Graduate Council

Standing Rules

The Graduate Council has jurisdiction over the policies, procedures, and requirements of graduate education. The Council establishes and reviews admission standards, basic degree requirements, and general policies; approves all graduate faculty members, new programs, and courses; and periodically reviews all existing graduate programs. The creation, design, and specific requirements of graduate programs and of individual student's programs are the responsibilities of the academic units; however, no academic unit has authority to waive or supersede the general policies of the Graduate Council. As needed, the Graduate Council reviews applications and nominations for specific university-level graduate student awards and recommends award recipients. Upon request, the Council also reviews university-level proposals for extramural funding of graduate training and education programs.

The Council consists of one graduate faculty member from each College and one graduate student. The Chair shall be a faculty member with immediate prior experience on the Council. The Dean and Associate Dean of the Graduate School and the Chair of the Graduate Admissions Committee shall be ex-officio, non-voting members.

Graduate Council

Graduate Certificate Programs at Oregon State University

Proposed Policy Statement:

The Graduate Certificate Program at Oregon State University is a structured progression of graduate level courses that constitute a coherent body of study with a defined focus within a single discipline or a logical combination of disciplines. It is designed for a student who has completed a baccalaureate degree and is in pursuit of advanced-level learning. Graduate certificates reflect the educational mission of the University. All certificate programs require a minimum of twenty-four (24) graduate credits with a cumulative grade point average of 3.00 or greater. Students desiring a graduate certificate must be admitted to the University as a credential-seeking graduate student, but are not required to be on track for a specific degree. There is no formal committee requirement for graduate certificates. Certificate students are subject to all general policies governing the courses for the Master's Degree.

Proposed Guidelines for Graduate Certificate Programs at OSU:

Definition

A graduate certificate program is a structured progression of graduate level courses that constitute a coherent body of study with a specific defined focus within a single discipline or a logical combination of disciplines. It is designed for a student who has completed a baccalaureate degree and is in pursuit of advanced-level learning. Graduate certificates reflect the educational mission of the University.

Program Coordination

A designated graduate certificate program coordinator oversees each individual program. The program coordinator is responsible for all aspects of administration of the program - applicant screening, admissions recommendations, and annual reporting to the graduate school. Annual reports will briefly summarize program status and provide statistics on enrollment and student progress. The Graduate School is responsible for certification of program completion.

Admissions

Students must be admitted to the University, either into a graduate degree program or into a graduate certificate program. This requires that the student hold a 4-year baccalaureate degree from an accredited College or University. Individual certificate programs may specify additional requirements, including minimally acceptable grade point averages. Students may be reclassified as "advanced degree students" by following the procedure listed in the Graduate Catalog. Credit earned at OSU prior to admission to the certificate program may be applied toward a certificate as transfer credit, per current graduate credit transfer policy. (p. 17, Graduate Catalog)

Curriculum

The certificate curriculum is a structured progression or collection of courses approved and offered for graduate degree credit at OSU. The curriculum consists of a minimum of twenty-four (24) quarter credit hours, and may include a final project, portfolio, or report for integration of the sequence of course materials. Up to 8 quarter credit hours may be transferred toward a 24 credit hour graduate certificate.

Transcript

Courses and certificates completed will be transcribed by the University Registrar as a part of the student's permanent University record. The certificate is awarded when all course material is satisfactorily completed and a cumulative grade point average of 3.00 has been attained for all courses to be used toward the certificate. Award of a separate document suitable for framing will be at the discretion of (and will be the responsibility of) the unit administering the certificate program.

Integration with current degree programs

Credits earned in fulfillment of a certificate program may be applied to a graduate degree program at OSU, so long as they meet the appropriate standards for use in the degree* and the criteria for transfer credit as defined in the graduate catalog.

Courses completed for a degree program may likewise be applied toward a certificate program. Courses completed no more than 7 years prior to the certificate award date may be used to satisfy certificate requirements.

Approval

New certificate programs must be proposed by a department, program, or by combinations of departments or programs, be reviewed and approved by the appropriate School or College committee(s), and must meet with the approval of the Graduate Council, the Curriculum Council, and the Graduate School.

* Includes all current graduate degree programs at OSU (Ph.D., EDD, MF, MBA, MS, MA, Ed.M., MAIS, MAT, MEng, MAgr, MOcE, MPH, MSE).

Approved as amended by the OSU Graduate Council, 10 May 2001;
Approved as amended by the OSU Curriculum Council, 24 May 2001

Graduate Council

2011-2012 Annual Report

To: Faculty Senate Executive Committee
 Date: July 24, 2012
 From: Walt Loveland and Carolyn Aldwin, Chairs, Graduate Council AY2011-2012
 RE: Graduate Council Annual Report for AY2011-2012

The Graduate Council (GC) met 16 times during the Academic Year 2011-2012 and had representation from all colleges. The following is a summary of the activities and accomplishments of the Graduate Council during the academic year. Details may be found in the Graduate Council minutes posted on the website:

<http://oregonstate.edu/senate/committees/gradcncl/min/index.html>

ACADEMIC PLANNING COMMITTEE (APC)

Given the large number of Category I proposals, Graduate Council members participated in the 14 APC pre-reviews of graduate level Category I proposals (two were postponed).

- Graduate Certificate in Public Health (Loveland)
- Graduate Certificate in Teaching English to Speakers of Other Languages (TESOL) (Loveland)
- Environmental Engineering MS and Ph.D. (Narayanan & Lach)
- MAT in Science Education/MAT in Math Education (Levine & Dykeman)
- Omnibus College of Liberal Arts (Aldwin & Dykeman)
- MBE in Construction Engineering Management (Levine)
- School of Life Sciences (Filtz)
- MFA in Creative Writing (Lach)
- Graduate Certificate in College & University Teaching (Dykeman)
- Graduate Certificate in Rural Policy (Coakley)
- PSM in Renewable Energy (Levine)
- Department of Applied Economics (Coakley)
- MA, MS in Communication, New Graduate Degree Program (Coakley & Dykeman)
- Comparative Health Sciences (Veterinary Medicine) (Semevolos)
- History of and Philosophy of Science MA, MS & Ph.D. (Aldwin – postponed)
- MA in Environmental Humanities (Lach – postponed).

CATEGORY I PROPOSALS

Thirteen Category I proposals were reviewed. The actions taken are listed below:

- Teaching English to Speakers of Other Languages (TESOL). Proposal to eliminate the program, which had no faculty or students – APPROVED.
- School of Integrated Plant, Soil, and Insect Science (Abbreviated Category I: Reorganization, Merger, Rename) – HOLD [sent back to the academic units by the GC].
- College of Education Abbreviated Category I proposal – APPROVED.
- MAT in Science Education/MAT in Mathematics Education – APPROVED.
- Graduate Certificate in Public Health – APPROVED.
- Merger of Animal Sciences with Rangeland Ecology and Management –APPROVED. (NOTE: additional CAT I to merge graduate programs will be needed.)
- Food in Culture and Social Justice Graduate Certificate Program – WITHDRAWN.
- Food in Culture and Social Justice Graduate Minor – APPROVED.

- Design & Human Environment – Create School and Align with College of Business – APPROVED.
- Environmental Engineering Category I proposal – APPROVED.
- University Certificate in College and University Teaching – APPROVED.
- Termination of Construction Engineering Management (MBE) – APPROVED.
- MA/MS in Communications (Category I – new program) – RETURNED.

CATEGORY II PROPOSALS

There were 153 graduate level Category II proposals this year. As in previous years, each Council member reviewed Cat II proposals from his or her college. A secondary reviewer was identified for each proposal to serve as consultant as needed.

GRADUATE PROGRAM REVIEWS

Seven scheduled reviews were conducted; five reports were approved (including two from last year); three reports will be completed next year; one delay was approved.

- Animal Science and Rangeland Graduate Program Review – Report approved.
- Design and Human Environment Program – Report approved.
- Nutrition Graduate Program Review – Report amended & approved.
- Botany & Plant Pathology – postponement to Fall 2012 approved.
- Geology and Geography Graduate Program Review – Report approved with revisions.
- Zoology Graduate Program Review – Report approved.
- Physics Program – Review conducted; report due Fall, 2012
- Masters in Public Policy – Review conducted; report due Fall, 2012.
- Horticulture – Review conducted; report due Fall, 2012.
- Exercise & Sports Science – Review conducted; report delayed.

FOLLOW-UP GRADUATE PROGRAM REVIEWS

These take place three years after a major program review. The details of each report are found at <http://oregonstate.edu/senate/committees/gradcncl/min/index.html>

- Masters of Agriculture Program – problems were identified in the report, including lack of a marketing program, low enrollment, and problems with learning outcomes. Report was accepted **with the proviso that the program director return in a year to report on progress in these areas.**
- Food Science and Technology – Report accepted.
- Environmental Sciences Graduate Program – Report accepted.
- Biological and Ecological Engineering (BEE) Graduate Program – Report accepted.
- Mechanic Engineering Graduate Degree Program – Report accepted.

AWARDS

Subcommittees of Council members reviewed nominations and selected recipients of the following awards:

- Laurel Block Grants (awarded to departments)
- Oregon Lottery Scholarships
- Bayley Graduate Fellowship
- Yerex Graduate Fellowship
- Herbert F. Frolander Outstanding Graduate Teaching Assistant Award
- Excellence in Graduate Mentoring Award

In addition, a subcommittee is reviewing over the summer:

- Western Association of Graduate Schools (WAGS) outstanding thesis awards
- CGS/Proquest Distinguished Dissertation Award

POLICY-RELATED ISSUES

The following policy-related issues were discussed by the Graduate Council and the actions taken are indicated.

Review of Request from Academic Programs for a Policy Statement on Ecampus Degree Proposals

Alfonso Bradoch and Gary Beach requested that the Graduate Council decide whether or not to review Ecampus proposals for the migration of existing graduate classes to Ecampus. Issues included learning outcomes and assessment. GC requested further information on who had accountability for ensuring that the ecampus versions of the courses were comparable. Decision: It was decided that Graduate Council would not need to review Ecampus versions of graduate classes, as long as Academic Programs would ensure that the on- and e-campus versions were comparable.

Review of Graduate Certificates

Currently, no separate review process exists for graduate certificate programs. After much debate concerning the GC oversight role and workload issues, it was decided that the GC does not need to review existing programs. Ecampus is charged with ensuring comparability across on- and e-campus programs, but Assessment should participate in the review, with GC input as needed.

Transcript-Visible Specializations at the Graduate Level

Jim Coakley and Brenda McComb developed a proposal to allow for [transcript-visible specializations at the graduate level](#). Approved.

New Institutional Indicators of Core Theme 2: Graduate Research and Education

Brenda McComb and Becky Warner proposed changes to the original report from the Graduate Council. A number of difficulties were noted, including:

- Two indicators in the previous document were eliminated in the new one;
- The use of the terms "threshold" and "goals" may be problematic;
- 2.2.3 does not include journal articles;
- 2.2 does not mention research faculty;
- tenure/tenure track dollar volume per faculty member may be problematic, etc. (see [November 2, 2011](#) minutes).
- Given that Goal 2 was the only goal which had significant faculty input, it was decided that Walter Loveland would let the Graduate School know that the GC prefers to retain the original document.
- However, subsequent conversation revealed that these changes were mandated by the Provost and President following their reading of the critique of OSU's accreditation report.

Approval of Graduate Faculty by the Graduate School

Review of the Standing Rules revealed that the GC is charged with approval of graduate faculty. However, GC delegated approval to the Graduate School, which should be noted as an Internal Policy.

Strategic Planning Initiative

Jim Coakley and Theresa Filtz participated in the Graduate School's Strategic Planning Initiative to enhance OSU's standing as a land grant school. Proposals include: increasing graduate student enrollment, GTA funding, and fellowships; increasing ratio of graduate students to faculty; increase number of interdisciplinary programs; increase diversity, and generally increase quality of graduate students and mentoring programs.

Graduate School Pilot Project – Three-year MBA & MPH Programs for Students from India

Current OSU policy requires four-year degrees for entrance into graduate programs. However, the British system in place in many countries has only three-year degrees. As India has a thorough accreditation program, the Graduate School proposed to conduct a three-year pilot program to admit MBA and MPH students only from schools with the highest accreditation ratings. Consensus by the Graduate School indicated that they are supportive of the program, but that it should be evaluated yearly. They are willing to assist in identifying criteria to assess the progress of the students.

Review of Remote Participation at Oral Examinations and Doctoral Program of Study Meetings

Last year the GC approved the possibility of remote participation in oral examinations and doctoral program meetings, but permission had to be received from the Graduate School, which was charged with monitoring the program and reporting back to the GC. The Graduate School reported that there were very few reported problems with this new procedure, and recommended that GC no longer require approval from the Graduate School. GC concurred; the new #e in the grad catalog will now simply specify that the student is responsible for making the arrangements for the defense.

PROCEDURAL CHANGES

Graduate Student Representation on Program Review Committees

The graduate student representative requested that she be allowed to observe a program review in order to gain a better understanding of the process. GC decided that it would be a good idea for the representative to sit in on one review, as long as the principals involved in the review agreed.

Category II Proposals

Given workload, it was decided that there would be a primary reviewer from the relevant college for Category II proposals, and a secondary reviewer as consultant, as needed.

Academic Planning Committee Reviews

It was decided to distribute APC reviews among the committee members, who would then be responsible for reporting on both APC reviews as well as Category I reviews.

Program Reviews

It was decided that the reviewer would present the report to the GC first and then invite the program chairs/directors and/or deans after GC has a chance to ask clarifying questions and identify potential problems.

Preliminary Examinations

It was felt that there was some confusion in the Graduate Catalog concerning preliminary examinations; in consultation with Bruce Rettig and Larry Bulling, the heading was changed in order to help clarify the process.

Graduate Council Manual

In order to ensure smooth transitions, the current chair wrote a GC chair's manual which basically constituted an overview of the types of tasks conducted by the GC, and the procedures by which those tasks are completed.

PERSISTENT PROBLEMS NOTED BY THE GRADUATE COUNCIL

In the course of discussing several issues, the Graduate Council notes the following problems as affecting the function of the Graduate Council, graduate education and graduate programs.

- Last year, the GC noted that the University reorganization effort has led to an on-going problem with a large number of postponed graduate program reviews. The Council suggested a revision of the self-study review team members to reduce the number of Graduate Council members on the review team from two to one, and to substitute with either an additional external reviewer or an OSU faculty member at large. This year the EC suggested that its members, prior GC faculty, and/or emeritus faculty be recruited for these reviews. This effort was only partially successful – while reviewers were found for most reviews, it was very difficult to recruit them. One possible solution would be to expand the GC membership by having a one-year overlap between outgoing and incoming representatives. This would also allow for a smoother transition.
- However, it has been extremely difficult to recruit faculty to this committee, largely because of workload perceptions. At one point, we stopped reviewing Cat II proposals from two Colleges in order to force them to appoint representatives.
- There has also been frustration on the part of GC members because so much of our time was spent on the university reorganization and review processes, and not as much on policy, which should be the primary concern of this committee.
- There is an on-going need to streamline graduate program reviews as departments continue to complain about the burden of preparing the self-study for the decadal review. In addition, programs need to collect data for yearly assessments, external accreditation, and the like. Last year the GC extensively discussed streamlining the graduate program review process, and was split concerning the

nature and quality of the data we should require. This year a concerted effort was made to identify a "minimum data set," which could be common among these differing review processes. We were discouraged to discover that there was actually very little overlap between the information that was required for different review purposes. Upon reflection, this made a certain amount of sense because different reviews are aimed at different portions of graduate programs – e.g., student success, faculty success, curriculum learning outcomes, etc. Only the graduate program review included all of these as well as assessments of university support for the program. However, the press of work from the reorganization meant there was insufficient time for the GC to pursue this further. We are encouraged that the Graduate School has been very pro-active in working with various branches of OSU to identify and collect a minimum data set, but we are concerned that GC may not have adequate opportunity for input into this process.

2011-2012 GRADUATE COUNCIL MEMBERSHIP

Walt Loveland '11, Chair*	Science
Mike Lerner '14	Science
Carolyn Aldwin '14**	Public Health and Human Sciences
Theresa Filtz '12	Pharmacy
Murray Levine '13	Earth, Ocean & Atmospheric Sciences
Jim Coakley '13	Business
Stacey Semevolos '13	Veterinary Medicine

Graduate Council

Annual Report of the Graduate Council 2010-2011

To: Faculty Senate Executive Committee
 Date: June 30, 2011
 From: Walt Loveland and Theresa Filtz, Chairs, Graduate Council, AY2010-2011
 RE: Graduate Council Annual Report for AY2010-2011

The Graduate Council (GC) met 27 times during the Academic Year 2010-2011 and had representation from all colleges. The following is a summary of the activities and accomplishments of the Graduate Council during the academic year. Details may be found in the Graduate Council minutes posted on the website:

<http://oregonstate.edu/senate/committees/gradcncl/min/index.html>

CATEGORY I PROPOSALS

The following Category I proposals were reviewed. The actions taken are listed below:

- Approved the Sustainable Forest Management (SFM) proposal to merge and rename the Forest Resources and Forest Engineering Degrees into the Sustainable Forest Management Degree.
- Approved the Forest Ecosystems and Society (FES) proposal to revise the Forest Science Graduate Program.
- Approved the proposal to establish a Master of Business Administration and Accountancy major.
- Approved the proposal to establish a School of Public Policy within the College of Liberal Arts.
- Approved the proposal to establish a PSM degree in Fisheries and Wildlife Administration.
- Approved the proposal to establish a MA degree in Women Studies.
- Approved the proposal to establish a PhD degree in Public Policy.
- Approved the proposal to rename the College of Public Health and Human Sciences and reorganize into Schools.
- Approved the proposal to rename the College of Earth, Ocean and Atmospheric Sciences and merge with Geosciences.
- Tabled the proposal to rename the MAT in Language Arts to the MAT in Humanities pending further information from the College of Education.

CATEGORY II PROPOSALS

The Graduate Council reviewed 169 Category II proposals this year. As previously, each Council member reviewed Cat II proposals in his or her discipline. A secondary reviewer was identified for each proposal to assure a thorough examination of the proposal.

The Council approved the proposal from the College of Business to establish three new Areas of Concentration in the MBA Degree Program, namely Commercialization, Clean Technology and Research Thesis. Students entering into the Research Thesis track will be monitored by the Graduate School, all other students in the MBA program will be monitored by the College of Business.

GRADUATE PROGRAM REVIEWS

Scheduled reviews and actions taken are listed below:

- Approved postponement of the Zoology Graduate Program Review from Winter 2011 to Spring 2011.
- Approved postponement of the Master of Public Policy Graduate Program review for one year (2011-12).
- Approved postponement of the Horticulture Graduate Program review for one year due to reorganization (2011-12).
- Approved postponement of the Exercise and Sports Science Graduate Program review to Fall 2011 due

to reorganization.

- Approved postponement of the MAIS Graduate Program review to Spring 2013 due to an imminent change in the program Director.
- Approved the start of the review clock for the Applied Economics Graduate Program from the Category I proposal date of March 2009, thus postponing the graduate program review to academic year 2018/19.
- Cancelled the scheduled program review and suspended admissions into the Veterinary Sciences Graduate Program.
- Accepted the review report of the MBA program.
- Accepted the review report of the Public Health Graduate program.
- Stipulated that the graduate program in Botany and Plant Pathology make a commitment by Fall 2011 to complete a Category I proposal for major restructuring or undergo a graduate program review in Spring 2012.
- Accepted the review report of the Agricultural Education Graduate program.
- Accepted the review report of the Science and Math Education Graduate program.

FOLLOW-UP GRADUATE PROGRAM REVIEWS

These take place three years after a major program review. The details of each report are found at

<http://oregonstate.edu/senate/committees/gradcncl/min/index.html>

- Accepted the follow-up review report of the Pharmacy graduate program, and
- Accepted the follow-up review report of the COAS graduate programs.

AWARDS

Subcommittees of Council members reviewed nominations and selected recipients of the following awards:

- Laurel Block Grants (awarded to departments)
- Oregon Lottery Scholarships
- Bayley Graduate Fellowship
- Yerex Graduate Fellowship
- Herbert F. Frolander Outstanding GTA Award
- Excellence in Graduate Mentoring Award

POLICY-RELATED ISSUES

The following policy-related issues were discussed by the Graduate Council and the actions taken are indicated:

Principles for allowing postponement of Graduate Program Reviews:

1. When synchronizing within plus/minus one year with either professional reviews or accrediting body reviews; when and if requested.
2. When eliminating the program.
3. When reorganizing and a Category I proposal will be used to change the program. In this case a one year postponement will be approved and the Cat I must be submitted within that year. If the Cat I is not submitted, the review will take place a year from the originally scheduled date.

It was also decided that the 10-year review cycle starts when the first student is enrolled in the program

Monitoring of the transfer of responsibility for oversight of the MBA program from the Graduate School to the College of Business

Approved a motion, in light of the MOU between the Graduate School and the College of Business, moving all the functions related to the MBA degree out of the Graduate School and over to the College of Business. In particular:

1. The MBA program continues to participate in Graduate Program Reviews.
2. In 2012, the MBA program director will report qualitatively to the Graduate Council as to what has worked and what has not worked with the transfer of all procedures from the Graduate School to the COB. Some of the policies are:
 - admission standards
 - programs of study
 - final oral examinations
 - transfer credits
 - reservation of credit
 - registration requirements
 - continuous enrollment
 - maximum credit load

- number of courses taken in residence
- adequate student progress and grades
- dismissal of students from the MBA
- time limit for completion of the MBA.

Resolution on General Learning Outcomes for the Ph.D. Degree

The Council approved the following resolution for consideration by the Faculty Senate: As a result of successfully completing the requirements toward the Ph.D., students will be able to: (a) produce and defend an original significant contribution to knowledge; (b) demonstrate mastery of subject material; and (c) conduct scholarly activities in an ethical matter. Additional outcomes, the assessment of all outcomes and the specification of learning objectives related to these outcomes are to be carried out at the program level and reviewed periodically.

Resolution on General Learning Outcomes for Masters Degree

The Council approved the following resolution for consideration by Faculty Senate: The Graduate Learning Outcomes for Masters degrees are:

- a. Conduct research or produce some other form of creative work, and*
- b. Demonstrate mastery of subject material, and*
- c. Be able to conduct scholarly or professional activities in an ethical manner*

The assessment of these outcomes and the specification of learning objectives related to these outcomes are to be carried out at the program level.

Proposal to allow some professional degree holders without a prior bachelor's degree to be admitted into graduate programs at OSU

The Council approved the motion that the OSU requirement for admission to the Graduate School be changed to "a four-year baccalaureate degree or an appropriate alternative degree from an accredited college or university". Further, the Council approved the motion that it is the intent of the Graduate Council that degrees judged to be appropriate alternatives include a doctorate of pharmacy (PharmD), a doctorate of veterinary medicine (VMD or DVM), and a doctorate of medicine (MD) from US or Canadian programs.

Proposal to allow departments who wish to accept international professional degree holders without a prior bachelor's degree to appeal for admissions consideration to the Graduate Admissions Committee

The Council approved the motion: Graduate programs with an international applicant who does not have a four-year bachelor's or an appropriate alternative degree, e.g. a professional degree of at least four years duration, but who meets all other requirements for admission as a graduate student at OSU, may appeal the admissions denial to the Graduate Admission Committee (GAC). The GAC, based on evidence presented by the graduate program, will determine if the student has sufficiently demonstrated preparedness to enter a graduate program and may provide an exception to allow admissions. The Graduate Council will review this policy in one year with input from the GAC.

University Accreditation

During this year, the Chair of the Graduate Council was the representative for graduate education on the Accreditation Steering Committee, (this duty involved attending 1 1/2 hour weekly meetings for about 14 months and external work.) The Council was used to review the sections of the Accreditation Self-Study document dealing with Graduate Education and to suggest/approve/evaluate institutional indicators for the Graduate Education Core Theme.

During 2010-11, OSU had a full cycle 10-year accreditation review. Starting in 2011, the institution will participate in a continuous cycle accreditation review by the NWCCU, with yearly activities. We suggest that a member of the Graduate Council continue to participate in this new continuous cycle accreditation process. The accreditation process may be best handled by a joint Administrative/Faculty Senate committee.

PERSISTENT PROBLEMS NOTED BY THE GRADUATE COUNCIL

In the course of discussing several issues, the Graduate Council notes the following problems as affecting the function of the Graduate Council, graduate education and graduate programs:

- The University reorganization effort has led to a large number of postponed graduate program reviews, an on-going problem from last year. The Council suggests a revision of the self-study review team members to reduce the number of Graduate Council members on the review team from two to one, and to substitute with either an additional external reviewer or an OSU faculty member at large.
- Approval of the needed Category I and II proposals to implement the University reorganization program will be a challenge.
- At the urging of the Faculty Senate President, the Council extensively discussed the current Graduate

Program Review Guidelines and the data requirements demanded of each program for the decennial reviews in response to widespread concern that the demands are too burdensome. Council members remain split on whether the data demanded is sufficient or unnecessary to achieve a comprehensive review, and revision of the guidelines was not accomplished this year. Council should consider re-examining the issue next year in coordination with the University Assessment Council and the office of Institutional Research. All agreed that improved central data collection would lessen the burden of programs to complete the self-study. The new graduate level learning outcomes and program-specific metrics currently being developed, as well as the data required by the NRC survey and rankings, should be discussed for integration into revised program review guidelines.

2010-2011 GRADUATE COUNCIL MEMBERSHIP

Walt Loveland '11, Chair*	Science
Theresa Filtz '12, Chair**	Pharmacy
Murray Levine '13	Oceanic & Atmospheric Sciences

Graduate Council

Annual Report of the Graduate Council 2009-2010

To: Faculty Senate Executive Committee
Date: June 30, 2010
From: Walt Loveland, Chair, Graduate Council AY2009-10
RE: Graduate Council Annual Report for AY2009-2010

The Graduate Council (GC) met fourteen times during the Academic Year 2009-2010 and had representation from all colleges. The following is a summary of the activities and accomplishments of the Graduate Council during the academic year. Details may be found in the Graduate Council minutes posted on the website: <http://oregonstate.edu/senate/committees/gradcncl/min/index.html>

Category I Proposals

The following Category I proposals were reviewed. The actions taken are listed below:

- Terminate the graduate degrees in Geophysics in COAS. The GC approved this action.
- Terminate the graduate degrees in Atmospheric Sciences in COAS. The GC approved this action.
- Rename the graduate degree in Oceanography to one in Ocean, Earth and Atmospheric Sciences. The GC approved this action.
- Terminate the Ph.D. degree in Comparative Veterinary Medicine. The GC approved this action.
- Change the name of the Department of Fisheries and Wildlife to the Department of Fisheries, Wildlife and Conservation Biology. The GC declined to approve this proposal.

Category II Proposals

The Council changed its method of reviewing category II proposals. Previously the Council had used a group of three members guided by Dean Fisk to discuss these proposals. This system had led to a long review process with significant backlogs of Cat II proposals at any time. This system was replaced by a system in which each Council member reviewed Cat II proposals in his or her discipline, thus increasing the number of reviewers and making a better match between proposal and reviewer. A substantial improvement in the clearance time for proposals resulted. To help in the review process, a secondary reviewer was engaged for each proposal to assure a thorough examination of the proposal.

Graduate Program Reviews

Scheduled reviews and actions taken are listed below:

- Graduate program in Teacher and Counselor Education was reviewed, and the report of the Review Team was accepted by the GC. The GC still awaits completion of an action plan to address the review conclusions.
- Graduate program in Biological and Environmental Engineering was reviewed and the report of the Review Team was accepted by the GC.
- Graduate program in Environmental Sciences was reviewed and the report of the Review Team was accepted by the GC.
- Postponements of the scheduled graduate program reviews in Agricultural Education, Animal Science, Botany and Plant Pathology, and Rangeland Ecology and Management to Spring 2011 were approved. A request to postpone the scheduled review of the MPH program was denied as this review had been postponed several times before.
- The Entomology program refused to complete a self-study or to cooperate with the scheduled graduate program review of that program. The GC produced a summary review report recommending

termination of the Graduate Program in Entomology and asked the Graduate School to suspend student enrollment in the program until the future of this program was decided.

- Graduate program reviews were conducted for the MBA program, and the MPH program. The results of these reviews will be discussed in 2010-11.

Follow-up Graduate Program Reviews

These take place three years after a major program review. The details of each report are found at

<http://oregonstate.edu/senate/committees/gradcncl/min/index.html>

- The follow-up report on the Graduate program in Creative Writing and English was accepted by the GC.
- The follow-up report on the Graduate program in the History of Science was accepted by the GC.
- The follow-up report on the Graduate program in Nuclear Engineering/ Radiation Health Physics was accepted by the GC.
- The follow-up report on the Graduate program in Fisheries and Wildlife was accepted by the GC.
- The follow-up report on the Graduate program in Materials Science was accepted by the GC.

Awards: Subcommittees of Council members reviewed nominations and selected recipients of the following awards:

- Laurel Block Grants (awarded to departments)
- Oregon Lottery Scholarships
- Bayley Graduate Fellowship
- Yerex Graduate Fellowship
- Herbert F. Frolander Outstanding GTA Award
- Excellence in Graduate Mentoring Award

Review of Internal OSU Preproposals for National Funding Competitions

- Faculty proposals for Integrative Graduate Education and Traineeship Program (IGERT) for the Research Office. GC reviewed and ranked these proposals to determine which are to be selected for OSU's submission.

Policy-Related Issues

The following policy-related issues were discussed by the Graduate Council and the actions taken are indicated:

- A policy on satisfactory progress by graduate students was approved. It requires programs to develop detailed implementation plans for defining satisfactory progress and to disseminate the information widely.
- The use of professional courses (7xx) courses on graduate programs was discussed. Such use is needed for the Pharm D/Ph. D. program in Pharmacy and the DVM/MPH programs in Vet Medicine and HHS. Detailed proposals were approved by the Graduate Council dealing with each degree program which should assist students in these programs.
- A clarification of the policies regarding the use of iBT scores for teaching assistants was approved. A minimum score was established for students holding teaching assistantship positions and a set of policies for the use of low scoring TAs was established and remedial courses were prescribed for these students.
- A new policy on remote participation in graduate program meetings and examinations was approved. The policy requires, in general, two way audio-video connections for remote participants, and allows unlimited numbers of remote participants. This action was taken to facilitate graduate degree programs offered by Ecampus.
- The Graduate Council indicated that to approve future Professional Science Masters (PSM) programs it would require a library evaluation and a Budgets and Fiscal Planning Committee evaluation prior to taking up the discussion of the program. Whether this was to be accomplished by an abbreviated Category I request or a Category II request was not considered to be important.
- The Council heard a description of a possible new program to remove the MBA program from the Graduate School and to have the program administered solely from the COB. Further discussions between the Graduate School and the COB are needed to develop the details of such a proposal.
- The Graduate Council said that in the case of 5xx/6xx/7xx courses the syllabi of the courses need to be approved by the Graduate Council if the course is to be used on a Masters or Doctoral program of study.
- The Guidelines for the Review of Graduate Programs was revised to indicate the consequences of failure

to participate in the review process.

Persistent Problems Noted by the Graduate Council

In the course of discussing several issues, the Graduate Council notes the following problems as affecting graduate education and graduate programs:

- The lack of a satisfactory funding model for interdisciplinary programs. Interdisciplinary graduate programs are often restricted in size by the lack of adequate, stable funding.
- The University reorganization effort has led to a large number of postponed graduate program reviews. For AY 2010-2011 there are nominally 12 graduate program reviews that need to be carried out, which will be quite challenging.
- Approval of the needed Category I and II proposals to implement the University reorganization program will be a challenge.

2009-2010 Graduate Council Membership

Walt Loveland '11, Chair	Science
Rick Colwell, '10	Oceanic & Atmospheric Sciences
Nancy King, '10	Business
Kathy O'Reilly, '10	Veterinary Medicine
Carolyn Aldwin, '11	Health and Human Sciences

Graduate Council

Annual Report of the Graduate Council 2008-2009

To: Faculty Senate Executive Committee
Date: July 22, 2009
From: Darlene Russ-Eft, Chair, Graduate Council AY2008-9
RE: Graduate Council Annual Report for AY2008-9

The Graduate Council (GC) met twelve times during the Academic Year 2008-2009 and was represented by all colleges. The following is a summary of the activities and accomplishments of the Graduate Council during the academic year. Details may be found in the Graduate Council minutes posted on the website:

<http://oregonstate.edu/senate/committees/gradcncl/min/index.html>

Category I Proposals. The following Category I proposals were reviewed. The actions taken are listed below:

- Renaming Economics Degree to Applied Economics Degree. GC reviewed and approved this proposal.
- Suspension of the Agricultural and Resource Economics Graduate Program. GC reviewed and approved this proposal.
- Graduate Certificate in Management for Science Professionals. GC reviewed and approved this proposal.
- Suspension of Master's of Science Degrees in Environmental Health Science. GC reviewed and approved this proposal.
- Interdisciplinary Master of Natural Resources. GC reviewed and approved this proposal.

Category II Proposals. The following Category II proposals and process were reviewed. The actions taken are listed below:

- Category II proposals were reviewed by a GC subcommittee.
- Use of University of Oregon Law School courses for Water Resources Master's of Science Degree. GC reviewed the proposal, and the Category II subcommittee reviewed the proposed courses. GC approved proposal but limited the number of credits that could be transferred to 15 credits.
- Summer work by Category II subcommittee. During the summer of 2008, Category II proposals were not reviewed, resulting in an overload during the fall 2008 period. To avoid a similar situation this year, a subcommittee was appointed to review these proposals during the summer months.

Graduate Program Reviews. Scheduled reviews and actions taken are listed below:

- Graduate program in Mechanical Engineering was reviewed, and the report of the Review Team was accepted by the GC.
- Masters of Agriculture (MAg). GC reviewed and accepted the report.
- Graduate program in Biological and Ecological Engineering was reviewed. The report is in preparation for consideration during the 2009-10 academic year.
- Graduate program in Environmental Science was reviewed. The report is in preparation for consideration during the 2009-10 academic year.
- Graduate programs in Teacher Education and Counselor Education were reviewed. The report is in preparation for consideration during the 2009-10 academic year.

Follow-up Graduate Program Reviews. These take place three years after a major program review.

- Graduate Program in Genetics. Based on the follow-up, GC recommended that the faculty in Molecular and Cellular Biology (MCB) and the faculty in Genetics report to the Graduate School on the Genetics program status.
- Graduate Program in Forest Science. Based on the follow-up, GC recommended that a second follow-up

be undertaken in 2010-2011.

Awards: Subcommittees of Council members reviewed nominations and selected recipients of the following awards:

- Laurel Block Grants (awarded to departments)
- Oregon Lottery Scholarships
- Bayley Graduate Fellowship
- Yerex Graduate Fellowship
- Herbert F. Frolander Outstanding GTA Award
- Excellence in Graduate Mentoring Award

Review of Internal OSU Preproposals for National Funding Competitions.

- Faculty proposals for Integrative Graduate Education and Traineeship Program (IGERT) for the Research Office. GC reviewed and ranked these proposals to determine four to be selected for OSU's submission

Policy-Related Issues.

- Future GC members should develop criteria for the periodic review of the INTO graduate student pathway programs.
- A subcommittee should explore the cyclical review process for graduate certificates and for established graduate minors for which there is no corresponding graduate degree program.
- GC requested that the Graduate School ask all programs for a definition of "adequate student progress."

Other Business.

- GC reviewed and approved the planning for the OSU-INTO-pathway students to be considered for the MBA and the MEng.
- GC reviewed and approved American Sign Language as a recognized second language; GC approved amending the Graduate Catalog as follows: "must show foreign language proficiency (including American Sign Language)..."
- GC commented on the proposed Revisions to Academic Regulations (20, 23, 24) and a newly proposed AR 31.
- GC accepted a proposal to set a conditional graduate admission for the International English Language Testing System (IELTS) score of 6.0 with the condition of revisiting the issue in a year.
- GC accepted a proposal to set a minimum Internet Based (IBT) score of 26 to replace the SPEAK score of 50 with the condition that this will be reviewed at the end of 2009-2010.
- GC reviewed a proposal for a five-year B.S./M.S. program in the School of Electrical Engineering and Computer Science. This will need to be reviewed and approved by the 2009-2010 Graduate Council.
- GC discussed the report of the Graduate Enrollment Task Force.
- GC met with eCampus staff to discuss issues and problems arising with eCampus programs and proposals.

Graduate Council

Annual Report of the Graduate Council 2007-2008

To: Faculty Senate Executive Committee
Date: July 30, 2008
From: Tom McLain , Chair Graduate Council AY08
RE: Graduate Council Annual Report for AY08

The Graduate Council (GC) met eleven times during Academic Year 2007-2008 with all members attending at least 65% of scheduled meetings and most well over 80%. In addition, members performed a number of duties outside of our meetings. No representative from the College of Engineering was appointed this year. The College of Veterinary Medicine was represented during Winter and Spring terms. No graduate student representative was appointed. Here is a summary of the activities and accomplishments of the Graduate Council during Academic Year 2008. Details may be found in the GC minutes posted on the Council website.

1. **Graduate Program Reviews:** Scheduled reviews and actions taken are as follows:
 - Graduate degree programs in Food Science and Technology were reviewed and the report of the Review Team was accepted by the GC.
 - Graduate degree programs in Biological and Ecological Engineering were scheduled to be reviewed, but the Review Team and Dean of the Graduate School judged that the departmental self-study was not acceptable and the site visit was postponed.
 - Graduate programs in the College of Oceanic and Atmospheric Sciences were reviewed and the report of the Review Team was accepted by the GC.
 - Graduate programs in the School of Mechanical and Industrial Engineering were reviewed but the report of the Review Team was not available prior to the close of the year.
 - Graduate Programs in the Department of Public Health: A petition to defer review of the Masters of Public Health for a number of years was not approved and review of the PhD and MPH degrees was scheduled for 2009-2010.
 - English—GC accepted report of Spring 2007 review.
 - Pharmacy—GC accepted report of Spring 2007 review.
2. **Follow-up Graduate Program Reviews**, conducted three years after a major program review were conducted and reviewed as follows:
 - Biochemistry and Biophysics
 - Chemical Engineering
 - Computer Science & Electrical Engineering
 - Microbiology
 - Crop and Soil Science
 - Operations Research and Statistics
3. **Awards:** Subcommittees of Council members reviewed nominations and selected recipients of the following awards:
 - Oregon Lottery Scholarships
 - Bayley Graduate Fellowship
 - Yerex Graduate Fellowship
 - Herbert F. Frolander Outstanding GTA Award
 - Excellence in Graduate Mentoring Award
 - WAGS/UMI Distinguished Masters Thesis Award
 - CGS/UMI Outstanding Dissertation Award
4. **Review of internal OSU preproposals for national funding competitions:** Several funding programs limit the number of proposals that may be submitted by OSU. The GC reviewed and made

selections of internal pre-proposals that should be encouraged for submission:

- NSF—Graduate Teaching Fellows in K-12 Education: 3 preproposals, 1 selected.
- NSF—IGERT: 7 pre-proposals ranked

5. **Policy-related Issues:**

- Approved a new policy for admission of students with three-year baccalaureate degrees from universities in countries that are signatory to the Bologna Declaration.
- Recommended that the Graduate School actively discourage combining GC Program Reviews with either accreditation reviews or Federal Agency research reviews except in unusual situations.
- Approved a new IELT/TOEFL equivalency table for use in graduate admissions.
- Approved a new policy on admission of students from India.
- Considered, but did not approve, changes to policy on remote participation by committee members in formal graduate program meetings.

6. **Other business:**

- GC reviewed and acted upon numerous Category I and II proposals
- GC proposed revisions to the Graduate Council Standing Rules
- Revised “Graduate Council Program Review Guidelines” to improve clarity, reflect new policies and add information needed on community engagement.
- Reviewed the comments from the external review of the Graduate School.

7. **Closing comments:** The success of the work of the Graduate Council is in large measure due to the commitment of the Council members. This is a very significant service obligation, often requiring many hours outside of meetings, and all members treated it with the respect and seriousness it demands. A second major factor is the strong working relationship between the Council and the Graduate School. It is essential that the Council work closely with the Dean of the Graduate School and her staff. However, I found that relationship is one of facilitation and not of influence and works very well. The Chair especially appreciates the excellent clerical and organizational support provided by the Graduate School.

I believe that one issue that future Councils will need to address is their role in strategic planning for the Graduate School and the University. The external reviewers of the Graduate School noted that graduate education is not identified as a priority in OSU’s strategic plan. I suggest that the Faculty Senate and future Councils seek to change that—and be proactive in partnering with the Graduate School to take new strategic leadership roles for graduate education at OSU in the future.

Graduate Council

Annual Report of the Graduate Council 2006-07

To: Faculty Senate Executive Committee
Date: July 24, 2007
From: Hal Koenig, Chair, Graduate Council
RE: Graduate Council Annual Report for 2006-07

The Graduate Council (GC) examined a number of Category I applications this year. The year began with the proposals from Economics and Applied Economics: while the GC saw merit in both of these proposals, the Council was dismayed by the amount of overlap in the curriculum proposed. This information was provided to the Provost and in combination with the report from Budgets & Fiscal Planning, he decided to not move the proposals forward. Associate Dean Rettig was then given the job to oversee creating a "compromise" program.

Medical Physics brought a Category I proposal to the GC that was developed with OHSU. After discussion over two meetings and additional information from the department, this proposal was approved. Three Category I proposals were brought to the GC from Engineering – these proposals were approved by the GC and created the School of Chemical, Biological and Environmental Engineering, the School of Civil and Construction Engineering, and the School of Mechanical, Industrial and Manufacturing Engineering.

A Category II proposal creating a graduate minor in Ecosystem Informatics was approved. As part of this minor, two new courses, GEO 543 and 547, were approved. Two Economics classes, 570 and 571, were discussed by the GC and approved as part of the unified economics program. Many other Category II changes in courses (e.g., name changes, prerequisite changes, etc.) were handled by the Category II Subcommittee comprised of three GC members.

Six graduate program reviews were heard this year at GC meeting and included reviews of Molecular and Cellular Biology, Genetics, Fisheries and Wildlife, Horticulture, History of Science and Materials Science. Five three-year graduate program follow-up reviews were conducted this year and included Civil Engineering, Wood Science & Engineering, Human Development & Family Studies (HDFS), College Student Service Administration (CSSA), and Adult Education.

In addition to the Council business noted above, the GC reviewed seven IGERT proposals and narrowed the field to four. Principle investigators for these proposals were then instructed to develop full proposals for submittal to NSF. Most of the GC members also served on committees to review and select graduate scholarship or fellowship (e.g., Bayley and Yerex fellowships) recipients.

2006-07 Graduate Council Membership

Graduate Council

Annual Report of the Graduate Council 2005-06

This is a summary of the program reviews, follow-ups and other actions of the Graduate Council during the 2005-2006 Academic Year. This list was compiled by Hal Koenig, Chair of the Graduate Council during that time.

The following graduate program was reviewed in 2004-2005 and presented to the Graduate Council in 2005-2006:

- Microbiology

The following graduate programs were reviewed and presented to the Graduate Council in 2005-2006:

- Industrial and Manufacturing Engineering
- Forest Science
- Nuclear Engineering/Radiation Health Physics

The following graduate program was reviewed in 2005-2006 and will be presented to the Graduate Council in 2006-2007:

- Molecular and Cell Biology (MCB) and Genetics

Follow-up reviews for the following programs were completed and presented to the Graduate Council:

- Master of Arts in Applied Anthropology
- Master of Science in Environmental Health and Occupational Safety Management
- Forest Engineering
- Chemistry
- Mathematics
- Environmental and Molecular Toxicology

Approved:

- Proposal to offer the Master of Arts in Teaching at the OSU-Cascades Campus
- Revision of the Master of Arts in Interdisciplinary Studies degree
- Revision to the Program Review Guidelines for Graduate Programs based on feedback from participants in the process

Reviewed:

- Faculty proposals for Integrative Graduate Education and Research Traineeship Program (IGERT) for the Research Office and ranked them to determine OSU's submission
- Letters of intent for NSF GK12 Program and selected one to be OSU's submission
- Sports Lottery Scholarship applicants and recipient selected
- Bayley Fellowship applicants and recipient selected
- Yerex Fellowship applicants and recipient selected
- Frolander Outstanding GTA applicants and recipient selected

2005-06 Membership:

Hal Koenig '07, Co-Chair	Business
Prasad Tadepalli '06	Engineering
Starr McMullen (v. Steel) '06	Economics
Alex Sanchez (v. Pehrsson) '06	Education
Theresa Filtz '07	Pharmacy
Michael Unsworth '07	Oceanic & Atmospheric Sciences
Dan Rockey '07	Veterinary Medicine
Alix Gitelman '08	Science
Tom McLain '08	Forestry
Bill Proebsting '08	Agricultural Sciences
Rod Harter '08	Health & Human Sciences

Non-voting members:

Graduate School Dean (Sally Francis)
Graduate School Associate Dean (Bruce Rettig)
Graduate Admissions Committee Chair (Rakesh Gupta)

Student Member — David McCandless (Graduate)

Executive Committee Liaison - Lynda Ciuffetti

Graduate Council

ANNUAL REPORT

DATE: June 23, 2005
TO: Jeff Hale, Faculty Senate President
FROM: Dale E. Pehrsson and Brent Steel, Co-Chairs Graduate Council
RE: 2004-2005 Graduate Council Annual Report
ATTACHMENT: [Audit Report](#) for the Graduate Admissions Committee

Membership on the Graduate Council for the academic year 2003-2004 included 12 voting members:

Dale Pehrsson, Co-Chair, Education
Brent Steel, Co-Chair, Liberal Arts
Lynda Ciuffetti, Science
Barbara Bond, Forestry
John Selker, Agricultural Sciences
Elaine Pedersen, Health and Human Sciences
Prasad Tadepalli, Engineering
Theresa Filtz, Pharmacy
Hal Koenig, Business
Dan Rockey, Veterinary Medicine
Michael Unsworth, Oceanic and Atmospheric Sciences
Dan Brown, Graduate Student Member

3 Ex-Officio members (Sally Francis, Dean of the Graduate School;
Bruce Rettig, Associate Dean of the Graduate School; and
Eileen Waldschmidt, Graduate Admissions Committee)
Mary Strickroth, Coordinator of Graduate Student Services attended the meetings.
Mike Quinn was the Faculty Senate Executive Committee Liaison.

Awards Subcommittees included:

- Sports Lottery Scholarship: Dan Rockey, Barbara Bond, and Lynda Ciuffetti
- Bayley/Yerex Fellowships: Elaine Pedersen and Theresa Filtz
- Frolander Outstanding GTA Award: Prasad Tadepalli and Barbara Bond
- CGS/UMI Dissertation and WAGS/UMI Thesis Awards: Prasad Tadepalli and Lynda Ciuffetti

Category II Subcommittee included (throughout summer 2004):

John Selker, Barbara Bond, and Hal Koenig. Dale Pehrsson served last summer. This committee is very active. Members review, make recommendations for re-submission and approves multiple Category II proposals on a regular basis (sometimes weekly) during the academic year.

The Graduate Council conducted and approved the following Program Reviews: The Council reviewed and approved the following Category I proposals:

- Proposal to Reorganize the School of Education (approved unanimously).
- Proposal to Eliminate Graduate Degrees in Plant Pathology (approved unanimously with a letter of petition to relevant deans and provost).
- Proposal to Create a Department of Nutrition and Sport (approved unanimously).

The Graduate Council conducted and approved the following Program Reviews:

- Wood Science and Engineering
- College Student Services Administration Review
- Adult Education Graduate Review
- Human Development and Family Studies Graduate Review
- Statistics Graduate Program (approved unanimously with a petition letter sent to the dean and provost)
- Crop and Soil Science Graduate Program (approved unanimously with a petition letter sent to the dean and provost)
- Chemical Engineering Graduate Program Review

The Graduate Council conducted and approved the following Program Follow-up Reviews:

- Applied Anthropology Review Report
- Master of Interdisciplinary Studies
- Community College Leadership Program

Additional Items Discussed and/or Action Taken by the Council:

1. Proposal from Pharmacy to allow 700 level credits—scientific and professional degree—courses in a Masters or PhD Program.

The council approved a motion that 700 level courses, which successfully adhere to graduate criteria and successfully navigate the Category II proposal process, be accepted as graduate level for programs of study.

2. Proposal from Nuclear Engineering to allow an exception to the university's PhD residency rule to test a distance delivered doctoral program. This was linked to the ongoing discussion of the Graduate Council related to PhD Learning outcomes at OSU.

The Graduate Council, after extensive review and discussion, unanimously proposed the following recommendations related to PhD study at Oregon State University. Council members believe that the PhD degree should prepare students to be independent scholars. To achieve this outcome, students in PhD programs must participate in collegial scholarly work in which direct mentoring occurs. What defines the PhD experience at OSU is embedded in the learning objectives stated below. To that end, each program offering a PhD will strive to meet the learning objectives and will provide doctoral students with guided experiences and a variety of educational opportunities. Programs, regardless of residency issues, will demonstrate that they:

- Prepare students to expand the knowledge of their discipline
- Help students develop requisite skills and knowledge necessary to assume professional positions in academia, industry or professional practice
- Mentor students and guarantee compelling peer-learning experiences
- Prepare students to become mentors so they can continue the learning cycle
- Provide a residential learning component or a demonstrated equivalent*

*The residency requirement strives to provide students with a compelling immersion experience with scholars and researchers in their specific discipline. A PhD education should provide a concentrated experience in a setting that supports and encourages both formal and informal scholarly interaction amongst faculty and students and the right to use on-campus resources; such experience is achieved through a period of residence on campus. When programs offer non-traditional classroom, advising and learning alternatives, it becomes essential to implement strategies to insure that this intent is met. Therefore, the graduate school requires that programs offering non-traditional residency requirements present to the Graduate Council a defensible argument, which provides a strategic plan for meeting the programmatic requirements, listed above.

Successful PhD programs should:

- Prepare students to expand the knowledge of their discipline(s).
This preparation will generally include:
 - o Development of research and scholarship skills
 - o Development of effective oral and written communication skills
 - o Extensive understanding of the knowledge base of the discipline
 - o Broad, general understanding of related disciplines

- Guide the professional development of students
This guidance will generally include:
 - o Extensive interaction between student's role models – usually resulting from learning experiences involving a variety of teachers and professionals
 - o Development of a professional network of peers – usually resulting from learning experiences in collaboration with peers
 - o Developing professional mentors – usually resulting from learning experiences in collaboration with mentors
 - o Understanding the politics and requirements of the workplace: academia, industry or professional practice
- Prepare students to become teachers and mentors for future students
This preparation will generally include:
 - o Compelling learning experiences in the student's own professional preparation that the student can model in his/her own professional career
 - o Development of an academic culture that places a high priority on teaching and mentorship
 - o Opportunities for students to serve as a teacher and mentor during the Ph.D. studies

3. European Three-Year degrees. (March, three meetings)

Concerning the movement to new three-year undergraduate degrees in the European Union and other European nations, the Graduate Council recommends:

- Postpone consideration of admissions policy changes for this for one year to allow informed discussion to take place by professionals who are more fully informed on the changes and their impact on U.S. graduate schools.
- Ask the Office of Admissions to collaborate with any departments or programs that may receive an application from a student with a three-year European bachelor's degree.

These recommendations were based on the following premises identified by Associate Dean Bruce Rettig;

- Current European degrees are highly diverse, just as they are in the U.S. This is why our Office of Admissions relies on detailed guidance from the national association of admission professionals to advise us on what is equivalent to a four-year U.S. bachelor's degree.
- This diversity is likely to continue, requiring us to rely on updated information from the professional associations to which Admissions, the Office of International Education, and the Graduate School belong. The Council of Graduate Schools had a useful discussion, which Mary Strickroth summarized for the Council committee. The organizations to which Admissions and OIE belong (AACRAO and NAFSA) have meetings this spring that include multiple sessions on this topic.
- There is a lag from the time that the professional associations conclude the appropriate way to handle new credentials to the date when the professional reference literature is revised.
- The uncertainty about this issue and the fact that many of our peers are not revising their admission requirements from Europe just yet suggests that we should delay any action to change university policy. Recent examples of no change are found at the University of Washington at http://www.grad.washington.edu/admissions/intl/pep_definition.asp and Stanford University at <http://gradadmissions.stanford.edu/information/international.html>.
- The very tight focus on a specific course of study in many European universities means that the students will have mastered a subject thoroughly at the end of three years, but they may not have sufficient breadth to pursue a degree unless it is closely related to their area of study. For example, someone with a three-year degree in Physics from a strong European university should be well prepared for MS and possibly PhD work in physics in the U.S., but may have substantial problems crossing over into a different field of study such as a biological science without additional undergraduate preparation.
- The discussions in Europe suggest that many agencies and employers are not convinced that a three-year degree is sufficient for employment. It is not unreasonable to believe that initial graduates of three-year degrees are most likely to continue for a European master's degree.
- If any students do apply for graduate school, our Admissions Office is prepared to partner with academic programs and departments to make exceptions while waiting for sufficient information to make complete policy changes.

4. The new Internet-based TOEFL Examination:

The Graduate Council suggests creating a task group for this summer to set up initial score thresholds, based on information and advice from Deborah Healey and International Education (including a demonstration of scoring for council members in residence this sum).

Respectfully Submitted,

Dale-Elizabeth Pehrsson and Brent Steel
2004-2005 Co-Chairs for Graduate Council

Graduate Council

2003-2004 Annual Report

TO: Stella Coakley, President
Faculty Senate

FROM: Lynda Ciuffetti, Chair
Graduate Council

RE: 2003-2004 Annual Report: Graduate Council

Membership on the Graduate Council for the academic year 2003-2004 included 11 voting members (Lynda Ciuffetti, Chair, Science; Tony Collins, Pharmacy; Marty Fisk, Oceanic and Atmospheric Sciences; Hal Koenig, Business; Luiz Bermudez, Veterinary Medicine; Barbara Bond, Forestry; John Selker, Agricultural Sciences; Elaine Pedersen, Health and Human Sciences; Dale Pehrsson, School of Education; Brent Steel, Liberal Arts; Prasad Tadepalli, Engineering) and 3 Ex-Officio members (Sally Francis, Dean of the Graduate School; Bruce Rettig, Associate Dean of the Graduate School; Eileen Waldschmidt, Graduate Admissions Committee). Mary Strickroth, Coordinator of Graduate Student Services, and Nancy Lasater, Assistant to the Dean attended the meetings. Becky Warner was the Faculty Senate Executive Committee Liaison.

Awards Subcommittees included:

- Sports Lottery Scholarship: Tony Collins, Brent Steel, and Luiz Bermudez
- Bayley/Yerex Fellowships: Elaine Pedersen, Martin Fisk, and Hal Koenig
- Frolander Outstanding GTA Award: Hal Koenig and Prasad Tadepalli
- CGS/UMI Dissertation and WAGS/UMI Thesis Awards: Prasad Tadepalli and Lynda Ciuffetti

Category II Subcommittee included (throughout summer 2004): John Selker, Barbara Bond, and Dale Pehrsson

The Council reviewed and approved the following Category 1 proposals:

- Rename the Department of Apparel, Interiors, Housing and Merchandising (AIHM) to the Department of Design and Human Environment (DHE) (approved unanimously)
- Terminate the Degree of Master of Software Engineering Degree (approved unanimously)
- Initiation of a New Graduate Instructional Program in Water Resources (approved unanimously)
- Initiation of a Graduate Certificate in Geographic Information Science (approved with one abstention)
- Initiation of a Master of Engineering (MENG) Degree (approved conditionally; final approval was given following requested changes)
- Initiation of a Master of Health Physics in Radiation Health Physics (MHP) (approved conditionally; final approval was given following requested changes)
- Initiation of a Graduate Certificate in Health Care Administration (approved unanimously)
- Terminate the Master of Engineering in Manufacturing Engineering Degree (approved unanimously)
- Graduate Certificate in Teaching English to Speakers of Other Languages (TESOL) (approved unanimously)

The Council reviewed and approved the following Category II proposals:

- New Graduate Minor in Sport and Exercise Psychology (approved unanimously)

The Graduate Council conducted and approved the following Program Reviews:

- Environmental Health and Occupational Safety Management (EHOSM) Graduate Program (accepted as written)
- Forest Engineering Graduate Programs (accepted as written)
- Environmental and Molecular Toxicology Graduate Programs (accepted as written)
- Computer Science Graduate Programs (accepted as written)
- Civil Engineering Graduate Programs (accepted conditionally; final acceptance was given following requested changes)

The Graduate Council conducted and approved the following Program Follow-up Reviews:

- Apparel, Interiors, Housing, and Merchandising (AIHM) Graduate Programs (accepted as written)
- Forest Resources Graduate Programs (accepted with addendum)
- Agricultural and Resource Economics Graduate Program (accepted as written)
- Physics Graduate Program (Final action on the follow-up report was tabled until further information was obtained)
- Electrical and Computer Engineering Graduate Programs (accepted conditionally; final acceptance was given following requested changes)
- Economics Graduate Programs (accepted with cover letter addressing recommendation 5)

Additional Items Discussed and/or Action Taken by the Council:

1. Admission Task Force Recommendations on Alternatives to TOEFL

Two years ago Dean Francis established a task force on graduate admission standards. In its report dated May 22, 2002, several recommendations were made. The Graduate Council accepted that report on November 14, 2002 and agreed to review this and other recommendations at a later time. Deborah Healey (Director of the English Language Institute) visited the Council on Oct 23, 2003 to describe some of the limitations of the TOEFL (Test of English as a Foreign Language) and to provide an overview of alternatives to the TOEFL that are accepted for admission of undergraduate international students. Following discussion, the Council approved a motion to add IELTS (International English Language Testing System), with a minimum score of 7.0, as an approved alternative to the TOEFL.

2. Discussion on the OSU Strategic Plan

The Council unanimously approved a motion that the Dean of the Graduate School should report directly to the Provost and that the Dean should report at the same level and have the same involvement in university governance as the Vice Provost for Research. Lynda Ciuffetti sent an email to President Ray supporting an earlier message from Dean Francis and emphasizing the concerns of the Council on this issue.

3. OSU Cascades Campus Graduate Education

Jay Casbon (Campus Executive Officer) and James Foster (Chief Academic Officer for the OSU Cascades Campus) joined the Council meeting by phone on December 11, 2003 to discuss the process for offering OSU graduate programs at the Cascades campus. A document was provided and used as a platform for discussion. Casbon said that the Cascades Campus would follow the protocol exactly as part of Oregon State University. The protocol was approved as presented; Dean Francis will share this protocol with Provost White.

4. Proposal to Offer the Master of Science in Counseling at the OSU Cascades Campus

The School of Education presented a proposal at the January 22, 2004 Council Meeting. Faculty and administrators from both the School of Education and the Cascades Campus attended the Council Meeting. Following discussion, the Council approved the proposal unanimously.

5. Final Examination Procedures for the Master of Public Health (MPH)

Donna Champeau (Graduate Coordinator in the Department of Public Health) and Ray Tricker (also from Public Health) visited the Council on February 12, 2004 to present a request that the MPH students who elect an internship be allowed to take a written examination instead of the current oral examination. Following discussion, the Council approved the request with one abstention.

6. Final Examination Procedures for the Master of Business Administration

Written background information was provided by Hal Koenig (Business) for the request to change final examination procedures for this Degree at the February 12, 2004 Council Meeting. Following discussion, the Council approved the request with one abstention.

7. Process for Approving Delivery of OSU Programs to the Cascades Campus

Bruce Rettig (Associate Dean, Graduate School) introduced a proposal from the Curriculum Council for a process for approving the delivery of OSU degree programs to the Cascades Campus. Sally Francis (Dean, Graduate School) said the purpose of this proposal is to have one generic process for both undergraduate and graduate degree programs. Following discussion of issues previously approved by the Graduate Council (see #3 above) for graduate programs proposed to be delivered to the Cascades Campus, the Council members made several motions to amend the document provided by the Curriculum Council. The Graduate Council approved the revised document unanimously.

8. Approval Process for Non-Credit Certificate Programs

The Graduate Council was asked by the Curriculum Council to review their proposal for the review of non-credit certificates and to note any concerns. The Graduate Council expressed concern about the potential that the public might confuse non-credit certificates with graduate certificates, although non-credit certificates are not transcript visible. The Council was informed that the non-credit certificates have a history that precedes the creation of graduate certificate programs and decided not to pursue this issue at this time, but Council was willing to do so if problems arise in the future. The Graduate Council approved the process unanimously as submitted by the Curriculum Council.

9. Minimum Credits for a PhD in Chemistry

Doug Keszler (Chemistry) visited the Council on June 3, 2004 and presented background information and rationale for the request. The request states that the minimum number of regular non-blanket course work for a PhD in Chemistry at OSU be 27 credits rather than 36 credits. Following discussion the Council approved the request unanimously.

10. Graduate Level Learning

The Graduate Council spent a considerable amount of effort and time on issues related to graduate level learning. Discussion and action on Graduate Level Learning can be found in the minutes of the Graduate Council Meetings (Nov. 13, 2003; Dec. 11, 2003; Jan. 22, 2004; Feb. 12, 2004; Feb. 26, 2004; May 6, 2004; May 20, 2004).

Background Information and Action Taken Related to Slash Courses:

In Fall 2001, using the final report of the Task Force on Graduate Level Learning as a basis, the Graduate Council began to develop policies that would: 1) ensure a graduate level learning experience in every graduate course; 2) address expressed dissatisfaction with slash courses, and consider the needs/constraints of academic units; and 3) be responsive to recommendation #7 of the accreditation report. Following a campus-wide survey and two open forums (April 17 & 21, 2003) to discuss proposed policies, the Council took the following actions during 2002-03:

1. Revised the criteria for differentiation of the 500 component of slash courses to include specification of graduate level learning outcomes.
2. Established the "50% Rule"- Effective Fall 2005, all graduate student programs of study submitted to the Graduate School must consist of, at a minimum, 50% graduate stand alone courses. The remaining credits may be the 500 component of 400/500 slash courses. Also, effective Fall 2005, the number of blanket-numbered credits allowed on a 45-credit MA or MS degree program will increase from 6 to 9. This policy directly responded to campus feedback heard in the open forums in 3 important ways:
 - a. Applied the 50% calculation to all credits on the program of study, as per accreditation standard 2.F.4 (footnote 1 below), instead of separating out capstone and other blanket numbered courses.
 - b. Delayed implementation for two years until fall, 2005.
 - c. Increased the number of blanket-numbered credits on master's programs from 6 to 9.

The Graduate Council met with and presented this policy to the Faculty Senate Executive Committee on March 2, 2004. The Executive Committee forwarded it for consideration to the Curriculum Council.

The Curriculum Council of the Faculty Senate reviewed and endorsed the policy on April 1, 2004.

Dean Sally Francis (Graduate School), Jack Drexler (Curriculum Council), and Lynda Ciuffetti (Graduate Council) met on April 27, 2004 with Dr. Pat Miltenberger, evaluator for the Northwest Association of Schools, Colleges and Universities. The 50% rule, criteria for graduate level learning, and the upcoming Faculty Senate process were discussed and Dr. Miltenberger met these with support.

Lynda Ciuffetti (Chair, Graduate Council) presented the revised criteria for differentiation of the 500 component of slash courses and the establishment of the "50% Rule" as a Discussion Item at the Faculty Senate on May 13, 2004.

At the Graduate Council Meeting on May 20, 2004 the Council addressed concerns voiced at the May 13, 2004 Faculty Senate meeting regarding the 50% Rule on Graduate Level Learning. In an effort to respond to faculty concerns with the implementation deadline, the Graduate Council approved the following: Departments or Programs that are unable to meet this policy for Graduate Programs beginning Fall 2005 may submit a Transition Plan that will address how the unit will move towards compliance with the policy.

The revised policy was presented as an Action Item at the June 10, 2004 Faculty Senate Meeting and approved by the Faculty Senate (motion #04-596-16).

Use of Upper Division Undergraduate Credits on Graduate Programs of Study

Included in the Task Force final report (June 12, 2001) on Graduate Level Learning was the recommendation that 6 to 12 credits of 4XX-level courses be permitted on a graduate program of study. For various reasons, the action to allow 4XX-level credits on programs of study was rescinded by the Council on February 14, 2002. On December 11, 2003 the Council revisited this recommendation and spent a considerable amount of time discussing this issue. On January 22, 2004 Council members presented responses from their constituents regarding the use of 4XX-level credits on programs of study. Because the Council felt that additional liaison was needed, the Council decided that a message and questionnaire would be drafted and opinions would be sought from graduate program coordinators and department administrators. In addition to the questionnaire, the Council felt it would be important to hold two Faculty Forums to get feedback and discussion on this policy. These were held on March 4, 2004. Following input from the faculty forums, responses to the questionnaire, and input from the Council members, the Council was split on their decision to implement this change. The Council decided to terminate further action on the allowance of 4XX-level credits on programs of study for this year.

Graduate Council

DATE: June 28, 2002

TO: Nancy Rosenberger, President
Faculty Senate

FROM: Vincent Remcho, Chair
Graduate Council

RE: 2001-2002 Annual Report - Graduate Council

Membership on the Graduate Council in 2001-2002 included 13 voting members (Vincent Remcho, Chair, Science; David Brauner, Liberal Arts; Carol Caughey, AIHM; Tony Collins, Pharmacy; Paul Cull, Engineering; Vicki Ebbeck, Health and Human Performance; Martin Fisk, Oceanic and Atmospheric Sciences; Doug Markle, Agricultural Sciences; Chandra Mishra, Business; Steve Radosevich, Forestry; Alex Sanchez, Education; Barbara Watrous, Veterinary Medicine and Delores McNair, student member) and 3 non-voting members (Sally Francis, Dean of the Graduate School, Bruce Rettig, Associate Dean of the Graduate School, and Maggie Niess, Chair of the Graduate Admissions Committee). Mary Prucha, Coordinator of Graduate Student Services and Jill Anderson, secretary to the Dean, attended nearly all meetings.

The Council reviewed and approved the following Category I proposals: renaming the Forest Products department and all of its graduate degree programs; creation of a College of Health and Human Sciences; and renaming of all current Human Performance graduate degrees. The Council reviewed and commented on a category I proposal to create a School of Electrical Engineering and Computer Science; following discussion, the proposal was withdrawn from consideration.

A subcommittee of David Brauner, Martin Fisk, and Alex Sanchez worked with Associate Dean Bruce Rettig to review and approve Category II proposals.

Awards subcommittees included: the Sports Lottery committee - Alex Sanchez, Tony Collins, Vicki Ebbeck; Bayley and Yerex Awards committee - Chandra Mishra, Barbara Watrous, Steve Radosevich; Frolander Outstanding GTA Award representative - Carol Caughey; and the CGS/UMI Dissertation and WAGS/UMI Dissertation Awards representative - Doug Markle.

The Graduate Council conducted 5 program reviews this year. Graduate programs reviewed were Agriculture and Resource Economics, Physics, Electrical and Computer Engineering, Forest Resources, and Education (Community College Leadership Program - CCLP). All reports were completed and approved except for CCLP, which was reviewed in early June. A draft report is being circulated amongst the review team members; the final report should be finished soon and available for review when the Council resumes meetings in the fall. In addition, the Council approved the review of the Zoology program conducted in 2001.

The Council conducted five follow-up reviews of programs. They included Bioresource Engineering, Nutrition and Food Management, Counseling, Human Performance and Movement Studies, and Animal Science.

Members of the Council met with President Paul Risser (the chair at a meeting arranged by the Faculty Senate President and other members at various open-forum meetings) to express their concerns about common issues facing all graduate programs in light of the University's fiscal situation.

The Council discussed at length the report prepared by a committee on Graduate Level Learning chaired by Jack Higginbotham, reviewed recommendations of the Graduate Admissions Task Force, and proposed a policy to eliminate 400/500 ("slash") courses at OSU, renumbering current slash courses as either 400 or 500 level. The policy proposal was put forward for public comment via the Graduate School web site, and sent to the Curriculum Council for comment. Vincent Remcho met with the Faculty Senate Executive Committee to

present the Graduate Council proposal. The Curriculum Council discussed the proposal at length and recommended that it not be approved as written. Concerns expressed by the Curriculum Council included the following:

- Budgets aren't big enough to allow departments to offer adequate numbers of separate 400-level courses and 500-level courses. With fewer offerings, the ability of students to choose between electives is diminished.
- There aren't enough graduate students to justify offering separate 500-level courses.
- Even if 400-level and 500-level courses were split, the lectures would be nearly identical. The real difference is in the assignments. If an instructor can't make the 500-level portion of a "slash" course more rigorous, we should provide that person with additional pedagogical training.

The response of the Curriculum Council suggested that further discussion and amendment of the suggested policy was necessary. At the close of the academic year, these discussions were underway. This will be a continuing agenda item for the Graduate Council in 2002/2003.

The Council addressed guidelines for reclassification of conditional (English) admission, provided requested input on the adoption of a new continuous enrollment policy (via subcommittee consisting of Steve Radosevich, Martin Fisk, and Delores McNair), eliminated the requirement for minors on Masters degree programs, adopted a new policy on application of credits towards a second Master's degrees earned at OSU, and began work on an update of the program review guidelines, and worked with the Institutional Review Board to adopt a new policy regarding prior IRB approval of theses and dissertations including human subjects research.

The Council acted on all charges put forth at the beginning of the 2001/2002 academic year:

- Complete Zoology program review. (completed)
- Forward a recommendation regarding participation in awards selection as an item to be included in the Standing Rules as a regular set of duties performed by the Council. (no changes to the standing rules were recommended)
- Discuss recommendations of the Graduate Level Learning Task Force and report to the Faculty Senate Executive Committee. (a report was made to the EC and a policy recommendation was made)
- Discuss issues raised regarding graduate program review procedures and policies. (a new set of review procedures was discussed and a preliminary set of guidelines will be discussed in AY 2002/2003)

Charges issued for the 2002/2003 Graduate Council are as follows:

- Complete the Community College Leadership Program (CCLP) review.
- Act on a proposal put forward by Maggie Niess regarding participation of graduate students who have completed all degree requirements except submission of the thesis or dissertation in commencement ceremonies.
- Follow up on the Physics program review to ensure that the Physics Department has in place a plan of action to ensure the health of their graduate program.

Annual Report 2000-01

DATE: June 27, 2001

**TO: Henry Sayre, President
Faculty Senate**

**FROM: Susan Tornquist, Chair
Graduate Council**

RE: 2000-2001 Annual Report - Graduate Council

Membership on the Graduate Council in 2000-2001 included 12 voting members (Susan Tornquist, Chair, Veterinary Medicine; Jim Ayres, Pharmacy; Jeanette Brandt, Home Economics and Education; Paul Cull, Engineering; Vicki Ebbeck, Health and Human Performance; Steve Esbensen, Oceanic and Atmospheric Sciences; Doug Markle, Agricultural Sciences; Chandra Mishra, Business; Steve Radosevich, Forestry; Vince Remcho, Science; Court Smith, Liberal Arts; and Andy Young, student member) and 3 non-voting members (Sally Francis, Interim Dean of the Graduate School; Bruce Rettig, Associate Dean of the Graduate School; and Maggie Niess, Chair of the Graduate Admissions Committee). Mary Prucha, Coordinator of Graduate Student Services and Julie Suchanek and Jill Anderson, secretaries to the Dean, attended nearly all meetings.

The Council reviewed and approved the following Category I proposals: M.S. in Public Policy, M.S. and PhD in Bioengineering, PhD in Materials Science, restructuring of the Masters of Business Administration and dropping of the M.S. degree in Home Economics.

A subcommittee of Chandra Mishra, Paul Cull, and Jeanette Brandt worked with Associate Dean Bruce Rettig to review and approve Category II proposals.

The Graduate Council conducted 4 program reviews this year. They were Apparel, Interiors, Housing, and Merchandise, Science and Mathematics Education, Geosciences, and Zoology. All reports were completed and approved except for Zoology which should be finished soon and available for review when the Council resumes meetings in the fall. In addition, the Council approved the review of the Rangeland Resources program conducted in 2000.

The Council conducted five follow-up reviews of programs. They included Atmospheric Sciences, MBA, Fisheries and Wildlife, Marine Resource Management, and Entomology.

The Council met with Provost Tim White to express their concerns about common issues facing all the graduate programs reviewed.

The Council discussed the report prepared by a committee on Graduate Level Learning chaired by Jack Higginbotham, reviewed recommendations of the Graduate Admissions Task Force, and requested formation of a Task Force on Graduate Admissions Standards.

The Council addressed guidelines for granting posthumous degrees, conditional admissions requirements and narrative transcripts, approval to proceed with thesis examination, and the OSU residence requirement for graduate students, revised guidelines for graduate certificate programs, grievance guidelines for graduate students, physical presence of committee members at committee meetings, and membership on the graduate faculty, and met with the OSU accreditation team.

Subcommittees of the Council worked with Mary Prucha to choose recipients of Oregon Sports Lottery Graduate Scholarships, Baylet and Yerex Graduate Fellowships, and the Herbert F. Frolander Graduate Teaching Assistant Award

administered by the Graduate School.

Graduate Council

Annual Report 1999-00

Memorandum

June 27, 2000

TO: Gordon Matzke, President
Faculty Senate

FROM: Mark Christensen, Chair
Graduate Council

SUBJECT: 1999-2000 Annual Report - Graduate Council

Membership on the Graduate Council in 1999-2000 included eleven voting members (Mark Christensen '00, Chair, Pharmacy; Bruce Rettig '00, Agricultural Sciences; Neil Davison '00, Liberal Arts; Jeannette Brandt '01, Home Economics and Education; Steve Esbensen '01, Oceanic and Atmospheric Sciences; Jim McAlexander '01 Business (replaced in spring term by Chandra Mishra); Susan Tornquist '01, Veterinary Medicine; Paul Cull '02, Engineering; Vicki Ebbeck '02, Health and Human Performance; Steve Radosevich '02, Forestry; Vincent Remcho '02, Science; Candace Pierson-Charleton '00, Student Member (Candace resigned Dec. 9th and no student replacement for her was named) and three non-voting members (Interim Dean of the Graduate School Sally Francis, Associate Dean Jack Higginbotham, and Graduate Admissions Chair Doug Barofsky). Mary Prucha, Coordinator of Graduate Student Services and Julie Suchanek, secretary to the Interim Dean attended all meetings, providing able assistance and advice to the Graduate Council.

The Graduate Council approved two graduate policies of the items of a proposal brought by the Graduate Admissions Committee during the previous academic year. The Graduate Admissions Committee (GAC) asked to shift three types of cases from decision making by the GAC to the departments to which the student applies. Applicants who have successfully completed a postgraduate degree, and applicants for degree programs who are currently working under the 24-hour rule described in the Graduate Catalog were approved. On the last item the GAC withdrew its request to have the Graduate Council review the policy on Applicants with narrative transcripts.

The Graduate Council set up a subcommittee of the Council to develop a set of guidelines for Colleges, Departments and graduate programs to develop Graduate Certificate Programs. Vince Remcho Chaired the subcommittee, which brought its report to the Council where approval was received. The Guidelines have been forwarded to the Faculty Senate Executive Committee.

The Graduate Council accepted and approved the reports of two graduate program reviews conducted in the previous academic year (Botany and Plant Pathology and Scientific and Technical

Communications). The Graduate Council conducted five graduate program reviews: Animal Science, Counseling, Economics, Human Performance, Movement Studies in Disability, and Rangeland Resources. Reports on the first four have been approved by the Council and are available for review at the Graduate School. The review of Rangeland Resources will be discussed early in the 2000-2001 academic year.

The Council reviewed and approved two Category I proposals; Master of Arts in Teaching entitled OSU Elementary Teacher Licensure Program in Central Oregon from the School of Education and Master of Fine Arts in Creative Writing from English of the College of Liberal Arts. A third Category I proposal was received and discussed; Master of Public Policy from the Departments of Economics, Political Science and Sociology. Action on the third Category I proposal is being delayed until the Provost reviews and meets with the Department of Economics to go over the report of the graduate program review of Economics. The Council approved a Minor in Ethnic Studies. A subcommittee of the Council (Vince Remcho, Steve Radosevich and Mark Christensen) worked with Associate Dean Jack Higginbotham to review and approve Category II proposals. During the summer term of 2000, Sally Francis and Vince Remcho will review and take actions on submitted Category II proposals.

Subcommittees of the Council worked with Mary Prucha to identify recipients of scholarships and Fellowships administered by the Graduate School. These subcommittees report reviewing the records of these outstanding students is one of the most pleasant and interesting tasks a faculty member carries out at OSU.

The Council reviewed the report on the Graduate School Review and the new category of Faculty appointments (Clinical Faculty Tract) and reported our findings to the university administration. The Graduate School has set up a subcommittee to study the 400/500 class differentiation policy and the Council will continue to monitor its progress.

Graduate Council

Annual Report 1998-99

Memorandum

July 2, 1999

TO: Ken Williamson, President
Faculty Senate

FROM: Bruce Rettig, Chair
Graduate Council

SUBJECT: 1998-99 Annual Report - Graduate Council

Membership on the Graduate

Council in 1998-1999 included eleven voting members (Bruce Rettig '00, Chair, Agricultural Sciences; Jim McAlexander '01 Business; Chris Bell '99 Engineering; Kermit Cromack '99 Forestry; Becky Donatelle '99 Health & Human Performance; Jeanette Brandt '01 Home Economics & Education; Steve Esbensen '01 Oceanic & Atmospheric Sciences; Mark Christensen '00 Pharmacy; Bruce McCune '99 Science ; Sharon Tornquist '01 Veterinary Medicine; Candace Pierson-Charlton '99 Student Member) and three non-voting members (Graduate School Dean Thomas Maresh, Associate Dean Jack Higginbotham, and Graduate Admissions Committee Chair Robby Robson). Mary Prucha, Coordinator of Graduate Student Services, and Katie Peterson, secretary to the Dean attended all meetings, providing able assistance and advice to the Graduate Council. Nancy Wolford served as student member during Fall term.

The Council reviewed and approved the Category I proposal for a Master of Software Engineering. A subcommittee of the Council (Mark Christensen, chair, Kermit Cromack, and Neil Davison) worked with Associate Dean Higginbotham to review and approve Category II proposals. That group also worked with Bob Burton, chair of the Curriculum Council, to develop procedures that would move new course proposals through the review process quickly and efficiently while examining proposals to insure that graduate courses provide a meaningful graduate experience for Oregon State University students.

The Graduate Council conducted three program reviews: Bioresource Engineering, Nutrition and Food Management, and Scientific and Technical Communication. Reports on the first two reviews have been approved by the Council and are available for review at the Graduate School. The review of the Scientific and Technical

Communication program will be discussed early in the 1999-2000 academic year.

The Council reviewed and affirmed the current policy that Oregon State University will not award a student a second Ph.D. Exceptions under special conditions will be made by the Dean of the Graduate School.

The Council reviewed a proposal from the Graduate Admissions Committee (GAC) to shift three types of cases from decision making by the GAC to the department to which a student applies: Applicants with narrative transcripts, applicants who have successfully completed a postgraduate degree, and applicants for degree programs who are currently working under the 24 hour rule (described in the Graduate Catalog). Although the Council supported the reasoning, final action including wording changes to the Graduate Catalog was deferred until an Interim Dean of the Graduate School is appointed.

Subcommittees of the Council worked with Mary Prucha to identify recipients of scholarships and fellowships administered by the Graduate School. These subcommittees report that reviewing the records of these outstanding students is among the most interesting and pleasant tasks a faculty member can carry out.

Graduate Council

Annual Report 1997-98

Memorandum

Date: June 15, 1998
To: Margaret Niess, Faculty Senate President
From: Jerry Heidel, Chair, Graduate Council
Subject: Graduate Council 1997-1998 Activities

Regular Graduate Council Business

1. Approved a Category I Preproposal for a graduate program in Sensometrics;
2. Approved Category I Proposals for the following:
 - A. -Master of Science in Applied Physics
 - B. -Masters in Business Information Systems;
1. Approved a program review report for the graduate program in Atmospheric Sciences;
2. Conducted a review of the Master of Business Administration graduate program, and approved the report of that review;
3. Conducted and approved follow up reviews of graduate programs for the following:
 - C. -Master of Agriculture
 - D. -Horticulture
 - E. -Family Resource Management
 - F. -Oceanography
 - G. -Veterinary Medicine;
1. Subcommittees reviewed applications for Bayley/Yerex and Oregon Sports Lottery Scholarships, and for the Herbert Frolander Outstanding GTA Award;
2. Took action on 188 Category II proposals (73 new courses, 121 changes in existing courses, 28 dropped courses, and 5 X-courses).

Ad hoc Graduate Council Business

1. Reviewed and commented upon Draft Assessment of Teaching Report;
2. Established a Research Review Subcommittee to begin examining graduate students' rights and concerns related to intellectual properties generated by their research programs.

The Future of the Exercise and Sport Science Program

A Report of the EXSS Task Force

Submitted December 13, 2012

Introduction

The plan outlined in this document is designed to advance the Exercise and Sport Science (EXSS) program in the School of Biological and Population Health Sciences at Oregon State University. Such strategic planning is consistent with the value of continuous improvement to which the College of Public Health and Human Sciences is dedicated, where we continually strive toward high standards by optimizing individual and collective strengths.

The mission of the EXSS program is to improve human health and wellness through the study and application of physical activity across the lifespan in all populations. This is achieved by generating new knowledge, translating knowledge into practice, and developing exceptional professionals.

Inspired by our program mission and OSU's status as a leading land-grant university, the EXSS Task Force evaluated all aspects of the current EXSS program to identify ways of leveraging our unique position, within a college of public health, to become a recognized leader in the interdisciplinary study and application of physical activity aimed at improving human health and wellness across the lifespan.

Planning Process

Dean Bray announced a task force comprised of five faculty members in EXSS on September 28, 2012. The members included Simon Driver, Vicki Ebbeck (co-chair), Kathy Gunter, Marc Norcross, and Mike Pavol (co-chair). The Task Force first met with Dean Bray in an organizational session and then met as a group on a regular basis across Fall term.

The Task Force gathered information that could assist in the formulation of ideas, and faculty in EXSS were invited to alert the Task Force to any resources that might be beneficial. The Task Force reviewed materials that included journal articles addressing trends in kinesiology specifically and higher education in general, job market projections, models of academic programs at other institutions, breakdown statistics of our current students and curriculum offerings, as well as various professional certifications currently available through different organizations.

Furthermore, faculty who teach in the EXSS program ($n=11$) accepted the invitation to individually meet for one hour with a member of the Task Force to share ideas and suggestions that were transcribed, verified by the faculty, and then distributed to members of the Task Force. Additional stakeholders with a vested interest in the EXSS program also engaged in a scheduled conversation with a Task Force member, including administrators ($n=3$), academic advisors ($n=5$) who met collectively, and a faculty representative from the Cascades campus. Faculty also responded to requests from the Task Force for further meetings and for answers to specific inquiries that better informed the Task Force about the nature of particular programs.

The Task Force shared their emerging recommendations with EXSS faculty over a 2-week period. During this time, the Task Force held meetings with the EXSS faculty and encouraged faculty members to provide feedback (via personal conversations or email) to Task Force members. This ongoing exchange of ideas ensured that the final recommendations were the result of considering a range of ideas and approaches as well as seeing each decision from various perspectives. Nevertheless, the final decisions regarding

the content of this report were those of the Task Force. Although general support was voiced by many of the EXSS faculty for the objectives presented in this report, no formal consensus was sought nor was this final report subjected to review by the faculty.

Current State of the Program and Why Change is Needed

The program in EXSS has many strengths. At the undergraduate level, the program in EXSS is one of the largest on campus. In 2011-12, EXSS was the fifth largest major in terms of number of Bachelor's degrees conferred. The undergraduate option in Pre-Therapy and Applied Health (PTAH) is an especially popular one, comprising 64% of EXSS majors. Of these, approximately 40% are pre-physical therapy, with the remainder divided between pre-occupational therapy, pre-medicine, pre-nursing, and pre-physician assistant. The other undergraduate options are Fitness & Nutrition (26% of majors), Physical Education Teacher Education (PETE; 5% of majors), and Applied EXSS (4% of majors). Graduates of the undergraduate program in EXSS appear to be viable professionally. Of the respondents to a recent alumni survey, 98% were either employed or enrolled in graduate/professional school and, of those who were employed, 83% had a job that was either directly or somewhat related to EXSS. As another indicator of marketability, over 90% of students who completed an internship during their undergraduate studies would have been recommended by their supervisor for hiring.

At the graduate level, the doctoral program in EXSS was ranked as the 11th best such program in the country in the most recent evaluation by the National Academy of Kinesiology in 2010. Movement studies in disability is an area of distinction at the graduate level, with a long history of training grants from the U.S. Department of Education. Other graduate concentrations exist in exercise physiology, neuromechanics, physical activity and public health, and sport and exercise psychology. In addition, the Master of Science program in Physical Education Teacher Education (MS-PETE) is the only program in Oregon to offer the Adapted Physical Education Endorsement. Most PhD graduates find employment in the field after graduation, typically in academia. MS-PETE graduates are also highly employable.

The faculty members associated with the EXSS program are strong instructors and productive scholars. In the recent survey of alumni, the quality of the faculty, their passion for teaching, and their care for the students were most often cited as strengths of the program. As scholars, faculty members have, on average, each published two articles and presented two abstracts at professional meetings in each of the past five years and, as a group, were awarded \$1.09 million in grants and contracts, on average, each of these years.

A major concern, however, is that the current model of undergraduate education is not sustainable. There are currently two majors, four EXSS options, and five pre-professional tracks offered and, with the exception of the Athletic Training major, there are no specific requirements for admission to the program. As of fall term 2012, there are 1018 EXSS undergraduate students and 179 Athletic Training students (including Pre-Athletic Training). By comparison, there are effectively 14 professorial faculty members and three full-time instructors in EXSS and Athletic Training, giving a student/faculty ratio of 70:1. In an attempt to accommodate the large number of majors, core 300-level classes are currently being offered at least three times each year, with class sizes ranging from 60-80 students and continuing to grow. Despite this, only 74% of EXSS students complete their

degree within four years. In the recent undergraduate program review, this diversity of specializations and course offerings, the large class sizes, the high student/faculty ratio, and students' difficulties in completing their degree within a reasonable period of time were cited as weaknesses of the program. The high student/faculty ratio also limits students' opportunities to get involved in research. A major recommendation of the program review was to "consider reducing the number of majors by instituting admission requirements, restructuring course offerings, or expanding the number of faculty," with a student/faculty ratio of 30:1 or less being recommended. The PTAH option, in particular, is one in which the number of interested students exceeds the capacity to find practicum sites. Furthermore, the number of pre-therapy graduates from Oregon colleges and universities each year greatly exceeds the total capacity of the two Doctor of Physical Therapy programs in Oregon.

At the graduate level, there are currently five concentrations, two of which (exercise physiology, physical activity and public health) have less than 1.0 FTE of associated faculty, with the others each having 2.0-3.0 FTE of associated tenured or tenure-track faculty. Furthermore, each concentration tends to function largely in isolation from the others. There is no coordination of coursework between concentrations and only recently has there been any deliberate consideration of establishing overarching thematic areas of excellence across concentrations. Arguably, this fractured organizational structure and lack of critical mass in most areas reduces the visibility of the program, impairs the ability to attract the strongest graduate students in some concentrations, places increased instructional demands on the faculty, undermines collaboration, and diminishes faculty productivity. This is without considering the impact of large undergraduate class sizes on faculty productivity. Another challenge being faced is the impending retirement of one of the two faculty members responsible for delivering the PETE program at the graduate and undergraduate levels. In a review of comparable programs, none try to offer so many undergraduate options and graduate concentrations to so many students with so few faculty members.

Finally, as was noted in the EXSS self-study conducted in 2011, financial support from the State of Oregon for higher education has declined and can no longer be considered a reliable or adequate source of funding. In addition, it has become increasingly difficult to obtain Federal funding for research. This creates a challenge in generating the money needed for operating expenses, conducting research, professional development of the faculty, and providing financial assistance to students.

The program in EXSS is facing several major challenges that need to be addressed. However, in responding to these concerns, there is also the opportunity to build on the strengths of the program, to take a proactive approach in adapting to current trends in the field, to embrace and take advantage of the role of the program in a College of Public Health and Human Sciences, and to enhance our contribution to the mission of the college. As such, we provide the following vision for the EXSS program.

Vision for the EXSS Program

We envision that the program in EXSS will move forward with a unifying focus on physical activity and health. We are a diverse faculty integrated into a College of Public Health and Human Sciences at a land grant university with a strong Extension program. As such, we

are uniquely able to advance understanding of the physiological, psychological, and neuromechanical underpinnings of the relationships between physical activity and health and to translate this knowledge into meaningful programs and clinical applications. From a research perspective, we will embrace this opportunity and develop it as our signature area of distinction, particularly in the areas of disability and health and community-based physical activity interventions, with future faculty hires focused on growing our presence in these areas. We will take an interdisciplinary approach, with active collaboration between faculty within the program, the College, and the University. A dynamic research environment will exist, with active involvement of faculty and strong graduate and undergraduate students as a community of scholars, with high levels of external funding, with close ties to the community, and with a support structure for enhancing scholarship.

The focus on physical activity and health will also be integrated into our educational mission. At the undergraduate level, we will prepare students to obtain certifications as fitness professionals (e.g., personal trainer, strength and conditioning specialist, physical activity in public health specialist), for graduate education in exercise science, and for professional training in the allied health professions (e.g., physical and occupational therapy, medicine, nursing, physician assistant). At the master's level, we will train professionals who promote physical activity and health as practitioners in the areas of adapted physical education, athletic training, and physical activity and public health. Finally, at the doctoral level, we will produce the next generation of exceptional researchers and academics who can further advance the knowledge base related to physical activity and health. By these means, we will fulfill the mission of the program.

Goals and Objectives

The Task Force identified three overarching goals as the guiding principles to achieve our vision. These goals are to promote excellence in: 1) undergraduate education; 2) graduate education; and 3) faculty research and scholarship. What follows are specific objectives to guide this process. These objectives are our path toward excellence. In meeting our goals we will also enhance student marketability, increase faculty productivity, strengthen our alignment with public health, and cultivate new revenue streams.

We recognize that some objectives located under a particular goal may also have relevance for one or more of the other goals; therefore, our main concern is that the objectives be achieved more so than the specifics of where each objective is listed. To aid in understanding the ramifications of the various objectives that speak to programmatic changes, a visual representation of the proposed structural alterations to our current program offerings appears in Figure 1.

Goal 1. Promote Excellence in Undergraduate Education

To achieve this goal, the EXSS program will restructure the undergraduate program, revise, refocus, and streamline the undergraduate course offerings, and impose admission standards that support program excellence and student success after graduation.

The undergraduate program in EXSS at Oregon State University is one of only four such programs in the U.S. that are integrated into a college of public health. Thus, we offer a truly unique opportunity for our undergraduate students. Our Bachelor of Science degree

provides students a broad background in the core areas of the discipline and prepares students for professional careers in fitness/wellness professions, as well as for entrance into professional and academic graduate programs.

To reach our goal to “Promote Excellence in Undergraduate Education,” we propose the following three objectives.

Objective 1.1: Condense the undergraduate program to two options. We will reduce the two current undergraduate majors and four current undergraduate options to one undergraduate major and two undergraduate options. The two options will be focused on (1) preparation for careers in physical activity and fitness/wellness (“Applied” option) and (2) preparation for careers or advanced study in the allied health professions and medicine (“Pre-Allied Health” option). Both options would suitably prepare students for relevant academic graduate programs in exercise science core areas. It is envisioned that the “Pre-Allied Health” option will require more coursework/lab work in the basic sciences (e.g., chemistry, physics, psychology). By comparison, the “Applied” option will require more applied coursework in EXSS, with the intent that graduates will be prepared for certification as a personal trainer, strength and conditioning specialist, wellness coordinator, physical activity in public health specialist, or similar. It is further envisioned that, rather than specifying formal tracks, students will be provided with lists of suggested courses for different career paths, with sufficient electives in their program of study for them to tailor their coursework to their desired career path.

Rationale: The two-option structure is in acknowledgement that the B.S. degree in EXSS can serve either as preparation for employment or as preparation for graduate or professional school. The B.S. degree in EXSS provides individuals with many viable career options related to physical activity and fitness/wellness. In fact, the U.S. Department of Labor has highlighted both “Fitness Trainers and Aerobics Instructors” and “Coaches and Scouts” as occupations with bright outlooks, with each projected to have more than 100,000 job openings and greater than 24% growth nationally over the period 2010-20. In addition, “Fitness and Wellness Coordinator” is highlighted as a new and emerging occupation with a bright outlook and “Exercise Physiologist” has gained status as a new occupational category. The EXSS program will take a leadership role in training these needed professionals.

A B.S. in EXSS also serves as excellent preparation for professional study in the medical and allied health professions. As was noted earlier, there is a high demand among students for pre-professional programs in medicine and allied health. In addition, the U.S. Department of Labor projects there to be 100,600 job openings for physical therapists (39% growth), 57,100 for occupational therapists (34% growth), 1.2 million for registered nurses (26% growth), 305,100 for physicians and surgeons (24% growth), and 40,600 for physician assistants (30% growth) over the period 2010-20. With EXSS’s focus on the science of physical activity in relation to human health, we are well suited to prepare students for professional programs in medicine and allied health and we will continue to do so.

The creation of the “Applied” and “Pre-Allied Health” options acknowledges the differing educational needs of those students who wish to pursue careers related to physical activity and fitness/wellness and those who wish to pursue professional

study in the allied health professions (i.e. application versus depth of scientific knowledge). The two options will meet the needs of these two groups of students.

Action Item 1.1.1: A subcommittee will be charged with implementing the two undergraduate options prior to the start of the 2013-14 academic year. Students would no longer be admitted to the existing Applied EXSS, Fitness & Nutrition, and PETE options starting in Fall 2013. [Person with primary responsibility: EXSS Undergraduate Coordinator; Timeline for the action item: Jan-Jun, 2013]

Objective 1.2: Revise the undergraduate curriculum and how it is delivered. Guiding principles for the revision of the curriculum are as follows:

- The curriculum will be competency-driven to ensure that students will receive the essential foundational knowledge and skills;
- Course content will be standardized and focused on material of primary relevance, with redundancy between courses avoided;
- Courses will be structured to ensure continuity, reinforcement of learning, and a logical progression across courses;
- The number of credit hours that students must take to acquire competencies will be minimized, including prerequisite and ancillary coursework;
- The inclusion of lab sections among the core courses required of all students will be minimized;
- Core courses will be structured such that some can be taken during the sophomore year and to allow students to complete all of the core courses by the end of their junior year;
- A greater number of advanced undergraduate courses that are tailored to specific sets of career paths will be offered, leveraging off corresponding graduate courses;
- More opportunities will be provided to gain skill in oral communication, critical thinking, problem solving, creativity, and leadership.

With regards to course delivery, it is proposed that lecture-based core courses be offered less often with larger class sizes, in order to facilitate the delivery of smaller, advanced undergraduate courses. In addition, the lecture-based core courses will be offered online through Ecampus.

Rationale: We believe that the envisioned curricular structure will enhance student marketability and aid in the timely completion of the B.S. degree, while also allowing for a reduction in credit hour delivery and greater flexibility in course offerings. The reasons for revising the curriculum in keeping with the stated guiding principles are to:

- 1) Better prepare students for career success (particularly by means of upper-level elective courses, such as a potential course in “Corporate Health/Wellness”);
- 2) Facilitate graduation in four years (e.g., with fewer required courses and by expanding access to courses through Ecampus);
- 3) Provide students with a better understanding of EXSS earlier in their studies so that they may make more educated career choices;
- 4) Potentially allow for a cohort model and its associated benefits for students, faculty, and advising in terms of standardization/predictability;
- 5) Increase curricular efficiency (i.e. the ability to educate large numbers of students within the teaching resources available); and

6) Provide for flexibility in teaching assignments, thereby enhancing faculty productivity.

Action Item 1.2.1: A subcommittee will compile a set of “core” competencies (i.e. foundational knowledge and skills) that every EXSS student should possess on graduation. [EXSS Undergraduate Coordinator; Sep-Dec, 2013]

Action Item 1.2.2: A subcommittee will establish a new core curriculum and course sequence based on the identified competencies. [EXSS Undergraduate Coordinator; Jan-Jun, 2014]

Action Item 1.2.3: Coordinate the development of competency-based, career-specific, upper-level elective courses [EXSS Undergraduate Coordinator; Sep 2014-Jun 2017]

Action Item 1.2.4: Coordinate the migration of the EXSS core courses to Ecampus [EXSS Undergraduate Coordinator; Sep 2014-Jun 2016]

Objective 1.3: Implement standards for admission to the options and retention in the major at the undergraduate level. It is envisioned that students will enter the EXSS program with an undeclared option and will be prevented from taking upper-level coursework in EXSS until they have completed a specified set of prerequisite courses with a specified level of performance. On achieving this benchmark, undergraduate students will be allowed to declare an option and enroll in upper-level coursework. In addition, all EXSS students would be required to meet a specified minimum level of performance in order to remain in the major.

Rationale: Delaying the time at which students are accepted into an option ensures that students will be making an informed decision about their career choice; they will be more mature when making the decision; and there will be fewer students who need to switch options and take extra time to complete missed requirements. The institution of admission standards, as well as a retention standard, will allow for greater administrative control of student numbers and will restrict advancement in the major to those students who demonstrate the ability to be successful in their chosen option. This process will also reduce the demands on credit hour and course delivery, as well as demands on the number of practicum/internship opportunities that need to be found. These are important concerns, given the high student demand for the EXSS major, particularly the PTAH option, relative to the number of faculty, the practicum/internship opportunities available in the greater Corvallis area, and the number of openings available in professional schools in allied health and medicine.

Action Item 1.3.1: A subcommittee will specify and implement the admission standards for the two undergraduate options, prior to the start of the 2013-14 academic year. The standards would apply to all students who enter the program beginning in Fall 2013. [EXSS Undergraduate Coordinator; Jan-Jun, 2013]

Action Item 1.3.2: A retention policy will be developed and in place for the start of the 2013-14 academic year. [EXSS Undergraduate Coordinator, Jan-Jun, 2013]

Goal 2. Promote Excellence in Graduate Education

To achieve this goal, the EXSS program will restructure the graduate program, transition to a set of three professional degree programs at the master's level, and impose new course and examination requirements at the doctoral level.

The graduate program in EXSS at Oregon State University is one of the few notable programs in the nation that is integrated into a college of public health. An additional point of distinction is the fact that we are the only doctoral program in Exercise Science on the west coast. Our professional master's degree programs will prepare students for entry into positions in schools, health department settings, federal agencies, prevention research centers, professional, commercial, and nonprofit organizations, and athletic programs. Graduates of our doctoral program will be trained for positions in higher education, as well as research-oriented clinical, industry, and government settings.

To reach our goal to "Promote Excellence in Graduate Education," we propose the following eight objectives.

Objective 2.1. Discontinue the current practice of admitting students into the Master of Science in EXSS degree.

Rationale: It is anticipated that this change will allow faculty to benefit from the advanced skill set of doctoral students relative to master's students. Doctoral students are better equipped to be productive collaborators with faculty on research projects and grants and require less faculty time than supervising master's theses or projects that involve manuscript writing, data analysis, etc. In addition, restricting currently available school/program student support commitments (i.e. GTAs) to doctoral-level students should result in the ability to support, and therefore recruit, more doctoral students in all EXSS research labs. Greater numbers, combined with increased scholarship expectations from doctoral students, should facilitate increased faculty research productivity. The Master of Science degree will be retained as a failsafe alternative perchance a student does not successfully advance to candidacy in the doctoral program.

Action Item 2.1.1: The change in practice would take effect with the fall of 2013 admission process, thereby impacting students who wish to start in Fall term of 2014. All promotional materials pertaining to our program would be altered to signify that we are currently not accepting students into the Master of Science degree in EXSS. The exception will be the Master of Science degree in EXSS with an area of concentration in Physical Education Teacher Education that will continue to admit students until a new practitioner-oriented master's degree in adapted physical education is established. [EXSS Graduate Coordinator; Jan-Mar, 2013]

Objective 2.2. Enroll students in one of three professional, non-thesis, master's degrees that would replace the current practice of admitting students into the Master of Science degree. We would create a new Master of Public Health in Physical Activity degree. In addition, we would discontinue the current undergraduate major in Athletic Training (AT) and replace it with a Master of Athletic Training degree. We would also replace the current Master of Science degree concentrated in Physical Education Teacher Education with a Master of Adapted Physical Education degree.

Rationale: The professional degrees will allow us to provide quality training tailored to the unique needs of future practitioners who wish to engage directly with communities and individuals to impact lives and make a difference. These non-thesis professional degree programs would allow for larger graduate student enrollments that generate student credit hours, as well as revenue from summer

tuition dollars. Larger enrollments would be in accordance with the current strategic plan of the OSU Graduate School that speaks to growing the number of graduate students on campus.

Development of a professional *Master of Public Health in Physical Activity* (MPH in PA) degree is indicated for three primary reasons:

1. As the only College of Public Health and Human Sciences in the state of Oregon, and one of a select few exercise and sport science programs within a college of public health, we are uniquely qualified to offer this degree that prepares professionals trained in the science of physical activity and its promotion in populations. The Association of Schools in Public Health recognizes three CEPH-accredited universities with the equivalent of an MPH in PA (also called an MPH in Physical Activity and Healthy Lifestyles and an MPH in Physical Activity and Public Health): Colorado State University, George Washington University, and University of South Carolina. We would thus be a national leader in providing an MPH in this important area of public health.
2. The integration of public health and physical activity aligns with the University signature area of improving human health and wellness, is consistent with the mission of the College to develop the next generation of public health and human sciences professionals through innovative curricula, and supports the shared focus on physical activity and health of the EXSS graduate program.
3. The professional degree program ensures that graduate courses are full and consistently offered. This would better justify the faculty FTE devoted to graduate teaching and would support the needs of doctoral students, who will be able to count on available and regular course offerings.

Action Item 2.2.1-MPHPA: Establish a subcommittee to oversee the process of developing and submitting a Category I proposal. [Gunter; Sept 2013-Jun 2014]

Action Item 2.2.2-MPHPA: Include MPH in PA as a degree option in our promotional materials and develop a procedure for reviewing, as well as managing, applications that will be in effect for admitting students for Fall term of 2016. [EXSS Graduate Coordinator; Apr-Jun, 2015]

A move to a professional *Master of Athletic Training* (MAT) degree is indicated for three primary reasons:

1. Between 2006-2010, of the 91 students admitted into the undergraduate AT program, 70 graduated with an AT option/major resulting in an average student attrition rate of 23%. Despite recent programmatic changes that have increased the number of students admitted each year, the maximum size of an AT student cohort is about 25 due to limitations in the number of qualified clinical training sites that are available on-campus and in the community. Additionally, given the program competencies required for accreditation and taught in a learning-over-time model, there is no mechanism to replace lost students in a given program cohort. Collectively, these circumstances make it difficult to satisfy the 20 graduates per year recommended by OSU for undergraduate programs. A shift to a MAT program would result in the discontinuation of a small undergraduate major with a high attrition rate and its replacement by a relatively large graduate program (≈ 30 students and 15 graduates per year). Additionally, as the program would run year-round and may be eligible for differential tuition rates,

we anticipate increased revenue generation will offset additional costs for summer faculty appointments. Therefore, we do not anticipate a need for increased resource allocation.

2. Nationally, the U.S. Bureau of Labor Statistics projects a 30% increase in AT jobs (5,500 jobs) and a total of 11,900 AT job openings due to growth and replacement needs over the period 2010-2020. Despite this projected growth, the AT program is one of only three accredited AT programs in the state of Oregon (along with Linfield College and George Fox University) and the only entry-level professional program in the OUS system. As such, a MAT program would continue to serve the greater land-grant mission of the University by providing this type of education to the people of Oregon.
3. At present, the entry-level education requirement for the AT profession is at the baccalaureate level. However, on June 25, 2012, the National Athletic Trainers' Association Board of Directors recommended that a new analysis of AT education be undertaken to determine the appropriate professional degree for the profession. Since then, the Commission on Accreditation of Athletic Training Education (CAATE), in its Winter 2012 newsletter, announced the formation of a transition group to help programs change from an undergraduate to a graduate-level professional AT program. Currently, two institutions with long-standing undergraduate AT programs and faculty members actively involved in the national AT education decision-making process and/or CAATE (Boston University and Indiana State University) are transitioning to graduate-level education. Collectively, these events indicate that a shift toward the master's degree being the mandated "point of entry" into the AT profession is likely to occur within the next 5-10 years. The proposed change to a MAT program would put OSU ahead of the curve nationally, enhancing the program's visibility as a leader in AT education. Otherwise, we will be one of many followers in implementing the mandate once it is made.

Action Item 2.2.1-MAT: Create a subcommittee that will evaluate existing graduate AT program models, select the most appropriate graduate model for OSU (i.e. 3/2 dual-degree (BS/MAT) option vs. 2-year MAT option), determine CAATE accreditation and transition requirements, and outline specific program requirements, course of study, and a program transition timeline. [Norcross; Apr-Jun, 2013]

Action Item 2.2.2-MAT: Establish a subcommittee to oversee the process of developing and submitting a Category I proposal and obtaining CAATE approval. [Norcross; Sep 2013-Jun 2014]

Action Item 2.2.3-MAT: Include MAT as a degree option in our promotional materials and develop a procedure for reviewing, as well as managing, applications that will be in effect for admitting students for Summer term of 2016. Admission of students to the undergraduate Pre-AT option and AT major would cease after Fall term of 2013 and 2015, respectively. [Norcross; Apr-Jun, 2015]

Development of a professional *Master of Adapted Physical Education* (MAPE) degree is indicated for four primary reasons:

1. Physical education is a primary means of advancing the health and wellness of children and creating positive health habits that children carry forward throughout their lives. As such, K-12 physical education teacher education

(PETE) is an important component of public health and integral to the missions of the program and College. This merits its continued offering, despite the imminent retirement of the one tenured faculty member with a full-time allocation to PETE.

2. The MAPE degree highlights the unique training our students would receive in adapted physical education. Currently, we are the only Oregon-approved teacher education program with an endorsement in adapted physical education, while there are 12 other institutions in Oregon that offer physical education teacher education programs (Oregon University System, *How to become an Oregon teacher: An advising guide to teacher preparation programs in the state of Oregon*, 2011). The MAPE would continue the EXSS program's long history of training adapted physical education specialists at the master's level, with associated funding from the U.S. Department of Education. The degree would directly replace the current M.S. in EXSS with a concentration in PETE. Given this fact, together with the proposed changes at the undergraduate level, it was concluded that the MAPE degree could be offered within the resources that will exist after the faculty retirement mentioned earlier. We do not anticipate a need for additional faculty or increased resource allocation.
3. The Bureau of Labor Statistics projects that the employment of adapted physical education specialists and others falling under the category of special education teachers will increase by 16.8 percent over the 2010-2020 decade. This growth, which is faster than average for all occupations, will create 213,200 positions in the industry. There is thus a need for professionals with an MAPE.
4. Master's students in adapted physical education typically are or become practitioners in the field (physical educators) and do not return to continue post-secondary education; so, a practical degree meets the students' needs. Moreover, with the current Master of Science degree concentrated in PETE, students receive waivers for many requirements, attesting to the difficulty of aligning practitioner-oriented training within an academic degree. A MAPE would eliminate the issue of waivers while maintaining the desirable model of a 1-year degree program.

Action Item 2.2.1-MAPE: Oversee the process of developing and submitting a Category I proposal. [Wegis; Sep 2013-Jun 2014]

Action Item 2.2.2-MAPE: Include MAPE as a degree option in our promotional materials and develop a procedure for reviewing, as well as managing, applications that will be in effect for admitting students for Summer term of 2016. As was noted earlier, the M.S. degree in EXSS with an area of concentration in PETE will continue to admit students until the MAPE is established. [Wegis; Apr-Jun, 2015]

Objective 2.3. Create an online graduate Certificate in Adapted Physical Education (CAPE) targeting licensed teachers who have a master's degree in hand, but are seeking to become a Certified Adapted Physical Educator and sit for the Adapted Physical Education National Standards exam.

Rationale: Data from the US Department of Labor/Employment and Training Administration projects that Adapted Physical Education will be a national growth area (10-19%) between 2010-2020. By creating an online graduate certificate, OSU will be building upon the national reputation of the Movement Studies in Disability (MSD) program and expanding the reach of the program to educators within Oregon

and beyond. Currently, no program in the US offers an online option for adapted physical education courses.

Action Item 2.3.1: Oversee the process of developing and submitting a Category I proposal. [S. Driver; Sep 2013-Jun 2014]

Action Item 2.3.2: Include CAPE as an option in our promotional materials and develop a procedure for reviewing, as well as managing, applications that will be in effect for admitting students for Fall term of 2016. [S. Driver; Apr-Jun, 2015]

Objective 2.4. Restructure the areas of concentration aligned with the EXSS doctoral degree. The five current areas of concentration (exercise physiology, movement studies in disability, neuromechanics, physical activity and public health, and sport and exercise psychology) would be reduced to two areas of concentration that would include (1) a focus on human movement sciences, with faculty who have interests in areas such as biomechanics, motor control, and musculoskeletal physiology, and (2) a focus on physical activity behavior, with faculty who have interests in areas such as movement studies and disability, physical activity and public health, sport and exercise psychology, and applied physiology.

Rationale: As part of our recent 10-year review of the EXSS graduate program, conducted by the OSU Graduate School, the external review panel suggested that we consider using broader themes to consolidate the current specializations. The logic was that restructuring to fewer areas of concentration would offer a greater critical mass of faculty in a given area, promote collaboration in research endeavors, and facilitate creative, as well as relevant, course offerings within an area of concentration. We still envision incoming applicants selecting their preference for working in certain laboratories and/or with particular faculty within an area of concentration that would determine the appropriate faculty to review specific applications.

Action Item 2.4.1: Have EXSS graduate faculty agree on the name of the two new areas of concentration. [EXSS Graduate Coordinator; Jan-Mar, 2013]

Action Item 2.4.2: Oversee the transition to two areas of concentration in promotional materials and application forms in preparation for the students applying to our program in fall of 2013. [EXSS Graduate Coordinator; Jan-Mar, 2013]

Objective 2.5. Revamp course offerings to appeal to the various student interests within one of the two newly created areas of concentration and, where applicable, be inclusive of public health issues.

Rationale: Alignment of course offerings within concentrations will increase student numbers in graduate courses, provide additional and relevant program-specific courses for graduate students, and potentially reduce graduate faculty teaching loads by merging courses – or sharing teaching responsibilities for courses that may be relevant within concentrations. As an example, to build on the national reputation of the MSD program and merge more effectively with other degree programs within the College, Disability and Public Health-specific courses would be created. A class that has recently been created is EXSS 550 Health Promotion for People with Disabilities, which is relevant for students who specialize in Movement Studies in Disability, Sport and Exercise Psychology, and Health Promotion and Health Behavior (as well as the proposed MPH in PA degree). Additional classes can be created to overlap with other areas in the College. Healthy People 2020 has an

objective (DH3) to “Increase the proportion of U.S. master of public health programs that offer graduate-level courses in disability and health,” so the initiative is timely and relevant. In addition, addressing public health issues within EXSS courses would better inform and prepare our students, and make our graduate course offerings more relevant/appealing to students majoring in public health, as well as students majoring in EXSS who are completing a MPH in PA degree.

Action Item 2.5.1: Coordinate faculty within each area of concentration to work toward viable course revisions. [EXSS Graduate Coordinator; Sep 2013-Jun 2014]

Objective 2.6. Revise the program of study requirements for doctoral students to include learning experiences that address grant writing, instructional strategies for college and university teaching, and professional development.

Rationale: This objective is designed to ensure learning experiences that facilitate success while a graduate student, enhance employability in a highly competitive job market, and offer early career preparedness. Grant writing is an important skill for students to obtain as they search for funding to support their research, continuing education, or professional development. Students who have experience with grant writing may also be of benefit to faculty who are actively writing grants. The additional training in pedagogy would elevate the quality of instruction provided by our Graduate Teaching Assistants and also equip doctoral students for positions that entail teaching. A 2011 review of the EXSS graduate program revealed that, in the last five years, the majority (88%) of our doctoral students were placed in positions that required teaching expertise, such as tenure-track assistant professor or instructor positions. In the same review, however, a survey of current and former students suggested that attention to professional development, including learning to be a good teacher, should be included in the training of students in order to strengthen the existing program. Additional topics of professional development might include involvement and leadership in professional organizations, searching for a job and preparing a personal CV, as well as understanding and practicing the manuscript review process.

Action Item 2.6.1: Establish a subcommittee to oversee the development and implementation of the new program of study requirements. [EXSS Graduate Coordinator; Jan-Jun, 2013]

Objective 2.7. Restructure the current preliminary examination requirement for doctoral students. The requirement would change from an examination solely of knowledge based on coursework to an assessment of knowledge based on coursework along with competencies related to completing an empirical, student-led research project and accompanying manuscript of publishable quality that is to be submitted to a scholarly journal or, the completion of a pilot project and development of a student-led grant proposal to be submitted for funding. This conversion will necessitate doctoral students having completed a research project prior to proposing their dissertation work.

Rationale: This change ensures that doctoral students gain additional experience in the research process so they are better prepared to complete their dissertation work. It also provides the opportunity to publish an article or submit a grant, which increases the productivity of students and faculty in our program while also helping students to be more marketable.

Action Item 2.7.1: Establish a subcommittee to oversee the development and implementation of the new preliminary examination requirements. [EXSS Graduate Coordinator; Jan-Jun, 2013]

Objective 2.8. Recruit quality, as well as diverse, graduate students.

Rationale: The better the students, the more likely they are to be successful in our program, as well as in obtaining employment. Quality students also facilitate faculty productivity. In addition, targeting diverse populations (e.g., low income, first generation, international, non-resident domestic, and other non-representative individuals) will broaden the applicant pool and enrich the educational experience for all associated with the program. This objective encompasses a shift in our current practice from a passive to a more active approach to recruiting. It also responds to the recommendation to develop recruitment strategies targeting diverse populations that was outlined in the EXSS Graduate Program Review conducted by the OSU Graduate School in 2011.

Action Item 2.8.1: Identify effective recruitment strategies to be implemented as part of the admission process for Fall term 2014. [EXSS Graduate Coordinator; Jan-Jun, 2013]

Goal 3. Promote Excellence in Faculty Research and Scholarship

To achieve this goal, the EXSS program will refocus its efforts towards collaborative research in the area of physical activity and health. We will strengthen our potential for success in obtaining extramural funding by aligning faculty interests, recruiting strategic hires congruent with our shared focus, and revising faculty workloads. Our interdisciplinary team of scientists is dedicated to expanding the body of knowledge on physical activity and health in order to identify the (1) individual and environmental factors that influence physical activity behaviors, (2) effect of physical activity on health outcomes, and (3) evidence-based approaches that facilitate the adoption and maintenance of physical activity participation, as well as promote health and wellness.

To reach our goal to “Promote Excellence in Faculty Research and Scholarship,” we propose the following three objectives. Additional focused efforts to revise the undergraduate and graduate program course offerings (listed under Goals 1 and 2) will also support this goal.

Objective 3.1. Communicate and promote a research agenda reflective of a shared focus on physical activity and health. Emphasize translational research that promotes relevant clinical and community-level applications to promote positive changes in health outcomes.

Rationale: The shared focus on physical activity and health will draw students and faculty with applied interests, nurture a greater exchange of ideas, and promote more collaborative and creative research endeavors among faculty and students. As an EXSS program embraced within a College of Public Health and Human Sciences, we are uniquely qualified to target our strengths related to understanding the physiological and behavioral underpinnings of the relationships between physical activity and health. Our land grant designation supports Extension faculty who stand ready to assist in translating our work into meaningful programs and clinical applications. Through these endeavors, students would be trained as translational scientists and exposed to a broader (multi-disciplinary) context of knowledge. The

National Institutes of Health has recently started a number of translational human health-related research initiatives that demonstrates the importance of and credence given to such an approach. Our shared focus across the multiple sub-disciplines within EXSS on translation of both applied and basic research to practice would make us more competitive for funding under such initiatives. Furthermore, promoting a culture in which expectations of research collaborations are the norm is essential to actualize our potential for excellence. We have an opportunity to respond to numerous funding opportunities that require interdisciplinary research teams with the capacity to address the etiology, prevention, intervention, and treatment of health conditions through physical activity participation. We are also unique in that we have faculty with Extension appointments who can support translation of laboratory research to community/applied research and ultimately the translation of research to practice. Bi-weekly (or monthly) meetings to present and discuss research ideas will facilitate collaboration and shared success.

Action Item 3.1: Hold bi-weekly (or monthly), scheduled faculty work sessions to review relevant RFAs and consider how we may collectively, or in small teams, pursue available funding by leveraging our interdisciplinary strengths. Faculty will share specific aims pages, RFAs/PAs, etc. to promote discussion, feedback, engagement, and collaboration. [Gunter; initiate spring, 2013]

Objective 3.2. Hire faculty in tenure-track positions whose research foci align with the EXSS program's shared focus toward physical activity and health and with strong potential for securing extramural funding. The most immediate needs of the program are in physical activity and public health (PAPH) and exercise physiology.

Rationale: As was noted earlier, the program in EXSS has many strengths. Among these, the faculty consists of fine and caring instructors and productive scholars; the undergraduate program in EXSS is one of the largest on campus; and the doctoral program in EXSS was ranked as the 11th best such program in the country. However, in order to achieve its potential, additional faculty are needed, both to assist in the delivery of the curriculum and to facilitate distinction in research and scholarship.

It is essential that hires be strategic and that any new hires support existing concentrations with demonstrated need and potential for growth. PAPH has been identified as such an area. PAPH focuses on the relationship between physical activity and health status and the promotion of physical activity in different community settings and population groups. This field is growing at a rapid pace, as evidenced by emerging professional organizations, journals, and interest groups. In 2012, the American Public Health Association (APHA) officially recognized Physical Activity as a primary special interest group of APHA. As the science and practice advance, more and more students are developing an interest in this area and job opportunities will increase as health care reform takes place. The faculty in EXSS receive several inquiries each term from students interested in pursuing graduate work in PAPH. At present, we have no full-time, tenured or tenure-track faculty with 1.0 FTE, nor any instructors, dedicated to the PAPH concentration. As such, this is identified as a critical hiring need. We propose two hires in the area of PAPH with expertise in identified areas: i.e. environmental correlates of physical activity and chronic disease and disability, physical activity behavior, physical activity assessment, and other related areas of specialization. These hires would collaborate

with current movement studies in disability, PAPH, and sport and exercise psychology faculty and would teach courses in the PAPH graduate program, the MPH in PA degree, and the EXSS undergraduate program.

A second area of critical programmatic need is in exercise physiology. Exercise physiology is the study of the effects of exercise on the various systems of the body, particularly the cardiovascular, respiratory, musculoskeletal, and endocrine systems. It is a central component of the discipline of EXSS; it is required knowledge for many or most careers related to EXSS; and it continues to be a strong area of interest to potential graduate students at OSU. However, at present, we have no tenured or tenure-track faculty with 1.0 FTE dedicated to this area. Although we have instructors who do an excellent job helping to meet the undergraduate teaching demands, we offer very few graduate courses in exercise physiology, leaving major gaps in the education of many graduate students. The research in and related to this area within the program has also been constrained by the limited faculty resources. That being said, we have existing faculty within the School with strengths in exercise and skeletal physiology, as well as innovative and advanced research instruments (e.g., DXA, Micro-CT, vibration platforms) that can be leveraged to support a full-time hire who can re-establish this area. An applied exercise physiologist with a particular interest in the physiologic basis of the exercise-health relationship, epidemiology, and intervention research would be able to collaborate with many existing faculty members in movement studies in disability, neuromechanics, PAPH, and sport and exercise psychology. We have identified such a hire as a critical need for our unit. If four hires were permitted, we would advocate for a second hire in this area to strengthen the collaborative opportunities for exercise physiology faculty and support graduate program growth.

Our vision is that the program in EXSS will move forward with a unifying focus on physical activity (PA) and health and that this will become our signature area of research distinction, particularly in the areas of disability and health and community-based PA interventions. At present we have faculty conducting research in such areas as PA promotion programs for people with disabilities, PA for falls and fracture prevention in older adults, psychosocial and sociocultural determinants of PA behaviors, motor skill development and its impact on health behaviors in children with disabilities, and anterior cruciate ligament injury prevention. Yet this research largely is focused at the level of individual and small group behaviors. The addition of faculty in PAPH will strengthen the program by providing a bridge between the individual/group and the larger community. The addition of faculty in exercise physiology will further strengthen the program by providing key expertise regarding the mechanistic bases underlying the effects of PA behaviors and the translation of that knowledge into PA interventions. With the addition of these critical missing components, the program in EXSS will be poised for distinction in our signature area of PA and health.

Action Item 3.2.1: Develop and approve position descriptions for the two PAPH and one exercise physiology tenure-track hires. [Wilcox; Apr-Jun, 2013]

Action Item 3.2.2: Appoint two search committees; one for PAPH and one for exercise physiology. A single search committee can review applicants for multiple positions in a particular area. [Wilcox; Apr 2013-Jun 2014]

Objective 3.3. Reduce teaching loads of faculty actively engaged in scholarship and actively pursuing extramural funding.

Rationale: The current PHHS Guidelines for Faculty Assignments document states that “External funding can change teaching and research assignments when the funding provides sufficient faculty salary and benefits to justify the adjustment and when the faculty member and co-directors agree.” However this does not accommodate the time needed to develop pilot work and/or grant proposals for competitive RFAs. Thus, we propose that faculty with fundable foci and ideas be afforded release time to develop competitive grant submissions.

The Research Office currently offers small awards from \$3500-\$6000 to cover the costs of a replacement instructor to cover one course, or similar responsibilities, normally presented by applicants. However, there are a limited number of these University-wide competitive awards available each year. Thus, we propose to develop a policy within the EXSS program to support the release time of faculty to develop grant proposals. This would demonstrate our shared value for research and acknowledge the reality of the time required to develop fundable proposals.

Action Item 3.3.1: Appoint a committee to develop a release time policy for EXSS program faculty who are developing and submitting grant proposals. The policy would be included in the faculty workload document. [Wilcox; Jan-Jun, 2013]

Concluding Comments and Recommendations

We are excited at the prospect of the program in EXSS moving forward in order to fully realize the individual and collective potential of the faculty. Our faculty makes significant contributions to the College of Public Health and Human Sciences, especially given the resources available and the competing demands on our time. We also, however, embrace the challenge of continuous improvement and contend that the goals and objectives outlined in this strategic plan will further our contributions and take us to a higher level of distinction.

We forward some final recommendations that stem from recognizing the considerable transformation our program will experience in the near future if the proposed strategic plan is adopted. First, it might be timely to engage the faculty in a conversation about changing the name of the program from Exercise and Sport Science to a name that better reflects our mission, vision, and alignment with peer programs. Second, as several objectives implicate increased revenue streams, we suggest administrators and faculty discuss programmatic needs and the potential for money being returned to the program to support funding priorities. Third, we recommend that a periodic review be implemented to determine the success of the various ideas adopted in this strategic plan and the need for additional changes that would benefit the program.

We appreciate the opportunity to offer suggestions regarding the direction of our program in EXSS. The process has stimulated some difficult yet necessary conversations, and we are well aware that the real work of implementing actual change lies ahead. While we cannot emphatically state that the proposed changes are necessarily the correct changes, we are in agreement that the status quo will no longer suffice and that exploring well-reasoned alternatives is preferable to no change at all.

Graduate Council

Proposed Graduate Council Internal Policies:

1. Approval of graduate program faculty, in accordance with Graduate Council policy, is delegated to the Graduate School.
2. For program reviews, the reviewers shall discuss their review for 15 minutes prior to inviting in the department chair & dean to the meeting.
3. For program review updates, only the reviewer needs to come to the GC meeting if there is no problem with the progress of the program. However, if the reviewer feels that there are issues of concern that need to be addressed, then the chair of the program will be invited to the meeting 15 minutes after the reviewer presents his/her concerns to the GC.
4. The current policy is to allow for up to a one-year delay to accommodate requests for simultaneous undergraduate and graduate program reviews.

Graduate Council

**January 13, 2014
2:00-3:00 PM
128 Kidder Hall
Agenda**

Remote participation – J. Casbon, 541-322-3107

2:00-2:05 **Introductions and Housekeeping**

2:05-2:15 **New Curricular Proposals**

- Post-bacc Certificate in Accounting – Extend to OSU-Cascades (MOU)
Graduate Council Reviewer: Jim Coakley
 - [Online version](#)
 - [PDF version](#)
 - Cascades currently delivers undergraduate major in Accountancy
 - Certificate is intended for those who have already completed an undergraduate degree, but want to transition into the Accountancy field. Requires completion of all accounting coursework needed to sit for the Certified Public Accountant (CPA) exam
 - Cascades has slack within their accounting courses – will not require additional resources to offer the certificate
 - Approved by Business Faculty.
 - Recommend approval
- New Graduate Option – Entomology
 - [Online version](#)
 - [PDF version](#)
 - See word document attached to proposal – Ent Option in Hort. Well-written proposal with liaison
 - Recommend approval

2:15-2:30 **International Dual Degree Programs** – Kim Johnson

- [Proposal](#)

2:30-2:50 **Proposal for a Co-degree Masters Program** – Dean McComb

**January 27, 2014
2:00-3:00 PM
128 Kidder Hall
Agenda**

Anticipated Absence: D. Ross

2:00-2:05 **Housekeeping**

2:05-2:20 **Policy Discussion** – time limit for degree

- From the "[Policies governing all Master's degree programs](#):"

Time Limit

All work toward a master's degree, including transferred credits, course work, thesis (if required), and all examinations, must be completed within seven years.

- A doctoral student can count all Masters and grad certificate credits toward a doctoral program of study regardless of how long ago they were taken.
- Given the university learning outcomes of mastery of material in the discipline, graduate committees should be examining students based on the current state of knowledge. Should there be a time limit for Masters? Should there be a time limit for PhD?

2:20-2:40 [Proposal for a Co-degree Master's Program](#) – Dean McComb

2:40-2:50 **Update on Assessmant** – Anita Azarenko

Graduate Council

**March 3, 2014
2:00-2:50 PM
128 Kidder Hall
Agenda**

2:00–2:15 – **Review and Approve Options in MBA Program**

- These are all conversions of existing Areas of Concentration to transcript visible options.
- Question to ponder: Should we require assessment plans a) only for new proposals, b) on all proposals, even if converting existing AOC (I support b, but am biased)
- Should all proposals come to the council or should approval for conversions of existing AOCs be delegated to Council Chair and Associate Dean of Graduate School? All new proposals would come to the council. Potential problem would be ability to back-door process by getting AOC approved first, then immediately submit Cat. II to create option.
- I view these proposals as test cases – what do we want to see, what process should be used?
- [Commercialization](#)
- [Global Operations](#)
- [Marketing](#)
- [Wealth Management](#)
- [Research Thesis](#)

2:15–2:30 – **Continued Discussion**

- Graduate students teaching other graduate students – feedback from units
- Obligation to assure advisor and committee after prelims.

2:30–2:50 – [Proposal for the Accelerated Graduate Pathway](#) – aka 4+1/3+2

Graduate Council

March 10, 2014
2:00-2:50 PM
Weatherford Board Room (fifth floor)
Agenda

Remote participation – J. Casbon, 541-322-3107

Anticipated absence: N. Kerkvliet, M. Lerner

2:00–2:10 – Review and Approve Options in Clinical Health Sciences: Clinical Sciences Graduate Option in Comparative Health Sciences

- [Online version](#)
- [PDF version](#)

2:10–2:11 – [Revisit Policy Governing Graduate Student Teaching](#)

2:11-2:30 – Accelerated Graduate Pathway – aka 4+1/3+2 (left over from 3/3)

2:30–2:40 – Waive 18 credit requirement for doctoral minor for PhD students already admitted to Aging Sciences minor:

- Background. Minor was approved before Curriculum Proposal System was modified. When College Representative “approved” proposal, it immediately went to Curriculum Council without going through Graduate Council or Graduate School (CPS has since been fixed). The Curriculum Council did not have a representative from the Graduate School or Graduate Council. They presumed it was approved by both. Note: there is no blame here – just one of those cracks in the system during implementation of a new policy.
- Result – Aging Sciences minor was approved for both Doctoral and Masters with a 15 credit requirement (versus 18 credits required for minor at Doctoral level).
- Request: “Since the Aging Sciences minor was approved with 15 credits, it would be helpful if the current IGERT students can be “grandfathered” in so they don’t have to now add another course and change their programs of study. We will change the requirements going forward, but it seems unfair to current students to make them change from what was previously approved. Thanks for your consideration of this request.”

2:40–2:50 – Matter arising

Graduate Council

**April 7, 2014
11:30 AM - 1:00 PM
128 Kidder Hall
Agenda**

Remote participation – J. Casbon, 541-322-3107

Anticipated absence: D. Ross

- 11:30 – 11:40 [Revisit Policy Governing Graduate Student Teaching](#) – again
- 11:40 – 11:55 [Change to Standing Rules of the Graduate Council](#)
- 11:55 – 12:10 [Change Graduate Minor in Women, Gender, and Sexuality Studies](#) – Janet Lee
- Updates the minor to reflect a change from three credit to four credit WGSS graduate courses.
- 12:10 – 12:20 **Pilot study – Three-year Degrees**
- Two years ago, the Graduate Council (and subsequently Faculty Senate) approved a three-year pilot program where we could demonstrate that individuals from UK-based systems with three-year degrees did have the appropriate educational background to be admitted as a graduate student at OSU. Note that we do accept three-year degrees from Bologna-compliant schools (which is restricted to Europe). The initial pilot program was focused on India.
- The current OSU policy is to not accept the Australian 3-year Ordinary degree. The general recommendation from those who are experts in international institutions recommend that US institutions which accept the Bologna-compliant three-year degrees should also accept the Australian three-year Ordinary degree.
- Since we are two years into a three-year pilot program, I would ask that the Council approve an amendment to expand the Pilot Study to include three-year Ordinary degrees from Australia and New Zealand.
- 12:20 – 12:30 **Graduate School Update**
- 12:30-12:45 [Continuous Enrollment](#)

Upcoming: Get feedback from programs on IR data

3:20 – Approval of Co-degree Programs Proposal

- [Proposal for a Co-Degree Masters Program](#)

Email from Dean McComb:

"Susie Brubaker-Cole, Toni Doolen and I have revised the proposal that provides a framework for graduate and undergraduate programs to develop co-degree programs that would allow undergraduate students meeting program-defined entrance requirements to enter into a Masters degree program while completing their undergraduate degree. Based on a review of programs at other universities, discussions in the past with both councils, and feedback from OSU students, the revised document represents our best effort at providing the foundation for formation of new co-degree programs. We seek approval by both Curriculum Council and Graduate Council for this proposal and ultimately would like to present this to the full Faculty Senate. By having this foundational document in place, preparation of co-degree programs by units should be expedited."

Graduate Council

June 10, 2013
3:00-5:00 PM
128 Kidder Hall
Agenda

3:00 – **Welcome**

3:05 – **Category I Proposal**

Rename Master of Science (MS) in Counseling Program to Master of Counseling (MCoun) #86455
Graduate Council Reviewer: Cass Dykeman, College of Education

- [Online version](#)
- [PDF version](#)

3:20 – **Environmental and Molecular Toxicology Graduate Program Review**

Graduate Council Reviewer: Stacy Semevolos, D.V.M.

- [Final report](#)
- [Unit response](#)

3:35 – **Electrical Engineering and Computer Science Graduate Program Review**

Graduate Council Reviewer: Jim Coakley, College of Business

- [Final report](#)
- [Unit response](#)

3:50 – **Discussion – Role of Graduate Council Reviewer in Graduate Program Reviews**

Current responsibilities (Jim Coakley's perspective):

- Participate in review – External reviewer has overall responsibility for the report and sends report to the Graduate School. Graduate School then sends report to department for corrections, and returns suggested corrections to the review team for inclusion in final report.
 - Note – there has been one situation where internal reviewers were excluded from this process – should there be a more explicit role for the Graduate Council Reviewer?
- Present review to the Graduate Council, lead discussion of the review with the Dean and Chair of the program. Liaison with review team, if clarifications are needed in the report.
- Participate in presentation of Action Plan to Provost and Graduate School Dean.
 - Note – neither the Graduate Council nor the GC Reviewer are involved in approval of the action plan.
- Conduct three-year follow-up of the action plan. Merely report to Graduate Council if everything is on track. Council may ask Dean and Chair for clarification and updates as needed.

4:10 – **Discussion of Issues from Graduate School**

Dean McComb

4:30 – **Adjourn**

Faculty Senate, Oregon State University, Corvallis, OR 97331-6203 · 541.737.4344

Agenda

11:30 – **Welcome**

11:35 – **Finalize Committee and Review Assignments for the Year**

Program	Department	Term	Review Type
Adult Education	Adult Education & Higher Education Leadership	Fall	GCPR
College Student Services Administration	Adult Education & Higher Education Leadership	Fall	GCPR
Civil Engineering	Civil, Construction, & Environmental Engineering	Wtr	GCPR
Human Development & Family Studies	Human Development & Family Sciences	Spr	GCPR
Wood Science	Wood Sciences & Engineering	Spr	GCPR & NIFA

Awards		
Laurels Block Graduate Program	Dec.15, 2012-Jan, 31, 2013	(GC), Filtz + 3 outside members
Oregon Lottery Scholarship <i>3 members</i>	Winter/Spring – March 2013	(GC), Casbon and Herman
Bayley/Yerex Fellowships <i>3 members</i>	Winter 2013 – February 2013	Lerner, Semevolos and Jump
Frolander Outstanding GTA Award <i>2 members</i>	Spring 2013 – April 2013	Ross and Filtz
CGS/UMI Dissertation and WAGS/UMI Thesis Awards <i>2 members</i>	CGS – May 2013 WAGS –July 2013	Jump and Ross

Excellence in Graduate Mentoring Award <i>2 members</i>	Spring 2013	Chi, Buckingham, Casbon and Kerkvliet
--	-------------	---------------------------------------

11:45 – **Discussion – two related topics:**

1) Final Exam for non-thesis Master's Program

Proposed change (in caps): Successful completion of a final oral examination is required for all THESIS-BASED master's degrees. Some departments also require the student to pass a written exam prior to the oral exam. PROGRAMS MAY REQUIRE EITHER AN ORAL FINAL EXAM OR A WRITTEN FINAL EXAM (OR BOTH) FOR NON-THESIS MASTERS STUDENTS BUT THE EXAM MUST ASSESS THE LEARNING OUTCOMES IDENTIFIED BY THE UNIVERSITY AND BY THE PROGRAM.

The proposed change allows either an oral or written exam. What if learning outcomes are assessed at the individual level using different mechanisms – combinations of assignments/projects/exams across multiple courses? Is the purpose to ensure every student earning a Master's degree has a final exam, or to ensure every student is individually assessed with respect to university and program level outcomes?

2) Competency based degree programs

[UW \(University of Wisconsin\) Flexible Option](#)

These universities/programs provide this option:

- Southern New Hampshire
- Portmont College at Mount St. Mary's
- Charter Oak State College
- University of Wisconsin
- Western Governor's
- Capella
- Northern Arizona University
- Baylor

These programs seem to be focused on demonstrated achievement of learning outcomes, and allows the use of non-academic experiences. Raises numerous issues – including the minimum number of graduate academic credits required to earn a degree.

12:15 – **Discussion of issues from Graduate School**
Dean McComb

12:45 – **Adjourn**

11:55 – **Renaming an Academic Program Proposal – Pharmaceutical Sciences – MS, PhD. #87166**

Graduate Council Reviewer: Theresa Filtz

- [Online version](#)
- [PDF version](#)
 - The College of Pharmacy seeks to rename our graduate degree program, such that graduate students in the College will receive a degree in 'Pharmaceutical Sciences' rather than the current designation of a degree in 'Pharmacy.'

12:10 – **New Option Proposal – Engineering Management #87775**

- [Online version](#)
- [PDF version](#)

12:30 – [Graduate Teaching Policy](#) – Discussion

12:45 – **Adjourn**

** Weatherford Board Room Directions – As you approach Weatherford from the MU, go under the arch and enter the door on the right side. From there, take the elevator to the fifth floor. The Board Room is down the hall on the left. There is limited access because the board room is in the residence hall section of Weatherford, so taking the stairs is not an option.

Graduate Council

January 12, 2012 ~ Noon-1:30 PM 128 Kidder Hall Agenda

1. Review of Minutes: [November 16](#) and [November 30](#) – (15 min) Note: The December 7 minutes will be presented for approval on January 26
2. [Petition for delay of Botany & Plant Pathology](#) review by Lynda Ciuffetti (15 minutes)
3. [APC Reports](#) (20 minutes)
 - a. MAT in Science Education/MAT in Mathematics Education (Jim)
 - b. Environmental Engineering MS and PhD program cat I (Vinod)
 - c. Ominbus CLA Cat I (Carolyn)
4. Nutrition revisited – maintain or maintain/restructure? (10 minutes)
5. [Comparison of Proposed Metrics](#) (30 minutes) – Denise Lach, Vinod Narayanan, Carolyn Aldwin

6/2/11 - Motion: Graduate programs with an international applicant who does not have a four-year bachelor's or an appropriate alternative degree, e.g. a professional degree of at least four years duration, but who meets all other requirements for admission as a graduate student at OSU, may appeal the admissions denial to the Graduate Admission Committee (GAC). The GAC, based on evidence presented by the graduate program, will determine if the student has sufficiently demonstrated preparedness to enter a graduate program and may provide an exception to allow admissions. The Graduate Council will review this policy in one year with input from the GAC.

6/9/11 – It was also suggested that when the Geosciences Program Review Report is presented to the Graduate Council and the Provost, both deans should be present at the meetings.

Pending:

- June 2012 – See 6/2/11 motion to review appeals by international students who don't have 4-year or alternative degree but meets all other requirements.
- Geosciences GPR Report – Provost and both deans should be present at GC meeting – see 6/9/11 minutes
- Graduate School Strategic Planning Team (Brenda, Jim & Theresa must be present)

Next scheduled meeting: January 26 ~ Noon-1:30 PM

Graduate Council

September 27, 2012
Noon-2:00 PM
Weatherford Hall Trysting Tree Conference Room D107
Agenda

Attendance: D. Jump – late arrival

1:00 Welcome and Introductions

1:05 Approval of [June 6 Minutes](#)

1:10 Review [Graduate Council Standing Rules](#)

1:20 Program Reviews

- Discuss revised review guidelines (Assoc. Dean Azarenko)
- Expected review presentations to the Graduate Council

Program	Meeting with Becky Warner	Graduate Council Rep to present the report	Department Head/ Program Director to be invited to the GC meeting	Graduate Council Meeting
MPP	November 6th	Mike Lerner	Brent Steel	Oct 11
Horticulture	November 9th	Denise Lach	Bill Braunworth/Anita Azarenko	Oct 11
Physics	November 16th	Mike Lerner	Henri Jansen	Oct 25
CCLP	December 3rd	Murray Levine	Darlene Russ-Eft	Oct 25

Overview of proposed reviews for upcoming year.

1:35 Process for review of curriculum proposals

- Courses – new/change
- Degrees – Cat I's
- Options – new this year
- Graduate Certificates

2:00 Deferral of Graduate Reviews – policy
[Request for delay of Applied Ethics review](#)

2:15 Issues:

- What is the role of the Graduate Council Representative during dissertation/thesis process?
- Should input from Graduate Council Representatives be considered in program reviews?

2:30 Process for review and removal of grad faculty

- Proposal: Graduate faculty should be reviewed (re-nominated) every five years. In those situations where performance as a graduate faculty becomes an issue, the review may be accelerated.

2:40 Review and approval of [Family and Medical Leave Policy](#)

2:50 Update on strategic priorities for the upcoming year (Dean McComb, Graduate School)

Information Item:

- [Directions to Weatherford D107](#) – From the corner of JEFFERSON WAY and 26th ST: The Trysting Tree Conference Room D107 is located through the right wing entrance way (with the wheel chair ramp) of Weatherford Residential College (see the map at <http://emilive.com/portals/274/tour/2096/14.html>). Walk through the entrance way and take a right around the corner. The room is located straight down the hall to the left of the glass wall cabinet.

Graduate Council

December 6, 2012

Noon-2:00 PM

Weatherford Hall Trysting Tree Conference Room D107

Agenda

- 12:00 – 12:15 [Community College Leadership Program Review](#) – *Unit representatives: Dean Larry Flick and Darlene Russ-Eft*
- [Graduate Council Recommendations](#)
- 12:15 – 12:20 **Approval of Minutes**
- November 8
 - November 15
- 12:20 – 12:30 **Category I – Renaming an Academic Program Proposal – From Women Studies Program to Women, Gender and Sexuality Studies**
- [Online version](#)
 - [PDF version](#)
- 12:30 – 12:45 [Physics Program Review](#) – *Unit representatives: Dean Vince Remcho and Henri Jensen*
- [Graduate Council Recommendations](#)
- 12:45 – 13:00 **MOU Proposal – Low Residency MFA in Creative Writing Offered at Cascades**
- [Online version](#)
 - [PDF version](#)
- 1:00 – 1:20 **Discuss [Final Examination](#) requirements when no thesis is involved**
Background: There are multiple departments that would like some flexibility in the final examination requirement for non-thesis programs. The issue revolves around the use of alternative methods to determine that the student has achieved the learning goals for the program. A classic example is the use of a written exam. If the emphasis is on assurance of learning, should there be some flexibility in the exit requirements that allow alternative direct methods to demonstrate assurance of learning?
- 1:20 – 1:30 **Graduate Council Assignments**
- 13:30 **Matters Arising/Continued Discussions**

Information Item:

Jo Tynon will chair the meeting in Walt Loveland's absence.

Pending Issues:

- Discontinuing little-used graduate minors
- Discussion of transcript visibility of "options/areas areas of concentration" for graduate degrees.
- Revision of self-study guidelines (Loveland and Fisk)
- Report of Science & Math Education program review
- Assuming approval of GLOs for the PhD degree by the Faculty Senate, GLOs for Masters degrees.
- Mike Kent's motion to allow admission of DVM holders to graduate studies.
- A discussion, motivated by Jim Coakley's request but going way beyond that, of the general issue of recognizing/creating transcript visible recognition of "options"/"areas of concentration"/etc for graduate degrees.
- Consideration of the Cat I proposal to create a School of Public Policy
- Consideration/evaluation of the reorganization Cat I proposals for those units requesting postponement of graduate program reviews, such as Horticulture.
- Follow up reviews for Food Science
- Revisit BPP program review (see Oct. 23, '09 minutes)
- Review of Cat I certificates - 10-year review?
- Review Int'l Admission Standards

Graduate Council

**February 25, 2011
10:00AM–10:50PM
128 Kidder Hall**

Agenda

1. 10:00 AM – Approval of [February 18 minutes](#)
2. 10:05 AM – Nutrition and Exercise Science Graduate Programs Program Review - Tony Wilcox
 - Email traffic [attached](#)
3. 10:25 AM – Report of the College of Business with respect to the MBA Degree and its separation from the Graduate School - Jim Coakley representing Ilene Kleinsorge.
4. 10:35 AM – Selection of metrics to judge the success of the MBA separation. Metrics might include:
 - a. the number of students enrolled vs. the number in 2010.
 - b. progress towards the 50/50 INTO/domestic mix promised to the Provost.
 - c. data on admitted students to determine if they met all requirements such as 3.00 GPA, TOEFL scores, 4-year baccalaureate from an accredited university, maximum of 15 reserved credits, transfer courses met standards, completed degrees have a minimum of 45 credits, work must be completed in 7 years, graduation GPA was 3.00 and possibly others.
 - d. any progress toward solving the problems concerning the oral exams for the MBA students and how this is being handled re: their commencement.

Pending Issues:

- Discontinuing little-used graduate minors
- Discussion of transcript visibility of "options/areas areas of concentration" for graduate degrees.
- Revision of self-study guidelines (Loveland and Fisk)
- Report of Science & Math Education program review

Meeting Agenda

9 October, 2009
1:30-3:30 PM – MU 206

1. 1:30-2:00 Awards Recognition
2. 2:00 - [Teacher and Counselor Education Report](#) - Sue Ann Bottoms and Sam Stern
3. Approval of Minutes from [25 September Meeting](#)
4. Discussion of New Cat II Review System

Items Pending:
<ul style="list-style-type: none">• 7xx/8xx courses and VM/Phar/HHS request• Grad Review of MPH, PhD in PH--petition to postpone (reschedule to 10/23)

New Cat. II Review System

1. **All Cat. II proposals will be reviewed by a primary and a secondary reviewer.** The primary reviewer will be the Grad Council representative from the college submitting the proposal. The secondary reviewer will be chosen in a way that balances the work load. The primary reviewer will be the person who interacts with the electronic proposal review system. The primary reviewer will be responsible for ensuring a timely response to each proposal.
2. **A proposed schedule of primary and secondary reviewers for 2009-2010 is as follows:**

College	Primary	Secondary
Ag	Wolpert	Lach
Business	King	Loveland
CLA	Lach	Wolpert
COAS	Colwell	Aldwin
Educ	White	Tynon
Engr	Narayanan	O'Reilly
For	Tynon	Colwell

HHS	Aldwin	Cui
Phar	Cui	King
Sci	Loveland	White
VM	O'Reilly	Narayanan

3. **When a Cat II proposal is received for review by the Graduate Council, an email will be sent to all members of the Council.** (Sorry about that—the system needs work). The primary and secondary reviewer should immediately begin reviewing the proposal, while all others can just delete the email. The secondary reviewer communicates his/her comments to the primary reviewer and the primary reviewer enters a joint comment into the system. The primary and secondary reviewers will receive “friendly” reminders at periodic intervals until the review is finished. The goal is a one week turnaround.
4. **The criteria for evaluating Cat II proposals are as follows:**
 - a. The key question is likely to be, Does the syllabus indicate that the students will receive graduate level instruction?
 - i. Does the syllabus have learning outcomes? Are some learning outcomes more than memorization and comprehension? Do at least some learning outcomes require analysis, experimentation, synthesis, proposing, evaluation, defending, predicting, evaluating, creating
 - ii. Does grading assess if the graduate level learning outcomes have been achieved?
 - iii. If the course is a slash course, is the graduate part of the class graduate level learning
 - iv. Does the syllabus contain the minimum requirements
(http://oregonstate.edu/ap/curriculum/policies/S_syllabus.html)?
 - b. Has appropriate liaison been conducted with other graduate units
 - c. Other
5. **The detailed instructions for interacting with the electronic proposal system are as follows:**
 - (a) Start at the Academic Planning and Assessment site for Category II proposals:
<http://oregonstate.edu/ap/curriculum/catii.html> (Review the Cat II submission details.)
 - (b) Click the red text that starts **Please...
 - (c) Log in with your ONID username and password.
 - (d) In this new page "Curriculum Proposal System Home" find and click the "All Proposals" link on the upper left.
 - (e) This gives you various search terms for proposals. Enter the proposal ID or change the "Review Group" to Graduate Council.
 - (f) Click "Search" and then click the proposal to be reviewed.
 - (g) Just below the Status line, Click "Hide All Reviews" to show all previous reviews and originator responses.
 - (h) Review the "Proposal" and the "Course Information" sections.
 - (i) Review the documents in the "Documents" section.

(j) If you are the Graduate Council secondary reviewer, send your recommendation to "Approve" or "Send Back" to the Graduate Council primary reviewer. If your recommendation is to "Send Back", then include comments on what the proposal lacks. Note that your name will be automatically included in the comments that are returned to the originator.

(k) If you are the Graduate Council primary reviewer, once you have received comments from the secondary reviewer either "Approve" or "Send Back" with comments.

6. This system of reviewing cat. II proposals will be operational on 9 October, 2009. Until then the traditional system will be used.

7. Email addresses of voting Council members:

Graduate Council

Agenda October 28, 1999

- 1. [Proposed Modification to Admission Policies](#) (J. Higginbotham)
- 2. [Presentation of Current Program Review Procedure](#) (J. Higginbotham)
- 3. [Discussion of Revising Program Review Procedure](#) (S. Francis)
- 4. [Discussion of 400/500 Differentiation](#) (S. Francis)
- 5. [Graduate School Strategic Plan](#) (S. Francis)
- 6. [Other Business/Announcements](#)
The meetings for the rest of the Fall term:
November 11, 1999-- 3:00-5:00pm-- Kerr Admin. Bldg. 650
December 9, 1999-- 3:00-5:00pm-- Kerr Admin. Bldg. 650

Graduate Council

Agenda October 14, 1999

1. Introduction of New and Continuing Members (M. Christensen)
2. Standing Rules of the Graduate Council (M. Christensen)
3. Appoint Committees (M. Christensen)
Category II Course review (need 3 - year long)
Scholarship/Fellowship Review
 Bayley/Yerex (need 3 - Winter term)
 Sports Lottery (need 3 - Winter term)
 Frolander Outstanding GTA Award Review (need 1 member - Spring)
 WICHE review (need 3 - Fall/Winter terms)
4. Graduate Education Round Table (S. Francis)
5. Status of Graduate Student Communications (S. Francis)
6. Other Business/Announcements

The meetings for the rest of the Fall term:
October 28, 1999 3:00-5:00pm Kerr Admin. Bldg. 650
November 11, 1999 3:00-5:00pm Kerr Admin. Bldg. 650
December 9, 1999 3:00-5:00pm Kerr Admin. Bldg. 650

Graduate Council

Agenda September 23, 1999

1. Introduction of New and Continuing Members (M. Christensen)
2. Standing Rules of the Graduate Council (M. Christensen)
3. Potential Agenda Items for 1999-00 (M. Christensen)
 1. Programs to be reviewed in 99-00
 - Human Performance and Movement Studies in Disability - Winter
 - Economics - Spring
 - Animal Sciences - Spring
 - Rangeland Resources - Spring
 2. Category I proposals
 - MPIA -- Master of Public and International Affairs
 - MFA for the Creative Writing Program in English
 - Master of Ethics -- Philosophy
 - MA in History
 3. Certificate Programs
 4. Electronic dissertations
 5. Graduate Admission policies
4. Appoint Committees (M. Christensen)
 - Category II Course review (need 3 - year long)
 - Scholarship/Fellowship Review
 - Bayley/Yerex (need 3 - Winter term)
 - Sports Lottery (need 3 - Winter term)
 - Frolander Outstanding GTA Award Review (need 1 member - Spring)
5. Graduate Education Round Table proposal (S. Francis)
6. Graduate Student Communications (S. Francis)
7. Status of GTA/GRA Unionization Activities (S. Francis)
8. Other Business/Announcements
The meetings for the rest of Fall term:

October 14, 1999	3:00-5:00pm	Kerr Admin. Bldg. 650
October 28, 1999	3:00-5:00pm	Kerr Admin. Bldg. 650
November 11, 1999	3:00-5:00pm	Kerr Admin. Bldg. 650
December 9, 1999	3:00-5:00pm	Kerr Admin. Bldg. 650

Graduate Council

April 7, 2014 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Theresa Filtz, Greg Herman, Don Jump, Nancy Kerkvliet, Mike Lerner, Andreas Schmittner, Stacy Semevolos

Voting Members Absent: Janet Lee, Darrell Ross

Ex-officio Member Present: Anita Azarenko

[Revisit Policy Governing Graduate Student Teaching](#) – again

- During a meeting with associate deans and Dean McComb, it was decided to let each unit resolve conflict of interest cases. GTA's teaching graduate courses, including evaluation of work, must be approved by the Graduate School, and the unit must divulge conflict of interest when the application for graduate faculty status is submitted.
- A request for definition was made. No process was determined in the meeting with the associate deans. Currently either a resume or vitae and justification of why one should teach graduate courses is forwarded to the Graduate School; for GTA's the documentation must also indicate why there is no faculty of record. Anita noted that has been an exception when it has rarely occurred, and approval was for a specific course, not an appointment as a graduate faculty member.
- Need to ensure that an individual is qualified to teach a graduate course and that there is no conflict of interest. There have been two requests that a process be put in place for the college or unit to approve GTA's to teach in their discipline.
- There is already a policy in place for exceptions through the Graduate School. It would be rare for the Graduate School to not approve an exception request if all of the documentation is in order.
- Part of the policy would be to define the process for exceptions.
- If there is concern of whether a dean or unit head is being objective, there would need to be an appeal process.

Action: Jim will revise the policy and resubmit to the Council for consideration.

[Change to Standing Rules of the Graduate Council](#)

- Appointing faculty should be an administrative function, and Jim felt that the Graduate Council should focus on curriculum. For some time, the Council has delegated graduate faculty appointments to the Graduate School.
- Question: Should both implementation and policy be delegated to the Graduate School?
 - Would the Graduate Council approve all policies related to graduate faculty appointments? Currently, anyone teaching a graduate course must be appointed to the Graduate School.
 - Question: what about adjunct faculty? The Graduate Council should approve any changes to restrict faculty who may have certain criteria, and the proposed revision may not allow for this to occur.

Action: Revisions were tabled to the next meeting when Jim will distribute a copy of the current graduate faculty for review.

[Change Graduate Minor in Women, Gender, and Sexuality Studies](#)

Updates the minor to reflect a change from three credit to four credit WGSS graduate courses.

- Janet was not present, but Jim indicated that all the courses are stand alone. This change would correct the syllabus to reflect the correct number of credits.

Action: Discuss this issue further when Janet Lee is present.

Pilot study – Three-year Degrees

Background: Two years ago, the Graduate Council (and subsequently Faculty Senate) approved a three-year pilot program where we could demonstrate that individuals from UK-based systems with three-year degrees did have the appropriate educational background to be admitted as a graduate student at OSU. Note that we do accept three-year degrees from Bologna-compliant schools (which is restricted to Europe). The initial pilot program was focused on India.

The current OSU policy is to not accept the Australian 3-year Ordinary degree. The general recommendation from those who are experts in international institutions recommend that US institutions which accept the Bologna-compliant three-year degrees should also accept the Australian three-year Ordinary degree.

Since we are two years into a three-year pilot program, Jim Coakley is requesting that the Council approve an amendment to expand the Pilot Study to include three-year Ordinary degrees from Australia and New Zealand.

- Because applications from Australia and New Zealand are not included in the three-year pilot, Jim suggested that these two countries be added to the pilot. They were not initially included because the pilot focused on recruiting students from India.

Action: Theresa moved to extend the current three-year pilot program to include Australia and New Zealand; motion seconded and passed. Jim will notify International Programs and the Graduate School that the three-year program was extended to include Australia and New Zealand.

Graduate School Update

- Dean McComb is telecommuting while caring for an ill family member.
- April 11 – closing date for the Graduate School Associate Dean search; there are good candidates for this half-time position which is a slight modification of Barbara Bond's former position; interviews will likely occur soon.
- April 14 and 15 – Two candidates for the MCB Director position will interview.
- April 16 – Graduate Program Review workshop for all programs scheduled to be reviewed in the next five years.
- May 15 – The Graduate School is hosting a Recognizing Excellence Reception from 6:00-8:00 PM for all graduate students receiving fellowships managed via the university scholarship system – students will be invited personally, as well as program directors.
- May 19 – Larry Roper will conduct a mentoring workshop.
- Anita will send a reminder this week requesting narratives for program evaluations.

Certificate Programs and Continuous Enrollment

- Does leave of absence apply to certificate programs? Technically certificate programs enroll graduate students, although sometimes there are applicants who are not graduate students. If admitted as a graduate student, then the leave of absence policy applies.
 - If one is in certificate program, should they be required to request a leave of absence?
- Should certificates be assessed during the program reviews? Certificates exist, but there is no review or assessment. Graduate program reviews have been inconsistent for certificates. Should guidelines be changed to require a review of certificates associated with graduate program reviews?
- Should learning outcomes and assessment be required for new certificates?
- One concern is that if enrollment plummets for a certificate, and it is no longer meeting a need, who monitors that?

Action: Don moved to exclude graduate certificates from the continuous enrollment policy; motion seconded and passed. Because certificates are a Provost's policy, Anita will ask Sabah to amend the continuous enrollment policy.

Action: Anita will bring a list of certificates to the next meeting so Council members have an idea of the number and type of certificates offered.

Upcoming Meetings

The April 14 meeting was canceled; April 21 is the next scheduled meeting from 11:30-1:00 in 128 Kidder Hall.

Meeting adjourned at 12:35 PM.

Minutes prepared by Vickie Nunnemaker, Faculty Senate staff

Faculty Senate, Oregon State University, Corvallis, OR 97331-6203 · 541.737.4344

Graduate Council

January 7, 2013 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Greg Herman, Don Jump, Janet Lee, Walt Loveland (proxy for Mike Lerner), Stacey Semevolos

Voting Members Absent: Theresa Filtz, Murray Levine, Darrell Ross

Ex-officio, Non-voting Members Present: Anita Azarenko, Brenda McComb

Welcome and Introductions

In addition to the appointed members, Walt Loveland was introduced as a substitute for Mike Lerner.

Approval of Minutes

Approval of the [December 6](#) minutes was deferred.

Updates

- Scheduling – Because the next bi-weekly meeting would be January 21, which is the Martin Luther King Jr. holiday, the next meeting will be January 28, then February 4, then the Council will attempt to resume an every other week format. The meetings will adjourn by 12:50 because some members have 1:00 commitments.
- Community College Leadership Program – The memorandum was updated and sent to the Graduate School.
- The Category I to rename the Women's Studies program to Women, Gender, and Sexuality Studies was approved and forwarded.
- Physics Program Review – The memorandum was updated and sent to the Graduate School.
- MOU on Low Residency MFA – Neil Browne is scheduled to visit the Council at on January 28.

[Applied Anthropology Graduate Program Review](#) – *Reviewer: Don Jump*

- Don stated that the PhD program is still fairly new as it started in 2006 and outlined the findings of the review team. Due to recent reorganization, they are no longer a department, but a program within a school, which has led to a loss of identity, power and control of their program – they want to be viewed as anthropologists; need to improve financial (stipend) support for AAGP graduate students; need to improve student-to-faculty ratio in the AAGP (there are 60 MS thesis students and 17 PhD students for 12 faculty – this does not appear to include the MAIS students who are sponsored by the group); and staffing support needs to be increased to keep faculty from being overwhelmed with clerical work.
- The primary recommendation from the Council will be to maintain. While the Council agrees that expansion could be warranted, it was felt that the cultural issues associated with the reorganization need to be worked out before additional resources are committed for expansion. It's recommended that the MA program be continued and the newly developed PhD program shows great promise.
- The School is currently recruiting two faculty who could end up being in Anthropology, although the faculty recruitment is not specifically for Anthropology. It was noted that they may not have actively sought out other OSU anthropologists to assist with the student-to-faculty ratio. There is also the possibility of courtesy appointments from state-wide anthropologists.
- Merging into a school was a culture shock and the faculty appear to be isolated and insular; they need to reach out to other units on campus and expand the advisor base using courtesy and affiliate appointments.
- The use of descriptive words in the first paragraph was suggested to alert the Provost to issues that need to be resolved. Don agreed, but noted that it was a group decision to not include this at the beginning of the report.

It was noted that the school has pockets of money that weren't available to Anthropology.

- It was felt that the statement that there was no one does social sciences is inaccurate.

Action: At this point, the report will stand with a recommendation to maintain. Jim will summarize concerns and invite Susan Shaw and Larry Rodgers to the January 28 meeting.

Limits on thesis credits

- There has been a request to increase the number of thesis credits for Master's degrees that will still count toward the 45 credit hours. The current guidelines require a minimum of 6 and a maximum of 12 for a 45-credit hour program. The requesting unit did not provide rationale for the request.
- It was noted that the limit can be fixed internally if the unit requires students to take other courses.
- How many credit hours do peer units allow? If the allowance is based on peer institutions, this exception would only apply to the requesting unit and not the university.

Action: The Graduate Council will advise the requesting unit to provide rationale so the Council may better discuss the request and determine peer limits.

Brenda suggested that the Council may wish to look at the overall requirements at some point and determine if OSU is in line with other institutions.

Graduate Program Review Guidelines – Anita Azarenko

- Theresa Filtz and Don Jump reviewed the draft Guidelines on behalf of the Graduate Council and provided input.
- For the Metric Table on pages 3 and 4, those items marked with a 'Y' in the 'Provided Centrally' column will be provided to units on a yearly basis.
 - It was suggested that an agreement be made with the Business Centers that they pull graduate student funding rather than have each unit provide the information. Anita suggested that Institutional Research may also be able to provide the information.
 - Anita will clarify the required time period for Table K.
- There is a possibility that spring term program reviews will be allowed to use the proposed guidelines as a pilot.

Action: Jim asked the Graduate Council members to review the draft and forward comments to Anita by January 14; he will ask for an email vote.

Update on Graduate Certificate

- Brenda reported that the OUS Provosts Council agreed to adopt the Category I proposal for the Graduate Certificate in College and University Teaching and noted there is a draft position description for a .5 FTE director and a TA to assist the director. The only pushback came from PSU which has an adult education degree and considers the proposal to be in competition.

Graduate School Report

- Masters of Applied Science (MAS) – Anita explained that the MAS is used most commonly in the UK and Australia and a few US institutions; it is a professional degree, typically a non-thesis degree. The Ecologic and Organic degree is being proposed. The PSM has a strong business emphasis, which does not exist in the MAS. It was noted there is a possibility of redundancy with MEng, and others. It's wise to have an optional component that is site-based.
- Brenda noted that Catherine Mater is attempting to create an opportunity for 100-150 Iraqi PhD students to received training. OSU may be able to accommodate 30-35 per year. The deans need assurance that there will be five years of funding. The Ministry of Higher Education in Iraq is involved.
- Scholar's Insight Event – Students would present their thesis in three minutes and an award goes to the best presentation; it's not uncommon for other institutions to do something similar. This would be an opportunity for students to communicate their thesis to a non-technical audience. It would also bring attention to graduate study at OSU.
- GRAD Course Prefix – Anita noted there will be some courses that cross-cut across disciplines and there is interest in non-technical communications courses.
- Admissions – Anita reported that just under 3,000 applications have been received and the Graduate School has been answering about 100 email and 50 calls per day. There were 335 degrees that were certified in Fall 2012.

- Scholarships, Awards, Recruiting
- Laurels Block Grants will begin reviewing applicants
- Provost's distinguished awards will be reviewed in February
- Recruiting – McNair scholars are being recruited
 - Currently looking at a mechanism to work with units attending recruiting fairs so the Graduate School can follow- up.
- A foundation development officer starts this week and will begin raising funds for graduate scholarships.
- 4+1 degree – Still working on the degree, but it will be called a co-degree rather than 4+1. Students in their junior year could apply for graduate programs.
- Talking with Sabah Randhawa and Rick Spinrad about allocating funding to allow PIs to pick graduate students rather than post-doc students.

