dean schedules the date of the "Provost's Meeting" to discuss the report and to review the program's action plan.
 - ☐ *Program must forward the completed action plan to the Graduate Dean at least one week prior to Provost's Meeting.*
- ☐ Program Director attends the "Provost's Meeting" along with the Provost, Graduate Dean, College Dean(s), and a representative of the Graduate Council to review and accept the action plan.

THREE YEARS AFTER THE REVIEW

- ☐ Graduate Council conducts a follow-up review to determine progress toward implementation of planned actions.

⁴ Additional copies (+4) needed if undergraduate program review held concurrently.

Guidelines for Graduate Council Program Reviews: Information for Reviewers

General Overview The Graduate School has responsibility for the quality of graduate programs at Oregon State University. Following a standard format, Intensive reviews of graduate programs are conducted through the Graduate Council. Graduate Council Intensive Program Reviews involve the preparation of a full self-study, a one day site visit by a panel of reviewers, and the approval of a formal report by the Graduate Council. The purpose of the review is to identify positive suggestions for enhancing the quality of graduate programs at Oregon State University.

Self-Study Document The primary benefit of the program review process lies in the opportunity for self-analysis and the use of this analysis along with the report of the Review Panel in subsequent program enhancement. Thus, a major component of the Program Review process is the process involved in the preparation of a self-study document which serves as the primary source of information for the Review Panel. The program director (or department chair if appropriate) is responsible for guiding the preparation of the self-study and assembling data and materials pertinent to the review. The self-study document should be prepared in close collaboration with the faculty, students, staff, and leadership of the program unit. The program director is responsible for insuring that all graduate faculty members have an opportunity to participate in the development of the self-study or have an opportunity to review the final document.

The Review Panel The Review Panel is appointed by the Dean of the Graduate School. The Graduate Dean works with the program director to identify external panelists, and with the chair of the Graduate Council to assign Graduate Council panelists. The Review Panel is composed of one member of the Graduate Council, two additional members of the OSU Graduate Faculty, at least one external academic disciplinary peer, and at least one prospective employer of degree recipients. Additional external panelists may be desirable. Usually, the external academic disciplinary peer member of the Review Panel is designated to chair the Panel. The Dean and Associate Dean of the Graduate School accompany the Review Panel during the site visit to observe and participate in the review.

To form the Panel, the Graduate Dean solicits nominations of external reviewers from the program director. The nominees should include a minimum of three academic peers and a minimum of three prospective employers. It may be appropriate for some programs to submit the names of people in academia as prospective employers because most of the graduates of their programs find employment as faculty members in academia.

Generally *not* considered for appointment to the Review Panel are former mentors or close personal friends of OSU faculty members, former OSU students, former OSU employees, individuals who have applied or are likely to apply for a position at OSU, or individuals from institutions substantially different in character from OSU who will be less likely to understand local circumstances. The Graduate Dean may consult with the academic dean regarding the selection of reviewers from among those nominated. The credibility of the review will be

enhanced by identifying thoughtful, experienced, knowledgeable, and objective external reviewers.

The external disciplinary peer reviewer should be a highly knowledgeable academician and recognized leader in the field under review. Academic peer reviewers should understand university operations and graduate education and have the ability to realistically evaluate the program's strengths and weaknesses relative to similar programs at comparable institutions, the program's operations, plans for growth and development, and the professional activities of faculty members.

The external employer panelist should also be a highly knowledgeable and reputable leader in his/her field and should have a high degree of familiarity with the current and future needs for advanced degree employees in the field, be very knowledgeable about industry trends, and be familiar with graduates of the program and of similar programs.

When a graduate program review coincides with an external review, such as a Cooperative States Research, Education, and Extension Service (CSREES) or accreditation review, the Graduate Dean may elect to appoint an external disciplinary peer member of the external review panel to the internal review panel. Thus, there is an external disciplinary peer member who serves in common on both reviews. Similarly, one of the internal graduate faculty Review Panel members may participate in the external review.

Expenses of the external reviewers, including travel, lodging, meals, any honorarium, and all other costs associated with the conduct of the review are the responsibility of the unit whose program is being reviewed.

The Dean of the Graduate School appoints the remaining internal members of the Review Panel. Internal members of the Panel should be from colleges other than that of the program under review. Whereas internal Panel members may vary in their familiarity with the subject matter of the program, all should be well versed in the practice of graduate education.

Pre-review Dinner The Graduate Dean will meet with the Review Panel over a working dinner the evening prior to the site visit. The self-study document will be reviewed, and the Dean will advise the Panel on review procedures. Significant issues to be examined during the site visit will be identified. During this meeting, the agenda of the on-site visit will be reviewed, and individual Panel members will be assigned responsibility for specific topics of inquiry and for preparation of sections of the written report. If the college dean has requested of the Dean of the Graduate School that attention be given to specific aspects of the program, that information will be presented for incorporation.

Site Visit Following review of the self-study the Review Panel will conduct a site visit of the program. The site visit is typically one day in length, but may be extended if deemed desirable by the Panel or program or if another review is involved. The schedule and agenda of the site visit will be developed by the Graduate School in consultation with the director of the program being reviewed.

The visit includes interviews with the college dean(s), the program director, faculty, staff, graduate students, and others as appropriate. The program director does not participate in the separate interviews other than his or her own session with the Review Panel. Confidentiality must be maintained in all discussions. It is helpful to schedule time with students early in the day so that the Panel can further examine any issues or concerns that may be raised by students over the course of the day's agenda. Additional materials may be requested by the Panel and reviewed at this time if appropriate. Time should also be arranged for any faculty or staff member or graduate student who wishes to have a private meeting with the Review Panel. The Panel usually observes the research and instructional facilities of the program.

The opportunity should be extended for additional feedback to the Panel after the site visit, to allow input from faculty and students who may not be present at the site visit or who may have follow-up comments. This data should be delivered to the Panel Chair no later than one week after the site visit.

At the conclusion of the site visit the Panel, in executive session, reviews its findings and discusses its sense of the review. This is a particularly important opportunity to capture the observations of the external reviewer(s). Following this discussion the Panel should agree upon format, content, and assignments for preparing various components of its formal report.

In addition, the college dean and/or the Dean of the Graduate School may wish to confer with the external reviewer prior to his or her departure.

The following is an outline of a typical site visit.

DAY ONE

6:00 - 8:30 pm Pre-review dinner with Graduate Dean and Review Panel

DAY TWO

8:00 - 8:45 am Program Director

8:45 - 9:30 am College Dean(s)

9:30 -10:15 am Program committee(s) (e.g., admission committee, graduate committee)

10:15 -10:30 am Break

10:30 -12:00 pm Graduate students

12:00 -1:00 pm Working lunch for Review Panel

1:00 - 1:45 pm Facilities tour

1:45 - 2:45 pm Program faculty

2:45 - 3:00 pm Break

3:00 - 3:30 pm Program committee(s), faculty, graduate coordinator, staff, as appropriate

3:30 - 4:00 pm Program Director

4:00 - 5:00 pm Executive session

Review Panel Report Based on the site visit and analysis of the materials presented in the self-study document, the Review Panel prepares a formal report of its findings (see Appendix II) within three weeks of the site visit. The report provides both evaluation and constructive recommendations. The report should address the quality, vitality, and direction of the program and the extent to which the program is achieving its stated mission and goals. It should also

analyze and evaluate inputs, productivity, and outcomes by assessing specific indicators such as the quality of the students applying to and entering the program, the instructional and scholarly productivity of the faculty, the program's commitment to diversity, the placement of graduates of the program, and the continued relevance of the graduate program. It is essential that all Panel members agree upon the structure and nature of the report, and the responsibility for preparation of each section. The preparation of the draft and final version of the report are the responsibility of the Panel Chair.

The report should contain recommendations concerning the future of the program including its structure and scope of activities. These recommendations could range from a recommendation to discontinue a program to a recommendation to greatly expand its scope. A recommendation might be to change the direction, structure, or activities of the graduate program in order to improve its quality, increase its effectiveness, or to utilize the University's resources more efficiently.

The initial draft is submitted by the Panel Chair to the Dean of the Graduate School. The Dean of the Graduate School will submit the draft report to the program director for review of errors in factual content. Corrections of fact suggested by the program director are submitted to the Graduate Dean who forwards them to the chair of the Review Panel. **After factual information has been confirmed the final report is submitted by the Review Panel Chair simultaneously to the Dean of the Graduate School and to the program director.**

Consideration of the Review Panel Report The chair of the Graduate Council will arrange for the report to be presented at a regular meeting of the Graduate Council where it is formally considered. The program director and academic college dean(s) will be invited to the Graduate Council meeting to comment on the report. The Council may accept the report as distributed, accept the report with revisions, or send the report back to the Review Panel for further work prior to final action. After the Graduate Council has accepted the report, the report is forwarded by the Graduate Dean to the Provost.

Action Plan An action plan should be prepared by the program director specifying timely, positive measures to address each of the Review Panel's recommendations to improve program quality. The Provost, the Graduate Dean, the college dean(s), a representative of the Graduate Council, and the program director meet to review and accept the action plan. The agenda for the meeting with the Provost includes a brief presentation of major recommendations by the Graduate Council representative, brief comments by the program director, brief comments by the college dean(s), followed by full discussion of the proposed action plan with the Provost. The meeting is scheduled for one hour. At the conclusion of the meeting, the Provost signs off on the action plan, specifying any additional issues to be addressed and actions to be taken. At an agreed upon date, typically three years later, the Graduate Council will conduct a follow-up review to determine if the planned actions have been implemented.

Review Panel Member Checklist

AT LEAST ONE TERM IN ADVANCE OF THE REVIEW

- ☐ Reviewer is nominated and appointed to the Review Panel.
- ☐ Graduate Dean establishes date of site visit, in consultation with the Review Panel members and the Program.
- ☐ External Panel members are contacted by Program for travel and lodging arrangements.

ONE WEEK IN ADVANCE OF THE SITE VISIT

- ☐ Panel members receive copy of Program self-study from Graduate Dean.

THE NIGHT PRIOR TO THE SITE VISIT

- ☐ Review Panel members meet with Graduate Dean over a working dinner.

THE DAY OF THE SITE VISIT

- ☐ Panel members participate in site visit.
- ☐ Review Panel meets in executive session to review its findings and agree upon format, content, and assignments for preparing the various components of its formal report. Date for delivery of report to Graduate Dean also determined.

WITHIN THREE WEEKS OF THE SITE VISIT

- ☐ Review Panel Chair submits an initial draft of the Panel Report (see Appendix II) to the Graduate Dean who forwards it to the program for review of errors of factual content.
- ☐ Review Panel Chair makes any needed corrections and submits the Final Report to the Graduate Dean and the program simultaneously.
 - ☐ *Panel Chair must sign off on the Final Report cover sheet, indicating that the document received full Panel agreement. Cover sheet should also indicate overall Panel recommendation.⁵*

UPON COMPLETION OF REPORT

- ☐ Graduate Dean submits report to the members of the Graduate Council for a 2-week review period.
- ☐ Report placed on the Graduate Council agenda.
- ☐ Report approved by Graduate Council.
- ☐ Graduate Dean forwards approved report to the Provost.
- ☐ Graduate Dean schedules the date of the "Provost's Meeting" to review the Program Action Plan.

⁵ Overall Recommendations: expand, maintain, restructure, reduce, suspend, discontinue, other...

- ☐ The Graduate Council representative receives copy of Program Action Plan at least one week prior to Provost's Meeting.
- ☐ The Graduate Council representative attends the "Provost's Meeting" along with the Provost, Graduate Dean, College Dean(s), and Program Director to review and accept the Action Plan.

THREE YEARS AFTER THE REVIEW

- ☐ Graduate Council conducts a follow-up review to determine progress toward implementation of planned actions.

Appendix I OUTLINE FOR THE SELF-STUDY DOCUMENT

The following outline indicates the content that is essential to the self-study. Additional information is appropriate if it will enhance the effectiveness of the presentation of the quality of the graduate program. Materials that do not relate to the objectives of the program review process should not be included. **The document should not contain information on employees or students that is considered confidential or restricted.** The document should be tabbed into appropriate sections to aid the Review Panel in locating information.

| THE SELF-STUDY | | |
|---|-----------------------------|---|
| PRE-TEXT PAGES | | |
| | Cover page | List name of graduate degree program to be reviewed. List all participating departments. |
| | Table of Contents | |
| | Sign-off sheet | Include signature of program director (or department chair if appropriate) indicating that all graduate faculty members had an opportunity to participate in the development of the self-study or had an opportunity to review the final document. |
| INTRODUCTION AND CONTEXT | | |
| This section should answer the question, “ <i>Why do you offer the program?</i> ” | | |
| | Brief history of program | Provide a brief background or history of the program to establish the review context. |
| | Mission statement | Explain how the program mission relates to the college and university missions. Indicate the unique role of the program within Oregon and beyond. |
| | Goals | List major long and short-term goals of the program. Include current strategic plan and diversity plan as appendices. |
| | Current challenges/issues | List issues that are confronting the program. |
| | Review goals | Identify the questions the program faculty hopes to have answered as a result of the program review. |
| | | |
| PROGRAM DESCRIPTION | | |
| This section should answer the question, “ <i>What do you do?</i> ” | | |
| | Characteristics of students | <ul style="list-style-type: none"> • Entering GPA of admitted & matriculated students (Model Table A) • GRE scores or other scores (e.g. GMAT) and comparison to national statistics (Model Table A) if available • TOEFL scores (Model Table A) • Honors/awards received by applicants & current students (Model Table F) • Number of students by degree sought, gender, ethnicity, residency (Model Table B) |
| | Admissions selectivity | <ul style="list-style-type: none"> • Applicant/matriculation ratio as per Model Table A • Program admissions criteria • Diversity recruitment strategies • Program admissions process/procedures • Include recruiting material as an appendix |

| | | |
|--|------------------------|---|
| | Financial support | <ul style="list-style-type: none"> Fellowships & scholarships awarded and selection process (Model Table C) Assistantships awarded (Model Table C), selection process, comparison to national statistics Proportion of students supported |
| | Curriculum | <ul style="list-style-type: none"> Include 1 copy of all graduate course syllabi in a separate binder to be delivered along with self-study document Learning outcomes for each graduate course Graduate course list (Model Table D) % graduate only & differentiation criteria within slash courses Core requirements (if any) Rankings (if any) Graduate seminar syllabus (past 3 years) Opportunities for internships, practica, etc. Graduate distance & continuing education activities Policy/procedures regarding academic & research integrity Include graduate student handbook as an appendix to the self-study document |
| | Personnel | <ul style="list-style-type: none"> Graduate faculty FTE (Model Table E) Graduate faculty to graduate student ratio as per Model Table E Distribution of graduate activities among faculty members (Model Table E) Support staffing |
| | Facilities and budget | <ul style="list-style-type: none"> Library resources Research and instructional facilities and equipment Faculty and student office space Financial resources available to support the program |
| | Organizational support | Include organizational chart. |
| PRODUCTIVITY | | |
| This section should answer the question, “How well do you do what you do?” | | |
| | Student Performance | <ul style="list-style-type: none"> Student honors & awards at OSU (Model Table F) Scholarly presentations, publications, exhibits, performances, etc. Identify major professors and/or committee members in bold/caps Grants and contracts Time to degree and attrition data (Model Table G) |
| | Faculty performance | <ul style="list-style-type: none"> Include 1 copy of faculty vitae in a separate binder to be delivered along with the self-study document Faculty honors & awards Scholarly presentations, publications, exhibits, performances, citations, invited talks, etc. Identify graduate student co-authors in bold/caps Grants and contracts Graduate student advising and thesis load per faculty member (Model Table E) Professional service and leadership |
| | | |

OUTCOMES

This section should answer the question, “*What difference does it make whether you do what you do or not? How do you know?*”

| | | |
|--|-------------------------------------|---|
| | Professional viability of graduates | <ul style="list-style-type: none"> • Theses/dissertations (Model Table H) • % employed at time of degree (Model Table I) • % positions directly related to degree • Types of positions, employment sectors • % who pass licensure/certification/professional exams and comparison to national statistics |
| | Satisfaction | <ul style="list-style-type: none"> • Results and interpretation of current student survey • Results and interpretation of Advanced Degree Recipient Exit Survey • Results and interpretation of survey of alumni |
| | Rankings/ratings | <ul style="list-style-type: none"> • NRC, US News, disciplinary rankings, etc. and comparison to peers • Disciplinary accreditation and other reports |

TRENDS AND FORECASTS

This section should answer the question, “*Do your students, faculty, university, or disciplinary trends demand that you do something different?*”

| | | |
|--|----------------------------------|--|
| | Current trends | |
| | Implications for program quality | |
| | | |
| | | |

SUMMARY

This section should answer the question, “*What have we learned from the program review process and what is our plan for moving forward?*”

| | | |
|--|----------------------|--|
| | General summary | |
| | Self-recommendations | List recommendations for enhancing program quality based on analysis and interpretation of the self-study document |

**SAMPLE
SIGN-OFF SHEET**

In signing this document, I indicate that all graduate faculty members in the program have had an opportunity to participate in the development of this self-study and review the final document.

Appendix II OUTLINE FOR THE REVIEW PANEL REPORT

1. Overall Recommendation:

- 3 Expand
- 3 Maintain
- 3 Restructure
- 3 Reduce
- 3 Suspend
- 3 Discontinue
- 3 Other _____

2. Summary of Findings and Recommendations

This section serves as an executive summary of the review report. A narrative style is common, but a bulleted list of key issues and findings may be useful. It summarizes all the major recommendations found in the body of the main report. This section generally does not exceed two pages in length.

3. Detailed Findings

This is the main body of the report. As such, it identifies the strengths and weaknesses of the program and provides a rationale for each point. It provides the details of the review findings and the basis for each recommendation. The report may be organized such that specific recommendations are interspersed throughout the narrative of the report, but the recommendations should be highlighted in some manner so they may be easily identified. The subsections of the report may vary depending upon the unit and nature of the program being reviewed. A typical report includes the following sections:

Introduction: Objectives of the review, participants, order of events, and organization of the report

Inputs:

- The fit of the mission of the program and its relationship to the mission of the academic college(s), and University mission.
- Quality of students
- Admissions selectivity
- Level of financial support of students
- Curriculum strength
- Quality of personnel and adequacy to achieve mission and goals
- Level and quality of infrastructure
- Quality of organizational support

Productivity:

- Level and quality of student performance
- Level and quality of faculty performance
- Viability of scholarly community within which students can interact

Outcomes:

- Professional viability of graduates
- Satisfaction of students and graduates
- Rankings/ratings

Conclusion:

Appendix III
SAMPLE CURRENT STUDENT SURVEY

CURRENT STUDENT SURVEY FOR PROGRAM REVIEW

It is the policy of OSU to conduct regular reviews of graduate programs. These reviews are intended to lead to constructive action to enhance program quality. As part of the Graduate Council review of your academic unit, we are interested in the opinions of graduate students regarding various aspects of graduate education.

Please read each item carefully and circle the number that best describes your viewpoint. All of your responses will be kept confidential. The questionnaire should take less than 10 minutes to complete.

| | Agree
Strongly | | | | Disagree
Strongly | |
|--|---------------------------|---|---|---|------------------------------|----|
| 1. The research facilities that are available to me for my graduate research meet my needs. | 5 | 4 | 3 | 2 | 1 | NA |
| 2. Support equipment (such as computers) needed for my research is available to me. | 5 | 4 | 3 | 2 | 1 | NA |
| 3. I have adequate access at OSU to facilities and equipment needed for my graduate work. | 5 | 4 | 3 | 2 | 1 | NA |
| 4. The quality and availability of graduate student office space is adequate for my needs. | 5 | 4 | 3 | 2 | 1 | NA |
| 5. OSU library resources available to me are adequate for my needs. | 5 | 4 | 3 | 2 | 1 | NA |
| 6. The program offers an adequate selection of graduate courses, sufficient for timely completion of a full graduate program. | 5 | 4 | 3 | 2 | 1 | NA |
| 7. Graduate courses are taught at an appropriate graduate level and are of sufficient rigor. | 5 | 4 | 3 | 2 | 1 | NA |
| 8. The graduate teaching by program faculty is of appropriate quality. | 5 | 4 | 3 | 2 | 1 | NA |
| 9. Graduate courses in other fields, needed to support my program or minor, are sufficiently available from other OSU departments. | 5 | 4 | 3 | 2 | 1 | NA |
| 10. Graduate program examinations are administered fairly. | 5 | 4 | 3 | 2 | 1 | NA |
| 11. Program seminars are adequate to keep me informed of developments in my field. | 5 | 4 | 3 | 2 | 1 | NA |
| 12. The initial advising I received when I entered the program was an adequate orientation. | 5 | 4 | 3 | 2 | 1 | NA |

| | Agree
Strongly | | | | Disagree
Strongly | |
|--|---------------------------|---|---|---|------------------------------|----|
| 13. I have a mailbox or another appropriate form of communication with program faculty and graduate students. | 5 | 4 | 3 | 2 | 1 | NA |
| 14. I have adequate access to my major professor. | 5 | 4 | 3 | 2 | 1 | NA |
| 15. I am receiving the research and professional development guidance I need. | 5 | 4 | 3 | 2 | 1 | NA |
| 16. I am satisfied with the professional interaction with my major professor. | 5 | 4 | 3 | 2 | 1 | NA |
| 17. I am treated as a respected contributor to the research program in which I am involved. | 5 | 4 | 3 | 2 | 1 | NA |
| 18. I have been given an opportunity to be engaged in significant research for my thesis. | 5 | 4 | 3 | 2 | 1 | NA |
| 19. If I decided to change my major professor, the program mechanism for doing so is suitable. | 5 | 4 | 3 | 2 | 1 | NA |
| 20. The treatment in this program of graduate students in the following categories is equitable and appropriate consideration is given to their distinctive needs: | | | | | | |
| 20a. domestic minority students | 5 | 4 | 3 | 2 | 1 | NA |
| 20b. women students | 5 | 4 | 3 | 2 | 1 | NA |
| 20c. international students | 5 | 4 | 3 | 2 | 1 | NA |
| 21. The program informs me of adequate opportunities for professional development and contacts outside OSU, such as attendance at professional meetings. | 5 | 4 | 3 | 2 | 1 | NA |
| 22. Graduate teaching or research assistantship stipends in this program are adequate. | 5 | 4 | 3 | 2 | 1 | NA |
| 23. The program offers adequate opportunity for its graduate students to gain teaching experience. | 5 | 4 | 3 | 2 | 1 | NA |
| 24. Of those graduate teaching assistantships under central program control, assignments are made equitably, based on established criteria. | 5 | 4 | 3 | 2 | 1 | NA |
| 25. Graduate program policies are clearly defined and readily available to me in a current handbook. | 5 | 4 | 3 | 2 | 1 | NA |
| 26. Graduate program policies clearly identify petition and appeals procedures available to me. | 5 | 4 | 3 | 2 | 1 | NA |

27. There is a well-established mechanism for regular graduate student participation in program decisions affecting students, whenever this is appropriate.

5 4 3 2 1 NA

The following items are designed to help us interpret the responses of students in your program. However, providing this information is strictly optional.

28. What degree are you pursuing?

☐ master's thesis
☐ doctoral
☐ other

29. How far along are you in your program?

☐ 1st year
☐ 2nd year
☐ 2+ years

30. What is your age?

☐ 20-25
☐ 26-30
☐ 31-40
☐ 41+

31. What is your gender?

☐ male
☐ female

32. What is your citizenship?

☐ USA
☐ non-USA

33. Are you a person of color?

☐ yes
☐ no

Do you have any concerns about this graduate program that you would like to share with the review team?

What do you consider to be the major strengths of this program?

How did you find out about the program?

Why did you choose this program?

What changes, if any, could the program leaders make to improve the quality of graduate education?

Appendix IV
SAMPLE GRADUATE ALUMNI SURVEY

OSU GRADUATE ALUMNI SURVEY

1. What graduate degree(s) did you earn from OSU¹²? (Circle all graduate degrees earned).

*Questions 2-16 refer to the **last** graduate degree you earned at OSU.*

2. From which department/program(s) did you earn your degree?

3. What was your major field of study for your degree? _____

4. What was your area of concentration within your major(s)? _____

5. What was (were) your minor field(s) of study?

6. In what year did you complete your last graduate degree at OSU? _____

7. Which three of the following best describe your reasons in seeking a graduate degree at OSU? (Rank your top three reasons with 1 = most important, 2 = next in importance, etc.)

- | | |
|--|---|
| <input type="checkbox"/> To get a promotion at a job | <input type="checkbox"/> To get research skills |
| <input type="checkbox"/> To retain a job | <input type="checkbox"/> To gain credibility in my profession |
| <input type="checkbox"/> To acquire an academic position | <input type="checkbox"/> To change my field/profession |
| <input type="checkbox"/> To gain expertise in content area | <input type="checkbox"/> For flexibility in job options |
| <input type="checkbox"/> To gain prestige of advanced degree | |
| <input type="checkbox"/> Other (Please specify) _____ | |

8. Using the following scale, please reflect on your graduate study at OSU and rate your satisfaction with each of the following aspects of your graduate school experience. (*Circle one number for each*)

| | Unsatisfied | | | Satisfied | | N/A |
|---|-------------|---|---|-----------|---|-----|
| Departmental advising/guidance | 1 | 2 | 3 | 4 | 5 | 6 |
| Major professor mentoring | 1 | 2 | 3 | 4 | 5 | 6 |
| Overall quality of graduate instruction | 1 | 2 | 3 | 4 | 5 | 6 |

¹² Program should list the degrees it offers here.

| | | | | | | |
|---|---|---|---|---|---|---|
| Diversity and availability of graduate course offerings | 1 | 2 | 3 | 4 | 5 | 6 |
| Professional relationship with graduate committee | 1 | 2 | 3 | 4 | 5 | 6 |
| Level of financial support | 1 | 2 | 3 | 4 | 5 | 6 |
| Resources available for student research | 1 | 2 | 3 | 4 | 5 | 6 |
| Overall satisfaction level | 1 | 2 | 3 | 4 | 5 | 6 |

9. How many years did it take you to complete your degree? _____

10. Please rate the length of time it took you to complete your degree. (*Circle one letter*)

- a) Much longer than expected
- b) About the length of time expected
- c) Less time than expected

11. Were you a graduate assistant while enrolled as a student at OSU. (*Circle all that apply*)

- a) Yes, a teaching assistant, for _____ years
- b) Yes, a research assistant, for _____ years
- c) No.

12. Were there periods of time in which you needed to self-fund your education? If so, how long? (*Circle one letter*)

- a) No.
- b) Yes, for < 6 months
- c) Yes, for 6-12 months
- d) Yes, for 12-24 months
- e) Yes, for longer than 2 years

13. What level of indebtedness did you incur to support the completion of your graduate degree? (*Circle one letter*)

- a) \$0-\$10,000
- b) \$10,000-\$20,000
- c) \$20,000-\$30,000
- d) More than \$30,000

14. As a result of your graduate education, how prepared do you feel in your career or to move on to a more advanced degree program? (*Circle one letter*).

- a) Very prepared
- b) Somewhat prepared
- c) Somewhat unprepared
- d) Very unprepared

15. Would you recommend the program from which you graduated to a prospective student?

- a) Yes
- b) No

16. Please indicate whether or not you would select each of the following if you could start your graduate program again. (*Circle one answer for each*).

| | | |
|--------------------------|-----|----|
| The same major | Yes | No |
| The same degree | Yes | No |
| The same major professor | Yes | No |
| Oregon State University | Yes | No |

Reflecting on your experiences after you earned your degree, please answer questions 17-24.

17. After receiving your graduate degree from OSU, have you been enrolled in any educational program, either full or part-time? (*Circle one letter*)

- a) No (***Skip to question number 20***)
- b) Yes

18. Which best describes the educational program(s) you have enrolled in since receiving your graduate degree from OSU? (*Circle all that apply*).

- a) Graduate degree (Masters or Doctorate)
- b) Professional (Law, Medicine, etc.)
- c) Post-baccalaureate
- d) Apprenticeship or internship
- e) Seminars, courses, workshops, not part of a degree program
- f) Other_____

19. Please describe any additional degree(s) you have completed since leaving OSU.

Degree(s)_____

Major(s)_____

Date(s) of completion_____

University(s)_____

20. From the following list, please indicate which best describes your ***initial*** post-graduate activity following your graduate education at OSU. (*Circle one letter*)

- a) Graduate degree program at OSU or elsewhere
- b) Postdoctoral fellowship/traineeship
- c) Entering a postdoctoral program
- d) Tenure track faculty position at a college or university
- e) Non-tenure track faculty position at a college or university
- f) Faculty position in education but not in a college or university
- g) Research position in a college or university
- h) Research position in the private sector
- i) Research position in a research institute
- j) Professional contractor for services
- k) Position in business/industry
- l) Government position
- m) Self-employment

- n) Other position in a college or university
- o) Other position in the private sector
- p) Other (Specify _____)

20a. Was your **initial** graduate status/position directly related to your degree training?
(Circle one letter).

- a) Yes, it was directly related to my degree (go to 20b)
- b) It was somewhat related to my degree (go to 20b)
- c) It was not at all related to my degree (go to 21)

20b. How long did it take you to find employment related to your degree?
(Circle one letter)

- a) < 6 months
- b) 6 – 12 months
- c) 12 – 24 months
- d) Longer than 2 years
- e) Not applicable

21. Which one of the following best describes your **current** employment status? (Circle one letter)

- a) Still in my initial post-graduate position (skip to question 19)
- b) Graduate degree program at OSU or elsewhere
- c) Postdoctoral fellowship/traineeship
- d) Entering a postdoctoral program
- e) Tenure track faculty position at a college or university
- f) Non-tenure track faculty position at a college or university
- g) Faculty position in education but not in a college or university
- h) Research position in a college or university
- i) Research position in the private sector
- j) Research position in a research institute
- k) Professional contractor for services
- l) Position in business/industry
- m) Government position
- n) Self-employment
- o) Other position in a college or university
- p) Other position in the private sector
- q) Seeking employment
- r) Unemployed but not seeking employment
- s) Other (Specify _____)

21a. Is your **current** graduate status/position directly related to your degree training?
(Circle one letter)

- a) Yes, it is directly related to my degree (go to 21b)
- b) It is somewhat related to my degree (go to 21b)
- c) It is not at all related to my degree (skip to question 22)

21b. How long did it take you to find employment related to your degree? (*Circle one letter*)

- a) < 6 months
- b) 6 –12 months
- c) 12 – 24 months
- d) Longer than 2 years
- e) Not applicable

22. If your current job is **not** related to your degree, please indicate whether each of the following is or is not a reason by making an “x” in the appropriate box.

| | Is a reason | Not a reason |
|--|--------------------------|--------------------------|
| Salary in major field not adequate | <input type="checkbox"/> | <input type="checkbox"/> |
| Too few jobs available in major field | <input type="checkbox"/> | <input type="checkbox"/> |
| Became interested in another field | <input type="checkbox"/> | <input type="checkbox"/> |
| Kept the position I had before starting the degree | <input type="checkbox"/> | <input type="checkbox"/> |
| Had training in another field | <input type="checkbox"/> | <input type="checkbox"/> |
| Current position will lead to a job more directly related | <input type="checkbox"/> | <input type="checkbox"/> |
| Did not intend major to be job-related | <input type="checkbox"/> | <input type="checkbox"/> |
| Wanted to live in a specific geographical area | <input type="checkbox"/> | <input type="checkbox"/> |
| Had to meet needs of other family members (spouse, children, etc.) | <input type="checkbox"/> | <input type="checkbox"/> |
| Other reason (specify): _____ | | |

23. Graduate degree Goals/Outcomes (*circle one number for each*).

| | To what extent were the following outcomes accomplished during your graduate degree program? | | | | | How important is this outcome to your job or career? | | | | |
|---------------------------------------|--|---|------------|---|---|--|---|---------------|---|---|
| | A great deal | | Not at all | | | Very important | | Not important | | |
| Readiness for continued scholarship | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Readiness for professional leadership | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Professional writing skills | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Analytical expertise | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Research design skills | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Subject matter mastery | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Knowledge of theory development | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Knowledge of computer applications | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Interdisciplinary perspective | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Knowledge of computer applications | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Oral presentation/competency | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |
| Creativity | 1 | 2 | 3 | 4 | 5 | 1 | 2 | 3 | 4 | 5 |

24. Please make any additional comments about your graduate degree program in the space provided below.

May 1 08 GC Meeting: Master of Public Health (MPH) Graduate Program Review

BACKGROUND:

The Department of Public Health offers the following graduate degree programs:

- MS in Environmental Health and Occupational Safety Management
- PhD and MS in Public Health
- Master of Public Health (joint campus program with OHSU and PSU)
- MS in Health Promotion and Health Behavior

The MS in Environmental Health and Occupational Safety Management was reviewed in 2003-04. In its report, the review team made the following recommendation, "We also recommend that the Masters in Public Health (MPH) program review, scheduled for 2008, be changed to a review of all graduate programs in the Department of Public Health, including EHOSM." The graduate programs listed above are scheduled for review during the 2008-09 academic year. The MPH degree recently (2005-06) underwent an accreditation review process and received the fullest approval offered by the Council on Education for Public Health (CEPH). More recently (Feb. 11, 2008) the Department of Public Health decided to formally suspend the master's programs in Environmental Health and Occupational Safety Management, Public Health, and Health Promotion and Health Behavior because their MPH program offers comparable tracks in these specialty areas.

ISSUE:

The Department of Public Health requests that the Graduate Council Program Review of the MPH program be substantially abbreviated during this review cycle in light of the recent full accreditation and the high national ranking that the program enjoys.

RECOMMENDATION:

1. The Graduate Council waives the scheduled reviews of the three master's degree programs offered by the Department of Public Health because the department will formally suspend those programs effective fall, 2008.
2. The usual Graduate Council Program Review of the PhD program in public health will occur as scheduled during 2008-09.
3. The panel that reviews the PhD program will review the accreditation documentation relative to the MPH against the Graduate Council Program Review Guidelines well in advance of the PhD review and determine if there are any questions/concerns that require additional consideration. Pending no such concerns, the Graduate Council review of the MPH will be considered to have been met through the CEPH accreditation process.

Promoting Diversity and Mentorship in Computing and Engineering through Graduate - K-12 Partnerships

PI: Margaret Burnett (Professor, School of EECS, COE)

CO-PI: Carlos Jensen (Associate Professor, School of EECS, COE), Ellen Momsen (Director of Women in Engineering Program, COE), Maggie Niess (Professor Emeritus, Science and Mathematics Education, COS).

Faculty advisors and departments involved: School of EECS, College of Engineering

Number of graduate Fellows per year: 8 Fellows per year, 40 over course of grant

Number of K-12 classes anticipated to be served each year: 4 per year, 20 over course of grant

Number of K-12 teachers working with Fellows: 4 teachers per year, 20 over course of grant

School district partners: Corvallis, Albany, Lincoln (Siletz Charter & Early College High School), Alsea, Salem, Lebanon, Sweet Home

Target audience of the project: Middle & high school

Setting: Urban, suburban, and rural

NSF supported disciplines or themes involved: Technology, Engineering

History: This is the same as last year's successful letter of intent. The proposal we submitted last year to NSF did reasonably well: 1 Excellent, 2 Very Goods, 3 Good reviews, earning a panel rating of "Recommended," but ultimately unfunded. The reviewers' issues point to a need for tuning our presentation, but no substantive flaws. We are confident a revised submission will succeed based on this and our new complimentary NSF CPATH grant which we can leverage.

1. Goals and Objectives

The two primary goals of this program are to provide graduate students in computing and engineering unique opportunities to develop and train as mentors and educators, and to promote diversity in computing and engineering by giving students additional learning opportunities and positive role models. Specifically, these are our objectives for the following stakeholder groups:

For Graduate Fellows

- **Teaching, mentorship, and communication skills:** Many of our graduate students aiming at academic careers have neither formal training in mentorship or pedagogy, nor structured opportunities for gaining hands-on experience. Without training in these important aspects, moving into a faculty position upon graduation becomes a process fraught with risks and pitfalls for these early professionals. This program will enable OSU to be one of the few universities to give students hands-on opportunities to develop these critical skills.
- **Interdisciplinary opportunities:** Employers and funding agencies are increasingly emphasizing the importance of interdisciplinary research and the skills to work effectively as a team. Fellows will gain valuable experience in relating their work to non-experts (pre-college students and teachers), working in an interdisciplinary team (engineering and education), and will help develop interdisciplinary teamwork skills.
- **Real-world focus:** By working with schools, teachers and pre-college students, developing and presenting curriculum, our graduate students will gain valuable experience working with real users, and solving real-world problems as presented by the students and teachers needs. This in turn will help them not only communicate more effectively about their research, but also motivate them to pick more socially relevant projects.

For the School of EECS and College of Engineering

- **Diversity of graduate students:** This program is an opportunity to recruit and support diversity, especially in the School of EECS, which has a severely skewed student population. By providing

direct mentorship opportunities, we hope to attract a more diverse graduate student population, perhaps more interested in working with outreach, human-centric computing, and teaching. We also hope to attract a more diverse undergraduate student population by giving them positive role-models a better understanding of Computing and Engineering as disciplines.

Schools & Teachers

- **Enriched opportunities for pre-college students, diversity of future undergraduate students:**

By showing how technology and computers are part of every aspect of STEM, and through interaction with the graduate students, we will show pre-college students and teachers that computing, science, and engineering are dynamic and interesting, and change stereotypes about these fields.

By targeting middle and high-schools we seek to intervene when research shows students start to shun science and technology education.

2. Project Plan

Two Fellows are assigned as a team to a class for the academic year. The teams will collaborate to develop and implement hands-on, inquiry-based, problem-based learning activities centered on the NETS (<http://cnets.iste.org/students>). The NETS are a benchmark for many school districts to evaluate students' technological readiness. Fellows will be integrated into the classes in support of the Technological Pedagogical Content Knowledge (TPCK) model [14]. This model argues the need for bringing content knowledge, technical knowledge as well as pedagogical knowledge together in order to create more powerful learning experiences. The Fellows will provide added content and technical knowledge to complement the teachers' pedagogical and content knowledge, and the two groups will learn from each other.

Each Fellow must take a 6 credit summer workshop (directed by the SMED faculty and graduate assistant, with the support of the K-12 teachers) in order to prepare for their experience. This workshop will cover:

- **Team-building activities among the teams and teachers**
- Learning basic pedagogic and mentorship skills and techniques

Table 1: International Society for technology in education (ISTE) National Educational Technology Standards for Students (NETS*S)

1. Basic operations and concepts
 - a. Students demonstrate a sound understanding of the nature and operation of technology systems
 - b. Students are proficient in the use of technology
2. Social, ethical, and human issues
 - a. Students understand the ethical, cultural, and societal issues related to technology
 - b. Students practice responsible use of technology systems, information, and software
 - c. Students develop positive attitudes toward technology uses that support lifelong learning, collaboration, personal pursuits, and productivity
3. Technology production tools
 - a. Students use technology tools to enhance learning, increase productivity, and promote creativity
 - b. Students use productivity tools to collaborate in constructing technology-enhancing models, prepare publications, and produce other creative works
4. Technology communication tools
 - a. Students use telecommunications to collaborate, publish, and interact with peers, experts, and other audiences
 - b. Students use a variety of media and formats to communicate information and ideas to multiple audiences
5. Technology research tools
 - a. Students use technology to locate, evaluate, and collect information from a variety of sources
 - b. Students use technology tools to process data and report results
 - c. Students evaluate and select new information resources and technological innovations based on the appropriateness for the tasks
6. Technology problem-solving and decision-making tools
 - a. students use technology resources for solving problems and making informed decisions

- Experiences in hands-on, inquiry-based, problem-based learning
- Experience and instruction in the scientific and engineering processes
- Exploring process learning skills, constructivism, cooperative learning, inquiry, and effective questioning strategies effective in problem-based learning
- NETS standards and development of course materials and strategies
- Exploring lessons that integrate technology instruction in other fields and disciplines (as required in Oregon)

During the school year, each Fellow will spend a minimum of 10 teaching hours per week at the school and five hours per week in preparation. Niess and the SMED RA will observe in-class activities and provide feedback on performance and effectiveness.

3. Recruitment and Selection

At least 50% of the Fellows will be selected from the area of computing, an area that is struggling more than most engineering and science disciplines in terms of a lack of diversity, and declining interest, especially among women, as described in the *Oregonian* article entitled “Computing Losing Luster for Women” published on 4/17/07. The remaining fellowships will be competitively awarded to qualified students from other engineering disciplines. We will make every effort to recruit and promote women and underrepresented groups, as these provide important role-models for the school children they interact with.

Students in their second and third years of graduate school (M.S. and Ph.D. candidates) will be targeted for this program. First year graduate students will not be recruited because they typically take heavy course loads, and often lack experience in their subject area and as mentors. In January of each year, a call for applications will be sent by email to all eligible students in the COE. Faculty will be invited to nominate candidates. Also, all graduate students with disabilities or who are underrepresented in their programs (including African American, Hispanic, Native Americans, and women) will receive a personal invitation to apply. An information session will be held each year to further promote the program and recruit students.

Applications will go to a selection committee. The selection committee will consist of the PI’s and two teachers. Interviews will be conducted with top candidates to make the final selection. Primary criteria for selection of Fellows includes: 1) expressed and demonstrated interest in outreach and interdisciplinary work, 2) expressed or demonstrated interest in teaching and mentorship, 3) ability and subject matter knowledge, as indicated by curriculum vitae, letters and other information, and 4) contribution of the applicant to the diversity of the cadre of Fellows.

Identification of K-12 Teachers will be based on recommendations of school principals, and ongoing working relationships with OSU faculty and COE outreach programs such as the Ambassador program and the precollege program. Momsen and Niess, through their ongoing interactions with the school districts, will be primarily responsible for selecting suitable schools and teachers based on 1) fit with the selected Fellows, 2) track record and previous experience, 3) potential for mentoring Fellows, 4) potential benefit to the teacher and school. Particular attention will be paid to schools that either have high diversity, low socio-economic indices, or classes with large female participation.

4. Organization, Management and Institutional Commitment

The PIs will have primary responsibility for the oversight and day to day administration of the program. Burnett will serve as Project Director, and will be responsible for coordinating and supervising the program. She has significant experience with project direction: she is the founding Project Director of the EUSES Consortium (including researchers from CMU, Penn. State, Cambridge University, Drexel, University of Nebraska, and IBM). She also has a 15-year history of mentoring undergraduates, a large number of which have been members of underrepresented groups (usually fe-

male), through the NSF REU program and through CRA-W's Distributed Mentor Program. Almost all of these students have gone on to graduate school at Carnegie I graduate schools. Burnett's interest in gender issues in technology led her to develop a mentorship model for female Ph.D. students, used successfully in collaboration with HP Laboratories [9]. As part of her research, she investigates gender issues that arise in end-user problem solving software [2, 3, 4, 5].

Niess will be responsible for training of the Fellows, as well as coordinating the evaluation team and data-collection. Her research centers on curriculum and instruction to guide students in strategic thinking with information technologies. She has worked with teachers in Oregon school districts for more than 25 years. Her recent research focuses on knowledge teachers need for integrating technology in teaching, with specific consideration of methods for engaging girls [15, 16, 17, 18, 19]. Prior to her return to academia, she was a mathematics teacher for 17 years.

Momsen leads the very successful COE Ambassador program which sends undergraduate students to high schools throughout Oregon. The Ambassador program is at the heart of the COE's diversity and outreach strategy. Thanks to her efforts, the College of Engineering has had a 20% increase in incoming students fall 2006 as compared to fall 2005, and a 40% increase in the number of incoming freshman female engineers and 50% increase for other minorities. She also brings her 20 years of experience as a high-school physics teacher. Ellen will serve as liaison with the schools, identifying schools and classes for placement, and mentoring Fellows.

Jensen received a Ph.D. in computer science in 2005, with a minor in psychology. His research lies at the intersection of software engineering and usability. His interests include privacy and security aspects of software engineering and their interactions with user behaviors [1, 11, 13], online trust and collaboration [7, 10, 12], and gender issues in programming and in self-directed learning [6, 8]. He is currently the PI of the departments' NSF CPATH grant looking at ways of reenergizing CS education nationally, a program which we can leverage in this proposal. He will lead efforts to identify novel and effective educational tools and strategies for addressing the NETS requirements.

This program is designed to fit seamlessly into the already existing and highly successful outreach activities existing at the college of engineering such as the COE Ambassador and precollege programs. We will work with EECS and the College of Engineering to develop a plan for the long-term sustainability, and to obtain institutional commitments to accompany this proposal.

5. Evaluation

The Northwest Regional Educational Laboratory (NWREL) will provide the external evaluation services for this project through the Research and Evaluation unit of the Center for Teaching and Learning. NWREL staff will determine the evaluation components needed to provide evidence of work toward the project goals and objectives and of the sustainability of the program. NWREL staff will conduct yearly site visits and focus group interviews to prepare a report about what is working and what is not. Niess and Science and Math Education staff will provide continuous monitoring, data collection, and evaluation. Each yearly report will be formative in nature to assist the project participants in moving forward with successful programs. The NWREL evaluations and the interpretation of their results will be supported by the National Center for Women and Information Technology's (NCWIT) Extension Services.

Evaluation will focus on the learning outcomes for the pre-college students in the classrooms (both in terms of NETS knowledge and their understanding and perception of Computing and Engineering as a disciplines), the Fellows' performance and evolution as mentors and educators, and the development of sustainable and generalizable educational strategies, tools, and programs.

6. Preliminary List of Additional Faculty Participants

Michael Bailey (EECS); Ron Metoyer (EECS); Tom Plant (EECS); Skip Rochefort (Chemical Engineering, OSU Precollege Programs); Weng-Keen Wong (EECS).

GK-12 Fellowships: Experiential Learning of High School Biology, Chemistry and Engineering through Virtual Laboratories

PI: Milo Koretsky **Co-PI:** Christine Kelly

Science, Technology, Engineering, and Mathematics (STEM) Faculty advisors and departments involved:

Chih-hung (Alex) Chang (School of Chemical, Biological and Environmental Engineering)
Goran N. Jovanovic (School of Chemical, Biological and Environmental Engineering)
Joseph McGuire (School of Chemical, Biological and Environmental Engineering)
Gregory L. Rorrer (School of Chemical, Biological and Environmental Engineering)
Lewis Semprini (School of Chemical, Biological and Environmental Engineering)

Number of STEM graduate fellows per year: 5 (years 1 and 5) to 10 (years 2, 3, and 4)

Number of K-12 classes anticipated to be served per year: 30 (years 1 and 5) to 60 (years 2, 3, and 4).

Number of K-12 teachers working with the fellows: 5 (years 1 and 5) to 10 (years 2, 3, and 4)

Number of Schools and School District Partners: 5 (years 1 and 5) to 10 (years 2, 3, and 4)

Target audience of the project (elementary, middle, or high school grades): High school

Setting (urban, suburban or rural): Mostly urban, one rural school will be targeted

NSF supported STEM discipline(s) or theme(s) involved: Science, Engineering and Technology

Goals and Objectives. This project extends our well developed instructional techniques utilizing virtual laboratories to the high school level. The goals are to use the virtual laboratory (1) as a tool for scaffolding problem-based instruction with real world content in regional high schools and (2) as a mechanism for collaboration between GK-12 fellows and high school teachers. Through these activities, fellows will develop improved communication, teaching, and team building skills and a deeper understanding of their own research. The high school teachers will be provided with a tool and content for inquiry-based and problem-based learning. These situated learning experiences will provide high school students a richer exposure to science and engineering and stimulate an interest in careers in these fields. This program will provide a catalyst for a systematic, broader based change both in high school education and in graduate education in the School of Chemical, Biological, and Environmental Engineering (CBEE) at Oregon State University (OSU).

The objectives crafted to achieve these goals are as follows:

1. Over five years, place 20 GK-12 fellows at 10 regional high schools to develop and implement virtual laboratories in the science and engineering classroom.
2. Apply a three-phase virtual laboratory deployment at each high school: (1) implement an existing virtual laboratory (CVD, Bioreactor, or Pure Water Lab), (2) develop and deliver a new virtual laboratory, (3) improve the new virtual laboratory based on assessment from phase 2.
3. Develop 10 new virtual laboratory models in the research areas of the GK-12 fellows.
4. Provide high school teachers with curriculum for 13 different virtual laboratories as a resource for learning in the chemistry, biology and engineering disciplines.
5. Deliver a workshop to high school teachers in the summer after Project Year 2.
6. Leverage methods already in place to assess learning and evaluate the effectiveness in meeting the project goals and objectives.
7. Disseminate the results through conferences (e.g., to high school teachers through the Oregon

Science Teachers Association (OSTA) Annual Conference) and archival journals (e.g., *the Journal of Chemical Education*).

Because this project is centered within a single unit, we will be able to systematically integrate the fellows' experience closely with their own research, facilitate team building and collaboration between fellows, and provide the fellows a community supported, high quality learning environment. This integration is difficult in projects distributed across multiple departments and cultures. Along with the benefits, such a tight integration may pose a problem for a single discipline unit. However, in this case because CBEE has vibrant research efforts that include elements of chemistry, biology, the physical sciences, and a variety of engineering disciplines, the 20 fellows will be engaged in a wide breadth of research activities, and will be able to translate that breadth to the high schools. We believe this approach will result in a superior experience for GK-12 fellows and has the highest potential for GK-12 activities to be permanently incorporated in graduate training.

Project Plan. With funding from the National Science Foundation's Course, Curriculum and Laboratory Improvement Program (CCLI) under Proof-of-Concept grant NSF0442832 and Phase 2 grant NSF0717905, and from Intel Corp. through the Faculty Fellows program, we have developed two virtual laboratories, the Virtual Chemical Vapor Deposition (CVD) laboratory and the Virtual BioReactor laboratory. Figure 1 shows a screenshot of the Virtual CVD laboratory. In a virtual laboratory, simulations based on mathematical models implemented on a computer replace the physical laboratory. These laboratories are not meant to replace the physical laboratories in the curriculum, but rather a virtual laboratory can be designed to extend the range of the learner specifically allowing completion of tasks not otherwise obtainable. These virtual laboratories have been implemented in the capstone laboratory sequence in CBEE at OSU, as well as in the Chemical Engineering program at UC Berkeley and the Graduate Materials Science program at the University of Oregon. Our intent in these projects is to provide students in Chemical, Biological and Environmental Engineering and Materials Science a capstone experience in which they can apply experimental design in a context similar to that of a practicing engineer in industry. In addition, research is being performed to explore the types of cognition and social interactions of student teams as they engage in these virtual laboratories, to determine the role of instructional design in the response of student teams, and to ascertain whether virtual laboratories can effectively promote types of learning that are difficult or impossible to achieve from physical laboratories.

The idea of using virtual laboratories to facilitate project based learning is compelling since, once the software has been developed, the cost to transfer it is relatively small, consisting mostly of developing teacher expertise. While the implementation has largely been at the university level, the software design allows the application itself to be used without modification in other contexts.

Whatever the course is, students can run the reactor and take measurements to collect data.

Indeed, one objective of CCLI Phase 2 is to demonstrate the utility of the Virtual CVD laboratory as a learning platform at the high school level. In order to achieve this objective, new, level-appropriate assignments have been developed to provide context

Figure 1: Screenshots from the Virtual CVD laboratory

for chemistry and engineering classes. The primary relationship in this curricular development has been a collaboration between Adam Kirsch, Science Teacher at Crescent Valley High School (CVHS) and Debra Gilbuena, a graduate student in CBEE at OSU. The content has been constructed to fit well with high school curricula in Oregon, including the relation to state learning standards in areas of both science and math, and to reinforce learning introduced earlier in the year. In Spring Semester 2008, it is being delivered to approximately 200 high school students in eight Chemistry and Engineering classes. The current graduate student writes:

In my opinion, thus far it has been a wonderful and rewarding project in which I not only learned more about CVD but also teaching and education at the high school level. I've really appreciated the opportunity to see high school lesson plan development, work closely with an awesome high school teacher, and work with high school students engaged in the learning process.

- Debra Gilbuana, CBEE Graduate Student

The high school implementation at CVHS will lead to a two-day workshop at Oregon State University with ten high school science teachers. In the workshop, high school teachers will learn how to use the Virtual CVD laboratory including both the 3D Student Client and the Instructor Interface, review of how the Virtual CVD laboratory has been used and learn the plan for how student learning will be assessed and evaluated at the high school level.

The model for more extensive deployment of virtual laboratories through the GK-12 Fellows Program is based on the success of this initial interaction with CVHS. The program will be implemented at 10 high schools in the state of Oregon. It is anticipated virtual laboratories would be used in between 4 and 8 classes at each high school. There will be a 3 phase cycle for each high school, as illustrated in Table 1. Phase 1 (year 1) consists of implementation of a developed virtual laboratory in the high school. This phase is similar to the pilot we are using at CVHS and would allow the GK-12 fellows and teachers to become familiar with the virtual laboratory instructional methodology and pedagogy. For Project Year 1, the labs would include the Virtual CVD and BioReactor Laboratories, and the Pure Water Laboratory. The Pure Water Laboratory was developed by Richard Herz of UCSD and Greg Ogden of University of Arizona under a separate CCLI grant. Phase 2 (year 2) consists of development of a new virtual laboratory in the research area of the GK-12 fellows. Two fellows, one second year and one first year, would be at each school. This phase would foster integration of the research area of the fellows in curriculum development and ultimately contribute 10 new virtual laboratory models. In Phase 3 (year 3), an improvement cycle of the new virtual laboratory based on assessment and evaluation in phase 2 would be completed.

Table 1. Implementation schedule

| Project Year | High Schools 1-5 | High Schools 6-10 |
|--------------|--|--|
| 1 | 5 Fellows (year 1; phase 1) | |
| 2 | 5 Fellows (year 2; phase 2)
5 Fellows (year 1; phase 2) | |
| 3 | 5 Fellows (year 2; phase 3) | 5 Fellows (year 1; phase 1) |
| 4 | | 5 Fellows (year 2; phase 2)
5 Fellows (year 1; phase 2) |
| 5 | | 5 Fellows (year 2; phase 3) |

Recruitment and Selection. CBEE currently receives about 50 GK-12 qualifying applications for doctoral study in each year. To enrich the pool of qualified applicants with respect to interests in education, communication, etc., we will advertise the fellowship opportunities through relevant venues (e.g. American Society for Engineering Education), and personally recruit from schools with a strong emphasis in these characteristics (e. g. Purdue University). Students admitted under traditional selection criteria (GPA, letters of recommendation, personal statements, work and research history, and GRA scores) to the doctoral programs will be asked to apply to the GK-12 fellowship program. The GK-12 application (written statements, resumes, and letters of reference

focusing on teaching potential) will include assessment of the applicant's commitment to education, social maturity, demonstrated outreach, teaching, and community involvement.

Organization, Management and Institutional Commitment. CBEE combines the ABET accredited undergraduate engineering programs of Chemical, Bio-, and Environmental Engineering, and graduate programs in Chemical and Environmental Engineering. This unique pairing of the three science-based engineering disciplines results in improved collaboration, synergy and systems understanding for faculty and students alike. The research efforts in the school can be classified into three categories: (1) biomaterials and bioprocesses, (2) environmental processes, and (3) microtechnology, microelectronics, and nanotechnology. Research thrust area leaders (Drs. Chang, Jovanovic, McGuire, Rorrer and Semprini) will facilitate placement of fellows with appropriate advisors and projects. Samples of research projects in the school (Table 2) illustrate that there is appropriate depth and breadth of funded research in the school to accommodate the proposed 20 fellows and are projects from which new virtual laboratories can be developed.

Table 2. Samples of funded research projects in CBEE

| Biomaterials and Bioprocesses | Environmental Processes | Micro and Nanotechnology |
|---|---|---|
| Synergies between Enzymes in the Bioconversion to Ethanol (DOT) | Global Transcriptional Responses in Nitrogen Cycling and Nutrient Removal Processes (NSF) | Implement. of Sustainable Energy Related Processes in Microstructured Reactors (NSF, Career) |
| Peptide based antibacterial coating (NIH) | Microb. Transport and Adhesion: A Multiscale Approach (NSF, Career) | Microchannel Portable Kidney Dialysis (Home Dialysis Plus) |
| Whole-Cell Biosynthesis of Nanostructured Materials (NSF) | Experimental and Numerical Characterization of Thin Films in 3-D Porous Media (NSF) | Process Eng. of Chemical Bath Deposition: A Soft Solution Route to Flexible Electronics (NSF, Career) |

Evaluation. The Northwest Regional Educational Laboratory (NWREL) will collaborate to provide the evaluation for the project. The assessment and evaluation will be led by Dr. Edith Gummer, who is also involved in this role for the two NSF-CCLI virtual laboratory grants. Assessment efforts will be focused on evaluating the conceptual objectives of the project: developing fellow's skills, enriching high school teachers' knowledge and teaching portfolios, and compelling delivery of experimental learning and discipline content to high school students.

List of Faculty Participants (not including PI/Co-PI). Chih-hung (Alex) Chang (CBEE); Goran N. Jovanovic (CBEE); Joseph McGuire (CBEE); Gregory L. Rorrer (CBEE); Lewis Semprini (CBEE); Edith Gummer (NWREL); Adam Kirsch (CVHS).

School District Involvement. As part of the current CCLI virtual Laboratory project, the Virtual CVD laboratory is being implemented Spring 2008 in a pilot program at CVHS. A two-day workshop will be held at Oregon State University on August 6-7, 2008 with ten high school teachers attending. Adam Kirsch the high school science teacher implementing the Virtual CVD laboratory at VCVHS in Spring 2008 is serving as high school coordinator for the workshop. In the GK-12 project, five of the ten participants from the (CCLI) workshop will selected to host GK-12 fellows. A second workshop, funded by this project, will be held in the summer after Project Year 2, from which High Schools 6-10 (see Table 1) will be selected.

Letter of Intent -- 2008 GK-12 Solicitation

Project: *Sustainable Engineering and Global Science (SEGS) in K-12 Schools and Community Outreach*

PI Skip Rochefort , School of Chemical, Biological, and Environmental Engineering (CBEE, COE) and Director, OSU Precollege Programs

Co-PIs: Janine Trempy (COS); Dan Arp, Botany and Plant Pathology (COS, CAS, University Honors College); Lew Semprini, CBEE (COE) and Subsurface Biosphere Initiative; Bob Duncan (COAS) ; Dan Cox, O.H. Hinsdale Wave Research Lab (COE).

STEM Faculty advisors and departments involved: COE, COS, CAS, COAS, SMED
See below for complete list of participants.

Number of STEM graduate fellows per year: Ten (10) graduate fellows per year, with 2-3 mentor fellows staying for more than one year as their program of study permits.

Number of K-12 classes anticipated to be served per year: 40 – 50 per year (typically 4 classes per day per teacher with content introduced in each classroom).

Number of K-12 teachers working with the fellows per year: 10 teachers per year. Same teachers for first 3 years (if possible), with Master Teachers from this group (5) working with new teachers as the program is expanded throughout Oregon and in the last two years.

School District Partners: Corvallis; Albany; Philomath; Lebanon; Sweet Home; Lincoln (Siletz Charter & Early College High School) until year 3. Recruit teachers from outside these districts (Portland and central/eastern Oregon) for years 4 and 5 to provide national model.

Target Audience of the Project Middle School and High School classrooms; K-grey through community outreach programs.

Setting Urban, suburban and rural

NSF supported disciplines or theme(s) involved: Science, Math, Engineering, and Technology

PROJECT DESCRIPTION

Goals and Objectives

We propose to develop and implement a model (*SEGS: Sustainable Engineering and Global Science*) with a focus on engaged learning experiences about sustainability. In this model, graduate students, in collaboration with faculty, and working directly with classroom teachers, will use educational best practices to develop a “suite” of STEM-based learning modules on sustainability that cross all disciplines and could be implemented in both middle and high schools, and community outreach. Once developed and implemented, it is envisioned that these modules would evolve to meet the changing sustainability landscape, with the goal of bringing the most recent social, environmental, and technological developments into the classrooms.

The long term goal for the proposed *SEGS Model* would be that the STEM-based learning modules on sustainability become an integral component of the schools and school district programs, meet the state and national standards for STEM education in middle and high schools, and become available nationwide to establish OSU as a leader in K-12 sustainability education and outreach.

Project Plan

Given that the issue of sustainability and sustainable practices is highly cross-disciplinary, and that OSU is a national leader in many of these areas such as water issues and alternative energy, we have sought to involve faculty and graduate students from a wide range of Colleges, Departments, and Centers in this GK-12 program. The classroom implementation will be carried out by a graduate student under the guidance of a faculty mentor, teamed with a grade 6-12 classroom teacher. Initially, we will recruit a group (10) of experienced grade 6-12 teachers from each of the school districts (we have an extensive list of contacts from previous GK-12 programs by Arp, Rochefort, and Rao), and work with them for a period of three years. In years 4 and 5 we will move to new school districts and teachers, retaining half of the original group as Master Teachers to assist with the training of the new teachers. The focus of the last two years will be to demonstrate portability and sustainability of the project concepts (learning modules). We will partner with NSTA for distribution through their network.

In the initial 3 year period a series of classroom tested “learning modules” would be developed (similar to Foss kit idea) in the various STEM fields, with a focus on sustainability issues. GK-12 Fellows would not be assigned to a specific teacher/school for an entire year, but would work initially with a teacher/school to develop a self-contained learning module (probably 5-15 class hours of module time) that the teacher could integrate into their normal school-year program. The Fellow would then move to another teacher/school to deliver that same module. The most important component of this plan, which is completely aligned with the greater goals of the GK-12 program, is that the GK-12 Fellows would initially deliver these modules in the classroom with the teacher as a partner, such that when the Fellow moves out of the classroom, the teacher has the knowledge, tools, desire, and capability to continue to use that learning module in future years. In the process, the teacher acts as a mentor for the GK-12 Fellow in the skills and attributes needed for successful interaction with K-12 students. In this model, the GK-12 Fellows can be considered as consultants, in which they work with the client (teacher/school), deliver a product to meet their needs (learning module), implement and train the teacher as needed, and then develop that module for worldwide dissemination through *TeachEngineering.com*. The teachers have the valuable and somewhat non-traditional role of *both* client and mentor.

It is envisioned that these "learning modules" could be tied to state and national standards with the help of the *TeachEngineering.com* group (<http://www.teachengineering.com/>), which is promoted as a repository for teaching materials by the NSF GK-12 Directorate. We have worked with Rene Reitsma in the OSU College of Business for several years to foster this collaboration and begin the process of joining this ever-expanding international learning community

Expected and Measurable Outcomes

The educational best practices implemented in the SEGS Model include: 1) learning environments that promote inclusion, reciprocity and cooperation, 2) opportunities to be part of small group learning activities focused on both discovery and application based learning, 3) implementation of pedagogy that honors diverse ways of learning, and 4) high expectations for student success.

As a result of the proposed activities, OSU will:

- 1) Design, construct and employ STEM-based learning modules on sustainability,
- 2) Prepare and train graduate students to incorporate their research into curricula for middle and high school students using educational best practices,
- 3) Create educational environments that improve communication, teaching and team building skills for the GK12 fellows.
4. Assemble innovative professional opportunities for middle and high school teachers to learn how cutting edge research in the areas of sustainability can be integrated with educational best practices to engage students in the learning process.
5. Enrich learning environments for middle and high school students with the use of educational best practices that prepare them for success in college STEM disciplines as well as STEM based careers.
6. Build on existing partnerships and create new partnerships between institutions of higher education and local school districts.

Community Outreach

As an outgrowth of this effort we propose to incorporate STEM-based learning modules on sustainability into free-choice learning environments through community outreach activities. STEM undergraduates from the pool of dual-degree majors, College of Engineering and Science Ambassador programs, and the extensive volunteer network in COE and COS would be recruited to *volunteer* for outreach activities under the guidance of the GK-12 fellows and GK-12 faculty. This model has already been sustained from a previous GK-12 funded activity in the form of *Family Science and Engineering Nights*, *Intel ISEF State Science Fairs*, and *Discovery Days* community outreaches, which reach 8000 – 10,000 K-12 age children and their families each year in informal learning environments (school gymnasiums and similar venues). The recent Corvallis Town Hall meeting that drew hundreds of people leads us to believe that communities are “hungry” for information and activities on sustainable living topics, and we will partner with these groups to leverage the resources and activities developed in the classrooms to make them available to the entire community.

Assessment and Evaluation Plan

An Evaluation Plan will be implemented by an individual who has discipline familiarity with the proposed effort but who is not participating directly in the training of GK12 Fellows, the development of modules or the transfer of modules to the middle and high schools.

This Evaluation Plan will be both formative and summative. Specific and measurable outcomes have been proposed and are described in this pre-proposal. If selected to develop a full proposal, then an Evaluation Plan (consisting of Project Description, Evaluation Overview, Evaluation

Design, and Data Analysis Plan) will be developed, in consultation with OSU's Assessment Office, and an individual to implement the Evaluation Plan will be identified. Janine Trempy, who developed and administers the assessment process for all College of Science units, has received NSF sponsored training in developing and implementing Evaluation Plans for assessing outcomes in educational efforts such as CCLI proposals. Thus, she is qualified to oversee, in consultation with the project PI and Co-PIs and partners, the development of the Evaluation Plan, using NSF suggested guidelines. An independent assessor will be identified to implement the Evaluation Plan.

Recruitment and Selection of Fellows and Teachers

Given the experience of the PI and Co-PI's with past GK-12 programs, K-12 outreach, and the large number of affiliated faculty to serve as liaisons, it is not envisioned that recruitment of students to the GK-12 program will be an issue. Rather, what has been learned from past GK-12 experiences is that selection and training (in education practices) of the Fellows, selection of the teachers, and the eventual partnering of these two somewhat disparate groups is the absolute *key to success* of the program. We have years of experience (successes and failures!) with this and feel that our collective "history" will serve us well as we move forward in this process.

Faculty Participants and Partners

Representatives of the proposed partnerships are listed below and more may be added:

COE – Skip Rochefort (School of Chemical, Biological, and Environmental Engineering (CBEE); Director of Precollege Programs; COSEY Outreach Center Co-Director; past GK-12 co-PI); Lew Semprini (CBEE and Subsurface Biosphere Initiative); Michelle Bothwell (CBEE, engineering and environmental ethics); Hong Liu, Biological and Ecological Engineering (BEE); Roger Ely, BEE; Dan Cox (School of Civil and Construction Engineering Management, Director, Hinsdale Wave Research Laboratory); Alicia-Lyman Holt (Outreach Coordinator, HWRL); Ellen Momsen (WME Director and COE Ambassadors)

COS - Janine Trempy (Associate Dean for Student Engagement/Assessment/Outreach in the College Science, COSEY Outreach Center Co-Director,), Dan Arp (Botany and Plant Pathology, Subsurface Biosphere Initiative , and Dean of UHC), Margie Haak (Coordinator of COS Outreach and COS Ambassadors), SMED (Free Choice Learning Faculty), SEPS (Kari VanZee, Coordinator of K-12 outreach and teacher training), Geosciences (Roger Nielsen), Martin Schuster (Environmental Microbiology)

COAS – Bob Duncan (Associate Dean) and COAS faculty to be determined.

CAS – Dan Arp (Botany and Plant Pathology, UHC Dean, and Subsurface Biosphere Initiative and past GK-12 PI), Dan Edge (Chair of Fisheries and Wildlife), Jerri Bartholomew (Director of the Salmon Disease Lab), Sujaya Rao (Crop and Soil Science and past GK-12 PI)

COB - Rene Reitsma (*TeachEngineering.com* -- Module national deployment)

CLA – Denise Lach (Sociology Dept. and Water Resources Institute)

Outreach and Engagement - Tryna Luton (K-12 online and Siletz Academy partner); Roger Rennenkamp (Director, Extension 4H Youth Development); Mario Magana (4H Latino Youth Development Coordinator).

OSU Centers: Institute for Water and Watersheds (Dr. Todd Jarvis, Associate Director); Hatfield Marine Science Center and Marine Science Program (Sean Rowe); *ONAMI* (Skip Rung, CEO); *BEST* (The Built Environment and Sustainable Technologies Research Center, Dr. Ken Williamson); O.H. Hinsdale Wave Research Laboratory and HWRL/NSF NEES Tsunami Facility (Dan Cox, Director)

Community Partners: ASOSU - Student Sustainability Initiative and Center; Corvallis Sustainability Coalition

Additional information that was not required for LOI but provides some insight into how the GK-12 program will be operated.

BUDGET (rough draft per YEAR): \$600,000 yr x 5 years = \$3 million

Graduate Students (10/yr @ \$40,500 total) = \$405,000

Teachers (10/yr @ \$4500) \$45,000

sub-total (stipend and cost of education funds – indirect costs) = \$450,000

Coordinator (0.5 FTE – salary + OPE) = \$40,000

PI (1 mo salary + OPE) = \$10,000

Evaluation and Assessment : \$15,000/yr

Supplies (for learning modules and outreach): \$20,000 - \$40,000/yr (fluctuates by cycle of development of modules)

Summer Teacher Workshops: \$25,000

Travel to NSF and meetings, etc.

Total = \$600,000

November 26, 2007

Chair, Graduate Council
300 Kerr Administration
Oregon State University
Corvallis, OR 97331-2121

Dear Graduate Council

The following is our response to issues raised by the Budget and Fiscal Planning Committee with respect to the proposed Graduate Certificate in Fisheries Management and the proposed Graduate Certificate in Marine Resource Management.

Graduate Certificate in Fisheries Management – On campus

Therefore, the committee approves the on-campus delivery of this certificate but has a few comments for the Curriculum committee to take note of, including:

a. No liaison e-mail with the Chair of Sociology was found despite there being 3 Sociology courses in the Human Dimensions sub area of courses listed. Thus, the long term commitment and ability of the Sociology Department to offer these courses can not be known.

Dr Sally Gallagher chair of Sociology supports the inclusion of the sociology courses in the Graduate Certificate. Please see attached correspondence.

b. Email liaisons with Adell Amos, a representative from the University of Oregon clearly states that OSU be aware that, "there is no commitment to teach Ocean Law [MRM 525] indefinitely." This course is also in the Human Dimensions sub area. Whereas this point is of little consequence for the Certificate in Fisheries Management because it is an optional course, it is a more important issue in the Certificate in Marine Resources Management proposal (see below).

COAS is developing Ocean Law as an Ecampus course so that it can be offered by an OSU-employed, suitably qualified instructor if UO can no longer offer Ocean Law in the long term.

c. Obviously, the maintenance of this new certificate program would require, as of yet unspecified, funding should a large number of existing courses that constitute it be dropped from the books over time due to their respective departments' inability or unwillingness to support them (e.g., MRM 525 and possibly SOC 580,581,585). However, email liaisons with the other relevant program heads suggests this will not be an issue in the foreseeable future.

The existing Masters of Science in Marine Resource Management (MRM) from which the proposed Graduate Certificate in Fisheries Management derives is equally dependent on the offering of constituent courses across various academic units. The MS degree has been in existence since 1974 and has adapted its course requirements in response to both changes in course offerings from other academic units and in response to student and employer demand for specific course offerings. The MRM director is confident that other academic units will continue to offer the courses listed in the short to medium term. If any of the listed courses are not offered in the long term, the MRM director will approve the substitution of similar courses in human dimensions or in the fisheries science subject area.

The text of the Category 1 proposal has been amended by the addition of a paragraph under the subject area course listings stating: “The Director may also approve any other course deemed relevant to the study of fisheries management as a substitute for any of the above courses.”

Graduate Certificate in Fisheries Management – Extended campus

The proposal implies that the Ecampus grant in combination with future Ecampus revenue from its associated courses will cover all library costs, student access costs, and a 0.15 FTE Coordinator. To the extent this is true the B&FP committee approves the Ecampus delivery of this certificate but it is conditional on the presentation and inclusion of an estimated budget outlining Ecampus activities and associate library expenses.

The budget aspects for this part of the Certificate Proposal was difficult to specify and evaluate. The 0.15 FTE RA/Program Coordinator (page 13) does not appear on the Budget Outline.

The 0.15 FTE RA/program coordinator is for the establishment phase of the Ecampus certificate and once established the Ecampus certificate option does not require 0.15 FTE support. The initial 0.15 FTE support is budgeted for in the \$73,000 Ecampus establishment grant.

The Library Evaluation Report indicated: (a) an initial \$3,500 expense, (b) \$6000 in annual expenses, and (c) \$175 per student annually in "access" expenses. Presumably the \$73,000 grant from Ecampus would cover some of these initial costs in addition to Ecampus course development costs but none of this was included in the Budget Outline so it was impossible for the B&FP committee to validate.

The library evaluation states that existing resources are adequate but that it would be desirable to expand the collection to address anticipated international student enrollment in the Ecampus component of the certificate. The Ecampus grant will provide for initial library expenses to enhance the collection. Ongoing expenses depend on the level of enrollment. If the level of enrollment justifies it, additional library funds will be provided from program revenues. The OSU Libraries do currently receive a set percentage of Ecampus revenue. We would also like to reiterate that existing library resources are adequate and that the intent is to reach the desirable level of library resources over time contingent on Certificate enrollment.

Professor Janet Webster (OSU Libraries) has written a more detailed response to the Budget and Fiscal Planning Committee concerns. This is attached.

The committee also felt that the proposal could have provided an analysis of whether and what the minimal number of Ecampus students would be for the online version of this certificate to be self-sustaining.

All of the courses that are part of the Certificate are, or will be, offered via Ecampus independently of the Fisheries Management Certificate as part of their home department's Ecampus offerings. Whether or not they need to be self-sustaining depends on whether the home department requires the full costs of the course to be covered by Ecampus enrollment. For example, if the Ecampus course is offered at the same time as the on-campus version of the course there is only a small additional cost to the department to offer it online. If the course is solely offered as an Ecampus course then it likely will be required to be self-sustaining. The majority of the Ecampus courses in the Fisheries Management Certificate are offered or will be offered alongside the on-campus offering.

As with any course, low enrollment will result in the Ecampus course being offered on a less frequent basis. Ongoing lack of demand for a course will likely see it dropped by the College and/or from the certificate electives.

Because the Ecampus courses are not solely dependent on student enrollment in the Fisheries Management Certificate, the minimum continuous viable enrollment is lower than it would be in a stand alone Ecampus certificate program. Initial enrollment in the certificate is estimated at approximately 10-15 students. A continuous enrollment of 25-30 students is expected in the longer term.

This analysis was an integral part of the Ecampus grant proposal. A memo from Ecampus supporting our enrollment analysis is attached.

Graduate Certificate in Marine Resource Management

The committee approved this certificate proposal but made a few comments for the Curriculum committee to take note of, including:

a) No liaison e-mail with the Chair of Sociology was found despite there being 3 Sociology courses in the Human Dimensions sub area of courses listed. Thus, the long term commitment and ability of the Sociology Department to offer these courses can not be known.

Please see relevant response above.

b. Email liaisons with Adell Amos, a representative from the University of Oregon clearly states that OSU be aware that, "there is no commitment to teach Ocean Law [MRM 525] indefinitely." Since MRM 525 is a required course in this certificate program, some discussion of the contingencies needed if and when Richard Hildreth (UO) stops teaching this course for OSU seem appropriate to include.

Please see relevant response above and note that COAS is also developing Coastal Law as an Ecampus course, which at the moment is a required course for the MS degree in Marine Resource Management.

c. Obviously, the maintenance of this new certificate program requires the continued offering of MRM 525 as well as some sufficient number of constituent courses now offered across various academic units. No mention was made as to how the Certificate Marine Resources Management would be affected by, or respond, should any of its constituent courses be dropped from the books. It should be noted, however, that email liaisons with the other relevant program heads suggests this will not be an issue in the foreseeable future, MRM 525 notwithstanding.

The text of the Category 1 proposal has been amended by the addition of a paragraph under the subject area course listings stating: "The Director may also approve any other course deemed relevant to the study of marine resource management as a substitute for any of the above courses."

.

Yours faithfully

Michael Harte

Attachment 2: Letter from Janet Webster OSU Libraries

November 26, 2007

Dr. Michael Harte
Marine Resource Management Program
College of Oceanic and Atmospheric Science
Oregon State University

Dear, Dr. Harte,

In regards to the review of the Category 1 Proposal for a Certificate in Fisheries Management, I would like to comment further on the OSU Libraries needs. The present collections and services are adequate to support the certificate program. The estimated \$2500 for enhancing the collection is available from the program's start up funding. This will be used to identify gaps in print and electronic resources, and acquire as appropriate. The annual cost of \$1000 for librarian and staff time for ongoing collection development is currently included in the OSU Libraries budget and will continue as such.

The Ecampus component of the Fisheries Certificate raises issues that are not unique to this proposal. In my evaluation, I included a "per student charge" as that is familiar existing budget approach. However, as the University moves towards more electronic delivery of courses and program, this approach is not as useful. I suggest that we proceed with the Graduate Certificate in Fisheries as proposed, and use the next two years to develop a new model for integrating the provision of library services and resources into new programs or courses that move to Ecampus delivery. Currently, the OSU Libraries receive a set percentage of the Ecampus revenue to provide services to distant students. Graduate students in this professional program may benefit from a different model for access to pertinent information resources. Consequently, more work needs to be done with the faculty involved to investigate ways to better utilize library services and resources through more sophisticated use of technology. Funds to work on this may be available through an Ecampus grant.

At this time, I and the OSU Libraries can support this Category 1 as proposed with the understanding that the OSU Libraries will be involved in phased development of a new model for providing information resources to graduate students.

Sincerely,

Janet Webster
Professor
OSU Libraries

Re: Proposal for *Certificate in Fisheries Management* - College of Oceanic and Atmospheric Sciences (COAS)

OSU Extended Campus -- Evaluation of Program Potential

Dr. Michael Harte presented a proposal for an online Graduate Certificate in Fisheries Management through an OSU Extended Campus RFP for new programs. As part of the proposal, he was asked to describe his program in detail, explain the rationale for developing this program online, characterize the target audience, list the composite courses and content experts, and describe how this proposal aligns with the OSU Strategic Plan and the mission of OSU Extended Campus to make OSU expertise available to nonresident learners.

Our program review committee consists of Susie Leslie and/or Gina Shellhammer from Academic Programs, Lisa Templeton (Director of Marketing and Communications), Dianna Fisher (Director of Project Development and Training), Alfonso Bradoch (Assistant Director of Department and Student Services), and myself. We evaluated the proposal based on whether it strengthens existing Ecampus or OSU programs, entails a collaboration between departments or colleges, delineates a clear timeline for completion, and whether the program design maximizes access for non-residential, non-traditional students. We assess the potential audience based on OSU reputation in the content area and likelihood of professional and international enrollment. The courses must be fully described and already have Category 2 approval. The program and courses must be outcome-based and aligned with accrediting standards, and the instructional resources must be readily available. We require a convincing needs assessment and an analysis demonstrating potential for sustainability.

During this process we requested a custom report from Eduventures, Learning Collaborative for Higher Education. They undertook a scan of professional association websites and relevant labor market data to identify existing providers of training and trends related to demand for this proposed program in fisheries management. Eduventures found very few competing online courses for distance programs in fisheries management, although they found one course at West Virginia University in Advanced Fisheries Management. No other online graduate programs were evident. They recommended partnering with professional organizations like the American Fisheries Society to fulfill professional certification requirements. Dr. Harte has excellent connections with international fisheries organizations and plans to kick off this online graduate certificate at the World Fisheries Conference in Japan in October 2008. We are confident that the courses will be successful and enrollment will be sustainable, although we predict that there will be a start-up period with somewhat lower enrollments.

After review of this proposal, the committee determined that the proposed Graduate Certificate had everything required except for Category 1 approval. We agreed to fund the program after it is approved by OUS, subject to availability of funds (funds are still available at this time). Funding from Ecampus will cover development or redevelopment of the online courses and program coordination. Our marketing group will undertake a thorough marketing campaign to appropriate audiences, building upon databases we have assembled and experience we have gained through our online programs in Natural Resources, Environmental Sciences, Fisheries/Wildlife, and Sustainable Natural Resources.

Please let me know if you have further questions. We look forward to making this new graduate certificate available to students throughout the world.

GRADUATE COUNCIL MEETING

**October 18, 2007
3:00pm, MU Boardroom**

Present: Professors Colwell, Fisk, Francis, Gitelman, Grosskopf, Harter, King, Kioussi, McLain, & Russ-Eft

Absent: Professor Wolpert, Mary Strickroth

Guests: Ryan Readdy, Angelicque White and their guests;
Aaron Wolf, Lynette de Silva, Roger Nielsen, Sherman Bloomer

Award Reception

An award reception was held in honor of Ryan Tucker Readdy, winner of the Hebert F. Frolander Outstanding Graduate Teaching Assistant Award, and Angelicque White, winner of the OSU Distinguished Dissertation Award and nominee for the Council of Graduate Schools/University Microfilms International Distinguished Dissertation Award competition.

Graduate Council Minutes for October 4, 2007

The minutes from the October 4, 2007 Graduate Council meeting were approved as amended.

OLD BUSINESS: Task Force on the Post Doctoral Experience

Tom McLain (Forestry) informed the Council that Barbara Bond and Theo Dreher were appointed to the President's Task Force on the Post Doctoral Experience as Graduate Council representatives. Both Drs. Bond and Dreher are former members of the Graduate Council.

T. McLain also announced that Alix Gitelman has returned to the Graduate Council this fall, representing the College of Science. Dreher had served in Gitelman's place while she was on sabbatical Spring 2007.

Follow up Review of the Computer Science Graduate Program

Standing in for Barbara Bond who was chair of the original review and of this follow-up review, Martin Fisk (Graduate School) presented the report of the Computer Science

Graduate Council Program Review follow-up. The original graduate program review took place in March, 2004. Both M. Fisk and Barbara Bond revisited the school on September 13, 2007. They met with the Director and Associate Director of the School of Electrical Engineering and Computer Science: Terri Fiez and Bella Bose. M. Fisk reported briefly on the progress the Computer Science program has made toward the eight major recommendations made in the original review report.

A. Gitelman asked for more information on the recruitment of OSU undergraduates to the Computer Science program. She asked if OSU undergraduates are recruited because they are the best applicants or because they are more likely to matriculate. M. Fisk could not offer an answer as that topic was not explored in detail during the meeting, however, other Council members suggested two possible justifications for recruiting OSU students: the competitive nature of Computer Science (CS) programs in general, and the high cost of a national recruitment effort. It was suggested that this practice is characteristic of a new program or a program experiencing a lot of competition. Rick Colwell (COAS) asked Council members if it is common practice within their respective units to recruit graduate students internally. All Council members present responded that it is not.

T. McLain asked for clarification on the new process of funding Teaching Assistantship (TA) appointments by research group. He also wondered whether TAs with specific skills are being placed in complimentary CS courses and if the unit's undergraduate instructional needs are being met with this new system in place. M. Fisk could not address those questions. M. Fisk and the Council did have additional conversation on the topic of the funding of CS students, including discussion on the department's move to a more timely TA appointment notification system, the move toward funding PhD students before Master's students, and the raising of Teaching Assistantship stipends.

Discussion was also held regarding the placement of CS graduates. As in the past, most graduates of the Program continue to find industry jobs. M. Fisk also reported that the department has lost faculty members to industry, however, the Program has raised the total number of faculty to 18 after having hired three new faculty members.

A motion was made and seconded to approve the Computer Science Follow-up Review Report. All voted in favor. Motion passed.

Policy for admitting students with 3-year foreign degrees

Graduate Schools in the United States are increasingly receptive to admitting at least some of the applicants with 3-year European degrees. Several universities say they accept such degrees. A minority will not accept applicants from European universities unless they complete four or more years of university education. Oregon State University has fallen into the middle ground of insisting on the equivalent of a four-year accredited U.S. university, but relying on various guides, plus information from OSU programs, to determine which applicants meet this equivalency standard.

T. McLain informed the Council that this topic has been on the Graduate Council agenda each year that he has been a member and he feels that it is important to learn how the European Union's movement to 3-year undergraduate degrees will affect OSU's graduate admissions policies. He said that the Council might want to express an opinion on how the Graduate Admissions Committee (GAC) should handle applications from students with 3-year degrees. He added that it is the Graduate Council's purview to advise the GAC and to modify admissions policies.

M. Fisk then provided the Council members with an overview of the EU decision – and information on how these applications are currently handled at OSU.

T. McLain suggested that we could encourage more applicants from Europe if the language in the OSU catalog is modified to indicate that 3-year degrees are considered on a case by case basis. Sally Francis (Graduate School) agreed that modifying the catalog language would be effective but it would represent a marketing change only. If the Council wants to effect a policy change, the members could decide, for example, that OSU will accept 3-year Bologna degrees only (3-year degrees from other countries would continue to be inadmissible). After additional discussion T. McLain summarized that Council members agreed to ask M. Fisk to perform additional research to learn the admissions policies of OSU's peer institutions and other select universities and to examine the language in their catalogs for the purpose of possible adoption/adaptation.

Category I Proposal for a Graduate Certificate in Water Conflict Management and Transformation

Professors Lynette de Silva and Aaron Wolf gave a short presentation describing the proposed graduate certificate program in Water Conflict Management and Transformation and offered the Council rationale for offering this program at OSU at the present time. Dean Sherman Bloomer offered his college's strong support of the new program. He indicated that there is great national demand for a program in water conflict management and that OSU is uniquely positioned to offer it.

T. McLain asked for clarification on program leadership and the admission process. L. de Silva answered that the graduate certificate would be housed in the Geosciences department and that she would oversee the running of the Program. A. Wolf responded that an admissions committee has not been established. S. Francis mentioned that graduate certificate programs are few and that she doubts that OSU units offering them have formal admissions committees, although she added that one might want to examine how the College of Forestry manages the Sustainable Natural Resources graduate certificate program. L. de Silva told the Council that the certificate program holds the same admissions requirements as the water resources graduate degree programs.