Voting members absent: Mike Lerner

Ex-officio members present: Brenda McComb

Guests: Neil Brown, Anita Helle, Leah Minc, Larry Rodgers, Susan Shaw, Bryan Tilt

Approval of Minutes

- [December 6 minutes](#) were approved as distributed
- [January 7](#) – approval deferred until February 4

Low Residency MFA in Creative Writing - MOU – *Reviewer:* Janet Lee

Unit representatives: Anita Helle and Neil Browne, OSU Cascades

- [Online](#)
- [PDF](#)
- Janet reported that the MOU proposes to extend the MFA to OSU-Cascades; it is a low-residency alternative to the high-residency program in Corvallis. Issues raised during the first discussion included the mentorship aspect, non-OSU faculty on committees, the role of the director, and assessment issues.
- Anita Helle noted that the low-residency notion is new for OSU and the structure has a very solid national precedence, including term-renewal faculty serving on thesis committees.
- Neil Browne distributed an [assessment document](#) to address concerns. The first paragraph addressed concerns about the stability of mentors. He questioned whether the Graduate School requires a certain number of faculty to which Brenda responded that one must be approved by the Graduate School as a graduate faculty member. She noted that, if they are a non-OSU faculty member, it is recommended that they co-chair the first couple of committees.
- Neil stated that they will seek out faculty with terminal degrees who are nationally known writers to serve on committees, and he will also serve on every committee. The idea is to build a solid core of faculty to work in the program on an on-going basis. Some mentors serving on committees will be ongoing faculty and they will be carefully selected to assist students in meeting benchmarks. The goal is to have the program sustain itself.
- The structure consists of two kinds of activities: 1) remote correspondence with a mentor and 2) an on-site face-to-face ten-day session where mentors are present. Core faculty will be prepared to take on the direction of theses by the beginning of the second year.
- Walt noted that the Budgets & Fiscal Planning Committee was under the impression that the non-OSU faculty would be short-term only, but it appears that they will be ongoing which would change the budget. Anita indicated that the core professional mentors contracts will be renewed. She indicated that OSU-Cascades will follow the national trend, which will be to request non-OSU faculty to consider renewing their contracts on an on-going basis after they have proven themselves. Nine-month OSU faculty would need to operate on overload during the summer. Lodging and meals will be paid for all guests. Walt questioned the figure of 54 guest writers per year. Anita responded that many more writers would be brought in than are used for correspondence terms; the average number of students in a correspondence term is 3-5. The 54 figure is not meant to imply that all would participate in correspondence terms. It was clarified that, during the summer, there will be 2 OSU faculty, 2 guest faculty and 40-50 guests for a shorter period of time.
- What is the substantive difference in the structures between Corvallis and Bend? Anita noted the

difference is in the delivery consisting of an intensive face-to-face workshop, which is the same, but requires 10 weeks in Corvallis and 10 days in Bend; the learning objectives are the same.

- Becky Johnson and Marla Hacker have indicated overwhelming support for the proposal.
- It was noted that the Corvallis MFA is highly regarded and there is carry-over from that program.
- Regarding transferability of credits, because the CLA dean felt that managing the two programs would be difficult, there will not be any reciprocal transfer at this point.
 - It was noted it's difficult to argue they are the same programs if the credits are not transferable. The proposal will serve place-bound students and those who are already in the workplace; the criteria are the same. Brenda stated that, if these are the same degrees, and they are issued by OSU, the OSU-Cascades credits must be transferable. Anita suggested adding a letter to the course numbers, such as an H used by the Honors College, to distinguish the two programs; it was argued that Honors credits are transferable.
 - The difference is that the Corvallis courses have a cap. If in a workshop in Corvallis, students are being advised on their thesis by Corvallis faculty; in Bend they will be advised by mentors.
 - It was suggested that this issue could be handled via advising.
 - Jim asked that the proposers think through the transferability, sort it out, and come back with a revised proposal.
- Regarding mentors serving as chairs, normally the MFA director would oversee the mentors. It was requested that there be a more formal process outlined in the proposal when they return.
- Neil noted that program-added benchmarks were included on page three of the document he distributed.

Discussion of Low Residency MFA in Creative Writing – MOU

- It was noted that the budget does constrain exactly the type of program they can offer.
- Is it OK to hire adjunct faculty without paying benefits? The contracts will be eligible for renewal. It was noted that one college has side-stepped paying benefits by rehiring the same faculty for over ten years. It was countered that there is a generous travel and meal allowance in the budget.

Applied Anthropology Graduate Program Review – Reviewer: Don Jump

Unit Representatives: Leah Minc Dean Larry Rodgers, Susan Shaw, Bryan Tilt

- Leah felt that the tone in the report regarding realignment was harsh in places; she noted it has been a rough couple of years and the review team picked up on the anxiety surrounding realignment. The faculty would rather that the process not be a referendum on realignment, rather, it should focus on moving forward.
- Don questioned whether the unit had problems with the report and questioned whether the concern with mixed methods on pages 16 and 17 was inaccurate (social sciences vs. humanities approach). Leah felt it comes down to the mission statement because anthropologists view themselves as social scientists and it would be problematic having a strong political or social agenda. Don suggested to 'lump together' the issues and address them in the Action Plan.
 - Another Graduate Council member felt that the social justice aspect was not as important as the focus between social sciences and humanities.
 - Leah indicated a need for them to be social scientists, but there is room for both.
- The report noted it appeared that faculty were overextended and there was not much clerical assistance available.
- Leah mentioned they were in a bind to offer a diversity of classes and suggested an advisor to assist with the graduate population, which is a priority. The faculty would like another partial FTE for support to administer the graduate program. Susan indicated when she knows the issues, she will address them. Bryan noted there is a proposal for staffing that will appear in the Action Plan.
- Another solution that may not be palatable to the program is to appoint anthropology faculty who are not in the unit – Leah was only aware of one or two faculty outside the unit with a PhD who would qualify. It was suggested that the unit rethink the PhD requirement, which may open the door to additional faculty. Leah noted they have required a PhD, but may be willing to consider this option on a case-by-case basis. It was suggested that the unit rethink who constitutes the graduate faculty members. Bryan felt there were gradations of graduate faculty. It was noted that many faculty have graduate appointments in multiple units. Leah indicated they would be open to assistance from the Graduate School in identifying graduate faculty.
- Regarding metrics, if there is anything in the Action Plan that requires a measure, make sure that metrics are included. If there is an action, include a metric so it can be measured in subsequent years.
- Leah indicated that faculty feel there has been a lack of leadership at the discipline level which strongly affects the health of both the undergraduate and graduate programs. Susan indicated she is open to

considering longer appointments in the disciplines.

Graduate Council Discussion of the Applied Anthropology Graduate Program Review

- Don will strike #C.2 under Reorganization, Vision and Culture Issues, as Don felt it may have been misphrased. Jim noted he will mention in the memo that it's felt that this is no longer an issue.

Action: Jim will recommend maintenance of the program in his memo and indicate that the report was accepted; Don will address the C.2. issue in the report.

Discussion of [Co-Degrees Proposal](#)

Brenda explained that the idea began with her and Susie Brubaker-Cole and would provide a way for students to move smoothly from a Masters to a PhD program. This proposal would create a platform for a university standard that could occur for any of the 80+ degrees and units would have the ability to increase standards above the platform. Brenda noted the proposal was considered by the Curriculum Council, which provided input; she would like approval from both the Graduate and Curriculum Councils, and then it will be presented to the Faculty Senate Executive Committee. If the proposal results in changes to entry requirements and credit counting, it would require approval by the Faculty Senate.

- The proposal would require an undergraduate 3.25 GPA to apply; the College of Public Health & Human Sciences preferred 3.0 and Engineering preferred 3.5, so they took the median. They discussed with Doug Severs at what point is a student no longer an undergraduate and no longer eligible for financial aid. The proposal is for 180 credits and Brenda acknowledged that double-counting nine credits may be controversial; some universities don't allow double-counting, while others do. The nine would be treated as transfer credits, but additional transfers would not be counted. Brenda noted that the Willamette law degree allows double-counting. This is a change that would allow undergraduates to double-count. When students take slash courses, they would have to take the 500 level courses.
 - What is the reason for the proposal? There are two primary reasons: 1) there is a large number of undergraduates who pursue an advanced degree and this proposal would reduce the amount of time and money students spend; 2) The Strategic Plan calls for recruiting high achieving students into the university and this offers incoming high achieving students the ability to finish one year earlier.
 - How does it reduce breadth and depth of coursework? Is it realistic for students to finish in one year? Some colleges are already doing something similar, but the proposal may not be attractive for some programs. This proposal would apply to exceptional students. It was noted that this may lead some students to a PhD program who may not have previously considered advancing.
 - Regarding requiring letters of recommendation from faculty, it was suggested that letters from professionals also be allowed.
 - Regarding transfer student credits, the proposal should state that a student has X number of credits toward the degree program, not just transfer credits, because some transfer students have 105 credits, but no credits in the degree program. Following discussion, the consensus was to leave decisions on admission requirements at the program level.
 - External support was questioned – how would it work in this program? At the undergraduate level, they're paid student wages, but students would be paid as a TA at the graduate level.

Action: Graduate Council members were asked to send additional comments to Brenda; she will distribute a revised proposal for Graduate Council consideration.

Housekeeping

Jim had hoped to transition meetings to every other week but, due to the workload, the Graduate Council will meet on February 4, 11 and 18.

Graduate Council

February 25, 2013 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Theresa Filtz, Greg Herman, Don Jump, Janet Lee, Murray Levine, Darrell Ross, Stacey Semevolos

Voting Members Absent: Nancy Kerkvliet, Mike Lerner

Ex-officio Members Present: Brenda McComb

Guests: Neil Browne, Lynda Ciuffetti, Stella Coakley, John Fowler, Joey Spatafora

Welcome and introductions

Botany and Plant Pathology Graduate Program Review – Graduate Council reviewers' recap

Graduate Council Representative: Mike Lerner

- [External Panel Review](#)
- [Review Summary](#)

- Major issues found by the review team from Mike via Jim:
 - Botany and Plant Pathology (BPP) has good faculty, but are spread too thin in some cases between their own and interdisciplinary programs.
 - The student support is not competitive with peers. BPP is using indirect cost to fund GTA's; some funds are supposed to come from the College of Science (COS). Brenda noted that a case has been made to Sherm Bloomer to work with the University Budget Committee to develop an adjustment to reflect increases in head count or SCH. There is a detailed MOU from the College of Agricultural Sciences outlining funding coming from COS to teach BPP courses in Biology.
 - It doesn't appear that BPP offers Ecampus courses.
- Minor issues:
 - Inadequate facilities; can't do a lot about this issue. It was noted by a Council member that, if indirect revenue was used for other than GTAs, those funds could be used for facilities; do they have enough funding for the operation? BPP raises \$8 million per year from research – where does it go?
 - Regarding modernizing course offerings, are 300/500 courses allowable? Slash courses were a concern of the review group. BPP is cancelling courses due to insufficient enrollment.
 - The international student enrollment is low.
 - Courses need to be strengthened.
- Regarding the program size, the proposal anticipates 13 students per year, initially, for an eventual total of 60 graduate students. There would be 23 faculty with a large number of courtesy faculty; 16 of the 23 are full professors.
- They are not competitive for GTA's – what is the current rate? Need to clarify.
- Research funding? GRA's at .49 FTE are paid in the \$20,000 range.
- Were graduate learning objectives reviewed? Brenda was uncertain.
- Why the need to modernize? Brenda stated that the recommendation came from outside reviewers resulting from discussions with graduate students. The reviewers did review some syllabi.

Botany and Plant Pathology Graduate Program Review – Unit representatives present

Unit Representatives: Lynda Ciuffetti (Chair), Stella Coakley (College of Agricultural Sciences Associate Dean), John Fowler (Graduate Studies Committee Chair), Joey Spatafora (Associate Chair)

- The level of support for GTAs and where their funding comes from is not clear. Lynda responded that the total need is for 41.5 quarters; 7 quarters for mycology, 9 quarters for botany, and 25.5 quarters

for biology courses. The funding is approximately \$36,000 for the herbarium, \$47,000 for botany, \$133,000 for biology and \$12,000 comes from the College of Agricultural Sciences (CAS).

- Stella explained that the COS policy was to return all overhead to the unit; however, COS offered that the college could keep the returned overhead for GTAs or deployed to units. It's implicit that the college would provide more support for GTAs if they could. Commitments made to the herbarium and mycology were made at the time the faculty were hired, but COS did not stand behind the commitments. There is no adjustment in the base budget for Biology.
 - Is there an opportunity for renegotiating how the funding will be handled? Lynda responded that, in terms of the biology program, Botany and Plant Pathology (BPP) is committed on a pedagogical sense (plant scientists should be teaching in the program). BPP contributes to teaching 10 Biology courses and contributes to 8 MCB courses. BPP faculty are not pleased about having to pay for all the GTAs because it does not allow for competitive GTAs or GRAs (faculty pay GRAs from grants if that's available). The Biology program becoming a major in a department is of grave concern to BPP
 - Do they have access money for Biology? Lynda stated that, when in COS, BPP only could request access money for BOT101, which is a Baccalaureate Core course, but did not receive it. It is not their place to ask for Biology access funding – that is up to the Biology chair.
- As to the recommendation to modernize course offerings, has BPP looked at other offerings? Lynda responded that the department has looked at courses offerings, some of which were reduced when the Provost required a minimum number of students; and BPP has designed new courses due to a computational concentration. Regarding assessment at the undergraduate level, Lynda and Carol Riven met with Bill Bogley and identified issues on which to concentrate.
 - Joey felt that the statement was targeted to a few specific courses, such as BOT550, which is scheduled for discussion with the faculty; several courses have been added and strengthened in plant physiology. Botany and Plant Pathology 350 is the largest plant pathology course in the country and the lab is very extensive; all students attend the same lecture, but undergraduate and graduates have their own lab and graduates have an additional meeting. Students have expressed their desire for a stand-alone course. BPP did the best they could with what they have.
- Are there problems with graduate students running labs in courses in which they are enrolled? Lynda mentors all graduate students and discusses conflict of interest issues. There are enough TAs so no one is ever evaluating one who would be a potential conflict of interest. No graduate students teach lecture courses, but they do teach labs.
- It appears that BPP is understaffed for the number of courses taught. Lynda was thinking about faculty when preparing for this meeting and noted there are a number of BPP faculty who don't teach in Botany because they teach MCB and Biology courses. Has BPP thought of reducing offerings? Lynda stated that they have reduced courses and have been trying to develop Ecampus courses, mainly at the undergraduate level. They also have to pay temporary instructors with returned overhead, and quite a few Botany courses are taught by temporary instructors. BPP is at bare bones related to dropping classes and need to expand to meet student demand. Joey stated the outcome is that they are penalized for participating in interdisciplinary programs, which BPP values, but is at the expense of their own major. Lynda noted that BPP has a lot of courtesy faculty. From BPP's perspective, they are short in all three focus areas. Additionally, BPP professors are aging and there will likely be a large turn over at the same time; many of these professors don't teach, but they do train graduate students.
- Related to increasing international enrollment, Brenda stated that Kim Johnson in the Graduate School can assist BPP with recruiting international students. John noted he has been in contact with Kim, which has resulted in two potential international students.
- Lynda questioned whether BPP responds to the Graduate Council's final document or recommendations from the review team; Jim indicated that they respond to both.
- Lynda questioned what was meant by 'metrics' in the Action Plan. Brenda responded that they need indicate what will be measured so it can be determined in three years if progress is being made.
- Regarding graduate student stipends at comparable institutions, Joey indicated that students don't feel that stipend level is a deciding factor, but faculty agree that stipends need to be increased. Lynda explained that BPP GTA GRA students are paid the same rate; however, because Biology's rate is lower, BPP was not allowed to pay the BPP rate to students, so the Biology rate was at .4 FTE with an added BPP at a smaller rate. A comment in report stated that BPP was not as competitive in some cases, but in other cases they were. Additionally, competitiveness may result in a tier level for salaries. Lynda was advised to include the stipend issue in their Action Plan. Brenda suggested checking with Courtney Everson regarding salary rates at peer institutions.

Graduate Council Discussion of the BPP Graduate Program Review –

- Brenda felt that the COS and CAS deans should be talking about this issue.
- 23 faculty and 50 undergraduate majors is not sustainable.
- Not fair for BPP to fund Biology courses. There is partial support from MCB.

- To what extent is the graduate program affected? Staffing and support for GTAs.
- Faculty are overtaxed and under supported.

Action: Jim will draft a response.

New MOU Proposal – Low Residency MFA in Creative Writing at OSU-Cascades

Graduate Council Representative: Janet Lee

Unit Representative: Neil Browne

- [Online](#)
- [PDF](#)

- Neil Browne provided a revised MOU which included comments addressing the structure and how the Board will work. Regarding the transferability issue, Jim explained that there have been requests for a university solution so a student in similar degree programs at different campuses cannot transfer without the department accepting a student into the program at the other campus. The Registrar's Office is looking at ways to flag these students in Banner if there is a capacity issue. Because all coursework is transferable, Jim felt this should not be held up due to the transferability issue.
- The curriculum at OSU-Cascades is still an issue that needs to be resolved. Students would create with a professional mentor for a term and the work would be facilitated by an exchange of packets; the relationship is analogous to how a professional writer and a publishing house would work. There is a residency twice per year where the student and mentor would be onsite for 7-10 days, and then an exchange of work would continue. Brenda felt that this is a hybrid arrangement and is why Ecampus not involved. Neil stated that Ecampus has been consulted, and they are on board with the plan. Brenda noted that Lisa Templeton has not talked with anyone and understood that there would only be an exchange of packets. There was an e-mail from Natalie Dollar indicating that she had talked with Lisa Templeton; Brenda suggested that Neil contact Lisa. Neil explained that the model they are constructing is different and is engaged far more personally on a relationship basis between a small group of students and a mentor, but it has the possibility for an online platform. A student and mentor would exchange ideas, create reading lists, and topics for an annotated bibliography.
- It was noted that the Association of Writers & Writing Programs endorses the proposed model, and that close mentoring and relationship is supported by the AWP. Neil noted that AWP is the accrediting organization and publishes hallmarks for this type of program. It was important to create a program that distinguishes itself from other programs, yet complements the Corvallis program.
- The proposed courses exist, but delivery will be different.

Graduate Council Discussion of the Proposal –

- A member hesitated to hold up the program due to the model, and suggested the Graduate Council give approval, but require a full external review in three years after the first co-hort is admitted to evaluate the program.
- Brenda noted that Lisa Templeton was told that the Graduate School was on board with the proposal, which is not the case. Jay will make it known that incorrect information was conveyed to Ecampus.

Action: Jim will approve the proposal and include a request for a full external review of the program three years after the first co-hort is admitted.

Graduate School Report

- Brenda was asked to approve a waiver for a College of Education student to defend their dissertation in less than one full term. Because the Institutional Review Board (IRB) approval for a related survey occurred about four months prior to when she planned to defend, how does one accomplish the requirements in less than four months? It appears from website is that one chapter is literature review and the other is original research. She felt that's about what a master's student would do.
 - Original research is not required for a Master's, but a PhD does need to be original.
 - Apparently the major advisor agreeable with the student's plan.
 - A minimum of two publishable articles is required.
 - One Council member questioned what constitutes a level of research in granting a PhD at OSU?
 - One member didn't feel that the timeframe was a problem if the student could accomplish the requirements.
 - It was noted that a student could be prepping for a period of time before IRB approves the survey.
 - It's up to the graduate representative to ensure that the process is followed, but not to the detriment of the student.
 - Concern was expressed related to a literature review vs. a dissertation.

Is continuing to accept a literature review as one of the two pieces of work acceptable?
Some members were not aware this was acceptable.

Meeting adjourned at 12:55 PM.

2. Discussion – two related topics:

a. Final Exam for non-thesis Master's Program

Proposed change (in caps): Successful completion of a final oral examination is required for all THESIS-BASED master's degrees. Some departments also require the student to pass a written exam prior to the oral exam. PROGRAMS MAY REQUIRE EITHER AN ORAL FINAL EXAM OR A WRITTEN FINAL EXAM (OR BOTH) FOR NON-THESIS MASTERS STUDENTS BUT THE EXAM MUST ASSESS THE LEARNING OUTCOMES IDENTIFIED BY THE UNIVERSITY AND BY THE PROGRAM.

The proposed change allows either an oral or written exam. What if learning outcomes are assessed at the individual level using different mechanisms – combinations of assignments/projects/exams across multiple courses? Is the purpose to ensure every student earning a Master's degree has a final exam, or to ensure every student is individually assessed with respect to university and program level outcomes?

NOTE: The following information was extracted from the Policies for Graduate Programs: Requirements for Master's degrees

All master's degree programs require a minimum of 45 graduate credits including thesis (6 to 12 credits) or research-in-lieu-of-thesis (3 to 6 credits).

All master's students must:

- *Conduct research or produce some other form of creative work, and*
- *Demonstrate mastery of subject material, and*
- *Be able to conduct scholarly or professional activities in an ethical manner.*

Successful completion of a final oral examination is required for all master's degrees with the exception of students who complete the nonthesis option under the EdM degree.

The final oral examination for master's candidates may, at the discretion of the graduate program, consist of a public thesis defense followed by a closed session of the examining committee with the candidate. Under normal circumstances, the final oral examination should be scheduled for two hours.

When no thesis is involved, not more than half of the examination period should be devoted to the presentation of the research project; the remaining time can be spent on questions relating to the student's knowledge of the major field, and minor field if one is included in the program.

A review of the current non-thesis Master programs reveals:

Degree Name	Credits	Non-thesis option	Final Oral Exam
MAG Master of Agriculture	45 - 24 outside of major	Research Paper	Required
MAIS Master of Arts in Interdisciplinary Studies	49 - min of 9 in each area	Research Paper	Required
MAT Master of Arts in Teaching	48	Not Specified	Required
MBA Master of Business Administration	45	Project	Required
MBAA Master of Business Administration and Accountancy	45	Project	Required
EdM Master of Education	45	Coursework?	Written Exam
MEng Master of Engineering	45	No Thesis or Project	Required

MFA	Master of Fine Arts	60	thesis	Required
MFor	Master of Forestry	45	Technical report	Required
MHP	Master of Health Physics	45	Not Specified, but non-research focus	Required
MMP	Master of Medical Physics	45	Not Specified	Required
MNR	Master of Natural Resources	45	Project	Required
MPH	Master of Public Health	60	Project	Required
MPP	Master of Public Policy	62	Essay	Required
PSM	Professional Science Master	50 - 57	Internship	Required

Discussion – but no resolution of the issue.

a. Competency based degree programs

These programs seem to be focused on demonstrated achievement of learning outcomes, and allows the use of non-academic experiences. Raises numerous issues – including the minimum number of graduate academic credits required to earn a degree.

One potential solution is to use the existing AR 23 (see below). Making the condition less onerous may be appropriate.

AR 23. Special Examination for Credit

A regularly enrolled student in good standing, either graduate or undergraduate, currently registered at Oregon State University and wishing credit for an OSU course for which a grade has not been previously received, may petition for credit examination under the following conditions:

- a. The application for such examination shall be presented on an Official Student Petition and shall bear the approvals of the dean of the student's college, the dean of the college in which the course is offered, and head of the department in which the course is offered. Petitions for special examination for credit may be approved or denied at the sole discretion of the department/college or the faculty member offering the course, taking into account both the academic merit of the petition and the department/college's ability to deploy adequate resources to prepare, administer, and grade such an examination.
- b. In no case may such examination be based on work used for graduation from high school, or in a foreign language that is the mother tongue of the applicant, or in courses not listed in the Oregon State University General Catalog.
- c. Grades earned in special examinations shall be submitted and recorded in the same way as for regularly registered courses, and will count with respect to repeating a course as defined in AR 20.
- d. A student may not petition for credit by special examination for a course in any term in which the student is or has been enrolled in the course after the add/drop deadline for that term.
- e. An examination for credit will not be approved for courses below the level for which college credit has previously been granted.
- f. No examination may be taken until the applicant has received a permit from the Registrar's Office, for which a fee of \$80 will be charged.¹

Footnote:

¹ As an alternative to departmental examinations, students may seek credit through the College Level Examination Program (CLEP) to the College Entrance Examination Board. CLEP includes nationally normed subject matter examinations and general examinations covering material included in a number of relatively standard courses taught in colleges and universities throughout the United States. Some of these subject matter examinations and general examinations have been accepted by departments at this institution. Policy guidelines have been established that make it possible for admitted and enrolled students to (a) transfer credits earned through these accepted CLEP subject matter and general examinations to this institution, providing certain criteria are met, and (b) earn credits through accepted CLEP subject matter and general examinations providing certain criteria are met. Further information about CLEP may be obtained from the Office of Admissions, 104 Kerr Administration Bldg.

Graduate Certificate Policies

- Jim felt it would be helpful to review the [Policies Governing Graduate Certificate Programs](#), which include:
 - completion of a baccalaureate degree,
 - admission to the university as a credential-seeking graduate student, but not required to be on track for a specific degree
 - admission through the Graduate School (but are they Graduate School students?),
 - earning 18 graduate credits; may include a final project, portfolio, or report for integration of the sequent of course materials,
 - no final exam is required,
 - there is no committee requirement (how or who assesses the work?), and
 - assessment of certificates is not required? (It is not clear whether certificate programs fall under assessment.)
- Because it appears that certificate programs are on the rise, the policy needs to be clear. Does the policy need to be more explicit to identify how to validate a student's work?
- The Graduate School always seeks advice from the program prior to admitting students.
- Anita will clarify these issues and report back to the Council.

New Certificate Proposal: Graduate Certificate in Wildlife Management

Graduate Council reviewer: Nancy Kerkvliet

- [Web version](#)
- [PDF version](#)
- Nancy reported that Fisheries & Wildlife is proposing the certificate, which would complement its successful Graduate Certificate in Fisheries Management.
 - The certificate would be advantageous to students who: are not competitive enough for a full-fledged graduate program, interested in online education options, seeking advancement in their current job, entering a graduate degree program that allows application of graduate certificate credits, or need coursework to qualify as a wildlife scientist or similar professional certification.
 - Students will likely be: recent graduates seeking to improve credentials for graduate school, students in existing OSU graduate degree programs, or natural resource professionals. It is anticipated there will be a large number of online students who will be mentored at federal and state natural resource agencies.
 - The program does not require a wildlife background, and only requires two fisheries courses. The proposal includes letters of support from federal agencies. Enrollment of 40 within 5 years is targeted.
 - Few additional resources will be needed because the proposal relies entirely upon existing programs, administration, and infrastructure. An existing graduate program advisor will handle applications, and the current program director for the Fisheries Certificate and PSM-FWA will provide program oversight and review. The budget is small, but difficult to ascertain.
 - Students are required to take 18 credits, which includes: 2 in Wildlife Sciences, 2 in Human Dimensions, and 1 recommended in a Skills area; plus a 3-credit capstone project
 - The unit considers this to be a logical & needed extension to expand training opportunities to

future wildlife managers nationwide. It will also enhance OSU's presence of online graduate education in biological and resource sciences, promote sustainability in existing online programs, and contribute to their commitment to excellence and opportunity in conservation education.

- There may be some natural overlap in environmental sciences, but the reviewers concluded that, overall, there is no overlap.
- Nancy felt the proposers addressed everything sufficiently well.
- Section 5b., page 25 – Assessment of Learner Outcomes indicates that assessment will be achieved through student evaluation of teaching scores and an exit questionnaire – both of which are indirect measurements. The proposers must address direct measures to assess learning outcomes.
 - Courses will be reviewed annually via electronic SET – this is not a learner outcome. It was noted that there are no university guidelines for assessment of certificates.
 - The proposal indicates that learner outcomes are intentionally broad and that students will be expected to meet three learner outcomes:
 - *Demonstrate* proficiency (overall GPA of 3.0 or greater) – there are only two courses and the capstone project is undefined.
 - *Synthesize* scientific information and demonstrate research skills, as well as provide correct citation and documentation of sources in the capstone project.
 - *Improve* knowledge and understanding of critical wildlife management issues to prepare for advancement in the field.
 - Is the certificate simply a collection of courses (yes), and is that acceptable?
- It doesn't appear that the proposed courses will prepare students for wildlife management, as indicated. Conversely, it's a way to acquire credentials in the field.
- Will some type of systemic assessment system be implemented, and is the unit prepared to do that? It was observed that it appears that certificates and degrees are beginning to be blended.
- How is this certificate different from post-baccalaureate programs?
- Other than the need to correct typos, Jim and Nancy will request that proposers revise the proposal to clarify how assessment will occur.

For future certificates, is there a need for a process to assist proposers when developing the proposal? Should there be a uniform approach to certificates? What happens when a certificate experiences low enrollment – is there a way to sunset the certificate program or determine if it is still relevant? One member felt that low enrollment was less of an issue if the required resources are limited or none.

Certificate requirements may be a future Graduate Council discussion. Anita will do some background research to determine how certificates are handled at other institutions.

Summary of MAIS Graduate Program Review

Graduate Council Reviewers: Jim Coakley and Stacey Semevolos

- [An Action Plan for the Master of Arts in Interdisciplinary Studies \(MAIS\) Graduate Program](#)
- [MAIS Review Panel Report for the Graduate School](#)
- Message from Dean McComb: All, just to be clear, the action plan for MAIS has been found unacceptable and will be rewritten after additional work to be done by David. David would like to meet with Council at a date in the future to discuss ideas raised in the recommendations to better craft an action plan that is likely to be successful.
- Jim reported that the overall recommendation from the reviewers was to maintain, and additional recommendations were to:
 - Expand the focus beyond the College of Liberal Arts and update the mission statement to include a vision as serving the campus as an incubator for novel graduate programs.
 - Rebrand and market the program to attract the best possible applicants and to bolster the program's reputation on campus.
 - Consider a minimum writing/verbal requirement for all applicants.
 - Continue the two courses designed for and required of MAIS students, and develop a third core course focusing on research methodologies and perhaps on communication to academic peers.
 - Instead of, or in addition to, the proposed third class, develop a required colloquium series where research results are presented.

Discussion:

- For how many students would this be the only path? Previously it was the only avenue for Communication, Public Policy, and Women Studies students to get a degree; the MAIS ultimately resulted in degree programs in these three programs. There is a possibility that this could serve

as an incubator for other types of new programs. Because students don't have a home, what benefit is there to incubate in a non-departmental unit, and would a 'home' provide better structure?

- The action plan states that meetings will be held, but it should indicate the meeting outcomes.
- It was felt the MAIS could be achieved in a disciplinary field; it appears to be a watered down degree. Concern was expressed about disassociation of students in any particular unit; there is no co-hort. Many students rely on MAIS to create their own program, but the same results could be achieved via a minor.
- It may be possible that the MAIS designator could be used for faculty to come together and eventually create a named program.
- The review team recommended 'maintain' because they saw value in those students who came to OSU seeking true interdisciplinary work, as well as the value of the incubator concept.
- Was there thought from faculty to be more deliberate and assess students who were successful, and provide assistance to those who were unsuccessful?
- Need clarity with programs, potential employers, and students.
- Need to restructure admissions because standards are different depending on the students' program selection. For whom is this degree a students' best option, and what is the screening mechanism?
- Several members felt that the 'maintain' recommendation was not appropriate, but restructure may be a better description.
- Jim will recommend that David Bernell hold some of the meetings outlined in the action plan and report his findings to the Graduate Council, as well as clarify issues raised by the Graduate Council.

Continued Discussion of Examination Requirement

- Due to time constraints, this discussion was postponed to the next meeting. Jim will distribute relevant links prior to the next meeting.

Graduate School Report

- Anita and Jim have been conducting assessment meetings with colleges, and only the Graduate School interdisciplinary programs are left. The Sharepoint site is close to being implemented and will include old plans and old reports (for those submitting reports). Anita will be alerted as reports are posted. There has been minor tweaking to the documents. The first two areas to have a full review conducted under the new system will be CSSA (Mike) and Adult Education (Jim).
- Anita reported that graduate students, in conjunction with the Graduate School, are exploring the possibility of creating a graduate student success center.

Next meeting: November 4

Graduate Council

January 12, 2012 Minutes

Voting Members Present: Carolyn Aldwin, Angi Baxter, Cass Dykeman, Theresa Filtz, Denise Lach, Vinod Narayanan, Andrew Plantinga, Stacey Semevolos

Voting Members Absent: Jim Coakley, Murray Levine, Darrell Ross

Ex-officio Non-Voting Members Present: Leah Minc, Bruce Rettig

Carolyn welcomed Andrew Plantinga to the Graduate School and informed him of the Category II proposals and the system for reviewing them. He will review the College of Agricultural Sciences proposals with another person as a back-up.

Minutes

A short discussion regarding the minutes culminated in the Council members agreeing they would like to see more precise minutes which include the topic, the pros-cons, and the decision or action plan. Start the term with shorter minutes.

There were additional changes to the November 16 minutes. The revised minutes were approved.

There were also changes to the November 30th minutes: Angi was present and Stacey attended both meetings. The revised minutes were approved.

Botany and Plant Pathology Program Review

Per [Lynda Ciuffetti's email](#), the department would like to postpone the review until fall 2012 due to the reorganization and the fact that they were moved solely to the College of Agricultural Sciences, rather than split between Science and Agricultural Sciences. Lynda is also a representative on the OUS board and is swamped with work. They would like to have both the undergraduate and graduate reviews done at the same time in the fall. Do we need combined reviews?

Brenda indicated that a proposal for a multidisciplinary Plant Sciences program was presented to the Provost three years ago, but nothing has happened since. The Horticulture and Crop Science proposal is on hold as well.

A short conversation about whether or not the review should be postponed for another term followed. It was suggested to give the department the benefit of the doubt and approve the postponement. It was noted that the university accreditation team was concerned about the number of delayed graduate program reviews. Graduate Council policy is to allow for up to a one-year delay to accommodate requests for simultaneous undergraduate and graduate program reviews. BPP had already been given a one-year extension, but the Council noted that one additional term to do the graduate and undergraduate reviews at the same time would be advantageous. The Council also recommended that Prof. Ciuffetti be reminded that the review should not be the responsibility of just the department chair/head.

Action: Theresa moved to postpone the Botany & Plant Pathology graduate program review to fall 2012 with a provision that, by the first day of fall term, the documentation and review team would be in place and scheduled for fall term. Failure to do this WILL result in a suspension of admission to the graduate program; Denise seconded the motion. Cass and Andrew opposed and Vinod abstained; the motion passed. Carolyn will inform Lynda Ciuffetti of the Council's decision.

Academic Planning Committee Reports:

Carolyn presented the [APC Reports](#) prepared by Vinod, Jim and Carolyn, regarding Environmental Engineering MS and PhD, MAT in Science Education/MAT in Mathematics Education, and the CLA Omnibus respectively. These are pre-Category I meetings that Walt previously attended. This year, the process has changed and different members of the Council attend the different meetings.

A question arose regarding the need to review those reports. *It was decided there was no need for the reports to be discussed at the Graduate Council unless there a policy or issue that the Council needs to review. However, we should keep them on file in case issues arise.*

A conversation regarding reorganization of schools, departments and colleges followed.

Nutrition Graduate Program Review

Denise reminded the Council that Recommendation #1 from the reviewers related to the Didactic Program in Dietetics (DPD). Those students stay for just one year, which does not look good for their success rate vis-a-vis the number of PhD students that finish their doctoral. Denise met with Brenda and Marty Fisk to discuss this issue, and it was decided that the recommendation be divided into two recommendations.

1. Decrease or phase out recruitment of MS students who are interested in only completing the DPD program requirements.
2. Create a post-baccalaureate DPD program for the certificate.

The reviewers' agreed on the above changes, and are recommending that the program be restructured and maintained.

Action: Theresa moved to accept the report as modified; Stacey seconded; and Andrew abstained. The report was approved as modified.

Assessment

A short discussion on the assessment process followed. Bruce reported that most assessment plans are on Gita Ramaswamy's assessment website. There have been conversations about moving the graduate assessment to the Graduate School.

The meeting adjourned at 1:30 PM.

Minutes provided by Nagwa Nagulb, Graduate School staff

Graduate Council

January 26, 2012 Minutes

Voting Members Present: Carolyn Aldwin, Angi Baxter, Jim Coakley, Cass Dykeman, Theresa Filtz, Denise Lach, Mike Lerner, Murray Levine, Vinod Narayanan, Andrew Plantinga, Darrell Ross, Stacey Semevolos

Voting Members Absent: None

Ex-officio Members Present: Brenda McComb, Bruce Rettig

Guests: Chrissa Kioussi, Greg Thompson

Review of Minutes

- December 7, 2011 – The minutes were revised to clarify the DHE Program Review related to reallocation of funds and numbers of students, and to correct Angi Baxter's name.
- January 12, 2012 – The minutes were revised to incorporate the changes suggested by Theresa Filtz.
- Decision: For the January 26 minutes, an abbreviated version will be used, which simply states agenda item/problem and action decided upon. Brief discussion of issues will be included to indicate the issues.

Review of the Graduate Program in Masters of Agriculture (follow-up) –

Chrissa Kioussi participated on the review team and presented the report. Greg Thompson was present to represent the department.

- Graduate Assessment Plan (Master's programs)
 - Concerns – three have been resolved and three are being addressed; Chrissa felt there has been substantial progress since the review.
 1. Low enrollment (in progress)
 2. Lack of clarity in visibility (in progress)
 3. Lack of outcomes (resolved)
 4. No Assessment Plan (resolved)
 5. Major concentration and area major professor issue (resolved)
 6. Lack of Marketing Plan (in progress)
- In summary, there is low enrollment, a follow-up was in progress and the Council acknowledges this was still a problem; additionally a marketing plan has not been fulfilled and learning outcomes are not unique. Carolyn agreed to contact Greg to ascertain what progress will be made on the parts of the action plan that were still in question.
- Cass moved to table the review; motion was seconded and approved with no dissenting votes.
- Regarding future review reports, Darrell advocated having the reviewer meet with the Council separately to discuss the review; then invite the program head to meet with the Council.
 - It was agreed by consensus to have the reviewer first meet with the Graduate Council to discuss the follow-up report. Council members will only invite the program chair if there are problems that still need to be addressed.

Updates

- Animal Sciences & Rangeland Management and Ecology – Carolyn reported that the requested changes in the program review were made – the latter should be restructured if not merged – and submitted to the Provost's Office.
- Botany & Plant Pathology Review – Carolyn advised Lynda Ciuffetti that the report must be completed by the first day of fall 2012, with the internal and external reviewers identified and a meeting time scheduled for fall quarter.

Standing Rules Review

- There were no suggestions for revisions to the Standing Rules. However, a discussion related to the Council's charge to approve graduate faculty revealed that the Council has delegated approval of graduate faculty to the Graduate School – this needs to be noted as an Internal Policy.

Academic Planning Committee Assignments

- MBE in Construction Engineering Management – Murray Levine
- Schools in the College of Liberal Arts (Omnibus) – Carolyn Aldwin
- School of Life Sciences – Theresa Filtz
- MFA in Creative Writing – Denise Lach
- Graduate Certificate in College & University Teaching – Cass Dykeman
- Graduate Certificate in Rural Policy – Jim Coakley

It was agreed that it would be better to not have a new Graduate Council member serve on an Academic Planning Committee pre-proposal meeting until they have participated in a Category I proposal review.

Comparison of Proposed Metrics – Denise Lach, Vinod Narayanan, Carolyn Aldwin

- Carolyn postponed the review for this meeting so that Vinod would be available for the discussion. Brenda asked for a delay until Institutional Research, and other reviews, are completed. Brenda asked for feedback based on the revised metrics.

Next scheduled meeting: February 9, 2012

Minutes provided by Vickie Nunnemaker, Faculty Senate Staff

Graduate Council

February 9, 2012 Minutes

Voting Members Present: Carolyn Aldwin, Cass Dykeman, Theresa Filtz, Denise Lach, Mike Lerner, Murray Levine, Vinod Narayanan, Andrew Plantinga

Voting Members Absent: Angi Baxter, Jim Coakley, Darrell Ross, Stacey Semevolos

Ex-officio, Non-voting Members Present: Brenda McComb, Leah Minc, Bruce Rettig

[Review of January 26 Minutes](#) – Forward any corrections to Carolyn.

[Comparison of Proposed Metrics](#) – Denise Lach, Vinod Narayanan, Carolyn Aldwin

- The idea to revise the metrics and determine how to advise units to proceed with program reviews resulted from lengthy reviews.
- Brenda reported that Sal Castillo is working toward having the ability to send a report generated by Institutional Research (IR) to every program every year. If Sal can't generate the necessary review information, the Council needs to identify what resources are needed to gather the information. Brenda's goal is to ensure that self-assessment is streamlined as much as possible, with the assistance of IR, so programs can achieve yearly self-assessment.
- Discussion: need to determine what is needed in addition to the IR-generated information and what units have done with the data; what is the minimum assessment that the Council needs for a program review; units will decide which metrics provided by IR that they wish to focus on; and, at the time of the review, the Council can determine if additional information is needed.

Action: Need to determine what metrics IR can provide; Carolyn will incorporate metrics into existing spreadsheet and redistribute for further discussion.

Update on Strategic Planning Initiative – Theresa Filtz

Theresa and Jim Coakley are on the Strategic Planning Committee charged by Brenda McComb to develop a Strategic Plan for the Graduate School which began fall 2011. Brenda is scheduled to report to the provost by end of spring term.

- Subcommittees include: 1) finance, 2) interdisciplinary programs and graduate faculty capacity, and 3) academic diversity and student quality. The goal is to have a first draft by March 1, 2012; potential distribution of the report for review would likely be in April.
- Subcommittee goals: keeping in mind the aspiration to be a top-25 land grant by 2025, increase graduate student enrollment and GTA funding, provide incentives to faculty to be PhD advisors (currently 1 PhD student/faculty member – goal is 3:1), goal for graduate student fellowships (aspiration of \$70 million is recommended), improve the number of and reduce barriers to interdisciplinary programs, and increase the number of joint degree programs on campus, both domestically and internationally. Additionally, restructure the application process, increase diversity of the student body population, improve graduate student quality and gpa to 3.5, increase the quality of mentored student relationships and improve the quality of graduate student relationships.
 - Let Brenda know if you are interested in obtaining additional information related to this project or if there are items you wish the group to consider.

Cat I Proposal Scheduling

- Three Category I proposals are ready for review by the Council for which Carolyn has assigned reviewers.

Cat I & Cat II Orientation

- Category II Proposals – Carolyn indicated that #3 on the distributed [Graduate School Category II](#)

[Course Proposal Review System and Review Guide](#) doesn't need to be addressed. Reviewers should particularly focus on liaison, slash courses, learning outcomes, and learning and assessment.

- When reviewing Category I proposals, determine whether proposals negatively affect: the curriculum, faculty, GTA's etc. Although the co-reviewers thoroughly review the proposals, all Graduate Council members are expected to familiarize themselves with each proposal.
- For reorganizations or mergers, determine whether the program will be affected in any way or whether there are adverse consequences; is there adequate faculty, graduate support and resources? The recommendations should be neutral, negative or positive.
- For new program proposals: there should be adequate faculty and sufficient numbers of at least 50% for stand-alone courses; is there overlap between other programs; does the program provide added value to the university; is there a demand for graduates in the program; is there adequate graduate support and resources; and was there appropriate liaison?
- For all proposals, the focus should be on curriculum, but questionable resources may also be addressed.

Requested Responses from Dr. Thompson re: the Masters of Agriculture Program Review – Dr. Thompson's [responses](#) can be found online. The discussion included the following:

- It doesn't appear as though new information has been provided – low enrollment is a real problem – it's not likely that enrollment could be turned around in one year, a marketing plan is lacking, there is still no website, and the value of the program to the university needs to be determined. It was recommended that another follow-up occur in one year. It was suggested that this could be a candidate for an INTO program.
- Bruce noted that this is not a major in Agriculture, instead, it is a degree type made up of multiple programs. He also mentioned that this program is similar to the MAIS, which will be reviewed by the Graduate Council next year.

Action: Theresa moved to accept the report with the provision that the program director return in a year to the Graduate Council with a report on whether progress has been made related to marketing, low enrollment and learning outcomes. The motion was seconded and approved. Carolyn will advise Greg Thompson of the decision.

E-campus Policy

- This topic was postponed to the next meeting.

Graduate Council

February 23, 2012 Minutes

Voting Members Present: Carolyn Aldwin, Angi Baxter, Jim Coakley, Cass Dykeman, Theresa Filtz, Denise Lach, Mike Lerner, Vinod Narayanan, Andrew Plantinga, Darrell Ross

Voting Members Absent: Murray Levine, Stacey Semevolos

Ex-officio Non-Voting Members Present: Brenda McComb, Bruce Rettig

Guests: Marie Harvey & Tom Eversole, College of Public Health & Human Sciences

Review of February 9th Minutes

Because there were no suggested revisions; the minutes stand as distributed.

Masters in Public Policy Reviewer Needed

The review will occur on Thursday, May 17th (dinner) and Friday, May 18th (all day meetings) – Cass Dykeman had volunteered, but now has a conflict; Jim Coakley volunteered to participate in this review.

Angi requested to sit in on the review to observe the process.

Action: Denise will determine if it is agreeable that Angi sit in on this review.

Graduate Minor/Option/Certificate in Food in Culture and Social Justice

Reviewers: Denise Lach, Vinod Narayanan

- The proposal was previously sent back because courses were not approved; Denise indicated that the courses are being offered either this term or next.
- Denise was unclear why both the graduate minor and certificate are being offered; the minor is not related to an existing major. It seemed odd that this is a Category II proposal.
- Vinod noted that the liaisons are co-mingled and it is difficult to determine whether they apply to the minor or certificate. This is not a stand-alone graduate certificate and must be taken with in conjunction with another degree.
- Theresa stated that, until written response to the Graduate Council inquiry is received via the Category II system, the proposal won't be considered. She requested that the proposers be asked the following: 1) clarify why a minor, certificate and option; 2) which major would be interested in hosting the minor?; 3) provide a list of majors for which the minor is appropriate; and 4) Food & World History 599 and 416/516 appear to be the same – is it a typo?
- Theresa questioned whether there is a policy that the Graduate Council will treat stand alone minors differently, even though they come through as Category II's. Bruce stated there is one other degree has both a graduate certificate and graduate minor. Jim noted that the only difference between the certificate and minor is two courses.
 - *Action: Denise will determine whether the certificate meets the 50% rule.*
- *Action: Carolyn will send a reminder to the proposers asking them to respond to the previous inquiries.*

E-campus Policy – Carolyn Aldwin

- What happens with 1.5 proposals (i.e. Ecampus proposals)? If it's a whole program, is it a Cat I or Cat II proposal?
 - The issue relates to both new majors and existing majors since it has been discovered that existing majors are now being offered online, but the request was not vetted by the unit. Vinod felt it was important for the unit to review proposed Ecampus courses/majors, and noted labs as an example.
 - How is it determined whether what's online is equivalent to what's offered on campus?
- Theresa suggested allowing these courses to be offered and ask questions during the review. Jim noted this review is not accomplished for on-campus courses. Andrew noted that on-campus courses have no

restrictions related to delivery, but Ecampus has delivery restrictions. Mike responded that this relates to consistency with course delivery.

- *Action: Carolyn will communicate to Gary Beach that the Graduate Council does not need to review existing programs, she will also suggest that the Curriculum Council also does not review, but the assessment folks should participate in the review (step D should be removed from the policy). Additionally, the Graduate Council will not agree to the proposal to approve anything in two weeks.*

Category I Review Timeline

It is anticipated that the below proposals will be discussed on the indicated dates:

- March 8 – College of Education Abbreviated Category I proposal – Reviewers: Cass Dykeman & Mike Lerner – Cass emailed the dean indicating that liaison concerns need to be addressed prior to the Graduate Council review.
- March 15 – MAT in Science Education – Reviewers: Darrell Ross & Murray Levine
 - *Action: Because Darrell is not available on this date, Carolyn will confirm that Murray is available.*

Proposed Category I Template – Carolyn Aldwin

Carolyn reviewed the Public Health Category I proposal using the proposed template and found it to be helpful.

- Theresa felt this was adding additional work that is not related to graduate programs. Carolyn felt that the Public Health template addressed the graduate programs.
- Some may find the proposed template useful, but one needs to stay focused on the graduate issues.

Graduate Certificate in Public Health

Reviewers: Carolyn Aldwin & Andrew Plantinga presented their [report](#).

Concerns expressed by Graduate Council members included:

- What advantage is there for OSU to have a stand alone program? It is not a requirement, but meets continuing education requirements.
- The proposal doesn't indicate how many students are in the collaborative program.
- Marie Harvey previously indicated to Bruce that they could offer the program because it was previously approved. Bruce noted that somewhere the proposal had been approved at some time, but it did not go through the proper OSU approval process.
- There was no curriculum review. It was indicated that no new courses are proposed, instead, they are based on existing classes with Ecampus versions.
- The program is targeted at mid-career professionals.
- Can the unit support both on-campus and Ecampus doctoral programs with existing faculty (Section I)?
- How will the Ecampus version handle biostatistics and epidemiology courses? Can they expect mid-career professionals to be prepared for these courses? Will there be pre-reqs, and how will they be handled?
- Certificate proposal indicates anticipation of 300 students by 2016; this may be a bit ambitious.
- How will faculty FTE be affected between on-campus and Ecampus; is there a sufficient market for two, and potentially three, certificates in the state?

Marie Harvey & Tom Eversole, College of Public Health & Human Sciences, joined the discussion –

- *Is the plan for a stand alone certificate?* Marie noted that the OHSU certificate program was not offered for a time this year while they were deciding whether they would continue with a Master's of Public Health in Nursing. The certificate program is not accredited and OSU did not previously participate in the certificate.
- *What was the enrollment when offered via OHSU?* Marie stated that enrollment was quite a few, and was successful, but didn't know enrollment numbers (perhaps 40 matriculated). Tom noted that the program was primarily offered to Portland area residents but not marketed state-wide.
- *It was felt that the stated enrollment is optimistic and questioned whether there is a sufficient, realistic demand to support both programs if OHSU again offers the certificate.* Tom felt the demand is sufficient and noted that CPHHS has been approached by the Oregon Public Health Division who felt that CPHHS was committed and OSU's courses were robust. Epidemiology is offered online this term with 15-20 students. Regarding demand, Marie explained there is a state-wide effort for county health departments to become accredited which will require administrators to be trained in public health, and many are not because they came from nursing backgrounds. Carolyn felt there was strong community support.
- *How will the Ecampus offerings divert resources from on-campus courses, and is there adequate faculty FTE?* Marie indicated that, initially, they want current core faculty to develop online courses and, if possible, teach them, but others can be hired to teach.

Who would be hired to teach the courses? Marie felt there were lots of individuals out there who could teach courses. They want PhD level instructors because students can take those courses and then become students in the PhD program. Carolyn noted that any instructors will need to be approved graduate faculty. Marie had not thought of that requirement, but reiterated that they want PhD faculty teaching.

- *Do faculty have sufficient extra time to develop courses?* Marie stated that Ecampus will pay during the summer for course development.
- *Will professionals taking the Ecampus version be prepared to take statistics courses?* Marie responded that many returning students are in a similar position; the statistics course has been discussed and faculty are in the process of determining how to offer the Ecampus version. She felt this would be a challenge, but on-campus students will also be challenged. Tom stated that the statistics instructor wants to ensure it is a 4-credit course so it will have sufficient rigor.
- *Will there be additional support for students to determine satisfaction?* Tom noted they could poll students to determine satisfaction.
- Tom has obtained a signed MOU between CPHHS and Ecampus for support of development of the online graduate certificate program, as requested by B&FP.

Action: Denise moved to accept the Category I proposal; motion seconded. Discussion – Because the Council received verbal reassurance to concerns, it was questioned whether the responses should be written into the proposal. Jim suggested that the concerns be listed in the comments section and the responses indicated. Motion approved by voice vote.

Meeting adjourned at 1:30 PM.

Review of [February 23rd Minutes](#)

Minutes stand approved as distributed

Geology and Geography Graduate Program Reviews – Denise Lach

- Denise reported that Walt Loveland (who was the actual reviewer) recommended expanding the geography program to alleviate a lack of resources and maintain the geology program.
- Concerns (*and responses*) – geography needs additional faculty (*both units gained access to more faculty as a result of the merger with COAS*); high proportion of slash courses; inequity of TA and RA stipends (*are now slightly below average, but goal is to have amount equal to COAS students*); key infrastructure needs (*space issues remain*); need professional development for teacher training and grant proposal (*developing a course for teaching training and grant writing*).
- Vinod – questioned why the two programs were reviewed together. Bruce explained that the two were also reviewed in this manner 10 years ago, and this is a common practice, although there is no policy on how to handle multiple related programs.

Bob Duncan and Aaron Wolf, representing the units, joined the discussion:

- There was a question of verbiage in recommendation #3 regarding recruitment of students being comprised by TA and RA stipends relative to other students at OSU. They felt that stipends should be relative to other universities since they don't compete for students in other OSU programs.
 - *Action: It was agreed that recommendation #3 will be revised to indicate that stipends are relatively low as compared to competitor institutions.*
- Aaron felt that the review report is fair and accurate. He explained that, since the merger, geography faculty have been able to tap into CEOAS faculty and advising resources.
- Carolyn explained that the unit will create an action plan that will be reviewed by the unit, Graduate Council representatives and Becky Warner; there will be a three-year follow-up review.
- Aaron noted that Geosciences and COAS requested assistance from the Provost in two areas: to bring Geosciences TA's up to equity so they are receiving the same stipend as CEOAS TA's and assistance in merging with the IT in-house network. The College of Science continues to support Geosciences via their network. The requests to the Provost were made over a year ago, with no resolution, and Aaron asked if there was a way to reiterate these requests during the Action Plan review with Becky Warner.

Graduate Council discussion:

Action: Denise will communicate to Walt Loveland the Council's requested revisions.

Action: Theresa moved to approve the review with the recommended revisions suggested, motion seconded and motion approved by voice vote with no dissenting votes.

College of Education (Abbreviated Category I: Reorganization, Merger, Move) – CPS # 82222

Reviewers: Cass Dykeman & Mike Lerner

[Review Report](#)

[PDF](#)

[Online](#)

- Two areas of note during the pre-review of the proposal: 1) comments by liaisons from Agricultural Sciences (*Disappointed that Agricultural Education was not even mentioned as potential partners and adjunct faculty in the proposal; response from Education is that revisions have been made in response to quite relevant observations*) and Public Health and Human Sciences (*no mention of the programs in our college – will reorganization change the professional relationship between the College of Education and College of PHHS?; response from Education was that revisions have been made in response to quite relevant observations*) and 2) the impact on graduate programs if Category I proposal is approved (*indefinite admissions holds affect several degree programs*).
- Why is the College of Science (COS) still funding SMED? Cass responded there is an MOU stating that the COS dean will hold funding lines for SMED faculty for a few years.
- Bruce felt that liaison comments regarding the acknowledgement of CPHHS is unclear; Cass acknowledged there were inaccuracies in the proposal, but didn't feel they were relevant to the proposal. There are no references to the Ed.M. in Adult Education which has 24 students. Carolyn felt it was reasonable to request that the dean include this omission.
- It is not clear to Bruce as to how OSU-Cascades programs fit into the college.
- Bruce outlined the options available related to the proposal: request revisions to the proposal (which would require re-review by the Budgets & Fiscal Planning Committee) or Carolyn can incorporate Graduate Council comments in the Curricular Proposal System.
- Theresa questioned why there is zero FTE in the organizational chart. Cass responded that a zero reflects that the position is currently not occupied. Murray noted that zero FTE is also shown for a current, acting FTE.
- Brenda referred to an email exchange with Darlene Russ-Eft raising the possibility of eliminating the CSSA program, which is not reflected in the proposal.
- Representatives from the College of Education will be invited to meet with the Council to clarify issues. Need to indicate to college representatives that clarity is needed regarding the PE MAT, the OSU-Cascades degree program is not accurate, potential restructuring in concentrations will need Category IIs, there is a zero FTE for the associate dean for research. Carolyn will get input from Cass before requesting information from Larry Flick.

Assignments & Scheduling – Carolyn Aldwin

- a. [Scholarship Committees](#)
Nagwa will contact Council members related to award assignments.
- b. Academic Program Committee Meetings – three program reviews are scheduled:
 - Friday, March 16th, [Graduate Certificate in Rural Policy](#), 502 Kerr Conference Room – GC Rep: Jim Coakley – CPS #83618
 - Tuesday, March 20th, [MFA in Creative Writing](#), 109 Gilkey Hall (Faculty Senate Conference Room) – GC Rep: Denise Lach – CPS #83436
 - Friday, March 23th, [Schools in the College of Liberal Arts](#) (Omnibus), 502 Kerr Conference Room – GC Rep: Carolyn Aldwin – #83297
 - [MAT in Science Education and MAT in Mathematics Education Endorsements](#) (MOU – Extend Existing from OSU-Main to OSU-Cascades) – GC Rep: Murray Levine and Cass Dykeman – CPS # 83047 –
- c. [Spring Quarter Meetings](#) – All meetings are scheduled from Noon-1:30 PM in 128 Kidder Hall: April 11, April 25; May 9, May 23; June 6, June 13

Standing Rules – Brenda McComb

Due to time constraints, this item was postponed to the next meeting.

Chair Report

The graduate student rep, Angi Baxter, requested that she be allowed to participate/observe the next program review. Denise consulted with the relevant dean, and, for a variety of reasons, it was determined that the next review would not be appropriate for this. However, we will work on involving Angi in one of the other reviews, and agreed that it might be a good idea of the grad rep sat in on one in the Fall term in the future.

[Review of March 8 minutes](#)

The minutes stand as distributed.

Masters in Public Policy Reviewer Needed

Mike Lerner will participate in this review which will occur on Thursday, May 17th (dinner) and Friday, May 18th (all day meetings).

[Follow-up Review, Food Science & Technology](#) (Darlene Russ-Eft)

[Recommendations of Graduate Program Review – March 4, 2008](#)

- Darlene indicated that Bob McGorin made several revisions to the report. She felt they have made good progress in areas they can control; however, they have not made much progress in the area of recruiting minority students into the program, and it was learned there are very few students in the pipeline in the US (Asian students are no longer considered a minority).
- Darlene indicated that the recommendation was to maintain the numbers of students, but expand and improve the quality of the program.
- It was unclear whether McGorin's responses relate to the action plan or the recommendations. It was assumed that the responses relate to both. Carolyn requested a copy of the Action Plan from the unit.
- Regarding recommendation #12 to increase Teaching Assistantships – are TA's being funded? Some students are funded but some are considered as internships.
- There was a question about the length of the preliminary exam. There is a two-hour requirement if an exam is given.
- Regarding graduate student learning outcomes in recommendation #11 – there are too many 400/500 slash courses.

The following issues need discussion with Bob McGorin:

- *Clarify the exam procedure and whether it is the required university procedure. Is there a separate oral exam or is this also the university prescribed exam?*
- *Excess slash courses.*
- *Request the number of minority students and ask the unit to provide an action plan related specifically to minority students. There should be more active recruitment strategies for minority students.*
- *Determine whether GTA's are being paid.*

Action: Theresa moved to accept the report, motion seconded. The motion to accept the report passed by hand vote with two dissenting votes. Carolyn will clarify identified issues and Brenda will discuss those issues with Bob McGorin.

MAT in Science Education and MAT in Mathematics Education Endorsements (MOU – Extend Existing from OSU-Main to OSU-Cascades) CPS # 83047

Reviewers: Murray Levine, Cass Dykeman, Darrell Ross

- [Online version](#)

[PDF version](#)

- Murray explained the purpose of the proposal is to extend existing MAT's from OSU-main to OSU-Cascades. Previously MAT's in Elementary Ed and Language Arts were approved at OSU-Cascades and science and math is now desirable.
 - They plan to hire additional graduate faculty to complement existing faculty, but there is a question of who the existing faculty are. They will hire science faculty, but actually do have math faculty.
 - The MAT program has been reduced to 6-8 credits in the content area when 9 are required – they are agreeable to increasing to 9 credits.
 - Will existing licensure faculty member be able to handle increased students? It was felt that the infrastructure is adequate.
- Cass hopes they would advertise as integrated Science and Math content areas. A related problem is that they are advertising Language Arts as 'Social Studies' and includes high school and middle school on their website.
- Bruce related a Graduate School problem when Cascades students thought they were receiving a degree in Social Studies when the MAT in Language Arts Education appeared on their degree. Students must understand what degree they will receive; the website does not reflect the degree.
- Need to offer direction in terms of website content.

Action: Carolyn asked Cass to draft verbiage related to inaccuracies on the website for the Language Arts program and Carolyn will communicate the concerns to OSU-Cascades.

- Pre-reqs indicate completed Bachelors from an accredited institution, while the MOU indicates content area.

Action: Murray moved to accept the proposal, motion seconded. The motion to approve the MAT in Science Education and MAT in Mathematics Education Endorsements (MOU – Extend Existing from OSU-Main to OSU-Cascades) Category I Proposal passed with no dissenting votes.

APC Report, School of Life Sciences

It is desirable for the individual attending the APC to participate in the Category I review.

Proposal for Graduate Options (Jim Coakley)

- The proposal would create transcript visible options at the graduate level. The implementation lies with the department and would validate completion of the option. There would be a section for the option on the graduate plan. Must ensure that faculty are in the option area and they are reported to the Graduate School. The option would be proposed as a Category II and be approved by both the Graduate Council and Curriculum Council.
- What responsibility does the Graduate School have related to degree options? Jim felt the unit would be responsible that the program plan is consistent with the option.
- Requirement for listing courses in the option? That would be included in the Category II.
- This would require changing the Program of Study page.
- Carolyn noted that the undergraduate option is 21 units; for graduates it's 12 units and a minor is 15 units; it seemed light to her. Thesis credits could be included in the 12 units.
- Bruce noted this would allow for sub-division of a major so it can be tracked and identified.
- Need to clarify that credits can overlap.
- A minor is in a different field and an option is within the major.
- Theresa noted that a certificate is a Category I, and questioned why the option would be a Category II.
- The Graduate Council will forward the proposal to the Curriculum Council for approval, and then it will be forwarded to the Faculty Senate for approval.

Action: Jim will revise the proposal to allow multiple options, no overlaps and will clarify course credits.

Action: Carolyn moved to approve the proposal with the noted changes, motion seconded. Motion to approve the Proposal for Graduate Options, as amended, passed with no dissenting votes.

Graduate Council Standing Rules (Brenda McComb)

- Brenda questioned whether the Standing Rules reflect the Graduate School view of shared governance if you did not represent the Faculty Senate. Brenda felt that policy-making should be more collaborative between the Graduate Council and Graduate School.
- Brenda's vision is when a policy decision comes up that the Graduate Council and Graduate School work

together to define policy and collaboratively make the decision.

- This topic will be discussed further during spring term.
- Theresa requested that Brenda identify verbiage from other institutions that have a collaborative model and bring them to an upcoming meeting for discussion.

APC Meeting Volunteers

- PSM in Renewable Energy – Murray Levine
- Department of Applied Economics: Rename Department – Jim Coakley

Graduate Council

April 11, 2012 Minutes

Voting members present: Carolyn Aldwin, Angi Baxter, Jim Coakley, Cass Dykeman, Theresa Filtz, Denise Lach, Mike Lerner, Murray Levine, Andrew Plantinga, Stacey Semevolos

Voting members absent: Vinod Narayanan, Darrell Ross

Ex-officio, non-voting members present: Brenda McComb, Bruce Rettig

Guests: Nagwa Naguib, Vincent Remcho, Virginia Weis

Review of [March 15 Minutes](#)

The minutes were accepted as distributed.

[Zoology Graduate Program Review](#)

Graduate Council Reviewer: Theresa Filtz

- Theresa reported that the review occurred in November 2011; it is a good graduate program with a prominent national reputation (National Academy of Science faculty); it attracts good graduate students; they need to start planning for when the prominent faculty begin to retire; the program recently changed department chairs; a strategic planning process is needed, including identifying how to move forward; stature is in ecology, but there are challenges; Zoology will become part of the School of Life Sciences, but will not give up departmental identity; teaching is being distracted from graduates to undergraduates; there is a requirement that students take X number of upper level seminars, but the seminars are not being provided at a sufficient rate to accommodate undergraduate students; students are requesting that high profile faculty teach; students are satisfied with teaching and mentoring; GTA stipends are quite low – students teaching the same courses are paid varying rates; the budget is shrinking and there is no money to raise stipends; and the external reviewers felt the building (Cordley) was in bad shape.
- Jim asked if they tried to get access funds for Zoology courses; it was unknown.
- Carolyn questioned using the F&A funds to support the education mission. Theresa noted that external reviewers were upset that grant overhead funds were not used for specific uses, but the funding the department receives generally comes in a lump sum and it may not be possible to identify the separate streams.
- Regarding graduate stipends, Andy questioned whether the department feels they are competing nationally. Theresa responded that, based on their reputation, they are still attracting high quality students and adequate numbers of students.
- Graduate students would like more stand alone classes and fewer slash courses; however, they do meet the 50% minimum.
- The faculty seem to be somewhat opposed to online courses, but they need to look at new ways to generate revenue.

Unit representatives: Virginia Weis, Zoology Department Chair and Vince Remcho, College of Science Interim Dean

- Vince felt the report was thorough and concise and he was pleased to have feedback. Virginia was pleased with the report and felt it will prod faculty to be more forward in ways that have not previously been considered.
- Virginia felt the issue of the strategic plan was the single most important message to faculty – it's time to think positively and begin the process. The department is recovering from a period of poor leadership and, as a result, lost department cohesiveness. She agreed to chair only if she had latitude to make changes.
- Virginia stated that the issue of graduate stipends is hampered by complexities surrounding the School of Life Science formation. The School is important for Zoology to both determine their identity and their

ability to offer stipends. TA pay is caught up in multiple units with inconsistent pay scales for graduate students, past reluctance to engage in entrepreneurial (Ecampus) activities, and lack of support from the dean's; she is in conversation with Vince about these issues. Vince indicated an objective is to have a threshold level of FTE and level of employment, and to address differences in norms and caps; it is important this is a faculty-led discussion and that a solution is found rapidly.

- Brenda noted that Ecampus is an entrepreneurial way of generating revenue and asked if they are thinking of developing more online courses. Virginia has talked with Ecampus representatives and has learned that other Science units have been successful with Ecampus. Complexity is that they are not Biology and units in other colleges want a part of Biology. She feels there are abundant opportunities and plans to jump into Ecampus offerings.
- Brenda made the observation that, given dean turnovers, infrastructure and a density of ecologists, if deans could work together to house ecology, then evolutionary biology could address infrastructure issues and free up space. Vince indicated he's been working on infrastructure issues and Virginia noted deferred maintenance issues in Cordley Hall.
- Carolyn referred to the recommendation to encourage a shift in resources from undergraduates to the graduate program. Virginia acknowledged they have a large undergraduate population that must be served. Faculty would love to be required to teach both undergraduates and graduates to achieve a balance, but not at the expense of research. Because the unit can't add on additional teaching responsibilities, they must have additional teaching resources from the college – perhaps the unit needs to be more assertive in requesting resources. They also need more tenure-track faculty and the college is committed to build in that direction.
- Carolyn mentioned the hesitancy to change the unit name. Virginia would like to change the name, but there has been push-back. She feels they are taking baby steps in that direction and the first step is for the school formation and to maintain the Biology program and eventually eliminate the Zoology major because it is very arcane and there are very few Zoology programs nationwide. Vince added that Biology does benefit from outside of Zoology and the college, and the desire is to determine a better structure.
- Virginia and Vince had no questions for the Council.
- Regarding capacity, Theresa noted they are at capacity, but additional faculty will alleviate the issue.

Action: Cass moved to accept the report, motion seconded. Motion passed by voice vote with no dissenting votes to accept the Zoology Graduate Program Review.

Category I Proposal – Merge Animal Sciences with Rangeland Ecology and Management –

Reviewers: Stacy Semevolos, Andy Plantinga

- [Online proposal](#)
- [Reviewers report](#)

- The proposal is for a program merger between the Department of Animal Sciences and the Department of Rangeland Ecology and Management to create the Department of Animal and Rangeland Sciences; the merger seems to be supported in Agricultural Sciences; Rangeland is a very small unit while Animal Sciences is larger; the objective is to enhance synergy among faculty; the merger seems reasonable from the standpoint of graduate education; does the merger of graduate degrees need to happen first or can unit merger go through and then address the degree merger since that would come through separately? – it's difficult to assess graduate impact in this format; it appears that work has been done on undergraduate degrees, but not at the graduate level; and the merger seems to make sense.
- Need to make certain they know that a new Category I proposal to merge degrees is needed since there is no mention of that; Carolyn will advise the proposers. This does not cover merger of the graduate program and responses to these questions need to be forthcoming.
- PhD/MS degrees need to be changed

Action: Theresa moved to approve the proposal; motion seconded. Motion passed by voice vote with no dissenting votes to approve the proposal to Merge Animal Sciences with Rangeland Ecology and Management.

[Draft of Graduate School Strategic Plan](#) – Brenda McComb

This document was initially distributed to the Graduate Council on April 6, 2012.

An Executive Summary will be prepared and included. Objectives and metrics will be used to understand how well they are doing to achieve the overarching goals.

Overarching Goals

1. Increase graduate student population to 25% of total university enrollment through recruitment and retention of high achieving and diverse students
 2. Continuously improve program quality, including accessibility of courses
 3. Grow and Invest Resources to Enhance Graduate Education Opportunities
- Andy questioned the thinking behind degrees housed in the Graduate School. Brenda talked with the heads of interdisciplinary programs and most are satisfied where the programs are housed; she feels they should be housed where it makes the most sense. More important is to determine how to account for faculty effort in interdisciplinary programs.
 - The resources don't seem to support the mandate to increase graduate student enrollment.
 - Need to incentivize on-campus faculty to be more involved with graduate programs.
 - Concern was expressed with section 2.6.2. to develop a co-terminal degree for high-achieving degrees because there is a limited number of seats and students would need to compete with other applicants. Brenda noted it was modeled after Stanford and is designed to attract high achieving undergraduates who can begin coursework toward a masters while a senior.
 - It appeared there were items in the report that don't relate to Graduate School metrics, particularly joint efforts over which the Graduate School doesn't have direct control.

Brenda requested that comments and potential revisions be forwarded to her.

Graduate Council Standing Rules – Brenda McComb

This item was postponed to the next meeting.

Report from the Chair

- The Food in Culture and Social Justice Graduate Certificate Category I Proposal has been withdrawn by the proposer.
- Category I's will now be reviewed concurrently by Budgets & Fiscal Planning Committee, Graduate Council and Curriculum Council to ensure that proposals can be approved by the Faculty Senate this term.
 - Engineering Proposal – Reviewers: Denise Lach and Vinod Narayanan
 - CLA Omnibus Proposal – Reviewers: Carolyn Aldwin and Cass Dykeman
 - Due to a lack of time, Carolyn will distribute [APC comments](#) via email.
- Program Reviews
 - Physics on May 23 and 24 – Vinod is now not available; Andy will determine if he is available; Vickie will request a second reviewer from the Executive Committee
 - Public Policy on May 18 – Mike Lerner and Jo Tynon

Minutes prepared by Vickie Nunnemaker, Faculty Senate Staff

Graduate Council

April 25, 2012 Minutes

Voting Members Present: Carolyn Aldwin, Jim Coakley, Denise Lach, Mike Lerner, Murray Levine, Vinod Narayanan, Andrew Plantinga, Stacey Semevolos

Voting Members Absent: Angi Baxter, Cass Dykeman, Theresa Filtz, Darrell Ross

Ex-officio, Non-voting Members Present: Bruce Rettig

Review of [April 11 Minutes](#): The minutes were accepted with no changes noted.

Category I Report Update – Merge Animal Sciences with Rangeland Ecology and Management #81305

- [Online proposal](#)
- [Reviewers report](#)

The response given back to the Graduate Council appeared to be sufficient. A separate Category I proposal will be submitted for the graduate program, more details to follow. A comment was made that there needs to be better justification for market needs (industry, employment, student needs) when submitting the Category I proposal for the graduate program, in reference to the Rangeland portion of the justification.

Category I Report – College of Liberal Arts Omnibus Merger #83297

- [Online proposal](#)
- [PDF version](#)

Carolyn presented the report on this Category I review. Basically, the College of Liberal Arts will be re-organized into six schools. The proposal reflects a good response to the APC meeting suggestions. There are currently no names of Deans placed on the organizational chart. Some committee members felt this wasn't necessary, while another member thought they should include the names. There are no changes to the graduate programs in this proposal. Some graduate programs may be in trouble by current enrollment numbers (mainly Women Studies, but also Applied Ethics, Music Education and Contemporary Hispanic Studies). There is a discrepancy between wording - "University School of Psychological Sciences" vs. "School of Psychological Sciences." A comment was made that the department should not be renamed in the proposal.

Action: There was a motion to accept the report, which was seconded and then voted unanimously to pass by the Graduate Council.

Category I Report – Create a School of Design & Human Environment and Align the School within the College of Business #83339

- [Online version](#)
- [PDF version](#)

Carolyn presented the report on this Category I review. There are no changes to the graduate programs in this proposal. No names were provided in the organizational chart – this was discussed briefly and decided it was probably not important. This proposal is being fast-tracked. The alignment within the College of Business and future integration will be a stepwise process. A separate Category I proposal will be necessary for full integration or to change the degree name.

Action: A motion was made to accept the report, which was seconded, and passed unanimously by the Graduate Council.

Graduate Council Standing Rules

This discussion was postponed due to Brenda not being available at this meeting.

Graduate Council Manual

Carolyn brought up the point that she will be on sabbatic next year and many of the experienced Graduate Council members will be rotating off as well. She thought that a manual describing general procedures/protocol would be helpful for continuity's sake and for new Graduate Council members. She will send a copy of the draft by email. Some members felt that it was a good idea. There was discussion about who decides awards committee assignments – Graduate Council vs. Graduate School? There was also discussion on the need to balance the workload of Council members and the potential to add more members or have other faculty help with award committees. Bruce brought up the fact that there is currently information on the web for some procedures, and to make sure the manual developed is in alignment with all locations on the websites. An example is curriculum procedures on graduate options. Also, other universities have links to source material in lieu of an actual Graduate Council handbook.

Pending assignments

The following assignments were made during today's meeting:

- Category I Proposal Review – Sciences and Math Education (Cass Dykeman, Jim Coakley)
- Category I Review – Environmental Engineering (Vinod Narayanan, Andrew Plantinga), Vinod to attend APC meeting
- Category I Review – Comparative Health Sciences (Stacy Semevolos, Murray Levine), Stacy to attend APC meeting May 16
- Cyber information – judging preproposals, deadline May 15 (Mike Lerner)
- Physics Program Review, May 23 (dinner), May 24 all day, Vinod and Andrew had agreed to split the day, but there were objections from Brenda. Mike Lerner has now agreed to do the program review for the Graduate Council.

Other items of discussion

- Bruce brought up the topic of Chemistry having different credit requirements for PhD than all other programs, and that special treatment may be requested in the future by departments having similar programs. Policy changes can be brought up and drafted by Graduate Council members.
- Discussion of changing the way the Graduate Council spends time – adjusting amount of time talking about Category I proposals vs. policy issues, etc.
- Can policy for Prelim be changed to written or oral exam, as opposed to the current oral exam requirement?
- Having general outcome assessments might provide a way for programs to administer their programs differently, but still maintain the same outcomes.
- Concerns about increasing the number of graduate students (in Graduate School Strategic Plan), but possibly decreasing the quality of education by increasing the student/faculty ratio.
- Concern of constantly changing to new programs without fully evaluating the benefits vs. costs/problems, not just rubber stamping proposals.

Voting members absent: Vinod Narayanan, Darrell Ross

Ex-officio, non-voting members present: Brenda McComb, Bruce Rettig

Guests: Susie Brubaker-Cole, Sunil Khanna, Nagwa Naguib

Review of [April 25 minutes](#)

The minutes stand approved as distributed.

GTA Orientation – Susie-Brubaker Cole (15 min.)

- [Fall 2011 New Graduate Teaching Assistant Orientation Summary](#)
- [GTA Orientation Summary from Jessica White and Robin Pappas](#)
- The Center for Teaching and Learning, the Graduate School and International Programs hosted a successful two-day cross-campus New Graduate Teaching Assistant Orientation for first-year students on September 15, 2011 - there were 47 international and 225 new GTAs; all colleges were represented; an overarching goal was to provide a cross-disciplinary approach to teaching at OSU. Areas covered included: 1) awareness of policies and procedures at OSU; 2) ensure GTA's understood the context of graduate teaching at OSU; 3) provide GTA's time to think about foundational teaching skills; and 4) provide them with an understanding of the resources available at OSU. The pre and post-surveys rated their knowledge in eight areas, and seemed to be successful in terms of student learning gains. The orientation will be held again this year, tentatively, on September 13 and 14. The organizers will work with the Graduate School to disseminate information to graduate students. For the future, Susie felt it would be good to expand and increase the engagement of peer student leaders.
- In response to Denise's question of whether most participants were teaching or assisting, Susie indicated that most were assisting.
- Andrew noted that organizers need to keep in mind that participants should to be identified by appointment, i.e. some GRA's also teach and should be invited to participate. He suggested an announcement of the orientation to unit heads.
- Angi thanked Susie for coordinating the orientation and felt this was a much needed program, and it was appreciated by both graduate and undergraduate students.
- There was also a suggestion to include second and third year GTA's and GRA's since not all teach during their first year.

[Graduate School Pilot Project](#) – Three-year MBA & MBP Programs for Students from India – Sunil Khanna

- Sunil explained that the pilot project would highlight the three-year degree and accreditation system in India to assist in making a better case by beginning to accept a limited number of students into two programs on a pilot basis, and determine whether to continue at the end of the pilot program. The proposal was a collaborative effort among the colleges.
- Brenda noted that the Graduate School is supportive.
- Bruce noted that some three-year programs clearly meet OSU's requirements, and the challenge is to determine which three-year programs from India would be accepted and which would not be accepted.
- Andrew questioned why this is different from other graduate students from India. Sunil responded that, under the current requirements, a student with a three-year degree cannot apply to OSU; this pilot would accept a limited number of students.

Vinod asked if there are more specific rankings per college. Sunil indicated that the India university system is accredited, and each college standardizes curriculum for all affiliated colleges.

- Brenda felt the pilot brings OSU one step closer to determining qualifications of students from India.
- Theresa questioned whether there will be an evaluation of student performance at the end of the pilot, and what metric will be used. Sunil noted it will include a standard evaluation, and the colleges (and perhaps the Graduate Council) will participate in determining the evaluation.
- What happens if a partner of an accepted student wants to apply to a program that is not included in the pilot program? Brenda felt that the student should be admitted and expansion of the pilot will be the responsibility of the admitting graduate program.
- In terms of possibly expanding the program, Carolyn felt that assessment should occur after each year rather than waiting until year three. Sunil indicated that the intent is to track pilot students on a yearly basis.
- Angi questioned whether potential struggles for students have been identified and what type of support is available. Sunil felt there will always be issues for international students and they will provide as much support as needed.
- Denise questioned what is unique about these students if they have no baccalaureate core preparation. Jim responded that they do have a general education experience, but not at the college level.
- Theresa questioned what constitutes success. Jim indicated that these students will be better than the current mix of international and domestic students. Brenda indicated there will be set metrics that must be met.

The consensus by the Graduate Council was that they are supportive of the pilot program, they agreed that it should be evaluated yearly, and are willing to assist in identifying criteria to assess the progress of the students.

Review of Remote Participation At Oral Examinations and Doctoral Program of Study Meetings – Brenda McComb, Bruce Rettig

Bruce learned that the majority of those using the form found it acceptable and most feel that remote participation is now part of the culture; the Graduate Council needs to affirm the process. The question is whether the required form should be replaced with instructions in the Graduate School catalog and on their website indicating that remote participation is allowable. Bruce distributed suggested verbiage to revise the catalog language.

- Vinod – departments should be made aware of rooms that are acceptable for remote participation.
- Jim noted that item f. of the proposed verbiage indicates that the Graduate School is not responsible for costs associated with remote participation and questioned whether it should be indicated that the student is responsible for all arrangements.
- Angi questioned what happens if something outside of the students' control occurs and a pending job depends on the defense. Those present indicated that it is never a guarantee that a student will pass the defense.
- There was a question whether the student could be remote, given that #g. requires a public presentation.
- It was decided to remove the current #e. The new #e will indicate that the student is responsible for making arrangements for the defense.
- It was agreed that it's not necessary to have everyone sign the form.

Action: Andrew moved to abolish the form; motion seconded. The motion to no longer require the form passed with no dissenting votes.

Graduate Council Standing Rules – Brenda McComb

This item was postponed to the next meeting.

Graduate Council Manual Feedback – Carolyn Aldwin

Although there was not time to discuss this topic, Carolyn indicated that Bruce suggested the manual should be as short as possible and use URL's wherever possible. The manual is intended as a guide, not as a policy document.

Bruce felt it was a way to use the website for one chair to pass forward to the next chair how they managed items.

Pending Items:

Reviewer's Needed:

- CAT I: [Graduate Certificate in College and University Teaching](#) proposal (CPS # 83870) – Cass

Dykeman

- Abbreviated CAT I: [Termination of the MBE in Construction Engineering Management](#) proposal (CPS # 83272) Vinod Narayanan and Jim Coakley
- APC Meeting: MA in Environmental Humanities proposal with Carly Lettero and Kathy Moore, May 30, 3:00 PM – Denise Lach

Matters Arising

Denise noted that Becky Warner is now participating in program reviews, rather than the provost, and is very thorough during program reviews. Becky's expectation is that the Action Plan will include goals and a strategy for meeting the goals (i.e., measures of success).

Review of May 9 minutes – The [May 9 minutes](#) stand approved as distributed.

Category I – New Degree Program Proposal – Environmental Engineering (CPS #82814) –

Reviewers: Vinod Narayanan & Andrew Plantinga; *Unit Representative:* Ken Williamson

- [Online version](#)
- [PDF version](#)
- [Vinod Narayanan's Report](#)

- Andrew indicated that the proposal was straight forward, graduate students doing engineering can identify themselves, and it will be beneficial to the both the students and the program.
- Andrew questioned the difference between this degree and the Biological & Ecological Engineering (BEE) degree. Ken stated there is overlap in the ground water areas, and students sometimes confuse that the two programs exist, but one is focused more towards the built environment and the other natural environment, and the students can usually sort it out.
- Vinod questioned whether ethics was covered in the seminar and what the seminar contents were. Ken responded there is a required one credit graduate seminar, and about one-third of the seminar deals with ethics and ethics of doing research; he noted there are also guest lecturers.
 - Theresa felt it would be helpful to review the learning outcomes for the course.
- Carolyn questioned whether there were any ethical issues specific to environmental engineering that need to be covered. Ken noted there are a variety of ethical issues required by accreditation, but there is not a specific ethics course related to engineering; every program needs to convey ethics.

Action: Jim moved to accept the Environmental Engineering Category I proposal; motion seconded. A request for a specific ethics learning outcomes will be included in the CPS comments section. Motion to approve the Environmental Engineering New Degree Category I, proposal #82814, passed by voice vote with no dissenting votes.

Category I – University Certificate in College & University Teaching (CPS#83870) – Reviewer: Cass Dykeman

- [Online version](#)
- [PDF version](#)
- [Reviewer's report](#)

- Cass expressed concern with the lack of liaison letters, particularly from the College of Education Dean. Brenda stated there was no liaison letter because all colleges were involved in writing the proposal; it states that the provost is willing to support the \$100,000 program; she felt that letters would be redundant.
 - The Council felt it would be beneficial for institutional memory if all of the deans signed the transmittal letter.
- Cass noted a reference to a letter from Gary DeLander, but no letter was included. Brenda confirmed that there was no letter; the reference resulted from an error while loading documents.

- Cass indicated that the capstone is 600-level, but there will be Master's students who will not be earning a doctorate. He also mentioned that approval is requested to be delivered via Ecampus. Brenda stated that they are not requesting Ecampus at this time but, once established, another proposal will be prepared for Ecampus delivery. Cass noted that Table 1 specifically indicates Ecampus; Brenda indicated that the Ecampus reference needs to be removed.
- Cass asked the question: How much do we want programs to be housed in the Graduate School? Brenda responded that the committee felt that the Graduate School is mutual ground and not perceived as being aligned with any particular unit. Theresa questioned concerns surrounding placing the proposal in a particular college. Brenda stated that the committee felt that, if aligned with a particular college, it would be directed at students in that college.
- Cass questioned the funding. Brenda responded that the Graduate School recurring budget would be increased by \$100,000 via a transfer from the Provost. Denise felt this was a high budget for 30 students. Brenda felt that they would start with this proposal to determine the demand and decide whether the support was appropriate.
- Denise felt it would be appropriate to house this proposal in the College of Education. She also noted that the core doesn't seem to be interdisciplinary.

Action: Carolyn and Cass will develop a list of concerns, including: the need to request liaison letters, including from COE; the commitment to develop and deliver classes; where is funding coming from; who approves electives courses; who are the members of the Graduate Certificate Committee; and who is responsible for the core courses?

Environmental Science Graduate Program (ESGP) Three-year Follow-up Review – Reviewer: Vinod Narayanan

- [September 9, 2009 Report](#)
- [Three-year Follow-Up Review](#)
- [Action Plan](#)
- Vinod explained the committee composition; Andy Blaustein provided the linked Action Plan; there are 4-5 participating colleges and 7 tracks in the program; it is a joint campus program with PSU and UO; the OSU program has 8 tracks; at the three-year follow-up point there were 58 students, and 19 have been accepted into 2012-2013 cycle; Andy Blaustein is still the director and has brought on an associate director. Issues include funding – although it's an interdisciplinary program housed in the Graduate School, the TA slots come from Biology and Andy must talk with the Biology chair for TA approval and feels certain that TA's will be funded if the Biology chair doesn't change – Vinod felt there should be a more robust way of funding; there is no incentive to serve on the graduate applications committee; another concern, the core courses were taught by two committed faculty who have left, and the associate director is now in charge of the core courses. Another issue revolves around the yearly conference that rotates between PSU, UO and OSU; PSU was to host this year, but there was no funding
- Carolyn questioned whether 8 options are needed.

Action: Denise moved to approve the three-year report; motion seconded. The motion to approve the Environmental Science Graduate Program Three-year Follow-up Review passed by voice vote with no dissenting votes. The Graduate School will forward the report and Action Plan to Becky Warner.

Biological and Ecological Engineering (BEE) Graduate Program Review Follow-up – Reviewer: Rick Colwell; Unit representative: John Bolte

- [Follow-Up Report to the May 2009 Graduate Program Review](#)
- Rick outlined the 11 Action Plan recommendations:
 - #1 – The College of Engineering (COE) needs to develop a greater investment in the departmental instructional programs. This remains a follow-up issue due to decreased investment by the state. Possible solution is a differential tuition if funds can be directed toward BEE, up to \$100,000, which is now kept by COE.
 - #2 – Build a unifying framework around the discipline of Biological Engineering. While considering whether there was a way to link more strongly to Chemical and Biological Engineering, a concept has developed because there is now a BEE graduate and undergraduate curriculum coordinator, which has helped at both levels. It is important to keep the distinction at both levels.
 - #3 – Meet with the School of Chemical, Biological and Environmental Engineering (CBEE) to develop joint vision/mission/goals. There has been a limited ability to accomplish this goal; what has happened instead, is progress toward a School of Natural Resource Engineering and led to more work with Wood Engineering and Forest Engineering. Development of a new school has

taken the place of work with CBEE.

- John Bolte felt that curriculum coordination at undergraduate levels is working quite well now, and the graduate program is active in the Water Resources Engineering program. BEE is unusual because they are intrinsically multi-disciplinary; most of their efforts have been with Forestry. He identifies most of their efforts with numbers 2 and 3. The proposed school would be available to any graduate or undergraduate program that wishes to be aligned with natural resources, but would not replace any units.
- When questioned about which issues were not being addressed, Rick indicated that it seems to be going well. The review group advised against Ecampus courses, but the unit countered with why Ecampus would be beneficial and is moving forward in developing Ecampus courses.
- #5 – Provide greater opportunities for graduate students to obtain teaching experience. Rick noted that TA funding would be preferred, but John stated there is no capacity to support GTA students; the plan is to use Ecampus funds for GTA's.
- Denise questioned whether students pay differential tuition. John responded positively, but indicated that the unit sees none of the \$100,000 in differential tuition.
 - With 75 undergraduate students, 22 BEE graduate students and about 30 graduate students in Water Resources Engineering and Science, the differential tuition would target both undergraduate and graduate students.

Rick and John were thanked for participating in the program review follow-up discussion.

Action: Theresa moved to accept report; motion seconded. The motion to accept the Biological and Ecological Engineering Graduate Program Review Follow-up passed by voice vote with no dissenting votes.

Category I – Termination of an Academic Program Proposal – Construction Engineering Management (MBE) CPS# 83272 *Reviewer: Carolyn Aldwin*

- [Online version](#)
- [PDF version](#)
- The program began in 2005/2006; it has never had more than eight students enrolled; and there is no impact to students because the program courses are available in other Engineering programs and the current students (three) will be allowed to either complete the MBE or transfer to M.Eng or M.S. degrees in Construction Engineering Management. On behalf of the College of Business, Jim Coakley said the proposal is fine.

Action: Denise moved to approve the proposal; motion seconded. The motion to approve Termination of the Construction Engineering Management (MBE) Academic Program, proposal #83272, passed by voice vote with no dissenting votes.

Graduate Council

June 6, 2012 Minutes

Voting Members Present: Carolyn Aldwin, Jim Coakley, Cass Dykeman, Denise Lach, Mike Lerner, Murray Levine, Stacy Semevolos

Voting Members Absent: Angi Baxter, Theresa Filtz, Vinod Narayanan, Andrew Plantinga Darrell Ross

Ex-officio non-voting members present: Brenda McComb, Bruce Rettig

Guests: Nagwa Naguib, Tom Wolpert

Review of [May 23 Minutes](#)

- Nagwa noted two corrections within the Biological and Ecological Engineering (BEE) Graduate Program Review Update:
 - The word 'Update' should be corrected to 'Follow-up' wherever it appears in conjunction with 'Program Update'.
 - The first recommendation indicates 'College of Education', but it should be 'College of Engineering'.

Action: The May 23, 2012 minutes were accepted as corrected.

Program Review Update, [Mechanical Engineering Graduate Degree Program Review Follow-up](#) – Reviewer: Tom Wolpert

- Tom reported that the follow-up review of the Action Plan was consistent with the original plan that was submitted to the Provost; there were no negatives.
- Given that this report contained 24 recommendations, Cass questioned the reasonable number of recommendations that can be accomplished. Tom noted that this review committee made very specific recommendations, but noted there is a danger with too many recommendations because the department viewed some as a low priority.
- Tom suggested that the School of Mechanical, Industrial and Mechanical Engineering be reviewed as one unit. Carolyn noted that Vinod indicated he has requested from the unit head the rationale for a combined review; Carolyn will share the response.
 - Carolyn suggested considering more combined reviews in the future for units that have overlap within a college. Denise felt that combined reviews could not be done credibly in the time allotted. Tom suggested coordinating combined reviews so they are accomplished in close proximity, but not on the same days. Brenda felt that unit leaders should make a compelling case for why they should be combined; the Graduate School would need to handle the logistics of combined reviews.
- Tom noted that there are two recommendations associated with student success which the unit did not address because they felt the data was not available. Carolyn will advise the unit that they need to determine how to get this requested data and provide it.

Action: Jim moved to accept the report; motion seconded. Motion to accept the Mechanical Engineering Graduate Degree Program Review Follow-up passed by voice vote with no dissenting votes. Carolyn will advise the unit that they need to track student and alumni success.

MA/MS in Communications (CAT I: New Program) #82032 – Reviewer: Denise Lach

- [Online version](#)
- [PDF version](#)
- Denise noted that requested proposal revisions were made in some instances but, in other cases, she could not find the requested revisions. Two new required methods stand-alone graduate courses were created; there is still a question about whether a minor is required for the degree program; and it is

still uncertain as to the difference between the MA and MS. Some of the unit responses stated that they weren't making requested revisions because other unit's aren't doing it, i.e. specific labor market data analysis was not provided because other programs have not provided the information. Their assessment strategy has a list of activities, but not how the activities will be achieved. The budget is neutral, with no funding allocated to address recruiting. Bruce noted that the slash courses have been removed and replaced with 500-level courses.

- If the purpose of the program is to provide instruction, Jim questioned whether the education minor being worked on by Brenda should be incorporated. If providing instruction is no longer the purpose, the proposal should be revised.
- Cass stated that he is not ready to vote until there is a market analysis and until he sees the Category II courses in the system so syllabi can be viewed. Denise questioned why one would prepare Category II proposals if the program is not approved. Bruce noted that concurrent Category I and II proposals could be prepared and the Category II courses would be approved only upon approval of the Category I. Jim felt that the minimum requirements (i.e., learning outcomes and assessment) for each course needs to be available for review.
- Regarding proposals, Carolyn noted that the Graduate Council needs to be consistent in enforcing requirements and/or requested revisions.
- Need to request learning outcomes and assessment methods for graduate stand-alone courses. Ask to clarify intentions of offering stand-alone 500-level courses. Indicate that curriculum is nebulous and suggest that they create a matrix containing the courses and learning outcomes. Regarding the market analysis, if there is no information available, they can contact the Graduate School to receive advice about contracting-out to obtain this information.

Action: Cass moved to return the proposal to Communications and request additional information, including: both need and employment market analysis; further information on the relationship between curriculum, and assessment and learning outcomes; and clarify slash and stand-alone courses; motion seconded. Motion to approve returning the proposal and requesting additional information passed by voice vote with no dissenting votes.

School of Life Sciences APC Report – Theresa Filtz

- Theresa reported, via Carolyn, that she attended the School of Life Sciences pre-review and is anticipating no difficulties with the proposal.

Proposed Changes to Graduate Catalog Copy on Examination Policy –Carolyn Aldwin

- Carolyn felt there was confusion around the current catalog copy regarding the differences between the Preliminary Exam, Written Comprehensive Exam and Oral Preliminary Exam; both she and Murray drafted [proposed policy revisions](#).
- After much discussion of potential revisions, inferences, departmental requirements and sharing of how the process is handled in various units, it was decided to not change the verbiage at this time. Brenda noted there is another piece containing information about the Final Oral Exam and suggested that the Council review all of the relevant materials prior to approving revisions.

End of Year Wrap-up – Carolyn Aldwin

- This is the last meeting of the term; the June 13 meeting is canceled.

Graduate Council

September 27, 2012 Minutes

Voting Members Present: Jay Casbon, Jim Coakley, Theresa Filtz, Greg Herman, Don Jump, Mike Lerner, Murray Levine, Andrew Plantinga, Darrell Ross, Stacy Semevolos,
Ex-officio Members Present: Anita Azarenko, Brenda McComb
Guests: Nagwa Naguib

Welcome and Introductions

As it was the first meeting of the academic year, Chair Jim Coakley welcomed everyone and those present introduced themselves.

Approval of [June 6 Minutes](#)

The June 6 Minutes were approved as distributed.

Review [Graduate Council Standing Rules](#)

Jim reviewed the Standing Rules with the Council and proposed that the process of reviewing policies and procedures commence. He requested input from the members to determine the order in which the reviews occur.

Program Reviews

- Anita Azarenko, Graduate School Associate Dean effective August 7, 2012, reported that the Graduate School (GS) would like to move toward streamlining the graduate program review reports. Her primary criticism when she was involved in a program review was why the department was generating the data when it's available via Institutional Research or the Graduate School. The hope is that assessment will roll up to a 10-year review. The GS now has access to more data which they can provide and the desire on their part is to do more internal and external outreach to assist in generating scholarships. The GS has been working on revised guidelines, which will be distributed to the Council members for review, and it's anticipated that the guidelines will be shared with graduate programs involved in reviews during 2013-2014.
 - Don questioned whether the GS will be able to track changes in programs and units, as well as college name changes. Anita acknowledged that this may be problem in the beginning, but stated that a report will be distributed annually to units to catch these changes rather than waiting for the 10-year review.
 - Theresa noted concern about tracking interdisciplinary programs. Anita noted that the Provost has indicated these students can be double counted.
 - Jim encouraged members to talk with faculty in their college who have been through a recent review about the draft that will be distributed from the Graduate School.
- Expected review presentations to the Graduate Council
 - Jim distributed a revised schedule from the one that was included with the agenda. Due to anticipated absences, Jim will revise and redistribute the schedule.

Program	Initial Graduate Council Meeting	Graduate Council Rep to present the report	Grad Council Review with Chair	Department Head/Program Director to be invited to the GC meeting	Meeting with Becky Warner
MPP	25-Oct	Mike Lerner	25-Oct	Brent Steel	9-Nov

Horticulture	11-Oct	Denise Lach	25-Oct	Bill Braunworth/Anita Azarenko	9-Nov
Physics	25-Oct	Mike Lerner	25-Oct	Henri Jansen	16-Nov
CCLP	25-Oct	Murray Levine	8-Nov	Darlene Russ-Eft	3-Dec

Overview of proposed reviews for upcoming year.

Vickie Nunnemaker is in the process of creating a pool of past Council members to participate in program reviews.

Awards

Please let Nagwa Naguib know if you are interested in serving on the following award committees: Laurels Block Graduate Program, Bayley/Yerex Fellowships, and Excellence in Graduate Mentoring Award.

Process for Review of Curriculum Proposals

- Courses, new or changed – Theresa noted that 700-level courses are not reviewed by the Council unless they are associated with a graduate proposal.
- Degrees, Category I's – Brenda indicated there could be the perception of a conflict of interest if the submitter is also the individual reviewing and approving the proposal. It was decided that, if a proposal is submitted by a Council member, the secondary reviewer would review and approve the proposal and be listed as a secondary liaison in the CPS system. Jim will assign the secondary reviewers.
- Options, new this year – Jim proposed that all proposed options initially come through the Council to make sure that the process is working; although it is a Category II, the same process as a Category I will be followed.
- Graduate Certificates – Jim noted that graduate certificates are not currently reviewed by the Graduate Council; instead, they are reviewed by the Curriculum Council and forwarded to the Faculty Senate. Brenda felt that, because there are graduate courses, the Council should have some oversight, and questioned whether these certificates should go through a 10-year review, similar to a GPR. Theresa thought that there was agreement that, if there is a certificate associated with a program, it would be reviewed during the GPR; this does not address certificates that may not be associated with a program. Brenda noted there are seven graduate certificates not associated with a program.
 - The Council agreed that graduate certificates will be treated as a Category I proposal.

Deferral of Graduate Reviews – Policy

[Request for delay of Applied Ethics review](#)

Discussion:

- Deferral of reviews was noted as a problem in the last accreditation review.
- Consensus by the Council was to deny the request to delay the Applied Ethics review; Jim will inform the unit of the decision. Jim will first confirm with Nagwa whether the initial deferral was for one or two years.

Issues

- What is the role of the Graduate Council Representative (GCR) during the dissertation/thesis process?
 - Issue is that there are directives for GCR's, but there are not always representatives present or they feel they are not part of the process.
 - Why is the GCR a voting member if they are present for compliance issues?
 - There needs to be an education piece for GCR's to explain their role.
- Should input from Graduate Council Representatives be considered in program reviews? It could be challenging if the GCR is outside the program area, but could provide input on the process.
 - A suggestion was made that the program review form be revised to add a block for input from the GCR.
- This issue will be discussed at a future meeting.

Process for Review and Removal of Graduate Faculty

Proposal: Graduate faculty should be reviewed (re-nominated) every five years. In those situations where performance as a graduate faculty becomes an issue, the review may be accelerated.

- Brenda noted there is an additional issue of faculty members who are not appropriate mentors, so a mechanism to determine the quality of their mentoring needs to occur. Brenda would like faculty to be required to take an online course related to mentoring during the review process, as well as requesting information from graduate students related to the quality of the mentoring they are receiving.
- Theresa questioned how one builds a case against someone who is not an effective mentor and how it

is dealt with. Brenda acknowledged that taking action will be difficult –will need to involve both Human Resources and the Faculty Senate.

- There are two issues that need to be addressed:
 1. a periodic review of graduate faculty appointments, and
 2. the need for a process to look at both sides of the issue.
- The GS will offer several workshops during the 2012-2013 academic year to discuss requirements for providing good mentoring. Theresa noted that faculty need to periodically be reminded of policies and mechanisms.
- Murray suggested a policy by the GS initiating a review of a graduate faculty member via a grievance subcommittee; he will draft a policy for review by the Council.
 - Jim asked members to think about this issue for further discussion at another time.

Review and Approval of [Family and Medical Leave Policy](#)

- Brenda explained that this policy resulted from the desire to allow students to take a leave related to maternity or serious illness and protect them related to degree progress. Requests are reviewed by Human Resources, granted by the Graduate School, and students would be allowed to take advantage of this 12-week period once during their tenure at OSU. A leave of absence is one-term in length.
 - The Council was in favor of allowing students to take one leave per year, rather than once during their tenure, as was proposed.
 - Brenda will revise the first paragraph under 'Section III: Policy' to eliminate errors and it will be brought the Council at a future meeting.

Update on Strategic Priorities for the Upcoming Year – Dean Brenda McComb, Graduate School

- Brenda thanked Theresa for co-chairing the Strategic Planning Committee. She has talked with the Faculty Senate Executive Committee, identified goals to work on and individuals to move the objectives forward, and will track indicators to identify progress. She will lay out objectives, goals and associated individuals at an upcoming Graduate Council meeting.

Graduate Council

October 11, 2012 Minutes

Voting Members Present: Jay Casbon, Jim Coakley, Greg Herman, Don Jump, Janet Lee, Murray Levine, Andrew Plantinga, Darrell Ross, Stacey Semevolos

Voting Members Absent: Theresa Filtz, Mike Lerner

Ex-officio Non-Voting Members Present: Anita Azarenko, Brenda McComb

Guests: Denise Lach, Nagwa Naguib

Call to Order, Introductions

[Approval of Sept 27 minutes](#) The minutes were approved as distributed.

[Family and Medical Leave Policy](#) – Update and Approval – Dean Brenda McComb

- This policy is consistent with other graduate student leave policies; the changes include:
 - Enactment of the policy at any time during the term; and
 - An additional one (1) term extension will be given for all courses and program requirements in progress at the beginning of an approved leave.
- Murray suggested including a link at the end of Section III to where other policies can be found.

Action: Stacey moved to approve the revised FMLA policy; motion seconded and passed by voice vote.

Strategic Priorities for Graduate School – Dean Brenda McComb

- [Prioritized Objectives to Achieve Strategic Plan Goals](#)
 - There are three goals (each goal has a variety of objectives):
 - Increase graduate student population to 25% of total university enrollment through recruitment and retention of high achieving and diverse students.
 - Continuously improve program quality.
 - Grow and invest resources to enhance graduate education opportunities.
- [Prioritized Objectives from our Strategic Plan memo from Brenda McComb to Jim Coakley](#)
- Brenda noted the need to grow based on capacity (how many graduate students should graduate faculty be expected to advise?) There was also a discussion related to funding and funding sources. There are indicators for success that will be monitored via dashboard.
- Please send comments to Brenda related to the Graduate School Strategic Plan.
- As an aside, Brenda has been asked by the Provost to serve on a committee to study space issues in Kerr Administration Building.

[Graduate Program Review](#) – Revised Guidelines – Associate Dean Anita Azarenko

- Need to create a seamless process including assessment and accreditation information that will roll up into a Graduate Program Review (GPR). Table 1 of the Guidelines identifies information that the Graduate School will generate data needed for a 10-year review (about 80%), but will be reviewed by the unit annually for accuracy.
- Council members were asked to look at the guidelines and send comments to Anita Azarenko, keeping in mind: 1) what information should be provided to an external reviewer, and 2) the information needs to be tied to assessment.
 - Anita noted that she would like to apply the revised guidelines to one or two upcoming graduate program reviews as a pilot before all units are required to use the revised guidelines.

[Horticulture Graduate Program Review](#) – Denise Lach, Reviewer

Denise began by providing an overview of the responsibilities of the Graduate Council (GC) member during a Graduate Program Review (GPR):

- Ensure that rules and procedures are in place and asking ‘tough’ OSU questions.
- The outside reviewer is the chair and responsible for drafting the majority of the report – but the job of the GC representative is to make sure that the whole story is laid out and there is nothing incendiary in the report. The intent is to be constructive and review the program.
- The process is that the night before the review team meets for dinner, a Graduate School (GS) representative outlines the goals, and questions are asked by the outside reviewers.
- The next day the review team: meets with unit administrators to lay out issues raised and identify strengths; meets with graduate students; tours facilities; meets with graduate program director; in late afternoon, debrief and divvy up report tasks; and draft recommendations.
- The report goes to dean and unit director for comments before the draft report goes to the GC, which can make suggestions and decide whether or not to invite the dean and unit director to meet with the Council; and then goes to the Graduate Program Director to begin drafting an action plan to address recommendations, as well as address metrics. Both the Council and GS must approve the draft report.
- Denise encouraged the GC representative to carefully consider recommendations – are they critical or are they suggestions for change?
- Denise reported that Horticulture is in pretty good shape, the students are employable, and the program fits within the Provost’s requirements.
 - The recommendation of the review team is to maintain and improve the Horticulture Graduate Program.
 - There is no graduate student co-hort since they are funded almost exclusively by grants and are hired as funds are available – the unit needs to determine how to attract a co-hort.
- Jim felt that Recommendation 10.i., which indicates ‘see recommendation e’, is not appropriate. Denise stated she had requested that this be removed, but was denied; she suggested that the Council make a recommendation to remove this entry.
- Council members were asked to review the report and send comments to Denise. Likely the Horticulture administrators will be asked to attend the next GC meeting and respond to GC inquiries.
- Denise noted that although Anita Azarenko was the heart and soul of the program, this was not included in the report because it was noted following the report.

Graduate Faculty Review Process, Continued – Dean Brenda McComb

- Brenda discussed the Graduate Faculty Review Process with Kate Hunter-Zaworski, Meg Reeves and Becky Warner and two issues were identified:
 - All were in favor of a five-year term with a renewal process to ensure that faculty are still engaged. The sticking point is to conduct a student evaluation of faculty because it is a personal issue. A component of the five-year review process could be development activities.
 - An additional discussion involved the role that conglomerate student letters play in the Promotion and Tenure process when the letters are not always honest because they cannot be confidential – how do we empower students to come forward with issues that may come back to bite them?
- Jim questioned whether it would be a five-year review or re-nomination. Brenda indicated that the Council would decide, but felt it should contain development components.
- Brenda responded positively to Don questioning whether faculty are approved by the GS to serve on committees, and noted there are five levels of activities. Jim mentioned that units can nominate faculty. Brenda explained that the GS approves graduate faculty on behalf of the Council. Brenda noted that the proposal would increase the GS workload, and would involve: the GS pulling out 20% of faculty for review each year from their graduate faculty database and determining whether they are still interested in continuing; interested faculty would then complete a brief online training relating to what it takes to be a good mentor and in what productivity activities they are engaged. A tool needs to be developed to make faculty aware of mentoring, GCR training, etc.
- Brenda needs approval from the Council to propose the process; she will draft a proposal for GC review and approval, then approval from both the Faculty Senate Executive Committee and Faculty Senate.

Graduate Council Assignments in the Curricular Proposal System (CPS)

Jim noted that the primary reviewer has primary responsibility to review the proposal unless there is a conflict of interest, in which case the backup reviewer has primary responsible for the review.

Revised Program Review Schedule:

Program	Initial Graduate Council	Graduate Council Rep to present the	Grad Council Review	Department Head/Program Director to be invited to the GC	Meeting With Becky
---------	--------------------------	-------------------------------------	---------------------	--	--------------------

	Meeting	report	with Chair	meeting	Warner
MPP	25-Oct	Mike Lerner	25-Oct	Brent Steel	9-Nov
Horticulture	11-Oct	Denise Lach	25-Oct	Bill Braunworth/Anita Azarenko	9-Nov
Physics	25-Oct	Mike Lerner	25-Oct	Henri Jansen	16-Nov
CCLP	25-Oct	Murray Levine	8-Nov	Darlene Russ-Eft	3-Dec

Certificate Programs

- Should certificate students be graduate students if they are taking graduate courses? The GC approves graduate certificates as a Category I, but these post-bacc students are not required to be graduate students, therefore, they do not have to qualify as a graduate student.
- There is no review of courses by the Graduate Council, Curriculum Council or Graduate School after the certificates are approved. Brenda feels that the GS and GC should take responsibility for the review. This change would result in another 1-2 reviews per year, but could be rolled into either a scheduled GPR or undergraduate program review.
- This is a topic for discussion at a future Council meeting.

The meeting adjourned at 1:56 PM.

Minutes provided by Vickie Nunnemaker, Faculty Senate staff.

Graduate Council

October 25, 2012 Minutes

Voting Members Present: Jay Casbon, Theresa Filtz, Greg Herman, Janet Lee, Mike Lerner, Murray Levine, Darrell Ross

Voting Members Absent: Jim Coakley, Don Jump, Andrew Plantinga, Stacey Semevolos

Ex-officio Members Present: Anita Azarenko, Brenda McComb

Guests: Dan Arp, Larry Curtis, Henri Jansen, Kimberly Johnson, Philipp Kneis, Julie Kurtz, John Lambrinos, Nagwa Naguib, Vince Remcho, Brent Steel

Call to Order

- The meeting was called to order by Theresa Filtz in the absence of Jim Coakley. A concern was raised regarding the Graduate Council minutes in general. The minutes identify which individual makes specific comments, and not every Council member was comfortable being identified with comments, particularly if they are critical comments. It was recommended that the members think about the stated concern and wait until Jim Coakley returns to discuss the issue.
- The [October 11 Minutes](#) were approved as distributed.

Graduate Program Reviews

- [Masters in Public Policy](#)
- *Graduate Council representative recap – Mike Lerner*
 - The report accurately reflects concerns; overall, the program is doing well and students are engaged. Primary recommendation: the program director needs to diversify and engage other faculty to assist with the program management – they are currently in the process of hiring an assistant administrator which may alleviate the workload. Additionally, a secondary concern was raised regarding the issue of clarifying faculty roles and getting information to the research faculty related to grants.
- *Discussion with unit representatives – Brent Steel, Philipp Kneis*
 - Brent reported the MPP has been doing full-cycle assessment for five years, and this should be included on the self-study form. Anita noted that an assessment component has been added to the new program review guidelines.
 - Theresa questioned who will assist with the program. Brent responded that Philip Kneis is newly hired and is the assistant program director. The CLA reorganization has resulted in a shared ownership, and there is now a faculty member who does advising and recruits for the seven tracks.
 - Theresa suggested that this information be included in the Action Plan.
 - Theresa questioned how faulty will find time for Ph.D. students and maintain the MPP program. Brent responded that many faculty have not previously participated as a major advisor. A point system has been implemented to reduce course loads commensurate with graduate student mentoring as an incentive to advise graduate students; Brent feels this will increase capacity. There are six new hires and an endowed chair in Political Science. Additionally, there is an MPP admissions committee, as well as a Ph.D. recruitment committee which is helping to spread the workload.
 - Brenda questioned the potential for growth. Brent responded that the reviewer's advice was to maintain 60-65 students and maintain quality; the unit is having a strategic planning meeting in two weeks and will discuss whether or not to grow. There is concern about the 100% placement rate and whether all the graduates can be placed if the program grows much.

- It was noted that the unit needs to go through professional accreditation before they can be ranked.
- Brenda remarked that the recruitment record is impressive and that they are attracting high quality applicants. Brent explained that the recruitment has been aggressive, including Google ads in Chicago resulting in five top notch students from the Chicago area; he also noted that Facebook ads didn't work well. There is now an effort to target LGBT students at southern schools.

Action: Jay moved to approve the report associated with the Masters in Public Policy Graduate Program Review; motion seconded; motion passed with no dissenting votes.

- [Physics](#)

- *Graduate Council representative recap – Mike Lerner*

- The program has had serious challenges, both faculty and student numbers have decreased, but appear to be improving.
- Recommendations and concerns noted:
 - Physics education research has been a way to grow the faculty, but this is an unusual arrangement for a Physics unit. There is concern with overlap with the College of Education, and there are interactions with SMED, but no joint appointments. Jay noted that Larry Flick needs to put together an integrated STEM education program, including Physics, and is working on the issue.
 - How does 'Paradigms in Physics' play a role related to research?
 - Should discontinue the Professional Science Masters (PSM) offering and focus on strengths.
 - Because Physics does not participate in Ecampus (one emeritus professor does participate), they need to find faculty to help develop Ecampus offerings. They are resistant to participating in Ecampus and prefer the mentoring aspect of face-to-face. The unit has budget issues and Ecampus offerings would be a way for them to support graduate students.
 - Regarding course offerings, the issue is that faculty numbers have dropped which makes it difficult for them to offer courses in all sub-specialties. They need to develop a plan to address this issue, perhaps by collaborating with other units.
 - Need to develop a rigorous and sustainable recruiting plan for graduate students. Attracting Physics graduate students is a national issue and they should work with the Graduate School.

- Theresa questioned the overall recommendation for the program, which appeared to be missing from the report. Brenda stated the recommendation would probably be to restructure. Jay suggested recommending a plan to acquire needed resources.

- *Discussion with unit representatives – Henri Jansen, Vince Remcho*

- Henri felt the review went well.
- To the question of how there is a Ph.D. in Physics where the students' research is in education, Henri responded that there is a discussion of how to better define the goals of the program; the physics background (Degree in Physics) has an education focus; there is support for this from professional organizations. The research is mainly at the upper division Physics level. The oral and comprehensive exams are the same for all Ph.D. students; the only difference is the dissertation. Physics works strongly with Education and there is strong collaboration.
- Is there a level of discussion with SMED synergies? Henri responded yes. It started when all upper division courses were changed at once, there was a strong interaction with SMED faculty, which allowed Physics to move forward; there is always faculty from both Physics and SMED on student committees.
- To the issue of why the department isn't involved in Ecampus, Henri stated there are two Physics Ecampus courses. The department is not in favor of Ecampus courses for the lower division service courses because they don't feel the quality is the same and professional organizations don't support Ecampus. In Physics there is a problem with the lab experience, which is an integral part of the course. There are also problems with administering tests. They believe that students work better together in a classroom environment. Janet felt that virtual communities are easier for non-traditional students, noted there is interesting research to build community, and encouraged Henri to be open to Ecampus courses. Theresa expressed concern that Physics education students are not being exposed to online learning. Henri felt that hybrid courses are a much better avenue. Henri stated that,

if Ecampus courses were funded the same as classroom courses, they would be less utilized. Janet noted that Ecampus courses would provide resources for GTAs. Henri acknowledged that they are resisting Ecampus courses. Jay encouraged Henri to examine different platforms. Henri doesn't know of any introductory online Physics courses that are successful and Ecampus could only accommodate 60 students per section, while classrooms can accommodate 200 students.

- Regarding the issue of actively recruiting high quality students, Henri and Brenda will discuss this issue in a separate meeting. Henri indicated Physics is recruiting about two-thirds American students, and noted there are ways to get to minority students, but they are a very small minority. Brenda noted that the Graduate School has cost-shared with other units.

Action: This discussion of this review will be continued during an upcoming meeting.

- [Community College Leadership Program](#)
- *Graduate Council representative recap – Murray Levine* (Note: the program director will meet with the Graduate Council on November 8)
- The review occurred in February; initially the reviewers met on campus with leadership and students and then went to Silver Falls Conference Center where the co-horts were meeting. The program is 20 years old and designed to admit once per year by co-hort, which is similar to other programs in the nation, but the delivery is non-traditional because they meet once per month for three days and attract working professionals.
- The overall recommendation is to restructure the CCLP which is an excellent and needed program, and with which a great deal is favorable, but in which there are also significant concerns.
- Specific recommendations and concerns:
 - There are currently two degrees offered, the Ed.D. and the Ph.D., but the expert reviewers felt the program should offer one, not both. The program began with an Ed.D emphasis and the Ph.D. option began in 2004. The reviewers felt the Ed.D was the preferred degree over the Ph.D. degree, which seems to have crept into the options. There was a lack of understanding of why students chose a Ph.D. or an Ed.D.; some said they chose the Ph.D. because the requirements were fewer and some because they thought the Ph.D. degree was more respected.
 - Improve design of online instruction, which is offered through Ecampus, but doesn't have online offerings.
 - It is difficult to get to Silver Falls, which has limited internet connection.
- Theresa will suggest to Jim Coakley that the Council further discusses this review prior to meeting with unit representatives.
- [Graduate Program in Horticulture](#)
 - *Discussion with unit representatives – John Lambrinos, Larry Curtis, Dan Arp, Anita Azarenko*
 - John was very impressed with the work of committee and insightfulness of the report, and for providing an outline of how to go forward.
 - Darrell questioned the recommendation to increase course offerings via cross-listed courses because he recently received a request to eliminate a cross-listing for an entomology course, which seemed counter to the proposal recommendation. John explained that the broader context is that they are still in the process of merging graduate programs with the goal to have a unified graduate program that cuts across Entomology, Horticulture and Plant Genetics. There may be some arcane logistical reasons for cross-listing, but all courses will eventually be under a common major with transcript visible options.
 - When questioned whether this approach of removing a cross-listing of the entomology course removes options for students, Anita noted that it is truly an Entomology course.
 - Dan explained that Horticulture and Crop Science will likely be two separate departments within a school. Anita noted that the advantage of a school is that the departments have a lot in common, but also some unique attributes. John felt that significant progress has been made toward integration at the undergraduate level, but integration at the graduate level has not yet been addressed.
 - An issue raised in the report relates to the lack of cohesiveness in the graduate student co-hort – how will a new designator affect that? John responded that one issue has been the integrated nature of Horticulture in general; consequently there have been co-horts among subsets of students. As graduate numbers have increased, there has been dynamic graduate student cohesiveness.
 - Anita mentioned that Horticulture itself is not a discipline, but is organized around

horticulture farming systems, which makes it diverse in who participates in the faculty.

- Regarding perspectives of the future of the program, Larry felt that the decision to maintain the departmental identity within the school will work fine. They are interested in a broader degree and felt that implementation is close. The proposed merger of Horticulture with Crop and Soil Science was contentious, but the merger is now off the table and will not be a barrier. Dan agreed, and is excited about the opportunity to integrate units and degrees. There is still a need to identify where to take advantage of synergies between two units and Botany and Plant Pathology will be included in the conversations, and possibly Forestry.

Action: Mike moved to accept the Horticulture Graduate Program Review report; motion seconded and approved.

Revising the Graduate Diploma to Include the Major – Julie Kurtz

- Julie explained that this issue arose when a student questioned why the major did not appear on the diploma. The diploma printing company indicated that the way in which diplomas are printed vary, and OSU does it the 'old school' way. Large institutions also display the college title. The undergraduate diplomas do indicate the major.
- The Graduate Council expressed no objections or concerns to changing the diplomas to include the major. Julie will proceed with incorporating the major on the diploma.

English Language Requirements – Mike Lerner

- Brenda noted there has been concern from Chemistry related to how international students are handled based on TOEFL scores. Mike related some prior experiences and emphasized that the Chemistry department needs to be able to approve their own students.
- Brenda noted that the scores have been reduced some and explained alternate ways in which students could be admitted. There was concern expressed for GTA's scores and felt that the scores should not be lowered for these students. Chemistry finally received an exception two years ago that allowed them to hire GTA's who did not meet the minimum verbal TOEFL, but the rest of campus remains held to the current rules. Mike felt that the current requirements for other units are too rigorous.

Action: This discussion will be continued at the next meeting.

Graduate Program Review Guidelines (newest draft) – Anita Azarenko

- In the latest draft of the new Graduate Program Review Guidelines, it was suggested to remove the tables regarding assessment and, instead, have units append their annual assessment reports, which are starting to be generated by units. These could be included along with the program learning outcomes (including trends and actions), a summary of the annual assessment report, changes in the assessment plan over time, and an action plan.
- Anita will revise the Guidelines for further discussion.

Meeting adjourned at 2:09 PM.

November 8, 2012 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Theresa Filtz, Greg Herman, Don Jump, Mike Lerner, Murray Levine, Stacey Semevolos

Voting Members Absent: Janet Lee, Andrew Plantinga, Darrell Ross

Ex-Officio Members Present: Anita Azarenko, Brenda McComb

Guests: Nagwa Naguib, Britta Stumpp

Approval of Minutes

The [October 25 minutes](#) were approved as distributed.

The discussion regarding identifying individuals' names in the minutes continued with the Council agreeing that, whenever possible, the names of Council members will be omitted from the discussion in the minutes; however, names will be associated with action items.

[Physics Program Review](#) – This was a continued discussion from the October 25 meeting.

- There was concern that students earning a PhD in Physics who write Education theses don't have adequate oversight. Is there always a College of Education member on the committee? Is there adequate pedagogy?
- It's clear that the Ecampus online learning piece is not addressed, but needs to be included.
- A possible outcome is for the one faculty member who has the training to become a graduate faculty member.
- An additional issue is how students are being recruited. It was not clear that the Education component contributes to Physics national ranking.
 - Henri Jansen, Physics chair, feels there is value in focused recruiting but, because it's a small program, it was not clear given capacity that the quality or number of students would be increased.
 - One option related to recruiting is to create an INTO Pathway.
- The Council could accept the report with amendments, including one amendment to involve restructuring.
- The report indicates that it may be time for a change in leadership. It's possible that the program could be reinvigorated with new leadership.
- There was a suggestion from the Council to move recommendations A-M from the back of the report to the front. Additionally, some of the recommendations need to be strengthened.

Action: The Council agreed to make the recommendation to significantly restructure the Physics Program; move recommendations A-M to the beginning of the report; write an executive summary including mention of joint appointments, clarification of degree requirements, restructuring, and collaboration with the College of Education; request development of a timeline for a leadership change; revise the mission; find ways to significantly expand the applicant pool, including the need to be open to recruiting international students; and be open to online courses as a pedagogy needed by students. Jim will draft an Executive Summary for review by the Council.

[Community College Leadership Program \(CCLP\) Review](#) – This was a continued discussion from the October 25 meeting.

- The overall recommendation is to restructure.
- There are five recommendations at the beginning:
 - Recommendation A – Choose a degree focus for the program; either EdD applied scholarship or

PhD research scholarship.

- The downside is that there is not a PhD environment. There is also not a research program to fund students.
- Should the Council emphasize that the unit should do either EdD or PhD, but not both? Can the PhD be suspended while the college engages in strategic planning?
- Recommendation B – Improve the design and practice of online instruction by development of guidelines and training for faculty.
 - Online learning is not required, but there is an Ecampus component because it is less expensive for out-of-state students.
- Recommendation C – Revise the portfolio project to apply consistent expectations and approaches to be communicated early in the program.
 - The unit agreed to be more specific.
- Recommendation D – Locate and assess a venue for intensive course work sessions that provides strong connectivity for mobile devices and computers, as well as greater travel accessibility.
 - It is difficult to access Silver Falls during the winter. The unit agreed somewhat and is proposing to move to Wilsonville for some of the classes.
- Recommendation E – Develop a program learning objective intended to achieve learner proficiency in managing technological change in the teaching and learning environment.
 - The unit felt it was their job to understand and manage technology.
 - It was noted that there was a [response](#) to the report from the unit.

This discussion was postponed until Darlene Russ-Eft is available to participate.

- The Council will recommend to 'Maintain' the program, which involves restructuring; an Executive Summary will be drafted for the Council to review.
- It should be mentioned to Becky Warner how the Ecampus piece is handled.

Action: Jim will draft a response that the Council recommendation for the Community College Leadership Program (CCLP) Review will be to revise Recommendation A to indicate that, as opposed to restructuring, the recommendation will be to suspend the PhD until appropriate funding is available, and maintain and improve the EdD.

Darlene Russ-Eft will be advised of the Council's decision.

English Language Requirements –

- The recommendations provide flexibility for students who don't meet certain thresholds and would allow local control, subject to review and approval by the Graduate School; Science & Engineering units are supportive of the proposal.
- Brenda conveyed a concern from Kim Johnson, Graduate School, which was whether the conditional admit scores would be so low that we would be taking undue risks. Kim is willing to meet with the Council to discuss this issue; she is in favor of a higher score with a waiver component.
- It was suggested that a three-year pilot be implemented and tracked for potential revisions during the pilot period.
- For GTA's, it was felt that 18 was a very low score for one who is grading papers. Conversely, it depends on the individual student. If 18 is the minimum, it allows other programs to use it as a minimum without actually meeting with the student. There was also support for a minimum of 20 with a unit waiver.
- It was agreed to revise the following to include any country: '*** Exemptions for citizens of African countries are considered on a case-by-case basis if the medium of instruction is English.'
- These recommendations could result in elimination of the TOEFL.
- It was noted that any program could set their standards above those listed.

Action: Kim Johnson will be requested to develop sub-scores. She will be invited to meet with the Council next week; Sunil Khanna will also be invited to participate in the discussion.

Graduate Student Teaching – Should there be exceptions to the current policy?

- Students working toward graduate certificates or advanced degrees are not permitted to teach graduate courses. It was felt by some that grading by a graduate student of other graduate students materials was considered a substantial part of teaching courses; others disagreed. Some felt it was valuable training, if they are qualified.
 - What is being expected of graduate faculty?
- It was suggested that total anonymity is a possibility of handling the situation. It was noted that the instructor needs to provide the grade and the graduate student could record the grade. There was some support for graduate students as assistants.

- The issue is whether the individual is able to objectively evaluate papers of friends, colleagues and enemies.
- If a TA is introduced into a slash course, it must be explained that this a learning experience for the graduate student and that anonymity will be maintained.

[Graduate Council Assignments](#)

Jim will revise the distributed assignments and redistribute.

Updates from the Graduate School

- New Major Admissions Improvements
 - Currently admissions documents are scanned, but a new process will be electronic.
 - Salesforce will be used by the Graduate School as a workflow process, including recruiting and admissions.
 - [Guidelines for Growing and Sustaining Interdisciplinary and Intercollegiate Graduate Programs at OSU](#)
 - The Graduate School should be the incubator to develop and administer interdisciplinary and intercollegiate programs, but should not be an accumulator of programs.
 - The Graduate School would provide funding annually for four years and participating colleges will provide support via a three-year MOU; programs will be reviewed after four years to determine success and continuation. The document provides consistent expectations for this type of activity.
 - Sabah suggested to Brenda that the EC review the proposal; the Graduate Council was supportive.
 - It was suggested to add a footnote that this policy applies only to programs that are sponsored through the Graduate School, but units can continue to sponsor their own programs.
- [Graduate Program Guidelines](#) – Anita suggested that GC members carefully review the guidelines and propose edits; Theresa and Don volunteered to assist Anita with the review.

Meeting adjourned at 1:59 PM.

Graduate Council

November 15, 2012 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Theresa Filtz, Greg Herman, Don Jump, Janet Lee, Mike Lerner, Murray Levine, Andrew Plantinga

Voting Members Absent: Darrell Ross, Stacey Semevolos

Ex-Officio Members Present: Anita Azarenko, Brenda McComb

Guests: Kim Johnson

English Language Requirements – Kim Johnson – Director of International Admissions

Kim distributed English Language materials:

- [English Language Testing and Training for International GTAs](#)
- [English Language Testing – Current and Proposed Requirements](#)
- [2011-2012 English Language Proficiency Requirements](#)

- Common trends – some [institutions](#) don't allow students to be a GTA if they have a reading sub-score.
- A concern expressed last week was why there is no sub-score for paper-based testing. Kim noted that the paper-based exam is being phased out.
- For [IELTS](#), OSU has used the internet-based test. Some institutions use only TOEFL scores.
- It was felt that many students do not achieve 26 on the iBT and felt that a score of 22 is more reasonable. Disciplinary differences and fluency were also noted; Brenda stated there is an option for units to set the score higher than 22 and noted that the published score sometimes reflects the level of student who applies.
- Jim noted that the institutional TOEFL is paper-based and that method would need to be retained.
- Having additional flexibility would be preferable.
- There was a concern expressed because a TOEFL is not required if a student successfully completes INTO-OSU language training as designated by CAP. Kim noted that, in some cases, a TOEFL would be required. Brenda noted there is a financial return on Pathway students.
- Brenda encourages units to speak with potential students, regardless of the score.
- A TOEFL is required, but an exception could be allowed. The bullets need to indicate that TOEFL is required.
- There was a suggestion to eliminate the third bullet under 'Exceptions': "Successful completion of language training at INTO-OSU as designated by the Conditional Admission Program – CAP." Brenda explained that this bullet pertains to students' scores that are below the required level, but the unit still wants to admit the student.
- It was suggested to raise the score from 22 to 24, but the exceptions would still be in place, which may result in OSU attracting better students. The sense last week was that the department could have higher scores but, if the university level is lower, some students may not apply. Some units don't even see scores in the 22-24 range. Brenda noted that OSU will continue to internationalize and doesn't want to prohibit students from applying.
- Some scores will result in more exceptions. Brenda trusts the units to appropriately come forward with exceptions and that students are able to progress.
- This is a three-year pilot proposal and will be reviewed at the end of the pilot to determine whether or not to continue.
- Proposed revision recap – If a student does not meet the minimum TOEFL, exceptions will be considered; if students don't meet the conditional standards, they would enroll in CAP. A graduate program chair can bring in a student who has less than the published standards.

Action – Theresa moved to accept the English Language proposal as amended; motion seconded. The

motion passed by voice vote with no dissenting votes.

Change to Graduate Admissions Requirements – Anita Azarenko

- The purpose of the proposed revisions is to achieve the ability to keep accurate records and easily retrieve information.
- The change to a cumulative GPA of 3.0 or above in the last 90 quarter hours must be calculated manually.
- For Bologna-compliant baccalaureate degrees, the proposal would honor a B average for a three-year duration.
- It was agreed to change the verbiage on the first proposed revision to "...the most recent baccalaureate degree..."; strike "On the first baccalaureate degree". Also strike from 2nd sentence as well.
- It was noted that these proposed revisions would need approval from the Faculty Senate.

Action: Theresa moved to accept the proposed revised GPA requirements; motion seconded. Motion to accept the revised GPA requirements passed by voice vote with no dissenting votes.

Physics – Jim Coakley

Jim distributed for review a Physics Graduate Program Review Memo to be forwarded to Becky Warner.

- Jim will forward the memo to Physics, invite them to the December 6 Graduate Council meeting and will wait until then to accept the report until after the unit talks with the Graduate Council.

Community College Leadership Program Review (CCLP) Memo

Jim sent the memo to Darlene Russ-Eft who asked to be invited to the December 6 meeting, so approval of the report will be delayed until after her visit.

Interdisciplinary programs – Brenda McComb

- Brenda met with the Executive Committee, which made the following suggestions:
 - Formalize the agreement with signatures between the Graduate Council and Faculty Senate leadership.
 - Because they wanted to make sure that these are guidelines rather than rules or policy, they requested a revision of the header; the first paragraph was also revised.
 - Replace the MOU with an agreement or signed agreements.
 - That it come forward to the Faculty Senate as an information item from Jim Coakley as the Graduate Council Chair rather than Brenda as an administrator.
- How does this affect the six programs already housed in the Graduate School? Brenda – Applied Economics will soon be moved into Agricultural and Resource Economics; other programs will be moved to other administrative units under a lead dean and will have an intercollegiate curriculum committee. There could also be an office of interdisciplinary studies or a center that houses these types of programs. Brenda felt that the graduate faculty in the program should decide where the program will reside; there was also a suggestion of a rotational basis, as well as of a divisional level.
 - If there is no dean willing to provide administrative oversight, the program would remain in the Graduate School to ensure that the program is not in jeopardy.
- Brenda will again revise the proposal related to movement of the home being driven by the faculty.

Meeting adjourned at 1:04 PM.

Graduate Council

December 6, 2012 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Theresa Filtz, Greg Herman, Don Jump, Janet Lee, Mike Lerner, Murray Levine, Andrew Plantinga, Darrell Ross, Stacey Semevolos

Guests: Randy Bell, Larry Flick, Rosemary Garagnani, Henri Jansen, Darlene Russ-Eft

Community College Leadership Program Review – *Unit representatives: Dean Larry Flick, Randy Bell and Darlene Russ-Eft*

- [Graduate Council Recommendations](#)
- Darlene, on behalf of the faculty, thanked the review team and Graduate Council for examining the program and providing comments and recommendations. They were particularly pleased that the review team went to Silver Falls to interact directly with students. The unit is in the process of addressing review team comments and are hoping to have all changes completed by Fall 2013, including new websites for all courses and revisions of the portfolio project. They will be addressing internet technology and, effective Winter 2013, courses will move to Wilsonville where there will be good internet.
- Regarding the EdD vs. PhD recommendation, the faculty feel that focusing on only one would be a disservice to students; the EdD is appropriate for students wanting to move into administration. Darlene noted that Carnegie is looking at a differentiation between EdD and PhD. The faculty have been examining the distinction between the two programs for the past six months or more and feel that by next year there will be a clear distinction between the two paths. The proposal is that the program focus would be 80% EdD and 20% PhD and would be differentiated in coursework and internship (focused on research and engaged in scholarly work and dissertation).
- Randy Bell noted that, when at the University of Virginia, they tackled the question and felt that the line has been blurring between the two degrees. If they choose to offer the PhD, it must be aligned with what is appropriate for that particular work. The goal is to strengthen both programs. The EdD is appropriate for those entering a practitioner's field who are not extending, but applying, theory. The PhD relates to quantitative or qualitative study, but has research questions involved. The PhD tests, extends and modifies theory for those whose career goals include research fields – this would be a small fraction of the students. Need to work this year to assist students in aligning career goals. They will have in place by the end of this year a policy for the college, the CCLP will be in place, all programs will be reexamined, and the Graduate Council will see a clear distinction and impact on all of their programs, which will become stronger.
- Larry Flick explained that the merger of Science and Math Education added a PhD program in the college. His experience is that students span a range in terms of interest, and his thought is that some students would have benefitted by understanding and be advised by a professional degree and what it represents as opposed to the assumption that they will follow a research track. The point of strengthening both and having a well-defined and articulated EdD will also strengthen the PhD programs across the college.
- Question: Should the college continue to bring in students during restructuring? Darlene responded that, based on faculty interest, they want to limit entry into the PhD, which has not previously occurred. Faculty would begin advising students in Winter 2013 to encourage some to move into a PhD. Starting now, they would be identifying students to be admitted into a PhD (20% at most). Larry noted that prior to the review, in the context of the merger, there was ongoing discussion to use what they have to support PhD work more broadly. There is a need to develop a clear set of questions for the different areas; faculty might see a way to connect PhDs from other groups. Darlene noted that two new faculty need to have graduate students and the PhD will support their research and publications that they must pursue to achieve tenure.
- Question: Is the unit was planning to expand on research areas? Darlene responded positively, both in

quantitative and qualitative areas outside of Education. Randy sees alignment with STEM research methods both inside and outside of the college.

- Question: Are PhD students on campus? Darlene responded they could be, but don't have to be. Randy added that it's important to realize that EdD students are different because they don't go straight through to achieve their PhD because they must teach for a few years before they can continue. Many counseling students are currently employed and furthering their education; it would be a disservice to students to require residency, and funding for doctoral students is extremely limited. The unit will work to improve mentoring opportunities for PhD students to work closely with an advisor.
- Question: Are students admitted into a particular program? Darlene – they are admitted to the program and then choose their program by the end of their first year. Faculty are beginning to realize that students need to declare their pathway when they apply with placement involving an evaluative, competitive process. Randy stated that there could be a disservice to a student who intends to achieve a PhD, and after a year learns that they are not accepted into the PhD program.
- A Council member thanked the college for moving toward early declaration and felt that how the college determines the difference between the EdD and PhD will impact the college in the future.

Council discussion:

- The Council's recommendation was to continue with the EdD and discontinue the PhD.
 - Options: ask them to suspend the PhD while restructuring or continue while restructuring? The Council could ask them to come back in a year to report on their progress. Another option would be to allow suspension and let Becky Warner to allow the program to continue.
- The Action Plan, requiring metrics of how the programs will grow, must be reviewed in three years.
- With so few PhDs, are they meeting the standard? It was felt that 1-2 students per year were required. It was clear that they didn't address the language of the recommendation to develop faculty resources to produce a consistent stream of PhD scholars; their approach was more that they want both programs. There has been a robust discussion of the EdD.

Action: Given that the college has already begun restructuring, Jim will rewrite the memo to Becky Warner to indicate that the Graduate Council will be critical during the three-year review related to restructuring and faculty support; there must be clear distinctions between degrees; and they need stronger training methods.

Approval of Minutes

- [November 8](#) – Minutes were approved as corrected to move two bullet points from the Graduate Student Teaching section to the English Language Requirements section
- [November 15](#) – Minutes were approved as distributed

Category I – Renaming an Academic Program Proposal – From Women Studies Program to Women, Gender and Sexuality Studies

- [Online version](#)
- [PDF version](#)
- The rationale for the proposal is that it reflects a movement toward the work they are doing related to women and gender, and trends in the field nationally because most units are Women and Gender Studies; there is a minimal budget impact.
- 'Women' reflects historical trends, 'gender' is more inclusive, and 'sexuality' is the growing trend. The unit wanted to leave 'Women' in the title because it is the trend nationally. The name change does not impact any current courses.

Action: Theresa moved to accept the proposal to rename the Women Studies Program to Women, Gender and Sexuality Studies; motion seconded; motion passed by voice vote.

[Physics Program Review](#) – Unit representative: Henri Jensen

- [Graduate Council Recommendations](#)
- To summarize the Council's recommendations, the vision and strategy and where to go with the program needs to be thought through.
- Both the Review Team and the Graduate Council expressed concern that students who write an education-oriented thesis may not have adequate oversight of the educational perspective. Henri provided input to the Council that those students who write an education-oriented thesis have faculty from the Science and Math Education (SMED) program on their committee, and that education courses taught by SMED are included on their program plan of study. The Council recommends that this be developed into a formal policy that specifies committee structure and minimum coursework for those students writing an education-oriented thesis.
- Henri felt that both the report and recommendations were very good, but there was no answer yet to the funding component.

- Henri was asked about the concerns related to online education and technology. Henri stated that online courses for educational purposes are a good thing for students who cannot be on campus. The other issue is online large service courses, which is where money is made and is a harder issue. The lab component is an issue because ABET and medical schools require these courses, but medical schools will not accept online courses. He felt that hybrid courses may be more appropriate and they are investigating how to approach and implement these courses.
- Regarding the recommendation to consider a search for an outside chair, Henri indicated he would be happy to step down and is considering how to make a transition workable. He felt that the unit is too small for a rotating chair approach and needs help in setting up an associate chair. He acknowledged there are pros and cons for an external search, but felt it could ultimately be helpful.
- The Council asked that the unit think through what they want to look like and determine what would work best for them.
- Henri asked for help with the role of Physics Education and indicated that he was curious about the opinion of the Graduate Council.

Council recommendations:

- Revise the paragraph in the Graduate Council's memo to Becky Warner related to SMED concerns to recommend that the collaboration outlined above be developed into a formal policy that specifies committee structure and minimum coursework for those students writing an education-oriented thesis.

Action: Jim will revise the memo to include the above recommendations and, on behalf of the Council, have Mike Lerner review the memo before submitting it to Becky Warner.

MOU Proposal – Low Residency MFA in Creative Writing Offered at OSU-Cascades

- [Online version](#)
- [PDF version](#)
- The proposal has the full support of both OSU-Corvallis and OSU-Cascades; this is the low residency alternative to the high residency MFA offered on campus; it is the same degree with different delivery methods; and the credits are non-reciprocal and non-transferable, which is typical for these programs nationwide. The feasibility study found that the Bend program serves working students rather than on-campus students and there is a good amount of demand
- There are two aspects of delivery: one-on-one mentorship with professional mentors in the craft of writing (mentors will have up to four students); mentors will serve as committee chairs for theses, which results in a literary work; and the mentor also guides public lecture and reading. Professional Mentors, who may not be local but are frequently tenured professors in other universities or emeriti professors, are commercially successful writers and interested in working one-on-one with students. Residencies will occur 8-10 days at a time for a total of 40 days over two years; mentors are guest writers and the residencies are led by both professional mentors and individuals in the publishing industry and OSU faculty. During residency, students work on craft, collaborate, and work with both students and professional mentors. Program operation falls under the dean of academic programs in Bend with a director (search currently under way); there is also a faculty board with faculty from both OSU-Corvallis and OSU-Cascades.
- Faculty at OSU-Cascades are fully behind the proposal.
- The Budgets and Fiscal Planning Committee questioned whether instructors are adjuncts because there were no benefits in the budget, but the proposal was revised to clarify that they are Professional Mentors.
- Professional Mentors chair the committees and must be appointed to graduate faculty. It was noted that these individuals are typically not eligible for graduate faculty but, because they have a terminal degree, they would be eligible for graduate faculty status.
- Questions: Can the committee consist only of Professional Mentors, or is a 'regular' faculty member required? How will students be advised in completion toward the degree? The director will handle these issues. It was felt that the director would be a graduate faculty member. A Graduate Council Representative would also be required to be on the committee. Is the director on all students' committees? The committee composition needs to be clarified in the proposal
- Question: How will a Professional Mentor be a committee chair if they are only employed for two terms? There will be a commitment of two years for the Professional Mentors. Is the budget correct at \$3500 per PM for taking on four students? Who will provide oversight that quality of responses will be sufficient? What measures will be in place to provide continuous assessment of the program? Assumed the director will do that; requested clarification in the proposal. If PMs are committee chairs, who will provide training in OSU expectations? The Director will provide oversight, as needed; need to incorporate oversight into the proposal. Concern was expressed that not all Professional Mentors will be prominent writer's and will elect to participate as a way to supplement their income, but may not be an appropriate mentor; they will need oversight.

- Why will OSU on-campus faculty be limited to summer residencies – it seems that these faculty should be the committee chairs. The requirement is a contract issue. There are only two OSU-Cascades faculty who will be participating; there was a question of workload if there are 40 students. The Council requested additional information about how the program itself will be assessed and how it could be built-in from the start so the program is sustainable, committee structure, Professional Mentor oversight and workload.
- Why are the credits non-transferable? It was thought that it was to keep the programs separate because they are different delivery models. It may be helpful to think of a pathway that would allow students to transfer.

Action: Janet Lee will communicate the Council's concerns to Neil Browne.

Discuss [Final Examination](#) requirements when no thesis is involved

Background: There are multiple departments that would like some flexibility in the final examination requirement for non-thesis programs. The issue revolves around the use of alternative methods to determine that the student has achieved the learning goals for the program. A classic example is the use of a written exam. If the emphasis is on assurance of learning, should there be some flexibility in the exit requirements that allow alternative direct methods to demonstrate assurance of learning?

- There have been several requests for exceptions to the required two-hour oral exam (note that two hours are not required) – this would impact non-thesis masters and professional programs – it seems to make sense for theses to have a two-hour oral exam, but could there be alternatives to this requirement? A written exam may be an alternative – if doing assessment of learning outcomes and the student has met the learning outcomes with alternative means, is an oral exam necessary? An alternative needs to be a method to assure that each student has met the learning outcomes. Who decides if the alternative is acceptable? Would this result in more work for the Graduate School and Graduate Council? A change would have to go through the Faculty Senate. A small, incremental change in the policy was suggested. What about committee input for assessment? It was suggested a capstone be required and a minimum of three faculty be involved, or have a series of exams. The MPH, MEng, MBA would be affected. MBA programs typically have a capstone project rather than an oral exam, perhaps MEng also.

Action: Jim will gather proposals from units on campus and present to the Executive Committee. Another member will check on the process of the MEng at other institutions.

Graduate Council Assignments

This topic will be discussed at a subsequent meeting.

Matters Arising/Continued Discussions

Jim thanked Andrew Plantinga for his service as this was his last meeting before moving to UC Santa Barbara.

Meeting adjourned at 1:44 PM.

Minutes provided by Vickie Nunnemaker, Faculty Senate Staff

Graduate Council

January 14, 2011 Minutes

Grad Council Members Present:	Carolyn Aldwin (HHS), James Coakley (Business), Theresa Filtz (Pharmacy), Michael Kent (Vet Med), Denise Lach (CLA), Murray Levine (COAS), Walt Loveland, Chair (SCI), Vinod Narayanan (ENGR), Jo Tynon (Forestry) and Tom Wolpert (AG SCI)
Grad Council Members Absent:	Cass Dykeman (Education)
Ex-officio Members Present:	Martin Fisk, Bruce Rettig and Leah Minc (Graduate Admissions Committee)
Support Staff Present:	Nagwa Naguib
Guests:	Marie Harvey, Chair, Public Health; Luiz Bermudez, Head, Veterinary Medicine; and Rosemary Garagnani, Assistant Dean, Graduate School

1. Updates from the Chair

Walt Loveland asked if there were any edits to the January 7, 2011 minutes. There were none. Minutes approved.

Loveland reported to the Council that the draft resolution on General Learning Outcomes (GLOs) for the Ph.D. degree has been discussed, edited and approved by the Faculty Senate at its meeting on Thursday, January 13, 2011.

As a result of successfully completing the requirements toward the Ph.D., students shall: (a) produce and defend an original significant contribution to knowledge; (b) demonstrate mastery of subject material; and (c) be able to conduct scholarly activities in an ethical manner. Additional outcomes, the assessment of all outcomes and the specification of learning objectives related to these outcomes are to be carried out at the program level and reviewed periodically.

These outcomes are to be assessed at the program level. Outcome (a) is already part of the assessment performed at the final oral exam and the GCR is specifically required to raise this metric. Outcome (b) is part of every unit's requirements for students and is assessed by course work grades, and preliminary examinations. Outcome (c) is new and will require the units to be sure the students are informed/trained as to what is required to conduct scholarly activities in an ethical manner. There is an array of methods the units could choose to use, such as the Graduate School course on RCR, and other courses, instruction in research groups, etc.

2. Public Health Graduate Program Review - Report

Denise Lach thanked Dr. Marie Harvey, Chair of the Department of Public Health, for producing a great self-study. The Review Panel was comprised of two external reviewers, as well as Tom Wolpert who could not be present at the site visit, but participated in the writing of the report. Both external reviewers are very familiar with the Council on Education for Public Health (CEPH), the accrediting agency that reviewed the program in 2006. They were very pointed and hard because of their experience in public health.

The department offers both a Masters' and a PhD program. The MPH is offered with OHSU and PSU. The plan is to separate from the larger consortium. Both faculty and students were very positive about the program. The Panel had 14 recommendations that were presented to both the Chair of the Department

and the Dean of the College.

Lach proceeded by reminding the Council that the Department of Public Health, as well as the College of Health and Human Sciences, are going through a number of reorganizational changes, including hiring sufficient faculty to support current programs. Panel recommendations included hiring faculty in the field of international health and making the website easier and clearer to follow. Another recommendation was to keep both faculty and students in the loop of what is going on in the department. Faculty were involved in developing the self-study of the program.

Loveland wondered if the Panel gave the program a "grade" and, if so, what it was. He wondered why the comments were as sharp as they were, which could impact the School of Public Health's Category I proposal for reorganization. Theresa Filtz agreed that the tone of the report was negative, and it might be a good idea to soften it by including some constructive criticisms, not negative comments. Lach responded that the reviewers recommended maintaining the Public Health Graduate Program.

Marie Harvey reported that the Department is hiring 11 new faculty members. She added that, when talking to the Provost in early February, she would like to address the Panel's recommendations and ask what could be done to implement them. She also indicated that Dean Tammy Bray created a "faculty transition team" to work with the administrative team to build the School of Public Health.

Carolyn Aldwin suggested that, when talking to the Provost, Harvey should point out that the Department is hiring those new faculty to support the PhD program; and that the Category I proposal is to support the reorganization of the Department.

Lach pointed out that the Review Panel was very careful about naming the two divisions of public health. Harvey informed the Council that a representative of CEPH, the accrediting body, was invited to review the proposal for creating the School of Public Health and was assured that it was likely to be accredited. She also added that they are already hiring faculty to help with the "international health" field. They will be working for both the graduate and undergraduate programs.

A short discussion resulted in a decision that some edits will be made to the report. Suggestions are to be sent to Lach and Wolpert. The report will be reviewed at next week's Graduate Council meeting.

3. Veterinary Sciences Graduate Program Review - Request for Postponement of Site Visit

Loveland reminded the Council that Dean Cyril Clarke had asked the Graduate Council to continue with the site visit planned for winter term. At last week's meeting it was decided to have the Graduate Council members on the Review Panel, Denise Lach and Vinod Narayanan, review the self-study and comment on its content at the Council's next meeting.

Lach and Narayanan informed the Council that, after reviewing the self-study document, they did not think that the review of this graduate program should proceed. Accordingly, Loveland suggested that, on behalf of the Council, he could make a recommendation to the Provost regarding suspending enrollment in this program.

Mike Kent had conversations with both Dean Clarke and Luiz Bermudez, Head of Veterinary Medicine, and reported that their intent for the program review is to get ideas about building the new program.

Martin Fisk reported that he had a number of phone and email conversations with Dean Clarke regarding this issue. Former Dean Sally Francis had several meetings with Clarke regarding the same issue; this resulted in granting a postponement of the review. The final postponement was not until this year. Fisk suggested to Clarke three options:

1. Suspend admissions;
2. Get the Graduate Council's opinion; or
3. A one-term postponement by the Graduate School.

Dean Clarke sent Fisk the self-study in a draft format, and then the same draft was submitted to the Graduate School as the final document.

Loveland asked the Council, given the above conversation, what their recommendation would be. What should we do about the program review? Should we recommend to the Provost termination of the program?

Bermudez gave the history of the program, and the reasoning for wanting to expand it. A number of

the students in the MS in Veterinary Science program are not clinical residents. The College is currently looking at the clinical courses. The minimum requirements for clinical training give students good fundamental research skills. The creation of divisions within the university led Dean Clarke to support the creation of an interdisciplinary program within the division. It is a slow process, and the deadline is to get it done by the end of the academic year. The goal is to revive the MS program and make it more dynamic and competitive. The clinical faculty want a masters' program. Veterinarians do not usually receive research training. They need to have some research background when they seek employment at academic institutions. In the past, research was not a requirement.

He went on to inform the Council that the plan is to initiate a new PhD program, depending on the demand. Current PhD students working with Veterinary Medicine faculty normally pursue degrees in MCB and Animal Sciences. At this point very few veterinary students are showing interest in pursuing PhDs. Bermudez indicated that he has designed a DVM/PhD program but, at this point, is not sure of its future.

A short discussion followed regarding the lack of a Category I proposal, the concern regarding the curriculum, and the fact that, currently, there are no other options for clinical students. Dr. Bermudez was thanked and dismissed from the meeting.

Loveland asked the Council if there was a motion. Lach and Narayanan suggested the following motions.

Motions:

- Cancelling the Program Review of the Veterinary Science Graduate Program
- Denise Lach moved. Vinod Narayanan seconded. Mike Kent opposed. Motion passed.
- Suspending Admission to the Veterinary Science Masters' Program
- Denise Lach moved. Vinod Narayanan seconded. More discussion led to postponing the decision to next week's meeting. Nagwa Naguib will send the Veterinary Science self-study to all Council members for their review.

Meeting adjourned 10:55 AM

Guests:	Cyril Clark, Dean, College of Veterinary Medicine and Rosemary Garagnani, Assistant Dean, Graduate School

1. Chair's Update

Walt Loveland asked if there were any edits to the January 14, 2011 minutes. There were none. Minutes approved.

2. Public Health Graduate Program Review Report

Walt Loveland reminded the Council that at last week's meeting, the Public Health Graduate Program Review Report was presented, and that some comments were made regarding the tone of the Report. The Council was advised to send their edits to Denise Lach and Tom Wolpert to incorporate into the Report, which was redistributed to the Council for a second look. He asked if there were further discussion regarding the Report. There were none.

Motion: Accept the Revised Public Health Graduate Program Review Report. Jo Tynon moved. Jim Coakley seconded. Motion passed.

3. Veterinary Sciences Graduate Program Review - Continuation of discussion of motion to terminate/suspend admissions to Vet Med MS program

Loveland reiterated what he said at last week's meeting that the Veterinary Sciences Graduate Program self-study, presented to Interim Dean Martin Fisk in early January, was judged by Fisk to be insufficient in detail to warrant a site visit. Following his review of the draft, Fisk had conversations with Dean Cyril Clarke, who indicated that he would like to proceed with the Program Review.

The self-study was then reviewed by the two Graduate Council members who were scheduled to participate in the program review. Denise Lach and Vinod Narayanan then recommended the review be cancelled. On January 14, 2011, the Council approved the motion to cancel the review.

The second motion made by Lach and Narayanan was to suspend admission to the program. Luiz Bermudez had argued that they would like to continue to admit students into the program. He conceded that in the past, the enrollment was low, but they would like to continue with the current students. To improve the program, they are revising the curriculum. The Graduate Council is in a dilemma, as to be consistent with actions taken with respect to the Entomology Graduate Program Review, it should recommend suspending admission. Program reviews look at the past ten or more years, not what the program would do in the future.

Dean Cyril Clarke, Veterinary Medicine, proceeded to defend the College's request to continue

enrollment in the Veterinary Sciences Graduate Program, by indicating that the Council should consider the strategic dimension of this decision. There are two important aspects to consider: 1) funded research, and 2) attaining critical mass. When reviewing both the self-study and the evaluations of those criteria, this program should not be allowed to continue the way it currently is. Veterinary Medicine needs to develop the Clinical Science Department's research capacity and ability. Strategically, the College needs to enhance its clinical sciences, which translates into clinical residents (post DVMs who improve their skills at surgeries, etc.). In the last 2 years, the College supervised between 14 and 16 residents. This June they are expecting four or five new funded residents to begin their programs. If admission is suspended, the College will lose momentum in pursuing its strategic objectives. They need a stepping stone to get this new vision. He went on to say that if this conversation had been held last September, a Category I proposal would have been prepared.

Lach wondered why this issue was not brought to the Council last fall. This review had been postponed from the previous academic year to this year, first to fall and then to winter term. Clark responded that delays have been required because of the challenges in developing a timing strategy across the Division of Health Sciences. The Division identified three strategic goals, which address specific concerns. When asked if the College had a commitment to the incoming residents, Clarke confirmed that they were all funded residents, and are eligible for enrollment.

When asked if the residents held research or clinical positions, Clarke responded that research is important in the discipline. He then reiterated that he was hoping that the Category I proposal be ready by late May 2011; if not, he would recommend not continuing the program, and making it resurface only as an option.

Bruce Rettig pointed out that when checking into the program's enrollment, he found that last fall there were seven graduate students in the Veterinary Science MS program and there were seven appointments of clinical fellows. He also noticed that the current GTAs had held appointments as clinical fellows last year. Clarke indicated that OSU was the only university with professional schools in the OUS system with residents. The current residents are not enrolled in a graduate program. Incoming residents will be appointed as GTAs. Rettig indicated that review of past and recent programs of study suggest a transformation in the use of the MS in veterinary science. Clarke responded that, in general, the program is becoming more focused in veterinary sciences. Most students working with Veterinary Medicine faculty are enrolled in MCB or microbiology. Last year, a graduate committee was established: some of the courses are being reviewed by this committee.

When asked if the new residents coming in next fall have a bachelors degree, Clarke responded that current enrollment of residents require that they have DVM degrees.

Loveland wrapped up the conversation and indicated that the Council will discuss the issue further, and would invite Dean Clarke to next week's meeting where the Council will discuss the admission of DVM degree holders to the Graduate School. He thanked Clarke, who then left the meeting.

The Council had a short discussion regarding the issue. Jo Tynon pointed out that if the program is not suspended, it will be difficult for the Department and the College to work on both the Category I proposal and continue with the current program. Lach repeated that the program does not seem to be a viable graduate program. Loveland wondered if we should delay suspending the program until May 2011, and see if they make a commitment to the reorganization. Cass Dykeman suggested that one solution might be to postpone the suspension until after this academic year. Loveland reminded the Council that Category I proposals take an average of two years to move through the system. There are currently 36 Category I proposals in the queue, so expecting the Category I to be ready and approved by May 2011, is somewhat out of reach.

Motion from last week's meeting to suspend admission to the Veterinary Sciences Graduate Program. Five in favor. Three opposed. Motion passed.

4. Allow Admission of DVM holders for Graduate Studies

Loveland introduced both the DVM and Pharmacy requests regarding admissions to the graduate degrees without a baccalaureate degree, but with a professional degree. Due to the fact that the Council ran out of time, he suggested dedicating next week's meeting to this item and inviting leaderships of the two colleges to attend the meeting. Rettig suggested inviting the College of Health and Human Sciences leadership as well. Nagwa Naguib will send invitations to all three colleges' leaderships.

Adjourned at 11:00 AM.

1. Chair's Update

Walt Loveland asked if there were any edits to the January 21, 2011 minutes. There were none. Minutes approved.

Loveland then distributed a spreadsheet graduate program reviews that will be added to the OSU accreditation report. The spreadsheet contained names of all graduate programs reviewed by the Graduate Council in the past ten years and had been updated by Loveland with information from the Graduate School to include the "grade" given to program by the review team.

Loveland then pointed out that the Graduate Council agenda has a large number of items that will need to be brought up at its next few meetings. The important issues are:

1. Revision of self-study guidelines
2. GLOs for Masters degrees
3. Recognizing/creating transcript visible recognition of "options"/"areas of concentration" for graduate degrees
4. Accreditation briefing from Chris Bell

He asked the members to review the pending items from the list and inform him if there were other important issues that need to be brought up sooner rather than later.

Martin Fisk was asked to announce to all Ph.D. granting programs that graduate learning outcomes for doctoral degrees were approved by the Faculty Senate on 1/13/2011. The motion passed by the Faculty Senate was:

General Learning Outcomes for the Ph.D. Degree -

As a result of successfully completing the requirements toward the Ph.D., students shall:

- (a) produce and defend an original significant contribution to knowledge;
- (b) demonstrate mastery of subject material; and
- (c) be able to conduct scholarly activities in an ethical manner.

Additional outcomes, the assessment of all outcomes and the specification of learning objectives related to these outcomes are to be carried out at the program level and reviewed periodically. These outcomes are to be assessed at the program level.

The Graduate School will change the examination results reporting forms for Ph.D. exams to allow the examining committee to indicate that the learning outcomes have been achieved. The Graduate School will phase in monitoring of compliance and will announce when learning outcomes will be monitored. The Graduate School will also alert graduate programs of the need for providing students with the means of achieving learning outcome (c) and for the need to establish a procedure for assessing if the outcome has been attained. The Graduate Program Review Guidelines will be updated to indicate that programs will need to include a description of their processes for training and evaluating students with respect to the Ph.D. learning outcome (c).

2. Pharmacy motion to allow professional degree holders to be admitted to the Graduate School

Oregon State University change the minimum graduate admission requirement from "a four-year baccalaureate degree" to "a four-year baccalaureate degree, a professional degree from a United States-accredited or a Canadian-accredited institution, or a professional degree of at least four years duration whose holder is eligible for licensure in the United States."

Theresa Filtz indicated that the motion was drafted by both the College of Pharmacy and the College of Veterinary Medicine. The College of Veterinary Medicine would like applicants holding DVM degrees with undergraduate work to be admitted to graduate degree programs. Those applicants might have a minimum of six years of higher education; not getting a bachelor's degree along the way is currently an impediment. They are very well trained with the rigor of work at graduate level courses. Gary DeLander added that most medical colleges do not require a bachelor's degree for admission.

Denise Lach pointed out that the drafted motion might make sense for Pharmacy or Veterinary Medicine, but the way it is written could be interpreted in that anyone without a bachelor's degree could be admitted into a graduate program. DeLander responded that the faculty of the colleges are the ones to determine whether or not the student is eligible to be admitted with the background needed to enter in the college.

Bruce Rettig reported that following Filtz's contacts with some pharmacy programs, he went to the universities' websites and found that all of them list the four-year bachelor as an admission requirement. He contacted the graduate admission directors at OSU peers and was told that many of these programs would admit DVMs without bachelor's degrees through an exception process. Tom Wolpert pointed out that OSU needs to be more specific as far as which professional degree would be accepted. Rettig followed by saying that Iowa State has a routine acceptance. The processes for granting exceptions vary from one university to the next. Wolpert stressed that OSU definitely needs to be transparent in this process.

Loveland wondered what other professional degrees applicants would hold. Rosemary Garagnani responded that international students might have dental, physical therapy, or law degrees, all of which are considered professional degrees. Filtz reminded everyone that the issue with international students will have to be discussed separately.

When the question was asked regarding establishing an appeal process, Fisk responded that establishing an appeal process is a much better route than changing university standards; especially when we are going through accreditation, and in view of our peer institutions.

Lach argued that there is value in getting a bachelor degree, but we might make sure that the applicant has the equivalent of one. An appeal process would be acceptable. Loveland wondered if the appeal would be decided by the department/college or the Graduate School. Filtz suggested that any applicant with a DVM or PharmD from an American or Canadian institution should be accepted into the graduate program. Garagnani wondered if the colleges in question could provide the names of the accrediting agencies. DeLander replied that, for Pharmacy, there are two agencies, the names of which will be shared with the Graduate School Admissions Office.

Loveland suggested forming a subcommittee of Council members to work on:

1. The policy language to appear in the catalog; and
2. The operation policy that meets the Graduate School concerns, as well as the affected college.

The subcommittee, comprised of Theresa Filtz, Tom Wolpert, Michael Kent, Carolyn Aldwin and Marty Fisk (Graduate School contact), will work on rewording the motion and presenting it back to the Council at its next week's meeting.

Adjourned at 10:55 AM.

1. Chair's Update

Walt Loveland asked if there were any edits to the [January 28th, 2011 minutes](#). There were none. Minutes approved.

He informed the Council that he sent an email to Provost Randhawa regarding the Council's decision to suspend admission to the Veterinary Sciences Graduate Program with a copy to Dean Clarke. The latter responded by asking to postpone suspension of the enrollment until Fall term, 2011. (The Graduate School is not currently admitting students to this program.) Provost Randhawa will make a decision on this issue upon his return to campus.

He then indicated that the Fisheries and Wildlife PSM Category I proposal will be forwarded to the Council for next Friday's discussion. Loveland will be in Berkeley the next couple of weeks, so Jo Tynon will chair the February 11 meeting and Theresa Filtz will chair the following one, i.e. February 18, 2011.

2. Report of subcommittee on language for catalog and operations policy for admission of professional degree holders to the Graduate School

Theresa Filtz informed the Council that the subcommittee revised last week's motion to read as follows:

The college of pharmacy moves that the OSU requirement for admission to graduate school be changed from "a four-year baccalaureate degree" to "a four-year baccalaureate degree or an appropriate alternative degree* from an accredited program in the United States or Canada"

- *degrees judged to be appropriate alternatives are:
- a doctorate of pharmacy, a.k.a. Pharm.D.
- a doctorate of veterinary medicine, a.k.a. V.M.D. or D.V.M.
- a doctorate of medicine, a.k.a. M.D.
- Upon passage of the statement above, Pharm.D., M.D. and D.V.M degree holders (without bachelor's degrees) from US and Canadian programs would be accepted through the regular admissions process without hindrance.

Marty Fisk pointed out that the Graduate School Leadership Team discussed the earlier motion and

asked Bruce Rettig to respond to the subcommittee. Rettig explained that Canadian students are international students, and recommended that treatment of Canadian and other international applicants be handled as part of the requirements for international student admission. He also reminded the Council that the issue now before the Council began with a request from the College of Veterinary Medicine to admit students with DVM degrees, but lacking bachelor's degrees, to graduate programs administered by the College of Veterinary Medicine or closely related degrees. He added that Theresa Filtz had expanded the scope of that discussion by requesting that applicants with DPHARM degrees, but lacking bachelor's degrees, be considered eligible for admission to graduate degrees administered by the College of Pharmacy. If the Council wishes to establish a policy that applicants with these degrees can be acceptable upon approval by Pharmacy and Veterinary Medicine, the Graduate School will agree to modify the admission web site language that currently cautions applicants that professional medical degrees are not normally sufficient for admission in the absence of bachelor's degrees.