Additional discussion was held concerning:

- Minor vs. Certificate – both are transcript visible
- Percentage of Graduate standalone courses – certificates also held to the 50% rule
- Introduction to policy courses already over utilized by other management programs. Will this limit the number of certificate students?
- E-campus – the design of creative and effective e-courses and the resources resulting from those courses

The Graduate Council members agreed that it is necessary to return the CAT I proposal creating a Graduate Certificate in Water Conflict Management to Geosciences asking for clarification on the following two concerns:

- 1) How will the Graduate Certificate accommodate the 50% rule? Note that in the section of the Graduate Catalog on certificates it states: "Certificate students are subject to all general policies governing the courses for the master's degree." A graduate certificate needs to have at least 50% of its credits as stand alone graduate courses.
- 2) Conversation between Geosciences and the Grad Council led to the understanding that the CAT I proposal is creating both a graduate certificate and a graduate minor. If that is the intent, you will need to submit a CAT II proposal to establish the graduate minor. The option of a graduate minor is only automatic when there is an existing graduate major.

Meeting adjourned.

GRADUATE EDUCATION ROUND TABLE

D-R-A-F-T P-R-O-P-O-S-A-L

September 15, 1999

The **Graduate Education Round Table** is the vehicle for strategic planning, initiative development, and advancing excellence in graduate education at OSU. Appointed by the Provost and Executive Vice President, the **Round Table** is empowered to undertake initiatives pertaining to graduate education in such areas as: graduate teaching assistant training and assessment; new graduate student orientation; graduate faculty training and assessment; graduate student enrollment management including recruitment, admission, and support; and enhancement of learning at the graduate level. As appropriate, the Graduate Education Council may make policy recommendations to the Graduate Council. The **Graduate Education Round Table** maintain liaison with Faculty Senate Committees on behalf of graduate education. The **Round Table** will meet regularly during the academic year to identify issues and priorities and to advance initiative plans.

The **Round Table** will be comprised of faculty, graduate students, and administrators at OSU in the area of graduate education. Activities of the **Round Table** are expected to involve faculty and responsible officers from the Graduate School, Admissions Office, Research Office, Student Affairs, Distance and Continuing Education, Financial Aid, International Education, Multicultural Affairs, and academic colleges to coordinate matters of mutual concern. Work groups may be created as indicated by emerging opportunities and challenges and/or to work in coordination with appropriate Faculty Senate committees/councils and/or administrative committees to develop quick response solutions to urgent problems and opportunities as they arise.

Chaired by the Dean of the Graduate School, the **Round Table** will consist of the Vice Provost for Research, 3 academic deans, 2 chairs/heads/directors of departments/graduate programs, Graduate Council Chair, and 2 Graduate Faculty members who are members of **Graduate Education Round Table** Work Groups, and 2 graduate students. Members shall be appointed for 3 year terms (initial appointments shall be for 2 and 3 years so that approximately 1/3 of the members will rotate off each subsequent year). Also, chairs of any work groups that may be created shall serve as *ex officio* non-voting members of the **Round Table**.

GRADUATE EDUCATION ROUND TABLE MEMBERSHIP

Graduate Council

January 7, 2013 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Greg Herman, Don Jump, Janet Lee, Walt Loveland (proxy for Mike Lerner), Stacey Semevolos

Voting Members Absent: Theresa Filtz, Murray Levine, Darrell Ross

Ex-officio, Non-voting Members Present: Anita Azarenko, Brenda McComb

Welcome and Introductions

In addition to the appointed members, Walt Loveland was introduced as a substitute for Mike Lerner.

Approval of Minutes

Approval of the [December 6](#) minutes was deferred.

Updates

- Scheduling – Because the next bi-weekly meeting would be January 21, which is the Martin Luther King Jr. holiday, the next meeting will be January 28, then February 4, then the Council will attempt to resume an every other week format. The meetings will adjourn by 12:50 because some members have 1:00 commitments.
- Community College Leadership Program – The memorandum was updated and sent to the Graduate School.
- The Category I to rename the Women's Studies program to Women, Gender, and Sexuality Studies was approved and forwarded.
- Physics Program Review – The memorandum was updated and sent to the Graduate School.
- MOU on Low Residency MFA – Neil Browne is scheduled to visit the Council at on January 28.

[Applied Anthropology Graduate Program Review](#) – *Reviewer: Don Jump*

- Don stated that the PhD program is still fairly new as it started in 2006 and outlined the findings of the review team. Due to recent reorganization, they are no longer a department, but a program within a school, which has led to a loss of identity, power and control of their program – they want to be viewed as anthropologists; need to improve financial (stipend) support for AAGP graduate students; need to improve student-to-faculty ratio in the AAGP (there are 60 MS thesis students and 17 PhD students for 12 faculty – this does not appear to include the MAIS students who are sponsored by the group); and staffing support needs to be increased to keep faculty from being overwhelmed with clerical work.
- The primary recommendation from the Council will be to maintain. While the Council agrees that expansion could be warranted, it was felt that the cultural issues associated with the reorganization need to be worked out before additional resources are committed for expansion. It's recommended that the MA program be continued and the newly developed PhD program shows great promise.
- The School is currently recruiting two faculty who could end up being in Anthropology, although the faculty recruitment is not specifically for Anthropology. It was noted that they may not have actively sought out other OSU anthropologists to assist with the student-to-faculty ratio. There is also the possibility of courtesy appointments from state-wide anthropologists.
- Merging into a school was a culture shock and the faculty appear to be isolated and insular; they need to reach out to other units on campus and expand the advisor base using courtesy and affiliate appointments.
- The use of descriptive words in the first paragraph was suggested to alert the Provost to issues that need to be resolved. Don agreed, but noted that it was a group decision to not include this at the beginning of the report.

It was noted that the school has pockets of money that weren't available to Anthropology.

- It was felt that the statement that there was no one does social sciences is inaccurate.

Action: At this point, the report will stand with a recommendation to maintain. Jim will summarize concerns and invite Susan Shaw and Larry Rodgers to the January 28 meeting.

Limits on thesis credits

- There has been a request to increase the number of thesis credits for Master's degrees that will still count toward the 45 credit hours. The current guidelines require a minimum of 6 and a maximum of 12 for a 45-credit hour program. The requesting unit did not provide rationale for the request.
- It was noted that the limit can be fixed internally if the unit requires students to take other courses.
- How many credit hours do peer units allow? If the allowance is based on peer institutions, this exception would only apply to the requesting unit and not the university.

Action: The Graduate Council will advise the requesting unit to provide rationale so the Council may better discuss the request and determine peer limits.

Brenda suggested that the Council may wish to look at the overall requirements at some point and determine if OSU is in line with other institutions.

Graduate Program Review Guidelines – Anita Azarenko

- Theresa Filtz and Don Jump reviewed the draft Guidelines on behalf of the Graduate Council and provided input.
- For the Metric Table on pages 3 and 4, those items marked with a 'Y' in the 'Provided Centrally' column will be provided to units on a yearly basis.
 - It was suggested that an agreement be made with the Business Centers that they pull graduate student funding rather than have each unit provide the information. Anita suggested that Institutional Research may also be able to provide the information.
 - Anita will clarify the required time period for Table K.
- There is a possibility that spring term program reviews will be allowed to use the proposed guidelines as a pilot.

Action: Jim asked the Graduate Council members to review the draft and forward comments to Anita by January 14; he will ask for an email vote.

Update on Graduate Certificate

- Brenda reported that the OUS Provosts Council agreed to adopt the Category I proposal for the Graduate Certificate in College and University Teaching and noted there is a draft position description for a .5 FTE director and a TA to assist the director. The only pushback came from PSU which has an adult education degree and considers the proposal to be in competition.

Graduate School Report

- Masters of Applied Science (MAS) – Anita explained that the MAS is used most commonly in the UK and Australia and a few US institutions; it is a professional degree, typically a non-thesis degree. The Ecologic and Organic degree is being proposed. The PSM has a strong business emphasis, which does not exist in the MAS. It was noted there is a possibility of redundancy with MEng, and others. It's wise to have an optional component that is site-based.
- Brenda noted that Catherine Mater is attempting to create an opportunity for 100-150 Iraqi PhD students to received training. OSU may be able to accommodate 30-35 per year. The deans need assurance that there will be five years of funding. The Ministry of Higher Education in Iraq is involved.
- Scholar's Insight Event – Students would present their thesis in three minutes and an award goes to the best presentation; it's not uncommon for other institutions to do something similar. This would be an opportunity for students to communicate their thesis to a non-technical audience. It would also bring attention to graduate study at OSU.
- GRAD Course Prefix – Anita noted there will be some courses that cross-cut across disciplines and there is interest in non-technical communications courses.
- Admissions – Anita reported that just under 3,000 applications have been received and the Graduate School has been answering about 100 email and 50 calls per day. There were 335 degrees that were certified in Fall 2012.

- Scholarships, Awards, Recruiting
- Laurels Block Grants will begin reviewing applicants
- Provost's distinguished awards will be reviewed in February
- Recruiting – McNair scholars are being recruited
 - Currently looking at a mechanism to work with units attending recruiting fairs so the Graduate School can follow- up.
- A foundation development officer starts this week and will begin raising funds for graduate scholarships.
- 4+1 degree – Still working on the degree, but it will be called a co-degree rather than 4+1. Students in their junior year could apply for graduate programs.
- Talking with Sabah Randhawa and Rick Spinrad about allocating funding to allow PIs to pick graduate students rather than post-doc students.

Neil Browne
Graduate Council Meeting
Feb 4, 2013

MFA in Creative Writing (low residency) proposal

MFA Thesis Committee (p.5)

“Committee Composition for the MFA thesis: The committee will consist of the Director, who will hold an MFA, the professional mentor (chair), Henry Sayre (Distinguished Professor) or Neil Browne (Associate Professor), and the Graduate Council Representative.* Low-residency programs maintain a stable core of professional mentors who are qualified to support thesis work and are typically renewed term by term in service of thesis advising. In addition, low residency programs typically have an additional group of professional mentors who may serve in a variety of shorter-term roles to lead workshops and provide programming. As the program develops and a solid core of professional mentors is established, these individuals will also be able to serve on MFA thesis committees. All professional mentors will hold a terminal degree.”

*See list for Graduate Council Representatives from OSU Cascades. Graduate Council Representatives will need to be recruited from OSU Cascades tenured and tenure-track faculty.

(Note: Professional Mentors. There is language in the proposal under head 3. The program will establish a core of Professional Mentors who will work on a consistent basis. As the program builds and these professional mentors become a key part of the program, they will be able to serve as committee members and chairs as well.)

MATRICES (p.4)

Outcome 1: Produce original work in a specified genre, culminating in a thesis of publishable quality and of high literary merit. The student and professional mentor confer to determine length, form, and content, but typically a thesis will be for prose, 80-120 pages, and for poetry, 38-45 pages.

- ✓WR 516: ADVANCED COMPOSITION (4 credits)
- ✓WR 524: ADVANCED FICTION WRITING (4 credits)
- ✓WR 541: ADVANCED POETRY WRITING (4 credits)
- ✓WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- ✓WR 503: THESIS
- ✓WR 504: WRITING AND CONFERENCE
- ✓WR 599X

Outcome 2: Develop and employ methods of intensive revision.

- ✓WR 516: ADVANCED COMPOSITION (4 credits)
- ✓WR 524: ADVANCED FICTION WRITING (4 credits)

- ✓WR 541: ADVANCED POETRY WRITING (4 credits)
- ✓WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- ✓WR 503: THESIS
- ✓WR 504: WRITING AND CONFERENCE
- ✓WR 599X

Outcome 3: Demonstrate mastery of various literary theories and techniques. Mastery will be achieved through participation in the poetry or fiction/non-fiction workshop (24 total credit hours of WR 521, WR 524, or WR 548), as well as in courses that focus on specific aspects of craft. Craft courses concentrate on a particular theory, genre, theme, technique, author or topic. Examples include courses on dialogue, the “uncanny” novella, linked story collections, the prose poem, the lyric essay, literary imitations, etc.

- ✓WR 516: ADVANCED COMPOSITION (4 credits)
- ✓WR 524: ADVANCED FICTION WRITING (4 credits)
- ✓WR 541: ADVANCED POETRY WRITING (4 credits)
- ✓WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- ✓WR 503: THESIS
- ✓WR 504: WRITING AND CONFERENCE
- ✓WR 599X

Outcome 4: Demonstrate an understanding of the contemporary creative writing profession. In addition to the instruction received in workshops on the profession, students attend mandatory residencies each year. These events feature nationally acclaimed writers who give public readings of their work and conduct colloquia specifically designed for the MFA students. Students engage in in-depth conversations with the writers about craft, the creative process, publishing, creative writing pedagogy, and other topics. Students also benefit from panels on a wide range of subjects relevant to the profession, as well as readings, roundtable discussions, and other events.

- ✓WR 516: ADVANCED COMPOSITION (4 credits)
- ✓WR 524: ADVANCED FICTION WRITING (4 credits)
- ✓WR 541: ADVANCED POETRY WRITING (4 credits)
- ✓WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- ✓WR 504: WRITING AND CONFERENCE
- ✓WR 599X

Outcome 5: Perform all activities in an ethical manner. This will be demonstrated by the student’s production of original work; by the student’s ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student’s coursework in literature, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately. An ethics component will be added to each residency period, here designated by 599X.

- ✓WR 516: ADVANCED COMPOSITION (4 credits)
- ✓WR 524: ADVANCED FICTION WRITING (4 credits)
- ✓WR 541: ADVANCED POETRY WRITING (4 credits)
- ✓WR 548: MAGAZINE ARTICLE WRITING (4 credits)

✓WR 599X: ETHICS AND GRADUATE STUDIES IN CREATIVE
WRITING (1 credit)

Initially, program success in a broad sense will be gauged by the following benchmarks:

A High Graduation Rate. A high percentage of matriculated students graduate from the program, and a small number of students drop out or transfer to other programs.

Acceptance Ratio. The program will maintain a high number of applications in relation to acceptances.

Literary Accomplishments in Post-Graduate Student Work. Many graduates go on to publish significant literary work and to win honors and awards for their writing.

Outside Assessment. After the program is up and running for two or three years, we will invite the AWP (Association of Writers and Writing Programs), the national organization for university creative writing programs to a program wide assessment.

Oversight (p. 2)

“Along with the director, the Board will also assume the responsibility of overseeing the composition of MFA thesis committees, and the hiring and performance of professional mentors. The board will provide orientation and direction to the Director. Procedure:

RESIDENCIES

1. One Board member (and other veteran mentors) will attend any new mentor's lecture or class.
2. Board and veterans go to the lectures and classes by returning mentors.
3. Students evaluate every class and lecture and provide comments on workshops during residencies.

The Director will receive the board, faculty, and student evaluations and report on each to the Board in full.

MENTORSHIP TERMS

4. Both the faculty member and the student will fill out a form at the beginning of each term listing the mutually-agreed upon expectations for the term, covering both writing and reading assignments.

a. Each student answers a prompt at the midterm and again at the end of the semester about work with his or her mentor. The director evaluates progress gauged on student and mentor agreed upon expectations (4).

b. At mid-term, both student and mentor will file, with the Program Director, a progress report; then again at the end of the term, the mentor and student will file a report on

whether or not the term's goals had been satisfactorily met, gauged on student and mentor agreed upon expectations (4)—if not, why.

The director sees every faculty member's midterm evaluations and final evaluations, and will report to the Board in full about the faculty member's work. Only fully satisfactory mentors can be renewed.

The low-residency program is administered under the same conditions as other graduate programs at OSU-Corvallis, with governing authority ultimately belonging to the Director of the School of Writing, Literature and Film. Local authority on day-to-day operations and hiring/renewals or non-renewals of professional mentors belongs to OSU Cascades. The MFA Low Residency Director will have the responsibility of personnel decisions, advising, admissions, scholarships, and student appeals."

**An Action Plan for the
Master of Arts in Interdisciplinary Studies (MAIS)
Graduate Program**

The Graduate School
Oregon State University

September 2013

Prepared by
David Bernell
Director, Master of Arts in Interdisciplinary Studies Program

Introduction

The Master of Arts in Interdisciplinary Studies (MAIS) program has undergone a comprehensive review in 2013. As a result of this review, which has included the preparation of a self-study and an on-site review, the MAIS program has been provided with a number of recommendations to strengthen the program.

The review panel has recommended the following:

1. Expand the focus of the MAIS beyond the College of Liberal Arts, possibly including serving as an incubator for new interdisciplinary graduate programs, and increasing the Director appointment to .5 FTE or adding a Co-Director from STEM disciplines.
2. Rebrand and market the MAIS to attract top applicants and bolster the program's reputation.
3. Consider adding a writing requirement for applicants, and perhaps using GRE or GMAT scores.
4. Continue core MAIS courses and add a third on research methods.
5. Add a required research colloquium series for 2nd year students, either in addition to or in lieu of a third required core course.
6. Develop "tracks" in disciplines that cohorts could take together.
7. Establish one or two admissions cycles instead of continuing rolling admissions.
8. Require the same number of credits in each area of study.
9. Consider requiring an appendix to every thesis or project that provides an account of how interdisciplinary scholarship was achieved.
10. Develop a handbook for MAIS faculty and advisors.
11. Provide a "home" for MAIS students either in the form of a physical space or continuation of IST courses into the 2nd year.
12. Track information on students in a way that is accessible to departments and faculty.

These recommendations, along with the discussion of the MAIS program in the full report, all point to several broad objectives, which can be characterized as such:

- A. Broaden the appeal of the MAIS beyond the College of Liberal Arts
- B. Achieve a greater sense of interdisciplinarity in students' work and their identity on campus
- C. Clarify the roles, responsibilities and opportunities for students and faculty
- D. Improve program administration
- E. Enhance the reputation of the program

In order to achieve these outcomes, the MAIS program proposes to take action on several fronts. These action items are discussed below, and they include concrete steps to be taken, along with a timeframe for their implementation. Though these are broken down according to the objectives listed above, many of these changes will serve the attainment of more than one of the stated objectives.

Action Plan

A. Broaden the appeal of the MAIS (Recommendations 1 and 6)

A.1

Goal: Develop “tracks” or groups of courses/fields that work well together.

Such frameworks can broaden the appeal of the program by highlighting programs and departments that are not commonly used in the MAIS, along with those that are more commonly used. Trends that are emerging in academic research, such as human-technology interactions, or relations between humans and the built environment, can weave together fields in the social sciences and humanities with fields in the sciences, mathematics and engineering. Another possibility suggested by the review panel is a track to fulfill requirements for teaching in Northwest Community Colleges.

Action Item: The MAIS program will develop at least two “tracks” per year over each of the next two academic years. This will involve working in coordination with multiple departments and programs, with emphasis on those that have low participation in the MAIS. This will include the development of sample programs of study, and a featured web presence of these options.

Metric: The first proposed track will be developed by the end of winter term 2014, and the second one by the end of spring term 2014. A similar schedule will be followed in winter and spring of 2015 to complete a total of four tracks. New tracks will subsequently be added as the opportunity and need arises.

A.2

Goal: Engage in outreach to programs beyond those that are already well-subscribed by MAIS students.

Expansion of MAIS participation across campus will require outreach and cultivation. To that end, the MAIS Director and the faculty who serve on the admissions committee/advisory group will need to engage faculty, graduate advisors and administrators throughout campus.

Action Item and Metric: MAIS program representatives will hold a minimum of three meetings per term with faculty, chairs and directors over the next two academic years. They will target programs that have been attractive to MAIS applicants and students, but unavailable or minimally used as fields of study.

A.3

Goal: Serve as an incubator for new interdisciplinary programs at OSU.

The process of developing new degree programs at OSU is labor and time intensive, requiring the development of a Category I proposal and a comprehensive approval process. In addition to providing an interdisciplinary degree in the form of the MAIS, Interdisciplinary Programs in the Graduate School can potentially add a new function, that of housing proposed new interdisciplinary programs in order to test their feasibility. This can allow faculty and students to engage interdisciplinary projects earlier than could otherwise be achieved, while testing whether a program can be sustainable. This is an ambitious goal, and will require careful study and coordination to determine administrative needs and funding mechanisms, along with potential interest across campus and a suitable initial test case.

Action Item: The MAIS program will study this option and provide a report to the Dean and Associate Dean of the Graduate School. This report will consider the opportunities and barriers to this proposal, along with recommendations and a plan for moving forward if the proposal is deemed feasible.

Metric: The report will be provided to the Dean and Associate Dean of the Graduate School by December 2014.

One additional recommendation from the review panel was to consider expanding the appointment of the MAIS Director to .5 FTE, or to add a co-director from one of the STEM disciplines, to allow for broader program outreach, appeal and participation. It is uncommon to have Co-Directors for graduate programs, due to cost and feasibility of management. Moreover, since the MAIS has no faculty or facilities of its own, and only two courses it offers, employing two directors seems unnecessary, especially in comparison to other programs on campus. Expansion of the Director's appointment to .5 FTE could make sense if responsibility expands to include the development and supervision of an incubator type of program. However, with the current level of responsibility, the .25 FTE seems both reasonable and consistent (or better) than the level of FTE provided to other program directors on campus whose appointments include teaching, research, service and administration.

B. Achieve greater sense of interdisciplinarity in students' work and their identity on campus (Recommendations 4, 5, 8, 9 and 11)

B.1

Goal: Revise and expand core curriculum.

The MAIS program currently requires two courses, totaling 4 credit hours. The review panel recommended that additional attention be paid to research methods and interdisciplinarity in these courses, as well as an expansion of course requirements. An appropriate way to initiate this is to add a

1-credit research colloquium for students in the second year to present their research to fellow students, as well as faculty. (The MAIS already holds one or two of these types of sessions a year, but they are voluntary and few in number.) This would allow presenters to gain feedback and suggestions on their research and writing. It would also help to develop a sense of cohort among MAIS students, as added meetings throughout the entire degree program can serve in lieu of a physical space to help create a “home” for MAIS students. A colloquium can also serve to broaden program appeal by sharing interdisciplinary research and demonstrating the potential of the program to faculty across campus.

Action Item: The MAIS program will develop a required 1-credit research colloquium course for 2nd year MAIS students, and will complete the Category II approval process.

Action Item: The content and scheduling of IST 511 and 512 will be reviewed to ensure sufficient attention to diverse research methods, and to ensure optimal timing of the courses, as well as frequency of class meetings. Changes will be implemented in the current academic year.

Metrics: Completion of the Category II process for the new MAIS course will be done no later than the spring of 2014. The new course will be offered (and required of students) starting with those entering the MAIS program during the 2014-15 academic year.

B.2

Goal: Revise requirements for the program of study and thesis/project to promote interdisciplinarity. Currently, the MAIS program requires a minimum of 9 credits in each field of study and a maximum of 21 credits. The panel recommended making a change so that an equal number of credits is required in each field of study. While requiring full equality among fields may not be attainable (due to varying course credits among classes and departments, as well as course availability), diminishing the lower and upper limits to 12 minimum/18 maximum would help to achieve the goal. In addition, the panel recommended adding a requirement that each thesis/project include an appendix explaining how the student achieved interdisciplinary scholarship. This would also help to bolster the program and the work of the students.

Action Item: The MAIS Director will consult with the program’s stakeholders (the Dean and Associate Dean, the admissions/advisory group, faculty, graduate advisors, and students), to determine the support, appropriateness and feasibility of pursuing these two changes.

Metrics: A decision regarding adoption of these two proposals will be reached by the summer term 2014, and any changes to be made will be implemented no later than the end of fall term 2014.

C. Clarify the roles and responsibilities for students and faculty (Recommendation 10)

Goal: Revise the MAIS website and forms.

Meeting this objective is a communications-oriented task. It includes building on the work that is done on a periodic basis to improve the clarity and sometimes the scope of various MAIS documents, particularly the MAIS website. Some specific ideas of new materials from the review committee include a handbook for faculty to clarify their roles and responsibilities; information on new “tracks,” with sample programs of study; and a fact sheet for students to help them communicate about their work and their degree to prospective employers. Other useful ideas suggested are an FAQ section for applicants, students, faculty and administrators; and profiles of a few “success stories” from the program. All of these would be enhancements to the MAIS website, and some may be available as hard copies as well. Taking these steps will also serve the goal of improving the coordination and consistency among departments and programs, which was discussed by the review panel, but not added as a formal recommendation.

Action Item: The MAIS program will review and revise its website, and will develop new materials to ensure that all program stakeholders can 1) better understand and communicate their roles and responsibilities; and 2) maintain a clear understanding about program goals, rules and procedures.

Metric: A first round of revisions to the MAIS website will be completed by January 2014, though the process will be an ongoing one. A student fact sheet will be completed by the end of spring 2014, and a faculty handbook will be ready for use starting in the fall of 2014.

D. Improve program administration (Recommendations 7 and 12)

D.1

Goal: Simplify and streamline the admissions process.

The MAIS Director, the review panel, and the graduate advisors of programs participating in the MAIS all agree that the admissions process should be changed. Instead of having rolling admissions, the program should establish one or two admissions cycles. The MAIS will therefore establish a single admissions cycle. Applications will be due March 1 of each year, and admissions decisions will be communicated to applicants no later than April 1. (Some exceptions may be made on a case-by-case basis as warranted.) An expanded and clarified explanation of application process will be substituted for the current webpage, as per the review panel’s recommendation.

Action Item: The MAIS program will implement the admissions cycle change in the current year. The Director will revise all materials to clearly explain the new timeline and admissions process, and will work closely with staff in the Graduate School and advisors in participating programs to ensure that all stakeholders fully understand the process to be adopted. It should be noted that the program will phase

in this change, allowing applications to be submitted for the winter 2014 term, so as not to abruptly change the requirements for applicants who may have been planning to submit applications for the winter 2014 term.

Metric: This change is to be implemented right away, and all communications and web postings will be completed by the end of October 2013.

D.2

Goal: Improve information management.

The MAIS program needs to make better use of the limited administrative support it gets each year. In particular, the program has to systematize the collection and management of information about students (e.g., fields of study, enrollment status) so that information is readily available to not only the Director, but to faculty advisors as well.

Action Item: The MAIS Director will work with the administrative staff person supporting the MAIS to develop a plan for acquiring and distributing information about MAIS students (and the program in general) on a regular basis. The Director will consult with the MAIS admissions/advisory group (and the Associate Dean of the Graduate School as required) to receive recommendations about the type of data that needs to be compiled, the frequency with which it should be compiled and distributed, and who should receive it (or have access to it, depending upon the process used).

Metric: A schedule of the information to be collected and its distribution will be developed during the fall term of 2013. The plan that is developed will be implemented in the winter of 2014.

E. Enhance the program's reputation (Recommendations 2 and 3)

E.1

Goal: Raise the bar regarding admissions selectivity (without sacrificing diversity).

There is an understanding among some programs and faculty on campus that MAIS students tend to be weaker than those in disciplinary programs, or that the program provides a fallback for students not accepted into other programs. The MAIS program has at times been willing to take a chance on some students whose academic records might preclude them from other programs (with mixed results), though it has long since stopped admitting students who have done poorly in other OSU graduate programs. In addition, there is no GRE requirement for admission, nor is a writing sample beyond the statement of objectives required. At the same time, there is widespread support among committed MAIS faculty that the program serves a diverse body of students very well, and that MAIS students go on from the program to a variety of successful careers. Since participation in the MAIS depends upon the

ongoing support of faculty, the program Director will be certain to develop any changes to admissions requirements in consultation with key stakeholders.

Action Item: As part of the consultation process discussed in item B.2, the MAIS Director will consult with the program's stakeholders to determine what types of changes should be made regarding admissions requirements and selectivity.

Metric: A decision regarding admissions changes will be reached by summer term 2014 (concurrent with the process described in B.2), and any changes to be made will be implemented in the admission cycle in the following academic year.

E.2

Goal: Rebrand the program and market it as a dynamic driver of creativity.

The rebranding and marketing of the program to bolster its reputation is a longer term goal, and one that will be served by successful implementation of all the other recommendations. At the same time, there are some specific actions that can be taken right away in communicating the opportunities available to students and faculty, and in highlighting the program's success stories.

Action Item: The MAIS Director will solicit ideas for student "success stories" on an ongoing basis and develop brief profiles of 3-5 stories to be highlighted on the website. This will be part of the larger effort of revising the website to highlight the opportunities and benefits that come from a degree in interdisciplinary studies (along with requirements, responsibilities, etc.). Communication of these successes in face-to-face meetings will also be helpful in broadening the appeal of the program across campus.

Metric: Consistent with Item C, the first round of revisions to the MAIS website will be completed by January 2014, and this will include the first success story. At least two additional profiles will be added by the summer of 2014. After that, new profiles will be added as deemed appropriate.

Action Plan Schedule

All of the action items described above will be completed on the following schedule.

| Term | Action Items |
|-------------|--|
| Fall 2013 | Hold three outreach meetings
Revise website – include one success story
Change admissions process to once-a-year
Develop plan to collect and distribute program/student information |
| Winter 2014 | Hold three outreach meetings
Develop one program “track”
Begin collection and distribution of program/student information |
| Spring 2014 | Hold three outreach meetings
Develop one program “track”
Complete Category II for new class
Complete student fact sheet |
| Summer 2014 | Complete faculty handbook
Add two success stories to website
Reach decisions on credit distribution, adding appendix to thesis/project, and admissions requirements |
| Fall 2014 | Hold three outreach meetings
Offer new class
Submit report on feasibility of incubator role for interdisciplinary programs |
| Winter 2015 | Hold three outreach meetings
Develop one program “track” |
| Spring 2015 | Hold three outreach meetings
Develop one program “track” |

A Note on Program Finances

The review panel suggested the possible need for additional financial support, for both administration and GRA/GTA positions. This is, of course, a common theme regarding academic programs, as they can almost always expand/improve/do more, and additional funding helps to achieve such aims. At the same time, such support is not always available, and programs often need to rely on additional funding streams to either maintain or expand services.

With respect to the MAIS, it is not a costly program, with a budget of about \$45,000 annually, while graduating about 20 students per year. As the self-study revealed, these students tend to see great

value in their education, and they have gone on to diverse and productive careers. Still, the MAIS can be more entrepreneurial with regard to funding. Two potential sources of funding within OSU include INTO and E-campus, and a third, which extends beyond campus, involves soliciting donations from alumni.

The MAIS Director has explored the possibility of working with INTO in the past, though no action was pursued at the time. The MAIS admissions process, which requires approval from multiple departments, has been considered too slow and cumbersome for INTO, which wanted decisions to be communicated within one week of receipt of applications. It is possible that changes in the admissions process can offer an opportunity to work with INTO. To that end, the MAIS Director will initiate a dialogue with INTO in the current academic year to explore the possibility of an MAIS “Pathway” for international students.

Pursuit of an additional funding stream via E-campus is another option, though some barriers exist. The MAIS offers only two (and soon three) courses, while all other student credit hours come from departments and programs across campus. It would be inappropriate to offer these required courses through E-campus, since the MAIS is not an online degree, and the courses require students to be present on campus. Nor does it seem feasible to suggest revenue sharing with departments benefitting financially from MAIS students enrolled in their E-campus courses. This would serve as a disincentive to participation in the MAIS program at a time when it is seeking greater participation. Nonetheless, engaging in a discussion with E-campus can shed light on potential opportunities. Therefore, the MAIS Director will meet with representatives in the current academic year from E-campus to explore available options.

Lastly, there is a possibility of soliciting donations from MAIS alumni. The OSU Foundation has been working successfully with colleges and programs across campus for many years to develop new sources of financial support. The MAIS should be no different from these other programs. The MAIS Director will initiate a process for engaging the OSU Foundation (this will start with a conversation with the Dean of the Graduate School), so that the MAIS program can begin to emulate the fundraising success that many other programs at OSU have already achieved.

Oregon State University Graduate Program Review Nutrition Graduate Program, May 2011

PREFACE

Professor Martin Fisk, Associate Dean of the Graduate School, Oregon State University (OSU), appointed a team to review the Nutrition Graduate Program (NGP) on May 4, 2011. The Review Team included the following: Denise Lach (Professor, OSU Department of Sociology, and Transitional Director of School of Public Policy); Thomas Wolpert (Professor, OSU Department of Botany and Plant Pathology); Patrick Stover (Professor and Director, Division of Nutritional Sciences, Cornell University); and Mark Failla (Professor, Department of Human Nutrition, and EHE Associate Dean for Research, Ohio State University). Review Team members received a copy of the Self-Study prepared by the Nutrition Graduate Faculty several weeks before the on-site meeting. Dean Fisk hosted the Review Team for dinner on the evening of May 3rd to provide an opportunity to meet one another, learn the background associated with review, and share expectations for the evaluation process. The following morning the team first met Professors Anthony Wilcox, Chair of the Department of Nutrition and Exercise Sciences, and Donald Jump, Nutrition Graduate Program Director, for an overview of the NGP and the faculty. Professor Tammy Bray, Dean of the College of Health and Human Sciences, shared insights about the rebuilding of the NGP and her vision for its continued maturation. This was followed by a meeting with graduate students (8 of 14 in attendance), a tour of the laboratory facilities in Milam and Weniger buildings that house NGP faculty and graduate students, and a meeting with NGP Faculty. The Review Team and Dean Fisk met once again with Professors Wilcox and Jump for final questions prior to initiating an Executive Session to share perspective on programmatic activities during the past five to six years and the stated perspective of the faculty, students and Dean Bray. The Review Team agreed to individually prepare a draft for assigned sections of the final report. The completed draft was shared, revised and accepted by all Review Team members prior to submission to Dean Fisk.

INPUTS

1. Fit of the mission of the program and its relationship to the mission to the academic colleges and university mission.

1.1 Background. The Nutrition Graduate Program (NGP) is affiliated with the Department of Nutrition and Exercise Sciences, chaired by Professor Anthony Wilcox. In this capacity, Professor Wilcox has oversight responsibility for the very large undergraduate programs, as well as two graduate programs: 1) Exercise Sports Science and 2) Nutrition. Professor Donald Jump was recruited in 2007 from Michigan State University to strengthen molecular nutrition at Oregon State University (OSU) and was appointed as NGP Director in 2008. The Department of Nutrition and Exercise Sciences is affiliated with the College of Health and Human Sciences. Professor Tammy Bray serves as Dean of this College and is a member of the Department of Nutrition and Exercise Sciences. All eight core NGP faculty members, including Professors Jump and Bray, are affiliated with the Department of Nutrition and Exercise Sciences. This core group was recently enriched by the recruitment of an additional seven adjunct NGP faculty who have primary affiliations with Animal Science (1), Biochemistry/Biophysics (3) Pharmacology (1), Public Health (1), and Environmental/Molecular Toxicology (1). The stated mission of the Nutrition Graduate Program is to: 1) provide state-of-the-art graduate level training in nutrition for the next generation of scientific leaders entering careers in academia, government and industry; 2) carry out cutting edge research in areas relevant to human health, including bone metabolism, cancer biology, diabetes, exercise, metabolism, obesity, and aging; and 3) communicate research outcomes to the public to improve health and well-being. The NGP self study identified five short-term goals and three long-term goals, which centered on growing the number of doctoral students, post-doctoral fellows and faculty, and increasing the quality and visibility of the program.

The Dean of the College of Health and Human Sciences expressed to the committee an ambitious vision for nutrition and NGP during the planned transition to a College of Public Health and Health Sciences. In keeping with the Land-Grant mission of the University, nutrition was viewed comprehensively in the context of linking healthy individuals to healthy families to healthy communities. In this context, nutrition was described as key to bridging the basic sciences, through its molecular nutrition emphasis, to community outreach with a strong emphasis on health disparities.

1.2 Challenges facing the NGP. The NGP is a relatively small program that has recently been reorganized and revitalized with the appointment of Professor Donald Jump as program director beginning in the 2008-2009 academic year. Professor Jump has taken the lead to revise and modernize

the curriculum and the NGP Handbook, and importantly has established a critical mass for the NGP by recruiting outstanding adjunct faculty from across the campus who appear to be committed to the success of NGP. Prior to Professor Jump's initiative, the NGP did not fare well in the NRC graduate program rankings, and the committee became aware during the review that the current number of NGP doctoral students is below the minimum size required by the OSU Graduate School. The committee noted the recent excellent progress and improvements in the NGP over the past two years, spearheaded by Professor Jump. An excellent framework has been established for the NGP, and the program is now well positioned to scale up the number of doctoral students to meet size expectations set by the OSU Graduate School, and to meet research and training goals put forward in the self study. Specific recommendations follow.

Recommendation 1. *Decrease or phase out recruitment of MS students.* The number of doctoral students needs to be increased to meet OSU Graduate School standards and to enhance the research and training missions of the NGP. MS student recruitment seems to be justified based on the following: 1) the ability of OSU to recruit students interested in completing Didactic Program in Dietetics (DPD) requirements through post-baccalaureate education in preparation for a dietetic internship (DI); and 2) filling teaching assistantships (TAs) with students qualified to support the undergraduate teaching program. While there are exceptions, research does not appear to be the primary motivation for MS student recruitment. Because the NGP has limited resources available to support doctoral training, the wisdom of using these resources to recruit and support MS students and the possibility of transitioning as many of these positions as possible to the PhD program should be considered by the faculty. The Review Team also encourages the NGP faculty to discuss the possibility of establishing a larger post-baccalaureate DPD program that generates full-tuition that could be directed towards support of the Director's salary.

Recommendation 2. *Doctoral student recruitment should be made a priority.* The quality of the NGP has been enhanced significantly the past five years by faculty recruitments to the Department of Nutrition and Exercise Sciences and recruitment of adjunct NGP faculty across the OSU campus. These changes should improve the ability of the NGP to recruit a strong pool of high quality graduate students. Currently, the quality and quantity of PhD applicants are inadequate to meet the stated missions and goals of the NGP. An aggressive doctoral student

recruitment plan should be developed and financially supported by the program, department and college. Doctoral student recruitment should be the highest priority for the program and all NGP faculty should actively engage in the recruitment of strong students to the NGP doctoral program.

Recommendation 3. *Develop a diversified funding plan for doctoral student training.* The funding plan for scaling up the doctoral program is centered on increasing faculty extramural research support (and hence GRAs), and obtaining a NIH- and/or USDA doctoral training grant(s). Dr. Manore is complemented for her success with obtaining a USDA training grant. However, the committee has some doubts that this approach will be sufficient to achieve the increase in PhD students that is required to meet enrollment minimums set by the Graduate School. The USDA National Needs Fellowship Program is not well funded and characteristically funds only two to three students. Currently, the NGP would not likely be competitive for a NIH training grant because of the small size of the current program, low matriculation of students from Underrepresented Minority (URM) groups, and the lack of graduates hired as postdoctoral fellows and appointed to tenure track faculty positions at Research 1 institutions. A training program that is “theme” centered and extends beyond the NGP may be feasible. While the desire to increase extramural funding is applauded, the current funding environment is challenging. The committee recommends that funding for the NGP doctoral training become a priority or the program may continue to not meet OSU program standards. We recommend that the NGP, departmental, and college officials work together to develop a diversified funding portfolio to fully fund (0.49 FTE) all first year doctoral students with opportunities for competitive funding of some candidates with dissertation year fellowships. The plan might include income and funding from e-campus, the Dean’s initiative, return of a portion of faculty salary recovery, and return of a portion of cost recovery from grants generating full indirect costs. The review team suggested that full funding for first year NGP students from program resources is essential to allow students to enter the doctoral program without an appointed faculty mentor, thus providing opportunities to rotate among faculty research groups before selecting a doctoral mentor.

Recommendation 4. *Maintain and build on current NGP strengths.* The primary strength of the revitalized NGP, both in its core and adjunct faculty, is in the area of molecular nutrition. The

size of the faculty is modest, yet the aspirations for the program appear to be much broader, and the pressure to become a comprehensive nutrition program (molecules to populations and policy) will increase with the new focus on Public Health. The NGP self-study also calls for the recruitment of a new professor at the assistant or associate level to enhance graduate training. The committee supports this recommendation and views such recruitment as essential to establish a critical mass for the NGP. The Moore Family Center for Whole Grain Foods, Nutrition and Preventive Health offers additional and immediate opportunities for the NGP, including the hire of one or two faculty. Dean Bray shared that the donors have stated their preference that the hire(s) have expertise in translational and not simply mechanism driven research. The review team recommends the need to develop a strategic plan for new faculty recruitments that is built around core strengths of the revitalized NGP. The review team concluded that achieving a broader vision that meets long-term aspirations of the college will require significant new investments and greater integration of the NGP with other related OSU programs.

2. Quality of Students and Admissions Selectivity. Total number of graduate students in the program from 2007 to 2010-2011 has ranged from 11-14 students. The number of applicants has increased during the 2006-2011 period by approximately 50%. Admission has been highly selective during this period with only 10-15% of the applicants accepted during the past three years. The majority of admitted students have matriculated in the MS program with a range of only zero to two PhD annual admits from 2006-2011. Mean test scores for admitted students (V=525, Q=627, A=4.5) are well above rejected applicants, but somewhat below the test scores desired to achieve stated aspirations. Also, there has only been one international student admitted to the program during the past five years.

The profile of applicants and admitted students does not compare favorably with many other graduate nutrition programs. This is explained in part by the marked changes in the program characterized by turnover of the faculty, the need to renovate laboratories, and development of a modern curriculum. Also, there have been no systematic efforts to recruit strong students. The current model for recruiting and funding first year students will not attract the best students for graduate study in nutrition at OSU. Rapid turnaround will be challenging without additional resources as the college is only providing 0.33 FTE towards each first year student. Faculty are understandably hesitant to provide additional support to beginning students, especially as the students are expected to assist with the teaching mission, take a full load of courses during the first year, and are largely admitted to the MS program.

The committee had the opportunity to meet with graduate students. Eight (five PhD and three MS students) of the 14 currently in the program attended the session. The entire group actively engaged in the discussion and exhibited impressive awareness of one another's projects. Students acknowledged the greater flexibility of the revised curriculum, the open door policy of the faculty that facilitates the use of equipment in the various laboratories and the culture that encourages collaboration. Unanimous concern was expressed about the poor quality of the soon to be renovated graduate student "bullpen". Other issues mentioned included the following: general lack of intellectual challenge in *slash* courses; the absence of meaningful interactions with faculty in the Exercise Science program that has largely resulted from the departure of a highly productive kinesiologist; apparent inequity in faculty support for presentation of research at professional meetings; and, lack of formal feedback by some faculty for graduate student teaching activities.