A long conversation followed. Deleting "United States or Canada" from the motion and excluding "international applicants" from the revised motion, were discussed. A revised motion was suggested and approved.

Catalog Language Motion: The College of Pharmacy moves that the OSU requirement for admission to the Graduate School be changed to "a four-year baccalaureate degree or an appropriate alternative degree from an accredited college or university." Carolyn Aldwin moved to alter the catalog. Jo Tynon seconded the motion. Denise Lach indicated she believes "an alternative degree" is not the same as "an equivalent degree," which the Council spent very little time discussing. (The Faculty Senate recently passed a set of learning outcomes for all Baccalaureate degrees awarded at OSU. No comparison of these learning outcomes with any of these professional degrees was done to determine similarities or differences.) Motion was voted on and passed nine in favor and one opposed.

A second motion was suggested.

Motion: It is the intent of the Graduate Council that degrees judged to be appropriate alternatives include a doctorate of pharmacy (PharmD), a doctorate of veterinary medicine (VMD or DVM), and a doctorate of medicine (MD) from US or Canadian programs. Carolyn Aldwin moved. Walt Loveland seconded. Denise Lach abstained. Motion accepted.

3. Accreditation Briefing

A comprehensive review to reaffirm Oregon State University's accreditation is underway. The Northwest Committee on Colleges and Universities (NWCCU), one of six regional accreditation agencies recognized by the Council for Higher Education Accreditation, changed its standards.

Chris Bell, Chair of the Accreditation Steering Committee, reminded the Council that in 2001 when Oregon State University was reviewed, the weaknesses were "assessment" and "facilities maintenance." The Steering Committee which consists of seven members, and in an effort to improve the "assessment" piece, added Gita Ramaswamy, the Director of Assessment, to its membership. The Committee's objectives are to lead the development of OSU's self-study by trying to engage the campus community.

OSU will be the first university to be reviewed under the new changed standards. Thirty universities will go through the seven-year process review. We will never have to do a comprehensive review again. We are getting to do it all at once.

The Steering Committee asked the units to develop core themes, objectives and indicators. It is a simpler process than the set of standards used in the past. We are not asked to provide volumes of information. The process began last January, and the intention was to have a full draft by the end of December 2010. Bell went on by saying that the plan is to have the five chapters ready by next Monday, February 7, for the campus community to review, then participate in the process by attending one of the campus forums. The site visit is scheduled for April 25th through 27th, and the hope is that by that time, every member of the professorial rank will be able to speak on every core.

He finished his presentation by saying that Oregon State does not compare too badly with its peers. There are some areas where there is a call for improvement.

Graduate Council

February 11, 2011 Minutes

Grad Council Members Present:	Carolyn Aldwin (HHS), James Coakley (Business), Cass Dykeman (Education), Theresa Filtz (Pharmacy), Denise Lach (CLA), Murray Levine (COAS), Vinod Narayanan (ENGR), Jo Tynon, Chairing (Forestry) and Tom Wolpert (AG SCI)
Grad Council Members Absent:	Michael Kent (Vet Med) and Walt Loveland, Chair (SCI)
Ex-officio Members Present:	Martin Fisk and Bruce Rettig
Support Staff Present:	Nagwa Naguib
Guests:	Selina Heppell, Associate Professor, Dept. of Fisheries and Wildlife (by phone from the Cayman Islands)

1. **Approval of February 4, 2011 minutes**

Theresa Filtz proposed changing one word in the Catalog Language Motion.

Page 2, para 4:

... for admission to the Graduate School be changed ~~from~~ to "a four year baccalaureate degree...

Minutes approved with above corrections in *underlined Italic*.

2. **Consideration of Cat I Proposal for PSM degree in Fisheries and Wildlife**

Selina Heppell joined the Council by conference call. She began by introducing the Category I Proposal to the Council. The general program has been in place for a number of years as a thesis masters' degree. Ursula Bechert and Dan Edge have been working for a couple of years with natural resources state agencies to offer an educational degree catered to professionals. Fisheries and Wildlife (F&W) Department's goal is to have a distance education coordinator for the program. The proposal was delayed from last year and they are hoping to have students get into the program this coming fall, 2011.

Denise Lach asked if the students could enter the program at any time of the year. Heppell explained that the PSM program includes a dynamic cohort, which starts in the fall and in which all students participate. There could be an alternative to starting it this coming fall.

Jim Coakley wondered why only five liaison responses were included in the proposal even though eleven responses were received. Heppell did not know the answer, and indicated that she will refer the question to Dan Edge.

Vinod Narayanan asked if this program was a distance-only PSM. Heppell responded that this program was primarily distance-only as it is designed for working professionals. When asked how students will do lab work when they are not on campus, she indicated that the Department will encourage students to spend some time on campus by working a few days, a week or even a term at Hatfield Marine Science Center (HMSC).

Lach questioned the reason behind creating a new PSM program instead of adding a 'fisheries' track to the existing PSM. Heppell will refer this question to Edge. Bruce Rettig explained that there is no PSM program with specialties. The program started when OSU received funding from the Sloan Foundation.

Four academic programs were involved in the planning with leadership from faculty in Botany and Plant Pathology (Stella Coakley and Don Armstrong). Because new degree programs would take a long time to fully implement, these four programs initiated this new initiative using existing degree authorization to offer the Master of Science degree. The unique characteristics of the PSM master's degree programs are that they combine a basic foundation in science courses with a professional curriculum consisting of business, communications, and ethics training. The capstone for these degrees is a supervised internship instead of a capstone thesis or research-in-lieu-of-thesis. The unique character of this proposal is that it is not adding the PSM structure to the current degrees in fisheries science or wildlife science. It is proposing a new major under the new degree of PSM. Bruce Rettig called this a non-thesis degree in a department that doesn't allow non-thesis masters.

Heppell agreed that F&W does not have a non-thesis masters' degree. Rettig indicated that, even though the proposal includes some technical issues, it is nonetheless a strong one.

Fisk pointed out that the proposal's cover page indicates that it is a professional science masters, a degree that does not yet exist in the state system. OUS approved having a PSM, but there is still no degree designation at the state level. It would be awkward for the Council to approve a PSM at this point. He continued by explaining that the PSM is owned by the Sloan Foundation, with administration oversight through the Council of Graduate Schools (CGS). The Sloan Foundation and the CGS want to establish it as an accepted professional credential, comparable to the MBA. Fisk then informed the Council that the OUS Provosts' Council is likely to approve the new degree designation in the next month. When this is done, the three currently approved PSMs will be grandfathered in and new PSM degrees can be created.

Carolyn Aldwin suggested that, if F&W would like to admit students into the program in Fall 2011, they should admit them as Masters of Science students by only changing the title of the proposal. Heppell pointed out that the agreement with the State Department of Fish and Wildlife should not be an obligation for the program to begin in Fall 2011. She went on by suggesting that we should inform Dr. Dan Edge of the Council's suggestion to defer this proposal until the OUS approves the PSM procedure. Fisk proposed waiting until OSU receives a response to the questions from OUS.

Narayanan wondered if this degree is offered to international students as stated in the proposal. Heppell answered that, indeed, international students are targeted to be included in this community. He then asked if, being an on-line degree, how can the required internships be monitored. She responded that the Department will be hiring an internship coordinator who will be in discussion with the internship employer. Each student's advisor will be reviewing the written document from the employer, and will be working closely with the internship coordinator. Outcomes are currently not assessed.

Lach asked if most students will do their internships at their current work locations. Heppell responded that F&W will encourage them not to do their internships with their employers, but rather in a different agency/location.

Narayanan asked about faculty time that will be spent with the students. Heppell responded that the Department is currently working on this issue, suggesting one student per advisor. This assignment might take five hours a term with additional time towards the end of the program. The Department is also working on faculty compensation, through eCampus, as is done with the new Master of Natural Resources (MNR). Courtesy faculty, who are involved in the Department and even attend faculty meetings, could serve as advisors to the students.

Lach questioned the reason why internships are required, given that the students would all be professionals with five or more years of experience. Heppell responded that this approach, a hybrid between an internship and a capstone, will promote students networking between agency professionals.

Aldwin noted that courses in human resources, required in a PSM, were not included in the proposal. Narayanan pointed out Section 3b, Accreditation, and wondered if the students will automatically get their certification after finishing their programs. Heppell responded that in order to be certified, in addition to the coursework and professional work, the individuals will have to apply. Narayanan wondered about the advantage of the proposed program towards obtaining a certification. Heppell responded that it was a value added.

Fisk asked Heppell how can being employed, one of the requirements for admission to the program, be guaranteed. She responded that the requirement is five years of professional experience. Checking if the individual is currently employed could be a challenge. She will check with Edge. 1 h. States

"Enrollment in the PSMFWA will be restricted to currently employed professionals with five years of professional experience." This will have to be changed.

On the performance indicator, Narayanan wondered what would be a good measure. Would certification be one such measure? Will the program need confirmation from the certifying societies? Whether or not a graduate is promoted should not be the sole measure of success since promotion depends on extraneous factors not under the program's control. Also a 100% success at obtaining a job is also not a good measure since these students already have jobs to begin with. Heppell responded that they might add a survey asking the students whether or not the PSM helped them move up the ladder. Lach noted that a better outcome might be how long it would take to go through the program or how much money is invested. Heppell responded that the Department is planning on tracking how long students are spending getting their degrees. Coakley wondered how they can insure that the courtesy faculty qualify to advise those students. Heppell responded that most courtesy faculty work in state agencies, have strong research credentials, and are good advisors.

Narayanan suggested that exit surveys could be based on learning outcomes, as well. In general the outcomes listed are vague. "An understanding of..." is vague.

Jim Coakley noted that the nature and level of research and/or scholarly work expected of program faculty (section 5d) is not adequately addressed. Does this include courtesy faculty?

Section 2b says the program will support research. Narayanan asked, if this is a non-thesis degree, why is research listed here? How will the program support research?

Coakley pointed out that neither Ursula Bechert, PSM Coordinator, nor Sherm Bloomer, Dean of Science, have given their feedback on the proposal. Also, there is no mention of College of Business liaison.

Motion: Defer the decision on approving the Category I Proposal for PSM degree in Fisheries and Wildlife. Theresa Filtz moved. Carolyn Aldwin seconded. Motion to defer approved.

Adjourned at 11:05 AM.

Carolyn Aldwin (HHS), James Coakley (Business), Theresa Filtz (Pharmacy), Michael Kent (Vet Med) Denise Lach (CLA), Murray Levine (COAS) and Vinod Narayanan (ENGR)

**Grad Council Members
Absent:**

Cass Dykeman (Education), Walt Loveland, Chair (SCI), Jo Tynon (Forestry) and Tom Wolpert (AG SCI)

**Ex-officio Members
Present:**

Martin Fisk, Leah Minc and Bruce Rettig

**Support Staff
Present:**

Nagwa Naguib

1. Approval of February 11, 2011 minutes

Minutes with edits by Vinod Narayanan, were reviewed and approved by the Council. Final version of the minutes will be posted on the website.

2. Discussion of Graduate Learning Outcomes (GLOs) for Masters Degrees

Theresa Filtz informed the Council that Walt Loveland suggested using the GLOs for PhDs, previously approved by the Faculty Senate, as a model in the discussion for GLOs for masters' degrees.

Council members discussed the PhD Learning Outcomes and their relevance to Masters degrees. It was eventually agreed that parts b and c of the PhD GLOs, mastery of subject material and ethical conduct, were also relevant outcomes for a Masters degree. The discussion then focused on whether scholarly or creative activity or a capstone of some sort was always required for a Masters. How should non-thesis Masters be accommodated? Could non-thesis masters have a creative project? Could coursework be sufficient? Bruce Rettig reminded the members that when the PSMs were being implemented, Don Armstrong and Dean Bloomer visited the Graduate Council and received approval to use an internship as a degree capstone in lieu of research or thesis. The idea is to train graduates to transfer the scientific knowledge to a work environment. The Master of Engineering (MEng), a degree that does not require any research or a capstone project but instead includes a summative exam, was discussed at length. Bruce Rettig also mentioned that the M Health Physics is another degree that does not require research, a capstone project or an internship. The use of teaching portfolios as a final product of the MAT and MExSS degrees was mentioned. It was noted that the Graduate Council previously approved all these alternatives to a thesis.

Denise Lach pointed out that all the graduate programs have outcomes that are very specific to their program. Marty Fisk added that, when researching other universities, he found that some have generic outcomes, and others have specific outcomes for each program.

Filtz asserted that a collection of coursework without some form of scholarly or creative activity is a certificate program.

Jim Coakley indicated that the College of Business created a matrix for every undergraduate program. Carolyn Aldwin suggested making sure there is a differentiation between the Masters and PhD GLOs.

The discussion resulted in the motion below:

Motion: Graduate Learning Outcomes (GLOs) for Masters Degrees are:

- a. Conduct research or produce some other form of creative work, and
- b. Demonstrate mastery of subject material, and
- c. Be able to conduct scholarly or professional activities in an ethical manner

Carolyn Aldwin moved. Denise Lach seconded. Motion passed.

Jim Coakley wondered if the above motion could be applied to minors. This issue will need to be discussed at a future meeting.

The issue of outcomes assessment (parallel to the PhD GLOs) was raised at the last minute by Murray Levine and it was agreed that this needed to be addressed at a future meeting as well.

Adjourned at 10:50 AM.

Approval of [February 18, 2011 minutes](#)

Minutes approved with no changes.

1. **Chair's Update**

Walt Loveland reported that Provost Randhawa met with both him and Marty Fisk regarding the Council's decision to suspend admission to the Veterinary Sciences graduate program. Dean Cyril Clarke requested that the suspension of admission to the MS in Veterinary Science be postponed until September 1, 2011. Applicants for residency are distributed among twenty-five veterinary schools, so Fall 2011 residencies assigned to Oregon State have already been accepted. Because the arriving residents expect to participate in a master's degree program, Provost Randhawa requested that a process for admitting this group be developed. Fisk indicated that Dean Cyril Clarke will provide a list of those applicants. Admission will then be reactivated for a brief window of opportunity. This will limit admission to only those applicants.

2. **Exercise and Sport Science (EXSS) Graduate Program Review – Request for Postponement**

Tony Wilcox presented his request to the Graduate Council to postpone the Exercise and Sport Science (EXSS) Graduate program review site visit. The EXSS was originally scheduled for Spring 2011. A one-term postponement to Fall 2011 is requested. He asked for an accommodation due to the fact that the program has been thoroughly engaged in the intense work related to reorganizing the department in the College of Health and Human Sciences (HHS). The university mandate for reorganization of the HHS academic units has compounded the work HHS is doing, as well as pursuing plans to become an accredited college of public health and human sciences. The latter has resulted in writing the Category I proposal, providing leadership to the faculty in the programs that will become the School of Biological & Population Health Sciences. Wilcox is also responsible for numerous faculty searches.

Wilcox indicated that the department lost three tenure-track faculty and the graduate coordinator relinquished his/her role. It is Wilcox's responsibility to put the new school in place, and is currently serving as its director, while continuing his role as chair of Exercise and Sport Science. Building a new school has been a challenge. A considerable amount of time was spent on it. Five different search committees interviewed thirteen candidates in January. The School has a total of ten vacant faculty positions to be filled. In addition to the above, it is important for the faculty to continue with their teaching and research activities. The department has 60 graduate students enrolled.

He went on to say that his appeal is based on important university priorities: building the future of the college is imperative. Graduate program review is very important work and it needs the time, effort and thought it deserves.

Loveland asked Council members if they had any questions for Wilcox. No questions were posed. Loveland informed Wilcox that the Council will discuss the issue and will get back to him with their

decision. Wilcox was excused.

Denise Lach pointed out that the Graduate Council's new policy for allowing postponement of program reviews (item #3) clarifies that a one-year postponement of the review is approved when reorganizing, and a Category I proposal will be used to change the program. She also indicated that the EXSS doctoral program has been recently accredited and was ranked as the 8th in the nation. She suggested delaying the review for one-term should not be an issue.

Theresa Filtz wondered what will be gained from not allowing them to postpone. Carolyn Aldwin stated that everyone in the College of Health and Human Sciences has been extremely busy. They took the Provost's mandate very seriously, and are reorganizing and hiring new faculty. Mike Kent added that it seems everyone on campus is very busy with the reorganizations, and we should be more accommodating as far as postponing program reviews.

Motion: Approve postponement of Exercise and Sport Science Graduate Program Review Site Visit to next Fall 2011. Denise Lach moved. Theresa Filtz seconded. Motion passed.

Fisk asked the Council what constitutes extenuating or difficult circumstances. He stated that when the Graduate School denies a postponement of a graduate degree based on Graduate Council criteria, and then the Graduate Council approves the postponement, the involvement of the Graduate School is not needed. Filtz responded that there should be an appeal process to help programs appeal their case. Aldwin indicated that exceptions for extenuating circumstances should be considered.

3. **Graduate Learning Outcomes (GLOs) for Masters Degrees:**

At the February 18th Graduate Council meeting, the Council established learning outcomes for Master's degrees. Loveland suggested adding a paragraph to those outcomes indicating that the assessment of these outcomes and the specification of learning objectives related to these outcomes be carried out at the program level.

Lach pointed out that individual programs have their own learning outcomes, and wondered if the Graduate School was collecting this information. Loveland responded that there will be a new check box on the Graduate Council Representative (GCR) instructions form, and the Office of Assessment will be keeping track of the responses. The "professional activities in an ethical manner" should be a requirement. Fisk added that there is on-line training, as well as a RCR course offered every fall, which students could use to fulfill this requirement.

Motion: To accept the amendment to the GLOs for Masters Degrees as follows:

- a. Conduct research or produce some other form of creative work, and*
- b. Demonstrate mastery of subject material, and*
- c. Be able to conduct scholarly or professional activities in an ethical manner*

The assessment of these outcomes and the specification of learning objectives related to these outcomes is to be carried out at the program level.

Carolyn Aldwin moved. Theresa Filtz seconded. No discussion. Motion passed.

Murray Levine asked how this information will be disseminated to the departments. Fisk responded that the Graduate School will inform the major professor and the GCR, and will widely publicize the new policy. Fisk also wondered if the students are to meet all three requirements. Council members responded that this was indeed the intent. If not met, the student's degree will be postponed until all these learning outcomes are achieved. Loveland reminded the Council that this new policy will need to be endorsed by the Faculty Senate before its implementation.

4. **Agenda for future meetings**

Loveland distributed suggested agenda items for future meetings.

Meeting adjourned at 10:50 AM.

Ex-officio Members Absent:	Marty Fisk
Support Staff Present:	Nagwa Naguib
Guests:	Gary Beach, Curriculum Coordinator, Academic Affairs

1. **Approval of February 25th, 2011 minutes**

Minutes approved with no changes.

2. **Chair's Update**

Graduate Learning Outcomes (GLOs) for masters' degrees, approved by the Graduate Council, have been forwarded to the Faculty Senate Executive Committee for their decision to approve them or to forward them to the Faculty Senate for discussion and decision.

Last April, Leslie Burns approached the Council regarding expediting the procedures for approving PSM degrees. The procedures include four elements or entities to approve the degree, namely the Graduate Council, the Curriculum Council, the Budgets and Fiscal Planning Committee, and the Library.

Walt Loveland proceeded by saying that the OUS Provosts' Council just approved four PSM degrees at OSU without involving the review of these four groups. He asked how this could be repaired. The Faculty Senate Executive Committee has been asked to consider a proposed expedited review process for the PSM degrees. The Provost gave directions to Gary Beach to implement these proposals. Beach is holding off on doing so until he has guidance from the Faculty Senate review bodies.

3. **AR20 Repeated Courses**

Loveland asked the Council if the previously distributed current text of the AR20 is acceptable to the Council. All the courses will appear on the transcript. Bruce Rettig explained that if the student took the course for the third time, it will show as excluded "E" which means that the credits will not be counted. AR 20 does allow graduate programs to work with the Graduate School if programs wish to keep records of any third attempts. Should the Graduate Council take any position? The flexibility under discussion is used by undergraduate students, but it has not been an issue for graduate students, so no action will be taken by the Graduate Council.

4. **Graduate Council Program Review Guidelines**

Loveland began the conversation by saying that the University of California-Davis guidelines require only a 20-page self-study. He suggests that the Council make changes with the goal of meeting that

20-page target for OSU self-studies. Jim Coakley noted that the modifications suggested in Loveland's draft revision will change the focus of the graduate reviews. The Council agreed, in principle, with the idea of a short page limit on the self-study documents.

Cass Dykeman wondered if graduate programs that are accredited also need separate graduate program reviews. This may be a timely change since regional accreditation is going to annual production. Do program reviews add an extra layer that is not needed? Loveland responded that the graduate reviews ask questions that are not asked by accreditation reviews. Accreditation reviews show us if the programs are competent, but they do not reveal the level of competency, which is a key aspect of graduate program reviews.

Rettig commented that some reviews lead to very few changes, while other reviews have had major impacts on programs/departments. Loveland added that the Provost pays close attention to comments from the external professionals who participated in the review and wrote the report. Actions to introduce changes follow his meeting with the internal reviewer, the program chair and the dean of the respective college. It is the only assessment tool OSU has for programs that do not have accreditation bodies.

Loveland asked the Council how they would like to tackle the draft guidelines he had distributed. Coakley answered that he liked the general concept of the guidelines, but we put a huge burden on the program to collect and analyze the data instead of discussing their teaching and research. Denise Lach added that we might just ask for the information identified on page 1, paragraph 3 of the draft Loveland provided.

Rettig reported that his home department (Agricultural and Resource Economics (AREC)) used to schedule a faculty retreat prior to crafting a self-study. Retreats or other approaches to think deeply about current and future program changes can often be more valuable than the subsequent external reviews. However, interaction with external reviewers can also provide opportunities for major changes of focus for programs. On the other hand, self-studies that are drafted by only one or two faculty members, without involving the rest of the faculty and students, do not bode well for the ensuing reviews.

Murray Levine pointed out that not all departments are similar. Engaging the entire faculty and student body may work for small programs, but are difficult for programs with large, diverse faculties. The size of the self-study and the process for developing it depend on the size of the program.

The following points were raised during an extended discussion by Council members:

- Data is needed and is crucial.
- The required data must be clearly defined.
- How much and what type of data will be available from Institutional Research?
- How will the data be tabulated?
- Data requests should be consistent.
- UC Davis guidelines are a good example to follow.
- Do the guidelines ask for information not covered by accreditation or other review processes?
- A standardized questionnaire is needed.
- An assessment committee is being established. Should we coordinate with them?
- Does the Council need input from other committees?
- Loveland's edits are taking us in the right direction.
- There have been discussions of annual assessments. Will this eliminate the need for the ten-year reviews?
- Schedule a meeting with Institutional Research and coordinate it with Becky Warner and Gita Ramaswamy regarding the yearly data needed.

Gary Beach informed the Council that Becky Warner started a group that will look at both the graduate and undergraduate reviews. The current policy is that if the undergraduate program is going through accreditation, Academic Affairs does not require a review.

A subsequent conversation between Loveland and Warner revealed that it was NOT the intent of Warner to have any external group look at or otherwise interfere with the Graduate Council's ability to set guidelines for graduate program reviews.

Meeting adjourned at 10:50 AM.

Ex-officio Members Absent: Marty Fisk and Leah Minc

Guests: Lynda Ciuffetti, Head, Botany & Plant Pathology; Gary Beach, Curriculum Coordinator, Academic Affairs

Support Staff Present: Nagwa Naguib

1. **Approval of March 31st, 2011 minutes**

No changes. Minutes approved

2. **Botany and Plant Pathology (BPP) MOU**

Gary Beach introduced the agenda item by reviewing the history of the BPP memorandum of understanding (MOU). For many years, the Department of Botany and Plant Pathology has reported to both the College of Agricultural Sciences (CAS) and the College of Science (COS). Its extension and research programs have been administered through CAS and its instructional programs have been administered by COS. Transferring the instructional programs formally to CAS should have been carried out through an abbreviated Category I proposal. The purpose of the MOU is to serve as a "house cleaning" exercise to complete the administrative requirements that were agreed to a long time ago. This activity is taking place now in order to meet the deadline for the annual hard copy of the OSU Catalog (May 1).

Walt Loveland asked Lynda Ciuffetti to comment on previous discussions to abolish the graduate program and replace it with an overarching plant sciences degree program. The Council had earlier agreed that a postponement of the graduate program review in BPP was based on discussions to create a replacement degree program. Lynda explained that the MOU in itself does not abolish any current BPP degree programs. The MOU includes three strategic goals requested by the BPP faculty in response to the Provost's Plant Science Working Group:

1. Increase coordination and integration of the undergraduate and graduate plant science curricula;
2. Re-brand graduate education in plant sciences; and
3. Coordinate faculty hires to leverage maximum impact on plant sciences.

In November 2009, the Provost visited the department and announced that he approved the move. As of January 2010, Botany and Plant Pathology became totally administered by CAS. The MOU was created at that time and finalized in July 2010. All of the grants, indices, and Foundation's accounts have been moved to CAS. Only the curriculum/courses still need to be moved.

CAS is in complete agreement with the overarching umbrella of both the undergraduate and graduate plant science curricula.

Beach reiterated that the codes in Banner will need to be changed, and that the students will receive their degrees from CAS, unless they are grandfathered in. He explained that the catalog has already been changed.

Theresa Filtz wondered if all the funds have already been transferred. Ciuffetti responded that there was no concern about it happening. BPP provides GTAs to support the biology program administered by COS. She also indicated that supporting the GTAs on overhead, as is currently done, is not sustainable. This issue will need to be revisited. Both BPP faculty and GTAs teach in the Biology Program.

Denise Lach asked why this process was done with an MOU instead of an abbreviated Category I proposal. Ciuffetti responded that this agreement involves the transfer of funds, so it needed to be put in an MOU.

Ciuffetti indicated that the transition has been extraordinarily time consuming, which is why she requested postponement of the BPP graduate program review. Filtz pointed out that BPP is two years behind schedule for the program review. The Council needs to complete a program review.

Loveland suggested, and the Council agreed to the following solution:

1. By end of Fall 2011, make a commitment to complete a Category I proposal to restructure or assimilate the BPP graduate program into an over-arching, multi-unit plant sciences program by Spring 2012; or
2. Schedule a graduate program review for BPP by end of Spring 2012.

Ciuffetti agreed to the suggested timeline.

3. **Graduate Program Review Guidelines:**

Loveland reminded the Council that at an earlier discussion of the Guidelines, it was suggested that the self-study prepared by the programs be shorter than it has been in the past. The summary of data developed for the self-study could then be posted on the program's website.

A question arose regarding why the reviews are held every ten years when the university accreditation takes place every seven years. Loveland indicated that the problem is that Graduate Council members currently have a heavy workload to participate in 10-year reviews on top of all their other responsibilities. How could they staff 7-year reviews? Should we double the number of Council members? Should some review teams be developed with graduate faculty who are not Graduate Council members?

Loveland then reported that both he and Filtz met that morning with the new Director of Institutional Research (IR), Salvador Castillo, to ask what data the IR office will be able to provide to the graduate programs. Castillo stated that, if the data is in Banner, they can provide it. Conversations with IR need to continue. Some of the data will be needed on an on-going basis for continuous university accreditation. Loveland suggested that the grants and contracts data could be easily requested from the Research Office.

Loveland said that some of the suggested data (see "Data Requested for a Graduate Program Review") should be collected by the departments/programs. A long discussion followed and included suggestions regarding using the "h index," for faculty members, assessment of the GLOs, and PROFs. Jim Coakley will share the PROF format used in the College of Business to collect faculty data with the Council at its next week's meeting.

Discussion ensued regarding the value of collecting all of the data versus allowing each unit to determine assessment metrics based on detailed, program-specific GLOs. Both qualitative and quantitative data should be required. If everyone is meeting the outcomes, what other data should be collected? How does the program's performance compare with our peers? And how do we know how to improve?

Conversations regarding the Guidelines will be resumed at the next Graduate Council meeting on April 14th, 2011.

Meeting adjourned at 12:00 noon.

Graduate Council

April 14, 2011 Minutes

Grad Council Members Present: Carolyn Aldwin (HHS), Cass Dykeman (Education), James Coakley (Business), Theresa Filtz, Chair (Pharmacy), Denise Lach (CLA), Walt Loveland (SCI), Vinod Narayanan (ENGR), Jo Tynon (Forestry), Tom Wolpert (AG SCI)

Grad Council Members Absent: Michael Kent (Vet Med), Murray Levine (COAS)

Ex-officio Members Present: Marty Fisk, Brenda McComb, Bruce Rettig

Ex-officio Members Absent: Leah Minc

Support Staff Present: Nagwa Naguib

Guests: Gary Beach, Curriculum Coordinator, Academic Affairs; Dan Edge, Chair, Dept. of Fisheries and Wildlife

Approval of [April 7, 2011 minutes](#)

No changes. Minutes approved.

Revisions of Graduate Council Program Review Guidelines

The Council resumed the discussion regarding the revisions of the Guidelines. Walt Loveland received some suggestions and feedback from Graduate Council members and incorporated them into the Guidelines. Walt noted that graduate program reviews have consequences. Programs have to develop action plans which are presented to the Provost together with the Review Panel Report. The process is critical as it can, in extreme cases, lead to termination of a graduate program.

Some Graduate Council members expressed an opinion that the program reviews are a waste of time for some departments/programs. Others indicated that the reviews benefit programs as a means of self-assessment, and the external reviewers' input is very valuable. One of the beneficial elements of a review is comparing data with similar external programs, especially our aspirational peers. Loveland pointed out that there are several advantages of having external reviewers give their recommendations on a graduate program.

A few Council members suggested that the review process associated with national accreditation of certain programs/departments of professional programs could suffice in lieu of the OSU graduate program review. Others argued that there is a disconnect between accreditation and program reviews, and that accreditation bodies have some different objectives. Further, a number of the graduate programs do not have external accreditation bodies and are therefore only reviewed using the OSU graduate program review process.

Aldwin suggested that the graduate programs should work closely with Institutional Research (IR) in an effort to collect yearly metric information data. Vinod Narayanan added that the programs should analyze the data before sharing it. It was agreed that faculty publications should be analyzed within the program/unit itself as this is likely not information that IR will collect any time soon.

It was noted that Graduate Learning Outcomes (GLOs) are important and should become part of graduate program reviews.

Jim Coakley reported that the College of Business conducts an annual assessment which continually achieves the goal of reviewing and improving the program. A systematic method to collect and report NRC metrics might also achieve this goal. Loveland commented that a yearly review of one's faculty and department is not an easy task. Filtz agreed that a review is a burden, but the outcome is beneficial. She wondered if there is a way to have it beneficial without it being a burden. Which data are we collecting that is not being used or is useful?

Loveland suggested having two separate lists of required data—one for those programs that have

accreditation bodies, and one for those that do not. Discussion of a different review process for units that undergo a professional accreditation should be considered.

Tom Wolpert thought that adequate questions were needed that address three things, the quality of students, the program's resources and the curriculum, as well as then assessing whether the program is sustainable.

Aldwin pointed out that the learning outcomes and quality assessment lists provided by both Denise Lach and Loveland are quite similar. She reiterated that a functional IR Office is critical.

Lach called attention to the fact that it is critical for the faculty to own and find value in this process. Having been reviewed by external reviewers has to mean something to the program. Loveland stressed that the external reviewer component is indeed valued. Loveland wondered if there is something really objectionable to the lists. Will the "h" index be a bombshell? Should it be removed?

Jo Tynon suggested tying the review to accountability and making it simple enough so that departments/programs could do it annually.

Finally, we were reminded that department/unit level GLOs need to be created and assessed in the review process as the OSU GLOs are too general to be used.

Ultimately, Denise Lach agreed to edit the previously distributed list of GLOs proposed to be used for assessing the PhD in Public Policy. She also agreed to provide some language for the graduate program review guidelines to highlight the relevancy and value of the self-study to units/departments. She agreed to send this to Loveland to incorporate in the revised guidelines.

Review of four PSMs approved by OUS

Gary Beach informed the Council that last fall, the OUS Board approved four PSM programs, namely PSM in Applied Biotechnology, PSM in Applied Systematics, PSM in Environmental Science and PSM in Applied Physics. These four programs have been grandfathered in. It is time to include them in the OSU Catalog, the deadline for which is May 1st. His presentation to the Graduate Council was an informational step before implementing the PSMs. Future PSMs will go through the regular Category I proposals. He then pointed out that, for the time being, Ursula Bechert is the PSM director and she reports to Dean Sherm Bloomer, College of Science.

PSM in Fisheries and Wildlife Administration (F&WA)

Dan Edge was introduced to the Council. He introduced the Professional Science Masters of Fisheries and Wildlife Administration (PSM in F&WA) to the Council and wondered if they had any questions regarding the Category I proposal, previously discussed by the Council in early March.

Loveland started by asking how Fisheries and Wildlife Admin will satisfy the graduate learning outcomes (GLOs) for this non-thesis masters' degree. Edge replied that there will be an internship report in addition to some documentation that will support the student's own reflection. Wolpert wondered if the program would admit a prospective student who is currently not employed. Edge responded that the fundamental requirement for admission is a previous five year employment, so a student could be currently unemployed. He also indicated that they might have more demand for this program than anticipated. Government agency support for their internships is needed. F&W hired an internship coordinator for the PSM in F&WA. The faculty advisor will review reports, and the internship coordinator will assist in the process and identify internships.

Lach suggested that some faculty at OSU might not want to advise PSM students. Will this have an impact on the existing program? Edge responded that the department has a robust research enterprise that will not be affected. They have a large number of faculty who could advise PSM students. When asked what the faculty motivation was, he responded that the department is offering compensation, and an overload proposal is being considered. He also pointed out that mentoring students is a pleasure to some faculty, and that he himself participated in advising non-thesis students.

Filtz suggested that the proposal include a statement regarding how the graduate learning outcome of "engage in research and/or creative activity" will be addressed by the program. Edge will implement this request.

Motion: Amend the Category I proposal to include a discussion of implementation of the graduate learning outcome of "engage in research and/or creative activity". Tom Wolpert moved. Denise Lach seconded. No more discussion. Motion passed.

Meeting adjourned at 12:05 pm

Graduate Council

April 21, 2011 Minutes

Graduate Council Members Present: Carolyn Aldwin (HHS), Cass Dykeman (Education), James Coakley (Business), Theresa Filtz, Chair (Pharmacy), Michael Kent (Vet Med), Denise Lach (CLA), Murray Levine (COAS) and Jo Tynon (Forestry)

Graduate Council Members Absent: Walt Loveland (SCI), Vinod Narayanan (ENGR) and Tom Wolpert (AG SCI)

Ex-officio Members Present: Marty Fisk, Brenda McComb and Bruce Rettig

Ex-officio Members Absent: Leah Minc

Guests: Gary Beach, Curriculum Coordinator, Academic Affairs; Sherm Bloomer, Dean, College of Science; Larry Flick, Chair, Science and Mathematics Education

Support Staff Present: Nagwa Naguib

1. **Science and Math Education (SMED) Graduate Program Review Report**

Sherm Bloomer and Larry Flick were introduced to the Graduate Council members. Carolyn Aldwin presented the Report to the Council indicating that the Site Visit occurred in early December 2010, and the Report was finalized in January 2011. It was a challenging review due to the upcoming move of SMED from the College of Science (COS) to the College of Education (COEd). Had the review been done without the prospect of the reorganization, the Review Panel's recommendation would have been to maintain. However, a recommendation to restructure comes with the reorganization. With the reorganization, there will be access to TASHips with more sources of funding.

The Review Panel had some challenges because the self-study did not summarize much of the requested data and the review team had to extract what they needed from the study's appendices. The Panel recommends that the Department track statistics, specifically key information on student demographics. There are four graduate programs in the Department, two of which are taught online through Ecampus. It was not clear if the online programs were as successful as the one on campus. The department needs to collect and provide separate data for each of the graduate programs and to provide data on the online students separately from on-campus students.

The SMED faculty are working productively including bringing in a large number of grants. The College of Science funds only faculty and staff salaries. No support and service funds are provided by the COS, requiring the Department to rely on grant funds and revenues from Ecampus tuition. The facilities used by the Department are in bad shape. It is still unclear if they will move to the Education building once it is ready. They need adequate space with new computers. Some of the students have better computer equipment than what is provided by the department. An increase in faculty FTE would be welcome.

Specific recommendations for the masters' students include a need for more online courses as well as incorporating some of the College of Education courses, and providing opportunities for all licensure students to work with students of diverse cultural backgrounds.

Recommendations for the doctoral program include enhancing the academic experience for first-year students; adding learning experiences in science and mathematics teacher education, grant writing, program evaluation; engaging mathematics faculty in conversations about the relationship and overlap between the programs offered by both departments; having the COS dean's office provide data on student credit hour generation; and monitoring faculty teaching as well as advising loads or advocating for additional faculty lines. There was general concern that some faculty may have significantly higher advising loads than others which should be monitored.

Aldwin summarized the report by indicating that SMED supports strong, successful and focused

graduate programs. The faculty are very productive and rank high among programs of this type. The upcoming merger with the College of Education will allow the department to continue in its progress and hopefully not lose the foci for their degree programs.

Jim Coakley, who also served on the Review Panel, added that there was an issue concerning whether all doctoral students were being advised by either tenured or tenure track faculty. Flick responded that one mathematics education faculty member is not tenured. In all other cases, PhD students are mentored by tenured faculty. He indicated that the department will be moving to the renovated Education building. Bloomer added that the department will be given the fourth floor of Education as a shell. Fund-raising is underway to complete the build out. Coakley pointed out that the COS and Dean Bloomer are very supportive of the programs and the department.

Aldwin asked Flick and Bloomer if the faculty FTE will continue in Science or be transitioning to Education. Bloomer responded that COS will continue funding the faculty lines in SMED. In the transition, COS will have financial but not managerial responsibilities. When asked if there was a Memorandum of Understanding (MOU) between COS and COEd regarding this transition, he responded that the MOU is in the process of being finalized.

Flick pointed out that there is a need for the department to do a better job tracking faculty productivity and student credit hours. He then added that he is working on the Action Plan that will be submitted to the Provost, in response to the Review Panel recommendations. There is still a struggle in figuring out how to deal with Ecampus courses. There is a lack of coordination between the online and on-campus courses. Bloomer added that tracking of student credit hours (SCH) is done at the program level but is not done by individual faculty members. The College does not set metrics for SCH. Salaries usually come from the college. The base budget does not cover Services & Supplies (S&S). The OSU budget model has not improved over the last few years in its ability to appropriately allocate funds between programs. Finally, in the case of SMED at least, the infrastructure issues of crumbling facilities should be resolved by the move to the Education building.

Filtz indicated that OSU will have to grapple with this issue of E&G only funding salary lines and having no money for equipment or facilities infrastructure. Bloomer responded that between the Ecampus and Summer Session funds, they were able to remodel some classrooms.

Several Council members wondered about the comment on page 3 of the report regarding "Faculty members should evaluate their personal biases/strengths and assess the impact that they might have on student learning in doctoral courses." Aldwin explained that a number of PhD students indicated that some SMED faculty were heavily involved in their grants, which did not allow them to have easy access to the faculty. This is only the students' perspective.

Filtz asked if the table with faculty FTE was provided. Aldwin responded that this table was missing. Filtz commented that in this case, the review should have been halted and clarification requested from the department. Aldwin indicated that the information was retrieved during the on-site review in which case it needs to be placed in the report.

Brenda McComb wondered if this was a viable program. Coakley responded that the faculty do an excellent job. Aldwin added that the number of faculty needs to be increased. Cass Dykeman commented that the SMED program is an excellent program, and a model one. There was some discussion regarding one reviewer's recommendation that the PhD program, given small numbers, be developed as a model program. Aldwin and Coakley indicated that they did not completely understand this comment from one of the external reviewers. Dykeman stated that nationwide, most teachers are taught differently, but SMED is unique in its approach: in spite of challenges and limitations, it is nonetheless a great program. He said that there are a variety of science and mathematics programs nationally and said that many of them would disagree that Oregon State's is a model degree. Aldwin was encouraged to seek clarification regarding this comment that OSU's SMED program should develop itself as a model.

Aldwin said that the faculty were concerned about their move to the College of Education. They perceive themselves as research-oriented faculty, and feel that their program will be taken over by the College of Education. Dykeman commented that the College of Education faculty feel their programs are being taken over by SMED. The Category I proposal for reorganizing the College of Education is close to being finalized. This should make things clearer for everyone.

Denise Lach suggested that the report be revised as it is hard to figure out where some of the recommendations come from. After a short discussion, it was decided that Aldwin and Coakley will

revise the report to clarify a few issues that were discussed by the Council, mainly:

- Ask the department to track faculty advising load rather than SCH;
- Ask the department for quantitative analysis of faculty productivity, not simply presentation of faculty CVs, as evidence of quality;
- Revise the section on the impact of a future Center for SMED Learning to focus more on potential impacts on graduate education and access to advisors rather than on impact to faculty self-esteem;
- Clarify the section stating that faculty personal biases/strengths were adversely affecting the graduate program to more accurately reflect student comments, and better explain the meaning of this statement; and
- Request student metrics, especially numbers of students enrolled and annual average graduate rates for each degree program separately and site (i.e., on-campus or on-line), and not in aggregate as currently provided.

2. **Introduction of and debriefing from Dean Brenda McComb, New Graduate School Dean**

Dean McComb addressed the Council indicating that she was looking forward to working with all of them. She has met with Theresa Filtz and plans to meet with her on a regular basis. She wants to make sure that the Graduate School is addressing the needs of all of the graduate programs. She plans to meet soon with graduate program directors in the different divisions. She has already been meeting with the college deans who have been asking for changes in Graduate School processes. She will also work to discover ways to appropriately fund and house the interdisciplinary degree programs. Finally, she encouraged all Council members to come to her with ideas and concerns. She is excited about working with all of them.

3. **Discussion regarding MOU on the transfer of MBA monitoring from the Graduate School to the College of Business (COB)**

Filtz reminded the Council that it was time to develop metrics for reviewing the MBA transfer from the Graduate School to be administered by the COB, as charged by the Provost.

Coakley reported that the COB is relying on the Office of International Admissions, a unit within INTO-OSU that administers undergraduate admission and INTO pathway students, for MBA admission processes. Once international graduate students participating in the INTO Business pathways program finish their language skills training, their records are released to the COB, which then evaluates their applications and makes the final determination on admission. The COB is planning on tracking the metrics for these and all MBA students.

Jo Tynon wondered if it has been helpful to have admission of international students processed by INTO-OSU. Coakley responded that this system streamlines the issues. Filtz reminded Coakley that the COB agreed to follow the Graduate Council policies when they moved the monitoring of the MBA to the College. They need to make sure that they are monitoring the program according to the GC policies. Coakley indicated that they are working closely with INTO, and are collecting relevant data. He then indicated that the number of students will not double by 2013 to 180, as previously thought; but the long term goal is to have between 300 and 350 students enrolled in the MBA.

Lach reminded Coakley that the Graduate Council program review metrics are different than the metrics proposed by the College of Business. Graduate Council metrics could be qualitative in addition to the quantitative metrics being discussed.

Filtz wondered how they deal with admitted students with a GPA lower than 3.0. Coakley responded that the COB refers these to the Graduate Admissions Committee and accepts that body's decisions.

Lach asked if student conduct procedures are the same for both graduate and undergraduate levels. She also wondered where the graduate student would go in case they have a complaint. Coakley responded that the student conduct complaints would first go to the COB then to the Office of Student Conduct. Lach clarified that she was concerned more about grievances, for example if a student and advisor have a conflict, than student conduct. Tynon pointed out that grievances should not be handled by the College. McComb informed the Council that the university is hoping to create a new ombudsperson position to deal with those issues. Filtz felt that COB should discuss the issue of grievance procedures with the Graduate School to determine the most appropriate route through the university. Fisk noted that the MOU states that COB will take over all functions from the Graduate School.

Motion: The College of Business will report back to the Graduate Council by the end of the first full year

of admissions, i.e. Spring 2012, qualitatively as to what has worked and what has not worked with the transfer of all procedures from the Graduate School to the COB. Denise Lach moved. Jo Tynon seconded. No more discussion. Motion passed.

May 5, 2011 Minutes

Grad Council Members *Present*: James Coakley (Business), Theresa Filtz, Chair (Pharmacy), Denise Lach (CLA), Murray Levine (COAS), Vinod Narayanan (ENGR) and Jo Tynon (Forestry)

Grad Council Members *Absent*: Carolyn Aldwin (HHS), Cass Dykeman (Education), Michael Kent (Vet Med), Walt Loveland (SCI) and Tom Wolpert (AG SCI)

Ex-officio Members *Present*: Marty Fisk, Brenda McComb and Bruce Rettig

Ex-officio Members *Absent*: Leah Minc

Support Staff *Present*: Nagwa Naguib

Guests: Greg Thompson, Head, Agricultural Education; Cary Green, Associate Dean, College of Agricultural Sciences; and Susan Shaw, Director of Women Studies Program

1. **Approval of [April 14th](#) and [21st](#) minutes**

Both sets of minutes had no changes and were approved.

2. **[Agriculture Education Graduate Program Review Report](#)**

Greg Thompson and Cary Green were introduced to Council members. Jo Tynon started by thanking the Review Panel for their work on the review. The overall recommendation is to maintain the Master of Science in Agricultural Education degree program at OSU, keeping open the possibility for program expansion. There is potential interest in adding a second option in Business and Industry Education (BIE) to the existing option.

Other recommendations include:

- Pursue an endowed professorship in agricultural education
- Find more student support through scholarships
- Clarify faculty position descriptions to more realistically reflect engagement and outreach efforts
- Put the graduate advising guide online
- Expand the use of undergraduate agricultural education as recruitment tools
- Expand graduate student enrollment and diversity by recruiting from diverse states
- Utilize the Master of Agriculture degree as a home for thesis students until the BIE Master's option is launched
- Add a graduate student office

Thompson responded that the department disbursed \$6,000 in scholarships this year. He also indicated that since 2001 the department has exceeded research, productivity and quality level expectations.

Green added that one of the department faculty has already received an endowed professorship. He then proceeded by indicating that Greg Thompson is a modest department head. The two faculty in the department are great but they are new, so Thompson has been carrying the load. Dean Ramaswamy provided more funds, but the department needs more space, scholarship and faculty. Development of the leadership academy will be very beneficial.

Martin Fisk pointed out that he, personally, was not very familiar with the program before participating in the review. Ninety percent of the graduates teach agricultural education in high schools in Oregon.

All students admitted to the undergraduate agricultural programs in Agricultural Sciences have been taught by Agricultural Education teachers who graduated from the OSU program, which makes agricultural education the pipeline to produce agricultural education teachers.

The Council thanked the visitors and proceeded with the discussion regarding the STEM connection and its synergies with the program. Other discussed points were the pedagogy and the faculty's FTEs. Bruce Rettig commented that, instead of appointing faculty on nine-month appointments, most appointments in the College of Agricultural Science are 0.75 FTE for 12 months. This allows faculty to seek funding to enhance their salaries through outside grants.

Tynon will review the self-study and make a few clarifications to the Report.

Motion: Accept the report with changes to be made by Jo Tynon, following the above discussion. Vinod Narayanan moved. Murray Levin seconded. Motion passed.

Jim Coakley suggested that program review reports should be discussed at the Council before the department head/chair and dean are invited to the meeting with the Council. This proposal was approved.

3. MA in Women Studies Category I

■ [Budgets and Fiscal Planning Committee Feedback](#)

Susan Shaw was introduced to the Council. The process of creating the MA in Women Studies began eight years ago. Unfortunately, the College of Liberal Arts could not fund the program. For the past few years, the MAIS students who select Women Studies as a primary area of concentration have been asking for this degree, as more institutions offer master's in Women Studies. In Oregon, none of the state universities has such a master's degree. They offer only undergraduate degrees in the field. The Program received support from both the University of Oregon and Portland State University. When asked why "women studies" and not "women's studies," Shaw replied that it is a discipline about "women."

Vinod Narayanan asked if it is expected that the MAIS in Women Studies as a primary area of concentration will disappear. Shaw did not think that this will be the case as some students like interdisciplinary studies. The program might grow, especially with the school configuration. The program currently involves about forty-five faculty on campus.

Fisk added that some of the Anthropology students use the MAIS and others use the Applied Anthropology program. He then wondered how Women Studies will be sure that the students are able to meet the foreign language requirement. Shaw responded that the program believes that students completing degrees in Women Studies need to be aware of events on a global skill and be able to respond to a global agenda. In order to do so, basic training in a second language is very important. Jim Coakley asked the reason for expecting a small number of graduates, i.e. five students. Shaw responded that the program was being more conservative with the number, but that she would not be surprised if the number exceeded twelve students. The advising capacity is available with four permanent faculty members, in addition to the prospect of more faculty advisors.

Narayanan pointed out that the expected graduate learning outcomes (GLOs) do not correlate with the methods by which they are assessed. He suggested creating a matrix of the GLOs with the assessment measures. Shaw agreed to clarify the GLOs. She added that some of the students go on to medical school, others start their own businesses. Talking to them through the exit interviews and one year after graduation helps the program's progress. Filtz reminded Shaw that the program, being the only one offered by a state institution, will be judged at the state level by the jobs obtained by their alumni. Some alumni of the MAIS/Women Studies program have shared the impact of their degree on their careers even though their careers would not be classified directly as ones the degree was designed to serve.

Shaw ended by indicating that several faculty are interested in teaching courses in the curriculum and they are very supportive of the program. She was then thanked and informed that she will hear back from the Council regarding their decision.

The Council discussed the proposal and expressed concern about the lack of quantitative research methods; the small number of graduates; and requiring more than the minimum number of stand-alone credits. Proposed changes will be suggested to Susan Shaw.

1. On page 13, section 5a, bullet point 5, it was requested that the phrase "and the ethical practice of research" be added to that outcome.
2. Merge the outcomes on page 13 with the assessments on page 14 to create a table or grid linking the outcomes with their assessment measures.
3. Add an alumni survey to the assessments list to gauge the value of the degree to graduates after they have left the program for some time.
4. On page 7, qualify the role of the listed affiliate faculty in the program.
5. On page 13, edit sentence 6 to begin with "Women Studies" instead of "We".
6. Take out the final line on page 5 that states 30 stand-alone credits, as this could commit the Program to require more than the minimum number of stand-alone credits.
7. On page 6, section f g, revise the expected number of graduates per year to reflect a better retention rate than currently assumed.
8. On page 5, under the heading "Qualitative Research 4 credits. Choose one of the following:" there are three courses listed. The Council pointed out the lack of a quantitative research methods option, and strongly suggests considering including at least the option of a quantitative research methods course in the curriculum.

Motion: Accept the MA in Women Studies Category I proposal with changes listed above. Jim Coakley moved. Jo Tynon seconded. Motion passed.

Graduate Council

May 12, 2011 Minutes

Voting Members Present: Carolyn Aldwin (HHS), James Coakley (Business), Cass Dykeman (Education), Theresa Filtz, Chair (Pharmacy), Michael Ken (Vet Med), Denise Lach (CLA), Vinod Narayanan (ENGR), Jo Tynon (Forestry), Tom Wolpert (AG SCI)

Voting Members Absent: Murray Levine (COAS), Walt Loveland (SCI)

Ex-officio Members Present: Marty Fisk, Brenda McComb

Ex-officio Members Absent: Leah Minc

Support Staff Present: Nagwa Naguib

Guests: Gary Beach, Curriculum Coordinator, Academic Affairs; Bob Duncan, Associate Dean, College of Oceanic and Atmospheric Sciences; Bruce Rettig, Graduate School; Brent Steel, Director, Master of Public Policy Program

1. COAS Graduate Program Review Follow - Up

Brent Steel and Bob Duncan were introduced to the Council members. Steel presented the follow-up report of the COAS Graduate Program Review, which Marty Fisk tasked him to conduct. After going through the Review Panel Report and the Action Plan, Steel met with Dean Mark Abbott and Associate Dean Bob Duncan. The Report listed 18 different recommendations for the College's graduate programs. Together with Abbott and Duncan, Steel went through each one of the recommendations, and concluded that the College's administration had indeed addressed every single one of them.

One of the recommendations was to pursue getting education days of ship time for student programs. Duncan reported that COAS had put in a proposal for resources for a new ship, which was endorsed by OSU administration, the Governor's Office and the State Legislature. Unfortunately, even though selected as a finalist, the College did not receive the award. They are planning on resubmitting a new, more modest proposal that will include other universities. He then indicated that the University of Washington vessels are funded by the State Legislature.

Steel reported that another recommendation dealt with the COAS students' need for internet access from their work stations. Security issues still continue with COAS' own computer network, but the plan is to have Wi-Fi access in Burt Hall by summer 2011. Students located in other buildings have access to different secure networks.

Steel concluded by indicating that the relocating of students close to their faculty advisors has been completed and that the follow-up review is very positive.

When asked regarding having their own ship, Duncan responded that it is a competitive edge but, when future funds become available, the College will have a strong case in securing them and will take advantage of the opportunity. For the moment, the refit of the current ships will be very beneficial, in addition to the four NOAA vessels moving to Newport, and the Ocean Observatories Initiative improvements taking place on the Oregon coast.

Motion: Accept the COAS Graduate Program Review Follow Up Report. Jo Tynon moved. Carolyn Aldwin seconded. No more discussion. Motion passed.

2. Category I Proposal for a PhD in Public Policy

Jo Tynon commented that this proposal is one of the best Category I proposals she has ever reviewed. It is very thorough and comprehensive, and covers both learning outcomes and diversity.

Jim Coakley questioned the reason for limiting the program to five students; i.e. accepting and graduating five students a year. And why graduate only two PhD graduates a year? Steel responded that the program is building upon the current masters' program. The program is competing with strong programs, for instance University of Michigan. They are doing very well in recruiting diverse students, for instance LGBT students from southern universities. They are very aggressive in recruiting McNair students from the list sent by Mary Strickroth. The program is in compliance with diversity requirements set by its accrediting body. The program's recruitment and placement budget for masters' students has been growing for the last two years.

Tom Wolpert wondered if the program will hire new faculty to cover the added coursework. Steel indicated that they have hired four new "top notch" graduate faculty who will help in designing new courses next year. He added that more faculty will be hired next year. He proceeded by saying that other institutions started with five students because placement of the first groups of graduates is very important. They thought starting slow will help maintain the quality of the program.

Carolyn Aldwin asked if there was enough support for the graduate students. The proposal mentions three GTA positions every year. Will other students be supported through Ecampus? Steel responded that the program currently has 52 Master of Public Policy students, 50 of whom have financial support. Twelve of those are funded on grants. They are not concerned about funding the five doctoral students on grants.

Brenda McComb wondered about a schedule for an external review of the program. Steel responded that this fall they are expecting to have three concurrent reviews of the MPP program, including the accreditation of the program. He will be meeting with the accrediting national body in Washington, DC and will discuss the process with them.

Vinod Narayanan wondered what the incentive was for supervisors to have graduate students do their practicum with them. Steel responded that the MPP program has students in the Governor's Office as well as several State agencies. They are good at policy analysis, and are considered by government agencies to be "free labor." Narayanan asked how the program will differentiate between the credits for practicum and research. Steel responded that the program gets feedback from the supervisor at the organization/agency where the student works as well as from the major advisor. Steel is the practicum coordinator. There is a final evaluation conducted before the student graduates. Narayanan questioned if the feedback from the agencies evaluates the learning outcomes. Steel replied by saying that the supervisors fill out an evaluation form which includes all necessary information the program requests. Denise Lach added that OSU's MPP alums hire current practicum students.

Marty Fisk asked why not be specific about GRE scores. Steel responded that they have a minimum GRE score online to discourage those whose scores are very low. On the other hand, they monitor a combination of GPAs, GREs, placement rates, and diversity of the student. The CLA Admissions Committee reviews the applications and makes the decision. Lach added that the program does not want to discourage minority students, or those who are coming back to school after an absence of several years. GRE scores are not the only criteria considered for admission. For instance, the McNair students have lower GRE scores but a very high motivation.

Fisk wondered if the number of faculty on the PhD committee should be changed to five, which will include the GCR. Lach will make the change.

Motion: Accept the Category I Proposal for PhD in Public Policy with the change of the number of faculty on the PhD committee to five faculty including the GCR. Tom Wolpert moved. Jim Coakley seconded. No more discussion. Motion passed.

3. Chair's Updates:

Filtz reminded the Council that we are heading towards the end of the academic year, with only three meetings left. The agenda for next week's meeting will include:

1. College of Business Areas of Concentration
2. A student from Colombia's application into the MPH program without an equivalent bachelor's degree. The student holds a medical degree. GAC would like direction from the Council as far as making exceptions.
3. The Category I Proposal to rename the College of Health and Human Sciences to the College of Public Health and Human Sciences.

She then proceeded by saying that Coakley's idea of reviewing and discussing proposals/reports before

inviting the visitors, which he proposed at last meeting, is an excellent idea. Logistically, this is creating a problem. There is not enough time to discuss the proposals ahead of time. She informed Gary Beach that May 26 will be the last time the Council will accept a Category I proposal for review to allow Council at least a week before the last meeting on June 2.

As far as the HHS Cat I proposal, Carolyn Aldwin commented that Dean Sherm Bloomer raised concerns with the name proposed for the School of Biological and Population Health Sciences and Dean Tammy Bray wanted to meet with the COS department chairs to discuss the issue. However, the meeting did not happen at Dean Bloomer's suggestion. Aldwin will meet with Tony Wilcox and Marie Harvey to discuss the issue before next week. Carolyn then proceeded by saying that the College is hiring between 11 and 17 new faculty to fill some holes. The undergraduate program is very large with only ten faculty teaching 800 majoring students. Some of the faculty will have to act as "bridge faculty." The rush to get the proposal through the system is mandated by the Council on Education for Public Health (CEPH) deadlines. The program has been approved on a probationary basis.

Gary Beach pointed out that the Faculty Senate will need a two-week notice before an agenda item is to be added. He advised checking with Vickie Nunnemaker about the deadline for next Faculty Senate meeting. He also informed the Council that he is expecting a few proposals to come through before the end of the academic year; otherwise they will need to be reviewed during fall term.

Adjourned 11:35 PM

Graduate Council

May 19, 2011 Minutes

Graduate Council Members Present: Carolyn Aldwin (HHS), James Coakley (Business), Cass Dykeman (Education), Theresa Filtz, Chair (Pharmacy), Denise Lach (CLA), Murray Levine (COAS), Jo Tynon (Forestry), Tom Wolpert (AG SCI)

Grad Council Members Absent: Michael Kent (Vet Med), Vinod Narayanan (ENGR), Walt Loveland (SCI)

Ex-officio Members Present: Marty Fisk, Brenda McComb

Support Staff Present: Nagwa Naguib

Guests: Rene Reitsma, Associate Professor, College of Business; Leah Minc, Chair, Graduate Admission Committee; Rosemary Garagnani, Assistant Dean, Graduate School; Marie Harvey, Chair, Public Health; Valerie Rosenberg, Director, Student Experience, INTO; Tony Wilcox, Chair, Nutrition and Exercise Sciences; Tom Eversole, Director, Strategic Development; HHS Alexis Walker, Chair, Human Development & Family Sciences; Gary Beach, Curriculum Coordinator, Academic Affairs; Bruce Rettig, Graduate School

Approval of [May 5](#) and [May 12, 2011](#) Minutes

Both sets of minutes were approved with no changes.

[New Areas of Concentration within the MBA Degree Program](#) – Rene Reitsma

- [Clean Technology Track](#)
- [Research Thesis](#)
- [Business Administration/Commercialization](#)

Rene Reitsma was introduced to the Graduate Council members. Jim Coakley began by explaining the new research thesis area of concentration that the College of Business (COB) would like to introduce to the MBA program. Last year, the COB submitted a Category II proposal for a research thesis concentration, and then was advised by academic programs to withdraw it and resubmit it as a change in concentration. The current request is to establish three concentrations in the MBA. The first would be the current program, renamed as a concentration in commercialization, and the second is a variation on the commercialization track with a sub-specialization in clean technology. The third track is a two-year alternative program which includes the 33 credit core curriculum plus a research thesis and other coursework.

When asked if the research thesis will be in each of the tracks, Coakley responded no. For the research track only, students will substitute a year-long research thesis for the current business project, and increasing the time to graduation to two years. In response to a question from Denise Lach about the number of research methods courses in the research track, it was noted that the research methods course is BA 596 and that there is additional statistics coursework in the MBA program.

Theresa Filtz asked Bruce Rettig to inform the Council of the reason behind bringing this request to the Graduate Council, instead of it being handled by the Graduate School. Rettig reminded the Council that a year ago the COB put a request to, and got an approval from, the Provost to move the MBA out of the Graduate School. So far, the MBA has been a program in which all students take the exact same coursework in a non-thesis program. This request moves away from the non-thesis program to a different model with two new areas of concentration. Gary Beach noted that, if the Council approved a related request to code the MBA areas of concentration in BANNER, it might establish precedence and we might get requests to code from 400-500 other areas of concentration.

Carolyn Aldwin expressed concern about the new areas of concentration. Rettig commented that every Masters program at OSU should have thesis or project in lieu of thesis, with variations for different programs. A special exception that was approved by the Graduate Council was made for the MBA program to have a

business project instead of a thesis or research.

The MBA coursework takes one year to finish. A concern was expressed regarding the fact that the second year might not be long enough to finish the research in the new track. Coakley and Reitsma noted that two years was the suggested minimum amount of time needed to complete the MBA with a research thesis. More time might be needed, as in any Masters program.

When asked if the program had alerted the instructors of research methods courses outside of COB of the fact that MBA students might be taking their classes, Coakley responded that liaison was conducted with all of the affected units.

Tom Wolpert wondered how much autonomy the COB has, and if there is a mechanism for overseeing the research thesis track students. Rettig responded that the issue is there will be two different groups of MBA students with the new concentrations. The COB will need to make necessary arrangements with the library, as does the Graduate School (GS), to collect theses. The GS thesis editor does an excellent job checking the format per the GS procedures and the COB will need to be trained to do this. Also, the students ask for, and are given, a list of Graduate Council Representatives (GCRs) by the Graduate School. The COB faculty will need to do the same by appointing someone to oversee the thesis format and using the same thesis manual.

Coakley indicated that even though the regular accreditation does not cover the research component of the program, the MBA will abide by the Graduate Council policies. Reitsma noted that they might start the areas of concentration with two or three students, but that the COB faculty might want to extend this opportunity and the number could increase to five or six students. Lach asked why the program did not consider a Masters' of Science in Business, where students could do research in business administration. Coakley responded that in three to five years they might decide to write a Category I proposal for an MS in Business.

Carolyn Aldwin commented that the diversification is great, but the agreement was for a Masters of Business Administration with no other areas of concentration. Filtz pointed out that this issue will be discussed at a later GC meeting. Reitsma pointed out that it would be helpful for students to know soon whether the new areas of concentration will be available to them. He was then thanked and excused.

Discussion will continue at next week's meeting.

International Degrees – Marie Harvey, Rosemary Garagnani, Valerie Rosenberg

- [Application for Admission to MPH Program messages](#)

Visitors were introduced to the Graduate Council members. Marie Harvey, Chair of Public Health, began by introducing the issue of Dr. German Escobar, an applicant with a medical degree from Colombia without a bachelor's degree. Dr. Escobar's application was denied by the OSU Graduate School based on current policy. The Department of Public Health's assessment is that the curriculum of Dr. Escobar's medical degree is very relevant to Public Health. When reviewing his courses, it was found that they are similar to those that the undergraduate students in public health are enrolled in. Combining the coursework with his clinical skills, the department is requesting that Dr. Escobar be admitted to OSU.

Brenda McComb reported that when she met with Dr. Sunil Khanna, they both agreed that this issue should be presented to the Council, as it will set a precedent. McComb also noted that Dr. Khanna would like the Graduate Council to take up the issue of admission for international applicants who do not meet the minimum language requirements.

Rosemary Garagnani informed the Council that Dr. Escobar had not yet applied, and the Graduate School's decision was made only as a pre-review. When asked, it was noted that there is no process for considering international students whose degrees are not judged to be acceptable by OSU. Both the Graduate School and the Graduate Admissions Committee (GAC) are carrying out Graduate Council policies in excluding Dr. Escobar's professional degree. If the Graduate Council would like international applicants', such as Dr. Escobar to be considered for exception, clear criteria and directions are needed from the Graduate Council as there is a wide range of professional programs, both domestically and internationally, that could be affected. Those criteria need to be carefully crafted. Leah Minc, chair of the GAC, agreed with Garagnani that the GAC needs clear guidance if the GC policies change. They would like to ensure that the students are ready to enroll in graduate programs.

When asked of the frequency of those requests, Garagnani responded that the Graduate School receives between 12 and 15 such requests a month. Most of the applicants are international students.

McComb indicated that she was surprised to see that an applicant with an MD is not admissible to a graduate

program at OSU. She wondered where the risk lay in accepting such a student, in the program, the Graduate School, or the Graduate Council.

Valerie Rosenberg, representing Sunil Khanna, Associate Provost for International Programs, presented the issue from the international aspect. She indicated that if the goal is to internationalize OSU, then we will have to look at what is acceptable from international institutions. When researching the top ten schools with public health graduate programs, five of the programs accept professional degree students. Aldwin wondered how to make sense of the cases without creating too much work for the Graduate School staff. Jo Tynon pointed out that it seems that those applications go through more scrutiny than others. Garagnani responded that the issue is not about the Graduate School work load, it just takes more time to review those applications which are, indeed, put under scrutiny. There needs to be clearer guidelines. Minc repeated that, for the exceptions process, clearer criteria is needed.

McComb went on to say that, if OSU is serious about internationalizing its programs, we will need to hire more people in the Graduate School to review those applications. She suggested that if the students get into the MPH program, for instance, and are not successful, they can always change graduate programs and take different courses. However, it was noted that to change a graduate program, the student must be accepted by the new program, so there is a check in place in the system. Tynon asserted that admitting professional degree students into graduate programs should be looked at case-by-case. A broad criterion is not recommended.

Denise Lach indicated her concern regarding the lack of a bachelors' degree and the fact that it is different than having a professional degree. Nevertheless, there should be an exception process.

Motion from Carolyn Aldwin: Allow individuals with MDs from universities outside the U.S. and Canada to apply and be admitted to the master's in public health program. The MPH program will be tasked with ensuring that the applicants and their prior institutions are sufficiently qualified to support graduate work at OSU. Motion will be discussed at next week's meeting

College of Public Health and Human Sciences Proposal – Rename and Reorganize – Marie Harvey, Alexis Walker, Tony Wilcox

- [Proposal](#)

After the introductions, Tony Wilcox presented the above proposal. The College of Health and Human Sciences (HHS) is restructuring three departments into two schools, plus the Department of Design and Human Environment (DHE) which will be restructured and moved to a different college at a later date. This reorganization coincides with the College of Public Health accreditation by the Council on Education for Public Health (CEPH). The College is adding "Public Health" to their name, with no changes in the curriculum. Wilcox then continued by indicating that they are hopeful that the Category I proposal is approved, as the CEPH response is expected in June.

Wilcox proceeded by saying that they have conducted a liaison process, which worked well. There were some concerns from the College of Science (COS) regarding the word "biological." From HHS's point of view, biological is a broad and generic term that does not apply solely to one discipline. Most colleges have the "biological" term in some of their courses. There was judged to be little risk in confusion, particularly with "health sciences" modifying the School's name.

Aldwin responded to Lach's question regarding the reason for rushing this proposal through the system. Aldwin indicated that it still needed to go to the Curriculum Council, and then to the Executive Committee, which will then put it on the Faculty Senate agenda. There is only a small window for approval as it needs to get into CEPH before July, 2011. otherwise accreditation will be delayed to 2014.

Alexis Walker informed the Council that developing the proposal has been a challenge, as it was done simultaneously with both the accrediting body mandate and the university requirements for reorganization. Lach pointed out that the programs are not changing, but it seemed that the curriculum will be changing. Walker responded that it was premature to add any changes, which will be done once the college is accredited. Harvey added that all the students are taking methodology and statistics courses. It is a positive change for the students.

Once the guests were thanked and excused, Lach asked if this proposal included program elimination. Gary Beach responded that they were only adding "Public" to the College title in addition to combining all the proposals into one. Lach pointed out that there was no administrative budget included and wanted to know how it will be managed. She would like to see a separate budget and an organizational chart for each School. Beach reminded the Council that there is an important timeline as the Curriculum Council will not meet again

until May 27th, and the Faculty Senate Office would like to have requests for agenda items submitted two weeks in advance for their June 9th meeting.

Motion: Approve the name change and revise the transmittal sheet. Subsequent to making the changes, resubmit Category I for reorganization of both schools at a later date. Tom Wolpert moved. Jim Coakley seconded. No more discussion. Motion approved.

Filtz will be asking the HHS leadership for supplementary documentation that will include the administrative budget and the organizational chart. It was also decided that, in case the delay in approving the Category I will jeopardize the accreditation, Filtz will revise the motion to include the full proposal with reorganization. Council members will be asked for their votes by email in that event.

Meeting adjourned 12:10 PM

Subsequent to the adjournment of this meeting, CHHS provided supplemental budget and organizational information to the Graduate Council. The full CHHS proposal to reorganize into Schools and be renamed was then voted on by email and was approved by a majority of the Graduate Council on May 23, 2011.

[Revised Science and Mathematics Education \(SMED\) Graduate Program Review Report](#)

Carolyn Aldwin reminded the Council that there have been five concerns about the SMED Report and some of its content, and that she worked with Larry Flick and Jim Coakley on revising it. The concerns were:

1. Lack of data on the number of graduate students by degree level. The concern was the low number in some concentrations as it did not meet the minimum numbers the University required. Tables A1 and A2 were added as appendices to the Report, showing the **total** number of students which will satisfy OSU's requirement.
2. Faculty Awards were not detailed in the Report. The Revised Report lists the awards and the publications. The average award exceeds \$150,000 per FTE, and is increasing. The average number of publications per FTE is five publications a year.
3. Clarification regarding "student credit hours (SCH)" – it is actually the number of students per faculty, not SCH. Text in the Report was edited to correct the misinterpretation. Review Panel was informed of the correction.
4. The concern about faculty's biases: Review Panel did not mean **bias**, but "**predilections**." Text was revised.
5. The fifth concern was the critique regarding the facilities in which the Department operates. This concern will be resolved when SMED moves to the newly remodeled Education Hall.

Aldwin reiterated that the College of Science (COS) will hold on to the Faculty FTE for the next five years, and then the Dean will transfer them to the College of Education (CoEd). It was suggested that the Action Plan should be signed by both the COS and the CoEd deans.

Motion: Accept the Science and Mathematics Education (SMED) Revised Review Report. Jo Tynon moved. Tom Wolpert seconded. No discussion. Motion passed.

Update on the University Accreditation Visit Results Related to Graduate Programs Walt Loveland reported to the Council that a confidential report from the Accreditation body has been received by OSU. The University decided not to respond to the report for now.

OSU was commended on the Cascades Campus, Student Affairs and the Foundation fundraising efforts. On the other hand, OSU received demerits on the following:

- Gap between the mission and the strategic action plan
- Mostly investing in the new initiatives
- No culture of assessment

The Graduate Council demerit is mainly that OSU does not have a culture of assessment. The Graduate Learning Outcomes (GLOs) had been adopted, but not immediately enforced. The new Director of Assessment, Gita Ramaswamy, was appointed quite late in the process, so the assessment records were incomplete. The plan is that the assessment records will be properly archived for future accreditation. It was also suggested that the Assessment website be accessible. Loveland reiterated that the Graduate Council is a major player in the process of assessment, and that Institutional Research will need to be beefed up to fulfill its role in this matter.

As for their comments on the graduate program reviews, they indicated that some of the reviews have been postponed for two to three years. They were complimentary, though, on the reviews and recommended the need for the Graduate Council to catch up with the ones previously postponed.

The formal report will be issued in early July, and distributed to the campus. The University is planning on signing up to the Science Citation Index provided by Thomson Reuters.

Theresa Filtz informed the Council that she will be drafting a letter to the Faculty Senate President regarding the large number of Category I proposals and program reviews that the Council will be taking on next academic year.

New Areas of Concentration within the MBA Degree Program

Filtz reminded the Council of where the MBA discussion was left off at last week's meeting, with the proposal of having three areas of concentration, namely commercialization, clean technology, and research thesis. Jim Coakley added that the College of Business (COB) and the Graduate School had agreed that the research thesis would be run through the Graduate School. Brenda McComb added that the students would apply to the MBA and be admitted by the COB. If they decide to pursue a research thesis option, then COB will send their information through to the Graduate School. Coakley added that, if the number of students interested in going the thesis route increases, the COB will prepare a Category I proposal to create a new degree program, probably a Master of Science.

When asked if the students doing the Clean Technology area of concentration will need to take engineering technology classes, Coakley responded that those students working with inventors could be offered elective engineering classes.

Motion: Establish three new Areas of Concentration in the MBA Degree Program, namely Commercialization, Clean Technology and Research Thesis. Walt Loveland moved. Tom Wolpert seconded. No more discussion. Motion passed.

International Degrees

Filtz informed the Council that the issue of International Degrees, presented at last week's meeting, will be discussed by a subcommittee comprised of Leah Minc (Graduate Admissions Committee Chair), Rosemary Garagnani (Graduate School Assistant Dean), Valerie Rosenberg (Director of Student Experience, INTO-OSU), Brenda McComb (Graduate School Dean) and herself. The subcommittee will get back to the Council with its recommendation.

Five-Year Plan for the Graduate School

Brenda McComb, new Graduate School Dean, addressed the Council by indicating that she would like to form a subcommittee from the Graduate Council to help craft a [Five-Year Plan for the Graduate School](#) (GS).

The GS has approximately \$250-\$300K in recurring funds that will need to be invested strategically in new long-term initiatives; and another \$150-250K from the carryover to make short term impacts in high return investment areas.

Members of the GS leadership met with Blake Vawter, Associate Director of Admissions, who uses social media in his undergraduate students recruiting efforts. The GS will try to work with him in a few areas where we can grow enrollment, e.g. the MBA program, for which McComb discussed cost-sharing with Jim Coakley.

Denise Lach pointed out that there is a need to recruit more doctoral students. McComb responded that Vice Provost for Academic Affairs, Becky Warner, will provide a list of the 98 new faculty members starting in Fall 2011. The hope is that many of those faculty members will attract more PhD students. We are also hoping that by working with the Provost and the Research Office, the Graduate School might be able to provide tuition remission for some of the externally funded graduate assistantships.

McComb went on to introduce other initiatives including:

- Best practices for time to completion – assess effectiveness

- Recruitment and marketing – need to be more effective
- English language training – will work with INTO
- Revive the TA Certificate Program for either TAs at OSU, or going to a different institution
- Growth of the Interdisciplinary Programs – there are opportunities for growth
- Work on the IT efforts – what will Institutional Research do for us (they are talking about increasing their staff)

McComb ended by saying that the above initiatives are only short-term tactical goals. She would like to set up five-year goals with Graduate Council help.

Filtz noted that Marty Fisk and Bruce Rettig met with department heads last fall, so yearly meetings with the graduate coordinators/directors would be a good approach. McComb responded that she has met with a large number of people and, starting next week, she is meeting with the graduate coordinators/directors and associate deans of the four university divisions, to listen to their concerns, suggestions for improvements, and vision for the future of the Graduate School.

Lach wondered how the new Graduate Council policies are communicated to the departments and colleges. She also wondered what the Graduate Council role was in assessment. Loveland reported that the Graduate Council charter is mainly for setting up policies.

It was decided that identifying volunteers for a subcommittee would be discussed at next week's meeting.

Meeting adjourned 12:00 PM

Graduate Council

June 2, 2011 Minutes

Grad Council Members *Present*: Carolyn Aldwin (HHS), James Coakley (Business), Cass Dykeman (Education), Theresa Filtz, Chair (Pharmacy), Denise Lach (CLA), Vinod Narayanan (ENGR), Jo Tynon (Forestry) and Tom Wolpert (AG SCI)

Graduate Council Members *Absent*: Michael Kent (Vet Med), Murray Levine (COAS) and Walt Loveland (SCI)

Ex-officio Members *Present*: Marty Fisk and Brenda McComb

Support Staff *Present*: Nagwa Naguib

Guests: Mark Abbott, Dean, College of Oceanic and Atmospheric Sciences; Gary Beach, Curriculum Coordinator, Academic Affairs; Sherm Bloomer, Dean, College of Science; Rosemary Garagnani, Assistant Dean, Graduate School; Leah Minc, Chair, Graduate Admission Committee; Bruce Rettig, Associate Dean, Graduate School; Sam Stern, Dean, College of Education; and Aaron Wolf, Department Chair, Geosciences

1. MAT in Humanities Category I Proposal

Following the introductions, Dean Sam Stern informed the Council that the College of Education is requesting a change in the name of the existing Master of Arts in Teaching (MAT) in Language Arts Education degree to a Master of Arts in Teaching in Humanities. The MAT program prepares students for licensure to teach in middle and high schools throughout Oregon and the nation. Two endorsement areas in which students may concentrate while completing the MAT in language arts education are social studies and language arts. The current degree name ("in Language Arts Education") does not accurately reflect the scope of preparation the graduates receive. An MAT in Humanities more accurately reflects the knowledge content, theoretical foundation, curricular study, and pedagogical formation found in the MAT program. Education and Counseling programs have been offered on the Cascades Campus for a few years. The College would like to build the programs up.

Theresa Filtz asked Stern to give the Council some history about the use of the term "humanities." Denise Lach commented that Social Studies discipline is different from the Humanities discipline.

Stern went on to explain that the College of Education does not currently offer an MAT in Art or Social Studies. The College would like to use the MAT to prepare the students to teach social studies and English. He continued by saying that students will earn a license in one or the other.

Once Dean Stern was excused, a short discussion followed and it was decided that Filtz will request the College of Education to make the following revisions to the proposal:

1. Change the "EngXXX (8) Graduate Level Coursework in Subject Area Specialization" on page 3 to a list of graduate-level course options that allow for subject area specialization.
2. List appropriate undergraduate degrees that would feed into this program.
3. Discuss more fully the national tests/licensing exams in language arts and social studies that are required for this program.
4. Strike the sentence on page 5 that says "The College of Education at OSU understands that this name change will apply to any MAT degrees awarded on main campus as well."
5. In section 2c on page 5, please link learning outcomes to assessments.
6. Provide a liaison letter from the HDFS faculty on the Cascades campus.

7. Provide a list of all liaisons from whom letters were requested and indicate whether responses were received (and attached) or not.
8. Provide liaison letters from other units at Cascades and from the main campus education programs.
9. There was significant discussion regarding the use of "humanities", as social studies is not usually associated with humanities at the university level. Please provide an explanation of how the name "Humanities" is justified from the K-12 perspective in this context.

Proposal tabled to next week's meeting after the Council receives responses to the above.

2. **College of Earth, Ocean, and Atmospheric Sciences Category I Proposal**

The Council was presented a Cat I proposal to merge the College of Oceanic and Atmospheric Sciences with the Department of Geosciences from the College of Sciences to create a new unit called "College of Earth, Ocean and Atmospheric Sciences." Sherm Bloomer, Dean of COS, informed the Council that long conversations have been taking place for more than a decade to merge the two units. Both the College of Science and the College of Oceanic and Atmospheric Sciences formed a steering committee to discuss the merger, which was driven by the faculty. Most of the Geosciences faculty were involved in the conversation. The two colleges drafted a Memorandum of Understanding (MOU) that is being reviewed by Provost Randhawa.

Mark Abbott added that the faculty were tasked with creating the vision, the philosophy, and the organization of the new college. They have a lot of ownership. It is an opportunity to bring the humanities in with sciences, a very positive outcome. Aaron Wolf reported that there was no opposition from the faculty: they are very excited about this merger.

In response to a question from Walt Loveland sent to Filtz, Bloomer responded that the structure of the new CEOAS is the same one used in merging the Science and Mathematics Education Department to the College of Education. He also reiterated that there will be no changes unless the two deans and the Provost approve them. He then added that, with the upcoming reorganization of the College of Science (COS), the Environmental Science Undergraduate Program (ESUP) would have been lost.

When asked about the reporting line of the ESUP and the fact that it reports to the Associate Dean for Research, Abbott indicated that the Program has a strong steering committee, and the director has a connection with both deans. He added that the MRM program reports to the associate dean as well.

Carolyn Aldwin wondered if moving the Environmental Sciences Graduate Program (ESGP), currently housed in the Graduate School, would be too cumbersome to add to the new College. Brenda McComb responded that once this merger is in place and is operating well, a discussion might start regarding the ESGP.

Denise Lach asked who would be responsible for the action items in the Geosciences Graduate Program Review Report. Wolf repeated that most of the recommendations will be taken care of with the merger, with adding the human dimension, more space and more faculty in geography. Bloomer noted that the space issue is being worked on. He went on by saying that this approach of partnering between colleges is a very positive and different one than used in the past. Visitors were thanked and excused.

After a short discussion, it was decided that Filtz will send the following questions to Bloomer, Abbott and Wolf:

1. Request the complete MOU regarding the transfer of Geosciences out of COS to CEOAS.
2. Add a sunset clause to the MOU.
3. Include a current organization chart for COAS to be compared to the new org chart on page 6 of the proposal.
4. Ask if the Associate Dean for Research is a new position. If so, describe the budget source for this position.
5. Where will the budget for both the undergraduate and graduate support staff originate?
6. Include a statement in the proposal that the Dean of CEOAS will be responsible for all aspects of the graduate programs in Geography and Geology, including the recommendations that will come forward as a result of the program review.

Proposal tabled to next week's meeting after the Council receives responses to the above.

3. **Departmental Committee Composition Discussion**

McComb posed a question regarding doctoral committee composition. A discussion followed regarding committee membership. The Council reaffirmed the right of graduate programs to choose their own faculty. The Council also reaffirmed the important role of the Graduate Council representative to ensure the fairness of the process as well as the integrity of the degree.

4. **International Professional Degree Holder Appeals Discussion**

Filtz reported that Leah Minc, Rosemary Garagnani, Brenda McComb, Valerie Rosenberg and herself met last week to talk about an appeal process for international graduate student applicants whose professional degree is not considered equivalent to a bachelor's degree. They agreed that the Graduate Admissions Committee (GAC) could handle these appeals given guidance. They also created a draft form to be used by the graduate programs to appeal the rejection of an applicant with a non-equivalent degree.

This is a pilot program that will be reevaluated by the Graduate Council within a year.

Motion: Graduate programs with an international applicant who does not have a four-year bachelor's or an appropriate alternative degree, e.g. a professional degree of at least four years duration, but who meets all other requirements for admission as a graduate student at OSU, may appeal the admissions denial to the Graduate Admissions Committee (GAC). The GAC, based on evidence presented by the graduate program, will determine if the student has sufficiently demonstrated preparedness to enter a graduate program and may provide an exception to allow admissions. The Graduate Council will review this policy in one year with input from the GAC.

Carolyn Aldwin moved. Denise Lach seconded. No more discussion. Motion passed.

Graduate Council

June 9, 2011 Minutes

Grad Council Members Present: James Coakley (Business), Cass Dykeman (Education), Theresa Filtz, Chair (Pharmacy), Denise Lach (CLA) and Walt Loveland (SCI)

Graduate Council Members Absent: Carolyn Aldwin (HHS), Michael Kent (Vet Med), Murray Levine (COAS), Vinod Narayanan (ENGR), Jo Tynon (Forestry) and Tom Wolpert (AG SCI)

Ex-officio Members Present: Bruce Rettig and Leah Minc

Support Staff Present: Nagwa Naguib

Guests: Gary Beach, Curriculum Coordinator, Academic Affairs

Approval of May 26th Minutes

Minutes approved with following changes from Walt Loveland:

Update on the University Accreditation Visit Results Related to Graduate Programs

Para 2, bullets to read:

- Gap between the mission (the strategic action plan) and the core themes
- No culture of assessment

College of Earth, Ocean, and Atmospheric Sciences Proposal – Continue last week's conversation

Theresa Filtz pointed out to the Council the responses received from Dean Sherm Bloomer in which he clarified and responded to the questions sent to him by Filtz following last week's Council meeting. Provost Randhawa asked the two colleges to create a procedure regarding the merger, thus the reason for drafting an MOU as COAS and Geosciences' faculty come from different cultures.

Motion: Approve the College of Earth, Ocean, and Atmospheric Sciences Category I Proposal. Walt Loveland moved. Cass Dykeman seconded. Motion passed without adding the MOU to the proposal.

It was also suggested that when the Geosciences Program Review Report is presented to the Graduate Council and the Provost, both deans should be present at the meetings.

1. **Finalize letter to Faculty Senate**

Filtz reported to the Council that Prof. Jack Higginbotham, President of the Faculty Senate, is recusing himself from all issues related to graduate programs. Instead, Kate Hunter-Zaworski, Faculty Senate President-Elect, will be the Graduate Council contact. Filtz has discussed with Higginbotham both the large number of program reviews and the Category Is and IIs that are in the pipelines for next year. She would like to divide the Council into two subcommittees (one to review the Cat Is and the second to review the graduate programs). The full Council could also meet to discuss changes in policies. She is also suggesting have two co-chairs to lead the Council.

Loveland responded that Faculty Senate committee chairs should be compensated at a 0.25 FTE. This solution will allow their departments to relieve them from some of their duties. There is also a shared governance issue. Faculty members have full-time jobs. He added that Cat I proposals do not have to be reviewed immediately. He also suggested that a new Faculty Senate committee should be formed to work on the University accreditation, which will occur every seven years.

Denise Lach commented that the faculty work very hard on preparing the Cat I proposals, and it is not fair to second guess their proposals. She also pointed out that the program reviews take more time from the Council members than reviewing the Category I proposals.

Program Review site visits were discussed with the following suggestions for possible changes in the composition of reviewers:

- No need to appoint two members of the GC to serve on each site visit
- Add a question on the Graduate Faculty forms regarding interest in participating in program reviews
- Faculty Senators to participate?
- Appoint two academic external reviewers (currently one academic peer reviewer and one future employer)
- Add someone from a department in a similar field of expertise

As for the Category I proposals, the following were suggested:

- Only one Category I proposal per Graduate Council meeting
- Distribute a questionnaire with a list of questions that will be asked by the Council (Denise Lach will send suggested questions)

The letter drafted by Filtz with her concerns regarding the Council's workload will be sent to the Faculty Senate President and President-Elect.

Graduate Council

October 5, 2011 Minutes

Voting Members Present: Carolyn Aldwin, Angela Baxter, Cass Dykeman, Theresa Filtz, Denise Lach, Murray Levine, Walt Loveland and Vinod Narayan, Stacy Semevolos

Voting Members Absent: Jim Coakley, Cass Dykeman

Ex-officios: Brenda McComb and Leah Minc

Guest: Kate Hunter-Zaworski

Introductions –

Following introductions, Kate thanked all for serving on the Graduate Council. She noted that she is working with Walt to manage workload of the Council and that Walt will discuss reorganization of the Council. Kate also thanked Theresa for her leadership last spring.

Discussion of the 2011-2012 Council Organization –

Walt noted that the Graduate Council has certain responsibilities of setting policy concerning graduate education while the Graduate School executes that policy. The Council only deals with general policies and is prohibited from prescribing the details of any graduate program. Positions still need to be filled from Forestry and Agricultural Sciences; if there are suggestions of faculty from these colleges, please forward names to Vickie. Walt is serving as chair during fall term to get the Council started.

Council Assignments/Reduction of Work Load –

Awards – The Graduate Council participates in the selection of several awards:

Laurels Block Graduate Program – this selection is important and involves two senior members of the Council. Theresa and Denise agreed to serve on this selection committee. *Oregon Lottery Scholarship* – Cass, Vinod and Jim

Bayley/Yerex Fellowships – Murray, Stacey and COS representative

Herbert F. Frolander Graduate Teaching Assistant Award – COF and CAS representatives

CGS/UMI Dissertation and WAGS/UMI Thesis Awards – Carolyn and CAS representative

Excellence in Graduate Mentoring Award – Carolyn and Stacey

Program Reviews – At the most, there will be six reviews during 2011-2012. The prior rules are in effect related to the program reviews. A program review takes about 20 hours – 2 hours for the dinner; 2 hours reading the report; 8 hours during the day of the review; and 8 hours preparing the report. Walt proposed appointing one person from the Council for each review and the Faculty Senate Executive Committee will appoint an additional faculty member, possibly from retired Graduate Council members. Walt noted that the light program review load will exist until 2014 due to some programs no longer existing resulting from reorganization. He also stated that the reviews are not distributed evenly – Carolyn suggested that some units be encouraged to review early.

- Program Review Assignments:

- Physics (spring 2012) – Vinod
- EXSS (fall 2011) – Jim
- Zoology (fall 2011) – Murray
- Community College Leadership (winter 2012) – Theresa
- Public Policy (spring 2012) – Cass; Denise noted there is another Public Policy review (Category I external review); Walt noted they should be combined
- Horticulture (spring 2012) – Denise

Distance Ed Committee Ex-Officio – Cass will represent the Graduate Council as an ex-officio, non-voting

member on the Distance Education Committee; Vickie will work with him on the meeting schedule.

Meetings/Category II Reviews

Walt felt that the committee should meet twice monthly and only review Category I proposals once per month. He also suggested that, due to the limited number of members, Category II reviews be limited to one reviewer – Denise felt that a second was helpful; Walt noted that a second reviewer could be consulted, if needed, but not assigned. Until representatives are assigned from Agricultural Sciences and Forestry, no proposals from those colleges will be reviewed until the representatives are appointed. Walt noted that there is a Category II tutorial which is helpful for new members. Graduate Council members will be assigned to review Category II proposals from their college. Walt will determine which colleges had the most proposals last year and ensure that individual will be assigned to the least active secondary position.

Category I Proposals – There are far fewer proposals than expected; currently there are two proposals pending – the MA/MS in Communication and a Graduate Certificate in Food Culture and Social Justice. The latter has been black flagged due to the structure of the proposal and Walt has been asked by Academic Affairs to not review the proposal at this time.

The Budgets & Fiscal Planning Committee will act as a gatekeeper for Category I proposals and will meet three hours per month and will only consider one Category I per month. Denise expressed concern with only one proposal considered per month because the Provost has indicated that funding for hiring will not be released until Category I proposals are approved.

Walt suggested that there be a pre-meeting screening for all Category I proposals, which would alleviate all members reviewing all proposals.

Policy issues –

1. Revision of Graduate Program Review Guidelines – Walt noted it is clear that the university has expectations; he suggested that the Graduate School outline the expectations/guidelines and felt that the frequency of reviews should be about every 10 years since there are 80 programs which translates to 8 per year. Ideally, this will be set up so that the bulk of the data is retrieved annually by Institutional Research. Brenda noted that there is a possibility of OSU purchasing a program called 'Academic Analytics' which would provide information by PI. Carolyn noted that her college is considering purchasing a similar program and expressed the need for collaboration in these purchases. Walt noted that the SB242 workforce data needs to be compiled. The Alumni Association may have this information, but it was noted that their information can't be accessed; Brenda will meet with the Alumni Association Director to discuss these issues. The information will be generated by the Graduate School, then reviewed by a Graduate Council sub-group and recommendations brought to the whole Graduate Council.
2. Assessment – The University Assessment Council is working on assessment issues in relation to negative comments in the recent accreditation report – Brenda noted that a return visit from the Accreditation team will be in December 2012. The Council needs to set general outcomes for assessment. There was a discussion of what assessment means, how to track, the need to dovetail various reviews, identification of needed information, etc.
3. Transcript Visible Program Options – The issue is currently being discussed by the Graduate School and Registrar's Office to determine if it is feasible.
4. Financial Issues – Tuition remission for Ecampus courses is still an issue – it was also noted that some departments are requiring courses to be offered via Ecampus.
5. Continuous Enrollment Program – At issue are ADD students in their 10th year. Walt noted that some institutions' continuous enrollment fee is smaller than OSU's.
6. Graduate Student vs. Post-Doc Issue – There is currently a huge disincentive to approve graduate students rather than post-docs. Brenda and Rick Spinrad are working on this issue. The Graduate School is looking for ways to provide incentives for hiring graduate students.
7. There might be generalized motion to assist student who are left as orphans because they cannot find advisors in their program area.
8. Graduate Admissions – Brenda noted that a repeated issue for international students is how to use the TOEFL scores – there are currently campus-wide discussions to create a different model.
9. The Graduate School has a new travel grant in place to provide funding for student travel.
10. Parental leave policy for graduate students should be handed off to the provost and Jacque Rudolph.
11. Determine how to normalize the extreme differential in payment of GTAs across campus.
12. The Provosts Distinguished Graduate Fellowship Program was initiated last year and renewed for this year. Walt noted that the provost was unhappy that the Graduate School was not able to spend all of the allocated funding. Brenda noted the Graduate School only spent about one-half the money and they need to have a much higher success rate in attracting students to OSU. She explained that

solicitations last year were late; this year the program was announced much earlier in order to recruit more nominations and ensure that the funds are used – a component of the high rejection rate is due to students applying to multiple programs at multiple universities.

13. Graduate Council Chair – Walt agreed to chair this term, but another member or two needs to step up to assume the chair position due to his workload. He outlined the time requirements: pre-proposal meetings – 1-2 hours; UAC 1 hour monthly; minutes and agenda – 1 hour weekly; prep time – 1 hour; program reviews (chair picks up after those who don't do their assignments) – 1-2 hours weekly. He suggested that one co-chair could do external assignments and the other does the internal piece. Likely there will no longer be any additional accreditation issues to deal with. If there are no volunteers to chair, it will be necessary to rotate monthly among the members.
 - Theresa suggested splitting duties further: she noted that the pre-proposal meetings do not require the chair to be present and the Council could have a list indicating who is next to attend the meetings; it's also not necessary for the chair to attend the UAC meetings; and someone needs to coordinate agenda items and someone else to handle emergencies.
 - Carolyn noted they had discussed co-chairs who would head up program reviews and Cat I proposals. She is willing to assist in the administrative assignments.
 - Please contact Walt if you are willing to assist with any of the administrative assignments.

Miscellaneous –

- The next meeting will be October 19 in 128 Kidder Hall and Carolyn will chair.
- Stacy requested guidelines for the review of Category II proposals.

Minutes prepared by Vickie Nunnemaker, Faculty Senate Staff

Graduate Council

October 19, 2011 Minutes

Voting Members Present: Carolyn Aldwin, Angi Baker, Jim Coakley, Cass Dykeman, Theresa Filtz, Denise Lach, Murray Levine, Walt Loveland, Stacey Semevolos,
Voting Members Absent: Fritz Gombart, Vinod Narayanan
Ex-Officio, non-voting members: Brenda McComb, Bruce Rettig
Guests: Gary Beach, Alfonso Bradoch

Walt thanked the members for volunteering for assignments following the last meeting. He also noted that his intent is to not be here during winter term. He distributed a tentative agenda for the remainder of the term. Regarding program reviews, Walt noted that the Graduate Council reviewer is involved in follow-up meetings to determine that recommendations are accomplished.

Review of October 5 Minutes – Brenda noted the following corrections: Cass was present and needs to be removed from those absent and Theresa (rather than Murray) agreed to review Zoology and Murray (rather than Theresa) agreed to review Community College Leadership. Walt asked members to send additional corrections to Vickie (none were subsequently received).

Report of "Expert" Pre-Screening Group on Category I Proposal for MA, MS in Communication (#82032) – Jim Coakley, Cass Dykeman

- Cass reported that data related to the labor market and demand for positions was not provided and is needed; it is implied that MAIS students will transition to this degree, but there is no data to back that up. He noted that there is a role for slash courses, but this degree appears to be based on slash courses and questioned whether these are within allowable limits.
- Walt noted that the budget indicates 'other budgetary unit', but the 'other' unit needs to be identified; he felt the program was weak, citing coursework degree and minimal thesis requirements; and that faculty appear to be minimally involved in the program.
- Jim noted that GRE is listed, but didn't explain how the GRE would be used, and that CLA liaison responses are missing.
- Denise noted that, as a part of a new school, there are other faculty that could be involved in the program to strengthen it; an MS should not be created to create an MS.
- Cass suggested that this could be a stand-alone Ecampus course and be the only Masters of this type offered online.
 - Angi noted that required Ecampus courses present difficulties for on-campus students which include much higher fees, lack of tuition remission, etc.
- Some felt that this was a weak program, but also noted that the MAIS itself is weak. Most expressed the opinion that the proposal should not go forward as presented

Action: Walt will paste Cass and Jim's report into the system and send it back to the proposers and ask them to respond.

As an aside, Walt questioned whether the Council wants to take up the issue of reviewing graduate certificates.

Consideration of Request from Academic Programs for a Policy Statement on Ecampus Degree Proposals – Alfonso explained that the issue arose from a conversation in the Curriculum Council and that there were previous discussions motivated by Becky Warner to consider how Ecampus programs and courses are currently approved and offered online. The Curriculum Council's understanding is that courses developed

by Ecampus already exist in the OSU catalog, but involve a different mode of delivery. The Curriculum Council decided there was no need for additional curricular review, but there would be a recording by Academic Planning and Assessment of migrated courses and programs to online delivery. During the summer the Curriculum Council met and raised questions re: migration, systematically recording in the database, etc. They also discussed the nature of the review process, whether it is curricular or an information item to the Curriculum Council given that it's an existing program. The result is the proposal being considered by the Graduate Council which more clearly articulates the process and who would be responsible for recording pieces.

Walt recalled there were some programs offered online that on-campus individuals were not aware of. Gary noted Sociology was one such program.

- Alfonso noted there was a process in place but, following changes in Academic Planning and Assessment leadership, there was a gap in the process. The understanding was that Ecampus would move information to Susie Leslie who would record it in the curricular database – upon her departure, this did not occur. There was one program, in particular, that fell between the cracks during the transition which resulted in the proposal.
- Gary explained that he, Alfonso, Lisa Templeton and Sara have been conducting a review to determine how to get courses and programs into the Curricular Proposal System to ensure there is a record of approvals. They revised the original draft approved by the Curriculum Council in January 2010; presented the revised draft to the Curriculum Council in July and were told that roles need to be identified; the draft was revised and reviewed by Becky Warner; then reviewed and revised again. An outstanding issue is, since these are already approved courses, does the Graduate Council need to approve or can the approval be acknowledged and included in the minutes rather than an actual approval step? It was included in the draft as an approval step, but could be changed later and revisions could be made as the Councils use the process.
- In response to Walt's question of whether programs are grandfathered, Alfonso felt it was not necessary to go back. Alfonso also noted that, as part of the oversight provided by Academic Planning, when academic departments submit proposals, they will be asked to clearly articulate program requirements stated in the catalog and in a side-by-side list of offered programs both online and face-to-face. Once Ecampus reviews and approves programs, they will be submitted to Academic Programs for review and determine whether there is alignment with the Graduate Council and Curriculum Council.
- Walt asked who is responsible for answering question B4: "Are the minimum requirements of the program being met? If not, indicate in what ways the proposed program will differ from the one on the OSU main campus." Alfonso responded that would be Academic Programs oversight; Ecampus would provide information from the program and Academic Programs would determine that the information is accurate and correct. Walt was unsure why some aspect of the program would be dropped in the Ecampus offering vs. the on-campus offering. Carolyn noted that options requiring internships that can't be accommodated online are dropped. Gary noted that some programs offer 3-4 options and Ecampus only offers one option.
- In response to Jim questioning how this proposed review compares to OSU-Cascades approval, Gary explained that approval to extend programs to OSU-Cascades is overseen by OSBHE via an MOU template. Jim asked what major distinction is between processes; Alfonso felt the difference is that Ecampus programs are proposed by Corvallis faculty and programs offered by Corvallis faculty.
- Denise questioned how much work will be required on the part of the Graduate Council to approve the programs. Walt felt an easy way to implement the process is to send it to the proposer, as with a Category I. Gary felt there would be one per year; Alfonso noted that Ecampus has the desire to work with the Graduate School to create additional programs. It was noted that assessment is currently not requested on Category I and II proposals.
- Jim noted that assessment needs to be included with reviews and questioned whether assessment will be included. Alfonso noted that proposers would be asked to provide assessment information and he will need to work with Gita Ramaswamy to determine assessment needs. Gary will schedule meeting with Gita, Lisa Templeton, Alfonso and himself to discuss assessment issues.
- Theresa questioned in what format the Graduate Council would receive the proposal. A form and summary would be received for migrating courses, but an abbreviated proposal would be required for a new program. Alfonso responded that he would send the RFP link to the Council (<http://ecampus.oregonstate.edu/faculty/program-request/>).

The following discussion occurred after Alfonso and Gary's departure:

- Jim noted that learning outcomes are for the degree program and expressed concern that learning outcomes will be affected by online courses.
- Carolyn felt there would be few graduate programs offered online and felt that oversight was needed; in terms of quality, the Graduate Council needs to be involved. Brenda noted that an objective for the

Graduate School is to grow graduate online courses.

- Theresa noted there is still a program review process in place and questioned whether the Graduate Council wants to conduct a review when the program is being converted to Ecampus or wait until the review process. Walt noted it would be better to catch something unusual at the beginning when it is first being offered, rather than wait for the review several years later.

Action: Walt will send a message to Alfonso and Gary asking, fundamentally, if they can assure the Graduate Council that on-campus and Ecampus courses are comparable and ask them to address issues of assessment.

Report of Task Force on Transcript Visible Specializations at the Graduate Level and Discussion of Further Directions – Brenda McComb, Jim Coakley, Bruce Rettig

- Jim explained that the group determined whether there were major concerns prior to writing the proposal. He distributed a [document](#) containing constraints, issues, advantages, disadvantage and next steps.
- Jim's goal is to present a formal proposal to the Graduate Council in December.
- Brenda explained that a Graduate School workload issue is created when students move from option to option and noted that options could reside with the committee until finalized. Coakley noted there is a desire on the part of some faculty to closely track both students and which option they have selected.
- There was a suggestion to limit the number of options to one.

Miscellaneous:

- Carolyn asked to set aside the Dec 7 meeting to discuss assessment issues.
- The next meeting will be November 2.

November 2, 2011 Minutes

Voting members present: Carolyn Aldwin, Cass Dykeman, Theresa Filtz, Denise Lach, Murray Levine, Walt Loveland, Vinod Narayanan, Stacey Semevolos

Ex-officio, non-voting members present: Leah Minc, Bruce Rettig

Miscellaneous –

- The Rangeland Program Review and Category I proposal were both scheduled for the November 16 meeting; however, the Budgets & Fiscal Planning Committee found the proposal to be lacking and it has been returned to the proposers – it is unclear whether the proposal will be ready to consider at the same time as the program review, which would be preferable.
- The TESOL program currently has no students or faculty; the proposal to eliminate the TESOL graduate certificate was found by the Budgets & Fiscal Planning Committee to be a no-brainer and, in the interest of eliminating review time by the Graduate Council, Walt asked if the members would take his word that the proposal should be approved – the members agreed with his assessment.
- The Food, Culture and Social Justice proposal will be presented by Denise and Vinod on November 16.
 - Re: graduate minors, Denise noted that they show up as Category II proposals and questioned whether this was appropriate. The Graduate Council will discuss the generic issue of graduate minors at an upcoming meeting.
- The COS representative has resigned.
- The next meeting will be November 16.
- The review of graduate certificates will be discussed at the November 16 meeting.

Discussion of New Institutional Indicators for Core Theme 2: Graduate Education and Research – Revised 10/11/11

Bruce noted the October 11, 2011 revised document is a result of the need for certain accreditation information. Brenda McComb and Becky Warner created the [distributed document](#) and Brenda is deferring to the Graduate Council to determine what is needed.

- The current document was created to replace the "objectives" document that was used in the accreditation process last year. Walt noted that the NWCCU indicated there were too many indicators in the previous document and that the objectives were not easily translated to the goal. It was noted that two objectives in the previous document were deleted in the current document.
- It was felt that 'ratcheting' is now being proposed; the use of the terms 'threshold' and 'goals' was questioned and 'threshold' is used in places where 'minimum' is meant; it was noted that 2.2.3. does not include journal articles; many may feel that the tenure/tenure track dollar volume per faculty member is problematic; there is no mention of research faculty in 2.2; 2.2.3 is diluted by including CLA faculty; objectives do not reflect indicators; the timeline for approval/revisions was unknown; in terms of reducing the number of objectives, there are now 16 rather than the previous 19; need to figure out where we're at with each program and determine which metrics could be reduced and which could be increased; weak program reviews don't necessarily result in improvement; NRC rankings are outdated; average time to completion for PhD students' needs to have different years for each discipline.
- Carolyn suggested going back to objectives 2.1, 2.1, 2.3 and 2.4 that were previously reviewed and have 2-3 indicators for each; can't set goals/metrics until we know where we are – the end result will be an assessment system.
- Denise questioned whether it was more important to have indicators that the university thinks is appropriate or indicators that the accreditation team feels is appropriate.
- Carolyn felt there should be consistency between graduate program review indicators and the Core Theme 2 indicators.

Walt noted that administration feels that the three core themes need to be modified and the Graduate Education and Research (Core Theme 2) is the only one that has faculty involvement. Theresa suggested that the Faculty Senate be asked to provide faculty input on the other two themes.

- Carolyn suggested three objectives with several indicators within each, such as, good graduate students, productive faculty and supportive of a collaborative culture.
- Suggestions to proceed: reduce the number of indicators in each category; redefine objectives; combine objectives 3 and 4 to have a scholarly collaborative culture that has economic results.
- Denise questioned whether every graduate program should report specific information to the Graduate School. Theresa suggested determining useful indicators.
- Carolyn felt there should be acknowledgment that there is not a graduate assessment system in place and indicate that a system is being developing and outline the desired elements.
- Vickie noted that the Faculty Senate Executive Committee is working with Sal Castillo to obtain data for Faculty Senate committees and councils, and the most effective way in which to obtain desired data is for the Graduate Council chair to advise the Executive Committee of their needs and the Executive Committee will work with Institutional Research to assign an individual to work with the Council.
- Bruce noted that program assessment varies, and there is still a need to aggregate at the university level. Carolyn suggested there be etic and emic outcomes and program reviews.

Action: Walt will report to Brenda that the Graduate Council prefers to return to a modified version of the prior objectives document rather than the version that was presented to the Graduate Council.

Action: Denise, Vinod and Carolyn will act as the subcommittee to examine/edit the draft guidelines for Graduate Program Reviews now being developed by the Graduate School (to replace the current guidelines). The results of this subcommittee's work will be presented to the Graduate Council for action as soon as possible.

Bruce noted there is a group asking for instructions related to their graduate program review and questioned whether he should contact all graduate certificate programs and indicate that all are required to submit graduate assessment models and graduate learning outcomes.

November 16, 2011 Minutes

Voting Members Present: Carolyn Aldwin, Angi Baxter, Theresa Filtz, Denise Lach, Murray Levine, Walt Loveland, Leah Minc, Stacy Semevolos

Voting Members Absent: Jim Coakley, Cass Dykeman, Vinod Narayanan

Ex-officio Members Present: Brenda McComb Bruce Rettig

Guests: John Killefer, Animal Sciences; Jim Males, Animal Sciences; Nagwa Naguib, Graduate School

Approval of October 19 and November 2 minutes – The October 19 minutes were corrected to replace Psychology with Sociology in the second sentence of the second paragraph of the Policy Statement on Ecampus Degree Proposal discussion. The [October 19 minutes](#) were approved as corrected and the [November 2 minutes](#) were approved as distributed.

Catalog Review Group – Nancy Laurence, Registrar's Office, requested Graduate Council participation to review proposed online catalog software being considered to replace the current software provided by the Business Solutions Group – Jim Coakley (not present) was volunteered, Angi volunteered and Carolyn is the alternate.

Graduate Program Review Report – [Animal Sciences and Rangeland Management and Ecology](#) – Carolyn Aldwin, Graduate Council; Larry Curtis, College of Agricultural Sciences; John Killefer, Animal Sciences; and Jim Males, Animal Sciences

- Carolyn presented the review: the consensus was that the programs were in trouble due to resources including both declining faculty and graduate students and infrastructure; the solution was to combine Animal Sciences and Rangeland Ecology. The number of faculty in Rangeland is low; Animal Sciences faculty have declined, with half being Extension throughout the state. There are five on-campus faculty and two Extension faculty in Rangeland. Problems with faculty retention are due to facilities and complaints about Withycombe Hall. There needs to be at least five faculty FTE in Rangeland, even if combined; an infusion of resources is needed. Because there is not a lot of money for GTA's, the consequence is a lack of a solid base for graduate students; students were admitted on a rolling basis when a faculty member received a grant; GRE's for verbal was below 400; there needs to be enough resources to admit students on January 15 and pull from the best students, rather than those available when funding allows. There is a lack of faculty in terms of graduate classes being offered, with many being slash courses, which makes it difficult for students to get into classes; and there needs to be an intervention at the dean level. The department took a small amount of GRA money and created a number of .2 FTE positions but, because some positions exceeded .2 FTE, the discrepancy between the FTE and actual work load needs to be addressed as this could result in union issues. Students, especially those who came in a rolling basis, felt that they weren't being mentored well in the first year; they need a good orientation which explains program expectations. Need to consider balance for international students; there should be more stake holder interest as they are concerned about the potential of programs being eliminated; they expressed frustration about hiring from within the program; and students need to be actively connected with stake holders.
- Walt noted that a question for the provost will be the grade received by the review team (C/D), which is just above termination.
 - The departments are not comfortable with grade
- Because the Category I proposal is not yet ready for Graduate Council review, it was suggested there be resources to have additional faculty hires.
 - The department representatives were told they should hear this week about an additional three hires. They felt confident for two hires, and likely for three.
- How much money will be spent; and who is providing the funding?

- The response was that both Dean Ramaswamy and Provost Randhawa would provide funding and that the deans' group will be meeting to discuss this issue.
- John Killefer has been guaranteed that the combined department is a priority and positions have been promised. He noted that Dean Ramaswamy has indicated that the department is the college's highest priority and added that upgrades are commencing
- Carolyn was unsure of the student to faculty ratio and noted that this data was missing in the self-study, although neither the faculty nor student numbers meet the provost's requirements. In Animal Sciences, there is currently 1 PhD student and 14-15 Master's students and in Rangeland there are 2 PhD students.
 - John notes that the faculty to student ratio has not changed much in 10-15 years.
- Carolyn noted both decreasing faculty and students and observed that, to be viable, the programs need an infusion of funding.
 - John responded that there are 480 undergraduate majors and the combined numbers will be about 500; there is no GTA money. Jim Males noted there are negotiations between Provost Randhawa and Dean Ramaswamy for GTA money and acknowledged that E&G funding is short.
- Denise noted that CLA raises funding for GTA's and questioned their plans for funding?
 - John responded there are plans for Ecampus courses to expand the revenue stream and there is a serious discussion regarding the tuition differential which he feels is warranted due to living laboratories.
- Carolyn felt that many lab classes, but no GTA's, didn't make sense.
 - John indicated plans of quadrupling students and a reduction of faculty by half.
- Is there demand for the graduate program and is there an applicant base?
 - Jim stated they are turning down many students. Carolyn noted that the pool is better than those currently accepted.
- Theresa asked how many could be accepted
 - John responded that, with existing faculty, the number of graduate students is close to capacity without external funding; however, with additional faculty, it can and should grow.
- Theresa asked if they have engaged in strategic planning to determine how many students, level of funding, etc., would be needed for future expansion and the merger.
 - John responded that strategic planning occurred prior to his term as chair; Jim noted it is in the review. John added that, in order to have a critical mass in graduate student areas, they would need to double the graduate student population and he feels that critical mass is important, and students need a cohort.
- Walt questioned what role there is for Extension faculty and, with the identified problems, is Extension an additional burden, and are Extension faculty currently supervising students?
 - John responded that not all institutions have faculty both on and off-campus and it's both a challenge and opportunity. His desire is to have a greater interaction with both groups.
 - Jim stated that off-campus Animal Science Extension faculty are graduate faculty and are utilized on committees. Additionally, all four Agricultural Experiment Station faculty are advising graduate students.
- Carolyn noted that the review suggested they offer Ecampus courses at the graduate level.
 - John noted the challenge of how to match our quarter system with the semester system because popular courses are offered at 3 credits, but are considered as 2 credits in a semester system.
 - Carolyn noted that a lot of departments went from 3 to 4 credits which results in 3 credits for a semester-based system and recommended fewer 3 credit classes.
- Bruce questioned students are supervised by College of Veterinary Medicine (CVM) faculty.
- Jim responded there are not many now. There is a 600 level Veterinary Medicine Physiology course that Animal Science students were not allowed to take. John noted some of their faculty have appointments in CVM. Carolyn noted the need for access to CVM lab facilities. Stacey noted that CVM courses are restricted to CVM students due to capacity.
- Angi recognized that GRE scores are highly relied upon, but questioned how special needs students, who are competent and able to perform expectations, are taken into account because there is no mention of alternate ways for students to qualify. Also, regarding student satisfaction, should we be looking at learning outcomes and what students learn from their mentors rather than satisfaction?
 - John responded that the graduate committee reviews all applications and looks at more than GRE scores, including transcripts, personal comments, experiences, etc., to look at applicants in a more holistic manner.
 - Carolyn noted that this review was done prior to the requirement of graduate learning objectives.
- Regarding the timing of applicants, John noted that one of the unique things about the student pool, which consists of internal undergraduate applicants and the external Animal Sciences student population, is that 80% want to go to Vet School and are waiting for official response in April; if denied,

they begin looking at alternatives. He thinks it would be wise for CVM applicants to think ahead about alternatives. Additionally, there has not been active recruiting of graduate students and He is trying to change that.

- Next steps – the Graduate Council will either accept the report or request revisions, and the department will be required to submit an Action Plan, which includes a Category I: Walt suggested delaying the Action Plan until the Category I is ready.
- Accept or change –
 - Denise noted that the review was written assuming there would be a Category I for merger and questioned how approval of the report should proceed. Carolyn noted that a Category I is recommended; if it doesn't occur, Rangeland should be eliminated.
 - The restructure is based on the merger, otherwise Rangeland should be closed. Walt noted that the first sentence of the report should be revised to so indicate. Any changes would be circulated back to the review committee for approval, and then it would be sent forward.
 - Denise heard that they expect the provost to fund three positions, but she didn't consider this to be one of the areas of excellence.
 - Walt noted that he and Carolyn were surprised to learn that this is a pre-Vet Med screening program. There was also a division among students as to a career path.
 - Theresa noted a cultural gap between animal production and animal medicine, although both have similar needs, it is increasingly difficult to work across a divisional gap and would like to see an inclusion that there is some mechanism to increase conversations.
 - Stacey added that CVM is supportive of combined programs, but there has been debate whether this is workable.
 - Walt stated there is enormous political pressure within the state to continue the Rangeland program.
 - Carolyn stated that Animal Sciences is in less trouble than Rangeland and questioned whether the merger, even with additional faculty, will be successful.
 - One member noted that it doesn't feel like the effort is there to make this a unique program.
 - Brenda noted that the Rangeland Ecosystem Ecology, which addresses arid land ecosystem issues, will be lost likely. Most graduates of this program are hired by government agencies.
 - Carolyn felt that stakeholder support can't over-emphasized and noted that incoming students are primarily from agricultural backgrounds. Walt noted the support from stakeholders was unusual.
 - Requested inclusion of an exit survey to indicate why the program should continue, the support from stakeholders and why restructuring is needed. Theresa moved inclusion of the exit survey; motion seconded and approved. There was a request for a revision of the program review to include an exit survey. This will need to be approved by all members of the review group prior to inclusion.
 - Brenda noted that the undergraduate curriculum is largely centered at EOU. Theresa added that terminating the graduate program should not affect the undergraduate program.

Category I Proposal for a New Certificate Program – Food, Culture, and Social Justice Graduate Certificate #81910 – Denise Lach, Vinod Narayanan

- Denise was quite confused with having a minor and certificate and questioned why both and noted there is some overlap. Concerned that slash courses are proposed; stand-alone courses have not yet been developed, but are proposed. There is pushback from Nutrition and Agricultural Sciences because students will not learn about food production; proposers indicate it's about distribution, social justice, etc. A capstone portfolio 1-credit course is proposed, but it's unsure how that would be taught. The certificate has learning outcomes, but the minor does not. Figure 1 indicates concerns. Liaison was done at the same time for the both the graduate and undergraduate certificate and minor, which was confusing.
- The review concerns will be sent back to the proposers.
- Walt commented that the certificates are being proposed to make money and concern was expressed about rapid growth projections. Denise and Vinod were also concerned with this.
- The question was raised that, if one is an OSU student, why choose a cert rather than a minor.
- Bruce stated that one graduate certificate is also a minor and has exactly the same requirements for both. This is a young program, but there has been a modest number graduating with the certificate; there were two with earned the minor but did not ask to have the certificate on their degree.
- Theresa questioned why have the certificate if it's not stand alone; it seems to be mostly valuable to those not in a graduate program.
 - Bruce responded that, technically, a student could earn both a certificate and minor. He favored supporting the review, but questioned if the program is viable without the proposed AREC course.

- Carolyn questioned, if the proposal is based on classes they are planning to be offered, should it be suggested that they wait until the Category II's are submitted for the proposed courses. She also wondered what students do and what sort of jobs will student be prepared for. Denise felt it could be thought of as a minor in Anthropology or Sociology, i.e., interested in food distribution or insecurity; think about it as an intellectual background in a major. Students are interested in this topic and faculty are working in this area.
 - Leah noted there is a strong demand in anthropology for cultural competencies and a tremendous interest in food scarcity issues. Denise felt that the minor makes sense, but perhaps not the certificate.
- Walt will indicate to proposers that the Graduate Council wants Category II's submitted for the AREC and Anthropology courses, and they must address the relationship between the certificate and minor.

Discussion of Graduate Council Review of Graduate Certificates

There are eight certificates on campus and three proposed, including Social Justice. Bruce stated there were 12 graduate certificates awarded in 2011 and 27 students enrolled in fall 2011; he noted the need to think about the time when the certificates were submitted. Inclusion of graduate certificates was originally not intended as part of a site review and the GIS (Global Information Systems) coordinator is asking for guidance.

Due to Graduate Council staffing, Walt suggested that the reviews be conducted by the Graduate School with participation by the Graduate Council. He questioned whether the Council wants to participate in these reviews and how they should proceed.

To Theresa's question of whether all eight certificates are associated with a responsible unit, Bruce responded affirmatively. Theresa asked whether the review could be folded into the graduate review. Bruce responded that it varies across units; some could be folded in but, for some, it would be difficult as they have a sponsor unit but are very interdisciplinary. Theresa questioned if some unit could be designated as being responsible. Carolyn felt it makes more sense to fold it into the graduate program review.

There was a motion and second for the Graduate Council to review the graduate certificates. Discussion:

- The details will be complicated.
- There is an implication that every certificate program would have a home administrative unit – it was suggested that the Graduate School could be the home; it makes sense to have a designated unit responsible;
- A graduate certificate is a collection of classes and not a cohort of students and doesn't have funding – why review? The university stands behind the program, student satisfaction, and ensuring that indicated courses are actually being taught. For those associated with programs, they should be reviewed during the program review, but the Graduate School handles others.
- *The motion for the Graduate Council to review graduate certificate programs passed reluctantly.*
 - Theresa liked the idea of 1) asking units to submit an assessment plan and learning outcomes to Gita Ramaswamy; and 2) once the information is submitted, the Graduate Council will determine how to evaluate.

Bruce suggested that the Grad School could request that an assessment plan and learning outcomes be provided, and request they be submitted to Gita Ramaswamy.

Graduate Council

November 30, 2011 Minutes

Voting Members Present: Carolyn Aldwin, Angi Baker, Jim Coakley, Cass Dykeman, Theresa Filtz, Denise Lach, Murray Levine, Walt Loveland, Vinod Narayanan, Stacy Semevolos

Ex-officio Members Present: Brenda McComb, Bruce Rettig

Guests: Marie Harvey, Donald Jump, Nagwa Naguib, Tony Wilcox

Category I Proposal to Create a School of Integrated Plant, Soil and Insect Science #81957

Walt's comments regarding the proposed merger of Horticulture and Crop & Soil Science (CSS) into a school included the following:

- Regarding the Entomology component, Walt identified two insect faculty and the proposal will build an undergraduate program; he felt that a review of the proposed undergraduate program and graduate minor is needed. He also didn't feel there was enough Entomology faculty to include 'Insect Science' in the proposal name.
 - Carolyn felt that the proposers should be reaching out to Zoology which has more entomologists than in the proposed merger.
- Theresa explained that, at the pre-proposal meeting, it was learned that the merger was not a grass roots effort and there was not a lot of faculty input. Russ Karow (Crop & Soil Science chair) indicated that the dean told the units to merge. However, Russ emphasized that there is value in merging that was revealed by the process of creating the proposal. Theresa felt it was worth asking why it makes sense to merge. Currently both departments are meeting university requirements.
- Carol noted there are 63 on-campus and 55 off-campus faculty, which would result in a very low student to faculty ratio. Brenda observed that the combined department would be larger than the College of Forestry.
- Denise felt that it was arguable to integrate the two units to create an interdisciplinary program.
- Bruce provided a recap of the Entomology history and felt that 'interdepartmental' was more appropriate than 'interdisciplinary'.
- Carolyn questioned whether this would be more appropriate as a 'graduate group' with a graduate mentor and getting Sonny Ramaswamy to identify himself as an Entomologist so there would be three on the proposal. She noted that of the 8-10 contacted for liaison, Greg Thompson (CAS) did not reply, and the replies were very brief – she felt that was odd.
- Walt felt that the title is fine, but questioned how they can have a viable insect program if there are only two faculty in that area. Brenda noted that a plant science graduate program was floated several years ago and Botany and Plant Pathology has a different perspective of plant science.
- Walt noted that the Budgets & Fiscal Planning Committee (BFP) requested inclusion of a yearly salary inflation in the budget, which they did not include.
- Denise questioned whether it was true there is no curriculum for graduate programs. Theresa noted that the CSS program has no core curriculum.
 - Carolyn would like to see minimums.
 - Walt also felt that some standards should be included, but it was left to the graduate faculty, and questioned how one knows when their coursework is completed.
- Brenda explained that Sonny wants the Cat I proposal pulled to revise the graduate program; the units were unwilling to revise until the Cat I was approved. A plant science program would be created.
- Bruce noted there are undergraduate outcomes, but no graduate outcomes. He contacted Gita Ramaswamy and determined that none of the units had submitted outcomes. Cary Green is looking into the assessment plans and outcomes. Denise felt this was more appropriate for the Category II proposals rather than the Category I proposal.
- Walt explained that all course designators will change to IPPSE; he would like a column on the table

that indicates the old courses and what the new ones will be.

- Carolyn noted there was nothing about ethics in the proposal. Brenda responded that she has notified graduate advisors that learning goals would be required.
- Walt questioned the phrase "citizen evaluation of teaching"; Carolyn noted this is an Extension term.
- Bruce clarified that the cover sheet is approving only an organizational change and not a new minor.
- Carolyn questioned whether the proposal could be returned to the BFP. Walt indicated that the BFP provided conditional approval with the inclusion of budget inflation. Carolyn felt the Graduate Council should approve it with the condition that the BFP request be added.
- Theresa questioned whether there is sufficient administrative staffing and will there be sufficient interaction between faculty and heads given that the proposal would create a large school by merging two large departments, and will this be an impediment to oversight of the programs?
- Walt's primary concern was the insect piece.
- Next steps:
 - determine what's driving the proposal,
 - request an intellectual justification,
 - justify the insect science piece, and
 - modify the budget to adjust for salary inflation (as previously requested by BFP).
 - Walt will indicate to the proposers that the proposal will not be approved until there is an Agricultural Sciences representative on the Graduate Council.

Chair Report

Walt thanked everyone who helped out fall term; he felt that the co-proposer model has worked well; he contacted the College of Agricultural Sciences, Forestry and Science deans regarding Graduate Council representatives and indicated that their respective proposals will not be considered beginning January 1 unless representatives have been identified – other Graduate Council members felt that no proposals should be approved effective now, including the merger proposal discussed today.

Walt will be stepping down as chair after fall term and explained his duties as chair for anyone who may be interested in co-chairing:

- Attends Academic Proposal Committee meetings (Category I pre-proposal meetings) – 1 hour/week
- Sets agenda for Graduate Council; tries to prepare two weeks prior to the meeting – 1-2 hours/week
- Additional meetings may occur, i.e. Liberal Arts omnibus meeting
 - Altogether, it may equal 3-4 hours per week.
- Carolyn will be on sabbatical in 2012-2013 and will need assistance chairing the Graduate Council during winter and spring term – she would prefer a collaborative leader model.
- Theresa is willing to continue as the Assessment Committee representative. She also felt that members could alternate attending the pre-proposal meetings to divvy up the workload. Vinod suggested that the respective co-reviewers attend the pre-proposal meeting so they would be aware if requested revisions were made; Denise felt it would be appropriate for the respective college representative to attend.
 - Align Gary Beach and Graduate Council members at Academic Proposal Committee meetings, which would reduce the number of hours the chair spends on Council work.
- Carolyn is concerned with the graduate assessment and how to go forward; the Council will discuss assessment next week.

Nutrition Graduate Program Review

Denise's recap of the review included the following:

- Great review; nutrition appears to be going forward positively.
- There were 14 recommendations – most are around the next stage related to what will be done to ratchet up the Nutrition program to international quality research standards.
 - The program was dominated by master's students so they could participate in an accreditation in their first year and often didn't finish the program once the accreditation was completed. The program will now focus on graduate students. Donald Jump clarified they were in a dual program with dietetics, and masters' students were getting more training to increase their pay scale when employed.
 - Denise felt that the real issue is to recruit high level students and finding effective funding.
 - Another issue is that Dean Tammy Bray has an idea of soup to nuts (a full service nutrition program) and faculty strength is growing in a more narrowly focused manner.
 - Things to think about include funding, recruiting and retaining students.
 - Denise felt that the recommendation will be to maintain the program, and expansion is up to the

program to achieve.

- Donald explained that faculty are not enthusiastic about phasing out the dietetics program because it brings in good quality students; the breakdown on focused recruiting is 90% for PhD students and 10% for masters; and new faculty are heavily engaged in labs.
- Denise reiterated that the recommendation is to phase out the dietetics program.
- Theresa questioned by how many would the PhD program need to be increased to meet the university minimum. Donald noted that it depends on funding and it's up to PIs to get grants. They want to increase faculty in the program, which increases capacity, and recently brought in several adjunct faculty. The response to Theresa's query of how many PhD students currently graduate was less than 2; she noted that 2 per year must graduate which requires 10 students in the program.
- Denise stated that, for the most part, faculty do not include graduate student support in their grants and that mentoring graduate students should be in the grant proposals. Donald responded that 7 of 8 faculty have grants and that most funding is from NIH and, in most cases, there should be support for graduate students in all external grants – he doesn't monitor grants, but it is his expectation. Walt noted that the Provost will likely question sustainability and their plan to go above 10 students. Regarding comments about an ethics course related to a training grant, Donald felt it was the responsibility of institutions to offer ethics courses. Denise suggested they look at Laurels Grants.
- Donald felt that the verbiage regarding NIH training grants in the report is not accurate. He indicated that faculty obtained space in the Linus Pauling Science Center after the report was written.
- Brenda urged faculty to actively encourage students to apply for funds allocated by the provost's office; she is willing to work with Tammy Bray to fund graduate fellowships.
- Jim questioned Recommendation #7 requiring a minor to increase breadth. Donald responded that the requirement is for eight additional courses for Public Health status and that the courses being developed should be offered in fall 2012.
- *Theresa moved to accept the report; motion seconded and passed.* Denise noted that Donald has a narrow view of nutrition and is channeling faculty to move that way and there is tension among faculty who don't fit in the new model, but didn't think they are interested in the 'eat right and prosper' model. Denise will write a brief Executive Summary indicating that the program should 'maintain' and focus on the post-bacc generator and change the Master's program into a conduit for the PhD. Denise indicated that an issue for the reviewers was that there are a lot of students who drop out after a year because they feel that they can get a good job after they achieve their dietetics certificate – (rec 1) reviewers noted they should decrease or phase out recruitment of Master's students. Carolyn felt this issue should receive greater emphasis in the report and Theresa felt it should be a separate recommendation because it's lost in its current location.
 - *The program review was accepted with the addition of an Executive Summary and the recommendation to 'maintain.'* Denise will attend the Provost's meeting when the review is presented.

The next meeting will be in MU109B from 11:00-Noon followed by a lunch with award recipients.

Graduate Council

December 7, 2011 Minutes

Voting Members Present: Carolyn Aldwin, Angi Baker, Jim Coakley, Cass Dykeman, Theresa Filtz, Denise Lach, Murray Levine

Voting Members Absent: Vinod Narayanan, Stacey Semevolos

Ex-officio Non-Voting Members Present: Bruce Rettig

Guests: Tammy Bray, Leslie Burns

Animal Science and Rangeland Graduate Program Review – *Action: Carolyn will send the Executive Summary to the Council members for an electronic vote.*

Nutrition Graduate Program Review – *Action: Denise will meet with Brenda to discuss whether the recommendation should be a 'restructure' rather than 'maintain'.*

Food Culture and Social Justice – Joan Gross informed Denise that the proposers will hold the certificate until the minor is approved. The proposers have previously been told that the Graduate Council needs to see the Category II's for the certificate. Additionally, many feel that AREC 599 is an important course to include in the proposal.

Action: Denise will ask the proposers how they would respond to the criticism that AREC 599 needs to be included; advise them that the Graduate Council can't move forward with the minor until the certificate issue is resolved; and inquire about the syllabus and Category II's for the certificate.

Review of Design and Human Environment Program Theresa Filtz presenting, with Leslie Burns, DHE Chair, and Tammy Bray, Dean of the College of Public Health and Human Sciences, present
Theresa highlighted the following aspects of the report:

- This is the program to nurture graduate students; faculty are committed to the program; use their own personal funds to send graduate students to meetings; they are understaffed and work with outdated equipment (duct-taped together); faculty maintain a program that is relatively rare for land-grants (unique west of the Rockies); and job placement is excellent. Recommendation to maintain a good program within the restructuring they are going through. They need extensive strategic planning to determine what they want to be and where they want to go. The review team felt the strengths were in a sociology path; most of the committee did not feel it was their place to tell them whether the Design School was the way to go – if so, should portfolios be required, should there be a creative scholarly output, or look at current strengths be built on? It was suggested that the program be strengthened via external speakers. Curricular offerings should be changed related to strategic plan. Program needs money (from industry folks); need to advocate for increased funding whether internal or external; it was felt that DHE was at the edge and could fall further behind.
- Regarding the level and quality of organizational support, Angi noted that the report mentioned creating funding for students attending conferences and equipment at the possible expense of GTA's and questioned whether there is a way to find funding and not eliminate GTAs. Leslie agreed that would not be her first choice, but it was the recommendation of the committee; she felt there are opportunities to take advantage of without eliminating GTA support. Theresa noted that the review team did not know of any available funds for reallocation except via reduction of the number of students, and the budget may need to be adjusted.
 - Carolyn noted the overstretched faculty with a faculty/student ratio of 13 faculty and 650 undergraduates and, at the time of the review, 30 grad students. Theresa added that the number of students in undergraduate studio courses is 24, that labs range between 25-30, and that the external reviewers felt that this was very large.
 - Carolyn questioned if there were ways of improving incoming graduate students. Leslie felt there

was a distinction between design school and what is done at OSU with science and research-based design courses. Portfolio reviews are required at both undergraduate and graduate levels vs. private design schools which often require portfolios for entrance; at OSU both masters and PhD students prepare theses. Some students will submit a portfolio, which is included in their admission folders; the review team felt that analytical thinking, research, etc. was more important than how well the students draw. The department will weigh portfolio advantages and disadvantages at the Masters level, but not at the PhD level.

- Leslie distributed written responses to the recommendations and thanked the review team for their time and engagement with students and faculty. Updates/comments on the report:
 - Since February 1st there has been an agreement among deans and faculty for a merger between DHE and Graphic Design (from Art), and the combined unit will move under the College of Business (COB), which will result in a Category I proposal.
 - It is now time to begin strategic planning. The COB is holding a strategic planning retreat in which Leslie will participate. There will be a department-level planning process. The overall recommendation of strategic planning was on target.
- Tammy, in response to Angi, noted that the number of graduate students has grown dramatically – previously there were about 6-7 students and recently about 20, while the undergraduate numbers have remained constant. It is a strong program and some students have chosen to come without funding.
 - Carolyn noted this brings up the topic of being more selective when accepting graduate students. Leslie agreed and noted that the selection committee is making decisions as a cohort and the report has forced them to reexamine their processes. Tammy felt that merging with COB may attract additional students.
 - Carolyn suggested including the selectivity component in Leslie's responses. *Action: Carolyn and Theresa will provide Leslie with some input to include in the final responses.* This input will be the building blocks for an action plan.
- Related to the satisfaction of students, Angi questioned whether we want to look at satisfaction only or larger outcomes, and how well do students internalize those outcomes and what challenges were presented. Leslie noted there were several areas of assessment included on the self-study, including a survey of current students, exit surveys and where students are being placed, and they are presenting papers or published, which also adds to the evidence of satisfaction. She felt they can be both satisfied and challenged. Carolyn noted this review was prior to the Graduate Learning Outcomes being required.
- The next step is to prepare the Action Plan. Leslie provided corrections to the report in her response (at the end of the document). *Action: Theresa will provide an appendix containing the corrections.*
- Carolyn – suggested that the grade of the program be included in the report.
- Jim noted that a problem with requiring a grant writing course as a special topics course is that special topics courses could change. *Action: Theresa will make a note of that concern.*

Action: Cass moved to accept the report with the inclusion of a grade at the beginning of the report; motion seconded and passed by voice vote with no dissenting votes.

Graduate Program Review – Botany & Plant Pathology was scheduled for a review last year and they were told that a review would be required by spring 2012 if a Category I was not prepared.

Action: Carolyn will inform Lynda Ciuffetti that a review will be held in spring 2012 and will ask Darrell Ross to participate in this review; the Executive Committee will be asked to provide a second reviewer.

Comparison of Proposed Metrics – Denise Lach, Vinod Narayanan, Carolyn Aldwin

The point is to try to determine overlap or discrepancies between various entities and try to develop one unique data set.

Action: The proposed metrics will be discussed in January (Brenda should be present); also ask for a liaison from assessment to meet with the Council.

Graduate Council

December 9, 2010 Minutes

**Grad Council Members
Present:**

Carolyn Aldwin (HHS), James Coakley (Business), Theresa Filtz (Pharmacy), Denise Lach (CLA), Walt Loveland, Chair (SCI), Jo Tynon (Forestry), Jessica White (Education) and Tom Wolpert (AG SCI)

**Grad Council Members
Absent:**

Michael Kent (Vet Med), Murray Levine (COAS) and Vinod Narayanan (ENGR)

**Ex-officio Members
Present:**

Martin Fisk and Bruce Rettig (Graduate School) and Leah Minc (Graduate Admissions Committee)

**Support Staff
Present:**

Nagwa Naguib

Guests:

Dean Hal Salwasser, College of Forestry; FERM Department Head Thomas Maness; FES Department Head Brenda McComb; and Gita Ramaswamy, Director of Assessment

1. Approval of December 2nd, 2010 minutes:

Request for Postponement of Horticulture Graduate Program Review:
Page 2, para 3:

Denise Lach asked if the 2006 unfavorable review would affect the upcoming reorganization. Azarenko responded...

Minutes approved with above corrections in underlined Italic

2. Updates from the Chair:

Loveland reported that he had correspondence with Leslie Burns, Gita Ramaswamy and Jack Higginbotham regarding the draft resolution on General Learning Outcomes for the Ph.D. degree. More on this issue was discussed later in the meeting.

He also informed the Council that today was Jessica White's last meeting on the Council. She will be replaced by Cass Dykeman starting winter term.

3. Category I Proposals:

1. Forest Ecosystems and Society (FES): Revision of the Forest Science Graduate Program
2. Sustainable Forest Management (SFM): Merge and Rename the Forest Resources and Forest Engineering Degrees into the Sustainable Forest Management Degree

Dean Hal Salwasser, Forest Engineering, Resources and Management (FERM) Department Head Thomas Maness and Forest Ecosystems and Society (FES) Department Head Brenda McComb were introduced to the Graduate Council members. Maness stated that the FERM and FES proposals reflect the changes in degree objectives and faculty supervision that resulted from the reorganization of three departments (Forest Resources, Forest Engineering, and Forest Science) in the College of Forestry to two departments (Forest Engineering, Resources and Management, and Forest Ecosystems and Society). The SFM proposal focuses on the graduate degrees of the Forest Engineering, Resources, and Management Department. The areas of concentration available under the Forest Resources and Forest Engineering degrees would be either used by the Sustainable Forest Management degree or moved to the FES degree.

Following a major reorganization in the College of Forestry, the college leadership decided to wait until

new department heads were hired and at work at OSU before revising the degree structure. It has become obvious that the reorganization has been confusing to the students, so this name change and descriptions of areas of concentration will clarify things to the current and incoming students.

McComb stated that this change will add a strong social science component to students in FES and will train students to work in interdisciplinary fields. Salwasser remarked that the College is supportive and excited about these two proposals. There is a slight overlap in the study of forestry policy in the two programs.

Loveland remarked that the FES proposal has an important social science component and wondered how the learning outcome will be assessed. McComb replied that the social scientists bring teaching and research experience in the analysis of social aspects of forest policies. Loveland then asked if the students are clear on what courses they should be taking when entering the program. The FERM proposal is clear in this area. McComb responded that the student's advisory committee meets with the student and advises him/her on what courses to take. Even though the department is continuing to develop guidance on course selection, they are trying to keep the FES study program design flexible and do not plan to require specific courses for all students.

Carolyn Aldwin, who also teaches in interdisciplinary programs, stated that in her program, students have core classes they are required to take; this creates a cohort model, and gives students opportunities to work with each other. McComb responded that FES *encourages* students to take certain courses among which Posing Research Questions and Natural Resource Research Planning. Some of the graduate students have prior training and do not need those courses. These courses provide a common understanding of social science research, lead students to work on problems together, and bring students together. Associate Professor Lisa Ganio offers a two-day "orientation" on the FES program. It is part of what the department does for the graduate students.

Lach noted that there are two different models used in formulating graduate programs: one model is what FES is currently doing, and the other model is being used in Public Policy where all the graduate students are required to take a certain course. There is difficulty with both approaches. Filtz asked if areas of concentration could be more clearly defined. McComb responded that it all depends on the students' advisory committee. Tynon proceeded by saying that the department has a list of probable courses, but the program is very flexible as graduate students come in with different backgrounds.

When Rettig asked if FES faculty were included in the process of reviewing the Category I proposal, McComb responded that they indeed have had long meetings that resulted in defining and deciding on, the areas of concentration. There is a crosswalk between the areas of concentration with the department's faculty, as well as the courtesy faculty.

Maness informed the Council that when faculty moved to the new departments, their programs did not move with them. It is taking time to work out all the details. McComb repeated that the FES program is trying to be more interdisciplinary.

Fisk pointed out that the proposal should have clarified which courses are in which areas of concentration. Aldwin suggested a more structured proposal with a detailed list of courses that could fulfill the areas of concentration.

Lach reminded the Council that they have been talking about the Graduate Learning Outcomes of the graduate programs: should we assess the FES accordingly? McComb responded that the department has been testing areas of competency for the past few years. She recognized that they may need to put more structure into the process. Wolpert added that what is needed is a vision of how these decisions are made. Hal Salwasser reported that the Forestry graduates are in high demand and hold high positions in both government and higher education.

Maness pointed out that the FERM program is more structured because the areas of concentration are related to careers in engineering and administration. Tynon added that the faculty like the disciplinary identification. McComb suggested adding a third column to Table 5 in the proposal identifying the faculty's association with the areas of concentration, and wondered if this approach will clarify the issue. Council members agreed that this would be an acceptable plan.

Rettig explained that the substantial changes will require creation of new graduate faculties in SFM and FES rather than a renaming of current graduate faculties in FR, FS, and FE. The Graduate School will work with FES and FERM to make these changes in current and new graduate faculties.

Aldwin wondered if the students can graduate under the suggested new name. McComb responded that the students have the choice to graduate under either the old or the new name. Rettig suggested that the Graduate School can assist with this process. Students who do not want to change their majors are not required to do anything, but students wanting to graduate under one of the new names will need to submit requests for changes of major. McComb proposed that the students who are close to finishing their programs will not want to change the name on their transcripts.

Loveland thanked the three visitors, Salwasser, McComb and Maness, and dismissed them from the meeting.

Loveland indicated that the FERM Category I proposal is clear on the issue of areas of concentration. The FES Category I proposal, on the other hand, raises some questions: the courses affiliated with areas of concentration need to be made clearer. Fisk pointed out that the only difference between the two proposals is in the areas of concentration. Tynon stated that when students apply for scholarships or fellowships, it is confusing for them to know where they get the signatures.

FERM Category I Proposal:

Approve the proposal. Jo Tynon moved, Carolyn Aldwin seconded. Motion passed.

FES Category I Proposal:

The Graduate Council voted to approve the Cat I proposal to revise the forest science graduate program with the following conditions:

1. Table 5 of the proposal will be amended to include information on which areas of concentration the faculty members will participate in.
2. A reference be added to the proposal referring to the website where typical/sample courses are discussed related to the various areas of concentration.

Carolyn Aldwin moved, Theresa Filtz seconded. Motion passed.

4. General Learning Outcomes (GLO) for the Ph.D. Degree:

Loveland reported that following the meeting when the GLO were discussed and a draft resolution was drafted, he shared the resolution with both Leslie Burns (Faculty Senate President) and Jack Higginbotham (Faculty Senate President-Elect). They, in turn, suggested that when brought to the Faculty Senate, we should have examples of what GLOs should be. Assessment takes place on the program level.

A short discussion regarding the draft resolution followed. It was confirmed that the Learning Outcomes should be established by each program. The academic units responsible for the degree programs will establish metrics to determine that Learning Outcomes have been met.

Loveland will respond to Leslie Burns regarding the GC opinion about not changing the current draft.

Meeting adjourned at 1:00 PM.

Graduate Council

November 18, 2010 Minutes

Grad Council Members Present:

Carolyn Aldwin (represented by Jeff McCubbin, HHS), James Coakley (Business), Theresa Filtz (Pharmacy), Michael Kent (Vet Med), Denise Lach (CLA), Murray Levine (COAS), Vinod Narayanan (ENGR), Jo Tynon (Forestry), Jessica White (Education) and Tom Wolpert, chairing (AG SCI)

Grad Council Members Absent:

Walt Loveland, Chair (SCI)

Ex-officio Members Present:

Martin Fisk (Graduate Council) and Leah Minc (Graduate Admissions Committee)

Support Staff Present:

Nagwa Naguib

1. **Approval of November 4th, 2010 minutes: Discussion of NRC Rankings - para 9**

~~Tom Wolpert commented that OSU's self assessment may be less important because it is up to an outside organization to assess us.~~ Loveland responded that how we are allocating faculty to graduate faculties is a big issue.

Minutes approved with above corrections in strikethrough Italic.

2. **Approval of November 11th, 2010 minutes**

No changes. Minutes approved

3. **Discussion of Assessment of Graduate Learning Outcomes for the Ph.D. Degree**

Jeff McCubbin introduced himself as the College of Health & Human Sciences (HHS) representative during Carolyn Aldwin's absence. HHS faculty have been surveyed, per last week's conversation regarding assessing the Graduate Learning Outcomes (GLOs). Tom Wolpert, chairing the Council, wondered if any of the members had contacted their faculty.

McCubbin presented the HHS faculty's input and distributed a handout with the results. In addition to soliciting faculty's input, he also met with Dr. Gita Ramaswamy, OSU Director of Assessment, and shared the results with HHS department chairs.

Wolpert stated that the Council is asking programs to provide general guidelines on how to assess Ph.D. students. Any other feedback that the Council receives will be submitted to the Faculty Senate for their final decisions. He opened the discussion regarding the draft resolution:

Draft Resolution on General Learning Outcomes for the Ph.D. Degree

The general learning outcomes for the Ph.D. degree are: (a) an original significant contribution to knowledge and (b) demonstrated competence in the subject material area. Other possible outcomes might include: (to be filled in)

The assessment of these outcomes and the specification of learning objectives related to these outcomes is to be carried out at the program level. Graduate Program reviews will include an examination of these assessment activities. Periodic reporting of assessment activities to the OSU Director of Assessment is an essential part of this activity. These policies are not intended to apply to the PharmD or DVM degrees as these degrees are administered by the Colleges of Pharmacy

and Veterinary Medicine and not the Graduate School.

After a long discussion, which resulted in different versions of the resolution and various inputs and edits from Council members, Jessica White drafted the following revised resolution which was approved by the Council, and which will be submitted to the Faculty Senate:

Draft Resolution on General Learning Outcomes for the Ph.D. Degree

As a result of successfully completing the requirements toward the Ph.D., students will be able to: (a) produce and defend an original significant contribution to knowledge; (b) demonstrate mastery of subject material; and (c) conduct scholarly activities in an ethical matter. Additional outcomes, the assessment of all outcomes and the specification of learning objectives related to these outcomes, are to be carried out at the program level and reviewed periodically.

4. Revision of Graduate Program Review Guidelines

Martin Fisk reminded Council members that this issue came about when Dr. Leslie Burns, Faculty Senate President, pointed out that the Graduate Council was requesting too much data when conducting program reviews. The Provost charged us to try streamlining the Guidelines, and making sure that the requested data is necessary.

Fisk presented to the Council a list of both the NRC and the OSU variables extracted from the Graduate Program Review Guidelines for Graduate Program Review. Walt Loveland deleted some of the NRC variables. He pointed out that the most powerful indicators in the NRC list are #7 and #8 that ask for the number of publications per faculty and the number of citations per publication. He then asked Council members to direct him on what items should be deleted or added to the list.

Denise Lach suggested that, as long as the NRC ranking is important to OSU, we should collect the data. Wolpert wondered if we should incorporate the NRC or the accreditation points into the Guidelines. He also pointed out that #1 in the NRC list is an important indicator and should not be deleted. Theresa Filtz remarked that some of the deleted points are redundant.

Lach questioned what the Council would like to see included in the self-study. Jim Coakley clarified that the Guidelines ask for process and supporting data. In the case of the MBA, for instance, there is an admissions process which includes selectivity. Lach pointed out that when she reviewed a program last year the admissions selectivity was low but, when the process and the target applicant pool was considered, the admission results were appropriate.

Wolpert asked the Council if the review process should be changed. White remarked that, organizationally, the Guidelines need to be revised. She then added that the process should be streamlined to make it more meaningful. Filtz commented that, with an effective Institutional Research Office, programs could easily be able to get the data for their self-study, which is usually burdensome to collect.

Wolpert stated that the University, i.e. IR, should be able to track and keep the necessary data, if they care about ranking. Coakley remarked that IR does not keep data related to faculty's activities and services. The burden falls on the department or program. Fisk acknowledged that the Graduate School does not track graduate faculty information, i.e. the number of committees they served on or the number of students they advised. For the Graduate School to be able to track this data, we will need to add staff support to collect it and enter it into Banner.

Vinod Narayanan pointed out that the University of California-Davis collects a larger number of data, but it is a good guide. Other members agreed that the UC Davis guidelines are a great sample to use.

Once more, Fisk asked Council members what they thought should be taken out or placed in the guidelines. Filtz suggested the review could be done similarly to the accreditation, i.e. ask the programs what their goals are, and evaluate them accordingly. She then suggested informing the programs that we do appreciate the burden of collecting this data puts on the departments, but it is necessary to obtain it and appreciate their collaboration in this area. She added that maybe this matter should be postponed until we finish working on the University Assessment. Council members agreed to wait on this issue to a later date.

Meeting adjourned at 1:00 PM.

Graduate Council

November 11, 2010 Minutes

Grad Council Members Present:	Carolyn Aldwin (HHS), James Coakley (Business), Theresa Filtz (Pharmacy), Michael Kent (Vet Med), Murray Levine (COAS), Walt Loveland, Chair (SCI), Vinod Narayanan (ENGR), Jessica White (Education) and Tom Wolpert (AG SCI)
Grad Council Members Absent:	Denise Lach (CLA) and Jo Tynon (Forestry).
Ex-officio Members Present:	Martin Fisk, Bruce Rettig and Leah Minc (Graduate Admissions Committee)
Support Staff Present:	Nagwa Naguib

1. **Approval of November 4th, 2010 minutes**

Walt Loveland indicated that the minutes from last week were not distributed due to the fact that the Faculty Senate Office is busy working on the 2011 apportionment table for this afternoon's meeting. Both sets of minutes will be put on next week's meeting agenda.

2. **Miscellaneous**

Tom Wolpert will chair next week's meeting as Loveland will be out of town. Loveland also wondered if members were available to meet on December 9th, as we are expecting two Category I proposals from Forestry as well as the Public Health Graduate Program Review Report. Council members responded that they would be available on that day.

Marty Fisk announced a new fellowship and scholarship program. The following is taken from the announcement that will be distributed to the campus later in the day.

The Graduate School is pleased to announce new centrally administered fellowship and scholarship opportunities to recruit outstanding doctoral students for graduate study at OSU. Although the target population is newly admitted doctoral students, newly admitted master's students will be considered in research/creative degree programs where a Ph.D. degree does not exist. Program Directors or Department Heads/Chairs are invited to submit up to two nominations per graduate major to the 2010-11 Provost's Distinguished Graduate Fellowship Program and no more than one nomination per graduate major for the *2010-11 Provost's Distinguished Graduate Scholarship Program*.

Objective: The Provost has designated funds for graduate fellowship stipends and recruitment bonus scholarships to raise the profile of graduate education and to foster enrollment of students of the highest quality. The *Provost's Distinguished Graduate Fellowship Program* provides prestigious university fellowships for one year only, which will be comprised of twelve-month stipends, plus tuition scholarships and subsidized health insurance. Fellowship nominations will be accepted on behalf of newly admitted doctoral students and any newly admitted research/creative master's degree students in which a doctoral degree program does not exist. *Provost's Distinguished Graduate Scholarship Program* will provide one time, academic year scholarship awards for recruiting purposes.

Fellowship Details: Fellowships will include a twelve-month stipend of \$30,000 for doctoral students and \$22,000 for master's students, to be distributed in four equal quarterly installments

during the year. The fellowship will also provide full academic year tuition remission through the Graduate School's Targeted Graduate Tuition Scholarship program plus a supplemental scholarship to cover the cost for enrollment in three graduate credits during summer term. Recipients will be formally appointed as OSU graduate fellows to allow access to subsidized health insurance under the prevailing graduate assistant/fellow health insurance plan. Fellowships will be administered by the Graduate School.

Scholarship Details: Scholarships will be one-time awards of \$6,000 for doctoral students and \$4,000 for master's students, which will be distributed in three equal quarterly installments during the academic year. These awards are to be separate from and in addition to a full year departmental assistantship offered to incoming students. Scholarships will be administered by the Graduate School.

Fellowship and Scholarship Nominations: Both domestic and international doctoral applicants will be considered, as well as master's applicants in research/creative degree programs where a Ph.D. program does not exist. Each program may submit up to two nominations for fellowships and one nominee for a scholarship.

Selection: The Provost's Distinguished Graduate Fellowship and Scholarship Selection Committee will be established and convened by the Graduate Dean. Approximately 30 fellowships and 15 scholarships will be awarded, depending on the total funds and the demand for the two types of awards. The Committee will select nominees based on academic achievement as indicated by grade point average, GRE, TOEFL, and other test scores, publications, presentations, awards and honors, contribution to diversity, and/or other professional activity. Additional considerations will be the nominating program's alignment with the university's strategic plan, the nominating program's achievement of the President's Academic System Guidelines, and the potential impact that an award would have on strengthening and building the degree program. Nominations will be evaluated as they are received. If a nominee is considered to be of exceptional merit, the program will be notified in a timely manner so that an immediate offer may be made without delay. Criteria for exceptional awards will be announced prior to December 1, 2010. All nominations not meeting the exceptional criteria will be reviewed after the February 15 deadline. Awards will be announced by February 28, 2011.

Vinod Narayanan pointed out that if the decisions were delayed till April 15th, we might lose some incoming students who would have accepted offers from other schools. Tom Wolpert remarked that we should anticipate at least a twenty-five percent rejection rate from the incoming students. Michael Kent confirmed that, from experience, some students choose to accept offers from Ivy League universities, so the sooner an offer is made, the better the chance that OSU will get those students. Fisk wondered if we should offer ten percent more stipends than we have funds for.

Theresa Filtz suggested a shorter timeline. Fisk reported that last year, Rosemary Garagnani, Assistant Dean, sent "intent to enroll forms" to incoming students. It was a way to get enrollment projections. This form could be used for the scholarship/fellowship program, giving us an idea of how many students will indeed be accepting the offers. Chris Bell proposed the Graduate School use what the College of Engineering has done in the past, and that is to ask the students to please let us know if they indeed will be coming to OSU; seventy five percent did respond.

Fisk is hoping the Committee would create guidelines regarding the top candidates, who will be the first ones to be offered scholarships/fellowships by the Graduate School. The rest would be decided by the Committee during February 2011.

3. Accreditation

Loveland introduced Chris Bell to the Council. Dr. Bell, the Chair of the Accreditation Steering Committee, explained what the Committee needed from the Council regarding accreditation efforts.

Oregon State will be one of the first universities evaluated by the Northwest Commission on Colleges and Universities (NWCCU). OSU has been told how we will be evaluated. We need to assess ourselves and then report back on how we are doing. At this time, what OSU needs to do is to get a process in place, then report it to the accrediting body. The committee has been given guidance on these issues by the NWCCU. In response to the guidance, OSU developed three core themes. Graduate Education and Research is core theme #2.

Using data collected by the committee, the Council needs to evaluate how we are doing. Are we meeting expectations? Doing well? Exceeding what we say we will do? Some of the data could come from the recently published NRC data.

Bell repeated that the Committee is trying to keep the process as simple as possible. This process involves a seven-year cycle; and we can always make adjustments as we proceed through future stages of the cycle. Even though there is nothing in the standards that requires us to compare ourselves to our peer group, the Committee decided to do so. The peer group consists of several land grant universities and the University of Oregon.

Bell reminded the Council that the NRC results provide data on only forty of the eighty graduate programs currently offered at OSU. The Council will need to select a rating, and include some narrative about it, if appropriate. Loveland indicated that, if the Council feels that it needs more data, the OSU Accreditation Committee could try to provide it. He also indicated that if the Council would like to see different indicators, more data will be provided.

A long conversation resulted in some edits to the Core Theme #2 Objectives and Indicators, which will be revised by Loveland and resubmitted to the Council at its December 2nd meeting.

Loveland reminded the Council that both he and Rich Holdren, Associate VP for Research, will be in charge of writing the initial draft of material for Core Theme #2. At the December 2nd meeting, he will provide a summary to the Council with the suggested grading scheme for the institutional indicators.

Loveland reminded the Council that the Assessment agenda item will be discussed at next week's meeting. The College of Science has developed a set of suggestions regarding assessment of graduate programs. He did share the suggestions with the Council members. He requested that other Colleges also provide input along these lines.

Meeting adjourned at 1:00 PM.

Graduate Council

October 28, 2010 Minutes

Grad Council Members Present: James Coakley (Business), Theresa Filtz (Pharmacy), Michael Kent (Vet Med), Denise Lach (CLA), Murray Levine (COAS), Walt Loveland, Chair (SCI), Vinod Narayanan (ENGR), Jessica White (Education), and Tom Wolpert (AG SCI)

Grad Council Members Absent: Carolyn Aldwin (HHS), and Jo Tynon (Forestry)

Ex-officio Members Present: Martin Fisk and Bruce Rettig

Ex-officio Members Absent: Leah Minc (Graduate Admissions Committee)

Support Staff Present: Nagwa Naguib

Guests: Gary Beach, Curriculum Coordinator

1. Introductions and Announcements

Walt Loveland introduced Gary Beach to the Council members. Mr. Beach was hired to fill the role of Curriculum Coordinator in the Office of Academic Affairs and International Programs.

Loveland also announced that Sal Castillo was appointed as Director of Institutional Research and will be on board in early January. He comes from the University of California, Santa Barbara.

2. Approval of October 7th, 2010 and October 14th, 2010 Minutes

October 7th minutes:

1. Assessment: Para 2

....

She indicated that Assessment is the accreditation agency requirement. Assessment needs to be kept simple and meaningful. There is a tie between outcomes assessment and quality of graduate education if we focus on graduate students' success. She indicated that the most important reasons for dropping out of PhD programs are 1) Lack of mentoring; and 2) Personal reasons (family and cost). Council members questioned these assertions. The Council of Graduate Schools has conducted major studies of problems with doctoral degree completion. Ramaswamy will forward information about the CGS studies to Council members. More conversations with the Graduate Council are needed.

October 14th minutes:

2. MBA Graduate Program Review: Para 6

.... Jim Coakley pointed out that, at OSU, people leave after four or five years after a mid-tenure review when it becomes apparent that they may not be promoted. When they leave they often get higher salaries in other universities or in companies.
He also pointed out that, in the business administration discipline, the OSU College of Business faculty publication level is higher than in peer programs. The comparison should be made with other business schools, not other disciplines within OSU.

3. Teaching and Counseling Education (TCE) Program Review - Action Plan: Para 7, Sentence 1

Theresa Filtz wondered about the method of assessing the teaching by part time instructors.

October 7th and 14th minutes approved with above corrections in underlined Italic.

3. Discussion of the Teacher and Counselor Education TCE Action Plan

Loveland stated that the Teacher and Counselor Education (TCE) Action Plan was to be submitted when the Graduate Council Reviewer, the Graduate School Dean, the Department Chair and the College of Education Dean met with Provost Randhawa last November. Unfortunately, it was not submitted. The Provost requested it to be prepared and submitted by the end of the year. The reorganization of the College of Education delayed this action a couple of times.

He then indicated that with the delay in preparing this document, the Action Plan is still not responsive to the Review Panel report and its concerns. One of the concerns that the Panel pointed out was that the tenure-track faculty were over extended as the size of the program is too large in proportion to the size of the faculty.

Tom Wolpert wondered if the process is to report back to the Provost on the meeting the Council had on October 14th with the Department Chair of TCE and the Dean of the College of Education. Loveland responded that the Provost has already received a copy of the Action Plan, but it might be a good idea to meet with him again and present to him the Graduate Council's opinion regarding the lack of responsiveness to the critical issues in the report. He also indicated that the Council will conduct a follow-up review in three years.

Jessica White reminded the Council that the College of Education has been going through a lot of issues of realignment, which is hindering the response to the Panel's concerns/recommendations.

Theresa Filtz agreed that a meeting with the Provost to go over the Action Plan is a good idea. A short discussion followed.

Motion: Martin Fisk, Interim Dean, Graduate School, to report to the Provost on the Council's discussion regarding the TCE Action Plan, and its recommendation to set up a meeting with the Council's representative, the TCE Chair and the Dean of the College of Education to discuss the Plan per normal procedure. Denise Lach moved. Tom Wolpert seconded. Motion passed.

4. Discussion of "Assessment"

Loveland reported that he was asked if the Council would allow someone from outside the Council to attend the meeting when assessment is discussed.

Bruce Rettig informed the group that he and Marty have been meeting with college leaderships regarding a large number of policy changes. Each college is represented on the Council so, if any of them has an issue with the policies, they will need to contact their representative on the Council. Jim Coakley suggested that we should have open forums by which we could get the faculty's feedback. We should not have a representative from one college and not the others.

Wolpert pointed out that the Graduate Council makes comments on "Assessment." Those comments will have to go to the Faculty Senate, as we are only a recommending party. Loveland added that the Faculty Senate Executive Committee will need to be advised of our plan on Assessment.

Filtz stated that the Council cannot exclude outside observers. Wolpert agreed that anyone could attend the meetings. They should, though, first contact their Graduate Council representative. It was also suggested that the Council offer open forums to discuss Assessment.

Loveland will report back that observers are welcome to be present at the Council meetings.

The Graduate Council referred to the April 21, 2005 and November 2, 2006 Council minutes that were distributed, in which PhD Learning Outcomes and PhD rules and regulations, respectively, were discussed. An extended conversation followed.

Beach indicated that he will look into the 2006 Accreditation Report to determine whether the 2005-2006 discussions of the Council relative to PhD learning outcomes were cited. Loveland pointed out that Assessment is now done through Program Reviews. He went on informing the Council that the Horticulture Department is asking to cancel their Graduate Review for five or ten years. He asked the Chair, Anita Azarenko, to present her case to the Council on December 2nd. Alone combining Horticulture with Crop and Soil Sciences should not deter them from having a Program Review.

Loveland reminded the Council that Dr. Gita Ramaswamy is the Director of Assessment at OSU. Some of the assessment requirements come from the Accreditation process that the University is going through. Lach pointed out that there is a campus-wide undergraduate curriculum assessment that is approved by the Faculty Senate. Vinod Narayanan remarked that, in the case of the College of Engineering, they go also through the ABET assessment. Loveland indicated that there are eighty graduate programs, each one of which is different, so the Assessment should be made at local levels. Some general principles might be useful to guide assessment. When the question of whether assessment was necessary was raised, he indicated that the University Assessment Committee does not consider the Graduate Program Review as being comprehensive enough when needing to assess a PhD program. Lach pointed out that the Program Review Guidelines do not mention anything about how to assess the program. Should we use the generic outcomes for all the PhDs?

Ideas of how to assess the PhD programs included:

- Have a baseline for assessment, then specific knowledge-based dictated by the program itself.
- Articulate one or two overarching guiding principles, sending them to the program for their assessment, then get them assessed when doing the self- study and the Graduate Program Review.

There was general agreement on having one or two overarching guiding principles for assessment, such as "an original significant contribution to knowledge" and "demonstrated competence in the subject material area", having a short list of items that might be considered by the programs and leaving the final decisions to the individual graduate programs. Assessment will be explicitly included in the Graduate Program Reviews.

Loveland proposed continuing the discussion of the guiding principles that will be asked of the departments, at another meeting of the Council.

5. Discussion of Revision of Guidelines for Graduate Program Review

Marty Fisk is proposing revising the Guidelines for the Graduate Program Review. We should try to simplify the self-study document. The guidelines we currently have could be completely rewritten.

Loveland proceeded by saying that there are ways to improve the process. He referred them to the URL links to the guidelines of some universities that Rettig has provided. The University of California, Davis' guidelines are pretty comprehensive and easy to use.

Wolpert wondered if the process should be to ask the reviewers or the accreditation body what they would like to see in the self-study. Lach stated that, in comparison to other programs, OSU is not asking much more than other universities. She then proceeded to say that we should make a list of the information that Institutional Research could provide the departments, and then the rest of the information will come from the departments themselves. Coakley pointed out that the graduate programs should be tracking this information every year.

Gary Beach suggested that the Graduate Council prepare a list of the required information to the Office of Institutional Research and ask them to identify what information they will be able to provide.

A short discussion followed. Marty Fisk will work more on the revision of the Guidelines.

Meeting adjourned at 1:00 PM.

1. Graduate Program Review Guidelines

Martin Fisk distributed notes regarding suggested revisions of the Graduate Program Review Guidelines. He would like to discuss changes to the guidelines with the Council at its next meeting. At the meeting involving the Provost and Faculty Senate leadership, President Leslie Burns asked whether the guidelines could be rewritten to be shorter and more tightly focused. The current guidelines include many data tables. Do reviewers need that much information? A short conversation followed. Walt Loveland noted that the new Institutional Research Director will be able to provide much of the information that has previously been assembled by departments. Current Guidelines will be sent to the Council members. This conversation will resume at the next Council meeting.

2. MBA Graduate Program Review

Dean Ilene Kleinsorge was introduced to the Council. Loveland indicated that he served on the Review Panel for the MBA program and would be summarizing the report on behalf of the panel. He noted that the overall recommendation was to support the intention of the College of Business to expand the MBA program, although careful thought needs to be taken about the management of program growth. The Oregon State University MBA program focuses on entrepreneurship and innovation. To achieve this, a key study strategy is to involve students in development of business plans.

Most of the current students are from the Willamette valley. The Review Panel would like to see the MBA attract a wider range of students, both nationally and internationally. It also recommended an increase in tuition to be more consistent with peers and to financially support an expansion in faculty. The panel was concerned about the challenges in administering the MBA final examination and urged the College of Business to develop an alternative assessment process. They also pointed out that the OSU Career Placement Center does not function well for the MBA students. Some business programs have their own career placement centers.

Kleinsorge responded that the Review Panel "hit it on the head" with all their recommendations. The career placement is a good suggestion. The College of Business has been losing money on every course they teach, but the new differential tuition charge should make progress on this issue. Aligning the MBA with OSU's strategic plan will give them an incentive to work on its reputation.

Denise Lach asked about the joint degree program with University of Oregon and Portland State

University. Kleinsorge responded that the executive MBA is a collaborative program between the three universities. The three deans are currently in conversations regarding this program. In this political environment, collaboration, even though not warm and fuzzy, is very important and it is the right thing to do. OSU delivers 17% of the teaching. The other two universities, plus some folks from the community, deliver the rest of the teaching. This multi-campus approach was required because OUS cannot provide an accredited MBA program, only the individual universities can do this.

Kleinsorge stated that they have added a summer program to the previous academic year only model, and that this is a valuable component. She also noted that the College has been contracted by the College of Science to deliver the business courses needed for the professional science master's degrees.

Vinod Narayanan asked about the statement in the report that, according to the COB faculty group, only half of the faculty hired as assistant professors achieve promotion and tenure. Loveland said that the statement from the faculty is not consistent with information from the College of Business on this issue and that the disparity is quite large. Jim Coakley pointed out that, in the business administration discipline, the OSU College of Business faculty retention is higher than in peer programs. At OSU, people leave after four or five years after a mid-tenure review when it becomes apparent that they may not be promoted. When they leave they often get higher salaries in other universities or in companies. The comparison should be made with other business schools, not other disciplines within OSU.

Action: To accept the MBA Graduate Program Review Report. Theresa Filtz moved. Carolyn Aldwin seconded. Motion approved.

Loveland indicated that the College of Business will prepare an action plan before meeting with the Provost.

3. **Teaching and Counseling Education (TCE) Program Review - Action Plan**

Dean Sam Stern and Interim Department Chair SueAnn Bottoms were introduced to the Council.

The TCE was evaluated in June 2009, and the Report was approved by the Graduate Council last October. When the Report was presented to the Provost, he asked for an Action Plan. We now have an action plan.

Loveland proceeded by summarizing the Report, which mainly recommended reduction and restructuring of the department. It is also apparent that there is an insufficient number of tenure-track faculty available for teaching, research, and mentoring.

SueAnn Bottoms responded that the Department has addressed the need for restructuring, although their plans are still a work in progress. By Fall 2011, the restructuring will be completed. In the process of restructuring, they suspended two programs. The statement in the report that there is too much reliance on part-time faculty is somewhat misleading. The College of Education believes that highly qualified practitioners can play a valuable role by teaching one or two courses per term and sometimes only one or two courses in a given year.

Sam Stern pointed out that the timing of the review was very helpful. Some program reductions have already been made. The College of Education has also increased the tenure-track faculty; a total of three new positions were developed for TCE. Another positive change is moving the Science and Mathematics Education Department (SMED) to the College of Education, which will create a link between the Colleges of Science and Education.

Loveland asked if the number of faculty has then increased to ten tenure-track faculty. Stern responded that some of the faculty are emeritus faculty on 1039-hour appointments. In other words, the net gain is 2.0 FTE. Those positions are a result of the Provost's incentive educational policy, namely English Language Learners, and Elementary Education. They are anticipating another position in counseling.

Loveland wondered about the suggestion regarding combining some of the positions. Stern responded that they have done some of that. Bottoms mentioned again that some of the faculty who teach one class have full time jobs outside the university.

Theresa Filtz wondered about the method of assessing the quality of education. Bottoms responded that they consider both student and peer evaluations, and that practitioners are assessed on a regular basis. Stern pointed out that the number of fixed-term appointments, serving as major professors, is pretty small, not worth creating a policy for. Those appointments get vetted by the Graduate School.

The Action Plan will be discussed at the next meeting of the Council.

Meeting adjourned at 12 noon followed by the Honors and Awards Ceremony luncheon.

Graduate Council

October 7, 2010 Minutes

Grad Council Members Present:	Carolyn Aldwin (HHS), James Coakley (Business), Theresa Filtz (Pharmacy), Michael Kent (Vet Med), Denise Lach (CLA), Murray Levine (COAS), Walt Loveland, Chair (SCI), Jo Tynon (Forestry), Jessica White (Education) and Tom Wolpert (AG SCI)
Grad Council Members Absent:	Vinod Narayanan (ENGR)
Ex-officio Members Present:	Martin Fisk, Bruce Rettig, Leah Minc (Graduate Admissions Committee)
Support Staff Present:	Nagwa Naguib
Guests:	Brent Steel, Director, Master of Public Policy; Joe Beatty, Co-Chair, Zoology; Gita Ramaswamy, Director, University Assessment

1. Introductions

Walt Loveland asked attendees to introduce themselves.

2. Approval of Minutes - June 3rd, 2010

June 3rd, 2010 minutes approved with no corrections.

Martin Fisk commented on the minutes, #3, page 3, regarding a fix to the Banner system to properly identify who gets credit for advising. It seems that the capability for this fix is present, but that this would require substantial time and effort to input and check the data that is entered into Banner.

Carolyn Aldwin responded that she used a BANNER feature when she was at the University of California and that the adjustment is not complex or difficult to implement. This issue will be reevaluated.

3. Summer Actions

Loveland reported that the Graduate Council (GC) participated in a large number of reviews during the summer. He praised the GC members for the work they have done. The Council's work on reviewing the Category II proposals has brought praise from the university and he wanted to let the Council know that their efforts on this and other issues have been appreciated.

He informed the Council that Provost Randhawa was not pleased with the decision by the Entomology Program to not provide a self-study for its Program Review. He directed the Graduate School to suspend admitting students to the program for now, until further notice.

4. Agenda for Year

Loveland presented his list of possible GC agenda items for the year. We have thirteen Category I proposals in the pipeline. More are being suggested. He then informed the Council that he had received an email from Dan Edge indicating that both President Ray and Provost Randhawa were in favor of the Category I proposal renaming Fisheries & Wildlife Department to Fisheries, Wildlife and Conservation Biology Department and asking the Council what he needed to do to respond to its request for changes. Loveland replied to Edge that the Council would be happy to review his Cat I proposal but the re-submitted proposal should address the issues raised by the previous review.

5. Request for postponement of Public Policy Graduate Program Review

The Council then started a discussion regarding the requests for postponement of graduate program reviews, and discussed how such requests should be handled. Except for programs that are reviewed by external accrediting bodies, the only assessment of continuing program quality is the graduate program review. Loveland reported that Leslie Burns, President of the Faculty Senate, would like to see a revision of the guidelines to make sure that the required information is being used in the program review. Fisk indicated that the program review guidelines are being revised and will be presented to the Graduate Council soon for their review.

Fisk reminded the Council that the programs start getting reminders from the Graduate School five years in advance of their upcoming review year. Loveland pointed out that, although the program review process focuses on past performance, it provides key information for making forward looking decisions about reorganization and other changes that are needed. Ideally, much of the information should be provided by the Office of Institutional Research to reduce the record keeping and analysis needed by academic programs. Unfortunately, the Office of Institutional Research has had a hard time assembling needed data in a timely manner. A Director of Institutional Research will be hired soon. Interview candidates are most promising and a new hire should go a long way toward resolving this issue.

Nagwa Naguib will send a list of the site visit dates of the upcoming program reviews to the Graduate Council.

Brent Steel, Director, Master of Public Policy Program (MPP), was introduced to the Council. He asked the Council to approve a postponement of the MPP Program Review during the ninth year of its existence (first degree awarded was in 2003) as opposed to the eighth year. The Program is applying for membership to the National Association of Schools of Public Affairs and Administration (NASPAA), a year after which they can apply with NASPAA for accreditation. He then asked for some leeway of one year for the above to be accomplished. He is waiting to hear back from NASPAA regarding their application for membership, and is hoping to know by October 15th. Although informal contacts suggest that the MPP Program exceeds the Association's standards, a full accreditation visit will be required. He would prefer holding the graduate program review the same year as the accreditation visit.

6. Request of postponement of Zoology Graduate Program Review

Joe Beatty, Executive Associate Chair, Zoology Department was introduced to the Council. He presented the Department's request for postponing the Zoology Graduate Program Review from Winter 2011 to Spring 2011. He indicated that this request is due to the fact that the department is currently involved in three faculty searches, two P&T cases, in addition to the reorganization in the Life Sciences. All these activities require a large amount of committee work.

7. Discussion of 5 and 6 above

Theresa Filtz wondered why a postponement of a program review within the same academic year should really matter to the Graduate Council. Couldn't the Graduate School make the decision instead? A discussion regarding the criteria and principles for postponement followed and resulted in the following:

Principles for allowing postponement of Graduate Program Reviews:

1. When synchronizing within plus/minus one year with either professional reviews or accrediting body reviews; when and if requested.
2. When eliminating the program.
3. When reorganizing and a Category I proposal will be used to change the program. In this case a one year postponement will be approved and the Cat I must be submitted within that year. If the Cat I is not submitted, the review will take place a year from the originally scheduled date.

It was also decided that the 10-year review cycle starts when the first student is enrolled in the program

The Graduate Council approved postponement of both the Zoology Graduate Program for a term (Spring 2011) and the Master of Public Policy Graduate Program for one year (2011-12).

8. Accreditation:

Loveland indicated that he is the Council's representative on the Accreditation Committee. OSU is the first PAC-10 university to undergo this review by the NWCCU group, after the standards have been changed. We will be evaluated in three areas: undergraduate education, graduate education and

research, and outreach and engagement. These areas are called the "Core Themes" of the University. We will be judged by certain "institutional indicators." A request has been made to provide data for these indicators and assign a "grade" for each indicator/objective/Core Theme.

The timeline for this review is:

- Data will be given to the groups by October 15th;
- Preliminary Review by November 30th;
- Report to the Accreditation Committee by December 15th;
- Accreditation Report to be submitted to the NWCCU by end of February 2011.

He then asked Council members their opinion on how to approach this process. Should the Council be divided in two groups, each group would review half of the objectives; or should the whole Council review all the objectives? We will need to define the expectations, and answer Objectives 2.1 & 2.2. The document will be short.

After a short discussion, the Council decided to dedicate meetings at the end of October or early November to work on the Accreditation project, as a group.

9. **Assessment:**

Gita Ramaswamy, Director of Assessment, presented the Graduate Student Learning Outcomes (GSLO) Based Assessment which she was charged by the Provost to lead. She, with a colleague, led this project at Purdue University.

She indicated that Assessment is the accreditation agency requirement. Assessment needs to be kept simple and meaningful. There is a tie between outcomes assessment and quality of graduate education if we focus on graduate students' success. The most important reasons for dropping out of PhD programs are 1) Lack of mentoring; and 2) Personal reasons (family and cost). The Council of Graduate Schools has conducted major studies of problems with doctoral degree completion. Ramaswamy will forward information about the [CGS studies](#) to Council members.

Meeting adjourned 1:00 PM.

Graduate Council

GCmin20100429 Minutes

Grad Council Members Present:	Carolyn Aldwin (HHS), Rick Colwell (COAS), Theresa Filtz (Pharmacy), David Hibbs (Forestry - substitute), Nancy King (Business), Denise Lach (CLA), Walt Loveland, Chair (SCI), Kathy O'Reilly (Vet Med), Darlene Russell (Education), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Chris Lenn (Student Representative), Vinod Narayanan(ENGR)
Ex-officio Members Present:	Gita Ramaswamy
Ex-officio Members Absent:	Martin Fisk
Support Staff Present:	Nagwa Naguib

1. Approval of Minutes – April 22nd, 2010

Rick Colwell noted a correction to the minutes as follows:

3. Fisheries & Wildlife – Category I Proposal – Dan Edge, Chair, Fisheries & Wildlife Department
3rd paragraph, 2nd sentence:
...largest *resistance* came from the alumni...

April 22nd minutes approved with above corrections in underlined Italic.

2. Updates from the Chair

Walt Loveland informed the Council that we will cancel next meeting scheduled for May 6th. We still have a few items in the pipeline which are not ready to be discussed by the Council yet. Remaining agenda items to be discussed before the end of Spring term are 1) the Fisheries & Wildlife Category I – PSM, 2) reducing the Graduate School operations, and 3) Council's work during summer term

David Hibbs added that the Department of Forest Ecosystems and Society is reorganizing, so a Category I proposal is underway.

Loveland proceeded by saying that Becky Warner, on behalf of the Strategic Alignment/Budget Reduction Review Committee (SABRRC), has been responding to the colleges' March 15th proposals with a statement that "budget projections for the next biennium indicate that additional cuts will probably be necessary, possibly in excess of 10%." He was not sure why she was making this statement, as he has not heard it anywhere else.

3. 5xx/6xx/7xx DVM courses

Loveland informed the Council that he had a conversation with Dean Cyril Clark who stated that there were several examples of 5xx/6xx/7xx courses taught in the same room at the same time and he (Clark) regarded them all as graduate courses.

Theresa Filtz remarked that the College of Pharmacy has subsets of 5xx courses, but graduate students attend along with didactic students. They are under different syllabus with different subjects, and sometimes with different exams. They are treated as separate courses. Graduate students do not sit in the professional classes.

O'Reilly then indicated that she does not agree with Dean Clark that all the courses are the same. The problem is that no one remembers how the 7xx were sent through the Graduate Council. Filtz agreed that those courses should not go through the Council, and that it is a computer system glitch. Those courses should only go to the Curriculum Council for approval.

Loveland informed the Council that Marty Fisk has suggested a resolution as follows:

"The syllabi of cross listed courses at the 5xx/6xx/7xx and 6xx/7xx level must be approved by the Graduate Council if the course is to be used on a Master's or Doctoral program of study."

All the grandfathered courses should go through this system. He then asked the Council members what they thought should be done.

O'Reilly confirmed that 7xx courses used on graduate programs should go through Graduate Council approval. Filtz reiterated that the student learning outcomes for professional students should be different than that of graduate students.

O'Reilly suggested that next year's reviewers of the Category IIs need to be paired with other reviewers with close disciplines and colleges.

Loveland went on suggesting that he will try to get the 7xx courses out of the computer system. He also confirmed that the 5xx/6xx courses need to have graduate level outcomes.

4. Fisheries & Wildlife – Category I Proposal – Continuation of Discussion.

Loveland reminded the Council that a decision on the F&W Category I proposal for renaming the department has not been made. He asked if it should be approved and sent forward.

David Hibbs indicated that they clearly do conservation biology, but it is limited in scope. There are a large number of faculty in other departments/programs on campus who do conservation biology as well. What does it mean to put it in their names in the F&W proposal and how it will be interpreted by outside people? Denise Lach reminded the Council that Fisk had pointed out, at last Council's meeting, that the department does not offer a conservation biology graduate program. The name change will not affect this issue.

Hibbs pointed out that F&W has a Category I proposal looking at an area of concentration in conservation biology. Lach proceeded to remind the Council that OSU has a high ranking in conservation biology, so if only one of the departments or programs will have conservation biology in their name, it will become a confusing issue.

Tom Wolpert wondered where the student goes to, if they are seeking a conservation biology degree. Filtz indicated that Dan Edge mentioned that the department was not interested in starting a conservation biology degree. Carolyn Aldwin corrected this statement saying that Edge thought it would be a great idea to have a PhD degree in conservation biology. Colwell suggested that young faculty should take the initiative to start a graduate program in this field. Lach suggested that conservation biology should be an interdisciplinary program. Loveland pointed out that on page 34 of the proposal, it is mentioned that "an interdisciplinary MS Degree in Conservation Biology has been discussed and that they are intending to pursue it regardless of the outcome of the proposal."

A long conversation followed and included the following points:

- International students, with a desire to get a degree in conservation biology, will have a difficult time figuring out where to go and who to contact.
- It is a very popular and a very important topic that OSU should capitalize on.
- If a department wants to name themselves something, they need to have a degree in that field.

- A lot of people on campus care about conservation biology, otherwise it would not be an issue.
- There is a need to create a conservation biology graduate program.
- F&W need to be informed that there should be an academic piece as well as a research program.

Motion: Graduate Council does not approve the name change of the Department of Fish and Wildlife to become Department of Fish, Wildlife and Conservation Biology for the following reasons:

1. Objections among the liaisons; and
2. The Department does not have a graduate program in Conservation Biology

Kathy O'Reilly moved, Theresa Filtz seconded, and Tom Wolpert abstained. Carolyn Aldwin did not approve the motion. Motion passed.

GRADUATE COUNCIL

April 22, 2010
2:30 pm – 128 Kidder Hall
Agenda

Grad Council Members Present: Carolyn Aldwin (HHS), Rick Colwell (COAS), Theresa Filtz (Pharmacy), Nancy King (Business), Denise Lach (CLA), Walt Loveland, Chair (SCI), Kathy O'Reilly (Vet Med), Darlene Russ-Eft (Education), Jo Tynon (Forestry), Tom Wolpert (AG SCI)

Grad Council Members Absent: Chris Lenn (Student Representative), Vinod Narayanan (ENGR)

Ex-officio Members Present: Martin Fisk, Gita Ramaswamy

Support Staff Present: Nagwa Naguib

Guests: Dan Edge, Chair, Fisheries & Wildlife; Ilene Kleinsorge, Dean and Jim Coakley, Associate Dean, College of Business; Rosemary Garagnani, Assistant Dean and Mary Strickroth, Coordinator of Graduate Services, Graduate School

1. Approval of Minutes – April 8th, 2010

Walt Loveland noted a correction to the minutes as follows:

- 2nd paragraph, 4th sentence:
..... and the Senate will consider the *Oceanography* proposal at its May meeting.

April 8th minutes approved with above corrections in underlined Italic.

2. Updates from the Chair

Loveland reminded the Council that last year the Council approved the Applied Economics Category I proposal. Course proposals for this program are submitted by the Graduate School and are designated as AEC. He then indicated that he had received about a dozen proposals seeking to convert existing AREC/ECON courses to AEC courses. Economics does not agree with this change. Loveland went ahead and decided on behalf of the Council to ask AEC to rewrite all the course proposals leaving ECON courses alone. This action is based upon the principle that one cannot eliminate courses of a department without their consent. (Economics wanted to use those courses in their public policy degree.) This proposal will be reviewed by the Curriculum Council. AEC faculty were not enthusiastic about this decision.

3. Fisheries & Wildlife – Category I Proposal – Dan Edge, Chair, Fisheries & Wildlife Department

Following the introductions, Loveland informed the Council that the Category I proposal to rename Fisheries & Wildlife (F&W) needed to be approved by the budget and fiscal planning group. An email from the Chair of the group, Jeff McCubbin, indicated that the committee had no objection to the name change proposed by F&W based on fiscal impacts.

Dan Edge introduced the proposal to rename the F&W department to Fisheries, Wildlife and Conservation Biology Department: the proposed new name will help better represent the nature of the department's mission to the university, the students and the public. He then proceeded by saying that the idea was introduced about five years ago during the faculty retreat. They had a vigorous debate between the three groups, namely fisheries biology group, wildlife biology group, and conservation biology group. A large number of names were introduced and debated. They finally decided on the Fisheries, Wildlife and Conservation Biology Department. A large number of junior faculty are in the field of conservation biology.

Two years ago, the department then proceeded to survey stakeholders, alums and students. The largest resistant came from the alumni group as they thought the name did not sufficiently describe their fields.

The Department surveyed another group of liaisons. Three areas of concerns were identified as well as a large number of alternative names. Some of the concerns were:

- How can F&W be doing this while everything on campus is changing:
 - The department has been working on this for more than two years. There are no other departments with "conservation" in their names. It did not make sense to wait when the College of Agricultural Sciences has already listed the new name in their restructuring plan.
- Conservation Biology being represented as an interdisciplinary profession:
 - It is a biological science; F&W department is the only one doing it on campus. The department has been listed in the Society for Conservation Biology for the last 10 years and has more graduate students in Conservation Biology than any other department on campus. There is a difference between expressing interest and fully doing it. A comment from Lynda Ciuffetti indicated that Botany & Plant Pathology (BPP) would support the name change contingent on being able to develop interdisciplinary degrees or options in BPP in restoration ecology or conservation biology. Many environmental science graduates take F&W courses.

The liaisons identified several names and Edge responded that most of the faculty wanted to make sure that there are three components in the name. Hal Salwasser suggested a longer name. Others suggested "science" instead of biology. Conservation science was not acceptable to the faculty. There is a professional

society with an identifiable discipline, and science is too broad and outside the realm of biology.

Loveland asked if, in historical context, the issue of people was an interest in plants. Edge responded that plant conservation biologists are mostly in the Department of Botany and Plant Pathology. Denise Lach stated that conservation biology is an emerging discipline, when the two words are put together, a new discipline is created. It is really narrow. She then wondered why it was not defined in the department's curriculum, if they wanted to become leaders in the field. Edge responded that there are two levels to the discipline: research and curriculum development. The department has a defined interdisciplinary master in biology across campus. Working on curriculum with other departments on campus is a challenge. On the other hand, they build coalitions as far as research is concerned, as twenty five percent of the grants are being submitted together with other departments.

Carolyn Aldwin wondered if an umbrella for a PhD program in Conservation Biology might get other departments interested in supporting the name change; and not as an alternative to the masters program. More people might be willing to work in this area. Edge pointed out that Brenda McComb does not support the name change as she herself is a conversation biologist. She indicated that it would not have been a problem if the two departments resided in the same college. Lach suggested that some faculty may be lured to the department from other departments. Loveland commented, in the case of moving to F&W from other departments, that there were principles that Becky Warner suggested, and Memorandum of Understandings between the two deans. Edge commented that there are different commitments from colleges to their individual faculty.

Jo Tynon asked what the level of support vs. no-support was, and what was the feeling about the lack of support from the College of Forestry? Edge responded that there is a total of six conservation biology faculty each from Botany & Plant Pathology, Forest Ecosystems and Society and Forest Engineering, Resources and Management. Marty Fisk pointed out that currently there is no major in conservation biology on campus and wondered where should this major reside.

Edge proceeded by answering the Council members' questions as follows:

- Proposing a master's degree in conservation biology, as students are attracted to conservation biology.
- Number of new graduate students will not increase.
- Graduate students can easily find the master's degree in conservation biology by doing a web search for faculty with expertise in the field they are interested in. It will be managed the same way as other interdisciplinary programs, e.g. ESGP and MNR.
- Eighty percent of the department's faculty are supporting the new name.

3. MBA Degree Program Outside of the Graduate School – Ilene Kleinsorge, Dean and Jim Coakley, Associate Dean, College of Business (COB)

Loveland began by informing the Council that there have been some correspondences regarding the proposal submitted by Dean Kleinsorge to Provost Randhawa about the MBA degree program transitioning out of the Graduate School (GS). Marty Fisk prepared a response highlighting the Graduate School's current role in monitoring the MBA program.

Dean Kleinsorge proceeded by thanking the Council for giving the College of Business the opportunity to present its proposal. The MBA program is a small program. It graduates sixty students a year, with an average of ninety students in the whole program. There is a need and desire to grow the graduate student population to 20% of the total student population. The MBA has a global graduate distinction. INTO at OSU requested 50 slots in the MBA next year expecting to transition to 40 students. The COB saw the opportunity to grow and started thinking about how to ramp up the program to include the INTO students, as well as recruiting domestic students. In the early 1990's, 62% of the student population was international students. The faculty decided not to have more than 50% international. Currently, the international students form 20% of the total population. They are looking at this transition as part of the strategy to grow a robust MBA program, up to 250 students a year. They would like to eliminate redundancy. The request, as in the case of Veterinary Medicine and Pharmacy, is to take control of the processes from admissions to graduation, while maintaining and retaining the Graduate Council policies. The COB is asking for the Council's advice on how to transition the MBA program from the GS to the COB. She also indicated that Associate Dean Jim Coakley will be in charge of this transition.

Loveland reported that Provost Randhawa is funding this transition as a pilot program. Kleinsorge noted that the extra funds will be used for domestic recruitment. Jim Coakley indicated that the goal is to double or triple the student population and make the process more efficient.

Loveland wondered how to set up a matrix to evaluate the success of the program. Kleinsorge responded that a baseline will be established this May with the MBA Graduate Program Review. The new processes will be reviewed in two years. Tom Wolpert asked about the MBA accreditation process. Kleinsorge responded that accreditation reviews occur every five years. Those include a spot check of what is working and what is not working, an assurance of learning that is very vigorous, learning objectives of the program, external reviewers to judge the students, and several requirements for the faculty. The American Assembly of Collegiate Schools of Business (AACSB) is the accreditation association which has been in existence for a long time.

Coakley reiterated that the COB monitors its MBA students, which becomes redundant with what the Graduate School performs. The faculty will continue being involved in streamlining the processes.

When asked if the course numbers will be changed from 5xx to 7xx, Kleinsorge responded that they had no intention of making this change. She also indicated that they already control the tuition, are not planning on moving from the Graduate Council as it is responsible for setting up policies for graduate programs, and the strategy is to partner with other programs, e.g. MEng. Coakley pointed out that the MBA is a non-thesis program.

Loveland pointed out that the list prepared by Fisk indicates that professional schools processes are not monitored by the Graduate School.

As far as the MBA admission process, Kleinsorge noted that the COB approves the applications for admission, and then send them to the Graduate School for review. Not one application has been denied by the GS. They also do the graduation audits. Their goal is to streamline and get to the potential students in a timely manner, and respond quickly to qualified domestic students. She also indicated that she has had a conversation with Fisk regarding the difficulty in reviewing international transcripts.

Loveland proceeded by saying that other groups on campus might be interested in going this independent route. Fisk stated that there would be no problem for the COB to do their own admission, but this would not apply to other departments or colleges without an accrediting body. These are two different issues.

Rick Colwell wondered if the COB was intending to articulate this plan at the upcoming MBA Program Review. Kleinsorge responded that, so far, this is just a proposal and the COB is seeking feedback. It is an opportunity for advice on the transition from the GS and on growing the MBA program.

Fisk informed the Council that Dean Sally Francis' opinion is if this proposal is approved, that all the processes for the MBA should be moved out of the GS. He then pointed out that the students will not have a central point to go to and it would create some confusion.

Jo Tynon wondered how many students were lost due to the current procedure done through the GS. She pointed out that the longer turnaround in the admissions process is not a good reason for moving forward with this proposal. When asked about the turnaround time for reviewing MBA applications, Rosemary Garagnani indicated that as of that day, there were 26 fall term admits, with a median turnaround of 4.5 days and an average turnaround of 6.8 days. Those admitted include both domestic and international MBA applicants.

Kleinsorge would like the opportunity to meet with the Graduate School to find the most effective way to deal with the transition, and identify best practices. More discussions followed.

Once the Graduate School and the COB meet, the Council will revisit the proposal.

Adjourned 4:35 pm

GRADUATE COUNCIL

April 8, 2010

Minutes

Grad Council Members Present:	Rick Colwell (COAS), Theresa Filtz (Pharmacy), Denise Lach (CLA), Walt Loveland, Chair (SCI), Kathy O'Reilly (Vet Med), Jo Tynon (Forestry), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Carolyn Aldwin (HHS), Nancy King (Business), Chris Lenn (Student Representative), Vinod Narayanan (ENGR), Darlene Russ-Eft (Education)
Ex-officio Members Present:	Martin Fisk, Gita Ramaswamy
Support Staff Present:	Nagwa Naguib
Guests:	Tom Eversole, Health and Human Sciences and Susan Tornquist, Veterinary Medicine.

1. Approval of Minutes – March 3rd, 2010

Martin Fisk suggested corrections to the March 3rd minutes:

5. History of Science Graduate Program Review Follow-Up

3rd paragraph, 4th sentence: add *of science* as follows:

...Nationwide, history of science programs have an average of only two PhD students a year.

March 3rd minutes approved with above corrections in underlined Italic.

2. Updates from Chair

Walt Loveland reported that all OSU units were to submit their Strategic Alignment proposals to the University Leadership by March 15. The reports, some of which are still in draft stages, have been posted on the web. They will still need to be vetted by the faculty in the respective units. Leslie Burns sent an email indicating that SABRRC is currently reviewing all the proposals and will be forwarding them to the Provost by May 31st. The President and Provost will announce the decisions and next steps on the implementation plan in early June. He noted that nothing will be implemented during Spring term, so the Council will be reviewing very few or no Category I proposals related to restructuring this term.

He then indicated that the Department of Fisheries and Wildlife has been circulating a Category I proposal changing the Department's name. For them to get it approved, Hal Salwasser the Executive Dean of the Division of Earth Systems Science should be on board, but it seems that he does not like this proposal. The Provost informed Salwasser that those proposals will not be considered this term. However, Leslie Burns has stated that faculty governance determines the process and the Senate will consider the Department of Fish & Wildlife proposal at its May meeting.

Fisk reminded the Council of last fall's email from the Provost in which he outlined the implementation of the OSU Strategic Plan. The Administrative and Academic

Systems Guidelines reflected a maximum of 4 levels of management; minimum of 6 direct reports; minimum of twelve students in each graduate course, which has been reduced to less than 10 students; majors should graduate an average of five master's students per year, and two PhD degrees per year over three years.

The reports from the units show that they are trying to conform to this model. Oceanography, for instance, is trying to meet these criteria by combining three majors into one. They are also considering combining COAS with Geosciences to create a College of Earth Sciences. There are discussions around campus regarding the creation of the new institutes and schools in different colleges. He then proceeded to say that the Administrative units too had to submit reports. All of the graduate programs reporting to the Graduate School meet the criteria except for the Water Resources Graduate Program as it is quite a new program. He invited Graduate Council members to comment on the Graduate School report.

3. DVM/HHS Dual Degree

Tom Eversole joined the meeting. Susan Tornquist joined a few minutes later. Eversole provided the following proposed motion:

Proposed Motion:

- *Students may co-enroll in professional and graduate programs. This will be referred to as enrollment in a 'dual degree' program. Enrollment in each program will require a separate admissions decision. Only students who have completed a Bachelor's degree may enroll in a graduate program.*
- *For students enrolled in a dual degree program, enrollment in either professional courses or graduate courses will satisfy the continuous enrollment requirement of the Graduate School for a specific term.*
- *Students may use 'graduate approved' courses in professional programs (specific graduate approved 7XX courses) as also satisfying the requirements of their graduate program if taken while co-enrolled as a professional and graduate student. Responsibility for defining a student's graduate program, including selection and approval of the student's curriculum, lies with the student's graduate committee. In this and all other aspects, the progression of students will follow normal processes and policies for a graduate program established by the Graduate Council and implemented by the Graduate School will be followed.*
- *Completion of graduate programs will be confirmed and degrees granted using established Graduate School procedures. Completion of professional programs will be confirmed and degrees granted using established procedures for the respective colleges.*

Proposal moved by Jo Tynon, seconded by Kathy O'Reilly.

Eversole presented the motion to the Council by indicating that the Colleges of Veterinary Medicine and Health and Human Sciences would like to implement a dual degree program of DVM/MPH. The DVM is a professional degree not overseen by the Graduate School and the MPH is a Masters degree in the Graduate School. They have the pieces in place to implement it. Students will save a year as they could complete this degree in five years instead of six. Winter term of Year 2, they will take professional courses (7XX) in VM and Public Health, and Epidemiology

courses, which would apply to both the DVM and the MPH. The latter is a non-thesis degree.

Fisk wondered if they can restrict the enrollment in the 7XX courses to students in the dual degree programs.. Eversole responded that the student will need to be admitted to the program to earn the dual degrees. Susan Tornquist indicated that occasionally this happens, and given certain conditions, it might happen again.

Fisk asked how taking 10 or 12 credits of dual counted courses as given in the example will lead to a compression of the program from six to five years.

Eversole indicated that the MPH is mostly done in a period of two years. This program allows students to compress their degrees.

When asked what the expectations from the students were, Eversole responded that they wanted them grounded more in the Vet Med courses, and this will occur when they take public health courses during summer term. Loveland pointed out that the curriculum lists a large number of required courses.

Eversole proceeded by saying that in Public Health, the students present a paper summarizing their internship, followed by an oral exam. He clarified that the main concern is the funding from the federal agencies in form of scholarships. Different agencies, eg. WHO, CDC, as well as the military, offer a number of internships to the MPH students.

Fisk reminded Eversole that the Graduate School will hold MPH students to the 7-year masters rule. The 7-year rule starts at the first course of enrollment. If they are on assistantships, they will need to register for 12 credits.

Loveland pointed out that the motion points are all taken from the PharmD/PhD motion approved by the Council at its February 19th, 2010 meeting. Theresa Filtz wondered if there was a different track than the epidemiology one. Eversole responded that international health could be another track.

The Council agreed that VM7XX courses approved for use on the MPH degree would need to be approved by the Graduate Council through the Category II approved process.

Motion: DVM/MPH is approved as a dual degree program following the same guidelines established for the PharmD/Phd. Motion passed.

4. Category I proposal – Terminate Comparative Vet Med Degree

O'Reilly informed the Council that all the students registered in that degree, are MCB students, an average of one or two students a year. Loveland asked if any OUS school would object to this action. O'Reilly responded that this move will be better for the students as they will be trained more broadly. Rick Colwell asked what prompted the creation of this degree. O'Reilly responded that at the time of its creation, there were students in the program. As biology evolved, and more faculty joined the College, this PhD program has become less and less used. Gita Ramaswamy wondered how the research funding will be affected. Students come in and are funded by the faculty, so there is no financial implication to this degree termination. The College's funding is increasing.

Motion: Terminate Comparative Vet Med Degree. Tom Wolpert moved, Theresa Filtz seconded. Motion passed.

5. Accreditation Process - Core Theme #2: Graduate Education and Research

Loveland provided the Council with a draft of the Steering Committee's goals for Core Theme #2: Graduate Education and Research. He then informed the Council that the University set some milestones to get the accreditation process underway. The process will include establishing the mission of the University and the three core themes.

The themes established by the Accreditation Steering Committee are:

1. Undergraduate Education;
2. Graduate Education and Research; and
3. Outreach.

The Graduate Council as well as the Research Council will be involved in Core Theme #2, Graduate Education and Research. We will need to define the graduate education as it is practiced at OSU, being a research university.

Denise Lach suggested changing the Core Theme #2 to *Research and Graduate Education* to cover both undergraduate and graduate research. She also suggested adding scholarship to research and education.

The Council discussed the document and suggested changes for Loveland to take to the Chris Bell, Chair of the Accreditation Steering Committee and Committee members.

6. Creation of PSM Programs

Loveland introduced the agenda item regarding Creation of PSM Programs. He indicated that units want to go forward with different PSM programs. He asked if we wanted each unit to submit a Category I proposal for each PSM program. Should they be abbreviated processes, i.e. Category II proposals? Email correspondences have been occurring with Susie Leslie, Leslie Burns, Ursula Bechert, Sally Francis, Marty Fisk and Michael Harte regarding this process. Susie Leslie indicated that she would be comfortable with the Category II process. Loveland wondered if the Budgets and Fiscal Planning Committee (BFPC) and/or the Faculty Senate Executive Committee need to review those proposals. Leslie Burns agreed that it would be appropriate for committees like BFPC to review and provide input on Category II proposals. There is no need for existing programs who want to add an option of a PSM degree, to submit Category I proposals which will require an external review or an OUS approval. He asked the Graduate Council how they would like to deal with the new PSMs.

Lach wondered why those proposals should not be reviewed as Category I proposals, if they are new graduate programs? Loveland responded that Category I implies a long time cycle for approval. Tynon suggested that this issue should be given a thoughtful consideration, and not being pushed expediently.

Fisk noted that those PSM proposals are in areas where they already have masters degrees and non-thesis options. The number of credits has increased to 30 credits of science core, 18 credits of professional courses and 6 credits of internship. The professional courses are roughly equivalent to a minor on a 45-credit masters but the PSM requires more than 45 credits. Submitting a Category I for a slight

modification might not be the best approach. He then reported that Sally Francis suggested that the OUS Provosts Council would not want to see these proposals. The State is backing the PSMs in a great way.

Tom Wolpert remarked that some masters' degrees are escape routes, as they are non-thesis. Fisk suggested the students could get a traditional non-thesis masters including the newly proposed PSM certificate and thus meet all the requirements for the PSM. A short discussion followed. It was suggested that a Category II to create a PSM in a programs that already has a non-thesis masters might be one way to create new PSMs. Fisk reminded the Council that the Fisheries and Wildlife has submitted a Category I proposal to create a PSM because they do not have non-thesis masters degrees in that program.

The Council indicated that the critical elements in approving new PSM degrees would be : (a) library evaluation (b) BFPC evaluation (c) GC approval and (d) CC approval. Any process that includes these elements would be acceptable.

Adjourned 9:45 am

GRADUATE COUNCIL

March 3, 2010

Minutes

Grad Council Members Present: Carolyn Aldwin (HHS), Rick Colwell (COAS), Nancy King (Business), Walt Loveland, Chair (SCI), Kathy O'Reilly (Vet Med), Jo Tynon (Forestry), Tom Wolpert (AG SCI)

Grad Council Members Absent: Theresa Filtz (Pharmacy), Denise Lach (CLA), Chris Lenn (Student Representative), Vinod Narayanan (ENGR), Jessica White (Education)

Ex-officio Members Present: Martin Fisk

Support Staff Present: Nagwa Naguib

Guests: Bob Duncan, Oceanic and Atmospheric Sciences; Aaron Wolf, Geosciences; Jonathan Katz, History of Science

1. Approval of Minutes - February 19, 2010

Fisk suggested corrections to the February 19th minutes:

- a. Item #3, para #10:
O'Reilly pointed out..... degrees are accredited outside the university.
- b. Item #3, para #12:
After a short discussion, a vote was taken and the amendment was rejected.
- c. Item #4, para #1:
Loveland pointed out that there is a typo on the first line of the Policy distributed with the agenda that will need to be...

Minutes from February 19th, 2010 approved with above corrections in underlined Italic.

2. Updates from Chair

Walt Loveland announced that Theresa Filtz asked that she be excused from reviewing the Lottery Scholarships applications. As there were no volunteers to replace her, Loveland proposed asking Darlene Russ-Eft, who would replace Jessica White on the Council during Spring term, to review them. Later on, Darlene Russ-Eft agreed to review the Lottery Scholarships applications.

Loveland also informed the Council that the State Legislature requested the OUS System to evaluate changing to the semester system. Aldwin mentioned that when the University of California System studied this option, they found it would be very expensive to change and they abandoned the idea. O'Reilly asked why people like

the quarter system. Wolpert responded that students hit a barrier at 10 weeks, and semesters are 15 weeks long.

3. Discussion of Graduate Review Reports from Environmental Sciences, NE/RHP, and Fisheries and Wildlife

Walt Loveland opened the discussion about the two follow-up reviews and the regular review presented to the Council at its last meeting:

- a. *NE/RHP*: Even though the graduate program is a strong one, the RHP program has been put on a watch list due to low enrollment. Graduate student support is limited with about 30-40 graduate students (out of 130) being supported.

Motion: Nancy King moved to accept the Follow-Up report. Rick Colwell seconded. No further discussions. Follow-Up Report accepted.

- b. *Fisheries and Wildlife*: The program has implemented all recommendations from the Review Panel. Another strong program.

Motion: Tom Wolpert moved to accept the Follow-Up report. Carolyn Aldwin seconded. No further discussion. Follow-Up Report accepted.

- c. *Environmental Sciences Graduate Program (ESGP) Review*: Loveland indicated that he was disturbed about the fact that the ESGP students felt that they did not belong to a department or college. Is the College of Science pulling out its support? The Biology Program provides six GTAs. Another concern is the fact that the Review Panel recommended that the program continues with its current level and not increase its enrollment which is currently about 45 students. Loveland then asked Aaron Wolf (guest for the Cat I proposals from COAS) if he had an insight regarding having ESGP move to the Division of Arts and Sciences in the new organization. Wolf responded that a conversation with the director, Andy Blaustein, will occur at a later stage.

The University Budget Committee (UBC) chaired by Loveland was charged twice by the Provost to look into the interdisciplinary program models. That group recommended that either a "pass the hat" model be used (involving support by the Deans) or the programs be housed in the Grad School with limited financial support.

Fisk pointed out that the ESGP is not entirely in the College of Science, but includes education, public policy, agricultural sciences, engineering, oceanography, and forestry. If the program moves under one college, the budget for these programs will stay with the colleges they came from. Loveland suggested that this issue should be raised with Provost Randhawa when the Review Panel member, the director of the program, and the Dean of the Graduate School meet with him on April 2nd, 2010. He needs to know that they have outgrown the support they are currently receiving. Different financial models should be discussed.

Motion: To accept the report and emphasize the financial model to the Provost during the discussion in early April. Jo Tynon moved. Walt Loveland seconded. Motion approved.

4. Category I Proposals from Oceanography

The guests, Bob Duncan and Aaron Wolf, were introduced to the Council members. Duncan started by introducing the Category I proposals from Oceanography. COAS has three graduate degree programs, namely Atmospheric Sciences (MA, MS, PhD), Oceanography (MA, MS, PhD), and Geophysics (MA, MS, PhD). They are proposing a name change to consolidate the three current related graduate majors into a single major program of study. The degree will change its name to the *Program of Ocean, Earth and Atmospheric Sciences* while the Atmospheric Sciences and Geophysics degrees will be terminated.

Penn State and Wisconsin, the comparators, are behind OSU, as they don't have oceanography programs. The idea was to merge the three programs into one. The only change in curriculum for the students is the addition of the three introductory core courses that provide interdisciplinary foundation required for all COAS students.

Loveland wondered about the overlap with the College of Science degrees. Wolf responded that this is not a concern for either the College or the Department of Geosciences who are offering a full support to COAS and to the Category I proposals. Geosciences faculty collaborate very well with the COAS faculty. Geophysics students are advised by Geosciences and COAS faculty. Geosciences is also developing undergraduate degrees with COAS. When asked if Geosciences offered MS and PhD in earth sciences, Wolf indicated that under the Earth Sciences umbrella, graduate degrees are offered in Geology, Geography and Earth Sciences.

Duncan commented that they would like Geosciences and COAS degrees to be in the same unit. Several reasonable alternatives to the divisional restructuring have been discussed and it is not clear where the programs will end up. He also indicated that they are working on a Category I proposal for the undergraduate degree, to be submitted in the fall term.

Aldwin asked for the reasons why the Environmental Sciences program is not part of this reorganization. Wolf responded that this could happen in the future. Fisk pointed out that the faculty in this program come from seven different colleges.

Duncan added that the designator for the new courses is OEA, that there are no more slash courses, but they will become only 500 credit courses. A different curriculum will be established to satisfy the marine science and oceanography for undergraduate students, and a Category I is being written to create this.

Wolpert wondered what COAS' response is to Cary Green's comment that the name change should wait until the reorganization has been completed. Duncan responded that Dean Sherm Bloomer sent a comprehensive email with which he supports the proposals. He proceeded to read the email. He then indicated that the Executive Dean of the Division of Earth Systems Sciences, Hal Salwasser, was given the opportunity to respond, but COAS has not received his feedback. The process began before the divisional structure started. It is an in-house issue and COAS would like to see its graduate programs develop.

Loveland proceeded by saying that his understanding was that the Executive Dean of a division should have their names on any Category I proposal. He will check with Becky Warner and will inform the Council members.

Both Duncan and Wolf were thanked and excused. The discussion proceeded. Colwell added that COAS wrote a letter to the Provost with the request to integrate earth sciences, in an effort to organize the faculty in a way to bring COAS and Geosciences together. Unfortunately, the Administration did not respond to this request.

Motions:

1. Loveland to contact Becky Warner regarding clarification if the Executive Dean of a division should be signing off on the Category I proposals.
2. COAS would make minor changes to the proposal regarding the slash courses to change them to 5xx courses.
3. Loveland to email Council members and ask for their approval, then will send the proposals on to the Curriculum Council.

Defer approval until clarification and revisions are made. Aldwin moved. Tynon seconded. No further discussions. Motions passed.

Following the Graduate Council meeting, Walt Loveland reported by email the following:

1. He contacted Becky Warner who clarified that the Executive Deans do not sign Category I proposals, but they are expected to provide liaison comments on them from the perspective of their College and their Division. Hal Salwasser was contacted and indicated his support and approval of the Oceanography Category I proposals on behalf of the College of Forestry and the Earth Sciences Division.
2. Bob Duncan edited the proposals to change references to 4xx/5xx core courses to 5xx courses.
3. The Curriculum Council would like to take up the Oceanography proposals at its 12 March meeting.

He proposed to the Council the following resolution/action:

The Graduate Council recommends approval of the three Category I proposals from Oceanography to:

- (a) terminate the Graduate Degree in Atmospheric Sciences (MA, MS, PHD)
- (b) to terminate the Graduate Degree in Geophysics (MA, MS, PHD)
- (c) to rename the Graduate Degree in Oceanography to a degree in Ocean, Earth and Atmospheric Sciences (MA, MS, PHD).

The Council notes that there are similar programs being developed for undergraduate students that will be discussed in forthcoming Category I proposal(s). Much of the Graduate Council's discussion centered around the relationship between these proposals and the proposed School of Earth and Environmental Sciences in the College of Science. It appears the faculty of Oceanography and Geosciences are committed to mutually supporting each other's efforts in graduate education in the Earth Sciences. With this in mind, the Graduate Council was not concerned about the apparent overlap between the programs and degrees.

Council members approved, by email, the above resolution.

5. History of Science Graduate Program Review Follow-Up

The guests, Jonathan Katz and Bob Duncan were introduced to the Council members. Duncan reported that he was presenting the Follow-Up report on behalf of Tom McClain who chaired the earlier Review Panel, but could not be present today. Both McClain and Duncan met last November, with History Department Chair Jonathan Katz to discuss the progress in carrying forward the Action Plan.

The program has taken on the Review Panel's recommendations, and all the areas have been strengthened. An increase in number of core faculty (33% more), in number of graduate students, in financial support and office space for graduate students among other things, has been accomplished. The Department of History has also been in discussion with the Department of Philosophy in the goal of combining both programs into a History and Philosophy Department.

Loveland asked what are the biggest challenges the program faces. Katz indicated that their challenge is the lack of funds and the number of students. The expansion of history and philosophy into one department will help. Nationwide, history programs have an average of only two PhD students a year. Wolpert asked how many stand alone graduate courses are offered. Katz responded that they try to always offer one stand alone course each term. The History of Science graduate program is the only PhD program (*Note: This is incorrect. Applied Anthropology has a Ph.D. program*) in the whole College of Liberal Arts (CLA). They feel that the CLA dean does not embrace the program, and would like to receive a reassurance from him. He also reported that he contacted as many alums as he could find, to check on the record of their placements after graduation. The result is very impressive.

Duncan suggested that there could be a good opportunity for the History of Science faculty to take the lead in the Responsible Conduct of Research (RCR) course that was offered last fall by both the Graduate School and the Research Office. Fisk followed up by saying that he, indeed, contacted Mike Osborne regarding leading the course. This would be a great service to the university to have faculty with the History of Science background involved in teaching this course.

Motion: Accept the History of Science Graduate Program Follow-Up Report. Tynon moved. O'Reilly seconded. No further discussion. Motion passed.

6. Spring Term Meetings

Loveland wondered if spring term meetings should start the second week of the term; Council members agreed. Vickie Nunnemaker will solicit times and dates from Council members and will schedule weekly meetings, which will be needed because of all the Category I and II proposals in the pipeline.

Graduate Council

February 19, 2010 Minutes

Grad Council Members Present:	Carolyn Aldwin (HHS), Rick Colwell (COAS), Theresa Filtz (Pharmacy), Nancy King (Business), Denise Lach (CLA), Walt Loveland, Chair (SCI), Vinod Narayanan (ENGR), Kathy O'Reilly (Vet Med), Jessica White (Education), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Chris Lenn (Student Representative), Jo Tynon (Forestry)
Ex-officio Members Present:	Martin Fisk, Gita Ramaswamy
Support Staff Present:	Nagwa Naguib
Guests:	Gary DeLander, College of Pharmacy; Tom Eversole, Health and Human Sciences; Rosemary Garagnani, Graduate School; Andy Blaustein, Environmental Sciences Graduate Program; Kathy Higley and Abi Farsoni, Nuclear Engineering; Alix Gitelman, Statistics; and Dan Edge, Fisheries & Wildlife

1. Approval of Minutes - February 3, 2010

Theresa Filtz proposed a correction to the minutes as follows:

Pharmacy Proposal to Use Professional Courses on PhD Programs and Have Dual Enrollment in PharmD and PhD Programs (Para 2)

Fisk reminded the Council that OSU requires students to have a bachelor degree before starting their PhDs. Filtz responded that the potential PharmD/PhD students are required to have a Bachelor's degree before entering the dual degree program. They are co-enrolled but...

Minutes from February 3rd, 2010 approved with above corrections in underlined Italic.

2. Reports from Walt Loveland, Chair, Graduate Council

- Walt Loveland read a statement from Leslie Burns regarding the Graduate Council authority to change policies.
- The Teaching and Counselor Education Program Review* was conducted last Spring, and the report was presented to the Provost last fall. The Provost requested the Department to submit an Action Plan, which was submitted a couple of weeks ago by SueAnn Bottoms, Chair of the Department. Neither Walt Loveland nor Marty Fisk were satisfied with the Plan, as it only dealt with questions in the admission of the students but did not encompass the issue of sustainability and the fact that there are not enough faculty to teach and advise students. In response to the email from Loveland, Dr. Bottoms agreed to rewrite the Action Plan before submitting it to the Provost.
- Reorganization Plans:* Walt reported that the original plans for the University reorganization, scheduled to be completed by March 15th and implemented by Fall 2010, is not feasible and

could take up to four years.

- d. *Category I Proposals:* The hold on the Category I (Cat I) proposals for curriculum changes has been released. There are three proposals in the pipeline. He asked the Council if they would like to meet with the Curriculum Council on March 12th to discuss the Oceanography Cat I proposal or should we just discuss it at our next meeting on March 3rd. Council members decided to discuss the proposal at the Council's next meeting, on March 3rd, and invite Sherm Bloomer, Mark Abbott, Bob Duncan and Aaron Wolfe to the discussion.

3. **Consideration/action on resolution from College of Pharmacy on using professional courses in PhD programs**

Loveland presented the summary of the Pharmacy proposal submitted by Gary DeLander, and asked if there were any comments or questions:

From Gary DeLander

- Students may co-enroll in professional and graduate programs. This will be referred to as enrollment in a 'dual degree' program. Enrollment in each program will require a separate admissions decision. Only students who have completed a Bachelor's degree may enroll in a graduate program.
- For students enrolled in a dual degree program, enrollment in either professional courses or graduate courses will satisfy the continuous enrollment requirement of the Graduate School for a specific term.
- Students may use 'graduate approved' courses in professional programs (specific graduate approved 7XX courses) as also satisfying the requirements of their graduate program if taken while co-enrolled as a professional and graduate student. Responsibility for defining a student's graduate program, including selection and approval of the student's curriculum, lies with the student's graduate committee. In this and all other aspects, the progression of students will follow normal processes and policies for a graduate program established by the Graduate Council and implemented by the Graduate School will be followed.
- Completion of graduate programs will be confirmed and degrees granted using established Graduate School procedures. Completion of professional programs will be confirmed and degrees granted using established procedures for the respective colleges.

Motion: A motion to accept the proposal submitted by Gary DeLander was made by Theresa Filtz and seconded by Denise Lach.

A meeting of Pharmacy and HHS people was held to discuss this proposal. There is an issue about how many professional credits can be transferred to the PhD programs. One alternative could be rewording the proposal to clarify that there could be some overlap requirements between programs.

DeLander stated that he checked over sixty programs around the country that offer dual programs. There is no precedent of how those universities handle these programs. They are all over the map. We all have the responsibility for the student's success, whether it is towards a MPH/Pharm, MPH/PhD, or otherwise. The student's graduate committee will oversee the appropriate program of study/courses/actual sequence at the time of the student's enrollment.

Marty Fisk indicated that the Graduate School does not see a problem with #2 in the DeLander proposal regarding the continuous enrollment requirement. The question is how financial aid and tuition waiver will be handled. It might create some complication on how financial aid is distributed in two different programs.

Kathy O'Reilly pointed out that, per Bruce Rettig, the student would not be in two different programs at the same time. Loveland responded that the Registrar's and the Financial Aid Offices will have to figure it out.

Carolyn Aldwin reminded the Council that there are federal regulations that we need to deal with, and it is not just a University issue. Denise Lach questioned if implementing the policy were the Council's responsibility. Tom Eversole pointed out that OSU has three professional schools, so we will have to

work out the administration of these programs.

Fisk remarked that the 700 courses never went through a Cat II process. Filtz responded that indeed the Graduate Council approved those courses at its December 4th, 2005 meeting. Discussion of the past approval of 700 level Pharmacy courses for Ph.D. degrees followed.

O'Reilly pointed out that the Council's role is to write policies, not monitor which classes the students are listing for their programs. We need to be careful as professional degrees are credited outside the university.

Aldwin suggested an amendment to put a cap of 15 (or 24 credits) at the discretion of the program that could be double counted. Aldwin moved and O'Reilly seconded the amendment.

No further discussions. Amendment was rejected.

Motion: Approve proposal originally submitted by Gary DeLander. Kathy O'Reilly and Carolyn Aldwin voted against the motion. Jessica White and Vinod Narayanan abstained from voting. Six members vote in favor of approving the proposal. Motion approved.

4. Reconsideration of Graduate Council policy on English Language Testing and Training Policy for International GTAs

Loveland pointed out that there is a typo on the first line of the Policy that will need to be corrected and should read: If the Graduate School determines that an applicant or current student's native language is not English,...

He also indicated that the last sentence in the two boxes (23-25 and 22-18) should read the same.

Loveland pointed out that this policy applies to the whole university and departments need to take it seriously. A short discussion followed.

Motion: Accept the Policy Statement, with the above mentioned corrections, regarding the iGTAs prepared by the Graduate School. Carolyn Aldwin moved, Kathy O'Reilly seconded. No discussion. Motion approved.

5. Environmental Sciences Graduate Program Review Report

Vinod Narayan presented the Review Panel Report on behalf of Shawna Grosskopf who chaired the Panel. The ESGP is a different program. It is a multi-disciplinary program housed in the Graduate School. Andy Blaustein has directed the Program since 2003. The Program has grown in size, and it offers PSM, MS, MA and PhD degrees. There are three ES core courses, then students choose among eight tracks. The Ecology and Social Sciences tracks had the most number of students. The program works in conjunction with UO and PSU programs. There is a joint campus conference once a year.

Even though the Program's seven deans meet once a year, only three deans showed up at the review meeting. The main funding source is from the College of Science. There are only six guaranteed teaching assistants from the Biology Program.

Narayanan proceeded by reporting that the students provided many comments at the review. They didn't feel they were part of one department, no sense of cohesion. They also felt disparity in the salaries across the programs. They felt as second class citizens in their own departments, as they were getting paid differently. They also indicated that some classes were outdated.

The Environmental Sciences Graduate Review Panel pointed out that there should be more buy-in from the faculty involved in the ESGP. The faculty's roles include committee work, mentoring students, and teaching. Some are very enthusiastic faculty who taught the core courses but unfortunately two of whom left OSU. Only ten percent of the faculty really participate in the program and are enthusiastic about their roles. It would be helpful if incentives were provided to faculty to participate in interdisciplinary programs. Faculty need to participate more actively with their students. Not all committee members are aware of the differences between interdisciplinary degrees and disciplinary degrees in the departments of their advisees. Sometimes students feel they have to satisfy two different programs/degrees.

The Panel's recommendations/findings include:

- Program to continue with its current level, but not to increase its enrollment. It is a great program
- Review tracks, streamline where there are low enrollments and redundancy with other programs
- Update course lists for tracks, perhaps with appointed track leaders and student input
- Keep web pages updated, including links to PSU and University of Oregon programs
- Work with Deans to provide incentives for faculty participation in the program as major professors, committee members and core teachers
- Collect consistent data on completion rates, time to completion and student placement after graduation
- Consider moving core courses to fall term to build student esprit de corps, include returning faculty and students to fall orientation, encourage formation of student e-mail list, student seminar series and a formal ESGP Student Association
- Have a consistent policy on requirements for students, including examinations and coursework
- Work with Deans and Chairs to ensure that ES students are on par with students in the participating units
- Enhance career services for both academic and non-academic careers
- Provide better funding model

Loveland mentioned that the University Budget Committee has, at the request of the Provost and the Dean of the Graduate School, developed funding models for graduate and undergraduate interdisciplinary programs. For graduate interdisciplinary programs housed in the Graduate School, the financial support is minimal involving 0.25FTE clerical support and similar small support for the Director.

Action on this report will be taken at the next GC meeting.

6. NE/RHP Graduate Program Review Follow-Up Report

Theresa Filtz presented the follow-up review report that was prepared last February 2009. The program was originally reviewed in 2006. It is a very strong program with high demand for achievement.

Progress made in response to the Review Panel recommendations included:

- *A reduction of faculty workload to maintain competitiveness* of the program. In the past three years, three new faculty members were hired, a 50% increase in FTE for the program. This increase, partly funded by an agreement with Idaho National Labs and the Oregon Engineering and Technology Industry Council, allowed a reduction in teaching loads from 4 to 3 courses per year per faculty.
- *Improving Utilization of Graduate Teaching Assistants:* Department is developing an instructor pool of recent PhD graduates and a few graduate students with interests in teaching skills are being utilized as teaching assistants with faculty oversight.
- Graduate student enrollment has increased in three years. Half of the students utilize the distance learning opportunities provided by the program.
- Start-up of a Medical Physics program, Fall 2009.

Higley was asked if the assessment of the distance program to evaluate its effectiveness in training and satisfaction has been completed. She responded that they are still assessing the program, taking a look at students, in a class-by-class survey. So far, a slight difference in satisfaction has been noticed. She

then proceeded to tell the Council that the Radiation Health Physics graduate students are up to 130 students, and E-Campus students reached 70 students. The OSU NE/RHP Department has one of the biggest programs in the world.

Loveland asked what the department's financial commitment was to the graduate students. Higley responded that they offer teaching assistantships to some of them.

Action on this report will be taken at the next GC meeting.

7. Fisheries and Wildlife Program Review Follow-Up Report

Alix Gitelman and Darlene Russ-Eft visited with the Department of Fisheries and Wildlife last November to conduct a Follow-Up Review. The original Program Review was held in 2007 and it reflected quite positively on the Department.

At the Follow-Up Review, it was found that the Department has responded to the Panel's recommendations.

- A diversity enhancement plan is being prepared and it is expected by the end of 2009-10 year
- The Department increased Polycom services in an effort to enhance communications between on- and off-campus graduate students and faculty
- Slash courses - a revision to the curriculum resulted in some courses being taught only at the undergraduate level and others at the graduate-only level
- The Department's distance education program has provided more teaching opportunities for graduate students
- GTA's assigned to "slash" courses are not grading papers of their peers
- Financial support and length of program - faculty are having these conversations with the students at the time of a graduate research assistantship if offered
- Annual performance reviews of graduate students is continuing
- Involving graduate students with department governance and operations,
- Continue to conduct surveys of recent graduates.

Action on this report will be taken at the next GC meeting.

Graduate Council

February 3, 2010 Minutes

Grad Council Members Present:	Carolyn Aldwin (HHS), Theresa Filtz (Pharmacy), Nancy King(Business), Walt Loveland, Chair (SCI), Kathy O'Reilly (VetMed), Jo Tynon (Forestry), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Rick Colwell (COAS), Denise Lach (CLA), Chris Lenn (Student Representative), Vinod Narayanan (ENGR), Jessica White (Education)
Ex-officio Members Present:	Martin Fisk, Gita Ramaswamy
Support Staff Present:	Nagwa Naguib
Guests:	Hal Koenig, Associate Professor, College of Business; Kerry Ahearn, Chair, Department of English; Jim Coakley, Associate Dean, College of Business

1. Approval of Minutes - January 22, 2010

Walt Loveland pointed out that the minutes of the iBT Policy from the January 22nd, 2010 meeting are not accurate regarding the Council's votes on the International GTA policy. Both he and Theresa Filtz remember that the Council had voted to make a technical correction taking 'Chemistry' out of the policy. The Council then voted to approve the Graduate School's website description "English Language Testing and Training Policy for International GTAs" as policy. Loveland asked that the [approved policy](#) be added to the minutes.

Marty Fisk remarked that there was more to this issue. The "policy" posted on the website, was created by the Graduate School over a period of fifteen years, should say "guidelines" and is outside the purview of the Graduate Council. It is also a guidance to INTO which is a for-profit organization and guidance to departments. Parts of the "guidelines" could be considered a "policy" but most of it is guidance.

Tom Wolpert indicated that the Council's recommendation was that IGTAs should get a score of 26 on their iBT. This was clearly a policy statement. We need to replace a policy with a policy. Jo Tynon remarked that some points are required and others are recommended. This is a confusing policy.

Loveland reminded the Council that the issue is not what the correct policy is, but what was approved at the previous meeting.

Motion: Approved the minutes from January 22nd meeting with the inclusion of the revisions distributed by Loveland prior to the meeting. Kathy O'Reilly moved. Carolyn Aldwin seconded. No further discussion. Motion passed.

Loveland asked the Council if the policy below should be discussed today, or if we should add it to the agenda of the Graduate Council's February 19th meeting. Council members agreed to wait till next meeting and asked the Graduate School to bring a revised draft of the policy and invite Rosemary Garagnani to attend the meeting.

2. Faculty Senate Executive Committee Reviews of Graduate Council Decisions

Loveland met with the Executive Committee (EC) to discuss their intent to review all Graduate Council policies and decisions. The EC informed Loveland that they no longer wished to review all policies, but could review selected policy decisions if needed.

3. NSF GK-12 Letters of Intent

Loveland mentioned that the Research Office is soliciting the Graduate Council's help in reviewing the NSF - Graduate STEM Fellows in K-12 Education (GK-12) Letters of Intent, which are due to NSF by April 20, 2010. He questioned the Council members' willingness to review those proposals. Fisk suggested that when the Graduate School is notified that Letters of Intent have been received, he will solicit one or two members' help with this review.

4. Postponing Program Review

Loveland presented the request from Larry Curtis, Associate Dean, Agricultural Sciences, in which he is justifying the reasons for postponing the Animal/Poultry and Rangeland Ecology Graduate Program Reviews to the following academic year. Loveland stated that Provost Randhawa had commented that departments had a lot of work dealing with the realignment and the Graduate Council should be lenient in responding to requests for delays.

Tynon expressed how difficult it was for programs to work on their self-study when they are not sure about the future of their programs/departments and its reorganization. O'Reilly agreed and suggested postponing all graduate program reviews for two years.

Fisk pointed out that the uncertainty of the future is not a reason for not reviewing the last ten years of a program's activity. The program review is an opportunity for input for reorganization, so totally dismissing this information during the reorganization could be a mistake. O'Reilly reiterated that the faculty cannot do it all, and that they will be looking at all the courses and the quality of their graduate students once they prepare for the Category I proposals. There are only so many hours in the day. Wolpert mentioned that some of those programs will not even exist after the reorganization. Filtz expressed her sympathy for the faculty as it seems everyone is in turmoil. Loveland indicated that Curtis is very serious about the review being postponed for just one year.

Motion: Approve the request to postpone the Animal/Poultry Graduate Program Review and the Rangeland Ecology Program Review, till spring 2011. Theresa Filtz moved. Tom Wolpert seconded. No further discussion. Motion passed.

Loveland presented a request for postponement of the Agricultural Education Program Review. Council members requested a written justification, as in the case of Animal/Poultry and Rangeland programs, which would be shared and approved by email. (This request was subsequently approved by email).

5. Program Review Follow-Up: Creative Writing and English

Hal Koenig and Kerry Ahearn joined the meeting. After the introductions, Koenig reported that both he and Mike Unsworth met with Professor Ahearn to review the progress those programs have achieved in response to the Review Panel's recommendations. Ahearn was very cooperative and helpful in the process.

During the period since the review was done, the College of Liberal Arts has gone through two transitions with Larry Roper as interim dean, then Larry Rodgers' arrival in 2008. The other big issue is the conversion of some courses from 3-credit to 4-credit hours. The English Department has faced many changes and we appreciate their position.

One of the recommendations from the Review Panel was that the Department needed to define itself by creating a strategic plan. Unfortunately, due to the decrease in budget and both the dean's transition and the course conversions, the process was slowed down. They need to tell people who they are, and where they want to go. It is tough but very clear what they need to do. We thought that the strategic plan was an excellent tool to tell their story to the dean, the other CLA departments and the rest of OSU.

Another major factor that is affecting the English Department is that they are currently running two masters' degrees, which they would like to continue.

Koenig then related to the Council that in the past, he served on the Statistics Graduate Program Review Panel, and the issue was the same as the English Department's, i.e. the budget. The university is not giving the department enough money to teach the courses that the university requests them to

teach. Enrollments are growing and the English Department teaches every undergraduate on campus but its budget is not growing. The English Department has a fixed number of teaching assistantships. This is a not a sustainable model.

Loveland responded that the budget is in a very bad situation. The \$20 million deficit for FY09 is being made up from reserves.

In response to the Council members, Ahearn responded with the following points:

- Faculty FTE is 22.5
- Very few MAIS students
- English will be very pleased if one of the 25-30 new positions in CLA/Science will be given to the Department
- 72 graduate students
- Poetry: 1 FTE faculty and 1 FTE instructor

Motion: Accept the *Creative Writing and English Program Review Follow-Up Report*. Theresa Filtz moved. Jo Tynon seconded. No further discussion. Motion passed.

6. College of Business - Graduate Course Enrollment

Jim Coakley joined the meeting. He informed the Council that non-MBA students come to the College with approved programs of study which include a business class. This year, the MBA classes are over capacity, so the College is not able to permit some of their students to enroll in their "approved" MBA classes. There is a problem with the fact that any faculty member on campus could approve a BA course on program of study without consulting with the College of Business. This might not be a problem for other graduate departments/programs, but it is for Business. He is requesting the Graduate Council to offer him some guidance on how to deal with the issue.

Tynon pointed out that there might be a failure in the liaison process. Coakley responded by saying that there is no requirement to liaison with the departments. When asked what the class size is, he replied that they would like a maximum of 30 students but they have recently had between 35 and 37 students. They get between two or three non-MBA students in each course. It is hard to honor their request to register if the course is full and the College of Business had not seen the program plan, which is considered a contract with the University. The College needs to coordinate with the student's major professor to figure out if the course really fits in the program of study. Wolpert wondered what will change if they knew ahead of time. Coakley responded that in this case they could project the demand, and/or divert the student to different classes. As far as students with a minor in business, the College knows ahead of time and plans accordingly.

Aldwin stated that her department sets aside a small number of seats in certain classes for non-majors. This could work with the MBA classes. The College would make the departments and the faculty aware of the "reserved" seats in those classes. Loveland reported that Chemistry sets aside seats beyond its own students as well. They also have Ecampus sections. Coakley stated that Business does not run Ecampus courses. They are at capacity and teach more students than before.

Filtz pointed out that MCB offers classes for only MCB students, stating that in the catalog. Maybe a similar description in the catalog would help with this issue. Also, Business could send a letter to departments and programs letting them know that the college will not be able to accommodate non-MBA students. Aldwin reminded Coakley and the Council that the Provost indicated in the past that we are one university and we need to accommodate the students. King stated that the MBA program is a 9-month program and some of the courses are offered only once a year, so not being able to get in one or two courses, will delay the MBA students from finishing their degrees. Loveland reiterated the fact that communication is important and maybe adding the limitation on the courses in CAT II proposals, indicating that those courses are limited to MBA students.

Coakley appreciated the feedback and will be communicating the limitation on the MBA courses to departments, programs, and faculty as well as add the language in the catalog.

7. Pharmacy Proposal to Use Professional Courses on PhD Programs and Have Dual Enrollment in PharmD and PhD Programs

Loveland reintroduced the Pharmacy proposal from last Council meeting. He reminded the Council that

this proposal is a model for two other programs, namely Veterinary Medicine and Public Health.

Fisk reminded the Council that OSU requires students to have a bachelor degree before starting their PhDs. Filtz responded that for the PharmD, students are required to have their BS degree before they enter the program. They are co-enrolled but not double-dipping. O'Reilly noted that students cannot be charged twice for the same course. Fisk agreed that this is a financial issue for the university. Wolpert stated that this is not a Graduate Council issue, i.e. double dipping for a PhD and a professional program. Fisk gave the example of undergraduate students who could reserve some courses for their graduate degrees. Those reserved courses cannot be counted towards their undergraduate degree.

A short discussion resulted in the request that the College of Pharmacy draft a summary of their proposed policy that will be reviewed at next Council's meeting.

8. **Review of Geosciences Cat II Proposal for Water Resources Minor**

Geosciences submitted a Category II proposal to add a graduate minor in Water Conflict Management and Transformation. They already have a graduate certificate in this field. The Council discussed whether both should be allowed. After a short discussion, the Council decided to adopt the following solution:

- *A transcript visible minor and certificate in the same field is permitted.*

Loveland and White will process the Cat II proposal as usual.

Graduate Council

January 22, 2010 Minutes

Grad Council Members Present:	Carolyn Aldwin (HHS), Rick Colwell (COAS), Theresa Filtz (Pharmacy), Nancy King (Business), Walt Loveland, Chair (SCI), Vinod Narayanan (ENGR), Kathy O'Reilly (Vet Med), Jessica White (Education), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Denise Lach (CLA), Chris Lenn (Student Representative), Jo Tynon(Forestry)
Ex-officio Members Present:	Martin Fisk, Gita Ramaswamy, Bruce Rettig
Support Staff Present:	Nagwa Naguib
Guests:	Darlene Russ-Eft, Professor, Adult Education and Leadership, College of Education; Tom Eversole, Director, Strategic Development, Health and Human Sciences

- 1. Approval of November 20, 2009 minutes**
Minutes approved.
- 2. Discussion of winter term meeting schedule**
Loveland proceed by letting the Council know that it was very hard to set up meetings during winter term to accommodate all Council members, thus the reason for the alternate dates, i.e. Fridays then Wednesdays. For Spring term, we are hoping to schedule the meetings of the Council on alternate days with those of the Curriculum Council, as we also might have to schedule a joint meeting with them at one point.
- 3. Cat I process and reorganization**
Loveland shared the Proposed Decision Making Process Associated with Restructuring flowchart that outlines the Cat I proposal process.
- 4. Revised Cat. II electronic approval system**
Loveland also informed the council that the Cat II system has changed as of January 1st, 2010 and we will get the notifications only once. In theory, it should be working by now. Some of the Council members indicated that this was not the case yet. Loveland will inform Susie Leslie of the fact that it doesn't seem that the system has been implemented yet.
- 5. Faculty Senate Executive Committee (EC) Review of GC policy decisions**
Loveland reported to the Council that the EC is asking to review all the policy decisions made by the Graduate Council. He sent the EC the text of the policies that were approved by the Graduate Council this year. He assumes he will discuss the EC request with them, but he has not heard back. A short discussion followed. He will report back to the Council after his meeting with the EC.
- 6. Reconsideration of iBT policy**
Loveland reminded the Council that in spring 2009, Rosemary Garagnani, Assistant Dean of the Graduate School, met with the Council and informed us that the SPEAK test is no longer being administered by OSU. The SPEAK test was given to all international students who have been offered

IGTA position and whose native language was not English, and it was used to determine suitability of the student to be a teaching assistant. Students not passing the SPEAK test were recommended to take English language training at OSU. With the elimination of the SPEAK test, OSU now relies on the speaking portion of the Educational Testing Service's internet based TOEFL (iBT) to determine English speaking proficiency. An iBT speaking score of less than 26 now requires that a student take English language training at OSU and limits the type of teaching assignments that these students can have. The new policy also stated that students with iBT speaking scores of less than 26 be given limited teaching duties and that a student with a score of less than 18 cannot be granted a teaching assistantship. The restrictions on teaching assignments significantly affected the Department of Chemistry. The Council approved a policy which inadvertently included the word "chemistry" in it suggesting that the policy only applied to that department. The application of the policy to the whole university was intended. The solution is to remove the word chemistry wherever it appeared in the previous Graduate Council motion.

Loveland proposed a revision to the wording of the previous passed resolution.

a. "remove the word 'Chemistry'" from the policy

Motion moved by Kathy O'Reilly and seconded by Carolyn Aldwin. No further discussion. Motion passed.

The approved policy is given below:

Policy statement regarding iBT and Graduate Teaching Assistants

1. The Graduate School will continue to review applications for admission from international students using their stated criteria for TOEFL, iBT and IELTS scores.
2. When a prospective student is not allowed to hold an assistantship on the basis of their iBT speaking score, the unit will be notified and given an opportunity to appeal the decision. This appeal right will be restricted to cases where the student has an iBT speaking score ≥ 18 . (The student will not be notified of the occurrence of the appeal until the appeal is fully resolved.).
3. If the unit wishes to offer a student with a non-passing (18-25) iBT speaking score an assistantship, the unit must:
 - (a) Guarantee that the new graduate student will be enrolled in **IEPA 098NC COMMUNICATION FOR IGTA's (3)** upon arrival (with the unit paying the cost of this training). The scheduling of IEPA 098NC will be coordinated with the units so that students can attend the course and conduct teaching assistantship duties
 - (b) If at all possible, assign the graduate student chores (such as paper grading, reagent preparation, etc.) that do not require personal contact with undergraduate students.
 - (c) If (b) above is not possible, pair the graduate student with language problems with another TA who is a native speaker of English in the laboratory or classroom environment. The unit will maintain documentation for each student of how conditions (a), (b), and (c) were met.

If the unit meets these conditions, the student may be admitted with support.

4. The unit will monitor the quality of GTA performance using student evaluations and the evaluations of the supervising professors. The unit will document for each student the results of their evaluation of the student's performance as a GTA.

In addition to this change Loveland proposed two revisions to the description of the English Language Testing and Training Policy for International GTAs which is on the Graduate School web site.

One was the statement that the student would be required to pay for the training. He explained that requiring an employee to pay for training as a condition of employment is inappropriate. He recommended editing the statement. It was agreed that this line would be removed by the Graduate School from its website.

The other change suggested by Loveland was that the paragraph related to complaints by undergraduates about teaching performance of TAs be removed. The Graduate School agreed that this paragraph would be removed from the Graduate School website.

7. Remote participation policy

Loveland reminded the Council that at its last meeting in November, the motion to change the policy on remote participation in the required graduate student meetings was postponed. The new policy would allow remote participation by any or all of the committee members, and the student, with the minimum acceptable equipment being a two-way audio and video. Since the last Graduate Council meeting,

relevant portions of the current policy statement along with the remote participation form were edited. The Graduate School submitted a revised policy and form to the Council for review.

Loveland introduced Darlene Russ-Eft, from the College of Education who presented comments relevant to the Community College Leadership (CCL) program in that college. Some external committee members for that program come from community colleges all over the US; some of whom are presidents of their colleges. Her concern is that some of those members might not have access to the required video equipments. The need for video communication does not apply to the CCL students as, for instance, they don't present equations. In some cases, when the equipment wouldn't function properly, they could spend thirty minutes trying to make it work. The decision of using video conferencing should be taken in the context of what is an appropriate situation. Loveland stated that there are some cases where audio only communication at an examination is not appropriate.

Bruce Rettig reported that when the issue of remote participation was first taken up by the Graduate Council, Sally Francis allowed trial exams in which the Graduate Council Representative reported to Sally about the quality of the examinations.

The Graduate Council then discussed the technical aspects of remote participation by multiple participants. Loveland indicated that the technology for this is routine.

Further discussion centered on the appeal process; having the major professor be the one to decide on, and approve of, remote participation; whether a proctor should be required if the student is at a remote site. It was also suggested that this policy could be tried for a year, after which a decision of adopting it or revising it would be made.

Theresa Filtz moved:

1. Graduate School will monitor graduate student meetings in which there is more than one remote participation, and in which the student is a remote participant and report the results to the Graduate Council within a year; and
2. The current and revised Graduate School policy as given on the Graduate School website and Graduate School catalog are shown below:

Remote Participation

Website Language

Current:

Remote Participation in Formal Meetings: *It is generally expected that all of your committee members or approved substitutes must be present for all meetings required by the Graduate School (program meetings for doctoral students and MAIS students, preliminary exams for doctoral students, and final oral exams for all students). If you have a special case in which a committee member may need to participate remotely, you and your committee must assure that all the conditions listed on the Remote Participation Form are met, and you must submit the form to the Graduate School one week prior to the meeting.*

Proposed:

Remote Participation in Formal Meetings: All committee members or approved substitutes must participate in all meetings required by the Graduate School (program meetings for doctoral students and MAIS students, preliminary exams for doctoral students, and final oral exams for all students). **If you or any committee member may need to participate remotely, then the student and committee members must assure that all the conditions listed on the Remote Participation Form are met,** and you must submit the form to the Graduate School one week prior to the meeting.

Catalog Language

Current:

It is generally expected that all members of graduate committees should be physically present at all required graduate committee meetings (i.e., program meetings, preliminary examinations, and final examinations). However, it is permissible for one member to participate from a remote location under certain circumstances. Appeals for exceptions to this policy may be addressed to the dean of the Graduate School. Contact the Graduate School for complete details.

Proposed:

It is generally expected that all members of graduate committees should be physically present at all required graduate committee meetings (i.e., program meetings, preliminary examinations, and final

examinations). However, it is permissible for the **student, and/or committee members** to participate from a remote location **provided all conditions listed on the Remote Participation Form are met and the student submits that form to the Graduate School (with appropriate signatures)** one week prior to the meeting. Appeals for exceptions to this policy may be addressed to the Dean of the Graduate School. Contact the Graduate School for complete details.

Vinod Narayanan seconded the motion. There was no further discussion. The motion passed. The Graduate School agreed to report the new policy to departments and programs.

8. Proposal from Pharmacy to use professional courses on PhD programs and have dual enrollment in PharmD and PhD programs

Theresa Filtz, as the College of Pharmacy representative, answered some Council member's questions regarding double counting credits for the professional programs and the graduate programs. Fisk indicated that the total number of graduate credits at the 700 level that are already allowed on Pharmacy Ph.D. programs is 48 credits. Aldwin wondered if there was a limit on the number of double counted credits. Loveland decided to postpone this issue till the next Graduate Council meeting.

Meeting adjourned at 4:05 PM.

Graduate Council

November 20, 2009 Minutes

Grad Council Members Present:	Rick Colwell (COAS), Denise Lach (CLA), Walt Loveland (SCI), Vinod Narayanan (ENGR), Kathy O'Reilly (Vet Med), Jo Tynon (Forestry), Jessica White (Education), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Carolyn Aldwin (HHS), Nancy King (Business), Chris Lenn (Student Representative), TBD (Pharmacy)
Ex-officio Members Present:	Martin Fisk, Bruce Rettig
Support Staff Present:	Nagwa Naguib
Guests:	Alfonso Bradoch, Director of Department and Student Services, E-Campus; Shelley Dubkin-Lee, Coordinator, Adult Education Program, Adult Education and Leadership, College of Education; Darlene Russ-Eft, Professor, Adult Education and Leadership, College of Education; Lisa Templeton, Executive Director, E-Campus; Paul Doescher, President, Faculty Senate.

1. Approval of November 6, 2009 minutes

Loveland pointed out two mistakes in the minutes that will need to be corrected. Naguib will resend the minutes to Vickie Nunnemaker in the Faculty Senate Office to re-upload.

Minutes approved with corrections.

He also informed the Council that Rong Cui has left the University, so Nunnemaker is working with the College of Pharmacy and the Faculty Senate Executive Committee to find a replacement from the College.

When asked if the Council would want to meet on December 18th, the consensus was not to meet until winter term. Nunnemaker is collecting availability for the Council members, and meetings will be scheduled soon.

2. Remote participation

Bradoch, Dubkin-Lee, Russ-Eft, and Templeton were introduced. Loveland reminded the Council that Remote Participation had been discussed last spring term. He then asked Bradoch to present his suggested policy. Bradoch proceeded to inform the Council that OSU's remote participation policy applies only to faculty committee members, not to the students. The suggested policy would adopt more flexibility regarding remote participation of distance students in examinations, which will be similar to the University of Washington, which offers distance degree programs. U of Washington is the only university from our peer institutions to adopt this policy.

Russ-Eft went on to inform the Council that students in the doctoral program of Community College Leadership, come mostly from western states (Hawaii, Idaho, Montana, Utah, Arizona, Nevada, Washington, and California). More than half of the students are from out of state. This diversity enlivens the discussion and enriches the experience, especially that each of those states have different policies. The need to bring those students to campus for their doctoral defense and their program of study meetings, can be difficult to arrange. Some of those students are deans and administrators and can easily handle an examination.

Dubkin-Lee proceeded by saying that online participation is encouraged, and it would become unattractive to those students to come to campus for their graduate programs. White pointed out that, over the years, she has witnessed that this requirement of being present on campus, lengthens the time the students take for finishing their degrees, and complicates time degree completion.

Rettig offered the suggestion for not changing the rules, but letting the programs propose policies at different types of exams and meetings for remote participation of their students.

Bradoch proceeded by agreeing that either the Graduate Council or the Graduate School would make the decision for individual programs. Loveland questioned the interpretation of the "responsibility for costs incurred for remote participation." Templeton responded that the individual student will pay for their remote participation, if they choose to go that route. Fisk noted that some departments own equipment which could be used. Loveland wondered if the students will be paying for equipment that will be used on campus; it depends on the situation. He then expressed his skepticism of the audio participation, as one does not see the student and their presentation, if any. Narayanan suggested the CGR should be included in the decision.

Bradoch indicated that the current policy for faculty remote participation will not be changed. The suggested policy applies only to students' participation. Other arguments presented included having two remote participants (the student and a committee faculty member); the technology for a three-way participation is available and could be used; and the effectiveness and savings should be considered.

Russ-Eft stated that OSU is recognized as one of the top two of the three universities in the nation that offers community college programs, and that we need to build on this reputation.

Loveland thanked the guests. A conversation of the Council continued.

The motion is postponed. A revised policy will be presented to the Council at its next meeting. The new policy could allow remote participation by any or all of the committee members, and the student, with minimum acceptable equipment being two-way video. The relevant portions of the current policy statement will be edited along with the remote participation form and presented to the Council for its approval.

3. Graduate Field Model Proposal

Doescher was introduced to the Council. He presented the Graduate Field Model Proposal which will transform existing graduate programs to cross-department fields of study in order to increase the visibility of key strategic programs, tighten the focus of the graduate programs, and enhance their stature. This change will generate savings of current expenditures on a large number of graduate majors, separately funded interdisciplinary programs, and address issues of graduate program viability by providing a mechanism for reducing the number of small enrollment graduate programs.

He indicated that this proposal followed the meetings of deans and upper administration last June with the Graduate Dean at Cornell. It is based on the field model currently in place at Cornell. Doescher was charged to present the proposal to the Council for their consideration. If the Graduate Council decides that this proposal is a good idea, and should be adopted, then it will be presented to the Faculty Senate Executive Committee for their approval, then to the full senate.

This is a very rough draft. It will be up to the Council to decide if OSU to adopt this policy, which might realign the graduate programs. Narayanan pointed out that all scholarships and fellowships at Cornell are controlled by the Graduate School. The funding model will need to be addressed. Lach mentioned that currently, the students draw on faculty from different departments on campus. Rettig pointed out that some of the Interdisciplinary programs started from the bottom up: faculty got together and decided on getting those programs started.

Loveland thanked Doescher. A short discussion followed including the fact that the dust needs to settle with the new OSU reorganization, before reorganizing the graduate programs. A system will need to be developed to regulate this process.

Motion: To table the Graduate Field Proposal. Moved by Tynon, and seconded by Narayanan. Motion passed.

Meeting adjourned at 3:40 pm

Graduate Council

November 6, 2009 Minutes

Grad Council Members Present:

Rick Colwell (COAS), Rong Cui (Pharmacy), Nancy King (Business), Chris Lenn (Student Representative), Walt Loveland (SCI), Kathy O'Reilly (Vet Med), Jo Tynon (Forestry), Jessica White (Education), Tom Wolpert (AG SCI)

Grad Council Members Absent:

Carolyn Aldwin (HHS), Denise Lach (CLA), Vinod Narayanan (ENGR)

Ex-officio Members Present:

Martin Fisk, Bruce Rettig

Support Staff Present:

Nagwa Naguib

Guests:

Gary DeLander, Associate Dean, Pharmacy; Theresa Filtz, Associate Professor, Pharmacy; Tom Eversole, Director, Strategic Development, Health and Human Sciences; Susan Tornquist, Associate Dean, Veterinary Medicine; Kevin Gable, Department Chair, Chemistry; Mike Lerner, Professor, Chemistry; Rosemary Garagnani, Assistant Dean, Graduate School, and Vince Remcho, Associate Dean, Science

1. Approval of October 23, 2009 minutes

Walt Loveland asked if there were any changes to the October 23rd minutes. None were offered. Minutes were approved.

He then proceeded to inform the Council that after last meeting's conversations with John Bolte, Biological and Ecological Engineering (BEE) Head, Larry Curtis, Associate Dean and Cary Green, Assistant Dean of the College of Agricultural Sciences (CAS); he contacted the College of Engineering to follow up on the credit hours funds that BEE generates. He was informed that, unlike what the group said about the tuition for the BEE courses, all BEE funds are transferred in full to CAS. Loveland has already related this information to Curtis.

He indicated that Alfonso Bradoch, Director of Department and Student Services, Extended Campus, will join the Council at its next meeting on November 20th to discuss remote participation at graduate student examinations and remotely delivered graduate fields.

2. Use of Professional Courses on Graduate Programs

Gary DeLander, Theresa Filtz, Tom Eversole, and Susan Tornquist were introduced.

Filtz presented a request for a change to the language in the Graduate Catalog to confirm that PharmD graduates can transfer courses completed as part of their professional degree into a Ph.D. program, with the approval of their Ph.D. committees.

She proceeded by saying that several 700-level professional courses were reviewed and approved through the Graduate Council's Category II process for use in a graduate program of study. These courses could be applied to a doctoral program. She added that many universities around the country offer PharmD/PhD and DVM/PhD concurrent degree programs. This allows students to begin research during the summers and taking

graduate courses while still enrolled in their professional degree programs. Some of those courses can be applied to both their professional degree requirements and to their PhD degree requirements.

DeLander confirmed that it is a common practice around the country, both in pharmacy and veterinary medicine, to allow dual enrollment for both professional and doctoral degrees.

Rettig said that he researched three of OSU's peer institutions (the University of Washington, The Ohio State University, and Purdue University), which provide detailed descriptions of combined PharmD/PhD and MPH/PharmD programs on their pharmacy school web sites. He also learned about the combined DVM/PhD at the University of California, Davis. He wondered whether OSU's College of Pharmacy had considered developing such a formal joint program.

Filtz indicated that they had explored the possibility of a joint program, but that they encountered problems with OSU's restrictions on co-enrollment.

Rettig described the way that OSU courses are currently transferred within the system. Undergraduate students can reserve a limited number of credits to apply to a later graduate degree. Students who take courses as non-degree seeking graduate students can transfer courses toward a graduate degree, but this is not noted in BANNER. Rather, it is a process to permit courses taken as non-degree seeking to apply to a graduate program of study. He then asked how Pharmacy courses would be transferred. Would they, like the undergraduate reservation system, cause the transcript to change or would they, like non-degree transfer courses, stay on the part of the transcript used for professional credits but appear on the PhD program of study. DeLander responded by saying that what we need to do is recognize the professional level courses as graduate courses, which is common knowledge.

Tornquist informed the Council that the Veterinary Medicine Curriculum Committee had approved the proposal presented to the Council by Filtz. She noted that federal dollars have been identified for training veterinarians in public health. Vet Med has received many inquiries from students about the possibility of participating in these initiatives.

Eversole added that the proposal not only supports students, but it will also be useful as Oregon State builds new public health initiatives. Health professions are changing the nature of internships to respond to new initiatives and national needs.

Fisk indicated that there is both need and value in Oregon State University expanding initiatives for joint graduate and professional programs in the health sciences. He reminded the Council that the University and the Graduate Council has placed limits on double counting, although they do allow 15 credits taken toward one master's degree to be used toward a second master's degree. Rettig said that requirements for the DVM and the DPHARM have never been reviewed by the Graduate Council. Except for the review process described correctly by Filtz, the Graduate Council has not reviewed any 7XX courses.

The conversation continued and covered the following points:

1. Pharmacy needs to be able to apply professional courses taken as part of the DPHARM degree to a PhD program.
2. Current rules need to be changed.
3. Students could get an internship at a public health facility. These credits should be eligible for use as part of their PhD degrees.
4. This is not a Category I proposal.

Loveland thanked the guests and the Council proceeded with their discussion, which included points related to a policy against dual enrollment and the need for a concrete plan.

Motion: The Graduate Council encourages proposals from the programs that provide detailed descriptions of how the co-enrollment would work, what courses and the number of credits that would be used for both degrees, and how courses would be approved.

Jo Tynon moved; Jessica White seconded. No more discussion. Motion passed.

3. College of Business – Graduate Course Enrollment

Item postponed to a future Council meeting as Jim Coakley, Associate Dean, was not available to present and discuss it.

4. Remote iBT Scores and Chemistry Graduate Assistants

Kevin Gable, Mike Lerner, Rosemary Garagnani, and Vince Remcho were introduced.

Loveland introduced the issue by saying that last spring, Rosemary Garagnani, Assistant Dean in the Graduate School, came to the Council to propose a replacement for the discontinued OSU SPEAK test, which was used to determine English proficiency for International Graduate Teaching Assistants (IGTAs). She proposed using the Educational Testing Service Internet Based Test of English as a Foreign Language (iBT TOEFL). The proposed minimum speaking score for IGTAs would be 26. The score of 26 is being used by the University of Oregon and the University of Arizona as the minimum for students being awarded a GTA. She recommended using this score for students being awarded GTAs with no teaching restrictions. The Graduate Council accepted her proposal with the condition to review it at the end of 2009-2010. Loveland then indicated that all of the current IGTAs in Chemistry would not have met this minimum.

Gable proceeded by saying that the proposal advanced to the Graduate Council by the Department of Chemistry captures what the Department has been doing for ten years or longer. For a variety of cultural and background reasons, not everyone who comes to OSU will be trained in English. Chemistry is willing to send them for language training as well as sending faculty to different parts of the world to recruit those students. Our history with those students has been successful, even though some of them are not able to speak English very well. Any standardized test does not give the whole picture. Some of the students could be shy or don't know the technical jargon of the tests. This only shows up when they come to campus and we meet them in person.

Lerner said that it is a universal truth that the test scores are meaningless.

Garagnani disagreed with their views regarding the test. She indicated that most departments cannot afford sending faculty members to recruit students from other countries or send their GTAs for training in the English language. It seems there could be room for a compromise with this policy.

Gable then answered questions from the Council members. Under the SPEAK test, the students were provisionally admitted. During their first term, they would be involved in grading, after which they were generally fine. Some of them were terminated on the basis of poor performance. This year's students did not score more than 24. The department does not offer assistance for those with a score of 18 or under. Remcho added that it is more valuable to get the faculty's assessment of the GTA than to use test scores.

To answer the question regarding who evaluates the students, Gable specified that each one of them registers in a CH607 recitation and lab to monitor their progress.

Loveland thanked the guests. A short conversation followed and resulted in a revised policy regarding iBT and Chemistry's Graduate Teaching Assistants (see attached). This policy will be revisited in a year.

Motion approved by email.

Meeting adjourned at 3:40 pm

Policy statement regarding iBT and Chemistry's Graduate Teaching Assistants

1. The Grad School will continue to review applications for admission from international students using their stated criteria for TOEFL, iBT and IELTS scores.
2. When a prospective Chemistry student is not allowed to hold an assistantship on the basis of their iBT speaking score, the Chemistry department will be notified and given an opportunity to appeal the decision. This appeal right will be restricted to cases where the student has an iBT speaking score is more than 18. (The student will not be notified of the occurrence of the appeal until the appeal is fully resolved.)
3. If the Chemistry department wishes to offer a student with a non-passing iBT speaking score an assistantship, the department must:
 - a. Guarantee that the new graduate student will be enrolled in **IEPA 098NC. COMMUNICATION FOR IGTAs (3)** upon arrival (with the department paying the cost of this training). The course **IEPA 098NC. COMMUNICATION FOR IGTAs (3)** must be offered at a time when GTAs can attend without interfering with their class and teaching schedules.

- b. If at all possible, assign the graduate student chores (such as paper grading, reagent preparation, etc.) that do not require personal contact with undergraduate students.
 - c. If (b) above is not possible, pair the graduate student with language problems with another TA who is a native speaker of English in the laboratory or classroom environment.
The Chemistry department will maintain documentation for each student of how conditions (a), (b), and (c) were met.
If the Chemistry department meets these conditions, the student will be admitted with support.
4. The Chemistry Department will continue its rigorous monitoring of the quality of GTA performance using student evaluations and the evaluations of the supervising professors. (Chemistry does insist upon quality performance of its GTAs.) The Chemistry Department will document for each student the results of their evaluation of the student's performance as a GTA. The Chemistry Department will report the results of this evaluation yearly to the Graduate Council.

**Grad Council Members
Absent:**

Carolyn Aldwin (HHS), Chris Lenn (Student Representative), Jo Tynon (Forestry)

**Ex-officio Members
Present:**

Martin Fisk, Bruce Rettig

**Support Staff
Present:**

Nagwa Naguib

Guests:

John Bolte, Department Head, Biological and Ecological Eng.; Larry Curtis, Associate Dean, College of Agricultural Sciences; Cary Green, Assistant Dean, College of Agricultural Sciences; Jeff McCubbin, Executive Associate Dean, Health & Human Sciences, and Marie Harvey, Department Chair, Public Health

1. Approval of October 9, 2009 Minutes

2. New Category II Review System

Walt Loveland asked the Council members about their experience so far in using the new Category II review system. It was suggested that the system should be linked to the on-line catalog to enable the reviewer to refer to previous catalog descriptions. The syllabus or course description included in the proposal is not very comprehensive. It was also suggested that Council members should have clear guidelines for evaluating graduate courses. Loveland will talk to Susie Leslie about getting additional information into the system, and linking it to the on-line catalog.

3. Biological and Ecological Engineering (BEE) Program Review

Loveland welcomed the guests, namely John Bolte, Larry Curtis and Cary Green to the Council and introduced the Graduate Council and ex-officio members.

Rick Colwell presented the report to the Council and the guests. The site visit took place on May 29, 2009. Mike Delwiche, UC Davis, led the review panel which included Joseph Danko, CH2MHill, and Graduate Council representatives Nancy King and Colwell (see page 4).

The report included sixteen findings and recommendations, which could be divided in three categories:

1. *Recommendation #1:* BEE faculty members appear to be strong, capable and highly motivated. The morale is good and they work very hard. The graduate students are very positive about the program and faculty, and seem to be a strong group.
2. *Recommendations #2-5:* BEE could look for interactions with outside groups. The Department has intimate links to water resources programs on campus. There is a need for greater investment by the College of Engineering (COE). The Review Panel was disappointed that the COE was unable to send a representative to meet with them during the review or afterwards, even though it seems that the department is working well with both Agricultural Sciences and Engineering Colleges. Colwell asked if the credit hours are credited to both colleges. Larry Curtis indicated that the credit hours show on the

COE only. It is a problem with Banner, even though the funds come from CAS.

Curtis also pointed out that the students like the fact that their diploma shows “engineering” degree, and consider this very important for their future careers. He then stressed that they would prefer leaving the program reporting to the two colleges. John Bolte suggested that the model of the program reporting to two colleges is not unusual around the country. Colwell reiterated that the COE needs to play a larger role in BEE as there is a strong overlap with other engineering programs. Bolte acknowledged that the relationship with COE does exist indeed.

1. *Recommendations #6-16:* Colwell reported on the Panel’s suggestions related to internal structure and vision of the department. Suggestions included:
 1. Develop a plan to recruit high quality graduate students
 2. Address issues of diversity including increase of female and international students
 3. Provide opportunities for the graduate students to gain teaching experience
 4. Consider adding a student member to the Graduate Program Committee
 5. Panel was excited about the undergraduate program, but concerned about the fact that the faculty will have difficulty maintaining graduate course offerings
 6. Encourage students to apply for external funds
 7. Consider developing REU program which will benefit the department
 8. Restart the seminar series
 9. Concern regarding starting a distance education model, as it might be a distraction to the graduate level. One-on-one mentor would work better.

Bolte responded by saying that he agreed with all the recommendations except the distance education one. Loveland wondered if BEE is considered for a merger with a different department or college. Bolte responded by saying that they are waiting for the dust to settle before discussing this issue.

Loveland thanked the guests and excused them. Discussion followed.

Motion to accept the Biological and Ecological Engineering Graduate Program Review Report – Denise Lach moved to accept the Report, Jessica White seconded. No more discussion. Motion passed.

4. Postponement of Graduate Program Reviews

a. Public Health (PH)

Jeff McCubbin and Marie Harvey were introduced, as were the members of the Council. McCubbin reported that he had an earlier conversation with Walt Loveland and Marty Fisk regarding the deferral of the PH Program Review. He is asking the Council to approve the deferral till spring 2011. This deferral will be helpful to both the College of Health and Human Sciences and the Public Health Department, due to the uncertainty within the university and the restructuring of the PH department. The Department’s configuration will be different. The new department will be up and running by next academic year. He reiterated that it is their intent, and they are confident, that the program and the self-study quality and quantity will be strengthened after the restructuring. It is more important to work with the faculty to focus on the redesign, as opposed to working on the self-study. He also pointed out that the PH department’s accreditation will be closer to Spring 2011, which will make more sense. The self study is 80% ready, but will need significant edits after the restructuring is completed.

Harvey pointed out that the department would benefit from this review. Spring 2011 will work best as they will be ready because of the configuration, which will affect their PhD programs. They will be stronger yet different, and will benefit the department. Colwell commented that the reviews are often useful to figure out the best things to do, and asked if they had outside groups helping them in the restructuring. Harvey responded by saying that they have connected with the health division. Colwell wondered if there were model programs in other universities with whom PH could consult. McCubbin indicated that a group from both HHS and PH had meetings with a variety of similar programs around the country. The PH department will grow bigger by adding new faculty. Martin Fisk questioned if the degree in public health will continue. McCubbin responded that it will continue with three PhD concentrations. Harvey added that the three concentrations have yet to be defined.

Vinod Narayanan wondered why the program has not been reviewed since its inception fifteen years ago. McCubbin responded that he didn’t know the reason, but that the department went through accreditation, and other reviews, during this time.

Loveland thanked the guests and excused them. A short discussion followed.

Motion to refuse the deferral of the Public Health Program Review to Spring 2011 – Denise Lach moved, Vinod Narayanan seconded. No more discussion. Motion passed with the majority of the votes. (5 YES, 3 NO). Upon further discussion, the Graduate Council agreed to allow a postponement of the Review until Spring 2010.

b. Botany and Plant Pathology (BPP)

Tom Wolpert introduced the letter from Lynda Ciuffetti, Chair of the Department, requesting a postponement of the Graduate Program Review. Wolpert indicated that the department does not know where they will be between the colleges of Science and Agricultural Sciences. The department might disappear.

Jessica White wondered if the degrees will disappear as well. Loveland responded that no one knows what will be happening in the restructuring of OSU.

A short discussion followed.

Motion to grant the request to postpone the Botany and Plant Pathology Program Review and revisit the issue within a year – Nancy King moved. Colwell seconded, Tom Wolpert abstained. No more discussion. Motion passed.

5. Remote Participation in Graduate Program Meetings and Examinations

Loveland indicated that Fisk surveyed OSU's peer institutions, in addition to other schools, and analyzed their policies regarding remote participation in graduate program meetings and examinations. We will postpone discussing this issue so that we can invite Alfonso Bradoch, E-Campus, to present his proposal regarding the issue. Bradoch will be scheduled to attend the November 20 meeting.

6. Graduate Students Satisfactory Progress

Loveland reminded the Council that Dean Sally Francis asked the help of the Council to have a policy regarding graduate students satisfactory progress. OSU departments and programs have such diverse policies regarding this issue. He also pointed out that some students are dismissed from the program due to funding issues, as opposed to their satisfactory progress.

He then introduced Bruce Rettig who analyzed the results collected from various departments, researched policies of other universities, and drafted a policy that could be implemented by OSU's departments and programs. Rettig explained how he has reached those recommendations listed in the report. Lach wondered if the graduate union might ask for consistency between graduate students from various departments. Fisk responded that the union is concerned with employment and not with setting academic standards. A short discussion followed.

Loveland then asked if the Council would move to adopt the process outlined on page 1 of Rettig's report.

Motion to adopt the process, by creating two separate documents, one of which will include only the process – Tom Wolpert moved, Kathy O'Reilly seconded. Short discussion. Motion passed.

Meeting adjourned at 3:35 pm

Graduate Council

October 9, 2009 Minutes

Grad Council Members Present:

Carolyn Aldwin (HHS), Nancy King (Business), Denise Lach (CLA), Walt Loveland (SCI), Vinod Narayanan ENGR), Kathy O'Reilly (Vet Med), Jo Tynon (Forestry), Jessica White (Education), Chris Lenn (Student Representative)

Grad Council Members Absent:

Rick Colwell (COAS), Rong Cui (Pharmacy), Tom Wolpert (AG SCI)

Ex-officio Members Present:

Martin Fisk, Bruce Rettig

Support Staff Present:

Nagwa Naguib

Guests:

Sam Stern, Dean, College of Education; and SueAnn Bottoms, Chair, Teacher and Counselor Education

1. Awards Recognition

The Graduate Council members welcomed the 2009 Graduate Awardees and their nominators/advisors. Present were:

- a. Andrea R. (Courtney) Hall - Lenore Bayley Graduate Fellow
- b. Justin Hall - P.F. & Nellie Buck Yerex Graduate Fellow
- c. Brittany B. Cline - Distinguished Master's Thesis Awardee
- d. Sarah Eddy - Frolander Outstanding GTA Awardee

Mike Bogan, P.F. & Nellie Buck Yerex Graduate Fellow, were out in the field so could not attend.

Also present were Dan Edge, Elisar Barber, Susan Haig, Chris Mathews, and Lynne Houck.

Martin Fisk introduced each of the awardees and acknowledged their individual scholarly accomplishments.

2. Teacher and Counselor Education (TCE) Report Sam Stern, Dean, College of Education and SueAnn Bottoms, Chair, Teacher and Counselor Education Department, joined the meeting and were introduced to the Council members. Walt Loveland, Chair of the Graduate Council, presented the Report of the TCE Program Review.

The program review of the TCE was conducted in June 2009. The review panel was comprised of three outside reviewers, Dr. Arthur Horne, Dean, College of Education, University of Georgia; Dr. Thomas Greene, Associate Provost and Dean of the Graduate School, University of Portland; Ms. Jane Evans, Principal, North Albany Middle School; and Graduate Council members, Dr. Becky Donatelle, Health and Human Sciences, and Dr. Walt Loveland, College of Science.

Loveland reported that the TCE department is doing remarkably well, graduating a large number of students, who are getting a great education and passing licensure exams. The report has a different view. The Review

Panel is recommending reducing and restructuring of the program. The unit has been entrepreneurial in using Ecampus funds to support the program. The Panel was concerned whether this is sustainable. The Review Panel noticed that the pressure to teach and advise makes research and other scholarly activities extremely difficult. The department has ten tenure and tenure-track faculty, plus a number of part-time instructors. The tenure-track faculty publish an average of one paper every five years. The supervision of students is critical and everyone is grossly overworked and stressed to the point of physical distress. The Review Panel recommends some sort of restructuring. One suggestion was for Ecampus to share additional funds with TCE. Another recommendation was to reduce the number of fixed-term appointments and increase tenure-track faculty. Loveland repeated that the Review Panel did not think that the current organization could be sustained.

Dean Sam Stern thanked Loveland and the Review Panel for their Report. He agrees with their recommendations and indicated that it was very insightful. The requirements for teacher and counselor education licensure have changed and there is a heavy burden on advising. The recommendation to reduce and restructure is the same as for earlier reviews.

SueAnn Bottoms reminded the Council that the department has gone through three reviews, and there is a consistency in the recommendations: increase in both tenure-track faculty and in research. Sustainability is a critical issue. The information from the Program Review will be useful in positioning the department.

Bruce Rettig asked if the department is continuing the restructuring. Stern responded that this issue is pretty complex. TCE offers different degrees. The "double degree" has been very successful. For example, there is a high demand for Spanish teaching, but the enrollment is pretty low. Some degrees have been suspended. Science and Math Education Department (SMED) faculty will be consolidated with the College of Education with the new reorganization. Marty Fisk asked if there will be a focus on the STEM education. Stern responded that STEM for elementary teachers will be a focus, as well as at higher levels. Once the College of Science identifies the groupings, SMED will move to Education.

Vinod Narayanan asked how many faculty are at Cascades campus. There are five faculty in Bend; two of whom are tenure track in teacher education and three are fixed-term in counselor faculty. Stern indicated that the Bend faculty do not have enough staff support, so are expected to do the administrative work, including working with the Corvallis campus. He proposed a second level of leadership at Cascades campus.

Narayanan asked if replacing fixed-term faculty with tenure-track faculty could be accomplished. Stern pointed out that there is a scaling problem. The cost to teach the classes is disproportionately out of balance. The College's priority is to hire tenure-track faculty. Denise Lach questioned if Ecampus was a "for profit" and if some of those funds could be used to supplement the budget. Loveland responded by saying that there was a need for reinforcing co-education beyond the formula. Some of the Ecampus funds will need to be used for advising.

Motion to accept the TCE Program Review Report - Kathy O'Reilly moved to accept the report. Vinod Narayanan seconded. No discussion. Report approved as presented.

3. Minutes of September 25, 2009 approved.

4. New Category II Review System

Walt Loveland presented his proposal for Cat II reviews. Each Cat II proposal will be reviewed by a primary and a secondary reviewer. The primary reviewer will be the Graduate Council representative from the college submitting the proposal. The secondary reviewer will be chosen in a way that balances the workload. The primary reviewer will be the person who interacts with the electronic proposal review system. The primary reviewer will be responsible for ensuring a timely response to each proposal.

He then shared the proposed schedule of primary and secondary reviewers for 2009-2010:

College	Primary	Secondary
Agricultural Sciences	Wolpert	Lach
Business	King	Loveland
Liberal Arts	Lach	Wolpert
Oceanic & Atmospheric Sciences	Colwell	Aldwin
Education	White	Tynon

Engineering	Narayanan	O'Reilly
Forestry	Tynon	Colwell
Health & Human Sciences	Aldwin	Cui
Pharmacy	Cui	King
Science	Loveland	White
Veterinary Medicine	O'Reilly	Narayanan

Loveland then pointed out that the slash courses with undergraduate options should be approved without being reviewed, i.e. push the YES button. Rettig asked who would be in charge of reviewing interdisciplinary courses. Loveland indicted the number of IST proposals would be small.

Loveland suggested scheduling a training session with Susie Leslie on how to use the program. He also asked the members to send him any proposals they feel uncomfortable with. Fisk offered one-on-one tutorials for anyone who desired one.

Proposal of distribution of reviewers (above) was adopted by the Council.

To do:

- Tom Eversole to be invited to the Council when the 7xx/8xx courses and VM/Phar/HHS request is presented for discussion.
- Jim Coakley to be invited to the Council when the business course issue is presented for discussion.

Meeting adjourned at 3:30 PM.

[Faculty Senate](#) » [Committees/Councils](#) » [Graduate Council](#) » [Minutes](#) » September 25, 2009 Minutes

Graduate Council

September 25, 2009 Minutes

Grad Council Members Present:	Carolyn Aldwin (HHS), Theresa Filtz for Rong Cui (Pharmacy), Denise Lach (CLA), Walt Loveland (SCI), Vinod Narayanan ENGR), Kathy O'Reilly (Vet Med), Jo Tynon (Forestry), Jessica White (Education), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Rick Colwell (COAS), Nancy King (Business)
Ex-officio Members Present:	Martin Fisk, Bruce Rettig
Support Staff Present:	Nagwa Naguib
Guests:	Paul Doescher (Faculty Senate President)

1. Introduction

Walt Loveland, Chair of the Graduate Council, welcomed Graduate Council members to the new academic year. He pointed out that the Graduate Council is an important committee, and members have been invited by their deans to represent their colleges. He then asked everyone to introduce themselves.

2. Charge to Graduate Council by Paul Doescher, Faculty Senate President

Loveland introduced Paul Doescher to the Council. Doescher gave the Council the charge for the new academic year. He indicated that this year will likely be an unprecedented one as far as curricular actions by the university. A special meeting of the Faculty Senate is scheduled for Tuesday, September 29th followed by a state of the university speech to the Faculty Senate and the university community, by President Ray on Thursday, October 8th. This academic year is likely to see new degrees, merged departments, and eliminated programs, which will precipitate a large number of Category I and Category II proposals. These proposals will need to be acted on quickly with the goal of completing actions on Category I proposals in six months and Category II proposals in one month.

Doescher proceeded to charge the Council with two important issues they might want to discuss.

- a. He would like to see a change in the process of review of Category II curriculum proposals. His assessment is that the Graduate Council's delegation of Category II proposal processing to the Graduate School has resulted in a lengthening of the time of approval. With the potential for a large number of Category II proposals this year, the proposal processing time should be shortened. Category I proposals have been taking two years to go through the system. The Executive Committee of the Faculty Senate and the OSU Administration is developing an overarching review procedure. The Provost has reactivated the Faculty Consultative Group (FCG) and increased its membership. In addition to the Executive Committee members, the FCG includes the Budgets & Fiscal Planning Committee Co-chairs; the Curriculum Council Chair; the Faculty Status Committee Chair; and the Graduate Council Chair. The FCG will review and screen proposals for reorganization.

- b. The second issue Paul Doescher asked the Graduate Council to explore was the "graduate field concept." The Dean of the Graduate School, Cornell University, visited OSU in early June and met with several deans of colleges regarding this issue. Carolyn Aldwin indicated that the University of California, Davis uses a combination of degree programs administered by departments and degree programs organized through graduate groups. Doescher asked the Graduate Council to consider this concept and decide if it would work for OSU. Aldwin's experience from Davis will be beneficial.

3. Tentative Agenda for Upcoming Meetings

The standing rules of the Graduate Council were distributed to the Council members. Martin Fisk pointed out that the standing rules place the Graduate Council in the position of establishing and reviewing the standards of graduate education at OSU. He also explained that the Graduate Council is a committee of the Faculty Senate and the members of the Graduate Council create the agenda. The Graduate School may suggest agenda items, but the Graduate Council controls the agenda. Agenda items can be sent to the Graduate Council chair for inclusion in future meetings. Graduate Council chair, Walt Loveland, provided tentative agendas for future Council meetings.

4. Outline of Revised Category II procedures

Loveland explained the current process of reviewing Category II proposals, and pointed out that the review by the Graduate Council takes substantially longer than review by the Curriculum Council. After a proposal has been approved by the curriculum committee of a college, it is reviewed by the Curricular Coordinator. Once approved by the Curricular Coordinator, it is sent to the Associate Dean of the Graduate School for review by the Graduate Council. The associate dean of the Graduate School notifies the Graduate Council Category II subcommittee of the proposal. The proposals are reviewed by the subcommittee which sends comments to the associate dean. The associate dean resolves differences of opinions and sends the proposal to the next review step (back to the proponents or on to the Curriculum Council). At each of these steps, the proposal could be returned to the proponents for corrections, additions, or clarification. Loveland proposed that the review procedure be revised so that each council member has access to the electronic system and can make decisions to "approve" or "request information" from the proponents. Each council member would review the Category II proposals submitted by his or her own college. Loveland is visiting with the Curriculum Council to determine whether they would continue to review graduate course proposals that have been approved by the Graduate Council. He asked if this process was acceptable to everyone. He also suggested a joint meeting with the Curriculum Council to discuss this proposal. He indicated that this could be a one-year interim solution due to the large number of expected proposals this year.

Narayanan commented that a conflict of interest might occur with the proposed process especially if the proposal is coming from the same department as that of the Council member's. Tynon suggested that two council members should review each proposal, one of whom will be from the college submitting the proposal as "the expert" in the field. Filtz suggested that requests to drop classes should be handled automatically.

Aldwin pointed out that the University of California system has bylaws, and as long as the faculty/department or college operate within the bylaws, permission from the Graduate Dean is not necessary.

Loveland will draft a document describing the new steps for reviewing Category II proposals and a rubric for evaluating proposals. He will present it for discussion at the next Council meeting.

5. Course Credits

Loveland described situations in which Category II proposals assign credits to courses that are not in line with the university guidelines. Some departments are proposing to assign four credits for courses that meet three hours per week. Other department's under-credit courses by giving three credits for courses that require more than nine hours of work outside the classroom per week. He pointed out that the University of Oregon arbitrarily changed many courses to four credits without changing the amount of instruction. The consequence is that the student at U of O receives four credits whereas a student taking the same course at OSU would receive three credits.

Council members discussed the issue and decided that the instructors of those courses should decide on the number of credits for the courses they teach. No action was taken by the Council.

The meeting adjourned at 3:20 PM.

Graduate Council

June 1, 2009 Minutes

Grad Council Members Present:

Rick Colwell (COAS), Becky Donatelle (HHS), Shawna Grosskopf (CLA), Nancy King (Business), Chrissa Kioussi (Pharmacy), Walt Loveland (SCI), Vinod Narayanan (ENGR), Darlene Russell (Education), Jo Tynon (Forestry), Tom Wolpert (AG SCI)

Grad Council Members Absent:

Kathy O'Reilly (Vet Med), Britt Hoover (Student Representative)

Ex-officio Members Present:

Martin Fisk and Sally Francis

Guests:

Badege Bishaw, Forest Ecosystems and Society;
Alfonso Bradoch, Director of Department and Student Services, E-Campus;
Nagwa Naguib, Graduate School Staff; Steve Radosevich, Forest Ecosystems and Society

Approval of May 11, 2009 Minutes

Walt Loveland indicated that he had two edits to the minutes:

1. Page 2: English Proficiency Minimum Test Scores for Entry into OSU Graduate Programs
 1. Para 2 – last sentence to read: "This policy goes into effect for students admitted for *winter* 2010."
2. Page 4: Graduate Enrollment Task Force
 1. Para 5 – last sentence to read: "Loveland suggested that the Task Force could make the recommendation that this increase in enrollment be done without any cost, *but that is not likely.*"

Motion: Motion to accept the *revised* minutes was made by Vinod Narayanan and seconded by Rick Colwell. Shawna Grosskopf abstained. Motion passed.

Interdisciplinary Master of Natural Resources (MNR)

Badege Bishaw and Alfonso Bradoch were introduced to the Council. Bishaw proceeded by indicating that a response to the Council's concerns has been addressed in the email of May 20, 2009 to Council members. He clarified that the director's 0.25 FTE is for coordinating both SNR and MNR programs.

Narayanan asked if all the professors/instructors are from the College of Forestry. Bishaw responded that in fact they are from the different colleges. Loveland wondered how the tuition revenue will be distributed. Bradoch responded by referring the Council to page 22 of the proposal where it shows that the E-Campus fee is split between the department and E-Campus. The revenue distribution will not be different from other programs, i.e. 80% goes to the department. He referred the Council to page 27 of the proposal with the detailed budget. Steve Radosevich pointed out that the rate is \$85/credit hour. Whether or not it is overload and paid directly to the department or otherwise, this is a negotiation between the department head and the instructor.

Jo Tynon posed two questions to the guests: 1) Courses should have the FOR designation instead of FES as they are currently listed. 2) How will the revenue be counted for the courses with an asterisk that are not all in the College of Forestry? Bishaw reminded the Council that E-Campus was paying for the preparation and

course development. Becky Donatelle wondered if the departments will agree with enrollment increase in their courses. Radosevich responded that it all depended on the individual departments. Bishaw referred the Council to the alternative courses that students could take (see p.107 of the proposal).

Russ-Eft asked the Council if there were any more questions, then thanked the visitors and informed them that she will be sending a response email once a decision has been made by the Council.

A short discussion followed. Donatelle pointed out that the instructors of those courses should be notified that students in this program will be attending their classes, which will increase the enrollment.

Motion: A motion to approve the Category I for the Interdisciplinary Master of Natural Resources by Loveland, seconded by Tynon. Donatelle opposed. Motion passed.

Distance Education and Campus Programs

Alfonso Bradoch returned to the meeting to open a discussion on the remote participation of students at their oral examinations and the registration for thesis credits at remote sites. Discussion followed on various technologies available for remote meetings and the need for staff and dedicated rooms for the use of technology.

The distribution of tuition for E-campus courses was discussed. Tynon wondered if the department will get only 80% of the E-Campus tuition as the remaining 20% will go to E-Campus. Sally Francis pointed out that differences in the distribution of on-campus and e-Campus tuition might affect departmental budgets [potentially leading departments to have on-campus student's sign up for E-Campus thesis credits]. Bradoch responded that on-campus students need to be coded differently so they would be excluded, and 100% of the tuition will go to the department. Loveland commented that OSU exists without E-Campus but E-Campus cannot exist without OSU.

Tom Wolpert wondered how much technology will be needed to implement this change to be able to hold remote oral examinations and registration for thesis credits at remote sites. Bradoch responded that they will establish what is required for the individual course. In some cases it might not work. The department and faculty will make the decision if the course could be put online or not. Adobe Connect rooms are able to bring multi media. Currently, facilities and trainings are available. Colwell agreed that the technology is abundant. Russ-Eft pointed out the issue of residency requirement and the fact that materials borrowed from the library will not be sent to remote locations when students are off campus but enrolled in 503 or 603 thesis. [So, for example, an E-Campus doctoral student located in Alaska would have to travel to Corvallis to pick up a book from the library.] Bradoch reminded the Council that distance education students need to be coded as such. If the students register through E-Campus, both tuition and library use are different. Bradoch indicated that the Library receives yearly revenue to compensate for E-Campus students.

Actions:

Bradoch agreed to present to the Council a proposal about distance education courses and oral examinations.

Definition of Satisfactory Progress

Martin Fisk explained to the Council that at the October 2008 meeting, Council members asked if there were rules for dismissing students who are not making satisfactory progress. Francis was directed to solicit from all the programs their definitions of satisfactory progress. The responses received to date are reflected in the spreadsheet Fisk distributed. He explained that most definitions were based on university requirement (3.0 GPA) and not much else. Narayanan asked if a real definition of research work is reflected.

Fisk offered a suggestion that student progress could be defined by mutual agreement between the student and the advisor or major professor and evaluated yearly by the student and the advisor. Loveland reported that this might not work if faculty and student do not agree on the student's progress.

Regarding the question of timelines, Fisk said that there is a policy of a maximum of seven years for the masters' degree. Russ-Eft suggested that the Graduate Council might need to decide on the timeline for the PhDs as well. Fisk indicated that the Biological and Ecological Engineering (BEE) program declared that the timeline for the PhD is seven years and other programs could adopt a similar policy. Colwell noted that there are certain reasons for taking longer to finish the PhD, for example, working at a company.

A discussion followed and suggestions included:

- Establish a university wide policy on satisfactory progress
- Establish a time limit for PhDs

- Faculty/student yearly meetings
- Ask programs to create a student progress policy and inform campus that this issue will be part of graduate program reviews.
- Add the above policy to the Graduate School Guide to Success or the web site.

Action: Fisk to present a proposal to the Council to be discussed next year.

Graduate Council Committee Assignments

Francis distributed a draft proposal of the 2009-2010 Graduate Council Committee Assignments. She also indicated that a few of the subcommittees' workload is heavier than others, thus the reason for the distribution of assignments.

Russ-Eft indicated that Leslie Burns informed her that, due to budget cuts, the Faculty Senate is hoping for a fast track on Category I and Category II processes to facilitate any elimination or merger of programs and combining colleges.

Meeting adjourned at 4:53 pm

Graduate Council

May 11, 2009 Minutes

Grad Council Members Present:

Rick Colwell (COAS), Becky Donatelle (HHS), Nancy King (Business), Walt Loveland (SCI), Kathy O'Reilly (Vet Med), Vinod Narayanan (ENGR), Darlene Russ-Eft (Education), Jo Tynon (Forestry), Tom Wolpert (AG SCI)

Grad Council Members Absent:

Shawna Grosskopf (CLA), Britt Hoover (Student Representative), Chrissa Kioussi (Pharmacy)

Ex-officio Members Present:

Martin Fisk and Sally Francis, Graduate School

Guests:

Bella Bose, Associate Director and Molly Shor, Head Advisor, School of Electrical Engineering and Computer Science, Nagwa Naguib, Graduate School

Approval of April 27, 2009 Minutes

Martin Fisk indicated that the intent of the Council probably needs to be more clearly stated in the summary of the actions of the Council on the Professional Science Masters Category I proposal. The Council agreed to change the last sentence of the summary to "The Council agreed that it would review and vote on the revised Cat I proposal electronically in order to expedite the process."

In response to Loveland's question if the Dean of Forestry contributed to the program, the response is corrected as follows: "Bradoch indicated that E-campus revenue was distributed to the college."

Motion: Motion to accept the *revised* minutes was made by Kathy O'Reilly and seconded by Walt Loveland. All voted in favor.

Appointment of fall 2009 Category II Proposal Review Subcommittee

Darlene Russ-Eft reminded the Council that we will need to have the Cat II subcommittee ready to review the proposals as early in the fall as possible. She reminded the Council, because many faculty have nine month appointments, review of Cat II proposals may not continue in the summer. Russ-Eft wondered if the current subcommittee comprised of Nancy King, Walt Loveland and Vinod Narayanan could continue on the Cat II subcommittee in the fall. Narayanan indicated that, even though he would be happy to, he didn't know if he would continue serving on the Graduate Council as his appointment was for one year only. King and Loveland volunteered to continue on the subcommittee. Donatelle also indicated her willingness to participate in the subcommittee in the summer. Francis indicated that program reviews, and other Graduate Council activities all need to be considered when filling the positions on the Category II subcommittee for next year.

Russ-Eft asked the Graduate School to provide the updated list of Graduate Council Programs Reviews for next year at the June 2nd meeting.

English Language Proficiency Minimum Test Scores for Entry into OSU Graduate Programs

Walt Loveland informed the Council that about twenty graduate students are admitted each year to the Department of Chemistry and funded with Teaching Assistants (TAs). This year twelve of these are international students. A faculty member travels to their country of origin to interview them face-to-face to evaluate their English language skills before they are accepted into the department. He indicated that his department's faculty are upset about the change that the Graduate Council passed, i.e. setting a minimum Internet Based (iBT) score of 26 for graduate teaching assistants, which replaces the SPEAK score of 50.

Fisk related the history of English language testing and minimum scores for admission to OSU and for

granting teaching assistantships. He indicated that a change was needed because the OSU English Language Institute will no longer provide the SPEAK test for spoken English proficiency and a new assessment of spoken English is needed. The Educational Testing Service (ETS) tests spoken English as one of its four internet based tests. The Graduate Council approved at its April 14, 2009 meeting the recommendation that 26 be the minimum score on the iBT spoken English test for graduate teaching assistants. This is in line with the minimum score of teaching assistants of most of our peer institutions that use the iBT for this purpose and also in line with the minimum SPEAK test score of 50, which was previously required for OSU international teaching assistants. Narayanan added that the College of Engineering has been admitting international students with iBTs. Fisk indicated that students can be admitted with an iBT speaking score of 18 to 25, but restrictions apply. With a score of 23-25 a student should take the international GTA class offered by OSU and should be monitored in the classroom. With an iBT speaking score of 18-22 the student should not be granted a teaching assistantship. This policy goes into effect for students admitted for Fall 2010.

Loveland indicated this was sufficient information to respond to concerned faculty in the College of Science.

Proposal for a five year B.S./M.S. program in the School of Electrical Engineering and Computer Science

Bella Bose, Associate Director, and Molly Shor, Head Advisor, from the School of Electrical Engineering and Computer Science joined the meeting at 3:30 pm and were introduced to the Council members. Bose handed out material that described his proposal.

Bose introduced the proposal for the 5-year B.S./M.S. program for top students entering the undergraduate programs in ECE and Computer Science. His request is to allow students in these programs to reserve up to 21 graduate credits during their undergraduate study. These credits would be applied to a 45-credit OSU Master's degree, thus allowing students in the program to complete an M.S. degree within one year of finishing the B.S. degree by taking 24 credits of course work and research.

Bose noted that currently, the University does not allow the students to reserve more than 15 credits to be used on a graduate degree, and a minimum of 30 credits must be taken after being admitted to a master's program. The Oregon University System has placed this limit of 15 credits of combined undergraduate and post-baccalaureate credits that can be transferred into a master's degree. Loveland and Russ-Eft asked if the program could be reformed to allow 21 credits on a 51 credit master's degree. The intent of the proposal is to have a 45 credit master's degree.

Francis indicated that there was an issue of revenue because graduate tuition is higher than undergraduate tuition. She had checked with Nancy Heiligman to determine if the additional six credits reserved for graduate study beyond the permitted 15 credits could be charged at the graduate tuition rate. There did not appear to be a mechanism to do this.

O'Reilly asked how many students would be in the program. Bose indicated 20 to 30 students. Donatelle asked if the size of the graduate classes was an issue. Bose responded that this was not an issue. The estimated cost to the university of the change from allowing 21 transfer credits rather than 15 would be about \$40,000. Russ-Eft thought the cost might be higher because, once the limit was raised for EECS, other programs would want to permit 21 transfer credits. Wolpert asked about current undergraduate and graduate enrollment in EECS. There are 190 to 200 undergraduates and about 150 Masters students in EECS not including MEng students. Francis wanted to know how many of the 200 undergraduates would take an extra 6 credits of graduate work. From previous comments it appears that would be about 30 students. Russ-Eft wanted to know how many B.S. students went to other universities for advanced degrees. Bose did not know.

Bose explained that the students will be admitted into that program during the spring term of their junior year and will be assigned a major professor in the fall term of their senior year and complete their capstone project in their senior year. During their senior year they would take graduate classes that would be reserved for their graduate studies. He expected that the students would be admitted to the Graduate School after their senior year. Bose mentioned that most of these students are already working with professors and that OSU will attract more students if they know that they can finish the B.S./M.S. degree within five years.

Rick Colwell asked if the graduate courses would be slash courses or stand alone graduate level. Bose indicated that they would be stand alone graduate.

Colwell questioned if the other schools are successful with the combined programs. Bose pointed out that all those students are residents. O'Reilly wondered why EECS was asking to allow 21 credits when other institutions that had 5-year B.S./M.S. programs allowed only 18 credits.

Francis pointed out that the Graduate School will not have the oversight until the students are admitted as graduate students.

Russ-Eft thanked Bose and Shor for their presentation.

After a discussion of the proposal, the Graduate Council decided on the next steps:

Actions:

1. Francis will contact her peers at PSU and UO and discuss the OUS Administrative Rules which puts a limit of 15-credit hours for the reserved credits.
2. Francis will contact OSU's peer institutions and inquire about the mechanics for implementing such a program and the way they bill the students.
3. Inform Bose of the Council's action and that the decision will be made soon, but not sooner than fall term.

Graduate Enrollment Task Force

Walt Loveland presented the Draft report of the Graduate Enrollment Task Force that was formed last fall by Dean Francis. Loveland serves on the Task Force as the representative of the Graduate Council.

The Task Force met with some deans. OSU's peer institutions enrollment reflects the population of graduate students to be twenty percent of the total enrollment. OSU will need to increase its graduate student population from 15% to 20%. He also indicated that Provost Randhawa's aspiration is to have three PhD students for every graduate faculty. Presently the ratio is close to one to one. In 1999, a task force discussed the graduate enrollment and estimated that an investment of about \$7M a biennial would produce 1000 extra students. The equivalent in today's dollars is \$8.9M. If we didn't have financial problems, the goals could be achievable. Loveland asked if the University should focus on raising graduate enrollments through E-campus as the money follows the students.

O'Reilly wondered if we should be focusing on increasing the Masters' students. Narayanan reminded the Council about the stimulus money which helps individuals obtain a graduate degree within a two-year period is more in line with funding Master's degrees than doctoral degrees

Francis indicated that one of the recommendations of the Graduate School Review was the ratio of PhDs to graduate faculty of 3:1. The question is, how do we define the graduate faculty? The National Research Council (NRC) study and its definition of graduate faculty was that the individual would have had directed a student within the past five years and served on a committee. Fisk informed the Council that department heads have the opportunity, every year, to review the list of graduate faculty, and make changes, if needed. Defining Graduate Faculty, as was done for the NRC study, would decrease the number of Graduate Faculty and would improve the student to faculty ratio at OSU.

Russ-Eft asked the Graduate Council if they had any recommendations to the Task Force. None was given. Loveland suggested that the Task Force could make the recommendation that this increase in enrollment be done without any cost.

Action: Contacting department chairs to find the status of the graduate faculty i.e. affiliated vs. hired faculty.

Russ-Eft asked the Council if anyone had an objection to the extra meeting on June 1st to replace the May 25th meeting of the Council. None was voiced.

Meeting adjourned at 5:00 PM.

Grad Council Members Absent:

Rick Colwell (COAS), Chrissa Kioussi (Pharmacy), Britt Hoover (Student Representative), Kathy O'Reilly (Vet Med), Tom Wolpert (AG SCI)

Ex-officio Members Present:

Martin Fisk, Sally Francis

Guests:

Sherman Bloomer, Dean (College of Science), Ursula Bechert (College of Science), Steve Radosevich (College of Forestry), Badege Bishaw (College of Forestry), Alfonso Bradoch (ECampus), Jaime Irvine (Graduate School)

Approval of April 14, 2009 minutes

Motion: Motion to accept the minutes was made by Jo Tynon and seconded by Becky Donatelle. All voted in favor. Motion passed.

Cat I Proposal to Establish Graduate Certificate in Management for Science Professionals

Russ-Eft distributed copies of an email from Ursula Bechert (3/9/09), an email from Dean Bloomer (8/16/09), and a 3/27/09 article about PSM programs that appeared in *Science*. Walt Loveland wished clarification on the reference to the Curriculum Council in Dean Bloomer's email. The Council agreed that, in the context of the message, Dean Bloomer must have been referring to the Graduate Council. Council members then were joined by Dean Sherm Bloomer, College of Science, and Ursula Bechert, College of Science. The Council clarified that the business courses are not an issue. The continuing concern is in regard to the "plus" courses. Bechert indicated that the Category I proposal had been modified, but that the syllabi presented in the Cat II proposals for the plus courses (511, 512, 513) had not. She said that after further discussion and consideration, she proposes to remove 511 and 512 from the certificate curriculum and expand 513 from 2 to 3 credits to reach the required 18 credits for a graduate certificate. She noted that the originally proposed model of a 3-course sequence contributes to establishing a sense of community among students and provides a cohort experience that will be different if the model is changed to a single 3-credit course. Bloomer indicated that skills building could be included in the certificate as a non-credit requirement. The Council expressed support for this approach. Bechert indicated that she will proceed with modifying the Cat II course proposals accordingly.

Loveland asked how this proposal falls within the University's financial situation. Bloomer said that creation of this certificate is an opportunity to add another dimension to our graduate courses and it does not require any new investments. Nationally, the Professional Science Master's degree appears to be used as an alternate pathway to obtain advanced science education. Francis said that the proposed certificate may present an opportunity for generating revenue because the online "plus" curriculum would be available to PSM's all over the country and because of a statewide PSM initiative. Bloomer added that the existence of the certificate may be attractive to students in other departments at OSU to add the professional courses to their own programs. He also sees the certificate as a benefit in attracting graduate students to a campus that offers this professional program.

There were no other questions for the guests. Russ-Eft indicated that she will send an email to Bechert

regarding the next steps. The guests were thanked and dismissed, and the Council took the proposal under consideration.

Loveland asked for confirmation that the disclaimer about the business oriented courses has been added as previously agreed. Fisk indicated that it has been added to the Cat II proposals related to business practices for scientists, PSM 565, PSM 566, and PSM 567. Loveland also wanted to know what the non-credit part of the certificate looked like. Francis reiterated Bloomer's comment that programs can have non-credit requirements. Loveland thought that the courses should have prerequisites or other limitations that restricts enrollment to PSM students.

Russ-Eft summarized the conversation by indicating that she will inform Bechert to remove the two, one-credit courses; revise PSM 513 as a three- credit course with appropriate prerequisites or an indication that enrollment in it will be limited to majors; and revise the Cat I proposal to reflect these structural changes. Professional skills courses can be included in the Cat I proposal, but not for credit. Subsequent to these changes, the Council will take formal action on the Cat I proposal. The Council understood this summary to constitute a motion which was seconded by Grosskopf. The motion was carried by a unanimous vote. The Council agreed that it would review and vote on the revised Cat I proposal electronically in order to expedite the process.

GK-12 Letters of Intent

Russ-Eft indicated that the Research Office will be receiving letters of intent to submit proposals to the NSF GK-12 program by the deadline of May 1. Only one letter may be submitted to NSF from OSU. The Graduate Council is being asked to determine which letter shall be put forward since it is anticipated that about four letters of intent may be received in response to the current RFP. Letters are limited to four pages. Graduate Council members agreed to rank the proposals and send the rankings to Nagwa Naguib at the Graduate School no later than May 7. The proposals will be distributed to the Council with a set of criteria and a ranking scale and Naguib will compile the rankings, and a final decision will be determined by Russ-Eft, Francis, and Fisk if the ranking process does not produce a clear outcome. Letters of intent will be distributed to Council members May 4 with instructions for ranking. To summarize, the letters of intent will be received Friday, May 1; they will be distributed to the Council on Monday, May 4; and the Council will return their reviews to the Naguib by Thursday, May 7. The rankings will be sent to the Research Office on May 8

Further Discussion Concerning Cat II Proposals, regarding process and summer reviews

Russ-Eft described her communications with Nunnemaker about adding members to the Graduate Council, appointing members earlier in the year, and changing the membership rotations so that Category II proposals could be processed during the summer and processed more efficiently in the fall. At the end of a discussion on alternate ways of processing Category II proposals Loveland, Donatelle, and Narayanan agreed to review Cat II proposals during the summer months.

Category I: Interdisciplinary Master of Natural Resources

At 4:00 p.m. Steve Radosevich, Alfonso Bradoch and Badega Bishaw joined the Council. Radosevich introduced a Cat I proposal to establish a Master of Natural Resources (MNR) degree. Radosevich summarized the curricular framework and explained that the entire degree would be available in an online format. He further indicated that some courses will be available in both online and face-to-face on-campus formats. Students will be able to take coursework in either format or as a blend of both. The MNR is a non-thesis degree built around a core, area of specialization, and capstone experience for a minimum of 45 credits. The undergraduate natural resources major was used as a template in the design of this proposed degree. Bradoch pointed out that the area of emphasis component of the MNR will capitalize on existing graduate certificates but specified that students will not be permitted to count credits or courses twice. The MNR will provide a "capstone" for graduate certificate programs. The new degree will also help to expand the reach of online graduate programming at OSU; currently, the only such program is in education. Bradoch indicated that ECampus is very enthusiastic about this proposal. Their market analysis indicates very good enrollment potential. There are few similar programs in the US. Student demand is strong and growing. Fisk noted that it should be transparent to all that all students will be required to come to OSU for their final examination.

The Council asked what the response would be to the report from the Budgets and Fiscal Planning Committee and was told to refer to the MOU presented in Appendix F of the proposal. Bradoch also indicated that ECampus will promote this degree internationally and will cover the cost of course development associated with the degree. The question was raised regarding whether or not the MOU is still in effect given the current financial crisis. Radosevich said that the \$30,000 promised by the Provost is "protected." Given the absence of financial support from the College of Forestry, the location of the program in the College of Forestry was questioned. Donatelle indicated that the budget should reflect the true costs of offering the program including the cost of developing and delivering the new courses. Loveland pointed out that E-campus was paying for the course development and Bradoch indicated that these funds were protected.

Tynon inquired about the faculty who will be needed for teaching and advising. Given the current financial crisis, will those faculty members still be here when the proposal is launched? Radosevich indicated that the courses are already being offered online and that students would be able to take coursework elsewhere through the Consortium. Students' committees will evaluate whether a particular course taken elsewhere can be transferred to the OSU program of study, ideally in advance of the student's taking a course for transfer. Loveland wanted to know if there was revenue sharing between the Consortium and OSU and Radosevich indicated that there was no revenue sharing.

Loveland asked where the program was housed. Radosevich indicated that the Dean of Forestry wanted it housed in the college.

Tynon then asked if Bishaw will become the director of this program when it is approved. She expressed concern for the likelihood of his continuing employment at OSU. The composition of the coordinating committee was also questioned. Concern was expressed about the social sciences element of the proposal given that faculty members are already stretched too thinly. Brent Steel's memo is relevant to this point. How will this issue be addressed within the proposal? Radosevich replied that the commitment varies by department. For example, Speech is very supportive of the proposal as is Sociology, but they would need additional faculty members in order to participate. Francis questioned the proposed FTE for the directorship given that the proposal indicates that the Director will serve on every student's committee. Francis also expressed her opinion that requiring every student to include the program director as a committee member is inappropriate and not common practice in graduate education at OSU.

Loveland asked if the Dean of Forestry contributed to the operation of the program. Bradoch indicated that E-campus revenue was distributed to the college.

Francis expressed concern about the use of the PSM certificate as an area of concentration for the MNR. The PSM certificate is not based on content but on skills and, therefore, is not appropriate as a concentration. Another concern about encapsulating certificates in the MNR is that some certificates have capstone requirements of their own. Radosevich indicated that it was OK to take the PSM certificate out as an option for MNR students. Further discussion of the curriculum followed. The Council thought that the core of the curriculum needed to be defined. Radosevich thought the core should be flexible. Course designations also needed to be worked out because forestry courses are still listed as FOR but the proposal lists them as FES. The Council discussed advising of the students and the role of the program director and major professor.

Radosevich, Bradoch, Bishaw departed at 4:57 p.m.

Loveland said that the proposal is a large document and needs considerable polishing. Donatelle agreed with this. Both Loveland and Donatelle also expressed some concern about the MNR budget compared to that of the SNR undergraduate program, and the salary base of the faculty identified in the budget. Tynon reiterated her concern about Bishaw's appointment and her opinion that the core advisory committee should be larger. Also, there needs to be clarification on the core curriculum and the source of advisors for the students need to identified.

She suggested that the degree might be more appropriately housed in the Graduate School. This statement is consistent with the memo from Jon Kimerling, which is included in the proposal, and which says it is an interdisciplinary program housed in the College of Forestry.

Russ-Eft will submit specific questions and concerns to Radosevich for his use in preparing revisions.

The meeting adjourned at 5:15 p.m.

Graduate Council

April 13, 2009 Minutes

Grad Council Members Present:

Shawna Grosskopf (CLA), Nancy King (Business), Chrissa Kioussi (Pharmacy), Kathy O'Reilly (Vet Med), Vinod Narayanan (ENGR), Darlene Russ-Eft (Education), Jo Tynon (Forestry)

Grad Council Members Absent:

Rick Colwell (COAS), Becky Donatelle (HHS), Britt Hoover (Student Representative), Walt Loveland (SCI), Tom Wolpert (AG SCI)

Ex-officio Members Present:

Martin Fisk, Graduate School

Guests:

Bill Boggess and Cary Green, Agricultural Sciences; Rosemary Garagnani and Nagwa Naguib, Graduate School

Introductions

Follow-Up Review on Masters of Agriculture (MAg) Degree Program

Darlene Russ-Eft welcomed Bill Boggess and Cary Green to the meeting. Kioussi presented the review team's report of the Masters of Agriculture (MAg) to Boggess and Green. She indicated that the program was found to fill a niche for certain students who need it and use it, and were found to like the program and willing to go through it.

She pointed out that lack of good communication and leadership is being corrected by the appointment of Dr. Cary Green who will be overseeing the program. She stressed that reconstruction of the website will be critical in giving both students and faculty a better access to information.

Green thanked the Review Committee for their work, and indicated that he was happy with the report. He pointed out that the previous review was held in 1994. The program works across the entire college. He mentioned that one of the biggest issues was communicating what the program stood for, as well as its assessment. They knew the review needed to be done. He also indicated that the internal report findings and recommendations, done by the College, were very similar to the external ones.

Bill Boggess also thanked the Review Committee for their work and indicated that he was very pleased to have Cary Green on board.

Russ-Eft thanked both Bill Boggess and Cary Green for their input. She then asked the Council if further discussion was needed. None was.

Motion: A motion to accept the Masters of Agriculture (MAg) Degree Program Review Report by Shawna Grosskopf and seconded by Jo Tynon. All voted in favor. Motion passed.

Approval of March 9, 2009 minutes

Motion: Motion to accept the minutes was made by Kathy O'Reilly and seconded by Jo Tynon. All voted in favor, except Darlene Russ-Eft who abstained as she was absent from that meeting.

Discussion concerning Category II proposals, regarding process and summer reviews

Marty Fisk reminded the Council that three members of the Council, Nancy King, Walt Loveland and Vinod Narayanan, form the Category II Subcommittee. This group reviews graduate courses that are being added, revised or dropped. Typically the subcommittee looks at those proposals and the syllabus, and makes recommendations. Proposals are available in an online system, and anyone can gain access, but only the Graduate School and other academic offices can make changes, recommend, accept or request additional information.

He indicated that last year, there was a backlog in the review of the Category II proposals. The process might need to be revised, as even though the proposals continue coming in during the summer, the Faculty Senate committees do not meet during that time, thus the creation of the backlog. Another possibility would be to have a Category II Subcommittee in place by beginning of fall in order to not delay the work. Fisk mentioned that there were between 40 and 50 proposals that came in last summer.

Fisk asked if the Category II Subcommittee could process proposals in the summer. Russ-Eft asked Council members how many of them had 12-months appointments.

Narayanan suggested that proposals could be reviewed remotely. He also indicated that it took about 10 minutes to review each proposal.

A long discussion of the Council resulted in some suggestions:

- Four members instead of three on the Category II Subcommittee;
- Have a form with guidelines and boxes with empty space for comments;
- A system to check facts;
- Eighteen-months appointments instead of 12-months, this way there would be some overlaps;
- Alternate members on the Council, as does the Research Council. Alternates could assume some of the tasks of the regular members and could become regular members;
- Expanding the Category II Subcommittee with members from outside the Graduate Council, i.e. adding one more member to the Subcommittee

Fisk clarified that the Executive Committee makes the recommendations for appointments to the Council. Approval of the recommendations is made by the Deans of the Colleges.

Russ-Eft asked for clarification on the reason to have the name of the instructor and the course schedule on the Category II proposal. She indicated that in the College of Education, they were told to remove the names. Narayanan answered that he would like to know who is teaching the course when he reviews a course proposal. He noted that the instructor named on the course syllabus is not necessarily bound to that course, and a different individual could teach it. Tynon wondered if the credit hours shouldn't jive with the contact hours. She also wondered if we should have representation on the Council by college size.

Action: Darlene will check with Vickie Nunnemaker at the Faculty Senate, regarding:

- Having alternate members on the Council
- Having more representatives from larger colleges
- Making appointments earlier in the fall term

She also asked Council members to get back with her regarding their availability during the summer term. E-Campus syllabi will be discussed at a later date.

English language proficiency minimum test scores for entry into OSU graduate programs:

Rosemary Garagnani joined the Council and presented the following two proposals:

1. *International English Language Testing System (IELTS) conditional score of 6.0:* IELTS is a new test. OSU uses a minimum score of 6.5 for entry into Graduate School. We have had this test for the last 3 years. The test is used by many students in Asia from which INTO (INTO University Partnerships, Ltd.) will be actively recruiting. There is a need to set a conditional score for conditional admission to the Graduate School. Several comparator schools have set 6.0 for conditional admission. The test score range is 0.0 to 9.0.

Council members asked if University of Oregon accepts the IELTS with conditional scores. Garagnani indicated that not a lot of schools have conditional score for IELTS. There isn't enough information

available. Fisk asked if the security on both tests is similar and Garagnani pointed out that they use the same process of showing identification. She hasn't heard of any problems with IELTS. She also informed the Council she is planning, after the admission season is over, to review those students who were accepted with a conditional IELTS score of 6.0 to make sure they are successful. Current students have scores of 6.5 to 7.5.

Motion: A motion to accept the proposal to set a conditional graduate admission IELTS score of 6.0 with the condition of revisiting the issue in a year was moved by Jo Tynon and seconded by Kathy O'Reilly. All voted in favor.

2. *Internet Based TOEFL (iBT) score of 26 for speaking to replace 50 on the SPEAK test:* Garagnani proposed that the iBT test replace the OSU administered SPEAK test as the English Language Institute is reorganizing and will stop administering the test. Score of 26 is being used by the University of Oregon and the University of Arizona as the minimum for students being awarded a GTA. She is recommending using the score of 26 iBT for students being awarded GTAs with no teaching restrictions. Departments who use non-native English speakers as GTAs might be requested to provide the evaluation of GTAs to the Graduate School. A discussion regarding the GTAs followed. A suggestion to add another question to the form for students' review of instructors was made. Garagnani will check with General Counsel about any issues related to evaluations of GTAs.

Motion: A motion to accept the proposal to set a minimum Internet Based (iBT) score of 26 to replace the SPEAK score of 50 with the condition to review it at the end of 2009-2010 was moved by Kathy O'Reilly and seconded by Jo Tynon. All voted in favor.

Updates from the Graduate School

No updates.

Meeting adjourned at 4:30 pm.

Graduate Council

March 9, 2009 Minutes

Grad Council Members Present: Shawna Grosskopf (CLA), Nancy King (Business), Chrissa Kioussi (Pharmacy), Walt Loveland (SCI), Kathy O'Reilly (Vet Med), Tom Wolpert (AG SCI)

Grad Council Members Absent: Rick Colwell (COAS), Becky Donatelle (HHS), Britt Hoover (Student Representative), Vinod Narayanan (ENGR), Darlene Russ-Eft (Education), Jo Tynon (Forestry)

Ex-officio Members Present: Martin Fisk, Sally Francis

Guests: Nagwa Naguib (Graduate School), Greg Perry (AREC), Prasad Tadepalli (Computer Science)

3:05 pm - Tom Wolpert chaired the meeting as Darlene Russ-Eft was on travel. The Council members introduced themselves. Sally Francis introduced her new Executive Assistant, Nagwa Naguib, to the Council.

Approval of February 23, 2009 minutes

Motion: Motion to accept the minutes was made by Nancy King and seconded by Walt Loveland. All voted in favor. Motion passed.

Follow-Up Review of the Graduate Program in Genetics

Council members were joined by Greg Perry, Department of Agricultural and Resource Economics. Perry informed the Council that David Cann, Alex Sanchez and he conducted a three-year follow-up review of the Graduate Program in Genetics. They met with Barbara Taylor, director of both the Genetics and the MCB programs, and Stella Coakley, Associate Dean of CAS. Genetics is a small program. About 90 percent of the faculty members are also associated with the MCB graduate program. So, it made sense that they merge both programs administratively. MCB currently has 35-40 students while Genetics has only four students. Perry wondered if we should eliminate the Genetics Program. In its 2006 review, the Panel suggested that the Genetics program become an area of concentration within the broader "umbrella" of the MCB graduate program. Sally Francis clarified that even though the same individual currently has responsibility for directing both the Genetics and the MCB graduate programs, no actual *merger* of the two programs has occurred. To merge programs or to change administrative lines will require a curricular proposal.

The follow-up review team's recommendation (p. 1) for taking care of this previously recommended merger is: *The combined MCB – Genetics faculty need to formally address and resolve the status of the Genetics degree within MCB. This should be done in a timely fashion, such that whatever revisions are adopted can be put into place within the next 12 months.*

Sally Francis indicated that the Genetics and MCB graduate programs are two separate graduate majors, MCB is housed in the Graduate School; Genetics is housed in the College of Agricultural Sciences (CAS). Perry reported that Barbara Taylor has become the director of the Genetics program, following Walt Ream. Francis also wondered if the budget to support Genetics was transferred to the MCB budget. Martin Fisk said that CAS has recently provided some administrative support to the MCB program.

Kioussi asked if, with the recommended merger, the students would receive a degree in Genetics or in MCB. Perry responded that the degree would be in MCB. Francis stressed the fact that, for this to be the case, a curriculum proposal will be required. She also pointed out that when the program review was conducted in 2006, Walt Ream indicated that he would secure more funds to support Genetics.

Loveland wondered if the funds from Agricultural Sciences still existed. Perry restated the fact that the funds have indeed been transferred to MCB, but that there are no students directed by faculty members in CAS in the Genetics Program. Fisk informed the Council that Barbara Taylor specified that the funds transferred from CAS are being used to support the staff of the MCB office.

Kioussi pointed out that the Genetics program was always a weak component and that the MCB Administrative Assistant was being paid from the Genetics program. Wolpert pointed out that Genetics had been a strong program but dwindled, as over the years the directors have asked for support. Francis responded by saying that the Graduate School has secured budgetary support for the interdisciplinary programs that have been housed in the Graduate School (i.e. MCB, MAIS, Environmental Sciences, Water Resources, and Applied Economics). Jim Carrington, former MCB Director, used some of the support provided by the Graduate School for supporting MCB students. Questions about interrelationships among graduate programs were raised during the Graduate Council Program Reviews of the MCB, Horticulture, Genetics and other programs, as they are highly interconnected. Francis then suggested that the Council might want to look at the minutes, talk to the directors, and look at the enrollment trends in those programs. Some housekeeping needs to occur. Perry agreed. He also stated that it is questionable if Genetics is a viable program, and pointed out that Barbara Taylor does not feel that there is as much resistance to merger or elimination of Genetics as there was three years ago, when the program was reviewed.

Perry directed the Council to the recommendation on page 2, which came out of the original 2006 report and stated that if the Council insisted on this recommendation, the Genetics program will be destroyed. Wolpert thought that maybe as an incentive, the issue should be considered a high priority, and the decision should be made within the next three months. Francis will charge Fisk to follow up with Barbara Taylor to determine a course of action. The future of the Genetics program will be decided when the Genetics graduate faculty meet in the spring. If the decision to drop the Genetics program is made, a Category I proposal will be required. Genetics may then become an area of concentration in MCB.

Motion: A motion to ask the MCB and Genetics faculty to report to the Graduate School on the Genetics program status was made by Walt Loveland and seconded by Shawna Grosskopf. All voted in favor. Motion passed.

Follow-Up Review of the Graduate Program in Forest Science

Prasad Tadepalli joined the Council to discuss the follow-up review of the graduate program in Forest Science. In the spring of 2006, a Forest Science program review was conducted. Since then, the College of Forestry has undergone a major reorganization in which three departments, namely Forest Resources, Forest Engineering and Forest Science were merged into two new departments of Forest Engineering, Resources and Management (FERM) and Forest Ecosystems and Society (FES). They have also hired a new wildlife biologist, Brenda McComb, to head the FES department.

Due to the overhaul of the College, they put many of the serious issues outlined in the report, on hold until they decide on what to do with the program.

One of the issues discussed in the follow-up report was lack of *communication* within the program itself. One recommendation in the 2006 report of the review panel was to create a forum or symposium, as a venue to increase awareness across the department on what the graduate students are working on. A one-day graduate student symposium was initiated and is organized by the students featuring presentations of their research. Tadepalli noted that he was not sure if this was a departmental or college-wide symposium, but a useful exercise, nonetheless. It is only for students' research.

Another issue discussed in the follow-up report was the *curriculum*. There has been interest in creating a stronger curriculum. The Provost has appointed a group of head of departments that have interests in the area of plant science, to make recommendations regarding strengthening the plant science area. New courses have been added. Francis indicated that she had received at that time a letter from Barbara Bond addressed to her, as well as to the deans of Agricultural Sciences, Forestry, and Science, in which Bond had delineated her view of the serious problems associated with OSU's ability to deliver content in plant sciences. The Deans agreed to pursue several courses of action in response to Bond's letter. One outcome was to eliminate the graduate program in Plant Physiology. Bond led a failed effort to analyze the plant science situation.

Diversity and hiring was a recommendation in the 2006 report around which the department has made progress. Many of the faculty members were OSU graduates, and the recommendation was to recruit faculty from outside the university. The new head of the department is one example of implementing this recommendation.

The recommendation regarding *space issues* has also been addressed and the graduate students have been allocated a common place. All computer labs are now shared by all the students in the college.

The main message of the follow-up is that both the college and the department have been in flux since the time of the graduate program review in 2006 and they are hoping that things will change with the new department head on board. Tapedalli also pointed out that there is more commonality between the departments, and that the climate has improved.

The Council decided to follow up review within the next two years (calendar year 2011), after the new department head is on board.

Motion: A motion to conduct a second follow-up in 2010-11 was made by Walt Loveland and seconded by Chrissa Kioussi. All voted in favor. Motion passed.

Review of Masters of Agriculture (MAg) Degree Program

Chrissa Kioussi and Kathy O'Reilly were the two internal reviewers for the MAg program review. (See Review Panel Recommendation below.) Kioussi presented the review team's report of the Master of Agriculture (MAg) to the Council. The MAg program is tailored to the needs of students who are not interested in conducting research or pursuing further advanced degrees. The MAg does not require a thesis (with upper case "T"), however there is a coursework and a research paper option which has been called a thesis (with lower case "t"). Kathy O'Reilly pointed out that the MAg students do not go on to earn doctorate degrees. There is confusion about the use of the word *thesis* to describe the coursework and research paper associated with the non-thesis option.

The program serves the needs of certain students, however, they seem to stumble onto the program rather than being advised about its existence. The web site did not provide guidance on how to be admitted to the program. Connected to this, is the realization that the program needs direction and leadership.

In addition to meeting with the heads of the departments and representatives of the colleges that participate in the MAg degree, the review panel met with four MAg students; one faculty member, Jay Noller; and Cary Green who has been newly appointed to oversee the program. The review panel felt that the lack of leadership in the past resulted in that there was no point of contact for students, and that this contributed to the rapid decrease in enrollment over the years. Jay Noller was very enthusiastic about the program and asserted that it fits the needs of some students very well. Dr. Green was happy to have the review done at that time, and stated that he will go back to the faculty with the report as a guide for addressing the recommendations of the committee. Financial support for students is limited – only two of the students who participated in the review were supported.

The review panel provided recommendations, some of which follow:

- Retain and support the new leadership.
- Create better internal (OSU) communication and education about the program.
- Develop better external marketing and communication
- Secure some level of financial support for the MAg students.
- Design and conduct an outcomes and assessment plan for the MAg program.

Review Panel Recommendation:

The Review Panel recommends that the Oregon State University Master of Agriculture Program in the College of Agricultural Sciences be maintained with limited restructuring towards the overall objective of revitalization and increased participation/subscription.

Action:

The invitation to Cary Green to attend the March 9 Council meeting had been overlooked. Therefore, Francis will call Cary Green and invite him as well as Bill Boggess to the Council's next meeting to provide an opportunity for CAS to respond to the report. The Council postponed action on the report until after it has an opportunity to interact with Green.

Discussion of Memo from Jon Dorbolo

Wolpert introduced and read parts of Jon Dorbolo's memo calling for the faculty's solidarity in temporary pay reduction and/or furloughs. Wolpert asked Council members if they felt the Graduate Council meeting was an appropriate venue to discuss this issue, and if the Council should participate in the conversation. He indicated that Dorbolo is asking for feedback. Kioussi suggested that this conversation should be done at the college or department level. Francis indicated that many universities around the nation are taking furlough days to help manage budget cuts. Council members believed that temporary pay reduction/furlough would have to be across-the-board and should be discussed in every venue. A concern about damage to graduate programs

and elimination of graduate assistantships was also raised.

Meeting adjourned at 5:00 pm.

Graduate Council

February 23, 2009 Minutes

Grad Council Members Present:	Rick Colwell (COAS), Becky Donatelle (HHS), Qing Meng (CLA), Nancy King (Business), Walt Loveland (SCI), Kathy O'Reilly (Vet Med), Darlene Russ-Eft (Education), Jo Tynon (Forestry), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Chrissa Kioussi (Pharmacy), Vinod Narayanan (ENGR), Martin Fisk (Ex-officio)
Ex-officio Members Present:	Sally Francis
Guests:	Juan Trujillo (Foreign Languages & Lit.), ??? (Disability Services), Lani Roberts (Philosophy), Ursula Bechert (SCI)

Approval of January 26, 2009 and February 9, 2009 minutes

Russ-Eft welcomed everyone to the meeting and asked for a motion to approve the January 26th Council minutes. The Council had no recommended modifications to the January 26th minutes. Tynon made a motion to approve the minutes as distributed and O'Reilly seconded the motion. The minutes were approved.

February 9th meeting minutes were discussed next. Wolpert indicated that there should be some clarification made to reflect that the approvals of the law courses in section A of the report are for the specific courses listed and for the Water Resources program only. After discussion it was decided to amend the minutes in two ways:

- Amend minutes to state "The approvals are for these courses and this program only."
- Regarding the U of O graduate faculty, the minutes should be amended as, "...to state that U of O uses a different process for Graduate Faculty."

Tynon moved to approve the minutes as amended and King seconded this motion. The motion to approve the February 9th minutes as amended carried.

Request to have American Sign Language used to satisfy the second language requirements for the MA Degree

Guests Tynon Alexander, Lani Roberts and Juan Trujillo were welcomed to the meeting.

Tynon Alexander began by explaining that this proposal is to allow American Sign Language (ASL) to satisfy the second language requirement for the MA degree. She noted that U of O and institutions have accepted American Sign Language as a language exit requirement. Roberts explained that the reason this is being proposed now is that she has a student with over two years of ASL but, since this is not recognized and accepted as a second language at OSU, she has to ask for an exception be made in the case of this individual student.

Juan Trujillo presented the Council with the handout "Standards for Foreign Language Learning" which shows the criteria for determining whether a communication mechanism is a *language*. He believes that ASL meets the criteria and, thus, should satisfy the second language requirement of the MA degree at OSU.

Tynon asked the Council if this could possibly be an oversight since ASL does qualify at the undergraduate level as a foreign language. She then asked if a vote would be needed to allow this at both the master's and doctoral level. If so, she asks that the Council discuss it at one time and vote on all. Francis noted that no action is needed at the doctoral level as any language requirement is at the discretion of the student's doctoral committee. Francis also provided the policy as it currently appears in the Catalog: "For the master of arts degree, the student must show foreign language proficiency equivalent to that attained at the end of a second-year university course in that language with a grade of "C" (2.00) or better." She also noted that the student must meet this requirement before they can take their final examination. She advised the Council that the matter on the table is whether ASL should be considered a foreign language within the context of the existing language requirement.

Tynon asked if ASL has a written portion. Trujillo answered that it does not but noted that a language is about proficiency in communicating and that for this particular language people can communicate through signing.

Loveland asked about the assessment process and if OSU has this capability in the case of ASL. Trujillo said that it does, and his department generally goes to an outside source to have students assessed.

Colwell asked how students would attain this as a language if OSU does not offer instruction in ASL. Trujillo noted that the individual would have to work with the Department of Foreign Languages and Literatures and, if they decided it was reasonable, they would work to find the student the necessary resources. Russ-Eft asked if ASL would need to be taught by video. Alexander noted that ASL is taught using print materials, but videos are also used.

Trujillo told the Council that hearing impaired people are considered bilingual because they can read and write in English but they can also communicate through sign language.

Roberts stated that Ivy League schools accept ASL as a second language, as does the California university system also accepts it. Therefore, she is not clear why OSU would not do so.

Loveland asked that if the language requirement only applies to the MA degree, should any language that has a culture attached be considered acceptable as a second language? Trujillo said that in his department they do accept any language and Roberts noted that ASL is the only language not currently accepted. Alexander added that for a long time ASL was thought to be bad English. However, this view has been dispelled.

There were no further questions from the Council for the guests. The guests were thanked for their time and excused.

Follow-up discussion and decision

O'Reilly asked for clarification as to whether this is a requirement that is merely transferred in or if this is a requirement that would need to be met at OSU? Francis explained that the Catalog says that the student would have to have "equivalent" to two years of a foreign language with a grade of a C or better. Therefore, satisfaction of the requirement could occur as a result of credit-bearing coursework either prior to enrollment at OSU or during enrollment at OSU (if available), or by competency assessment conducted by the OSU Department of Foreign Languages and Literatures.

Loveland moved to approve ASL as a recognized second language and amend the Graduate Catalog as follows: "...must show foreign language proficiency (including American Sign Language)...." Donatelle seconded the motion; the motion carried.

Revisions to Academic Regulations (20,23,24) and a newly proposed AR 31

Tynon asked the Council if the footnotes in the document that had been circulated to the Council were part of the regulations or if they were just included for the information of Council members. The footnotes are part of the Regulations and appear in the Catalog.

Loveland stated that he would like to see AR23 (paragraph 1) revised to include the word "and" instead of the word "or" as in, "...at the discretion of the department/college or faculty member...." He noted that, otherwise, many issues could arise where the two parties may not agree. Tynon noted that if the Council suggested that change, the word "sole" should be removed from that sentence also. Colwell noted that if the wording was changed as suggested above, both the department/college and the faculty member would have to agree for

things to move forward so they would be forced to work any issues out. Loveland agreed. Colwell stated that it is difficult to understand the proposed change to this AR and be asked to approve it in the absence of an understanding of the context and rationale for the proposed change. He mentioned that it was most likely carefully written this way (i.e. the word "and" instead of "or") to avoid some problem that the Council is unaware of. Tynon mentioned that both AR 23 and 24 are very similar but worded differently.

Loveland stated that the difference is credit versus waiver. The Council observed an error in wording within the proposal in that AR should refer to waiver, not credit. Loveland also stated that he does not like the word "absolution" in regard to AR 31 because it has religious connotations and thus should be removed. Russ-Eft suggested that the word "expunge" could be used instead of the word "absolution."

Tynon asked the Council the Council's proposed changes to AR 23 would change the original meaning of the AR? She proposed that the Council refer this question back to the AR Committee along with the message that if it would change the original meaning to so advise the Graduate Council because the Council has some concerns about this.

Tynon also suggested eliminating the footnotes. She believes the footnotes should be included with each AR.