Recommendation 5. It is imperative that the faculty immediately develop and implement an aggressive program of recruitment to begin in autumn 2011. Recruitment needs to be as a collective responsibility and not merely an additional activity for Dr. Jump in his role as director of the NGP. As OSU is the only institution in Oregon that awards the PhD in Nutrition, recruitment of strong students in undergraduate nutrition program and the biological sciences on campus, as well as other institutions in the state seems to provide an opportunity for this effort. The NGP faculty are also encouraged to take advantage of ongoing recruitment efforts by life science programs on campus. These include the Molecular and Cellular Biology program and the departments of Biochemistry and Biophysics, Botany and Plant Pathology, and Microbiology. The review team recommends that the department, college and university provide funding to NGP to facilitate initiatives designed to recruit strong doctoral students for a period of three years.

3. Level of Financial Support of Students. As stated above, department support of graduate students is limited to 0.33 FTE for first year students with contributions from faculty potentially increasing the level of support to 0.49 FTE. Such support is associated with service as a teaching assist. Many of the graduate students also receive college scholarships in the range of \$1000-2000 annually. These funds can be used to supplement stipends or for enrichment activities such as travel to professional meetings. However, the graduate students shared that the scholarships are generally used to pay "fees" that are not typically provided in GTA/GRA appointments and can be relatively expensive. Thus, the scholarships do not seem to be facilitating the intended enrichment process. The Graduate School appears to lack

competitive funding programs for dissertation year fellowships or other means of effectively partnering with faculty to support the best and brightest doctoral students with research assistantships. As mentioned above, this situation places a heavy burden on faculty to generate and commit long term support to doctoral students at a time when federal funding of sponsored research is extremely tight. The funding issue represents a major barrier to scaling up recruitment of highly competitive graduate students.

Recommendation 6: The faculty should consider strategies to diversify the research funding portfolio as a means of increasing available support for doctoral students. Alternative funding sources such as the food industry in the northwest region may represent a means to obtain support for graduate students. The record of high productivity and visibility of the NGP core and adjunct faculty provide a sound foundation for seeking such support. The faculty is also encouraged to discuss the possibility of establishing an external advisory board of industry and government scientists as a means of securing additional funding, as well as opportunities for graduate student internships.

4. Curriculum strength. Admission into the NGP requires proficiency equivalent to bachelor's degree level competency in human nutrition, biochemistry and physiology, otherwise these minimal competencies must be met in the graduate program of study. The doctoral core curriculum includes 22 credits of didactic course work in metabolism (6 credits), nutritional status (3 credits) and statistics (9-12 credits). Course requirements in the Responsible Conduct of Research (RCR) can be fulfilled through IST 520 (1 credit) or MCB 557 (3 credits). The curriculum for neither of these RCR courses is likely to meet the NIH training grant standards. The core curriculum electives provide in depth and specialized instruction in nutritional aspects of cancer, bone physiology, energy metabolism, and metabolic disease. Concentration specific electives in biochemistry, genomics, epidemiology, public health, exercise, and functional foods provide both breadth and depth to the core curriculum. This curriculum appears to be excellent in fully supporting the NGP goals to span molecular and human nutrition, and provides a strong academic foundation for the NGP research programs. Current graduate students expressed satisfaction in the quality and availability of course offerings.

The curriculum does not include foundational courses in the social/behavioral sciences, and therefore does not support the long-term college vision of building a program that links healthy people, healthy families and healthy communities.

Recommendation 7: The NGP faculty should discuss the possibility of requiring a minor for the PhD to increase the breadth of doctoral students.

5. Quality of personnel and adequacy to achieve mission and goals.

The quality of the faculty associated with NGP has improved substantially since the previous review. This was achieved by hiring new faculty and by the inclusion of adjunct faculty, especially those from the Linus Pauling Institute, in the program. The committee reviewed core faculty extramural research support, publications, and Impact H-Index. There are many faculty with very strong funding and publications records, and only one faculty member currently lacked funding. These faculty provide a strong foundation for the NGP with its focus on molecular nutrition, but not necessarily the critical mass of core faculty required for a broad based program that provides quality training in both applied and basic aspects of nutrition.

The recent effort in increasing the quality and productivity of faculty members associated with the NGP has outpaced the recruitment of strong graduate students, especially PhD students. Faculty have choices regarding their commitment of time and effort to training graduate students and if they don't find strong students in the NGP program, they have access to other graduate programs with potentially stronger students. As discussed above, investments in doctoral student recruitment and first year funding will be essential to support, leverage and maximize the successful investments in NGP faculty.

6. Level and quality of infrastructure. During the past decade, the institution and college have made considerable investments to re-build the Nutrition faculty by hiring strong senior and junior faculty into tenure track positions. Also, there has been major investment in renovating laboratory facilities in Milam Hall and Weniger Hall. These renovations continue and provide faculty with a modern research facility. Appropriate accommodations for the Moore Family Professor have been undertaken. Presently, space is adequate for the current faculty at their level of funding. Laboratory space also will be assigned to several core faculty in the NGP in the soon to be completed LPI building. This will provide additional workspace for graduate students and research staff, and also ensures continued and possibly increased opportunities for NGP core faculty to collaborate regularly with colleagues at LPI. Space for scholarly activities has the potential to be a limiting factor for consideration of additional faculty hires to the NGP.

In addition to the high quality of the physical facility, laboratories visited by the committee were well equipped with a wide variety of both state-of-the-art and standard instrumentation essential for addressing problems in cellular and molecular nutrition. Also, Dr. Traber and colleagues at LPI possess state-of-the-art instrumentation required for metabolism studies. Although specific information was not provided, it appears that the facilities were equipped by a combination of start-up packages and the success of the faculty with obtaining competitive funds. Students expressed appreciation for the willingness of faculty to provide training and access to the instruments, regardless of specific location and faculty advisor.

The committee did not visit the Nutrition and Physical Activity laboratory directed by Dr. Manore.

PRODUCTIVITY

1. Level and Quality of Student Performance. Current graduation rates are averaging about 71% for both MS and PhD students, with an average 2.5 years and 4.5 years to completion of the MS and PhD, respectively. Efforts are underway to reduce attrition although these numbers continue to be relatively high (Between 2005-2010, only 67% of students finished in less than eight years).

Doctoral students and some MS students are regularly publishing in leading peer reviewed journals in the discipline, including the *Journal of Nutrition*, *American Journal of Clinical Nutrition* and the *Journal of Nutritional Biochemistry*. As modern nutrition is an integrative science, it is noteworthy that students are also co-authors of papers published in other high impact journals that often serve as vehicles for dissemination of nutritional biochemistry and nutrition and physical activity including *J. Lipid Research*, *Experimental Biology and Medicine* and *Medical Science of Sports and Exercise*. Students reported during their interview that they felt “publication pressure” from their major advisors. A large number of students are making scholarly presentations at professional meetings. For example, eleven nutrition grad students have given presentations/abstracts at professional meetings during the first four months of 2011. The meetings include the annual meetings of Experimental Biology and the American Chemical Society, which are important venues for molecular nutrition scientists. It appears that all faculty encourage students to attend professional meetings, although students report that some faculty provide financial support to attend and present at professional meetings, whereas others promote but do not.

In interviews with the students, we heard that the fellowships were relatively small (~\$1-2,000/per term) and were primarily used to pay student fees. Students also suggested that notification of

information about fellowships is not necessarily distributed to all and depends primarily on the PI/major advisor. There was limited evidence that Nutrition Graduate students have been successful in attracting external awards, although over the years several have won poster competitions at the American Society of Nutrition meetings.

Recommendation 7: Characterize causes for lack of completion of the degree and develop strategies to increase completion rate.

Recommendation 8: Continue publication expectations for students and provide support for travel to present results at a professional meeting at least once during the PhD degree program.

Recommendation 9: Encourage faculty and graduate students to seek prestigious graduate fellowships, including OSU Graduate Fellowships.

2. Level and Quality of Faculty Performance. The department reports a highly commendable increase in research productivity as measured by receipt of grants, publication of peer-reviewed manuscripts, and presentations at professional meetings, both in absolute numbers and on a per faculty basis. The department has been intentional about encouraging research and recruiting senior faculty with active research agendas and the success of this strategy is most evident. Over the last five years, scholarly activity increased substantially by a variety of metrics including peer reviewed publications and presentation, citation counts and external funding. The self-study reports that the H-Index (index of impact) ranges from 4 to 46. Several faculty members have won internal awards for scholarship, and two have received professional awards for excellence in scholarship. This success is echoed in reports from students who are impressed by the quality of faculty, believing they are pushing the forefront of nutrition and human medicine. Students appreciate the ability to collaborate closely with this productive faculty.

Recognizing the difficulties of finding resources to support graduate students, there does appear to be inequities in the distribution of mentoring responsibilities. Some faculty members do not appear to mentor NGP PhD students, although they may work with students from other PhD programs. It was mentioned that Nutrition Graduate students may not be sufficiently strong to participate in emerging

faculty research programs. This further supports the need for aggressive recruitment of strong students to NGP by the faculty.

Recommendation 10: Include mentoring Nutrition Doctoral Students as part of every faculty member's Position Description and consider the success of graduate students in faculty performance reviews.

3. Viability of Scholarly Community within Which Students Can Interact. Both students and faculty shared that there are weekly seminars in the department at which research from both OSU and external researchers is discussed. There was some concern among students that the topics of the seminars were not always of interest as they addressed physical activity rather than nutrition. Students suggested that the time might be better used to talk about their research with other nutrition students in informal settings. Although the College of Health and Human Sciences has several interdisciplinary centers (e.g., Healthy Aging, Children and Family), students do not identify these as part of their scholarly community (neither did most faculty members). Finally, we did not hear from either faculty or students that students were engaged in any program or departmental governance or decision-making.

Recommendation 11: Review required and elective slash courses to ensure that they have appropriate learning outcomes and assignments for graduate students.

Recommendation 12: Find ways to engage students in program decision-making as part of their professional development (e.g., serve on search committees, participate in curriculum reform, etc.).

Recommendation 13: Encourage the Nutrition graduate students to organize and lead a "journal club" as a means of sharing interests and expertise with one another.

OUTCOMES

1. Professional viability of Graduates. As indicated earlier, previous to the arrival of the current program leadership, the Nutrition Graduate Program (NGP) was in a state of disarray. Consequently, records for graduate placement prior to 2005 are not available. Since 2005 ten MS and five PhDs have graduated from the program. Of the five PhD graduates, one owns a nutrition consulting business, one is a sports nutrition specialist with adjunct faculty status, one is employed as an industry research scientist and two are postdoctoral fellows. Thus, while the total number of PhD graduates from the program is very low, success of the PhD students as determined by placement within their respective areas of study is noted. Many of the MS students were completing undergraduate DPD (Didactic Program in Dietetics) requirements to qualify for admission to a Dietetics Internship program, a requirement to become a Registered Dietician (RD). Available data suggest that the majority of these students have been admitted to dietetic internship programs. Of the students for which placement data are available, the majority are employed as Registered Dieticians or in a related field.

2. Satisfaction of Students and Graduates. Data for the satisfaction level for graduates of the program was obtained through a survey conducted in late 2010 and consisted of six responses. Although quite limited in scope, graduates generally indicated satisfaction with their experience in the NGP.

Data for satisfaction of current graduate students is based on a meeting with eight of the graduate students during the on-site review and a student survey conducted toward the end of 2010. The survey was sent to 14 students in the program and responses were received from eleven individuals.

Responses for the survey indicated satisfaction that met or exceeded the averages obtained from the OSU Graduate School graduate exit survey for all OSU graduate programs. During the meeting of the committee with Nutrition graduate students, they expressed an overall, very positive assessment of the program. It was felt that significant improvements have recently been made in the curriculum and core requirements for the program. Program-related courses are provided in a timely manner such that there are no problems with availability. Students felt that the program provided a positive learning environment that inspired a great deal of camaraderie. Students were pleased with the research facilities and indicated a high level of collaboration and sharing of facilities. A significant point of dissatisfaction was expressed over the quality of the student office space. There are plans for extensive renovation of these office facilities in the near future. Most students felt that the diversity of research conducted in the Department of Nutrition and Exercise Science presented a strength for the NGP, but

were disappointed by the limited number of collaborations occurring between faculty in the program and other members of the Department. Some students also commented that the research diversity in the Department was reflected in the Departmental Seminar series and often led to seminars not relevant to their interests. One student expressed strong concern over limited rigor in *slash* courses; several other students agreed with this assessment.

3. Rankings/ratings. Recent NRC (National Research Council) ratings for the NGP from OSU (out of 44 programs surveyed) produced an S-ranking of 31 (5th percentile) and 41 (95th percentile) and an R-ranking of 16 (5th percentile) and 32 (95th percentile), suggesting that the NGP at OSU is ranked fairly low among other comparator programs. NRC rankings were based on data spanning the period of 2000-2006. However, the NGP has undergone significant changes since 2005. Consequently, current NRC rankings are not a valid reflection of the current state of the program. Comparison of a number of metrics associated with program success from the period reflected in the NRC rankings (2000-2006) with the period since the reorganization of the program (2005-2011) suggests substantial improvement. For example, the average number of faculty publications/year increased from 0.85 to 7.8, faculty with external grants increased from 42.5% to 87.5%, and first year student support increased from 25% to 100%. These metrics suggest that the program is currently on an improved trajectory.

CONCLUSIONS

The NGP program experienced difficulties during the late 1990s, necessitating complete restructuring of the faculty, renovation of the physical facilities, and revision of the graduate curriculum. The unit can proudly conclude that it has successfully accomplished these goals. The committee was very impressed by the scholarly productivity and positive attitude of the faculty, the quality of the research environment, and the enthusiasm of the graduate students, especially in regards to the learning experience they are receiving from the faculty. The program is now well positioned to address the major problem of recruiting and retaining a sufficient number of strong students to produce the standard number of graduates expected by the Graduate School. The current funding model and the distribution of the limited funds to both the MS and PhD programs represent the major barrier to accomplish this goal. The graduate faculty need to develop a strategic plan for recruiting more doctoral students to the program. The faculty and the administration must partner to develop a more diversified funding portfolio for shared support of graduate students in order to achieve the aspirations of the NGP. The NGP is the only program in Oregon that confers the PhD in Nutrition. This and the widespread

recognition that diet and physical activity are key environmental factors that determine the balance between health and chronic disease make it imperative that the program is retained and expands capacity for training more graduate students in nutrition and its intersection with physical activity. Such growth is expected to increase the quality and visibility of NGP both on and off campus. It is noteworthy that Professor Wilcox stated strong support for retention of the NGP when directly asked his opinion by the review team.

3.6.2011

CURRENT CATALOG COPY:

Preliminary Examination

The student working toward a doctoral degree must pass a comprehensive preliminary examination. The purpose of this exam is to determine the student's understanding of his or her major and minor fields and also to assess the student's capability for research. Students must enroll for a minimum of 3 credits during terms in which they undertake departmental written or oral preliminary examinations.

Written Comprehensive Examination

Most programs require a written comprehensive examination to be taken before the oral preliminary examination. If a written examination is required, it must be completed prior to the oral preliminary examination. The content, length, timing, passing standard, and repeatability of this examination are at the discretion of the major department. The general rules and structure of this examination, however, must be provided in writing to all candidates for this examination and a current copy of these guidelines must be on file with the Graduate School. Copies of the written examination (questions and student's answers) must be available to all members of the student's doctoral committee at least one week prior to the oral preliminary examination.

Oral Preliminary Examination

The oral preliminary examination is taken near the completion of the student's course work. The oral examination is conducted by the student's doctoral committee, and should cover the student's knowledge in his or her major and minor subjects. The exam may cover the student's proposed research topic, although no more than one-half the time should be devoted to specific aspects of the proposal. The examination should be scheduled for at least two hours, and the exam date must be scheduled in the Graduate School at least one week in advance. If more than one negative vote is recorded by the examining committee, the candidate will have failed the oral examination. No more than two re-examinations are permitted by the Graduate School, although academic units may allow fewer re-examinations.

At least one complete academic term must elapse between the time of the preliminary oral examination and the final oral examination. If more than five years elapse between these two examinations, the candidate will be required to take another preliminary oral examination.

Graduate Examination Policies

Students must enroll for a minimum of 3 credits during terms in which they undertake graduate examinations.

Comprehensive Examination

The student working toward a doctoral degree must pass a ~~e~~Comprehensive ~~preliminary~~ ~~E~~examination, ~~which may be written, oral or both. English Language Testing and Training for International GTAs

Departments planning to appoint international graduate teaching assistants (IGTAs) should follow the Graduate Council policy and assignment guidelines.

Departments are advised to include in their offers of graduate teaching assistantships the specification that students receiving iBT speaking sub scores of less than 26 will be required to undertake further English language training and that the cost of such training will be met by the academic department.

IGTAs will be evaluated by the INTO-OSU staff at the end of the term in which further language training has been undertaken. INTO-OSU will make a recommendation as to whether English language proficiency is sufficient, limited, or that further training is necessary. INTO-OSU will take into consideration the training policy and [Guidelines for the Assignment of International GTAs](#) when making a recommendation.

Graduate Council Policy Statement Regarding International Graduate Teaching Assistants (February 19, 2010)

If the Graduate School determines that an applicant or current student's native language is not English, the proposed IGTA is required to take the Internet Based TOEFL (iBT) test before being appointed as a graduate teaching assistant. (Students who matriculated prior to Winter 2010 are exempt from this policy.)

Potential IGTAs scoring below 26 on the speaking section of the iBT can be appointed, but will be required to undertake further English language training.

If a department wishes to offer a student with an iBT speaking score of 18 to 25 an assistantship, the unit must:

- a. Affirm that the graduate student will be enrolled in **IEPA 098NC COMMUNICATION FOR IGTAs** (with the unit paying the cost of this training).
- b. If at all possible, assign the graduate student chores (such as paper grading, reagent preparation, etc.) that do not require personal contact with undergraduate students.
- c. If (b) above is not possible, and if possible, pair the IGTA in the laboratory or classroom with another TA who is a native speaker of English.
- d. Monitor the quality of IGTA performance using student evaluations and the evaluations of the supervising professors. The unit will document for each student the results of their evaluation of the student's performance as a GTA.

If the unit agrees to meet these conditions, the IGTA appointment can be made.

The scheduling of IEPA 098NC will be coordinated with the units so that students can attend the course and conduct teaching assistantship duties. Please check the OSU course catalog for

confirmation of the time and date:

<http://catalog.oregonstate.edu/CourseDetail.aspx?subjectcode=IEPA&coursenumber=098NC>

Guidelines for the Assignment of International GTAs

| iBT
Speaking
Sub Score | Assignment Considerations |
|---|--|
| 26 and
above | No significant language difficulty is anticipated. A score of 26 has characteristics of near-native speaking ability. Language proficiency usually includes demonstrated audience awareness, cohesive and well developed responses, limited deficiencies in fluency, vocabulary, grammar or pronunciation. |
| English language training is required for scores below 26. | |
| 25 - 18 | Assignment should be made recognizing that the IGTA has language limitations. The graduate teaching assistant must attend the IGTA course. INTO-OSU may recommend alternate courses when the IGTA course is not offered. Departments should provide close ongoing monitoring of progress in the IGTA assignment and in language skills development. Characteristics in this range may include strong but understandable accent, labored and deliberate pronunciation, possible difficulty with free-response items, halting speech patterns or vocabulary limitations. |

Students with an iBT speaking score of less than 18 can not be assigned teaching assistantships.

Current Requirements

| | Graduate Applicants | |
|----------------|--|--|
| TOEFL | Regular Admission | Conditional Admission |
| Paper | 550 | 500-547 |
| Internet (iBT) | 80
Minimum score of 18 on each section
Speaking sub-score of 26 if awarded GTA | 61-79

Or any sub-score less than 18 |
| IELTS | 6.5 | 6.0 |

Exempt from English Language Testing:

- Individuals who have completed a bachelors or master's degree from a regionally accredited institution in the U.S. or other English speaking country (See list below).
- Individuals who are in the process of earning an advanced degree from an accredited institution in the U.S. or another English speaking country may be **conditionally admitted**.
- Citizens of the following countries: Australia, Belize, Canada, Ghana**, New Zealand, Scotland, West Indies, and United Kingdom.

** Exemptions for citizens of other countries are considered on a case-by-case basis if the medium of instruction is English.

Proposed Requirements

| | Graduate Applicants | |
|---|---|--|
| TOEFL | Regular Admission | Conditional Admission |
| Paper | 550 | 500-549 |
| Internet (iBT) | 80
Minimum score of 18 on each section | 61-79

Or any sub-score less than 18 |
| Internet (iBT)
Applicants
awarded GTA | 80
Speaking sub-score of 22
Reading & Writing sub-score of 18 | |
| IELTS | 6.5 | 6.0 |

Exempt from English Language Testing:

Applicants who have demonstrated success by achieving an overall GPA greater than 3.0 on a 4.0 scale for 2 or more semesters/quarters in a rigorous undergraduate or postgraduate program in the U.S. or from one of the following English speaking countries**: Australia, Canada, New Zealand, and United Kingdom.

** Exemptions for citizens of other countries are considered on a case-by-case basis if the medium of instruction is English.

Exceptions to the proposed requirements will be considered by the Graduate School Dean on request if :

- Applicants GRE Verbal score is greater than 500 (153 – revised GRE) **OR**
- The Chair of the Graduate Program (or designated faculty) has personally interviewed the student and establishes a plan for language support for the student, if needed, which may include additional English Language Training, **OR**
- Successful completion of language training at INTO-OSU as designated by the Conditional Admission Program -CAP

| 2011-2012 Language Proficiency Requirements | | | | | |
|---|-----|----------------------------|-------|------------|-------|
| | pBT | iBT | IELTS | Password** | PTE** |
| Direct Admit Undergraduate | 550 | 80-minimum subscores of 16 | 6.5 | N/A | N/A |
| Direct Admit Undergrad CAP | 500 | 60 | 5.5 | N/A | N/A |
| Undergraduate Pathway | 500 | 60 | 5.5 | 6 | 44 |
| Direct Admit Graduate* | 550 | 80-minimum subscores of 18 | 6.5 | N/A | N/A |
| Direct Admit Grad CAP | 500 | 61 | 6.0 | N/A | N/A |
| Graduate Pathway | 525 | 70 | 6.0 | 7 | 48 |
| SAWE | 500 | 61 | 5.5 | 6 | 44 |

*Note: Language requirements for individual departments may be higher; not all departments allow conditional admission at the graduate level.

**Note: Password and PTE exam results may be used for evaluation purposes for the Pathway programs. For graduate pathway programs, students must submit the required TOEFL/IELTS scores prior to beginning the program. All students will be re-tested upon arrival and placed in appropriate levels.

**Estimated AE
Progression Rate**

| Language Proficiency Advisory Table | | | | | | Estimate 1 term of Academic English per one level increase | |

TOEFL® Score Scales

| Skill | Score Range | Level |
|--------------------|------------------|---|
| Reading | 0–30 | High (22–30)
Intermediate (15–21)
Low (0–14) |
| Listening | 0–30 | High (22–30)
Intermediate (15–21)
Low (0–14) |
| Speaking | 0–30 score scale | Good (26–30)
Fair (18–25)
Limited (10–17)
Weak (0–9) |
| Writing | 0–30 score scale | Good (24–30)
Fair (17–23)
Limited (1–16) |
| Total Score | 0–120 | |

The **Reading** and **Listening** sections are scored by computer with a score range from 0 to 30. The Reading section has 36–56 tasks based on reading passages from academic texts and answering questions. The Listening section has 34–51 tasks based on listening to lectures, classroom discussions and conversations, then answering questions.

IELTS Band Scale

| Band Score | Skill Level | Description |
|---------------|--------------------------|---|
| Band 9 | Expert user | has fully operational command of the language: appropriate, accurate and fluent with complete understanding. |
| Band 8 | Very good user | has fully operational command of the language with only occasional unsystematic inaccuracies and inappropriacies. Misunderstandings may occur in unfamiliar situations. Handles complex detailed argumentation well. |
| Band 7 | Good user | has operational command of the language, though with occasional inaccuracies, inappropriacies and misunderstandings in some situations. Generally handles complex language well and understands detailed reasoning. |
| Band 6 | Competent user | has generally effective command of the language despite some inaccuracies, inappropriacies and misunderstandings. Can use and understand fairly complex language, particularly in familiar situations. |
| Band 5 | Modest user | has partial command of the language, coping with overall meaning in most situations, though is likely to make many mistakes. Should be able to handle basic communication in own field. |
| Band 4 | Limited user | basic competence is limited to familiar situations. Has frequent problems in understanding and expression. Is not able to use complex language. |
| Band 3 | Extremely limited user | conveys and understands only general meaning in very familiar situations. Frequent breakdowns in communication occur. |
| Band 2 | Intermittent user | no real communication is possible except for the most basic information using isolated words or short formulae in familiar situations and to meet immediate needs. Has great difficulty understanding spoken and written English. |
| Band 1 | Non-user | essentially has no ability to use the language beyond possibly a few isolated words. |
| Band 0 | Did not attempt the test | No assessable information provided. |

Change to Graduate Admissions Requirements

15 November 2012

Change from:

- A combined GPA of 3.00 on the last 90 quarter credits (60 semester credits) of graded undergraduate work on the first baccalaureate degree, plus all work completed thereafter. Minimum GPA for admission to *only* graduate certificate programs is set by the departments that supervise the certificates. Applicants requesting admission to only graduate certificate programs should contact their academic program to learn about minimum GPA and other admission requirements.

Change to:

- A cumulative GPA of 3.00 on the most recent baccalaureate degree or any subsequent graduate degree. Graduate programs may choose to calculate the GPA on the last 90 quarter credits (60 semester credits) of graded undergraduate work, plus all work completed thereafter, and submit that GPA to the Graduate School as the basis for admission. Minimum GPA for admission to *only* graduate certificate programs is set by the departments that supervise the certificates. Applicants requesting admission to only graduate certificate programs should contact their academic program to learn about minimum GPA and other admission requirements.

Change from:

- A Bologna-compliant baccalaureate degree of at least three years duration with a B average (equivalent 3.00 on a U.S. 4.00 grading scale) in the last two years, plus all subsequent graded course work;

Change to:

- A Bologna-compliant baccalaureate degree of at least three years duration with a B average (equivalent 3.00 on a U.S. 4.00 grading scale), plus all subsequent graded work.

Graduate Council

November 8, 2012 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Theresa Filtz, Greg Herman, Don Jump, Mike Lerner, Murray Levine, Stacey Semevolos

Voting Members Absent: Janet Lee, Andrew Plantinga, Darrell Ross

Ex-Officio Members Present: Anita Azarenko, Brenda McComb

Guests: Nagwa Naguib, Britta Stumpp

Approval of Minutes

The [October 25 minutes](#) were approved as distributed.

The discussion regarding identifying individuals' names in the minutes continued with the Council agreeing that, whenever possible, the names of Council members will be omitted from the discussion in the minutes; however, names will be associated with action items.

[Physics Program Review](#) – This was a continued discussion from the October 25 meeting.

- There was concern that students earning a PhD in Physics who write Education theses don't have adequate oversight. Is there always a College of Education member on the committee? Is there adequate pedagogy?
- It's clear that the Ecampus online learning piece is not addressed, but needs to be included.
- A possible outcome is for the one faculty member who has the training to become a graduate faculty member.
- An additional issue is how students are being recruited. It was not clear that the Education component contributes to Physics national ranking.
 - Henri Jansen, Physics chair, feels there is value in focused recruiting but, because it's a small program, it was not clear given capacity that the quality or number of students would be increased.
 - One option related to recruiting is to create an INTO Pathway.
- The Council could accept the report with amendments, including one amendment to involve restructuring.
- The report indicates that it may be time for a change in leadership. It's possible that the program could be reinvigorated with new leadership.
- There was a suggestion from the Council to move recommendations A-M from the back of the report to the front. Additionally, some of the recommendations need to be strengthened.

Action: The Council agreed to make the recommendation to significantly restructure the Physics Program; move recommendations A-M to the beginning of the report; write an executive summary including mention of joint appointments, clarification of degree requirements, restructuring, and collaboration with the College of Education; request development of a timeline for a leadership change; revise the mission; find ways to significantly expand the applicant pool, including the need to be open to recruiting international students; and be open to online courses as a pedagogy needed by students. Jim will draft an Executive Summary for review by the Council.

[Community College Leadership Program \(CCLP\) Review](#) – This was a continued discussion from the October 25 meeting.

- The overall recommendation is to restructure.
- There are five recommendations at the beginning:
 - Recommendation A – Choose a degree focus for the program; either EdD applied scholarship or

PhD research scholarship.

- The downside is that there is not a PhD environment. There is also not a research program to fund students.
- Should the Council emphasize that the unit should do either EdD or PhD, but not both? Can the PhD be suspended while the college engages in strategic planning?
- Recommendation B – Improve the design and practice of online instruction by development of guidelines and training for faculty.
 - Online learning is not required, but there is an Ecampus component because it is less expensive for out-of-state students.
- Recommendation C – Revise the portfolio project to apply consistent expectations and approaches to be communicated early in the program.
 - The unit agreed to be more specific.
- Recommendation D – Locate and assess a venue for intensive course work sessions that provides strong connectivity for mobile devices and computers, as well as greater travel accessibility.
 - It is difficult to access Silver Falls during the winter. The unit agreed somewhat and is proposing to move to Wilsonville for some of the classes.
- Recommendation E – Develop a program learning objective intended to achieve learner proficiency in managing technological change in the teaching and learning environment.
 - The unit felt it was their job to understand and manage technology.
 - It was noted that there was a [response](#) to the report from the unit.

This discussion was postponed until Darlene Russ-Eft is available to participate.

- The Council will recommend to 'Maintain' the program, which involves restructuring; an Executive Summary will be drafted for the Council to review.
- It should be mentioned to Becky Warner how the Ecampus piece is handled.

Action: Jim will draft a response that the Council recommendation for the Community College Leadership Program (CCLP) Review will be to revise Recommendation A to indicate that, as opposed to restructuring, the recommendation will be to suspend the PhD until appropriate funding is available, and maintain and improve the EdD.

Darlene Russ-Eft will be advised of the Council's decision.

English Language Requirements –

- The recommendations provide flexibility for students who don't meet certain thresholds and would allow local control, subject to review and approval by the Graduate School; Science & Engineering units are supportive of the proposal.
- Brenda conveyed a concern from Kim Johnson, Graduate School, which was whether the conditional admit scores would be so low that we would be taking undue risks. Kim is willing to meet with the Council to discuss this issue; she is in favor of a higher score with a waiver component.
- It was suggested that a three-year pilot be implemented and tracked for potential revisions during the pilot period.
- For GTA's, it was felt that 18 was a very low score for one who is grading papers. Conversely, it depends on the individual student. If 18 is the minimum, it allows other programs to use it as a minimum without actually meeting with the student. There was also support for a minimum of 20 with a unit waiver.
- It was agreed to revise the following to include any country: '*** Exemptions for citizens of African countries are considered on a case-by-case basis if the medium of instruction is English.'
- These recommendations could result in elimination of the TOEFL.
- It was noted that any program could set their standards above those listed.

Action: Kim Johnson will be requested to develop sub-scores. She will be invited to meet with the Council next week; Sunil Khanna will also be invited to participate in the discussion.

Graduate Student Teaching – Should there be exceptions to the current policy?

- Students working toward graduate certificates or advanced degrees are not permitted to teach graduate courses. It was felt by some that grading by a graduate student of other graduate students materials was considered a substantial part of teaching courses; others disagreed. Some felt it was valuable training, if they are qualified.
 - What is being expected of graduate faculty?
- It was suggested that total anonymity is a possibility of handling the situation. It was noted that the instructor needs to provide the grade and the graduate student could record the grade. There was some support for graduate students as assistants.

- The issue is whether the individual is able to objectively evaluate papers of friends, colleagues and enemies.
- If a TA is introduced into a slash course, it must be explained that this a learning experience for the graduate student and that anonymity will be maintained.

[Graduate Council Assignments](#)

Jim will revise the distributed assignments and redistribute.

Updates from the Graduate School

- New Major Admissions Improvements
 - Currently admissions documents are scanned, but a new process will be electronic.
 - Salesforce will be used by the Graduate School as a workflow process, including recruiting and admissions.
 - [Guidelines for Growing and Sustaining Interdisciplinary and Intercollegiate Graduate Programs at OSU](#)
 - The Graduate School should be the incubator to develop and administer interdisciplinary and intercollegiate programs, but should not be an accumulator of programs.
 - The Graduate School would provide funding annually for four years and participating colleges will provide support via a three-year MOU; programs will be reviewed after four years to determine success and continuation. The document provides consistent expectations for this type of activity.
 - Sabah suggested to Brenda that the EC review the proposal; the Graduate Council was supportive.
 - It was suggested to add a footnote that this policy applies only to programs that are sponsored through the Graduate School, but units can continue to sponsor their own programs.
- [Graduate Program Guidelines](#) – Anita suggested that GC members carefully review the guidelines and propose edits; Theresa and Don volunteered to assist Anita with the review.

Meeting adjourned at 1:59 PM.

Graduate Council

November 15, 2012 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Theresa Filtz, Greg Herman, Don Jump, Janet Lee, Mike Lerner, Murray Levine, Andrew Plantinga

Voting Members Absent: Darrell Ross, Stacey Semevolos

Ex-Officio Members Present: Anita Azarenko, Brenda McComb

Guests: Kim Johnson

English Language Requirements – Kim Johnson – Director of International Admissions

Kim distributed English Language materials:

- [English Language Testing and Training for International GTAs](#)
- [English Language Testing – Current and Proposed Requirements](#)
- [2011-2012 English Language Proficiency Requirements](#)

- Common trends – some [institutions](#) don't allow students to be a GTA if they have a reading sub-score.
- A concern expressed last week was why there is no sub-score for paper-based testing. Kim noted that the paper-based exam is being phased out.
- For [IELTS](#), OSU has used the internet-based test. Some institutions use only TOEFL scores.
- It was felt that many students do not achieve 26 on the iBT and felt that a score of 22 is more reasonable. Disciplinary differences and fluency were also noted; Brenda stated there is an option for units to set the score higher than 22 and noted that the published score sometimes reflects the level of student who applies.
- Jim noted that the institutional TOEFL is paper-based and that method would need to be retained.
- Having additional flexibility would be preferable.
- There was a concern expressed because a TOEFL is not required if a student successfully completes INTO-OSU language training as designated by CAP. Kim noted that, in some cases, a TOEFL would be required. Brenda noted there is a financial return on Pathway students.
- Brenda encourages units to speak with potential students, regardless of the score.
- A TOEFL is required, but an exception could be allowed. The bullets need to indicate that TOEFL is required.
- There was a suggestion to eliminate the third bullet under 'Exceptions': "Successful completion of language training at INTO-OSU as designated by the Conditional Admission Program – CAP." Brenda explained that this bullet pertains to students' scores that are below the required level, but the unit still wants to admit the student.
- It was suggested to raise the score from 22 to 24, but the exceptions would still be in place, which may result in OSU attracting better students. The sense last week was that the department could have higher scores but, if the university level is lower, some students may not apply. Some units don't even see scores in the 22-24 range. Brenda noted that OSU will continue to internationalize and doesn't want to prohibit students from applying.
- Some scores will result in more exceptions. Brenda trusts the units to appropriately come forward with exceptions and that students are able to progress.
- This is a three-year pilot proposal and will be reviewed at the end of the pilot to determine whether or not to continue.
- Proposed revision recap – If a student does not meet the minimum TOEFL, exceptions will be considered; if students don't meet the conditional standards, they would enroll in CAP. A graduate program chair can bring in a student who has less than the published standards.

Action – Theresa moved to accept the English Language proposal as amended; motion seconded. The

motion passed by voice vote with no dissenting votes.

Change to Graduate Admissions Requirements – Anita Azarenko

- The purpose of the proposed revisions is to achieve the ability to keep accurate records and easily retrieve information.
- The change to a cumulative GPA of 3.0 or above in the last 90 quarter hours must be calculated manually.
- For Bologna-compliant baccalaureate degrees, the proposal would honor a B average for a three-year duration.
- It was agreed to change the verbiage on the first proposed revision to "...the most recent baccalaureate degree..."; strike "On the first baccalaureate degree". Also strike from 2nd sentence as well.
- It was noted that these proposed revisions would need approval from the Faculty Senate.

Action: Theresa moved to accept the proposed revised GPA requirements; motion seconded. Motion to accept the revised GPA requirements passed by voice vote with no dissenting votes.

Physics – Jim Coakley

Jim distributed for review a Physics Graduate Program Review Memo to be forwarded to Becky Warner.

- Jim will forward the memo to Physics, invite them to the December 6 Graduate Council meeting and will wait until then to accept the report until after the unit talks with the Graduate Council.

Community College Leadership Program Review (CCLP) Memo

Jim sent the memo to Darlene Russ-Eft who asked to be invited to the December 6 meeting, so approval of the report will be delayed until after her visit.

Interdisciplinary programs – Brenda McComb

- Brenda met with the Executive Committee, which made the following suggestions:
 - Formalize the agreement with signatures between the Graduate Council and Faculty Senate leadership.
 - Because they wanted to make sure that these are guidelines rather than rules or policy, they requested a revision of the header; the first paragraph was also revised.
 - Replace the MOU with an agreement or signed agreements.
 - That it come forward to the Faculty Senate as an information item from Jim Coakley as the Graduate Council Chair rather than Brenda as an administrator.
- How does this affect the six programs already housed in the Graduate School? Brenda – Applied Economics will soon be moved into Agricultural and Resource Economics; other programs will be moved to other administrative units under a lead dean and will have an intercollegiate curriculum committee. There could also be an office of interdisciplinary studies or a center that houses these types of programs. Brenda felt that the graduate faculty in the program should decide where the program will reside; there was also a suggestion of a rotational basis, as well as of a divisional level.
 - If there is no dean willing to provide administrative oversight, the program would remain in the Graduate School to ensure that the program is not in jeopardy.
- Brenda will again revise the proposal related to movement of the home being driven by the faculty.

Meeting adjourned at 1:04 PM.

REVIEW PANEL REPORT
Master of Science in Agricultural Education
Oregon State University
January 2011

Overall Recommendation

- ☐ Expand (possibly)
- ☒ Maintain
- ☐ Restructure
- ☐ Reduce
- ☐ Suspend
- ☐ Discontinue
- ☐ Other: _____

Summary of Findings and Recommendations

Overall, the review panel finds the Master of Science in Agricultural Education degree program at Oregon State University to be sound. Under **inputs**, its mission fits well with those in the College of Agricultural Sciences and University. Quality of the students, admissions selectivity, curriculum strength, and quality of personnel are high. Because of factors like a one-year program completion period and an emphasis on secondary teacher preparation in agriculture, the program is limited to non-thesis graduate students who advance through the required courses and experiences in a cohort. The program would benefit from increased financial support of students, additional infrastructure, and increased faculty FTE articulated below.

In terms of program **productivity**, level and quality of student and faculty performance and viability of the scholarly community within which students can interact are high. Again, students are currently solely non-thesis students preparing to be secondary teachers of agriculture. The model is effective in producing highly qualified teachers of agriculture, but limits student involvement in scholarly activity and hence, faculty scholarly productivity.

Finally, in terms of program **outcomes**, the professional viability of the graduates is first rate and the students and graduates are highly satisfied with the program. The Department Head and faculty are to be commended for their performance and positive relationships with their students and program graduates.

The **overall recommendation** of the review panel is to maintain the Master of Science in Agricultural Education degree program at OSU, keeping open the possibility for program expansion. There is potential and faculty/stakeholder interest in adding a second option in Business and Industry Education (BIE) to the existing option in Public School Teaching. BIE majors and graduate students in other departments would take courses in the new option. Courses in this option would also lend themselves to distance education or blended face-to-face/distance delivery modalities. BIE majors could be thesis students who contribute to the scholarly productivity of the faculty.

The greatest limiting factor for the BIE program expansion is faculty time. If the program could realize continuity in 12-month appointments for the two existing tenure-track faculty members after their start-up packages end and realize an undergraduate instructor/advisor to allow these faculty members to do more graduate-level teaching and advising, the panel feels a successful expansion into the second Master's option could be realized. The 12-month appointments help these faculty members meet their research and scholarly requirements for tenure and promotion. Across the nation, 12-month appointments for agricultural education teacher educators also foster successful stakeholder relations through outreach and engagement activities. So much of their outreach and engagement is with secondary agricultural education teachers, students, and programs, and this occurs during the summer months. This is unique to agricultural education among teacher education fields and is what drives stakeholder support for university agricultural education faculty and programs. Strong relationships between the university and these stakeholders pay big dividends in both directions and hence, are worthy of resource consideration.

Other recommendations for the AgEd graduate program are:

- Pursue an endowed professorship in agricultural education as another enabling resource in realizing program stature, excellence, stability, and growth.
- Find more student support through scholarships, fellowships [e.g., the University Graduate Laurels Block Grant Program (UGLBG)], and Graduate Teaching and Research Assistantships.
- Clarify faculty position descriptions to more realistically reflect engagement and outreach efforts.
- Put the graduate advising guide on-line to improve communications and recruiting potential. Advertise student funding support opportunities on the web.
- Expand the use of undergraduate agricultural education and selected undergraduate agriculture, food systems, and natural resource and environmental sciences classes as recruitment tools for the program.
- Expand graduate student enrollment and diversity by recruiting students from diverse states like Hawaii that may have limitations on producing highly qualified secondary teachers of agriculture.
- Utilize the Master of General Agriculture degree as a home for thesis students until the BIE Master's option is launched.
- Add a graduate student office with cubicles and a fourth faculty or instructor's office.

Detailed Findings

Introduction

The findings and recommendations of the review panel are derived from a thorough review of the self-study report for the Master of Science in Agricultural Education and other documents (e.g., faculty position descriptions, student portfolios, and the graduate advising guide). Interviews were held in Strand Agricultural Hall 237 on December 16, 2010 with the Department Head, two faculty, and one present and one former instructor in the Department of Agricultural Education and General Agriculture (who are also program graduates); two current graduate students and two recent program graduates; and two College of Agricultural Sciences Associate Deans who have had oversight responsibilities for the academic programs in the department. The review panel was also taken on a walk-through of the department's office, library, and classroom facilities in Strand Hall. The membership of the review panel was:

Dr. Thomas Dormody (Chair of the Review Panel)

Professor and Former Department Head

Department of Agricultural & Extension Education

College of Agricultural, Consumer and Environmental Sciences

New Mexico State University

Dr. Murray Levine

Professor

College of Oceanic and Atmospheric Sciences

Oregon State University

Dr. Joanne Tynon

Assistant Professor

Forest Ecosystems and Society

College of Forestry

Oregon State University

Also attending the review was Dr. Martin Fisk

Interim Dean

Graduate School

Oregon State University

Inputs

Fit of the Mission of the Program and Its Relationship to the College and University Missions

“As a land grant institution committed to teaching, research, and outreach and engagement, Oregon State University promotes economic, social, cultural and environmental progress for the people of Oregon, the nation and the world. This mission is achieved by producing graduates competitive in the global economy, supporting a continuous search for new

knowledge and solutions, and maintaining a rigorous focus on academic excellence, particularly in the three Signature Areas: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress.”