Francis indicated that AR31 appears to be concerned with only undergraduate students. Tynon noted that AR31 says "student" and could apply to a graduate student who is out for awhile and would like come back. Loveland agreed that it could apply to any student who left and failed years ago but decided to come back and pursue a different discipline. He mentioned that failing so many classes years ago would mean that such a student would have a terrible GPA and that it would be impossible to come back and boost it to the level required for admission to Graduate School. Francis noted that the "24 hour rule" is a mechanism for handling such situations in the case of graduate students. Tynon asked how this would apply to a student who, for example, had a terrible accident and had to be out for awhile. Francis responded that it would not matter in the case of a master's student because most likely 7 years have passed and their course work has expired. She also noted that for doctoral students, coursework does not expire. Francis suggested that this AR is appropriate to only undergraduate students. O'Reilly stated that "undergraduate" should be included in the first line of the AR.

Category I: Graduate Certificate in Management for Science Professionals

Ursula Bechert arrived and introduced herself. Russ-Eft indicated that the Council members had the Category 1 proposal and noted that it has been considered previously. Bechert stated that she would address concerns that she was previously made aware of. She said that she re-submitted the proposal with more revisions underlined to make the changes easier to see.

Bechert said that one of the concerns that had been addressed in the revised proposal was how she had worked with the College of Business. She told the Council that she met with the Dean of the College, Ilene Kleinsorge, to discuss this. Bechert also told the Council that she followed up with potential courses that might be relevant for inclusion in the proposed certificate by speaking with Jeffrey Hale (CLA). She stated that Hale did not think his college had any courses that would be relevant for inclusion in the proposed certificate program, but that some of his new media students may be interested in some of the courses she is developing for the certificate.

Bechert addressed the next concern regarding whether skills courses were represented graduate level learning. She noted that she included what differentiation of undergraduate and graduate level learning in the revised proposal. She indicated that she brought the Michigan State University (MSU) program as an example of best practice in this regard. She told the Council that many of the topics at MSU were very similar to what she would like to offer, but she believes that the courses MSU offers are not as rigorous as what she would like to offer. She also noted that she had visited several universities to talk with faculty and students about their programs and about what was working and what wasn't working for them as a means of understanding best practice. An issue that surfaced in these visits was the difficulty of making business courses relevant to science students. King noted that Michigan State courses are being taught with regular professors who are in the MSU College of Business. In essence, the program "borrows" faculty from the College of Business to teach their courses. Bechert told the Council that these faculty members do not teach the PSM courses in the usual time frame and that most are taught on a Friday afternoon and all day Saturday specifically for the PSM students. King shared her concern with using science faculty to deliver business courses. Her concern is that these faculty members are teaching graduate level coursework with no framework for keeping current in the business field. She also noted that it would benefit for these faculty members to have associations with business faculty members. Bechert responded that the person who has

been hired for the OSU program is not currently on campus but that her goal is to get him on campus so he could teach on campus as well as through E-campus. She mentioned that she would also like this person to get an adjunct position in the College of Business so that he would have associations with College of Business faculty. King stated that she believes it would be difficult to find a person to do this. Bechert told the Council that the person who has been hired was specifically chosen because he has background in both science and business.

Donatelle indicated that she struggles with whether the skills courses are truly graduate level having looked at the Michigan State example. She said that she views some of these courses as more akin to training and development than to graduate education. Bechert responded that she believes these are courses that are needed at the graduate level. She believes that duplication of some things like presentation is essential. However, she said that she does not want the approval of the certificate to be delayed on this issue and would remove them if necessary for approval.

O'Reilly asked if students from other disciplines can also register for these courses. Bechert indicated that other students can register for them but they prefer only PSM students at this time. Bechert told the Council that she believes that students receive the biggest benefit when they register for the whole curriculum instead of just taking a class or two as the classes build on each other. Bechert told the Council that the College of Science has approved the professional skills courses and that they are waiting to hear about the Category I before approving the business courses.

Loveland asked what the cost of this certificate is to students. Bechert responded that it would be just tuition and fees for the 18 credits required for the certificate. Loveland then asked what positive revenue the department is realizing on this certificate. Francis responded by saying that she believes that Dean Bloomer would say that right now this is not a source of positive revenue but, since this program is growing rapidly across the US, there is an opportunity for this certificate to be attractive to students.

Loveland asked if the business courses would count for students who would like to go on to get an MBA. King responded that none of the business courses would qualify. Bechert told the Council that her goal was to develop a good quality program with good courses. She mentioned that this was why she took the time to visit other Universities to find out what was working and what was not working. She explained that since we have the courses, and that non-PSM students are asking to take the courses, it makes sense to package the courses into a certificate. Loveland asked if the students who take the business courses are given a warning that they will not be able to apply these courses to any business program elsewhere. Bechert answered by saying that students currently are not given such a warning.

Follow-up discussion and decision

Loveland stated that he is concerned about the business courses and asked King what the College of Business thinks about this. King responded by saying that they "tolerate" it but do not like it because they are not really business courses. But, technically, she tells the Council that they have done what they were asked to do within the proposal and that they have specified that the business courses are not accredited courses. Loveland indicated that such a proviso should appear in all advertising for the certificate. Francis agreed that it is important that students are so informed.

O'Reilly asked how many other graduate certificates OSU offers. Francis responded and listed the various graduate certificate programs currently offered. O'Reilly asked if these are considered an intermediate between an undergraduate and graduate level and if other certificates have courses that will qualify to transfer to a full master's degree. Francis explained that the graduate certificate is a formal graduate credential. At OSU, students may apply all credits earned in the pursuit of a graduate certificate toward the completion of a master's or doctoral degree subject to the approval of the student's graduate committee. Russ-Eft offered the example of the TESOL certificate which has courses that can be transferred into a graduate degree program. O'Reilly indicated that this is where she thinks the difference with this certificate is because neither science nor business will accept these as transfer courses into graduate degree programs.

Francis reminded the Council that four PSM programs already exist and that the proposal on the table is to carve out a graduate certificate that "packages" the "plus component" of the PSM degrees. She reiterated that the Graduate Council made the decision that graduate certificates can be part of graduate degree programs and that we treat it as "value added."

Russ-Eft asked if the plan is to offer this certificate through distance education and Francis responded that this is the plan. Loveland stated that his review of the budget revealed that about fifty students are needed to

make this work. In order to get fifty students, the certificate would need to be offered online.

Tynon notes that certain employees may desire this certificate to enhance their credentials within their current employment situation. Loveland stated that he would like to add a caveat that this certificate will not qualify as entry into a graduate program. He noted that, if this is a targeted certificate, he questions whether other students on campus should be using these courses. O'Reilly stated that she believes this certificate could be useful for bachelor's degree students who may like to use this as an additional credential. Francis noted that graduate certificate students must be admitted to OSU as credential-seeking graduate students.

Becky explains that she does not believe this certificate is graduate level and has issues with what it will cost and also with the credibility of the program. She also expressed her concern that with all the budget cuts happening right now she wonders if we can handle this new certificate program. Tynon explained the other side of this and the fact that E-campus is a cash cow and when the economy is bad people want to go back to school to enhance their credentials.

The Council agreed that clarification on these issues is needed and they decided to postpone action on this proposal. In the meantime, Russ-Eft will find out if the certificate courses have already been approved and, if not, the status.

Loveland would also like Russ-Eft to find out if Bechert would be opposed to putting a caveat on all literature explaining that the business courses will not apply toward graduate business degree programs nor qualify as pre-requisites for graduate business courses.

Meeting times during Spring term

Russ-Eft indicated that she will be absent for the March 9th meeting and that Wolpert has agreed to Chair that meeting.

Russ-Eft asked if a meeting on March 23 will be necessary. She indicated that she does not have any agenda items right now. Francis noted that she does not believe a meeting on the 23rd will be necessary. Council decided to tentatively cancel the meeting on the 23rd. If something arises at the March 9th meeting, the Council can decide at that time to meet on the 23rd.

Russ-Eft asked the Council what their preference is for scheduling Graduate Council meetings during Spring Term. She asked if it would work for everyone to continue to meet the second and fourth Monday's from 3:00-5:00 pm. Tynon indicated that she would check her schedule and let Russ-Eft know. The rest of the Council agreed that continuing on the same schedule would work for them. Russ-Eft told the Council meetings will continue as they have been.

Ex-officio Members Present:

Martin Fisk, Sally Francis

Guests:

U of O Vice Provost Marian Friestad – Conference Call; Jaime Irvine

Approval of minutes of January 26th, 2009

There were no changes in the January 26 minutes and a motion to accept the minutes was approved by voice vote.

Category II Review: University of Oregon (U of O) Law School

Sally Francis contacted U of O's Vice Provost Miriam Friestad and she has agreed to a conference call with the committee members. Quick discussions of the items to be discussed with the Vice Provost were addressed.

The conference call to the Vice Provost proceeded and introductions of the committee members present and the colleges belonging were addressed.

Francis started the conversation by explaining that the Graduate Council has been considering a proposal from the Director of the Water Resources program, Mary Santelmann, to administer a congruent advanced degree of courses taught at U of O Law School be allowed to transfer to the Water Resources MS degree program. Vice Provost Friestad noted that U of O professional schools all report through the Graduate School except for the Law School which is the only school that currently does not report through the Graduate School. The law courses are graduate courses that have an advanced degree status beyond the undergraduate degree. It is the practice of U of O that the Master's programs choose to waive or accept other work beyond the 15 quarter hours as transfer credits. Those hours could be work from another University or Professional school. 45 degree hours are the minimum and goes up to as many as 70+ credit hours that can be transferred into the program of study. The minimum amount of credit hours is as low as 30 if the program decides that is how many they want to transfer, however, that does not take into account the size of the core requirements of the Master's degree. That is when Vice Provost Friestad commented on utilizing joint programs as they tend to make more efficient use of the election component. The general idea is that Graduate level courses in a Professional school can and are used in a Graduate degree.

Question and answer forum began between the committee members and Vice Provost Friestad. It was asked how U of O establishes faculty Graduate status and it was noted that they use a different process from OSU. It is the policy that anyone on the tenure track is considered Graduate faculty. It is also the policy that U of O does not review each of the programs of study as long as they are meeting their core requirements and that is left up to the faculty. Vice Provost Friestad ended her conversation leaving an important point to consider. Communication with potential students is very important. Clarity between the two units needs to be addressed so that the students know they are pursuing two congruent programs, not a joint program. For

instance, they receive one degree from OSU and another from U of O, and it is up to the other degree programs to decide if they want to waive those credits and apply to other program of study.

Vice Provost Friestad was thanked for insightful information and it was noted that she would be willing to investigate any further questions the committee may have.

Discussion on this subject continued after the phone call ended. Francis commented that the main issue to think about is to limit the number of credits that is approved to transfer.

Walt Loveland made a motion to approve section A of the report by Nancy King (Appendix I below), to not approve the two writing courses from section B, and to gather more information from section C. Jo Tynon seconded the motion. All were in favor and the motion was carried.

Darlene Russ-Eft will convey to Mary Santlemann that the eight courses in section A of the report in Appendix I be approved and that the writing courses in section B will not be approved. Section C warrants more investigation before a decision can be made. The approvals are for these courses and this program only. It was noted that only 15 credits will be approved for transfer.

IGERT Reviews

Review of the preproposals continued and each committee member reported their individual ranking of the eight proposals based on the criteria previously given. The average of each score was calculated and the top four proposals were chosen. They are as follows: Waterborne Pathogens by Katherine Field and Luiz Bermudez; Life in an Aging Society by Karen Hooker, Carolyn Aldwin, Tory Hagen, Ron Metoyer, Mike Pavol, Rick Settersten, Carmen Steggell, and Alexis Walker; Clean Energy Technology by Christine Kelly, Ray Brooks, and Alex Yokochi; Coastal Futures by Selina Heppell, Michael Harte, Scott Heppell, and Susan Capalbo. These top four proposals will be forwarded to the Research Office for their further investigation. Notes were taken and gathered on each of the proposals to be given to the members of the proposals for further improvements.

Update from Graduate School

The Graduate School does not have any pressing information to share with the committee. During the next Graduate Council Meeting, language entry requirements are to be discussed.

There was a motion to adjourn brought by Becky Donatelle and Rick Colwell seconded. All were in favor.

Meeting adjourned.

Appendix I

Report of Nancy King on University of Oregon Law courses.

I have reviewed the packet of material provided related to courses from the University of Oregon's School of Law that would be accepted for OSU graduate credit in the proposed concurrent MS Water Resources and Juris Doctorate (JD) from the University of Oregon.

In the packet were materials for 10 courses from the University of Oregon's School of Law that the grad council is being asked to approve for transfer credit towards a MS Water Resources degree at OSU.

The syllabi for the proposed 10 courses all provide for a graduate level learning experience that would be classified as providing graduate level learning outcomes including analysis, synthesis and evaluation. A rationale for accepting transfer of each course for OSU graduate credit is attached as well as a CV for the instructor of each course.

I've reviewed all of the materials and, except for courses where the documentation is incomplete, I recommend that we approve the transfer of these courses for graduate level credit for the MS Water Resources degree at OSU.

A. The courses with complete documentation that I recommend approving without further delay are:
Administrative Law (Law 664)
Environmental Law (Law 610)
Environment and Pollution Law (Law 610)

Coastal Law (Law 610)
Ocean Law (Law 607)
Water Resources Law (Law 669)
Land Use Law (Law 668)
Human Rights and Environment Law (Law 693)

The argument for accepting transfer of Coastal, Ocean and Water Resources Law courses is especially strong since the same courses are currently being taught as graduate level courses at OSU by the same U of O instructor, while also being taught by that instructor as law school courses at UofO. So, approving transfer would simply allow students who take the course in the law school as opposed to taking the course at OSU to receive credit through transfer.

B. Two courses proposed for transfer are legal research and writing courses (Legal Research and Writing I and II (Law 622 and Law 633)). I recommend asking for further clarification of the rationale for accepting transfer of these two courses due to the fact that all law students must take these courses and the fact that the content of the courses is not related to the water resources discipline, but addresses broadly legal research and writing. There are numerous other courses being proposed for transfer credit to OSU that do have a discipline-related focus related to the course of study of a graduate student seeking a MS in water resources, so the question is why should OSU approve for transfer these two courses that all law students have to take that are not related to the water resources focus of the graduate program to which they would be transferred? Won't accepting these two courses limit the number of discipline-related law school courses more directly related to the students' study of water resources since every student seeking the concurrent degrees would likely propose to transfer these two law school required legal research and writing courses?

C. Several of the courses do not have complete documentation for purposes of our review:
The syllabus for Legal Research and Writing II is missing (see also B above, requesting more information about transfer of this course).
The rationale for accepting transfer of Natural Resources Law for graduate credit at OSU is missing.
The rationale for accepting transfer of Indian Law for graduate credit at OSU is missing.
Also, the course numbers for National Resources Law and Indian Law are missing from the documentation.

D. Other courses were listed in the materials provided to the graduate council as potential transfer courses for graduate credit at OSU by MS Water Resources students seeking concurrent JD degrees. There are quite a few other courses listed in the documentation related to the proposed concurrent MS Water Resources and JD degrees that we do not have any documentation for (syllabus, CV or rationale for accepting transfer credit at OSU). These include:

Energy and the Law (Law 607),
Global Environmental Challenges (Law 607),
Hazardous Waste (Law 688)
Law and Science (Law 607),
Renewable Energy (Law 607),
International Environmental Law (Law 690) and
Climate Change Law and Policy (Law 607).
Tribal Courts and Tribal Law (Law 610) (same as the Indian Law course considered in C above?)

We should not approve transfer of these courses listed in D above without receipt and review of documentation for the specific courses.

Jaime Irvine; Anna Harding and Marie Harvey (PH)

Approval of minutes of January 12, 2009

The minutes were amended to indicate that Walt Loveland moved and Becky Donatelle seconded the motion to approve the minutes of January 12th, 2009. There were no other changes in the minutes. A motion to accept the minutes, as amended, from the January 12th meeting was made by Tom Wolpert and seconded by Becky Donatelle. The minutes were approved as amended.

IGERT Reviews

Darlene Russ-Eft informed the Council that there is a new call for IGERT (Integrative Graduate Education and Research Traineeships) proposals by the National Science Foundation. Martin Fisk noted that IGERT grants are prestigious and are typically for about \$3,000,000 over five years. OSU is allowed to submit four preproposals to this competition. The OSU Research Office has requested Letters of Intent (LOI) in order to select four teams to submit preproposals. Those LOIs are due at the Research Office today. The Research Office has requested that the Graduate Council rank the proposals and Darlene explained that it would be helpful for the Council to be aware that the LOIs are coming. Martin Fisk explained that typically about eight groups on campus submit LOIs and each LOI will be no more than six pages long.

Darlene requested that the Council members bring a ranking of the LOI to the next Council meeting on February 9th. The Graduate Council will be given a list of about ten criteria on which to base their rankings. At the February 9 meeting, the individual rankings will be tabulated and discussed in order to produce an overall ranking to submit to the Research Office. The Graduate Council's ranking will be forwarded to the Research Office. The intent is for the Research Office to inform the authors of the top four Letters of Intent of their status on the 10th of February. The NSF Proposal deadline is March 13th, which will allow the authors about a month to write their preproposals. Becky Donatelle wanted to know if Council members should rank the LOIs in advance of the February 9th meeting. It was agreed that Council members will rank the proposals and bring their notes to the next meeting so that the Council can come up with a final, overall ranking.

Category I Proposal: Suspension of Master's of Science (MS) Degrees in Environmental Health Science

Visitors Anna Harding and Marie Harvey from the Department of Public Health (PH) were welcomed and introductions proceeded. PH is proposing to suspend the MS degree in Environmental Health and Occupational Safety Management, Public Health, and Health Promotion and Health Behavior because the majority of

students are enrolling in the Master's in Public Health (MPH) and not in these degree programs. There is currently one student seeking the MS. Courses offered in the MS degrees are also offered in the MPH program and students are able to conduct research within the structure of the MPH. Marie Harvey indicated that the MS is not an accredited degree while the MPH is accredited.

Tom Wolpert asked if there was any advantage to the M.S. Marie Harvey indicated that research is a component of the M.S. thesis option and students wishing to obtain a Ph.D. in PH may prefer to get an M.S. Marie Harvey indicated that the MPH is primarily a non-thesis degree, but a thesis option is available. Walt Loveland asked if there was any cost savings to the suspension. There appears to be none.

Jo Tynon asked about the rationale of suspending the MS degree rather than terminating it. Marie Harvey indicated that PH wants to suspend the MS rather than cancel it to make it easier to reinstate the programs if interest in the M.S. increases. She indicated that the situation could change if the proposed new school of public health should become a reality. Concerns about closing the MS program when administration is looking to boost enrollment were also discussed. There were no more questions and the visitors were thanked and they were dismissed. Sally Francis explained the review of the PH graduate program is coming up and a program with little demand and few students would have been discussed during that review. With the impending review, PH chose to end the M.S. degree. Jo Tynon moved to approve the suspension of MS degrees and Kathy O'Reilly seconded the motion. All were in favor.

Category II Review: University of Oregon (U of O) Law School

Mary Santelmann, Director of the OSU interdisciplinary programs in Water Resources proposed to the Graduate Council at a previous meeting that ten courses taught by the University of Oregon Law School be allowed on Water Resources MS degree programs of study. At the January 12th meeting of the Council, it was decided that the 10 law courses be reviewed by the Graduate Council's Category II Subcommittee following the procedure previously established by the Council. Nancy King (a member of that subcommittee) reported on her review of the ten courses whose syllabi and instructor's resume's were submitted to her. (Her report can be found in Appendix I.)

The review showed that there were eight courses that had good documentation and she recommended them to be approved for use on OSU graduate programs of study. Two courses, however, lacked full documentation and Nancy's recommendation prompted further discussion.

Marty noted that there was a discussion at the last meeting of whether professional courses could be applied to 45 credit minimum Masters Research Degree. Sally then handed out a statement from the Council of Graduate Schools regarding how to define what graduate education is and what it is not. She explained that at most universities professional courses are not included in graduate programs of study unless the total number of quarter credits exceeds forty-five. OSU does allow a small number of pharmacy professional courses on the graduate programs. These specific pharmacy courses were reviewed by the Category II Subcommittee of the Graduate Council and subsequently approved by the Graduate Council. Francis also distributed a summary of research she had conducted on the details of three of the dual degree programs identified by Santelman for emulation at OSU. Francis discovered that in all three of these cases, law courses appear to be added to master's degree programs of study only in excess of the standard 45 graduate credits required for the degree. Similarly, U of O allows twelve quarter credits of professional law courses to count toward their 57 credit Environmental Studies M.S. degree. Further lengthy discussion in how many and what professional courses/credits should be transferred to graduate programs ensued.

Walt Loveland made a motion to accept as graduate credit at OSU the eight courses that Nancy King recommended be used as graduate credit. There was no second to the motion.

The following issues were discussed:

- (1) Should professional courses be allowed on OSU graduate programs of study?
- (2) If professional courses are allowed, should they be counted toward the 45 credit minimum for a master's degree?
- (3) Should any professional courses that are permitted be in addition to the 45 credit minimum?
- (4) Should U of O law professors be nominated to the OSU Graduate Faculty (it was pointed out that only one of the faculty members who teach the courses under consideration holds a graduate degree)?
- (5) Could the U of O law courses be approved to be applied only to Water Resources master's degrees or would they be allowed for inclusion on any OSU graduate program of study?

Sally Francis related a conversation she had with U of O Vice Provost Marian Friestad about the use of U of O law courses on U of O Master's degrees, in which the Vice Provost indicated that U of O would not allow what

OSU was considering. It was requested that Sally contact Vice Provost Friestad again to obtain clarification and to invite her to participate in the next Graduate Council meeting on February 9.

Mary Santelmann will be asked to identify other programs that allow law credits within a 30 semester credit degree.

Update from Graduate school

The Graduate School will be interviewing applicants for Helen Serewis' job this week.

There was a motion to adjourn brought by Kathy O'Reilly and Chrissa Kioussi seconded. All were in favor.

Meeting adjourned

Appendix I

Report of Nancy King on University of Oregon Law courses.

I have reviewed the packet of material provided related to courses from the University of Oregon's School of Law that would be accepted for OSU graduate credit in the proposed concurrent MS Water Resources and Juris Doctorate (JD) from the University of Oregon.

In the packet were materials for 10 courses from the University of Oregon's School of Law that the grad council is being asked to approve for transfer credit towards a MS Water Resources degree at OSU.

The syllabi for the proposed 10 courses all provide for a graduate level learning experience that would be classified as providing graduate level learning outcomes including analysis, synthesis and evaluation.

A rationale for accepting transfer of each course for OSU graduate credit is attached as well as a CV for the instructor of each course.

I've reviewed all of the materials, and except for courses where the documentation is incomplete, I recommend that we approve the transfer of these courses for graduate level credit for the MS Water Resources degree at OSU.

A. The courses with complete documentation that I recommend approving without further delay are:

- Administrative Law (Law 664)
- Environmental Law (Law 610)
- Environment and Pollution Law (Law 610)
- Coastal Law (Law 610)
- Ocean Law (Law 607)
- Water Resources Law (Law 669)
- Land Use Law (Law 668)
- Human Rights and Environment Law (Law 693)

The argument for accepting transfer of Coastal, Ocean and Water Resources Law courses is especially strong since the same courses are currently being taught as graduate level courses at OSU by the same U of O instructor while also being taught by that instructor as law school courses at UofO. So, approving transfer would simply allow students who take the course in the law school as opposed to taking the course at OSU to receive credit through transfer.

B. Two courses proposed for transfer are legal research and writing courses (Legal Research and Writing I and II (Law 622 and Law 633)). I recommend asking for further clarification of the rationale for accepting transfer of these two courses due to the fact that all law students must take these courses and the fact that the content of the courses is not related to the water resources discipline but addresses broadly legal research and writing. There are numerous other courses being proposed for transfer credit to OSU that do have a discipline-related focus related to the course of study of a graduate student seeking a MS in water resources, so the question is why should OSU approve for transfer these two courses that all law students have to take that are not related to the water resources focus of the graduate program to which they would be transferred? Won't accepting these two courses limit the number of discipline-related law school courses more directly related to the students' study of water resources since every student seeking the concurrent degrees would likely propose to transfer these two law school required legal research and writing courses?

- C. Several of the courses do not have complete documentation for purposes of our review:
The syllabus for Legal Research and Writing II is missing (see also B above, requesting more information about transfer of this course).
The rationale for accepting transfer of Natural Resources Law for graduate credit at OSU is missing.
The rationale for accepting transfer of Indian Law for graduate credit at OSU is missing.
Also, the course numbers for National Resources Law and Indian Law are missing from the documentation.
- D. Other courses were listed in the materials provided to the graduate council as potential transfer courses for graduate credit at OSU by MS Water Resources students seeking concurrent JD degrees. There are quite a few other courses listed in the documentation related to the proposed concurrent MS Water Resources and JD degrees that we do not have any documentation for (syllabus, CV or rationale for accepting transfer credit at OSU). These include:
Energy and the Law (Law 607),
Global Environmental Challenges (Law 607),
Hazardous Waste (Law 688)
Law and Science (Law 607),
Renewable Energy (Law 607),
International Environmental Law (Law 690) and
Climate Change Law and Policy (Law 607).
Tribal Courts and Tribal Law (Law 610) (same as the Indian Law course considered in C above?)

We should not approve transfer of these courses listed in D above without receipt and review of documentation for the specific courses.

Graduate Council

January 12, 2009 Minutes

Grad Council Members Present:

Becky Donatelle (HHS), Shawna Grosskopf (CLA), Nancy King (Business),
Chrissa Kioussi (Pharmacy), Walt Loveland (SCI), Darlene Russ-Eft
(Education), Jo Tynon (Forestry)

Grad Council Members Absent:

Rick Colwell (COAS), Vinod Narayanan (ENGR), Kathy O'Reilly (Vet Med),
Tom Wolpert (AG SCI), Britt Hoover (Student Representative)

Ex-officio Members Present:

Martin Fisk, Sally Francis

Guests:

Mary Santelmann (Water Resources)

Review & approve minutes

Council members reviewed the minutes from the November 24, 2008 meeting. Grosskopf moved to accept the minutes and King seconded the motion. The minutes were approved unanimously

Council members reviewed the minutes from the December 8, 2008 meeting. A question arose concerning a date in a memo, and Russ-Eft suggested removal of the date, since the memo did not become part of the official record. Grosskopf moved to accept the minutes as amended, and Loveland seconded the motion. The minutes were approved as amended unanimously.

Discussion: Water Resources Policy & Management

Mary Santelmann (Water Resources) presented details on a proposed program to offer a concurrent Juris Doctorate (J.D.) and Master of Arts in environmental science through collaboration with the University of Oregon. The major issue involves whether to allow use of credits from the professional law degree courses from the U of O to fulfill OSU graduate student programs of study. The Council reviewed the minutes of March 3, 2005 concerning a similar issue. Several questions arose:

Who makes the decision? The decision is made by the Graduate Council.

What information is needed and what is the process? At its March 3, 2005, meeting, the Graduate Council approved a motion "...that 700 level courses that successfully go through the Category II proposal process be accepted as graduate level for programs of study." Once accepted as graduate level courses they can be used on any graduate program of study. Therefore, it was agreed that the Category II subcommittee will review the paper materials from U of O using the same standards and criteria as are applied to review of all proposals to establish new graduate courses. The discussion and the decision of the Category II subcommittee will be brought to a meeting of the full Graduate Council. It was stated that if the courses were used for the University of Oregon LLM degree, then it was likely that they would be graduate level.

When will the decision be made? The decision will be made by the end of February, 2009.

Information Item: Revision of Strategic Plan

Walt Loveland led the Council in discussing the revisions to the OSU Strategic Plan. He observed that the Strategic Plan recognizes that OSU has moved from a public to a semi-private institution. He suggested that

we might look at the areas of success, such as inter-collegiate sports, for insights that could be transferred to the academic mission of the University. Also, there is a move to focus around three thematic areas. For example, Dean Francis mentioned that there will be a trial review of doctoral programs around the Improving Health and Wellness theme and that the Provost has asked her to work with Becky Warner on the concept of theme-oriented joint graduate and undergraduate reviews. Another issue involves the approval of new graduate degrees. If a new degree is added, then what will be dropped? Loveland pointed out a mention of graduate programs on page 9 of the plan.

Discussion: Possible review of Certificate Programs and Graduate Minors

The Council discussed the issue of the need to review graduate certificates and graduate minors for which there is no corresponding graduate degree program. Currently graduate certificates and such minors are not reviewed, but the Council decided at its meeting of April 6, 2006, that they should be reviewed. Prior to setting up a subcommittee to explore a possible review process, the Council members asked the Graduate School to determine the numbers of graduates who have completed graduate certificates and minors over the past 10 years.

Updates from the Graduate School

Helene Serewis has left the Graduate School to join the College of Liberal Arts. Bruce Rettig has rejoined the Graduate School at quarter time. He will be dealing with issues surrounding post-docs.

The NRC assessment of the research doctorate should be available in February.

Adjournment

_____ moved that the meeting be adjourned, _____ seconded that motion, and the Council voted unanimously to adjourn.

Next Meeting: January 26, 2009 from 3:00-5:00p in President's Conference Room (Kerr Administration, 6th Floor)

Becky Donatelle will take the minutes next time.

Graduate Council

December 8, 2008 Minutes

Grad Council Members Present:	Rick Colwell (COAS), Becky Donatelle (HHS), Shawna Grosskopf (CLA), Nancy King (Business), Chrissa Kioussi (Pharmacy), Walt Loveland (SCI), Kathy O'Reilly (Vet Med), Darlene Russ-Eft (Education), Jo Tynon (Forestry), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Vinod Narayanan (ENGR), Britt Hoover (Student Representative)
Grad School Members Present:	Martin Fisk, Helene Serewis, Sally Francis
Grad School Members Absent:	Mary Strickroth
Guests:	Ursula Bechert (Science), Sherman Bloomer (Science), Ilene Kleinsorge (Business), Munisamy Gopinath (AREC), Susan Capalbo (AREC), Greg Perry (AREC), Steve Buccola (AREC), Starr McMullen (AREC), Vic Tremblay (Economics), Bruce McGough (Ag Sci/CLA), Randy Rosenberger (Forestry), Rolf Fare (Ag Sci/CLA)

Category I Proposal: Graduate Certificate in Management for Science Professionals

Ursula Bechert gave a brief overview of the proposal for a 19-unit graduate certificate program designed for science majors and mid-career professionals. She said that the courses were originally developed for OSU's Professional Science Master's (PSM) degree program. She gave a brief history of the development of the PSM program which was funded by the Alfred P. Sloan Foundation in an effort to increase interest in graduate level science. The PSM is a non-thesis Master of Science degree emphasizing interdisciplinary studies that integrate natural sciences and mathematics with training in management, communication, and professionalism. Bechert said that science (PhD) students would be interested in the certificate program as well as some pharmacy and veterinary students, e-campus students (an online version will also be developed) and PSM students from other universities.

Sherm Bloomer spoke further on PSM programs and on the intent of the proposed certificate program. He said that, although it has been said that the PSM is doing for the STEM professions what the MBA did for business, he wanted to make clear that the PSM is not a substitute for an MBA nor does it compete with MBA degrees at OSU or elsewhere. He said that the note he sent to Council members today was an attempt to make that clear.

Sally Francis added her support by saying that the timing is right and that repackaging the PSM as a certificate would attract students to OSU. She said that she had not heard of another school developing such an on-line certificate program. Schools around the country are looking for sources for PSM "plus courses" and Oregon is viewed as a leader in the PSM movement. She said that OSU has the opportunity to get some of that enrollment. She then referred to the National Research Council's July report (on the PSM being critically important to the competitiveness of the US) which is available free off the NRC website.

Ilene Kleinsorge informed the Council that the College of Business (COB) is very supportive of the PSM, but that the College takes issue with some of the language in the proposal. Because this Category I proposal could be viewed by deans of other business schools, the COB would like to edit some of its language to make

sure that there is no confusion about the certificate's intent as it relates to the PSM and the delivery of education that might be viewed by some as the equivalent of some business coursework. Since these courses are not offered by an accredited program, Kleinsorge stated, they are not transferable to an MBA program. Kleinsorge wants this to be made very clear to students.

Additional discussion on the following topics was held:

Professional skill sets for scientists (Plus courses)

Council members were concerned over the content of the plus courses. Some thought that they are not rigorous enough to be considered graduate-level. Bechert explained the need for and purpose of the courses and how the topics have evolved (industry need and student request).

Audience for Program

Council members questioned the appropriateness of the certificate for certain student populations. They asked who the certificate is designed for and what value a graduate certificate in PSM would provide to students who earn one.

After the guests left, further discussion was delayed until the end of meeting.

Category I Proposal: Renaming Economics degrees to Applied Economics

Russ-Eft introduced the next agenda item by reminding the Council that they'd previously discussed the proposal at its November 24th meeting. She added that the Council members should have now received a copy of the recommendation made by the Budgets and Fiscal Planning Committee. She then opened the floor to questions.

Munisamy Gopinath (Gopi) distributed copies of the Graduate Catalog's table of "Graduate Majors and Areas of Concentration" with the Economics graduate program entry highlighted.

Visitor and Council discussion was considerable, a few of the topics discussed follow.

Graduate Major in Economics vs. Department of Economics ~ Walt Loveland expressed his concern that the Department of Economics is losing its graduate programs. Francis explained that the multi-departmental graduate program in economics has always resided in the Graduate School, but in 2006 the Provost transferred degree granting authority away from the participating departments to the Graduate School. This was done by edict (without a Category I). Sally Francis explained that the Provost has such authority since all Faculty Senate action is advisory to the Provost.

Tension between applied economists and theoretical economists ~ This tension is felt around the country and contributed to the failure of OSU's UGFE. Vic Tremblay made the point that the core course needs of applied economics students and theoretical economics students has diverged over the past 15 years. A one-size fits all model of core course requirements no longer works.

Funding Core Courses ~ Grosskopf pointed out that Table 1 in Appendix B lists courses (529 & 571) that will be eliminated from the new AE core but that the cost of the courses appears to still be charged to the College of Liberal Arts. She also noted that 515 is not listed but is a part of the new core and should be assigned to AREC. Gopi explained that the basis of the allocation remains the same but that the courses will change.

Funding of the AE Director ~ The Budgets and Fiscal Planning Committee memo indicates that it is also concerned with knowing who will be responsible for funding the director after the third year. Gopi said that he hopes that an internal review of the program after its first years will determine next steps.

In an effort to move forward, Russ-Eft asked visitors to leave.

Before he left Vic Tremblay presented Russ-Eft with the memo he had submitted to Dean Rodgers. Tremblay told Russ-Eft that the memo was a written explanation of why the Economics Department will not participate in the AE graduate program.

Additional Council discussion ensued.

A motion was made and seconded to approve the Category I proposal recommending that the data in Table 1, located in Appendix B, be more closely aligned with the proposed applied economics core and that the

long-term financial support of the directorship be clarified now. Graduate Council members shared the Budgets and Fiscal Planning Committee's concern about the program's long term financial sustainability.

8 voted in favor, 0 opposed, 1 abstained, motion passed.

Category I proposal: Suspension of the Agricultural and Resource Economics Graduate Degrees

Susan Capalbo, Chair, Department of Agricultural and Resource Economics, explained motivation behind the suspension.

A motion was made and seconded to approve the Category I proposal to suspend current graduate degrees in Agricultural and Resource Economics provided that the abbreviated Category 1 proposal revising the Graduate Degrees in Economics Leading to the Master of Arts, Master of Science, and Doctor of Philosophy in Applied Economics is approved.

All voted in favor, motion passed.

Category I Proposal: Graduate Certificate in Management for Science Professionals

The discussion of the Category I proposal to establish a graduate certificate in Management for Science Professionals resumed.

After additional discussion, the Graduate Council agreed to return the Category I proposal to establish a graduate certificate program in Management for Science Professionals to its author for the following reasons:

The Council was concerned about potential overlap/redundancy of professional skills courses PSM 511, 512, and 513 with other current campus courses. Council members suggested checking with other program offerings including those in New Media Communications and in Adult Education & Higher Education Leadership.

The Council would like clarification on the status of the new PSM courses. If Category II proposals have been submitted to the Academic Programs Office, have they already been reviewed? If they have not been submitted, when might they be?

Additional liaison with the College of Business is needed. It is the Council's understanding that Dean Kleinsorge has submitted a list of suggested revisions to the CAT I document author. When the College of Science and the College of Business are in agreement over the language in the proposal and have reconciled any other differences, a revised version of the proposal (with changes clearly marked) should be forwarded to the Graduate Council for further review.

New Business

Russ-Eft wished the Council members a Happy New Year and announced that the next meeting will be held on January 12, 2009.

Meeting adjourned.

**Grad Council Members
Present:**

Rick Colwell (COAS), Becky Donatelle (HHS), Shawna Grosskopf (CLA), Nancy King (Business), Britt Hoover (Student Representative), Chrissa Kioussi (Pharmacy), Walt Loveland (SCI), Vinod Narayanan (ENGR), Kathy O'Reilly (Vet Med) Darlene Russ-Eft (Education), Jo Tynon (Forestry), Tom Wolpert (AG SCI)

**Grad Council Members
Absent:**

None

**Grad School Members
Present:**

Martin Fisk, Helene Serewis, Sally Francis (remote participant)

**Grad School Members
Absent:**

Mary Strickroth

Guests:

David Cann (MIME), Belinda Batten (MIME), Ron Adams (COE), Munisamy Gopinath (AREC), Susan Capalbo (AREC), Greg Perry (AREC), Claire Montgomery (Forestry), Steve Buccola (AREC), Starr McMullen (AREC)

Mechanical Engineering Program Review

Council members were joined by Dean Ron Adams, College of Engineering, David Cann (Mechanical Engineering Graduate Program Chair) and Belinda Batten (Head) from the School of Mechanical, Industrial & Manufacturing Engineering (MIME).

The Graduate Council program review of the Mechanical Engineering (ME) graduate program was held on May 5, 2008. Tom Wolpert, who served as an internal member of the review panel, presented an overview of the review panel's report. The [full report](#) is appended to these minutes.

Wolpert began by naming and recognizing the contributions of the other members of the review panel. He then discussed the recommendations made by the review panel.

Most Council and visitor discussion focused on the following topics:

GTA v. GRA Pay

Wolpert reported that during a site visit interview some of the ME graduate students expressed a concern over what they believed to be an inequity in funding levels between Graduate Teaching Assistants (GTAs) and Research Assistants (GRAs). Belinda Batten told the Council that the pay rate for both positions is typically the same but that the FTE is often different. She added that the department has a published rate scale for GTAs and this scale is often used for GRA appointments, but sometimes a different rate is chosen by particular faculty funding the GRA. Sally Francis recommended that the statement concerning a "university pay scale" on the top of page 9 of the review panel's report be corrected. Francis said that she is not aware that the university has a pay scale. The CGE (union) contract stipulates a minimum pay rate, and the Graduate School recommends a minimum rate. The report's statement, Francis surmised, most likely refers to the department's pay scale.

Ron Adams mentioned that he had also heard some student requests to have the percentages of GTA/GRA FTE made equal. Batten provided several reasons why this would be problematic (resources, the number of sections needing support, the amount of work required, etc).

Curriculum Strength & Student Presentations

A discussion of the panel's recommendation to reduce ME course unit requirements was held. Additionally a correction to the typo on the chart located at the bottom of page 9 of the report was made (the Graduate School requires a minimum of 24 "graded" units, not 27). In response to the reported concern by students that the department does not offer enough "dynamics" courses, Batten told the Council that the department lost people working in that area and that the new hires are very junior. Also, in response to recommendation number 10 (suggesting increasing the opportunities for graduate student presentations), Batten told the Council that each ME specialty group now schedules its own regular meeting seminar where students are encouraged to present their work.

Vision Committee/Faculty Participation

Recommendation number 11 suggests the formation of a faculty vision committee. Batten informed the Council that the school established a five-member Strategic Vision Committee before the date of the review site visit and that she was surprised that that fact had not been communicated to the review panel. MIME faculty have been asked to participate and to make recommendations in regard to future faculty hires. Wolpert reported that the panel had heard from some faculty that there is limited opportunity to participate and that a common vision for the future of the School could be better communicated.

Qualifying Examination

The review panel wondered if the Qualifying Examination is rigorous enough since nearly 100% of students pass it on the first attempt. David Cann responded that the exam format was implemented only a year and a half ago so there might not be enough data to judge. Batten reported that the exam is modeled after the Electrical Engineering/Computer Science (EECS) exam and that that unit actually had the same concern and is considering revising it.

Concluding Comments

Wolpert informed the Council that a meeting was requested by some ME faculty after the formal review was completed. It was suggested that some faculty members did not feel free to express themselves on the date of the site visit. At a later date a separate meeting with the internal reviewers and some members of ME faculty was held, but since these conversations occurred outside the formal review process, statements that were made during this meeting were not included in the review panel's report.

Wolpert suggested that it would be useful for MIME leadership to appreciate the need for strong communication particularly regarding transparency in process and faculty participation.

Before leaving, the guests thanked Wolpert and the review panel for the time and effort put into the review process.

Loveland asked Wolpert if any of the report's 24 recommendations were more important than others. Wolpert responded that the recommendations concerning improving communication were emphasized. The review panel noted that there was a significant disconnect between what is happening at the college level and the faculty.

After additional discussion, a motion was made and seconded to approve the Mechanical Engineering Graduate Council Review Report.

All voted in favor. Motion passed.

Category I Proposal: Renaming Economics Degrees to Applied Economics

Russ-Eft told the Council that she had received an email from a faculty member recommending that Shawna Grosskopf recuse herself from the discussion of the Category I proposals because she is a faculty member of the Department of Economics. Russ-Eft added that she and Grosskopf considered the suggestion and both agreed that it would be inappropriate for Grosskopf to recuse herself. As a Graduate Council member she is representing her college not her department. Russ-Eft reminded all the Council members of their duty to represent their respective colleges.

After introductions, Munisamy Gopinath (Gopi) stated the purpose of the proposal and informed the Council of the steps he and the Applied Economics Graduate Faculty (AEGF) had taken over the past eight months to create the proposal. Francis, as the proposing dean, told the Council that the initial 1988 Category I that created the existing multi-departmental/multi-college economics graduate program at OSU was for an applied economics program. During the course of the approval process the name of the degree was changed to "economics." She informed the Council that at an off-site facilitated retreat last spring the majority of the participating faculty agreed that an applied focus makes the best sense for the program and for OSU since the university has the faculty strength to establish national distinction in the area.

Darlene Russ-Eft informed the Council that the proposal before them had not yet been reviewed by the

Budgets and Fiscal Planning (BFP) Committee. She said that although the Council will be discussing the proposal today, it will not be taking action on the proposal in advance of the BFP Committee's review.

Council and visitor discussion focused on the following topics:

- The Department of Economics faculty's decision to limit participation in proposed program ~ faculty will teach AE core courses but will not be involved otherwise.
- Background information on the University Graduate Faculty in Economics (UGFE) ~ the genesis of the program and the reasons for its failure.
- Reasons why two Category I proposals (one in economics, one in applied economics) failed in 2006 ~ limited resources and course overlap.
- AE Program "fit" for the state of Oregon ~ University of Oregon has pure economics master's and doctoral programs and Portland State University offers MA/MS degrees only.
- Suspension of graduate programs in AREC ~ Category I proposal to suspend programs has been prepared.
- AE Director's salary ~ The CAT I states that the OSU Provost is providing this salary for the first three years only. No other interdisciplinary program director receives funds from the Provost. As the AE program develops, director's FTE will be reduced from .7 to .5, but who will pay it? Council members felt that it would be appropriate for the Budgets and Fiscal Planning Committee to consider this question.
- Internal evaluation of the AE program after the first three years ~ Although not technically a "new" program, Francis indicated that the renamed program must be reviewed after the first three years, using the OUS new program review model.
- Library Assessment ~ not needed for an abbreviated CAT I although library resources were ranked "marginal" in 2006.
- Future Hiring of Applied Economics Faculty ~ future hiring will need to be a highly consultative process with all participating deans and the Provost involved. It is important to be aware of one another's needs in terms of expertise needed for all economics related programs.
- Distribution of Revenue ~ will not change. Credit hours remain with the department teaching the courses and will not go to the Graduate School.

Grosskopf brought the language on page 13 relating to a "reallocation" of resources from each participating college to the Council's attention. Grosskopf said that she understood that a full Category I proposal is needed when funding is being reallocated. Francis pointed out that the Council must not have received the most recent version of the proposal because the language on page 13 had been edited after consultation with Dean Rodgers, Dean of the College of Liberal Arts. The most recent version of the proposal is dated November 20, 2008, but the November 13th version had been posted with the Graduate Council's agenda.

Francis read the revised bulleted sentence: Each participating College will ensure that adequate resources assigned to the teaching of graduate applied economics core courses are available.

Grosskopf then asked if language indicating a reallocation of resources on Appendix B Table 1 had also been corrected. Gopi said it had not been, but that it should be changed as well.

Grosskopf informed the Council that she learned on the Academic Programs Office website that abbreviated Category I proposals are required to have approval signatures from of all participating departments and colleges. Gopi disagreed saying that the AE program will reside in the Graduate School and that no department approval is necessary. He added that he had consulted with Susie Leslie, the director of the Academic Programs Office, who confirmed that only the participating deans were required to approve the proposal. Francis added that a departmental signature page could be added to the proposal if the Council thought it necessary.

After discussion ended and the visitors departed, Russ-Eft announced that she will seek clarification on the issue of the signature page, she will confirm the changes to the proposal regarding the allocation/re-allocation language, and that the Council will make its final decision once the Budgets and Fiscal Planning committee has made its recommendation.

Category I Proposal: Suspension of the Agricultural and Resource Economics Graduate Degrees

Susan Capalbo, Chair, Department of Agricultural and Resource Economics explained the motivation behind the proposed suspension. She said that in the spirit of resource savings, parallel degrees are not necessary. She then told the Council that the AREC undergraduate program will remain unchanged and that students

who were admitted to AREC graduate programs for Fall 2008 will be allowed to complete their programs.

Council members and visitors agreed that it would be inappropriate to make a decision on this program suspension proposal before a decision is made on the program renaming proposal.

Guests:

Chris Bell (Engineering), Jim Coakley (Business)

Follow-up on INTO Pathway to the MBA and MEng Programs

Before the guests arrived, Darlene Russ-Eft related Jim Coakley's concern that establishing an MBA admissions committee to consider INTO pathway student applications along with other applications to the MBA program would be impractical for his unit. Then for new member Jo Tynon's benefit, all Council members introduced themselves.

Russ-Eft thanked Chris Bell and Jim Coakley for coming to the meeting and for their responses to her email dated October 14, 2008 in which she shared the Graduate Council's questions concerning the proposed INTO-OSU MBA and MEng Pathway programs.

Jim Coakley thanked Russ-Eft for the opportunity to meet with the Council again and said he hoped that the conversation would clear up any final questions Council members might have about the proposed pathway programs. He then presented a handout which addressed the College of Business's (COB) response to the Graduate Council recommendations and gave a detailed description of how the review of graduate admission applications is currently handled by his college. He also described circumstances in which students are sometimes admitted conditionally or provisionally to the MBA program and he explained the reasoning behind the COB's Graduate Program Committee's policy that prevents students from starting their last year in the program until "fully" admitted.

Tom Wolpert asked Coakley questions concerning MBA program capacity and plans for growth. Wolpert asked how Coakley would decide who will be allowed into the program once it's at full capacity. Russ-Eft was also concerned that in some situations the program could potentially be forced to turn away more qualified applicants (domestic) in order to first admit students originating from the INTO pathway (who have met the entrance requirements).

Coakley informed the Council that regardless of INTO, his college has been addressing the issue of growth for some time and they do not currently turn any qualified student away. The COB faculty want an appropriate mix of domestic and international MBA students and he assured the Council that growth will be carefully controlled. He explained that his College is also being pressured to grow by the university and that the COB is entering into a financial agreement with the Provost that would provide the college with additional funding as enrollment rises (any type: INTO enrollment or traditional enrollment). He also told that Council that if

capacity were to become a problem the COB can always raise the MBA admission standards to control growth.

Becky Donetelle asked Coakley if success meant numbers. Coakley answered that COB wants their students to succeed and they carefully monitor the progress of MBA students – especially international students. English language proficiency is especially important in the MBA program because case-based class projects demand understandable dialogue and participation from each student team member. Coakley described how quarterly grades are monitored and the consequences (warning/probation/dismissal) for poor grades.

Council and visitors discussed pathway program admission criteria including admitting students with 3-year non-Bologna degrees. Both Coakley and Bell assured the Council that there would be plenty of qualified INTO pathway applicants with 4-year degrees. Coakley stated that the INTO recruiters are not recruiting from 3-year schools at this time but they are exploring the “market” and at some time might ask us if we would consider admitting students from certain targeted 3-year schools.

Council and visitors also discussed the issue of pathway student status and challenges in changing visa status when a pathway student becomes a graduate student.

Before the guests departed Bell assured the Council that the INTO model is predicated on student success and that OSU units involved with the INTO partnership will be kept in the loop on future planning.

Council discussion then centered on how the INTO partnership will impact faculty.

Rick Colwell reminded the Council that at some point it will need to think about criteria for the periodic review of the pathway programs.

After further conversation the Council asked Russ-Eft to communicate its approval to proceed with the planning of the MBA and MEng OSU-INTO pathways with the understanding that:

- A caveat will be conveyed to students applying to pathway programs that admission to a graduate program is not guaranteed;
- That students enrolled in a pathway program do not hold graduate student status unless and until they are granted formal admission;
- That current university Graduate Admissions requirement are met, including the policy that requires the equivalent of a U.S. baccalaureate degree of at least four years duration or a baccalaureate degree in a country that is a signatory of the Bologna Declaration;
- That there will be a review of pathway programs by the Graduate Council at the end of each program's first year and periodically thereafter, to evaluate its success and to determine if the continuation of this trial program is warranted; and,
- That if, at a future date, the administrators of pathway programs want to begin considering admitting students with 3-year non-Bologna degrees, a list of universities and degree programs must first be considered by the Graduate Council.

New Business

Martin Fisk asked Russ-Eft if a regular agenda item named “Graduate School Announcements” could be added to subsequent Graduate Council agendas. Russ-Eft agreed then reminded the Council members to respond to her email asking for winter quarter availability.

Meeting adjourned.

GRADUATE COUNCIL MEETING

October 27, 2008
3:00pm, Kidder 128

Grad Council Members Present:	Rick Colwell (COAS), Becky Donatelle (HHS), Shawna Grosskopf (CLA), Nancy King (Business), Walt Loveland (SCI), Vinod Narayanan (ENGR), Darlene Russ-Eft (Education), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Chrissa Kioussi (Pharmacy), Kathy O'Reilly (Vet Med)
Grad School Members Present:	Martin Fisk, Sally Francis, Helene Serewis
Grad School Members Absent:	Mary Strickroth
Guests:	Ricardo Matano (Oceanography)

Follow-up on INTO Pathway to the MBA and MEng Programs

After the October 13, 2008 Graduate Council meeting, Darlene Russ-Eft wrote to both Jim Coakley and Chris Bell with the Council's questions concerning the proposed INTO-OSU MBA and MEng Pathway programs. Today, the Council considered Jim Coakley's response to its questions. Russ-Eft informed the Council members that Chris Bell is currently traveling out of the country and did not respond to her email message dated October 14, 2008.

Council discussion centered on the following issues:

Admission guarantees: A Council member noted a statement found at the end of the third paragraph of the Coakley memo clearly stating that there would be no promised admissions, but the fifth paragraph contains a statement that can be interpreted to contradict the first statement: "We plan to restrict entry into the pathway such that all of those who successfully complete the pathway and are eligible are admitted to the program." Council members felt that applicants to the pathway should be warned that admission to graduate programs is never guaranteed. Members also wanted INTO personnel and OSU personnel to be made aware that no promises of guaranteed admission would be made.

Potential growth of the MBA program: Questions raised: What is the program's maximum capacity? Will there be funds available for additional faculty resources?

Pathway “bridge” classes: Questions raised: Who teaches these courses? If taught by current business or engineering faculty, will special training be required?

Business Models: Walt Loveland informed the Council that the Provost had asked the Budget Committee to decide how much (if any) revenue would be distributed to OSU departments involved with INTO programs. It appears that various business models are still under consideration.

Periodic Review of INTO Pathways: The necessity for and the timing of reviews was considered as well as appropriate metrics.

Graduate Program Admissions Committees: With the introduction of the pathway program formal departmental admissions committees may be needed to deal with a larger and more diverse applicant pool.

University Admission Policies: Council considered the issues involved with accepting 3-year Asian bachelor degrees for graduate level admission especially the concern that students holding 3-year degrees may lack sufficient background in “general education.” Sally Francis reminded those present that at a meeting earlier in the year, the Graduate Council changed its policy to accept 3-year bachelor’s degrees from any European country that is a Bologna Declaration signatory. OSU is on the leading edge with its policy as, last Martin Fisk checked, no other university has created policy as broadly accepting of the Bologna degrees. Francis added that a lot is known about the high level of planning and coordination that has gone into the Bologna Process. Much less is known about the quality and academic breadth of Asian degree programs.

Status of pathway students: The student status of INTO participants is not for the Graduate Council to decide, but Council members wanted it made clear that pathway students are not graduate students.

A motion was made and seconded to conditionally approve the trial of the MBA pathway provided:

- That College of Business and INTO personnel will convey a caveat to students applying to the pathway program that admission to the MBA program is not guaranteed;
- That the students enrolled in the pathway program do not hold graduate student status unless and until they are granted formal admission;
- That the College of Business will form an MBA program admissions committee to consider the applications of students originating from the pathway program as well as those coming through the traditional process;

and

- That there will be a review of the pathway program by the Graduate Council at the end of the program's first year and periodically thereafter, to evaluate its success and to determine if the continuation of this trial program is warranted.

All voted in favor. Motion passed.

Russ-Eft will communicate the Council's decision to Dr. Coakley. The Council postponed making a decision on the MEng Pathway.

Discussion of “acceptable student progress”

Russ-Eft turned the meeting over to Francis for a conversation on what it means for a graduate student to be making acceptable progress.

Francis told the Council that the language in the OSU Graduate Catalog indicates that “a student may be dismissed for failing to make satisfactory progress toward an academic degree, as determined by a major department/program or the Graduate School.” The catalog language does not include a definition of “satisfactory progress” and “satisfactory progress” for graduate students has not been defined by Graduate Council. Francis added that the lack of a definition has resulted in serious problems when a department wishes to dismiss a student for that reason. Francis asked the Council to give some thought to what satisfactory progress means and asked if it wanted to consider making a formal universal (but generic) definition. Francis also offered the suggestion that if the Council believed it necessary it could require every graduate program to articulate its own description of satisfactory progress and share it with its graduate students.

Council members considered the many and varied academic progress markers (grades/research progress/ time to degree, etc.) and also discussed processes within their individual programs to periodically evaluate graduate students. Members believe that the responsibility of defining satisfactory progress rests at the program level.

The Graduate Council charged Francis to communicate with department chairs and directors of interdisciplinary graduate programs, to raise their awareness of this issue, to ask for their program's definition of academic progress, and to inform her how they plan to communicate the definition to their students.

Francis also suggested that a brown-bag information session on developing (or sharing) processes to evaluate graduate student progress be scheduled and that a unit's self-study report, written in support of a Graduate Council Graduate Program Review include a statement describing how the program reviews its graduate students.

Proposed revisions to Academic Regulations

Russ-Eft asked the Council if it had any questions or concerns about the proposed changes to AR 17 and AR 25 as she needs to respond to the Faculty Senate by

November 4, 2008. Council members did have concerns and asked Russ-Eft to communicate the following:

After considering the proposed changes to AR 17, Graduate Council members had the following questions about the suggested revision: What is the reason for the change? What is its purpose?

Council members were very concerned that the regulation would allow someone who was not in the classroom (the department chair) to be responsible for grading. Members felt that it was critical to have the instructor involved in such grade changes. Therefore, the Council would like to recommend using language to the effect that "If a separated instructor wishes to make a grade change, that change should be coordinated with the department chair.

Graduate Council Committee Assignments

A revised committee assignment list was distributed.

New Business

Russ-Eft asked the Council if they would be available for a meeting on November 10, 2008. The majority of the members indicated that they would be available.

A discussion was then held regarding scheduling Graduate Council meetings for the remainder of the academic year. The timing of the fall meetings seems to work for most members but the day does not. Russ-Eft will communicate potential meeting dates for winter quarter and will then schedule meetings when the majority of members are available to attend.

Graduate Council Minutes for October 13, 2008

The minutes from the October 13, 2008 Graduate Council meeting were approved as submitted.

Announcement

Francis announced that the two master's students whose theses were nominated to compete in the Western Association of Graduate School's thesis competition have been selected as finalists for the awards. Francis hopes that at least one of the nominees from OSU will be successful.

Meeting adjourned.

Graduate Council

October 13, 2008 Minutes

Grad Council Members Present:

Rick Colwell (COAS), Chrissa Kioussi (Pharmacy), Nancy King (Business), Walt Loveland (SCI), Vinod Narayanan (ENGR), Darlene Russ-Eft (Education), Tom Wolpert (AG SCI)

Grad Council Members Absent:

Becky Donatelle (HHS), Shawna Grosskopf (CLA), Kathy O'Reilly (Vet Med)

Grad School Members Present:

Martin Fisk, Sally Francis

Guests:

Chris Bell (Engineering), Jim Coakley (Business), Rosemary Garagnani (Graduate School), Valerie Rosenberg (International Programs), Helene Serewis (Graduate School)

Introduction of new Council Members

Darlene Russ-Eft introduced herself as Chair of the Graduate Council and welcomed the Council members to the meeting. She invited all Council members to introduce themselves. New members this year are Becky Donatelle (College of Health & Human Sciences), Walt Loveland (College of Science), and Vinod Narayanan (College of Engineering). Continuing members are Tom Wolpert (College of Agricultural Sciences), Shawna Grosskopf (College of Liberal Arts), Rick Colwell (College of Oceanic & Atmospheric Sciences), Nancy King (College of Business), Chrissa Kioussi (College of Pharmacy), and Darlene Russ-Eft (College of Education). Neither a graduate student representative nor a representative from the College of Forestry has been identified and appointed.

Graduate Council Committee Assignments

The list of committee and subcommittee assignments for 2008-09 was distributed. For the benefit of those who had no prior experience with the workings of the various committees, Russ-Eft and other experienced Council members briefly described the duties, joys and challenges involved in serving on the various committees.

Sally Francis noted that Nancy King's assignments will have to be added to the committee list (to replace Rene Reitsma's) and this will most likely result in major changes to the line up. If other Council members have issues with their assignments as they stand today, Russ-Eft or Helene Serewis should be contacted.

Rick Colwell noted that only one Council member had been assigned to each Graduate Program Review team. He, Tom Wolpert, Chrissa Kioussi, and Russ-Eft then advocated for having at least two Council members on each review panel: one new member and one continuing member, with the experienced member serving as the lead (when the review is held in conjunction with an outside agency review). Usually, the external academic disciplinary peer member of the Review Panel is designated to chair the Panel. With Colwell's proposed format, the current year review serves as a training exercise for the new member who would then be in a position to lead a review the following year. After additional discussion it was agreed to add additional Council members to all the 2008-09 reviews. Russ-Eft asked Council members to contact Serewis with their preferred program review assignment.

Francis then took a moment to encourage Council members to attend the Graduate School's open house on October 20th (3:30-5 PM). The Graduate School's offices in 300 Kerr Administration were remodeled over the summer. The open house will give the campus community an opportunity to view the changes that were

made. Immediately prior to the open house the Graduate School will host an informal award reception for the winners of the Frolander Outstanding Teaching Assistant Award, the OSU Distinguished Master's Thesis and Dissertation Awards, and the WAGS/UMI Technology Award.

INTO Pathway to the MBA and MEng Programs

Council members were joined by Chris Bell, Jim Coakley, Rosemary Garagnani, and Valerie Rosenberg.

Chris Bell, Associate Dean of the College of Engineering and Chair of the INTO Implementation Team, began by giving the Council members an overview of the OSU-INTO partnership. INTO will be offering OSU English language and pathway programs for specially recruited international students. Pathway programs work to transition students who are typically both somewhat deficient in English and somewhat deficient academically (deficient due to the traditions of their educational systems, not intellectually) into regular OSU undergraduate and graduate programs. INTO has been very successful with its university partnerships in the United Kingdom, exceeding their recruitment goals (the goal at East Anglia was 500 students in pathway programs in 5 years, the goal was met in 2). The OSU goal is 500 students in five years with 60% of those students mainstreaming into regular academic programs. If met, this would double OSU's international student population in 5-6 years.

Bell presented the Council with a hand-out (Preliminary Curriculum-MEng Pathway) and described in some detail how an INTO pathway student could proceed to the OSU MEng degree program. Bell said that he is still working on the proposed pathway with his colleagues at the College of Engineering and with INTO. The pathway program has not yet been finalized.

Some questions asked by Council members:

Could an MEng pathway student complete a master's thesis? Bell said that is not currently the focus of the program as all the students will be fee-paying, but it would be possible for a qualified student to proceed to that level.

Is there a financial incentive to INTO for their recruits to be successful? Bell said that there is a significant incentive.

Will INTO replace OSU's English Language Institute (ELI)? Bell said yes, ELI will be subsumed into INTO.

Additional discussion was held regarding pathway instructors (pathway courses will be taught by both OSU faculty and INTO faculty). Francis reminded the Council that INTO personnel teaching non English-language courses will be required to be added to the graduate faculty.

Jim Coakley then described his college's pathway proposal (hand-out: INTO OSU MBA Pathway). Coakley identified the following issues that will need to be resolved before students can be admitted to an INTO-OSU Graduate Pathway Program:

"Status" of Students in Pathway Program: Do we need to change Admission Office/Registrar's Office policy for post-baccalaureate students? Coakley informed the Council that in order to meet visa requirements, many international students need to be "degree seeking" (pursuing a major). Valerie Rosenberg stated that I-20s can be issued for non-degree seeking international students, but that some countries do not allow their citizens out unless they are degree seeking.

Admitting students with 3-year undergraduate degrees to Pathway Program: Both the business and engineering colleges want to consider the admission of students holding 3-year non-Bologna degrees (from select universities).

After the guests departed, Council members discussed international enrollment, the INTO-OSU partnership, and the requirements of the two proposed graduate pathway programs. Francis summarized the decision point for the Council members – does this look like a reasonable pilot experiment? Council members felt they needed additional information before being comfortable with making a decision. Members asked Russ-Eft to communicate the following message to Drs. Bell and Coakley:

The Council encourages the concept of an MEng and MBA INTO pathway program pilot program but asks to receive additional information (on the topics listed below) by its next meeting, scheduled for October 27th. If available, the Council members hope that Jim Coakley and Chris Bell can attend that meeting.

Here are our questions:

- What is the nature and conditions of the promise made to pathway students interested in graduate school?
- After successful completion of the pathway, is admission to the graduate program guaranteed? And, how is that decision made?
- What happens in the case of an unusually competitive domestic and/or international (non-INTO) applicant pool? The MBA pathway chart indicated that a pathway student still needs to apply to the graduate program, but the MEng pathway chart does not.
- Graduate Council wonders if engineering and business faculty have given enough thought to the design of the INTO graduate pathways and the requirements for admission to their OSU graduate programs. For example, are there enough graduate level courses in the MEng pathway? What are the INTO English courses proposed for the MBA pathway?

Finally, Graduate Council understands that there may be a report from OSU delegation to East Anglia. If so, Council would like to see the report and would like to learn success rates of that school's graduate business and/or engineering pathways (if they have any).

Meeting adjourned.

GRADUATE COUNCIL MEETING

June 5, 2008
3:00pm, Kidder 128

Grad Council Members Present:	Rod Harter (HHS), Tom McLain (Forestry), Alix Gitelman (SCI), Rene Reitsma (Business) Rick Colwell (COAS), Chrissa Kioussi (Pharmacy), Darlene Russ-Eft (Education)
Grad Council Members Absent:	Shawna Grosskopf (CLA), Kathy O'Reilly (Vet Med), Tom Wolpert (AG SCI)
Grad School Members Present:	Martin Fisk, Sally Francis, Helene Serewis, Mary Strickroth
Grad School Members Absent:	
Guests:	Marie Harvey (Public Health), Anna Harding (Public Health), Robert McGorin (Food Science & Tech.), Cary Green (AG SCI)

Food Science and Technology Program Review Report

Council members were joined by Robert McGorin and Cary Green. Dr. Green was present to represent the College of Agricultural Science in place of Stella Coakley. He is new to OSU having previously spent 13 years at Texas Tech.

The Graduate Council program review of the Food Science & Technology (FST) graduate program was held on March 4, 2008. Darlene Russ-Eft, who served as an internal member of the review panel, presented a brief overview of the review panel's report. The full report is appended to these minutes.

Russ-Eft began by saying that the review team was quite large because the Graduate Council program review was held in conjunction with a review of the undergraduate program by the Curriculum Council. She said that she thought it was a good process and that the team was well treated.

Russ-Eft first discussed the review report's executive summary. She reported that the review team found that the FST Department is reasonably well-functioning and respected within the university, regionally, nationally, and internationally. Its undergraduate program is thriving and growing. But, it appears that it is growing at the expense of the graduate program and the department's research mission. The program at the PhD level has shrunk noticeably. Other departmental problems include old and unreliable equipment and an issue about lab space. One of the top three recommendations made by the review committee was that the Department needs to agree on a reasonable balance between the graduate and undergraduate programs.

Other recommendations brought to the Council's attention by Russ-Eft were:

Rec. 6: Attention should be paid to mentoring and supporting new faculty in their efforts to obtain research funding.

Rec. 8: There needs to be continued attention to boosting communication and linkages between on-campus and off-campus graduate students and faculty.

Rec. 10: The Department should further evaluate the availability and relevance of graduate level classes.

Tom McLain asked if the drop in PhD candidates is a result of a lack of career opportunities for PhD students. McGorin answered that that is not the case. The Department tracks job placement of all the domestic graduates and it enjoys nearly 100% placement. McGorin believes that the drop in the number of PhD students is a result of the increase in the competition for external funding. The Department turns away PhD applicants because the faculty does not have the funds to support a lot of students.

When asked if faculty funding sources are federal, McGorin answered that the sources are a mixture of federal and commodity commission sources (i.e. The Oregon Wine Board). Small research projects are funded by industry related groups. McLain then asked if the Department has received food safety research funding. McGorin answered that only three faculty work in the area of food safety and they have applied for Federal competitive grants.

Alix Gitelman asked if the increase in undergraduate students has resulted in an increase in teaching assistantships from the College of Agricultural Sciences. McGorin answered that the Department has not received an additional increase in base funding and that the Department has been recently required to fund additional teaching assistantships due to the increase in undergraduate lab sections.

Council and visitor discussion then focused on the following topics:

Faculty Numbers

McGorin reported that the department was able to hire two new faculty to replace those who retired.

Departmental Seminar/Improving Community

McGorin reported that last summer, the FST faculty made a commitment to attend seminars and to invite guest speakers. McGorin praised the current FST graduate student representative for organizing many social events over the past year. McGorin admitted that graduate students are definitely more lab-centric than department-centric and it is difficult to alter this culture.

Population increase of Undergraduate Students

McGorin informed the Council that a marketing campaign (brochure, website, and lobby display) initially enhanced the undergraduate program's visibility. Later the fermentation and wine programs began to attract additional undergraduate students. A high percentage of OSU BS alums work in the Oregon food industry, while 80% of MS/PhD alums attain jobs outside the state or internationally.

McLain thanked the guests as they departed and informed the Council that a wrap up of the discussion would occur at the end of the day's meeting.

Department of Public Health Petition

Council was joined by Anna Harding and Marie Harvey from the Department of Public Health. McLain reminded the Council members that at its May 1 meeting a petition to waive (or substantially abbreviate) the review of the Master of Public Health (MPH) graduate program was considered. The Council members present at that meeting had many concerns about the request and it was decided to invite Marie Harvey, Chair of the Public Health Department, to a subsequent meeting to provide additional information.

Harvey began by addressing the issue concerning her department's MS degrees. She informed the Council that the Department is currently working on and hopes to complete the Category I proposal to suspend its MS programs (Environmental Health and Occupational Safety Management, Public Health, and Health Promotion and Health Behavior) by the end of Spring Quarter. The Department wishes to suspend the programs in order to provide more resources to its MPH and PhD programs. Anna Harding added that there are only a couple students remaining in the MS programs and that they will be finishing soon. The Department has not been recruiting into the MS programs for some time, but instead redirects prospective students to the very successful MPH program. Harding told the Council that all a student can accomplish in the MS programs can be accomplished in one of the four tracks of the MPH program (Environment, Safety and Health, Health Management and Policy, Health Promotion, and International Health). Although the MPH is considered a terminal professional degree, students can elect to do a thesis.

Harvey informed the Council that the Department is currently examining the possibility of becoming a School of Public Health. This is a long process but if the Department becomes a School there would be more funding and opportunities available for students and faculty. With more resources, the School might consider reinstating the MS programs. Discussion on the effects and consequences of the suspension of a program vs. termination ensued.

Harvey and Harding then addressed in detail the reasons why they believe it would make sense for the Graduate Council to postpone the review of the MPH for five years. Among the reasons was the difficulty of reviewing only one part of an integrated program and the fact that the program has recently undergone a successful accreditation review.

Council discussion focused on the following topics:

- The differing objectives between graduate programs reviews and accreditation reviews.

- The need to assure program quality in programs participating with other OUS campuses.

After the visitors left the room, and after considerable discussion, a motion was made to conduct a Graduate Council Program Review of the PhD in Public Health and the Master of Public Health in the Department of Public Health in 2009-10 using the established Graduate Council Program Review Guidelines with some supplemental requests or adjustments in procedure to accommodate the unique nature of collaborative degrees offered by multiple OUS institutions. McLain will communicate this decision and the rationale for it to Marie Harvey.

All voted in favor. Motion passed.

Council then returned to the discussion of the FST graduate program review. Rene Reitsma asked for an explanation of recommendation #12 (The purpose and the rationale of the preliminary written examination requires attention). Russ-Eft answered that the review panel could not understand the purpose of the exam. They did determine that it is not The Preliminary Exam, but a separate one. Chrissa Kioussi suggested that the issue had to do with the interdepartmental faculty, but she was also unclear on the true purpose of the examination.

A motion was made and seconded to approve the FST Review Report as submitted.

All voted in favor. Motion passed.

Graduate Council Minutes for May 15, 2008

The minutes from the May 15, 2008 Graduate Council meeting were approved as amended.

Before McLain adjourned the meeting, he extended his thanks to all the Council members for their remarkable work this past year. He observed that one of the reasons the Graduate Council works so well is due to the strong relationship between the Council and the Graduate School. He said that the Graduate School does not try to influence the work of the Council, it facilitates it. McLain added that in his view, the level of this relationship is appropriate. McLain then wished all present a safe and successful summer.

Future Business

As business to be carried forward, the 2008-2009 Graduate Council will need to review the Graduate Council Program Review Guidelines to determine any needed changes or additions to those guidelines that would accommodate the unique nature of degree programs that are collaborative and/or integrated with other OUS institutions.

Meeting adjourned.

Review of the Food Science and Technology Department of Oregon State University

Report submitted April 2008

The Graduate Council conducted a site review of graduate programs in the Department of Food Science and Technology on March 3 and 4, 2008. This review was undertaken in conjunction with an external review team as well as a Curriculum Council team. The teams also benefited from the participation of Sally Francis, Dean of the Graduate School, Martin Fisk, Associate Dean of the Graduate School, and Susan Leslie, Academic Programs.

Internal Graduate Program Review Team:

- Darlene Russ-Eft, Department of Adult Education & Higher Education Leadership
- Chrissa Kioussi, College of Pharmacy

External Review Team

- Charles Bamforth, University of California, Davis (Chair of the review committee)
- Rolando Flores (University of Nebraska)
- Randy Rice (Alaska Seafood).

Curriculum Council Team

- Mike Bailey (Department of Electrical Engineering)
- John Lee (Department of Mathematics)

Executive Summary

We found the Department of Food Science and Technology (FST) to be reasonably well functioning and respected within the University as well as regionally, nationally, and internationally. The undergraduate program is thriving even perhaps to the point of adversely impacting the research mission and graduate program. The graduate program, especially at the Ph.D. level has shrunk noticeably. These items and other successes and areas where improvement is needed are discussed at length below.

The FST department has infrastructure problems stemming from old, unreliable equipment that adversely affects training of both undergraduate and graduate students and the ability of the department faculty to reach its full research potential and be more competitive for major grant funding. Steps need to be taken partly by the department and partly with the aid of the College of Agricultural Sciences to address these problems.

Our report is organized as follows.

- Summary of Major Recommendations
- Undergraduate Program Review
- Graduate Program Review

Both the undergraduate and graduate program reviews contain their own recommendations and conclusions, some of which are reflected in the summary of major

recommendations. There is some repetition but we did not want to lose the sense of the input we received during the site visit by merging similar comments that seemed to us to convey a somewhat different point of view or strength of opinion.

Summary of Major Recommendations

1. FST should closely examine the relationship between increased undergraduate enrollment and the decrease in GPAs, both overall and among the different degree options. It may be worthwhile creating a “professional” half of the program, with the students qualifying to continue after the sophomore year. Whatever the cause of the GPA drop, it is important to adjust admission standards or ameliorate causes and restore the more traditional high quality 3.0 grade-point average of typical FST undergraduates.
2. Opportunities for undergraduate research should be extended.
3. The department needs to agree on the desired balance between the undergraduate program and the graduate program.
4. The Department should enhance linkages with relevant federal and state agencies and private industry. The Department should consider establishment of a more organized mechanism for gaining stakeholder inputs to planning. Involving relevant stakeholders may help to highlight the need for additional research funding for the department.
5. The faculty should continue to build linkages with other departments within the College of Agricultural Sciences (CAS) and outside of CAS, including Business and Forestry.
6. Attention should be paid to mentoring and supporting new faculty in their efforts to obtain research funding.
7. The Department should develop an admission process that ensures the recruitment of U.S. minority students. Further attention needs to be placed on recruiting domestic graduate students. Attention needs to be paid to recruiting and enthusing Ph.D. students on the Corvallis campus, whilst continuing the leadership and mentorship of graduate students in the Astoria facility.
8. There needs to be continued attention to boosting communication and linkages between on-campus and off-campus graduate students and faculty.
9. Attention should be focused on increasing the number of graduate advisors and mentoring new faculty into that role.
10. The Department should further evaluate the availability and relevance of graduate level classes.

11. Efforts should be made to increase teaching opportunities to graduate students, particularly through increasing the number of Teaching Assistantships.
12. The purpose and the rationale of the preliminary written examination requires attention.
13. The FST seminar program should be given priority attention.
14. The Department should consider instituting some form of laboratory rotation process for graduate students.
15. The Department is encouraged to develop a space and equipment utilization plan. As part of this plan, the Department should consider creating a graduate student lounge separate from the undergraduate student lounge.

Undergraduate Program Review

Growth and success of undergraduate program is to be commended. Undergraduate students exhibited obvious enthusiasm. They were positive about virtually all elements of their program. Advising was singled out as a major strength.

- Historically FST has had about 40-45 graduate students and about 40 undergraduate students. There has been a significant shift over the past 10 years. The graduate program has contracted into the 20's and the undergraduate program is slightly over 100.
- The typical time to undergraduate graduation is hard to pin down; approximately 5 to 6 years seems a reasonable estimate. Most FST majors transfer from other majors or schools at about the junior level. Typically this delays progress towards the degree.
- Based on the information available to us at the time of the site visit, about 10% of FST undergraduates continue into the graduate program at OSU.
- About 10% of FST undergraduates get a chance to work in a lab.
- FST offers about 23 undergraduate scholarships per year totaling about \$31,000.
- The OSU FST department has had a very successful increase in undergraduate enrollment, from 32 in 1996 to 90 in 2006.
- Much of that run-up has been the result of creating a Fermentation option, comprising about 63% of the FST BS graduates in 2006-2007.
- The rapid growth of the undergraduate program was the conscious result of new options in fermentation, advertising, recruiting, contacting high school teachers, and direct mailing to 4,000 undergrads.
- A limitation to further growth is lab space and faculty preparation time.
- With current resources, the undergraduate program could accommodate at most 110-120 students.
- Increased national placement of undergraduates is a goal of the program, not just placement in the Northwest. Students are resistant to leaving Oregon.
- At the same time as this increase in undergraduate enrollment, however, there has been a decline in FST undergraduate grade point averages, from a high of 3.10 to a current average GPA of 2.73. A graph given in the self-study shows that this

decline appears to be correlated with the run-up in enrollment. This is supported by the fact that the average GPA in the Fermentation option (the option with the largest run-up) is 2.5, while the average for the other options is 2.9. (If you plug in the numbers from the graph, you get a correlation coefficient of $r = -.77$ between GPA and enrollment size for 1996-2006. This correlation becomes a very incriminating $r = -.99$ for the years 2003-2006.)

- The drop in GPA noted in the self-study probably has several causes. Suggested causes were: (a) A larger cohort of students not as well trained in background science. It was suggested to check the effect of basic science courses on overall GPA. (b) Students are older than average (26 years) and have non-traditional student responsibilities such as full-time jobs and/or families with children to attend to as well as their academic program.
- Undergraduates seem to be in great demand in industry, apparently getting multiple job offers with ease.
- The undergraduate teaching load among the faculty is a concern. It appears that their hard work has indeed created a successful undergraduate program, but at the expense of other scholarly work, such as grant-writing and establishing more intensive research programs.
- Teaching load of the faculty in CAS averages in 3-6 courses per year. In FST it is about 1-2 courses per year.
- Some FST faculty are clearly concerned that the attention paid to the undergraduate program over the past 5 years has had unfortunate impacts on the graduate program, especially concerning being competitive for top research grants. Some said it is time to emphasize the graduate program.
- The faculty is spread too thin due to undergraduate teaching with the attendant negative impact on departmental research.
- Perhaps a reasonable balance would be 75-80 undergraduates and an improved graduate program and research environment.

We talked with five FST undergraduates about the program. They told us:

- The FST faculty is very popular among the students. The students describe them as excellent, excited, know their material, have a passion for teaching, and get to know the students. They say that this is in sharp contrast to faculty in other departments, such as Biochemistry.
- All five of the students switched into FST from other programs. They all credited the quality of the faculty with making their decision. (In fact, if there was a bounty system on new students, Dan Smith would be a rich man...)

- The FST undergraduate courses are excellent and well-taught. Class sizes are typically 20-30. They go up to around 70 in the Food Law course, which is probably the case because it is a BacCore offering.
- The students have a moderate course load, typically averaging 15-16 hours/quarter (of all their classes, not just FST)
- The students estimate that they spend around 20-40 hours per week on assignments outside of class. This seems reasonable. There seemed to be a consensus that the basic science courses and a statistics course took a lot more time than their FST courses.
- The students were very enthusiastic about the instruction in all FST courses except one sequence, BEE 452-453. What they really liked was the applied science aspects of the courses. They stressed that they studied FST courses to learn the material because they wanted to understand why things happened as they did. This was in sharp contrast to their experience in core science courses where they said they studied (memorized) only to pass exams. In one venue they found science compelling and in the other a turnoff.
- The biggest blight in the FST undergraduate curriculum is the BEE 452 and BEE 453 combination. The students describe it as poorly organized, poorly taught, and covering much material that they don't need to know.
- While some students obviously choose this major because they like eating and drinking, these students chose it because they wanted jobs in the scientific end of the food processing industry. They went so far as to point out how closely related FST is to "applied chemistry", which they like.
- None of these five students is going on to graduate school. The two main reasons were (1) plentiful job opportunities if they get out now, and (2) they are not sure what they would want to specialize in if they did go to graduate school.
- The students do have opportunities to conduct undergraduate research, but those opportunities are not well-publicized. They say you have to go to various professors and ask about possibilities.
- We asked the students if the FST undergrads can reasonably graduate in four years. For these students the answer was no because all had come from other major and programs. For students in general it was hard to tell since almost all were behind.
- The students were concerned that the lab equipment used for teaching was old and broke down a lot. They are concerned that they will not be prepared to use the

newer equipment that they will find in their jobs. Equipment is in short supply – students race to get the equipment they need.

- The Microbiology Lab is an enrollment problem for students. The class is a lecture-lab where the lecture accommodates twice the number who can enroll in the lab making a permanent and worsening lab access problem. Often students must try to get the lab during summer term. This is a road block to planning schedules and timely degree completion. Students (sometimes, often) can't register for their planned program and have to return to advisors for plan B.
- Students in Fermentation don't seem to be realistic about career options. Becoming a local (OR, WA, CA) brew master or vintner is a low paying long term prospect.
- Career path opportunities up to six figures are available for students in the Food Science option who are willing to move to where the major food processing companies are located.
- The students we met with were confident that jobs they would like to have are and will be available in abundance.
- Students said the FST faculty knows what is going on in the industry and what degree you need for what career path.
- The students said internships were readily available but information about them was less available. Students had to contact the head undergraduate advisor and/or a faculty member and ask about opportunities. When they did the faculty members were very responsive. The students suggested it would be helpful to have some advertising about internship possibilities – a more organized effort.
- When asked if an internship should be a required part of the FST undergraduate degree program, students said it was a good idea but would be impossible for some students unless the internship paid enough to enable those students to support themselves and/or their family.
- The students expressed a wish for a Food Product Development course, which apparently is a capstone experience in many food science programs. Now students do product development informally via a club.

In summary, our key findings and recommendations are:

1. FST should closely examine the relationship between increased undergraduate enrollment and the decrease in GPAs, both overall and among the different degree

options. If there is indeed a correlation, serious consideration should be given to culling some students from the program in order to maintain the strength and reputation of the program.

2. Whatever the cause of the GPA drop, it is important to adjust admission standards or ameliorate causes and restore the more traditional high quality 3-point average of typical FTS undergrads.

3. Perhaps it would be worthwhile creating a “professional” half of the program like some other OSU majors do, and make the students qualify to continue with the program after the sophomore year. Qualification could be based on GPA or partly on GPA and some other good predictor of success.

4. Something should be done about BEE 452 and BEE 453. The sequence should be re-vamped to be more relevant and the strongly expressed concerns of students about the teaching effectiveness of the instructor should be addressed.

5. The opportunities for undergraduate research should be more widely publicized. Besides being enjoyable and educational, it might also inflict some of the undergraduates with the “research bug” and motivate them to enter the FST grad program.

6. The balance between the undergraduate program and the graduate program is an important issue that apparently has not been well discussed among the faculty. Our sense is that there is no consensus about the correct balance. We were told that such discussions are in their early stages.

7. In order to broaden stronger elements of the undergraduate program, FST might consider some sort of bachelor’s program in seafood science, as seafood seems like a possible area of strength. Perhaps there is potential for some sort of QA/QC curriculum in seafood at the BS level. There is a shortage of such trained personnel in the Pacific Northwest, and if there are limitations to successful placement of fermentation graduates, this might be an area to investigate in order to keep vitality in the undergraduate program and continue successful placement of graduating students. Some investigation should occur to see if this has merit.

Graduate Program Review

The graduate program of the Department of Food Science at Oregon State has had better times in the past; but the best ones lied ahead. The major components that indicate a sign of trouble in the Department are the low numbers of graduate students and the flat numbers in research grant activity.

It was evident to the review team that the morale of the graduate students at Corvallis was lower compared with the attitude of the graduate students from the satellite centers (Portland and Astoria). The fact that the facilities are aged and new funds for renovation are not available at Corvallis create tough issues that the University administration needs to address sometime soon. However, it was also evident that the OSU-FST undergraduates that go into the graduate program have a completely different attitude, a more positive and progressive one. So, the components for success are there, but a new sense of graduate student community and direction needs to be reestablished on the Corvallis campus.

The graduate course offering of the Department needs attention as well, since many students complained that they do not have much to take. This is especially critical for the students that come from the OSU bachelor and/or master programs and who have taken most of the graduate courses. This is not unique to OSU-FST but deserves attention and should be part of the faculty plan for the future.

The success of enrollment and placement of students in the undergraduate program during the last years, associated with the stagnant numbers in the graduate student enrollment and grant procurement of the faculty is creating “the perfect storm.” There is no doubt that the faculty and administrators have this issue clear, since they used the “perfect storm” term. However, we feel that the most troublesome issue is that the faculty of the Department of Food Science was apparently expecting this review team to define the route forward for their graduate program and their research activities. It is our opinion that no recommendation from us can substitute the “soul searching” that the faculty of the Department needs to embark on. It is our recommendation that the faculty with internal and/or external assistance needs to make a realistic plan for the next five to eight years. This plan needs to identify the chart to follow in terms of their research activities in pursuit of grant activity that will make their graduate program a robust one. The option of abandoning the graduate program is not a valid one, so the only way for this Department is forward.

The potential for growth and success for the graduate program continues to rest on their subject areas of strength such as sensory, flavor chemistry, processing non-thermal, food safety (especially on sea food applications) and value-added packaging and processes. The soon to be in place OSU Wine Institute might create new opportunities, but it is arriving at a time that there are other similar projects going on in the nation with which it will need to compete.

In this “soul search” the faculty of the Food Science Department is not alone. Most if not all of the Food Science Departments in the nation are facing similar challenges such as reduced funding sources and more competition for available funds. Industry is looking for fast turn around to their problems solved by research; so, they tend not to go to faculty for solutions unless the faculty has some unique process or labs. An example of this is the success that the Food Innovation Center has had.

- **Students** FST graduate student enrollment has remained relatively stable during 1995-2007. During that time there was an average of 33.5 graduate students. There have been slightly more M.S. students (18) as compared with Ph.D. candidates (16). However, the number of Ph.D. candidates has been declining, with only 7 Ph.D. candidates today.

- The graduate students appear to be selected based on their undergraduate grades and GREs, as well as a statement of objective or purpose. Due to budgetary constraints and lack of research funding, the department is not currently offering graduate teaching or research assistantships to recruit top applicants.

- Like the rest of the university, the department is well attuned to the goal of building diversity. The department, including the graduate program, reflects some of the same weaknesses as all of OSU in recruiting a diverse student body. There are, however, a good representation of female students and Asian students. U.S. minorities (African Americans, Native Americans, and Hispanics) are rarely represented among the graduate students.

See recommendations 5 through 10.

- **Faculty** The faculty demonstrate a strong commitment to the graduate students. Although overall representing a younger group of faculty members, they are extremely qualified and diverse in their areas of expertise.

See recommendations 3 and 10.

- **Curriculum.** Over 40 courses can be taken by FST graduate students for graduate credit of which 26 courses are graduate-level only. There are, however, a relatively large number of slash courses. In addition, the consistency of slash courses, with regard to rigor, workload, requirements for graduate student participation, and level of instruction seems to vary depending upon the course and the instructor. The department may be well-served by evaluating its slash courses, especially the consistency in how such courses are taught across the curriculum, e.g., some courses were considered too difficult by undergraduates while in other courses students felt that extra work for graduate students was contrived. It may be desirable to make some courses solely 400 or 500 level based on past enrollment patterns, course material, and faculty desire to accommodate undergraduates and graduates.

A related concern among graduate students is that because there are so many slash courses, the “50% Rule” sometimes comes into play when students are designing a program of study. This can be particularly problematic for students who completed their undergraduate degree in the Department. The need to add additional graduate stand alone credit hours sometimes means that graduate students must take courses in forestry or toxicology.

See recommendations 11 through 16.

- Research The research interests and pursuits of the faculty provide the graduate students with the opportunity to participate in a research program. The faculty are diverse in their expertise, addressing a wide variety of issues in the field.

The faculty expressed a need to develop more and additional funding sources. It may be appropriate to begin a program to establish connections with state and federal agencies, as well as private industry. Such relationships could open up significant research opportunities for faculty and graduate students.

The graduate students appear to be well mentored by the faculty in their research pursuits, particularly those in the Astoria facility. Such mentorship has led to productivity in scholarship. The graduate students have a good record of publications. Nevertheless, graduate students must find a funded lab to undertake research, and there are no rotations within labs and disciplines.

There is a distinct sense of mission drift in graduate program-uncertainty, and lack of direction. However, graduate students in Astoria seem focused and functioning differently than FST students on campus. It seems like there is a lost opportunity in not utilizing graduate students in Astoria more, for example, for teaching.

See recommendations 1 through 4 and 8 and 15.

- Financial Support Due to budgetary constraints and lack of research funding, the department is not currently offering graduate teaching or research assistantships to recruit top applicants.

See recommendations 1 through 4.

- Administration, Facilities and Infrastructure The Department appears to be well served by the current Department Chair, Dr. Bob McGorin. The review teams would like to acknowledge and commend Dr. McGorin for his leadership in the self-study process.

The Department suffers from somewhat old and outdated facilities. It does, however, benefit from the Pilot Plant and from the Astoria Seafood Laboratory and the Food Innovation Center in Portland. Astoria seafood lab has standing and credibility widely

recognized in both academic and industry circles. Astoria seafood program seems to be operating well.

FIC also stands out as strength. FIC functioning in an applied sense very well, as evidenced by 50% self-funding from revenue coming in. FIC connection to consumers via sensory testing and focus groups provides value for students in seeing the real world connection with what they are studying.

The graduate students, particularly those in the Astoria facility, appear to have access to sufficient resources and labs to carry out and complete their work.

For the Corvallis location, some effort should be made to locate industry or alumni sources of funding to help with improvements in infrastructure components, e.g. freezers, refrigerators.

It seems unlikely that a new building and infrastructure will be immediately forthcoming. Therefore, the FST program should focus energy on reshaping and constructing the size and type of program to work optimally with the existing infrastructure. This most certainly must include an assessment of how many students can be serviced in a quality fashion.

See recommendations 18 and 19.

- Community and Participation The extent to which the graduate students see themselves as part of a community or cohort is somewhat limited in the program. Furthermore, as compared with the undergraduate students, the graduate students seemed somewhat muted in their enthusiasm for the program. Nevertheless, one great strength of the program is that graduate students are included in activities involving departmental governance and operations.

At the same time, because Departmental graduate students are on the Corvallis campus, as well as in Astoria and potentially Portland, there is not a strong sense of community among graduate students. Indeed, the graduate students stated that they were more familiar with undergraduate students as compared with their graduate student peers. While students acknowledged this weakness in the program, they also acknowledged that this is often their choice, as they are busy with their research and their studies, and usually do not choose to make time for efforts aimed at building community. It may be that providing graduate students with a graduate student lounge would facilitate more interaction.

In addition, the graduate program would be well-served by strong communication and linkages among on-campus and off-campus graduate students and faculty.

Re-structure and re-build the graduate seminar in order to more successfully engage both PIs and students. There were numerous comments about the absence of vitality in the seminars, and the need to breathe new life into it.

See recommendations 9 and 19.

- Annual Reviews The program apparently undertakes an annual monitoring of graduate student progress. Although not an areas of comment by either graduate students or faculty, this review would serve to “catch” struggling or failing students and should be continued.

- Level and Quality of Student Performance According to the self-study document, the Department has awarded 80 M.S. degrees and 49 Ph.D degrees in the period from 1995 to 2007. The top-5 most productive graduate advisors accounted for over 53% of the graduate degrees awarded. Of these five, three have either been reassigned or have retired. At the same time, a group of 8 new tenure-track faculty that were hired since 1999 appear to be making early and consistent contributions to graduate advising.

Between 1995 and 2007, faculty published 401 refereed journal articles, edited 8 books, wrote 102 book chapters, had 76 presentations published in conference proceedings, and gave 290 presentations at professional conferences. A majority of these had a graduate student as the first author.

See recommendation 10.

Level and Quality of Faculty Performance Input for this section will be taken from the external team report. The faculty appear to be well qualified and diverse in expertise, which enables them to address any major issue pertaining to natural resources. The faculty, however, needs to improve their productivity in grantsmanship, since this will help to support research efforts and graduate students.

See recommendations 1 through 4.

- Quality of the Scholarly Community (including collaborative ventures) The Department appears to be well connected with private businesses throughout Oregon and the Northwest. Faculty need to develop closer relationships with state and federal agencies in order to increase research funding collaborations and possibilities.

See recommendations 1 though 4.

- Professional Viability of Graduates The Department conducted a survey of FST graduate alumni; of whom 34 had received graduate degrees in the period from 1995 to 2006, and 20 self-identified as M.S. students while 10 self-identified as Ph.D. students.

There was no adjustment for non-response bias. All of the respondents were employed, about 50% holding business/industry or private sector positions. The remainder hold faculty positions at a college or university (20%), are pursuing a graduate or post-doctoral fellowship (17%), or are employed in other research positions. Two thirds of the alumni group declared that their current employment is directly related to their graduate training in their FST field of study. While 90% of the alumni respondents would choose the same major and same degree and 66% would choose OSU, only 55% would choose the same major professor.

See recommendation 17.

- Satisfaction Survey of Graduates There did not appear to be a comparison of the FST alumni students with the OSU Graduate School Exit Survey.

- Ranking of the Graduate Program There did not appear to be any comparison of the Graduate Program with other similar programs.

In summary, our key findings and recommendations are:

We found the Department of Food Science and Technology to be reasonably well functioning and respected within the University as well as regionally, nationally, and internationally.

Our key findings and recommendations fall broadly into three categories: A. Research capabilities and faculty resources; B. Graduate education and issues for graduate students; C. Facilities and administration.

A. Research Capabilities and Faculty Resources

1. The Department should have a long-term plan of action for increasing linkages with relevant federal and state agencies, as well as continued linkages with private industry. Such linkages may help with future research funding.
2. The faculty is encouraged to continue to build linkages with other departments within the College of Agricultural Sciences (CAS) and outside of CAS, including Business and Forestry.
3. Attention should be paid to mentoring and supporting new faculty in their efforts to obtain research funding.
4. The Department should consider establishment of a more organized mechanism for gaining stakeholder inputs to planning. Involving relevant stakeholders may help to highlight the need for additional research funding for the department.

B. Graduate Education and Issues for Graduate Students

5. The Department should consider developing a comprehensive plan for recruitment of minority students. In particular, the current admission process has the potential to let qualified minority candidates slip through the cracks.
6. The last Graduate Program Review identified the high number of international graduate students. Some progress has been made, but further attention needs to be placed on recruiting domestic graduate students.
7. The self-study document prepared by the Department identified that there has been a drop in Ph.D. candidates over the past four years from 19 students in 2003-4 to 7 students in 2006-7. More energy and attention needs to be paid to recruiting Ph.D. students and to the graduate student experience. The review team felt a lack of enthusiasm among the graduate students and faculty on the Corvallis campus.
8. Continue the leadership and mentorship of graduate students in the Astoria facility, including the monthly graduate student meetings to discuss research. The graduate students in the Astoria facility were very satisfied with the leadership and mentorship that they experienced. They appeared to be working well as a team, and the facilities were considered adequate.
9. Efforts should be made to continue to develop processes to ensure communication and linkages among on-campus and off-campus graduate students and faculty. This may help to solve the issue of enthusiasm, given perceived satisfaction with leadership and mentorship in the Astoria facility. Some possibilities include but are not limited to: (a) scheduling on-campus seminars and other similar activities such that they do not conflict with off-campus activities, (b) scheduling off-campus seminars that do not conflict with on-campus activities and courses, and (c) providing a van for students to travel to campus or to one of the off-campus facilities as a group.
10. Attention should be focused on increasing the number of graduate advisors and mentoring new faculty into that role. The self-study document noted that five graduate advisors accounted for over 55% of the graduate degrees awarded. Furthermore, three of the five advisors have either retired or have been reassigned to new positions.
11. The Department must further evaluate 400/500 “slash” courses, and especially examine the consistency with which such courses are taught across the curriculum. Graduate students complained that they have to seek courses through forestry and toxicology to fill out their credit requirements. The Department self-study mentioned that all faculty members are expected to develop a graduate course in their areas of expertise that will be taught every other year. Such development would provide a great addition to the program.
12. Efforts should be made to increase teaching opportunities to graduate students, particularly through increasing the number of Teaching Assistantships. The

department should continue to develop graduate teaching assistants for courses with large enrollments. It would seem that MS students could be utilized for some of the graduate teaching assignments. A second year MS student should be capable of picking up some of the TA load, at least for some of the lower level courses. For Ph.D. students who want teaching experience, the Department could consider offering course credit in return for teaching.

13. The previous Graduate Program Review identified a concern about the lack of consistency in communicating information about the program requirements, particularly the preliminary written exams. Concerns still exist regarding the qualification exam. The purpose and the rationale of this exam were not clear to the review team. The multiple levels of screening and testing of graduate students seem unnecessary. It is suggested some streamlining could take place and not utilize the “optional” exam. The present approach also seems to leave the program open for criticism as arbitrary.
14. The previous Graduate Program Review identified that the FST seminar program was of concern. Over the past years no major restructuring has been done. There appear to be no scheduled seminars, and when they do occur, they are not well attended by faculty or students. Both students and faculty expressed interest in improving the current seminar status, and this should be given priority attention.
15. Graduate students must find a funded lab to undertake research, and there are no rotations within labs and disciplines. This may lead to issues as to exposure of students to the various science and technology techniques and approaches as well as possible personnel conflicts. The Department should consider instituting some form of lab rotation process for graduate students.
16. The Department should continue to conduct annual reviews with graduate students. It can help to keep graduate students on track and can serve to “catch” struggling or failing students.
17. The Department should continue to conduct surveys of recent graduates, as this provides valuable feedback.

C. Facilities and Administration

18. The Department is encouraged to develop a space and equipment utilization plan. Certainly Wiegand Hall is an older building, but attention should be placed on replacing old equipment and obtaining new equipment, such as autoclaves, cold storage units, freezers, and centrifuges.
19. An area of concern for graduate students involves the lack of a graduate student lounge. As part of the space utilization plan, the Department should consider creating a graduate student lounge separate from the undergraduate student lounge.

GRADUATE COUNCIL MEETING

May 15, 2008
3:00pm, Kidder 128

Grad Council Members Present:	Rod Harter (HHS), Tom McLain (Forestry), Tom Wolpert (AG SCI) Alix Gitelman (SCI), Shawna Grosskopf (CLA), Kathy O'Reilly (Vet Med), Rene Reitsma (Business)
Grad Council Members Absent:	Rick Colwell (COAS), Chrissa Kioussi (Pharmacy), Darlene Russ-Eft (Education)
Grad School Members Present:	Martin Fisk, Sally Francis, Helene Serewis, Mary Strickroth
Grad School Members Absent:	
Guests:	Michael Unsworth (COAS), Logen Logendran (School of MIME), Hal Salwasser (Forestry) Ilene Kleinsorge (Business), Jack Drexler (Business)

Industrial and Manufacturing Engineering Graduate Program Review Follow up Report

Council members were joined by Michael Unsworth and Logen Logendran.

Unsworth met with Ken Funk and Logen Logendran on May 1, 2008 to discuss changes that have occurred since the Graduate Council Program Review of the Department of Industrial and Manufacturing Engineering (IME) in November 2005. Dr. Funk was the interim Department Chair at the time of the review, and Dr. Logendran was the IME Graduate Program Chair. The full follow-up review report, written by Unsworth after the May 1 discussion, is appended to these minutes.

Unsworth briefly highlighted the original review panel's recommendations and concerns, and then reported on the current state of the graduate programs.

Council and visitor discussion focused on the following topics:

Faculty & Graduate-level Teaching

The review panel's recommendation concerning the hiring of additional IME faculty and the need to offer more graduate stand-alone coursework is being addressed. An Assistant Professor in Information Systems Engineering was hired in 2005, and the unsuccessful search to hire a Manufacturing Systems Engineer will soon be re-launched. The recruitment of an instructor to teach undergraduate-level courses was successful and this instructor's service has allowed IME faculty to do more graduate-

level teaching. Unsworth reported that the department's effort to offer more strictly 500-level courses is a work in progress.

Merger with the Department of Mechanical Engineering

Unsworth reported that during the program review site visit, some IME faculty and students expressed concern over the upcoming merger with the department of Mechanical Engineering. Chiefly, they were concerned over the potential loss of departmental identity and budgetary independence. The merger has now been completed and Unsworth reported that the IME faculty and staff feel that it has gone better than imagined. The IME faculty and staff appear satisfied with the current situation and are comfortable under Dr. Batten's managerial style.

Before the guests left the meeting, Sally Francis thanked Unsworth for attending the Mechanical Engineering (ME) pre-review dinner on May 4th and for sharing his IME draft report with the ME reviewers. After the guests left the meeting and after additional discussion, a motion was made and seconded to approve the IME Follow -up Review Report as submitted.

All voted in favor. Motion passed.

Graduate Council Minutes for April 17, 2008

The minutes from the April 17, 2008 Graduate Council meeting were approved as amended.

Graduate Council Minutes for May 1, 2008

The minutes from the May 1, 2008 Graduate Council meeting were approved as amended.

CAT I Proposal: Reorganize the College of Forestry

Tom McLain introduced the Category I proposal to the Graduate Council members. He informed the Council that the primary reasons for the College reorganization is the need to save money and the need to better address the needs of its principal stakeholders. He added that the CAT I does not propose any change to the College of Forestry (COF) degree programs or to the graduate faculty. Hal Salwasser, COF Dean, arrived to join the discussion.

Council and visitor discussion focused on the following topics:

Graduate Faculty

Although the COF graduate programs will be housed in the three departments for administrative purposes, it is the graduate faculty who will continue to control the degree programs and are responsible for managing the curriculum and all other programmatic needs. Sally Francis stated that the Graduate School's Graduate Faculty database should be reorganized so that departmental affiliation is not a key field. The issue of managing the graduate faculty of a graduate program (updating faculty lists) was also discussed. Will the COF department heads manage the multi-departmental graduate

programs faculty lists? Interdisciplinary graduate programs normally have a director to manage this task.

Undergraduate Faculty

Although there will be no changes made to the undergraduate degree programs, the undergraduate faculty will be redistributed among the three departments. When asked about the P&T process, Salwasser said the process would be handled by each department in the traditional manner. Salwasser added that in COF discussion, a different approach is being considered that would serve to better protect the interests of the junior faculty.

A motion was made and seconded to approve the Category I Proposal to reorganize the College of Forestry as submitted.

All voted in favor. Motion passed.

CAT I Proposal: Reorganize Administrative Units in the College of Business

Ilene Kleinsorge, Dean, College of Business (COB), and Jack Drexler joined the meeting. Kleinsorge gave a brief overview of the CAT I proposal which reorganizes the COB by eliminating the academic department structure. The transformation of the College to a professional school model and the resignation of a department chair identified the need for a reorganized structure that would better support the demands of the COB's mission. Kleinsorge indicated that the former structure perpetuated artificial divisions and inefficiencies, while the new structure allows the College to fully utilize its talents and resources. Kleinsorge added that the CAT I would not affect the COB's graduate program in any way.

When asked to elaborate, Kleinsorge stated that the MBA program has always been College led. It has been under the direction of the Associate Dean of Academic & Student Services. The program has no tracks or concentrations so COB departments have never been involved in managing it.

Rod Harter then shared a recent experience he had as a member of the Graduate Council Program Review team examining the College of Oceanic and Atmospheric Sciences' (COAS) graduate programs. The COAS administrative structure is similar to the structure COB is proposing. Harter alerted Kleinsorge that one disadvantage to this organizational model is a problem of communication. Harter told Kleinsorge that the COAS faculty complained that the lack of good communication within the College was problematical – especially in regard to curriculum development/advancement. Kleinsorge thanked Harter for the warning, and said that the COB Executive Steering Committee has representatives from every discipline and every program. The Committee meets regularly and is now identifying how the undergraduate and graduate committees will operate and what the committees' responsibilities will be.

Rene Reitsma indicated that the COB faculty is much smaller than the COAS faculty. He doesn't believe that communication will be an issue for them. Kleinsorge added that she will monitor the situation in an effort to prevent issues from arising.

A motion was made and seconded to approve the Category I Proposal to reorganize the College of Business as submitted.

All voted in favor. Motion passed.

Next Meeting

McLain announced that a revised petition from the Public Health Department will be considered at the next Graduate Council meeting on Thursday, June 5th.

Meeting adjourned.

GRADUATE COUNCIL MEETING

May 1, 2008
3:00pm, Kidder 128

Grad Council Members Present:	Rick Colwell (COAS), Rod Harter (HHS), Chrissa Kioussi (Pharmacy), Tom McLain (Forestry), Darlene Russ-Eft (Education), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Alix Gitelman (SCI), Shawna Grosskopf (CLA), Kathy O'Reilly (Vet Med), Rene Reitsma (Business)
Grad School Members Present:	Martin Fisk, Mary Strickroth
Grad School Members Absent:	Sally Francis, Helene Serewis
Guests:	Bob Duncan & Mark Abbott, COAS

COAS Graduate Program Review Report

Council members were joined by Dean Mark Abbott and Associate Dean Robert Duncan of the College of Oceanic and Atmospheric Sciences (COAS).

The Graduate Council program review of the COAS graduate programs was held on January 25, 2008. Rod Harter, who served as an internal member of the review panel, presented a brief overview of the review panel's report. The full report is appended to these minutes.

Harter began by saying that in his three years serving as a member of OSU's Graduate Council, the COAS graduate programs were the strongest he has reviewed. He recognized the contributions of the external members of the review team (James Yoder, Margaret Delaney, and Thomas Leschine) and added that the experts were also very impressed with the COAS programs and that the final review report is strong and positive. Harter then addressed a few of the review panel's key recommendations.

Council and visitor discussion focused on the following topics:

FUNDING

The review panel's first recommendation is that OSU should better assist COAS with its funding needs. Currently COAS faculty support themselves with little money from OSU. Over the course of a career, COAS faculty obtain 60-70% of their own salary and virtually all graduate student support from external (federal) funding sources. The

weakened federal funding climate is threatening this manner of operating and without more state money the College will be hard pressed to maintain faculty size and the quality of its programs. Bob Duncan agreed with the review panel's assessment saying that these are difficult times and it's a challenge to find ways to pay the bills. He added that it would be great to have faculty members and students supported at a level that would make them as productive as possible.

Curriculum and Teaching

Harter reported that during the site visit, some students expressed concern over the quality of teaching and the course content of the core course curriculum. Students indicated that the opportunity to anonymously evaluate the instructors of these low-enrollment courses is near impossible and that some wondered if evaluations are taken seriously by the administration.

Tom McLain wondered if the issue with teaching quality is due to the way the college is structured. Since COAS faculty are required to focus on research in order to obtain funding, this leaves them with less time to devote to teaching and improving teaching methods. Bob Duncan agreed that COAS faculty do proportionately less teaching and proportionately more research, but that the majority of faculty put their heart and soul into the classes they teach and that the incoming faculty are very enthusiastic about creating new courses.

Mark Abbott responded that after reviewing COAS teaching evaluations (both he and Bob Duncan have always reviewed them quarterly), he is unconvinced that the problem is as large as was conveyed by the students. He sees just a handful of issues and the College is working on addressing them. He added that as a result of this review he intends to better communicate to students how seriously teaching evaluations are taken. Abbott meets quarterly with the younger faculty members and has made them aware of the teaching resources available to them from OSU's Center for Teaching and Learning. Coming from research backgrounds, many of the younger faculty have little teaching experience and mentor as they were mentored.

Duncan informed the Council that revising the curriculum, including considering different methods of delivering courses, will be the subject of the next faculty summer retreat. He shared some of the current curricular challenges:

- 500/600 level courses are taught to small classes every other year because the size of the program. It is very expensive, from a faculty resource point of view, to continue in this mode.
- Core courses are larger classes but are more problematic. Students enrolling in these courses come from many areas and backgrounds. Faculty are often required to teach to students with different levels of quantitative ability.

After the guests left the meeting and after additional discussion, a motion was made and seconded to approve the COAS Graduate Council Review Report as submitted.

All voted in favor. Motion passed.

Changes to the Graduate Council Program Review Guidelines

Tom Wolpert re-opened discussion on the proposed revisions to the Graduate Council Program Review Guidelines. This discussion was initiated at the April 1 Council meeting, but when it was suggested that additional gate-keeping language be added to discourage coordinating Graduate Council Program Reviews and CSREES (Cooperative States Research, Education, and Extension Services) reviews, conversation was postponed until new language could be drafted. Wolpert introduced the new language to the Council members who agreed that it was appropriate. The new language added to the ***Self-Study Document*** section read:

The Graduate Council will review the self-study document and may elect to cancel or postpone the Graduate Program Review if the document is not received by the agreed deadline and/or if the document lacks essential content.

In an effort to make language in the ***Timing of Reviews*** section of the guidelines as clear as possible, McLain suggested striking the word “generally” from the proposed statement so that it would read:

The Graduate Council *does not* recommend that a Graduate Council Program Review be held in conjunction with a Cooperative States Research, Education, and Extension Service (CSREES) review.

A motion was made and seconded to approve the proposed language above and the other changes to the Graduate Council Program Review Guidelines discussed at the April 1 Graduate Council meeting.

All voted in favor. Motion passed.

Petition: Master of Public Health (MPH) Graduate Program Review

Rod Harter told the Council that he had met with fellow College of Health and Human Sciences members Marie Harvey and Anna Harding of the Department of Public Health in order to be able to present their petition. After explaining the Department of Public Health's requests, Harter told the Council that the Master of Public Health (MPH) program, a joint program with OSU, OHSU, and PSU, ranks 2nd in the nation and has recently received its second accreditation.

With discussion it was clear that Council members present were uncomfortable with considering waiving the MPH graduate program review even though the program had recently undergone a successful accreditation review. The Council did not want to set the precedent of accepting an outside agency review in lieu of examining the program itself. The Council also wanted to know if the department was planning on suspending its other Masters programs temporarily or terminating them.

After considerable discussion, the Council agreed to postpone making a decision until additional information could be received. The Council will request that the Department of Public Health provide an updated proposal, addressing the following issues:

MS Program Reviews

The Graduate Council would like additional information before considering waiving the scheduled reviews of the master's program in Environmental Health and Occupational Safety Management, Public Health, and Health Promotion and Health Behavior.

The Council asks that the Public Health Department further explain its plans concerning its MS programs. In particular, it asks that you clarify if you intend to terminate or suspend the degrees and to provide a timeline for submitting the Category I proposal(s).

PhD Program in Public Health and MPH Program Reviews

The Graduate Council Program Review of the PhD degree in Public Health will occur as scheduled in 2008.

In regard to the upcoming MPH review, the Graduate Council would consider accepting the MPH accreditation documents in lieu of a full self-study document on the condition that the Public Health Department agrees to compare its 2005-06 MPH accreditation documentation to the "Graduate Council Program Review Guidelines" and that any missing essential content will be provided to the Graduate Council review team appointed to review the MPH program and the PhD program in Public Health in 2008-09. This missing essential content and updated tables (containing data gathered since the 2005-06 accreditation review) would be provided to the reviewers as a supplemental document.

McLain suggested inviting representatives from the Department of Public Health to the next Graduate Council meeting if they do not agree to revise the petition as suggested. Council members concurred.

NSF-Graduate Teaching Fellows in K-12 Education

Council members discussed the GK-12 proposals and rankings. Votes were tallied from six Graduate Council members. Based on the number of number one rankings, the Council elected to recommend the proposal submitted by Professor Margaret Burnett, School of EECS, "Promoting Diversity and Mentorship in Computing and Engineering through Graduate – K-12 Partnerships."

To Debbie Delmore, OSU Research Office

At its May 1, 2008 meeting the Graduate Council reviewed three proposals for NSF GK-12 Graduate Teaching Fellows. NSF permits each university to submit only one proposal to this competition. The Graduate Council recommends that the proposal submitted by Margaret Burnett be the one chosen by the university as the proposal to be submitted to NSF.

This recommendation is based on rankings provided by members of the Graduate Council. The proposal by Burnett and her coinvestigators received four first place votes. The next highest ranked proposal received two first place votes, and the third proposal received no first place votes.

Because of the May 16 deadline for the submission of letters of intent for this competition, it is probably important to let Dr. Burnett and the lead investigators of the other proposals know as soon as possible the outcome of the university's evaluation of the proposals.

If you have questions, please contact me.

Yours,

Dr. Martin Fisk, Associate Dean of the Graduate School

Next Meeting

McLain announced that the next Graduate Council meeting will be held on Thursday, May 15th.

Meeting adjourned.

Graduate Council Follow-up review

Department of Industrial and Manufacturing Engineering

Mike Unsworth met with Ken Funk and Logen Logendran on Thursday, May 1, 2008 to discuss changes that have occurred since the Graduate Council Program Review of the Department of Industrial and Manufacturing Engineering (IME) in November 2005. Dr Funk was the interim Department Chair at the time of the Review, and Dr. Logendran was the IME Graduate Program Chair.

Overview of the current status

At the time of the Review in 2005, discussions were underway to merge the IME Department and the Mechanical Engineering Department to form a School of Mechanical, Industrial and Manufacturing Engineering (MIME). IME faculty and staff expressed some concerns at that time concerning the impact such a merger might have on their Department's ability to recruit and retain high quality faculty and graduate students. They were also concerned about the potential loss of departmental identity and budgetary independence.

The merger has now been completed, although several aspects of School structure and operations continue to develop. Dr. Funk is now MIME interim Associate Head, and Dr. Logendran retains his responsibilities for the graduate program in the Industrial Engineering.

In general, IME faculty and staff have been satisfied with the progress since the merger. The School Head, Dr Batten, has been sensitive to IME concerns and was described as a good “people person”. Although IME no longer has departmental status, it is felt that, at present, the discipline is sufficiently distinct when viewed by prospective applicants, particularly on the new website structure. Important budgetary lines for GTA appointments in IME have been maintained separately from Mechanical Engineering.

In the 2+ years since the review, a number of the recommendations of the Review Group have been implemented, and these will be discussed in the following sections, which are structured according to the main recommendations (italicized) of the 2005 review. For readability, some of the recommendations have been re-numbered and grouped together.

2005 Recommendations and Recent Progress

1. *At least one IME faculty position should be created over each of the next two years to restore faculty numbers and permit growth of the graduate program.*
2. *IME should be allowed to hire faculty to replace those that have departed. This is critical to meet the new Graduate School rules regarding graduate coursework and would be an important show of support for the program.*

An Assistant Professor in Information Systems Engineering was hired in 2005; a search for an Assistant Professor in the areas of Statistical Process Control and Quality and Reliability Engineering last year was unsuccessful, but this search is being reconstituted with a focus more strongly on finding a person with leadership potential in the broader area of Manufacturing Systems Engineering. In addition, an instructor in IME has been hired, and her presence in teaching undergraduate classes has allowed IME faculty to find time for more

graduate teaching. Progress towards meeting the Graduate School requirements in numbers of strictly graduate-level (500-) classes is continuing.

3. *There are risks that a prospective merger with the Mechanical Engineering Department could adversely influence the Department's ability to recruit and retain high quality IME faculty and graduate students, but there are also potential benefits in a merger. We recommend that, if a merger proceeds, steps be taken to ensure that IME can be identified as a self-contained discipline with a clear graduate curriculum and faculty career path.*
AND
4. *In order to keep an identity for IME it should retain department or a similarly clearly defined status. This will be critical for the continued recruitment of highly qualified faculty and graduate students.*
AND
5. *Some budget lines of IME should be kept separate from Mechanical Engineering to avoid erosion of the smaller program.*

The structure of the School and the presentation of its areas of specialization have been done in such a way as to maintain the distinct discipline of IME. Although the web-pages for the School are still under development, it is clear from them that visitors to the web-pages will be able to readily identify the IME faculty, graduate curriculum etc. Dr Funk has budgetary responsibility for GTA appointments in IME, and the merger into the School has given him some useful flexibility in the distribution of GTA funds.

6. *The review committee acknowledges the increased recruitment efforts by the department and recommends that they be continued.*

At the time of the review in 2005, the department was concerned about a decline in graduate applications, and was putting particular efforts into contacting regional University departments from which students might be interested in coming to OSU to pursue graduate degrees. These efforts turned out not to be particularly successful, recruiting only a small number of students who were not academically or motivationally strong. The IME group has therefore modified its strategy, and now aims to publicize its graduate programs more through links with faculty and former graduate students on the national and international scales. A Graduate Student Recruiting Event, jointly held annually by the School and the College, also has attracted prospective students, both from OSU and outside of OSU. In addition, IME have moved their treatment of graduate applications to be entirely electronic, and have streamlined the faculty review process. This has allowed them to respond to applicants much more quickly and to make early offers. The revised strategy seems to have been successful, with around 60 applications so far, seeking admission in Fall 2008. GTA offers have been made to the top 10 applicants for Fall 2008, with 9 of them accepting the offers. The number of new graduate students in the program has also increased this year (2007-08) to 15 from about 10-11 in years past. With a breakdown of 7 PhD and 8 MS, about 12 of these 15 students are supported through GTA and GRA positions.

7. *To broaden the graduate curriculum, and alleviate some of the impact of faculty losses we recommend that IME consider cross-listing courses with departments with common interests. Opportunity would seem strongest with Statistics (operations research for Manufacturing Systems majors) and Mechanical Engineering (material and materials processing for Nano/Micro Fabrication majors) although other relationships might also be built with Computer Science (Information Systems majors) and Exercise Science and Psychology*

(Human Systems majors). Developing these relationships would also satisfy the graduate students' desire for a broader range of courses.

8. *IME should publish a list of courses that will be offered over a two-year horizon to enable students to better plan their programs.*

Cross-listing has not been implemented, because it is felt that current opportunities for students to take classes in other departments serve the curriculum well. For example, some IME graduate students are required to take courses from the School of Electrical Engineering and Computer Science, and in Mechanical Engineering and Chemical Engineering, in addition to the required and elective courses taught in IME. Likewise, students from other disciplines take Nano/Micro Fabrication courses taught in IME to meet their program requirements. Similar situations exist with the courses taught in the Human Systems Engineering focus area and those taught in the Exercise Science and Psychology departments.

In addition, progress is being made in scheduling classes in the new School to avoid conflicts between Mechanical Engineering, and IME classes. The aim is to produce a sustainable 2-year curriculum plan, for example, with specialist courses taught by faculty on an alternate year schedule. This plan will be published on the web for graduate student use.

9. *We recommend the development of a graduate seminar series. It may be useful to create this as a course for credit, and require graduate students to attend. Such a series could include speakers from OSU, both from in IME and elsewhere, as well as speakers from industry. Academic speakers who require compensation for expenses could come from other universities in the region to minimize expenses, while those from farther away may be invited based on fiscal considerations. Possible sponsorship of the series by industry should also be investigated.*

AND

10. *The Department should consider mechanisms to avoid isolation of those working at ONAMI. These may involve improving transportation between ONAMI and campus, creating a student seminar series, and encouraging regular faculty interaction both professionally and socially*

A successful seminar series has been established within the School, with typically eight to nine seminars per term. Graduate students are normally expected to attend at least 4-5 seminars per term from this series. It was observed that the regular occurrence of seminars has helped students based at the ONAMI facility on the HP campus to become more integrated socially and academically with the campus-based group. ONAMI students also routinely visit the campus for classes, so it is not felt that the physical isolation of the ONAMI facility has outweighed its many research advantages.

11. *The Department, in association with College administration, should develop a flexible plan that matches graduate student numbers and teaching commitments to the number of faculty available.*

With the new faculty and instructor appointments, the ratio of graduate faculty to graduate students is now about one to two.

12. *The Department should look into areas of research collaboration, which might be led by IME faculty or otherwise, that could take advantage of the excellent infrastructure in IME and lead to more research involving cross-disciplinary integration.*

The formation of the School has somewhat increased collaboration, but it is felt that it is still too early to realize the full benefits. It has not been possible to collocate all faculty in the new School in one building, and the general policy is to allow individual IME faculty to decide whether a physical move to join ME faculty in Rogers or Dearborn Halls is desirable for their research interests. One faculty member has moved to Rogers Hall to strengthen collaboration and Dr Funk has also moved his office to Rogers to be closer to the Head of School. Because the three buildings occupied by the School are close to each other, it is not felt that these moves are likely to weaken the cohesiveness of the IME discipline, but clearly it is desirable for the School eventually to become more physically contiguous.

It is becoming clear that the strong research presence offered by ONAMI is increasing possibilities for collaboration on research between faculty from different Departments and Schools and with industry.

13. *The Department should keep records of the quality of students applying and being accepted into the program, and should endeavor to compare intake quality with that of comparator departments.*

AND

14. *The Department should introduce an on-going plan to keep track of former students and their career progression.*

The new electronic processing of graduate applications has improved record keeping and made searching the continuing applicant data base possible to explore trends. Comparisons of the quality of applicants and graduate intake with other peer universities, and with some top 10 engineering schools, generally show that OSU applicants and intake compare favorably in terms of factors such as GRE and TOEFL scores.

The merger to the School structure has placed additional burdens on staff responsible for administering applications and maintaining databases; these staff also have to share the varying overall workload of the School. There is some concern about this workload.

15. *The Department should investigate further the possible causes of the decline in graduate applications in recent years. For example is this a national trend, or are there special factors at OSU that need to be remedied?*

It is generally felt that the decline was part of a national problem brought about by post 9/11 visa restrictions and administrative delays on foreign applicants, and by the perception that other countries were more welcoming to foreign graduate students. This decline may have been halted, at least based on 2007-2008 applications. The faster response to IME applications as a result of the electronic treatment and streamlined review of files seems to have increased success rates.

16. *The Department should consider developing a graduate internship program in collaboration with industry.*

Faculty perceive strengths and weaknesses of internship programs. In particular, the effort in identifying internship opportunities, supervising working arrangements, and the risk of losing interns to permanent jobs were mentioned. Industry Fellowships are a preferred way of placing graduate students in industry while encouraging more substantial research collaboration and these opportunities are being successfully pursued, albeit on a small scale at this time.

17. *The Department should keep track of national rankings of graduate programs in IME departments and endeavor to use this knowledge to improve the ranking of IME at OSU.*

AND

18. *Given the climate nationally (and particularly in Oregon) for the funding of higher education, it may be necessary to increase development efforts as noted in the self-study report. This is not a short-term process and requires proper cultivation of alumni and corporations. Efforts should be made to put together a strategic plan of how to accomplish this. Other than scholarship and assistantships, IME may also wish to consider an endowed seminar series and professorships to attract top faculty or support current faculty.*

Making progress to improve the ranking of OSU Engineering nationally is a goal of the entire College of Engineering and underlies the recent reorganization and restructuring. A new position of Associate Head for Graduate Programs and Research in the School is about to be filled, and this person will undertake strategic planning for development of all three graduate programs in the School, including likely global collaborations.

GRADUATE COUNCIL MEETING

April 17, 2008
3:00pm, Kidder 128

Grad Council Members Present:	Rick Colwell (COAS), Alix Gitelman (SCI), Shawna Grosskopf (CLA), Tom McLain (Forestry), Kathy O'Reilly (Vet Med), Rene Reitsma (Business), Darlene Russ-Eft (Education), Tom Wolpert (AG SCI)
Grad Council Members Absent:	Chrissa Kioussi (Pharmacy), Rod Harter (HHS)
Grad School Members Present:	Martin Fisk, Sally Francis, Helene Serewis, Mary Strickroth
Grad School Members Absent:	
Guests:	

Graduate Council Minutes for April 3, 2008

The minutes from the April 3, 2008 Graduate Council meeting were approved as amended.

Changes to the Graduate Council Program Review Guidelines

Sally Francis introduced the proposed changes to the Graduate Council Program Review Guidelines. Francis informed the Council that most of the changes were editorial in nature. Other proposed changes warranting and obtaining discussion were:

Community Engagement

Francis suggested that a Program under review be asked to describe its efforts in community engagement. She informed the Council that OSU is currently looking into applying for recognition into this Carnegie Foundation classification. Discussion ensued regarding the meaning of community engagement and a suggestion was made to bring definitions and examples of community engagement to the annual Program Review Workshop.

Discouraging the coordination of Graduate Council Program Reviews with Cooperative States Research, Education, and Extension Services (CSREES) reviews

Francis reminded the Council of the recent problems reviewers have encountered with programs attempting to coordinate multiple reviews. She said it is often the case that a

Program will give the outside agency review precedence over the internal review – leaving Graduate Council members and the other internal reviewers at a disadvantage in terms of obtaining the necessary data needed to comprehensively review the graduate program.

Other Council members shared their experiences – both good and bad. Francis told the Council that the proposed language is intended to discourage coordinating these two types of reviews – not disallowing it. Worried about disenfranchising programs that are able to successfully coordinate the two review types, Wolpert asked Francis how many coordinated reviews have been unsuccessful. Francis answered that three coordinated reviews in recent years were unsuccessful.

Wolpert wondered if the guidelines should contain an explicit statement warning programs that reviews will be cancelled when self-study documents are submitted late or incomplete. Other Council members agreed to that idea and Francis asked Wolpert to write a gate-keeping statement to that effect for consideration for incorporation in the guidelines at the next Graduate Council meeting.

NSF-Graduate Teaching Fellows in K-12 Education

McLain informed the Council that the NSF-GK-12 program limits to one the number of proposals that can be submitted by Oregon State University and that a representative of the OSU Research Office has estimated that they would receive three or four submissions to consider this year. McLain informed Council members that they will be requested to read and rank the letters of intent in time to discuss them at the May 1 Council meeting.

400-level Credit on Programs of Study

Along with a presentation of materials (Graduate Council minutes from 2003) on the subject, Martin Fisk related the long history behind OSU's policy regarding not allowing undergraduate level courses on programs and study. He also presented his research into peer institution policies on this subject.

Fisk reported that faculty in interdisciplinary programs have indicated a need and a desire to allow some 400-level course on a program of study. He asked the Council if any members present saw a need to re-open this discussion.

After further discussion on the topic, Fisk commented that he did not sense Council member interest in reopening a detailed investigation into changing the current policy. No further action will be taken at this time.

Next Meeting

Tom McLain announced that the next Graduate Council meeting will be held on Thursday, May 1st.

Meeting adjourned.

Barbara Bond (Forest Science)

Follow up Review of Crop & Soil Science Graduate Programs

Barbara Bond presented a follow-up report of the Crop & Soil Science (CSS) Graduate Council Program Review. The original graduate program review took place April 11, 2005. Dr. Bond was chair of the review panel with Denise Lach and Theresa Filtz serving as internal members of the review team and Randy Southard as the external member.

Bond told the Council that it is very relevant to the discussion to consider that the CSS graduate program review was done in conjunction with a Cooperative States Research, Education, and Extension Service (CSREES) review. CSREES teams comprehensively review graduate and undergraduate education and research. For the convenience of program units, it has been the Council's practice to dove-tail its reviews with CSREES reviews. Bond stated that she sees both pros and cons to this practice. When the CSREES review is a particularly large one a smaller review can get lost along the way. She told the Council that that is precisely what happened in the review of the Crop and Soil Science graduate programs – the unit was not prepared for the graduate portion of the review.

Bond said that it was clear that the unit focused an enormous amount of energy on preparing the data needed by the CSREES team but did not prepare the data needed by the Graduate Council team. Additionally, the unit showed resistance when the Graduate Council reviewers asked for the additional data they needed to conduct their review. For instance, at the time of the review the program could not provide the required admissions data and was not able to articulate its graduate programs' philosophy or its overall objectives (the skills and knowledge it hopes to impart to its graduate students). However, at the time of the review it was clear that CSS brings in many high quality students, has a high graduation rate and its graduates enjoy a high rate of employment in their field. In the end, the review team wrote a fairly scathing review report and a consequence of that required CSS department head, Russ Karrow, to prepare progress reports and meet with the Provost annually. Dr. Karrow's reports are appended to these minutes.

Bond informed the Council that over the last three years CSS has responded very well to many of the specific recommendations made by the review team. For instance, the unit has improved its records management system, has included student participants in the governance of the program, and has been more active in nominating its students for fellowships and awards. Bond recommends that the Council release the head of the Crop and Soil Science department from the obligation of preparing annual progress reports.

Tom McLain asked Bond if she is recommending that the CSS head be released from his obligation because

CSS has suffered enough or because the unit has changed its behavior. Bond responded that both could be said. She believes that despite the program's obvious success, CSS still needs to work on creating programmatic integrity – and articulating the programs' objectives would be a very good start.

Discussion on the pros and cons of coordinating CSREES and Graduate Council Program Reviews and the consequences of negative reviews then ensued.

A motion was made and seconded to release the head of the Crop and Soil Science department from the obligation of preparing annual progress reports. All voted in favor. Motion passed.

After additional conversation, the Council offered the following advice and counsel to the Graduate School:

When communicating with programs considering coordinating reviews, the Graduate School will strongly emphasize the great challenges of doing so.

The Council then offered the following advice and counsel to Graduate Council members chairing graduate program review teams:

When programs fail to adequately prepare for a Graduate Council Program Review, Graduate Council supports its member's decision to postpone the review.

Graduate Council Minutes for February 7, 2008

The minutes from the February 7, 2008 Graduate Council meeting were approved as distributed.

Graduate Council Minutes for February 21, 2008

The minutes from the February 21, 2008 Graduate Council meeting were approved as distributed.

Annual Review of Graduate Council Standing Rules

The Faculty Senate asks each of its committees to review its standing rules annually. McLain informed the Council that members may recommend changes to the Graduate Council Standing rules, but any changes are subject to Faculty Senate approval. To open the conversation McLain suggested discussing the following two issues (1) approval of graduate faculty members (2) current Graduate Council duties that are not articulated in the standing rules.

1. Martin Fisk gave the Council a brief primer on the graduate faculty approval process. After explaining how the process is currently managed in the Graduate School, he said that in the past the Graduate Council approved graduate faculty membership. Fisk suggested that due to an increase in nomination volume or because of the routine nature of the process, the Graduate Council delegated the duty to the Dean of the Graduate School. Sally Francis added that in the past, the Graduate Council considered all graduate course proposals. That duty is now the responsibility of a Graduate Council subcommittee. Francis added that any one of the responsibilities listed in the Graduate Council standing rules could be delegated in any way the Council wishes. Kathryn O'Reilly agreed by saying that the Council retains full responsibility even though it might delegate the work away from Council members. Further discussion on the topic ensued. Fisk promised to research past Council minutes to learn the date when the Council purposefully delegated the duty of approving graduate faculty appointments to the Graduate Dean.
2. Discussion was then held about Council responsibilities that are not listed in the standing rules – particularly its role in reviewing nominations for university-level graduate student awards and reviewing university-level proposals for extramural funding of graduate training and education programs. Members agreed that this is an appropriate role for the Graduate Council and since Council members commit a significant amount of time to this responsibility, the role should be articulated in the standing rules.

Policy on Remote Participation in Formal Meetings

Fisk asked Council for advice with dealing with exceptions to the 2001 Graduate Council policy limiting remote participation of graduate committee members at formal meetings. Since becoming Associate Dean of the Graduate School six months ago, Fisk has considered a relatively large number of requests to deviate from this policy. Students frequently petition to be allowed two remote committee member participants and Fisk has also seen a petition requesting the remote participant of a student. Fisk said that he suspects he might also to be asked to consider a petition requesting that a major professor be allowed to be a remote participant. He asked the Council for its opinion of these issues.

Discussion on this topic ensued.

Most Council members agreed that with advances in conference technology, remote participation can be more easily integrated into meetings and examinations. Most members found no issue in allowing remote participation when audio with video is employed.

In regard to the remote participation of a student, some Council members felt strongly that students must be physically present during a final defense or an oral examination (when the student is required to make a presentation). Some Council members thought a student should never be allowed to participate in any formal meeting solely by telephone.

Allowing up to two remote participants was considered acceptable by many Council members, but the need to revise the current policy was not seen to be necessary at this time.

Questions considered:

- Council is concerned that student rights are protected. Is there any inherent disadvantage to the student when participants serve remotely?
- Council must ensure that the integrity of the examination process is not jeopardized. Does a remote exam properly evaluate the student?

McLain reminded the Council of the duty of the Graduate Council Representative (GCR) to protect the rights of the student. Is there another role for the GCR in this process? Should GCRs be empowered to pull the plug on a defense when remote participation becomes problematic?

The Council asked Fisk to keep track of the number of exceptions requested and to report back if numbers increase. Additionally, when granting an exception with unusual circumstances, Fisk will charge the GCR committee member involved to carefully monitor the meeting and report back to the Graduate School.

Next Meeting

Tom McLain announced that the next Graduate Council meeting will be held on Thursday, April 17th.

Meeting adjourned.

IGERT Letters of Intent

MEMORANDUM

Date: February 25, 2008
To: Debbie Delmore, Research Office
From: Tom McLain, Chair, 2007-08 Graduate Council
Subject: Ranking of IGERT Proposals

The Graduate Council discussed the proffered OSU IGERT proposals and found some excellent and intriguing ideas—our compliments to all proponents. The Council ranked the 2008 submissions as follows:

1. Ecosystem Informatics
2. Waterborne Pathogens: Evolution, Ecology and Environment
3. (tie) Genome Biology Training Program
3. (tie) Earth's Subsurface Biosphere—Dynamic Processes in Multiphase Systems
5. Water, Ethics Climate and Conflict Program

6. Advancing Community Sustainability in Rural Areas: Integrative.....
7. (tie) Interdisciplinary Training in Food Webs in Human Altered Environments
7. (tie) Interdisciplinary Doctoral Program on Dynamics of Health and Aging.

The Council member's discussion yielded some general comments about all the proposals as well as specific comments. These are offered to help development of the successful proposals and to explain rankings of others.

General Comments:

1. Concern that none of the proposals really highlighted what is innovative in their plan. Many, if not most, NSF reviewers will be looking for sparkle in addition to science. All, at varying levels, are a little boring.
2. For those being sent to NSF there needs to be a minimum level of baseline and passive minority recruitment activities plus a topic-specific aggressive active plan. The contact plan found in the Water, Ethics, Climate and Conflict plan was seen as a good statement of baseline activity.
3. Acronyms, specifically those that are disciplinary based, need to be held to a minimum. The plan needs to speak less to science and more to the planned integrative activities and diversity recruitment.
4. Mary Strickroth should be consulted regarding specific institutional support that may be available.
5. Greater emphasis is needed on plans for dissemination. Consider plan to publish innovations and assessments in education-related journals. Consider convening panel with current OSU/UO IGERT programs to exchange success stories, problems, failures and new strategies; stimulate institutional change and stronger connections across programs.
6. Only a few of the ten or more IGERT reviewers will be concerned with the science and whether it is at the cutting edge of an emerging field. Most reviewers will be concerned with the additional features required in the proposal. So, in addition to a strong science section, the proposals must be strong in all other features that will be reviewed.

Specific Proposal Comments:

Ecosystem Informatics: will not be successful unless this proposal becomes much more than a report of current success; a renewal will not be likely without a clear focus on new directions using what has been learned over the past four years as a springboard into something very new and different. Minority recruitment section needs strengthening.

Waterborne Pathogens: p5, paragraph 2. Need to rewrite to avoid admitting defeat.

Genome Biology Training Program: need to emphasize innovation in education; grass may not be the best example for reviewers, is there one from Vet Med?; suggest strengthening section on availability of Illumina as a unique feature of the education program; far too many acronyms, less on science and more on integration; make clear that the minor will follow the IGERT (para 3, p3). Page 2—Linux and Perl are not

specific tools of bioinformatics—are used by many. As written, you could say that Windows is a bioinformatics tool—may be true, but not helpful. P5, #6, next to last sentence: what are competing programs?

Earth's Subsurface Biosphere: need to play up success with female students—express as a percentage of total.

Water, Ethics Climate and Conflict: intriguing idea that needs to be fleshed out further to be more competitive. In present form it is not well enough developed and lacks sufficient detail to be convincing. Good passive recruitment plan, but needs to demonstrate a more active effort. Other regional schools have ethics programs—suggest considering collaborations with those to strengthen effort.

Advancing Community Sustainability in Rural Areas: lacks global appeal beyond immediate regional emphasis. How to intersect with other sustainability efforts? Program appears thin on integration and potential for expansion.

Interdisciplinary Training in Food Webs in Human Altered Environments: Seems like a reasonably good idea but the proposal lacks specificity and needs further development compared to other submissions. Integration is not well identified and evidence of university support missing. Lacks assessment plan or credible recruitment plan.

Interdisciplinary Doctoral Program on Dynamics of Health and Aging: Seems like an extension of NIH grant? What PhD programs are affected and how? Lacks clear identification of integration and commitment of multiple disciplinary proponents. Lacks specificity in innovation and details of training plan; weak recruitment plan.

Category I Proposal Renaming the BS, MS, and PhD Degrees in Nutrition & Food Management to Nutrition

Professor Tony Wilcox, Chair, Nutrition and Exercise Sciences, gave a brief overview of the Category I proposal and presented the Council with reasons why the name change is desirable and appropriate at this time. In 2005, the Nutrition & Food Management Department merged with the Exercise & Sport Science Department to form the Department of Nutrition and Exercise Sciences. The proposed name is a better reflection of the current focus of the degree programs. Food Management is no longer an active research focus.

Fisk asked for more information on the areas of concentration. Wilcox explained that only two graduate areas remain: applied nutrition and dietetics and bionutrition. Foodservice management remains a degree option of the undergraduate program only. This discussion led to the discovery of a typo on the Category I proposal.

McLain asked if the department's Graduate Students were consulted about the name change. Wilcox answered that the proposal was approved by the faculty but that students were not consulted. He added that no students would be affected by the

change since all graduate students are now working in the areas of applied nutrition and dietetics or bionutrition.

After some discussion, a motion was made and seconded to approved the Category I Proposal renaming the BS, MS, and PhD Degrees in Nutrition & Food Management. The proposal was approved after a revision to Item C. ***Objectives, functions and activities of the majors*** was made: the food service management concentration was deleted from the list of graduate program areas of concentration.

All voted in favor. Motion passed.

New Business

Tom McLain reminded the Council members that the March 6th meeting has been cancelled.

Meeting adjourned.

Graduate Council Minutes for January 17, 2008

The minutes from the January 17, 2008 Graduate Council meeting were approved as amended.

Graduate Council Participation in Fellowship and Award Programs

A chart listing the fellowship, scholarship, and award programs administered by the Graduate School was distributed. Graduate Council members currently serve on selection committees awarding the Bayley & Yerex graduate fellowships, Oregon Lottery scholarship, Frolander Outstanding GTA, Western Association of Graduate Schools/UMI Distinguished Masters Thesis, and the Council of Graduate Schools/UMI Outstanding Dissertation awards.

Because the Council is still without representation from the Colleges of Engineering and Veterinary Medicine, Mary Strickroth announced that her most immediate need is for one additional Graduate Council member to join Theo Dreher and Rene Reitsma on the Oregon Lottery Scholarship committee. The Committee reads 60-70 nominations a year. Strickroth welcomes the participation of a Graduate Council member, but if no volunteers come forward she seeks permission to recruit outside the Council.

When there were no volunteers, Tom McLain asked Council members to nominate faculty within their respective colleges to serve. Council members were asked to forward their nominations to Tom McLain or Martin Fisk within three to four days of this

meeting. McLain also instructed Fisk to contact the College of Engineering to request the services of one of its faculty members since that college traditionally nominates many students for the Oregon Lottery scholarship. Fisk agreed and said that he hoped that Engineering leadership would also designate a faculty member to serve on the Graduate Council.

Strickroth then announced that Graduate Council participation would soon be needed on two additional award committees – the Presidential Management Fellows and the Lindau Nobel Meeting Nominees. In the past, selection committee participants were taken from the Graduate School leadership team but now a credible selection process with a more inclusive institutional selection committee is needed to identify the best OSU candidates. After discussion Council members agreed that they would add this service to the list of Graduate Council committee duties beginning Fall 2008.

Follow up Review of Microbiology Graduate Program

John Selker presented a follow-up report of the Microbiology Graduate Council Program Review. The original graduate program review took place June 2, 2005. Dr. Selker and Dr. Logen Logendran (Industrial Engineering) revisited the department on November 12, 2007. The full follow-up report is appended to these minutes.

Selker informed the Council that the original review was very positive and that the Microbiology graduate program has always been thought of as healthy with its solid cadre of graduate students. Selker commended Theo Dreher, chairman, for bringing peace and unity to the Microbiology Department following a long history of leadership issues. The original reviewers, however, were concerned about the future direction of the department. Selker added that the department did take to heart the recommendation to develop a strategic plan, and has had two retreats since the time of the original review. Unfortunately the plan to move toward the thematic research field of **Water-borne Infections** was reluctantly abandoned when the department lost faculty to the better paying College of Veterinary Medicine (Vet Med).

Sally Francis asked Selker for more information on the agreement made between Microbiology and Vet Med to team-teach a number of new or revitalized 600-level pathogenic microbiology courses. Selker provided the Council additional information on what he believes to be the beginning of a new track for the Microbiology graduate program but asked Francis to consult with Theo Dreher for a more detailed description of the arrangement.

Martin Fisk noted that the followup report indicated that graduate students are not included in department operations, yet the Microbiology action plan indicated that they would be. Selker answered that there is a graduate student member on the graduate affairs committee. He added that the Department feels that community and morale has been improved with the institution of the weekly fall quarter “Fireside Chats” and with greater and regular communications between faculty and graduate students.

A motion was made and seconded to approve the Microbiology Follow-up Review Report. All voted in favor. Motion passed.

Follow up Review of Chemical Engineering Graduate Program

Jim Carrington presented a follow-up report of the Chemical Engineering Graduate Council Program Review. The original graduate program review took place March 1, 2005. The internal review team members were Jim Carrington, Lynda Ciuffetti, and Dan Rockey. Dan Rockey (Biomedical Sciences) met with Ken Williamson, Department Head, Biological, Chemical and Environmental Engineering on November 30, 2007. The report focuses on the recommendations made after the original review. The full follow-up report is appended to these minutes.

Carrington reported that at the time of the original review, Chemical Engineering was a relatively small, chronically under-funded department. Its graduate program was also small with a small mass of students and a faculty too stretched to offer all its graduate courses. As expected, Chemical Engineering was fused with Biological and Environmental Engineering in October. Carrington reported that he understands that a new PhD program in Environmental Engineering will be operational in 2009.

Shawna Grosskopf asked to know more about the Biological Engineers in the new department. Carrington explained that some Chemical Engineers are partially biologically oriented, and that other biological engineers on campus belong to the Department of Biological and Ecological Engineering in the College of Agriculture.

Rene Reitsma was concerned that the department's response to the first recommendation by supplying funding numbers and a meaningless per faculty average was a non-substantive response to the issue. Carrington agreed but was not overly concerned.

A motion was made and seconded to approve the Chemical Engineering Follow-up Review Report. All voted in favor. Motion passed.

Follow up Review of Biochemistry & Biophysics Graduate Program

Elaine Pederson presented a follow-up report of the Biochemistry and Biophysics Graduate Council Program Review. The original graduate program review took place February 23, 2005. Dr. Pederson and Dr. Michael Unsworth (Oceanic & Atmospheric Sciences) revisited the department on November 26, 2007. The full follow-up report is appended to these minutes.

Pederson began by remarking that at the time of the original review the department was doing an outstanding job with the resources they had and she believes that that is still the case today. She mentioned that the new chairman was not fully familiar with the original review report, but that he had a very positive attitude toward making improvements in general and has resolved to make improving communication among faculty and graduate students one of his major priorities.

Discussion on the following topics ensued:

- Loss of faculty and little hope of replacement funding
- Managing the teaching experience requirement – with no GTA funding from College
- Heavy graduate core course load, but desire among faculty to keep status quo

Additionally, the Council discussed how best to manage future follow-up report presentations. It was suggested that the department chair be invited to attend the presentation to be available for questions. And at a deeper level, Council wondered what role the Graduate School and the Graduate Council should play in program evaluation and improvement – especially in cases when the department does not elect to follow the recommendations of the reviewers.

A motion was made and seconded to approve the Biochemistry & Biophysics Follow-up Review Report. All voted in favor. Motion passed.

Graduate School Review Report

Tom McLain introduced visitors Jeff McCubbin and Chris Bell who served as the internal members of the review panel charged by the Provost to review the Graduate School in October 2007. The external members were Graduate Deans from UC Davis and Michigan State University: Jeff Gibeling and Karen Klomprens. This was the first unit reviewed under the university's new "Support Unit Program Review" guidelines. The guidelines and the full review report can be found on the Graduate School's website at: http://oregonstate.edu/dept/grad_school/faculty/supportunitreview.html

McCubbin told the Council that the Graduate School did a tremendous job preparing the self-study document. During the on-campus portion of the review the review team met with various constituents from across campus. These included staff, faculty, central administration, and students all of whom have direct interaction with the functions of the Graduate School. McCubbin reported that during the site visit, almost one hundred percent of constituents acknowledged Mary Strickroth and Sally Francis and the entire Graduate School staff as being incredibly competent, caring, and efficient in responding to campus needs. McCubbin gave an overview of the report and its recommendations, but most discussion centered on the following topics:

THE IMPORTANCE OF A SUCCESSFUL TRANSITION OF THE GRADUATE

ADMISSIONS FUNCTION TO THE GRADUATE SCHOOL: There was concern across the constituency that the transition could negatively affect the Graduate School if it does not go well. Staffing levels were of major concern. The Provost and the University must ensure that the Graduate School has the necessary staffing levels to make the transition a success. The campus is supportive of the change and it perceives that the Graduate School will improve the graduate admissions process. The reviewers felt strongly that the work of graduate admissions must be the Graduate School's very first priority this year.

THE IMPORTANCE OF GRADUATE EDUCATION TO THE UNIVERSITY MISSION:

External reviewers were strong contributors to the section of the report dealing with Graduate School leadership. The reviewers were surprised that the importance of graduate education to the research mission was not articulated in the OSU Strategic Plan and that university leadership sees the Graduate School primarily as a service unit. Top ranking US research universities have high graduate enrollments and strong, appropriately funded graduate schools. The reviewers recommended increasing doctoral enrollment campus wide if OSU's hope is to become a top 10 land grant institution. With proper funding, the Graduate School can demonstrate leadership in a meaningful way by creating a central fellowship competition to identify excellence across campus. A move toward a campus leadership role would require that the Graduate School do less monitoring and compliance activities.

Tom McLain asked McCubbin and Bell to elaborate on what was reported about the relationship between the Graduate School and the Graduate Council. McLain related his concern that the campus perceives the Graduate Council being mostly involved with compliance, but he admits that Council members are worked pretty hard with a very heavy list of annual duties (Program Reviews, CAT I & II Petitions, award committees, and other committee work). Because they are locked into a system of responding to the campus' needs, Council members don't have much time left for creative activity. A discussion on faculty governance ensued.

When there were no further questions, McCubbin asked Francis if there would be a follow-up review scheduled. He thought a follow-up would be a valuable addition to the review process. At the time of the meeting, no one could recall if a follow-up review was mandated in the guidelines. For the reader's information, the appropriate section of the guidelines is reproduced here:

Implementation Progress Check

- One year after the action plan is accepted, the unit head will submit a progress report to the managing vice president.
- The managing vice president, and perhaps some representatives from the Review Team, will evaluate progress on the action plan and will provide feedback to the unit head.
- Unit's progress toward achieving the outcomes detailed in the action plan will become part of the annual review process of the unit head.

Francis then asked McCubbin if he would be interested in presenting this report again at an upcoming Provost Council meeting or at a Faculty Senate Executive Committee meeting. Francis feels that it would be more appropriate for the chair of the review panel to present the report than for the leader of the unit to do it.

New Business

Tom McLain announced that he is taking the chair's prerogative and cancelling the March 6, 2008 Graduate Council meeting.

Meeting adjourned.

Follow up review of the Chemical engineering Graduate Program

The following is a Summary of a discussion between Dan Rockey and Ken Williamson, Department Head, Biological, Chemical and Environmental Engineering, 11/30/07. The main points in our discussion are separated into subject areas addressing the specific recommendations of the review committee and are in Arial font.

RECOMMENDATIONS

1. Faculty - The department should consider establishing a goal of doubling the external research support per faculty, as this will translate into increased GRA support for graduate students.

Currently the department has 5.5 million dollars in annual extramural support, with an average of over \$300,000 per faculty member. The faculty average approximately 2-3 manuscripts per year and there were six patents in the department last year. There is one startup company currently functioning as a result of departmental activity and two more are planned. Connections with the ONAMI group remain strong. All of these lead to direct and indirect benefits for graduate students.

2. Faculty - More emphasis should be placed on nominations of faculty for national and international awards that will provide visibility for the program and the graduate program.

A committee addressing this issue has been formed.

3. Graduate students - To be consistent with nationally recognized programs, the Department would need to increase the size of its Ph.D. program by several fold. While this may be a very long-term goal, an intermediate goal should be to make a concerted effort to increase the size of the Ph.D. program beyond the proposed increase to 50% of the graduate student body. The Department should develop strategies for recruiting graduate students broadly across the country, with a focus on Ph.D. recruitment.

There are currently 38 graduate students in the department, all of which are supported financially. The department currently focuses on recruitment of Ph.D. students, and fills additional slots with M.S. candidates. This is a significant increase in average numbers of graduate students per faculty relative to the situation at the time of the review.

4. Graduate students - The involvement of graduate students on Departmental Committees and a graduate student representative at faculty meetings should be carefully considered. Graduate students can provide a unique perspective to committees and the experience provided to the graduate student makes these efforts worthwhile.

Graduate students have been added to several committees.

5. Courses - The structure of coursework in the Ph.D. program should be reassessed in view of the possible integration of Environmental Engineering faculty. Whether or not graduate students with interests in Environmental Engineering are served by the Chemical Engineering framework should be evaluated if/when integration is approved.

The planned merger of Chemical, Biological, and Environmental engineering did occur. While there is not currently a specific graduate program in either biological or environmental engineering, this is a goal of Dr. Williamson that he intends to address within the next year.

6. Courses - Although the Review Committee is strongly supportive of the suggested merger of Environmental Engineering faculty with Chemical Engineering, there are likely to be differences in cultures between the two fields. This came to the attention of the Review Committee through comments made by students regarding graduate courses in a Chemical Engineering subject taught by faculty external to the Department. The perception of the students was that such courses were taught at a lower level than they would be if taught by a chemical engineer. The Department must ensure that appropriate faculty teach courses at the graduate level.

While there are five faculty in environmental engineering that train chemical engineering students, three of them have degrees in chemical engineering and are thus certainly qualified to teach courses in this area. There is no reason to believe this is a concern at present.

7. Courses - The Department needs to expand its offering of 500 and 600 -level graduate courses to provide greater breadth and depth for its students, and reduce dependence on 400/500 courses for graduate education.

The faculty have worked to reduce the number of 400/500 slash courses taken by graduate students. Currently there are 7 “stand alone” 500 level courses.

There still is a need to increase the number of 600 level courses, but such additions are limited by funding issues and faculty time constraints. This is not viewed as a serious problem. Doctoral students take approximately 16 credits within departmental courses and then take other courses outside the department.

8. Courses - The Department should consider starting a seminar series that brings to campus academic, government and industrial speakers. Although this does require resources, in the early years it may be possible to tap scientists, engineers, and practitioners in Oregon for a high proportion of the talks.

The seminar series remains in the planning stages.

9. Courses - One way to build visibility of the Department and increase the course offerings is by offering short courses taught by visiting faculty. It might be possible, for example, to invite well-known faculty from other universities to visit OSU and give lectures over, say, a week. Students would take these courses for credit.

It is not likely that short courses offered by visiting faculty will be offered anytime soon by the department. This is not considered a current priority. It should be noted that such courses are not common on the OSU campus.

10. Resources - The funding model for GRAs and GTAs needs to be reviewed and reconsidered so that nationally competitive offers can be made. Most other major universities allow the inclusion of student fees into the budgets of grants.

All 38 graduate students are currently supported in the program through either TA or GRA funds.

11. Resources - Funding for GTAs needs to be considered from the standpoint of providing stipends that do not penalize students who might move from the GRA title to the GTA title.

The concern that GTA's are paid somewhat less than GRA's is being addressed by the department. The salaries are currently within 8% of one another and work is continuing in this area.

12. Resources - Graduate student offices and desk space is very limited and common space is of low quality. These areas should be reviewed carefully and resources invested to bring graduate student offices to reasonable standards.

There has been significant increases in the office space available to students. Six graduate students went to new facilities in Graf Hall and the common office for graduate students has been reworked to be a more efficient use of space. There are common computers available for students but currently many students have their own computers or have computers in their research laboratories. The students have full access to the internet in Gleason hall via wireless connection or via Ethernet cables.

While the Chemical, Biological, and Environmental Engineering faculty were combined into a single department, they are still housed in different buildings. The placement of all faculty into a single building is a priority and will be addressed when a planned engineering building is constructed. Space constraints makes the combination of faculty an impossibility at present.

There was discussion during the review about how important Dr. Williamson is to the stability of the Chem E. graduate program. A succession plan is in place and there will be an external search for a new department head next year.

Dr. Greg Rohrer remains the head of the graduate committee. This is a positive, as both students and faculty felt that Dr. Rohrer had a significant role in improving the graduate program.

Follow-up Report on Microbiology (MB) Graduate Review

John Selker and Logen Logendran

We met with the chair (Theo Dreher), lead graduate student advisor (Bruce Geller), and office administrator (Mary Fulton) for about 1.5 hours on November 12, 2007, reviewing action related to each of the recommendations listed in our original report.

The faculty had two retreats since the original review. The program has been buffeted by external circumstances, especially the loss of faculty specializing in pathogenic microbiology to Veterinary Medicine (VM), driven by higher salaries and the low likelihood of program regrowth. The loss of these faculty has, for example, derailed or delayed action on the department's earlier idea of moving toward water borne disease. Rather, the department is focusing on its traditional strength in environmental microbiology. Since this meeting, Theo Dreher has communicated that a mutual agreement has been worked out with microbiologists in VM, including that group as integral participants of the Microbiology Graduate Program (most were already affiliates) in return for financial and teaching support for the program. Both Microbiology and the affected Vetmed faculty are very optimistic about this arrangement, which builds a bigger program that is well balanced in environmental and pathogenic microbiology. VetMed will help support GTAs and participate in teaching. This will allow a number of new or revitalized 600-level courses to be offered (likely every second year), team-taught by faculty from MB and VM, as well as scientists from two Corvallis biotech companies (esp. SIGA Technologies). This new plan is being implemented for the recruitment that is already under way and for courses to be offered in the next academic year.

The faculty and students ultimately rejected the recommendation of a unified core curriculum on the basis that the number of possible, distinct, tracks made such a system inefficient in meeting the students' educational needs.

The college of science has not been able to provide the GTA funds which were recommended.

The suggested focus on recruitment through greater investment in communication and inclusion of graduate students in the departmental operations was rejected as being out of keeping with the department culture, or that of the discipline.

The department has employed the 2-yr rolling contracts with its non-tenured lecturers which has improved the stability of the work environment for these critical team members.

Fund raising has been limited, garnering on the order of \$100k in recent years.

Improvement of student communication has been achieved primarily through the institution of fireside chats, which are well attended.

Overall the department seems to be attempting to optimize its function within very tight resource constraints. External grants have been steady, which supports the core of the graduate stipends. The leadership employs a light-hand, which has improved departmental morale and communication, and essentially staying the course in terms of departmental methods, focus, and size during a time of diminishing resources provided by the university.

Report Recommendations
July 2005

Recommendations:

It is **recommended** that the Department invest further effort toward on the fleshing out of their strategic plan. Several faculty members indicated that strategic plans were not useful without the opportunity to garner new monies, and that the current budget situation defeats the need for strategic planning. We do not concur with this perspective.

Microbiology is a dynamic field with a rapidly evolving ensemble of key research questions, funding opportunities, and equally quickly changing market place for new employment. A strategic plan is essential in crafting the directions for the department and to insure full faculty buy-in for program adjustments that are inevitable given the economic climate and changing technologies and science. Strategic plans must address considerations regarding maintaining the strength in the undergraduate and graduate programs and service courses in the department and how faculty and funding allocations may need to address the current environment.

It is **recommended** that the Department work to create a more cohesive graduate program through greater investment in communication and inclusion/integration of graduate students in the departmental operations. This could meet the graduate student concerns relative to course offerings, communication of requirements and equitable treatment. It could also lead to improved ability to recruit graduate students, necessary to support research in the Department.

It is **recommended** that the faculty reexamine the graduate curriculum. A core curriculum of stand alone courses for graduates that meets the needs of diverse interests could be accomplished, with a one-year sequence of common courses including history, genomics, microbial genetics and physiology, bioinformatics, ethics, seminar, research methods, and grant writing, and a synthetic perspective on the interconnections between the diverse branches. Offering courses which appeal to other biologically related graduate students could create a critical mass of students to fill courses and to provide a community of peers that will nurture mutual support and sharing of ideas.

It is **recommended** that the Department continue its requests to the College of Science to replace the diminishing number of Graduate Teaching Assistants needed for teaching labs in the undergraduate service courses. This is a critical and relatively low cost investment in assuring that the program can achieve the mission of excellence in education as the University continues on a path of increasing undergraduate enrollments. Recognition of the need to support many complex laboratory courses is needed at the college level if this program is to retain its outstanding reputation for undergraduate education.

It is **recommended** that the Department and College Administration determine a means to provide durable commitment to the Instructor faculty within the Department. These important faculty members deserve to have some reassurance of commitment to continued support by the Department. They are critical to the success of the Department in providing strong advising, teaching and mentoring of undergraduate students.

It is **recommended** the department begin efforts at directed fund-raising with the help of the OSU foundation. The University is starting a huge fund-raising campaign (to include bioinformatics) and the microbiology department can offer other ideas (new BL-3 lab, renovated labs, research positions). The interaction with the Foundation might also identify some opportunities for department-specific fund-raising efforts (scholarships, undergrad research funds).

Action Plan in response to the Review of the Graduate Program
(Conducted June 1&2, 2005; report presented to Graduate Council, October 20, 2005)

The following Action Plan has been arrived at largely from discussion at a Microbiology Faculty Department Retreat held September 8 & 9, 2005. That discussion benefited from the recommendations flowing from the Department review report, a draft version of which was available to us at the time. The Department's own assessment of the state of the graduate program agreed well with that of the review team, and our action decisions are therefore listed below as responses to the Review Report recommendations. As described below, several improvements have already been made or have begun to be implemented.

1. The Department should fully develop a Strategic Plan.

Considering the undergraduate and graduate programs as being tightly interlinked and interdependent, we view the core strategy of the department as:

- (a) continuing to provide the only undergraduate degree in microbiology offered in the State of Oregon in a way that maintains its current strengths, which are identified as the provision of varied courses that match the recommendations of the American Society for Microbiology, and the emphasis on laboratory experience both in the classroom and in the research laboratory;
- (b) maintaining a diverse research enterprise that addresses a range of subtopics that are currently prominent in the field of microbiology. Several of these subtopics are directly relevant to the core land grant missions of OSU and closely align with the OSU Strategic Plan and the recently funded Provost's Initiatives. Such diversity was applauded in the review report, and it optimally supports a broad undergraduate program as outlined above;
- (c) maintaining a vibrant graduate program that retains the current strong record of graduate student success in graduation, post-graduation employment and in research publication, but that incorporates improvements as outlined below;
- (d) building a signature thematic research presence in the field of ***Water-borne Infections***. This is a field that is very topical (tsunami, hurricanes, potential bioterror contamination of the water supply, potential spread of mosquito-borne diseases with global warming) and so both socially important and fundable. This is also a theme that is well represented in several aspects within the Department and that is relevant to OSU strategic interests in supporting human health issues and increasing NIH funding. It is envisaged that an emphasis on water-borne infections spear-headed by the Department of Microbiology could be part of an OSU-wide Infectious Disease Initiative involving other emphases led from the Colleges of Veterinary Medicine and Pharmacy.

2. More cohesion and collegiality should be brought to the graduate program

The Department has been aware for some time that there has been some lack of community among graduate students, which has been serious enough to affect

productivity, morale and recruitment. Even before the recent Department review, we have tried to correct this, and have already seen results.

- (a) We supported last year the founding of a Microbiology Graduate Students Association, registered with OSU, that has a small budget from the Department in support of social and other group activities;
- (b) A meeting/social room has been modestly renovated and provided with wireless internet access for graduate student use;
- (c) A graduate student has been added to the Graduate Affairs Committee. An annual poster session at which only graduate students present their work was begun last year. A graduate student participated in the faculty searches last spring/summer;
- (d) Graduate student input was sought and considered in our Department Retreat last summer, and the graduate students were apprised of our deliberations.

The Chair has emphasized regular communication with graduate students in an effort to improve advising. We have made changes to better inform and advise graduate students for their graduate studies career. In addition to the initial orientation with incoming students held before their first term of graduate studies:

- (a) we have offered an informal orientation/survival guide series of "Fireside Chats." This is being held this fall (once weekly at 5 pm Wednesday), with presentations on a range of topics (course selection, research project selection, program requirements, prelim exam preparation, working towards a research publication and giving a research seminar, etc.) by almost all the faculty (in turn); the non-credit course is required for first year students and will be offered annually;
- (b) we have produced a written survival guide that documents routine procedures used around the Department;
- (c) we are improving the departmental website as a convenient source for information.

The review report indicated some concern from graduate students that there were inconsistent requirements for research output (number of papers) being used by different graduate committees. This concern had not been heard by the faculty previously and was not further explained when graduate students were asked for input. The issue has been discussed by the faculty and there is no indication of a real problem, though we have now been sensitized to the issue to help prevent a future occurrence.

3. The graduate curriculum should be reexamined with particular consideration of instituting a required core sequence and more graduate-only courses. More consistency in implementing the graduate component of 400/500 courses was advised, and more stand-alone graduate level courses were also advised.

- (a) We have initiated discussions concerning a core curriculum. After being asked for advice, the graduate students were no longer as unified in their support for a set of core courses. Nevertheless, this issue is being deliberated by the Graduate Affairs Committee.

- (b) We have drawn up preliminary guidelines describing the additional graduate component of 400/500 courses, so that there can be more rigor and consistency across our several slash courses. Because of personnel restrictions, we will need to continue to rely heavily on our slash courses for graduate training. To further enhance graduate offerings, however, we are proposing to offer a 1-credit 500-level add-on to each 400/500 course, encouraging more advanced graduate students to participate in the graduate component (primary literature presentations and discussion); this innovation will double as a topic-specific journal club. These changes will be further discussed before implementation, targeted for Spring 2006.
- (c) The Graduate Affairs Committee will consider the full set of graduate course offerings and advise on improvements, especially suggesting ways to encourage individual or small groups of faculty to offer stand-alone 500/600 level courses despite the low availability of faculty resources and limited student numbers. The review report made the good suggestion that course development could be in collaboration with or aimed at attracting students from other units or graduate programs, and this will be considered.

4. Continued requests should be made to the College of Science for an adequate number of Graduate Teaching Assistantships to support the undergraduate laboratory courses. The Chair is committed to making such requests. GTAs are not only important in supporting the undergraduate program, but also they are the primary recruitment resource we have for attracting graduate students.

5. The Department should more actively engage in fundraising with the help of the OSU Foundation. The Department is known to have dedicated friends, whose relationship with the Department does need to be nurtured. The Chair and Administrative Assistant (Mary Fulton, who is experienced in development activities) have increased contact with friends of the Department and with the OSU Foundation over the last year, and this will continue. The Department has hosted recent memorials celebrating past faculty members; these activities have built community. At the summer retreat, the Department discussed strategic ways that our considerable savings from patent payments could be used. One possibility is to use these funds to encourage a match from a major donor in order to establish an endowed Chair; the faculty agreed in principle to use these Department resources to support an initiative in Water-Borne Infections (mentioned above). A better defined strategic plan that emerged from the summer retreat was seen as important in providing focus to potential gifts of funds. These activities will continue.