“The College of Agricultural Sciences at OSU is Oregon’s principal source of knowledge relating to agricultural and food systems, and a major source of knowledge regarding environmental quality, natural resources, life sciences, and rural economies and communities worldwide. The College provides undergraduate and graduate education leading to baccalaureate and graduate degrees, and extended education programs throughout Oregon and beyond. Its research programs create knowledge to solve problems and to build a knowledge base for the future. It is a source of information and expertise in integrating and applying knowledge with benefits that are felt in domestic and international settings.”

The mission of the Agricultural Education Program at OSU “is to prepare qualified agricultural education personnel for a variety of roles in education and agriculture in Oregon, nationally and internationally.”

The departmental mission statement under which the AgEd graduate program falls fits well within both the college and university missions. Qualified agricultural education personnel who can educate others in agricultural and food systems, natural resources and environmental sciences, and related disciplines are needed throughout Oregon and beyond. They can advance the science of sustainable earth ecosystems and promote economic growth and social progress wherever they work. The current MS in Agricultural Education program that focuses on teacher education for secondary agricultural education as well as the potential second Master’s option in Business and Industry Education mentioned in the self-study report are consistent with the departmental mission statement.

Quality of Students

The MS in Agricultural Education is designed to be a one-year program with a cohort of students entering in Fall quarter. Incoming students have already achieved competence in an agricultural content area as demonstrated by having completed a BS degree, typically in Animal Science, Agricultural Resource Economics, Crop & Soil Science, Horticulture or General Agriculture. To ensure a significant breadth of understanding, students are also required to have taken 53 credits of diverse agriculture courses. This program is one of few in the nation requiring completion of a BS and breadth courses before admittance; it is believed by the review panel that these high standards have led to a high quality and successful student population.

In addition students are required to document 4,000 hour of work experience related to agriculture. This achievement will also satisfy a licensure endorsement for Career and Technical Education.

One measure of the quality of incoming students is their GPA. In the last 90 hours of undergraduate coursework their average GPA was 3.30; their average GPA for required agriculture related courses was 3.60. These results are based on the previous eight years and

a total of 68 students. All of these students over the same period exceeded the passing score (590) of the Praxis standardized test required for teacher certification, with cohort averages ranging from 695 to 755.

Admissions Selectivity

The AgEd Graduate Program has a rigorous set of admission requirements that follows the OSU Graduate School and is guided by the licensure standards set by the National Council for the Accreditation of Teacher Education (NCATE) and the Oregon Teachers Standards and Practices Commission (TSPC). Requirements include completion of standardized tests: CBEST, Praxis and ORELA (Oregon Educator Licensure Assessments); documented competency working with students 7-12 grade level; demonstrated effectiveness in oral and written communication; a statement of professional goals; an interview with a faculty committee; and verified 4,000 hours of work experience in agriculture.

The extensive list of admission requirements has resulted in students that are highly successful. Of the 143 students enrolled over the past 14 years, about 90% have graduated.

Recruitment is focused on Oregon students with the expectation that most will work in the state after graduation. The current and past students interviewed during this review suggested that offering a few undergraduate courses in Agricultural Education at OSU might be a useful mechanism to excite students who are undecided in their career path.

The review panel suggests that the range for recruitment might be broadened beyond Oregon's borders for purposes of expanding enrollment and increasing diversity. One possibility would be to see if there are any opportunities to recruit graduate students from Hawaii, given the state's historically close relationship with OSU and Hawaii's possible limitations on producing highly-qualified secondary teachers of agriculture. Also, recruiting might be helped by having more detailed information about the program on the department website. For example, having the graduate advising guide online could be useful for attracting students as well as a resource for existing students.

Level of Financial Support of Students

Due to the intensity of this one-year program, there are no graduate assistantships available. Students do apply for department and university scholarships and fellowships. Over the past five years about four students per year have received awards in the range of \$800-\$1500.

The review team suggests that the department explore additional opportunities for their students. The OSU Graduate School has several programs that may be applicable, including the University Graduate Laurels Block Grant Program (UGLBG). The department submits an application for a UGLBG; an internal process is established to select the recipients. This grant can be used to pay for some or all tuition charges. The award is made on the "basis of academic merit and/or a student's ability to contribute toward diversity in graduate education."

Curriculum Strength

The AgEd graduate program focuses on the pedagogy of teaching agriculture. The program and its curriculum are appropriately accountable to the OSU Graduate School, National Council on Accreditation of Teacher Education (NCATE), and Oregon Teacher Standards and Practices Commission (TSPC). The curriculum meets the specific requirements for each of these organizations including being grounded in a conceptual framework required by NCATE for OSU teacher education programs to be nationally accredited. Students admitted into the AgEd graduate program already have a Bachelor's degree in a technical agriculture field like Animal Science or General Agriculture and at least 53 credits of diverse agriculture related coursework. Hence, they are strong in content knowledge before entering the program. They also complete significant work experience in agriculture before licensing to teach (at least 4,000 hours).

The courses in agricultural education required to complete the graduate program are appropriate and cover the requirements from the three organizations listed above. The action research course is a unique offering that causes students to collect and reflect on data tied to their own teaching and the performance of their students in order to make informed improvements to their teaching. Practicum courses like student teaching are competency based and of high quality. Assessment methods and tools used to evaluate student learning in the Master's courses and experiences are variable, robust, and appropriately tied to learning the core competencies. Along with reflecting on the results of their student teaching action research, students keep a reflective journal throughout student teaching to inform and improve practice. The course competency matrix on page 22 of the self-study report makes it clear in which courses and experiences core competency areas are addressed. Finally, students have an opportunity to teach lessons to secondary students in an alternative education setting, exposing them to diverse learners in a nontraditional learning environment.

Overall, the review panel finds the curriculum of the Master of Science in Agricultural Education program to be excellent in scope and quality.

Quality of Personnel and Adequacy to Achieve Mission and Goals

A strength of the AgEd graduate program is the "energetic, enthusiastic, visionary faculty who are experts in the area of teaching and learning and who are dedicated to developing high quality teachers and programs for secondary students" (Self-Study Report, p. 13). The program lists five Graduate Faculty members: three tenure track or tenured faculty and two instructors one of whom has recently taken a position with the Oregon Department of Education. The graduate program is supported by an Office Coordinator and Advising Assistant position. Based on the evidence presented in the self-study report and interviews, the review panel feels that these personnel are of high quality and adequate to deliver the Master of Science in Agricultural Education degree program. However, faculty resources are inadequate for achieving consistency in scholarly activity, expanding the graduate program into the Business and Industry Education (BIE) option that is more appropriate for thesis students than the current teacher preparation option, and meeting the outreach and engagement responsibilities of the department with Oregon agriculture teachers and secondary agricultural education students/FFA members.

The program challenges listed on pages 13 and 14 of the self-study report and discussion during interviews assisted the review panel with this assessment. Continuity in 12-month appointments for the tenure-track faculty and an instructor/advisor for undergraduate courses would enable these faculty to achieve consistency and excellence in research and scholarly activity; develop and teach courses, and advise students (including thesis students) in a proposed Business and Industry Education (BIE) option to the graduate program; and meet their outreach and engagement obligations to secondary agricultural education teachers, students, and programs, many of which occur during the summer months.

Level and Quality of Infrastructure

The MS in Agricultural Education graduate program is part of the Agricultural Education and General Agriculture Department. The Department is housed in Strand Agriculture Hall, built in 1909. A small suite of offices on the first floor serves the Department Head, faculty, and staff. The program's primary classroom, STAG 033, is an enhanced classroom and is suitable for courses with enrollments of 18 or fewer students. The program does not control other facilities used by the program.

The AgEd program needs more dedicated office and teaching space if the program is to grow. The College of Agricultural Sciences has plans for constructing a new Livestock Pavilion in the next two years. This will greatly increase facility capacity for AgEd.

Common areas for AgEd graduate students are limited to the use of a classroom and small library on the basement level; there are no graduate student cubicles. Students have access to shared computers and printers, although most have their own personal computers. It is expected that the new building will alleviate capacity problems. All in all, the physical infrastructure of the AgEd graduate program has been nicely renovated and is better than that of many other OSU programs.

Quality of Organizational Support

The Department Head holds a 1.0 FTE appointment, with 45% of his time allocated to teaching graduate courses and to advising both undergraduate and graduate students. In keeping with a general trend at OSU, AgEd has two 9-month tenure-track faculty on 1.0 FTE appointments. These positions are structured at 50% teaching, 20%-25% scholarship, 20% advising (both graduate and undergraduate students), and 5-10% service, respectively. Both faculty members have 2-3 years' startup support for summer salary. Both teach five or more courses per year in addition to summer courses. During winter term, faculty conduct supervised visits to schools across Oregon where graduate students are engaged in their student teaching requirement. Each student is visited six times in the winter term. When startup support ends for the tenure-track faculty, it is not clear what will be sacrificed. The current structure does not allow much uninterrupted time for scholarly activity. By necessity, research is clearly tied to teaching. There is some support for travel to supervise student teachers and travel to professional meetings.

There is one full-time instructor. There are no graduate research assistants and there are no

graduate teaching assistants, although graduate students can get course credit to serve as teaching assistants.

The job market for secondary agricultural education teachers in Oregon does not limit graduate program growth; it is limited by the size of the faculty. The tenure-track faculty would like to expand the non-thesis Master's degree to include research efforts. While this change would enhance opportunities for faculty research productivity, it is not clear how this can be facilitated at present.

There is concern that tenure-track faculty are not getting the support they need to meet the expectations for scholarly output as defined by the tenure and promotion guidelines in the OSU faculty handbook. Delegating some of their responsibilities to others would help. An additional undergraduate instructor would free up time for AgEd tenure-track faculty to teach graduate level courses. Providing funded graduate assistantships to help with teaching and research efforts would also support faculty efforts. Position descriptions for tenure-track faculty should clarify outreach efforts to more realistically account for engagement with secondary teachers and others. Finally, the addition of an endowed chair in AgEd would enhance the program's ability to secure research funding, attract high caliber graduate students, and increase the professional profile of the program.

Productivity

Level and Quality of Student Performance

Incoming students must meet several programmatic benchmarks (e.g., CBEST and PRAXIS test performance, GPA scores). Once here, student performance is assessed through coursework exam scores, including a final oral exam, and through PRAXIS assessment. This includes an assessment of the students' professional teaching portfolio and their student teaching performance. Grade point averages for AgEd students have been consistently high, ranging from 3.75 to 3.97 for the last eight years.

Very few students who start the program do not finish, primarily because of work or personal commitments. The dropout rate appears quite low. It is more often the case that, instead of dropping out, students take additional time to complete their degree.

While there appears to be congruence between student and program expectations, having a formalized graduate advising guide is nevertheless recommended. A web-based advising guide can be especially useful to help potential students understand the curriculum and it can also serve as a recruitment tool for interested others. Another recruitment tool that has found success in other departments is providing (and advertising via the web-based guide) more scholarship and fellowship support for graduate students.

Level and Quality of Faculty Performance

The review panel finds the faculty and instructors in the AgEd graduate program to be highly productive and of high quality. They have a combined 43 years of secondary teaching experience in agricultural education and role model outstanding pedagogy in their university teaching. All have received significant teaching and/or advising awards in agricultural education. Faculty members are evaluated on their teaching through student evaluation of teaching (SET) questionnaires. SET data are used in annual and cumulative (tenure and promotion) performance evaluations. Faculty members also prepare documents for review that reflect on their performance in all assignment areas.

The faculty has been prolific in research and scholarly activity. The Department Head was the 5th most prolific author in the Journal of Agricultural Education from 1996-2005. All three tenured or tenure-track faculty have received awards for their research and scholarly activity. All are prolific publishers; it is particularly noteworthy how many papers and presentations the junior faculty has to its credit as early career professionals. All are involved in their professional associations. The two instructors also have recent papers and/or posters to their credit; one instructor received three poster and a paper presentation awards in 2008.

Viability of Scholarly Community Within Which Students Can Interact

Students in the AgEd program are very engaged with teachers and teaching. They learn about pedagogy from faculty members who practice and demonstrate pedagogy in the classroom. They become competent to teach in broad content areas. Because they are not required to conduct research for their degree, their scholarly community is different from that of students obtaining a thesis Master's. Nevertheless, the students' cohort model serves to keep them in touch with one another and helps them build relationships with teachers and other community members through conferences, supervised classroom instruction, and FFA.

Outcomes

Professional Viability of Graduates

The AgEd program has done an outstanding job of tracking the progress of its graduates. In part, this is because Oregon agriculture teachers and the AgEd faculty attend the Oregon FFA Convention, State Fair, and other events together. Also, the Department Head has elected to track where all graduates since 1996 are employed.

Graduates of the AgEd Master's program currently teaching were surveyed in spring 2010. Responses were received from 44 out of the 55 graduates surveyed. Fully 100% of the alumni who responded were employed as high school teachers. Most (85%) found employment in less than six months. Employer evaluations ranked AgEd graduates favorably compared to other teachers.

Satisfaction of Students and Graduates

The review team had the opportunity to meet with four students, two currently enrolled in the

program and two recent graduates. All the students were very positive about their experience. It was clear that the cohort model and the detailed lists of requirements kept them busy and created an atmosphere conducive to group learning and support.

The results of a 2010 department survey of 44 alumni showed overwhelming satisfaction with their experience and achievements in the Agricultural Educational program. In response to the levels of satisfaction in the categories of “departmental advising/guidance”, “major professor mentoring”, and “overall quality of graduate instruction”, over 60% of the graduates were very satisfied and 25% somewhat satisfied. Lowest satisfaction was with “courses taken outside the department” and “level of financial support”. The “overall satisfaction level” received a ranking of very or somewhat satisfied by 90% of the graduates.

As another measure of satisfaction, graduates were asked if they were starting over, would they consider this program again. Over 90% replied they would attend OSU again for the same degree with the same major professor. The graduates replying to the survey all are currently employed as high school teachers with 95% as Agricultural Science and Technology instructors.

Rankings/Ratings

Periodically, there has been survey research published in the Journal of Agricultural Education that has attempted to rank agricultural education departments in U.S. universities. These rankings have favored Ph.D. granting departments over those like Oregon State University’s Department of Agricultural Education and General Agriculture that are offering Bachelor’s and Master’s degrees only. Hence, the rankings are not useful in determining program strength relative to peer programs that offer only Bachelor’s and Master’s degrees in agricultural education.

One instructor we interviewed has been delivering teacher professional development workshops across the nation on new secondary curricula in agricultural sciences education. It is his opinion that the Oregon agriculture teachers who have graduated and licensed to teach under the Master of Science in Agriculture Education at OSU have been the best prepared teachers coming into these workshops and hence, the most prepared to succeed with the new curricula. Part of the rationale for this endorsement was that all of the graduates of the OSU AgEd graduate program already possess a Bachelor’s degree in an agricultural science discipline.

Conclusions

Overall, the review panel finds the Master of Science in Agricultural Education degree program at Oregon State University to be sound. The overall recommendation of the review panel is to maintain this graduate degree program, keeping open the possibility for program expansion. There is potential and faculty/stakeholder interest in adding a second option in Business and Industry Education (BIE) to the existing option in Public School Teaching that could be realized with additional resources. The Department Head and faculty stewarding the Master of Science in Agricultural Education are to be commended for the soundness of

the program, performance of their students, and positive relationships with their students and program graduates.

The review panel would like to thank the Department of Agricultural Education and General Agriculture and the College of Agricultural Sciences at OSU for all that they did to prepare for the review and educate the review panel on the graduate program. Along with Dr. Martin Fisk, Interim Dean of the Graduate School and Dr. Greg Thompson, Department Head of Agricultural Education and General Agriculture, the review panel wishes to thank Nagwa Naguib, Executive Assistant to the Dean of the Graduate School and Sara Williams, Office Coordinator and Advising Assistant for the Department of Agricultural Education and General Agriculture for their logistical support.

Subject: MA in Women Studies Category I Proposal - BFP Committee Feedback

Hello Susan,

Our Budgets & Fiscal Planning Committee met last week to review your Category I proposal (MA in Women Studies). Thanks for all your work on this proposal.

Below are a couple questions that emerged during our review of your proposal.

1. You have identified incremental personnel costs totaling \$9.2K/year (\$6.0K salary and \$3.2K OPE). Who specifically are these costs for and how were the amounts derived? Also, do you anticipate these costs increasing (as salary and OPE costs often do) over the four-year projection period?

The salary is to support the teaching of WS 521 (3) Feminist Leadership & Management, WS 522 (1) Grant-writing and Development for Feminist Organizations, and WS 523 (2) Community Organizing & Collective Action. The \$6,000 is based on our current rate of \$3,000 per three-credit course for fixed-term instructors. I do not anticipate that cost increasing. Joel Colvin (his email is included in the proposal) has suggested the OPE is high for now, and so that estimate should cover possible increases over the projection period.

2. You reference GTAs on page 13 (Section 4c). What costs associated with those GTAs do you anticipate as those GTA positions "migrate to the MA program" from the MAIS program?

We currently fund eight .25 GTAs in the MAIS program. We anticipate all of those positions will migrate to the MA program. We do not anticipate any change in the costs of the TAs.

3. Do you anticipate any course development costs associated with the new WS course offerings?

We do not anticipate any costs associated with the new offerings. All of them have been developed and are currently in the curriculum proposal system.

4. What is the basis for your estimate of "8-10 new full-time graduate students each year?" This was on page 6 (Section 1f) of your proposal.

We currently enroll 4-6 new grad students each year in the MAIS program, almost all of whom would prefer an MA. So we anticipate most of these applications will become applications for the

MA program. We have never actively recruited for the MAIS program, and we have often received feedback from undergraduate students around the country that they would be interested in an MA but not the MAIS. With the MA, we will begin active recruiting for the program and so anticipate that we will easily attract an additional 4-6 students per year. At 8-10 new students per year, we will also be at capacity to supervise grad students.

5. On page 6 (Section 1g) you anticipate conferring five degrees per year. Is the difference between 8-10 new students per year and 5 degrees per year a function of anticipated attrition or something else?

Yes, we do anticipate attrition. We also have had the experience in the MAIS of graduate students who take longer than expected to complete their degrees (for a variety of reasons, mostly having to do with life issues), and so we expect that during the first few years we'll have lower completion rates as some of these students take, four, five, six years to finish occasionally.

6. How much do you anticipate this program will cannibalize from enrollment in the existing MAIS program?

We imagine practically all of first area MAIS students will take the MA instead, although we expect some students will still take WS as a second area in the MAIS, and so we will still participate in that program.

7. In the "Evidence of Market Demand section (page 11-12, Section 4a), you noted that 12 regional employers returned surveys about the need for this program. What percentage of the total survey population is represented by the 12 employers who responded (i.e., how many surveyed employers did not respond)?

We sent out 47 surveys. So, that's about a 27% return rate.

8. Will there be other programmatic objectives, functions, or activities that will have to be deferred or cancelled to account for the time and money that will be invested in this proposal (i.e., what are the key identified opportunity costs associated with this proposal)?

Not really. Essentially, we have built most of the program before we have proposed it. Additionally, as part of the proposed School of Language, Culture, and Society we have more access to resources to support the program—for example, through co-sponsored events or cross-listed courses.

Please send Carol, me, and our committee (copied above) your responses to these questions.

After we receive your feedback/responses, we will conclude our financial/budgetary review of your proposal, vote on it, and move it on to the next committee via either email this week or a discussion/vote at our next BFP Committee meeting (on April 25th).

I've copied Gary Beach (Academic Affairs), Mike Bailey (Curriculum Council Chair), and Theresa Filtz (Graduate Council Chair) above to keep them apprised on the status of this proposal and to help expedite the proposal through all the committees.

Let me know if you have any questions.

Thanks,

Steve Hoelscher

Transcript Visible Specializations at the Graduate Level

Constraints:

- Should not impact the multitude of "Areas of Concentration" (AOCs) currently approved and in the catalog. The intent is to **NOT** convert all AOCs into becoming transcript visible specializations. Departments have the choice of converting some of the AOCs into transcript visible "options".
 - At the undergraduate level, there are both transcript visible options and non-transcript visible areas of concentration. We are using the term "option" to refer to a transcript-visible specialization within an existing graduate degree – for lack of a better term.
- Needs to be supported by a formal curriculum approval process to ensure appropriate agencies are informed (Graduate School, Registrar, etc.) This could be similar to the process currently used to approve undergraduate options (will require modification of the curriculum proposal system, etc.)
- Needs to be a formal process to approve the addition of an "option" to a graduate degree candidate (will require the Registrar to enter a banner code into the student record).

Issues:

- The Registrar needs to be able to validate that the requirements for the "option" have been met.
 - They would like each "option" to have a minimum set of core requirements. There would be extra work for the departments in deciding which courses make up the various "options" and getting the information into the catalog, and departments would have to assure that the courses are taught regularly so the students can earn the "options".
 - There are alternatives that could be investigated in the future, such as having the approved program plan in degree works.
- The Graduate Council would need to develop a definition as to what constitutes a transcript-visible option. Currently, the absolute minimum used by the Graduate School to establish a new Area of Concentration is to have a minimum of 3 courses and 2 faculty.

Advantages:

- Allows tracking of student information within banner/data warehouse. Information regarding enrollment, degrees by gender, ethnicity, residency, age, etc. becomes available to the academic unit and the University
- There would be greater scrutiny on the part of faculty, administrators, advisors, liaisons, as to what constitutes the courses and requirements for each specialization within a graduate degree program.

Disadvantages:

- Will require more effort by Graduate Council and Curriculum Council to formally approve graduate specializations.
- Also additional workload for Graduate School, Registrar, Catalog, SIS etc.

Next Steps:

- Meet with interested departments to collect input and interest
- Begin formation of formal proposal – December deadline?

USDA-NIFA and OSU Internal Review Report – April 24, 2011

Graduate Programs in (1) Animal Sciences and (2) Rangeland Management and Ecology

Oregon State University, Corvallis OR

1. Overall Recommendation: **Restructure** by combining the programs.
2. Summary of Findings and Recommendations
 - a. **Key Issues**
 - i. Faculty FTE are below “critical mass” due to
 1. Lack of replacement faculty FTE over the last two decades
 2. Loss of early career faculty due to unanticipated departure from the institution without replacement
 - ii. Current faculty demographics of both departments are such that reduction of faculty numbers means that fewer students are being trained
 1. The near-retirement stage of some faculty, the administrative and/or undergraduate teaching loads of others, coupled with fiscal considerations to cover the cost of supporting students have impacted the graduate education programs with an adverse impact on the morale of students and faculty alike
 - a. Nonetheless, student consensus indicated that “things have improved”
 2. Interestingly, the faculty:student ratio (Animal Sciences) has not changed indicating a continued commitment of faculty to graduate education
 - iii. E&G budgetary constraints of CAS and departments
 1. Campus administration needs to address the flow of financial resources to the department to support student enrollments
 - a. Provision of funding for GTAs to support the undergraduate education mission of the units (ANS/RME courses) will assist funding for graduate education
 - iv. Faculty Mentoring and Professional Development
 - a. Enhance professional development of new hires which will promote retention of new hires
 - b. Set expectations for instruction of graduate courses by faculty
 - b. **Findings – Recommendations**

1. Campus administration must address and fulfill faculty FTE commitments for the new consolidated department: Hire tenure-track FTE (a cluster hire of assistant and associate levels would be most beneficial)
 - a. A combined target of 18-20 faculty is recommended
 - i. 5 FTE immediately as a cluster hire to enhance programmatic developments *including* graduate education opportunity
 - ii. Replacement priority for future FTE due to resignations and retirements to develop and maintain the necessary preeminence for the consolidated unit
2. The consolidated department should merge the two graduate programs to create a modernized graduate education opportunity for MS and PhD degree conferrals
 - a. Develop a modern and comprehensive name
 - e.g., Animal Systems and Range Ecology
 - e.g., Biology of Animals and Ecology of Range
 - b. Develop a graduate education core **plan** that takes advantage of departmental strengths (upon the new FTE hires) and campus opportunities that gives students personalized disciplinary “options”
 - i. Identify minimal core curriculum for MS and PhD programs – develop appropriate core courses for research area of interest/ so students understand what is expected for degree completion and the courses are available for enrollment
 1. Consider if it is a possibility that graded course requirements for a research PhD are too high
 2. Consider a policy/regulation course (perhaps covering both animal science and range issues)
 - ii. Range program – connect and enhance collaboration with water resources and natural resources – research, undergraduate and graduate programs, extension
 - iii. Campus administration should address issues related to advanced degree students being “locked out” of courses in other units
 - iv. Campus administration and the department should develop *an educational think-tank workshop* to develop a consortia to consider novel opportunities for “missing” classes via long distance learning with western states or e-classes
 1. To make gains in this arena, financial resources to bring faculty from disparate sites together to develop are essential with campus IT/interaction modes to “make it happen”

2. Change admission strategy to develop an early (campus compatible) deadline (e.g., January 15) for application review and allowing for competition for fellowships and opportunity to gain the “best crop” of students (this doesn’t preclude continuing admissions beyond the early deadline)
 - a. Consider the balance of OSU vs non-OSU applicants
 - b. Consider opportunities for international students
 - c. Consider opportunities to enhance the diversity of students (both gender and ethnicity)
3. Student Development and Communications
 - a. Improve the mentoring and orientation for 1st yr students (regardless of term admitted)
 - i. Teaching, safety issues, and research should be emphasized
 - b. Convene a session involving students and a faculty committee to consider salary issues – and the equalization of salary base and workload
 - i. Develop a greater faculty-student partnership within the department, which will be especially important for students as the consolidation unfolds
 1. Develop “a consolidated departmental plan” for funding of graduate students that is equitable and openly-communicated with students
 2. Work with administration to gain GTA funding from campus for ANS and RNG courses
 3. Investigate GTA opportunities for program students in other departments
 - c. Communication and mentoring regarding workload balance
 - i. Discussion of expectations with students and mentors
 - d. Focus on communications with students regarding the departmental merger and any potential graduate program merger
 - e. Investigate campus-wide teaching/TA-training programs – require participation if available; consider development of

- a 1 unit grad level “teaching skills class” that all program students must take in their first quarter
- f. Develop student-to-stakeholder interactions
 - i. Consider an annual event to provide interactions which could lead to student-funding development and career opportunities
 - 1. For example:
 - a. Half day of student presentations
 - b. Luncheon
 - c. Half day of stakeholder presentations

3. Detailed Findings

- a. Introduction:
 - i. **Objectives of the review.** The graduate program review was commissioned as part of the 10 yr review process required by the institution. An unusual feature of this review is that it was organized in alignment with the USDA-NIFA external review of the departments of Animal Sciences and Rangeland Ecology and Management. These two departments are planning to merge as of July 1, 2011. The department heads (Jim Males and Mike Borman) have been working with stakeholders, faculty, staff and campus administration to create a strategic vision for the new department. A search for a new head is underway.
 - ii. **Participants.** See iv below and **Attachment 1: Participants**
 - iii. **Order of events.** See **Attachment 2: Review Site Visit Agenda**
 - iv. **Organization of the report.** The report format was organized according to university guidelines. The overall content was defined by a one page sheet provided by the Graduate School entitled “Appendix II: Outline for the Review Panel Report”. Dr. Mary Delany (UC Davis), a member of the USDA-NIFA external review team was identified as the lead for the internal Graduate Program Review and asked to compile the introductory materials and the report as a whole. Dr. Twig Marston (University Nebraska), a member from the USDA-NIFA external review team and OSU-internal team members (Walter Loveland, Carolyn Aldwin, Martin Fiske) participated in the scheduled meetings. The other USDA-NIFA team members (see attachment 1) also provided input by discussion during the site visit. Drs. Delany, Marston, Loveland, and Aldwin held

responsibility for the text based material below (Sections: b. Inputs, c. Productivity, d. Outcomes, e. Conclusion) and overall recommendations.

b. Inputs:

- i. **Mission fit and relationships to college, and university missions.** The strategic plan provided by the merged Department of Animal and Rangeland Sciences addresses teaching, research, and extension. This aligns the department with more than the general connotation of land grant universities; the new department has taken great care in aligning with particular components of both the Oregon State University and College of Agricultural Sciences mission statements. Highlights include the commitment to excellence in the classroom, research, and programming. The department is committed to contributing to Oregon's overall economy. Also, the Animal and Rangeland Sciences strategic plan provides both a science track, which prepares students for veterinary school or graduate school, and an animal management track, which prepares students for careers oriented in animal/range management or related industries. The department is dedicated to using internal staff and external stakeholder inputs to craft its present and future endeavors. The department strategic plan is begins with ambiguously large concepts, but it ends with specific ideas and plans it expects of itself to achieve attainable, high-quality goals.
- ii. **Quality of students/Admissions selectivity.** The rolling admissions format practiced by the department(s) may be an impediment to recruiting the level of scholarly students that would enhance the program. It may also be an impediment for gaining fellowship support for students. The GRE scores of rejected students were often higher than those accepted, and there evidence for declining GRE scores over time.. The stated reason for this policy is that students were taken on as research projects were funded, which leads to selecting for convenience/familiarity rather than excellence. This is partially in response to lack of alternative stable support for graduate students such as GTAs. The department (ANS) has devised a new strategy to raise the credentials (40% percentile threshold for average GRE scores) of incoming students.
- iii. **Level of financial support of students.** The department (ANS) has designed a strategy to provide 0.2 fte which allows for fee remission in return for service activities (assistance with classes). However, there may be discrepancies between the stated FTE and the number of hours worked, which should be corrected. There is an apparent disparity and a lack of communication regarding salary support and opportunities for students to get GTAs. The departments need to spend time developing an improved plan for graduate funding, as does the campus administration. Also surprising was the lack of active participation in

the graduate student union which might provide support for improved [job equity for the graduate students](#)

- iv. **Curriculum strength.** Graduate classes were evaluated on breadth and depth of class offerings. It appears that classes taught both within and outside the home departments are adequate to prepare graduate students for knowledge and research support. Graduate students expect a majority/large percentage of classes to be made available from within the Animal and Rangeland Sciences, which may not be feasible. Students should be realistic in understanding that the breadth of classes needed to provide individually-needed class work will have to encompass several different departments, colleges, and schools within the University. Graduate student surveys indicate student satisfaction in knowledge transfer and course quality. Complaints and concerns center on two areas. First is the number of graduate stand-alone courses as compared to “slash” classes. This is magnified because a vast majority of the graduate students come from OSU undergraduate degree programs, hence, “slash” programs have already been taken to complete B.S. degrees. Compounding this is the critically low number of graduate faculty and their graduate-level teaching loads/expectations. The second problem is the inability of Animal and Rangeland Science graduate students to gain timely admittance into graduate level classes being offered in other departments and colleges or schools. Those specifically mentioned frequently reside in the College of Veterinary Medicine. The inability to enroll in these classes has caused delays in degree completion and student frustration. The unit administration should negotiate with COVM to provide access to their classes, especially in light of the services provided to COVM in terms of access to animals, etc.
- v. **Quality of personnel and adequacy to achieve mission and goals.** The quality of the faculty and the instructors are appropriate to meet the mission/goals of the programs, offering effective opportunities in the lab and field for advanced degrees in the areas outlined, however, the number of faculty are inadequate which has resulted in a low number of trainees (i.e., low faculty numbers and high administration loads, as well as faculty nearing retirement age not taking on students). More students could be accepted than faculty have resources to fund – so in some ways the faculty are appropriately not taking on too many students. However, the number of graduating students does not meet the current university-mandated criteria, which is why we recommend that the graduate programs be merged. Students in a survey expressed strong satisfaction with their mentors (ratings of 4 and 5 from 10 of 16 students that completed the

survey). Also, the low number of faculty means that the diversity of graduate courses offered is lower (students indicated a lack of graduate courses was a problem). As mentioned earlier, many of the classes are “slash” courses, and since many of the students graduated from OSU, they may have already taken these classes. Ultimately, expectations need to be established (perhaps at least a threshold of expectation for graduate education once tenure is achieved; at other institutions it can be an expectation that a faculty member upon advancement will offer a graduate level class in their area of scholarship).

- vi. **Level and quality of infrastructure.** Students are trained at the OSU (Animal Science, campus based) site as well as the Agricultural Research Center (ARC, Eastern Oregon) (Rangeland Ecology Management). Withycomb Hall was mentioned by many administrators and faculty as being in need of renovation to make it a suitable laboratory environment. Problems include leaking roofs. A Nutrition Lab exists where students can run assays or have assays conducted with a sliding payment scale set by the institution. Access to a Reproductive Physiology lab also is an opportunity. A building or animal facilities tour was not part of the review, so the space/infrastructure was not directly assessed nor was discussion held on graduate student study space (cubicles/offices, etc.). The field opportunities and the access to Eastern Oregon labs (Union Station, Burns) seemed high quality (overview by slide presentations). The Burns unit is a partnership with USDA-ARS and apparently has many advantages for laboratory analyses. Students mentioned that access to a high quality molecular/cellular biology techniques (laboratory) course would be a welcome addition.
- vii. **Quality of organizational support.** The Animal Sciences faculty discussed their Graduate Student Handbook as an information-laden resource for students. The students did not see this in the same light. Students entering “off cycle” seem especially at a disadvantage. Annual reviews/performance sheets were part of the mentoring process, although this seemed more like a “check off” than mentoring/professional development. The students appear to be very positive about the seminar course being run by a new faculty member, in which they give presentations (two quarters) and then are exposed to internal faculty presentations. Opportunities for GTA’s (an important form of organization support) are not apparent within the department (which seems odd, given the number of undergraduates being educated, about 430 in ANS and 30 in REM, and given the expected laboratory sessions). This seems to be an issue needing resolution by the campus administration. Communication of opportunities for GTAs in other units should be offered.

c. Productivity:

- i. **Level and quality of student performance.** The review committee was concerned by the data (Appendix K of the self-study) on the number and quality of graduate students. For the **Animal Science** program the number of graduate students declined significantly from 2000 to 2010, mirroring the reduction in FTE and overall demographics of the faculty. In the period from 2002-2003 to 2010-2011 the total number of entering doctoral students was 8 and the total number of entering masters students was 43. Of these masters students it appears that 12 did not complete the program to receive a degree, a 28% attrition rate. For the doctoral students the attrition rate is not easily determined although the NRC data (see below) suggest it was not good. Neither the masters nor the PhD programs appear to meet the University's guidelines for sustainability of graduating 2 PhD students per year and 5 master's students per year. For the **Rangeland** program, a similar decline in student numbers was observed from 2001 to 2010. In the ten year period from 2001 to 2010, 8 students entered the doctoral program and 44 students entered the masters program. The graduation rate for the masters program was excellent with only 3 people leaving without completing a master's degree. The same sustainability problem exists with the Rangeland program as exists in the Animal Science program. **The review committee suggests the two graduate programs be combined to create a more sustainable overall program with areas of concentration in Animal Science and Rangeland.** The choice of a program name for the combined program/degree should be carefully chosen with full all stakeholders and the graduate students being involved.

A second issue is the quality of the graduate students in Animal Science. The average GRE verbal scores of the applicants declined from 582 in 2004-2005 to 430 in 2009-2010. The latter score for a cohort that is primarily native speakers of English is abysmal. A similar decline in GRE quantitative scores from 592 to 450 was noted also. What is paradoxical about these scores is that the average quantitative GRE score of rejected applicants in 2009-2010 was 710. This may be the product of what the department refers to as "rolling admissions" in which students are admitted continuously rather than grouping the applicants and making decisions on an entire group of students. **The review committee suggests graduate applicants be admitted on fixed dates, January and the usual April 15th, so as to make sure that the best students are selected for admission.** Limited current data is available for admissions of Rangeland students but these data suggest a much better set of average GRE scores (650 and 510) but a similar problem with rejected applicants (680 and 560). **The review committee suggests that GRE scores be required for admission to either program.**

- ii. **Level and quality of faculty performance.** The level and quality of faculty performance is best summarized by the NRC metrics discussed below. However the review committee is concerned with another aspect of the faculty situation, the apparent decline in the number of faculty, which certainly affects the number of students in the graduate programs. In Fall 2000, the Animal Science program had 33 non-emeritus tenure-tenure track faculty. By Fall 2010, the number of non-emeritus tenure-tenure track faculty was 24. Approximately 11 faculty had retired or resigned in the intervening years which means there was little replacement of these faculty. Of the current faculty 12 are primarily extension faculty. We understand there is a plan to add five new faculty members to these departments which will help.

Rankings/ratings. The Animal Science program was evaluated in the recent NRC evaluation of quality in graduate education. Oregon State University, as part of its decennial accreditation by the NWCCU, used eight of the NRC metrics to rate its graduate programs. The metrics used were the number of publications per faculty member, the number of citations per publication, the percent of faculty with grant support, the average completion rate of PhD students, the average time to degree of PhD students, the number of PhD students graduated per year, the percent of interdisciplinary faculty and the GRE scores of the entering PhD students. For each metric the score of each graduate program was compared to the mean score of our peer institutions (Auburn, Arizona State, Clemson, Colorado State, Iowa State, Kansas State, Oregon, North Carolina State, Purdue and Washington State). If the score of the OSU program was within two standard deviations of the mean, it was said “to meet expectations”. If the OSU score was more than two standard deviations above the mean, it was said “to exceed expectations”. If the OSU score was less than two standard deviations below the mean, it was said “not to meet expectations”. The Animal Science program did not meet expectations for two metrics (number of publications per faculty member and the percent of faculty with grants), exceeded expectations on one metric (completion rate) and met expectations for all the other metrics. Animal Science calls attention to the issue with the NRC study of how the number of faculty were calculated for each program which was a problem for land grant institutions where graduate faculty are routinely drawn from industry, national laboratories and federal agencies. Overall the Animal Science program is said to “meet expectations.”

- iii. **Viability of scholarly community within which students can interact.** The review team met with 13 students. On an individual basis, it is clear students are

interacting with their research mentors, and they are also interacting amongst themselves (a positive and supportive cohort was interviewed who reported a number of positive efforts, such as a journal club, research presentations, etc.). They clearly would enjoy more opportunities to attend meetings, discuss career options, etc. They were concerned about the departmental merger although they seemed accepting of it; however, there were clear concerns regarding any consolidation of the graduate programs. This means that some “leg work” is necessary to assure them, listen to and evaluate concerns, and promote faculty-based scholarly interactions that they can be a part of – to see the value of the interdisciplinary or multidisciplinary scholarship to their education. It was not clear that the students are interacting with other faculty outside the department, but since the majority of students are M.S., this is not unusual.

d. Outcomes:

- i. **Professional viability of graduates.** There is a clear career path for the range degree students; the animal sciences students seemed less clear as to their opportunities. That is not unusual for ANS students throughout the country as they often start out committed to veterinary school. A key recommendation is to develop an alumni base which these departments should have, given their long history, to help educate the students as to career opportunities (which in fact are very positive opportunities ranging from further professional and research advanced degrees, laboratory research, positions in state and national regulatory agencies and government, positions in agribusiness and allied industries, etc.).
- ii. **Satisfaction of students and graduates.** Student interviews indicated a mix of satisfaction with mentors (despite the scenarios where faculty left the institution) but concern about graduate level classes (perceived lack), lack of training to be a good instructor, negative views of orientation during their first year of the program, and lack of access to techniques-base courses. The students were fierce in their view that the programs (animal and range) were stronger in their “separateness”. They expressed concerns about the job opportunities given the current economic climate. The self study analysis indicated 10 of 16 student responses expressed strong satisfaction (4 and 5) in evaluating their mentoring experiences. The students were “out of the loop” in regard to the departmental merger and we recommend rectifying that by increased communication. Students were happy with the journal club format of one seminar series.

e. Conclusion:

- i. We affirm the value of these advanced degree graduate programs for their contribution(s) to the mission of the land grant institution and in public service to the state of Oregon in educating students. We believe that consolidation of

the two programs along with a concerted effort by faculty (which must include new hires) to enhance aspects of the opportunities for students will result in a unique (there are only three advanced degree programs of this type in the nation), high quality and well-known program with national visibility and many opportunities to engage in international education in the future. Specifically, this consolidated and updated program at OSU has the potential to be the lead and premier unit in promoting science-based knowledge and educated experts (working in the field or voting at the polls) regarding livestock and animal systems and range sciences of the Great Basin, this will bring further visibility to the institution. The current and future (as committed by campus administration) disciplinary-based graduate faculty offer will provide expertise for training in the molecular, cellular, organismal and systems level analysis of animals and the environment – and how the important interactions between these units.

Attachment 2. Review Site Visit Agenda

Animal and Rangeland Sciences

Departmental Review

March 14-17, 2011

Sunday March 13

Afternoon: Convene Boise Airport. Jim Males and Mike Borman will meet and drive to LaGrande, OR

Monday March 14

| | |
|-------------------|---|
| 7:00 am. | Breakfast with Males, Borman, Tim DelCurto (Superintendent EOARC), and Larry Larson (EOU Ag Program Leader) |
| 8:30 am. | Convene with EOU, EOARC Faculty |
| 8:45 – 9:15 am. | Overview of EOARC Burns and Union and EOU facilities |
| 9:15 am | Break |
| 9:30 – 10:30 am. | EOARC Animal and Range Research overview |
| 10:30 – 11:00 am. | EOU Undergraduate Program (Range Major and Animal Sciences Minor) |
| 11:00 – 12:00 pm. | Team and EOARC/EOU Faculty (with box lunches) |
| 12:15 pm. | Leave for Corvallis |
| 7:00 pm. | Dinner for Team and OSU Graduate Program Review Team – Corvallis |

Tuesday March 15

| | |
|-------------------|--|
| 8:00 am. | College of Agricultural Sciences and Extension Administration |
| 9:30- 10:15 am. | Overviews, Departmental (Males and Borman); Undergraduate Program (Jim Hermes); and Graduate Programs (Fred Menino). |
| 10:30 -10:45 am. | Break |
| 10:45 – 12:00 pm. | NIFA and Undergraduate Program Review Team meet with Undergraduate Students |
| | NIFA and Graduate Program Review Team meet with Graduate Faculty Eastern Oregon Faculty available Polycom. |

| | |
|-----------------|---|
| 12:00-1:00 pm. | Working lunch for NIFA, Graduate Program and Undergraduate Program Review Teams |
| 1:00 – 2:00 pm. | Meet with Stakeholders |
| 2:00 – 3:15 pm. | NIFA and Undergraduate Program Review Team meet with Undergraduate Teaching Faculty |
| | NIFA and Graduate Program Review Team meet with Graduate Students |
| 3:15 – 3:30 pm | Break |
| 3:30 – 4:00 pm | OSU Review Teams meet with Males and Borman |
| 4:00 – 5:00 pm | NIFA and OSU Review Teams in Executive Session (if NIFA team is not included in this they will be taken on a tour of farm facilities) |
| 7:30 – 9:00 pm | Reception for Review Team, Faculty, Administrators – Males Home |

Wednesday March 16

| | |
|------------------|--|
| 8:00 – 9:00 am | University Administration |
| 9:30 – 11:00 am | Research Overviews Faculty (Break will be worked in as needed) |
| 11:00 – 12:00 pm | Extension Overview (Jim Thompson) |
| 12:00 – 1:00 pm | Lunch with CAS Unit Leaders |
| 1:15 -2:00 pm | Animal Unit Managers & Laboratory Support Personnel |
| 2:00 | NIFA ReviewTeam Open for Discussion and work on report |

Thursday March 17

| | |
|----------------|---|
| 8:30 – 9:30 am | Exit Interview – College of Agricultural Sciences and Extension Administrative Team |
| 10:00 am | Exit Interview – Animal and Rangeland Sciences Faculty |

English Language Testing and Training Policy for International GTAs

All international GTAs (IGTAs) whose native language is not English are required to take the Internet Based TOEFL (iBT) test before serving as graduate teaching assistants. Test scores for incoming students can be reviewed using the Banner student information system or confirmed by contacting the Graduate School staff.

Departments are advised to include in their offers of graduate teaching assistantships the specification that students receiving iBT speaking sub scores of less than 26 will be required to undertake further English language training and that the cost of such training will be met by the academic department.

IGTAs with iBT speaking sub scores of 26 or above should have no significant language difficulties. It is anticipated that IGTAs with scores in this category should be fully competent to complete assignments requiring significant student-teacher interaction.

For IGTAs scoring below 26, departments should use the [Guidelines for the Assignment of International GTAs](#) to make assignments commensurate with the level of English language proficiency and should monitor and ensure effectiveness and competence in the IGTA's fulfillment of assignment.

IGTAs scoring below 26 will be required to undertake further English language training, the level of which will be determined by the original score received. Departments are expected to pay for the course designed specifically for IGTAs (IEPA 098NC, Communication for IGTAs). This three-credit course will be offered only fall term and is tentatively scheduled late on Tuesday and Thursday afternoons. Please check the OSU course catalog for confirmation of the time and date:

<http://catalog.oregonstate.edu/CourseDetail.aspx?subjectcode=IEPA&coursenumber=098NC>.

The specific course work required will depend upon INTO-OSU's course recommendation and course availability during the term in which further training is needed. IGTAs enrolling in INTO-OSU courses other than the IGTA course should notify their INTO-OSU instructors that they are potential GTAs and will need to be evaluated as such. They should also request that the instructor fill out the GTA evaluation form at the end of the term.

IGTAs will be evaluated by the INTO-OSU staff at the end of the term in which further language training has been undertaken. INTO-OSU will make a recommendation as to whether English language proficiency is sufficient, limited, or that further training is necessary. INTO-OSU will take into consideration the training policy and [Guidelines for the Assignment of International GTAs](#) when making a recommendation.

Departments employing IGTAs shall maintain on file records of assignments and any remedial action taken should there be questions or complaints about IGTA performance.

Guidelines for the Assignment of International GTAs

| <i>iBT
Speaking
Sub Score</i> | <i>Assignment Considerations</i> |
|--|---|
| <i>26 and
above</i> | <i>No significant language difficulty is anticipated. A score of 26 has characteristics of near-native speaking ability. Language proficiency usually includes demonstrated audience awareness, cohesive and well developed responses, limited deficiencies in fluency, vocabulary, grammar or pronunciation.</i> |
| <i>English language training is required for scores below 26.</i> | |
| <i>25 - 23</i> | <i>Assignment should be made recognizing that the IGTA has language limitations. The graduate teaching assistant must attend the IGTA course. INTO-OSU may recommend alternate courses when the IGTA course is not offered. Departments should provide close ongoing monitoring of progress in the IGTA assignment and in language skills development. Characteristics in this range may include strong but understandable accent, labored and deliberate pronunciation, possible difficulty with free-response items, halting speech patterns or vocabulary limitations.</i> |
| <i>22 - 18</i> | <i>Teaching assistant is expected to undertake further English language training, the level of which will be determined by INTO-OSU recommendation and course availability during the term in which further training is required. In the absence of alternate courses, INTO-OSU may recommend the IGTA course be taken. Only assignments involving minimal student-teacher interaction should be made. Departments should provide close ongoing monitoring of progress in language skills development.</i> |

A New Instructional Program for a Graduate Certificate in Management for Science Professionals

Revised May 2009

**Oregon State University
College of Science**

1. Certificate Program Overview

a. Proposed CIP number: 301801

b. Brief overview including description and rationale:

People working in science or science-related fields typically have received no formal training in management, communications, ethics or professional technical skills during their graduate study. However, a variety of individuals employed as researchers in managerial positions, small business owners, veterinarians, pharmacologists, private consultants, or government employees often need such skills to perform their everyday work. This 18-credit graduate certificate is designed specifically for science majors and mid-career professionals. Recipients of the certificate will successfully develop and manage private science-based practices in medicine and biology, effectively run research laboratories, broadly communicate with diverse groups of people, and think critically about the work in which they are engaged.

The courses required to earn the proposed graduate certificate are also required of all Professional Science Master's (PSM) students at Oregon State University (OSU). The PSM is a unique science graduate degree because students are required to complete an internship in lieu of thesis research and take courses in communications, business management, and ethics in addition to disciplinary science courses. At OSU, PSM program options are currently offered in Applied Biotechnology, Applied Physics, Environmental Sciences, and Applied Systematics in Botany. Graduates better understand the applications of their science.

The Graduate Certificate in Management for Science Professionals consists of eight courses emphasizing four key topic areas:

- project management, finance, marketing and organizational principles (9 credits in which courses are taught sequentially),
- communications (3 credits),
- ethics (3 credits), and
- professional skills (3 credits).

An online version of this graduate certificate program is planned, which will:

- enable entire PSM programs at OSU to be offered via distance education,
- increase student recruitment, including non-PSM degree seeking students who may wish to earn the graduate certificate,
- create opportunities for curriculum sharing with other PSM programs in the U.S., and
- increase capacity to develop additional PSM degree programs at OSU and elsewhere in the state.

Graduates of this certificate program will receive formal recognition for completing the professional training, which currently can only be achieved through an assemblage of disjointed courses or an intensive MBA Program.

c. When will the program be operational, if approved?

Fall 2009

2. Course of Study

a. Briefly describe proposed curriculum.

Course topics were developed based on feedback received from industry representatives during PSM program development workshops held at OSU in June 2001 and December 2003. Additional information from other universities, OSU students, non-governmental organizations, and government agencies obtained during annual workshops for the last several years has continued to upgrade and augment the curriculum.

We are requesting a new course designator (PSM). The Graduate Certificate consists of 18 credits:

- PSM 565 Accounting and Finance for Scientists (3 credits)
- PSM 566 Management and Marketing Scientific Technologies (3 credits)
- PSM 567 Innovation Management (3 credits)
- COMM 550 Communication and the Practice of Science (3 credits)
- PHL 547 Research Ethics (3 credits)
- PSM 513 Professional Skills (3 credits)

b. Describe new courses; include proposed course numbers, titles, credit hours, and course descriptions.

Existing courses include Communication and the Practice of Science (COMM 550), which is currently offered under Topics in Speech Communication through the Department of Speech Communication (COMM 512). Research Ethics (PHL 547) is currently offered through the Department of Philosophy.

Management classes (PSM 565, 566, 567) are specially designed for science majors to provide a practical understanding of business skills in accounting, marketing and entrepreneurship that will be useful in the workplace. The Professional Skills class (PSM 513) evolved to address a variety of specific training needs identified by both graduate students and employers, and importantly serve to integrate the diverse knowledge bases grounded in science and management that these students acquire.

Complete descriptions of all courses for the PSM certificate are attached as Appendix A.

c. Provide a discussion of any non-traditional learning modes to be utilized in the new courses, including, but not limited to: 1) the role of technology, 2) the use of career development activities such as internships.

An online version of this graduate certificate will be offered, and a development grant from e-campus has already been awarded pending approval of this Category I proposal. The ability to offer the certificate on-line will significantly increase student access beyond the

OSU campus and create opportunities for curriculum-sharing with other universities interested in developing complementary professional programs of study.

The Graduate Certificate in Management for Science Professionals fosters career development and expansion of scientific skills to produce graduates capable of effectively and productively interacting with co-workers in business and scientific fields. The management courses were designed after careful consideration regarding content, learning sequence, and presentation style. Professors and students at five universities that also offer PSM programs with professional training components were visited in 2004 and queried about teaching style and learning effectiveness. Integration, synthesis, and application characterize successful teaching methods, particularly when educating science-based students in business concepts. Integrative learning occurs when students are asked questions like, “Which company would you buy stock in?” Answering such questions requires them to understand financial statements, market trends, leveraging, and other business concepts, not typically taught to science-based students. There is a steep learning gradient that exists as students progress from didactic lectures to demonstrations and finally hands-on learning opportunities. When students work in teams on various projects, they must synthesize their communication, business, and scientific skills.

The PSM 513 spring-term course is designed around a science-based case study project, which serves as an integrative learning experience requiring students to apply their collective business, communication, and scientific skills. These projects are developed and mentored by working professionals from various organizations and disciplines off-campus (examples in Appendix B). Student teams develop project management plans, work together to solve real-time problems, and then share results through final reports and on-site presentations.

Unlike most graduate-level courses, comprised of similar discipline-cohorts, this certificate program includes students representing a wide range of science-based careers. It sets the stage for interdisciplinary communication and broad-based learning opportunities.

d. What specific learning outcomes will be achieved by students who complete this course of study?

Graduates of the certificate program will have an understanding of:

- Basic concepts in practical accounting and finance, marketing, project management, and entrepreneurship,
- Interpersonal and organizational communication styles,
- Ethical issues in scientific and social settings, and
- How to apply scientific knowledge in a variety of settings and by working as part of a multi-disciplinary team.

Specific course learning outcomes include students' ability to:

PSM 565: Accounting and Finance for Scientists

- Apply fundamental accounting principles for different types of organizations and interpreting financial statements of these organizations
- Use activity-based cost analysis and performance measurement analytics
- Follow business cycle fluctuations, free market dynamics, and inflation trends

PSM 566: Management and Marketing Scientific Technologies

- Draft a project management plan that includes work breakdown structures, time and cost components, project control and quality parameters
- Adapt marketing concepts (research, target positioning, pricing, and methods of promotion) to develop new products or services

PSM 567: Innovation Management

- Develop a business plan to commercialize a new technology, product or service
- Structure small business enterprises and non-profit organizations
- Apply sustainable business practices

COMM 550: Communication and the Practice of Science

- Write and give presentations on various topics to diverse audiences
- Work effectively in teams, engage in collaborative decision-making, and negotiate
- Engage in different styles of interpersonal communication and understand organizational communication strategies

PHL 547: Research Ethics

- Adapt problem-solving methodologies to deal with ethical issues in scientific, business, and social settings
- Explore organizational business and cultural values and how they affect the practice of science and conservation
- Apply guidelines relating to patent, trademark, copyright, and authorship issues

PSM 513: Professional Skills

- Draft and work effectively from a project management plan
- Integrate and apply scientific, business management, and ethics training in a team-based science project
- Communicate effectively across scientific disciplines

- e. Is there a maximum time allowed for a student to complete this program? If so, please explain.**

Students can work through the program in a timeframe that fits their own schedule, although ideally they will complete the certificate in one academic year, working with the same cohort of students. Individuals will be bound by normal Graduate School guidelines and timelines (e.g., completing a Master's degree within a 7-year time period).

3. Accreditation of the Program

- a. If applicable, identify any accrediting body or professional society that has established standards in the area in which the proposed program lies.**

There is currently no organization that accredits this type of graduate certificate.

- b. If applicable, does the proposed program meet professional accreditation standards?**

N/A

4. Evidence of Need

a. What evidence does the institution have of need for the program? Please be explicit.

The PSM degrees at OSU (<http://psm.science.oregonstate.edu>) require courses currently offered through the proposed graduate certificate, and clearly address the needs recognized and articulated by key organizations like the Alfred P. Sloan Foundation and the Council of Graduate Schools (CGS) (<http://sciencemasters.com/>)-- see below.

The Graduate Certificate in Management for Science Professionals packages the additional training (also known as “plus” courses) provided in the PSM degree. Students majoring in scientific disciplines are drawn to these types of courses because they recognize how the training enhances their career options by adding value and versatility to their skills-base. We receive at least 10 to 12 inquiries per year from students interested in taking the “plus” PSM courses. Letters of support for this graduate certificate from the Dean of the College of Forestry and Associate Dean of the College of Agricultural Sciences (Appendix C) indicate interest from these scientific disciplines. Veterinary and pharmacy students also benefit from this training; however, their heavy course loads preclude their participation until graduation.

As an online option, this graduate certificate represents another step towards making entire PSM degree programs available via distance education.

b. Identify statewide and institutional service-area employment needs the proposed program would assist in filling. Is there evidence of regional or national need for additional qualified individuals such as the proposed program would produce? If yes, please specify.

Over 8 years ago, the Alfred P. Sloan Foundation provided seed money for development of PSM degrees at major universities. OSU was one of the grant recipients. These non-thesis Master of Science degrees emphasize interdisciplinary studies that integrate natural sciences and mathematics with training in management, communication, and professionalism. Students acquire skills in analytical thinking, problem solving, and gain real-world experience through internships. Packaging the professional plus courses as a graduate certificate program will: 1) allow us to access e-campus funds to convert this curriculum into a distance learning option, 2) facilitate development of entire online PSM programs at OSU, 3) increase access to this training opportunity among working science professionals as well as PSM students at other universities, and 4) help recover costs for delivery of these courses through increased tuition revenues.

The value of PSM programs have been recognized by different organizations through time. A quote from USA Today (19 July 2004, cover story) summarizes the PSM degree in this way:

“The PSM is being called the MBA for scientists and mathematicians. It’s an education aimed at future managers who will be able to move comfortably in the business of science...”

The CGS’ report “Graduate Education: The Backbone of American Competitiveness and Innovation” (26 April 2007) recommends:

“...support for innovative graduate education programs, such as professional master’s degrees, which respond to workforce needs...”
(http://www.cgsnet.org/portals/0/pdf/GR_GradEdAmComp_0407.pdf).

There is a regional and national need to provide this type of training to people with careers in science and mathematics. Organizations need people who are comfortable in the worlds of both science and business; graduates will be better able to contribute to running private veterinary or medical practices, managing small science-based start-ups, or serving in managerial research positions for larger companies or agencies. Letters of support for this graduate certificate come from a variety of government agencies, industries, and small businesses interested in hiring these graduates and attest to this need (Appendix C).

Oregon was recently chosen as one of five states to participate in the “National Governor’s Association Policy Academy on State Strategies to Meet Emerging Workforce Needs through the Professional Science Masters Program”. The goals of the academy are to:

- Identify high-skills workforce gaps that PSM programs can help address,
- Assess the viability of implementing a statewide PSM strategy, and
- Create an action plan for a statewide PSM program that is linked to other ongoing Science, Technology, Engineering, and Mathematics related activities and programs at the K-12 and post-secondary level.

It is anticipated that this Graduate Certificate in Management for Science Professionals will be available in an online format in the fall of 2009 and could augment PSM program development at institutions across the state. A copy of Oregon’s proposal (which further specifies service-area employment needs), letter of support from Governor Kulongoski, and letter of approval from the NGA are enclosed in Appendix D. This initiative has since progressed with receipt of a \$20,000 planning grant from the Sloan Foundation and seven OUS institutions participating. A second implementation grant application for \$185,840 is currently under review with the Sloan Foundation.

c. What are the numbers and characteristics of students to be served? What is the estimated number of graduates of the proposed program over the next five years? On what information are these projections based?

Currently, OSU accepts between 10-15 new PSM students annually into its Applied Systematics in Botany, Applied Physics, Environmental Sciences, and Applied Biotechnology programs, and all of these students are required to complete the certificate program. More programs in applied chemistry, fisheries and wildlife, bioinformatics and a cooperative, multi-institutional renewable energy PSM are envisioned and each should have capacity for approximately 10 students per year. Conservatively, we estimate that another 50 to 60 non-PSM students will register for the certificate each year (on campus and via distance education) in about 3 years, given that there are currently over 130 PSM programs offered at more than 80 universities across the U.S. (map below), and these programs potentially represent significant numbers of students interested in OSU’s Certificate in Management for Science Professionals.

As an online option, PSM students from other universities gain access to OSU’s “plus” curriculum required for their degree programs. In addition to professional training needs for new PSM programs developed at academic institutions in Oregon through the NGA initiative, PSM program directors from institutions in other states have also expressed an

interest in OSU's professional PSM curriculum. The National PSM Association (NPSMA) recently conducted a Best Practices and Educational Metrics survey, which received responses from 40 universities representing 62 PSM programs. Survey respondents indicated a strong interest in curriculum sharing among institutions offering PSM degrees. Development of the "plus" training required has been a challenge for many institutions, which our certificate could easily overcome by sharing relevant courses via distance education. All PSM programs are required to have "plus" courses as defined by the CGS: http://sciencemasters.com/portals/0/pdfs/Guidelines_for_PSM_Affiliation.pdf.

However, the Graduate Certificate in Management for Science Professionals would also be available to non-PSM students. Individuals who recently completed their undergraduate training often seek graduate degrees to learn additional skills. Others want to re-tool in their existing fields or advance in their current positions of employment. These students would all be able to register for this graduate certificate.

Traditional courses offered on campus have a capacity of approximately 20 students. Additional students can only be accepted if more sections are added. However, significantly greater numbers of students could be accommodated through an online offering of the Graduate Certificate in Management for Science Professionals, as currently envisioned.

d. Are there any other compelling reasons for offering the program?

The Graduate Certificate in Management for Science Professionals is unique and addresses a compelling need in the field of science and mathematics.

Collectively, the classes that comprise the Graduate Certificate in Management for Science Professionals are offered at the graduate level, because they are designed for individuals who have already earned their undergraduate degree in science or math and are interested in advancing their careers through additional graduate level training. It is

important to note that the business management series does not replace or comprise part of an MBA degree, just as other certificate components do not contribute to minors in specific topics (e.g., communication). However, we have found that many of our PSM students have heightened interest in certain topics after taking these professional courses, so that some choose to take additional communication courses and a few even earn an MBA after graduating with their master's degree from a PSM program.

To acquire the skills this certificate offers, individuals in the past have had to cobble together coursework from a myriad of sources often spending more time than desired on specific topics. The professional courses represent a broad array of topics. To emulate the proposed curriculum, students would have to independently organize a variety of activities with different organizations and existing courses. Importantly, these students would not benefit from the collaborative processes involved such as peer evaluation nor would they have opportunities to integrate what they are learning through projects required each term in the PSM professional curriculum. The goal of the Graduate Certificate in Management for Science Professionals is to produce "T-shaped" individuals who have depth in a particular field of science or math and breadth in a variety of "plus" course topics that enable them to understand the applications of their work in science and function as versatile employees. The PSM 513 class allows students to integrate their training in science and math with the professional skills they acquire. Collectively these professional courses ask students to analyze (not just remember), evaluate (instead of simply understand), and create (versus merely apply) their knowledge so that they can adapt their skills to a variety of employment settings. By emphasizing a hands-on, integrative learning approach, students develop competence in all three learning domain structures (cognitive/knowledge; affective/attitude, and psychomotor/skills).

The PSM 565, 566 and 567 classes were similarly created from a stated need by employers of science master's degree recipients. Graduates with an understanding of the business applications of their work in science are viewed as more valuable than traditional graduate degree holders. Multiple discussions contributed to the design of these classes, which cover key topics identified as important by employers. We needed to develop a few classes that would educate science and math majors in the basics of accounting, project management, marketing, and entrepreneurship, unlike the Master of Business and Engineering degree, which requires a minimum of 18 hours of credit in graduate level and 15 credit hours of pre-requisite course requirements in business administration (33 credits total). We initially worked with the College of Business to design these courses but eventually decided to hire a special instructor who had earned graduate degrees in both science and business administration. This facilitated our goal of creating courses specifically for science and math majors.

As stated earlier, this certificate is designed at the graduate-level for individuals who have completed an undergraduate degree in science or mathematics, and these classes are part of the required curriculum for PSM students. Employers of science Master's graduates also emphasized the need for training in interpersonal and organizational communication, and COMM 550 is a class that evolved from those conversations. We worked with Gregg Walker, the previous Chair of the Department of Speech Communication, to include appropriate topics. New Media Communications is another department in the College of Liberal Arts designed to prepare students for a career in media, not in science. Course options in this program emphasize this perspective and would not meet the needs of the Graduate Certificate in Management for Science Professionals. Jeff Hale, the Director of New Media Communications, agreed that "The

New Media Communications program does not have coursework that would be relevant to your students” (12 December 2008 email). Similarly, the Adult Education program “will prepare you to work either: as a development and training specialist... or as an instructional specialist and master teacher/trainer” and the Community College leadership Program “prepares faculty and administrators for leadership roles in technical and community colleges, higher education settings and similar organizations” (OSU website). Our graduate certificate program is designed for science majors. We make students enrolled in the Environmental Sciences PSM program emphasizing environmental education aware of the Education Double Degree option, but this type of training is not in the focus of the general “plus” course training.

Importantly, precedents for this type of graduate-level training have been set at other universities throughout the U.S. and examples include:

- Michigan State University (http://grad.msu.edu/all/bus_mgt.htm),
- University of Utah (<http://web.utah.edu/pmst/coursework.html>), and
- University at Buffalo (<http://professionalmasters.cas.buffalo.edu/>).

e. Identify any special interest in the program on the part of local or state groups (e.g., business, industry, agriculture, professional groups).

Special interest in the type of training offered through this graduate certificate has been expressed by numerous individuals, agencies, and organizations. A letter of support from Senator Ron Wyden (Appendix C) acknowledges that “the Graduate Certificate in Management for Science Professionals will enable individuals to bridge the gap between business and science in a variety of workforce sectors...” Congresswoman Darlene Hooley shares that opinion and offers that “expanding the PSM programs to include a Graduate Certificate will provide a wonderful opportunity for students outside the PSM program area who are interested in gaining critical professional skills.”

Professional associations such as Associated Oregon Industries (AOI), which represents more than 20,000 businesses in the state, and the Oregon Bioscience Association (OBA) are both strong proponents of OSU’s PSM program and the proposed graduate certificate. John Ledger, Vice President for External Affairs of AOI, and Bob Lanier, Executive Director of OBA, both serve on the OSU PSM Advisory Board.

Large and small businesses (e.g., Hewlett Packard, Chemica Technologies, Inc. and ViewPlus Technologies) are interested in the proposed Graduate Certificate in Management for Science Professionals, as are state government agencies (Oregon Department of Fish & Wildlife), and those affiliated with agriculture and forest industry sectors (see letters of support in Appendix C).

And finally, other academic institutions interested in developing new PSM programs through the NGA initiative are likely to have a strong interest in OSU’s Graduate Certificate in Management for Science Professionals.

f. Discuss considerations given to making the complete program available for part-time, evening, weekend, and/or place bound students.

The \$75,000 grant from e-campus will help create an online version of the Graduate Certificate in Management for Science Professionals, thereby allowing access for individuals who would simply like to work on the certificate part-time (5-7 units/term to

finish in one academic year) or full-time (in conjunction with another graduate program). Students would then be able to complete the certificate by working online whenever and wherever they currently live.

While exploring what types of teaching styles worked best for this type of curriculum and audience, we came across an excellent example of an online master's degree program at Michigan State University. That program requires students (from all over the world) to gather on campus for 3-4 weeks at the beginning of their degree program to learn about challenging topics in person and meet and connect with one another. We plan to develop our online graduate certificate curriculum using a similar hybrid format.

5. Similar Programs in the State

a. List all other closely related OUS programs.

The Graduate Certificate in Management for Science Professionals provides an exposure in an applied approach to topics that are taught in-depth in all MBA programs. Currently no program exists for science majors like the one being proposed. Letters from Oregon state legislators, previously referenced, underscore the value of the Graduate Certificate in Management for Science Professionals.

In the Pacific Northwest, OSU is currently the only university offering PSM programs and this certificate is similarly unique.

b. In what way, if any, will resources of other institutions (another OUS institution or institutions, community college, and/or private college/university) be shared in the proposed program?

All resources necessary for the Graduate Certificate in Management for Science Professionals are located at OSU.

c. Is there any projected impact on other institutions in terms of student enrollment and/or faculty workload?

There are no projected impacts on other institutions in terms of student enrollment and/or faculty workload; however, as an online option, PSM students from other universities can gain access to OSU's "plus" curriculum, particularly if these courses are formally recognized by and transferable to their individual degree programs (see 4.c. above).

6. Resources

a. Identify program faculty, briefly describing each faculty member's expertise/specialization. Separate regular core faculty from faculty from other departments and adjuncts. Collect current vitae for all faculty, to be made available to reviewers upon request.

Core Faculty:

Gregory Kivenzor; College of Science, OSU (**PSM 565, 566, 567**)

Instructor: Has graduate training and experience in both business management and science sufficient for teaching "plus" courses in accounting, management, marketing

and entrepreneurship with applications in science-related fields (not accredited by the AACSB); will also assist with outreach and development of internship opportunities for OSU's PSM Program.

Gregg Walker; Speech Communications, OSU (**COMM 512**)

Professor: Previous chair of the Department of Speech Communication, adjunct professor of Forest Resources, and Director of the Peace Studies program; teaches courses in conflict management, bargaining and negotiation, mediation, international negotiation, natural resources decision making, and peace studies; conducts training programs on collaborative decision making, designs collaborative public participation processes, facilitates collaborative learning community workshops about natural resource and environmental policy issues, and researches community-level collaboration efforts.

Jonathan Kaplan; Philosophy, OSU (**PHL 547**)

Associate Professor: Explores the relationship between developmental and evolutionary biology, especially the importance of non-genetic heritable variations in developmental resources for evolutionary innovations; teaches biomedical ethics, scientific reasoning, philosophy of biology, and reasoning and writing.

Ursula Bechert; College of Science, OSU (**PSM 513**)

Director of Off-Campus Programs: Teaches professional development courses for graduate science majors; directs development of PSM programs as well as international programs; research in reproductive biology of wildlife species, development of novel diagnostic and population management tools, nutritional and pharmacological studies; international collaborative research in southern Africa.

- b. Estimate the number, rank, and background of new faculty members who would need to be added to initiate the proposed program in each of the first four years of the proposed program's operation (assuming the program develops as anticipated). What commitment does the institution make to meet these needs?**

One new faculty member will be required to deliver this certificate program at OSU. This person will be hired as an instructor during the first year of the certificate. He/she should have a graduate degree (MS or PhD) in science and an MBA or formal training in business management. Work experience in industry, research and/or academia is desirable. In addition to teaching accounting, management, marketing and entrepreneurship with applications in science-related fields (PSM 565, 566, and 567), this individual will assist with outreach and development of internship opportunities for PSM students at OSU.

A letter from the Dean of the College of Science (Appendix E) confirms the institution's commitment to meet this need. No other additional hires are needed for this certificate.

- c. Estimate the number and type of support staff needed, if any in each of the first four years of the program.**

No additional support staff will be needed to develop and deliver this certificate. A grant from e-campus (\$75,000) will facilitate conversion of traditional courses to online options. Recruitment efforts will be folded into current PSM student recruitment activities. An

existing 0.2 FTE PSM Coordinator position will assist with the student application process. Applicants need to have earned an undergraduate degree in a field of study in science or mathematics, and/or have been admitted to a PSM program.

d. Describe the adequacy of student and faculty access to library and department resources that are relevant to the proposed program.

Information can be readily accessed by students enrolled in the Certificate Management for Science Professionals Program on the OSU campus.

e. How much, if any, additional financial support will be required to bring access to such reference materials to an appropriate level? How does the institution plan to acquire these needed resources?

No further acquisitions are required. Reference material currently available is adequate.

f. Identify any unique resources, beyond those on hand, necessary to offer this program. How does the institution propose that these additional resources will be provided?

No unique resources are required.

APPENDICES

Appendix A: Course Descriptions

List of Proposed Courses:

PSM 513: Professional skills (3 credits)
COMM 550: Communication and the practice of science (3 credits)
PHL 547: Research ethics (3 credits)
PSM 565: Accounting and finance for scientists (3 credits)
PSM 566: Management and marketing scientific technologies (3 credits)
PSM 567: Innovation management (3 credits)

Appendix B: Service-Learning and Case Study Project Examples

Appendix C: Letters of Support

Oregon State University

Sherman Bloomer, Dean, College of Science
Ilene Kleinsorge, Dean, College of Business and Sherman Bloomer, Dean, College of Science
Stella Coakley, Associate Dean, College of Agricultural Sciences
Hal Salwasser, Dean, College of Forestry
Mark Merickel, Associate Dean, Extended Campus
Courtney Campbell, Chair, and Jonathan Kaplan, Associate Professor, Dept. of Philosophy
Charlotte Headrick, Acting Chair, Department of Speech Communication
Jeffrey Hale, Assistant Dean, External Relations – College of Liberal Arts & Interim Director, New Media Communications

Government Representatives

Ron Wyden, U.S. Senator, Oregon
Darlene Hooley, State Representative, Oregon
Doris Matsui, State Representative, California
Jennifer Bond, Senior Advisor, Council on Competitiveness

Industry and Government Agency Advisors

John Ledger, Vice President of External Affairs, Associated Oregon Industries
Takuji Tsukamoto, President and CSO, Chemica Technologies, Inc.
Linda Amedo, Business Systems Manager, Hewlett-Packard Company
John Gardner, President, ViewPlus Technologies
Charlie Corrarino, Conservation and Recovery Program Manager, Oregon Department of Fish and Wildlife

Appendix D: NGA Proposal and Letters of Support and Approval

Appendix E: Budget

Appendix F: Instructor CVs

Appendix A: Course Descriptions

COMM 550: Communication and the Practice of Science (3 units)

Instructor: Gregg Walker

Offered: Fall term

Course description: Topics in this class include teamwork and collaborative decision-making; interpersonal and organizational communication; writing for and making presentations to diverse audiences; negotiation and consensus building; as well as persuasion and influence.

Approach:

The class meets twice weekly for 1½ hours to encourage discussions. Gregg Walker serves as the lead instructor and four other faculty members contribute to the course based on their areas of expertise. Students explore different communication styles and give a formal presentation at the end of the term.

PHL 547: Research Ethics (3 units)

Instructor: Jonathan Kaplan

Offered: Winter term

Course description: The course provides a basic understanding of: 1) responsible conduct in scientific research (e.g., guidelines relating to patent, trademark, copyright, and authorship issues), 2) scientific ethics and corporate culture, and 3) cultural impacts on decision-making processes, science, and societal values. In addition, the course covers recent trends such as the increased politicalization of science and the difficulties engendered by particularly strong economic incentives (e.g., start-up pharmaceutical and biotechnology companies).

Approach:

The class meets twice weekly for 1½ hours to encourage discussions. Various case studies, both historical and recent, are used to introduce and illustrate particular kinds of ethical problems that arise in scientific research and in the commercialization of particular kinds of results. Students become familiar with ethical problems they might face in their professions, identify ethically problematic situations, explain what aspects of those situations are ethically problematic, and then explain *why* those situations are ethically problematic.

PSM 513: Professional Skills (3 units)

Instructor: Ursula Bechert

Offered: Spring term

Course description: The class provides an integrative learning experience by giving students opportunities to apply their collective management, communication, and scientific skills to real-time case study projects. These projects are developed and mentored by working professionals from various disciplines. Student teams work together to solve problems and share results through final reports and on-site presentations. One or two projects are completed per term, based on the amount of work involved per project.

Approach:

The class meets weekly for two hours, and students are expected to work together outside class time based on project needs. Off-campus mentors initially make presentations and share background information about particular projects. Specific objectives are then addressed by the class working together. A project management plan, drafted by the students, further details individual responsibilities and guides team efforts. Project outputs include a final report and presentation. Guided team and self evaluations provide insightful feedback for each student about his/her performance as a team member at the conclusion of the project.

PSM 565: Accounting and Finance for Scientists (3 units)**Instructor:** Gregory Kivenzor**Offered:** Fall term

Course description: The course frames accounting and financial issues, including the broader environment in which a variety of enterprises operate (e.g., corporations to non-profit organizations). Fundamental principles of accounting and financial analysis for different types of organizations are covered. Lectures on micro- and macro-economics include inflation, business cycle fluctuations, and free market dynamics.

Approach:

The class meets twice weekly for 1½ hours. Students are assigned to 3-4 person teams, based on their different disciplinary backgrounds, to encourage communication skill-building opportunities. At the beginning of the term, each team chooses a company that serves as a model to illustrate key concepts (e.g., human resource management) that students explore through specific projects.

PSM 566: Management and Marketing Scientific Technologies (3 units)**Instructor:** Gregory Kivenzor**Offered:** Winter term

Course description: Project management emphasizes work breakdown structures, time and cost management, project control and quality, and human resources. Frameworks for management within a variety of entities (from non-profit organizations to large corporations) involved in science or science technologies are explored. Methods of market research, segmentation, target marketing and positioning, new product development, produce life cycles, pricing, and promotion and distribution are addressed. The importance of the global market and cultural factors that affect marketing strategies are included.

Approach:

The class meets twice weekly for 1½ hours. Students are assigned to 3-4 person teams based on their different disciplinary backgrounds to encourage communication skill-building opportunities. At the beginning of the term, each team chooses a company that serves as a model to illustrate key concepts (e.g., human resource management) that students explore through specific projects.

PSM 567: Innovation Management (3 units)**Instructor:** Gregory Kivenzor**Offered:** Spring term

Course description: Commercialization of new scientific technologies, products and processes, technology transfer mechanisms, entrepreneurship, and development of a business plan are key topics. Legal topics include intellectual property; structuring small business enterprises, partnerships and corporations; regulatory issues; and sustainable business practices. Other topics include intellectual property management, management of scientists and engineers, business assessment based on the triple-bottom-line, and actual commercialization of products and services.

Approach:

The class meets twice weekly for 1½ hours. Students are assigned to 3-4 person teams based on their different disciplinary backgrounds to encourage communication skill-building opportunities. At the beginning of the term, each team chooses a company that serves as a model to illustrate key concepts (e.g., human resource management) that students explore through specific projects.

Appendix B: Case Study Project Examples

- Black & Veatch, an engineering consulting firm, asked PSM students to create a business development plan to attract two new potential clients in the Portland OR and Vancouver WA region. Their final report and presentation were delivered at the Black & Veatch office in Lake Oswego.
- Anderson Risk Analysis, Inc. mentored students on a project conducted for the Salem Water/Wastewater Management Taskforce. The Taskforce and Mayor of Salem listened to the PSM students' presentation on how Salem could reduce its mercury discharges into the Willamette River by 27 percent.
- Willamette National Forest challenged PSM students with two ethical case studies focused on the conservation of spotted frogs and spotted owls. Panel discussions were set-up by the students to share viewpoints and conservation plans of different stakeholders including the USGS, USFWS, ODFW, as well as members of the general public.
- The Oregon Environmental Council asked students to develop a series of case studies to demonstrate effectiveness of low impact development projects throughout the state of Oregon. The Council used the students' report in their advocacy efforts to reduce storm water runoff in different areas slated for construction.
- Hewlett Packard challenged students to find new and innovative ways to utilize their ink jet technology. Presentations were made with consideration to potential markets and cost.
- Cascade Pacific Resource Conservation and Development Area, Inc. worked with PSM students to develop farm plans with Willamette Valley farmers to conserve riparian areas. Plans were used to explore opportunities to improve drinking water, decrease erosion, and increase habitat for indigenous species.

Re: Support for the Professional Science Masters Program

The College of Science has supported the development of the Professional Science Masters Program from the beginning of the program, when it was supported by a grant from the Sloan Foundation. The College of Agricultural Sciences has been a partner in the design and implementation of the program.

The College views this program as an important strategic addition to our graduate programs. The PSM degree provides something that is unusual in higher education now and seems to have a value for students and employers. The certificate would make the core components of the PSM program available to students who already have a primary engineering or science degree, and would greatly extend the reach of the program.

The College of Science has supported the following components of the program costs:

- Part of Ursula Bechert's FTE to provide recruitment, advising, program coordination, and internship coordination.
- Support to the Department of Communications to deliver the communication course
- Support to the Department of Philosophy to deliver the ethics course
- Support to students and the College of Business to develop the business components
- Support for the annual partners conference and recruiting materials

The management courses, this year, were developed and delivered in an Ecampus delivery mode by instructors supported by the College of Science. The curriculum does not fit well within the College of Business and this approach provided a more appropriate curriculum for the program. These changes were coordinated with the College of Business. The courses were delivered in an online version and an on campus version, so that students in the program in Corvallis did not see a financial penalty.

The College intends to continue support for these program components, as the PSM program is an important piece of our graduate program. It is expected that as all of the certificate courses are developed in an online version that the resources from those courses will help defray the course delivery costs in each of the units that are participating.

The Graduate Certificate proposed here would be important for the College, but would also be of use to a number of PSM programs being developed at other institutions, as it provides access to courses that are sometimes challenging to develop. OSU is ahead of several other institutions in this regard.

Please let me know if I can answer any other questions about this program and the College's support for it.

Hi Gina:

Here's the exchange Ilene and I had about these courses at the end of April. I've copied her on this as well so she's aware we are going forward with implementation of the courses and the associated certificate.

Let me know if we need more documentation.

Thanks,
Sherm

Sherm,

As long as this does not end up being a major but is a certificate, we have no problems with the proposed curriculum or offerings. I checked with AACSB last week and was encouraged to find that your plan would not cause problems for the COB. Of course they didn't understand why the resources were not available to the COB to deliver for you, but that is not in my control and I will not be held accountable for making it so.

To: Kleinsorge, Ilene - COB
Subject: Professional Science Masters Curriculum

Ilene:

Thanks for the conversation a couple weeks ago about the Professional Science Masters curriculum. I really do appreciate the efforts COB went to in exploring these courses and I also understand the difficulties they present.

My understanding is that COS will go ahead and work with Ecampus to develop and staff a three course series intended to familiarize STEM students with the key concepts they will encounter in the private or public sector workplace. I've attached a working outline of what those three courses might look like and how we would talk about the, so as to make it clear these are not business courses and not intended for anyone thinking about business as the focus of their professional career. I want to be very clear about who these are for and how we'll use them.

Let me know if this seems OK to work from. If so I'll get the next steps going for Fall and will keep you posted on where we are and how the courses are shaping up.

Many thanks,
Sherm

Dr. Ursula Bechert
Director of Off-Campus Programs
College of Science
Oregon State University
CAMPUS

Dear Dr. Bechert,

This letter is written in strong support of the Category I proposal for the development of a "Graduate Certificate in Management for Science Professionals." As you know, I was the P.I. on the Alfred P. Sloan Foundation grant to Oregon State University (OSU) that resulted in the development of the Professional Science Masters Program at OSU. From my experience with the program, I have seen the value of offering the management opportunities to science students and believe that many more of our students could benefit from this aspect of the Professional Science Masters (PSM) Program. I am also aware of how other institutions have struggled (as we have) with establishing and sustaining the management aspect of this unique program.

I believe that developing a Graduate Certificate Program would allow non-PSM degree seeking students in other science-related disciplines to also benefit (e.g., veterinary students and veterinarians). By opening enrollment of this program to a broader audience, it should be possible to help recover costs of development and delivery of the management aspect. We know that other PSM programs are interested in curriculum sharing and that several will benefit from the certificate program once it is offered online. I understand that the online version will be developed as soon as the Category I proposal is approved and I believe that aspect will be of great value to our campus overall.

As you know, the College of Agricultural Sciences has been a partner in the development of the PSM programs and we see opportunities for additional units to be involved in these programs in the future. There is additional value in making the management related courses available online and in encouraging traditional thesis seeking Masters and Ph.D. students to obtain additional expertise in this area of professional development. We know from the experiences to date with developing the PSM program that just offering business courses developed for other purposes does not work well for the students.

In summary, I support the direction that you are taking with the Category I proposal to develop this new program. Please let me know if there are questions that arise about this proposal that I am able to answer.

Sincerely,

A handwritten signature in black ink that reads "Stella Melugin Coakley". The signature is written in a cursive, flowing style.

Dr. Ursula Bechert
College of Science
Oregon State University
2082 Cordley Hall
Corvallis OR 97331

Dear Dr. Bechert:

I support your proposal to create a Graduate Certificate Program in Management for Science Professionals, which springs from the Professional Science Master's (PSM) degree programs that you've been developing.

The College of Forestry sees real value in providing additional training opportunities in business management, communications, and ethics to students enrolled in our graduate programs. In fact, our on-line Sustainable Natural Resources curriculum is an elective option within the PSM degree in Environmental Sciences.

Graduates from the College of Forestry find employment with a variety of organizations, including federal and state natural resource agencies as well as private companies. The development of the additional skills that you describe in your proposal will make our students more competitive and versatile employees and natural resource managers. As we have begun looking into this type of opportunity ourselves, we encounter great interest throughout the region, nation, and world in the business and science courses that would be available in your program. Natural resource management is in the process of substantial change and a Graduate Certificate such as you propose would be extremely beneficial to forest and other natural resource managers.

You have our support in developing a Graduate Certificate Program in Management for Science Professionals at OSU.

Best wishes,

A handwritten signature in black ink, appearing to read "Hal Salwasser". The signature is fluid and cursive, with a long horizontal line extending from the left side.

FROM: Mark Merickel, PhD

Associate Dean, OSU Extended Campus

A handwritten signature in black ink, appearing to be "M. Merickel", written over the printed name.

SUBJECT: Letter of Support for Category 1 proposal, Graduate Certificate in Management for Science Professionals

OSU Extended Campus fully supports the establishment of an OSU Graduate Certificate in Management for Science Professionals. We have other highly successful programs for professionals in various fields of science, know how to market to this audience, and have established a reputation nationally for high quality, accessible courses and programs. Bringing this program to an extended audience nationally and internationally reinforces our goal of improving access to OSU programs.

The online version of this graduate certificate would be marketed nationally and would be of interest to students in other Professional Science Masters programs across the country. (Nationwide program information—<http://www.sciencemasters.com/>). In addition, we anticipate enrollment in the individual courses by working professionals who are managing science programs and wish to upgrade their skills in core areas essential to their management success.

Upon curricular approval Ecampus will provide assistance with program planning, marketing, course design and development, Blackboard training, and supporting services

to students at no cost to the college or department and will return tuition revenue to the program according to the established Ecampus revenue-share model. We will support development of the online courses within this program by providing funding for the content provider for each course. With careful planning and with anticipated enrollment, this program will be self-sustaining under this model.

April 20, 2007

To whom it may concern:

We are writing in support of the Category I proposal to create a Graduate Certificate Program (19-credits), "Graduate Certificate in Management for Science Professionals," based on the Professional Science Masters (PSM) degree cohort curriculum.