6. Complete the recruitment of the two active searches (Pathogenic Microbiologist, Immunologist) with attention to hiring the highest caliber person and to diversity; for future recruitments, emphasize newer, high profile areas (e.g., genomics). We were able to successfully recruit Dr. Martin Schuster to fill the Pathogenic Microbiologist position; he will start in April 2006. The Immunologist position was not filled, and reactivating this search is of major importance to the Department. This is being investigated through CAS, COS and perhaps other sources. For future hires, the Department has specified: an immunologist; a bacterial metabolic engineer/systems

biologist; replacement of a retiring instructor/advisor; a person to advance our presence in the field of Water-Borne Infections.

7. *Improve recruitment of graduate students, particularly Ph.D. candidates.* To improve recruitment, we:

- (a) have increased graduate student stipends to \$20,000 for fall 2005 incoming students (and we have made stipends as consistent as possible among all our graduate students);
- (b) have developed a new advertising poster that is being mailed to advisors of biological science programs at universities and colleges in the Pacific North-West. We have decided to focus increased recruiting activities in our local region, which will include our continued efforts to attract minorities;
- (c) are improving our Departmental website, especially the pages devoted to providing information for prospective and current graduate students.

8. *Improve aging facilities in Nash Hall.* Recognizing that there is no plan for imminent renovation of this aging facility, we have been using Departmental resources to make modest but meaningful improvements. We:

- (a) have developed stairway and hallway displays in Nash Hall that better introduce the Department to its visitors (e.g., students and faculty being recruited; potential donors), and to convey the excitement of learning about and conducting research in microbiology;
- (b) are painting most laboratories to make them brighter for occupants;
- (c) are investigating the installation of improved lighting to replace unsightly original light fixtures;
- (d) are tidying up shared instrumentation facilities to make them more usable; this will be followed by updating these over time through applications to OSU's Research Equipment Reserve Fund.

GRADUATE COUNCIL MEETING

**January 17, 2008
3:00pm, Kidder 128**

Present: Professors Fisk, Francis, Gitelman, Harter, Kioussi, McLain, Reitsma, and Mary Strickroth

Remote Participant: Professor Russ-Eft

Absent: Professors Colwell, Grosskopf, and Wolpert

Guests: Hal Koenig, Valerie Rosenberg, Rosemary Garagnani

Graduate Council Minutes for November 29, 2007

The minutes from the November 29, 2007 Graduate Council meeting were approved as submitted.

Follow up Review of Graduate Programs in Operations Research & Statistics

Dr. Hal Koenig, College of Business, presented the Operations Research and Statistics follow up review report. The original Graduate Council program review took place on February 21, 2005. H. Koenig and Dr. Tom Adams, Forest Science, revisited the department on November 8, 2007. H. Koenig gave the Council members a synopsis of the report prepared after this visit. He reported that a thin faculty and a heavy service course obligation continue to be major challenges to the department. H. Koenig spoke highly of the department chair, Bob Smythe, for his work in keeping the department running despite the financial and staffing challenges, and of the faculty for their willingness to give so much time and effort to the students.

After the presentation discussion was held on the following topics:

- **Insufficient faculty and finances** - Sabbatical leaves currently place a strain on faculty and it is feared that heavy consequences would fall to the department and to the campus at large if a statistics faculty member is permanently lost.
- **Threat to viability of graduate program** - The Statistics Department struggles to staff the statistics course sequence used by almost every graduate program on campus (serving over 300 graduate students per year). The pressure to offer the course sequence comes at price – the vitality of the statistics graduate program.

Also discussed was the Council's role in examining graduate programs. Sally Francis (Graduate School) reminded the Council that its responsibility is to examine programs not departments. Tom McLain (Forestry) commented that he has noted that the Council has more impact on seeking corrective action on a program's systemic issues. When expressing concern about graduate programs in relationship to budgets, the Council is impotent.

The need to establish a process of reviewing graduate certificate programs, service courses, and standalone graduate minor programs was once again brought to the table. It was decided to put this topic on a future Graduate Council agenda for deeper consideration.

After discussion a motion was moved and seconded to approve the follow up report and to ask the Dean of the Graduate School to communicate to the Dean of Agricultural Sciences and the University Provost the Graduate Council's concern for the continued viability of the graduate level statistics course sequence without further jeopardizing the vitality of the graduate program in statistics.

All voted in favor. Motion passed.

IELTS Information & Action

Valerie Rosenberg, International Programs, and Rosemary Garagnani, Office of Admissions, joined the Council members to discuss the Office of Admission's correction to the International English Language Test System (IELTS) /Test of English as a Foreign Language (TOEFL) equivalency table. The correction was based on the concern that OSU had minimum scores of the IELTS set at too high a level. In 2003, the Graduate Council voted to accept an IELTS score of 7.0 as an approved alternative to the minimum acceptable TOEFL score (550, paper-based test).

V. Rosenberg presented the Council members with a sample of IELTS/TOEFL equivalency scores from thirteen US and international universities showing that most of these schools equate an IELTS score of 6.0 - 6.5 to a paper-based TOEFL score of 550.

After some discussion a motion was made and seconded to accept the proposed recalibration of the OSU equivalency of:

$$6.5 \text{ IELTS} = 550 \text{ TOEFL}$$

All voted in favor. Motion passed.

Courier Service Discussion

S. Francis informed the Council of a recommendation made by the Office of Admissions to the Provost to express mail all letters of admission/I-20 packets to undergraduate applicants. The Provost has since approved the request to fund this service for both undergraduate and graduate students.

Opinions of Council members on this topic included the belief that in most cases this service is not really needed, a consideration of asking the graduate programs to bear the cost, and a consideration of using express service only after a certain date or for special cases.

R. Garagnani offered to take these opinions to the Graduate Admissions Committee for a final decision. T. McLain informed her that the Council would like to be informed of that decision when it is made.

Policy for Admitting Students with 3-year Foreign Degrees

T. McLain began the discussion by informing the Council members of the recommendation made by the Office of Admissions to the Provost to accept 3 year international Bologna and India (A List schools only) degrees for graduate admission on a 3-year pilot basis and the subsequent Graduate School recommendation to the Graduate Council to accept 3 year degrees for graduate admission (omitting a pilot program) if the student is educated in a country that is a signatory of the Bologna Declaration.

The Graduate School recommendation was to change the language in the Graduate Catalog to:

The equivalent of a U.S. baccalaureate degree of at least four years duration with a B average (equivalent 3.00 on a U.S. 4.00 grading scale) in the last two years, plus all subsequent graded course work; or a four-year equivalent baccalaureate degree with a two-year equivalent graduate degree; or if the student is educated in a country that is a signatory of the Bologna Declaration, a baccalaureate degree of at least three years duration with a B average (equivalent 3.00 on a U.S. 4.00 grading scale) in the last two years, plus all subsequent graded course work; or a baccalaureate degree of at least three years duration with a two-year equivalent graduate degree.

A motion was made and seconded to accept the Graduate School's recommendation, but the wording could be modified for clarity.

Discussion followed on selecting the new policy's effective date, its publication date and ways to make the current policy's catalog language concerning 3 year degrees more welcoming (conveying to the applicant that the degrees are currently considered and accepted on a case by case basis). Also discussed was when to internally advertise the change in policy to the campus community.

The motion was then amended to include that the policy would become effective July 1, 2008 for students applying for the Fall 2009 term and that the communication plan would be left to the Graduate School to consider and implement.

All voted in favor. Motion passed.

T. McLain then brought the Council's attention to the Graduate School's second recommendation concerning the admission requirements for students from India:

The Graduate School recommends that no action be taken on changing the graduate admission requirements for students from India until the policies of our peer institutions are investigated and until details of a pilot evaluation period are determined. These details could be the length of trial period, departmental breadth, number of students admitted in the trial period, and metrics for evaluating the success of the applicants.

V. Rosenberg was asked to explain about India A List schools. She explained that the National Assessment and Accreditation Council (NAAC) is responsible for evaluating and accrediting Indian institutions for higher education. The highest rating given by the NAAC is the score of A++ and a total of 128 universities in India have so far been rated. A list of India A list schools, their scores and peer team reports can be located on the NAAC website <http://naacindia.org/Universities.asp>

After discussion, a motion was made and seconded to accept the Graduate School's recommendation with the modification that there be no pilot and that the Graduate Council revisit this topic in two years time.

All but one voted in favor. Motion passed.

Meeting adjourned.

GRADUATE COUNCIL MEETING

November 29, 2007

3:00pm, Kidder 128

Present: Professors Colwell, Fisk, Francis, Grosskopf, King, Kioussi, McLain, Wolpert, and Mary Strickroth

Absent: Professors Gitelman, Harter, and Russ-Eft

Guests: Robert Duncan, Michael Harte, Hal Koenig, Tracy Daugherty, Michael Oriard, Gary DeLander, and Theresa Filtz

With the approval of the Council members present, Martin Fisk (Graduate School) chaired the meeting until the arrival of Tom McLain (Forestry).

Graduate Council Minutes for October 18, 2007

The minutes from the October 18, 2007 Graduate Council meeting were approved as submitted.

Category I Proposal: Water Conflict Management and Transformation

M. Fisk reminded the Council members of the two issues raised in the October 18 meeting when the original CAT I proposal to establish a graduate certificate in water conflict management and transformation was first reviewed. He explained that the unit has since revised the CAT I proposal to address the question of monitoring the 50% rule and has submitted a new CAT II proposal to create a graduate minor.

After discussing their remaining concerns over the question of sufficient oversight in monitoring the 50% rule, a motion was made to approve the proposal as submitted with the stipulation that the program director or another designated WCMT faculty member be responsible for monitoring 50% rule compliance for the certificate program.

All voted in favor. Motion passed.

Review of English Graduate Program

Council members were joined by Hal Koenig, College of Business, Tracy Daugherty, Chair, Department of English, and Michael Oriard, Associate Dean, College of Liberal Arts.

The Graduate Council program review, held in conjunction with an undergraduate program review, was held on May 11, 2007. Hal Koenig, who served as an internal

member of the review panel, presented a brief overview of the review panel's report. The full report is appended to these minutes.

H. Koenig began by recognizing the contributions of the other members of the review panel. He was especially grateful to the external members who served as experts in the field and whose writing skills resulted in the polished review report before you now. H. Koenig then brought the Council's attention to page 6 of the report where the review panel recognizes the English Department's high quality work and its many accomplishments.

Council and visitor discussion focused on the following topics:

Budget: In their report, the reviewers noted that the English Department's current budget model is "unacceptable" and that it creates "a situation for managing the Department that makes strategic planning impossible." Although the Department offers many university service courses (required of students), its budget is inadequate and does not meet student demand. The university budget model is not tied to student demand. To ease the department head's reliance on the practice of deficit spending and bailout, the CLA dean is making it one of his priorities to develop a new department budget model.

T. McLain entered the meeting at this point and assumed his role as chair.

The MA Program: The panel's comment on whether or not OSU wants or needs an MA program was discussed. Michael Oriard explained how the MFA program depends upon the MA program. The MFA program could not exist without faculty teaching graduate-level literature classes and in order to offer those classes a minimum number of students are required to enroll (the MA students). Tracy Daugherty informed the Council that it would not be feasible to eliminate the MA program because of the current make-up of the faculty and their interests. Instead he claims that the English faculty is now ready to move away from the four-track MA to consider a single-focus MA program. He offered the example of building a program around an identity such as "information literacy" then mapping out how current course offerings and faculty expertise can contribute to that.

GTA Workload: The recommendation to lower the GTA load to one course per quarter (1-1-1) was discussed. H. Koenig explained that the panel felt that the current uneven teaching load of 2-1-1 puts a bind on students the term when the students must teach two courses. T. Daugherty sees the recommendation as a redefinition of what full-time would mean for an English GTA at OSU. Nationally, there is no standard for fulltime English GTA workload. If this recommendation is adopted, the Department would require additional funding to support at least eight new GTAs.

After the guests left the meeting and after additional discussion, a motion was made and seconded to approve the English Graduate Council Review Report as submitted.

All voted in favor. Motion passed.

Category I Proposal: Marine Resources Management Graduate Certificate

Professor Michael Harte, Director of the Marine Resources Management Program, gave a short presentation describing the proposed graduate certificate program in Marine Resources Management and offered the Council rationale for offering this program at OSU at the present time.

T. McLain asked if the program would be offered via Ecampus. M. Harte responded that the program would be offered on campus, but there currently exists the potential for a student to take two-thirds of the courses online. Given time and if desired, the program could transition to a fully online program.

T. McLain asked if the opportunity to add a final experience or a capstone project exists to address assessing program outcomes. M. Harte responded that the decision was made not to require a capstone project of the certificate students because most of them would be performing a capstone project in their major department – writing theses or dissertations that have an applied element to them. M. Harte added that the proposed certificate program in Fisheries Management will have a capstone project requirement because that program will be offered off campus (via Ecampus).

Other topics of discussion included national trends for certificate program administration, employers (federal and state agencies) recognizing certificates as professional development opportunities for employees, and the alternative plans for offering MRM 525 if the University of Oregon can no longer offer it.

A motion was made and seconded to approve the proposal as submitted.

All voted in favor. Motion passed.

Category I Proposal: Fisheries Management Graduate Certificate

M. Harte described the long and interesting genesis of the Fisheries Management certificate program. He stated that there has long been a global need for formal training in fisheries management and OSU is uniquely positioned to offer it. When Ecampus offered the money to develop the online program, M. Harte and others saw a great opportunity to create a world-class program that, although aimed at an international audience, will greatly interest US agencies (state, federal) and their employees.

After discussing their concerns over the question of sufficient liaison and the lack of representation from the College of Agricultural Sciences (Dan Edge, Department of Fisheries & Wildlife was inadvertently not included in this meeting), a motion was made and seconded to approve the proposal as submitted.

All voted in favor. Motion passed.

Review of Pharmacy Graduate Program

Council members were joined by Professor Gary DeLander, Chair of the Department of Pharmaceutical Sciences and Assistant Dean for Academic Affairs, College of Pharmacy.

The Graduate Council program review was held on May 26, 2007. Tom Wolpert (Agricultural Sciences) who served as an internal review panel member presented a brief overview of the review panel's report. The full report is appended to these minutes.

T. Wolpert explained that the review panel only examined the graduate program within the Department of Pharmaceutical Sciences. The existing PharmD is a professional degree and not under the purview of the Graduate School and the Department of Pharmacy Practice is not currently offering its graduate degrees. The consensus among the reviewers was that the graduate program was thoughtfully constructed and is very well managed with many high caliber students who appear very satisfied with the program. The Department is thriving with a young but successful faculty who are highly collaborative.

After discussing a few of the major issues (**space**: faculty and students are spread across campus and some faculty are located at OHSU, **number of faculty**: level currently below critical mass, & **financial limitations**: need to increase assistantships even further) there was some discussion on the ramifications of the College relocating to the OHSU Portland campus. The potential impact on the OSU campus would be greater than the impact on the Pharmacy faculty who would benefit from the move and support it. Being in the Portland area would offer opportunities for greater collaboration especially in the area of translational research.

When asked what value he placed on the review process, G. DeLander responded that although he wouldn't want to go through the process every year, he did find the process to be valuable and was glad that the report confirmed many of the strategic moves the department has already taken. He reported that the College is currently undergoing a strategic search for a faculty member in the field of pharmaceuticals.

After the guests departed, a motion was made and seconded to accept the review report as submitted.

All voted in favor. Motion passed.

Sally Francis (Graduate School) then made the observation that in many Graduate Council program review reports two issues frequently appear: the need for an ethics education course and students' desire for a teaching or co-teaching experience. Discussion on creative approaches to finding paid/unpaid teaching experiences ensued. On the topic of ethics education, T. Wolpert informed the Council that there was recently

talk among the MCB faculty of establishing a new ethics course that would be useful to many students across the biological sciences.

Meeting adjourned.

FINAL REPORT

Oregon State University
Department of English
Program Review Site Visit
May 10-11, 2007

External Review Team

Kay Halasek, Department of English, Ohio State University, Panel Chair
Philip Gerard, Department of Creative Writing, University of North Carolina Wilmington
Eva Payne, Humanities, Chemeketa Community College

Internal Graduate Review Team

Hal Koenig, College of Business, Grad Lead
Mike Unsworth, Oceanic & Atmospheric Sciences
Andy Blaustein, Environmental Sciences

Internal Undergraduate Academic Program Review Team

Frank Chaplen, Bioengineering, Undergrad Lead
Marv Pyles, Forest Engineering

OVERALL RECOMMENDATION

The English Department, as currently funded and staffed, is unable to meet or successfully sustain its own wide-ranging mission and the additional responsibilities placed on it by the University.

The review panels recommend first and foremost that the department take the initiative to chart its own course, updating its departmental Strategic Plan so that it becomes the “roadmap” for the department to follow for the next five to ten years. All of the needs identified in this report are urgent. At the same time, the review panels recognize that the department—with the cooperation of the college and University—must itself prioritize these recommendations and create from them an implementation plan that addresses these needs in as realistic and effective a manner as possible.

In addition, the review panels recommend that within that Strategic Plan the department

- ✓ Tie its plan to the needs and interests of the University, community, and state.
- ✓ Identify areas of strength and coherently express the unifying connections among targeted areas and aligning them to the University Strategic plan.
- ✓ Continue a careful and strategic evaluation and revision of all course offerings and programs with a goal of more sharply defining their philosophy, intent, and structure.
- ✓ Determine the foci for the undergraduate major and MA program.

- ✓ Devise a plan that includes optimal enrollment numbers for all programs and courses and identify areas where capping or cutting back student enrollment is desirable to increase the quality of the student experience, the programs, and the department.

It may be unrealistic in the current budgeting cycle, for example, to expect the Department to mount four searches at once. Nevertheless, the Department should prioritize those hires, make them in as timely a fashion as possible, and create a timeline for reaching full staffing within a reasonable period, probably three to five years. To ensure that the Department is configured and prepared to meet its growing obligations and its updated Strategic Plan, *the review teams also recommend that the University and/or College*

- Revise the funding practices of the Department; the current practice of under-funding and repeated annual “bail outs” is unacceptable, creating a situation for managing the Department that makes strategic planning impossible.
- Prioritize the English Department in both their immediate allocations and long-range fiscal planning, providing funds to increase funding to graduate students, decrease the teaching loads of graduate students and term instructors, and hire much needed faculty into key appointments.
- Provide systematic support for all technology used in support of the Baccalaureate Core, ensuring the regular purchase, replacement, and support of computer hardware and software.

SUMMARY OF FINDINGS AND RECOMMENDATIONS

The English Department, as currently funded, staffed and configured, is unable to meet or successfully sustain its own wide-ranging mission and the additional responsibilities placed on it by the University. In other words, the department cannot effectively sustain the expansive programming that it now attempts to offer. Given this situation, the department *must* create a long-term strategic plan, identifying and investing in those courses and programs that best serve its mission and its students. Such a strategic plan will, necessarily, mean restructuring, reducing, suspending, or even discontinuing some current courses and/or programs. In this regard OSU is fortunate. The department has obvious strengths in a variety of areas, including but not limited to creative writing, expository writing, and literature, and can certainly fashion a more focused major and graduate programs that take advantage of these, reinforcing success and focusing the department’s limited resources in a small number of areas so that they may become truly excellent instead of merely adequate.

Determining the department’s identity will likely be the most crucial and difficult part of long-range planning, since undoubtedly some specialties must be curtailed or even eliminated in the interests of the larger mission.

More specifically, the review panels recommend that the Department

- Update the departmental Strategic Plan so that it becomes the “roadmap” for the department to follow for the next five to ten years. As part of this effort, the areas noted below should be addressed explicitly:
 - ✓ The department should take the initiative to chart its own course and tie this to the needs and interests of the University, community, and state. This may and should include not only adding new initiatives but also cutting or curtailing some courses, programs, or practices to use more effectively personnel, funds, and other resources.
 - ✓ In doing so, identify areas of strength and coherently express the unifying connections among those areas and aligning them to the University Strategic plan.
 - ✓ Continue a careful and strategic evaluation and revision of undergraduate course offerings and programs with a goal of more sharply defining the philosophy, intent, and structure of the major.
 - ✓ Determine the foci for the undergraduate major and MA program; as a general principle, the teams urge the department to examine all current and proposed courses, programs, and practices in light of the department’s focused aspirations, that every decision be taken deliberately rather than by default.
 - ✓ Devise a plan that includes optimal enrollment numbers for all programs and courses and identify areas where capping or cutting back student enrollment is desirable to increase the quality of the student experience, the programs, and the department.
- Identify a portion of any capital campaign funds it receives to support need-based scholarships for undergraduates, the need for which the review panels were reminded of by students, some of whom reported working in excess of 30 hours per week and some of whom rely on food stamps.
- Develop equity in workload among faculty, especially with respect to thesis advising.
- Continue a careful and strategic evaluation and revision of graduate course offerings, eliminating from the catalogue any course not taught within the two-year class cycle of the MFA and MA.
- Concentrate on recruiting MFA and MA students of color.

Such strategic redefinition of the department and its programs necessitates the immediate and definitive support of the University and College.

To that end, the review panels recommend that the University and/or College

- Revise the funding practices of the Department; the current practice of under-funding and repeated annual “bail outs” is unacceptable and creates an impossible situation for managing the Department, making strategic planning impossible. Specifically, the University and College should
 - ✓ Provide *in the form of recurring monies* all necessary funding for operating expenses and salaries (GTAs, term instructors, faculty, and staff).

- ✓ Provide separate and transparent accounting of the monies budgeted for the Baccalaureate Core, the undergraduate major, and the MA and MFA programs—in the form of recurring funds at a level adequate for the department to meet its obligations to provide student access to core classes.
- ✓ In determining these costs, acknowledge and assume the course limits recommended by the discipline's recognized professional organizations MLA, AWP, ABC, ATW, and CCCC—course limits that do not compromise the quality of instruction.
- Provide funds to allow for financial support of all graduate students admitted—through GTAs, fellowships, and higher stipends. In our view, admission of unfunded candidates to either the MA or the MFA program slows or impedes completion of degrees and undermines morale, creating a two-tiered community of graduate students, and is inappropriate for a Research I Institution.
- Lower the teaching load of all GTAs to 1-1-1 to ensure that they can apply their energies and time more fully to their programs of study.
- Lower teaching load of all instructors to 3-3-3 to create greater opportunity for further course innovation and enhancement and a higher quality of professional life.
- Provide systematic support for all technology used in support of the Baccalaureate Core, ensuring the regular purchase, replacement, and support of computer hardware and software. Under current practice, no replacement cycle exists for either hardware or software, and funding is based on the judgment of a student committee with no continuity or expertise in technology. Additionally, departmental resources better spent elsewhere are squandered writing new complex grant applications for each need.
- Devise a way to offer more “500-level only” courses for MA students and, where possible, to limit enrollment in the “400/500-level” courses to numbers appropriate for a graduate-level experience—12-15 instead of 25-30.
- Fund the hire (in priority order determined by the department over the course of four to five years) of four tenured or tenure-track faculty:
 - ✓ A tenured or tenure-track faculty member to direct the First-Year Writing program. This program is crucial not just to the English Department but also the entire university (through the Baccalaureate Core) and should be regarded as a university hire housed in English.
 - ✓ A tenured or tenure-track faculty member in business and technical communication. Again, this faculty member is of urgent importance to disciplines outside English.
 - ✓ A tenured or tenure-track faculty member in poetry, a necessity for an aspirational program like that at OSU.
 - ✓ A tenured or tenure-track faculty member in literature in a field defined by the department in its strategic plan. (We recommend not hiring too narrowly—a specialist with a second field or a strong generalist with specific scholarly interests will give the department flexibility in planning curriculum.)

DETAILED FINDINGS

Introduction

At the request of Oregon State University, an eight-member review team conducted in May 2007 an on-site review of the Department of English. As its central objectives, the review team sought to assess the current structure, scope, and quality of the undergraduate and graduate programs in the department. In pursuing these objectives, the review team necessarily attended to related issues such as number and distribution of faculty, related programs and resources, and University budgeting guidelines. In all of its activities and deliberations, the review team followed the “Guidelines for the Review of Graduate Programs” provided by the Graduate Council of Oregon State University (approved 6 April 2006) and consulted the “Self-Study Report: Undergraduate and Graduate Programs” submitted by the Department of English (May 2007).

The External Review team included panel chair Professor Kay Halasek (Department of English, Ohio State University), Professor Philip Gerard (Department of Creative Writing, University of North Carolina Wilmington), and Professor Eva Payne (Humanities, Chemeketa Community College). The Internal Graduate Review Team included Professor Hal Koenig, College of Business (Graduate Lead); Professor Mike Unsworth, Oceanic & Atmospheric Sciences; and Professor Andy Blaustein, Environmental Sciences. The Internal Undergraduate Academic Program Review Team included Professor Frank Chaplen, Bioengineering (Undergraduate Lead) and Professor Marv Pyles, Forest Engineering.

Members of the External Review Team, Internal Graduate Review Team, and Internal Undergraduate Academic Program Review Team met from 6:00-9:00 p.m. on Thursday, May 10, 2007, and from 7:30a.m. to 5:30 p.m. on Friday, May 11, 2007. During the Thursday session, members met with Sally Francis, Dean of the Graduate School, and Susie Leslie, Academic Programs. On Friday, the three teams (accompanied by Sally Francis, Susie Leslie, and Helene Serewis of the Graduate School) met with Tracy Daugherty, Chair of the Department of English; Sabah Randahawa, Provost; Michael Oriard, Associate Dean of the College of Liberal Arts, English Department faculty and advisors (two sessions); approximately twenty undergraduate and graduate students; the English Department Graduate Committee; and Departmental Committee Chairs. The on-campus review agenda ended in executive session, during which the review teams drafted an initial set of recommendations, which it forwarded to the University in May 2007.

Department Accomplishments

The review teams wish to begin articulating its detailed findings by acknowledging the very high quality of the work underway in the English Department at Oregon State University. In particular, the teams recognize and applaud the following:

- A faculty who themselves form the basis of a strong department, who demonstrate a genuine commitment to both teaching and research, who have achieved distinction both in the classroom and in their scholarly and artistic achievements, who are fully engaged in the profession, and who are clearly invested in student success.
- A corps of term instructors who, despite uncertain employment from term-to-term and year-to-year, shoulder a large portion of the departmental teaching load in the Baccalaureate Core, providing instruction of high quality to students from across the University.
- A diverse and wide-ranging curriculum at the graduate and undergraduate levels.
- Graduate and undergraduate students who express not only satisfaction but also delight with their programs and admiration and respect for their faculty, whom they note are available, capable advisors, mentors, and teachers.
- Effective departmental undergraduate student organizations.
- Intellectually engaging experiences for students outside the classroom through such initiatives as the Visiting Writers' Series, the Writing Center, and WIC.
- Productive professional development opportunities for its graduate students, including the MA Working Groups, pre-quarter training for GTAs and on-going training through pedagogy courses and other programs.
- A department that fields a substantial responsibility for courses in the University's Baccalaureate Core—more than any other department in the University.
- An undergraduate writing minor that serves students from across the University, providing courses in creative writing, expository writing, business writing, and technical writing—all of which contribute to the mission of the University.
- Effective ongoing revisions to the undergraduate course offerings.
- Specific and meaningful statements of learning outcomes and implementation of assessments of student achievement in its undergraduate programs.
- Innovative use of electronic technology in writing courses, especially technical and business writing.
- A successful MFA program, which, though new, has achieved some distinction.
- A culture of professionalism and collegiality among faculty and instructors.
- A talented cadre of graduate students in both the MFA and MA programs, many of whom serve as GTAs teaching lower-division courses.
- A thoughtful, practical, and rigorous training program for those GTAs, including mentoring of MFA GTAs by core MFA faculty as they teach creative writing courses
- Effective and engaged advising of undergraduate English majors.
- A capable and effective chair who enjoys the respect and cooperation of his peers
- A strong and professional administrative staff who provide sustained support to the faculty, instructors, and students in the department.

The Department of English at OSU is staffed by a remarkably accomplished faculty of diverse interests and wide-ranging professional accomplishments. The faculty culture encourages and values excellence in teaching, with faculty members of all ranks and specialties working diligently and successfully as classroom teachers, mentors, and professional role models for their students. Both undergraduate and graduate students

spoke with high praise of their teachers and thesis advisors. They were most appreciative of the individual attention they routinely get in conferences with faculty members outside the classroom. They respect their teachers and believe they are being well-served in their classes by the rigor of the assignments.

The department assumes six main responsibilities, each of them requiring substantial department resources:

1. The undergraduate major—which serves 216 students.
2. The MFA—which serves 15 students.
3. The MA—which serves 26 students.
4. The minor—which serves 53 students in both undergraduate and graduate courses.
5. The baccalaureate writing courses, which serve the entire university.
6. Technical writing courses, which mainly serve business, science, and technical studies majors.

In all, the department contributed 29,853 student credit hours to the University in 2004-2005, over 16% of all credit hours in the College of Liberal Arts that year.

Although individual courses are well-defined, focused, and rigorous, the same cannot be said of most of the programs of study. The department lacks a coherent intellectual and artistic focus. It began largely as a service department, teaching basic composition skills to science and engineering students. It then evolved into a department of literature, offering a traditional major course of study that included surveys in British and American literatures organized historically, courses in prominent authors such as Shakespeare, and in-depth genre studies. In recent years it has added courses and or programs in creative writing, film studies, post-colonial literatures, world literatures, literary theory and criticism, cultural studies, technical writing, women's studies, rhetoric, advertising and public relations writing, African-American literature, Chicano/a literature, and a menu of independent study, practicum, and special topics courses.

Meanwhile, the number of tenure-track teaching faculty has declined, particularly in literature studies. Thus the department is trying to cover more areas than ever with fewer faculty per specialty, and the predictable result is a sense of being continually overwhelmed by the demands of the various programs and tracks. This leads to faculty members being defensive of their limited resources, including but not limited to new hires and TA positions. This is an untenable situation, bad for morale and subversive of the values of a fine group of professionals. Ultimately, should the department continue in this direction, the multiplying and conflicting demands will undermine its mission and effectiveness. Many English departments across the country share this same situation, likewise continuing to add new specialties and programs without long-range planning. The solution is to plan a coherent and achievable vision for what the department wants and needs to be, then to shut down moribund programs and discontinue or redefine courses which no longer serve the department's mission.

In other words, the department cannot effectively offer every kind of course and program that faculty might wish to or that students might want. Certainly it cannot keep adding to the menu. It must choose which of its courses and programs best serve its mission and its students, and then discontinue the others. In this regard OSU is fortunate. The department has obvious strengths in a variety of areas, including but not limited to creative writing and literature, and can certainly fashion a more focused major and graduate programs that take advantage of this, reinforcing success and focusing the department's limited resources in a small number of areas so that they may become truly excellent instead of merely adequate.

One long-term goal ought to be full support of all candidates accepted into graduate programs. One way to accomplish this is to set realistic goals for increasing support each year within a timeline developed during the process of defining the Department's identity and deciding which programs it will continue to offer and with what focus. Likewise, to allow those graduate students to fully engage with their studies and succeed in their creative endeavors, we recommend planning to reduce GTA teaching load to 1-1-1 in a time frame consistent with the above. Finally, though the recommended hires reflect urgent current needs, it may be unrealistic to expect that the Department can mount four searches at once. Instead, based on our findings and its own internal reorganization process, it should prioritize those hires and create a timeline for reaching full staffing within a reasonable period, probably three to five years.

Determining the department's identity will likely be the most crucial and difficult part of long-range planning, since undoubtedly some specialties must be curtailed or even eliminated in the interests of the larger mission.

The MFA Program

The MFA program is an obvious success story, and it has achieved its good results in spite of receiving very little support from the department or the University. We suspect that one reason it has succeeded is that the core faculty, under the guidance of the current chair, who played a major role in planning it, offer a focused, coherent, and rigorous program of study. That is, students can plan their program knowing exactly which workshops and other courses will be offered when. Expectations are explicit. Writing courses are open only to graduate students. The faculty members, active and publishing writers all, foster a sense of community and shared enterprise among each other and their students.

And yet the number of faculty is not adequate to field a program that can achieve national prominence. A rule of thumb, expressed in the AWP Hallmarks for a Successful Graduate Program in Creative Writing, is that the faculty include *at minimum* two practitioners in each thesis genre. OSU has only one poet on staff, who must chair *every* MFA poetry thesis. Students have no option of studying with another poet, learning a different aesthetic. The same is true in screenwriting, which depends on a single

practitioner. Note that the two-faculty member requirement is a *minimum* requirement; a program with national aspirations should actually have more, as well as be prepared to temporarily replace those faculty members who go on leave or sabbatical with teaching writers of similar stature, not local adjuncts.

The MFA is the department's terminal degree and should be supported as such.

The MA Program

In contrast to the MFA program, the MA is not clearly focused. Many courses in the catalogue have not been taught in memory, and the department has begun a laudable process of deleting those. However it is still the case that most courses are cross-listed and open to undergraduates. This is a reasonable solution if applied in a limited fashion and if the courses are truly graduate courses, but we suspect that a course that includes 25-30 students, the great majority of them undergraduates, cannot typically be considered a true graduate course. The number of students alone makes discussion and reasoned argument unmanageable, and that only two or three graduate students sometimes enroll in the classes means that the level of lecture and any discussion occurs is likely below what one would expect in a rigorous MA program.

The solution would be to define the MA degree more precisely: Whom does it serve? How does it fit into the department's mission and long-range plan? How should it be shaped for maximum effectiveness and intellectual rigor? What will be the measure of its success? This process includes asking the question: Does OSU want or need an MA in English? Or does it make sense to close it out and focus resources on the terminal degree program, the MFA?

The above questions are not for the review teams to answer but rather for the department. Whatever MA the department offers, it should be fashioned deliberately in the context of the department's mission and long-range plan—and also with a realistic eye to what resources are actually available *at present*.

The Budgeting Process

The budgeting process-- particularly as it pertains to staffing baccalaureate writing courses, buying and maintaining technology such as computers, and outfitting classrooms with such basic items as desks—seems at best opaque and at worst bizarre.

We suggest the following:

1. That the University, through the College, assume responsibility for adequate budgeting of the department's service component.
2. That the budgeting be done in a transparent manner—that is, that money be identified for hiring adjunct and lecturers prior to their being assigned courses by the chair, rather than continuing the current practice, whereby the chair

applies for debt relief after the fact, with no assurance that the College will make good on the obligation.

3. That the College assume responsibility for buying and replacing technology on an appropriate standard rotation basis. (Currently the director of the writing program must write grants for each new piece of equipment or software, with no plan in place for replacements or upgrades.)
4. That the College assume responsibility for adequately furnishing academic spaces. This should not be a burden on a departmental operating budget.

CONCLUSION

We have great confidence in the ability of OSU's English Department to redefine itself and reorganize its curriculum to reflect a more focused mission. It will not be easy. The transition will require strong leadership from the chair, good will and good faith from faculty members, and an explicit show of support and encouragement from the administration. This refined identity and focus should be determined before new funds are committed to the department for new faculty hires; however, it would be prudent to offer appropriate incentives based on succeeding at this task to move the process along, bearing in mind that OSU's strongest asset is its very accomplished and dedicated faculty.

OSU GRADUATE COUNCIL

Review of the College of Pharmacy May, 2007

1. INTRODUCTION AND CONTEXT

The mission of the Graduate Programs within Oregon State University's College of Pharmacy is to train graduates who will maximize the health of the public by advancing patient care and facilitate the discovery, understanding, and cost effective use of medicines. The faculty is divided between the Corvallis and OHSU-Portland campuses. Studies in the pharmaceutical sciences are conducted in Corvallis while more clinically-related investigations occur in Portland. This faculty division correlates with the training provided by the College for its professional students who attain a PharmD degree. In years 1 and 2 of the professional four-year degree program, student training occurs in Corvallis where classes are offered in the basic and applied sciences that define the field; year 3 is taught in Portland where clinical aspects are stressed; and year 4 is reserved for internships. The presence of the medical school in Portland adds significant value to the educational efforts of the professional PharmD degree program. *Similar synergies occur within leading, contemporary graduate pharmacy programs that are near research medical school complexes.*

The College of Pharmacy has awarded graduate degrees since 1914. The graduate program was modified in 1974 and now provides a *Masters of Science in Pharmacy* (thesis, non-thesis) and a *Doctor of Philosophy* degree in Pharmacy. The graduate faculty's scholarship reflects the wide spectrum and interdisciplinary nature of pharmacy. Programmatically, the graduate faculty are split into two departments, the **Department of Pharmaceutical Sciences** and the **Department of Pharmacy Practice**. The Department of Pharmaceutical Sciences is entirely housed in Corvallis and has 14 tenure or tenure-track faculty that are grouped into three areas of concentrations: ***medicinal chemistry and natural products, pharmacology, and pharmaceuticals***. Pharmaceutical science research programs include the isolation, identification and elaboration of new natural products, drug discovery, the pharmacology of cellular signaling, the development of genetically modified rodent models to understand diseases, drug formulation, the effect of pharmacokinetics on drug utilization, the creation of novel vaccines, and the use of biopharmaceutical agents for drug delivery. Complementing these research endeavors are research programs within the Department of Pharmacy Practice. Studies within the Department of Pharmacy Practice include cardiovascular disease pharmacotherapy, drug use and management, pharmacoeconomics, and policy. At this time, Pharmacy Practice graduate faculty have not served as thesis advisors on advanced degree dissertations.

The Committee only reviewed the graduate program within the **Department of Pharmaceutical Sciences**. Several logistic and programmatic factors contributed to our focus on this department. First, the Committee's site visit was restricted to Corvallis. Second, the College has not awarded an advanced degree in pharmacoeconomics for

many years. Currently there is not a critical mass of faculty in pharmacoeconomics and pharmacy administration to support a graduate program. This situation is expected to change in the near future and is further discussed in Section 3.F of the Report Third, the pharmacotherapy unit within the Department of Pharmacy Practice does not have an established graduate curriculum that leads to an advanced degree.

The last formal evaluation of the College of Pharmacy program was in 1994. The OSU Graduate Council conducted a regular “decennial review” of this program on May 26, 2007. The following served as team members:

Internal Reviewers:

Professor Shawna Grosskopf, Department of Economics

Professor Marie Harvey, Department of Public Health

Professor Thomas Wolpert, Department of Botany and Plant Pathology

External Reviewers:

Dr. Edmund Graziani, Wyeth Research, Department of Chemical & Screening Sciences-Pearl River, NY

Professor Harold Kohn, Chair, University of North Carolina at Chapel Hill

Dean Sally Francis, Associate Dean Bruce Rettig, and Assistant to the Dean Helene Serewis attended the program review sessions.

Prior to the May 25th site visit, the Committee received a comprehensive Self-Study Report that was prepared in accordance with the Graduate Council Program Review Guidelines. Additional information was provided to the Committee both during and after the site visit.

The team members met with the College’s leadership, the graduate faculty and staff, graduate students, and toured facilities at the Oak Creek and College of Pharmacy buildings. The team visited laboratories facilities in two of the three areas of concentrations and toured both the instrumentation laboratory in the Oak Creek Building, which houses the nuclear magnetic resonance spectrometer, and the rodent facility in the Pharmacy Building.

The objectives for the decennial review are to evaluate the program goals and mission, the adequacy of the support resources, the level of performance of the graduate training, the level and extent of faculty scholarship and productivity, and the outcomes of the program. The Committee in its assessment also examined the progress within the three individual areas of concentrations. Most important, the Committee was asked to suggest or identify areas that would enhance this graduate program.

2. PROGRAM INPUTS

2.A. Program Mission and Goals

As stated in the College of Pharmacy's Strategic Plan (May 2004), the College "share(s) in the university's vision to serve the people of Oregon and to be among the top 10 land grant institutions in America. We are a core component of the university's theme of realizing fundamental contributions in the life sciences and optimizing the health and well-being of the public."

In terms of graduate education, the College's stated goal is to provide academic programs that serve the university mission and "train students to become independent scientists capable in the design, execution and interpretation of scientific inquiry that address problems of biomedical relevance" and foster "graduates and professionals who will maximize the health of the public by advancing patient care and facilitating the discovery, understanding and cost effective use of medicines."

The graduate programs of the Department of Pharmaceutical Sciences fit in the "contribution to the life sciences", "training scientists" and "facilitating the discovery...of medicines", whereas the PharmD professional program contributes more directly to "the health of the public".

Related to graduate education and research training, the College has itemized outcomes and goals designed to pursue their mission:

1. Entry level goals related to recruiting and retaining excellent students
2. Curricular goals
3. Professional goals

As itemized in the self-study document, the College has made progress toward achieving many of these goals.

Remaining to be achieved are goals that develop a sustainable and expanded PharmD/Ph.D. track, rebuild pharmacoeconomics, and increase ties between medicine, science and practice with a goal of improving translational research and grant-success.

One key strategic goal of the program is to increase enrollment in the graduate program to 39 students, or 2.5 Ph.D students per faculty, with a concomitant increase in funded research to support students in the laboratories. The current make-up of the faculty, with many assistant professors, is a challenge in terms of funded research.

Another key strategic goal is related to location and facilities; the College is split between the OSU and OHSU campuses which separate the science and practice faculty, also impeding translational research. The OSU campus is also "split" across three locations. A long-term goal is to reunite the College in Portland.

In terms of research goals, the Department chair itemized areas of emphasis including a goal of developing a "center of natural products and discovery", initially

submitted as a Provost initiative, but currently funded by the College. The launch of the Oregon Translational Research and Drug Discovery Initiative (OTRADI) may provide funding and the opportunity to expand hiring in the drug discovery area. Other research areas targeted for growth and emphasis are vaccine development, and genetically modified mouse models.

2.B. Students (quality of students, admission selectivity, recruitment success, level of financial support of students).

2.B.1. Introduction

The College, and more specifically, the Graduate Studies Committee has been successful in setting both ambitious and attainable goals with respect to the recruitment and training of graduate students. The stated aim, “to train students to become independent scientists capable in the design, execution and interpretation of scientific inquiry that address problems of biomedical relevance” is both appropriate and serves an important need in the state, since the College offers the only graduate program in Pharmacy/Pharmaceutical Sciences in Oregon.

In an effort to better evaluate both the successes and areas for improvement with respect to student-related program inputs, it may be worth focusing on specific goals the College has set for itself in this regard:

- A. Recruitment of high quality students
- B. Recruitment of domestic students, with a particular emphasis on students from Oregon and the Pacific Northwest
- C. Recruitment of students across diverse socio-economic backgrounds
- D. Provide adequate financial support for high quality students
- E. Provide academic, language and cultural support for international students
- F. Provide a sense of community among students

2.B.1.1. Recruitment of high quality students

Admissions standards to the program appear to be sufficiently stringent. The average GPA of applicant from 2001-2006 was 3.39; acceptably above the minimum of 3.0 required. In 2004, the average GPA was 3.08.

2.B.1.2. Recruitment of domestic students, with a particular emphasis on students from Oregon and the Pacific Northwest

Based on data obtained from the Department, there have been an equal number (or greater) of domestic students than international students that have matriculated into the program every year since 2002, with the exception of 2004. However, data for students that transfer *within* the university from other departments and international students who encounter delays obtaining a visa are not accounted for in the self-study

document. The current departmental roster of graduate students appears to be approximately one third domestic students.

2.B.1.3. Recruitment of students across diverse socio-economic backgrounds

The college does not formally track how successful it has been in attracting students from diverse economic backgrounds. Anecdotally, a number of students have been recruited from rural colleges, but in the majority of cases such students may find the professional program considerably more attractive than the graduate program, which may make retention of such students difficult.

2.B.1.4. Provide adequate financial support for high quality students

In the College, graduate student funding is widely acknowledged to be of primary importance to the health of its research programs. There has been a three-fold increase in College funds used to support graduate student stipends over the last five years. Nonetheless, the current uncertainties in federal and private research funding appear to be incurring considerable stress upon the system. The department has done an exemplary job of securing interim funding for students, but it is not clear how sustainable this will be in the future. Strategies for increasing the likelihood that all research active faculty secure external funding will be essential to long-term support of graduate students. While the class has high entering GPAs and their scores on the GRE and TOEFL (where appropriate) are above average, the quality of the entering class would benefit from competitive fellowships offered to outstanding students and a further increase in the current teaching assistantship stipend of \$20,000.

2.B.1.5. Provide academic, language and cultural support for international students

Adequate resources appear to exist on campus that facilitate the orientation of international students (e.g., student associations), although the College should develop procedures for identifying those students who may need greater help, making sure they are aware of all the resources at their disposal, and then following up with them over their first year. In discussions, it was suggested that TOEFL scores and a telephone interview of prospective students are not always predictive of how well a student will perform, especially with respect to being able to carry out teaching assistantships (a critical source of funding in a student's first year). It is recommended that an assessment of written skills be part of the admission requirements, and that greater effort is made to track and follow up with students in cases where there are language issues.

2.B.1.6. Provide a sense of community among students

The limited space within the College has led to the geographical separation of some research groups within the same area of concentration. Accordingly, a number of students expressed a sense of isolation. Co-localization of all students (or at least,

those within the same disciplines [*i.e.*, medicinal chemistry, pharmacology]) would be of lasting benefit.

The College funds a graduate student research retreat that provides an excellent opportunity for building a sense of community and fostering research communications. Both faculty and students expressed much enthusiasm for the retreat.

Medicinal Chemistry and Natural Products Graduate Students. Research groups in Medicinal Chemistry and Natural Products vary in size from 0 to 5 (average: 3.8). The groups are composed of graduate students (Master, doctoral), postdoctoral fellows, technicians, visiting scientists, and senior research assistant professors. All the students are funded by either graduate teaching assistantships (GTA) or graduate research assistantships (GRA). The number of laboratory researchers is sufficient to maintain steady progress but is less than desirable for the continuity of information and techniques within the individual groups, and for growth. Expansion of the graduate pool has been hindered by small entering classes in this area of concentration and student turnover. Another limiting factor has been the uncertainty of sustained grant support. The graduate student's backgrounds are diverse, and students come from schools throughout the United States and abroad.

Pharmacology Graduate Students. The faculty in this area of concentration are currently training nine Ph.D. students and one M.S. student. The Pharmacology faculty are highly interdisciplinary and participate in a variety of programs and departments on campus. Consequently, included among these ten students are students from the Genetics Program, Molecular and Cellular Biology Program and Department of Biochemistry and Biophysics. Currently, six of the students are specifically in the area of Pharmacology and include 5 Ph.D. and 1 M.S. student enrolled in the College of Pharmacy. Student quality appears to be high and reflective of the overall quality of students admitted into the Pharmacy Graduate Program. Faculty have expressed the desire to increase the quantity of students trained in this area of concentration. Given that student support for GTAs has recently been increased by the college, it is likely that any increase in student training will be contingent on successful identification of outside funding. The faculty are encouraged to pursue such funding opportunities.

Pharmaceutics Graduate Students. Research groups in Pharmaceutics vary in size from 1 to 4 (average: 2.0). The groups are composed primarily of graduate students (6 doctoral, 1 masters), and 1 postdoctoral fellow. All the Ph.D. students are funded by either graduate teaching assistantships (GTA) or graduate research assistantships (GRA). With the exception of one group within pharmaceutics, the number of laboratory researchers is less than desirable for the continuity of information and techniques within the individual groups, and for growth. Expansion of the graduate pool has been hindered by the small number of research active faculty, and the uncertainty of sustained grant support. It is likely that the recent retirement of one the most active members of pharmaceutics has also had an effect on recruitment.

2.C. Graduate Faculty and Staff

2.C.1. Introduction

The graduate faculty in the Department of Pharmaceutical Sciences consists of 2 full professors, 5 associate professors, and 7 assistant professors. The 14 faculty are divided into three research areas of concentration: medicinal chemistry and natural products (5), pharmacology (6), and pharmaceuticals (3). Complementing these 14 faculty are 3 senior research assistant professors. The Department is modest size in all areas of concentration and is understaffed in the area of pharmaceuticals. The compositional makeup of the 14 tenured and tenure-track faculty is a strength and a weakness. The younger faculty have added considerable expertise in contemporary and emerging areas of pharmaceutical science. They are talented and energetic. The two full professors, Dr. Mark Leid and Dr. Mark Zabriskie, provide leadership to the pharmacology, and medicinal chemistry and natural products areas, respectively. Nonetheless, there is a need of additional mentorship for both assistant and associate professors in the Department. The faculty staff is Ms. Debra Peters. While Ms. Peters is listed at only 0.25 FTE, her skilled efforts permit her to meet the current administrative needs of the Department.

Medicinal Chemistry and Natural Products Faculty. Five tenure/tenure-track faculty make up this area of concentration: Professor Mark Zabriskie, Associate Professor Phil Proteau, and Assistant Professors Taifo Mahmud, Kerry McPhail, and Fred Stevens. The unit has a unified focus in natural products that fosters joint studies and mentoring of the graduate body. In July, 2005, Professor William Gerwick, a recognized national leader in natural products chemistry left OSU to join the faculty at Scripps. This departure left a significant void in the faculty. With this loss, new opportunities for growth and development occurred. In the last 22 months, the unit has regained equilibrium. Professor Mark Zabriskie deserves considerable credit for providing the necessary leadership during this transitional period.

The five-member natural product group is spread over three buildings that are separated by considerable distance. Three (Zabriskie, Mahmud, McPhail) are housed in Oak Creek Building while the remaining two are in the Pharmacy (Proteau) and Weniger (Stevens) Buildings. This places the unit and its graduate students at a significant disadvantage and it places at risk the research productivity and educational experiences of students not in the Oak Creek facility. Having said this, the Oak Creek Building is remote from many of the campus facilities and is at best adequate having neither the laboratory infrastructure (e.g., linear footage of chemical hoods, house vacuum, house gas, elevator, floor drains) nor the ventilation that is ideal for natural products chemistry.

The central research theme of the natural products group is the discovery and elaboration of natural products relevant to anti-infectious agents. Studies include the isolation (Mahmud, McPhail, Proteau, Zabriskie), structure determination (Mahmud, McPhail, Proteau, Stevens, Zabriskie), biosynthesis, and enzymology (Mahmud, Proteau, Zabriskie), and elaboration (Mahmud, Proteau, Zabriskie) of natural products.

An additional interest of Professor Stevens is the interactions of biological antioxidants with lipid peroxidation. While there is precursor-directed synthesis within this unit there is a lower level of “traditional organic synthesis” than one might expect for a broadly-based natural products group. This missing component may hamper the elaboration of potential therapeutic leads discovered from nature. Are there future opportunities with the Department of Chemistry for joint hires where the primary appointment is within the College and for building bridges with faculty in Chemistry? Also missing is a strong translational medical component within the group. With the expected launch of Oregon Translational Research and Drug Discovery Initiative (OTRADI), the Medicinal Chemistry/Natural Products group has an extraordinary opportunity to add valued expertise that can foster collaborative programs consistent with NIH’s current efforts to increase translational research. More important, an opportunity may exist for the College’s Department of Pharmaceutical Sciences to gain an important footprint at OHSU and additional access to the Portland medical research community. The medicinal chemistry/natural products group at OSU’s Collge of Pharmacy must be the leading authority in the State in drug discovery. Thus, it is recommended that this strong group add a faculty member in Portland with a background in chemical biology/chemical genetics who can facilitate and conduct high throughput screening assays (enzyme, high content cell-based) on new natural products isolated or engineered by the Corvallis group and on relevant pharmacological targets. While the initial emphasis of this group may be in infectious disease it is likely that research opportunities will lead to other health needs. This proposed addition is consistent with the Department’s long-term plans to greatly expand in drug target and analysis.

Pharmacology Faculty. Five tenured/tenure track faculty make up this area of concentration including: Professor Mark Leid, Associate Professor Theresa Filtz, and Assistant Professors Arup Indra, Jane Ishmael, and Chrissa Kiousi. The group pursues varied but integrated research programs with an overall emphasis on signaling. Research projects focus on nuclear receptors (Leid and Indra), phospholipase mediated signaling (Filtz), glutamate receptor interactions (Ishmael) and signaling-activated transcriptional regulation of cardiovascular and muscle development (Kiousi). The group is young, collegial and highly energetic. Interactions are constructive with evidence of developing collaborations. The faculty expressed a desire to expand their graduate training and a long-term goal of the college is to add FTE to this research area. A major structural strength of the Pharmacology group is the availability of a transgenic mouse facility. The College has recently provided a significant investment in the production of this facility with plans for ongoing improvement and expansion. The facility plays an essential role in the development of murine research models which provides a critical component in the majority of the research programs in this area of concentration. The College is encouraged to proceed with its plans for continued development.

Pharmaceutics Faculty. There are three faculty (plus one emeritus) that make up the pharmaceutics section of the College: Associate Professor Mark Christensen, and Assistant Professors Rosita Rodriguez-Proteau and Zhengrong Cui. The traditional focus of this group has been formulation and drug delivery, but with the recent

retirement of Professor Ayres, this is perhaps changing. Recent publications suggest an increased focus on permeability models for studying natural products (Rodriguez-Proteau), and highly novel approaches to immunotherapy and vaccine delivery (Cui). The latter appears to be an area of great potential for the department, and it is strongly recommended that the next faculty hire be made to strengthen this research focus. There is considerable risk that this group lacks critical mass with respect to faculty and students.

2.D. Graduate Curriculum and Degree Requirements

2.D.1. Introduction

Graduate degrees are offered in three research areas of concentration: medicinal chemistry and natural products, pharmacology, and pharmaceuticals. A professional Pharmacy degree is not required for students entering the graduate program. Offerings include both M.S. and Ph.D. programs. M.S. student programs usually consist of 50 to 60 credit hours with a minimum of 12 credit hours of thesis research and 2 credit hours of seminar. The Ph.D. program consists of 110 credit hours with 30 to 60 hours of coursework and 50 to 70 hours of thesis. PHARM 735 ("Foundations of Drug Action") is required for all areas of concentration. All students are required to make an annual presentation (talk, poster) at a yearly faculty/graduate student research retreat of which there is a requirement to make at least one formal presentation every other year. All students are required to attend Pharmacy seminars and Pharmacy journal club. Students funded on GTAs are also required to conduct three research rotations. In addition, curricula for each research area have been developed that are discipline-specific and include specific course requirements with suggested electives appropriate for each area of concentration. In all cases, the intent is to design a curriculum tailored to the needs of the individual student. As such, the development of the final plan of study for each student is designated by the students' graduate committee. The flexibility of the graduate committee to design specific curricula for incoming students originating from diverse backgrounds was considered a strength of the program.

Seminar-type programs within the Department of Pharmaceutical Chemistry are multifaceted. They consist of Departmental seminars, a newly instituted biweekly journal club that focuses on issues of general interest to all three areas of concentration, and tract-specific journal clubs. In addition, there are opportunities for students to present at regional (e.g., the Volcano Meeting) and national conferences. The Department's seminar program is irregular and typically occurs every two-to-three weeks. Students do not present podium presentations within this program but rather have opportunities at the College's annual Spring retreat and in tract-specific journal clubs. The current use of the Departmental seminar program is an opportunity loss. There is sufficient available time to require students (graduate students and postdoctoral fellows) to present a formal seminar every two years on a topical paper of interest. Implementation of this seminar requirement would meet several unmet needs in the program. First, a regularly scheduled seminar program would foster cross-disciplinary knowledge among the three

areas of concentrations. Second, student-led seminars would provide increased experiences in teaching, a concern raised by several graduate students. Third, a regularly scheduled seminar program would create greater cohesiveness among the different, separated research groups. Finally, in addition to these seminars, seminars from researchers in industry would provide OSU graduate students with increased understanding of research conducted in pharmaceutical and biotechnology companies.

Following completion of the designated coursework, all students are required to take a written and oral examination for degree candidacy. Students in pharmaceuticals take a written examination whereas students in medicinal chemistry and natural products and students in pharmacology prepare mock grant proposals. In part, as a consequence of the self-study exercise, the Graduate Studies Committee recently implemented a requirement for all students to complete their preliminary examinations by the end of their 10th academic term. This provides an excellent mechanism for general oversight to insure that individual students remain “on track” and to identify deficiencies early in a student's program.

Due to increasing national demand and based on recommendations of the American Association of Colleges of Pharmacy, the College has also developed a PharmD/Ph.D. Program. Students must be separately accepted into the professional program and the graduate program and fulfill the requirements of both. While two students have enrolled in this program, only one has continued to near completion. It appears evident that, in addition to the substantial time commitment presented by this degree, there is also a significant financial burden on the student particularly during pursuit of the PharmD portion of the program. Consequently, a proposal is being developed to identify a source of funding for students during the PharmD program. This may make the program more attractive to interested students and contribute to the success of the program.

Medicinal Chemistry and Natural Products Graduate Program. Students in the Medicinal Chemistry and Natural Products area of concentration take 36 credit hours of classes (~12 classes). Of these classes only PHARM 735 is required. The curriculum is flexible and accommodates the specific research themes (tracks) of the five members in this group. Thus, students are advised by their research advisor to take graduate credit Pharmacy classes in biosynthesis, bioorganic chemistry, and in medicinal natural products; and classes in other departments that cover advanced organic chemistry, structure determination, biochemistry and molecular biology to fulfill didactic needs necessary for their research. The number of required credit hours (36) is higher than most peer graduate programs and is considered by the Committee as a strength. It is admirable that faculty invest their student's time in formal educational classes at the expense of added laboratory research in their first two years of graduate study. Absent from the curricular is an intensive graduate class in pharmacology. This deficiency can perhaps be addressed internally within the College with future hire(s) in Pharmacology.

Pharmacology Graduate Program. Students in the Pharmacology area of concentration are required, to take PHARM 735, and PHARM 564. Unless a student can demonstrate a strong background in Pharmacy, students are also required to take the Pharmacology I, II, and III series (PHARM 591, 592, and 593). A graduate level biochemistry series (BB 590, 591 and 592) is also usually required. The remaining coursework available for recommendation for the degree originate from multiple disciplines including Animal Science, Chemistry, Microbiology, Molecular and Cellular Biology and Statistics and are required based on the educational background and career objectives of the student. Discussions with graduate students indicated that students were generally pleased with course offerings in this area of concentration. However, as noted above, the curriculum lacks an intensive graduate-level class in pharmacology and better use of the seminar program could be implemented. Also, students in this area of concentration indicated a requirement to produce at least one peer-reviewed publication from their thesis research. However, others within the same concentration indicated a minimum requirement for three. The policy on the expectation for publication should be clarified. A requirement for a minimum of three publications may not be a reasonable expectation for some student programs.

Pharmaceutics Graduate Program. Students in the pharmaceutics program can choose between three curricular pathways: drug delivery, pharmacokinetics, or drug metabolism. All tracks require PHARM 735. The bulk of the course requirements are identical for each track (prerequisites in mathematics notwithstanding for the pharmacokinetics track), with appropriate requirements in chemistry, pharmacy, and statistics. Presumably, the major differences between the tracks involve the current topics course(s), additional mathematics prerequisites for the pharmacokinetics track, the requirement of a statistics or toxicology minor for the drug metabolism track, and the addition of a microbiology requirement for the drug delivery track. Two pharmaceutics faculty do the bulk of what appears to be a very heavy teaching load in the college.

2.E. Administration, Financial and Organizational Support

2.E.1. Administration

The Department of Pharmaceutical Sciences is one of two departments in the College of Pharmacy. The Chair of the Department of Pharmaceutical Sciences, Professor Gary DeLander, reports to the Dean of Pharmacy, Professor Wayne Kradjan. Professor Gary DeLander also serves as the Associate Dean for Academic Affairs. In addition, Professor Mark Leid, also provides administrative services for the College in his position as the Assistant Dean for Scholarship. Dean Kradjan and Dr. DeLander provide the College's graduate program with direction and guidance. In the past seven years this leadership team has invested substantial new resources to facilitate growth of the graduate program (*i.e.*, GTAs, retreat, faculty start-up packages, graduate recruitment, instrumentation). They have crafted a unit with considerable focus that allows this modest size department to have critical mass in two contemporary areas of pharmaceutical sciences (natural products, genetic murine models for disease). In

addition they have developed and put in to place a strategic plan for the development of a third area of focus in biopharmaceuticals. This leadership team has also created an impressive long-range plan to expand the Department from its current faculty size of 14 to 23, and to integrate the areas of concentration around the central theme of translational research. Finally and most importantly, the College's leadership has created a nurturing environment that fosters research and collegiality.

Dr. Theresa Filtz currently serves as the chair of the Graduate Studies Committee. Dr. Filtz's leadership and administrative expertise was widely acknowledged and praised throughout the site visit. Members of the Graduate Studies Committee represent all disciplines in Pharmaceutical Sciences and Pharmacy Practice. Members for the academic year 2006-2007 include Dr. George Allen, Dr. Mark Christensen, Dr. Zhengrong Cui, Dr. Jane Ishmael, Dr. Chrissa Kiousi, Dr. Dale Kraemer, Dr. Taifo Mahmud, David Blanchard, the graduate student representative, and Dr. Gary Delander as an ex officio member. As described in the Self Study the Graduate Studies Committee makes final admissions decisions, recommends GTA assignments, sets policy related to the Pharmacy graduate program, prepares the decennial self-study, organizes the annual faculty/graduate student retreat and orientation programs, selects presentation and travel awardees, and monitors student progress. Although this committee appears effective in supporting and overseeing the graduate program, the review team recommends that the Department consider a more efficient and less time-consuming approach, including the establishment of an additional committee(s) to share the responsibilities of the existing committee.

2.E.2. Financial Support

Graduate students are supported by a variety of sources including seven to eight students on College-funded GTAs and eight students on grant or contract funding as GRAs. The College of Pharmacy supports the graduate programs through the provision of GTA positions and the annual faculty/graduate student research retreat. In addition the College has provided funding for travel and expense to bring potential domestic students to Corvallis. Due to this investment in recruitment the Department successfully enrolled two of the three visiting students this academic year. It is noteworthy that there has been a three-fold increase in College funds to support pharmacy graduate student stipends over the last five years. The College currently provides \$200,000 for GTA stipend support.

Although the Department has done an exemplary job of securing interim funding for students, it is not clear how sustainable this will be in the future. The review committee recognizes that the current uncertainties in federal and private research funding could potentially have a negative impact on financial support for graduate students. Faculty members also expressed concern that funding of graduate students is unstable due to dependence on external research grants. From a budgetary perspective long-term sustainability or growth of the Department will depend on not only a stable funding stream from the College but also increased probability that all research faculty secure external funding to support graduate students.

2.E.3. Organizational Support

Ms. Debra Peters, administrative assistant, is assigned 0.25 FTE to the graduate program. She processes all graduate student applications, maintains correspondence with prospective students, organizes recruiting, and serves as a central resource for student and faculty concerns related to the graduate programs. Despite her 0.25 FTE allocated for the graduate program, the overall impression is that her appointment is adequate to meet the current administrative needs of the Department.

2.F. Facilities, Equipment and Other Infrastructure

2.F.1. Research Facilities and Equipment

The research facilities, including laboratories and offices, available to faculty and graduate students are located in three separate buildings on the OSU campus: the Pharmacy Building, the Oak Creek Building, and Weniger Hall. The Oak Creek Building which is located on the other side of campus from the Pharmacy Building provides space for three research groups in the natural products area. Research space in Weniger Hall is currently being used by a new medicinal chemistry faculty member. The Department as a whole is spread across campus and the Medicinal Chemistry and Natural Products faculty, in particular, is spread across three locations on campus. This situation is less than ideal for graduate students in these programs and puts them at a significant disadvantage for research productivity and educational experiences. The College should strive to unify the Medicinal Chemistry and Natural Product unit within one building that is equipped to conduct contemporary research in natural products and permit the development of the full potential of this interactive group (faculty and students).

The review team visited laboratory facilities and toured both the instrumentation laboratory in the Oak Creek Building, which houses the nuclear magnetic resonance spectrometer, and the rodent facility in the Pharmacy Building. During the last eight years the College has made significant investments in research infrastructure and equipment to support the training of graduate students in modern techniques. These investments included renovation of labs within the Pharmacy Building and the Oak Creek Building and in analytical equipment including a 300 MHz NMR machine, an LC-mass spectrometer with HPLC input, and a JASCO P1010 Polarimeter. In addition, the rodent housing facility in the Pharmacy Building was renovated last year and is capable of housing hundreds of mice for use as animal models of disease or development.

Despite the renovations, the review committee is concerned about the lack of safety procedures in all laboratories and inadequate infrastructure (e.g., linear footage of chemical hoods, house vacuum, house gas, elevator, floor drains) and ventilation in the Oak Creek Building. Efforts need to be made to endorse rigorous safety procedures in all laboratories that are utilized by students and faculty. In addition, efforts need to be made to upgrade the infrastructure in the Oak Creek Building and the Pharmacy

Building including the installation of emergency power and expansion of the animal quarters. The College should consider upgrading to a higher field strength NMR magnet for greater resolution, and the addition of a cryoprobe for the NMR would be a tremendous benefit when working with small quantities of natural products. Also, given the very high maintenance requirements of LC/MS systems, the College may want to consider extending any service contracts it currently has on the instrument.

2.F.2. Other Infrastructure

Students have 24 hour access to the Pharmacy Building and are assigned office space and/or desks in their designated laboratories. Study tables and computers are available for use by graduate students in a small resource room in the Pharmacy Building. Students also benefit from the proximity of the College to the central campus library (The Valley Library). Pharmacy Room 113 includes additional space specifically designated for graduate students with desks, chairs, internet connections, a couch, and a small conference table. A refrigerator, coffee machine, microwave, and a photocopy machine are also available in this space for graduate student use.

Instructional facilities include one large lecture hall (Room 305) and two classrooms (Rooms 107 and 329). The conference room, Room 213, is also used for small group instruction. The lecture hall accommodates most of the large group instructional needs of the College and is a "University enhanced classroom" which has a large, motor-driven screen, an overhead video projector, a public address system that includes a wireless microphone, a network connection and the ability to project images either from a computer (using, for example, PowerPoint), VCR tape, or DVD. Overall, the graduate student office accommodation and class rooms are adequate or above average.

3. PROGRAM PRODUCTIVITY AND OUTCOMES

3.A. Curriculum and Mentoring

The faculty, in the vast majority of cases, appear to effectively deliver the courses required or recommended for the areas of concentration and on a regular basis. Some courses are offered annually whereas the majority of graduate courses are offered on an alternate year basis. Consequently, in most cases the graduate courses appear to be readily available for student programs. The one exception to this is PHARM 536 which does not appear to have been taught since 2002 and no longer appears in the course catalog. This course is not required for any of the areas of concentration but is one of the recommended courses for the Pharmaceutics area of concentration. The future availability of this course should be clarified. Also, the availability of PHARM 585 appears to be somewhat intermittent having been offered in 2001 and 2005 but with no clear periodicity for future offerings. This class is also not required but is one of the recommended courses for the Pharmacology area.

In 2005 the Graduate Council approved the use of some professional 700 level Pharmacy courses for the graduate program. Consequently, some of the graduate courses meet concurrently with the professional students and are fairly large enrollment classes. Among these courses are PHARM 735, 591, 592, and 593. The remainder of the graduate offerings is targeted specifically to the graduate program and thus, represents lower enrollment classes. The graduate curriculum also relies on a variety of courses taught through various other programs and departments throughout the University. While this could present problems associated with course content and availability that cannot be directly addressed by the Pharmacy graduate program, this practice appears to be very effective and provides an efficiency that could not otherwise be met, particularly given the small size of the faculty. Discussions with students indicated that they are generally very happy with the available curriculum. In general, the graduate program appears to provide a suitable curriculum that is offered in a timely, effective manner.

There is no formal Graduate Curriculum committee. Oversight of the graduate curriculum appears to have fallen under the purview of the Graduate Studies Committee and primarily as a consequence of the recent internal review. The program is encouraged to establish a mechanism for intermittent review of the graduate curriculum to insure that course requirements and offerings remain consistent with the goals of the graduate program. It was noted that an ethics class was not required or recommended for any of the areas of concentration. However, discussions with the faculty indicated that some faculty members advise their students to take an ethics course. The graduate program may wish to make this a consistent recommendation.

Medicinal Chemistry and Natural Products Curriculum. The medicinal chemistry graduate class syllabi (PHARM 537, 540) show evidence of carefully constructed classes in contemporary areas related to biosynthesis, bioorganic chemistry, and natural products. Responses from students indicate that these classes were valued, and helpful in their training. The addition of Professor McPhail to the teaching program is expected to provide further expertise in the area of natural products and should meet the needs of PHARM 540 (Medicinal Natural Products Chemistry).

Pharmacology Curriculum. The nature, quality and availability of coursework for the Pharmacology area of concentration appears well-managed. Faculty participation in course offerings and graduate training is high and students appear pleased with the area of concentration. The majority of participating faculty are junior faculty but strong leadership appears to have been provided by Dr. Mark Leid. A long-term goal of the College is the addition of another faculty member to this area. This should help to further strengthen this area of concentration.

Pharmaceutics Curriculum. The curriculum in pharmaceutics at the College appears appropriate, comprehensive, and topical. However, it appears that a very heavy teaching load is shared over a small number of individuals such that the curriculum could be imperiled if the faculty in this concentration is not expanded in the very near

future. Moreover, given the highly structured nature of how students must progress through the curriculum, and that students who graduate are highly competitive in terms of employment prospects, the College must continue to offer all courses on a regular basis, to the potential detriment of faculty time spent on individual research goals unless the teaching faculty is expanded.

3.B. Student Successes (level, quality): Student Scholarly Productivity/Awards and Honors.

In general terms, the graduate student experience at the College appears to be a highly positive one. The research environment is stimulating, student life is collegial, and graduate advisers take an active interest in their students' work and ideas. Moreover, the facilities provide an adequate preparation and training for future careers in science, and the students publish and graduate with satisfactory to excellent insights and skill sets (see Section 3.C).

The College places the primary responsibility of training students upon individual faculty, which is appropriate, particularly in the transmission of modern laboratory techniques and the use of advanced equipment. And while satisfaction surveys of students from the College consistently outscore, in terms of favorable responses, the aggregate of scores for all graduate students at OSU, it is nonetheless of concern that the only response that describes lower than average satisfaction was that the research professor "provided constructive criticism on my research". It may therefore be useful for the College to review its efforts to "provide more centralized exposure to professional issues" as a complement to individual mentoring. These issues fall under a number of main categories: training in hypothesis development, development of presentation (oral) and writing (grantsmanship, scientific publication) skills, opportunities for teaching and/or interning, and exposure to cross-disciplinary and translational research. Discussions with both faculty and students revealed a high level of satisfaction that critical thinking skills were being honed in the laboratory, and that faculty were available for discussion, encouragement and constructive criticism. Perhaps, this represents a positive trend that will hopefully be reflected in subsequent student surveys. Students and faculty were also in agreement that oral presentation skill training was provided in group meeting presentations, one-on-one coaching for preliminary exams, and the annual research symposium. Nonetheless, it might be useful for the College to develop a metric for tracking progress of students in this regard, especially for those students, international or otherwise, who enter the program without much formal training in this regard.

The College is also doing a commendable job of balancing the needs of students to develop their own professional writing skills with the very real needs of faculty to produce publications in a timely manner. However, perhaps greater emphasis could be placed on identifying those students that require additional help to improve their writing skills as early as possible in their tenure at the College, so that when they are finishing their experimental work they might be in a better position to write their thesis and perhaps even assist in the preparation of manuscripts. There was, too, some confusion

as to what the formal graduate school requirements were with respect to scholarly (journal) publications for graduation. It is highly advisable that students publish as much as they can (and documentation suggests that most research groups are publishing good quality papers at a decent rate), and that if publications are required for graduation, that this is both clearly communicated and uniformly applied.

Some students expressed an interest in being able to teach or co-teach an undergraduate lecture; while an informal mechanism exists whereby faculty can easily accommodate such requests, it might be useful to make this opportunity more widely available to those who might not know about it, or would not have otherwise considered such an option. Similarly, there was strong interest from students, about half of who expressed an eventual desire to work in industry, for internships outside of those that are required for students in the pharmaceuticals track. The College may want to explore greater outreach to biotechnology and pharmaceutical companies in this regard (see Section 3.C).

An area where the College could place a greater emphasis than it does already is in actively sponsoring and enabling cross-disciplinary and translational projects. It is hoped that with the advent of OTRADI and other fledgling collaborative projects across the college, that these opportunities will multiply, though careful oversight will be required. It is encouraging that the College's future plans embrace this as a worthy goal, which will be a great benefit for students in their careers in academia (multi-investigator grants), industry (multi-disciplinary teams), or otherwise.

Students have done very well in achieving various honors and awards while they are at the College. These include a number of prestigious travel awards and graduate fellowships, many of which are highly competitive. Students have been first author on a number of important publications from the College (*Vaccine*, *Organic Letters*, *Journal of Natural Products*, *Chembiochem*, *Tetrahedron*, *International Journal of Pharmaceutics*, *Pharmaceutical Research*, *Journal of Biological Chemistry*), though this skews perhaps too strongly toward the natural products/medicinal chemistry students. Greater effort should be made to ensure that Ph.D. students in all tracks graduate with one-to-two first author publications in high quality journals.

3.C. Student Retention, Graduation Rates, Employability

Data presented by the College indicates that in the last 10 years, 45 out of 56 graduate students have either graduated or are advancing in a timely manner towards graduation, a roughly 80% retention and graduation rate. This percentage compares very favorably with estimates of what the national average is thought to be (50%). Data also suggest that >90% of students admitted into the program either passed their preliminary exams to advance into the doctoral program proper, or actually receive a degree within 3-7 years of entry into the College. There appears to have been one year (2004) in which the cohort did not advance as expected, which is partially explained by some students leaving when two research active faculty left the College. The College seems well on track to continue to produce high quality graduates in a timely fashion,

though it would be well advised to reduce the number of students who have been in the program for > 6 years, ensure equitable distributions of promising new students to the younger faculty, and maintain funding levels to support all students that advance through the program.

The majority of students who graduate from the College have found placement in positions well suited to their backgrounds and course of study. It is noted that many international students go abroad to pursue academic appointments in their (presumably) home countries. The College would do well to maintain ties to these institutions that may provide future applicants to the program. Faculty had a realistic view of job prospects in their respective fields, and were proactive in mentoring their students to take on projects and/or pursue postdoctoral studies that would increase their likelihood of forging scientific careers if they so desired. Many of the students, particularly those that planned to pursue careers in industry, expressed the desire to gain more first-hand contact with representatives from that sector, and well as some frustration that recruitment efforts on campus seemed to be aimed primarily at undergraduates. The College might want to consider inviting more industry representatives to give seminars and lead informal discussion groups, as well as to invite back alumnae from the program to talk about their first-hand experiences in gaining employment after graduation. It was also suggested that the very successful internship program that is required for all or most of the students in the pharmaceuticals track be expanded to provide opportunities to all students, though there may of course be practical reasons why a 3-6 month internship may be untenable in other disciplines. In addition, many students would benefit from additional mentoring with respect to C.V. writing and gaining job interview skills.

Medicinal Chemistry and Natural Products Student Outcomes. Students exit from the medicinal chemistry and natural products area of concentration well trained. Most proceed to postdoctoral positions, which is common for this discipline. The students are placed in leading laboratories which is a direct measure of their training at OSU. Upon completion of their educational training students take positions in academia (*i.e.*, Cairo, Khon Kaen, Nanyang), industry (*i.e.*, Pfizer, SIGA, Wyeth), and governmental laboratories (*i.e.*, Lawrence Livermore, NIH). Student authored publication is high and is consistent with faculty productivity. Furthermore, student satisfaction from the research experience and training appear excellent both from exit interviews and discussions with students during the site visit.

Pharmacology Student Outcomes. The Pharmacology area of concentration consists primarily of young faculty and as such, there is very little information on student success in this area. Since 2003, three Ph.D. and two M.S. students have been graduated by faculty participating in this area. Two of the Ph.D. students were graduated from the interdisciplinary Molecular and Cellular Biology Program and not part of the Pharmacology area. Also, one of the M.S. students was very recently graduated. Of the remaining two students, both have gained successful employment. One is a research scientist as a commercial pharmaceutical company in Japan and the other is employed

as a faculty member at a University in Thailand. As such, student success appears favorable.

Pharmaceutics Student Outcomes. Graduates from the pharmaceutics track have been highly employable, obtaining permanent positions in academia or industry without the need for postdoctoral experience. Pharmaceutics students also appear to benefit from the required 6-month internship in an industrial setting, which may provide valuable first-hand experience. In addition, the research active laboratories in pharmaceutics are producing a number of high quality publications and research awards, and the College would be well advised to build on this by actively recruiting additional students (and faculty) into this cluster.

3.D. Faculty Scholarly Productivity/Awards and Honors (quality of faculty and adequacy to achieve missions and goals; level and quality of faculty performance)

Using accepted metrics, faculty productivity for OSU Department of Pharmaceutical Sciences is very strong. Table J1 of the Self-Study lists for 2001-2006 242 peer-reviewed papers, 13 patents, 186 abstracts, and 114 invited talks. Peer-reviewed publications steadily increased during this time frame. Figure J3 of the Self-Study plots the Department's grant and contract research support from 2002-2006. During this time period research support increased from ~\$1.25 million dollars (direct costs) to just below \$2 million dollars. The Department expressed a concern that current NIH pay lines may impact the success rates of competitive renewals and increase the time required to garner new awards.

Medicinal Chemistry and Natural Products Faculty Outcomes. The Medicinal Chemistry and Natural Product unit's scholarship as evidenced by publication (quantity, quality) and presentations is very strong. This unit is among the nation's leading academic centers of excellence in natural products (other centers include the University of Illinois at Chicago and the University of Mississippi). The OSU group during this decennial period has amassed a solid record of publications, presentations, and patents. The group has collectively published in leading, peer-reviewed journals. Using the four year 2003-2006 period, the publication record for Professors Mahmud, Proteau, Stevens, and Zabriskie were 19, 14, 13, and 13, respectively (Dr. McPhail joined OSU in Fall, 2006). If we add Professors Gerwick's publications to this time period the total number is 91 for this area of concentration.

Another measure of productivity is grant support. Currently, three faculty (Mahmud, Stevens, Zabriskie) serve as a PI on NIH R01 grants, and new Assistant Professor McPhail serves as a core leader on an International Cooperative Biodiversity Group U01 grant. Bolstering this support are additional funds from the American Heart Association (Proteau), Herman-Frasch Foundation (Mahmud), Medical Research Foundation of Oregon (Mahmud, Stevens), USDA/CREES (Stevens), and Smithsonian Institute (McPhail). An important source of research funds comes from the College

where a five year commitment has been given for the identification of new natural products (e.g., antibiotics) from a rare Indonesian collection. These funds have helped OSU's promotion of OTRADI at the State level. The current funding of the group is sufficient to maintain the level of scholarship at the status quo. It, however, does not allow for growth, and nor does it provide the necessary grant portfolio to withstand the uncertainties of today's funding climate. Analysis of data provided by the College show a faculty that is proactive in submitting grants and that grants are being submitted to both federal sources and foundations. This activity is the norm today given the shortage of research funds. It will be necessary for the faculty to maintain this level of grant submission in the immediate years ahead and to broaden their efforts to include joint submissions with OSU and OHSU faculty, and to look to possible synergies with industry. The College's goal to submit a graduate training grant proposal (or program project grant) cannot wait to 2011.

Yet another measure of faculty output is student training. The unit has consistently moved students along the graduate training process with the end product being quality trained students consistent with OSU's graduate training mission. For the period 2002-2006, all members of the unit matriculated graduate students through the program (Gerwick: Ph.D.: 6, M.S.: 1; Mahmud: M.S.: 1; Proteau: Ph.D.: 4, M.S.: 1; Zabriskie: Ph.D.: 1, M.S.: 1). Finally, during this decennial period five US patents were awarded to faculty.

The Medicinal Chemistry and Natural Products faculty have maintained a visible professional profile both in service and leadership. Recently, Professor Mahmud was honored with the Phi Kappa Phi Emerging Scholar Award.

Pharmacology Faculty Outcomes. The Pharmacology area of concentration consists of predominantly young faculty with only 1 full professor. The remaining faculty are represented by one recently-promoted associate professor and three assistant professors with two faculty in the area for 1 year or less at the time of the internal review. Consequently, metrics of faculty productivity for this area of concentration are not yet readily apparent. Nevertheless, given this caveat, current measures of productivity appear generally "on track". There were 24 publications from 2003-2006 attributable to work conducted by faculty while in their current positions (three faculty). These same faculty also graduated three Ph.D. students and two M.S. students during the same time interval. Currently, approximately one-third of the total graduate students in the program are being trained in this area of concentration. Also, funding for this group of faculty in 2006 included one PI on a NIH R01 grant and PIs or Co-PIs on grants from the NIH/NIEHS, NIH/NIHLB and American Heart Association. The faculty are acutely aware that successful applications for funding is key to the future success of this program area and considerable effort appears to be ongoing in this regard. The faculty are encouraged to maintain this effort as it is essential to maintaining the current area. Further, given the faculty's expressed objective of growing this area of concentration, greater success in generating funding will be crucial to this growth.

Pharmaceutics Faculty Outcomes. The pharmaceutics faculty is extraordinarily productive, given its very small size and the recent retirement of one of its principal senior research faculty (Dr. Ayres). Assistant Professor Cui has published a remarkable series of papers in recent years, his student has been awarded a prestigious graduate fellowship, and has moreover been commendably creative and proactive in obtaining research funding in what is a very competitive climate. The publication record of the remaining faculty is adequate to poor, though a fairly large teaching load shared over a very small number of instructors may have contributed to this record. Again, the need for additional research active faculty hire in this concentration is urgently required, and will help ensure that productivity in this section of the College does not decrease.

E. Level of Quality of Infrastructure; Viability of Scholarly Community with Which Students Can Interact

The infrastructure within the OSU community has the potential to augment the educational and research experiences of graduate students in the Department of Pharmaceutical Sciences. Potential collaborations that the College might explore include departments where natural synergies are or would likely be found: Department of Chemistry, Department of Biochemistry & Biophysics, the Veterinary College, Interdisciplinary Graduate Program in Molecular & Cellular Biology, and Department of Economics. The Department of Pharmaceutical Sciences currently has a cross-disciplinary focus and draws students and supports them on GRA appointments from several programs at OSU (e.g., Biochemistry & Biophysics, Molecular Cell Biology and Genetics). Building on these efforts to link with other programs at OSU could potentially enhance the educational opportunities for students and promote multidisciplinary research, translational projects and grant-writing. Enhancing student interaction with other scholarly units on campus will greatly benefit students who plan to seek careers in academia or industry.

Another potential area of collaboration lies within a number of joint activities between the College of Pharmacy and the Department of Public Health. At the heart of this collaboration are the courses offered by Public Health faculty in the areas of health management, health policy, epidemiology, and biostatistics. In addition to courses being available to pharmacy students, the faculty in the Department of Public Health stand willing and able to work with faculty in the College of Pharmacy on a variety of different projects including patient safety, clinical outcomes, evidence based practice, and quality improvement. The participation of the College of Pharmacy and Department of Public Health in the Institute for Healthcare Improvement's Health Professional Education Collaborative provides yet another opportunity to work with one another. The breadth and depth of collaboration might be further enhanced by jointly hiring faculty members who can work effectively in both settings.

F. Program Growth and Diversity

The program currently has 21 Ph.D. students and 14 tenure track faculty in the Department of Pharmaceutical Sciences. Faculty have increased by two over the last

ten years, but due to turnover, half of the faculty are at the assistant professor level; there are only two full professors. The Department is seeking an additional faculty member in the area of Pharmaceutics; the long-term goal is to increase the faculty to 23.

Student enrollment has varied between 23-35 students per year over the last 10 years. Current enrollment is currently relatively low; however student retention is exceptionally high. Also since the last review, the Department has increased GTA's dramatically from 2 to 7.5, that are supported by funds from the College. One of the strategic goals of the Department is to increase enrollment, which will require additional research funds to support students after their one year of GTA funding.

The Department has put considerable effort into recruiting students, both to identify successful students as well as to promote the diversity of the student body; in their case by increasing the share of domestic students. They have realized an increase from 15 to 42% since 1994.

The College of Pharmacy is currently expanding the number of faculty positions in the broad area of pharmacoeconomics/outcomes/ policy/epidemiology research and pharmacy administration. As described in the Self Study a number of research areas fit under this broad umbrella including evaluation of patient outcomes; economic evaluation of medications and other therapies; policy evaluation and the assessment of subsequent outcomes in patient populations; assessment of antibiotic resistance in the community setting; patient safety and medication reconciliation; and other areas. The review committee commends the College on this direction and in their interest in developing a formal graduate training program as a track in Pharmacy for several reasons. First, a demand exists in the state of Oregon for such a program and trained professionals that can provide guidance for optimal healthcare resource allocation to health care providers, policy makers and legislators. The proposed program will fill an important and needed niche in the state. Second, the program is in keeping with both the mission of the College and Oregon State University as a land grant university. Third, this broad umbrella for research interests affords the opportunity to build cutting-edge, cross-disciplinary research and educational possibilities for graduate students.

4. REAL OR PERCEIVED BARRIERS TO GREATER SUCCESS

The barrier mentioned most frequently during our visit was space. Short-term there is the issue of the Department being spread across campus. The medicinal chemistry and natural products faculty is spread across three locations on campus; relocating these at the Oak Creek facility would be an improvement, although not ideal. Longer term the issue of the split between the science and practice programs between OSU and OHSU is perceived as a barrier; the benefits of having the science part of the program united with practice near a medical center would be considerable, particularly for translational research. The lack of research orientation currently at the OHSU campus is seen as a barrier currently.

Another issue raised as a barrier is the low number of students, which is coupled with the issue of their funding. The College has been generous in funding GTA lines, but students eventually need to be pursuing research in a laboratory. The barrier at the moment is the lack of outside research funds. This is fairly acute due to the recent departure of well-funded senior faculty. Recruitment of senior faculty is perceived as too costly in terms of laboratory set-up, but might pay off in the longer run.

5. SUMMARY AND RECOMMENDATIONS

The Department of Pharmaceutical Sciences is a thoughtfully constructed program with national excellence in national products and developing excellence in genetic murine models for diseases. It has benefited from effective leadership from Dean Wayne Kradjan, Departmental Chair Gary Delander, and senior professors Mark Leid and Mark Zabriskie. The Committee commends the graduate faculty for their efforts and commitment to excellence.

The Department has continued to diversify over this decennial period to respond to new opportunities in contemporary pharmaceutical sciences. The faculty has undergone significant transition. Two senior, nationally recognized faculty members have left within the last few years, one (Ayres) to retirement and another (Gerwick) relocated to another institution. In its place several new assistant professors have been hired (Cui, Kioussi, McPhail). This change has opened new opportunities and placed stresses on the infrastructure of the Department. There are significant threats that risk further development. They include the amount and quality of research space, the impact of fragmented space on the integrity of the Medicinal Chemistry and Natural Product group (five faculty spread across three distal sites); the need to augment faculty expertise in pharmaceuticals with a particular emphasis in biopharmaceuticals, pharmacology, chemical biology useful for drug discovery, and translational research; the absence of a nearby research-intensive medical school that can stimulate and foster translational research; the reduction in national funding; and the vulnerability of junior faculty in today's funding climate. The Department has responded with a strategic plan that focuses on natural products where it already has national excellence, the use of unique genetic mouse models to explore diseases, and the development of biopharmaceuticals for vaccines and vaccine delivery.

The Committee makes the following recommendations to strengthen a strong unit within OSU's graduate program. We divide our recommendations on "short-term" goals attainable within 5 years, and "long-term" goals that can be met within the next ten years.

"Short-term" Objectives:

- (1) Hire a faculty member in pharmaceuticals in the area of biopharmaceuticals to build toward a critical mass in this area and to relieve a chronic shortage of faculty expertise in this area of concentration.
- (2) Add an additional faculty in pharmacology.

- (3) Add an additional faculty in chemical biology whose laboratory is housed within OTRADI's high through-put screening facility. The faculty member is expected to accelerate natural product lead identification and optimization and to catalyze the Department's translational studies with OHSU faculty.
- (4) Revitalize the College's presence in the areas of pharmacoeconomics, outcomes, policy, and epidemiology research and pharmacy administration to meet the health needs of the State and the increasing importance of these disciplines.
- (5) Add senior hires to increase leadership, mentorship, and external funding within the Department.
- (6) Strengthen ties to Chemistry and Microbiology to support program project or training grants consistent with the NIH roadmap and initiatives.
- (7) Unify the Medicinal Chemistry and Natural Product unit within one building that is equipped to conduct contemporary research in natural products and permit the development of the full potential of this interactive group (faculty and students).
- (8) Upgrade the infrastructure in the Pharmacy Building including the installation of emergency power and expansion of the animal quarters.
- (9) Initiate a weekly seminar program in the Department of Pharmaceutical Sciences that is a blend of outside (academic, pharmaceutical) and student speakers where students are required to give seminars on a recent, noteworthy publication.
- (10) Endorse rigorous safety procedures in all laboratories.
- (11) Establish a mechanism for the intermittent reviews of the graduate curriculum to insure that course requirements and class objectives are met and updated, and clarify classes recommended for the doctoral program.
- (12) Add a graduate pharmacology class to the graduate curriculum.
- (13) Increase TA lines from 7.5 to 10 over the next five-year period to accommodate the increased expansion of the graduate student body.
- (14) Increase the teaching/research graduate stipend and offer competitive fellowships to incoming graduate students.
- (15) Increase interaction with international students during recruitment and their graduate studies to assess and augment academic, language, and writing skills.
- (16) Develop a formal procedure to monitor graduate student progression and identify students in need of help.
- (17) Clarify expectations required for graduation (*i.e.*, publications) within the Department.
- (18) Expand outreach to alumnae from the graduate program, both in industry and academia. Seminars from alumnae would provide excellent opportunities for current students to learn first hand how to make the transition from graduate school to a professional career.
- (19) Consider contacting pharmaceutical companies with intern programs to see if non-pharmaceutics students (*i.e.*, medicinal chemistry and natural products, pharmacology) could spend 3-6 months in an industrial setting.
- (20) Facilitate greater translational research projects through shared lab meetings, additional contact between faculty and students at the Corvallis and Portland campuses, and in active recruitment of new faculty with interdisciplinary interests.

- (21) Maintain and upgrade the College's instrumentation to sustain and augment its contemporary research programs.

"Long-term" Objectives:

- (1) Move the College to the OHSU site thereby providing a one-stop program for the professional students and unifying the College's faculty. The move to Portland provides several incentives that will enhance the graduate program. First, it will place faculty within a leading biomedical complex and foster translational research. Second, it will unify the College's faculty permitting the two Departments to be housed in one central location. This change will permit the "cross-talk" necessary for studies that bring bench discoveries to the clinic. Third, it will permit OSU's Department of Pharmaceutics faculty to be in close proximity to OTRADI and other State health initiatives.
- (2) Expand the graduate faculty in all current areas of concentration and add expertise in drug target analysis, toxicology, and proteomics (system biology).
- (3) Increase graduate enrollments concomitant with increased external funding.

GRADUATE COUNCIL MEETING

**October 18, 2007
3:00pm, MU Boardroom**

Present: Professors Colwell, Fisk, Francis, Gitelman, Grosskopf, Harter, King, Kioussi, McLain, & Russ-Eft

Absent: Professor Wolpert, Mary Strickroth

Guests: Ryan Readdy, Angelicque White and their guests;
Aaron Wolf, Lynette de Silva, Roger Nielsen, Sherman Bloomer

Award Reception

An award reception was held in honor of Ryan Tucker Readdy, winner of the Hebert F. Frolander Outstanding Graduate Teaching Assistant Award, and Angelicque White, winner of the OSU Distinguished Dissertation Award and nominee for the Council of Graduate Schools/University Microfilms International Distinguished Dissertation Award competition.

Graduate Council Minutes for October 4, 2007

The minutes from the October 4, 2007 Graduate Council meeting were approved as amended.

OLD BUSINESS: Task Force on the Post Doctoral Experience

Tom McLain (Forestry) informed the Council that Barbara Bond and Theo Dreher were appointed to the President's Task Force on the Post Doctoral Experience as Graduate Council representatives. Both Drs. Bond and Dreher are former members of the Graduate Council.

T. McLain also announced that Alix Gitelman has returned to the Graduate Council this fall, representing the College of Science. Dreher had served in Gitelman's place while she was on sabbatical Spring 2007.

Follow up Review of the Computer Science Graduate Program

Standing in for Barbara Bond who was chair of the original review and of this follow-up review, Martin Fisk (Graduate School) presented the report of the Computer Science

Graduate Council Program Review follow-up. The original graduate program review took place in March, 2004. Both M. Fisk and Barbara Bond revisited the school on September 13, 2007. They met with the Director and Associate Director of the School of Electrical Engineering and Computer Science: Terri Fiez and Bella Bose. M. Fisk reported briefly on the progress the Computer Science program has made toward the eight major recommendations made in the original review report.

A. Gitelman asked for more information on the recruitment of OSU undergraduates to the Computer Science program. She asked if OSU undergraduates are recruited because they are the best applicants or because they are more likely to matriculate. M. Fisk could not offer an answer as that topic was not explored in detail during the meeting, however, other Council members suggested two possible justifications for recruiting OSU students: the competitive nature of Computer Science (CS) programs in general, and the high cost of a national recruitment effort. It was suggested that this practice is characteristic of a new program or a program experiencing a lot of competition. Rick Colwell (COAS) asked Council members if it is common practice within their respective units to recruit graduate students internally. All Council members present responded that it is not.

T. McLain asked for clarification on the new process of funding Teaching Assistantship (TA) appointments by research group. He also wondered whether TAs with specific skills are being placed in complimentary CS courses and if the unit's undergraduate instructional needs are being met with this new system in place. M. Fisk could not address those questions. M. Fisk and the Council did have additional conversation on the topic of the funding of CS students, including discussion on the department's move to a more timely TA appointment notification system, the move toward funding PhD students before Master's students, and the raising of Teaching Assistantship stipends.

Discussion was also held regarding the placement of CS graduates. As in the past, most graduates of the Program continue to find industry jobs. M. Fisk also reported that the department has lost faculty members to industry, however, the Program has raised the total number of faculty to 18 after having hired three new faculty members.

A motion was made and seconded to approve the Computer Science Follow-up Review Report. All voted in favor. Motion passed.

Policy for admitting students with 3-year foreign degrees

Graduate Schools in the United States are increasingly receptive to admitting at least some of the applicants with 3-year European degrees. Several universities say they accept such degrees. A minority will not accept applicants from European universities unless they complete four or more years of university education. Oregon State University has fallen into the middle ground of insisting on the equivalent of a four-year accredited U.S. university, but relying on various guides, plus information from OSU programs, to determine which applicants meet this equivalency standard.

T. McLain informed the Council that this topic has been on the Graduate Council agenda each year that he has been a member and he feels that it is important to learn how the European Union's movement to 3-year undergraduate degrees will affect OSU's graduate admissions policies. He said that the Council might want to express an opinion on how the Graduate Admissions Committee (GAC) should handle applications from students with 3-year degrees. He added that it is the Graduate Council's purview to advise the GAC and to modify admissions policies.

M. Fisk then provided the Council members with an overview of the EU decision – and information on how these applications are currently handled at OSU.

T. McLain suggested that we could encourage more applicants from Europe if the language in the OSU catalog is modified to indicate that 3-year degrees are considered on a case by case basis. Sally Francis (Graduate School) agreed that modifying the catalog language would be effective but it would represent a marketing change only. If the Council wants to effect a policy change, the members could decide, for example, that OSU will accept 3-year Bologna degrees only (3-year degrees from other countries would continue to be inadmissible). After additional discussion T. McLain summarized that Council members agreed to ask M. Fisk to perform additional research to learn the admissions policies of OSU's peer institutions and other select universities and to examine the language in their catalogs for the purpose of possible adoption/adaptation.

Category I Proposal for a Graduate Certificate in Water Conflict Management and Transformation

Professors Lynette de Silva and Aaron Wolf gave a short presentation describing the proposed graduate certificate program in Water Conflict Management and Transformation and offered the Council rationale for offering this program at OSU at the present time. Dean Sherman Bloomer offered his college's strong support of the new program. He indicated that there is great national demand for a program in water conflict management and that OSU is uniquely positioned to offer it.

T. McLain asked for clarification on program leadership and the admission process. L. de Silva answered that the graduate certificate would be housed in the Geosciences department and that she would oversee the running of the Program. A. Wolf responded that an admissions committee has not been established. S. Francis mentioned that graduate certificate programs are few and that she doubts that OSU units offering them have formal admissions committees, although she added that one might want to examine how the College of Forestry manages the Sustainable Natural Resources graduate certificate program. L. de Silva told the Council that the certificate program holds the same admissions requirements as the water resources graduate degree programs.

Additional discussion was held concerning:

- Minor vs. Certificate – both are transcript visible
- Percentage of Graduate standalone courses – certificates also held to the 50% rule
- Introduction to policy courses already over utilized by other management programs. Will this limit the number of certificate students?
- E-campus – the design of creative and effective e-courses and the resources resulting from those courses

The Graduate Council members agreed that it is necessary to return the CAT I proposal creating a Graduate Certificate in Water Conflict Management to Geosciences asking for clarification on the following two concerns:

- 1) How will the Graduate Certificate accommodate the 50% rule? Note that in the section of the Graduate Catalog on certificates it states: "Certificate students are subject to all general policies governing the courses for the master's degree." A graduate certificate needs to have at least 50% of its credits as stand alone graduate courses.
- 2) Conversation between Geosciences and the Grad Council led to the understanding that the CAT I proposal is creating both a graduate certificate and a graduate minor. If that is the intent, you will need to submit a CAT II proposal to establish the graduate minor. The option of a graduate minor is only automatic when there is an existing graduate major.

Meeting adjourned.

GRADUATE COUNCIL MEETING

**October 4, 2007
3:00pm, Kidder Hall 128**

Present: Professors Colwell, Dreher, Fisk, Francis, Grosskopf, Harter, King, Kioussi, McLain, Strickroth, & Wolpert

Absent: Professor Russ-Eft

Guests: none

Introduction of new Council Members

Tom McLain (Forestry) introduced himself as Chairman of the Graduate Council and welcomed the Council members to the meeting. He invited all Council members to introduce themselves. New members this year are Rick Colwell (Oceanic & Atmospheric Sciences), Nancy King (Business, F07), and Chrissa Kioussi (Pharmacy). Continuing members are Theo Dreher (Science), Shawna Grosskopf (Liberal Arts), Rod Harter (Health & Human Sciences), Darlene Russ-Eft (Education), and Tom Wolpert (Agricultural Sciences). Representatives from the colleges of Engineering and Veterinary Medicine have not yet been appointed.

Sally Francis (Graduate School) introduced Martin Fisk to the Council members. Dr. Fisk is the new Associate Dean of the Graduate School, replacing Bruce Rettig.

Dr. McLain asked the Council members for help in identifying a graduate student to serve as the student member of the Graduate Council. Students may apply to serve by completing the "Committee Membership Application" a downloadable form located on the Associated Students of Oregon State University (ASOSU) website:
<http://asosu.oregonstate.edu/>

Committee Assignments & Awards Ceremony

Dr. McLain distributed an informational handout presenting websites of interest to Council members and Category I and Category II review process flow charts. He discussed the "Graduate Council Standing Rules," reminding us that the Council is a Faculty Senate Committee and that as Chairman, he reports to the President of the Faculty Senate. He also instructed the Council members on how to access Graduate Council agendas, meeting documents, and meeting minutes.

For a very useful summary of the way the Graduate School is organized and the challenges they face, Dr. McLain suggested that the Council members read the self-

study document prepared by the Graduate School in preparation for its service unit review. Dr. McLain added that the document succinctly states how the Graduate Council fits in relationship to the Graduate School.

The list of committee and subcommittee assignments for 2007-08 was distributed. For the benefit of those who had no prior experience with the workings of the various committees, Dr. McLain described the duties of the various committees.

Sally Francis (Graduate School) emphasized that these are “proposed” assignments and if a Council member has a problem with an assignment, Tom McLain or Helene Serewis should be contacted by Thursday, October 11th.

Dean Francis said a few words to clarify the duties involved with the Western Association of Graduate Schools (WAGS) Thesis Award. Depending on field of study, Dean Francis will ask Council members for help in securing expert reviewers to read two of the six final WAGS award entries. Dr. McLain added that a Council member could volunteer to be one of the expert reviewers, but hopes that he/she would instead assist Dean Francis in finding an appropriate faculty member within his/her unit. Dr. McLain warned that Council members will have enough to do fulfilling their own duties to the Graduate Council and its committees.

Dean Francis also took a moment to encourage Council members to attend the Council meeting on October 18th when the Graduate School will host an award reception for the winners of the Frolander Outstanding Teaching Assistant Award and the OSU Distinguished Dissertation Award. The Graduate Council will meet in the MU Boardroom for this ceremony.

Graduate School Review

Dean Francis reported on the upcoming support unit review of the Graduate School and invited the Council members to participate in the site visit. The site visit will be held October 22-23, 2007. The Provost's new policy on support unit reviews, the Graduate School's self-study, and a tentative agenda can be found at:

http://oregonstate.edu/dept/grad_school/faculty/supportunitreview.html

Dean Francis encouraged the Council members to read the self-study and to in turn encourage people in their units to pay attention to the review and participate if possible.

When asked by Dr. McLain, Dean Francis updated the Council on the Provost's decision to move the graduate admissions function to the Graduate School from the Office of Admissions. The search for an Assistant Dean to implement and manage the new graduate admissions process is currently underway. Dean Francis hopes to have that position filled by January 2008. Although this is a huge undertaking for the Graduate School, Dean Francis is committed to making this work and improving the graduate admissions service for the benefit of all OSU units.

Task Force on the Postdoctoral Experience

Dean Francis reported that President Ray has asked John Cassady, Vice-President for Research, and herself to conduct a study of OSU's practices surrounding postdoctoral scholars. Serving as co-chairs, Dean Francis and Dr. Cassady are launching a task force to look at issues involved in the managing/monitoring of postdocs on campus, including examining employment issues such as salary and benefits and exploring ways of enhancing the OSU postdoctoral experience (mentoring and professional development). Dean Francis hopes to have a report completed by the end of the academic year.

Two members of the task force will be representatives from the Research Council and the Graduate Council. Dean Francis invited Council members, especially those members from colleges that have a large number of postdocs, to volunteer to participate in the work of this task force. Dr. McLain suggested that a previous member of the Graduate Council would also be qualified to serve on the task force. He asked current Council members to contact him by the end of the week if they are interested in serving. If there are no volunteers, Dr. McLain will work with Dean Francis to identify a former Council member to assist.

Other Business

Discussion on agenda items for the October 18th meeting was held.

If Council members find themselves unavailable to attend a scheduled meeting, Dr. McLain asked that he be notified as soon as possible, particularly if the agenda for the missed meeting includes an issue important to their college as other representation may need to be sought.

In closing, Dr. McLain stated that he looks forward to working with the Council this year and promised to be as steward-like of members' time and energies as he is able.

Meeting adjourned.

GRADUATE COUNCIL MEETING

June 7, 2007

3:00pm, Gilkey 109

Present: Blythe, Dreher, Filtz, Francis, Harter, Koenig, Rettig, Russ-Eft, Strickroth, Unsworth, & Wolpert

Absent: Grosskopf, Tadepalli, & McLain

Guests: Belinda Batten, Bill Warnes, Sherm Bloomer, & Steve Hobbs

1. Graduate Council Review of the Materials Science Graduate Program

Hal Koenig (Business) introduced the guests. Council members were joined by Belinda Batten, Head of the new School of Mechanical, Industrial, and Manufacturing Engineering, Bill Warnes, Director of the Materials Science Program, Sherm Bloomer, Dean of the College of Science, and Steve Hobbs, Executive Associate Dean of the College of Forestry.

Theresa Filtz (Pharmacy) presented a brief overview of the report of the Materials Science Graduate Council Program Review. The graduate review site visit took place on March 8, 2007. The full report is appended to these minutes.

The general impression of the review team was that the Materials Science Graduate Program is a good program. It is and has historically been very well supported by the Department of Mechanical Engineering, which provides the program with GTAs, office support staff, and the director's FTE.

Dr. Filtz added that Materials Science is well integrated into the Mechanical Engineering Department. She said that the challenge is that Materials Science has grown beyond the College of Engineering in terms of research interests. Faculty from the College of Science, The Oregon State Materials Institute (OSUMI) and the College of Forestry are interested in working with Materials Science students. Filtz said that the review team wonders how faculty across colleges can truly integrate into this growing program. She then discussed some of the specific recommendations that the review team hoped could help the program through this growth process.

Council and visitor discussion on the following topics ensued:

Curriculum: The faculty are moving forward on revising the Materials Science curriculum to be more useful for students and faculty working outside Mechanical Engineering.

Student Funding: Departments normally give GTAs to students in their own program(s). How can interdisciplinary students be protected from being treated as second-class citizens within their PI's department?

Administrative Structure: Should the program be moved to the Graduate School to allow for the broadest possible participation from all colleges? The program is now well funded by the School of Mechanical, Industrial, and Manufacturing Engineering. The Graduate School's interdisciplinary budget is static unless the Provost can be persuaded to allocate additional funds to boost it enough to accommodate another program.

FTE of Director: Currently, the Program Director receives one course release and 0.10 FTE. Rod Harter (College of Health and Human Sciences) said that the review team collectively agreed that the directorship should be appointed for at least 0.25 FTE.

Slash Courses and the Current Policy on Undergraduate Courses on Programs of Study: Interdisciplinary and multi-disciplinary programs require students who are advanced in one subject to obtain a basic understanding in one or more other subjects. When the Graduate Council approved the requirement that at least 50% of a program of study consist of graduate standalone credits, it never took final action on a proposal to allow a few credits of the remainder to be 4XX courses. Dean Bloomer argued that this is common practice at many respected peers and encouraged the Council to take this issue up again next year.

After the guests left the meeting and after additional discussion, a motion was made and seconded to approve the Materials Science Graduate Council Review Report with a three part addendum, that added:

- A recommendation that the directorship be increased to at least .25 FTE.
- Recognition that the decision whether or not to move the program to the Graduate School remains with the program faculty.
- A recommendation that alternative business models be explored.

All voted in favor. Motion passed.

Dr Koenig then informed the Council that the minutes of May 17, 2007 and today's meeting minutes will be distributed and approved by email vote.

2. Review of the Horticulture Graduate Program

The Council then continued their discussion of the Horticulture Graduate Council Review Report. At the May 17, 2007 meeting, the decision whether or not to approve the report was postponed until further information was obtained from Starr McMullen, the Review Panel Chair.

Dr. Koenig informed the Council that, in a telephone conversation with Dr. McMullen, she acknowledged frustration that the self-study was delivered late and that it appeared that the department gave most of the attention to completing the CSREES and undergraduate reviews. However, she believed that the graduate program was reasonably well-covered in the new self-study. She concluded that the graduate program review was adequate.

The Council discussed the Horticulture Department's failure to fully comply with the procedures outlined in the Graduate Council Program Review Guidelines. Because the preparation for the

site visit was unsatisfactory and the self-study report (when it was finally received) lacked many key components, Council members thought that Dean Dutson (College of Agricultural Sciences) should be made aware of the situation. Dr. Koenig suggested that in future, program review site visits should be canceled if the review materials are not provided to the review panel members by the set deadlines.

A motion was made and seconded to approve the Horticulture Graduate Council Review Report on condition that the department undergo another full review (with a full self-study) in three years.

All voted in favor. Motion passed.

Dr. Koenig and Dean Francis then thanked Dean Rettig and the Council members for their excellent service.

Dean Rettig reminded the Council that, although this is the final Council meeting of the academic year, Category II proposal reviews will continue over the summer. Council members may also be asked to serve on grievance committees over the summer. A new council membership will take over at the first meeting in October.

Meeting adjourned.

GRADUATE COUNCIL MEETING

May 17, 2007

3:00pm, Gilkey 109

Present: Blythe, Grosskopf, Filtz, Francis, Harter, Koenig, Rettig, Russ-Eft, Strickroth, Tadepalli, & Wolpert

Absent: Dreher, McLain, & Unsworth

Guests: John Selker, Starr McMullen, Anita Azarenko, Shawn Mehlenbacher, Larry Curtis, Goran Jovanovic, Brent Steel, Kay Schaffer, Paul Farber

1. Follow-up Review of the CSSA Graduate Program

John Selker (Bioengineering) presented a follow-up report of the College Student Services Administration (CSSA) Graduate Council Program Review. The original graduate program review took place April 19, 2004. Dr. Selker revisited the department on March 27, 2007. He reported that the program director, Rich Shintaku, provided an updated formal written response to all of the original review report's recommendations at the meeting. That response along with the full follow-up report is appended to these minutes.

Before giving a brief overview of these reports, Dr. Selker commented that he was pleased to meet Dr. Shintaku again and that he recalled that the retreat-based self-study distributed before the original review was the best he had seen as a reviewer. He also recalled that for such a small program, running on a shoestring, he was impressed by the large number of people from all over campus that had participated in the review.

Due to time constraints, Council discussion of the CSSA follow-up did not immediately follow Dr. Selker's departure but was held after the next four agenda items. At the time of discussion, Shawna Grosskopf (College of Liberal Arts) indicated, in response to Dr. Shintaku's written comment concerning the continued absence of a public policy course in the CSSA curriculum that Dr. Shintaku might not be aware that the OSU Masters of Public Policy Program has a large number of suitable course offerings that he could consider utilizing. Darlene Russ-Eft (School of Education) said that she would carry that recommendation to Dr. Shintaku.

A motion was made and seconded to approve the CSSA Follow-up Review Report. All voted in favor. Motion passed.

2. Minutes from Previous Meetings

A motion was made and seconded to approve the minutes of April 5, 2007. All voted in favor. Motion passed.

A motion was made and seconded to approve the minutes of May 3, 2007. All voted in favor. Motion passed.

3. Review of the Horticulture Graduate Program

Hal Koenig introduced the new guests. Council members were joined by Starr McMullen (Agricultural & Resource Economics), Anita Azarenko, Chair, Department of Horticulture, and Shawn Mehlenbacher, Graduate Program Coordinator, Department of Horticulture. Dr. McMullen, who served as the chair of the Graduate Council Review Panel, gave a brief overview of the Horticulture review report. Dr. McMullen told the Council that the original graduate program review was conducted over a year ago in conjunction with CSREES and undergraduate program reviews. Because the graduate review panel members did not receive comprehensive self-study materials prior to the site visit in April of 2006, they were unable to finalize their report until this quarter. After the presentation, Larry Curtis, Associate Dean of the College of Agricultural Sciences entered the meeting.

Dr. Azarenko presented the Council with copies of Dr. Mehlenbacher's document "Comments and Corrections" written in response to the review report. She said that these are general comments reviewed by several members of the Horticulture faculty and could be entered as part of the record. She then addressed several of the report's recommendations.

(1)

In response to the specific recommendation to schedule regular meetings of the graduate faculty, Dr. Azarenko informed the Council that most of the strategic planning for the department occurs during the summer because it is very difficult to pull everyone, including the 29 off-site extension faculty, together during the academic year. The plan this summer is to schedule a two-hour meeting of the graduate faculty prior to the meeting of the entire faculty. When asked to confirm the number of Horticulture graduate faculty, Dr. Azarenko answered a total of 41, including 12 courtesy faculty. She added that they will all be required to be physically present at the summer meeting.

Dr. Azarenko then explained why the department does not actively recruit new students. Because the department does not have any graduate teaching assistantships it must rely on soft money exclusively for the support of its students. Recruitment occurs by the faculty only when money, in the form of research assistantships, becomes available. Theresa Filtz (College of Pharmacy) asked Dr. Azarenko how then the department attracts students. Dr. Azarenko answered that the program's reputation is good and people do apply and some are invited to visit. She added that the Horticulture program has a sufficient applicant pool to fill the supported positions that are available.

Dr. Mehlenbacher added that another challenge to recruitment is the diversity of disciplines within the department. Good students are often turned down because their interest areas do not match the faculty's funded research projects. Dr. Mehlenbacher added that the department does not have a shortage of qualified applicants, it just has a shortage of dollars to support them. When Dr. Filtz asked why some of the top applicants did not select OSU, Dr. Azarenko answered that Horticulture's stipend amounts were uncompetitive until very recently. The stipends were raised this past August and are now very competitive.

(2)

In response to the specific recommendation to establish departmental procedures for regularly updating records and in response to the suggestion that a faculty committee be assigned to oversee the process, Dr. Azarenko explained that the graduate coordinator relies on two multi-member faculty committees – the admissions committee, which makes admissions and scholarship recommendations, and the program committee, which works on curricular issues, marketing materials, and the graduate handbook. This structure has long been in place but it had not been communicated well within the Horticulture self-study. In January, additional faculty members were added to these two committees. Additionally, in response to the Review Panel's concern that the department does not have sufficient record keeping procedures, an Office Specialist Level 2 has recently been assigned to maintain all graduate student records.

In response to the recommendations relating to the Horticulture curriculum, Dr. Azarenko updated the Council on the progress made by the Ad hoc College of Agricultural Sciences (CAS) Graduate Plant Sciences Curriculum Committee. That committee is examining the tremendous gaps in the plant sciences curriculum and exploring ways to improve the situation. The CAS is now monitoring departmental hiring of new faculty – insisting that those hired have the ability to help fill the critical educational gaps.

Dr. Filtz asked Dr. Azarenko for an update on the development of an interdisciplinary graduate program in plant sciences. Dr. Azarenko said that the faculty do not have the time to pursue it. The faculty are overworked, over-committed and they have spun their wheels over proposals, but since there is no money behind it, the pursuit has unfortunately stalled.

In regard to the other curricular recommendations, Dr. Azarenko explained her program's stance on common core courses (few and flexible for a reason) and she informed the Council that the program will add a course on teaching methods and grant writing to the lists of suggested courses for all three areas of emphasis. Dr. Russ-Eft recommended AHE 553 (a course in learning theory) to Dr. Azarenko who said that she would consider it. In addition, Dr. Azarenko and Dr. Mehlenbacher assured the Council that Horticulture graduate students are required to give at least one presentation a year, but most do more than that.

Shawna Grosskopf (College of Liberal Arts) asked Dr. Azarenko to address the statement in the Review Report that indicated that the self-study failed to present a clear picture of faculty productivity. Dr. Azarenko indicated that copies of Horticulture faculty CVs were included, but that the program did not summarize the data for the review team. Dr. Azarenko added that faculty productivity is high with over 3 million dollars in grants a year which is equal to or better than many of Horticulture's comparator programs.

Dr. Koenig then asked for additional questions from the Council. When there were none, Dr. Koenig asked the guests if they had any comments. Dr. Curtis responded that this was a thorough discussion but offered to answer questions if the Council had any.

Due to time constraints, Council discussion of the Horticulture report did not immediately follow the departure of the guests but was held after the next three agenda items. At the time of discussion, Council members were concerned over whether or not the review team had enough

hard data to evaluate the program to adequate depth. Because Dr. McMullen had already left the meeting, Council members discussed contacting Dr. McMullen to ask her this before making a decision on the report.

A motion was made and seconded to postpone a decision on the Horticulture review report until further discussion with Dr. McMullen. All voted in favor. Motion passed.

4. History of Science Review Report

Dr. Koenig introduced the new guests. Joining the meeting were Bob Duncan (Atmospheric and Oceanic Sciences), Paul Farber, Chair, History, and Kay Schaffer, Dean, College of Liberal Arts.

As a member of the graduate review panel, Dr. Duncan gave a brief overview of the History of Science review report. He began by complimenting Dr. Farber and the program. Dr. Duncan believes that the History of Science program is a strong and healthy program. Its faculty members have a strong reputation for scholarly activity and though graduate students are few, they are highly competitive. He warned, however, that the program is at a crossroads due to upcoming retirements. The first recommendation made by the review committee is to ensure a critical mass of faculty in order to maintain the viability and quality of the program. The program is encouraged to hire the very best people to carry on the traditions that have been so successful over the past many years. Dr. Duncan then briefly described the remaining recommendations and the reasons behind them.

Dr. Farber told the Council that it was a good report and that he agreed with just about all of the recommendations. He gave the Council an update on the search to replace Dr. Nye. An offer is out to an extraordinary person, who is internationally known, has written 8 books, and is a Guggenheim fellow. Dr. Farber is hoping that the search will be successful.

Dr. Farber agrees with the recommendations to increase student numbers and to increase the number of 500-level courses, but he added, that with the program's limited budget this would be nearly impossible. He informed the Council that History of Science faculty members are putting in for NSF and Mellon training grants, but that would be a temporary solution to the student funding problems.

Dr. Farber discussed the future creation of a graduate student lounge (hoping to find funding for this remodeling project) and his constant search for student office space. He also agreed to begin tracking student placements.

Kay Schaffer then offered her thanks to the review panel whose internal and external members she believed to be excellent. She informed the Council that the History of Science Program is a jewel and she would like to see more programs with cross-disciplinary emphases in the College of Liberal Arts.

Tom Wolpert (College of Agricultural Sciences) asked Dr. Farber to provide more information on the teaching assistantship situation. Dr. Farber explained that there are two teaching

assistantships to support upper division History of Science courses (one from Liberal Arts and one from Science) but College of Science students are usually awarded them. The History Department has no GTA budget; undergraduate courses are taught by regular faculty.

Theresa Filtz asked about the likelihood of replacing the retiring HOS faculty. Dr. Farber answered that there is no question that they will be able to replace the two endowed chairs. He said that he'd like Dr. Dahl's FTE in the department to be increased but Dr. Schaffer is waiting to see if the new budget will allow it.

Due to time constraints, Council discussion of the History of Science report did not immediately follow the departure of the guests but was held after the next agenda item. At the time of discussion, Council was concerned that, when Dr. Farber retires, the History Department and the College of Liberal Arts might not replace him with someone who specializes in the History of Science. Council members felt that this is crucial to the survival of the program.

A motion was made and seconded to approve the History of Science review report. All voted in favor. Motion passed.

5. Follow-up Review of the Adult Education Degree Program

Brent Steel (Political Science) presented a follow-up report of the Adult Education Graduate Council Program Review. The original graduate program review took place May 3, 2004. Dr. Steel and Goran Jovanovic (College of Engineering) revisited the department this spring. He reported that the program director, Rich Shintaku, provided an updated formal written response to all of the original review report's recommendations at the meeting. That response along with the full follow-up report is appended to these minutes.

Before giving an overview of these reports, Dr. Steel spoke briefly about the original review, which had been chaired by Elaine Pedersen of the Department of Design and Human Environment. It was an unusual review because the program is done away from the Corvallis campus. At the time of the review, the program was delivered primarily at Chemeketa Community College and is now delivered at excellent facilities at Clackamas Community College. The students to which the review team had access (about 7 or 8) were so enthusiastic for the program and its director that Dr. Steel said jokingly that he was a bit suspicious. Dr. Steel added that he had been involved in several reviews, so he greatly appreciated Dr. Shintaku for being professional, thorough, and very, very responsive to the review team's needs.

After giving the Council members an overview of his report, Dr. Steel remarked that there has been a lot of action taken on the original review panel's recommendations. In fact, most of the concerns have been addressed satisfactorily. During the follow-up review Dr. Jovanovic suggested the program consider allowing a thesis option for students interested in engaging in research. Dr. Shintaku liked the idea and thought that some of the students may well be interested in that. Another suggestion was to develop an international program. Dr. Russ-Eft informed the Council that the School has just hired a tenure-track faculty member whose

specialty is in international educational programs. He will be teaching in both the College Student Services Administration and the Adult Education programs

Sally Francis (Graduate School) asked about the status of the TESOL (Teaching English to Speakers of Other Languages) certificate program. In his write up, Dr. Shintaku mentioned that the College is working on its development, but Dr. Francis knows that the program has been approved. Dr. Russ-Eft responded that the issue is getting enough students interested in taking the program. At this time, the program is offered only every other year due to low enrollment. Bruce Rettig (Graduate School) said that the Department of Adult and Higher Education is reviewing the certificate program and is considering ways to deliver it better.

Dr. Jovanovic commented that he noticed greater energy and momentum within the program since the first review, probably due to the hiring of the two new tenure-track faculty. He is worried, however, about the viability of the program since it relies solely on e-campus revenue. Although this funding model makes him leery, he admits that the program appears to be succeeding. Dr. Francis said that the e-campus business model has been in place for five years and it will be evaluated after this year. Her impression is that the dean of the college must feel confident in continued funding since he made the two faculty hires.

Dr. Russ-Eft commented that this program speaks to students who are already employed, working in business and industry, who feel the need to acquire more skills or earn a master's. She added that through those business and industry contacts, the program has been able to provide some very interesting internship opportunities.

A motion was made and seconded to approve the Adult Education Follow-up Review Report. All voted in favor. Motion passed.

Meeting adjourned.

GRADUATE COUNCIL MEETING

May 3, 2007

3:00pm, Gilkey 109

Present: Blythe, Dreher, Francis, Harter, Koenig, Rettig, Russ-Eft, Tadepalli, and Unsworth

Absent: Filtz, Grosskopf, McLain, Strickroth, and Wolpert

Guests: Dan Edge, Stella Coakley, Ken Williamson, and Belinda Batten

1. Review of Graduate Programs in Fisheries and Wildlife

Darlene Russ-Eft (School of Education) explained that she would be presenting the report on behalf of Alix Gitelman who led the Graduate Council Review Team but is currently away on sabbatical. Russ-Eft then thanked Dan Edge for his leadership of the Fisheries and Wildlife self-study and for successfully pulling together a complex review (complete with trips, video conferencing, and the involvement of three review teams: CSREES, Curriculum Council, and Graduate Council). Russ-Eft said that it was a pleasure to be involved and that she was sure the entire review panel felt the same. To keep her presentation short, Russ-Eft referred the Council to the report, which is appended to this document.

Hal Koenig (College of Business) then asked Dr. Edge and Associate Dean Coakley for any comments.

Dan Edge (Fisheries and Wildlife) extended his thanks to the review team and thanked Russ-Eft for complimenting his leadership. He appreciated the effort the review panel members took in evaluating all the materials that were presented to them. He was glad to see that the review report contained good recommendations on how to improve what the department is doing and a sufficient amount of kudos for what the department is already doing very well. He added that he was thankful that many of the recommendations were in the vein of “continue doing what you are doing.” He assured the Council that the department is not planning on discontinuing any of those things.

Edge then addressed the panel’s recommendation to unite the department in a single modern facility. He said that this recommendation was also made after the last review in 1996, but he said that a new facility is not likely to appear any time soon. He did say that he has a committee looking at ways to combine lab services in the hope of freeing up some sorely needed lab space, but otherwise he is fresh out of ideas for improving the situation. He assured the Council that the department always attempts to assign new students office space in close proximity to their faculty advisors and it also tries to keep student office space in the same building as the laboratories in which students are working.

Edge told the Council that the final reports from the Curriculum Council and the CSREES team are expected very soon. Although the recommendations from those reports are likely be similar to those in the Graduate Council team’s report, he is waiting to judge them all together. The

department is currently undergoing a substantial undergraduate curriculum revision, which will feed into a parallel discussion at the graduate level.

Linda Blythe (Veterinary Medicine) asked Edge if this discussion involved the evaluation of the department's 400/500 "slash" course offerings. Edge answered that it did.

Stella Coakley (College of Agricultural Sciences) echoed Edge's thanks to the Graduate Council for its thorough review. She added that the department of Fisheries and Wildlife is important to the College but there is no pot of money available to fix the problems requiring funding. She said that although a new building is not on the OSU/OUS radar screen, making the current facility earthquake proof is. This observation was followed by discussion of the building's condition and the heavy cost of the retrofit. Coakley said that the retrofit would cost a lot, but less than half the cost of a new building.

There was additional discussion on the status of the CSREES and Curriculum Council review reports. Coakley said that the meeting with the Provost is already scheduled and she hopes that the other reports are available by then. She also said that she is surprised at the timeliness of these review follow-up meetings. Normally it takes much longer for the reports to be completed and the follow-up meetings scheduled.

When there were no further questions, Koenig thanked the guests as they departed.

The Council then had additional discussion over the department's "slash" and 50% rule issues, the challenges of recruiting minority/economically disadvantaged students, the consequences of research requirements for multiple field seasons on the time to degree for the MS, and the condition of Nash Hall and the future repairs that have been budgeted.

A motion was made and seconded to approve the Fisheries and Wildlife graduate review report. All voted in favor. Motion passed.

2. Category I proposal to create a school of Chemical, Biological, and Environmental Engineering

Category I proposal to create a School of Civil Construction Engineering

Ken Williamson (College of Engineering) gave the Council a brief overview of the CAT I proposals. He explained that the College of Engineering is moving to a different administrative structure involving the creation of schools. The first school was created two years ago – the School of Electrical Engineering and Computer Science. Williamson then talked about the reasons why the environmental engineering program should move from its old home in the Department of Civil Engineering to the new School of Chemical, Biological, and Environmental Engineering (a better "fit," better for the students and faculty, better collaborative research opportunities, etc.).

Theo Dreher (College of Science) told Williamson that he was under the impression that water research was still an important part of Civil Engineering. Williamson answered that a large part of the faculty in civil engineering are involved in ocean engineering and related structural

engineering issues. In fact there are only two faculty working in traditional water resources in the department. Williamson said that water resources engineering is not a growing area of civil engineering.

Dreher asked for more explanation in regard to the program in Biological and Ecological Engineering being replaced by a new program. Williamson answered that the College of Engineering is developing a new “biological” engineering program (the name of this program is currently being negotiated). It will be a multi-disciplinary graduate degree program (with many tracks) administered by the College of Engineering, similar to the current ocean engineering degree. Williamson said that he is currently redrafting the statement regarding that proposal before it goes before the Faculty Senate. Dreher asked if there was a response from John Bolte supporting this plan in the proposal. Williamson said there is no conflict with Dr. Bolte or with the Department of Chemical Engineering about this plan. There is a lot of discussion and negotiation. When the CAT I to create the school is approved, the next steps will be to develop Category I proposals for graduate degrees in environmental engineering, which is currently a specialization within civil engineering, and the new college wide biological engineering graduate degrees.

Sally Francis (Graduate School) spoke of the past Graduate Council graduate program review of the programs in the Department of Civil Engineering in which an external reviewer was opposed to moving environmental engineering out of the department. Williamson responded that that external reviewer is the chair of a civil engineering department (having a huge water research component) in a water-stressed state. OSU’s faculty are interested in biological remediation of exotic compounds which has little connection to civil engineering but close ties to work in chemical engineering. It makes sense to move these people to the new school. Williamson added that the National Science Foundation has a division in “Chemical, Biological, and Environmental Engineering,” which is another good reason to justify this organization.

Prasad Tadepalli (College of Engineering) asked Williamson if there is any collaboration between the environmental, biological and chemical engineers. Williamson answered that there is (nanotechnology applications and membrane work in kidney dialysis development). Williamson added that there is more collaboration between environmental and chemical engineers than there is between environmental and civil engineers.

Blythe noted that the proposed school has new administrative positions but no extra budget to support them. Williamson answered that the school head will be supported half time from state funds; the other half time will be supported through research funding. The head will also get a reduced teaching load and be expected to maintain their highly active research programs. The long-term goal would be for the school heads to hold an endowed chair.

Williamson then spoke about the Civil and Construction Engineering proposal, which is similar to the other CAT I proposal but has a slightly different flavor because the new school will be organized and administered through the endowed Kiewit Center for Infrastructure and Transportation. The head of the proposed new school would also be in charge of this center and would receive half of his/her salary from this endowment.

Belinda Batten was introduced as the Head of the Department of Mechanical Engineering (ME) and the interim Head of the Department of Industrial and Manufacturing Engineering (IME).

Michael Unsworth (Oceanic & Atmospheric Sciences) asked Batten to comment on IME's fear of losing departmental identity and their ability to attract high quality students to their programs. Batten answered that she was aware of this concern (of IME departments going away once they've been merged with another department). She has communicated to the faculty that if they want to preserve their identity they need to define what that identity is and then work on building up those strengths. Batten said that it seems that the faculty are learning that their fears were unfounded; many are beginning to see some benefits to the merger.

Dreher asked Batten how she will deal with strategic decisions, especially those involved in the hiring of faculty. Batten understands that this is a sensitive issue because IME is half the size of ME. When hiring faculty one should consider curricular needs, faculty and student ratios, and research areas contributing to the unit. It would be best to hire faculty who could bridge both programs and foster collaborations between them.

When Dreher expressed concern about the need to maintain balance between ME and IME, Batten informed the Council that the head of the school would appoint the two associate heads. One would come from each program although their duties would be functional: graduate/undergraduate. If further developments led to having one associate head instead of two, it would be very important to have the associate head from a different program than the head. But Batten added, that is not the way the departments are operating right now.

Before leaving the room, Williamson and Batten thanked the Council for its willingness to revise its agenda and listen to the CAT I proposals today.

In discussion, Council members felt that the CAT I proposals seemed to be a done deal and felt that the Council could make little impact at this point. It was also felt that the graduate students and the graduate programs involved would not be impacted by the creation of the schools as no concerns have yet arisen.

Bruce Rettig (Graduate School) informed the Council that the Curriculum Council approved these CAT I proposals contingent upon the Graduate Council approving them. Votes by the Council would determine whether these proposals would be on the May 10 Senate agenda.

A motion was made and seconded to approve the Category I proposal to create a School of Civil and Construction Engineering and the Category I proposal to create a School of Mechanical, Industrial and Manufacturing Engineering. All voted in favor. Motion passed.

Another motion was made and seconded to approve the Category I proposal to create a School of Chemical, Biological, and Environmental Engineering **on the condition that a supportive liaison letter is submitted from John Bolte of the Biological and Ecological Engineering Program.**

Meeting adjourned.

**GRADUATE COUNCIL PROGRAM REVIEW OF
GRADUATE PROGRAMS IN
THE DEPARTMENT OF FISHERIES AND WILDLIFE
January, 2007**

OVERALL CONCLUSION AND RECOMMENDATION:

The review teams (Graduate Council team, and Cooperative State Research, Extension and Education Service—CSREES—of the U.S. Department of Agriculture team) found the Department of Fisheries and Wildlife (hereafter, the Department) to be well functioning and very well respected within the University as well as regionally, nationally and internationally. The external reviewers concluded that the Department was among the top such Departments nationally in terms of quality, breadth and depth of research and faculty expertise. The diversity of expertise among the faculty enables them, and their graduate students, to address virtually any major issue pertaining to natural resources. Furthermore, the close links between the Department and many state and federal agencies afford graduate students access to both relevant problems and potential employers. The Department benefits from the strong leadership of the Department Head, which is acknowledged by faculty, staff and graduate students. Graduate students are well-qualified, extremely dedicated to their research programs and also very loyal to the Department.

The Department relies heavily on courtesy faculty (appointed from various state and federal agencies) for teaching and mentoring graduate students. There is some concern that retirements from these agencies, many of which may be left unfilled, will detrimentally impact the Department's teaching and mentoring, and put additional pressure on the tenure track faculty. We recommend that the program be continued with additional support for new faculty hires, unified, updated, and safe on-campus facilities and additional GTA positions.

SUMMARY OF SPECIFIC RECOMMENDATIONS.

These fall broadly into three categories: A. Research capabilities and faculty resources; B. Graduate education and issues for graduate students; C. Facilities and administration. These recommendations overlap heavily with those of the CSREES team that are pertinent to the Department's graduate programs. Each recommendation is referenced later in the document in an appropriate context.

A. Research Capabilities and Faculty Resources

1. With strong linkages to federal and state agency partners, and their importance in the graduate and research programs, the department should continue to foster multi-way communication, particularly concerning hiring of professional staff within federal and state agencies, who may eventually serve as courtesy faculty. The Department should

foster these relationships to improve the Department's standing in integrated research and outreach.

2. Faculty should have a long-term plan of action for dealing with the potential loss of expertise within the Department provided by courtesy faculty, both in terms of research potential as well as graduate course availability.
3. The faculty are encouraged to continue to build linkages with other departments within the College of Agricultural Sciences (CAS) outside of CAS, including Veterinary Medicine, Forestry, Business, and Science.
4. The Department should continue to seek positions to fill gaps in terrestrial wildlife and marine/freshwater invasive species extension. The Department might cooperate with other departments to fill the need for terrestrial invasive species extension.
5. The faculty should continue to aggressively recruit minority faculty to increase diversity.
6. The Department should continue its strong mentoring program for junior faculty.
7. The Department should develop a departmental governance document, or a procedural manual, including policies and procedures related to personnel matters and the policies governing courtesy and affiliated faculty.
8. The Department should consider establishment of a more organized mechanism for gaining stakeholder inputs to planning, and it should continue to foster direct interactions between stakeholders and students.

B. Graduate Education and Issues for Graduate Students

9. The Department should consider developing a comprehensive plan for recruitment of minority students. In particular, the current ad hoc admission screening has the potential to let qualified minority candidates slip through the cracks.
10. Efforts should be made to continue to develop processes to ensure communication and linkages among on-campus and off-campus graduate students and faculty. Significant progress has been made with actions including the formation of a Graduate Student Association. Some other possibilities include but are not limited to: (a) scheduling on-campus seminars and other similar activities such that they do not conflict with off-campus courses, and (b) providing a van for off-campus students (e.g., those at Hatfield) to travel to campus as a group
11. The Department must further evaluate 400/500 "slash" courses, and especially examine the consistency with which such courses are taught across the curriculum. It may be desirable to make some courses solely 400- or 500-level based on past

enrollment patterns, course material, and faculty desire to accommodate undergraduates and graduates.

12. Efforts should be made to increase teaching opportunities to graduate students, particularly through increasing the number of Teaching Assistantships. The department should continue to develop graduate teaching assistants for courses with large enrollments. For Ph.D. students who want teaching experience, the Department could consider offering course credit in return for teaching.
13. GTA's assigned to "slash" courses should not be responsible for grading the papers of their graduate student peers.
14. Faculty should continue to be forthright in representing the amount of time needed for students to complete their degree and the availability of support throughout that period. Faculty should be sensitive to and responsive to the perception that the time to complete a MS degree can be excessive.
15. Faculty should continue annual performance reviews of graduate students.
16. The Department should continue to ensure that graduate students are represented in departmental governance and operations.
17. The Department should continue to conduct surveys of recent graduates, as this provides valuable feedback.

C. Facilities and Administration

18. The Department is encouraged to develop a space utilization plan to unite the department in a single modern facility. The teams note that this recommendation was made during the prior review, which indicates some urgency in addressing this situation.
19. Given the importance of distance learning for the Hatfield Marine Science Center, it is critical that full technical support is provided.
20. The Department should evaluate staff needs as new funds are secured. IT support should be continued with the same level of responsiveness and quality

1. INTRODUCTION

The Graduate Council conducted a site review of graduate programs in the Department of Fisheries and Wildlife during the week of January 22, 2007. The review was concurrent with an outside review by the Cooperative State Research, Extension and Education Service (CSREES) of the U.S. Department of Agriculture and an internal review of the Department's undergraduate programs by the Curriculum Council. Most of the Graduate Program review activities occurred on Monday, January 22. One member of the external

CSREES review team, Donna Parrish, was designated to assist in the graduate program review, although in the end all members of the CSREES team contributed to this report, and they are all therefore listed and acknowledged below. The teams also benefited from the participation of Sally Francis, Dean of the Graduate School, Bruce Rettig, Associate Dean of the Graduate School, and the Curriculum Council review team, consisting of Carol Brown, Accounting; Susie Leslie, Acting Director of Academic Programs and Academic Assessment; and Rich Shintaku, Adult Education and Higher Education Leadership.

Internal Graduate Program Review Team:

- Alix Gitelman, Department of Statistics, chair of internal team
- David Bernell, Department of Political Science and Director of the Master of Arts in Interdisciplinary Studies Program
- Darlene Russ-Eft, Department of Adult Education & Higher Education Leadership

CSREES Team:

- Bruce Menzel, CSREES, chair of external team
- Jim Dobrowolski, CSREES
- Bruce Leopold, Mississippi State University
- Donna Parrish, U.S. Geological Survey, Vermont Cooperative Fish and Wildlife Research Unit, University of Vermont
- Ken Wilson, Colorado State University

The self-study report of the program, which was provided in advance, gave a detailed description of the department and its history, strengths of the faculty, research facilities, graduate program components, financial issues, assessment procedures, and proposals for future developments. The review teams appreciate the hard work that went into the preparation of the self-study, which greatly helped in informing the teams during the review process. Indeed, many of the recommendations herein overlap substantially with those provided by the CSREES team.

On January 22, the teams began by meeting with the Department Head (D. Edge) and College-level administrators. Following that, the teams heard a series of presentations from the Department Head, the Graduate Program Director (S.A. Heppell), and a representative from the Fisheries and Wildlife Graduate Student Association (B. Glenn). The next series of engagements were open-ended conversations with Graduate Faculty, the Graduate Committee, a group of graduate students, and the Oregon Cooperative Fish and Wildlife Research Unit faculty (B. Anthony, H. Li, D. Roby, and C. Schreck). The teams broke into three groups for late-afternoon tours of Nash Hall facilities, Weniger Hall facilities and the off-campus Fish Performance and Genetics Laboratory just east of Corvallis. The final formal meeting of the afternoon was a brief meeting with Department administrative staff. The review teams shared dinner with “clientele representatives” and courtesy/affiliate faculty. On Tuesday, January 23, the external review team toured Hatfield Marine Science Center (HMSC) and the Oregon Hatchery Research Center. A teleconferenced meeting brought the teams together Tuesday afternoon to learn about

educational components of HMSC. On Thursday, January 25, the external review team presented a draft of their report.

This review includes an analysis of the Graduate Programs in the Department, including evaluations of its mission, students, curriculum and organization. In addition, the review examines the level of productivity and quality of the students and faculty. A discussion of outcomes of the program, including the professional viability of the graduates, their satisfaction with their training, and the ranking of the program on a national scale is also included.

2. BACKGROUND

2.1 Department history

Much of the material for this section is taken from the Department's self-study document. The Department of Fish, Game and Fur Animal Management was established in 1935 at the same time as the Oregon Cooperative Wildlife Research Unit (hereafter, the Coop Unit). The name of the Department was changed to Fish and Game Management in 1936 and to its current name, Fisheries and Wildlife in 1964. Since its establishment, the Department has the largest or second-largest undergraduate program in the College of Agricultural Sciences, and one of the largest graduate programs in the University.

Federal cooperators are an integral part of the Department. The Coop Unit, which became a combined Fish and Wildlife Research Unit in 1971, has been a major component of the Department's research and graduate training for much of their mutual history. Since 1971, there have been four scientist positions in the Coop Unit almost continuously, and currently these four are responsible for supervising almost 25% of the Department's graduate students. A fisheries biologist from the Natural Resources Conservation Service and a fisheries scientist from NOAA Fisheries, Alaska Science Center are also housed in the Department. Courtesy faculty from Oregon Department of Fish and Wildlife (ODFW); U.S. Forest Service, Forest Research Laboratory; U.S. EPA; and USGS, Forest and Rangeland Ecosystem Science Center collaborate in Department research and teaching programs. In addition, the Department participates in several major collaborative research programs including the Hatfield Marine Science Center, the Long-Term Ecological Research Program, and the Fish Performance and Genetics Laboratory.

In all, the Department has 27 tenured or tenure-track faculty, with 17 housed in other administrative units (9 at HMSC, 3 at two other experiment stations, 5 at county extension offices). In addition, there are 43 faculty on non-recurring funds (these include 11 Senior Research appointments and 32 Post-doc, Research Associate and Research Assistant positions). Finally, the Department has 39 courtesy faculty (these include 4 in the Coop Unit, and others from such agencies as ODFW, USGS, USFS, EPA, NOAA Fisheries, ARS, and NRCS).

In the last 10 years the Department has lost nine members to retirement. Six of these positions were teaching and research positions, of which four have been replaced with 1

search pending. The other three retirements were of extension faculty, of which two have been refilled. In addition, one promotion to administration left a terrestrial wildlife specialist position unfilled. Three faculty joined the Department upon the closure of another CAS department; two tenure-track faculty failed to reach tenure; and there have been four new positions in the last two years. Taken in aggregate, these changes in faculty in the last 10 years have left some holes or little depth in some of the core programs of the Department. In addition, three pending retirements in the Coop Unit loom large for the Department as these faculty teach and mentor many graduate students each year.

The Department obtains funds from four sources: The Agricultural Experiment Station, University Education and General funds, Extension Service (including Sea Grant, Agricultural Program and RREA), and state and federal funds in support of grants and contracts. The first three sources account for just under \$2 million annually. Among CAS units, Fisheries and Wildlife ranks eighth in recurring base funds, but has the largest number of grants and contracts, and the largest graduate program. The grants and contracts account for between \$6 and \$6.6 million annually, mostly in federal grants. Typically, the Department ranks between second and fourth among University units in grant activity. The Department has developed several distance education offerings that bring fees directly back to it.

The Department offers programs leading to the M.S. in either Fisheries or Wildlife; the Ph.D. in either Fisheries or Wildlife; Masters of Arts in Interdisciplinary Studies; and the Masters of Agriculture-Aquaculture. These programs are greatly enriched by the intellectual and experiential diversity of the Department faculty, with students gaining valuable experiences working on timely, relevant projects that are of interest to State and Federal agencies.

2.2 Department mission (directly from the self-study document)

Faculty and students in the Department of Fisheries and Wildlife acquire, integrate and disseminate knowledge about fish and wildlife at all levels of biological organization. We focus on resource systems influenced by human activities. Our goal is to provide people with the knowledge needed to make wise decisions on issues of conservation, sustainable use, and ecosystems restoration. We accomplish this through a combination of undergraduate and graduate education, scholarly research, extension education, and public outreach.

3. THE GRADUATE PROGRAM

3.1 Graduate students

There are usually between 70-85 students in the Fisheries and Wildlife graduate program – with roughly two-thirds of the total currently pursuing a Masters degree and the remaining students pursuing a Ph.D. The graduate students are extremely dedicated and well qualified. Due to the strength and reputation of the Department, the program attracts

strong graduate applicants, such that the faculty are competing for some of the best students in the country, while also attracting excellent international students.

The graduate students appear to be selected not only based on their grades and GREs, but on their demonstrated capabilities, their fit within the larger research program of the faculty, and even their prior relationships and interactions with faculty members. The graduate students generally seemed to have strong working relationships with faculty, and there is clearly a feeling of mutual respect among graduate students and faculty.

Like the rest of the university, the Department of Fisheries and Wildlife is well attuned to the goal of building diversity. The department, including the graduate program, reflects some of the same weaknesses as all of OSU in recruiting a diverse student body. To address this, the program seeks to take advantage of university resources to hire new faculty that add diversity to the program. In addition, some faculty in the program have made a concerted effort to recruit graduate students from underserved and underrepresented minority groups.

Many of the graduate students that the teams met with became affiliated with the Department before their formal graduate study began. For example, several worked as field research assistants for faculty members. With these relationships already forged, these students had relatively easy access to the graduate programs, and faculty willing to support them. This informal access seems to create a selection bias among Department applicants—those who can afford to relocate to Corvallis (or some other field research area) may have considerably easier access to the graduate programs in the Department.

See recommendations 9 and 10.

3.2 Faculty

The faculty demonstrate a strong commitment to the graduate students. They are extremely qualified and diverse in their areas of expertise, and they are very team-oriented and loyal not only to their students, but also to the Department and the University. While there are a large number of courtesy faculty, and these faculty tend to work disproportionately with graduate students, especially in teaching graduate courses, the nature of these appointments do not seem to impact graduate education in any adverse way. Rather, there is a net benefit for the graduate program. The diversity of expertise, and the exposure that courtesy faculty provide to 1) funding sources, 2) institutions and individuals outside OSU and the academic community, 3) the aims and uses of applied research, and 4) the state and federal agencies where the graduate students may end up working, serve the graduate students quite well.

See recommendations 2 through 7.

3.3 Curriculum

There is a wide offering of graduate level courses, allowing students to learn in a variety of areas. There are, however, a relatively large number of slash courses, and few graduate stand alone courses, considering the large number of graduate students and the strength of the graduate program. In addition, the consistency of slash courses, with regard to rigor, workload, requirements for graduate student participation, and level of instruction seems to vary depending upon the course and the instructor. The department may be well-served by evaluating its slash courses, especially the consistency in how such courses are taught across the curriculum, e.g., some courses were considered too difficult by undergraduates while in other courses students felt that extra work for graduate students was contrived. It may be desirable to make some courses solely 400 or 500 level based on past enrollment patterns, course material, and faculty desire to accommodate undergraduates and graduates.

A related concern among graduate students is that because there are so many slash courses, the “50% Rule” sometimes comes into play when students are designing a program of study. The need to add additional graduate stand alone credit hours sometimes means that graduate students are not able to take courses they would like to, because they are slash courses.

Faculty and graduate students both expressed some concern with the Graduate School policy involving continuous enrollment. There was agreement that getting students through the program is beneficial, especially considering the length of time it takes to earn a degree. However, students and faculty provided examples of how the policy is a disservice to students who need to take a temporary break from their studies due to financial or personal reasons.

See recommendation 11.

3.4 Research

The research interests and pursuits of the faculty provide the graduate students with the opportunity to participate in a first-rate research program. The faculty are very diverse in their expertise, addressing a wide variety of issues in the field, and graduate students play an important role in that research agenda, developing their own research agenda and expertise.

The faculty have an outstanding rapport with state and federal agencies – this includes the Coop Unit – which opens up significant opportunities for graduate students to participate in multidisciplinary, team oriented research projects.

The graduate students are well mentored by the faculty in their research pursuits, and this has led to great productivity of scholarship. The graduate students have a strong record of publications, and significant participation in academic conferences.

Faculty and graduate students both acknowledge that because a long time is required in the field conducting research – this is true for students pursuing either a Masters or a

Ph.D. – students take a long time to earn a degree relative to other programs at OSU, but not necessarily relative to comparable programs elsewhere.

See recommendations 1 through 3 and 14.

3.5 Financial Support

It is a great strength of the program that graduate students are not accepted without financial support. All are provided research assistantships as they begin their studies, and such funding usually lasts 2-3 years. Even though funding from most of the grants supporting graduate students tends to run out before graduate degrees are completed, faculty consistently work with graduate students to secure additional funding through the completion of their degrees. Very few students end up without some financial support despite what may be a long time to degree completion. While there was some concern among graduate students and faculty about the need to secure additional funding to complete graduate studies, the graduate students understood that this was simply a part of how their field works.

By contrast, the program provides relatively little funding for teaching assistantships, allowing for very few opportunities to provide graduate students with teaching experience. There are typically 2-3 GTA positions for on campus courses per term, and an additional 4-5 for distance education courses per term. While many graduate students may not want to serve as TA's, there are graduate students that both want and need the experience, especially those pursuing a career in academics. The program should make more teaching opportunities available through teaching assistantships, so that students who so desire can have the opportunity to teach. Alternatively, the Department could consider offering course credit to Ph.D. students who want to gain teaching experience.

The review process found that there are cases where graduate students are serving as TA's in slash courses, and that part of their responsibility involves grading and evaluating graduate students enrolled in the course. Graduate students are not permitted to evaluate their peers in this way, and this practice should be discontinued.

See recommendations 12 and 13.

3.6 Administration, Facilities and Infrastructure

The Department is very well served by the current Department Head, Dr. Dan Edge. He has the respect and admiration of faculty, staff and students. In particular, he takes personal interest in all members of the Department. The review teams would like to acknowledge and commend Dr. Edge for his outstanding leadership.

The Fisheries and Wildlife program benefits from some excellent facilities, and these enhance the opportunities and work of not only the faculty but also the graduate students. The fish lab at the Agricultural Experiment Station is an outstanding facility for

conducting fish physiology experiments. In addition, the Hatfield Marine Science Center and the Oregon Hatchery Research Center are outstanding research facilities. The technology upgrades at Hatfield Marine Science Center and Nash Hall allow for additional distance learning capabilities.

The graduate students have access to sufficient resources and labs to carry out and complete their work, though they tend to be dispersed throughout Nash Hall and Weniger Hall, and in some cases, their assigned space leaves significant room for improvement. [One possible recommendation would be to house the graduate students in some common areas so that there would be more peer-to-peer interaction.] This is particularly the case concerning Weniger Hall. Serving as an annex for several departments, it is substandard in many cases including the fact that labs and equipment are very old and seem to lack regular maintenance; it is isolated with little faculty/student visitation; faculty and graduate research assistants sometimes have to modify their work to match the facilities; and it may not be, overall, a consistently safe environment.

The condition of some of these facilities provides a useful lesson. The Department of Fisheries and Wildlife and its graduate program receive a great deal of funding from outside sources to finance research. The connections the program has with federal and state natural resource agencies are impressive. Yet it is clear that simply because such funding sources exist, it does not necessarily mean that the facilities to conduct research will be well-funded. Though outside the scope of this report, the recognition of this circumstance should offer a cautionary note for larger efforts at the university to attract outside funding sources: additional funding from outside sources may not meet the expectations attached to it for providing financial relief, particularly for facilities and infrastructure. Unless there is a commitment by the university to support the facilities and infrastructure that make first-rate research possible, the quality of research coming out of OSU may slip.

See recommendations 18, 19 and 20.

3.7 Community and Participation

The extent to which the graduate students see themselves as part of a community or cohort is somewhat limited in the program.

One great strength of the program is that graduate students are included in activities involving departmental governance and operations. This includes representation in retreats, faculty meetings, curriculum development, graduate student recruitment, and even promotion and tenure decisions. The graduate students very much appreciate this participation; solicitation and consideration of their input results in a sense that their work is valued and that they are taken seriously.

Another important development has been the formation of a Graduate Student Association, which allows for communications and contact among students.

At the same time, because Fisheries and Wildlife is located in different buildings on campus, with graduate students in both Nash and Weniger Hall, and because faculty are located throughout the state, within the numerous facilities available to the Department, the students understand that they are somewhat isolated, both from the Department and from each other. As such, there is not a strong sense of community among graduate students. While students acknowledged this weakness in the program, they also acknowledged that this is often their choice, as they are busy with their research and their studies, and usually do not choose to make time for efforts aimed at building community. It may be that providing graduate students with contiguous or common office spaces will facilitate the development of a graduate student community.

In spite of this acknowledgement, the graduate program would be well-served by strong communication and linkages among on-campus and off-campus graduate students and faculty.

See recommendations 8, 10, 16, and 18.

3.8 Annual Reviews

The program conducts annual reviews of graduate students to monitor progress. This exercise is more enthusiastically supported by the graduate students than the faculty. Faculty generally expressed the idea that it represented an additional bureaucratic requirement that did not serve to “catch” struggling or failing students, as such students would be likely to be identified by their advisors at some earlier point. The students, however, perceived this as positive and not too onerous requirement, as it provides a mechanism for assessment of progress and self-evaluation.

See recommendation 15.

4. PRODUCTIVITY

4.1 Level and Quality of Student Performances:

According to the self-study document, the Department has awarded 154 degrees over the previous six years, of which 105 were M.S. degrees and 49 were Ph.D. Approximately two thirds of these degrees were awarded in Fisheries. In terms of scholarly output, in the years 2003-2005 Fisheries and Wildlife graduate students authored or co-authored 63 publications in the primary literature and 8 book chapter/other works. In the same time period the students made 67 presentations locally or regionally and 52 presentations at national or international conferences. These publication and presentation records were deemed to be very good by the external CSREES team members.

See recommendation 17.

4.2 Level and Quality of Faculty Performance:

Input for this section was taken from the CSREES team draft report. The faculty are extremely qualified and diverse in expertise, which enables them to address any major issue pertaining to natural resources. The faculty (including, especially the Coop Unit faculty) have an outstanding rapport with State and Federal agencies which facilitates multi-disciplinary, team-oriented research projects. As noted by the CSREES reviewers, the faculty are extremely productive in grantmanship, publishing in peer-reviewed journals, and garnering regional and national awards. There is a good balance between basic and applied research, and an atmosphere of integration between the types of research. The applied research conducted by the faculty is of critical importance to local, state and regional issues.

The recent growth of the marine program, combined with the historical strength of the salmonid program offers promise of national prominence in this area. The Department has also developed a very strong avian research group that exceeds most programs in size and depth, nationally. The research program does lack adequate faculty in mammalogy and big game ecology, and with pending retirements in the next two to four years, this problem will only be exacerbated. The faculty are very team-oriented and very loyal to the Department and the University.

See recommendations 1 through 4.

4.3 Quality of the Scholarly Community (including collaborative ventures).

By its very nature, the Department is intimately connected with many state and federal agencies which affords it rich and plentiful opportunities for research collaborations. In all, courtesy faculty are affiliated with eight different state or federal agencies. These connections not only allow graduate students to work on relevant research projects, but also allow them to gain exposure to working in state or federal agencies and to “rub elbows” with potential employers.

See recommendations 1 through 4, and 7 and 8.

5. OUTCOMES

5.1. Professional Viability of Graduates

Given the importance that faculty place on the professional viability of graduates, the Department has conducted surveys of graduates every three years. The most recent survey, completed in 2006, contacted 230 domestic undergraduate and graduate students who had graduated from the department between 2003 and 2005. Rigorous pre-survey and follow-up procedures were used, but there was no adjustment for non-response bias. Twenty-eight MS. and seven Ph.D. graduates returned the survey. Almost 90% of M.S. degree graduates and all Ph.D. graduates were employed. A majority of these were permanently employed (64% for M.S. and 57% for Ph.D.), and most were working in the natural resources professions (90% for M.S. and 70% for Ph.D.). Most graduates

obtained employment with a state or federal agency. These responses indicate a high level of professional viability for graduates (or at least those responding to the survey).

See recommendation 17.

5.2. Satisfaction Survey of Graduates

During the past three years, 44 Fisheries and Wildlife students have completed the OSU Graduate School Exit Survey; and their responses were compared to all responding OSU graduate students (n = 367). There appeared to be a high level of satisfaction with the program, particularly in encouragement from major professor to present or publish their work (96% versus 69%) and securing a job before graduating (78% versus 58%).

There were, however, some areas of concern. More Fisheries and Wildlife graduate students than the general population of OSU graduate students indicated that the program took longer than expected (44% versus 22%). Furthermore, this has continued as a concern from the last review. Another issue involved negative ratings in Department attitudes toward race (with 9% providing negative ratings). From a Department Survey of Current Graduate Students, with 30 respondents, facilities were of concern (e.g., office space, computers, and research equipment). Availability and rigor of graduate courses, particularly with regard to slash courses, was another concern. Information on Department and graduate school policies was also mentioned as a concern, with the recommendation that orientation sessions should be conducted each term. Availability and assignment of graduate teaching assistantships and teaching experiences in general were viewed as limited.

The Department appears to provide many positive outcomes for students, particularly with regard to presentations and publications and employment following graduation. The issue of the length of time for completion might be addressed at the time of application as well as within the context of the recommended orientation sessions. Issues regarding race should be addressed by making concerted efforts department-wide to entice increased numbers of minority students, as well as possible departmental discussions and action-planning. As described in the Facilities section of this report, the department needs to identify common spaces for graduate students in order to encourage greater camaraderie and collaboration among graduate students. Finally, the continued concern for teaching experience needs to be addressed, not only through Teaching Assistantships but also through course or program requirements.

See recommendations 9, 10, 12, 14, and 18.

5.3. Ranking of the Graduate Program

The Department provided a comparison of OSU Fisheries and Wildlife with 29 National Association of University Fish and Wildlife Program institutions. The data presented the number of advanced degree students and graduates during the last semester or quarter of 2004. From that comparison, OSU appears to be one of the largest programs and appears

to be successful in graduating its M.S. and Ph.D. students. The external CSREES team concurred that the Department is among the top of its kind nationally. The one area of concern involves the enrollments and graduation rates among minority students, particularly in terms of Fisheries M.S. and Ph.D. students.

See recommendation 9.

GRADUATE COUNCIL MEETING

**April 5, 2007
3:00pm, Gilkey 109**

Present: Dreher, Grosskopf, Francis, Koenig, Rettig, Russ-Eft, Strickroth, Wolpert

Absent: Blythe, Filtz, Harter, McLain, Unsworth

Guests: Prasad Tadepalli

Hal Koenig (College of Business) introduced new Graduate Council member Theo Dreher (College of Science) who will be replacing Alix Gitelman while she is away on sabbatical.

1. Minutes from Previous Meeting

A motion was made and seconded to approve the minutes of March 1, 2007. All voted in favor. Motion passed.

2. Wood Science & Engineering Follow-up Review Report

Hal Koenig (College of Business) presented a follow-up report of the Wood Science and Engineering (WS&E) Graduate Council Program Review. The original graduate program review took place March 8, 2004. Koenig and Peter Bottomley (Microbiology) revisited the department in November 2006. Koenig reported that the department head, Tom McLain, provided a two-page response in advance of the meeting. That response is appended at the end of the following review report:

Wood Science & Engineering Follow Up Review March 2007

Department Head McLain of Wood Science & Engineering (WS&E) prepared the two page response (attached) in advance of a meeting with Hal Koenig and Peter Bottomley, members of the 2004 Graduate Review Committee. A meeting was held in November of 2006 to discuss the department's response to the committee's suggestions.

Addressing the recommendation in order:

- Add a faculty member in the composites area

The composites area is integral to the WS&E department and at the time of the Graduate Council review, the composites faculty member had recently left the department. We are very glad to see that the department was able to hire two faculty members.

- Even out graduate student committee workload for faculty

While recognizing differing strengths and proclivities of faculty members the Graduate Council team was concerned about some faculty members serving as the major professor for

four or more graduate students at the same time. We are satisfied that with the Department Head's oversight through exit interviews and student success in their graduate programs.

- Giving doctoral students the opportunity to teach.

The departmental response to this concern is understandable given the absence of TA funding, and the lack of courses that require TA assignments (see Department Head's response). It would be useful for the department to make enquiries into other national programs in their discipline, to determine if "teaching experience for graduate students" is a common occurrence, and if so, how it is accomplished.

- Students stating they would start over with a different major or different university in exit interviews conducted between 2000 and 2003.

We appreciate your interest in this area. Regarding foreign students interpreting the survey incorrectly, you might have it back-translated by two foreign students who speak the same language. In this process, one student translates it into his/her native language and the other student translates it back into English. If the translated version does not match the original English version changes in the wording must be made.

- Difficulty of graduate students with a WS&E undergraduate degree to find classes that are not simply "slash" versions of their undergraduate classes

We are pleased to see additional graduate classes being offered.

- Wireless access in Richardson Hall

At the time of the report, wireless access was just beginning to spread across campus. We are glad to see that it is available for students and they can access their ONID accounts and the internet. Access issues with regard to security are understandable.

- Student fees and the cost of insurance

We understand the department's situation regarding funding students.

In addition to a discussion of the department's response to Graduate Review Committee recommendations a few other topics were also discussed.

Diversity was an issue that had been discussed during the Review and in regard to the graduate student population there have been changes in the intervening three years.

Professor McLain noted that the graduate student population in the department has become more diverse. Chinese students are going to programs in China and the University of British Columbia more often than programs in the United States. This is a result of huge investments in programs in China, Scandinavian countries and Canada as compared to much smaller investments in domestic programs. The current student population includes more students from Europe and South America.

The WS&E faculty was ethnically diverse at the time of the review but was challenged by gender diversity. Gender diversity is still problematic, but Professor McLain reported that they have a female research associate that is a great role model for women graduate students.

The research associate has been hired to teach one course but her research is currently supported by soft money.

The loss of civil engineering faculty who were interested and willing to collaborate with WS&E faculty came up in our discussion. Professor McLain indicated that when this was coupled with the departure of a key senior WS&E faculty member, the number of joint projects and graduate students pursuing dual majors was significantly reduced. A newly hired endowed faculty member in biomaterials science offers new opportunities with materials science and mechanical engineering faculty. In particular, Professor McLain was optimistic that new graduate courses and collaborations will develop in this area.

McLain, 11/1/06

**Comments on Actions related to
2004 WS&E Grad Council Review Recommendations**

Recommendations:

- An effort was underway to hire a faculty member in composites – we do not need to tell the Department about the importance of this area in WS&E, but we encourage them to make this appointment a reality.

New Assistant professor (Muszynski) was hired in Fall 04. Through gift from JELD-WEN Foundation we were able to hire a senior-level endowed chair faculty member in the composites area as well.

- Even out graduate student committee workload for faculty; some faculty are advising as many as 4-5 graduate students and others as few as one graduate student. The underlying issue is the time that the major professor can spend with each student.

That's pretty much the way the world is going to work. Some faculty prefer, and have capacity, to manage many students and others don't. I monitor mentoring success through an exit interview and other observations and haven't spotted a recurring problem. Since all of our students are grant funded there will be a natural variation in the number mentored by each faculty.

- While having “real” faculty member in front of a class is great, doctoral students should be given teaching opportunities – determine how this can best happen.

This is a perennial problem for which we have no good answer. We do not have TA positions in WSE so teaching opportunities are limited to lectures and oversight of a few undergraduate labs. Nevertheless, I find that most of our PhD students are finding opportunities to develop some level of teaching skill. We are very aware of this issue and help our students as much as possible find opportunities.

- In an exit survey of students who graduated between 2000 and 2003, only six of thirteen stated that they would start over with the “same major,” and only seven of thirteen said they would start over at the “same university.” This needs to be investigated.

This was very much of a surprise and we can't explain it. I have adjusted the questions I ask in my exit interview to try to tease out any discontent, but that has not revealed any systematic problems. We are very sensitive to this issue now, but need more contemporary data. Our survey expert wonders if the question may lead foreign students to a different answer than domestic students.

- It is hard for graduate students with a WS&E undergraduate degree to find “new” course work (i.e. courses that were not required as part of their undergraduate program of study). How can the department maintain rigor at both the undergraduate and graduate level?

I think that we have solved this problem with the proposed or realized addition of new advanced graduate courses in Polymer Composites, Frontiers in Bio-based Materials Science, Wood Quality and Advanced Topics in Wood Composites.

- If a plan is not in the works for wireless access to computer networks in Richardson Hall, work with the College to make this happen.

Students now have public wireless access in Peavy and Richardson that enables them to connect to their ONID accounts and the internet. However, they cannot access the part of the Forestry network that is behind a firewall without paying a fee. Given our budget restraints, the nature of security and service center agreements, I suspect that won't change anytime soon. Students do have free access to all of the Forestry network through readily available hardwired machines.

- Students expressed concerns about student fees and the cost of insurance – how can the Department help with these issues?

We can't. But we pay most students a stipend and now the GA Salary Supplement.

After Koenig's presentation, there was some discussion about the surprising results of the 2000-2003 exit surveys. Council members suggested that the small sample size, language comprehension of non-native speakers of English, and the high rate of civil engineering students opting for a dual major with Wood Science & Engineering may have all contributed to the unexpected response. However, there was no suggested explanation why seven out of thirteen students responded that they would not start over at “the same university.” Koenig told the Council that Tom McLain continues to monitor this issue with exit interviews.

A motion was made and seconded to approve the WS&E Follow-up Review Report. All voted in favor. Motion passed.

3. Human Development and Family Studies Follow-up Review Report

Prasad Tadepalli (EECS) presented a follow-up report of the Human Development and Family Studies (HDFS) Graduate Council Program Review. The original graduate program review took place May 21, 2004. Tadepalli and Belinda Batten (Mechanical Engineering) revisited the department winter term 2007. Tadepalli reported that in a meeting with the department head, Carolyn Aldwin, and the graduate advisor Alexis Walker, he and Dr. Batten gathered information about the current status of the graduate program including a written response from the Department head that is added to the report as an appendix. The complete HDFS follow-up report is appended to these minutes.