As part of the PSM cohort curriculum, students are required to take Philosophy 547, "Research Ethics," which one of us (Jonathan Kaplan) has taught for the past two years. The response from the PSM students has been quite positive – the comments on the qualitative student evaluations this year included such remarks as "a great, thought-provoking class" "I really enjoyed this class even though I was a bit apprehensive about taking a philosophy course" and "very stimulating, relevant, and interesting." It is clear from these experiences in 547 that students from technical backgrounds have not been exposed to rigorous, sustained thinking about the ethical issues engendered by scientific research, and that, while initially skeptical of the value of such work, come to appreciate the importance of taking these kinds of issues seriously.

Creating a Graduate Certificate Program that, as part of preparing students in the sciences to work effectively in the private sector, includes a required ethics component, would benefit the OSU community in a number of ways. First, of course, those students taking advantage of the Certificate Program would benefit by gaining the expertise necessary to work effectively as both research scientists and business people, while maintaining a focus on the ethical issues inherent in their careers. Second, the businesses in which these students end up working will no doubt benefit by having hired people who have, at the very least, been asked to think seriously about what ethical conduct in research settings involves. And finally, such a program would send a strong message that ethical training, and ethical behavior, is a critical part of good management practice in the sciences, something that, unfortunately, has not always been seen as obvious, nor always practiced.

In short, the proposal to create a "Graduate Certificate in Management for Science Professionals" Graduate Certificate Program, based on the Professional Science Masters (PSM) degree cohort curriculum, is well worth supporting.

Subject: RE: PSM program

Ursula, this looks like a wonderful applied program for professionals in scientific and technological fields. The New Media Communications program does not have coursework that would be relevant to your students. However, your program may be an option for our students that want to focus on scientific visualization as a career path in new media. We are supportive of your Cat I proposal and look forward to the implementation of this program.

Hi Jeff,

Thanks for returning my call this morning. I appreciated your feedback regarding potential course overlap between your New Media Communications program and our Professional Science Master's program (<http://psm.science.oregonstate.edu/>). Thanks for suggesting a reply to this email as a letter of liaison to acknowledge the lack of overlap and differences.

It looks like you've developed a wonderful program, and I really liked your website. Perhaps a few of your students might be interested in taking some of the professional courses we've created, especially if they're planning to start or manage a media company. I hope that your Cat I proposal process goes smoothly.

Best wishes for the holidays-- Ursula

Appendix D: NGA Proposal and Letters of Support and Approval

State Strategies to Meet Emerging Workforce Needs through the Professional Science Masters Program

OREGON'S CHALLENGE

According to business leader participants in a recent survey by Monitor, Oregon is a great place to live but lacks a sufficient skilled labor pool, most particularly lacking in specialists in engineering and the sciences. The same survey found that responding companies in Oregon interact with the state's universities at twice the rate of others in the United States and globally, indicating a strong level of collaboration and partnership. The Monitor analysis further urged the state to position itself by:

- Creating jobs to provide opportunity for the state's rapid population growth (Oregon: 7.9% compared to the U.S.: 6.1%);
- Raising average wages (Oregon: \$37,711 compared to the U.S.: \$42,405) by focusing on maintaining innovation levels (Oregon: 17.91 patents/10,000 workers versus the U.S.: 8.96 patents/10,000 workers);
- Expanding high-end manufacturing (e.g., IT products, analytical instruments, heavy machinery and machine tools); and
- Fostering non-urban development by maintaining the state's strong positions in agriculture-related clusters (e.g., wine, forest products, and furniture).

Two of the primary strategies that were recommended for the state to differentiate itself were: (1) to improve education from prekindergarten through university levels, with particular emphasis on higher education, and (2) to increase support of entrepreneurship to bolster home-grown industries.

The just released workforce demand projections from the Oregon Employment Department show a growing need for advanced education in many occupational groups. The table below summarizes the science, technology, engineering, and mathematics (STEM) occupation projections where the positions will be filled with an applicant that at a minimum must have a bachelor's degree, but where the competitive candidate will have a master's degree.

**STEM Employment Trends
For Occupations with Master's Degree Hiring Preference**

| | Employment | | | | 10-Year Occupational Projections | | | 2006 Master's |
|---|---------------|---------------|--------------|-------------|----------------------------------|--------------|--------------|-----------------|
| Occupation Group | 2006 | 2016 | Change | % Change | Growth | Replace | Total | Degrees Awarded |
| Computer Specialists | 1,295 | 1,475 | 180 | 13.9% | 180 | 145 | 325 | 73 |
| Mathematical Science | 924 | 1,047 | 123 | 13.3% | 123 | 268 | 391 | 56 |
| Engineering | 18,340 | 19,735 | 1,395 | 7.6% | 1,413 | 3,952 | 5,365 | 273 |
| Life Sciences | 2,763 | 2,955 | 192 | 6.9% | 192 | 765 | 957 | 59 |
| Physical Sciences | 2,531 | 2,858 | 327 | 12.9% | 327 | 622 | 949 | 91 |
| Total | 25,853 | 28,070 | 2,217 | 8.6% | 2,235 | 5,752 | 7,987 | 552 |
| Source: Oregon Employment Department Workforce and Economic Research (January 2008) and Oregon University System 2006 Fact Book | | | | | | | | |

This table highlights the workforce impact that the retirement of highly educated baby boomers will have on the demand for critical occupations in the coming decade. Current trend data for Oregon and the

United States raises further concerns because the overall educational attainment between young and older adults finds that the higher education levels are held by the older age group. This trend does not bode well for future economic vitality.

The Governor's Office, the State Board of Higher Education, the State Board of Education, and the Workforce Investment Board presently have several initiatives underway to expand and improve the state's education delivery system overall and specific STEM educational/research opportunities available to Oregonians. These include:

Unified Educational Enterprise (UEE) Subcommittee of the Joint Boards: One of the fundamental responsibilities of this group is to respond to the Legislature's call for postsecondary education sectors to cooperate on alignment initiatives. The UEE is on track to analyze the current enterprise alignment and identify gaps within it.

Key Elements of an Aligned Education Enterprise:

- Advance a standards-based education system based on agreed upon common core proficiencies with rigorous standards and learning outcomes for all students PreK-20;
- Develop clearly defined and articulated pathways that allow all students of all ages to smoothly enter and exit the education enterprise and make informed decisions regarding education and training options and opportunities;
- Facilitate development of clear, consistent, frequent, and cross-sector communication that informs students of their options and opportunities (communication includes parents, teachers, counselors, teachers, faculty, administrators, Boards, and other stakeholders);
- Study and advise on integrated data systems that allow for transfer of student records including learning and achievement across systems and institutions; and
- Make recommendations for achieving a coherent PK-20 system, with a unified vision, common language, clear agreements, up-to-date policies, and well engineered structures.

Post-secondary Quality Education Commission (PSQEC): The Governor has established the Commission to build a model for understanding the needs of the full post-secondary education system.

The commission is to:

- Identify the key issues to address in completing a model that identifies the particular needs of community college and university students;
- Determine the key values encompassing the mission of post-secondary education in Oregon, including access to education, educational quality, student success, professional compensation, research, service, innovation, technical/career and adult basic education;
- Solicit input from educators, education policy experts and others about the elements of the model; and from the public, input regarding educational priorities in the model;
- Develop the model based on research, data, public input and experience; and
- Communicate with stakeholders regarding model development.

Engineering & Technology Industry Council (ETIC): This council was established in 1997 to plan and oversee improvements in engineering programs with a focus on better serving industry's needs. This marked the first time that the state universities and the private sector worked in full collaboration to co-fund and direct efforts to grow the capacity and excellence of Oregon's engineering and technology programs and the number of skilled workers produced through these efforts. The voting members of ETIC are industry executives who meet regularly with leaders from Oregon public university campuses to develop strategic plans and associated implementation plans. The industry members serve a fiduciary role by holding the campuses accountable for producing results based on an objective set of metrics.

ETIC investments have grown a cadre of engineers and technology workers for all of Oregon's industries, from high tech to agriculture, from tourism to forestry, and other key sectors of our economy such as energy, medical, transportation, manufacturing, and financial services. ETIC investments have been leveraged by private dollars, providing two dollars in private support in funding, equipment, scholarships and other support for every dollar of public investment. ETIC investments have established a solid base that will enable Oregon to meet its goals of more than doubling the number of engineering degrees and increasing externally funded research more than five-fold by 2020.

The Oregon Innovation Council (Oregon InC): Created in 2005 by the Governor to make recommendations on how the public sector can stimulate Oregon's economy, Oregon InC was recently awarded \$28.2 million by the 2007 Oregon Legislature to implement four industry initiatives and three signature research centers. Manufacturing, food processing, seafood, and the nascent wave energy industry represent the industry initiatives. The research initiatives include ongoing support for the state's first successful signature research center, the Oregon Nanoscience and Microtechnologies Institute (ONAMI), as well as the formation of two additional signature research centers: the Bio-Economy and Sustainable Technologies (BEST) Center, which will focus on bio-products, bio-fuels and green development; and the Oregon Translational Research and Drug Development Institute (OTRADI), which will focus on infectious disease research.

This package is designed to build on Oregon's competitive advantages, enhance diverse industries, and create competitive jobs and opportunity in every corner of the state. Further, it is the product of an unprecedented partnership between the business community, state government, the venture capital community and higher education.

The Oregon Business Plan: In 2002, government, business, and academic leaders came together to form the Oregon Business Plan initiative: a comprehensive plan to grow the economy of the state through the identification of key issues that are relevant to growing business in Oregon. Updated yearly and supported by the **Oregon Business Council** (a private non-profit organization consisting of 47 chief executives from some of Oregon's largest businesses), the Oregon Business Plan is a model for broad inclusiveness and has a remarkable history of success in the state legislature, in economic impacts and in job creation. Cluster methodology is the strategic underpinning of the Oregon Business Plan, and since 2002, a large network of clusters has developed to feed the Oregon Business Plan and to help train industry and economic development professionals to use the tools and strategies of cluster development.

Governor's Employer Workforce Training Fund (EWTF): The EWTF was created in 2003 when the Governor directed that a portion of Workforce Investment Act funds go to support incumbent worker training with an emphasis on industry clusters. Regional Workforce Response Teams (made up of workforce and economic development practitioners) are encouraged to utilize their local EWTF resources to support the workforce needs of local industry cluster groups while the state portion of the EWTF resources has been used to support statewide industry sectors (like healthcare and manufacturing) and assist in training the local practitioners in the regions on how to use the cluster-oriented approach. In addition, the fifteen workforce regions each received additional funds from EWTF to expand their capacity to use the cluster approach to respond to cluster-based workforce needs. EWTF investments total approximately \$20 million over the past four years.

Oregon's 2007 Legislative Session approved an unprecedented 18% increase in education funding for Pre-K, K-12, Community Colleges, and Oregon Universities, plus targeted investments in high-demand occupational programs in healthcare and engineering. These resources will support the education and training needs of businesses along with the Oregon InC investments.

GOALS & EXPECTED OUTCOMES FOR THE PSM POLICY ACADEMY PROCESS

In *Priming the Talent Pipeline: Oregon's Future Workforce Needs Analysis*, commissioned by the Oregon Workforce Investment Board as its strategic plan, a number of key strategies are identified to: (1) place greater emphasis on lifelong learning over the course of an individual's career, (2) increase levels of entrepreneurship, and (3) put greater emphasis on technical professionals developing hybrid skill sets. These broader skill sets include knowledge about supply chain management, quality and process control, data and decision support tools, customer service, company/market needs, and global commercial awareness. Offshore outsourcing is raising skill requirements for innovation, new product design and project management.

There are currently four PSM programs at Oregon State University (OSU) in Applied Biotechnology, Applied Physics, Environmental Sciences, and Applied Systematics in Botany that were initiated with a \$400,000 grant from the Alfred P. Sloan Foundation in 2002. Program development was based on feedback from local industry and follows the precedent set by ETIC for industry involvement by engaging an Advisory Board and organizing annual workshops. The last workshop, held at OSU in late November 2007, explored how new PSM programs at OSU could positively impact workforce development needs. Allen Alley, the Deputy Chief of Staff for Governor Kulongoski, was the keynote speaker. Potential programs in several STEM disciplines were recommended and paralleled the needs summarized in the employment trends table on page one.

Currently, these are the only PSM programs in the Pacific Northwest. Expansion of PSM programs will give Oregonians a new advanced education choice that will keep them competitive in the rapidly changing workforce. Importantly, PSM graduates prefer to remain in the state with approximately 68% of OSU's cohorts staying in Oregon and 77% in the Pacific Northwest. Similar trends have been noted elsewhere (e.g., 55% of Penn State University's PSM graduates remain in the state). These programs also appeal to minorities and women; approximately 50% of PSM enrollment at OSU is comprised of women.

Our goals in participating in the PSM Policy Academy Process are to learn how other states have implemented system-wide, economically viable PSM programs and to initially identify and prioritize development of specific PSM programs in Oregon to address future workforce needs. We plan to create task forces using experts from the Oregon Employment Department, UEE, ETIC, Oregon InC, and Oregon Business Plan initiative representatives, and members of the OSU PSM Advisory Board as well as the NGA Policy Academy home team. These groups will gather information from representative industries and then work together to publish a report of these findings.

An action plan for development of new PSM programs in the state will draw from the collective knowledge and resources of Oregon's initiatives described earlier, the Oregon University System, and PSM program experience at OSU. The professional curriculum offered at OSU for its PSM programs represents several years of development involving input from industry as well as other universities. Students take a series of eight courses, which include a year of business training (accounting and finance; project management and marketing; innovation management), courses in communications, research ethics, and a series of professional skills seminars. These courses will be available in an online format in the fall of 2009 and could augment PSM program development at institutions across the state. Various partnerships will encourage development of economically viable programs (e.g., joint degree programs between academic institutions). By working together with groups like the UEE, a pipeline to produce future PSM graduates can be created.

A PSM start-up grant fund will then be established, with co-funding from representative industries, to support development of new programs at Oregon's academic institutions. Nationally, PSM programs in the biosciences predominate, representing over a third of the PSM degrees granted in 2006 (Council of

Graduate Schools, February 2008). Oregon InC's initiatives and research centers reflect this growing area of interest, and could help spearhead cooperative partnerships with industry to further development of PSM programs in the state. It is also anticipated that Congress will include appropriations for PSM programs at the National Science Foundation (NSF) in legislation for 2009. This forward momentum will be beneficial to Oregon institutions seeking support for program development from NSF in the future.

Oregon businesses are dominated by many medium and small firms that will need to hire professionals with broad skill sets envisioned by PSM programs. The PSM movement has the potential to not only produce graduates capable of bridging the gap in communication between the research and marketing arms of industry, but between industry and academic institutions as well. The PSM alumni from OSU have shown a strong interest in networking among other PSM cohorts, maintaining ties to OSU, as well as promoting the PSM at their place of employment. The opportunity to further develop PSM programs in Oregon at this time are perfect, given the work that has already been done and the initiatives to expand and improve the state's education delivery system that are currently underway.

PROPOSED TEAM COMPOSITION

The core team is comprised of highly effective and skilled individuals with knowledge and authority to get things done. (Contact details are included in the Appendix.)

Bruce Schafer, Team Lead: Bruce is the Director of Industry Affairs for the Chancellor's Office of the Oregon University System and the Executive Director of the Engineering & Technology Industry Council. Prior to joining the Oregon University System in 1999, Bruce was the President and founder of PC-Kwik Corporation, which was licensed to major personal computer manufacturers. Prior to founding PC-Kwik, Bruce served as an engineering and marketing manager at Intel Corporation. Bruce will be working with provosts and deans from colleges across the Oregon University System to identify programs with the strongest support from employers, students, and schools that would be best candidates for the PSM program.

Senator Richard Devlin, Senate Majority Leader: Senator Devlin is serving as chair of the Senate Committee on Rules and Executive Appointments and is also a member of the Senate Committee on Commerce and Labor. Senator Devlin has extensive experience with budget and education issues, having served on the Joint Ways and Means Committee for several legislative sessions. Senator Devlin will help guide the PSM initiative through the cross-sector legislative priority-setting process blending this critical need between graduate education and economic development.

Margie Lowe, Governor's Higher Education Policy Advisor: With over two decades experience in management of budget and policy issues in multiple programs areas, Margie has spent the past four years focused on implementing strategies to make postsecondary education more affordable and successful for all Oregonians. She has effectively worked with agency officials, stakeholder groups, and legislators to implement innovative programs in education and human services. Margie will be working with executive branch agencies for employment, economic development, workforce development, and higher education to assure full support from critical stakeholders.

Steve Mahon, General Manager for TriQuint Semiconductor: Steve has 26 years experience in the semiconductor industry specializing in GaAs based integrated circuit processing and microwave acoustics. Currently, Steve oversees design, development and manufacturing of bulk acoustic wave (BAW) microwave filters. He holds bachelor's and master's degrees in electrical engineering. Steve's role with TriQuint Semiconductor and its affiliation with the University of Oregon's Material Science Institute's graduate internship program causes him to be particularly interested in improving Oregon's ability to produce graduates with degrees that combine science, business, and communication.

Ursula Bechert, Director of Off-Campus Programs, College of Science: Since January 1998, Ursula has been working at OSU to develop research and educational programs in the sciences. She has been leading development of the PSM programs at OSU since 2002, and is currently the Vice President of the National PSM Association (NPSMA). Ursula chairs the NPSMA's Strategic Planning Committee and serves on its Board Development and Best Practices committees. She has a degree in veterinary medicine and a PhD in reproductive endocrinology, and as an OSU faculty member, understands what is involved in conducting research, teaching, and building educational programs from the ground up. Ursula will be working with home team members and industry representatives to gather information about potential Oregon PSM program needs, and will also help to initiate and mentor new PSM programs at other institutions in the state.

Home-team members will work with and support the efforts of the core team. All of the individuals listed have been serving in an advisory capacity guiding growth and development of OSU's PSM programs.

Linda Amedo, Manager of Business Systems and Industrial Engineering, Hewlett Packard: Linda has been with Hewlett Packard since 1978, and is currently managing a team responsible for providing systemic improvements in business performance through the use of their business process and modeling expertise and analytical and project management capabilities. She also serves on the Advisory Boards for the College of Engineering and the PSM Program at OSU.

Charlie Corrarino, Conservation and Recovery Program Manager, Oregon Department of Fish and Wildlife: Charlie is responsible for oversight of native fish conservation issues and implementation of Oregon's Native Fish Conservation Policy, and he collaborates with the OSU Department of Fisheries and Wildlife on the operation of the Oregon Hatchery Research Center.

Bob Lanier, Executive Director, Oregon Biosciences Association: Bob serves as the President of MouldWorks, which is based at the University of Oregon. He has served in a variety of entrepreneurial positions in the past, including Director of Business Development for Partner LABfx, Director of Sales and Marketing for Neo-Genesis, and Co-Founder/Director of International Sales for Antalys, an AI oriented software consulting company, which was acquired by Baan Enterprise Systems in 1997.

John Ledger, Vice President for External Affairs at Associated Oregon Industries: Associated Oregon Industries (AOI) is Oregon's largest business organization. John is the editor of the Business ViewPoint magazine, oversees all public and other external relations for AOI, and lobbies the Oregon legislature on environmental and transportation issues. He originated and authored the legislation creating the Oregon Sustainability Board, the first of its type in the nation.

Hans Neukomm, retired Vice President and Director of the Energy Services Division, CH2M Hill: In 1998, Hans was appointed to the Oregon Energy Facility Siting Council and in 2005-06, he served as the Council's Chair. Hans is very active in community service for which he received the State of Oregon's Economic and Community Development Award for Outstanding Community Leadership in 2002. He serves on the Board of the Good Samaritan Hospital and the Linn-Benton Community College Foundations, on the OSU PSM Advisory Board, and is a Past Chairman of the Corvallis-Benton County Economic Development Partnership.

This team of industry experts will be augmented with appropriate executive branch partners as planning needs evolve. This will include participants from the Oregon University System, the Employment Department, Economic and Community Development Department, and the Community Colleges and Workforce Development Department.

THEODORE R. KULONGOSKI
Governor

March 3, 2008

Chris Hayter
National Governor's Association, Hall of the States
444 North Capitol Street, Suite 267
Washington, DC 20001-1512

Dear Mr. Hayter:

The prospect of being one of the states chosen for inclusion in *NGA's Policy Academy on State Strategies to Meet Emerging Workforce Needs through the Professional Science Masters Program* is an exciting opportunity for Oregon's higher education system. Oregon's efforts to expand and improve the state's education delivery system and specifically our (STEM) educational/research opportunities including the four Professional Science Masters (PSM) programs at Oregon State University (OSU), positions us well for the opportunities of this particular Policy Academy.

Our state's innovative approach to the implementation of cluster-based economic development is complemented by several education-focused initiatives described in the proposal. Employment needs for master's level STEM occupations are expected to increase significantly over the next decade, particularly in the computer, mathematical and physical sciences. Expanding the number of PSM degree options available in Oregon will help us fill these workforce needs by providing industries with scientifically trained managers. Individuals with a PSM degree complete their studies with both expanded skills in their science discipline and new professional skills in business management, communications and ethics; they also will have gained practical experience through internships making them ideally suited for key emerging industry positions. And master's graduates are more likely to remain in the state than those earning other types of graduate degrees.

This NGA Policy Academy will help us explore specific Oregon PSM program needs and promote development of these new programs in cooperation with industries destined to hire the PSM graduates. Bruce Schafer, Director of Industry Affairs for the Oregon University System Chancellor's Office, is in a key position to direct implementation of statewide adoption of PSM programs and is enthusiastic about serving as the leader of the core team. Oregon State University presently has the only PSM programs in the Pacific Northwest; their Director, Ursula Bechert, is eager to expand PSM programs throughout the Oregon University System.

Chris Hayter
March 3, 2008
Page Two

I have selected three partners to serve with Bruce and Ursula on Oregon's core team; they are committed to rolling up their sleeves and spending a significant amount of time on this project, including, but not limited to, participation in these activities:

- Advance preparation with the team prior to the Policy Academy;
- Attendance at the two-day Policy Academy Workshop held June 2 and 3, 2008 in Sacramento CA;
- Implementation of the plan, including creation of a PSM start-up fund for academic institutions; and
- A one-day site visit from NGA project staff in the fall of 2008 to review progress of the plan.

The adoption of statewide PSM programs will raise awareness of these innovative programs and help Oregon respond to critical workforce needs. I understand that the work done in the Policy Academy will, ultimately, have far reaching effects, so I am fully committed to providing the support necessary to sustaining the gains realized through this process. Thank you for your consideration of this proposal; I look forward to Oregon's selection.

Sincerely,

THEODORE R. KULONGOSKI
Governor

The Honorable Theodore R. Kulongoski
Governor
State of Oregon
900 Court Street NE, Room 254
Salem, OR 97301-4047

Dear Governor Kulongoski:

I am pleased to inform you that Oregon has been selected to participate in the NGA Center for Best Practices Policy Academy: *State Strategies to Meet Emerging Workforce Needs Through the Professional Science Masters Program*. Your state's proposal demonstrated a clear vision, relevance to other ongoing activities in your state, and a strong commitment to action. Four other states were selected to participate.

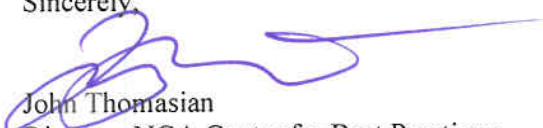

As part of the Academy, your state team will receive an orientation conference call, participate in a national Policy Academy meeting, and receive an in-state follow-up meeting to develop and refine a state action plan. In addition, Center staff and Academy faculty will be available throughout the nine-month process. The NGA Center will cover the costs of transportation and lodging for up to five individuals per state for participation in the PSM Academy meeting. Your state may send up to one additional team members at your own expense.

This Policy Academy will begin in April 2008 and continue through December 2008. A national Policy Academy meeting will be held June 2-3 in Sacramento, CA followed up by in-state site visits this fall.

We will be in contact with your designated team leader, Bruce Schafer, to coordinate next steps in the coming weeks. In the meantime, please contact Chris Hayter of the NGA Center at 202-624-7833 or chayter@nga.org if you have any questions.

We look forward to working with your state team on this important project.

Sincerely,

John Thomasian
Director, NGA Center for Best Practices

Dr. Ursula Bechert
College of Science
Oregon State University
2082 Cordley Hall
Corvallis OR 97331

Dear Dr. Bechert:

It is a critical time for the United States. Everywhere we look, we see evidence of the global competition that American companies are facing. Unfortunately, we also see evidence that American companies are struggling because their employees lack the training necessary to compete in this global marketplace.

I am proud to say that the State of Oregon and the Oregon University system have been on the forefront in fighting to improve this situation. In particular, a tremendous amount of effort has been focused on ensuring Oregon's students get the math and science education, skills and knowledge that they will need to succeed. Oregon State University's Graduate Certificate Program in Management for Science Professionals is an important part of this effort.

This Graduate Certificate Program will help us become more competitive in science and math by providing individuals interested in working in science-related fields with training in business management, communications, ethics and professional technical skills. People working in research facilities, private practices or consulting firms, government agencies, and other industries often need such skills in their everyday work, but they have no way to acquire this training within their current professions. The Management for Science Professionals Graduate Certificate Program will enable individuals to bridge the gap between business and science in a variety of workforce sectors, and will arm their employers with the able workers needed to succeed in the 21st Century marketplace.

Oregon State University's Graduate Certificate Program in Management for Science Professionals should be applauded and emulated.

Sincerely,

RON WYDEN

Ursula Bechert D.V.M., Ph.D.
College of Science
Oregon State University
DBPP-2082 Cordley Hall
Corvallis, OR 97331

Dear Dr. Bechert:

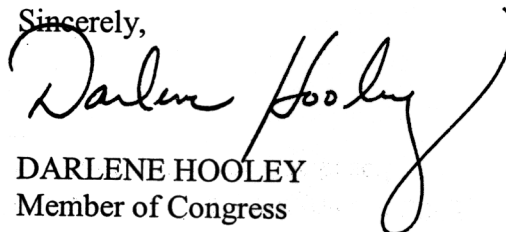

I am excited to learn about Oregon State University's success with the Professional Science Master's (PSM) programs. I first learned of this program in 2005, when it was being developed. I have been a long time supporter of science based education and am encouraged to see this program growing.

Expanding the PSM programs to include a Graduate Certificate Program will provide a wonderful opportunity for students outside the PSM program area who are interested in gaining critical professional skills.

In this global economy, we should take every opportunity to arm our graduates with the tools they need to thrive and compete. We also compete at the university level for the best and brightest students and this program is one more way we can continue to recruit students to Oregon State University.

Thank you for keeping me informed about the growth of this exciting program. Please let me and my staff know how we can continue to support the important work you are doing.

Sincerely,

Ms. Ursula Bechert
Oregon State University
2082 Cordley Hall
Corvallis, Oregon 97331

Dear Ursula:

As a supporter of scientific research and increasing science, technology, engineering and math education in our nation's schools, I wanted to update you on important developments in Washington.

Science and technology issues, such as global warming and alternative energy, are crucial to our nation's competitiveness and security. As research into such pressing issues continues I believe our nation's researchers should be encouraged to effectively communicate new discoveries to the public. That is why I am proud to report that the House of Representatives incorporated a program I introduced—the Scientific Communications Act of 2007 (H.R. 1453)—into the National Science Foundation reauthorization bill (H.R. 1867). This bill will create a NSF grant program to train science graduate students to communicate more effectively with policymakers, business leaders, and other non-scientists in order to capitalize on the federal government's enormous annual investment in scientific research. I look forward to working with my colleagues in the Senate to ensure this legislation becomes law.

Late last month, the House also passed two bills that will advance STEM education and research in our country and ensure that the U.S. workforce remains competitive in the global economy. One of those bills, H.R. 362, will expand programs that help put qualified STEM teachers in our classrooms, improve teaching methods, and will create a panel of experts to identify and develop a new set of K-12 STEM curriculum for use in our public schools. Following the recommendations made in the National Academy of Sciences landmark report, *Rising Above the Gathering Storm*, H.R. 363 will strengthen the federal government's long-term basic research programs. The bill supports outstanding young researchers through grants at the NSF and the Department of Energy, while also establishing a national coordination office to identify, prioritize and fund research infrastructure at universities and national laboratories.

If you have any questions about these or any other issue, please do not hesitate to contact my office at (916) 498-5600.

Sincerely,

DORIS O. MATSUI

Dear Dr. Bechert:

I am writing in support of the development of a Graduate Certificate in Management for Science Professionals at OSU. I understand that this certificate program would be designed for science majors and emphasize organizational finance, marketing and entrepreneurship, communications, ethics and professional skills. My work with the Council on Competitiveness has made me keenly aware of the need for this type of training. The Council on Competitiveness is a private nonprofit organization comprised of CEOs, university presidents and labor leaders focused on fostering innovation-based growth and global competitiveness. As part of our National Innovation Initiative, the Council recommended the development and support of these types of PSM programs. We believe PSM programs and this type of training are essential for national competitiveness and regional economic growth as well. In my collaboration with the Council on Graduate Schools in support of PSM programs throughout the nation, I have seen a large demand for graduate certificate programs in communication, ethics and business skills, not only within the PSM programs, but by students in many different fields of science who are preparing for a research career and pursuing a Ph.D.

During my many years working at the National Science Foundation as the Director of Science and Engineering Indicators, I became convinced that providing business and communication skills for scientists and engineers is an important way of capturing and transmitting innovative ideas and products. Additionally, my colleagues at the National Science Foundation and other federal and state technical agencies needed and used such skills in our work responsibilities as science administrators on a daily basis. These skill sets are very important not only for entrepreneurs and business professionals, but also for scientists and engineers in all occupations, because they need to be prepared to enter the workforce in many different sectors.

I was very impressed with the OSU PSM programs and students when I recently participated in the two-day OSU industry advisory meeting for your PSM programs. I believe that instituting a "Graduate Certificate in Management for Science Professionals" would strengthen the PSM programs and also meet a broader need at OSU and the Corvallis community. Indeed, I believe that the curriculum would be of broader interest throughout Oregon and the nation.

Good luck in your efforts to formalize such a graduate certificate program. I believe that it will be a big success.

Dear Dr Bechert:

I was very pleased to see the proposal for Graduate Certificate program for Science Professionals in Management.

As you know, AOI is Oregon's largest and oldest comprehensive business association, with members ranging from Intel to single-person small businesses. Many of our members are research and consulting companies, especially high-tech and environmental.

Our members often seek managers, or those with management potential, with master's degrees in science, engineering and mathematics. Unfortunately, most employees with scientific background have little or no managerial training, a very real deficit. So the proposed curriculum looks very germane to today's business needs.

I believe graduates from such a program, who must now compete with applicants throughout the nation or worldwide, would be very attractive to Oregon employers.

Please feel free to cite AOI as a strong endorser of your proposal.

Sincerely,

John Ledger
Vice President, External Affairs

JL:kah

CHEMICA

TECHNOLOGIES, INC

April 20th, 2007

Dr. Ursula Bechert
College of Science
Oregon State University
2082 Cordley Hall
Corvallis OR 97331

Dear Dr. Bechert:

I have been a long-time, enthusiastic supporter of the Professional Science Master's (PSM) Program at Oregon State University (OSU), because I understand the value of merging training in business management, communications, ethics and professional technical skills with a science-based graduate degree. At Chemica Technologies, Inc., we value scientists who understand how their work fits within the broader context of the world of business. These individuals are more effective contributors to team projects and are versatile employees.

Oregon State University's Graduate Certificate Program in Management for Science Professionals will broaden access to this type of training to non-PSM degree-seeking individuals, which is excellent. Additionally, I understand that other universities offering PSM degrees are interested in curriculum sharing opportunities, and OSU's Graduate Certificate Program in Management for Science Professionals would certainly be of interest as an online option.

The Graduate Certificate Program will enable individuals to bridge the gap between business and science in a variety of workplaces, and I really appreciate your devoted effort to further develop and promote this substantial program to fill a long time need in many industries.

I strongly support the PSM program at OSU.

Sincerely,

Dr. Takuji Tsukamoto
President/CSO
Chemica Technologies, Inc.
325 SW Cyber Dr.
Bend, OR 97702-1076

To: Ursula Bechert, DVM, PhD

April 20, 2007

Dr. Bechert,

I was excited to learn of your proposal to create a Graduate Certificate Program from the PSM cohort curriculum that is designed specifically for science majors not included in the PSM program. I am also very supportive of your proposal to develop an online version of this certificate program as I believe this would be an attractive learning option for many students, especially adult learners who are returning for higher level academic degrees.

As you are aware, I am a big proponent of students in science or science-related fields receiving some type of formal training in management, communications, ethics and professional technical skills.

Employers, such as Hewlett Packard, appreciate technical candidates who have a basic understanding of finance and marketing principles, have been exposed to the potential business practices companies might use when managing in an innovative environment, have a grounding in business ethics and know multiple methods for communication. Applicants with this type of background are typically more successful in the interviewing process than those who do not.

I would like to provide my support for your proposal as I believe programs such as this are in the best interest for companies such as ours – now and into the future. Please let me know if there is anything more I can do to help in gaining the approval you need to move forward on this.

Regards,
Linda Amedo

April 23, 2007

Dr. Ursula Bechert
Director of Off-Campus Programs, College of Science
Oregon State University
Corvallis, OR 97331

Dear Ursula:

I am happy to hear about the new proposal for a Graduate Certificate in Management for Science Professionals. Since it will require courses that are already in place for the Professional Science Master degree program, it should require minimal extra effort for a possibly significant reward to OSU.

The courses required to earn the certificate would be very valuable for a scientist in virtually any business situation. Even scientists intending to pursue academic careers could profit considerably if ever they should become involved with a spin-off or other cooperative venture with a small company.

I approve this initiative wholeheartedly.

John Gardner

Re: Letter of support for Graduate Certificate Program

Dear Dr. Bechert,

Per your request I would like to express support from the Oregon Department of Fish and Wildlife (ODFW) for your proposal to create a Graduate Certificate in Management for Science Professionals.

ODFW employs over 1,000 managers, biologists and administrative support staff. Most of our biologists receive their formal education in one of the life sciences such as fishery or wildlife biology. On the job training for ODFW biologists focuses on collecting and interpreting data from a suite of fish or wildlife species. Most ODFW managers are recruited from within the rank of our biological staff and have little formal training to manage human and financial resources. There are several reasons why the Graduate Certificate in Management for Science Professionals is appealing. First, the list of courses you provided is consistent with management skills necessary to become an effective manager. Second, the courses are offered throughout the year and the program can be completed in eight months. Finally, since many ODFW employees live in remote portions of the state, an on line, distance learning option is highly desirable.

Good luck developing the program and feel free to contact me should you have any questions.

Sincerely,

Charlie Corrarino
Conservation and Recovery Program Manager

Cc:

Virgil Moore, ODFW Director

Dr. Dan Edge, Head, OSU Department Fisheries and Wildlife

Laurie Byerly, ODFW Deputy Director

Roxie Burns, ODFW HR Administrator

Ed Bowles, ODFW Fish Division Administrator

Ron Anglin, ODFW Wildlife Division Administrator

Appendix E: Budget

(OUS and OSU)

Category I Proposal Budget Outline

Estimated Costs and Sources of Funds for the Proposed Program

Total new resources required to handle the increased workload, if any. If no new resources are required, the budgetary impact should be reported as zero.

* See current OPE tables at <http://oregonstate.edu/dept/budgets/budghand/tables.htm>

Faculty support is for 0.5 instructor for management courses, partial FTE for communications and philosophy courses; the management courses will grow once online and will move from the 0.5 FTE position to 1.0 FTE by the 3rd year (see below).

Support FTE is Ursula Bechert, some course delivery and program management.

Service and supplies is office, phone, incidental funds.

Other is costs of Annual Partners Conference and meetings and some recruitment activity.

Note a number of these costs have been in part defrayed by private funds from the OSU Foundation.

VITA

Gregg B. Walker, Ph.D.

(condensed vita – environmental communication, natural resource management focus)

Positions: Professor of Communication
Adjunct Professor of Forest Resources
Adjunct Professor of Oceanic and Atmospheric Sciences (Marine Resource Management)
Adjunct Professor of Anthropology

Office Address: Department of Speech Communication
Oregon State University
Corvallis, OR 97331-6199 USA
PH: 541.737.2461 FAX: 541.737.4443
email: walker@oregonstate.edu (o), jgktwalker@comcast.net (h)

EDUCATION - Degrees Earned

Ph.D., Communication Studies, University of Kansas, 1983; M.A., Communication Studies, University of Kansas, 1982; B.S., History, Sociology, Speech Communication (three majors), University of Minnesota, 1974; B.A., Speech Communication, University of Minnesota, 1974

TEACHING AND RESEARCH AREAS

Conflict management, bargaining and negotiation processes, mediation and facilitation, environmental communication and conflict resolution, communication theory, argumentation, leadership, decision-making, collaborative governance, pluralism and participatory communication

RECENT WORKSHOPS AND PROJECTS (partial list)

Workshops

- Walker, Gregg B., and Steven E. Daniels (2006, May). Enhancing the Coastal Manager's Ecosystem Management Toolkit: An Introduction to the Collaborative Learning Approach. Workshop presented at The Coastal Society 20th International Conference, St. Petersburg Beach, FL.
- Senecah, Susan E., and Walker, Gregg B. (2005, September). A taste of . . . the Collaborative Learning approach for resolving Multi-party conflicts. Workshop presented at the Association for Conflict Resolution annual conference, Minneapolis, MN.
- Walker, Gregg B., and Daniels, Steven E. (2005, September). Public Involvement and Community Decision-Making in the Mt. Hood National Forest Region: An Introduction to the Collaborative Learning Approach. A training workshop presented to the Mt. Hood National Forest staff and key stakeholders, Estacada and Welches, OR.
- Walker, Gregg B., and Daniels, Steven E. (2004, 20-22 October and 17-19 November). *Systems Thinking and Situation Mapping: Ideas from Collaborative Learning*. An instructional module presented at the "Collaborative Problem-Solving and Organizational Change Workshop for Washington Department of Fish and Wildlife Managers," conducted by the Natural Resources Leadership Academy of Washington State University, Olympia, WA.
- Walker, Gregg B., and Daniels, Steven E. (2004, 20-22 October and 17-19 November). *Assessing Collaborative Potential: The Progress Triangle*. An instructional module presented at the "Collaborative Problem-Solving and Organizational Change Workshop for Washington Department of Fish and Wildlife Managers," conducted by the Natural Resources Leadership Academy of Washington State University, Olympia, WA.
- Walker, Gregg B., and Daniels, Steven E. (2004, 20-22 October and 17-19 November). *Communicating, Knowing, and Learning*. An instructional module presented at the "Collaborative Problem-Solving and Organizational Change Workshop for Washington

- Department of Fish and Wildlife Managers ,” conducted by the Natural Resources Leadership Academy of Washington State University, Olympia, WA.
- Walker, Gregg B. (2004, 12 May). *Improving Public Participation: Fundamentals of Collaborative Learning*. Two hour program presented at the National Conference on Communications and Public Affairs, U.S. Army Corps of Engineers, Seattle, WA.
- Walker, Gregg B. (2004, 10-11 May). *Improving Public Participation in Environmental Conflicts: The Collaborative Learning Approach*. A two-day instructional module presents as part of the graduate seminar on Environmental and Public Policy Conflict Resolution, the Program on the Analysis and Resolution of Conflict of the Maxwell School of Government and Public Service, Syracuse University, Syracuse, NY.
- Walker, Gregg B. (2004, March 24). *Collaborative Learning and Collaborative Potential: Applications to Regional Sediment Management and Grays Harbor*. Workshop presented to the U.S. Army Corps of Engineers Seattle District, USACE Seattle District Headquarters, Seattle, WA.
- Walker, Gregg B. (2003, March). *Decision Processes, Systems, and Assessing Collaborative Potential: Ideas from Collaborative Learning*. Training program presented at the Fire Learning Network Workshop, The Nature Conservancy, Little Rock, AR.
- Walker, Gregg B., and Daniels, Steven E. (2002, October). *Understanding Decision Processes And Assessing Collaborative Potential and Roles: Ideas from Collaborative Learning*. Training program presented at the Aridlands Grazing Network Workshop, The Nature Conservancy, Joseph, OR.

Projects

- Protecting Tribal Harvests: Policy Work Teams at the EPA Tribal Leaders Summit*, Confederated Tribes of the Umatilla Reservation, August 2006. Working with Kathleen Feehan, Water Quality Specialist for the Confederated Tribes of the Umatilla Reservation, I designed and directed policy work team sessions for Tribal Leaders Summit participants.
- Mixing Zone Workshop*, Salem, Oregon, March, 2006, sponsored by the Oregon Department of Environmental Quality and OSU Institute for Natural Resources. I helped design the day-long workshop of ninety participants, facilitated the workshop, and directed the afternoon's Collaborative Learning activities. The workshop also included my presentation, "The Collaborative Learning Approach to Environmental Policy Decision-making: A Quick View."
- Communities, Desired Conditions, and Collaborative Learning: Forest Planning under the New Rule*, March 2005 – present. Comprehensive Collaborative Learning training, assessment, community workshop, and Cooperators project conducted for the Bridger-Teton National Forest, Jackson, WY (with Steve Daniels of Utah State University).
- Community-based Collaboration and Kenai Winter Access Planning: A Collaborative Learning Approach*, January 2005-May 2006. Collaborative Learning training, assessment, coaching, and community workshop activities to address winter activities on the Kenai Peninsula, Chugach National Forest, Alaska (with Steve Daniels of Utah State University).
- Improving Public Lands Management, Planning, and Decision-Making: An Introduction to Collaborative Learning*, April, May, and August 2003; September 2004, May 2005. This forest plan revision project featured comprehensive Collaborative Learning training, assessment, and community workshops conducted for the Allegheny National Forest, Warren, PA (with Sue Senecah of SUNY-ESF and Steve Daniels of Utah State University).
- The Mouth of the Columbia River Regional Sediment Management Demonstration Initiative: A Collaborative Learning Approach to Stakeholder Involvement*, September 2003-September 2004. Sponsored by the Portland and Seattle Districts of the U.S. Army Corps of Engineers, this comprehensive Collaborative Learning (CL) project that included conversations with over seventy stakeholders, CL training workshops for stakeholders and

Corps personnel, and a CL community workshop on the science and organization of RSM (with assistance from Pat Corcoran of Oregon Sea Grant, Steve Daniels of Utah State University, Corrine Gobeli of Oregon State University, and present and former graduate students).

Improving Public Lands Management: Fundamentals of the Collaborative Learning Approach, November 2002. Comprehensive Collaborative Learning training and community workshop project conducted for the Shawnee National Forest, Harrisburg, IL (with Steve Daniels of Utah State University).

Collaboration, Systems Thinking, Facilitation, and Community Decision-making, March 2002. Three day workshop presented to the University of Nevada Cooperative Extension Service, Las Vegas, NV (with Steve Daniels of Utah State University and Pat Corcoran of Oregon Sea Grant Extension)

Improving Public Land Management: An Introduction to Collaborative Learning, USDA Forest Service, Region 2, Fort Collins, CO, 06-07 September 2001.. This was a two-day introductory training course prepared for and presented to planning staff from Colorado and Wyoming (Region 2) national forests (with Steve Daniels, Director, Western Rural Development Center, Utah State University).