After giving the Council Members a brief overview of his report, Tadepalli remarked that the original review panel's recommendations were taken very seriously by the department and he stated that he was very impressed at the progress made.

A Council member asked for clarification on HDFS' recent faculty recruitment. It was asked if the four new faculty members hired were all full professors. Tadepalli answered that all were hired to senior positions (admitting that the department is a bit top-heavy), but after additional conversation with the Council he confirmed that both Mark Lusk and Marc Braverman were originally hired to administrative positions in International Programs and Extension respectively.

A motion was made and seconded to approve the HDFS Follow-up Review Report. All voted in favor. Motion passed.

New Business

Sally Francis (Graduate School) announced that the Graduate School has announced a call for nominations for the Excellence in Graduate Mentoring Award and asked Council Members to volunteer to fill an unexpected vacancy on the award committee. When no one volunteered, Francis indicated that she would also ask the Council members not present at the meeting or allow the current members of the award committee to proceed without a representative from the Graduate Council.

Consideration of GK12 Proposals

Bruce Rettig (Graduate School) informed the Council that on April 20, the Research Office will forward GK12 proposals to the Graduate Council for review. Mary Strickroth (Graduate School) gave a brief description of the GK12 program and its goal to improve science education. The program provides graduate students from science programs stipends to work in rural public schools assisting teachers. Since NSF only allows one proposal to be submitted per university, the Graduate Council would be deciding which would go forward. Rettig commented that it is unlikely that there would be many proposals to consider. Discussion of the proposals (if more than more is submitted to the Research Office) will be held on May 3.

Meeting adjourned.

Three-year review of the Human Development and Family Studies

The Human Development and Family Studies (HDFS) program was reviewed 3 years ago by the graduate school. Prasad Tadepalli (EECS) and Belinda King (ME), who were two of the original members of this review committee conducted the follow-up review on February 22, 2007 and wrote this report. We met with the department head Carolyn Aldwyn and the graduate advisor Alexis Walker for about an hour and half.

HDFS was a very strong program even at the time of the original review. The HDFS department was chaired by an interim head, Karen Hooker, at that time. Carolyn Aldwyn was hired later that year as the head of the department. The original review was mostly positive about the graduate program, the department and its leadership. Quoting from the review,

“Most of the faculty members are active in research, publishing, and getting grants. Some of them are fellows in their respective professional societies and have won numerous awards. They serve on editorial boards of several journals and review for journals and conferences. The students are quite satisfied with the research training and education they are receiving and are full of praise for their professors. They especially appreciate the warmth and concern the faculty members appear to show in their interactions with the students.”

Nevertheless, the review committee made several recommendations, which are taken very seriously by the department. The actions taken by the department in response to these suggestions are documented in a detailed report from the department head, which is attached as an appendix to this report. In summary, we are very positively impressed by the enthusiasm with which our recommendations are embraced and implemented by the department. We summarize the main points below, leaving the details to the appendix.

Curriculum

One weakness in the curriculum identified by the external evaluator, Teresa Cooney, is the lack of courses in observational methods. In response, the department introduced two qualitative methods courses with particular emphasis on observational methods. Moreover these two courses were made mandatory to all graduate students. They also added new courses in development theory and methods which are supported by the new faculty. They are planning to offer at least 3 elective courses per year to support the research work of the faculty and students.

Faculty Recruitment and Research

The department added 4 full professors since the last review: Scott Hofer, Rick Setterston and Mark Lusk hold regular faculty positions and Marc Braverman is an Associate Dean of HHS with faculty home in HDFS. They also hired a Research Associate professor, Andrea Picciman. They are hoping to fill the Knudsen Endowed chair position in the near future and hire 2-3 assistant professors in the next few years. They were able to increase the diversity in gender and sexual orientation and are trying to increase the racial diversity.

Since the original report, two new signature research centers have been established in which the HDFS faculty play the primary roles: Center for Healthy Aging Research which emphasizes health and behavior issues of the elderly and Sustainable Rural Communities Initiative, which focuses on the well-being of rural communities in Oregon. These centers are supporting a lot of collaborative research with departments such as Public Health, Resource and Agricultural Economics, Forestry, and Sociology.

Child Development Center is a remarkable facility but was not being used much for development research at the time of the original review. There are now several projects, two headed by Joanne Sorte and two by Megan McClelland, that study various aspects such as childhood obesity and emergence of learning-related skills in children.

The faculty was encouraged to pursue more federal research funding in the original report. Several of the faculty have participated in a workshop sponsored by the dean on grant writing. There have been several proposals submitted. Some of the faculty obtained funding from NICHD, USDA-NRI and the Department of Education.

Three new faculty brought in 4 funded projects with them. The department has been very successful in getting internal funding from the college and the university.

Student Recruitment and Support

HDFS has a unique approach to recruiting students in that they exclusively admit Ph.D. students and focus on personal contacts of the faculty and potential match to their research interests. They are also ahead of the curve on web-based advertising. They invite the admitted domestic students to an on-campus visit and a large fraction of them decide to enroll in their program.

Their approach to recruiting through personal contacts and on-campus visits seems to be working well. They were able to attract more Ph.D. applicants than before and increase the racial and gender diversity of the student body. The recruits included 2 McNail scholars and 4 men.

Since the previous review, the department has made significant strides in increasing the support for students to attend conferences. They make awards of \$500 each to students on a competitive basis to attend conferences to present papers and posters. They awarded 11 such scholarships in the last year.

They improved the communication with graduate students by holding open question-answer sessions with the graduate program co-directors every quarter. They initiated a spring celebration of graduate student achievements where the faculty provide lunch and express appreciation of student successes. This seems to have been well-received.

Computing Infrastructure

The department used several technology resource fee grants to significantly improve the computing infrastructure. Milam hall was converted to wireless and a large server and several laptops were purchased so that any class room in Milam can be turned into a computer lab. A variety of software licenses enable the students to access any analytical software they need. With the help of the research office and the Center for Healthy Aging Research, they established a "LIFElab," which is a center for data collection located in Bates Hall. Currently it has a large server and 19 computers that gather in-house and lab-data and process surveys.

In summary, the HDFS department made great strides in all aspects in the past 3 years and seems poised to the next level of advance. Their dedication to their mission, strong focus, and effort are highly commendable and they are worthy of all the support they can get from the college and the university administration.

HDFS Response to Graduate Council Follow Up February 2007

The Human Development & Family Studies Graduate Program was evaluated in 2004. The committee was quite positive, but made 13 recommendations for improvements. The following is an account of our response to those suggestions in the last two years. Recommendations are indicated in bold.

1. Establish at least one course on observational methods.

We now offer annually two qualitative methods courses, both of which devote significant attention to observational methods. Further, the first of the two is now required for all graduate students. In addition, more of our graduate students who seek additional observational methods are referred to appropriate courses in anthropology (ethnographic methods) and in sociology (qualitative sociology).

2. Conduct more research in the Child Development Center.

There are new research projects being conducted at the CDC (see Appendix A). Two are headed by Dr. Megan McClelland and involve seven graduate students, as well as two undergraduates who received URAP awards. Two are headed by Joanne Sorte, Director of the CDC, and involve both graduate and undergraduate researchers. An additional master's thesis project from the Design & Human Environment department is currently awaiting IRB approval.

3. Consider special topics courses in the signature areas of research.

With the addition of new faculty, we have added the proposed new courses in development, theory, and methods. We are also planning to offer at least three electives classes a year.

4. Consider making comprehensive examinations a more productive process for students.

We have continued to study this issue, including conducting an additional survey of comprehensive exams in other HDFS units across the country. We have not found a common approach nor have we settled on a solution. We continue to believe that interdisciplinary programs such as ours provide a useful exercise by requiring students to integrate material they have learned in coursework taught by faculty from various disciplines. Conversations currently are focusing on ways to make the qualifying exams equitable across students (e.g., developing common theory and methods questions for each cohort). Because our graduate faculty has changed quite a bit over the past several years, we think further discussion of this issue is appropriate at this time.

5. Improve the quality, quantity, and diversity of graduate student applicants.

We are convinced that improving the pool of applicants is best accomplished through personal contacts. Toward that end, we have recently developed an invitation for faculty to send electronically to respected colleagues, telling them about our program and encouraging them to send us their best undergraduate students.

We also are learning that print material is not a particularly effective way to reach a young audience. The Graduate Committee intends to focus its efforts during spring quarter on revisions

to our web materials. In addition to make the website more informative and more user friendly, we plan to include a podcast or two about our program.

Our application numbers are growing; we received 19 complete applications for our January 15th deadline and we have a second deadline on April 1st. Our efforts to increase the diversity of applicants seem to be working as well. For example, we received applications from and admitted two McNair scholars this month. We also had applications from five people of color of whom two (three?) have been admitted. The Graduate Council's report also noted a small number of male applicants. This year, of the 19 applications we received by January 15th, three (16%) were from men, two of whom were admitted. In fact, 25% of those admitted were men. Currently, 4 (13%) of our 31 graduates students are men.

Next month, we will have our 3rd annual recruitment weekend in which applicants living in the U.S. who received a positive decision are invited to come to campus to meet with faculty, graduate students, and each other; attend classes; and explore the campus and Corvallis. The Department pays the travel and lodging expenses for these visits. So far, the vast majority of people who attend have decided to enroll in our Program.

Last year and in the current year as well, we have promised the best applicants in our pool a graduate assistant position of at least .30 FTE. This higher FTE seems to be leading to more decisions to enroll at Oregon State.

6. Set aside some funds to support graduate student travel to attend conferences.

We have set aside funding to support \$500 awards for graduate travel to conferences from three sources: the Petersen Endowed Chair, the Knudsen Endowed Chair, and departmental funds. We have developed an application process for these funds (see <http://www.hhs.oregonstate.edu/hdfs/graduate/funding.html>). This program has been very popular, and we have had to tighten eligibility. The most important criterion is participation in the program, either by presenting a paper or poster or by engaging in society governance at some level. In 2005-2006, we awarded 11 students scholarships for a total of \$5,500 (see Appendix B). So far this year, we have awarded 10 fellowships for a total of \$5,000, but denied two.

7. Reconsider the exclusive emphasis on Ph.D. bound students.

Graduate faculty members have considered this issue at length and our position is unchanged. Given limited resources and the very large number of undergraduates we serve, we do not feel that it is in our best interests to emphasize the terminal M.S. degree, which would require us to provide graduate-level training in research to individuals who will not be practicing researchers. Instead, we seek to improve our recruitment of top Ph.D. students.

8. Improve the communication with the current and new graduate students.

Last year, the chair hosted an open office period for graduate students to ask questions. This year, each quarter, we are holding an open session each quarter for all graduate students with the graduate program's co-directors at which any question may be raised. Beginning in the fall and for the first time, we paired in-coming students with a current graduate student co-advisor. Although some of these pairings have been more successful than others, the successful ones have far exceeded our expectations. We will continue this practice in coming years. Our research apprenticeship/observation program is rotating students through various research projects and

labs in the department, providing opportunities for students to work with different faculty and to get to know other graduate students. We have instituted a spring celebration of our graduate students as well. Faculty provide lunch and celebrate students' milestones and accomplishments. Finally, on their own, students have initiated a weekly social hour.

9. Develop ways of obtaining more federal grants that enable the faculty to do research publishable in top quality journals.

Several of our faculty have participated in the grant writing program sponsored by the dean, which resulted in a number of submissions. So far, an R03 from NICHD has been funded to Dr. MacTavish; Dr. Richards received funding from USDA-NRI; and Dr. Rosenkoetter is collaborating on several studies funded by the Department of Education, and several other proposals are pending. Drs. Acock and Vuchinich have been collaborating with Dr. Flay in Public Health as co-investigators on federal submissions, and Dr. Vuchinich has recently submitted his own grant proposal. Dr. McClelland is resubmitting her proposal, and has also sought funding with research colleagues in Taiwan from their government.

We have three new faculty, Profs. Rick Settersten and Scott Hofer, and Research Associate Professor Andrea Piccinin, who have brought a total of four new grants or subcontracts with them, three from NIH and one from the MacArthur Foundation. Drs. Settersten, Hofer, Piccinin, Aldwin and Levenson have been participating in a P01 submission from UC Berkeley, and Drs. Hofer, Piccinin, Aldwin, Hooker, & Levenson are collaborating on another P01 submission for this June, with Dr. Hofer as PI.

Faculty have been very successful in garnering pilot funding from either the college or the Center for Health Aging Research (CHAR), which has supported graduate students and publications. Four grants have been funded by HHS: One to Dr. Hooker, one to Dr. McClelland, another to Drs. Levenson and Aldwin, and a fourth to Drs. MacTavish and Richards. Several faculty have also received pilot funding from CHAR, including Dr. Walker and Drs. Hofer and Aldwin.

Thus, the faculty have been very active in seeking funds for their own research and to support graduate students. This is resulting in an increasing publication rate among the faculty.

10. Continue the efforts to develop signature research centers and seek collaborators outside the department and college.

Since the original submission of our graduate review, two centers have been funded in which HDFS faculty participate. The Center for Healthy Aging Research has provided an excellent avenue for collaborative research. Dr. Walker has a grant funded with Drs. Becky Donatelle and Melinda Manore in Public Health on health behavior habit interventions in middle-aged women. Drs. Hooker and Aldwin are consultants on a grant funded to Carmen Steggel and Atiya Mahmood on acceptability of technologies which would help older adults age in place. Drs. Hofer and Aldwin recently received a grant working with Dr. Tory Hagen and psychosocial stress and cellular stress.

Drs. Kate MacTavish, Sally Bowman, Sharon Rosenkoetter, and Leslie Richards have been very active in the Sustainable Rural Communities Initiative, as has new Extension Demographer Lena Etuk. All of these faculty are engaged in rural Oregon. Dr. MacTavish has been examining the issues of mobile home park residence and child and family wellbeing, and is also working with

Dr. Richards on a project looking at community factors that shape physical activity among rural low-income Latino youth. Dr. Richards is just completing the second wave of the multi-state Rural Families Speak study examining the wellbeing of low-income rural mothers in the post-welfare era. Dr. Bowman has a large project funded through the Ford Family Foundation focused on the evaluation of parent education and family support services in rural Oregon. Dr. Rosenkoetter, through a training grant has facilitated the preparation of special education practitioners for work on rural schools. All such work is supported through the collaboration with other rural scholars engaged in the SRCI, such as Dr. Bruce Weber in Resource and Agricultural Economics, as well as faculty in Sociology and Forestry such as Drs. Rebecca Warner and John Bliss, respectively. The SRCI faculty have recently received permission from NSF to pursue an Integrative Graduate Education and Research Traineeship in Rural Studies training grant which would provide significant support for doctoral students.

11. Try and get at least 2 more faculty slots, not counting this year's hiring.

We have been increasing our number of faculty since the last review. As mentioned earlier, we hired two new full professors, Drs. Scott Hofer and Rick Settersten, and one new Research Associate Professor, Dr. Andrea Piccinin. In addition, we have two senior faculty who initially came to OSU in administrative posts. Dr. Marc Braverman is Associate Dean for Extension in HHS whose home department is HDFS. He teaches a graduate course in evaluation methodology every other year. Dr. Mark Lusk came to OSU as Director of International Programs, and has recently stepped down to take a full-time post in our department as a full professor. He will serve as point person for the Human Services option in the HDFS major, and is currently teaching a graduate class in Program Development. We are still pursuing candidates for the Knudsen Endowed Chair in Family Research and Policy. We hope to hire two-three additional assistant professors in the next few years, but it is unclear whether the financial situation of OSU will permit this.

12. Improve the computational infrastructure.

In the past two years, we have substantially upgraded the computer infrastructure for HDFS. Through a series of Technology Resource Fee (TRF) grants we developed a virtual computer lab. One grant funded the conversion of Milam Hall to a wireless facility, and another allowed the purchase of a large server (called "umbrella") and a whole series of software and licenses for both quantitative and qualitative analysis. Thus, students can access any analytical software they need as long as they have an onid account. An additional grant funded 25 laptops and a laptop cart for transporting the laptop to classrooms. As Milam is wireless, this allows any classroom in Milam to be a virtual computer lab. HDFS is funding a GTA to help other students with accessing umbrella. This system has been used to great benefit in our quantitative methods classes by Drs. Acock and Vuchinich, and Dr. Richards is currently piloting the system in the new graduate qualitative methods class. Further, other faculty have started using the system in other classes, such as our undergraduate WIC class.

This year we received substantial funding from the Research Office (RERF funds) and the Center for Health Aging Research to develop the LIFElab, a facility for data collection. The LIFElab, located in Bates Hall, consists of 19 computers, 8 of which will be used for data collection (cognitive and survey data) in the lab, one of which is connected to a scanner for processing surveys, and ten of which will be used for in-home data collection. In addition, we

also purchased a large server to support data collection, including web-based surveys. The LIFElab is nearing completion, but will require some soundproofing to be completely viable.

13. Upgrade the library collection to research level.

We continue to support the idea of upgrading the library collection, although resources required seem prohibitive in this regard. Our experience is that access to digital collections, either from campus or through interlibrary loan, has made the collection less of a problem than was true in the past. It would be terrific, though, if the library was able to arrange for immediate access to materials rather than the 6-month delay common for some key periodicals in our field.

Appendix A: Research Projects at the Child Development Center

McClelland, M. M. *The emergence of learning-related skills*. College of Health and Human Sciences, Oregon State University, (\$14,019). Funded May 1, 2004 – June 30, 2005.

McClelland, M. M. *The kindergarten readiness study*. Oregon State University Research Office, (\$10,000). Funded June 1, 2005 – September 30, 2006.

Carrie Farris (MA student)

Sarah Feeney (MA student)

Michaela Sektnan (MA Student)

Devora Shamah (PhD student)

Shannon Wanless (PhD Student)

Amy Murray (MA Student - is doing thesis on data from project)

Shauna Tominey (PhD student)

Sorte, Joanne.

Health in Action, a program approach to reducing obesity in young children (\$64,844), Northwest Health Foundation grant, 2005-2006. Undergraduate research opportunities (time studies of child activity levels, data review of child 24 hour food recall nutrition assessment, calculation of Body Mass Index for preschoolers); graduate student involvement in program development discussions, no direct implementation involvement or thesis; Director's publication of project design and results in *Young Children*, National Association for the Education of Young Children, presentations for State Superintendent Conference, Oregon Dietetics conference, etc.

Oregon Head Start Prekindergarten Program (\$1,070,728 and etc.) Oregon Department of Education, 2005-2007 (and etc.). Undergraduate and graduate grant management & implementation experience and data mgt; Sako Tsutsuminaka thesis (teacher perceptions); graduate participation Shauna Tominey (potential research at CDC), Cris Dogaru (informed thesis and dissertation), Katherine Lloyd (informed study), Carrie Farris (informed research)

Deb Upington (grad student) and Marilyn Read (DHE). Children's preference for environments study, Research for Master's thesis. IRB pending; project dates March - May 2007.

APPENDIX B

\$500 Travel Allotments For Graduate Students

2005-2006

Name	Date of Travel	Where To	Event	Account
Devora Shamah	Aug. 8-12, 2005	Tampa, FL	Rural Sociological Society	Department
Erica Srinivasan	Nov. 18-22, 2005	Orlando, FL	Gerontological Society of America	Knudson
Yu Jin Jeong	Nov. 14-20, 2005	Phoenix, AZ	NCFR	Department
Bethany Chamberlain	Nov. 16-19, 2005	Phoenix, AZ	NCFR	Petersen
Cris Dogaru	March 4-7, 2006	Lexington, KY	National Early Childhood Transition Center Research Team Meeting	Department
Shannon Wanless	April 27-30, 2006	Louisville, KY	Conference on Human Development	Department
Cris Mouzong	March 23-26, 2006	San Francisco, CA	Conference for Society of Research on Adolescence	Department
Michaela Sektnan	April 27-30, 2006	Louisville, KY	Conference on Human Development	Department
Amy Murray	April 27-30, 2006	Louisville KY	Conference on Human Development	Department
Doris Cancel-Tirado	April 27-30, 2006	Palm Springs, CA	Western Psychological Association Conference	Department

GRADUATE COUNCIL MEETING

March 1, 2007

3:00pm, Gilkey 109

Present: Koenig (chair), Filtz, Francis, Gitelman, Grosskopf, McLain, Rettig, and Wolpert

Absent: Blythe, Harter, Russ-Eft, Strickroth, and Unsworth

Guests: Jose Reyes, David Hamby, and Ron Adams

1. Minutes for February 1, 2007 and February 15, 2007

A motion was made and seconded to approve the minutes of February 1, 2007. All voted in favor. Motion passed.

A motion was made and seconded to approve the minutes of February 15, 2007. All voted in favor. Motion passed.

Theresa Filtz (Pharmacy) asked to be updated on the status of the IGERT proposals that were ranked at the last meeting. Hal Koenig (Business) informed the Council that the Office of Research received the Council's list of the top four proposals (and the one alternate) with their thanks. Koenig added that he had a telephone conversation with one of the writers of the proposal that had been ranked sixth, because that person wanted feedback on how to improve the proposal for next year. Koenig told that person that the proposals selected to move forward were further along in thinking and development.

2. Category I Proposal for Statewide Graduate MS and PhD Degrees in Medical Physics (revised)

Jose Reyes (Nuclear Engineering & Radiation Health Physics) began by updating the Council on news and actions since the January 18, 2007 Graduate Council meeting, when the first version of this proposal was reviewed. He also re-addressed some of Council members' previous concerns.

Reyes assured the Council that Oregon Health and Sciences University (OHSU) and OSU definitely want the Oregon Medical Physics Program (OMP) to be truly a joint program. Reyes directed the Council's attention to new language on page one of the proposal that emphasizes this desire. Reyes added that a jointly operated advisory board with common admittance and graduation criteria would oversee admittance to the OMP Program.

Reyes informed the committee that the College of Engineering is committed to the OMP Program and the search for a new faculty member and deputy director of the OMP Program has commenced.

Reyes informed the committee that he met with OSU's Provost who agreed that the OMP Program should have a common tuition. The two Provosts (ours and OHSU's) have not yet

decided on the amount. It could be as high as the medical school's tuition, or somewhere in between OSU's and OHSU's.

Reyes, David Hamby (Nuclear Engineering & Radiation Health Physics), and the Council members discussed the OMP curriculum and the "live" classrooms already operational at OSU's NE/RHP facility and at OHSU. It is possible that OSU's Radiation Health Physics students may also benefit from this new programming. Reyes hopes that many of the courses will be broadcasted via the Internet connection, lightening the load of some NE/RHP faculty members.

Bruce Rettig (Graduate School) then gave the Council and its visitors a brief description of joint campus registration. He advised Reyes to learn more about this process and whether it might be available. Joint campus registration involving OSU and OHSU is currently limited to the MPH program.

Reyes informed the Council that the OMP proposal has already passed through the OHSU Graduate Council and will be brought before the OHSU Faculty Senate on April 15th.

Tom McLain (Forestry) asked Reyes where the OMP students would live. Reyes answered that it depends on the individual student's sub-specialty. If the student is studying medical physics, it would make sense for him/her to live in Corvallis, but if the student is studying therapeutic physics he/she would probably want to be located near Portland.

Sally Francis (Graduate School) asked Reyes if OHSU had a library review comparable to ours. Reyes responded that OHSU's medical library is more extensive than OSU's. Francis noted that the OSU review evaluated our collection at marginally adequate for the first two sub-specialties. Reyes responded that most of the crucial journals are available electronically.

Filtz cautioned Reyes to press the issue of OSU students being granted access to the OHSU libraries. She warned that this is not a simple issue and institutional licensing agreements at OHSU might forbid or severely limit access to OSU students.

Alix Gitelman (Science) asked two questions on behalf of Michael Unsworth (Oceanic and Atmospheric Sciences) who was not present at the meeting. Unsworth wanted to know why the journal "Physics in Medicine and Biology" was not listed among the other important journals in the library review. Reyes and Hamby took note, but did not comment. Unsworth suggested that the OMP program be very clear to prospective students regarding course prerequisites and other preparation needed for admission. Reyes responded that the advisory board plans to provide joint graduate student handbooks for each subspecialty with a section detailing that type of advice.

Rettig asked Reyes about the addition of a Masters of Medical Physics program in the CAT I proposal. Reyes responded that this addition was mandated by OHSU's Graduate Council. The faculty at OHSU believes an MMP would speed students into the clinical setting. The faculty at OHSU is very concerned by Oregon's shortage of clinicians. Additionally it is believed that having an MMP degree will help with gaining accreditation. Hamby informed the Council that

he does not particularly like the MMP because he feels that the field of Medical Physics is more of a research field. Additional discussion on this topic and others ensued, including:

- ❑ The OMP advisory board's charge to examine course content in both OSU and OHSU courses.
- ❑ The OMP advisory board's charge to consider promotion and tenure cases.
- ❑ The need for an external OMP advisory board for accreditation purposes.
- ❑ MDs serving on graduate committees and serving as major professors – OSU's Graduate Faculty policy will allow it.

Ron Adams (College of Engineering) then commented that the College has been looking toward a strong partnership with OHSU for a long time and he is very happy to find the complimentary strengths at OSU and OHSU driving this proposal forward. Adam's best hope is that OSU faculty will soon be able to compete for NIH funding.

The guests left the meeting.

After some general comments the Council members considered how to address the omission of the MMP program on the CAT I's title page.

A motion was made and seconded to approve the CAT I proposal with instructions to the unit to list the MMP program along with the MS and PhD degrees in the Proposal's Title heading.

Meeting adjourned.

GRADUATE COUNCIL MEETING

February 15, 2007

3:00pm, Gilkey 109

Present: Koenig (chair), Blythe, Filtz, Francis, Gitelman, Harter, McLain, Rettig, Russ-Eft, Strickroth, Unsworth, & Wolpert

Absent: Grosskopf

1. Minutes of January 18, 2007

A motion was made and seconded to approve the minutes of January 18, 2007 as amended. All voted in favor. Motion passed.

2. Review of IGERT Letters of Intent

To: Debbie Delmore, OSU Research Office

The Grad Council met yesterday and discussed the seven letters of intent (LOIs) that were sent to the Grad School. The Council members were impressed by all the proposals but four clearly stood out from the others. Those LOIs include Multi-Dimensional Imaging, Genome Biology, Systems at Interfaces and Advancing Community Sustainability.

In the table below I have listed these LOIs and also an “alternate” - the LOI from Professor Jennifer Field. The list of four includes the Multi-Dimensional Imaging proposal that was selected by the Grad Council last year and they submitted a full proposal to NSF in the fall. That group is supposed to hear whether they have received funding this month or next and they wanted a chance to rewrite/resubmit their proposal if they were not funded in this round. If they receive funding, we did not want one of OSU’s four spots to be vacant so we gave the alternate spot to the proposal from Professor Field. One note about Professor Field’s proposal, the discussion in yesterday’s meeting recognized that this was the ***only*** proposal that had just one PI listed and no additional faculty from other departments. This did “stand out” among the set of seven LOIs so you might pass this along to Professor Field.

One other note from our discussion, one of the other proposals indicated that assessment would be figured out by the April deadline – in essence they submitted an incomplete LOI. It would seem logical that each LOI would work to address ***all*** parts of the Guidelines from the Research Office, but at least one group acknowledged, but did not address, a section.

Thank you for your help in the process. Please pass along our congratulations to all teams for their work on the proposals and thinking about how they can help graduate students transcend the boundaries of their “home” discipline to solve complex problems. Our best wishes to the four that made the cut to do well in the NSF review process.

Hal Koenig for the Graduate Council

Fundamentals and Applications of Multi-Dimensional Imaging	PI: Adel Faridani , Co-Pis: Steven Reese, Michael Bailey, Jamie Kruzic, Brian Bay, and others
Genome Biology Training Program	PI: Todd Mockler , Co-PIs: James Carrington, Steve Giovannoni, Weng-Keen Wong, Annie Qu
Systems at Interfaces: Dynamic Processes in Multiphase Subsurface Ecosystems	PI: David Myrold , Co-Pis: Peter Bottomley, Rick Colwell, Radu Popa, PSU , Lew Semprini
Advancing Community Sustainability in Rural Areas: Integrative Graduate Education and Research Traineeship in Rural Studies	PI: Bruce Weber , Co-PIs: John Bliss, Katherine MacTavish, Nancy Rosenberger, Hannah Gosnell
Linking Chemical Processes in the Environment with Biological Outcomes	Jennifer Field

Meeting adjourned.

GRADUATE COUNCIL MEETING

February 1, 2007

3:00pm, Gilkey 109

Present: Koenig (chair), Blythe, Filtz, Francis, Gitelman, Harter, McLain, Rettig, Strickroth, Unsworth

Absent: Grosskopf, Russ-Eft, Wolpert

Hal Koenig (College of Business) began the meeting with a few words about future Graduate Council agendas. He then reminded the Council that the President of the Council of Graduate Schools (CGS) will be visiting OSU on March 15th. The March 15 Graduate Council meeting will be canceled so that Council members will be free to visit with Dr. Stewart and to attend her presentation “Graduate Education and the US Competitiveness Agenda” which will be held at 2:00 PM in the MU Journey Room.

1. Course Proposals for Econ 570 and Econ 571

Koenig explained that all members of the Graduate Council are reviewing the Econ 570 & Econ 571 course proposals. Koenig reminded Council members that these courses were included in the letter written by Provost Sabah Randhawa in which the Provost denied the economics and applied economics CAT I proposals and assigned Bruce Rettig as Interim Director of the current graduate economics degree program (what was the UGFE). However, because the courses have not gone through the Faculty Senate review process beyond being included in one of the Category I proposals, the review by the Graduate Council and the Curriculum Council is required.

Theresa Filtz (Pharmacy), who has never served on the CAT II subcommittee, asked to know what the Graduate Council’s role is in examining these proposals.

Bruce Rettig (Graduate School) explained that even though the Curriculum Council rigorously scrutinizes all CAT II proposals to assure that they meet certain criteria, all CAT II proposals for graduate courses also require the approval of the Graduate Council’s CAT II subcommittee. Council members in that committee review the proposals and are encouraged to make productive comments, ask for clarification if needed, or make suggestions for improvements.

The main reason why it was felt necessary for the proposals for Econ 570 & 571 to come before the Graduate Council prior to going before the Curriculum Council, Rettig stated, is that faculty disagreement over the macroeconomics courses contributed to the UGFE’s fall. Faculty in the Department of Economics believe that the graduate courses in macroeconomics should more closely resemble sequences at peer universities. Faculty in Agricultural and Resource Economics and Forest Resources disagree and argue that the current macroeconomics courses are more suitable for the students at Oregon State University. The liaison documents attached to the proposals report these differences, which were also discussed when the Category I proposals were presented to the Council last term.

Alix Gitelman (Science) asked if these two courses would replace Econ 515 (the macroeconomics course taken by many master's students from a number of graduate programs). Rettig answered that it would because the Department of Agricultural and Resource Economics (AREC) does not have the resources to offer Econ 515 without the help of the Economics Department.

Discussion on the programmatic demand for Starr McMullen's Econ 515 and that course's focus was held.

Mike Unsworth (Oceanic & Atmospheric Sciences) commented that he understood from reading the CAT II liaison that there is concern that the level of the new 570 is too hardy for candidates wanting a terminal master's degree, despite the fact that the course requires only one undergraduate course as a prerequisite.

The Council discussed the necessity of trusting the instructor to keep the course at the appropriate level.

Linda Blythe asked if the Council has any recourse, if after approving these new economics courses three-quarters of the students taking it fail. Rettig answered that because this is a core course and not an elective, the Provost and the Graduate Dean have given him the authority, as director of the Program, to change the instructor assignment if needed.

Rod Harter (Health & Human Sciences) asked if the approval of these courses would lead the two factions of economists to resolve their differences. Rettig answered that it would be helpful for the students in those programs to report satisfaction with the courses. Additionally AREC and Forest Resources have the authority to modify its core course requirements for their own department's graduate degrees, if they feel this is needed.

A motion was made and seconded to approve Econ 570 & 571 as proposed. All voted in favor. Motion passed.

II. Admission of students with 3-year Bachelor's degrees from Europe

Graduate Schools in the United States are increasingly receptive to admitting at least some of the applicants with 3-year European degrees. Several universities say they accept such degrees. A minority will not accept applicants from European universities unless they complete four or more years of university education. Oregon State University has fallen into the middle ground of insisting on the equivalent of a four-year accredited U.S. university, but relying on various guides, plus information from OSU programs, to determine which applicants meet this equivalency standard.

Koenig asked the Council if they felt that now is an appropriate time to examine this issue since these special admissions cases will become more prevalent as more and more European universities move to the 3-year system. He noted that applicants from Europe are more common

in some fields than in others. Koenig asked the Council if they wanted to form a subcommittee to explore the subject in depth.

Rettig advised the Council of the current admission policy that requires that an applicant to an OSU graduate program have the equivalent of a four-year US bachelor's degree from an accredited institution.

Rettig informed the Council that OSU has admitted one student with a 3-year European degree. He wasn't sure which Engineering program had requested the exception, but that Department's admission committee had made a very strong case for that applicant's admission. A special flag was placed on the student's record in the Banner student information system so that Admissions and the Graduate School could track and evaluate his/her performance.

Sally Francis (Graduate School) told the Council that she was surprised to learn that OSU admits applicants with 3 year bachelor's degrees. Rettig confirmed it but added that that fact is not advertised. Francis wonders if the Office of Admissions changed the policy without the approval of the Graduate Council. Francis stated that the Graduate Council is in charge of graduate admissions policy not the admissions office. Graduate Council should set the requirements.

Discussion on whether or not we should amend the catalog language ensued. Some questions asked were:

- Does the current catalog language discourage International applicants? Are we losing them to other universities with more lenient admissions standards, or has the current language worked to our advantage by discouraging applicants with insufficient preparation from applying?
- What does equivalency mean? How do you decide which degrees are equivalent to an OSU undergraduate degree?

In the end, the Council members felt that OSU's pool of applicants from Europe has been quite small and thought this unlikely to change. The process of dealing with the files on a case by case basis seems to be working well. As long as the exception process is clearly articulated and there is a process available, we should continue to allow the department chairs and admissions groups to decide which 3-year degrees are equivalent. Rettig, however, will contact the admissions office to learn what programs are currently dealing with these cases to learn if they have issues or need guidance. Additionally, Francis will request an annual admissions report to track how many students with a 3-year degree are admitted annually. She also felt it would be worthwhile to monitor the performance of these students.

III. Approval guidelines for distance delivered degrees (currently advertised online graduate credentials)

Rettig introduced discussion on whether or not a curricular review process for distance delivered degree programs should be instituted. There is currently no review process required. If a unit is currently authorized to deliver the degree they may offer that degree online without submitting to

any additional approval process. The Curriculum Council has been interested in this question for some time.

Upon learning that some MS programs are exclusively delivered via e-campus Theresa Filtz (Pharmacy) asked how it is possible for these e-campus students to meet OSU campus residency requirements. Rettig explained that the minimum residency requirement was changed in 1994, allowing courses taught by OSU graduate faculty to count towards residency.

Alix Gitelman asked who verifies that the instructor of an e-campus course is actually a member of the OSU graduate faculty. Rettig answered that e-campus does bring their quarterly schedules to him and he does verify that the course has been authorized and that the instructor is certified to teach in the field. Rettig said that e-campus has been more conscientious than other units in having him review courses. He performs more oversight on e-campus courses than he does on other courses offered on campus.

Other topics of discussion included:

- Measuring the graduate learning experience in e-courses, who is the best judge: a campus subcommittee or the unit in charge of the course?
- Does the strong economic advantage of offering courses via e-campus cloud a unit's judgment?
- Is more oversight of e-campus courses needed? We want to maintain the value of our graduate degree programs.

After additional discussion it was decided to update the Graduate Council's Graduate Program Review Guidelines to include instruction to programs to report on their distance delivered courses and programs in the self-study document. Additionally, Programs should be instructed to include e-campus students in the site visit interviews – arranging for chat sessions if students can not participate in person.

Old Business

Koenig informed the Council members that eight IGERT proposals would soon be forwarded to them for review and ranking. An opportunity to discuss the proposals and scores in committee, will occur at the February 15th meeting.

Meeting adjourned.

GRADUATE COUNCIL MEETING

**January 18, 2007
3:00pm, Gilkey 109**

Present: Koenig (chair), Blythe, Filtz, Francis, Gitelman, Harter, Rettig, Strickroth, Unsworth, and Wolpert

Absent: Grosskopf, McLain, Russ-Eft

Guests: Jose Reyes, Kathy Higley

1. Category I Proposal for Statewide Graduate MS and PhD Degrees in Medical Physics

After introductions, Hal Koenig (Business) asked Jose Reyes (Nuclear Engineering & Radiation Health Physics) for the latest news from the Budget and Fiscal Planning Committee (BFPC). As there was no update, Koenig informed the Council and the visitors that he did not expect that a Graduate Council vote on the Category I proposal would be taken until the BFPC had finished their analysis, but he added that the Council would be glad to hear an overview of the proposal.

Jose Reyes praised Kathy Higley and David Hanby for their work in collaborating with OHSU, which was necessary to get the proposal off the ground. Reyes said that the process of working on the proposal has been exciting and said he's been pleased with OHSU's responsiveness.

Kathy Higley (Nuclear Engineering & Radiation Health Physics) then provided the Council with an overview of the proposal.

After hearing that proponents of the proposal are hoping to start the new program this fall, Linda Blythe (Veterinary Medicine) asked Higley how many students could have heard about the program. Higley responded that she is aware that some of the current radiation health physics students have tremendous interest and would certainly transfer to the program. Additionally, Higley is aware that a large percentage of her distance students, already working in the field of medical physics but needing an advanced degree, would be interested in the program as well.

Tom Wolpert (Agricultural Sciences) asked Higley about the minimum requirements for certification (in the four specializations) and then asked if there is anything preventing the radiation health physics students from becoming certified in medical health physics. Higley responded that a number of OSU radiation health physics students do go on to become certified after completing an additional clinical experience (a residency) at Samaritan Regional Cancer Center or elsewhere.

Higley also talked about the future accreditation of the new program. She said that OSU is already offering the courses that an accrediting body would require.

Reyes added that it isn't enough to provide a way for master's students to become certified and work as clinicians. He also believes that it is important to advance the field with a strong

research-oriented PhD program – so new technologies and new treatment therapies can be developed. Reyes is very excited about OSU students and faculty becoming involved in research collaborations that will help the medical profession with its needs and the needs of patients. He said that one of the features that will distinguish the OSU/OHSU program from any other is going to be the strong research component.

Mike Unsworth (Oceanic and Atmospheric Science) asked Higley about the academic background of the students coming into the new program. Higley responded that the classical way a student would come into the program would be with a physics undergraduate degree, but added that some of the radiation health physics students have backgrounds in biological sciences, engineering and mathematics. She added that the required background needed for studying the different sub-specialties can be quite different and that some admissions issues have yet to be worked out. Unsworth then noted that there is surprisingly little physics in the core courses outlined in the Cat I proposal and that the only mathematics course is an introduction to statistics. He stated that it is odd to him that a person could call himself a medical physicist with so little background in mathematics and physics. Higley responded that for the therapy sub-specialty, admission preference would be given to students with a physics background. She added that the mathematics and physics preparation needed for some of the other sub-specialties would not be as rigorous.

Unsworth questioned the lack of a written response from the OSU physics department and asked if there is any overlap in the research that they are doing or if they could offer any graduate training that would be useful for medical physics students. Higley answered that she was surprised not to get a response back from the head of the physics department during the initial approval process. She then mentioned that Professor Faridani's work in imagining (mathematics) is the closest area to medical physics and they are already working with him

Reyes then spoke about the recent Graduate Council Program Review of the Nuclear Engineering/Radiation Health Physics graduate programs and the reviewers' formal recommendations that he thought were very helpful. He spoke of the reviewers' concern for the survival of the radiation health physics program after the creation of the new medical physics program. Reyes told the Council that upon graduation, most radiation health physics students enter industrial fields (radiation protection, nuclear power plants, national laboratories, military, etc) rather than medical fields. The medical physics program would be interesting to some, but not to all of the radiation health physics students.

Sally Francis (Graduate School) commented that the proposal indicates that both universities (OSU/OHSU) would be listed on the diploma making it a joint program. However in various other places there is mention that each university would have its own admissions standards. Francis stated that if the medical physics program is to be a joint program, everything should be standardized within it.

Additional discussion on this topic and others included:

- The development of the OMP Advisory board, its duties and the composition of its membership

- The development of an agreement letter between the OSU and OHSU Provosts (re: a common tuition)
- The need of OSU students to take OHSU courses (sometimes remotely) and vice versa
- A Professional Science Master's Program in medical physics
- State regulation of the profession
- Linn Benton Community College as potential "feeder" school (x-ray technology program)
- Funding of medical physics students
- Potentially higher graduate assistant tuition remissions for medical physics tuition: who pays?
- OSU Graduate Faculty v. OHSU Graduate Faculty – can an MD direct a PhD dissertation in medical physics?

The guests left the meeting.

The Council then discussed preparing a list of follow-up questions for Reyes and Higley. Koenig informed the Council that he would send a draft memo to the Council members by noon of the next day and asked that they make any changes or comments by Wednesday. He will then forward the revised memo to Reyes and Higley for their response (a revised proposal for a subsequent Council meeting).

2. Minutes of November 30, 2006

A motion was made and seconded to approve the minutes of November 30, 2006. All voted in favor. Motion passed.

3. Review of IGERT Letters of Intent

Koenig informed the Council that Francis received a request from the Research Office that the Graduate Council be asked to review IGERT proposals as they did last year. Koenig asked the Council if they would agree to review the proposals this year and in the future. After discussion it was agreed that it is appropriate for the Graduate Council to review the proposals this year and in subsequent years as needed (any year that there are more than four proposals). It was also decided that these proposals should be set at no longer than six pages in length.

4. Updates from Dean Francis

Francis informed the Council of Associate Dean Rettig's retirement, his recent appointment as interim director of the economics graduate program, and the status of the search for Rettig's replacement. Francis and Koenig expressed their appreciation of the Associate Dean's past and current service.

Francis informed the Council that the Provost launched a new process of reviewing service/support units and that the Graduate School and the Research Office would be reviewed this academic year. Francis asked the Council to consider several questions: Should the Council help with the self-study? Should past or present Council members be appointed to the review team? Should the Council meet with the reviewers? Francis also told the Council that a web-based satisfaction survey was released and data was collected.

Francis asked the Council to pencil in President of the Council of Graduate Schools, Debra Stewart's visit on March 15th. She has been invited to present a public presentation on the competitive agenda. Stewart's visit corresponds with the annual meeting of the Western Association of Graduate Schools in Portland March 16-18. OSU's Graduate School is hosting this meeting.

To gauge if the NRC survey process is working efficiently, Francis asked Council members if any had been contacted by the National Research Council. Some members were contacted. A Council member mentioned that deadlines were not made clear.

5. FERPA and Student Examinations

The Family Educational Rights and Privacy Act (FERPA) protects student privacy. Recently, a question has been posed about whether the public announcement of student presentations as part of final examinations must receive student permission or whether the student's permission is implied because the presentation is part of the requirements for the degree. A review of the Graduate Catalog relative to doctoral programs includes the statement "The final oral examination consists of a public thesis defense followed by a closed session of the examining committee with the candidate." The language in the description of the master's thesis is not as explicit. The question before the Council is whether a public oral presentation should be required for a master's degree. If so, should the language from the doctoral student section of the catalog be included in the master's degree section?

The Council agreed that Mary Strickroth and Bruce Rettig would collaborate to insert language into the graduate catalog that would clarify the role of public presentations of master's theses.

Meeting adjourned.

GRADUATE COUNCIL MEETING

November 30, 2006

3:00pm, Gilkey 109

Present: Koenig (chair), Blythe, Filtz, Francis, Gitelman, Harter, McLain, Strickroth, and Unsworth

Absent: Grosskopf, Jovanovic, Rettig, Russ-Eft, Wolpert

Guests: Stella Coakley, Dale Pehrsson, David Cann, and Walt Ream

1. Minutes for October 12, 2006 and November 2, 2006

A motion was made and seconded to approve the minutes of October 12, 2006. All voted in favor. Motion passed.

A motion was made and seconded to approve the minutes of November 2, 2006. All voted in favor. Motion passed.

Alix Gitelman (Science) asked to be updated on the status of the two Category I economics proposals that the Council had previously reviewed. Hal Koenig (Business) and Sally Francis (Graduate School) informed the Council of the Provost's decision to halt the review of the two proposals and to establish a single graduate program in economics to be administered out of the Graduate School with Bruce Rettig (Graduate School) managing the program. Dean Francis commended the Council on the quality of its review of the two proposals and indicated that their analysis was very central to the Provost's decision. She also explained that the Provost consulted with the President and President-Elect of the Faculty Senate and considered the report of the Budget and Fiscal Planning Committee and the comments submitted by the Chair of the Curriculum Council in reaching this decision.

2. Graduate Council Review of Genetics

David Cann (Engineering) presented the report of the Graduate Council review of the Genetics program. The review's site visit took place May 1, 2006. Cann began by saying that the program has excellent academic records. He said it is small because of a lack of funding and because, like other interdisciplinary programs, it relies heavily on the volunteer spirit of its faculty. He then discussed many of the review panel's recommendations.

Associate Dean Stella Coakley (College of Agricultural Sciences) commented that the review did a good job of identifying the challenges facing the program and that it was also informative in showing that the utilization of the program is as broad as the MCB (Molecular Cellular Biology) program with very diverse faculty participation. She added that Walt Ream has done an excellent job of keeping the program afloat in challenging times.

Walt Ream (Microbiology) proceeded to address a few of the recommendations. He commented on recommendation 2 and recommendation 5.

He also informed the Council that although he thought the review report to be an outstanding synopsis of the Program, he did disagree with a statement questioning the Program's standards. Ream spoke of the first course all Genetics students take being widely regarded as the most difficult course in life sciences at OSU. Last year the three top students in that class were Genetics students. Additionally it is the life science faculty who are evaluating the exams and thesis defenses of Genetics students and Ream believes that those faculty members are holding Genetics students to the same high standards that are applied to any other life science graduate student.

Ream understands why the review panel would question the absence of Genetics student failures/drop outs, but explained that the anomaly of a 100% completion rate is due to the highly selective admission process. Ninety percent of all Genetics program admissions applications are typically thrown out and only the best of the remaining applicants are awarded fellowship or grant support.

Francis (Graduate School) asked Ream to comment on Genetics master's students' time to degree, which appeared to be a bit long. Ream explained that some unsuccessful PhD students leave the program with an MS if they have satisfied that degree's requirements. Coakley also pointed out that another factor which has distorted the numbers might have to do with the Professional Science Master's Program. In the recent past, PSM students entered through the Genetics Program because the MCB program did not yet offer a Master's degree.

Linda Blythe (Veterinary Medicine) asked Ream his opinion of the recommendation to move the Genetics program (to a track) under the Molecular Cellular Biology graduate program.

When Ream asked Coakley to comment, she responded that she could not offer an official comment but said that the general sense of the College of Agricultural Science is to move towards more umbrella programs (programs with many tracks). She did say that it makes good sense to try to simplify the lives of the faculty who currently participate in so many disciplinary and interdisciplinary programs (faculty would sift through just one set of applications looking for students and would match those students up with the programs best suited to their interests.). Focusing on programmatic areas would attract the highest quality students. Coakley stated that it doesn't make sense to have similar programs in colleges or departments.

There was then discussion over degree name and concentration/track identification on diplomas and transcripts. Currently at OSU, transcripts indicate major and minor only. Tracks are not transcript visible. OSU diplomas indicate degree name only (i.e. Doctor of Philosophy).

Discussion was held on the following:

- The large number of independent degrees and majors at OSU.
- Faculty participation on graduate faculties (on the average 4 faculties and up to 10).

- Achieving graduate program “economy of scale” while balancing student interest, employer desire, and disciplinary needs.

Ream then shared his idea of a major reorganization of the life sciences at OSU, building one or two (applied science/theoretical science) large departments that would house all life sciences programs. He admitted that it makes sense to join Genetics and MCB but it makes even more sense to do the larger reorganization of life sciences.

Blythe asked Ream if the Genetics program would grow if it remained independent. Ream responded that without additional funding the program will remain as it is today.

The guests then left the meeting.

Blythe commented that after reading the review report she understood that the Genetics Program is doing great. Why do we want to reorganize it? She added that it seems like it would upset more people than not if the program is merged with another.

Unsworth added that if the Council does not agree with the recommendation perhaps we should ask that the report be amended or indicate our feelings in the reporting of the minutes. Discussion about the recommendation to merge and about possible solutions to Genetics’ identity problem ensued.

Gitelman ask the Council members to reread recommendation #14 which she believes is a hedge against what the Council is concerned about. She said that the primacy of preserving the Program is in this recommendation and can satisfy the Council’s concern about the other recommendation to merge. Unsworth agreed that this is a comfortable way out.

A motion was made and seconded to approve the Genetics Graduate Program Review Report. All voted in favor. Motion passed.

3. Civil Engineering Follow-up Review Report

Dale Pehrsson (Education) presented a follow-up report of the Civil Engineering Graduate Council Program Review. The original graduate program review took place February 10, 2004. Original review panel members, Dale Pehrsson and Luiz Bermudez met with Department Chair, Ken Williamson and Tom Miller, Assistant Department Head on October 27th. Pehrsson reported that in that meeting, they collected the following information (complete report inserted here):

DATE: 11/18/2006

TO: DEAN SALLY FRANCIS

**FROM: DALE-ELIZABETH PEHRSSON, REVIEW COMMITTEE CHAIR
LUIZ BERMUDEZ, COMMITTEE MEMBER**

RE: CCEE GRADUATE PROGRAM REVIEW TWO YEAR FOLLOWUP

Committee members, Dale Pehrsson and Luiz Bermudez met with Department Chair, Ken Williamson and Tom Miller, Assistant Department Head on Friday, 10/27/06 in Dr. Williamson's office. At that time we reviewed the graduate program recommendations made in the initial graduate review of 2004. Dr. Williamson went through each recommendation and discussed the status of the program changes that have been implemented since the time of the initial review. Drs. Bermudez and Pehrsson asked additional questions and reviewed several additional points and were satisfied with the information received. Clearly, this graduate program has undergone some major organizational, faculty, structural and student policy revisions in the past two years. The department faculty members and administration have demonstrated through their actions and follow-up on the recommendations that they considered the graduate review recommendations seriously. The program has re-evaluated the "top 25" strategy and it is no longer an emphasis. Focusing on other initiatives allowed the faculty the opportunity to address issues in an adequate fashion. Indeed, they have made substantial attempts to do so. Though not all issues are resolved, they have made and continue to make significant progress.

The following areas were discussed and reviewed; these are most pertinent to the initial CCEE Grad Review:

Action 1: Graduate program administration has become more centralized through the appointment of a graduate program coordinator and a graduate student advisor. The coordinator chairs the Graduate Committee and graduate student representation has been added to the committee. The Graduate Coordinator is responsible for continuing to develop the graduate seminar series. These changes have resulted in improved management of graduate program and improvement in communication with graduate students, marketing of graduate programs, resources re-allocation for graduate students and increase in quality of graduate curriculum (e.g. graduate seminar).

Action 2: The Graduate Committee's continues their efforts to recruit higher quality graduate student through better marketing and increased graduate student support. This remains a challenge, high industry salaries are a major disincentive. Faculty are engaged in recruitment of graduate students especially women and students from underrepresented groups. A recruitment visitation has been developed where about 6 students from across the US are brought to the department in February to consider OSU for their graduate studies.

Action 3: Diversity and multi-cultural training was and continues to be provided to faculty to improve their skills for interaction with a highly diverse graduate student population. Faculty and staff have worked with the diversity office and have conducted several trainings related to diversity and multicultural sensitivity and communication. Indeed, this was the focus of their last faculty retreat. The faculty members understand this is an area of challenge and needs ongoing attention.

Action 4: Strategic plans for each of the graduate disciplines within CCEE (structural, geotechnical, water resources, environmental, ocean, and transportation engineering) were developed during 2004-05. These included evaluation of graduate course offerings and focus of graduate programs, increasing collaboration with other groups both within and outside the CCEE, increasing research funding and graduate student support, and developing recommendations for future space and faculty needs. The department has raised over 11 million dollars for renovation of Apperson Hall and the building is presently under construction. Additionally, upgrades of graduate facilities are being planned for the Hinsdale Wave Laboratory and Graf Hall.

Response to Specific Recommendations made in initial 2004 Grad Review

Graduate Review Recommendation:

It is suggested that CCEE develop a financial plan to increase FTE to provide adequate staff/student ratios more indicative of Top 25 Peer institutions.

Dr. Williamson discussed how the CCEE Department is chronically under funded and they have limited control over state funding or funding allocations. However, the department has re-defined their mission to impacting the state economy and seeking additional state support. Funding has been requested from the 07-08 Legislature for about \$5 million in faculty support for graduate programs and \$2-4 million in equipment and renovations.

Graduate Review recommendation:

Develop recruitment and retention strategies that increase faculty diversity. An incremental five-year plan that brings faculty FTE in closer alignment with top-25 status should be considered.

Graduate Review Recommendation:

The CCEE faculty can do many interventions in addition to hiring faculty of color, to deal with the issue of distinctive treatment of minority, women and international students, it is recommended that the Department develop a plan of action to deal with diversity sensitivity issues and access campus resources (such as attending DPD trainings, accessing consultations with Multicultural office personnel and the Office serving minority students).

The department has hired six new faculty members within the five years which included two Caucasian women, one Asian woman, two Caucasian men and an Asian man; recruiting attempts to hire a Hispanic/Latino applicant failed due to salary differentials. The department plans to recruit to fill 10 potential new positions over the next five years, providing opportunities for more diversity hires.

Graduate Review Recommendation: This information regarding display of prejudice and prejudicial attitudes is troubling and should be investigated further. An action plan to prevent or deal with these occurrences in the future should be developed and set forth.

This was addressed above.

Graduate Review Recommendation:

We concur (with Departmental plans for identification of diversity issues). The Department may wish to contact the office for OSU multicultural affairs to gain access to resources for fair and thorough evaluation. Further, the Department may wish to contact “peer” institutions to establish criteria that are standard in the field.

The Department expanded trainings and workshops for faculty related to diversity issues once the new faculty hires are in place. They have worked with the Office of Multicultural Affairs and Diversity training, the department has a more clear understanding of the specific issues related to student sensitivity and communications styles. An all-day diversity training workshop was conducted for all faculty and staff in fall, 2006.

Graduate Review Recommendation:

Though the Department receives input from several Industry advisory boards, because the Department prides itself and markets itself on having “Work Ready Graduates” it is strongly advised that the CCEE Department develop industry user-friendly protocol for employer satisfaction feedback of graduate hires. A similar protocol should be developed to solicit and receive feedback from recent graduates tailored to identify their perceptions regarding their “Work Ready” preparedness.

The department and faculty have advanced their Web-based feedback methods significantly to include exit interview for graduates and feedback from employers. Additionally, they have streamlined their advisement system so that students are communicated with and advised in a more timely fashion.

Graduate Review Recommendation: We concur; additionally we recommend that the program implement a strong student retention effort and that an organized plan be formulated, especially as it relates to students of color and women.

We have instituted additional recruiting programs for women and students of color. The department is committed to providing financial aide to all women and students of color who choose to be admitted to the graduate program.

Graduate Review Recommendation: These advising, organization and communication issues are consistent review findings and actions to enhance these processes seem warranted. A refined and organized advisement process is recommended.

Done

Graduate Review Recommendation:

Develop a more refined and ongoing advisement and communication system.

Done

Graduate Review Recommendation:

Communicate distribution and allocation of lab resources to students to increase their understanding of project and equipment assignments and how to better access resources.

These recommendations were addressed with the appointment of a graduate program coordinator and a graduate student advisor, this position has served to strengthen program decisions, and graduate students have on the Committee. Upgraded resources, computers and facilities have also been developed for the students.

Graduate Review Recommendation:

Offerings should be evaluated, streamlined and communicated in a clear way to graduate students. Funding is needed to offer standalone courses. Graduate courses that cannot be offered should be removed from program catalogs. Further, as the Department focuses on its refinement of curriculum and strengthens the program at the graduate level, it is recommended that a CCEE develop curriculum that supports a solid, focused and strong PhD and M. Eng. Programs.

Done

Graduate Review Recommendation:

Evaluate essential course offerings that are necessary for students to complete their Program of study and eliminate courses from the curriculum that are not offered regularly., Update, evaluate, streamline and implement advising procedures that inform graduate students as to their course options prior to admission or during their first term in the program.

All graduate offerings were reviewed during 2004 and a significant number of 400/500 level courses have been eliminated. If we obtain additional support for graduate faculty, almost all 400/500 level courses will be dropped. Course offerings and graduate catalog has been updated. Additionally, the issue of many courses listed in the catalog and on course listing materials without deliverance, has been addressed by realistically removing the courses that the CCEE Department can not teach.

Graduate Review Recommendation:

Establish a clear plan to implement the M.Eng program.

Policies for the M. Eng. Degree program were developed during fall, 2004.

Graduate Review Recommendation:

Establish a clear plan to implement the above, a system and teaching opportunities should be created. This is a clear concern expressed by the graduate students. Compensation for GTA positions should be comparable to those for GRA positions.

Faculty have committed to having all Ph.D.s to be involved in a teaching experiences as part of their programs. Funding is simply not available to make assistantships for GTAs at a comparable level to GRAs.

Graduate Review Recommendation: It is recommended that the Department seriously evaluate which programs are the most essential and consider eliminating those programs that are less crucial. This would streamline resources and better organize teaching and advising processes, research resources and management issues. It would assist CCEE in creating a clearer “niche” that provides for potential national recognition.

Civil engineering comprised of a number of different professional discipline that are highly fragmented. They believe that if they are to have a high quality undergraduate program, diversity of faculty expertise is essential. This also supports faculty scholarship. There is little opportunity to eliminate programs. CCEE believes a more constructive approach is to promote collaboration between the various disciplines toward large research projects and graduate curricula and therefore they have pursued this strategy.

The environmental engineering program will move to Chemical Engineering in fall, 08. Cooperative research programs will still be maintained with Civil Engineering for several projects.

Graduate Review Recommendation: Evaluate current utilization of faculty for undergraduate and graduate courses, including reviewing the tradition of teaching recitations. Review faculty load formula to include graduate advising, teaching and research. Develop a reorganization plan for fair distribution of structural and resource reallocation with the move of programs to other Departments. Continue marketing and seeking information regarding the program with industry, graduates and parents; this is a major strength. We recommend having faculty discuss, plan and strategize the priorities and needs of moving to Top 25 status. Eliminate programs that are not productive.

Faculty members do not support teaching recitations with graduate students. Faculty members are given credit for graduate teaching, advising and research in the present workload allocation model; however, some faculty members believe this model does not give adequate credit. This is an administrative judgment call about how to cut the pie. There are few opportunities for shifting faculty loads within CCEE away from meeting our large undergraduate commitments without additional resources.

Resources allocation and priorities to move to Top 25 status will be addressed in the strategic planning to be done in fall, 04. In 2005 the CCEE Program has switched its focus to statewide initiatives.

Graduate Review Recommendation:
The CCEE faculty will have to develop an aggressive research agenda and plan that will attract increased grants, research funding, student assistantships, private funding

to reach the Top 25 University Status mandate. Faculty and Management will need to allocate time, resources and funding to achieve this goal.

The Department has an aggressive research agenda that has been supported by the College and the Research Office and continues to advance. There have been five retirements and new faculty hires enter with established research programs adding quality and attracting graduate students.

SUMMARY:

It is our impression that the CCEE department and faculty members have acted responsibly upon the recommendations put forth by the graduate review. It is clear that they have vision for what their programs and faculty members are best at delivering to meet the needs of this discipline within the Pacific Northwest. There have been several opportunities and advancements over the past 2 years that have lead to further development of the program, including retirements, new faculty hires with active research agendas, structural changes, financial infusions and fundraisings, tragic tsunami and world events that have helped mobilize the program and operationalizing the vision of the faculty. They are continuing to develop their trainings, recruitment and curricula to meet the needs of a diverse and global workplace.

Pehrsson concluded her report by commenting that she felt it heartwarming to see that the department has been seriously working on following the reviewers' recommendations.

Tom McLain (Forestry) asked about the department's feelings regarding the proposed reorganization of the school. Pehrsson answered that she only spoke with Drs. Williamson and Miller and that they seemed to be supportive.

Mike Unsworth (Atmospheric & Oceanic Sciences) expressed his surprise to hear that the department of Civil Engineering (CE) is chronically under-funded. He asked Pehrsson if CE is receiving its fair share from the College of Engineering's resources.

McLain shared that he understood that Ron Adams (Dean, COE) had made a decision not to support CE. Francis added that Dean Adams' decision might be a strategic one. Perhaps he primarily supports programs that have the potential to rise to the top 25.

Rod Harter (Heath & Human Science) asked about the Engineering Student Resource Fee. Wouldn't the department of Civil Engineering receive a portion of that money? McLain answered that he believes the revenue from those fees goes to support the College of Engineering infrastructure (computer facilities and support, and laboratory activities).

Pehrsson informed the Council that she is concerned that although the department is aggressively seeking state funding, they do not have a back up plan if that money is not allocated.

Francis (Graduate School) asked whether or not the Council wished to consider revising the format of the Follow-up Review at a future meeting to include interviews with additional program faculty. In the current format, the reviewers meet with leadership only. Today's discussion raised the potential concern that the leadership of a program would report information in the most positive light. If other members of the unit have concerns or issues, those concerns would not necessarily be made known through the current process.

A motion was made and seconded to approve the Civil Engineering Follow-up Review Report. All voted in favor. Motion passed.

Meeting adjourned.

GRADUATE COUNCIL
PROGRAM OF REVIEW
OF
GRADUATE PROGRAM IN GENETICS
May 2006

OVERALL CONCLUSION AND RECOMMENDATION:

The Genetics Program provides an excellent vehicle for attracting students to OSU who are interested in a genetics approach to basic and applied research in a number of biological disciplines. The program is supported by excellent laboratory facilities and faculty. Its graduates have found successful careers in both academe and industry.

While such glowing adjectives might indicate a robust program, unfortunately, it does not. It has no faculty of its own, and financial support is meager and exists only because one college is willing to channel some of its resources to the program.

The fact that the program enjoys voluntary faculty support is a strong indication of the need and potential for this program. **The team recommends that the program be continued within a restructured organization which retains its identity but leverages the resources of a larger whole.** Other specific recommendations are contained under each section of the report.

1. INTRODUCTION

The Graduate Council conducted a site review of the Genetics Program on May 1, 2006. The review team, who all contributed to this report, consisted of:

Alex A. Sanchez, College of Education, Chair
David Cann, Department of Mechanical Engineering
Greg Perry, Department of Agricultural and Resource Economics
Mary-Dell Chilton, Syngenta
Stanton Gelvin, Biological Sciences, Purdue University

The self-study report of the program, which was provided in advance, gave a detailed description of the program, its history, strength of the faculty, research facilities, and the various program components. The review team appreciates the hard work that went into the preparation of the self-study, which greatly helped in informing the team during the review process.

The team met with Sally Francis, Dean of the Graduate School, over dinner on the evening before the site visit. This was a useful meeting for clarifying procedural issues and identifying areas of responsibility for the review team members.

On May 1, the team began with a series of meetings in the Agricultural and Life Sciences building. The first meeting was with Walt Ream, Director of the Genetics program, who provided the team with an excellent overview. The following meeting with the associate deans of the College of Agricultural Sciences (Stella Coakley and Charles Boyer) provided insights into the role of the college in the life of the Genetics Program. George Rohrmann, who serves as chair of the Joint Admissions Committee for both the Genetics and MCB (Molecular and Cellular Biology) Programs, presented the review team with a very good explanation of the admissions process.

A group meeting with faculty members followed. Genetics is an interdepartmental program, and as such is composed of 49 faculty from 15 different departments/institutes and colleges. A high proportion (20 of the 49) attended a lively group meeting with the review team. After a working lunch, the team was given a tour of the center for Genome Research and Bio-computing core laboratory, which has state-of-the-art equipment and serves the needs of Genetics as well as several other programs.

Gail Millimaki who serves as a quarter-time administrative assistant for the Genetics Program (and also works half-time for the MCB program), met with the committee to inform the team of her role in helping the program director and the admissions committee chair with their responsibilities as well as “shepherding” the graduate students through the program. The meeting with students revealed a cadre of dedicated students who are very committed to a genetics degree program.

The chief reason given by the students was its flexible curriculum, which accommodates study in areas of specific interest to each student for either academic or industrial careers. The director of the MCB program, Jim Carrington, provided the team with information that led to a discussion of the relationship of the genetics and the MCB program and the need to organize all the life science programs into a more coherent structure than currently exists. A number of alternative scenarios were presented.

The debriefing sessions with the director of the Genetics Program was an opportunity to clarify information presented in the various meetings as well as to get his “take” on the possible direction for the program. The review team’s executive session at the end of the day was an opportunity to discuss the program with greater understanding and to assign report writing responsibilities and a timeline.

This review includes an analysis of the program’s mission, students, curriculum and organization, a section on the level of productivity and quality of the students and faculty, and a discussion of outcomes of the program, including the professional viability of the graduates and their satisfaction with their training. This report contains observations and recommendations by the Review Team. The recommendations are made at the end of each section and numbered sequentially in italics

2. BACKGROUND

Mission and Evolution of the Genetics Program

The Genetics Program at OSU was created in early 1975 in order to attract graduate students interested in a genetic approach to research in diverse biological disciplines, both fundamental and applied. Its mission statement stresses preparation of students for either industrial or academic careers. The Program offers a core curriculum of courses in genetics, and in addition offers maximum flexibility for selection of elective coursework appropriate to the interests and needs of each student. The major short term goals of the Program are securing funding for students and updating core courses. The longer term goals include broadening student training by securing teaching assistantships for the program and broadening the course offerings to include genomics, bioinformatics and computational biology, cross-disciplinary areas which are essential to anyone hoping to work at the frontiers of biological research in the near future.

The Program in Genetics currently encompasses 49 volunteer faculty from every life sciences department in the university. Its graduate students represent an enormous diversity of interest areas. Over the past four years, students in the Genetics Program have chosen major professors from twelve “home departments” or institutes: Forest Sciences (2), Environmental and Molecular Toxicology (4), Animal Science (1), Horticulture (2), Crop and Soil Sciences (5), Biomedical Science (2), Botany and Plant Pathology (2), Microbiology (3), Linus Pauling Institute (1), Pharmacy (2), Biochemistry and Biophysics (3) and Fisheries and Wildlife (1). These 28 students are distributed amongst 23 of the 49 faculty within the Genetics Program.

Compared to the total graduate student population of 2630 degree seeking students at Oregon State University, 14 students are a small group. Yet clearly the Genetics Program has served its past and current students uniquely and well, based on their responses to evaluatory questionnaires. A graduate degree in genetics is offered by the front line institutions with which OSU competes for top notch graduate students. It is likely that some excellent OSU graduate students would have chosen a competing institution if OSU had not had the Genetics Program. While its size is modest, the Genetics Program’s quality and impact have been impressive, despite what can only be described as meager resources. The faculty who have brought this program to life are to be commended for the energy and dedication they have devoted, accepting teaching commitments above and beyond their departmental duties because they are convinced of the importance of interdisciplinary training in genetics.

Observations

Committee members were favorably impressed by the energy, enthusiasm and diversity of the students we met in the course of the site visit. Students were uniformly positive about the concept of the Program. They noted some concerns about one core course taught by too many different faculty. They also noted one core course (molecular virology) that is not offered frequently enough (alternate years). Dr. Walt Ream, Director of the Genetics Program, told the Committee that he was already working on these problems.

Members of the Review Committee were surprised to find that the graduate students we met, who represented several departments within the Genetics Program, in many cases had never met each other. They had apparently shared no common functions. The Program in its present form

is too small and impoverished to develop seminars and retreats that might give more credence to the term “Genetics Program.” This program has not yet attained critical mass. The underlying problem is mainly a lack of financial resources: the Genetics Program is certainly wealthy in ideas, intentions, energy and enthusiasm. Genetics lies at the core of the biological sciences of coming decades.

Recommendation:

1. *The Director of the program should continue working with faculty and students to address the concerns expressed by the students regarding core courses and that solution(s) be found as soon as possible.*
2. *The Director is urged to find methods to give the Genetics students opportunities to meet and engage in functions such as seminars and retreats which provide them with a sense of belonging to a “program”.*

3. THE GRADUATE PROGRAM

3.1 Graduate Students

The graduate students enrolled in the degree program in Genetics at OSU are small in number because of lack of significant funding, but appear to have good academic credentials.

Student Recruitment

There are currently a total of 14 graduate students in the Genetics program, including 8 PhD students and 6 MS students. Of that group of 14, there are 9 domestic students and 5 foreign students. Over the past 5 years the Genetics program has received a geographically diverse distribution of applications. Over the past three years, approximately two-thirds of the applications were from abroad. A majority of those applications came from P.R.China and India, including a number of applications from the top schools in those countries. Of the domestic applications, roughly half came from the Northwest region. From the past three years, only 2 applications came from OSU undergraduate students.

Because of limitations in support, only a small number of students are admitted (over the past 5 years typically between 2 and 5, except for 11 admits in 2003). The only formal recruitment activity within the Genetics program is a recruitment weekend that takes place in early March. In discussions with the Genetics faculty, including the Chair of the Genetics Admissions Committee Prof. George Rohrmann, the pool of grad applications is entirely satisfactory in terms of number and quality given the current level of support.

In the panel discussion with the current graduate students, a number of factors appeared to have an important role in their decision to join the Genetics program at OSU as opposed to the MCB Program at OSU or other universities. In comparison to the MCB program, a number of students stated that they chose the Genetics degree program because the curriculum was inherently more flexible. In this way it could be tailored to their own needs and research interests. In addition, a number of students stated that they preferred the Genetics program because it did not require the rotations that are a part of the MCB program. This is especially true if an incoming graduate

student has already chosen an advisor. One other factor to make note of is that the Genetics program offers an M.S. degree whereas the MCB program only offers a Professional M.S. degree (which is geared more for industry). Students interested in an MS degree were likely to choose Genetics over MCB due to this factor. Lastly, compared to other schools on the national stage the Northwest location of OSU was a significant attraction based on feedback from the student panel.

Recommendation:

3. While the pool of graduate students is mostly satisfactory given the current limited funding situation, a significant increase in the number, quality, and geographic distribution of graduate applicants will be required for the growth and vitality of the program.

Quality and Retention of Graduate Students

While the number of admitted students is small, generally the students in the Genetics program have good academic credentials in terms of undergraduate GPA and GRE scores. Taking the 2005 class as an example (a total of 4 students), the average undergraduate GPA was 3.8 and the average GRE percentile scores were between 62 to 71 %.

There does not appear to be any problems with retention within the program. For data taken from 2001 to 2005, there were no students that changed degree programs from PhD to MS. No data were provided on the number of students that dropped out of the program altogether.

Recommendation:

4. With an increased emphasis on recruitment, an improvement in the academic credentials of the students will be realized.

Student Financial Support

There is very little support for funding of graduate students within the Genetics program. The College of Agriculture is currently the sole contributor with a yearly contribution of approximately \$25,000 per year which is used to fund one student fellowship (although it is not clear that such a fellowship is funded every year). All other students are funded through external research contracts, through teaching assistantships arranged by their “home” departments, or are self-funded. There appears to be a capacity to expand the number of students because of the large number of participating faculty and the availability of laboratory space. However, lack of sufficient student financial support greatly limits the program size.

At the time of the review, supported students receive an annual stipend of approximately \$21,000 plus tuition.

Recommendation:

5. *The long term viability of the Genetics program necessitates an increased budget from stable funding sources. The Genetics faculty should continue to seek funding from a variety of sources, including training grants, to increase the number of supported students in this program.*

Satisfaction with the Program

Overall, the students in the program were very satisfied with all aspects of the program. The only criticism was that a number of important graduate courses were not taught often enough. This is common problem with many interdisciplinary programs because the faculty often are forced to teach these courses as an overload because of their existing teaching responsibilities in their home departments. However, the Genetics faculty have found a novel solution to this problem. Two of their core courses (MCB 554 and MCB 555) are taught by a team of 10 to 12 instructors. In this scheme, each instructor teaches a number of lectures related to their area of expertise. This can be a risky approach because of the vast differences in teaching styles and expectations. However, the students were uniformly positive about this approach and appreciated the fact that no one instructor could teach a course like this because no one person could be knowledgeable on all of the topics in the course.

Recommendation:

None.

3.2 Curriculum

The program sponsors three core Genetics courses: Genome Structure and Maintenance (MB/MCB/GEN 554), Gene Expression (MCB/GEN 555) and Population Genetics (GEN 530). The enrollment numbers in Table D of the self-study only reflect enrollment in the Genetics portion of these classes. A check with Data Warehouse provides a more complete picture of these classes. MB/MCB/GEN 554 is taught each Fall term and averaged about 6 Microbiology students, 17 Molecular Biology students and 6 Genetics students per class the last three years. MCB/GEN 555 is taught each Winter term and averaged about 20 Molecular Biology students and 7 Genetics students per class the last three years. GEN 430/530 is taught on alternate years in the spring. The average enrollment for 2002, 2004 and 2006 has been 19 students at the graduate level. There are 6 students in 430 for 2006, records suggest 430 wasn't available in 2002 and 2004.

The indication from faculty and the program director is that all these courses are taught on a voluntary basis, i.e., above and beyond the coursework responsibilities within their home departments. GEN 554 and 555 are taught "by committee", with the syllabus for the Fall 2005 version of 554 listing 12 instructors and 555 listing 10 instructors for the Winter 2006 course. GEN 430/530 is taught by a single instructor. The feedback from both faculty and students is that both groups recognize the benefits of having experts teach portions of each class, rather than having one person try to cover all topics when their expertise is limited in several areas.

Students and faculty both agree on the weakness of this approach, which is the difficulty students have in adapting to so many teaching styles. On balance, however, both groups support the current approach.

3.3 Faculty and Other Personnel

At the time of the review, the interdepartmental Genetics Program was composed of 49 faculty representing 15 different departments/institutes from several different colleges (2001-2005 listing). Faculty have a common interest in applying genetic approaches to research problems, although these approaches range widely from “classical breeding genetics” to “molecular genetics” to “bioinformatics”. Most Genetics Program faculty are also members of the Molecular and Cellular Biology (MCB) Program. However, many Genetics Program faculty indicated that their students wanted a degree in “genetics” and not necessarily in “molecular biology”. It appears that additional faculty have recently been or will soon be incorporated into the Genetics Program.

All or most of the faculty are highly research-active with regard to publication and funding. Between 2001 and 2005, 22 of the 49 faculty trained Genetics Program graduate students as well as graduate students from other programs and/or departments. Thus, a high percentage of these faculty members are active in the Genetics Program. Despite the fact that there are relatively few students in the program, the students seem to have “spread themselves” around numerous Genetics Program faculty.

Genetics faculty were invited to meet as a group with the review committee. Approximately 20 faculty members attended, a high proportion of the total faculty of the Program. These faculty eagerly participated in the discussions and were quite articulate in describing their roles in the Program, and the strengths and weaknesses of the Program. Despite the fact that faculty are not granted “release time” by their department heads to participate in Program activities (teaching, administrative work, etc.), they all willingly gave their time freely because they truly “believed” in what they were doing. This contrasts with faculty from similar programs in other Universities, in which the same few people seem to do all the work, while the others seek to benefit from Program membership without making much of a contribution. In this regard, the OSU Genetics Program faculty are to be commended for their efforts and willingness to work for the “common good”.

The program also employs one quarter-time administrative assistant (who additionally works half-time for the MCB Program) who helps the Program Director and Graduate Admissions Director with their activities. She also serves as the “Program Mother” to chaperone the Genetics Program graduate students through their years in the program.

Recommendations:

6. *Faculty MUST be given “release time” from their normal departmental teaching and administrative responsibilities to participate in Genetics Program activities. A mechanism should be found such that teaching and administrative efforts are credited to the home department of each faculty member, as well as to the Program.*

7. *A mechanism must be found for fully funding the salary of the Administrative Assistant, perhaps directly from the Office of the Graduate School Dean. Currently, her salary is partly “cannibalized” from other funds that are returned to the program director. The Administrative Assistant recently won an OSU staff award for excellence in performance. It seems a shame that the program is not funded at a sufficient level to compensate her resulting raise without withdrawing funds from other Program activities.*

3.4 Infrastructure

The Genetics Program administrative assistant works from an office that is also used for the MCB program. Genetics Program graduate students have their mailboxes associated with this office.

The review committee was shown several GCRB Core Laboratories with state-of-the-art DNA sequencing, robotics, microscopy, microarray, and computer systems. Although this Genomics Center is not run out of the Genetics Program, it services the needs of the program, including opportunities for Genetics Program students and faculty to participate in genomics experiments. The staff seems knowledgeable and willing to help train students. From what the review committee heard, charges were in line with those charged by similar centers at other universities.

Recommendation:

8. *Perhaps, if the Genetics Program were to receive extramural support, some of this could be used to help subsidize the Genomics Center such that program participants could receive a discount on services.*

3.5 Organizational Issues

The review committee spent a large amount of time listening to and considering various recommendations from a number of OSU faculty and administrators regarding the current and future status of the Genetics Program. Although there was not unanimity, there appeared to be consensus with regard to a number of issues:

1. The Genetics Program has been successful, despite a continuously desperate funding situation. The pool of applicants, whereas not outstanding in quantity and quality, has been more than adequate. Genetics Program students have done well in this program and have gone on to successful careers in the life sciences.
2. Both Genetics Program faculty and students saw a need for some sort of program where genetics as a discipline (as opposed to molecular biology) was taught. There are many students in “traditional” departments (e.g., Animal Sciences, Forestry, etc.) who would prefer a “genetics” degree to a more “traditional” degree from their home department.

3. It is difficult, if not impossible, to run a “program” with research fellowship support for only one student per year (actually, it appears as though the true amount of funding allows for only one fellowship every two years).
4. Students like the flexibility of the Genetics Program. Such flexibility is not available in many other programs, including the MCB Program.
5. Students are generally quite happy with the program.
6. Genetics Program faculty have unselfishly given their time and efforts to support the Program, despite the fact that they receive no additional compensation (participation in the program can actually be seen as a “tax” on the faculty).

Most Genetics Program faculty are members of the MCB Program. The two programs share a common admissions committee and administrative assistant. Currently, the MCB program is funded from multiple sources, allowing them to admit approximately 10 students/year. This compares with the Genetics Program’s ability to admit at most 1 student/year (without commitment to a particular laboratory). Arguments were made both for and against combining the two programs. This may make financial sense, but Genetics Program students, and some faculty, believed that this would eliminate the study of genetics as a discipline at OSU, and would not necessarily serve the interests of many graduate students.

Jim Carrington, the director of the MCB Program, indicated that the MCB program has been expanding in faculty, and desires to double the number of graduate students. In addition, “tracks” (specialty interests) have been proposed to become established within a MCB “umbrella” that would allow students some flexibility in their studies within MCB; such a track has been proposed for “molecular pathogenesis”. There was intense discussion, several times within the review period, of whether the Genetics Program should be incorporated within an expanded “MCB-like” umbrella as a separate track. This would be a “middle-of-the-road” proposition that would neither eliminate genetics (as a discipline) nor completely subsume it under the MCB program.

Recommendations:

9. *Although a number of recommendations were discussed throughout the review period, there appeared to be consensus on the following proposal:*
 - a. *The MCB Program should be expanded into a broader “umbrella” program, which would be re-named. The expanded umbrella program would continue to have a common graduate admissions process and administrative assistant. The MCB Program as it currently exists would remain largely intact within this umbrella, with its current curriculum and rotation system maintained.*
 - b. *The Genetics Program would become a “track” within this umbrella program. It would maintain its curriculum generally intact from its current status. Students could enter the Genetics Program “track” either funded by*

the program (and therefore available for performing rotations) or directly into a laboratory (which would then directly fund the student). (Although not discussed by the Review Committee, such dual-mechanism of entry could be followed by any “track” within the umbrella).

- c. Other “programs” (such as Molecular Pathogenesis) could also form “tracks” within this expanded umbrella.*
- d. Students within the umbrella program would share a few common courses (one possibility would be to share the current courses Genome Structure and Maintenance, and Gene Expression). Courses “specific” to each track would then be determined (e.g., the Genetics “track” could require Population Genetics, whereas the MCB “track” could require Cell Biology). Another possibility would be to have all students in the umbrella program take common courses such as Bioethics, Scientific Communication (e.g., speaking, critical reviewing of literature, grant writing, etc.), and Statistics.*
- e. Funding for the expanded umbrella program would be placed under the auspices of one higher-level administrative structure, such as the office of the Graduate School or the office of the Provost. This way, a “unified” budget for the entire program could be planned without the necessity of “begging” for funding from multiple entities (e.g., departments, colleges, etc.). Extramural funds (e.g., the State of Oregon, Federal training grants, industry funds, alumni contributions, etc.) could be sought to expand the financial base of the program and supplement program activities.*

4. Productivity

4.1 Level and Quality of Student Performance

The faculty noted that offering a Genetics program is attractive to a certain cadre of potential students and that, as a result, they have been successful in attracting some high quality students into their program. The data provided in the self study (especially Table G) really did not provide the committee with a clear indication that students were moving successfully through the program. Based on the data in Table G, 18% of the Ph.D. students in the program were, on average, advanced to candidacy each year. If students require about five years to complete the program, about 20% would be advanced to candidacy each year, indicating a high rate of success. Even then, however, the numbers may be skewed by changes in matriculation rates.

Similarly, 18% of the MS students on average passed final exams each year. Presuming an MS degree requires 2-3 years to complete, this percentage suggests a good share (maybe more than half) of the MS students never complete the program. Again, however, matriculation rates could account for much of this “failure” rate.

Consulting with Data Warehouse provides a better picture of student performance. Consulting with this data base for enrollments in GEN 530 for 2004 and 2006 and GEN 554 from 2001-05

revealed that there were 7 Ph.D. students and 12 M.S. students. Of that number, 1 Ph.D. student and 5 M.S. students have graduated. The remaining students were listed as current students in Appendix G of the self-study document. Based on this evidence, it appears that all students entering the program successfully move through to graduation. That there apparently have been no failures among this student cohort is somewhat troubling, however. Graduate school is designed to be challenging, with some students ultimately dropping out because they can't pass preliminary exams, field exams, oral exams, or can't complete a thesis. If all students pass over these various hurdles successfully, one has to wonder whether the standards in this program are as high as they should be. Perhaps this is a particularly strong, but small, cohort of students. With a longer time period to sample, some "failures" may be observed.

Evaluating the quality of students in the program is also difficult. Of the 28 students listed as graduates in Table H or current students in Appendix G, only 12 were noted in Table F as having received awards. Most of the awards consisted of publications, presentations, or grants received. In other words, the awards are things that a good graduate student should be expected to do sometime during their graduate program. That the majority haven't received an award, even after we recognize that some students are just getting started, also raises concerns about student quality. A measure of program quality that is also a measure of student quality is where students attended school before entering the Genetics program. Again, the pattern is very mixed. The program has attracted students from solid universities like Oregon State and the University of Oregon, as well as higher caliber programs like UC-Davis and University of Colorado. But there are also students from relatively weak colleges such as Eastern Oregon University. It does appear that the program tends to attract students more from the West Coast than from elsewhere in the country. Although some students apply from all over the United States, most of those coming from farther away don't ultimately enroll. Also, although the faculty themselves are graduates of many of the prestigious land grant universities in the U.S., the program itself isn't attracting very many graduate students from these same universities.

Recommendation:

- 10. Given the incomplete information provided in the self-study document and the additional pieces of information pulled together by our committee, it appears that the Genetics program attracts a few good students, but as a whole their students are simply average. That being the case, it appears that performance standards should be reviewed to see if they are high enough to motivate students to excel in the program.*

4.2 Level and Quality of Faculty Performance

Evaluating faculty performance is difficult, given the many different departments and colleges represented in the Genetics program. There are 49 faculty listed as participants in the Genetics program. Included in this number is an OSU Distinguished Professor, a fellow in the American Association for the Advancement of Science, a recipient of the Elizabeth P. Ritchie Distinguished Professor Award, and three recipients of the F.E. Price/Agricultural Research Foundation Award for Excellence in Research in the College of Agricultural Sciences.

A perusal of citation counts for selected faculty suggests the majority of faculty are directing active research programs and their work is having an impact on their respective professions. As a group, the Genetics faculty have generated millions of dollars in external grants. Taken together, it seems clear that there are some outstanding faculty involved in the Genetics Program.

4.3 Quality of the Scholarly Community

Virtually all the faculty in the Genetics program have doctorate degrees, most are from the larger land grant universities in the U.S., with a sprinkling of faculty from universities such as Stanford, University of Colorado, University of Oregon, Syracuse University and UC-San Diego.

There seems to be a great deal of harmony and collaborative behavior within the Genetics community of scholars. Perhaps the most telling illustration of this is the manner in which the core Genetics courses 554 and 555 are taught. As noted previously, 554 is taught as a collaborative effort involving 12 faculty. GEN 555 has 10 faculty involved in instruction.

5. Outcomes

5.1 Professional Viability of Graduates

The Review Committee was provided with a list of initial and current placement of Genetics Program graduates since 2001, including 8 Ph. D. recipients and 9 MS recipients. Most of the MS awardees are employed in technical support positions in academic (3), industrial (3) or government (1) laboratories. Two have gone on for further training, one for an MBA and the other for a Ph. D. degree. Amongst the Ph. D. recipients, 5 took postdoctoral traineeships initially and of these 3 have moved into academic positions more recently. One graduate took an academic position immediately; another took a position in industry and one returned to his home country and works in a research institute there.

Observations

This is an excellent employment record in several respects. It shows that the Genetics Program is succeeding in its mission of training students for both industrial and academic careers. The variety of the positions taken by graduates of the program reflects the great diversity of biological areas for which students were prepared. And most importantly, the record is clear evidence of employability of program graduates. This reflects well on the university and the program. We must wait perhaps a decade or more to determine whether the program has trained truly outstanding scientists, but the track record to date augurs well.

5.2 Satisfaction Survey of Current and Past Program Participants

The committee received a summary of responses to a questionnaire on opinions of students and graduates about the Genetics Program. Statements were ranked on a scale of 1 to 5 where 5 is best.

Survey of Current Students:

From current students, the highest marks--4.4 or better--went to the essentials of a good graduate program: research equipment and facilities, OSU library, quality of teaching, rigor of coursework, fairness of prelim exams, access to major professor, and treatment of the student as a valued member of the research team. Equitable treatment of domestic minority students, women and international students were similarly very high (4.4 to 5.0). Strangely, students ranked "communication is adequate" at 4.5, but gave lower ranking to specific areas of communication: program policies clearly defined (3.6), petition and appeals procedures clearly defined (3.0), student participation in program decisions (3.0), mechanism to change professor is suitable (3.7). Thus the operations and rules of the program appear to be something of a mystery, at least to some of the respondents. It is less surprising to find that adequacy of stipends and office space as well as availability of computers are ranked lower (2.9-3.9): these are probably areas in which students are always going to hope for more. Nevertheless they need review and attention if possible.

Survey of Alumni:

The survey of program graduates (five respondents) was more focused, and the responses were more uniform. They ranked all areas at a satisfaction of 4.2-4.5 (where 5 is best and 1 is worst) except "Resources available for research," which was rated only 3.8. Thus, advising, mentoring, instruction, diversity of courses, professional relationship with committee, level of financial support and overall satisfaction were all given quite favorable marks.

Time to Ph.D. degree was reported at 4.5-5.5, which is excellent if this means time from BS to Ph.D. However time to MS (presumably from BS) at 3-4 years is very slow. Two of the five respondents incurred substantial debt during their studies, one from a year of self-support and the other for over two years.

Observations

Communication

With the caveat that survey results can be strongly influenced by the language in which the question is couched, we accept the results at face value for the present purpose. The current students clearly indicate some communication deficiencies that the program needs to address, no matter what form this program eventually takes.

"Research Resources"

It is unclear what kind of "resources available for research" were in such short supply that they elicited a lower mark from program alumni, especially in view of the 4.6 rating from current students on "Research facilities are adequate." The lower alumni rating could reflect the impact on the average (in the alumni survey) of one isolated project with unusual requirements that were not available. Alternatively it might reflect a wish for more RAs available to program participants. Without additional information it is difficult to evaluate this mark.

Time to Degree

Time to PhD looks fine if it is scored from BS, not MS. However time to MS degree, at 3-4 years, is very long. If typical students are taking 3-4 years to fulfill requirements for the MS degree, the genetics program faculty need to evaluate whether students are slow to finish because

of lack of preparation (need for remedial coursework), other commitments (additional jobs taken to feed the family, etc.), or a lengthy list of required courses

Recommendations:

- 11. A handbook of policies and procedures specific to the program should fulfill some of the needs. Students seem to wish for more advising and contact at the outset; perhaps a second year student in the program could be assigned to each new student in order to give incoming students a sense of belonging to the program.*
- 12. The method of determining length of time to degree needs to be clarified.*
- 13. If 3-4 years is required for compliance with the MS degree requirements, the list of requirements needs reevaluation and consolidation.*

5.3 Ranking of the Genetics Program

Overall the responses of both current and past students appear quite favorable. The Genetics Program appears to be filling a need, and doing a remarkably good job of it, given the extremely lean resources available. We commend the faculty participants in the Genetics Program for the considerable success of this enterprise. At the same time we must take note of the half of the glass yet to be filled, and our conclusions and recommendations must take into account the most promising way to increase the impact of genetics at OSU.

Observations

The Review Committee felt that the small size of the group of students involved in the Genetics Program at any one time is a real handicap. In a real sense, genetics is a major rather than a program. The students do not know each other, have no interactions, no seminar program, no retreat, no discussion groups, etc., except insofar as they participate in these activities in the framework of their “home department.” What you have is good, but a program when it attains critical mass can be much more. The review committee hears clearly the problem that funds are not available to make Genetics into a real Program viable as a separate entity. Reliable funding from the administration would be the best solution to this problem.

The Review Committee was unified in its conclusion that the status quo for the Genetics Program is not satisfactory. Of available options, most felt that the best move would be to consolidate the Genetics Program with the MCB program (which we did not review, but which clearly has the resources and size to attain critical mass). The consolidated program should have a name that reflects this addition to its scope. **The consolidation should be done in a way that preserves as many as possible of the advantages the Genetics Program offers now, especially its ability to recruit students who desire a genetic focus to their graduate training. In that context, OSU should continue to offer the degree of PhD in Genetics.** We stress that one intent of consolidation is to give Genetics room to grow, provided that there are potential students recruitable to sustain such growth. Fellowship support for incoming graduate students in biological sciences should not be earmarked for a particular program up front. Let

the students decide during their first year whether they wish a degree in molecular biology, cellular biology, genetics, genomics or whatever other labels program members agree upon.

The mechanics of consolidation of Genetics Program with MCB must be carried out in a manner consistent with policies and procedures at Oregon State University. The Review Committee has not even attempted to consider this presumably thorny problem. On the academic side, we advise that the best way to make the process a smooth one is to increase first year graduate student support for the combined program, so that the whole really is greater than the sum of its parts. Another way to insure a smooth transition is to involve the faculty (and students) in the process at every stage.

Recommendation:

14. *Consolidation should be done in a way which preserves as many as possible of the advantages the Genetics Program now offers, especially its ability to recruit students who desire a genetics focus to their graduate training. In that context, OSU should continue to offer the degree of PhD in Genetics.*

GRADUATE COUNCIL MEETING

November 2, 2006

3:00 PM, Gilkey Hall 109

Present: Koenig (Chair), Blythe, Filtz, Francis, Gitelman, Grosskopf, Harter, Jovanovic, Rettig, and Russ-Eft

Absent: McLain, Unsworth, Wolpert

Guest: Julia Jones, Geosciences

1. Category II Proposal for Graduate Minor in Ecosystem Informatics

Julia Jones (Geosciences) gave an overview of the proposal which arose from the 4 million dollar IGERT grant funded by the National Science Foundation in 2003. Four courses (GEO 538, 542, 543, 547) were developed for the benefit of the 30 IGERT recipients, but non-fellowship students have also demonstrated a considerable interest in the courses. The proposed graduate minor would provide transcript visibility for both students in the IGERT program and students who wish to study the same curriculum. Two of the courses listed above have already been approved. Course proposals for GEO 543 & 547 have been packaged with this CAT II and are to be considered at the same time that the minor is being reviewed.

Hal Koenig (Business) asked the Council members for questions.

Theresa Filtz (Pharmacy) questioned Jones on the efficiency of having four instructors in the classroom simultaneously. What is the benefit of having all the instructors in the room? Jones answered that all four instructors do attend and team-teach the courses in return for partial teaching release. The minor was developed to encourage cross-disciplinary collaboration among disciplines on campus which have not formerly interacted. Having everyone together in the classroom facilitates research collaborations.

Rod Harter (Health & Human Sciences) asked if this model of team-teaching would be sustained after the funding from the Provost's strategic initiative runs out. Jones responded that the department chairs and deans involved are interested in the future gains to the University that might arise from the research collaborations and centers which could be built from fostering these partnerships among the faculty.

Goran Jovanovic (Engineering) asked about the reference to models and modeling in the course descriptions. He asked if the study of numerical methods is prerequisite to this program. Jones explained that the students in these classes come from many different backgrounds (the students are from 12 different PhD programs) and not all of them have experience in numerical analysis. The instructors who are team-teaching the courses learn to talk about concepts in a way that does not require everyone to understand them at equal depths but fosters basic comprehension of the concepts across the table. The principal aim of the minor is not to make everyone into a mathematician or an ecologist but to help facilitate a dialog that allows students to share key concepts across disciplines.

After Jones left the room Koenig asked for thoughts or discussion from the Council.

Bruce Rettig (Graduate School) mentioned that the Council postponed approving this proposal last spring because the new courses had not passed through the College of Science then. They have since been approved by that College.

There was some discussion of the department and college buy-in that would be needed after the Provost's funds had been exhausted.

A motion to approve the minor proposal was made and seconded. All voted in favor. Motion passed.

2. Minutes from October 19, 2006

The minutes from the October 19, 2006 meeting of the Graduate Council were approved as distributed.

3. PhD rules and regulations

Rettig summarized past Council discussions of changes in doctoral student policies. He asked whether the Council would like to consider one or more of these issues this year.

The Council discussed OSU's Graduate Council Representative (GCR) model. Rettig described student frustration when they find it difficult to identify a GCR and asked whether procedures at other universities, such as the University of Washington, might address their needs better.

Council members appreciated the challenges for the students, but were not comfortable with any change that would either lead to a GCR who might not be as protective of students or that would require additional work at the department level. After some discussion, it was generally agreed that the OSU GCR model should be left unchanged but that the list (database) should be refreshed. To update our list, new faculty interest sheets will be forwarded to departments.

There was also discussion of the PhD Program of Study and the transfer of credit. Rettig noted that the University of Washington does not transfer credit toward a PhD, but allow students with prior master's degree to file programs with fewer required credits than students without a prior master's degree. Council members thought the idea had merit, but did not choose to pursue this issue at this time.

4. Category II Proposal (continued)

Blythe (Veterinary Medicine) asked for clarification on her previous motion to approve the proposed minor in ecosystems informatics. By passing the previous motion, did the Council approve the courses along with the minor or is a separate motion needed to approve the courses?

After some discussion, a motion to approve GEO 543 & 547 was made and seconded. All voted in favor. Motion passed.

Meeting adjourned.

Handout prepared by Bruce Rettig for the Council:

Ph.D. Requirements

The Graduate Council invested much time and energy discussing requirements for graduate education in the period from 2000 through 2004. In 2004-05, the Council decided that it wanted to review graduate degree requirements and consider revisions. Three groups were formed to study (1) three-year European degrees, (2) service courses, and (3) doctoral degree requirements. After much reading and discussion, the third group submitted a draft statement of doctoral learning outcomes. That draft was revised to represent the strategies that should be used by academic programs to help students achieve learning outcomes. That document was provided to the Department of Nuclear Engineering and Radiation Health Physics, which was seeking an exception to the doctoral residence requirement. No changes were made to the residence requirement.

The goals of this document are (1) to provide the Graduate Council background on why this may be an appropriate time to review doctoral degree requirements, (2) to summarize the essential elements of doctoral education identified by the Council of Graduate Schools, (3) to provide the Council the document prepared by an earlier Council two years ago, (4) and to summarize some current doctoral degree requirements that the Council might wish to consider changing. For a more complete statement of doctoral degree requirements, please see the catalog at <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=40>. Clarifications and other requirements common to both master's and doctoral degrees can be found at <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=38>.

Background

In late July, Sally Francis, Bruce Rettig and others visited the Office of Graduate Studies at the University of California at Davis, one of the OSU peers, and the Graduate School at Berkeley. The University of California at Davis recently reorganized its staffing and updated some of its policies. Impressed with what was learned on this visit, Francis and others are at work on a plan that is intended to improve the quality of service to OSU graduate students and programs offering graduate degrees at OSU.

Any changes in policies and procedures must recognize the current budgetary climate. The Graduate School, other administrative units, and most academic units have recently absorbed large cuts in revenues while being required to take on new expenditures such as increases in compensation to faculty, staff, and graduate assistants. The Graduate School must design a process that is as efficient as possible while meeting university expectations. However, any shift in responsibilities from the Graduate School to academic units must create greater value at the program level. Before considering what those changes might be, the Council needs to keep in mind the key elements of graduate education. In this document, the focus is on doctoral education.

The Doctor of Philosophy Degree

In a formal policy statement, the Council of Graduate Schools states that "The Doctor of Philosophy program is designed to prepare a student to become a scholar: that is, to discover,

integrate, and apply knowledge, as well as to communicate and disseminate it. ... The Ph.D. program emphasizes the development of the student's capacity to make significant original contributions to knowledge in a context of freedom of inquiry and expression. A well-prepared doctoral student will have developed the ability to understand and critically evaluate the literature of the field and to apply appropriate principles and procedures to the recognition, evaluation, interpretation, and understanding of issues and problems at the frontiers of knowledge. The student will also have an appropriate awareness of and commitment to the ethical practices appropriate to the field. All of this is accomplished in apprenticeship to and close association with faculty members who are experienced in research and teaching." The policy statement recognizes that administration of Ph.D. degree programs usually involves three levels: the Graduate School, a department or program, and faculty (especially the dissertation advisor). A student is normally guided through distinct phases: (1) a bachelor's degree program that provides the basic prerequisites needed to pursue graduate education, (2) a graduate curriculum that prepares the student for dissertation research and that allows the student to develop the additional skills appropriate to the discipline, (3) written and/or oral examinations that demonstrate preparation to become a degree candidate, (4) the dissertation research, and (5) a final examination over the dissertation.

Graduate Council Statement

OSU

Graduate Council

Policy Statement on recommendations for

Ph.D. Learning Objectives

6/2/05

The Graduate Council, after extensive review and discussion, proposes the following recommendations related to PhD study at Oregon State University. Council members believe that the PhD degree should prepare students to be independent scholars. To achieve this outcome, students in PhD programs must participate in collegial scholarly work in which direct mentoring occurs. What defines the PhD experience at OSU is embedded in the learning objectives stated below. To that end, each program offering a PhD will strive to meet the learning objectives and will provide doctoral students with guided experiences and a variety of educational opportunities. Programs, regardless of residency issues, will demonstrate that they:

- Prepare students to expand the knowledge of their discipline.
- Help students develop requisite skills and knowledge necessary to assume professional positions in academia, industry or professional practice.
- Mentor students and guarantee compelling peer learning experiences.
- Prepare students to become mentors so they can continue the learning cycle.
- Provide a residential learning component or a demonstrated equivalent*

*The residency requirement strives to provide students with a compelling immersion experience with scholars and researchers in their specific discipline. A PhD education should provide a concentrated experience in a setting that supports and encourages both formal and informal scholarly interaction amongst faculty and students and the right to use on-campus resources; such experience is achieved through a period of residence on

campus. When programs offer non-traditional classroom, advising and learning alternatives it becomes essential to implement strategies to insure that this intent is met. Therefore, the graduate school requires that programs offering non-traditional residency requirements present to the Graduate Council a defensible argument which provides a strategic plan for meeting the programmatic requirements listed above.

Successful PhD programs should:

- Prepare students to expand the knowledge of their discipline(s).

This preparation will generally include:

- Development of research and scholarship skills
 - Development of effective oral and written communication skills
 - Extensive understanding of the knowledge base of the discipline
 - Broad, general understanding of related disciplines
- Guide the professional development of students

This guidance will generally include:

- Extensive interaction between students and role models – usually resulting from learning experiences involving a variety of teachers and professionals
- Development of a professional network of peers – usually resulting from learning experiences in collaboration with peers
- Developing professional mentors – usually resulting from learning experiences in collaboration with mentors
- Understanding the politics and requirements of the workplace: academia, industry or professional practice.

- Prepare students to become teachers and mentors for future students

This preparation will generally include

- Compelling learning experiences in the student's own professional preparation that the student can model in his/her own professional career
- Development of an academic culture that places a high priority on teaching and mentorship
- Opportunities for students to serve as a teacher and mentor during the Ph.D. studies.

OSU Doctoral Degree Requirements

Doctoral degree requirements at OSU are designed to meet the common expectations described above. Many of the policies and practices have been in place for many years and could be usefully examined in light of external circumstances and changing expectations of the doctorate. Selected policies and practices are compared to those at highly ranked universities such as the University of Washington, the campuses of the University of California and respected peers such as the Ohio State University.

Because the residence requirement was recently and thoroughly reviewed, the Council might not want to work on it at this time. However, it may be helpful to consider the *university requirement of 108 credits for the doctorate*.

Although assigning a doctoral student to *an advisory committee with one or more external members* is commonly done, other universities structure the committees differently from OSU. At OSU, a doctoral advisory committee consists of five members. The major professor and at least one other must hold graduate faculty status in the student's major program. One member must be a GCR selected from a list provided by the Graduate School.

At the University of Washington, "The doctoral supervisory committee consists of a minimum of four members, at least three of whom (including the Chair and the Graduate School Representative) must be members of the Graduate Faculty with an endorsement to chair doctoral committees. A majority of the members must be members of the Graduate Faculty. The Graduate School Representative (GSR) must be a productive scholar in his or her own field. The remaining members must be identified by the student's appointing department or program as productive scholars in the student's major field and/or subfields. The Chair(s) of a committee must be able and willing to assume principal responsibility for advising the student. In addition, the Chair(s) should have adequate time available for this work and should expect to be accessible to the student. Emeritus/a faculty may serve as a Chair if the above conditions are met. Co-Chairs may be appointed when both serve with equal importance on a student's supervisory committee and equally share the responsibility for the student's progress. Affiliate faculty may serve as a Chair if they meet the above conditions and either of the following conditions is met: 1) the committee includes a co-chair who is a non-affiliate Graduate Faculty member **OR**; 2) the committee includes two non-affiliate members of the Graduate Faculty with an endorsement to Chair from the program offering the student's degree."

<http://www.grad.washington.edu/Acad/gsmemos/gsmemo13.htm>

There are two key differences between OSU and UW. Instead of the student drawing the name of the GCR from a list provided by the Graduate School, the UW Graduate School formally appoints the committee, including the Graduate School Representative, based on nominations from the program graduate coordinator. This committee is charged with approving "a course of study which will fulfill the general course requirements of the student's major and supporting fields, conducting the student's General Examination and, when appropriate, recommending advancement to Candidacy."

There are merits to the OSU process, at least in the abstract. The program coordinator is not involved in the selection of the GCR, which increases the possibility that this person is a "third party neutral" with no ties to the program. This also saves work by the program coordinator. On the other hand, many students expend large amounts of effort in search of a GCR. If the GC wishes to consider this shift of assigning the GCR, it may wish to discuss other pros and cons of the OSU process.

It is common nationally for the standard for a master's degree to be the coursework equivalent of one full academic year with the expectation that it would take most students two years to complete all degree requirements. Likewise it is common nationally to require a minimum of three academic years beyond the bachelor's degree or a minimum of two academic years beyond the master's degree, with an understanding that most doctoral degrees require four or more years to complete. At some universities, the practice of translating this time span into credits, which is followed at OSU, appears in degree requirements although the calculated number varies

depending on the calculation of number of credits in a full time registration per term. The University of Washington and the Ohio State University set a minimum number of credits for a doctorate beyond the bachelor's degree, but allow programs to set a smaller minimum when a previous master's degree has been earned. At other universities, such as the University of California at Davis, a recognition that the process for accumulating course credits in the pre-dissertation stage and the number of credits per term vary by discipline causes that Office of Graduate Studies to not set a university minimum number of credits, but to defer to the individual programs. However, as at OSU, rigorous oversight is maintained both to gain approval for offering a degree and in periodic program reviews.

Related to this requirement is the *university policy toward transfer credits*. Currently, OSU allows an unlimited number of transfer credits toward the PhD as long as the residence requirement is met and all transferred courses meet OSU criteria (such as graded with B or better, taken after completion of a bachelor's degree, and being graduate standalone). If OSU followed the UW policy of reducing the number of credits required for a PhD if a student earned a prior master's degree, much of the need for identifying transfer courses could be eliminated. The first determination of whether the courses should transfer occurs when a student's advisory committee holds a program planning meeting. My interpretation of many transfer courses is that a student's advisory committee wishes to reduce the number of didactic courses at OSU and sometimes the total number of credits. Allowing individual programs to determine the requirements would eliminate most of the need for transfer credits. This is true whether transfer credits are not allowed (UW) or transfer credits are allowed, but not needed (Ohio State and UC Davis).

One question for the Council then is what value is added to the student and what assurance of quality of a doctoral degree program comes from setting the total number of credits required for a Ph.D. (OSU model) or to let the pre-oral prelim requirements be set by a program, subject to compliance with the approved requirements for that particular major (UC Davis model). If a university standard for total credits is set, the next question is whether to permit a smaller number of credits at OSU for a PhD if the student has a prior master's degree in a relevant discipline.

Finally, if the program has the ability to vary the program in response to information on a prior master's degree, is there a remaining rationale for transfer credits toward a PhD?

GRADUATE COUNCIL MEETING

October 19, 2006

3:00pm, Gilkey 109

Present: Koenig (chair), Filtz, Francis, Gitelman, Grosskopf, Harter, Jovanovic, McLain, Proebsting, Rettig, Russ-Eft, Unsworth, and Warnes

Absent: Blythe, Unsworth

Guests: Jim Carrington

1. Minutes from October 5, 2006

The minutes from the October 5, 2006 meeting of the Graduate Council were approved as written.

2. Graduate Council Review of Molecular and Cellular Biology

Tom McLain (Forestry) presented the report of the Graduate Council review of the Molecular and Cellular Biology (MCB) program. Jim Carrington, director of the MCB program, expressed his gratitude for the helpful review. He disagreed, however, with the problem of finding faculty to teach MCB courses. MCB courses are team-taught. When one of the faculty members is unavailable, the class sessions taught by that person are usually reassigned. When this is not feasible the remaining sessions can be expanded to provide a full course. This year, there is no problem because the five people hired through a university initiative have arrived and each will teach within the MCB program as part of the initial work assignment.

Goran Jovanovic (Engineering) praised the report for its focus on the future. The MCB program is a visionary way to make good use of university resources and move OSU toward its goals.

Shawna Grosskopf (Liberal Arts) asked how resources are distributed to the participating departments. Carrington explained that this has operated through an Interdisciplinary Allocation Model (IAM) and that this has been very useful for the MCB program. Sally Francis (Graduate School) cautioned that the IAM was based on a university Budget Allocation Model (BAM). A budget re-basing process has suspended the BAM, which is requiring different processes for providing funding for interdisciplinary degree programs.

3. Graduate Admissions

Bruce Rettig (Graduate School) reminded the Council that it had received a report from external consultants on graduate admissions on May 18, 2006. One of the proposals was to move graduate admissions from the Office of Admissions to the Graduate School. In order to plan the necessary reorganization, three people from the Graduate School

(Francis, Rettig, and Janet Morandi) and four people from the Office of Admissions visited the University of California at Davis and the University of California at Berkeley in July. Although both of those universities have excellent graduate schools that include graduate admission, current planning at OSU includes modification of our processes to follow innovative and compelling practices in the Graduate School at UC, Davis.

Rettig suggested that we consider two practices at UC, Davis. One is that they do not set a specific number of credits for a PhD, deferring instead to each program to provide those requirements. Also, PhD programs of study are not filed with the Graduate School. Rettig also shared two other practices. At Ohio State University and the University of Washington, doctoral students can complete minimum requirements for the PhD with fewer credits (a minimum of two full years of full-time study rather than three) if the students have a prior master's degree. Finally, the University of Washington does not transfer credits to their doctoral degree programs.

Rettig indicated that the most time-consuming part of the analysis of doctoral programs of study come from analyzing transfer courses. In most cases, reducing the number of credits from the current 108 to 72 if a student had completed a prior master's degree would eliminate the need to transfer credits. Individual programs could still require student to meet all local requirements, but they would accept the responsibility for determining whether courses taken elsewhere would allow them to waive some particular course requirements.

McLain said that any change that was designed to ease workload in the Graduate School by shifting responsibility to individual programs would be resisted in the current environment. Before any of the changes Rettig suggested would gain acceptance, a case needs to be made that this would advance the interests of the programs.

4. Other Business

Darlene Russ-Eft (Education) indicated that students in her college have had repeated problems with selecting a Graduate Council Representative. She asked whether the current processes could be reexamined. Grosskopf said she has never been asked to serve as a GCR. McLain indicated that he has not been contacted recently. Rettig agreed to raise this issue with staff to determine whether current procedures were working adequately.

Grosskopf asked when the Economics and Applied Economics proposals would be considered again. Rettig responded that Hal Koenig (Business) has submitted a list of issues to the proposing units and that no responses have been received to date.

Meeting adjourned.

Attachment below: Report of the Graduate Council Review of the Molecular and Cellular Biology Program.

OSU GRADUATE COUNCIL
Review of the
Molecular and Cellular Biology Graduate Program
June 2006

I. INTRODUCTION AND CONTEXT

The interdisciplinary and interdepartmental program in molecular and cellular biology is responsible for the programs leading to the PhD in Molecular and Cellular Biology (MCB), the MS in MCB and the MS in Applied Biotechnology. The MCB program is a confederation of about 100 faculty from many academic departments who more or less collectively establish, participate in and oversee a curriculum, degree requirements and other activities related to the common good. The group is led by an Interim Program Director who reports to the Dean of the Graduate School. Until FY05, program funding was largely piecemeal with base funding from the College of Science and donations from many others, including the Center for Genome Research and Biocomputing (CGRB). FY05 brought a new funding model with base and productivity funding from the Graduate School. Other potential changes coming to this program include the impact of new resources from the Provost's Initiative in Computational and Genome Biology (CGBI) in which the MCB program is a central element, and a planned change in strategic focus. As a result, the MCB program has begun a period of significant transition.

The OSU Graduate Council conducted a regular decennial review of this program on June 9, 2006. The following served as team members:

Internal Reviewers:

Dr. Thomas McLain, Wood Science & Engineering (Chair)

Dr. Carlos Martins-Filho, Economics

Dr. Farah Ibrahim, Teacher and Counselor Education

External Reviewers:

Dr. Tom Adams, Director of Yield and Emerging Technologies, Monsanto Company

Dr. Mary Beth Mudgett, Asst. Prof of Biological Sciences, Stanford University

Dean Francis, Associate Dean Rettig, and Assistant to the Dean Serewis also attended the program review sessions.

The MCB program interim director and staff prepared a comprehensive self study of the program which was distributed to the team in advance of the on-site review. The self-study was prepared in accordance with the Graduate Council Program Review Guidelines and is included in this report by reference.

During the site visit the team members met with Professor James Carrington, the Interim MCB Program Director, the MCB program staff, Deans (or their representatives) of the Graduate School, Science, Agricultural Sciences, Pharmacy, Veterinary Medicine, and Health and Human Sciences who have active involvement with the MCB program, the MCB Committee Chairs and the Genetics program leader. The team also held open separate meetings with about 25 MCB faculty and twelve current PhD students. The team toured some of the core laboratories of the Center for Genome Research and Biocomputing that are commonly used by most, if not all, MCB students and faculty.

The goals of the Graduate Council Review are to evaluate the program goals and mission, the adequacy of support resources, the level of performance of the faculty and students in achieving the program goals and the outcomes that result from the existence of the program. The review team focused primarily on the PhD program which has been in place longer than the relatively new MS in Applied Biotechnology. The MS in MCB degree is not promoted by the program and is a fall-back credential. The MCB program asked that the following be assessed as a part of the review process:

- 1) The MCB strategic plan and program direction,
- 2) Funding and expenditures, recommendations for sustainability and growth,
- 3) Growth of the program, recommendations for increasing diversity,
- 4) Quality of courses and plans to evolve content and instructor participation,
- 5) Relevance of the program within an OSU and employer context.

II. PROGRAM INPUTS

A. Program Mission, Goals and Strategic Plan

The mission of the MCB program is to thoroughly prepare students for careers in forefront areas of biomedical, environmental, and agricultural science by focusing on research and education in fundamental aspects of mechanistic biology. This mission is clearly aligned with that of the University and supports several of the key themes identified by President Ray as central to the future of OSU.

As an interdisciplinary and interdepartmental center, MCB seeks to develop a community of interest around a PhD program that serves the needs of many faculty and students, specifically with research; and to a lesser degree, the opportunities offered by a professional masters program in applied biotechnology.

The MCB Program has developed a strategic plan that focuses on goals in three areas: funding, student recruitment, and curricular change. The review team explored those plans in some depth and this report will address those specific goals and plans in subsequent sections. Overall, the team was pleased to see that the MCB faculty have thought seriously about the future of the program and are proposing some substantive changes that respond to a fluid operating environment and the success with Provost's Initiative funding. There is considerable faculty engagement and interest in this program as evidenced by history of involvement and participation in this review. We could not, however, tease out the degree to which broad MCB faculty have ownership of the planned changes. In addition, it is not clear that the members of the MCB Advisory Board (largely supporting Deans) are fully aware of the future plans.

The overall goals of the strategic plan and direction are appropriate. Computational and Genomic Biology are an excellent core for a modern multifunction/multidiscipline program in Molecular and Cellular Biology and this central theme should provide an appropriate mechanism to drive the program's future.

B. Students

MCB PhD program characteristics were reported for academic years 2001-2006. Six students matriculated each year from 2001-2004 and 8 students each year from 2005-2006. The two additional GRA slots available in 2005 and 2006 were funded through the CGBI. Overall, the student body is fairly equal in gender distribution, with domestic students accounting for the majority compared to international students (~25%). A cohort of students was selected from an applicant pool that varied from year to year (~107 applicants/yr). Applications fell from 2002 to 2004, possibly due to the introduction of an

application fee in 2002. Applications are now on the rise (120 applications in 2006) and are expected to increase in 2007. The graduate placement scores seem to be competitive with peer institutions. Students rejected from the program had similar or slightly less competitive profiles, indicating that other factors (reference letters, research interests and/or interviews) were likely the deciding factors for acceptance.

The characteristics for the MS in Applied Biotechnology were reported for academic years 2003-2006. Applications to this program have steadily increased, with 5 matriculated students in 2006. The representation among the MS students is similar to that of the PhD pool; however in 2006 4 of the 5 students were international. The graduate placement scores for the MS students were lower than those for the PhD students, especially in the verbal and quantitative skills.

The MCB program successfully recruits white domestic students from the Pacific Northwest and a few international students from Asia/Pacific Islands resulting in a poorly diverse pool. This problem is ubiquitous in this field at many universities without significant funds for targeted recruitment and is well recognized by the MCB faculty.

C. Faculty

The MCB group consists of a group of 100 faculty from 6 colleges and 16 departments at OSU, demonstrating that diverse interests and expertise are melded into one modern graduate program. From 2001-2005, 23 PhD students completed dissertations under the mentorship of 20 faculty. One PhD student was mentored by two faculty, providing some evidence that interdisciplinary training is happening in the MCB program. It was encouraging to find through discussion with faculty and students that additional interdisciplinary research and interactions were appearing in MCB graduate work. Such activities were not highlighted in the report. Within the MCB group, 36 faculty are actively involved in student advising on graduate committees. Approximately 25% of the MCB faculty have participated in the instruction of the graduate core courses, although commitments varied from 2001-2006. It is difficult to know the impact of such changes on course content and quality. The deans, faculty and students all remarked that fluidity in the instructor base poses inherent short-term and long-term challenges (e.g. financial, programmatic, and minor quality issues, respectively).

D. Graduate Curriculum and Degree Requirements

MCB PhD students are required to complete 36 units of graduate-level coursework, including 8 required core courses: *MCB 511- Research Perspectives in Molecular and Cellular Biology*; *MCB 525-Techniques in Molecular and Cellular Biology*; *MCB 553-Structure and Function of Eukaryotic Cells*; *MCB 554-Genome Organization, Structure and Maintenance*; *MCB 555-Genome Expression and Regulation*; *MCB 556-Cell Signaling and Development*; *MCB 557-Scientific Skills and Ethics*; and *MCB 610- Internships* (i.e. 3 laboratory rotations). This is on par with core requirements in MCB PhD programs at peer institutes.

The MCB graduate core curriculum is currently moving to integrate and emphasize training in computationally intensive, genome-centered biology. The Committee sees this curriculum development as an essential determinant that can distinguish this progressive MCB program from peer MCB programs that fail to implement new technology in PhD coursework. In the past year, *MCB 554-Microbial Genetics* and *MCB 555-Eukaryotic Genetics* were updated and renamed to *MCB 554-Genome Organization, Structure and Maintenance* and *MCB 555-Genome Expression and Regulation*, respectively. In short, the curriculum was changed to consolidate material between prokaryotes and eukaryotes and to provide a more genome-view of biology and to emphasize system-wide topics. It is too early to tell the impact of these changes. However, the instructor in charge, as well as the MCB

curriculum committee and faculty present, enthusiastically supported the changes and reported that the material was well received this year and that the course will continue to undergo slight changes in subsequent years to solidify content. MCB 557 will be reintroduced into the curriculum in 2007 to fill pre-existing gaps in writing instruction as well as ethics training pertinent to work in the biological sciences. In addition, it was mentioned that the cell biology course (MCB 556) will be taken over by two instructors in an attempt to make it a more integrated class.

Key funding for new curriculum development and instructors was obtained through the CGBI which was led by past-MCB Program director Steve Giovannoni and current CGRB director Jim Carrington. Five junior faculty were hired in 2006 under the initiative. These new faculty are currently setting up their research laboratories and are exempt from teaching for one year. By the academic year 2007-2008, it is projected that some of the new hires will create 2 new courses in computational biology and bioinformatics for graduate students in the MCB program. The other faculty will participate in the existing core classes. Details regarding faculty commitment and course content were not provided, but there was conversation that coverage will include instruction in systems biology, genome evolution, and computational biology at both the practical and theoretical levels. Discussion with the current MCB faculty revealed that they were not very informed about the planning or vision of the new courses, indicating that the broader faculty are not actively involved in curriculum design or decision-making.

The MCB curriculum has introduced the concept of “tracks” as a mechanism to identify high impact research areas and to consolidate faculty specialization across campus. The MCB vision is that tracks may help in student recruiting, obtaining competitive training grants, and enrich the training of the students (e.g. focus course work, identify suitable mentors, and build community activities). In 2006, the Host-Microbe interactions and Molecular Pathogenesis track was initiated with clear leadership, curriculum, faculty cohesion, and a website. Three other tracks have been conceptualized, although leadership and course objectives have not materialized. The impact of these tracks and the proposal is difficult to assess at this time. Peer institutes have tracks and successfully coordinate research areas and visibility. Thus, it is expected that such tracks may identify research strengths within the MCB program. Once formally instated, the tracks should be evaluated to determine if they are achieving the goals set by the MCB program.

E. Administration, Financial and Organizational Support

The MCB program is administered as an interdisciplinary and interdepartmental program of the OSU Graduate School. The Interim Director, Jim Carrington, reports to the Dean of the Graduate School and is advised by an Advisory Board comprised of supporting Deans plus the VP of Research. Very little paid FTE is dedicated to leadership and administration of the program. Faculty voluntarily choose to associate with the MCB program and contribute a portion of their time to the group’s success and to teaching students. Historically, this volunteer arrangement has generally worked but with some challenges to maintaining consistency with core curriculum and course teaching. The new initiative will fund new faculty who will have a portion of their time explicitly dedicated to the success of MCB community needs which should ease some of these pressures. It is, however, a program that will be sensitive to the presence of strong leadership of disparate faculty interests and solid administrative commitment from academic deans.

Dr. Carrington’s leadership and administrative acumen was widely acknowledged and praised throughout the site visit. His leadership with the successful Provost’s Initiative proposal has been especially important to setting new directions for the MCB program. He also facilitates a significant interaction between MCB and CGRB which is integral to the success of the strategic plan. His presence and participation in the College of Science leadership meetings is critical to the coordination of MCB program

directives with new initiatives and decisions being made within participating departments. The interim nature of his position suggests that an important leadership decision may be in the near future. However, it should also be noted that as director of the CGRB, and administrator of the Provost's initiative on Computational and Genome Biology, Dr. Carrington will maintain an active interest in the program's direction.

The group of deans and representatives that met with the team was strongly supportive of the MCB program, and stated that it was the best program on campus applying modern molecular and genome-wide approaches in the biological sciences. The deans acknowledged that the university needs a MCB program that is inherently interdisciplinary to coordinate state of the art research technology with translational research being conducted on campus. Their overall enthusiasm of the MCB program suggests that a strong base of campus-wide support for the program is in place. This group, however, feels that they are underutilized as an advisory group and could be more effective with a greater participatory role. Given the likely budget environment of the next several years, a greater engagement of this group could be critical to any leadership transition and success with achieving strategic goals.

The new Graduate School funding model, and the Computational and Genome Biology Initiative provide greater financial stability and resources for the program than in prior years. In addition, the director continues to be entrepreneurial in securing donations and the return of some productivity funds from participating departments. These represent a sizable portion of the MCB budget and the distribution of these funds appears to have been carefully thought out, although the degree of budget transparency to MCB faculty was not clear. These funds are used to support first year students and other expenses in new ways that are critical to the development of the program.

The review committee is concerned that a significant percentage of this program's budget (44%) is composed of voluntary contributions from participating units. These voluntary contributions are committed on a year to year basis and can therefore be more volatile than other sources of funding, especially in times of tight budgets. Given the deans' stated support for the program, the committee recommends that efforts be made to guarantee that these voluntary contributions become a permanent part of the program's budget. A key issue will be sustaining the funding level through the university rebasing process and positioning the program to successfully compete for a significant training grant targeted for 2011 at the end of the CGBI Initiative.

In summary, from a budgetary perspective, long term sustainability or growth of the MCB program will depend on: a) a stable funding stream from the participating Colleges and Graduate School; b) direct program support for first year students through GRAs; c) an equitable (across participating departments) and transparent mechanism that recognizes and/or rewards the contribution of faculty to teaching in the program.

F. Facilities, Equipment and Other Infrastructure

Because of the nature of the MCB program, it does not have equipment or facilities. The MCB students, however, all have access to the core laboratories of the CGRB which are extensive and appear to be well maintained and managed. The CGRB facilities include an excellent computational core that is broadly used and continues to develop through MCB faculty grant support in a way that should enable achievement of the program's goals in computational biology. While modest in scale, the core equipment required for genomics research are up to date and are being used creatively to ensure that scientists trained in the MCB program have been exposed to technology that will serve them well in future careers. This creative leveraging of CGRB resources is allowing students to have a much broader experience than

if they were limited to departmental lab facilities and equipment. The CGRB facilities should be maintained as a central part of the MCB training experience.

The program relies on the participating faculty to provide additional facilities, academic infrastructure, offices and other equipment that will enable student success. Those are widely decentralized and vary in nature and extent. Based on student achievements, the overall support appears to be adequate.

III. PROGRAM PRODUCTIVITY AND OUTCOMES

A. Curriculum and Mentoring

The MCB program succeeds in delivering the core curriculum courses each year. However, this is an interdisciplinary program mostly fueled by faculty interest and FTE for teaching is not supplied by the MCB program. Some colleges and programs incorporate MCB program teaching support into faculty position descriptions, but many do not. Hence, the curriculum has been largely delivered by volunteers who have put their personal stamp on the course leading to some inconsistency in content from year to year. That is not necessarily bad since it may keep the course content fresh, but since the MCB courses are also populated by non-MCB students there may be less overall program oversight of curricula than might be found in a departmental-based system. There may be limits on the teaching pool if junior faculty foresee vulnerability in terms of promotion and tenure. The new hires funded by the Provost's Initiative will have a component of their position identified to support of the MCB program which may mitigate this problem in the future, especially since they will develop and deliver new courses that are critical to the success of the MCB strategic plan. Volunteers will still be at the core of the curriculum in the future.

The major incentives for faculty participation are their interest and the chance to work with very gifted students interested in applying state-of-the-art molecular and genomic tools to their established research programs. The deans of the participating colleges at OSU (Pharmacy, Agricultural Sciences, Forestry, Science, Health and Human Sciences, and Vet Medicine) judged the MCB program to be successful based on student success. An external reviewer questioned whether the MCB core program was limited to only graduate students. The answer is that seniors can take the courses, but as a matter of course very few actually do. The program faculty indicated that they are not seeking to grow their own MCB graduate students, preferring to seek talented students from the Pacific Northwest and the surrounding regions. However, the team suggests that proactively mingling introductory graduate courses and senior undergraduate courses through the 400/500 slash system might create some beneficial synergies and increase the talent pool for OSU and peer programs.

A key curricular issue, according to the deans, is difficulty in getting diverse constituents on campus to fully commit to the MCB program. One concern voiced was that there must be insurance against barriers in home departments that discourage long-term teaching commitments to the MCB program. They also noted that the curriculum was missing some core elements necessary to set up a multiple tracks approach (e.g. defined tracks, coursework, faculty participation, and track leadership). The students expressed a preference for the current set-up and opined the narrower track concept did not appeal to them. However, it was also clear that the current students did not have a good understanding of the proposed tracks system. The faculty felt that tracks would help focus the program and increase its competitiveness. The faculty and students both noted that MCB students have greater insight into other related disciplines than the average single science subject students.

Considering that the curriculum is in a state of transition, it was surprising to find that a course on

biostatistics was not being considered for the MCB core. Discussion with the faculty indicated that there was not an appropriate existing course. A new MCB faculty member indicated that a planned new course in evolution and genomics will be statistically rigorous. This may serve the needs of some students, but a course dedicated to statistical analysis using biological datasets seems highly relevant for the vision of the MCB program.

B. Student Success and Perspective

The students reported that the average time for completion of a degree was approximately five years. This matched with program statistics of 5 years, 4 months to complete the program. The students felt highly supported financially, socially, and academically. All students were planning to continue biological research as postdoctoral scholars in academia or research scientists in industry. The students noted that they had picked OSU's program because it provided flexibility, the core courses appealed to them, they felt the program was broader, and they were able to do rotations in different labs. Most noted that they had identified this program from on-line searches. The students felt that they had a broader base of knowledge than the average science student. Although the students were spread out over all the participating disciplines in terms of office space they were comfortable with their respective homes and did not feel that they were not accommodated by MCB. They all had space in the MCB program but this was not where they hung out. They felt fairly confident of their identity as an MCB student and as a member of the department that was providing direct support.

The students reported that they do not have a formal mechanism to get feedback from the general MCB faculty, but were generally satisfied with the advising they received from the program director, their major professor and graduate committee members. The students reported that their core courses gave them a very good preparation, and their committee is very helpful in designing an adequate preparation program. Although all students expressed great enthusiasm for *MCB 525-Techniques in Molecular and Cellular Biology*, most felt that the course needed to be updated. This was also echoed in faculty discussions. Students suggested implementing new information regarding: (1) experimental troubleshooting, (2) data analysis and application, and (3) accessing/downloading bioinformatics tools for data manipulation. Faculty suggested the implementation of modern techniques commonly used by MCB students. Two students indicated that training in computer programming (Perl) would have benefited their research program. They also noted that the ethics course through the Philosophy department was nearly useless for their purposes. They wanted an ethics course with greater direct relevance to their area of study. We note that the MCB program is responding to this complaint and has identified an MCB faculty member to develop and deliver an ethics and skills/techniques course next year. Students also felt that they would like more information in their course work that pertained to grantsmanship, writing skills, Power Point presentations, and career development options (academics vs. industry) near the end of the PhD program.

Some students noted a preference to have their advisory committee active from year one. They noted that the professor of the MCB525 course was available to advise the students during the first year and that was very helpful. Some students noted that they liked the flexibility in the program; if they took initiative they always got support. The students also noted that the interim coordinator was always available. The students noted that the idea of having 100 faculty members available to them was very inviting and encouraging.

Some students expressed desire for the MCB program to improve the communication about the program and graduate school requirements, so that they would have a clearer idea of what they were expected to fulfill and by when. This may not be specific to MCB but could reflect differing departmental requirements. (Colleague non-MCB students working in the same lab will have different requirements

which may lead to some confusion.) However, other students felt like they were in charge of learning the requirements and this wasn't a problem. Some also felt that Graduate School website was difficult to navigate. One issue the students brought up was a desire to understand the process of bringing in faculty they wanted to work with into the MCB program. They stated that they were told it was a simple process, but they did not know what it entailed. They also wanted to know current faculty research interests. Although information regarding participating MCB faculty research programs is available on the web, the students indicated that they would have a better idea of the current research questions if individual websites were routinely updated with this information.

C. Student and Faculty Scholarly Productivity / Awards and Honors

MCB graduate students typically publish the results of their dissertation research in high quality scholarly publications with 41 journal articles listed as being published by 17 students since 2001. In addition, students stated that it is common to attend more than one conference during their graduate tenure and it appears to be common for students to present at these meetings (>80 presentations since 2001). Overall this productivity seems adequate. However, there are no publications listed for several of the 23 students who have graduated since 2001. It is not clear if this is a matter of bookkeeping, or if it represents a more troubling trend of issuing PhDs to students that have not completed publishable scholarly work.

On the whole, there appears to be a sufficient number of faculty receiving grant funding to support a vibrant program. This was reflected by the fact that students said they had no problem finding laboratories that could provide financial support. Given the large size of the faculty it is difficult to sort through how many are major contributors and how many really act more as bystanders. The program would benefit from a thorough review of faculty contributions and resources to better understand how this large group of "volunteers" can contribute to achieving the programs goals.

Both faculty and students have been honored with numerous external and internal awards reflecting an active group of scientists making contributions in research and teaching. The University should be proud of the contributions this group is making.

D. Student Financial Support, Retention, Graduation Rates, Employability

MCB PhD students receive an annual stipend of \$22,000 at 0.49 FTE plus a tuition waiver. Under a new strategy, the first year of support is covered by the MCB program and subsequent years by MCB faculty research grants and/or departmental teaching assistantships. The ability to support first year students with GRAs (starting 2005) is seen as critical for success in recruiting graduate students and enabling them to participate in rotations through different labs. Graduate students stipends seem to be competitive with peer programs.

Currently, 6 TA positions are funded; however, 7 TA positions are required for MCB graduate support. Obtaining more TA funding is essential to support the students in their second year, and may be a factor for retention in the program, especially considering the desired growth in the program. The MCB faculty clearly indicated that they are committed to securing available TA positions for MCB graduate students; however, a constant source of TA funding is imperative.

Comments from graduate students suggest that funding is generally available (at least for the small number of PhD students in the program) and the Committee detected no concerns regarding continued funding for the expected length of study. As such, it was surprising to learn that the two alumni surveys returned indicated that students had to self-fund part of their studies (< \$10,000). Success with securing a Training Grant will be critical for longer term success.

The program did not provide specific information on attrition rates, but anecdotal evidence suggests that attrition from MCB is no greater than might be expected from any PhD program. The average time in residence to degree completion is about 5 years and 4 months.

In the last five years, students (23/32) trained in the MCB PhD program were placed in competitive academic and research institutes (e.g. University of Washington, Yale, Los Alamos National Laboratory, University of Geneva, Siga Technologies, NIH) demonstrating that the program is generating highly trained and ambitious scientists. Only one MS student was reported to continue in research at an institute. The committee did not meet with any MS students to adequately evaluate their training and productivity.

Students in the MS in Applied Biotechnology do not receive financial support from the MCB program, but may be supported by employers or TA positions. The long term success of this new program under this type of financing arrangement is uncertain although current enrollment trends suggest that there is a steady demand. Growth in this program appears to be limited by the availability of paid internships. Because this is a new program there is insufficient information on attrition or other productivity measures to draw inferences at this time.

E. Program Growth and Diversity

The review team is impressed with the steps being taken to expand the size of the MCB program as a result of initiative funding, and concur that these are desirable and appropriate. In the long run, growth of the program will require new resources and probably a more central role on campus. Success with obtaining a new training grant will be important, but we tend to agree that a vision of a metamorphosis of MCB into a broader umbrella graduate program to serve the life sciences community could be catalytic to greater OSU success.

A lack of diversity is a concern among faculty and students. While there is a fairly good gender balance among the students, this is not true for the faculty where women are under represented. There was also a notable absence of women speakers as part of the seminar program. The program should take a hard look at these types of opportunities as a means of providing balance to the program and developing further opportunities for mentoring underrepresented groups. This is a historic problem and is slowly changing; MCB leaders and faculty should continue to make this a high priority in alignment with University goals. Among students there are few non-dominant groups represented. The program was overwhelmingly White and Far East Asian with a few international students, also from Asia.

We concur with the program priority of increasing student diversity in the MCB PhD and MS in Applied Biotechnology programs. We do not, however, have new ideas and insight into how to achieve that beyond the steps that are proposed by the MCB leadership. We suspect that they will need to cast their recruiting net well beyond the Pacific Northwest to improve their chances of additional student interest. If they find a promising and qualified underrepresented student applicant for the PhD program then they might consider making funding that student a high priority and whether the targeted fellowship funds from the Graduate School could be helpful. Longer term, a key could be to help fill the pipeline with underrepresented students by specifically nurturing undergraduates. We did not explore the steps being taken to diversify the MS degree program, but it may be reasonable to enlist the help of employers in that effort.

D. Real or Perceived Barriers to Greater Success

While the MCB program has been quite successful to date and has taken dramatic steps towards increasing its effectiveness in the future, significant challenges remain and will need to be addressed if the lofty goals of the program are to be achieved. There is a perception among the faculty of variability in rewards for their participation in the program. Some faculty feel they are supported by their departments and credited for their service while others feel the service is appreciated but not credited, or more often, not recognized. Whether or not these are real or perceived differences, it contributes to bit of a “can’t do” attitude when it comes to such critical things as structuring the curriculum. The volunteer nature of the faculty is a strength but also a challenge since it is more difficult to align the faculty on such things as core competencies and shared goals. This seems to be currently addressed by a core group of highly committed faculty that has made this program their priority, and they have accomplished a lot. However, this puts the program at some risk with nothing to ensure this commitment will be maintained in the future.

There is also a significant challenge with aligning a large volunteer faculty on a clear purpose for the program. For many, this appears to be just another avenue to troll for students for their laboratories and when questioned, they did not articulate any distinction between MCB students and others in their laboratories. Pragmatically, this is to be expected, but to achieve a stated goal of receiving a training grant by 2011 will require clear consensus on defining the unique attributes of an OSU MCB graduate. The vision of providing multi-disciplinary training rather than simply representing a multi-departmental confederation is a good one and would position students well to be competitive in the job market. However, it may not be a vision that is universally shared by the faculty.

As mentioned above, stability of core funding, especially dollars used for supporting graduate students could be improved. The program leadership is not currently allowing this to be a barrier but a tremendous amount of energy is spent gathering a small amount of money to keep this going.

IV. SUMMARY AND RECOMMENDATIONS

The decennial graduate program review of the Molecular and Cellular Biology program revealed a successful interdisciplinary graduate education program with strong administrative, faculty and student support, especially for the PhD program. The program enjoys strong leadership and is benefiting from a new funding model and a university-level initiative that is the catalyst for significant strategic change, now underway. The core curriculum is strong and undergoing change to reflect new priorities and advances. Student satisfaction is very high with the PhD program. We are not able to assess that for the relatively new MS program. There is a dedicated core group of faculty who make this program work, supplemented by a larger group of interested participants.

Currently students appear to be gaining adequate and appropriate training to move on in their careers, especially at the PhD level. The coursework-only-MS program is relatively new and a recent faculty hire is now putting greater attention to advising, curriculum and program support activities. We suggest that a more meaningful assessment of the program should be made in several years.

In some cases, the MCB PhD program has begun to provide a framework for a truly multi-disciplinary education. This effort is in early stages and should accelerate since students that have truly developed the ability to work fluidly across disciplines will have a definite competitive advantage in the workplace. The program goals to develop core capabilities in computational and genomic research as a theme to unite disparate research efforts are a good beginning. However, the faculty as a whole need bring more focus

to this. There was very little ability by the faculty to articulate what made an MCB student unique within the overall graduate program at OSU.

Long term sustainability or growth of the MCB program will depend on: a) a stable funding stream from the participating Colleges and Graduate School; b) direct program support for first year students through GRAs; c) an equitable (across participating departments) and transparent mechanism that recognizes and/or rewards the contribution of faculty to teaching in the program; and d) faculty success with grantsmanship and recruiting high quality students.

This report contains numerous observations and opinions about various aspects of the MCB program that aren't summarized here. This is a successful implementation of an interdisciplinary education model. We offer the following recommendations to improve upon that success.

Recommendations

1. The MCB program leadership should take steps to more proactively engage the Advisory Board in the future of the program.
2. Regular consultative meetings of the participating MCB faculty should be conducted to ensure support and/or understanding of the new program directions and to regularly discuss broad programmatic issues.
3. Clear expectations should be placed on MCB faculty that make their enrollment in the program meaningful. This could include participation in core curriculum, participation on development of "tracks", participation in planning committees covering programmatic issues, and other contributions to training MCB students.
4. An annual report of the program accomplishments and goals should be prepared and distributed widely to faculty and administrators.
5. Departments hiring new faculty with clear interest in MCB and related technology should explicitly define faculty job descriptions so that a portion of the individual's teaching and mentorship duties are officially committed to the MCB program. In return, OSU departments will be able to attract or retain exceptional scientists requiring modern technology and students with this interest.
6. Continue to make improving student and faculty diversity a high priority. Develop a written diversity action plan to share with the MCB Advisory Board, the MCB faculty and OSU administration.
7. The MCB Program Director and the Dean of the Graduate School should establish methods of assessing whether program and course student learning objectives are achieved. Review of student evaluations of instructors should be one component of oversight. The Dean and Program Director should consider exit interviews and other techniques to gain meaningful feedback on program quality.
8. Develop stronger mechanisms to align department/college incentives with the success of the MCB program and reward faculty for their 'voluntary' contributions.
9. Define unique requirements that make the MCB program "multidisciplinary". For instance, a

truly “multidisciplinary MCB PhD student” at OSU is expected to: (1) complete course work in molecular and cellular biology with a strong emphasis on computational biology, mathematics, and systems biology; (2) be able to conduct research using modern research tools available through the CGBI; (3) complete a research dissertation answering fundamental biological questions at the genome level and (4) be prepared for an increasingly complex job market that values scientists that can work across classical disciplines.

10. Continue to improve the current MCB curriculum to better serve the training needs/requests of the MCB students, such as: updating MCB 525, implementing more formal opportunities for learning grant writing and making oral presentations, and by integrating new courses that will uniquely train MCB PhD students and distinguish them from their graduate peers (e.g. computational biology, biostatistics, programming, genome evolution, systems biology).
11. Given that the focus of the MCB PhD program is shifting to a greater emphasis on more numerically and computationally intensive subjects and research, the degree requirements should reflect course requirements or mastery of graduate level statistics or mathematics.
12. The MCB faculty should identify a core group of individuals to serve as mentors to MCB graduate students in the first year. Formal advising is expected to help the students identify programmatic needs early in their career, identify research labs for rotations, and provide a mechanism for faculty to recruit students with similar interests into their labs.
13. Financial support of students is critical to long term success. The MCB program should expand their efforts to ensure that GRA and TA funding, supplemented with fellowships, is available to support a strong and diverse student population. Faculty energy should be invested toward developing gifting opportunities and securing industry-supported fellowships and internships for both PhD and MS students.
14. Given the deans= stated support for the program, the committee recommends that efforts be made to guarantee that these voluntary contributions become a permanent part of the programs= budget.
15. The participating MCB faculty dedicated to graduate training should formally commit to teaching in the MCB courses, and that commitment should be reflected in faculty position descriptions. Such an obligation is essential to maintain a rigorous, consistent graduate curriculum from year to year. Teaching contributions should be formally acknowledged and supported by the participating departments.
16. The MCB program should publish and/or document examples of interdisciplinary research activities at OSU. It will be critical to be able to demonstrate clear evidence of integrated and multidisciplinary graduate research in order to secure a training grant in the near future.

GRADUATE COUNCIL MEETING

October 12, 2006

3:00 PM, Kidder 128

Present: Koenig (Chair), Filtz, Francis, Gitelman, Grosskopf, Harter, Jovanovic, McLain, Proebsting, Rettig, Russ-Eft, Strickroth and Unsworth

Absent: Blythe

1. Category I Proposals for Graduate Degrees in Economics and Applied Economics

Hal Koenig (Business) began the meeting by asking the Council Members if they had read the Budget and Fiscal Planning's report on the Category I proposals for Economics and Applied Economics. Bruce Rettig (Graduate School) was contacted by a member of Budgets and Fiscal Planning Committee (BFPC) who was worried that the report might be misinterpreted. That person recommended that the Graduate Council look at the report as an identification of issues and concerns and not as a "veto."

Continuing its discussion of October 5, the Council returned to its evaluation of the two Category I proposals for new graduate degrees in Economics and Applied Economics.

Council members discussed the strengths and weaknesses of both proposals. The majority of members felt that although the individual proposals did have merit there were also fatal weaknesses in each. Of particular concern were the issues of inefficiency and duplication. It was strongly felt that the Graduate Council could not consider approving either of the proposals in their current form.

One Council member suggested that if the faculty involved in the two programs cannot be convinced to cooperate, external reviewers (experts in the field) should be invited to campus to examine and deal with the academic and political situation. But another member argued that transferring internal management problems to strangers would be a drastic and unpopular move.

Shawna Grosskopf (Liberal Arts) reminded the other Council members that if the admission of new graduate students is not resumed, there will not be enough teaching assistants to help with economics service courses. In addition, tenure-track faculty could be lost.

Council concerns about the proposals can be classified as those that apply to both proposals and those that deal with individual proposals. These include:

Both Proposals

Both proposals include language critical of each other. Council members found this to be deeply troubling and requested revised proposals with less emphasis on past disagreements and more emphasis on working toward common interests.

The Council strongly agreed with the BFPC's concern about duplication of courses, especially at a time when university resources are scarce and leading to program cuts elsewhere on campus. If possible, the programs should seek ways to continue to offer shared courses and to rely on each

other's courses. If university interests are served by courses that must be different in the two programs, clear explanations of the need for the apparent duplication must be provided.

One cross-listed course, AREC/ECON 525 (Econometric Methods), is highly valued by all parties. More courses should be identified for joint use. What is the philosophical basis for different course descriptions for courses that were used by multiple departments in the past? Is the difference solely based on mathematical prerequisites and orientation? Are there differences in learning outcomes? If there are differences in learning outcomes, what are they and why is the difference appropriate?

If the Deans of Agricultural Sciences, Forestry, and Liberal Arts support the expanded offerings of graduate courses, they should explicitly state that the funding resources will be available in the future.

Applied Economics

The Applied Economics program should develop admission requirements for this program that would be directed to the director of the program rather than to the heads of particular departments. The admission requirements should not vary depending on the department in which the major professor is located.

The explanation of the consortium proposed for the Applied Economics program should include a clear definition for supporting and primary faculty. In the current draft, it appears that a professor who instructs and researches in a "field" has less stature than those teaching the core courses. Council members questioned the basis for this. If there is no substantive basis for the separation of the faculty into two groups, the Graduate Council recommends one group. The Council recommends that any distinction between faculty members be based on objective reasons for assigning the five types of graduate faculty authorities (teach graduate courses, direct non-thesis master's students, direct thesis master's students, serve on advisory committees, and direct doctoral dissertations).

Having recently reviewed the graduate program in molecular and cellular biology, the Council commends it as a model to use in planning graduate economic training. Its graduate faculty members are differentiated only in terms of which of the five Graduate Faculty authorities they have.

The Council understood that the design of the consortium was based upon retaining what worked well in the former University Graduate Faculty of Economics and upon avoiding problems. However, the description of the consortium is difficult to understand. The Graduate Council found the stratification in the Consortium very complex and possibly counterproductive. Some Council members asked whether the proposed organizational structure was needed at all and whether it would make governance easier or harder. The flexibility described in the proposal might be challenged in a few years. There was concern about how robust the organization is and whether it can adapt to changes in future circumstances.

The Council did not understand how the program would be marketed. Will the program leaders be able to recruit excellent students by clearly delineating a vision of the program? How will the university recruit students into both this program and the economics program?

Economics

The Council did not understand how strong the demand for the graduates of this program was. What distinguishes this program from economics graduate programs elsewhere? Why would a good student choose this small program over programs, such as those at the University of Oregon and the University of Washington that have a similar curriculum but a larger range of fields? With graduate economics programs available at the University of Oregon and Portland State University, the Council did not understand how an additional program at Oregon State University was justified. When economic degrees were authorized for Oregon State University approximately two decades ago, a statement was made about the special niche that would be filled by Oregon State. Will this program serve a special need in the state and the region? The Council was concerned about whether the recent attrition rate might reflect that students being attracted were either unprepared for the program or were not motivated to complete their degrees.

The Council did not understand how the learning outcomes in the proposal would be achieved and would like a more complete explanation on that point. Other information of interest to the Council would include the non-completion rate. How does it compare to peers? Why do students fail? A survey of the current students in Economics would be a helpful documentation on issues raised in review.

Koenig agreed to send an email to the drafters of the proposals indicating the Council's concerns and desire to see substantially revised proposals.

The meeting was adjourned.

GRADUATE COUNCIL MEETING

October 5, 2006

3:00pm, MU 206

Present: Koenig (chair), Filtz, Francis, Gitelman, Grosskopf, Harter, Jovanovic, McLain, Proebsting, Rettig, and Unsworth

Absent: Blythe, Russ-Eft

Guests: Greg Perry, Jack Walstad, Carlos Martins, Hal Salwasser, Thayne Dutson, Kay Shaffer

1. Introduction of new Council Members

Hal Koenig (Business) introduced himself as Chair of the Graduate Council and welcomed the Council members to the meeting. He invited all Council members to introduce themselves. New members to the Council this year are Linda Blythe (Veterinary Medicine), Shawna Grosskopf (Liberal Arts), Goran Jovanovic (Engineering), and Darlene Russ-Eft (Education). Professors Blythe and Russ-Eft were absent. The graduate student member of the Council has not yet been assigned.

Sally Francis (Graduate School) thanked the Council members for their past and future service and reminded all present that the Gradual Council is the only Faculty Senate body that includes representatives from all OSU colleges.

2. Committee Assignments

The list of committee and subcommittee assignments for 2006-07 was distributed. For the benefit of those who had no prior experience with the workings of the various committees, Koenig briefly described the duties of each.

Koenig reminded the Council that these are “proposed” assignments. Council Members who would like to switch assignments were asked to inform the Graduate School within two weeks from today’s date. Requests for changes will be accommodated if possible.

Bruce Rettig (Graduate School) broached the subject of the Category II subcommittee’s summer work habits. The Curriculum Council shares the problem of faculty finding it difficult to review proposals during a time when many of them are on vacation, conducting field research or in other commitments. The Curriculum Council expects to review this issue and may have a proposal for Graduate Council consideration.

3. Category I Proposal for Graduate Degrees in Applied Economics

Greg Perry (Agricultural & Resource Economics) introduced himself and Jack Walstad (Forest Resources) before giving an overview of the CAT I proposal for graduate degrees in applied economics (MS/PhD in applied economics, graduate minor in business economics).

Perry began by saying that the departments of Agricultural & Resource Economics (AREc) and Forest Resources (FR) have a long history of graduate education in economics and then provided some background on the formation of the UGFE (University Graduate Faculty of Economics) in 1988. Perry shared the reasons why the UGFE was dissolved in 2005, and how the new applied economics degree proposed in the CAT I proposal adheres closely to the spirit of cooperation and applied focus of the original UGFE proposal with important changes in organizational structure and degrees offered (new fields) which he feels would benefit both the program's faculty and students. He feels that the design of the new program would attract students and better prepare them for jobs in applied economics.

Perry informed the Council that all the department heads and deans involved in the proposed program have signed off on the proposal except for the College of Business. The faculty of that college was unable to meet to consider the proposal prior to today's meeting.

After describing the many benefits of the new degree program, Perry admitted that a problem with course duplication will exist if this proposal and the Department of Economics' corresponding proposal are both approved, resulting in a decline in enrollment in some of the PhD level core courses. He believes, however, that enrollment in applied economics core courses would improve once the new program becomes better known. Duplication of effort in the area of economics preliminary examinations would also occur.

Perry informed the Council that Carlos Martins, Chair of the Economics Department, reviewed and commented on the Applied Economics proposal. Perry thought Dr. Martin's comments were fair and briefly recounted a few of them. Perry asked the Council to refer to the proposal's liaison section for a full accounting of the communication between Martins, Perry, Walstad, and other faculty.

After Perry's presentation, Koenig asked Walstad and the deans present for any comment. Dean Hal Salwasser, College of Forestry, said he is supportive of the proposal and very pleased that we are reaching out to other departments in collaboration. Working across boundaries is right in line with OSU's strategic plan. Thayne Dutson commented on the increased marketability of students graduating under the new degrees. Dutson said that there is a very high demand in business for students trained in applied economics.

Koenig then asked the Council members for questions and comments.

Shawna Grosskopf (Liberal Arts) asked Perry if AREc and FR would be dropping their own graduate degrees if this CAT I proposal is approved. Perry answered that his unit would be retaining their degrees and the existing set of degree fields. Walstad told Grosskopf that FR would also be keeping their programs because students like the Forest Resource moniker.

Michael Unsworth (Atmospheric & Oceanic Sciences) asked what the current AREc degree fields are and how they differ from those proposed in the new degree. He also wondered how students interested in studying International Trade, for example, would choose between the two programs. Perry answered that there is a difference in the core courses required. Additionally, the marketability of the two degrees is different, each degree opening certain doors.

Grosskopf asked who in the Graduate Economics Consortium (GEC) would decide who is qualified to teach core courses and to be included as a “primary” faculty member. Perry answered that the policy committee and the director of GEC would deal with these issues.

Francis took a moment to describe how faculty are appointed to the interdisciplinary program in Molecular Cellular Biology (MCB) although that program does not have a two-tiered faculty structure as proposed in this CAT I.

Tom McLain (Forestry) asked how the GEC would be more efficient than the UGFE in terms of administrative overhead. McLain wondered if, in a practical sense, the GEC would be the same as the UGFE. Perry responded that in the days of the UGFE, an AREc faculty member would automatically be a member of the UGFE. That same faculty member would have the choice of joining the GEC or not. Walstad then described the problems with decision making and voting within the UGFE. He believes that the proposed organizational structure of the GEC would reduce such problems.

Other points of discussion included:

- Representation in GEC from departments other than AREc and FR
- Data presented in Appendix B (graduates produced vs. faculty membership)
- How faculty will be compensated in GEC
- How current and future students will be affected if this proposal is approved

4. Category I Proposal for Graduate Degrees in Economics

Carlos Martins thanked the Council for the opportunity to present his department’s proposal and promised to be brief.

Martins explained that this proposal is to restructure his unit’s current degrees which were established in 1988 with the creation of the UGFE. He told the Council that the UGFE gave graduate economics degree granting authority to the departments of AREc,

Forest Resources, and Economics and that the basic idea was to provide a diverse group of students the benefit of a shared common core. He then explained how the UGFE evolved so that eventually Economics was the unit which was primarily exercising its degree granting authority and teaching the majority of the core courses. Martins added that over time the views of the members of the UGFE diverged significantly in regard to core curriculum content and delivery.

Martins then discussed the Economics Department's national ranking, described how the proposed economics degrees would be different from the current degrees, and how the proposal would be in the best interests of the university, the students and their future employers.

After Martins' presentation, Koenig asked Dean Kay Schaffer, College of Liberal Arts, for comment. When she had none, Koenig asked the Council members if they had any questions for Dr. Martins.

Theresa Filtz (Pharmacy) asked if the proposal essentially seeks to give the Department of Economics more control over (academic) outcomes. Although Martins wouldn't use the word control, he agreed that the economics curriculum should be enabled to evolve in tandem with the economics profession and its standards. When asked why economics faculty are not interested in joining the new umbrella group (GEC) Martins answer that one faculty member (out of twelve) is interested and that Economics will participate in teaching international trade and courses in macroeconomics for the GEC. Martins couldn't comment when Filtz asked if Economics faculty would participate on the GEC policy council.

Goran Jovanovic (Engineering) questioned if the UGFE failed to reinvent itself, as all programs must do for survival. Martins discussed how the UGFE made significant changes in the 90's: guidelines were revised to give departments more control, the Department of Economics identified econometrics courses, which were in addition to those in the UGFE core, which became required for the economics PhD degree. Martins added that in 2005-6, the big effort to make the core more flexible, so that every department could go in its own direction, failed.

Other points of discussion included:

- The Memorandum of Understanding (MOU) regarding ECON 515: who teaches it now, who will teach it in the future and which students (econ or applied econ) are taking it and will take it.
- The cost of implementing the new economics degrees

After thanking the visitors for their input, Koenig dismissed them from the room.

Discussion was then held among the Council members.

Francis gave the Council members some background on the Provost's decision to freeze graduate admissions in economics and the reasons why the two new degree proposals were brought before the Council today as abbreviated CAT I proposals. The Provost, after consultation with the Provost's Council, believes that the proposals should be handled internally and that they should be fast-tracked through the system. No student will be admitted into an economics program until at least one of the proposals is approved.

Many of the Council members felt that both proposals had academic merit, but that the amount of course duplication was shocking. Tom McLain pointed out that although many of the course titles are the same the content of the courses might be different. Grosskopf suggested that mathematical rigor could be one of the important differences. Another member of the Council felt hopeful that some of the duplication might be later sorted out.

After additional discussion, Koenig volunteered to meet with Martins, Perry and Walstad, to relate the Council's frustration over the course duplication and to suggest more collaboration in the proposals. The Council members agreed to that course of action. It was also decided that discussion of the proposals, in greater depth, will continue at the October 12 Graduate Council meeting.

Rettig warned the Council members that a change of venue for the meetings is likely.

Meeting adjourned.

GRADUATE COUNCIL MEETING

June 1, 2006

3:00pm, MU 212

Present: Koenig (chair), Filtz, Francis, Gitelman, McLain, Proebsting, Rettig, Rockey, Sanchez, Tadepalli, and Unsworth

Absent: Harter, McCandless, McMullen

Guests: Tom Adams, Steve Hobbs, Ron Adams, Jose Reyes

1. Minutes from Previous Meeting

A motion was made and seconded to approve the minutes of May 4, 2006. All voted in favor. Motion passed.

A motion was made and seconded to approve the minutes of May 18, 2006. All voted in favor. Motion passed.

2. Forest Science Graduate Program Review Report

Prasad Tadepalli (Electrical Engineering and Computer Science) presented the report of the Forest Science Graduate Council Program Review Committee to the Graduate Council. The review's site visit took place April 10, 2006.

Tadepalli prefaced his presentation by saying that the review panel found the Forest Science self-study to be very detailed and useful and that although they were also presented with a draft report of the OSU College of Forestry Survey prepared by the Committee on Academic Freedom and Responsibility, the review panel decided not to utilize that analysis because it was based on input from all the departments in the college, not just Forest Science. Tadepalli added that the Forest Science program is reputed to be one of the best in the country with research output beyond what one would expect for its size. The review panel feels that it is important for OSU to maintain its leadership in forestry by fully supporting the Forest Science Department and strengthening its graduate program.

Tadepalli presented the Council with the Review Panel's **major** recommendations:

- Develop a vision and strategic plan for a fiscally viable department. Make sure that the strategic plan of the department is well-aligned with the university strategic plan.
- Examine the needs of the curriculum for the graduate students and collaborate with the other related departments and colleges in the university to develop a strong curriculum of cross-listed courses that serves the needs of Forest Science and related departments on campus. Collectively convince the administration to commit to faculty resources to cover these classes on a regular basis.

- Develop creative ways to collaborate with other universities through distance learning and other means to give the students a broader research and educational experience.
- Increase the production of graduate students to be in line with the faculty size and the research funding.
- Try to find support for a controlled environmental growth facility capitalizing on existing and new funding opportunities.

In response to the recent events surrounding the attempt by some college faculty to delay the publication of the article in *Science* by Donato et al, the review panel also made the following recommendations:

- Implement a diversity plan including a strong preference for hiring external candidates.
- Hiring internal candidates should be rare and should only be allowed in exceptional cases. Ensure that the faculty searches are not narrowly focused. Hiring committees should be diverse, transparent and open to input from all faculty at all stages of the process.
- The Department and the College should encourage communication between faculty and students of different stripes by supporting cross-departmental projects, and by sponsoring a colloquium or mini-symposium on controversial issues. Train the students in critiquing each others' ideas and responding to criticisms in a professional way.
- Work with other departments in COF to develop an expansive, forward-looking vision of forests as a whole that includes all aspects of forestry. Promote this broader vision among the faculty, the students, the administration, and other stake-holders.

The review panel made the following recommendations in regard to the Forest Science research program:

- Develop a vision and strategic plan for the research program in the department. Integrate it with an overall plan for the teaching, extension, and research mission.
- Increase the graduate student production especially at the Ph.D. level to raise the stature of the department and its long-term impact.
- Develop a communication strategy for use with clients and stakeholders to articulate the research vision.
- Increase the effectiveness in transferring the scientific information produced in the research program to potential users (strengthen the relationship between research, teaching, and extension).
- Add expertise in soil science.

The review panel made the following recommendations to improve and strengthen the FS community:

- There should be a continued commitment to forests as a whole, leading to an expansive, forward-looking vision of forestry. The two camps of the forest science must be bridged by pursuing the common ground between the production-oriented research and the ecological and biological research.
- Faculty searches must be focused broadly and should seek the strongest possible candidates regardless of cultural, regional, or even forestry background.
- The department must implement a diversity plan that includes a strong preference for external candidates. The faculty search process should be reformed so that the search committee acts on behalf of the faculty to conduct a broad search, then summarize and prioritize the applications. The faculty as a whole reach consensus 1) on the candidates to interview and 2) the final recommendation.
- Cross-departmental communication should be facilitated by encouraging group research projects with multiple PIs, and by having a college-wide colloquium or annual mini-symposium to exchange and debate research and views within COF and FS.

To view review panel recommendations on department facilities, program curriculum, and graduate students, please refer to the full report.

Hal Koenig (College of Business) then gave Tom Adams (Forest Science) an opportunity to comment.

Adams thanked the Council and the review panel members in particular for their efforts on the review. He said that the panel members were conscientious, that the report was very thorough, and that in general the panel did a very nice job. He admitted that the report offered a lot of good ideas and that a number of its recommendations were “spot on,” although he naturally could not agree with all of them.

Adams also told the Council that he believed that the program review process, although a tremendous amount of work, is a great opportunity for self-learning for all departments. He said that the review panel’s report will set the stage for a lot of thinking within Forest Science and the college as they work towards tackling some of these issues.

Steve Hobbs (College of Forestry) was then asked to comment. He thanked the review panel for its constructive critique of the program. He said that the report will add fuel for the department and college to deal with some of these very pressing issues. He understands that the issue of declining faculty in the area of soil science has been a serious concern, but it is difficult to find the permanent FTE to fund these critical areas. He added that the problem of losing key faculty areas is campus-wide.

When asked for questions or comments, Michael Unsworth (Atmospheric & Oceanic Sciences), asked if the department or college had any thoughts or solutions on how to build or maintain its number of graduate students, when one finds that it is more efficient to get the research done by hiring research associates. Unsworth asked if Adams had found other ways to fund graduate students, especially during the early years when graduate students are very busy with coursework.

Adams answered that for twenty years the department has received no funding from the university or college to fund graduate students aside from the funding received from contracts or grants. He added that it is no accident that Forest Science is as effective a research unit as it is. Employing research assistants/associates to do the research is one of the reasons for the success, but Adams admits that they are losing students. Adams reported on a suggestion made by Steve Radosevich to revitalize the Master of Forestry program. An MF program would increase the number of self-supporting students. In regard to enlarging the PhD population, Adams stated that it is up to the faculty to decide to fund students rather than research assistants but he wonders if the faculty would be willing to risk a reduction in research productivity. Adams said that another strategy discussed within the department would be to attract more students to the master's and certificate programs in sustainable natural resources.

Koenig questioned the use of the word "university" in a statement made on page six of the report criticizing OSU for its lack of a global reputation in Forestry. Tadeballi explained what reviewer John Laurence meant by the statement and admitted that the word "university" should probably be changed to "college" but that he would confirm that with the other review panel members. At Koenig's request, Adams explained that applied FS research is almost strictly regional in scope while the basic research (in forest ecology) has no boundaries.

Sally Francis asked Tadeballi what was meant by a comment on page 12 of the report. She said that the Graduate School has never provided graduate student targets. Her preference would be for Tadeballi to remove the statement. Tadeballi said that he would consult the review panel.

Adams and Hobbes left the meeting.

Unsworth then asked Tadeballi to what extent he felt that having external reviewers without US university backgrounds effected negatively their contribution to the team. The reviewers, Tadeballi answered, were very strong in their fields and that the only minor issues that arose were of an administrative type. William Proebsting (Horticulture) added that the external reviewers understood the forestry system very well. He said that they were insightful and contributed a great deal.

A motion was made and seconded to approve the report subject to the revisions requested by the Council with the understanding that Koenig would provide Tadeballi oversight in assuring that the revisions meet Council's requirements.

All voted in favor. Motion passed.

3. Old Business

Unsworth and Theresa Filtz (Pharmacy) then gave the Council a brief update on their committee's work writing a "Responsible Conduct of Research" training grant proposal.

4. Nuclear Engineering/Radiation Health Physics Review Report

Theresa Filtz (Pharmacy) presented the report of the Nuclear Engineering/Radiation Health Physics Graduate Council Program Review Committee to the Graduate Council. The review took place February 13, 2006.

Filtz began by saying that the overarching feeling of the review team was that Nuclear Engineering/Radiation Health Physics is a very successful and impressive graduate program. The team's recommendations are not meant as criticism but if followed could serve to strengthen an already strong program.

Filtz then presented the Council with an overview of the Review Panel's recommendations:

- Faculty are overburdened and will not be able to meet the rapidly increasing demand for the more graduates without a serious investment by the College and University. As top ranked programs among only a handful of similar programs nationwide, NE and RHP are great assets to the College and University. The graduate programs risk losing national stature due to staffing challenges and/or becoming overly dependent on unstable external funding. We recommend an increase in full-time, tenure-track faculty.