Planning, Participation, and Public Land Management: The Collaborative Learning Approach, USDA-Forest Service, Region 9, Milwaukee, Wisconsin. Two and one-half day introductory training course about the philosophy, framework, and techniques of Collaborative Learning. The course was presented to the senior planners from the national forests of Region 9—the Midwest, Mideast, and Northeast United States (with Steve Daniels, Director of the Western Rural Development Center, Utah State University, formerly of the Department of Forest Resources, Oregon State University).

Improving Public Land Management: The Collaborative Learning Approach, USDA-Forest Service Eastern and Southern Regions [Regions 9 and 8] University, Cincinnati, Ohio, 29-31 January 2001. This was a three day course in the theory and practice of Collaborative Learning in public land management, decision making, public participation, and conflict resolution (with Steve Daniels).

People, Watersheds, and River Parks: A Collaborative Learning Design and Facilitation Training, College Station Texas, June-July 2000. This project was sponsored and hosted by the Center for Public Leadership Studies, George Bush School of Government and Public Service at Texas A & M University. Funded by the San Antonio Water System and the San Antonio River Authority, the project included two separate 2-day training programs. The first, held in June, presented an introduction to Collaborative Learning. The subsequent July training emphasized how to design and facilitate Collaborative Learning activities (with Steve Daniels of Utah State University).

Collaboration and Community-Based Watershed Management: Training and Critique, Ashton, Idaho, April 1999. This project included an assessment of the Prepared for The Henry's Fork Watershed Council and a one-day training on facilitating multi-party collaboration, sponsored by the Henry's Fork Foundation & the Fremont-Madison Irrigation District (with Steve Daniels).

Public Participation, Collaborative Learning, and the South Deep Area, Colville National Forest, Colville, WA, December 1998 through April 1999. This project included a two-day "Introduction to Collaborative Learning" training for Colville National Forest staff and Colville area community leaders. The project also featured a day-long citizen workshop on the South Deep area (with Steve Daniels, and Keith Blatner and Matthew Carroll of Washington State University).

Public Participation, Planning, and the Chugach National Forest, Anchorage, AK, August 1997 to 1999. This project included both introductory and basic training programs on Collaborative Learning as a basis for public participation activities and interdisciplinary team

work as part of the forest plan revision process. In addition to training, the project featured the design and facilitation of Collaborative Learning citizen workshops, and situation assessment interviews (with Steve Daniels).

Collaborative Learning, Citizen Involvement, and Forest Policy: A Facilitator Training, sponsored by the Great Lakes Forestry Alliance and Wisconsin Rural Partners, Inc., 18-20 February, 1998. This project consisted of an introductory workshop, "Natural Resource Land Use Conflict Resolution: Opportunities for Communities," for community leaders. That workshop was followed by "Collaborative Learning, Involved Citizens, Natural Resource Dependent Communities, and Forest Policy," an advanced facilitator training program connected to the January 1997 workshop on "public participation and land use conflict resolution."

Presented Papers (Invited):

2007. "Evolutionary Psychology, meet Developmental Systems Theory." Presented at Stanford University's Department of Anthropological Sciences Colloquium Series. January 12th, 2007.

2006. "Giving up the Adaptive Landscape Metaphor." Presented at the University of California, Irvine's Department of Logic and Philosophy of Science Colloquium Series. May 4th, 2006.

2006. "Evolution and Developmental Resources: from Variation to Stability and Back Again." Presented at the Franklin & Marshall College Philosophy Department's Colloquium series. April 6th, 2006.

Presented Papers (Invited), continued.

2006. "Inside/Outside: External Resources and the Individual in the Fragile Science." Author meets critics commentary on Robert Wilson's *Genes and the Agents of Life*. *American Philosophical Association*, Pacific Division. March 2006.

2005. "Evolution and developmental resources: from variation to stability and back again" A plenary talk presented at the fourth biennial conference on the "Developmental Basis of Evolutionary Change" at the University of Chicago. October 20-23, 2005.

2005. "Devo-Evo and the Limits of Contemporary Behavior Genetics Research Techniques: A Reply to Kenneth Schaffner." Presented at the First Annual Queensland Biohumanities Conference. Brisbane, Australia. October 15-16, 2005.

2005. "Is it Time to Give up Adaptive Landscapes?" Presented at the University of Houston's Department of Biology and Biochemistry Colloquium / Seminar series. September 7th, 2005.

2005. "Misinformation, Misrepresentation, and Misuse of Human Behavioral Genetics Research." Presented at the Duke University Law School's symposium, "The Impact of Behavioral Genetics on Criminal Law," April 2005.

2005. "The End of Adaptive Landscapes?" Presented at the University of British Columbia's Philosophy Colloquium series, January 2005.

2004. "Violence and Public Health: Exploring the Relationship Between Biological Perspectives on Violent Behavior and Public Health Approaches to Violence Prevention." Presented at Pennsylvania State University conference, "Beyond Science and Values," April 2004; the *Center for Ethics and Values in the Sciences* conference on "Philosophical Issues in the Biomedical Science," University of Alabama Birmingham, May 2004.

2003. "MAOA and Violence: The Gene and the Environment." Presented at the *Center for Ethics and Values in the Sciences'* colloquium series, University of Alabama Birmingham, March 2003.

2003. "The Targets and Units of Selection: Physical Processes and Statistical Bookkeeping in Biological Evolution." University of Cincinnati Philosophy Department, February 2003; Oregon State University Philosophy Department, February 2003; Lewis and Clark College Philosophy Department, October 2004.

2001. "Import Bans and Tying One's Hands: Weakness of Will and Import Restrictions." Philosophy Department Colloquium, University of California at Irvine, April 2001.

Presented Papers (Invited), continued.

2000. "Social Justice, Economic Choices, and Health Care Expectations." Bioethics Fullerton Conference, "The Humanities in Medical Education," April 2000.

2000. "Distant Relatives and Extinct Relations: Troubles for the Historical Approach to Human Adaptation." *American Philosophical Association*, Pacific Division Meeting, April 2000.

1996. "Wittgenstein on the Soul." *American Philosophical Association*, Pacific Division Meeting, April 1996 (Commentator).

Presented Papers (peer reviewed):

2006. "Evolutionary Innovations and Developmental Resources: From Stability to Variation and Back Again." *Philosophy of Science Association*. Biennial Meeting, November 2006.

2006. "The End of the Adaptive Landscape Metaphor." *Scientific Images: An American Philosophical Association Pacific Division Mini-Conference*. March 2006.

2003. "Spandrels, Pendentives, and Squinches: Architecture, Adaptation, and History." Duke University Center for the Philosophy of Biology, Second Annual Conference on Recent Work in Biology and Philosophy, April, 2003.

2002. "Social Justice, Economic Choices, and Health Care Expectations." *American Philosophical Association*, Eastern Division Meeting, December 2002.

2002. "On the Concept of Biological Race and its Applicability to Humans." With Massimo Pigliucci. *Philosophy of Science Association* Biennial Meeting, November, 2002.

2001. "Ethics and Evolution." *International Society for the History, Philosophy, and Social Studies of Biology* Biennial Meeting, July 2001.

2001. "'Scientific' Decision Making: Decision Analysis and Evidence-Based Medicine." Center for Ethics and Values in the Sciences conference, "Value Free Science: Ideal or Illusion?" University of Alabama, Birmingham, February 2001.

2000. "Mental Illness and the Ways of Contingency: Context Sensitivity, Social Norms, and the Biology of Construction." *American Philosophical Association*, Eastern Division Meeting, December 2000.

2000. "Historical Evidence and Human Adaptations." *Philosophy of Science Association*, Biennial Meeting, November 2000.

Presented Papers (peer reviewed) (continued):

1999. "Evolutionarily Meaningful Environments and the Gene-Phenotype Relationship: The Problem With Standard Environments." *American Philosophical Association*, Eastern Division Meeting, December 1999.

1999. "ADD/ADHD and the Genetic Disease Concept." with Alan Rubel, *American Society for Bioethics and Humanities* Conference, October 1999.

1999. "Decisions and the Culture of Deciding." *Inland Northwest Philosophy Conference* "Reason and Rationality," April 1999.

1998. "Scientific Explanations, Political Pluralism, Ontological Commitments, and What Killed the Dinosaurs." *Inland Northwest Philosophy Conference* "Realism and Anti-Realism," April 1998.

1998. "Genetic Determinism and the PKU Myth." *American Philosophical Association*, Pacific Division Meeting, April 1998.

Other Professional Activities:

Respondent: "Making Sense of Evolution" Panel discussion. Oregon State University. April 7, 2007.

Participant and Presenter: "Recent CLA Research on Race and Racism." Oregon State University October, 21st 2006.

Participant and Presenter: "3rd Annual Pacific American Philosophical Association Mini Conference," a campus presentation by the OSU Philosophy Club. April 2006.

Panel member: "Research Ethics Forum." Oregon State University, March 2nd 2006.

Conference organizer (with Sharyn Clough): "2nd Annual Pacific American Philosophical Association Mini Conference," a campus presentation by the OSU Philosophy Club. April 2005.

Discussant "Roundtable on Race: The Case of John Locke," Oregon State University. (<http://oregonstate.edu/~cloughs/CloughRace1.html>). February 2005.

Discussant "Roundtable on Race and Racism: An Interdisciplinary Conversation," Oregon State University. (<http://oregonstate.edu/~cloughs/CloughRace1.html>). November 2004

Other Professional Activities (Continued).

Conference organizer (with Sharyn Clough) and discussant: “1st Annual Pacific American Philosophical Association Mini Conference,” a campus presentation by the OSU Philosophy Club. April 2004.

Participant and collaborator, “Representing Genes” project, funded by the NSF and other granting agencies. Principle investigators: Karola Stotz, and Paul Griffiths, University of Pittsburgh, PA. Conferences in February 2004, and January 2003.

Teaching Experience (courses taught, 1995-2006):

- “Research Ethics” (a graduate seminar) OSU, 2006-present.
- “(Why) Are We Rational?” (an Oregon State University Honors College colloquium) co-taught with Andrew Stivers (OSU Department of Economics) OSU, Winter 2005.
- “Ethics” (an introductory course) OSU, 2004-present.
- “Scientific Reasoning” (an undergraduate course) OSU, 2003-present.
- “Philosophy of Biology” (both as a graduate seminar and as an advanced undergraduate course) OSU, 2003-present; University of Tennessee Knoxville (UTK), 1998-2003; Stanford University, 2002.
- “Reasoning and Writing” (an introductory course) OSU, 2003-present.
- “Philosophy of Science” (both as a graduate seminar and as an advanced undergraduate course) UTK, 1998-2003.
- “Special Topics in Advanced Biological Practice” (an advanced graduate seminar) co-taught with Massimo Pigliucci (Dept. Evolutionary Biology, SUNY Stonybrook) UTK, 2002-2003.
- “Wittgenstein: Interpretation and Method” (both as an advanced undergraduate course and as a graduate course) UTK, 2003; Stanford, 1996.
- “Philosophical Foundations of Democracy” (an advanced undergraduate course) UTK, 2000- 2003.
- “The Philosophy of Madness: Conceptual Issues in Mental Disease” (a graduate seminar) UTK, 2002.
- “The Human Condition: Value and Reality” (an introductory course) UTK, 2000-2002
- “The Philosophy and Science of Evolutionary Biology” (a graduate seminar) co-taught with Massimo Pigliucci. UTK, 2001.
- “The Human Condition: Knowledge and Reality” (an introductory course) UTK, 1998-2000.
- “Topics in Contemporary Philosophy: Rorty, Davidson, and Hacking on Contingency” (an advanced graduate seminar) UTK, 1999.
- “The Philosophy and Literature of Post-Modernism” (an advanced undergraduate course) Stanford, 1997.
- “The Philosophy and Literature of Existentialism and Post-Modernism,” (an advanced undergraduate course) co-taught with Stephen Käufer. Stanford, 1995.

Additional Teaching Interests:

- “Ethical, Social and Political Issues in Agricultural Practice and Food Production”
- “Biodiversity: Ethical Crises and Conceptual Difficulties”
- “Political Philosophy”

Professional Service:

University/Departmental and Related:

| | |
|----------------|---|
| 2006 - present | Chair, Student Awards Committee, Philosophy Department, Oregon State University. |
| 2006 - present | Member, Faculty Tenure and Promotion Review Committee for Joseph Orosco. |
| 2004 - present | Coordinator, Applied Ethics Certificate Program, Oregon State University. |
| 2005 - 2006: | Chair, Departmental Faculty Advisory Committee, Philosophy Department, Oregon State University. |
| 2003 - 2006: | Member, Computing Resources Committee, Oregon State University. |
| 2005: | Member, CLA Research Grant Selection Committee |
| 2003 - 2005: | Faculty co-advisor (with Sharyn Clough), Undergraduate Philosophy Club, Oregon State University. |
| 2003 - 2005: | Member, Departmental Faculty Advisory Committee, Philosophy Department, Oregon State University. |
| 2000 - 2003: | Co-Chair, Colloquium Committee, Philosophy Department, University of Tennessee, Knoxville. |
| 1998 - 2003: | Member, Head's Advisory Committee, Philosophy Department, University of Tennessee, Knoxville. |
| 1999 - 2003: | Member, Committee on Revising the Undergraduate Philosophy Curriculum, Philosophy Department, University of Tennessee, Knoxville. |
| 1998 - 2003: | Member, Medical Ethics Committee, Philosophy Department, University of Tennessee, Knoxville. |
| 2000 - 2001: | Member, Search Committee, Assistant Professor Position, Philosophy Department, University of Tennessee, Knoxville. |
| 1999 - 2000: | Member, Head Search Committee, Philosophy Department, University of Tennessee, Knoxville. |

Other Professional Service: Manuscript Reviews

| | |
|----------------|--|
| 2005 - present | Manuscript reviewer for <i>Philosophy of Science</i> |
| 2004 - present | Manuscript reviewer for <i>The Quarterly Review of Biology</i> . |
| 2004 - present | Manuscript reviewer for the <i>University of Chicago Press</i> |
| 2003 - present | Manuscript reviewer for <i>Biology and Philosophy</i> . |
| 2001 - present | Manuscript reviewer for <i>The British Journal for the Philosophy of Science</i> . |

Professional Development:

| | |
|------|--|
| 2003 | Writing Intensive Curriculum Seminar, Oregon State University. |
| 2001 | Innovative Technology Center Workshop on basic HTML, University of Tennessee. |
| 2000 | Innovative Technology Center Workshop on Blackboard System, University of Tennessee. |

Fellowships Held, Grants Received, and Awards:

- 2007: Senior Personnel member on NSF grant application for “REU Site for Oregon Marine Science: From upper estuaries to the deep.” Principal Investigators: George W Boehlert and Robert A Duncan. Total grant amount: \$300,000 over 3 years. I am responsible for the “Research Ethics Component” of the grant, which totals approximately \$12,000 for three years. Awarded 2007.
- 2005: OSU College of Liberal Arts Research Grant (\$9,102), with Andrew Valls (Department of Political Science), for our proposal “Housing Discrimination as a Basis for Black Reparations.”
- 2004: OSU Philosophy Department “Service Award”
- 2003: National Endowment for the Humanities Fellowship (\$3,250), Summer Institute on Science and Values, University of Pittsburgh.
- 2002 - 2003: Matchette Foundation Grant (\$3,000), Principal Investigator and Grant Writer
- 2001 - 2002: Haines-Morris Grant (\$8000), Co-Principal Investigator and Grant Writer
- 1991 - 1996: Andrew W. Mellon Doctoral Fellowship in the Humanities

PROFESSIONAL PROFILE

- Entrepreneur, educator and businessman with broad background and diverse experience
- Communicator with extensive experience in cross-cultural dialog with consumers and business customers in America, Europe and Asia
- Researcher seeking new approaches and innovative solutions
- Author of over 50 published papers, international presentations and patented inventions

EDUCATION

MBA, University of Connecticut, School of Business Administration, Stamford, CT, 2000

- Concentration: Global Marketing and Management

Ph.D., State University of Geodesy and Aerial Surveying, Moscow, Russia, 1987

- Concentration: Technical Sciences
- Dissertation title: *Research of the Holographic Measurement Methods*

M.S., Environmental University, Odessa, Ukraine, 1976

- Concentration: Applications in Computer Sciences
- Thesis title: *Data Processing System for the World Weather Data Center*

Professional development: Classes and courses in Leadership Psychology, Negotiations, Presentation Skills, Visual Basic Programming, Project Management, Database Management.

GLOBAL MARKETPLACE EXPERIENCE

Worked, taught in or traveled to 30+ countries:

- 22 in Europe
- 5 in North America
- 5 in Asia

Fluent in three languages, have basic knowledge of three more.

Quickly establish cross-cultural communications leading to development of long-term business relations.

TEACHING EXPERIENCE

2007 **Adjunct Associate Professor**
Worcester State College, Worcester, MA

- Developed a course on Global Market Forecasting and will teach on-campus and online classes for the Division of Graduate and Continued Studies at WSC
- Use Blackboard software as a main tool to enhance student learning experience
- Continue research of brand marketing in transitional economies. Submitted a paper discussing this subject to Academy of Marketing Science Review.

2006 **Adjunct Faculty**
Whittemore School of Business and Economics, UNH, Durham, NH

- Taught a course of Market Opportunity Analysis to two sections of full and part-time students with business majors. Extensively used Blackboard and WebCT tools for lecturing, student project management and examination purposes
- Complemented lectures with real-life team and individual student projects
- Actively communicated face-to-face and electronically with colleagues and students
- Conducted research of the management decision making based on sales analysis and forecasting in B2B and B2C markets
- Researched consumer behavior in countries with transitional economies to develop effective strategies in brand marketing
- Researched applications of clean energy technologies in residential housing markets and RFID marketing tools.

2005 **Invited Lecturer**
Shanghai Microelectronics Equipment Co., Shanghai, China

- Taught Business and Technology Aspects of the Contemporary Semiconductor Manufacturing Markets to Chinese scientists and engineers (mostly Ph.D. level).

1979-1991 **Graduate Thesis Mentor, Scientific Advisor**
Polytechnic Institute, Odessa, Ukraine

- Served as a thesis mentor (scientific advisor) and internship supervisor to graduate students in Computer Sciences. Guided graduate research, reviewed and approved Masters theses, participated in thesis defense of 12 graduate students, 11 of whom graduated with high honors.

1988-1990 **Adjunct Professor**
College of Cultural Studies, Odessa, Ukraine

- Taught continuing education graduate and undergraduate students a course Use of Photography in Advertising.

INDUSTRY EXPERIENCE AND SELECTED ACCOMPLISHMENTS

2003-Present Founder and Chief Strategist

BiFoS, LLC - Bi-Focal Strategies, Merrimack, NH (privately held)

Advise presidents and owners of small and mid-size client companies on business strategy.

- Analyze respective markets and uncover new opportunities in the US, UK, China and Russia
- Identify the most effective marketing and sales initiatives to achieve overall business objectives
- Proposed and implemented cross-specialty marketing approach involving several companies
- Develop new product roadmaps and help to implement derived business strategies
- Analyze cash flows to determine the product/service profit drivers
- Helped the DoD prime contractor to successfully reshape organizational strategy
- Helped to optimize the company profit margins via pricing strategy and loss-cutting techniques.

2003-2004 Manager, Member of Executive Team

Greenerd Press & Machine Company, Nashua, NH (privately held)

- Identified new market opportunities, developed the company technology roadmap to increase competitiveness and profit margins of the products - sophisticated hydraulic presses
- Spearheaded development of the new SPC-capable control system strategy to win new customers
- Met with key customers, presenting new products, negotiated specifications, helped to close sales
- Established and enhanced collaboration with Sales, Manufacturing and Purchasing departments
- Implemented pre-quote analysis of the sophisticated projects, boosted support of sales and service
- Managed development and promotion of 12 new products, including 3 unique ones
- Energized and motivated engineers, making their role in the product design and implementation pivotal to the whole organization

2002-2003 Vice President of R & D, Member of Executive Committee

Acu-Rite Companies, Jamestown, NY (subsidiary of \$700 mil multinational Heidenhain GmbH)

- Developed and communicated a product roadmap to enhance the market share
- Coordinated product development activities with Sales, Marketing and Manufacturing functions
- Identified and discussed future product requirements with customers. Supported sales activities at domestic, European and Asian subsidiaries
- Conceptualized a new product targeting the Mainland China market
- Had budget - over \$1 mil - and hiring authority over the Engineering organization - 23 engineers and technicians. A two-tier organization included four engineering groups, prototype and testing labs with matrix teams
- Led the development of 3 new products
- Shaped and coached a team of R&D, Quality and Manufacturing specialists redesigning the production technology to increase an important product yield from 70 to 95%, reducing the rework costs at the same time
- Collaborated with Quality department to ensure ISO 9001 compliance in design and manufacturing.

1997-2002 Leader/Architect, Control Systems

ASML-CT (formerly SVG), Wilton, CT (subsidiary of \$9 bil multinational ASML)

- Led five cross-functional and cross-disciplinary teams of 3 to 5 Ph.D. and MS-level specialists. Leveraged matrix environment to better utilize resources.
- Identified new opportunities in emerging technologies: developed the best-in-the-industry dose control systems for 5 generations of lithographic machines, implemented in 1998-2003
- Translated marketing requirements into strategic technical solutions. Developed and negotiated systems specifications and budgets
- Developed Visual Basic models describing and predicting behavior of sophisticated processes
- Delivered six presentations at international conferences and national workshops
- Presented new designs to major customers: Intel, IBM, Motorola, Samsung, etc.
- Coached engineers and technicians

1995-1996 Electronic Publishing Production Supervisor

Research Institute of America, New York, NY (subsidiary of \$7 bil Thomson Holdings)

- Hired and trained the new production team
- Played a key role in a team, launching 12 new products: supervised multiple releases
- Co-developed and implemented the TQM system and reduced annual production costs by more than \$200,000.

1994-1995 Manager of Operations

Beta Business Products, Inc., New York, NY (privately held)

- Took over the ailing division, bearing full budget and partial P&L authority
- Built new team: hired, trained and coached 25 employees
- Supported sale force, conducted customer presentations
- Re-engineered the organization and production technology to reduce costs
- Evaluated, scheduled and budgeted projects
- Developed imaging database management systems
- Outsourced labor-intensive work to a Philippines partner.

1992-1994 Sales & Marketing Director

HiTech Innovative Manufacturing, Odessa, Ukraine (VC-funded startup)

- Developed effective marketing and sales approach to advertising and promotion utilizing innovations in desktop publishing and color printing
- Had full P&L, budgetary and hiring authority
- Established strategic and tactical objectives, developed organizational structure
- Developed and implemented marketing plans, analyzed ROI, arranged proper financing.

1989-1992 Head of Department, Member of Executive Staff

Special Projects Institute for Printing Equipment, Odessa, Ukraine (nationwide corp.)

- Developed multi-channel marketing strategy to reach out multiple end users through the partner networks
- Tripled the volume of business within two years to \$10 million
- Had full P&L, budgetary (up to \$3.4 mil) and hiring authority

- Served as a Principal Investigator of numerous commercial and governmental projects
- Managed large governmental programs involving 60 to 80 employees
- Extensively communicated with customers
- Developed and implemented new systems and MEMS technologies for electronic industry
- Published new research results and presented at national and international conferences.

1976-1988

Researcher, Sr. Research Scientist

Research Institute for Machine Tools and Instrumentation, Odessa, Ukraine

- Served as a Principal Investigator of numerous commercial and governmental projects
- Conducted research in optics, lasers and holography applications for digital imaging
- Developed mathematical digital and analog models describing sophisticated processes
- Presented research results at national scientific conferences and symposia
- Developed sensors, encoders and control systems for precise machine tools and robots
- Published papers in professional journals and conference proceedings

HONORS AND AWARDS

- Hall of Fame Inductee - UConn School of Business
- GE Capital Fellowship for Global Marketing research and presentations
- Multiple research awards, fellowships and honorable mentions
- Silver Medal at Business and Science Show
- Bronze Medal at Business and Science Show
- M.S. degree with Highest Honors

PROFESSIONAL AFFILIATIONS AND MEMBERSHIPS

Academy of Marketing Science
UConn School of Business, Alumni & Friends Society
SME, Southern NH Chapter
Merrimack Valley Venture Forum
NH Business & Industry Association
Toastmasters International

Fellow
Strategy Committee Chairman
Marketing Committee Chairman
Program Committee Member
Energy Committee Member
Competent Communicator

TEACHING INTERESTS

- New product development and risk management
- Brand marketing in the countries with transitional economies
- Global marketing in technology-intensive environment
- Emerging B2B markets
- Positioning as a marketing strategy
- Market forecasting

(see more details in a separate Teaching Philosophy Statement)

RESEARCH AND PUBLICATIONS

Paper submitted and invited for a second round of reviews for a special issue ‘Cross-Cultural Issues in Marketing Research’:

Kivenzor, Gregory. “Brand Equity Aberrations: Heritage Brand Perception Effects in Russian Markets.” *Academy of Marketing Science Review*, 2007.

Ongoing research of the consumer behavior and purchasing decision making in the countries with transitional economies. Analysis of brand marketing effectiveness and issues in customer relations management.

A full list of technical publications, including 5 in refereed journals, 12 in conference and symposia proceedings and 15 patented inventions will be furnished upon request.

FUTURE RESEARCH INTERESTS

Research interests cover several areas with either emerging technologies or the existing technologies serve as enablers of new applications.

The following topics become ever important for both domestic and international markets and shall benefit from an in-depth theoretical research:

1. Market research and forecasting of renewable energy sources (fuel cell, solar, wind, etc.) for small business and residential use
2. Real-time sales analysis and forecasting on the global marketplace using active RFID reporting.

(see more details in a separate Research Statement)

CURRICULUM VITAE

URSULA BECHERT

JULY 2007

Oregon State University
2082 Cordley Hall
Corvallis OR 97331

Phone: 541 737 5259
Fax: 541 737 3573
E-mail: ursula.bechert@oregonstate.edu

PROFESSIONAL PREPARATION

| | | |
|----------------------------------|------|--|
| Ph.D. in Animal Sciences | 1998 | Oregon State University |
| D.V.M. - Veterinary Medicine | 1991 | Washington and Oregon State Universities |
| B.S. in Bioveterinary Science | 1985 | Utah State University |
| Journey into Leadership Training | 2003 | W.K. Kellogg Critical Issues Program |
| Immobilization of Wildlife | 1999 | Safe Capture International |

POSITIONS

| | |
|-----------|--|
| 2004- | Director of Off-Campus Programs, College of Science, Oregon State University (OSU) |
| 2002-2004 | Program Coordinator, Professional Science Master's, College of Science, OSU |
| 1998-2002 | Assistant Professor Senior Research, College of Veterinary Medicine, OSU |
| 1992-1997 | Associate Veterinarian, clinics primarily in the Willamette Valley, Oregon |

SYNERGISTIC ACTIVITIES

Current:

- Oversee development and management of graduate programs with major off-campus components:
 - Professional Science Master's (PSM) Programs (<http://professionalmasters.science.orst.edu>) initiated with a \$400,000 grant from the Alfred P. Sloan Foundation; involved faculty from five major colleges on campus as well as numerous industry and agency representatives to guide development of curricula.
 - International research and exchange programs for faculty and students in the College of Science.
- Founded and serve as Executive Director of NW Wildlife Conservation, Inc. (since 1998), a non-profit organization created to foster regional partnerships in the Pacific Northwest for global conservation through research and education.
- Conduct research through a faculty appointment in the Department of Animal Sciences at OSU. Projects focus on reproductive biology of wildlife species (particularly elephants) and development of novel diagnostic and population management tools through collaborative relationships in southern Africa, as well as nutritional and pharmacological studies with captive wildlife species.
- Professional and community service positions:
 - Vice President of the National PSM Association since June 2007.

- Member of the Ecology, Evolutionary, Environmental, and Organismal Biology Panel for the Science Foundation of Ireland (SFI) for the past two years, and chaired the SFI Women in Science Panel in 2006.
- Representative on the OSU International Advisory Council for the College of Science for the past two years.
- Contributing member of professional organizations including the Society for Conservation Biology, the Wildlife Disease Association, and the American Association of Zoo Veterinarians (AAZV).
- Volunteer Youth Director for high school students at a local community church since 2007.
- Member of the Institutional Animal Care & Use Committees for the Oregon Zoo (1998-2000) and Wildlife Safari (1999-2002).
- Member of OSU's Faculty Hearing Committee (2004-06), Graduate School Financial Aid Committee (2005), and College of Veterinary Medicine Public Relations Committee (1998-2002).

Previous:

- Developed a Zoo and Wildlife Medicine Program for the College of Veterinary Medicine at OSU (1998-2002). Activities included:
 - Creating and advising a Student Chapter of the AAZV.
 - Mentoring students in a variety of different research projects.
 - Supervising a cooperative program with Chintimini Wildlife Rehabilitation Center and facilitating development of new preceptorship and internship programs at the Oregon Zoo and Wildlife Safari.
 - Teaching three new senior block electives (Wildlife Rehabilitation, Free-ranging Wildlife, and Zoo Medicine; VM 781-22, 23 and 24).
- Practiced as a full- or part-time veterinarian in private clinics and wildlife parks in Oregon (1992-97):
 - Examined patients, performed orthopedic and soft-tissue surgeries, handled emergencies, and developed preventive medicine programs.
 - Volunteered as a veterinarian in Kenya for one month (1994) to work with the Masai and their livestock.
- Gained business and managerial experience by working as a:
 - Marketing consultant for Bonney Enterprises, Inc. (1987) to create a landscaping business for an established corporation that provided employment to mentally handicapped adults.
 - Sales manager for Ilsa's Konditorei & Café, Inc. (1985-86) to train personnel and generally advertise and promote the business.
 - Owner of a janitorial company that serviced residential and commercial sites on a contract basis (1982-86) while completing my undergraduate degree.

SPECIAL RECOGNITION AND SKILLS

- Offered a position as an Adjunct Scholar for the Charlie Bild VIP Program in the College of Veterinary Medicine, University of Florida (2002 and 2004)
- Invitation to join the Alpha Gamma Chapter of the Society of Phi Zeta Veterinary Honor Society (2000)
- Speak German fluently; SCUBA certified; special training in communication and counseling

GRANT AWARDS

Research (>\$500,000 total)

| Year | Title | Amount | Funding Agency |
|-------------|---|---------------|---|
| 2005 | Beavers and persistent organochlorine pollutants in estuarine and riparian ecosystems (PI) | \$10,000 | Oregon Sea Grant |
| 2005 | Formulations of a long-lasting, single-does contraceptive vaccine in captive African elephants (PI) | \$12,000 | International Elephant Foundation & Elephant Care International |
| 2005 | Maintenance of a forest ecosystem in Northern Siberut through development of sustainable conservation-based economies (Co-PI) | \$120,000 | Critical Ecosystem Partnership Fund |
| 2004 | Biology and conservation of the Mentawai Island primates in the Peleonan Forest, Northern Siberut, Indonesia (Co-PI) | \$25,000 | Margot Marsh Biodiversity Foundation |
| 2003 | Ecology, population structure and movements of elephant populations in northern Botswana (Co-PI) | \$89,944 | USFWS |
| 2002 | U.S.-Botswana planning visit for wetlands management & hippo research workshop (PI) | \$7,073 | NSF and Conservation International |

SELECT INVITED LECTURE AND PRESENTATION TOPICS

- 2006 “Wildlife Conservation in Northern Botswana” for the OSU International Environmental Issues Seminar Series (invited speaker annually for 5 years)
- 2005 “Career Opportunities in Zoo and Wildlife Medicine” for the OSU Pre-Veterinary Club
- 2004 “Pharmacokinetics & Clinical Efficacy of Terbinafine against Aspergillosis in Avian Species” at the AAZV Conference in San Diego CA
- 2003 “Professional Master’s Degree Programs in the Sciences at OSU” at the Association for the Study of Higher Education Conference in Portland OR
- “Pharmacokinetics of Orally Administered Ibuprofen in Elephants” at the AAZV Conference in Minneapolis MN
- “Building Capacity for the Sustainable Management of Natural Resources in Northern Botswana” at the Higher Education Partnerships for International Development Conference in Washington D.C.
- 2002 “Monitoring Stress in Wild African Elephant Populations: Potential Management Implications” at the AAZV Conference in Milwaukee WI
- “Use of Ibuprofen in African & Asian Elephants” at the Cross-Species Approach to Pain and Analgesia Workshop in Warrenton VA
- Chair of the 3rd Annual NW Wildlife Conservation Conference in Corvallis OR
- 2001 “Wildlife Conservation in Botswana” at OSU’s 2nd Annual International Education Week
- “Collaborative Research Initiatives in Northern Botswana” at the International Joint Conference, Society for Tropical Veterinary Medicine and Wildlife Disease Association in Pilanesberg National Park, South Africa
- “Nutritional Comparisons among Carcass & Commercial Diets for Captive Cheetahs” at the 2nd Annual NW Wildlife Conservation Conference in Winston OR
- 1999 Chair of the 1st Annual NW Wildlife Conservation Conference in Portland OR
- Section Chair at the North American Conference on Elephant Foot Care and Pathology at the Oregon Zoo in Portland OR
- 1998 “Factors Affecting Prolactin Secretion in the African Elephant” (poster) at the Society for the Study of Reproduction Conference in College Station TX
- 1996 “Carfentanil Citrate as an Oral Anesthetic Agent for Brown Bears” at the AAZV Conference in Puerto Vallarta, Mexico

Guest Lectures for Courses at OSU

- 2001 “Wildlife Rehabilitation” (VM 738) for the College of Veterinary Medicine
- 1999 “Reproductive Physiology of Elephants” (VM 718) for the College of Veterinary Medicine
- 1997 “Zoonotic Diseases of Wildlife” (FW 499/599) for the Department of Fisheries of Wildlife
- 1993 “Exotic Animal Medicine” (VM 776) for the College of Veterinary Medicine
- 1992 “Reproductive Diseases of Domestic Livestock” (ANS 316) for the Department of Animal Sciences

NEW COURSE DEVELOPMENT & TEACHING

Professional Science Seminar Series (PSM 511, 512 and 513)

Developed and currently teach three classes that were created as part of a 19-credit Graduate Certificate Program in Management for Science Professionals (a requirement of the PSM Program at OSU) to provide formal training in business management, communications, ethics and professional skills for individuals in science-related fields. Personal teaching style emphasizes hands-on learning opportunities that complement didactic and demonstrative instruction. Students complete service learning projects, create their own multi-media portfolios, develop skills to conduct and give interviews, explore leadership styles, and enhance teamwork skills.

Wildlife Rehabilitation (VM 781-22)

Taught for 3 years as a 1-week block elective (i.e., full-time) to senior veterinary students. Daily classes were structured as morning lectures and afternoon workshops. Topics included: philosophy of wildlife rehabilitation; zoonotic diseases; orphaned wildlife; handling and immobilization of wildlife; medicine of raptors, waterfowl, and small mammals; wildlife forensics; and wildlife laws, regulations and policies.

Zoo Medicine (VM 781-23)

Taught for 3 years as a 2-week block elective to senior veterinary students. Daily classes were structured as morning lectures and afternoon workshops or fieldtrips to regional zoos, wildlife parks, and research facilities. Topics included: role of zoo veterinarians; classification of mammals; biodiversity crisis and conservation; preventive medicine; allometric scaling; handling and immobilization of zoo animals; zoonotic diseases; aquaculture medicine; dentistry; and medicine of: terrestrial carnivores, elephants, equids, rhinoceros and tapirs, artiodactylids, amphibians, marine mammals, monotremes and marsupials, primates, and exotic birds.

Free-Ranging Wildlife Medicine (VM 781-24)

Taught for 2 years as a 1-week block elective to senior veterinary students with a similar course structure emphasizing a hands-on, experiential learning style through workshops and fieldtrips. Topics included: role of the wildlife veterinarian; zoonotic diseases; wildlife law; infectious diseases of wild mammals; handling and immobilization of native wildlife; and principles of disease management.

PROFESSIONAL SKILLS

Course Coordinator:

Ursula Bechert, DVM, PhD

2051 Cordley Hall

Tel: 541 727 5259

E-mail: ursula.bechert@oregonstate.edu

Credits: 3 (offered spring term)

Course Number: PSM 513

Class Location & Time: TBA

Prerequisites & Co-requisites: PSM 565, 566 and 567; COMM 550; PHL 547

Goals:

This class will meet weekly for 1½ hours, or as needed, to introduce, discuss, work on, and provide guidance for a case study project. Students will work together with classmates and off-campus mentors to address a contemporary problem in a scientific field within the context of an existing business. This collaborative project will provide students with opportunities to integrate and apply their collective business, communication, and scientific knowledge to create innovative solutions. A final report and PowerPoint presentation are required at the end of the term. Case study projects are designed to provide positive experiences for both students and their off-campus partners.

Measurable Student Learning Outcomes:

- expand knowledge base with respect to project management, business principles, and potentially new fields in science by working on a sponsored project as part of an interdisciplinary team.
- enhance creative thinking, writing, presentation and public speaking skills.
- build effective interdisciplinary communication and teamwork skills.
- integrate concepts across business management and scientific application fields to produce relevant solutions to real-time problems in the workplace.
- understand the utility of professional training acquired this past year and highlight areas needing improvement through team- and self-assessments.

Please note that off-campus representatives will initially make presentations and share background information about a particular project. Specific objectives will be described, and then the class will be free to decide how to tackle them. It is anticipated that time outside or instead of the weekly class will be required for this 3-credit course (minimum 3 hours/week). Communication with the project mentor will be done via phone and e-mail communications as well as on an as-needed basis in person.

Schedule & Weekly Assignments:

| Week | Date | Activity |
|-------------|-------------|---|
| 1 | 31 Mar | Introduction & expectations for the class; project management plans
Guest speaker: TBA

<u>Assignment:</u> 1) read background materials for case study project; 2) develop project management plan due 14 Apr |
| 2 | 7 Apr | Mentoring

<u>Assignment:</u> finish project management plan |
| 3 | 14 Apr | “Crossing the Chasm” - bringing new ideas & technologies to market; submit project management plan to instructor & project mentor

<u>Assignment:</u> work on project |
| 4 | 21 Apr | Scientific writing

<u>Assignment:</u> work on project |
| 5 | 28 Apr | Mentoring as needed

<u>Assignment:</u> work on project ; finish outline of draft report due 12 May |
| 6 | 5 May | Team& cross-disciplinary communication skills

<u>Assignment:</u> work on project |
| 7 | 12 May | Mentoring as needed; submit outline of draft report to instructor & project mentor

<u>Assignment:</u> work on project |
| 8 | 19 May | Mentoring as needed

<u>Assignment:</u> finish report & PowerPoint presentation 26 May for feedback; complete project |
| 9 | 26 May | Mentoring as needed

<u>Assignment:</u> make final revisions to report & presentation due 2 Jun |
| 10 | 2 June | Turn in final report; complete peer evaluation forms & review case study experiences; give presentation (time & location TBD) |
| | 4 June | Picnic for 1 st year PSM students at 6 pm – location TBA |
| 11 | 9 June | Finals week (no class) <i>Enjoy the summer!</i> |

Evaluation of Student Performance: Detailed instructions and grading criteria for individual assignments will be given in class. This is designed as a hands-on, active-learning course and classmates will depend on your participation. Assignments are due on particular days to keep your project on track—please keep these in mind! If you have any questions or concerns, please contact Dr. Bechert.

A team score for a project management plan, final report and presentation, as well as individual scores based on team and self evaluations will be used to assign A/F grades for this course. Everyone will receive the same number of points for the team score (total of 55 possible). Team evaluation forms will be used to complete thoughtful evaluations for each team member. Anonymous results will be shared with each person and should provide insightful and helpful feedback to each student. The self evaluation form will serve as a useful comparison: what individuals think of their performance and teamwork skills versus what others think.

| Assignments | Grade Points | Due Dates |
|--------------------------------------|--------------|----------------|
| Team score - project management plan | 20 | 14 Apr |
| - final report | 20 | 12 May & 2 Jun |
| - final presentation | 15 | 12 May & TBD |
| Team evaluation | 25 | 2 Jun |
| Self evaluation | 20 | 2 Jun |
| | 100 | |

A total of 100 points can be earned, and actual grades will be assigned on a curve (e.g., if the highest score earned is 80 points, this figure will be considered equivalent to 100 and other scores will be calculated on this basis).

Learning resources: (recommended – optional)

Crossing the Chasm by Geoffrey Moore (2002); HarperCollins Publishers, Inc. (ISBN: 0-06662-002-3)

The Chasm Companion by Paul Wiefels (2002); HarperCollins Publishers, Inc. (ISBN: 0-06-662055-4)

How to Write & Publish a Scientific Paper, 5th Edition (1998); Oryx Press (ISBN: 978-1573561655)

Writing Successful Science Proposals (2000); Yale University Press (SBN: 978-0300081411)

Partners Not Competitors: The Age of Teamwork & Technology (1992); Ideals Publications (ISBN: 978-1878289094)

Statement Regarding Students with Disabilities: “Accommodations are collaborative efforts between students, faculty and Services for Students with Disabilities (SSD). Students with accommodations approved through SSD are responsible for contacting the faculty member in charge of the course prior to or during the first week of the term to discuss accommodations. Students who believe they are eligible for accommodations but who have not yet obtained approval through SSD should contact SSD immediately at 737-4098.”

Expectations for Student Conduct: Please see <http://oregonstate.edu/admin/stucon/achon.htm>.

“Many students do not understand what academic dishonesty is. It is important to become familiar with its different forms and the University's definitions.

At Oregon State University academic dishonesty is defined by the Oregon Administrative Rules 576-015-0020.1.a-c as: *An intentional act of deception in which a student seeks to claim credit for the work or effort of another person or uses unauthorized materials or fabricated information in any academic work.* Academic dishonesty includes:

- **CHEATING** - use or attempted use of unauthorized materials, information or study aids or an act of deceit by which a student attempts to misrepresent mastery of academic effort or information. This

includes unauthorized copying or collaboration on a test or assignment or using prohibited materials and texts.

- **FABRICATION** - falsification or invention of any information (including falsifying research, inventing or exaggerating data and listing incorrect or fictitious references.
- **ASSISTING** - helping another commit an act of academic dishonesty. This includes paying or bribing someone to acquire a test or assignment, changing someone's grades or academic records, or taking a test/doing an assignment for someone else (or allowing someone to do these things for you). It is a violation of Oregon state law to create and offer to sell part or all of an education assignment to another person (ORS 165.114).
- **TAMPERING** - altering or interfering with evaluation instruments and documents.
- **PLAGIARISM** - representing the word or ideas of another person as one's own OR presenting someone else's words, ideas, artistry or data as one's own. This includes copying another person's work (including unpublished material) without appropriate referencing, presenting someone else's opinions and theories as one's own, or working jointly on a project, then submitting it as one's own."