Filtz told the Council that the primary recommendation (above) was driven by the external reviewers who were stunned by the workload carried by NE/RHP faculty. This sentiment was also felt by the internal reviewers but they were not as surprised, as they are more aware of the budget situation at OSU.

- Faculty need to find a mechanism to reduce teaching loads to compensate for high productivity in research and obtaining research funding. This recommendation was made in 1991 and remains unaddressed.
- Faculty need to re-evaluate the under-utilization of graduate teaching assistants as a means to reduce the undergraduate teaching load.
- Demand for graduates is high and expected to increase dramatically in the near future. Overall graduate student quality is very good; however, an equal number of equally qualified applicants are not admitted due limitations based on funding, faculty size and research interests. The college and department need to consider means to expand the

program to take advantage of increased demand for graduates and adequate supply of qualified applicants.

- Faculty are encouraged to participate in on-going graduate programmatic assessment based on academic goals. Faculty productivity in terms of revenue generation appears to be over-emphasized relative to publication quality. Collection of data on graduate applicants and admittants should be on-going.
- Require all graduate students to complete at least one application annually for external funding. The department should offer to cover the expenses of application submission, including costs of requests for official transcripts.
- Reverse the downward trend in the number of scheduled seminars. Do not schedule more than one seminar at any one time.
- Consider offering special seminars or colloquia centered on ethical issues specifically for graduate students.
- The department deserves commendation for an exceptionally detailed and very useful graduate student handbook.
- Find innovative ways to offer more stand alone graduate courses at the 500/600 levels.
- Faculty should proceed cautiously with the plan for a new joint-degree program in Medical Physics in collaboration with OHSU.

Filtz reported that the review panel members did not want to see the medical health physics program expand at the cost of the radiation health physics program as the RHP program is only one of six in the country and of national importance.

- The reactor, APEX facility, radiation center, and radiochemistry lab are exceptional facilities. However, they appear to be significantly influenced by funding sources and could be better integrated with the academic mission.
- Better integrate the research of the NE and RHP disciplines with each other and with the strengths of the department and University in environmental measurement and assessment.
- Develop and integrate a department-level diversity action plan with the College of Engineering's plan to increase diverse gender and ethnic representation among graduate students, faculty and staff.

After the presentation, Jose Reyes (Nuclear Engineering) thanked Filtz and said that the report was very thorough, insightful and very helpful. He reported that his unit is already working toward following the recommendations.

Reyes updated Filtz and the Council on recent discussions with OHSU regarding the design of the proposed medical physics program. Although the original idea was to design a professional program, an MS and PhD program is also being considered.

Ron Adams (College of Engineering) made one comment on the faculty load issue. He told the Council that this is a major issue across the College. He informed the Council that the College has made a proposal to the Technology and Industry Council for funding. He hopes that the State Board of Education can also be pressured to help out. Adams added that he is proud of the faculty's research productivity despite the heavy teaching work load. Adams added that NE/RHP is the highest ranked engineering program in the College.

Koenig then asked if the Council had any questions for Filtz or the visitors.

Dan Rockey asked Reyes if faculty load will be impacted with the addition of the medical physics program. Reyes responded that the department is already teaching most of the medical physics courses under radiation physics. Since there is a lot of coursework overlap between the two fields, the department will not need to hire a lot of new faculty.

Tom McLain questioned the educational benefit of requiring all NE/RHP graduate students to complete an annual application for external funding. Filtz responded that it was actually the graduate students themselves who suggested this recommendation during their site visit interview. It was thought that this requirement would provide a good opportunity to improve grant writing skills and if a student is successful in securing external support he/she could return his/her GTA/RA award to the department for reassignment.

Reyes and Adams left the meeting.

A point of clarification was asked regarding NE/RHP teaching workload.

Filtz explained then assured the Council that during the site visit the NE/RHP faculty never complained about their workload but instead displayed pride that they could handle it. She added that the graduate students also had very high morale and that the department was a strongly collegial one.

A motion was made and seconded to approve the review report as submitted. All voted in favor. Motion passed.

5. New Business

As this is the final meeting of the year, Sally Francis (Graduate School) and Koenig took a moment to thank everyone for serving as Graduate Council members this year.

Francis announced the winner of the new graduate faculty mentor award (Excellence in Graduate Mentoring Award). Peter J. Bottomley was selected. Francis said that the

response to the call was fantastic with 14 strong nominees. Dr. Bottomley's achievement will be recognized at University Day and at a Graduate Council meeting in the fall.

Meeting adjourned.

Review of the Graduate Program in Forest Science

1. Introduction

The Graduate Council conducted a review of the Department of Forest Science as part of the regular cycle of graduate program reviews at Oregon State University. The review took place simultaneously with the review with the USDA CSREES Research Program review. The review team members were as follows:

Oregon State University Members

Prasad Tadepalli, Electrical Engineering and Computer Science (Chair)

William Proebsting, Horticulture

External Review members

John Laurence, Pacific Northwest Research Station

Cindy Prescott, University of British Columbia

Additional CSREES Review Team Members

Catalino Blanche, CSREES (Team Leader)

Lee Allen, North Carolina State University

Joseph McNeel, West Virginia University

Anna Sala, University of Montana

Sally Francis and Bruce Rettig, the Dean and the Associate Dean of the Graduate School, also attended parts of the program review. The department prepared a detailed self-study report before the review, which was sent to the review team on the 28th of March. The review team had a pre-review meeting on the night of April 9th with Dean Francis, who discussed the review process and the format of the report. The review team visited the Department on April 10th. The review schedule is attached in the Appendix.

We had also seen a draft report of OSU College of Forestry survey done by the Committee on Academic Freedom and Responsibility, chaired by Norm Johnson. After some deliberation, we decided to not use this survey in our report because it was based on the input from the entire college and is going to be dealt with by Johnson's committee. We also solicited email comments from the forest science faculty on the administration and the culture of the department, to which a couple of the faculty responded. This review report was written by the following four members of the review team: Prasad Tadepalli, John Laurence, Cindy Prescott, and William Proebsting.

2. Executive Summary

The Department of Forest Science at Oregon State University is reputed to be one of the best in the country and occupies a unique position in the College of Forestry. The department is a research leader in the university and has many accomplished faculty members. The faculty, research staff, and the graduate students conduct world-class research. The productivity of the department in terms of the research papers and their impact is well-above their peer institutions. The graduate students are well-supported by grants and have high regard for their advisors. The research funding of the department has been among the top three departments at OSU. The core curriculum on posing relevant research questions and using appropriate research methodology

for answering them is unique and innovative. The statistical advising freely made available to the students received high praise from the committee. It is important for OSU to maintain its leadership in forestry by fully supporting the Forest Science Department and strengthening its graduate program.

In spite of the above strengths in research and teaching and the excellent reputation and accomplishments of its faculty, the department and the graduate program face some important issues that deserve immediate attention from the department and the college. Some of these issues are related to fiscal matters and some are administrative and cultural. We deal with them separately. The professorial faculty of the department fell by 22% in the last 5 years. The annual expenditures of the college exceed the revenues by 30% and threaten its future fiscal health. The department lost critical strengths in important areas such as soil science and forest mycology and lacks a clear department-wide research strategy for the future. It heavily depends on the support staff, i.e., faculty research assistants and associates for their research. The department does not have a large enough graduate student body relative to its faculty size, especially given that the faculty does not have undergraduate teaching responsibilities. The graduate students complain of not having access to a sufficient number of graduate courses both within and outside the department. We list the major recommendations here leaving more detailed recommendations for the remaining sections.

- Develop a vision and strategic plan for a fiscally viable department. Make sure that the strategic plan of the department is well-aligned with the university strategic plan.
- Examine the needs of the curriculum for the graduate students and collaborate with the other related departments and colleges in the university to develop a strong curriculum of cross-listed courses that serves the needs of Forest Science and related departments on campus. Collectively convince the administration to commit to faculty resources to cover these classes on a regular basis.
- Develop creative ways to collaborate with other universities through distance learning and other means to give the students a broader research and educational experience.
- Increase the production of graduate students to be in line with the faculty size and the research funding.
- Try to find support for a controlled environmental growth facility capitalizing on existing and new funding opportunities.

Many of the issues related to the administration and culture have come to light with the recent unfortunate events surrounding the attempt by some college faculty to delay the publication of the article in Science by Donato et al on effects of post-fire logging. Although this incident is regrettable, it sheds some light on the underlying problems of communication and culture within the department and the college. Some graduate students, faculty, and administrators are concerned by the apparent lack of collegiality and communication between faculty members of different groups. There is little diversity among the faculty members in race and gender. Perhaps more importantly, more than half of the current professorial faculty in the department earned their Ph.Ds at OSU. From the remarks of some of the faculty, the hiring practices encourage inbreeding by not being sufficiently open and transparent. It is important to take immediate steps to address these issues in a precipitous and transparent fashion. We recommend the following actions:

- Implement a diversity plan including a strong preference for hiring external candidates.

Hiring internal candidates should be rare and should only be allowed in exceptional cases. Ensure that the faculty searches are not narrowly focused. Hiring committees should be diverse, transparent and open to input from all faculty at all stages of the process.

- The Department and the College should encourage communication between faculty and students of different stripes by supporting cross-departmental projects, and by sponsoring a colloquium or mini-symposium on controversial issues. Train the students in critiquing each others' ideas and responding to criticisms in a professional way.
- Work with other departments in COF to develop an expansive, forward-looking vision of forests as a whole that includes all aspects of forestry. Promote this broader vision among the faculty, the students, the administration, and other stake-holders.

3. Overview of the Department

The Department of Forest Science is one of four departments in the College of Forestry. The origins of the College of Forestry at OSU go back to the state-funded forestry research program in 1940 in Salem. The group moved to Corvallis in 1957 and gradually became part of OSU. In 1967 it merged with the other forestry faculty on campus, and the Forest Science Department was formed as a separate unit in 1976. Currently the department has 19 tenure track faculty and 59 graduate students. It also has 4 fixed term faculty, 5 active emeritus faculty, and a large body of adjunct and affiliate faculty who also supervise students.

The mission of the Department of Forest Science is "to provide strong research programs in education and research with the goals of furthering knowledge; training future scientists, teachers, and practitioners; informing the public; and, helping society deal effectively with the pressing issues of forest health, productivity, conservation, and sustainability" [Self-study, pg 6].

The department's research is well-aligned with its mission statement and includes a broad spectrum of activities that deal with understanding of forest growth, function, and change with the multiple goals of improving forest health, productivity, conservation, and sustainability. The education mission of the department includes developing expertise in several areas related to the above goals including forest ecology, genetics, biotechnology, tree physiology, integrated forest protection, silviculture, agro-forestry, and sustainable forestry.

The department's primary emphasis is on research with most faculty having 0.15 FTE or less devoted to teaching. The department is a research leader in forestry. Its faculty is world-renowned and brought over \$36 million dollars in research in the past 4 years, over 50% of which is through competitive grants. The comparisons in the self-study document show that the faculty's publication and citation records are the best among their peers. Forest Science has been consistently among the top 3 departments at OSU in total grants and contracts awarded each year. The department offers Master of Science, Master of Forestry, and doctorate degrees. Almost all the students are supported through GRAs and fellowships and seem to receive high quality advising, teaching, and research experience.

In spite of these positive factors, there are a few troubling aspects that need attention. Like all other departments at OSU, Forest Science was also subjected to dwindling state support. As a

result, its faculty is smaller today than 5 years ago by 22% and the graduate student body is smaller by 32%. It is estimated that the college's annual expenditures exceed its revenues by 30% and without changes in resources or expenditures, the College reserves will be exhausted by 2010. The department lacks a strategic plan to cope with the dwindling resource base and appears to be looking for a direction. Currently the faculty is undecided about issues such as breadth vs depth in its research, how to increase revenues and find new sources of funding, what research areas are most attractive, appropriate proportions of production vs. ecological research, and the relative importance of graduate student training vs. post-doctoral research staff.

Related to the above item is the disappearance of many vital subject matter graduate courses both in the department and across the campus. Examples include plant physiology and soil science. Lack of adequate graduate courses is one item that is brought up by the students in surveys and personal interviews as the most pressing need they feel. While some faculty members found creative solutions to the problem, such as sending their students to other universities, this approach seems expensive in the long-run.

Last but not least, the department has recently suffered a serious blow to its prestige arising out of the attempt by some faculty in the college to delay the publication of an article in *Science* authored by two graduate students and their faculty mentors (Donato et al) on the effects of post-fire logging. This raised some questions about the communication and collegiality of the faculty members of the college, and whether the administration is taking sides that might impinge on the academic freedom of some students and faculty. The dean has appointed a special committee to look into this and make recommendations. We address some of the systemic issues that were raised by this incident in Section 8 of this report.

4. Faculty Research

The Forest Science department at Oregon State University is home to an impressive research program that is both large and complex. To a great extent, the program provides an adequate mix of research that addresses issues of regional, continental, and global importance. In addition, there is a substantial effort to build and maintain long-term, collaborative research programs (e.g. CFER, AmeriFlux, and Andrews LTER) while still addressing shorter term regional needs through Cooperatives. The faculty has also forged strong relationships with federal cooperators and the result is a research partnership that substantially increases the capacity of the Department. While commendable, it was not necessarily clear to either the review team or to clients that this strategy or outcome is intentional or even appreciated. Nor was it clear whether the research program is integrated with a strategic vision for the Department.

Research in the Department is almost entirely dependent upon external sources of funding that are increasingly difficult to obtain and are likely to decrease in magnitude. The faculty is very successful in competing for these funds and the number and quality of scholarly publications (as determined by the journals of publication) is outstanding. They meet or exceed the level and quality reported by peer institutions. Outstanding productivity is further evidenced by the continued and even increased success at acquiring competitive funding. Given the level of support from the University and from the State, substantial external funding will remain essential to the continued operations of the Department, thus the need to plan strategically is critical. The

Department faculty should consult with research partners and other funding agencies to assure that they understand future priorities.

The faculty members receive substantial national and some international recognition for their efforts, particularly as evidenced by invitations to participate in meetings. They also frequently serve the scientific and professional communities through participation in committees, on grant review panels and editorial boards. There are a few instances of awards of international and national stature, however most awards are given at the regional or University level.

Another measure of the quality of the research program is the success of students in gaining appropriate employment after they leave the university. Information was presented on the current employment of about 50 percent of the graduates from the past 10 years. By-in-large, the Forest Science graduates who were tracked have been successful in obtaining professional positions that relate to their area of study. The positions of the remaining half of the population are unknown. Future study/employment should be tracked more carefully in the future.

Many faculty members have adopted a model for research that depends more on fixed-term positions rather than relying on graduate students to maintain their research productivity. While the number of graduate students per active faculty member varies, it averages less than 3. Departments of comparable size in other universities have larger numbers of graduate students. For example, the University of British Columbia has more than 4 students per faculty on average, although all faculty members there have significant undergraduate teaching responsibilities as well. Given the amount of research funding the faculty attracts and given that they do not have undergraduate teaching responsibilities, the department should be producing more graduate students.

Strengths

- The faculty members are highly regarded, and highly productive with several members producing contributions to the scientific literature in numbers and quality far above the academic norm.
- The research enterprise provides an excellent opportunity to train graduate students at all levels and to further the experience of post-doctoral scientists.
- The members of the department publish their work in high quality outlets, appropriate to the subject matter.
- There is a good balance between research that addresses regional, continental, and global issues in forest science.
- The Department maintains an appropriate mix of applied and basic as well as short and long-term research. Of particular note are the HJ Andrews program, the CFER program, and the research cooperatives, each a long-term effort addressing a different client base.
- There is a large extended faculty who provide excellent supervision, mentoring, and broad expertise to students.

Weaknesses

- Research projects by individual faculty members driven by short-term funding opportunities leads to a perception that the Department lacks a long-term strategic vision of its research.

- The Department has not made it clear to clients what the research program is and why it is what it is.
- Actual transfer of technology lags substantially from initial publication
- The College has not successfully established OSU and COF as internationally important research entities in the minds of the constituents. There are important ramifications of leaving the ranks of regionally focused universities and joining those that have a more global focus.
- The number of graduate students is low relative to number of extended faculty and grant support.
- One specific and critical area of research needs to be addressed: with retirements and relocations, there is no expertise in forest soil science in the College. Given the potential role of nutrient cycling and below-ground processes as an integrating discipline, it is critical to add this expertise to the faculty.

Recommendations

- Develop a vision and strategic plan for the research program in the department. Integrate it with an overall plan for the teaching, extension, and research mission.
- Increase the graduate student production especially at the Ph.D. level to raise the stature of the department and its long-term impact.
- Develop a communication strategy for use with clients and stakeholders to articulate the research vision.
- Increase the effectiveness in transferring the scientific information produced in the research program to potential users (strengthen the relationship between research, teaching, and extension).
- Add expertise in soil science.

5. Facilities

The facilities available to the Forest Science department appear to be adequate to meet the mission and needs of the unit. Space is becoming limiting however and if the size of the Department increases, it will become increasingly important to optimize the use of facilities. Offices, laboratories, seminar rooms, and common areas available in Richardson Hall are superb. While the entire department is not housed in a single building, the availability of space in the FSL provides similar quality facilities in an adjacent building. Also, given the active participation of several courtesy faculty from the Forest Service and USGS, it seems unlikely that graduate student research would ever be accommodated in one location.

There is some concern about the availability of state-of-the-art greenhouse space. A new facility at Oak Creek, originally constructed for other purposes, is being modified to provide additional research greenhouse space, however, it was not clear whether this space will be available or appropriate for other Departmental uses. Its location makes it inconvenient, but there does not appear to be sufficient vacant space near Richardson Hall to alleviate the problem.

The Department is lacking a controlled environment growth facility and it would likely be put to immediate use were it available. The Department should consider seeking foundation

funds (e.g. NSF, Kresge, Ford, Rockefeller, others) to support the development of such a facility.

There is substantial use of laboratory space for storage, however, much of that seems to be used for storing and maintaining expensive instrumentation that is deployed during the field season. Thus, it may not be feasible to store equipment elsewhere. In addition, there did not seem to be a concern about a shortage of laboratory space.

Computer support and the availability of the QSG for statistical consulting are services that earned the envy of the committee members. The Department and College should do everything possible to maintain this exceptional level of service.

Strengths

- Richardson Hall provides superb office and laboratory space.
- There is excellent computer support via the FCR.
- The new containment facility for insect and pathogen work is an important new addition.
- The HJ Andrews and College forests provide outstanding field research opportunities.
- The Cooperative Chemical Analytical Laboratory (CCAL) provides excellent analytical support for a number of research programs.

Weaknesses

- The Department is not housed in one building, however, given the close collaborations with courtesy faculty at CFSL it is unlikely the Department could be consolidated in one location.
- Tree growth facilities are very limited (e.g. general purpose greenhouse and controlled growth chambers). The Oak Creek greenhouse may or may not alleviate the problem at the Department level

Recommendations

- Optimize the use of existing space. Examples of space optimization are: 1) relocation of storage material (samples; old archives) and non technical field equipment (ladders, tools, etc.) in low quality space to free up high quality space for laboratories and offices; 2) grouping graduate students in larger multiuse offices.
- In the event of the construction of a new building, consider possibilities for a physical linkage with Richardson Hall.
- Capitalize on existing funding opportunities (e.g. USD-NRI, foundations, and NSF) for equipment and research infrastructure.

6. Graduate Program and Curriculum

The Department offers Master of Science, Master of Forestry, and the doctorate degrees but no undergraduate degree.

The department embarked on a curriculum revision effort six years ago, so they are three years into the new curriculum and mentioned that this was a good time to reflect on it. The curriculum is in keeping with their stated mandate of training scientists. The core curriculum (FS520 and FS521) is innovative serving many purposes including teaching the skills to develop a research proposal, introducing students to related fields and other professors, and fostering cohesion of students from different research groups early in their program. In the fall, the students are required to take two 1-credit modules in addition to the 1-credit FS520 on “posing researchable questions.” In the winter term students take FS521, which is a 2-credit course on “developing a research plan.” In addition, they try to offer 1-credit companion modules that emphasize specific research skills, but these are not required. The department sometimes had difficulty in finding faculty to offer these optional modules.

The curriculum review revealed that potential employers of graduates ranked communication skills as the highest priority for graduates. The department has opted to not have a separate communication skills courses, preferring to limit the number of mandatory (hoop-jumping) courses. This may be symptomatic of the professoriate being perhaps too influenced by students’ immediate attitudes and reflexes regarding being told what to do, rather than serving their long-term interests. The curriculum revision plan identified a number of potential workshops that could be offered by FRL staff which would provide excellent communication training for students. It is not clear if this has happened. The department has opted to have students to develop their communication skills within existing Forest Science graduate courses and in lab group meetings and students confirmed that they were indeed part of graduate courses, but the department needs to reflect on whether this is sufficient given the importance of these skills in graduates who become scientists and natural resource professionals. The communication skills may be expanded to include media communication, especially for those students engaged in policy-relevant research.

The graduate students pointed to a lack of courses available to them to meet their graduate program requirements as the key curriculum issue. Of lesser note was a concern that they had to go outside the department for many courses. It would not be recommended that similar courses be taught in different units within the same university, so this is not a “real” problem. The issue may instead be to what extent and for how long other units are happy to teach Forest Science graduate students, and if the department is seen and will continue to be seen as pulling its weight in terms of course offerings for graduate students (could see this being a real issue if faculty in other units are teaching Forest Science students, in addition to large undergraduate teaching loads in their own unit). The department will clearly have to maintain a good suite of courses available to students in other units to maintain this positive relationship on campus.

More significant were areas identified in which “service” courses were no longer available anywhere on campus. Examples were plant physiology and (perhaps) genetics. In the words of one student who is surveyed in the self-study (vol II page 84):

“The lack of course offerings that are stand-alone graduate courses severely limits the major and course work a student is able to take. I will have 3 credits from Forest Science (not including thesis) when I graduate and I am a FS graduate student??? I do not think there are adequate plant physiology courses available within or outside of this department. Barbara Bond’s course is one of two courses in plant physiology left at the graduate level and that raises serious concern in my

mind. I contemplated leaving OSU and finding a university with better course offering so that I could have the basic information required to complete my degree.”

It was clear that department members (Bond and Howe in particular) had shown leadership in resolving these problems, but the process had broken down, apparently when it came time for units to commit resources to teaching such courses. It is not clear if only graduate courses in this area are lacking, or if undergraduate courses are also unavailable – if the latter, then a fix is needed regardless of declining resources. The department may have to be innovative in this regard, perhaps partnering with other universities that have maintained plant physiologists, to offer senior undergraduate and/or graduate courses through video conferencing or such technologies. Modular specialized courses were mentioned – this may be what the department needs to explore in order to maintain graduate course offerings across all disciplines in the face of a shrinking professoriate. The most worrisome gap in courses is in the discipline of soil science, which, prior to recent retirements, was one of the disciplines for which OSU was world-renowned. Restoring capacity in soil science should be a high priority for the department, college and university.

The most troublesome challenges faced by students on curriculum issues have resulted from well-intentioned policies in the Graduate School and elsewhere in the university administration. A new policy stating that half of each student’s credits must come from graduate courses and not “split-level” senior undergraduate/graduate courses, has compounded the problem of the lack of courses offered at any time that are useful and appropriate for graduate students.

Faculty members have responded to students concerns about lack of teaching experience during their graduate degree by developing a graduate course in which students develop a syllabus for a course. This is well-intentioned but may not really solve the problem, which may not be a solvable problem within a graduate degree. Forest Science graduates do not get opportunities to serve as TAs, and so worry that they are not getting the ‘teaching experience’ that students in other departments enjoy. This is probably more of a perceived problem than a real one, as most TAs do not get much teaching experience or mentoring, and most would probably prefer to be GRAs as Forest Science students are, if they had the option. Another point raised by one person in our interviews is that most professors never actually learned how to teach and so should probably not be offering such courses. This may be an opportunity for the Department of Forest Science to show leadership in this important area by developing modules with the Education Department on university-level instruction for graduate students. The Graduate School might be the logical champion of such a module or course, “Teaching in Academia,” for all graduate students on campus as part of a Graduate Professional Development initiative. Students could also be proactive by approaching faculty who do teach and requesting an opportunity to teach in their course and some guidance from the instructor about their teaching. Persons from the RA pool who took this initiative found the instructors to be receptive to this and gained valuable experience. Faculty could facilitate this by making the necessary contacts for students who express the desire to get some volunteer teaching experience.

The department, like many other institutions, needs to keep the listing of graduate courses in the Catalogue and the Graduate Handbook up to date. There are several courses in the catalogue that are not offered in the last 3 years. These should be removed. Students need to know before they arrive on campus which courses are offered so they are not unpleasantly surprised when they arrive on campus to find that many of the courses that they expected to take are no longer

offered. The committee had some difficulty discerning which courses are currently offered, so it is likely that students also have difficulty.

Strengths

- Breadth in program – areas of interest
- Lots of flexibility in course selection
- Innovative core sequence course
- Availability of statistical advising

Weaknesses and Recommendations

- Loss of campus-wide service courses
 - Lead a campus-wide effort to coordinate and streamline the different biology curriculums in different departments and get administrative support for offering these courses on a regular basis.
 - Develop a strong set of stand-alone graduate courses covering the broad spectrum of forest science. Get administration's commitment to increase the teaching FTE to an adequate level to be able to offer these courses.
 - Explore creative solutions such as modules, short courses, video-conference courses with other universities
- Minimum enrollment policy discourages faculty from offering graduate courses
 - Advertise courses across campus
- No course in fire ecology
 - Coordinate with Forest Resources
- No soil science courses
 - Restoring soil science teaching and research should be top priority
- Limited teaching experience opportunities for grad students
 - Encourage/ facilitate students to seek volunteer teaching experiences
 - Explore partnering with Education to develop science education course
- Coordinated approach to improving communication skills
 - Mandatory communication workshops or core course

7. Graduate Students

The department has been successful in attracting bright, motivated graduate students and appears by all accounts to take good care of the students in all aspects of their graduate program. Currently there are 59 graduate students in the program, out of which 24 are Ph.D. The administration of the graduate program by department staff received consistent praise. The graduate students who talked with the panel expressed few concerns about their graduate program, other than insufficient graduate courses and the issue of collegiality among faculty, which will be addressed separately.

The graduate students cite the reputation of the college and the faculty as the main reasons for choosing OSU. Currently 96% of the students receive support at 0.49 FTE and the remaining receive support at 0.2 FTE. Most of the students are supported through GRAs. The department has an active scholarship committee that is quite effective in obtaining fellowships for its

students. Although the funding policy is officially for 2 and 3 years respectively for MS and PhD students, most students take longer than this time to complete, but are funded through completion of their thesis. Occasional cases of funding lapse have been dealt with by the department to ensure that students do not find themselves without a stipend while within the expected time-in-program limits. The number of graduate students (“carrying capacity”) of the department is thus set by the number of faculty and their ability to secure research funding, which is exemplary.

There were no concerns raised about any faculty members taking on more students than they can properly supervise. There were also no concerns raised that courtesy faculty do not take supervision too lightly – many of the scientists in associated institutions who are also major professors appear to excel in this capacity. This impression was borne out by the students associated with these faculty and other members of the professoriate.

Students appear to be well provided with desk space, computer access and IT support. The department has wisely invested in statistical advisors for the graduate students. It will be critical for the department to maintain this service in the face of looming budget restrictions.

Students expressed concerns about the limited collegiality in the department and especially within the college. They felt that the professors had a limited awareness or interest in what graduate students (other than their own) were working on. The department should discuss having a seminar series in which students present their proposed or in-progress research, and offer incentives to students and faculty to attend these as part of an effort to build collegiality among the faculty, graduate students and RA pool, who also play a large role in mentoring and training graduate students. Other means of increasing communication between “tribes” need to be explored within the department and college.

The graduate student survey that the students undertook for the self-study report also indicated few areas of concern other than the lack of courses in the department and the lack of teaching opportunities available to them. The research talks presented by faculty members stressed graduate students as the primary product of the department.

Strengths

- Attracts excellent (bright, motivated) graduate students
- Receives adequate and equitable funding through program, plus tuition waiver
- Well provided with desk, computer access, IT support
- Excellent system for providing high-level statistics support to students
- Students are made aware of opportunities for professional development

Weaknesses and recommendations

- Limited awareness of what students are working on
 - Have student seminar series in which students present their proposed or in progress research
- Limited communication between “tribes”
 - Foster collegiality among faculty, RA, grad students

8. Administration, communication, culture

The Department of Forest Science has a Head system, with 5-year renewable terms. Strategic planning, academic leadership, budget development and control, personnel, facilities and equipment, safety and program support are listed as the Head's primary responsibilities. Several faculty committees provide input to these areas. In general, policy decisions are made by faculty as a result of general faculty meetings and an annual two-day off-campus retreat. While this system seems to have functioned well in the short term, serious long term problems have developed with respect to inbreeding and vision.

At the review, faculty were generalized, bluntly, as senior, male, white and OSU. Approximately, 17 of 26 faculty listed in the self-study have one or more graduate degrees from OSU. More than half of the professorial faculty received their Ph.D's from OSU. It was noted that often highly specialized faculty positions are developed in FS and, as a result, this expertise is likely to be found at OSU. This is a conservative strategy that may have served FS well in some respects. In particular, it may be well-adapted to obtain agency funding for larger, longer term projects, which is the source of much of the graduate student funding. However some critical comments from the students and the faculty suggest that this strategy may have failed to recruit the best possible candidates in the past faculty searches. The comments of the following alumnus aptly illustrate both the strengths and weaknesses of the college (self study, v2, page 131).

"OSU Forest (sic) is a very well-funded and well-administered college, and the faculty is quite good. I did not appreciate the quality of the infrastructure during my time as a student. I now realize how rare it is for a college to have such an extensive research forest close to campus, research facilities and support like the FRL and media center, and outstanding computational infrastructure and support. Given this, I don't understand why the college continues to hire from within rather than attracting established, world-class faculty from outside. Nearly all recent hires have some past OSU forestry connection ... OSU forestry is quite good, but it could be so much better."

There are reasons to believe that this lack of diversity is not an accident, but rather is a result of flawed hiring practices. We are told that these include focusing the searches too narrowly, not having sufficiently broad faculty representation in the hiring committees, not enforcing a strict conflict-of-interest policy in hiring committees, and lacking a transparent decision-making process. The effects of these unsatisfactory practices on the faculty morale and collegiality are unmistakably negative. In the words of one faculty member:

"We have not hired the best and brightest candidates in the past. Instead, we have hired those with connections to influential people in the department. This has resulted in a culture of cliques or tribes within the department that don't communicate effectively with one another. We desperately need new, young faculty who were trained outside of OSU and the northwest to bring their enthusiasm and fresh ideas to our department."

In past decades, FS was an early, foresighted leader in forest ecology. This represented a form of academic diversity that broadened the department's traditional focus. This effort seems to have matured and contracted as budgets have declined. Nonetheless, it still accounts for a large

proportion of the department budget. Recommitting to academic diversity represents an opportunity to renew this important leadership and also to diversify FS in other ways.

Having faculty members take regular sabbaticals at other schools would be one way to broaden their expertise, and should be encouraged. More importantly, by hiring faculty without OSU connections FS could reap dividends from ideas and perspectives brought in from outside OSU and from outside forestry. This diversification could stimulate new lines of innovative research and education in the department. The department must look forward and think imaginatively to, 1) enhance the department's reputation for developing new areas in forest research, 2) strengthen the graduate program, 3) improve diversity, and 4) maintain/improve funding.

The history of FS has resulted in a divergence of faculty views and expertise. The controversy over the regeneration study published in *Science* reflects this divergent evolution of "differing world views of forestry." During our face-to-face interviews with the students, they informed us that they did not feel harassed or bullied, just disappointed with the atmosphere among the professoriate in the College. One student remarked as follows in the survey reported in the self study (v 2, page 85).

"A divisive, unsupportive, confrontational atmosphere exists between "traditional" foresters and ecologists in the college and the department."

While the issues surrounding the *Science* article comprise a legitimate area of academic, social and political debate, the incident was judged to reflect a lack of collegiality on the part of some faculty and an imbalanced perspective by the college administration. Lack of diversity among the faculty especially at the administrative level may have contributed to a degree of insensitivity and intolerance to different points of view. With regard to the *Science* article controversy, we suggest that the Department and College administration neglected their responsibility in both the faculty/student clashes and the political confrontations arising from this paper. Faculty members who threaten colleagues with professional destruction need to be dealt with firmly. Though it seems to have been a peculiar set of circumstances that resulted in the students bearing the brunt of the criticism, it should not be their responsibility to deal with this. Nonetheless, there was praise for the maturity with which the students conducted themselves.

The facts and issues surrounding this incident are complex, but the perception of them runs counter to the concept and spirit of open, innovative research and scholarship. This cannot help and will likely damage the reputation of the Department of Forest Science and College of Forestry if not the whole of OSU. Universities should be looked to as objective sources of knowledge, innovation, debate and progress. Polarization such as has occurred inevitably damages the graduate program. After the review, one student stated that there was an atmosphere of fear, retribution and mistrust at the height of the public furor.

Dealing with these issues was thought by some to be a question of improving communications and was viewed by FS as an opportunity to improve communication within the Department, between Department and College and between Department and external stakeholders and collaborators. We are skeptical that this is the only problem, because the recent controversy seems to be a culmination of long-term trends in the COF.

Publication of the *Science* article and the publicity it generated also raised questions about the funding sources of the college, policy advocacy of its administrators, and the potential conflicts of

interest these could entail. We believe that it is in the long-term interest of the college and the university to encourage and develop strong research programs on all sides of the “differing world views of forestry.” Conscious efforts to encourage this diversity of views and to provide ways for productive and collegial interactions between faculty members of different world views would make the university a much more exciting place where knowledge is created by constant debate and reevaluation of the status quo.

Strengths:

- The department generally has a good system of administration which both expects and receives faculty support.
- There has been a strong commitment to maintaining infrastructure, especially computing and statistics.
- Research strength has provided a major source of financial support to the department and the graduate program.

Weaknesses:

- Budget declines have reduced faculty numbers and raised questions about how to define future faculty positions.
- Current funding and research models, e.g., lack of group research projects that span the spectrum of product-related research and more fundamental research, tend to force faculty apart, reducing interaction and collegiality.
- The department seriously lacks faculty diversity not only in race and gender, but also in faculty alma mater.
- Hiring practices are unsatisfactory, and appear to encourage inbreeding and a conventional outlook towards the future of forest science.

Recommendations:

- There should be a continued commitment to forests as a whole, leading to an expansive, forward-looking vision of forestry. The two camps of the forest science must be bridged by pursuing the common ground between the production-oriented research and the ecological and biological research.
- Faculty searches must be focused broadly and should seek the strongest possible candidates regardless of cultural, regional, or even forestry background.
- The department must implement a diversity plan that includes a strong preference for external candidates. The faculty search process should be reformed so that the search committee acts on behalf of the faculty to conduct a broad search, then summarize and prioritize the applications. The faculty as a whole reach consensus 1) on the candidates to interview and 2) the final recommendation.
- Cross-departmental communication should be facilitated by encouraging group research projects with multiple PIs, and by having a college-wide colloquium or annual mini-symposium to exchange and debate research and views within COF and FS.

Nuclear Engineering and Radiation Health Physics program review

I. Summary of findings and recommendations

The external review of the graduate programs in the department of Nuclear Engineering (NE) and Radiation Health Physics (RHP), College of Engineering, Oregon State University, was conducted on February 13, 2006 by three internal and two external reviewers. The review team overall was favorably impressed with the graduate programs. Both NE and RHP graduate programs are well regarded nationally due in large part to the department's expertise in reactor safety/thermal hydraulics and radiation health physics. This high regard is despite the fact that the state of Oregon has no power producing nuclear plants. The department self study highlights the strengths of the program in its current state while acknowledging future challenges. Graduate students were overall highly satisfied with their programs and faculty. The department chair and faculty are to be commended for maintaining strong graduate training programs despite budgetary and other constraints. The review team makes the following suggestions in an effort to help improve and maintain the quality of the currently strong programs.

- Faculty are overburdened and will not be able to meet the rapidly increasing demand for the more graduates without a serious investment by the College and University. As top ranked programs among only a handful of similar programs nationwide, NE and RHP are great assets to the College and University. The graduate programs risk losing national stature due to staffing challenges and/or becoming overly dependent on unstable external funding. We recommend an increase in full-time, tenure-track faculty.
- Faculty need to find a mechanism to reduce teaching loads to compensate for high productivity in research and obtaining research funding. This recommendation was made in 1991 and remains unaddressed.
- Faculty need to re-evaluate the under-utilization of graduate teaching assistants as a means to reduce the undergraduate teaching load.
- Demand for graduates is high and expected to increase dramatically in the near future. Overall graduate student quality is very good; however, an equal number of equally qualified applicants are not admitted due limitations based on funding, faculty size and research interests. The college and department need to consider means to expand the program to take advantage of increased demand for graduates and adequate supply of qualified applicants
- Faculty are encouraged to participate in on-going graduate programmatic assessment based on academic goals. Faculty productivity in terms of revenue generation appears to be over-emphasized relative to publication quality. Collection of data on graduate applicants and admittants should be on-going.
- Require all graduate students to complete at least one application annually for external funding. The department should offer to cover the expenses of application submission, including costs of requests for official transcripts.
- Reverse the downward trend in the number of scheduled seminars. Do not schedule more than one seminar at any one time.

- Consider offering special seminars or colloquia centered on ethical issues specifically for graduate students.
- The department deserves commendation for an exceptionally detailed and very useful graduate student handbook.
- Find innovative ways to offer more stand alone graduate courses at the 500/600 levels.
- Faculty should proceed cautiously with the plan for a new joint-degree program in Medical Physics in collaboration with OHSU.
- The reactor, APEX facility, radiation center, and radiochemistry lab are exceptional facilities. However, they appear to be significantly influenced by funding sources and could be better integrated with the academic mission.
- Better integrate the research of the NE and RHP disciplines with each other and with the strengths of the department and University in environmental measurement and assessment.
- Develop and integrate a department-level diversity action plan with the College of Engineering's plan to increase diverse gender and ethnic representation among graduate students, faculty and staff.

The major, over-arching theme of the review is that the current faculty in NE-RHP, while successfully generating large amounts of external grant and contract revenue (\$13 million in five years), are stretched to capacity by research, advising and teaching expectations. Although the department is well positioned in terms of facilities and faculty expertise to support the expected resurgence in the US nuclear industry, the review team is concerned that the department be able continue to supply a quality graduate education to an expanded student population. Essentially, 8 faculty appear to advise all 29 graduate students in NE and RHP. Four new faculty joint appointments are being discussed in collaboration with Idaho National Labs; the College of Engineering has offered additional funds for two 0.5 FTE positions. However, these measures do not adequately address the core problem of too few faculty.

Demand for NE Masters and PhD graduates is high and is anticipated to rapidly increase beyond the capacity of existing national programs. The Nuclear Regulatory Commission, national laboratories, and power plant industry are hiring. With expected rapid expansion in orders for new nuclear power production plants, employment also is expected to increase in radiation health physics. This is a major reversal of trends in the industry since the 1970s. The department needs to develop a plan to position itself for increased expansion or risk losing its national reputation.

The NE and RHP disciplines could be better integrated to increase potential for even greater national recognition. For example, OSU has the ability to be nationally recognized in radiation and its use in assessment of radiation and radioactivity. The radiation health physics program could benefit by increased focus on its basic strengths-- environmental sampling and measurement, modeling and assessment of legacy and current sites, and radiation detectors and their use. The potential exists for national recognition for radiation detection and use of detectors and the department should seize this opportunity. Currently, radiochemistry is narrowly focused on plutonium chemistry. Given the strengths of environmental studies at OSU, radiochemistry could be an important University asset if integrated with the department's expertise in environmental measurement and assessment.

Discussions are currently underway to further expand the department's graduate programs by adding a new program. Oregon Health Sciences University (OHSU) has approached NE & RHP to

collaborate on the creation of a new accredited joint degree program in medical physics. OHSU is hiring a board-certified Medical Physicist to oversee such a professional degree program but requires access to NE and RHP facilities on the OSU campus. Appealing features of the new professional program include increased tuition revenues from paying graduate students, increased alignment with the needs of the state of Oregon for Nuclear Medicine specialists, increased utilization of the teaching/research facilities, and increased compensation for graduates of the Medical Physicist program as compared to Radiation Health Physicists. Potential disadvantages of this expansion into Medical Physics include the further stretching of an already over-burdened faculty and a shifting of resources from Radiation Health Physics, which may potentially damage this highly regarded program. The faculty are urged to proceed cautiously with this plan.

Graduate students reported the faculty to be accessible, collegial, and supportive, with frequent social occasions planned for the group as well as individual advising and collaboration. We observed evidence of a strong rapport among the graduate students in the Department; they knew each other by name and were aware of one another's areas of study/research. Student morale was high, perhaps reflecting a resurgence of the industry and job market. The Department has compiled a very detailed and informative graduate student handbook that is one of the best on campus.

The group of graduate students with whom we met expressed concern that there were many graduate courses in the catalog that had not been offered in several years. Several students mentioned that they found it difficult to find enough graduate credits to fill their programs of study. Other students wished that they had more elective course opportunities within the department. Additionally, a primary issue of concern of the review team is the large number of 400/500 ("slash") courses that are currently offered by the department.

Some graduate students would like more teaching experience. Approximately 25% expect to pursue academic rather than careers in industry, national laboratories or hospitals. Better utilization of graduate teaching assistants in undergraduate courses could reduce the teaching load of the faculty and provide for greater training opportunities for interested graduate students. The faculty appeared to be unable to reach a consensus on this issue at this point, but circumstances require a comprehensive re-evaluation.

During the review, faculty members expressed worry that funding of graduate students is unstable due to dependence on external research grants. One means to address this issue is to take better advantage of competitive external graduate fellowship opportunities. Graduate students would like more timely information on available external funding opportunities; Dr. Reyes indicated that responsibility to better provide this information was recently assigned to a departmental staff member. Additionally, graduate students expressed an interest in greater practice with grant-writing and suggested that an annual curriculum requirement should be a completed application for an external fellowship. The students would like the expense of the application (including costs for transcript transmission) to be reimbursed by the department.

No mention was made of attempts to further increase the gender and ethnic diversity of the majority white male graduate students or faculty. The department should develop a diversity action plan in consultation with professional expertise. The College of Engineering has hired a professional faculty member to explicitly increase gender and ethnic diversity in all departments of the College who should be consulted. As noted by one reviewer, there are very few photos of women or underrepresented ethnic groups among many photos of Nuclear Engineers and Physicists in the Radiation Center building.

Criticisms of the self-study document include the appearance that it was developed by one or two key writers. Time constraints may have made it difficult for faculty examination of issues and consensus on major goals. The faculty is encouraged to use the data sets in the document to consider its

major goals for the next few years and how best to achieve them. Additionally, the self-study tended to use revenue as a metric for quality a bit too much rather than academic goals and peer-reviewed publications. Finally, the graduate applicant and admittant metrics were only collected for two previous years (2004 and 2005) rather than the five years requested by the Graduate School. The department is highly encouraged to begin a system whereby all required data are collected and tabulated each year on all graduate applicants and admittants for ongoing self-assessment.

II. Detailed findings

A. Review specifics

The graduate program in the Department of Nuclear Engineering and Radiation Health Physics was reviewed on February 13, 2006. The five member review panel included three internal and two external reviewers: Theresa Filtz (review team Chair; OSU Dept. of Pharmaceutical Sciences) and Rod Harter (OSU, Dept of Health and Human Sciences) who are members of the graduate council; Mary Jo Nye (OSU, Department of History) who was appointed by the graduate school; James Martin (Univ. of Michigan, Dept. of Environmental Health Sciences, Professor Emeritus); and Richard Wright (Westinghouse Electric, Pittsburgh, PA). Dr. Wright had extensive prior interactions with the department, particularly with Dr. Reyes, as part of a contract with Nuclear Engineering to safety test a Westinghouse-designed passive flow reactor. The review committee met with Dean Sally Francis of the graduate school on Sunday evening, Feb. 12, 2006, for dinner to discuss review procedures and to assign reviewer responsibilities.

The site visit agenda for Feb 13, 2006 is attached and included meetings at the Radiation Center (35th and Jefferson, Corvallis) with John Cassady, Vice President for Research at OSU; Ron Adams, Dean of the College of Engineering; Chris Bell, Associate Dean of the College of Engineering; Jose Reyes, Department Chair; Qiao Wu, Graduate program Chair; all nine faculty members of the department; the Reactor staff, and most of the graduate students. Reviewers also conducted a tour of the Radiation Center facility including the TRIGA nuclear reactor and the scale-model passive flow reactor study facility.

Each committee member was provided a copy of the self-study report (73 pages) and two volumes of appendices (2 inches) one week prior to the review. The table of contents for the self-study is appended. The self study included the department, College and University mission statements; a list of self-study objectives and program challenges; information on faculty workload, productivity, honors and awards, and demographics; research program descriptions, facilities and funding; curriculum and course lists for the graduate program; procedures for graduate applications and admissions; applicant/matriculant metrics for two years prior; graduate student financial support and demographics; program administration; national rankings and student/alumni satisfaction survey results. Signatures attested to the participation of the faculty in the creation of the self-study.

The appendices included the College of Engineering business plan; a copy of the graduate student handbook, faculty CVs, copies of the student and alumni surveys; written responses to the surveys; detailed statistical analysis and graphics from the student surveys; teaching and course evaluation data; organizational chart; student population data for six years; and nuclear workforce supply/demand charts. Prior to and following the review, additional requests were made for information on graduate student stipend levels, time to graduation, a copy of the previous program review, a list of invited department seminar speakers and a listing of student enrollment at the undergraduate and

graduate levels in 400/500 courses. This supplemental information was provided same day or over the next few weeks.

B. Program overview

The graduate program in Nuclear Engineering (NE) was established in 1959 and became a Department in 1972 with full and continuous accreditation to the present. Radiation Health Physics (RHP) has been a degree program at OSU since 1963 and became affiliated with NE in 1991; the department name changed to Nuclear Engineering and Radiation Health Physics in 2001. The RHP undergraduate program is nationally accredited.

The NE program is ranked 9th of approximately 30 programs in the nation and is one of only a handful of programs with a 1 MWt or greater full working reactor for student training. The RHP program is ranked third nationally of six accredited programs, and the only program on the West coast.

The NE-RHP faculty list 5 primary objectives for their graduate program including to produce graduates: with high levels of competency in the disciplines, with effective individual and team worker skills, with good communication skills, and with a high regard for the profession and life-long learning. These objectives appear to focus the curriculum, pedagogy, and graduate student progression.

A previous review of the Department of Nuclear Engineering was conducted in 1991 with a follow-up review in 1993. The review was overall positive and described a high-quality, small, specialized program. Suggestions for improvement were made, but no large problems were found. At the time, the review team made the following recommendations:

1. Hire one or two new faculty, preferably including a female faculty member.
2. Reduce faculty workloads with new positions and buy-outs from research grants and sabbaticals.
3. Accelerate the recruitment of graduate students, particularly non-OSU graduates
4. Update computer and instructional material
5. Increase the production of student peer reviewed research papers.

Of the five prior recommendations, the first and the last three appear to have been resolved. The second recommendation still stands unaddressed today. Faculty workloads remain very high, limit the expansion of the program to meet anticipated demand, and are not being reduced to compensate for high productivity in obtaining research funding and expanding the research programs.

In the current self-study, the faculty identified three challenges for the program including: 1) meeting the needs of a growing demand in the nuclear energy industry, 2) aligning with the needs of the state of Oregon and the nation, and 3) developing resources to support graduate student training. The primary limitations to meeting these challenges include a shortage of faculty who are over-leveraged in terms of teaching and research appointments, a small number of graduate teaching assistantships available within the College of Engineering, the lack of a nuclear production reactor in the state, an overall decrease in state funding for higher education, and a shortage of trained professionals to expand the professoriate given the growing demands of industry. The Department has developed several strategies to deal with these issues including discussion of a collaboration with Idaho National Labs which may yield up to four part-time or full-time faculty lines. An agreement with the Dean of the College of Engineering may provide 50% funding for two additional FTE faculty positions. The review team makes further recommendations to attempt to address the student funding and other issues.

C. Graduate Admissions, Advising and Retention

Recruitment and Selectivity:

Recruiting is overseen by the department's marketing specialist, and funds are made available from the Dept. and COE to bring some candidates to OSU for a campus visit. The department sets up a recruitment booth at national meetings in order to recruit students both in and outside the Pacific Northwest, and faculty members recruit at OSU (mainly in Physics and Mechanical Engineering), OIT, and PSU. No mention was made of specific attempts to recruit underrepresented ethnic or female students.

The department recruits OSU undergraduates for the graduate programs, as well as non-OSU students. OSU students with the bachelor's and master's degrees from OSU may be encouraged to go into Ph.D. programs elsewhere, but there is disagreement among faculty members about this strategy. Currently 6-7 M.S. students took their B.S. degrees at OSU. Recruits who have enrolled in the graduate program include not only degree holders in nuclear engineering or radiation health physics, but also from physics, chemistry, environmental sciences, and natural science. Of seventeen students who met in a session with the Graduate Review Committee, seven had non-engineering undergraduate degrees.

In the admissions evaluation process, GPA was noted as the most important criterion, followed by statement of interest and letters of recommendation. GRE scores are not mandatory, but figure in assistantship and fellowship offers. Ph.D. students are admitted only if a faculty member makes a commitment to serve as major advisor. About half of applying students are not admitted; however, for the past two years, admitted students appear to be of the same or higher quality than rejected students. Thus, the program could double in size without any decline in student quality. Faculty members expressed concern that they could not admit more Ph.D. students. The number of graduate students admitted into the program is currently at capacity based on number of faculty. In 2005, three faculty advised 6 MS students and 2 or 3 Ph.D. students each, while other faculty members had fewer total advisees.

Graduate Student Demographics

Of new students admitted in 2004 and 2005 in nuclear engineering, 3 of 23 (13%) were female, 5 were international, 1 was Asian/Pacific Islander and 2 declined ethnic identification. Admitted to Radiation Health Physics in 2004 and 2005, 4 of 20 (20%) were female, 1 was international, 2 were Black, 2 were Hispanic (total of 20% underrepresented minorities), and 5 declined ethnic identification. Faculty members noted, in discussion of the ratio of international to domestic students, that international students are more expensive for the department, and that this is a consideration in admission. No mention was made of attempts to recruit a more diverse student population in terms of gender or underrepresented minorities. As noted by one committee member, there are very few photos of women or underrepresented groups among many photos of Nuclear Engineers and Physicists in the Radiation Center building.

Student Financial Support:

Nine-month graduate assistantship stipends are awarded at five dollar-amount levels, depending on the student's experience, with some students also receiving additional summer stipends. Twenty-one students currently have stipends and/or fellowships, most at a .40 FTE, for which the monthly remuneration ranges from \$1,321 to \$1,522. Most assistantships are for research, funded by faculty members' external grants. Only four teaching assistantships currently are available. Teaching assistants

help with grading and preparing materials, give occasional lectures, or share responsibility for an introductory course. A few fellowships are available (now at \$25,000), but 0.20 assistantships are usually also awarded to a fellowship student since the fellowship does not cover tuition.

Faculty members worry that funding of graduate students is unstable due to dependence on external research grants. Students would like more information on available external funding opportunities. Dr. Reyes indicated that this responsibility was recently delegated to a departmental staff member. Graduate students suggested that a curriculum requirement should be a completed application annually for an external fellowship with the expense of the application (including costs for transcript transmission) reimbursed by the department.

Orientation and Advising Programs:

Each student is assigned a major advisor upon matriculation. Quarterly reports of progress are required from each student working on a thesis or dissertation. Faculty members as advisors meet weekly with their group of students or with individual students. Students reported the faculty to be accessible, collegial, and supportive, with frequent social occasions planned for the group as well as individual advising and collaboration. Three weekly seminars are offered by the department, which all meet on Tuesdays. Students suggested that the seminars be scheduled at different times so that students might occasionally attend a seminar outside their own specialty.

Student Performance:

Master's students are expected to complete the program in two years, which is a pre-requisite for entry into the Ph.D. program. Retention and time to degree does not appear to be an issue.

Job Placement and Employer Assessment:

Graduate students do not seem concerned about placement and cite successful experiences of more senior students in the program, as demonstrated in the department's self-review document. The industrial representative on the review team indicated that demand for all graduates is extremely high and is projected to increase further.

D. Curriculum

A statement of the curricular goals of the Nuclear Engineering and Radiation Health Physics program was provided in Section 1.0 – INTRODUCTION of the Self-Study.

Graduate Student Handbook

The Department has compiled a very detailed and informative graduate student handbook that is current and up-to-date. The 2004-2005 edition included in the Self Study materials is a 49-page document that begins by welcoming the new students to the program, and continues with helpful sections entitled "Getting Settled" and "Special Services at OSU". This document is one of the most comprehensive and student-friendly manuals on campus.

Sufficiency and Quality of Required Courses

The group of graduate students with whom we met expressed concern that there were many graduate courses in the catalog that had not been offered in several years. Several students mentioned that they found it difficult to find enough graduate credits to fill their programs of study, particularly if

they had obtained their undergraduate degree from OSU. Other students wished that they had more elective course opportunities within the department.

A primary issue of concern is the large number of 400/500 (“slash”) courses that are currently offered by the department. Of the 23 graduate courses offered in the Nuclear Engineering program from 2003 to 2005, 12 (52%) were 400/500 “slash” courses. In the Radiation Health Physics program during the same period, 7 of 12 (58%) graduate courses offered were 400/500 level “slash” courses. We suggest that the Department look for innovative ways to offer more stand alone, bona fide graduate courses at the 500/600 levels.

Access to Teaching Instruction and Teaching Opportunities

Approximately 25% of the students indicated an intention to pursue academic careers rather than industry, national laboratories or hospitals placement. Students who had interest in academic appointments expressed interest in gaining more experience in the classroom as a lecturer. Other students heading directly into nuclear energy industry jobs did not consider this as high of a priority. Utilizing interested graduate students as teaching assistants in undergraduate courses could be a great opportunity both to reduce faculty teaching load and to improve training in the graduate program.

New program initiatives

The department chair has identified the establishment of a Medical Physics graduate program as a key feature of his vision of the future. Dr. Reyes cited the success of other Medical Physics programs in other universities, and the willingness of OHSU Medical School to work collaboratively in this effort. Medical Physics graduate students would be expected to generate tuition revenues equivalent to other health-related professional programs on campus and would not appear to require assistantships. Development of an accredited, collaborative Medical Physics program would support health care needs in the state of Oregon—an important consideration given the lack of a power production nuclear reactor in the state. However, adding a new graduate program would be difficult to accommodate with current staffing and could further strain the department’s limited resources. Although the department could realize efficiencies from overlap between Medical Physics and Radiation Health Physics offerings—and the extant computational resources would be a significant asset--the department’s thriving Radiation Health Physics program could be adversely affected by diverting faculty resources.

At this stage, the form of the collaboration with OHSU is not clear. Partnering with a recognized medical physicist and a goal of accreditation within a few years would be minimal requirements. The focus of the planned program-- therapy physics, radiologic imaging, or nuclear medicine, or all three-- hasn’t been detailed. Despite its revenue-generating appeal and high level of compensation for graduates, Medical Physics is a demanding discipline with significant peer expectations. The Department, College and the University need to evaluate carefully whether significant necessary investments can be made to support such a program. The nature of the partnership with OHSU, the direction of the tuition revenue stream, costs of administering a program in two locations, costs of student access to facilities at OHSU, and costs of needs for additional faculty expertise should be carefully analyzed.

A leadership program is being considered as a partnership with industry. One reviewer noted that “Leadership is difficult to teach; it occurs naturally by turning out the best students; i.e. the best lead.” However, there appears to be considerable enthusiasm in the department for the program.

E. Scholarly Community

Ethics and Professional Skills Training

In our group meeting with graduate students and faculty, we learned that the graduate students had ample opportunities to discuss the ethical issues related to nuclear energy and radiation exposure. A 300 level course is available to undergraduates on societal aspects of nuclear technology. However, special seminars or other modes of ethical guidance for graduate students could be useful. Within the department, professional skills training is something that is generally done on a one-to-one basis, between major professor and graduate student. There seems to be variable opportunities for graduate students to obtain grant writing experience, and the students voiced interest in having expanded roles in this process.

Department Seminar Series/Journal Clubs

The Department offers a graduate seminar nearly every term, with different topics taught based upon the expertise and interest of the faculty member assigned to teach the course. According to a list provided by the Department, 43 seminars and colloquia have been held since January 2003. The least number of seminars and colloquia during that time period occurred during the 2004-2005 academic year when only 7 were held, a downward trend that the students would like to see reversed. Additionally, the various research laboratory groups in the department each have their own informal, journal club-type of small group meetings and discussions.

Access to Internship/Externship Experiences

Excellent internship/externship opportunities exist for the graduate students in nuclear engineering as well as radiation health physics. Many of these externship experiences lead to full-time employment opportunities for students following completion of their graduate programs. The department is pursuing the design of a leadership pipeline program in collaboration with industry wherein graduate students will have a mentor and two undergraduate trainees.

Student Participation on Departmental Committees

The Department has a Student Advisory Committee, a group of 10 to 12 individuals with six categories of student representation. Dr. Reyes chairs the meetings of this group, whose charge it is to provide student input on departmental issues. The students we spoke with were very enthusiastic about the role played by this student governance committee.

Graduate student productivity and attendance at Professional Conferences

Graduate students appear to be publishing at a good rate; the department notes 12 graduate student publications in the past year. The vast majority of the graduate students we spoke with had attended one or more professional conferences, and many had made presentations, or were co-author of presentations at these meetings.

Cohesiveness of the Graduate Student Group and Student Satisfaction

We saw evidence of a strong rapport among the graduate students in the Department, as they knew each other by name, and were aware of one another's areas of study/research. Students we talked with were very pleased with their experiences in both the Nuclear Engineering and Radiation Health Physics graduate programs. The student morale was high, perhaps reflective of the resurgent job market in nuclear energy, as well as the curricular changes that been implemented within the past few years.

F. Faculty

Productivity and Teaching load

In general, the department is well positioned to support the expected resurgence in the US nuclear industry. As one of the few departments in the country, they have the facilities and expertise to supply quality education at the graduate level in the NE and RHP. The faculty has broad and diverse skills with impressive credentials. Many hold important positions in national and international professional societies. The department notes the acquisition of \$13 million in external funding over five years.

The self study indicates that there are 8 full-time and 4 part-time faculty, but closer examination shows that two are emeriti, one is assigned to the office of research, one is on offsite assignment with return rights, one administers the department, and one directs the radiation center and reactor. Thus, only eight faculty are listed as currently advising graduate Masters and PhD students. The productivity of the group under such circumstances attests to an extraordinary commitment.

However, the faculty also appears to be stretched to the limit, mentoring a broad range of MS and PhD students and providing the undergraduate curriculum. Faculty each teach four courses per academic year. The College of Engineering and the University should recognize that these are potentially tenuous circumstances and take steps to preclude shortages or decay in programmatic quality. Discussions with the Department Chair, Dr Reyes, and Dean Adams revealed that attempts to leverage additional faculty positions are underway. Four joint appointments are being initiated with Idaho National Labs which will provide additional faculty expertise and potential graduate mentors. However, there are legitimate concerns about departmental participation and distractions of faculty with a split appointment at a distance. Additionally, the College of Engineering has offered additional funds for two 0.5 FTE positions, with the remaining FTE to be leveraged from departmental resources. However, in this scenario, the department risks becoming overly dependent on unstable external grant funding. The review team feels strongly that these measures do not adequately address the core problem of too few faculty. We recommend an increase in full-time, tenure-track faculty.

As important as adding new FTE, the faculty are urged to better utilize graduate students as teaching assistants in the undergraduate program. NE and RHP faculty employ few adjuncts or teaching assistants in undergraduate courses. The faculty expressed concern that graduate students would be less capable in a 100 level engineering class of recruiting undergraduates into the NE and RHP disciplines. Faculty need to further investigate the validity and source of this concern.

Research

Faculty research interests are weighted heavily toward thermal hydraulics and graduate student theses mirror this. Radiation health physics is also a significant programmatic focus and reflects the department's healthy and welcome commitment to this discipline. Additionally, the department has expertise in more traditional nuclear engineering areas not particularly noted for specialization (but that perhaps could be) including, for example, use of the reactor and use of the APEX for safety studies of advanced reactor designs. The department has excellent computational facilities that could be used assess safety systems, and facilities to study dosimetry and radiation interactions in shields and detectors. Another area for faculty to potentially capitalize upon could be the integration of radiation health physics into the APEX facility to study ways to optimize health physics for new reactor designs. Systems analysis engineering may be applied to identify a reduction in the reactor areas requiring exposure/contamination controls, thus saving personnel dose, control costs, etc.

The radiation health physics program could benefit by increased focus on its basic strengths-- environmental sampling and measurement, modeling and assessment of legacy and current sites, and radiation detectors and their use. Research and teaching in these areas have the potential to be premier among existing programs in the nation. The potential exists for national recognition in radiation detection and use of detectors; the department should seize this opportunity. The department's skills in assessment could be applied to forecasting source terms for advanced reactor designs and routine and emergency response thereto.

Radiochemistry research programs are unique to NE/RHP programs. However, at OSU, they appear narrowly focused on funded work on plutonium chemistry and appear almost out of place. Radiochemistry could be an important asset if integrated with environmental measurement and assessment.

G. Facilities and Administration

Adequacy of staff to support the curricular goals.

The department faculty is addressed in section F of this report and will not be addressed here. The department is housed in the Radiation Center which is separate entity and has its own staff. Since this facility is inextricably associated with the department, no differentiation will be made between the two staffs. Overall, the impression is that the staff is adequate to support the curricular goals given the current graduate student load. Students feel that they have easy access to the staff both to further their education, and to provide help and guidance.

Department Chair.

Dr. Jose Reyes is a relatively new chair, having assumed the position in the past year, in a department that seems to run very smoothly, especially given the high research productivity and teaching loads of the faculty. Dr. Reyes appears to have a good working relationship with the faculty and staff. Interviews with the students indicated that there are few problems that affect their studies and research. The faculty, staff and graduate students are satisfied and enthusiastic about the direction of the department. The relationship with the Radiation Center seems to be very cooperative. Dr. Reyes recent assignment in Vienna with the International Atomic Energy Association has the potential to broaden the role of the department in the international nuclear community.

Dr. Reyes' vision for the future of the department seems to coincide with the recent upturn in demand in the nuclear power industry. He recognizes that the increase in demand for graduates will continue to accelerate, and that his faculty will soon be overwhelmed. While the faculty seems enthusiastic and progressive, increased workloads from an increasing student population will limit their ability to conduct and supervise research. As discussed above, Dr. Reyes was approached by OHSU to establish a Medical Physics graduate program in the department. Dr. Reyes is enthusiastic, but the review team remains concerned that adding a major new thrust would further strain the department's limited resources.

Research Facilities

The research facilities available to graduate students in the department are world class. As was emphasized by Dr. Reyes, a research reactor seems an absolute necessity for a healthy nuclear engineering department. The reactor is being run well and is well utilized for research, but it is not a self-supporting facility and is not expected to be. Department of Energy sponsored conversion of the

reactor to low enriched fuel will allow for new characterization of the facility and will provide a foundation for additional research in the short and long term. Gary Wachs, Todd Keller and Steve Smith are to be commended for their administration of this facility. The addition of a full-time reactor administrator should assure the current high standards and increase research opportunities.

The thermal-hydraulic testing facilities are probably the best in any American university. The APEX facility for performing integral systems tests on advanced passive reactor designs is virtually unique. Innovative experimental scaling performed by Dr. Reyes helped to create a unique facility for the testing of complex advanced reactors. Multiple graduate theses appear to have been produced based on experiments conducted with the APEX facility. However, looking forward, it will be necessary to develop new missions for this large and sophisticated facility now that the testing for Westinghouse has been completed.

The ATLATS facility established by Dr. Wu, while smaller scale, is also world-class and adheres to the same high quality standards. The facility is used to support advanced reactor licensing efforts in the US.

Nuclear Engineering/Radiation Health Physics Graduate Program Review

Site Visit Agenda February 13, 2006 E130 Radiation Center

Internal Review Team:
Theresa Filtz, Pharmacy – Chair
Rod Harter, Health and Human Sciences
Mary Jo Nye, History

External Review Team:
Michael Corradini, Engineering Physics, University of Wisconsin—Madison
James Martin, Environmental Health Sciences, University of Michigan
Richard Wright, Westinghouse Electric

Date/Time		Event/Interview/Participants
Sunday, 2/12	6:00 – 9:00 PM	Working Dinner Review Team Sally Francis – Dean of Graduate School Location: Michael's Landing
Monday, 2/13	8:00 – 9:00 AM	Program Overview Dr. Jose N. Reyes, Jr., Head Review Team Location: Radiation Center, Room E130
	9:00 – 10:00	Graduate Committee/Department Faculty Qiao Wu, Graduate Program Chair David Hamby, Committee Chair Jack Higginbotham, Committee Chair Kathryn Higley, Committee Chair Todd Palmer, Committee Chair Jose N. Reyes, Jr., Committee Chair Brian Woods, Committee Chair Location: Radiation Center, Room E130
	10:00 – 10:30	BREAK Location: Radiation Center, Room E130
	10:30 – 11:00	College Dean Ron Adams, Dean, College of Engineering Review Team Location: Radiation Center, Room E130
	11:00 – 11:30	Research John Cassidy, Research Office Chris Bell, Associate Dean, College of Engineering Review Team Location: Radiation Center, Room E130
	11:30 – 1:00	Working Lunch Location: Radiation Center, E130

	1:00 – 2:00	Lab/Facilities Tour Location: Radiation Center
	2 :00 – 3:30	Graduate Students Review Team Location: Radiation Center, E130
	3:30 – 3:45	BREAK Location: Radiation Center, Room E130
	3:45 – 4:15	Debriefing Dr. Jose N. Reyes, Jr., Head Review Team Location: Radiation Center, Room E130
	4:15 – 5:00	Executive Session Review Panel (Closed Door) Location: Radiation Center, Room E130

GRADUATE COUNCIL MEETING

**May 18, 2006
3:00pm, MU 212**

Present: Filtz, Francis, Gitelman, Harter, Koenig, McCandless, McMullen, Rettig, Rockey, Sanchez, Tadeipalli, Unsworth

Absent: McLain, Proebsting

Guests: Kate Peterson (Enrollment Management), Michele Sandlin (Admissions), Rosemary Garagnani (Admissions), Jim Richman, Bella Bose

1. Report of the External Consultants on Graduate Admissions

Sally Francis (Graduate School) reminded the Council of the task force, chaired by John Westfall, Professor of Chemistry, that examined graduate admission procedures on campus in 2001. The task force report was quite thorough and the Office of Admissions made changes to the graduate admissions process as a result. It was agreed that a follow-up review would take place two to three years later.

To undertake the follow-up review, the Graduate School, Office of Admissions, and Enrollment Management invited two consultants arranged through the Council of Graduate Schools to campus in March 2006. Over the course of two days, the consultants met with key campus offices, held open forums for department heads and staff and met with university administration. The key recommendations made by the consultants were to move the responsibility of graduate admissions to the Graduate School, to stop using paper applications and implement a 100% web-based application process, to stop processing unpaid applications, to eliminate the Faculty Senate's Graduate Admissions Committee and assign that responsibility to the Graduate School, and for the Dean of the Graduate School to work with Graduate Council on all matters of enrollment and admissions.

Francis informed the Council that the consultants' report was discussed at a Provost's Council meeting and that she is now working with Michele Sandlin and Kate Peterson to bring the recommendations before the Graduate Council, the Graduate Admissions Committee, and OSU department chairs. Later, at the request of the Provost, they will prepare an implementation plan to determine what resources would be needed to implement the report's first two recommendations.

Alix Gitelman (College of Science) asked Francis if the Provost would be committed to implementing these recommendations pending the feasibility study. She added that in reading the report she understands that graduate admissions procedures at OSU are inefficient and that outside people are alarmed at our processes. Gitelman stated that the stumbling block to change is usually a lack of resources. If there is no commitment of support from the top then she doesn't see a point to this exercise.

Both Francis and Peterson explained that the Provost is committed to doing something to address the issues. Peterson added that the idea behind the feasibility study was to protect the Graduate School from being saddled with this responsibility without adequate resources to manage it.

Gitelman asked about the consultants' recommendation regarding necessary FTE. Peterson responded that during the consultants' exit interview she understood that the consultants were not being literal about the FTE needed for the transfer but were instead making a statement that it would take significant investment to successfully move the responsibility of admissions to the Graduate School.

Alex Sanchez (College of Education) asked how the transfer of graduate admissions responsibility to the Graduate School would affect a department's admission authority.

Francis responded that individual departments have never had admission authority. For legal reasons, the *University*, not the department, admits students based on the recommendation of admission from the department. Sandlin added that the University would never admit a student into a graduate program without the recommendation of the department or program.

Francis explained how OSU's current hybrid (centralized/decentralized) admissions procedure is currently managed. She added that if graduate admissions moves to the Graduate School, current campus procedures and procedures from other universities will be reviewed to determine the most effective system.

Prasad Tadepalli (College of Engineering) stated that his department (EECS) has invested a lot in a web-based admissions infrastructure and wondered how the transfer would affect his unit. Would they be required to switch to a different system? Tadepalli stated that he wants departments to have the ability to design their own admissions forms.

Peterson responded that the design of any future system has not yet been decided upon but she understands that individual disciplines have different needs and that some flexibility and customization will always be necessary no matter what system is employed.

Francis added that the question of system design is separate from the question of whether or not graduate admissions should be moved to the Graduate School.

Jim Richman (a member of the Graduate Admissions Committee and a faculty member in the College of Oceanic and Atmospheric Sciences) discussed the duties of the Graduate Admissions Committee in relation to conditional admission decisions. He informed the Council that GAC members' ideas on what makes an admissible student is extremely varied so there is quite a bit of discussion over these cases in that committee. Richman warned that if the GAC were eliminated a lot of this type of "judgment" work would be transferred to the Graduate School. Francis commented that the Graduate School is quite experienced in handling petitions, exceptions, grievances, and so forth and appreciates the workload issues.

Francis informed the Council that the chair of the GAC, Rakesh Gupta, does not disagree with the consultants' recommendation. However, since the GAC is a Faculty Senate committee, the

Faculty Senate would need to take action by revising its Bylaws to eliminate this committee. The Graduate Council should go on record to either support or reject this recommendation, so that the Faculty Senate can be informed of the Council's position notified. Francis added that members of the GAC should also inform the Faculty Senate of their opinion.

Additional discussion ensued concerning conditional vs. regular admission.

There was also some discussion on the practice of processing applications without a paid fee.

A motion was made and seconded to accept the consultants' recommendation to move the responsibility of graduate admissions to the Graduate School.

The motion was then amended to become

To accept the consultants' recommendation to move the responsibility of graduate admissions to the Graduate School provided that the feasibility study has positive results and that funding for the move is identified. Additionally the Council recommends that all the administrative processing changes suggested on page 8 of the consultant's report be taken seriously even if the transfer does not occur.

All voted in favor. Motion passed.

2. Environmental and Molecular Toxicology Follow-up Review Report

Bella Bose (College of Engineering) presented a follow-up report of the Toxicology Graduate Council Program Review. The original graduate program and CSREES reviews took place September 23, 2002. Bose and Carol Caughey (College of Health and Human Sciences) revisited the department on May 25, 2005. Bose reported that in a meeting with the department head, Larry Curtis, they collected the following information (report appended here):

Follow-up Graduate Program Review Department of Environmental and Molecular Toxicology

Introduction

The follow-up graduate program review of the Department of Environmental and Molecular Toxicology took place on May 25, 2005. The Graduate Council review team members were:

Bella Bose, College of Engineering (School of Electrical Engineering and Computer Science)

Carol Caughey, College of Health and Human Sciences (Design and Human Environment)

The team met Dr. Larry Curtis, the department head for about 1 ½ hours and discussed various things – most important being the steps taken by the department on the concerns and recommendations mentioned in the 2002 graduate review. The following report was generated from this discussion.

The department had 15 faculty members in 2005 compared to 17 in 2002. However, the department was planning to hire 4 new faculty – 2 replacements and 2 new. There were 25 graduate students, almost all of them pursuing Ph.D. degree. There were 6 incoming students in Fall 2004, 2 were supported by training grant, 1 on departmental fellowship and 3 on GRA.

2002 Review Concerns and Recommendations and the Steps taken since then:

CR-1: During our discussion with the graduate students, they noted that some minor improvements in advising could be made. Currently, the department head advises all students who don't have a major professor. Even though the department head is available most of the time to answer their questions the students felt that some sort of orientation program for the incoming students would be very useful. Some students were not sure about the policy and procedures regarding qualifying exam. One student, who is currently in her third year in the program, mentioned that only very recently had she found out the extent of the lab resources available in the department.

Steps taken: At present there is an orientation program for all incoming students at the beginning of Fall term. The department web site has been updated, mentioning the procedures and policies on qualifying and preliminary exams, required courses, and so forth.

CR-2: Some students felt that it would be useful to have some teaching experience before they graduate. Even though they get some experience through their research seminars they felt it was inadequate. The department is currently in the process of creating an undergraduate degree program in toxicology. Once this happens, the graduate students should get some opportunities to TA in some of the undergraduate classes.

Steps taken: There is an undergraduate minor in toxicology and so the students get chances to teach classes. There are two students, supported by an NIH training grant, teaching for high school teachers. Further, some students are teaching in the chemistry department.

CR-3: Because of the designed focus on research in the department, some faculty may have fewer demands on teaching and instruction of graduate students. Other faculty may have a greater demand on their time in instruction as compared to time spent in conducting research. It is suggested that a review of teaching loads be conducted to provide feedback as to any levels of inequity of faculty time.

Steps taken: Even though the department gets only one FTE equivalent amount in its budget for teaching the new policy is that every faculty member teaches one course per year.

CR-4: At present the position descriptions of faculty members do not include teaching. Yet they do teach graduate classes. This was not perceived as a problem currently, but potentially this could have an impact on budgeting and funding. An update of the faculty job descriptions to reflect graduate teaching responsibilities is recommended.

Steps taken: Please see item #3 above.

CR-5: Office space for graduate students, research assistants, and post-docs, both in ALS and in Weniger Hall, is limited. The need for more office space was mentioned during the review as important. From an occupational safety point of view, offices should not be located in research laboratories.

Steps taken: One of the programs supported by USDA had been eliminated. This has freed some space and so space is no longer a problem. ▲

Theresa Filtz (Pharmacy) asked Bose if the new department policy on equitable teaching loads is now reflected in the faculty position descriptions. Bose replied yes and that the equity issue has been solved to the satisfaction of the faculty.

A motion was made and seconded to approve the Toxicology Follow-up Review Report. All voted in favor. Motion passed.

3. Minutes from Previous Meeting

A motion was made and seconded to approve the minutes of April 20, 2006. All voted in favor. Motion passed.

4. End of Year Issues

Bruce Rettig (Graduate School) asked Council members how they would like to handle the approval of minutes after the final Council meeting of the academic year. After some discussion a motion was made and seconded to approve the minutes via e-mail. All voted in favor. Motion passed.

Rettig then asked for a Council volunteer to serve as a back-up evaluator on the CAT II subcommittee over the summer. Hal Koenig (College of Business) agreed to take on the responsibility.

Rettig also warned the Council that if there should be a student grievance filed over the summer Francis would need to convene a special advisory committee to hear the grievance. Council members need to be prepared to serve if called upon.

5. Old Business

Francis informed the Council that she recently had a conversation with the Provost's Council concerning the Graduate Council's recommendation to form a task force to pursue the Council of Graduate Schools' grant funding for training in the Responsible Conduct of Research. Francis told the Council that members of the Provost's Council were supportive and hoped we would take action and submit a grant proposal. Francis added that she is now working on convening a committee to do this.

Meeting adjourned.

Council of Graduate Schools (CGS) Consultancy Report

Graduate Admissions Process Review Oregon State University

March 22, 2006

Submitted by:

Daniel J. Bennett, Assistant Dean, Graduate Admissions/Student and Academic Affairs,
Graduate Division, University of California, Los Angeles (UCLA)

Robert S. Sowell, Dean of the Graduate School, North Carolina State University (NCSU)

Introduction

This consultancy is part of a formal review of the graduate admissions process conducted at Oregon State University (OSU) in 2005-2006. The current review follows a 2001 Graduate Admissions Task Force review that resulted in the adoption of “the model of a standard, hybrid/centralized admissions process.” Although the stated goals of the task force and the subsequent re-engineering of the graduate admissions process in 2002 were to “(i) increase the efficiency of the admission process for applicants, academic units, and the University administration, and (ii) increase the effectiveness of academic units in meeting their recruitment goals,” it appears that these goals were not met. Therefore, a renewed effort to improve the graduate admissions process was initiated during the current academic year.

Over the course of two days the consultants met with the Graduate School Dean, Associate Dean, and staff, the Director, Office of Admissions, associate directors and staff from the various functional areas of Admissions, the Interim Assistant Provost for Enrollment Management, the Enrollment Management Information Technology Manager, chairs of departmental admissions committees, chairs and admissions staff from departments, members of the Academic Senate’s Graduate Admissions Committee, staff from the International Office, and the Vice Provost for Student Affairs.

It became apparent from the discussion with chairs that several departments wish to grow their graduate programs, some by up to 15 to 20%, and many units wish to raise their national rankings. A faculty member from the College of Engineering expressed the desire for his school to be in the top 15 of engineering schools in the U.S. The consultants have included consideration of these goals in their observations of the graduate admissions process.

In order to frame the discussion in this report, it should be noted that the consultants are the Dean of the Graduate School at North Carolina State University (NCSU) and the Assistant Dean of Graduate Admissions/Student and Academic Affairs of the Graduate Division at the University of California, Los Angeles (UCLA). At NCSU the Graduate School centrally manages the intake of graduate applications (all submitted and paid online through Apply Yourself software) and related material, is moving toward the use of document imaging to electronically transmit the related material documents to departments, and is in the process of implementing of People Soft student systems on campus. At UCLA, the Graduate Division centrally manages the intake of applications (all submitted online through in-house software; 95% are paid online, with the other 5% paid through check/money order) but related material is sent directly by the applicants (self-managed) to the departments. The online application data are made available to departments through mainframe and intranet processes; the latter allows the department a variety of options for printing out an applicant profile. The mainframe admissions and student systems are legacy-based and currently are in the process of a major upgrade (in-house design) that will permit more enhancements for student records processing.

In this report we state our primary findings and recommendations on structural and administrative process changes, and make some concluding remarks about graduate admissions at OSU.

Primary Findings

- There is widespread confusion about and unhappiness with the graduate admissions process among applicants, staff, faculty, and university administrators at OSU.
- The 2001-2002 review of graduate admissions focused on the micromanagement of parts of the admissions process rather than on the larger structural and managerial problems that inhibit a more efficient process.
- Changes that emanated from the 2001-2002 report were not well communicated to or understood by the campus community. In some instances the changes appear to have made things worse rather than better. The lack of follow-up and continuous training to meet the needs of staff and faculty turnover and confusion about the lines of responsibility for graduate admissions have resulted in widespread ignorance about policy and procedure. For example, some faculty believe graduate admissions is run by the Graduate School, and many departments are unaware of or do not know how to use existing Banner and Data Warehouse report functionality to access information (no instruction manual is provided).
- A critical goal of the 2001-2002 re-engineering of graduate admissions – to improve turnaround times through the establishment of service standards for moving documents to departments and processing department decisions – has not been met. Turnaround times on both processes vary widely, depending on how documents are submitted, which varies by applicant because of applicant and department confusion, and on when the applications are submitted. Conflicting deadlines between undergraduate and graduate processing cause delays in processing graduate applications and decisions.
- There is no one individual or unit in charge of graduate admissions at Oregon State University. There is no separate director; responsibility is delegated to the campus admissions director, who also has responsibility for undergraduate admissions, her main priority. The director does not have delegated authority to institute training or make process changes to improve graduate admissions. Responsibility for graduate admissions is spread among the Student Affairs Admissions and Information Technology Offices, the departments, the International Office, the Academic Senate's Graduate Admissions Committee, and minimally, the Graduate Council and the Graduate School.
- Graduate admissions has no campus advocate. It is housed in Admissions in Student Affairs, an office and unit whose primary focus is undergraduate admissions and student welfare. During the walk-through, Admissions staff at all levels clearly expressed that during the crunch time of conflicting deadlines, their priority was undergraduate admissions. A former staff member in Admissions who now works for a graduate program reinforced this position. Admissions conducts twice-a-year training for undergraduate admissions but staff could not remember the last time it was done for graduate admissions (perhaps in 2002 or 2003?).

- There is widespread sentiment on campus, among department chairs and staff, the International Student Office, and even among Admissions staff, that graduate admissions belongs in the Graduate School.
- The central receipt and processing of graduate admissions materials by the Admissions Office, an initial step that does not involve transcript evaluation (done later when admission is recommended), adds little quality to the process for applicants or departments and causes confusion and delays.
- A number of separate, duplicative graduate admissions processes have been created in departments and colleges to compensate for some of the deficiencies in campus systems and processes. This phenomenon both solves and adds to the problems. Departments try to bypass the central admissions procedures by telling applicants to send duplicate materials directly to them, to not pay their applications until a decision is made, or other mixed-message information. In some instances a separate departmental process facilitates initial application review at the departmental level but later delays the processing of decisions; it almost always causes confusion for everyone involved in the process.
- There is a lack of standardization, integration, and clarity of purpose between all parts of the graduate admissions process on campus.
- The technology serving graduate admissions is not sufficiently robust to provide the type of services needed by applicants, staff, and faculty, and places the University behind the competition.
- The separate, in-house, enhanced technology graduate admissions process created by Enrollment Management IT for the Departments of Electrical Engineering and Computer Science does not appear to fully serve the needs of these departments and their applicants (many service features are lacking) and perhaps even adds to the problems for applicants (for example, Computer Science is asking applicants to list every course taken in Computer Science rather than simply referring to the applicant's transcript; also the second level of specialization information being requested of applicants seems too specific for this point in time). Hence it does not offer a model for the use of other departments in addressing many of the deficiencies in the current process.
- Processing unpaid applications causes problems. These applications are not fully captured in admissions data and hence skew selectivity statistics, making some programs look less selective than they are. They also add to processing confusion, and take time away from processing applications for which fees have been paid, i.e., these applicants are failing to support the enterprise of graduate admission. Further, if an applicant who had not paid the fee were to appeal a denied admission, the appeal would be outside of normal University processes, potentially causing legal concerns.
- International graduate applications and enrollment are dropping and require attention. The International Office staff report confusion among international applicants about

process and indicate they must employ TA's to handle emails from international applicants and to handle problem cases. This office also must intervene on behalf of international applicants who wish to come as sponsored students, because of inadequate advising provided by the Admissions Office. The Admissions Office does not provide a separate email address for international graduate applicant inquiries but instead directs applicants to the undergraduate email address.

- The Graduate School is almost completely out of the loop in regard to graduate admissions. The graduate dean does not receive regular weekly reports on application and admissions data or take a lead role in graduate enrollment management discussions or planning. Other than having the responsibility for loading tapes of GRE/TOEFL test scores into Banner, approving applicants to pursue a second Ph.D., or reviewing those applicants who are OSU employees, in Projection 1000, or are being re-admitted, the Graduate School has little meaningful responsibility for anything connected with graduate admissions.
- The Academic Senate's Graduate Admissions Committee (GAC) as it presently functions serves little useful purpose and is too disconnected from the Graduate School and the Graduate Council.
- The Graduate Council needs to be more engaged in graduate admissions policy and planning issues.

Recommendations

- **Move the graduate admissions operation to the Graduate School.**

It is not possible for graduate admissions at OSU to function in a rational and efficient manner until it is put into the hands of those who have the vested interest in making it a priority. Also, it is not advisable to separate the operation of one of the most important charges of a graduate dean – to assist faculty and departments in the recruitment of top quality graduate students – from the graduate dean's other administrative functions.

The administrative model of housing graduate admissions in a central campus admissions office is little used in public universities in the U.S. and when it is, the problems found at OSU are common. In the latest edition of *An Essential Guide to Graduate Admissions*, published by the Council of Graduate Schools in 2005, the authors note (page 6) "When the processes are centralized within a graduate school rather than combined with undergraduate admissions in a university-wide office, more control is achieved over the entire admissions process. The graduate school often can answer applicants' questions about the institutional requirements and policies and about its array of academic programs more knowledgeably than can a university-wide office. Further, graduate applications do not compete for attention with other deadlines (freshman, transfer, or professional applications)."

The primary focus of Student Affairs/Admissions at OSU is undergraduate applicants and students. Graduate admissions is not a priority for this unit and their staff do not have a deep

understanding of graduate admissions concerns. For example, their director of information technology seemed surprised that faculty on graduate admissions committees would prefer to have percentile scores included as part of the database for graduate admissions review. The reviewers were equally surprised that this feature was not available, as percentile scores are far more meaningful than numerical scores when reviewing a specific application cohort. Part of the reason for this lack of understanding is that undergraduate and graduate admissions recruitment, decision-making, and enrollment management are very different in that the former is highly centralized, the latter highly decentralized. A decentralized graduate admissions decision-making process requires a deep understanding on the part of central management of the academic cultures of the graduate departments, and of their needs and values; it also requires continuous communication with and training of departmental staff.

The campus Director of the Admissions Office currently signs letters of admission for graduate admits. This is inappropriate and sends the wrong signal to applicants and departments in regard to the priorities of the campus and its graduate school. The Dean of the Graduate School's name should appear on all letters of graduate admission.

- **The transfer of responsibility for graduate admissions must include: (1) a full FTE for the appointment of a Director of Graduate Admissions; (2) a full FTE for the appointment of a Director of Information Technology services; (3) at least another full or half-time FTE to support admissions processing; and (4) additional physical space, if needed.**

(1) The director should report to the Dean of the Graduate School and be responsible for leadership and management of the admissions process. A graduate school should have a designated official responsible for graduate admissions. This individual ultimately is responsible for a range of functions and activities in relation to graduate admissions. Chief among these responsibilities is the role of the university's compliance officer for university, state, and federal policies and procedures for graduate admissions (e.g., university baseline standards, state privacy regulations, Title VI and Title IX, non-immigrant visa policies, etc.). The lack of a clear chain of accountability at OSU has contributed to a number of problems observed by the consultants. For example, the design of the online application and the admissions database and connected products lacks a number of important features needed by graduate applicants and admissions committees. And there should be a process manual and ongoing training procedures for graduate admissions that are the responsibility of this position. The director should join and participate in the activities of the National Association of Graduate Admissions Professionals (NAGAP), the national professional organization devoted to all aspects of graduate admissions administration.

(2) The technology serving graduate admissions is inadequate for the mission of the OSU Graduate School. The lack of contemporary features, such as online letters of recommendation, a fully functional application status screen for applicants, and receipt and posting of GRE and TOEFL scores through an electronic file transfer protocol (FTP), offer a striking contrast to other competitor institutions. Again we quote from *An Essential Guide to Graduate Admissions* (page 5): "Allowing applicants to confirm receipt of documents, check the status of their application, and access admissions decisions through a secure online enrollment management system greatly enhances this process."

James H. Lampley (Service Quality in Higher Education: Expectations versus Experiences of Doctoral Students, *College and University Journal*, Volume 77, Number 2, Fall 2001, page 13) refers to an “increasing sense of consumerism” among graduate students that demands more online information and services. Consumer-oriented applicants also are asking for more services in the admissions process, and for quality assessment information (e.g., average time-to-degree, available levels of financial support, placement information on graduates) for graduate programs under their consideration and universities are supplying it via web sites. OSU needs to move in this direction as well, and this functionality could best be managed by the Graduate School.

If the Banner system is inadequate for the streamlined processing of online applications and for providing the level of online service features needed by applicants and departments, the University should consider purchasing another admissions commercial software package, such as Apply Yourself (used at NCSU) that can streamline processing and provide high level services, and from which application information can be loaded into Banner.

The lack of technology support in the Graduate School hampers its ability to move OSU’s graduate programs to a higher level through better recruitment, institutional research, program review, and support for online student services. The new technology support position can begin with admissions and then actively move on to work on these other areas of concern. Also, the IT Director should work collaboratively with the Student Affairs IT Directors and other units on campus to make sure that the Graduate School’s interests are taken into account in the development and upgrading of all student systems.

(3) While we recommend the cross-training of the Graduate School’s student affairs staff in admissions matters so that they can serve applicants, students, and departments in all admissions and student affairs matters, an administrative model in use at the graduate schools of both consultants, we believe that the slim staffing resources of the OSU Graduate School require augmentation for this concept to work well.

(4) The reviewers were told that a Total Quality Management (TQM) review conducted more than a decade ago at OSU recommended that graduate admissions be moved to the Graduate School but that space was a reason for this recommendation not being implemented. If additional space is needed to accommodate the new FTE, equipment, and files, this should be made part of the transfer process.

- **Discontinue the Graduate Admissions Committee and move the process for consideration of exceptions to the University’s baseline standards to the Graduate School.**

The eight-member GAC (plus two support staff) meets approximately 24 times a year to review 100+ applications. Even its own membership now recommends that the Committee no longer review applications with a 2.75 to 2.99 junior/senior grade point average. The exceptions review process should be the responsibility of the Associate Dean, reserving the Dean to review appeal cases only. The responsibility for this review should reside in the Graduate School, as it does in almost all universities with which the consultants are acquainted. Such activity will enrich the

deans' understanding of the types of recommendations and bases for exceptions being made by the academic departments and of the graduate admissions review process. Data on exceptions should be part of an annual report on graduate admissions presented by the Dean to the Graduate Council.

- **The Graduate Dean should fully engage the Graduate Council in graduate admissions enrollment management and policy issues through full and frequent reports on graduate admissions activity.**

Rather than have a separate Senate Graduate Admissions Committee, whose activities are more properly the purview of the Graduate School, the Graduate Council should become more active in discussing graduate admissions enrollment management and policy issues and provide support to the Graduate School for initiatives that will strengthen the plans to improve the graduate applicant pool and reach enrollment management goals. Graduate admissions/enrollment management should be made part of the review of each graduate program, with the Graduate School providing detailed reports on the admissions data for the program under review.

- **Make administrative processing changes in graduate admissions:**
 1. Abolish paper applications and require all applicants to apply and pay online.
 2. Stop processing or considering unpaid applications at the central and department levels.
 3. Consider raising the application fee and establishing a fee differential for international applications (that cost much more to process) to support improvements in admissions processing.
 4. Use Educational Testing Service's (ETS) ScoreLink process, rather than tapes, to receive and post GRE/TOEFL scores. Create an automated job to access and process electronic files that requires minimal staff intervention.
 5. Include and populate GRE/TOEFL percentile score fields in the database to facilitate faculty review of application portfolios.
 6. Either bifurcate the application process, requiring applicants to complete an online application and pay centrally and submit all other materials directly to the department (process used at UCLA), or receive all materials centrally (process used at NCSU) and create central scanning process so that files are received electronically by departments.
 7. The Graduate School should assert full authority to ensure that Graduate School and departmental staff and websites are dispensing consistent and correct information to graduate applicants.
 8. The Graduate School and Student Affairs should collaborate to establish an online process for admitted applicants to submit their statement of intention to register and deposit.

Conclusion

The current fragmentation of the administration of the graduate admissions process at OSU essentially means that no one can be held accountable for its failure to establish a mission or meet goals. The Graduate School is the most logical place to house this responsibility and authority, as is demonstrated by best practices elsewhere and is outlined in the professional literature. It simply makes good academic and administrative sense to include graduate admissions as part of the Graduate School's functional responsibilities.

The consultants recognize that this and the other recommendations in the report require a major structural change in graduate admissions processing at OSU and the transfer of responsibility for graduate admissions to the Graduate School requires the assignment of new resources, including skilled staff, equipment, and space. This level of change and commitment of resources is essential for OSU to improve its graduate admissions process through modern and efficient enrollment management technology, and to recruit more and better graduate students and raise the rankings of its graduate programs.

Although a great deal of dissatisfaction with the current graduate admissions process at OSU was expressed by every group and individual with whom the consultants met, we also heard expressions of goodwill toward each other among all of these same groups and individuals. They understand that it is the structure and processes involved, especially the lack of a clear line of administrative accountability linked to the Graduate School, that has led to many of the existing problems. Many individuals with whom the consultants spoke expressed strong confidence in the Graduate Dean, Associate Dean, and graduate school staff, and indicated their belief that they should have full responsibility for graduate admissions. We believe that given the appropriate administrative authority and necessary resources, the OSU Graduate School can vastly improve the graduate admissions process for the campus and provide a basis for growing quality graduate enrollment for the University in the years to come.

GRADUATE COUNCIL MEETING

**May 4, 2006
3:00pm, MU 212**

Present: Filtz, Francis, Gitelman, Harter, McCandless, McLain, McMullen, Proebsting, Rettig, Sanchez, Tadepalli, and Unsworth

Absent: Gupta, Koenig, Rockey

Guests: Robert Iltis and Elaine Pederson

1. Minutes from Previous Meeting

Tom McLain (Forestry), concerned that programs already preparing self-studies would be required to employ the revised Graduate Council Graduate Program Review Guidelines, suggested that an effective date be added to the minutes. After discussion, a motion was made and seconded to approve as amended the minutes of April 6, 2006. All voted in favor. Motion passed.

2. Chemistry Follow-up Review Report

Elaine Pedersen (College of Health & Human Sciences) presented a follow-up report of the Chemistry Graduate Council Program Review. The original graduate program review took place January 30, 2003. Pederson and Stephen Hobbs (College of Forestry) revisited the department Winter term 2006. Pederson reported that in a meeting with the department head, Douglas Keszler, they collected the following information (report appended here):

CHEMISTRY GRADUATE PROGRAM GRADUATE COUNCIL FOLLOW-UP PROGRAM REVIEW 2006

Department Overview

In 2003, when the Chemistry Graduate Program was reviewed, the department faced a number of challenges including a building in need of many repairs brought on by low to zero building maintenance funds and a need to refill faculty positions vacated by retirements. The review committee was appalled to find out that the serious building problems that existed in 2003 still existed.

Recognizing the need for additional funds, the Department has been creative in seeking increased funding. The Department has used funds from restructured course fees, Ecampus courses, Summer Session courses, and returned overhead in order to achieve some of the changes discussed in this report. In order to continue to support the various objectives of the Department, including the graduate program, the Department's goal is to generate \$1M each academic year in excess of their base funding.

Since the Graduate Council Program Review in 2003, the Department has successfully increased the number of graduate students from 57 to 80 students. Three tenure-track faculty members have been added to the Department faculty.

Responses to Recommendations from the 2003 Graduate Council Program Review

Graduate Teaching and Advising

A re-examination of required graduate coursework is suggested. Given the size of the faculty related to the various traditional divisions of chemistry, the Department should consider reducing the total number of graduate courses that are offered.

At the time of the Graduate Council Program Review, the majority of graduate programs in chemistry in the United States required a lower number of credits for course work and a higher number of credits for lab/research work than was offered by the OSU chemistry graduate program. To make the OSU Chemistry Graduate Program more aligned with other chemistry graduate programs, the department successfully sought an exemption from the Graduate Council for the 36 credit minimum for course work for doctoral students and has reduced their minimum number of graduate course work credits to 27.

As faculty members retire, discipline-specific graduate coursework should be re-examined to insure compatibility with research areas identified as important to the Department and the research specialties of the faculty.

The Department reviewed the specializations of faculty who had retired and who were close to retirement and revised the curriculum. The Department is currently moving from five concentrations (Organic and Bioorganic, Analytical and Environmental, Physical, Inorganic/Materials, and Nuclear) to three concentrations (Organic, Bio-analytical, and Materials). These three areas fit the specializations of the Department's mid-career faculty and have been the focus of new hires.

Although the courses needed for graduate students will vary according to sub-discipline, an effort should be made to have a common set of degree requirements, for example, the number of courses, research proposals, seminar presentations, cumulative examinations, and so forth.

There are no department core courses because each area of concentration is quite different from other areas. In both organic chemistry and in bio-analytical chemistry graduate students take core courses within their concentration. Core courses are not required in materials chemistry because it is a very interdisciplinary subject area and tailored to meet the needs of individual students.

At the master's level the degree requirements are the same across all concentration areas. For doctoral students, all students take the same number of required courses, all students are required to participate in the department seminar, and all students who wish to be considered for a GTA take a seminar teaching course. Only the organic and bio-analytical chemistry doctoral students take written preliminary examinations. The materials faculty feels the oral preliminary examination is sufficient to test their students' readiness for research.

Continued involvement in multidisciplinary and interdisciplinary programs is recommended. This offers graduate students the opportunity for additional coursework and an enhanced graduate and research experience.

Faculty and graduate students continue to be involved across disciplines.

To insure adequate graduate faculty for various divisions and research interest group areas it is critical that new hires be tenure track faculty to insure no further loss of graduate faculty.

Three tenure-track faculty members have been hired or are in the process of being hired, including the Harris Endowed Chair position. It should be noted that one faculty member will retire June 2006, one faculty member has resigned and accepted a position elsewhere, and two additional faculty retention cases are in process. To date, permission has not been granted to open a search for new faculty members. Regarding the impact of the retirement and the resignation, these two faculty members had efforts in two foci areas, organic and bioanalytical, of direct relevance to the health of the graduate program. Thus the impact is related to the Department's capacity to maintain both its graduate research and education.

Faculty and Research Programs

While two of the three hires made in the last five years are women and one is an individual of color, the total number of faculty that are women and individuals of color is low. The Department is encouraged to continue to search for qualified women faculty and people of color as new hires by identifying capable women and individuals of color as recruiting targets as part of their hiring process for the replacement of retiring faculty.

The hire for the Harris Endowed Chair is from an underrepresented group. The other two are white males. The Department chair stated that current department demographics are close to the national average in terms of underrepresented groups.

Although current faculty are productive and successful in acquiring grant funds, the changing needs of industry, the failure to refill faculty positions, and the need to replace faculty who are soon to retire, place research programs in potential jeopardy. If research programs are in jeopardy, so is the graduate program. It is critical the Department be allowed to continue to hire faculty and be provided adequate start-up funds to recruit strong faculty. Substantially higher start-up funding will probably be necessary to attract women and people of color.

The Department was able to offer \$600,000 for the two new faculty members and \$2M for the Harris Endowed Chair position. As discussed in the overview, to continue to have monies available for future start-up funds and other Department needs, Department faculty members have made the commitment to try to generate \$1M per year.

Graduate Students

The Department is considering a variety of initiatives. Some of the initiatives can be pursued with few new resources (Chemistry Self Study Report, 2002). The review committee supports these initiatives and recommends their implementation:

- **Re-examination of required graduate coursework and restructuring of GTA work loads.**

The restructuring of the graduate course work was discussed above. The lack of additional funds for GTAs and the increase in undergraduates across campus who need chemistry courses has negatively impacted the Department's making the restructuring of

GTA work loads possible. Undergraduate chemistry service courses are in high demand and are required for many majors across campus. While the increase in undergraduates in Chemistry courses has brought new dollars into the College of Science, the review committee understands the Department is not receiving these dollars. Additional funds for hiring additional GTAs would lessen the currently high workload.

- **Continue to recruit international students.**

The Department has developed contacts with four universities in mainland China. Each year one faculty member goes to China and interviews students at these universities. Through one on one contact, students with English language skills and strong science backgrounds are identified. Generally, three to four Chinese graduate students are admitted to the Graduate Program each year. Additionally, the Department is beginning to establish relationships with several Korean universities.

Other initiatives would require additional resources, but it is clear that if the Chemistry Graduate Program is to remain strong and keep its current status these actions will be necessary. The following are recommended:

- **Hiring more graduate faculty.**

As discussed above, this has happened.

- **Increase graduate stipends to stay competitive.**

Graduate stipends were increased 3 percent this January and will be increased 4 percent January 2007. With consistent but small increases for several years the stipends will be closer to the national average.

- **Increase access to advising and faculty interaction during the graduate student's first year.**

Students are now required to make a decision about their research focus and subsequent research advisor by February 15 of their first year. Because of this earlier deadline they are more active in taking part in the orientation seminars during Fall term. In these orientation seminars they meet with Department faculty and learn of ongoing research projects. This change has opened up communication between new students and the faculty.

- **Identify potential needs of incoming students and match applicant interests with faculty research.**

The Graduate Recruitment Committee carefully evaluates applicants and steers incoming students to the mid-career faculty in one of the three identified foci areas discussed above.

- **Provide opportunities for first-year students to learn more about each professor's research activities.**

During the Orientation Seminar (discussed above) held during Fall term, new graduate students meet with different faculty members once a week for about six weeks. The voluntary seminar is held during the lunch period and because of its link to the deadline for a research focus commitment (discussed above) attendance is good.

Facilities

While a thorough cleaning would help and an immediate major renovation will provide some relief, the Department badly needs a new facility. Postponement could result in compromising a program of otherwise excellent quality. Therefore, problems with the laboratory facilities must receive high priority. It is recommended existing facilities be rehabilitated and construction of a new facility pursued.

The Chemistry Department is included in part of the University capital campaign initiative for a Pauling Science Complex. In the first phase Chemistry will have two floors, and it appears that in the second phase they will acquire a new building. This is still a number of years away, and there are serious facilities problems that still remain. When the Chemistry Graduate Program Review was conducted in 2003 the Chemistry Building, Gilbert Hall, had serious plumbing and roofing problems. Three years later these problems still exist. This is a major concern of the follow-up review team. Ongoing water problems over a period of years continue to further damage building infrastructure and create a potentially, if not already existent, danger to faculty, staff, and student health and well being. The heavy rains of winter 2006 have potentially added to this risky situation. There is particular concern about the structural integrity of a sky bridge used daily by students traveling between classes. The follow-up review team strongly recommends that the sky bridge and roof receive immediate attention.

As indicated in the 1989 report, the Department must address the safety/health issues of graduate student desk space located in laboratories.

In the 1989 Chemistry Graduate Program Review it was recommended that graduate student desk space be located away from laboratories for health and safety reasons. This change was not made during the years between 1989 and the 2003 Graduate Program Review. This change still has not been made due to lack of space.

Resolving the issue of funding for the three major shared instrument facilities (currently supported via internal and external funding sources) would be beneficial to the department.

Since the review in 2003 there has been a joint hire of an x-ray crystallographer with the University of Oregon. The funding of the various shared instrument facilities is operating under a 50 percent cost recovery program. User fees pay 50 percent, and the Department pays the remaining balance from returned overhead. Faculty support this funding resolution.

Administration

Given that most graduate students hold GTA and GRA appointments in the Department and the importance of these positions to the research and teaching missions, the Department might consider ways to increase graduate student involvement in Department activities. For example, the Department might consider graduate student participation on the Long-range Planning Committee or other committees as appropriate. Graduate students offer perspectives and insights that can represent valuable contributions to the Department.

Graduate students are now active on the Department safety committee and the seminar committee. Students have the role of inviting and hosting outside speakers.

Other – Electrical and Machine Shops

The Department needs to locate sustainable funding to support shop needs particularly in the machine shop area.

The shop facilities are operating under the 50 percent cost recovery system used for the shared instrument facilities described above. External funding is used to help support these shops.

After Pederson completed her presentation, the Council discussed the condition of the Chemistry building. Members of the Council found this portion of the report to be of very serious concern. Some wanted to provide additional detail about the conditions in hopes of motivating change, but others were concerned that if there is no funding available for repairs, it might do the department more harm than good to draw attention to the matter.

A motion was made and seconded to approve the Chemistry Follow-up Review Report and to recommend that Dean Francis communicate directly with the Provost regarding the condition of Gilbert Hall. All voted in favor. Motion passed.

3. Mathematics Follow-up Review Report

Robert Iltis (Speech Communications) presented a follow-up report of the Mathematics Graduate Council Program Review. The original graduate and undergraduate program reviews took place February 28, 2003. Iltis and Prasad Tadepalli (Engineering) revisited the department on April 12, 2006. Iltis reported that in a meeting with the new department head, Ralph Showalter and an associate professor, Mina Ossiander, they collected the following information (report appended here):

Followup Report on the Review of the Department of Mathematics

This report is based on a third year follow-up review of the Math department's graduate program conducted by Robert Iltis, the chair of the speech communications, and Prasad Tadepalli, a graduate council member and a faculty member in EECS. We met with the new chair of the department, Ralph Showalter, and an associate professor, Mina Ossiander, on April 12, 2006 and talked to them for an hour. Our overall impression after the interview was that the department has undergone a sea-change in atmosphere in the last three years. Three years ago at the time of the review several people left the department and the faculty slots were not filled by the dean. The undergraduate program was strong, but the graduate program was in disarray. The morale was low and the mood was pessimistic. After 3 years of new leadership, increased support from the administration, several new hires, and increased research funding, there is a new mood of optimism, higher morale, and positive spirit in the department. The old problems seem to have been largely solved, but there are some new issues such as space and covering the low-level undergraduate courses with increased enrollments. The rest of the report summarizes our interview.

1. The budget was \$3.5 million 3 years ago. What is the current budget?

CLOSE TO 4 MILLION. INCREASE DUE MOSTLY TO INCREASES IN OPE AND RAISES. THE DEPARTMENT HAS ALSO OBTAINED SOME REVENUE FROM E-CAMPUS AND BOOKSTORE PACKET SALES.

2. The recommendation was to maintain a minimum of 25 graduate faculty members. Has this been achieved?

YES. 2 ADDED IN 2003, 2 IN 2004, 1 IN 2005, ANOTHER FIXED TERM TO START IN 2006. THE INCREASE IS DUE IN PART TO 2 CASES OF SPOUSAL ACCOMMODATIONS FOR FACULTY HIRED BY THE DEPARTMENT. OTHER ADDITIONS HAVE COME FROM THE RECENT PROVOST'S INITIATIVES

- *In 2002-3 there were 13 full professors, 8 tenured associate professors and one untenured assistant. What are the current numbers?*

POSITIVE STEPS HAVE BEEN MADE TO OVERTURN THE INVERSE PYRAMID OF 2002-2003. THE NEW ASSISTANT PROFESSORS ADDED IN THE LAST 3 YEARS HAS HELPED. THE CURRENT NUMBERS ARE 17 FULL PROFESSORS, 6 ASSOCIATE PROFESSORS, AND 2 ASSISTANT PROFESSORS. 3 MORE WILL BE JOINING FROM FALL 2006 AS ASSISTANT PROFESSORS INCLUDING 1 ON FIXED TERM. WITH ALL OF THEM THE NUMBER WILL BE 28.

- *In 2002-3 instructors represented about 10 FTE in the department. What are the current numbers?*

CURRENTLY: 6 FULL TIME, 3 HALF TIME AND 1 THREE-QUARTER TIME, FOR A TOTAL OF 8.25 FTE.

3. In 2002-3 the department had 48 graduate students, and GTA appointments supported nearly all of them. What of the current numbers?

BUDGETED AT \$350 K, AND SUPPLEMENTED BY THE DEPARTMENT TO \$540 K. IN 2005-2006: 46 GTA'S, 2 GRA'S, 4 UNSUPPORTED GRAD STUDENTS. IN 06-07 THE DEPARTMENT WILL RETURN TO 40 GTA'S—THE NUMBER ALLOWED BY THE BUDGET, SUPPLEMENTED BY THE DEPARTMENT.

LACK OF PARITY WITH PEER INSTITUTIONS REMAINS AN ISSUE FOR RECRUITMENT OF GTA'S. THE SALARY BASE FOR ALL GTA'S HAS BEEN SET AT \$12,500, WHICH IS \$1,000 LESS THAN UTAH STATE OFFERED 2 YEARS AGO.

Questions regarding the specific recommendations to the department:

1. What has the department done to pursue innovative pedagogical strategies to maintain student opportunities while reducing the cost of providing them? In your view was this a recommendation that could have been achieved?

SEE BELOW.

2. Did you eliminate courses from the catalog that had not been taught in three years? If not, why?

DONE. THE DEPARTMENT ALSO TOOK STEPS TO CORRECT PROBLEMS WITH GRADUATE OFFERINGS THAT WERE NOTICED IN THE LAST REVIEW. DISCIPLINARY SEMINARS, WHICH THE FORMER CHAIR REPORTED TO HAVE DISAPPEARED IN THE 1990'S, ARE BACK. THE CURRENT CHAIR REPORTS THAT THERE ARE NOW 5 REGULARLY SCHEDULED SEMINARS. IN THE CHAIR'S OPINION THE CURRICULUM'S HEALTH HAS RETURNED. SCHEDULING HAS BECOME A CHALLENGE.

3. What was done about the computing infrastructure in the department?

THE DEPARTMENT NO LONGER OPERATES ITS OWN SYSTEM. DEPARTMENT ADMINISTRATORS BELIEVE THAT PROGRESS HERE HAS BEEN SIGNIFICANT. INSTRUCTORS COMPLAINED IN 2002-2003 THAT THEY DID NOT HAVE PCS. ALL INSTRUCTORS NOW HAVE COMPUTERS.

4. Instructors sought a handbook as well as regular opportunities to meet with the leadership in the department, and this was one of the recommendations. Were these recommendations met? If not, why?

THE DEPARTMENT PRODUCED A TEACHING PROCEDURES HANDBOOK AND AN INSTRUCTOR'S HANDBOOK. BOTH ARE ONLINE. REGARDING MEETINGS WITH THE INSTRUCTORS: THE CHAIR REPORTS THAT HE HAS OFFERED TO MEET WITH THEM 2 TIMES, BUT THERE HAS BEEN ONLY SMALL INTEREST.

5. Have you been able to find new sources of funding?

SEE ABOVE. A SMALL REVENUE STREAM (PERHAPS \$40 K) IN E-CAMPUS, BUT MOST OF THAT MONEY GOES DIRECTLY TO SUPPORT INSTRUCTION. GRANTS HAVE BEEN THE MOST IMPORTANT ELEMENT HERE. CURRENTLY 12 FACULTY MEMBERS ARE INVOLVED IN 12 GRANTS. MOST HAVE BEEN NSF. 2 RECENT GRANTS ARE DOE.

Additional questions:

1. The review concluded that the department in 2002 was less research oriented and more teaching oriented than it was in 1990. Is this still the case?

POSITIVE STEPS ARE TAKEN TO REVERSE THIS TENDENCY. GRANTS ARE ONE SIGN. MOST IMPORTANT HAS BEEN THE INFUSION OF ENERGY FROM NEW HIRES. ALL BUT ONE OF THE NEW HIRES IS IN APPLIED MATHEMATICS. ONE HIRE WAS IN ALGEBRA.

2. The review noted an increased orientation toward interdisciplinary and applied research. Is this still the orientation?

THE CHAIR BELIEVES THAT FOR INSTRUCTIONAL AND RESEARCH PURPOSES THE DEPARTMENT HAS A RESPECTABLE CORE IN PURE MATHEMATICS. A STRONG INCLINATION TOWARD APPLIED STUDIES REMAINS. FACULTY ARE ENCOURAGED TO DEVELOP CONNECTIONS OUTSIDE THE DEPARTMENT.

3. The review noted that from 1990 to 2003, 8 tenure track faculty members had departed, and five of whom were tenured associate professors. Have more tenured associate professors left? Have they been replaced with tenure stream faculty?

NO ADDITIONAL DEPARTURES.

ADDITIONAL NOTES:

A. THE DEAN HAS BEEN SUPPORTIVE AND RESPONSIVE, BOTH IN TERMS OF HIRING AND OVERHEAD RETURN.

B. THE DEPARTMENT IS WORKING ON THE PROBLEMS OF ADDRESSING UNDERGRADUATE DEFICIENCIES IN MATH PREPARATION. THE FACULTY IS NOW LOOKING AT CHANGING MTH 111 TO HELP WITH STUDENT SUCCESS AND RETENTION.

C. THE CHAIR REPORTS THAT MORALE SEEMS TO HAVE IMPROVED. THE DEPARTMENT HAS BEEN ABLE TO RECRUIT AND HIRE ITS TOP CANDIDATES. IN THE RECENT PAST THE CONCERN HAS BEEN WHETHER OR NOT A CANDIDATE WOULD COME, EVEN DURING HIRING DELIBERATIONS. DURING THE DELIBERATIONS FOR THE MOST RECENT HIRE THAT QUESTION DIDN'T EMERGE. ADMINISTRATORS TAKE THAT AS A SIGN OF INCREASED MORALE.

After Iltis' presentation there were few questions and no concerns from the Council members. Iltis told the Council that he left the Mathematics interview excited at witnessing a successful outcome to the initial review. He told the Council that the department is moving in the right direction and that he credits this to the increased support received from the dean and the change in leadership in the chair's office. Tadepalli commented that there is always a question of whether or not Graduate Program Reviews matter. The outcome of the Mathematics review gives very positive evidence that they do matter.

A motion was made and seconded to approve the Mathematics Follow-up Review Report. All voted in favor. Motion passed.

4. CGS Responsible Conduct of Research Initiative

Sally Francis (Graduate School) reintroduced the topic of implementing RCR (Responsible Conduct of Research) training at OSU, a discussion started at the April 20, 2006 Graduate Council meeting.

Francis asked if Council members had talked with colleagues regarding this issue and if there is further thinking and reflection to be shared. After some discussion, Francis presented two draft proposals (attached) mandating RCR training for graduate faculty and graduate students.

Tom McLain (Forestry) told the Council that he is not fond of unfunded mandates sent down to the departmental level by central administration. He feels this type of mandate would achieve an uneven response. Many Council members concurred. It was generally felt that without OSU RCR training resources already in place, it is premature to require departments to comply. Guidance is needed. A centralized program to provide RCR training should be developed.

After additional discussion, a motion was made to recommend that Dean Francis work with interested parties, including the VP of Research, to form a task force to develop a set of recommendations and report back to Graduate Council. Alix Gitelmann (College of Science) amended the motion to include instructions to the taskforce to bring a preliminary grant proposal to the Council by the end of Spring term. Theresa Filtz (Pharmacy) amended the motion to instruct the taskforce to also identify people willing to work on the proposed project over the summer by the end of Spring term.

The amended motion was seconded. All voted in favor. Motion passed.

Theresa Filtz was in the process of formulating a motion to postpone indefinitely any action on the two draft proposals regarding mandated faculty and student RCR training presented by Dean Francis, when the meeting ended abruptly due to a fire alarm which required evacuation of the building. It is the recorder's interpretation that such a motion would have passed; therefore, upon approval of these minutes by the Council, the motion to postpone any action on the two proposals described above will be considered approved.

GRADUATE COUNCIL MEETING

**April 20, 2006
3:00pm, MU 212**

Present: Koenig (chair), Filtz, Francis, Harter, McCandless, McLain, Proebsting, Rettig, Rockey, Sanchez, Tadepalli, and Unsworth

Absent: Gitelman, Gupta, McMullen

Guests: Robert McGorin, Bill Boggess, Courtney Campbell

1. Forest Engineering Follow-up Review Report

Robert McGorin (Food Science & Technology) presented a follow-up report of the Forest Engineering Graduate Council Program Review. The original graduate program and CSREES reviews took place April 14, 2003. Robert McGorin and Kenneth Williamson revisited the department on April 5, 2006. McGorin reported that in a meeting with the department head, Steve Tesch, and several of his faculty, they collected the following information (report appended here):

Since the 2003 review, the Department's allocated budget from the College of Forestry (COF) has been relatively flat. The Department was successful in obtaining gifts from alumni and friends to establish a new endowment to offset the salary of an existing faculty member, and to support unendowed student fellowships. The faculty ranks have been stable during this time period; newer faculty at the time of the review have built new programs and recruited new students.

The review stimulated the faculty to have a number of conversations about the future of the Department; their reaction to shifting priorities in education, research, and the profession; and how to remain relevant within the College of Forestry, OSU, and their disciplines of interest. What follows are the FE Department's responses to the review team's specific recommendations:

1. Continue to maintain Departmental and College strengths, including premier faculty and research activities, facilities, great working relationships between the COF departments and with other OSU colleges and departments.

The FE faculty have been operating at full productivity since the review. Four faculty who were relatively new when the review was conducted have settled into their teaching, advising, and research programs. They are now providing many contributions to departmental teaching, scholarship, grantsmanship, service, and disciplinary leadership.

Since the review, some metrics include:

- Number of enrolled graduate students: 33 (fall 2005), up from 24 in 2003
- Percentage of PhD students: 61% (20), up from 54% (13) in 2003
- Established new graduate concentration in forest soil science

- Refereed journal articles: 33 (2004, data from annual reviews, 2005 now being compiled), up from 23 in 2002 (data from annual review)
- Books or book chapters published: 7 (2004), up from 2 in 2002
- Publications in press or review: 47 (2004 data), up from 22 in 2002
- Faculty research presentation: 94 (2004), up from 47 in 2002
- Research grants and contracts received: \$1.26 million in 2005 (calendar year) up from \$1.07 million in 2002.
- Fall term 2005, awarded \$131,252 in gifted departmental fellowships to fully-support 7 graduate students. Two more were funded by a COF endowment. Students also received supplement fellowships from Departmental, COF, and OSU sources that add to this total. This is the largest amount of donor-supported assistance for graduate students at OSU according to recent summary from the Graduate School.

2. Work toward a more timely process of Graduate Advisory Committee member identification to expedite development of course of study. In addition, graduate advisors should help monitor course offerings so as to minimize delay in curricular completion.

Most students adhere to Graduate School guidelines. The FE Grad Program advising guide is available on their Web page, as are OSU projections for future course offerings (though these are often subject to change.)

Increasing numbers of incoming graduate students arrive in early summer and work for a major professor. This enables them to get their feet on the ground and especially to meet fellow students who often have the best knowledge of professors' courses to favor, information about Department culture and procedures, etc.

At the fall FE orientation, the Department encourages incoming students to form their committee and plan courses for their program as soon as possible. Also it strongly encourages students to talk with other students about courses and instructors.

3. If a mismatch exists between the graduate student and major professor, work toward resolving the differences or facilitate identification of an alternative director of the graduate student.

This topic is now included in the FE fall orientation. It clarifies that the Department Head is person to see if there is a conflict, and that concerns will be taken seriously. There have not been any issues since the review.

4. Address the student concerns of lack of rigor in course work by reviewing the offering of 4xx/5xx courses and assure a graduate level of learning.

The FE Graduate Committee examined this issue carefully as the 50/50 rule was implemented. The slash-class issue is not a concern for hydrology and soils students, but remains a challenge for those in the harvesting and forest operations graduate program,

especially Master of Forestry (MF) students. These MF students will be the most directly affected by the 50/50 rule also. The Department still has too few students in this area to justify substantial numbers of stand-alone graduate courses.

The Department is pilot testing an approach to clarify the graduate learning component by adding a 1-credit stand alone 5xx or 6xx graduate credit to supplement a traditional slash course. As it gains more experience with this approach, FE may eliminate the slash designation.

It is not an option to drop the graduate program in the harvesting area because OSU FE is the primary educational program for future faculty in the world.

- 5. Requirements and expectations for the MF degree as described in the Graduate Student Handbook need to be followed or if changed, they need to be better communicated to the applicants and incoming students. Alternatively, convert the MF option to a course work-only program to allow completion by self-funded students within as little as one year.**

The Department had lengthy discussions about the philosophical differences between the Master of Forestry (MF) and Master of Science (MS) degrees and some differences of opinion remain among the faculty. The FE Grad Advising Guide has been revised to clarify the intended differences so there is clearer “truth in advertising.” Most faculty agree the MF is a terminal professional degree, but some believe the primary difference is with the experimental rigor of the project required. One point of view is that an MF is appropriate if the project is a case-study with limited statistical rigor.

A Coursework-only MF has been discussed as a potential means to attract more graduate students, but has received lukewarm reception from the FE Department Advisory Committee.

- 6. Provide a college-level orientation for incoming students to gain understanding of forestry and activities within the College.**

An All-College graduate student orientation program was started in fall 2004. The FE Department orientation is held the same week to clarify some issues and “build community” among students advised by FE faculty (including Western Regional Graduate program (WRGP) and Environmental Sciences (ENSC) students.)

- 7. The Department needs to focus on increasing its diversity. The “grow your own” philosophy to expand faculty diversity is not perceived as the best approach. The department should develop a strategy to determine how to attract outside faculty hires and inquire of other Forestry departments to determine how they were able to achieve “new blood.” Commitment to diversity may require hiring of an individual who doesn’t match the current departmental mold and could lead to the bonus of expansion of research interests.**

Faculty diversity remains a challenge. The Department has not had an open faculty position since the last review. It tried to retain a recent female PhD graduate to improve gender diversity, but she was very aggressively recruited elsewhere and left to obtain a better position. The Department has several women PhD students currently in-progress; it believes that it can educate them, send them off to gain experience and recruit them back to campus in the future. Virtually no other programs are educating women with PhDs in forest operations.

When future tenure-track faculty openings occur in the forest hydrology and soils area, this is the most probable opportunity for the Department to quickly build gender and ethnic diversity, given the observations above. The recommendation of the reviewers is that the FE Department, with the support of the College of Forestry, needs to proactively work towards hiring a woman on its faculty at the earliest occasion.

The Department has been more successful in hiring women for post-doc and FRA positions, and has worked to engage students with these folks in the research area.

To assist in recruiting more diverse international students, the Department had its Graduate Student Recruitment Brochure translated into Spanish. This was distributed at technical conferences.

8. a. Maximize the utility of the Department web site for recruitment to build diversity in the student population.

b. Enhance visibility of the programs by participating in outreach programs and professional organizations to encourage women and minorities in science.

The Departmental website is a continual work-in-process, and is supplemented by individual lab group or faculty web sites. Most FE faculty agree that this is an effective means of communicating with prospective students.

FE allocates \$6,000 each year to assist graduate students in traveling to professional meetings to present thesis research, interact with students and scientists from other organizations, and otherwise enhance their professional development. This is a good opportunity for its female students to serve as ambassadors for its graduate program.

9. Establish a mentoring program for the female graduate students.

This is a work in progress that will be significantly better if it can hire a woman on the faculty. Most faculty who advise females make it a practice to include at least one woman on the graduate committee.

FE also encourages and financially supports student participation in professional meetings and conferences where women role models are likely to be present. In recent years, it have supported travel for women students to the Oregon Women in Higher Education Conference; National Association of University Forest Resources Programs

(NAUFRP) Conference; Council on Forest Engineering Annual Meeting (COFE); American Water Resources Association (AWRA) Annual Meeting; American Geophysical Union (AGU) Annual Meeting, Agronomy-Crop Science-Soil Science Society of America Annual Meeting; Canadian Operations Research Society Annual Conference; and 2nd International Conference on Mechanisms of Organic Matter Stabilization and Destabilization in Soils.

10. a. Continue to maintain levels of funding for graduate students including nominating students for competitive college and university-wide fellowships.

b. Pursue options for GTA positions for those students interested in teaching.

FE is the number-one department at OSU for fellowship support. According to recent Graduate School summary, FE students received nearly \$200,000 in fellowship and scholarships in 2005. The FE graduate committee is charged with recommending candidates to the DH for departmental awards and oversees the nomination process for COF and OSU awards. In the past two years, FE students have been nominated for every fellowship/scholarship available.

FE encourages engagement with teaching for those students who express an interest. Faculty have elected not to develop a policy that requires all students to have some form of teaching experience as a part of their graduate education.

There is some confusion about labels because the culture in the COF is not to award GTAs, but rather to employ them as GRAs (typically on a 12-month basis) and modify their position descriptions for the terms they engage in teaching. FE has provided opportunities for several PhD students to engage in meaningful team or independent teaching experiences since the last review. In at least two cases, women were selected for lower-division course assignments to provide role models for the UG women. Most PhD students are also encouraged to take courses designed to introduce students to teaching methods and course administration as a broadening requirement. It was suggested that for those students who do receive teaching experiences, there should be written documentation of their teaching evaluation, their effectiveness in the classroom, etc. This will be a valuable reference, should they decide to pursue an academic career.

11. Expedite the admissions process.

FE has worked hard to be responsive to prospective students, and to keep them apprised of their status via E-mail. It is continually challenged by its dependence on timely actions by others across campus. Actions required by the Graduate School and the Admissions office both frequently delay the Department's ability to make timely decisions regarding acceptance of a student. Internally it now converts all applications to a PDF for easy electronic review by faculty. It provides timely feedback to applicants about financial aid decisions in February, March, and April. There is probably room for continuous improvement, especially for early fall applicants when departmental financial aid decisions are not made for several months, and individual faculty do have grant funds

readily available at that time. Prospective students are informed of the FE departmental timelines on their website.

12. Be more proactive in identifying long-term research needs that integrate a wider range of resource issues and values and expand the hydrology and watershed research to involve all land-use regions, embracing the “ridges-to-reef” perspective identified in the OSU 2007 discussions.

Most FE faculty recognize and embrace a broader and more diverse mission for the Department, while also acknowledging that its primary unique strength is in planning for and designing forest operations, and understanding potential soil and water impacts. The broader mindset is well reflected in the proposal for a department name change, as well as revisions to the mission and vision statements in the FE strategic plan that it has worked to align with the COF and OSU strategic plans.

There are several success stories that include efforts to lead development of the PNW hydrologic observatory, the multi-land use studies within the Calapooia watershed, the LTER collaborations at the HJ Andrews, and the multi-disciplinary work underway in Hinkle Creek and soon in the Trask Watersheds. Several FE faculty are engaged in the new Institute for Water and Watersheds on campus, as well as the Water Resources and Environmental Sciences interdisciplinary graduate programs.

13. Recognizing that the research activities conducted by graduate students serve as the foundation of the Department’s research program, it needs to attract additional M.S. and Ph.D. students to maintain and strengthen its program. Current resource levels in the FE Department could support an additional five to six graduate students per year.

As noted in #1, the Department has worked to attract new students and its enrollment has grown as newer faculty developed OSU programs.

14. Greater emphasis on multi-collaborator competitive grant funding is needed in the future. Development programs and rewards are suggested to encourage faculty to compete for larger research projects that integrate many natural resource issues and require long-term, major funding. Collaborations with investigators either at OSU or elsewhere that have had past grant success might improve competitive grant acquisition.

As noted in #12, the Department has a number of multi-disciplinary and multi-collaborator projects underway. Some projects include OSU collaborators, others have local and regional agency collaborators, and a number of projects have national or international linkages.

Competitive grants remain rare, but most faculty are very capably supporting their research programs. COF Research Cooperatives and agency cooperative agreement funding remain the primary means of support for much of that work.

In some cases, the Department has not provided sufficient incentive to faculty to seek large competitive grants. Faculty have ample funds to support a modest research and graduate program and choose to pursue leadership roles instead of large-grant-generating infrastructures.

In other cases, FE has faculty eager to invest their energy in proposals and they have struggled to find targeted federal programs that include forest engineering themes. This has been demoralizing for some faculty who observe very limited opportunities from more obvious programs. The review committee's suggestion for successfully pursuing a major NSF grant was to collaborate with a PI known by the agency, which will tremendously increase the odds of funding. It takes time for faculty to build their reputation, establish a strong publication track-record, and to increase the reviewers' confidence that their project proposal will deliver as promised.

In summary, it is our assessment that the Department of Forest Engineering faculty have attempted to address the issues raised by the review team during the Graduate Program external review in Spring, 2003. We were informed that the recommendations made during the review stimulated considerable productive discussions among the FE faculty about the future of the Department. We also believe that despite the fiscal constraints on the Department, good progress has been made. It is our expectation that the Department will continue to work against these recommendations in the future.

Theresa Filtz (Pharmacy) asked McGorin for more information on FE's efforts to improve faculty diversity. She was interested to know if the unit had thought to hire a consultant or requested assistance from professionals on campus to learn how they can become more attractive to the people they want to hire. McGorin responded that he knew that the FE faculty had meetings to discuss how they could improve their attempts to recruit a female but he was not sure if they had contacted a consultant. Tom McLain (Forestry) added that faculty diversity is a major issue for the entire college and that units may need to consider hiring foreign female faculty as there are virtually no US females trained in the field (outside of OSU).

Michael Unsworth (Atmospheric & Oceanic Science) asked McGorin about the progress made towards compliance with the Graduate School's 50% rule. McGorin responded that the Master of Forestry students continue to be challenged in this regard and that the department does not have the teaching resources to open additional graduate standalone courses at this time. Bruce Rettig (Graduate School) suggested that a possible solution could be to utilize courses from other related departments to fulfill the requirement. Perhaps coursework from the new Water Resources interdisciplinary program can be considered.

Unsworth and Sally Francis (Graduate School) inquired if the negative publicity the department received recently is affecting graduate admission numbers and/or graduate student retention this year. McGorin replied that it seemed too early to tell and that his discussion with the department chair did not delve deeply into the controversy or its effects.

There was additional discussion regarding the Forest Engineering controversy and how the Council could encourage appropriate and successful mentor/student relationships in all the colleges. Unsworth felt that it is too soon for this discussion but he suggested that the dean of the College of Forestry should be invited to provide the Council an update (to inform the Council members of the progress the College has made toward addressing the issues) at an appropriate time. He suggested that fall would be soon enough. Rettig added that since Prasad Tadepalli (Engineering) and his review team is currently preparing a review report of the recent graduate program review of Forest Science, he will have the opportunity to bring attention to the need for better mentoring in the College as he discusses the subject as it relates to the Forest Science program.

A motion was made and seconded to approve the Forest Engineering Follow-up Review Report. All voted in favor. Motion passed.

2. Review of letters of intent for NSF GK12 programs

The Council members discussed the merits of the two letters of intent submitted.

A motion was made and seconded to select the “Be a Scientist” project. All voted in favor. Motion passed.

3. Code of Responsible Conduct/Ethics in Graduate Education/Mentoring Initiatives

Francis introduced Bill Boggess, President of the Faculty Senate, and Courtney Campbell (Philosophy) and explained that both men had participated in the recent Public Forum on Scientific Ethics, which was held in Valley Library on March 1. The Forum, sponsored by the Spring Creek Project at OSU and the university’s Philosophy Department was conducted to explore the process of science and public policy, which has drawn national attention following controversy about a group of faculty in Forestry who attempted to delay the publication in a scientific journal of research by a graduate student and several faculty co-authors. Francis then informed the Council that the Council of Graduate Schools (CGS) is offering small grants to fund training in the Responsible Conduct of Research (RCR). She asked the Council to consider whether or not OSU should pursue this funding and if so who would write the proposal and what type of program would be proposed. The deadline for proposals is August 14, 2006.

Discussion ensued. It was generally agreed that there is a need for training and that now is the ideal time to respond as a campus to the issue of responsible conduct. Council members brought forward ideas and concerns. Including:

- How is responsible conduct and mentoring taught? Do we develop workshops, seminars, coursework modules, web-based resource depositories, other?
- There will always be excuses not to train. We are too busy, we already participate in other mandated training, there is no room in the curriculum, etc.
- The training would have to be general so that it would be applicable to students and faculty from all fields. Or many different programs addressing the needs of individual research fields would need to be implemented.

- How do we ensure campus-wide participation?
- Could this be tied to the Graduate Program Review process?
- Do we engage in this training even without CGS support?

Discussion ended with Francis telling the Council members that she would be visiting with the Provost's Council and the Graduate Student Senate to measure levels of interest and support for submitting a proposal.

Meeting adjourned

Department Head, Chemical Engineering

SUBJECT: Three-year Follow-up Review Summary, Department of Forest Engineering

As external reviewers of the Department of Forest Engineering's (FE) Graduate Program in Spring, 2003, we are responding to your request to provide a synopsis of the Department's responses to the review team's recommendations. In a meeting with the Department Head, Steve Tesch and several of his faculty on April 5, 2006, we were able to collect the information summarized in this report.

Since the 2003 review, the Department's allocated budget from the College of Forestry (COF) has been relatively flat. The Department was successful in obtaining gifts from alumni and friends to establish a new endowment to offset the salary of an existing faculty member, and to support unendowed student fellowships. The faculty ranks have been stable during this time period; newer faculty at the time of the review have built new programs and recruited new students.

The review stimulated the faculty to have a number of conversations about the future of the Department; their reaction to shifting priorities in education, research, and the profession; and how to remain relevant within the College of Forestry, OSU, and their disciplines of interest. What follows are the FE Department's responses to the review team's specific recommendations:

1. Continue to maintain Departmental and College strengths, including premier faculty and research activities, facilities, great working relationships between the COF departments and with other OSU colleges and departments.

The FE faculty have been operating at full productivity since the review. Four faculty who were relatively new when the review was conducted have settled into their teaching, advising, and research programs. They are now providing many contributions to departmental teaching, scholarship, grantsmanship, service, and disciplinary leadership.

Since the review, some metrics include:

- Number of enrolled graduate students: 33 (fall 2005), up from 24 in 2003
- Percentage of PhD students: 61% (20), up from 54% (13) in 2003
- Established new graduate concentration in forest soil science

- Refereed journal articles: 33 (2004, data from annual reviews, 2005 now being compiled), up from 23 in 2002 (data from annual review)
- Books or book chapters published: 7 (2004), up from 2 in 2002
- Publications in press or review: 47 (2004 data), up from 22 in 2002
- Faculty research presentation: 94 (2004), up from 47 in 2002
- Research grants and contracts received: \$1.26 million in 2005 (calendar year) up from \$1.07 million in 2002.
- Fall term 2005, awarded \$131,252 in gifted departmental fellowships to fully-support 7 graduate students. Two more were funded by a COF endowment. Students also received supplement fellowships from Departmental, COF, and OSU sources that add to this total. This is the largest amount of donor-supported assistance for graduate students at OSU according to recent summary from the Graduate School.

2. Work toward a more timely process of Graduate Advisory Committee member identification to expedite development of course of study. In addition, graduate advisors should help monitor course offerings so as to minimize delay in curricular completion.

Most students adhere to Graduate School guidelines. The FE Grad Program advising guide is available on their Web page, as are OSU projections for future course offerings (though these are often subject to change.)

Increasing numbers of incoming graduate students arrive in early summer and work for a major professor. This enables them to get their feet on the ground and especially to meet fellow students who often have the best knowledge of professors' courses to favor, information about Department culture and procedures, etc.

At the fall FE orientation, the Department encourages incoming students to form their committee and plan courses for their program as soon as possible. Also it strongly encourages students to talk with other students about courses and instructors.

3. If a mismatch exists between the graduate student and major professor, work toward resolving the differences or facilitate identification of an alternative director of the graduate student.

This topic is now included in the FE fall orientation. It clarifies that the Department Head is person to see if there is a conflict, and that concerns will be taken seriously. There have not been any issues since the review.

4. Address the student concerns of lack of rigor in course work by reviewing the offering of 4xx/5xx courses and assure a graduate level of learning.

The FE Graduate Committee examined this issue carefully as the 50/50 rule was implemented. The slash-class issue is not a concern for hydrology and soils students, but remains a challenge for those in the harvesting and forest operations graduate program, especially Master of Forestry (MF) students. These MF students will be the most directly affected by the 50/50 rule also. The Department still has too few students in this area to justify substantial numbers of stand-alone graduate courses.

The Department is pilot testing an approach to clarify the graduate learning component by adding a 1-credit stand alone 5xx or 6xx graduate credit to supplement a traditional slash course. As it gains more experience with this approach, FE may eliminate the slash designation.

It is not an option to drop the graduate program in the harvesting area because OSU FE is the primary educational program for future faculty in the world.

- 5. Requirements and expectations for the MF degree as described in the Graduate Student Handbook need to be followed or if changed, they need to be better communicated to the applicants and incoming students. Alternatively, convert the MF option to a course work-only program to allow completion by self-funded students within as little as one year.**

The Department had lengthy discussions about the philosophical differences between the Master of Forestry (MF) and Master of Science (MS) degrees and some differences of opinion remain among the faculty. The FE Grad Advising Guide has been revised to clarify the intended differences so there is clearer “truth in advertising.” Most faculty agree the MF is a terminal professional degree, but some believe the primary difference is with the experimental rigor of the project required. One point of view is that an MF is appropriate if the project is a case-study with limited statistical rigor.

A Coursework-only MF has been discussed as a potential means to attract more graduate students, but has received lukewarm reception from the FE Department Advisory Committee.

- 6. Provide a college-level orientation for incoming students to gain understanding of forestry and activities within the College.**

An All-College graduate student orientation program was started in fall 2004. The FE Department orientation is held the same week to clarify some issues and “build community” among students advised by FE faculty (including Western Regional Graduate program (WRGP) and Environmental Sciences (ENSC) students.)

- 7. The Department needs to focus on increasing its diversity. The “grow your own” philosophy to expand faculty diversity is not perceived as the best approach. The department should develop a strategy to determine how to attract outside faculty hires and inquire of other Forestry departments to determine how they were able to achieve “new blood.” Commitment to diversity may require hiring of an individual who doesn’t match the current departmental mold and could lead to the bonus of expansion of research interests.**

Faculty diversity remains a challenge. The Department has not had an open faculty position since the last review. It tried to retain a recent female PhD graduate to improve gender diversity, but she was very aggressively recruited elsewhere and left to obtain a better position. The Department has several women PhD students currently in-progress; it believes that it can educate them, send them off to gain experience and recruit them back to campus in the future. Virtually no other programs are educating women with PhDs in forest operations.

When future tenure-track faculty openings occur in the forest hydrology and soils area, this is the most probable opportunity for the Department to quickly build gender and ethnic diversity, given the observations above. The recommendation of the reviewers is that the FE Department,

with the support of the College of Forestry, needs to proactively work towards hiring a woman on its faculty at the earliest occasion.

The Department has been more successful in hiring women for post-doc and FRA positions, and has worked to engage students with these folks in the research area.

To assist in recruiting more diverse international students, the Department had its Graduate Student Recruitment Brochure translated into Spanish. This was distributed at technical conferences.

8. a. Maximize the utility of the Department web site for recruitment to build diversity in the student population.

b. Enhance visibility of the programs by participating in outreach programs and professional organizations to encourage women and minorities in science.

The Departmental website is a continual work-in-process, and is supplemented by individual lab group or faculty web sites. Most FE faculty agree that this is an effective means of communicating with prospective students.

FE allocates \$6,000 each year to assist graduate students in traveling to professional meetings to present thesis research, interact with students and scientists from other organizations, and otherwise enhance their professional development. This is a good opportunity for its female students to serve as ambassadors for its graduate program.

9. Establish a mentoring program for the female graduate students.

This is a work in progress that will be significantly better if it can hire a woman on the faculty. Most faculty who advise females make it a practice to include at least one woman on the graduate committee.

FE also encourages and financially supports student participation in professional meetings and conferences where women role models are likely to be present. In recent years, it have supported travel for women students to the Oregon Women in Higher Education Conference; National Association of University Forest Resources Programs (NAUFRP) Conference; Council on Forest Engineering Annual Meeting (COFE); American Water Resources Association (AWRA) Annual Meeting; American Geophysical Union (AGU) Annual Meeting; Agronomy-Crop Science-Soil Science Society of America Annual Meeting; Canadian Operations Research Society Annual Conference; and 2nd International Conference on Mechanisms of Organic Matter Stabilization and Destabilization in Soils.

10. a. Continue to maintain levels of funding for graduate students including nominating students for competitive college and university-wide fellowships.

b. Pursue options for GTA positions for those students interested in teaching.

FE is the number-one department at OSU for fellowship support. According to recent Graduate School summary, FE students received nearly \$200,000 in fellowship and scholarships in 2005. The FE graduate committee is charged with recommending candidates to the DH for

departmental awards and oversees the nomination process for COF and OSU awards. In the past two years, FE students have been nominated for every fellowship/scholarship available.

FE encourages engagement with teaching for those students who express an interest. Faculty have elected not to develop a policy that requires all students to have some form of teaching experience as a part of their graduate education.

There is some confusion about labels because the culture in the COF is not to award GTAs, but rather to employ them as GRAs (typically on a 12-month basis) and modify their position descriptions for the terms they engage in teaching. FE has provided opportunities for several PhD students to engage in meaningful team or independent teaching experiences since the last review. In at least two cases, women were selected for lower-division course assignments to provide role models for the UG women. Most PhD students are also encouraged to take courses designed to introduce students to teaching methods and course administration as a broadening requirement. It was suggested that for those students who do receive teaching experiences, there should be written documentation of their teaching evaluation, their effectiveness in the classroom, etc. This will be a valuable reference, should they decide to pursue an academic career.

11. Expedite the admissions process.

FE has worked hard to be responsive to prospective students, and to keep them apprised of their status via E-mail. It is continually challenged by its dependence on timely actions by others across campus. Actions required by the Graduate School and the Admissions office both frequently delay the Department's ability to make timely decisions regarding acceptance of a student. Internally it now converts all applications to a PDF for easy electronic review by faculty. It provides timely feedback to applicants about financial aid decisions in February, March, and April. There is probably room for continuous improvement, especially for early fall applicants when departmental financial aid decisions are not made for several months, and individual faculty do have grant funds readily available at that time. Prospective students are informed of the FE departmental timelines on their website.

12. Be more proactive in identifying long-term research needs that integrate a wider range of resource issues and values and expand the hydrology and watershed research to involve all land-use regions, embracing the "ridges-to-reef" perspective identified in the OSU 2007 discussions.

Most FE faculty recognize and embrace a broader and more diverse mission for the Department, while also acknowledging that its primary unique strength is in planning for and designing forest operations, and understanding potential soil and water impacts. The broader mindset is well reflected in the proposal for a department name change, as well as revisions to the mission and vision statements in the FE strategic plan that it has worked to align with the COF and OSU strategic plans.

There are several success stories that include efforts to lead development of the PNW hydrologic observatory, the multi-land use studies within the Calapooia watershed, the LTER collaborations at the HJ Andrews, and the multi-disciplinary work underway in Hinkle Creek and soon in the Trask Watersheds. Several FE faculty are engaged in the new Institute for

Water and Watersheds on campus, as well as the Water Resources and Environmental Sciences interdisciplinary graduate programs.

- 13. Recognizing that the research activities conducted by graduate students serve as the foundation of the Department's research program, it needs to attract additional M.S. and Ph.D. students to maintain and strengthen its program. Current resource levels in the FE Department could support an additional five to six graduate students per year.**

As noted in #1, the Department has worked to attract new students and its enrollment has grown as newer faculty developed OSU programs.

- 14. Greater emphasis on multi-collaborator competitive grant funding is needed in the future. Development programs and rewards are suggested to encourage faculty to compete for larger research projects that integrate many natural resource issues and require long-term, major funding. Collaborations with investigators either at OSU or elsewhere that have had past grant success might improve competitive grant acquisition.**

As noted in #12, the Department has a number of multi-disciplinary and multi-collaborator projects underway. Some projects include OSU collaborators, others have local and regional agency collaborators, and a number of projects have national or international linkages.

Competitive grants remain rare, but most faculty are very capably supporting their research programs. COF Research Cooperatives and agency cooperative agreement funding remain the primary means of support for much of that work.

In some cases, the Department has not provided sufficient incentive to faculty to seek large competitive grants. Faculty have ample funds to support a modest research and graduate program and choose to pursue leadership roles instead of large-grant-generating infrastructures.

In other cases, FE has faculty eager to invest their energy in proposals and they have struggled to find targeted federal programs that include forest engineering themes. This has been demoralizing for some faculty who observe very limited opportunities from more obvious programs. The review committee's suggestion for successfully pursuing a major NSF grant was to collaborate with a PI known by the agency, which will tremendously increase the odds of funding. It takes time for faculty to build their reputation, establish a strong publication track-record, and to increase the reviewers' confidence that their project proposal will deliver as promised.

In summary, it is our assessment that the Department of Forest Engineering faculty have attempted to address the issues raised by the review team during the Graduate Program external review in Spring, 2003. We were informed that the recommendations made during the review stimulated considerable productive discussions among the FE faculty about the future of the Department. We also believe that despite the fiscal constraints on the Department, good progress has been made. It is our expectation that the Department will continue to work against these recommendations in the future.

Letter of Intent -- 2006 GK-12 Solicitation

Project: *Clustering Computer Science with Science, Mathematics, and Engineering for the Enhancement of STEM Learning in Oregon's Middle and High Schools*

PI Margaret Burnett (Electrical Engineering and Computer Science (EECS), COE)

Co-PIs: Carlos Jensen (EECS, COE); Maggie Niess (Science and Mathematics Education (SMED), COS); Skip Rochefort (Chemical Engineering, COE, also OSU Precollege Programs); Tom Plant (EECS, COE); Janine Trempy (COS); Weng-Keen Wong (EECS, COE)

Faculty advisors and departments involved: *Computer Science Fellows* recruited from EECS and *Content Fellows* recruited from any all science & engineering depts at OSU.

Number of graduate fellows per year: Nine (9) fellows per year distributed as 3 (EECS), 6 (COS, COE, COAS, CoAg) plus 9 undergraduate students per year from the same areas.

Number of K-12 classes anticipated to be served per year: 6 classes per year, 30 over 5 years.

Number of K-12 teachers working with the fellows per year: 6 teachers per year, 30 over 5 years.

School District Partners: Corvallis; Albany; Lincoln (Siletz Charter & Early College High School); Alsea; Salem; Lebanon; Sweet Home

Target Audience of the Project Middle School and High School

Setting Urban, suburban and rural

NSF supported disciplines or theme(s) involved: Science, Math, Engineering, and Technology

PROJECT DESCRIPTION

a. Goals and Objectives

The goals and objectives of this project are many given the large number and diversity of stakeholders involved. Given the brevity of this pre-proposal we will only touch on the core goals and objectives. Roughly speaking, these can be divided into goals for the Fellows, goals for the schools, and goals for the departments and colleges involved.

OSU Schools, Departments & Colleges

- **Diversity of students:** This program is an ideal opportunity to recruit and support diversity, especially in the school of EECS and Engineering, which are dominated by male technology focused students. This program will support and emphasize human-centric computing and engineering opportunities, hopefully attracting a more diverse student population.
- **Interdisciplinary experiences:** In a time when funding agencies like the NSF is increasingly valuing interdisciplinary collaboration, this program represents a golden opportunity to start and promote interdisciplinary research on campus from the “grass-roots” level (i.e. graduate students), better preparing our students for the future as well as giving faculty advisors and mentors opportunities for joint research efforts.
- **Extension & outreach:** This program and the close contact it brings with local schools provide opportunities to make a real impact on the community. By engaging the local educational community we can ensure that our research is adopted, and that it remains relevant. We will also examine successful approaches to technology integration in STEM disciplines, and disseminate these nationally.

Schools & Teachers

- **Assistance to teachers** in developing and teaching hands-on, inquiry-based problem-based learning activities integrating computers and technology instruction. This is a change mandated in all K-12 education; teachers are expected to teach both **with** and **about** technologies as part of their specific STEM curricula, something which many teachers have

not been prepared to do. The Fellows will therefore provide important and needed support to teachers by serving as technology and content advisors.

- **Enriched opportunities for students:** By showing how technology and computers are part of every aspect of STEM, and through interaction with the graduate students, we will show K-12 students that computing, science, and engineering are dynamic and interesting, and change stereotypes about these fields. By targeting middle and high-schools we seek to intervene when research shows students start to shun science and technology education.

Fellows

- **Interdisciplinary opportunities:** Employers and funding agencies are increasingly emphasizing the importance of interdisciplinary research and the skills to work effectively as a team. As part of this program the fellows will be required to work together in interdisciplinary clusters, as well as with teachers and K-12 students.
- **Real-world focus:** By working with schools, teachers and students to develop and present curriculum, our students will gain valuable and unique experience with real world problems.
- **Improved communication skills:** Fellows will receive specific instruction in communication and pedagogy as part of this program and engage in extensive research and reporting activities. This will enable them to not only become more confident and skilled communicators, but give them valuable insight into the learning process, in particular with learning **with** and **about** technology (computer science).

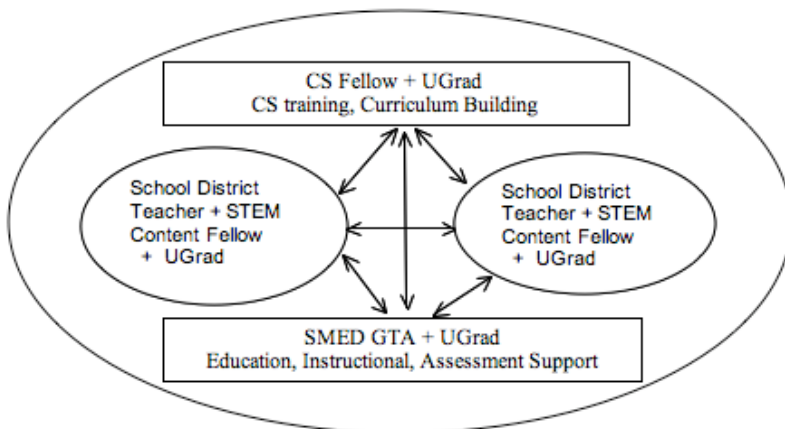

b. Project Plan. Our goal is to engage Fellows in the delivery of science, engineering and mathematics curriculum to a broad audience of students and teachers, with a very specific and focused attention to the *novel integration of computers* in the delivery and explanation of this content. This focus mirrors the needs of K-12 schools, currently seeking to integrate technology education into each subject area. Thus teachers are now expected to teach both **with** and **about** technologies integrated in their specific STEM curricula. Unfortunately, current teachers have not been prepared for this additional requirement and the assistance of the Fellows will provide important and needed support. Fellows will be appointed for a period of one year. Their activities in that year will be divided into three phases (see figure below): I) Training and Preparation, II) In-school Engagement, and III) Outreach. It should be noted that Phase III spans the entire period of involvement by the Fellows, as the extensive outreach programs available at OSU will be used for Fellow training in the summer prior to their in-school activities, and also to encourage their *lifelong involvement in education* through connections with K-12 outreach programs at OSU.

A unique aspect of this proposal is the **School Cluster Model** composed of Fellows, K-12 teachers (middle or high school), and undergraduates. Each cluster contains two teachers, three undergraduates, and three Fellows. Each cluster has two types of Fellows; two *Content Fellows* (from appropriate STEM disciplines), and a *Computer Science* (CS) Fellow. The *Content Fellows* work directly with a teacher in his/her content area to develop curriculum, while the *CS Fellow* seeks to enhance the presentation and delivery through the integration of computers and technology. This instruction will involve technology education (for Fellows, teacher, and K-12 students) combined with innovative uses of computer science techniques (data-mining,

visualization, simulation, etc.). A SMED RA (who is NOT a GK-12 Fellow) will be brought in to work with **all** the clusters, providing guidance and support for the fellows, and assisting in the evaluation and data gathering. The undergraduates will provide additional assistance and be mentored by the Fellows. The undergraduates will train in the first year, and then assume a more active role of teacher support as the graduate Fellow moves to another classroom. This provides some support for teachers once the Fellows move on to other classrooms and teachers.

School Cluster Model

Each cluster is assigned as a school team for the academic year. Each Fellow will spend a minimum of 10 teaching hours pre week at the school and five hours per week in preparation. The clusters will collaborate to develop and implement hands-on, inquiry-based, problem-based learning

activities. The Project Coordinator and SMED RA will observe in-class activities and provide feedback on performance and effectiveness. K-12 Teachers will monitor the Fellows and communicate directly with the Leadership Team. During spring term, the clusters will hold a Symposium highlighting the progress in their schools. This Symposium will be used for encouraging additional participation as well as to jump-start efforts for the following year.

Each Fellow must take 6 graduate credits summer workshop (directed by the SMED faculty and graduate assistant, with the support of the K-12 teachers) to develop relations within their cluster, explore problem-base learning, and plan lessons and activities for the upcoming academic year with their teacher. This workshop will include:

- Team-building activities in support of clusters and among clusters
- Experiences in hands-on, inquiry-based, problem-based learning
- Experience and instruction in the scientific and engineering processes and traditions.
- Exploring process learning skills, constructivism, cooperative learning, inquiry, and effective questioning strategies effective in problem-based learning
- Exploring lessons that integrate technology instruction along with a focus on science and mathematics curriculum identified in their proposed school placements
- Designing curricular ideas focus on alignment with national, state, and local standards for mathematics, science, and technology education, with a special focus on teaching science and mathematics **with** and **about** instructional technologies
- Practice teaching with their peers and students in various outreach programs
- Reflecting and refining plans for instruction in the Fall

c. Recruitment and Selection. *CS Fellows* will be recruited specifically from Computer Science and *Content Fellows* from any other STEM graduate program at OSU. Graduate students (M.S. and Ph.D. candidates) in their second and third years of graduate school will be targeted. First year graduate students are not recruited because they typically take heavy course loads and their content knowledge is not as well developed. In January of each year, a broad call for applications will be sent by email to all eligible students in the OSU STEM departments. Faculty will be invited to nominate candidates and all graduate students with disabilities or who are

underrepresented in their programs (including African American, Hispanic, and Native American students in all programs and women in engineering, physics, and mathematics) will receive a personal invitation to apply.

Selection of graduate students is one of the most critical steps to the success of the program, and we will build on the experience of a previous GK-12 program in developing this process. The selection committee will consist of two teachers, two faculty members from the participating graduate programs, and one faculty member from SMED, will reviews applications. Interviews will be conducted with top candidates to make the final selection. Primary criteria for selection of fellows includes: 1) expressed and demonstrated interest in science outreach and interdisciplinary work, 2) expressed or demonstrated interest in teaching, 3) ability as indicated by curriculum vitae, letters and other information, 4) "fit" to selected schools and grade levels, 5) disciplinary fit, and 6) contribution of the applicant to the diversity of the cadre of fellows. The first three criteria address the qualification of the applicant. The final three primary criteria address our desire to have a balanced cadre of Fellows that reflects 1) the breadth of our project (computing, sciences, engineering, and mathematics), 2) our desire to place fellows in middle and high schools, and 3) supporting and promoting diversity.

Selection of GK-12 Teachers will be based on recommendations of school principals, and ongoing working relationships with OSU faculty. This simple selection procedure proved to be highly successful in the previous GK-12 program and will be continued.

d. Organization, Management and Institutional Commitment. This proposal was developed in a series of meetings involving the PIs and Co-PIs. This Collaborative Team will be actively involved in the program administration along with a Program Coordinator (to be named) and the External Evaluator (NWREL) to complete all program assessments to demonstrate progress with the program goals and objectives. Within the overall grant, separate accounts will be established, with funds allocated as described in the budget document for this proposal. An Internal Advisory Board will consist of key administrators (deans, associate deans, and department chairs from both colleges).

e. Evaluation. The *Northwest Regional Educational Laboratory (NWREL)* will provide the external evaluation services for this project through the *Research and Evaluation* unit of the *Center for Teaching and Learning* (Edith Gummer, Director). NWREL staff will determine the evaluation components needed to provide evidence of work toward the project goals and objectives and of the sustainability of the program. NWREL staff will conduct yearly site visits and focus group interviews to prepare a report about what is working and what is not. Each yearly report will be formative in nature to assist the project participants in moving forward with successful programs. Over the five years, NWREL will work with the project staff and participants to provide a *summative evaluation* providing evidence of the sustainability of the program.

f. List of Faculty Participants (not including PI and co-PIs). Lundy, COE, Associate Dean; Arp, Bot & Plant Pathology; Wright, Geosciences; Dick, Mathematics; Bogley, University Honors College (Mathematics); Flick, SMED; Momsen, COE, Director, Women and Minorities in Engineering; Haak, Chemistry; Metoyer, EECS; Bailey, EECS.

Letter of Intent
2006 NSF – Graduate Teaching Fellows in K-12 Education (GK-12) Program

Title of Project: Oregon State University GK-12: ‘Be A Scientist’ in Rural Oregon

PI/Co-PI: Sujaya Rao / Ed Jensen

Faculty advisors and departments involved:

Name	Role in Project	Discipline / Department
S. Rao	PI	Entomology / Crop and Soil Science
E. Jensen	co-PI	Ecology & education / Forest Resources
D. Wooster	Faculty Resource	Aquatic ecology / Fisheries and Wildlife
E. Sulzman	Faculty Resource	Soil ecosystems/ Crop and Soil Science
H. Stotz	Faculty Resource	Post harvest technology / Horticulture
J. Noller	Faculty Resource	Soil mapping / Crop and Soil Science
M. Dragila	Faculty Resource	Hydrology/ Crop and Soil Science
P. Hayes	Faculty Resource	Plant breeding / Crop and Soil Science
R. Halse	Faculty Resource	Botany / Botany and Plant Pathology
S. DeBano	Faculty Resource	Ecology / Fisheries and Wildlife
E. Davis-Butts	Collaborator	Education / SMILE Program
M. Dalton	Collaborator	Education / School of Education
R. Collay	Collaborator	Education / SMILE Program
S. Bottoms	Collaborator	Education / SMILE Program

Number of graduate fellows per year: 10

Number of K-12 classes anticipated to be served per year: 15-20

Number of K-12 teachers working with the fellows: 10-15

School District Partners: (SD = School District; Superintendents in parenthesis): Alsea SD (J. Larson); Central Linn SD (M. Harrell); Hermiston SD (J. Nelson); Falls City SD (P. Tarzian); Grant SD (N. Cleaver); Great Albany SD (P. Bedore); Lebanon Community SD (J. Robinson); Monroe SD (R. Crowson)

Target audience of the project (middle, high or elementary grades): Elementary and Middle School

Setting (urban, suburban or rural): Rural

NSF supported disciplines or theme(s) involved: Biological Sciences (Organismal and suborganismal), Environmental Sciences

Project Description: In the Track I GK-12 program (2002-2005), OSU Fellows developed and implemented inquiry-based hands-on activities in rural schools near Corvallis. In the current proposal we will build on our Track I successes and extend the program regionally, nationally, and globally. OSU Fellows will provide rural students with a scientist's experience to generate excitement about science, change stereotypic perceptions of scientists, and provide rural youth access to advances in science and technology to prepare them for tomorrow's global competition. OSU Fellows will develop and implement inquiry-based hands-on, experiential activities that are: 1) based in the environments surrounding participating schools, and involving local communities (place-based), 2) connected with OSU research, and 3) linked to schools globally.

This is a resubmission of the 2005 Track II proposal which was **Recommended for Funding** by the review panel but not funded. Reviewer comments include: "The panel was impressed with both the intellectual merit and broader impact of proposal"; "Breadth of STEM areas that were included in the effort was impressive"; "The focus on rural schools and the reach that the Track I had were viewed as strengths"; "The Science Blitz effort was considered to be a "creative addition", "an important model for rural initiatives" and an approach "that other programs with an opportunity to serve remote areas might emulate"; "the willingness of local communities to provide accommodation for fellows is also indicative of a high level of community support". The evaluation plan was considered to be "first-rate" by one reviewer as "qualitative and quantitative metrics are tied directly to the goals, objectives and activities". The NSF Program Manager encouraged resubmission; she indicated that the proposal had merit but was not funded due to funding limitations. As with other programs, many proposals funded in 2005 represented resubmissions. She also indicated that, while universities can submit New Awards in the future, this is last year for submission of renewals ('Continuing Projects'), such as the current proposal.

Goals and objectives: Goals for each of the diverse groups collaborating in the project are to:

1. (OSU graduates) Add value to their graduate experience by enhancing science communication skills and professional development opportunities
2. (Rural K-12) Enrich rural science education by integrating scientific inquiry with landscapes surrounding schools, with university research, and with international schools
3. (Rural Teachers) Involve rural science teachers in professional learning communities and professional development workshops
4. (OSU faculty) Institutionalize GK-12 opportunities at OSU for program sustainability

Project Plan: Ten OSU Fellows will be selected each year and provided the following training in the summer: 1) Three-week summer course covering inquiry-based learning, rural community characteristics, student engagement, curriculum design, etc., 2) Week-long team building workshop organized by SMILE, and 3) Three-day planning retreat with teachers for discussions on schedules, classroom resources, dress codes, etc. In addition, during a Special Topics course each term, topics covered in summer will be revisited, and challenges faced will be addressed.

Place-based Approach and Integration with University Research: OSU Fellows will be placed in rural schools for developing lessons that will involve the local landscape and be connected with university research. To provide rural students with a scientist's experience, they will guide them through activities that scientists engage in: asking questions, designing experiments, conducting investigations, collecting data, drawing conclusions, and presenting results to peers.

This approach was piloted in 2005-2006 in 3 schools through the Discovering Partners in Nature Program funded by Toshiba America Foundation (TAF). An OSU graduate student

guided students as they collected flowers and trapped bees around schoolyards, and developed these into a permanent collection at each school. Students visited the scanning electron microscope at OSU to compare pollen samples from bees and flowers to discover which bees pollinate which flowers. They will present their results during a campus conference on May 18th 2006 to be attended by university /school administrators, parents, stakeholders, and the TAF President. This program has the added value of being part of a larger OSU research study on bee diversity. The pollination project will be used as a model for developing similar lessons on OSU research topics of local relevance such as invasive species, salmon, and non point source pollution in Oregon Rivers, for integrating OSU research with rural science education.

Program Extension-Regional: In rural schools a distance away from Corvallis, a Science Blitz, suggested by teachers in John Day, will be adopted. In each term, select OSU Fellows will initially spend 3 weeks in intense planning, then travel to remote schools and spend 3 weeks providing science instruction in as many classrooms as possible. Fellows will then proceed to another remote school and provide a similar Science Blitz. Lessons will cover the ecology of the school surroundings, such as the fossil beds in John Day and agroecosystems in Hermiston. Accommodation for the Fellows will be provided by the community.

Program Extension-National: In collaboration with a national NSF program, we will develop an interface for submission of K-12 curricular items developed by OSU Fellows to a National Science Digital Library that will enable us to align our lessons not only to Oregon standards but to national standards as well, thereby increasing their availability to teachers nationwide.

Program Expansion-International: We will partner with OSU's Corroboree 4-H Across the Sea Program, a web-based curriculum through which students in the U.S. and Australia participate in hands-on activities related to local habitats, and exchange results via the web. Corroboree will be implemented by OSU Fellows in the GK-12 program to provide rural students with a global perspective of the environment, and to build technology skills in teachers for program sustainability. It will also be expanded to include new partners in China and India.

Program Impacts: OSU Fellows will gain experiences in scientific communication and team work. Each Fellow will make a presentation on their experiences in a department seminar, and prepare a peer-reviewed manuscript. Rural students will gain unique opportunities to explore nature and make discoveries in their communities. The lessons will expose them not only to science, but to OSU as well. It will provide a diversity of role models (particularly women and minorities), enabling rural students to envision themselves as future college students, and scientists. The close interaction with OSU, strengthened by involving rural youth in university research, and visits to technological facilities on campus, will facilitate changes in stereotypic perceptions of scientists, alleviate fears about science, and motivate students to consider science careers. For teachers, a Professional Learning Community will be initiated to help alleviate their isolation, and to provide mentorship. Teachers will also participate in grant writing and action research workshops to be organized at OSU. For program sustainability at OSU, a Rural Science Education Fund has been established in CSS, and additional grants have been received / submitted. In addition, a new course on Science Education and Outreach is being offered.

Recruitment and Selection: Graduate students will be selected from science disciplines based on merit, enthusiasm, and performance in an interview. As per NSF specifications, no graduate student pursuing a degree in science education will be recruited, and Fellows will be supported for no more than 2 years. Preference will be given to underserved minority students and to those from rural communities. Using these criteria, in Track I we recruited 39 Fellows (18 graduate and 21 undergraduates) of which 2.5 % were Native American, 2.5 % African
