The Council had no comments on or amendments to the minutes from the last meeting (January 25, 2001).

2. Bioengineering Category I proposal

Joseph McGuire (Bioresource Engineering) presented the Category I proposal for the initiation of new instructional programs leading to MS and PhD programs in Bioengineering. The undergraduate program already in place was approved in 1996, and discussions about MS and PhD programs began two years ago. Such programs would be unique to Oregon. The only other such program in the Pacific Northwest is offered at the University of Washington, and that program has served as a model for the current proposal. The UW philosophy of approach is similar to OSU's: encourage students from different fields (chemical engineering, etc) but require that all students have some level of competency in bioengineering. The UW bioengineering program receives about 300 applications each year for approximately 25 openings, which indicates a real market for the program.

The Department has identified approximately 30 faculty members in various departments with interests in bioengineering research. It has also decided to hire three additional faculty members and conduct the program through the Department of Bioresource Engineering instead of conducting it interdepartmentally.

The Department has received support from the Whitaker Foundation, whose main interest is in biomedical enhancements. While such applications of bioengineering make the program more attractive for some, the Department hopes to also emphasize other applications that require integrating biology at multiple levels and for varied problems.

Dr. McGuire admitted that OSU lacks a program in medical sciences, which often complements a bioengineering program. The Department has sought to overcome this deficiency by creating strong ties with the College of Veterinary Medicine and with Good Samaritan Hospital of Corvallis. The College of Veterinary Medicine offers facilities for studying such things as post-operative care and is willing to help with using animals for research that is to benefit humans. There is representation from the hospital on the advisory board for the new program, and other medical professionals in Portland are willing to provide lectures. The hospital also has lab space and other resources available. The Department is committed to purchasing whatever books are needed to enhance the Valley Library's collection of bioengineering resources, but it has not yet pinned down where those funds will come from.

Dr. McGuire added that the Department plans to approach the College of Business to elicit help making sure the program, through coursework and experiential learning, meets the needs of business. The Department's advisory board includes several members from the business/industry community, and the Department has made a commitment to meet their needs and address their concerns.

Following Dr. McGuire's summary of the proposal, Sue Tornquist (chair, College of Veterinary Medicine) dismissed the guests. The Council's initial discussion was minimal, with comments that it was an excellent

program and the timing was good for it. A motion for approval was made and seconded.

Following the second of the motion, Paul Cull (College of Engineering) raised a concern about whether the Department of Computer Engineering was represented in those signing off on the project. Some faculty members in that department have worked with biological models for years, and he wanted assurance that their interests were not undercut. After discussion, most Council members agreed that Computer Engineering was represented in the signature of Chris Bell (Dean of College of Engineering) and thus had opportunity for input.

The Council voted on the proposal: Seven were in favor, 1 opposed, and one member abstained. The proposal passed.

The proposal will now move to the Curriculum Council, and the suggestion was made to ask the Curriculum Council to verify the liaison for Computer Engineering before the taking.

3. MBA Program Review Follow-up Report

Court Smith (College of Liberal Arts) presented the follow-up report on the MBA program. Currently, the College of Business is revising the MBA program, and will submit a proposal soon. The proposal will address all the issues brought up in the review (e.g. recruiting issues, resource issues, graduate faculty issues). Since the Graduate Council will address these issues again when the proposal is submitted, it did not engage in lengthy discussion.

A motion to approve the review and forward it to Provost White was made and seconded. All were in favor.

4. Approval to Proceed with Thesis Examination

Doug Markle (College of Agriculture) led the discussion on the Approval to Proceed form that is required before graduate students submitting a thesis can schedule their exams. Council members received a copy of the form, which states that, by signing, committee members ♦ have had sufficient opportunity to review the examination copy of this student ♦'s thesis ♦. The Graduate Catalog states that at least two weeks before the final exam, an exam copy of the thesis must be presented to the Graduate School and the oral exam must be scheduled.

Instead of providing committee members with copies of the thesis well in advance, students typically hand the Approval to Proceed form and the thesis to committee members at the same time, two weeks before they plan to take the exam. This means they need to schedule the exam immediately, and thus need the form signed before committee members can review the thesis. Some Council members reported receiving the form even before receiving the thesis. Dr. Markle suggested removing the wording that implies any evaluation prior to exam, replacing it with something akin to the following statement:

I have received the thesis as listed above and I agree that the final oral exam should be scheduled.

Discussion included whether changing the wording would change the philosophy behind it, which is based on a committee reading a thesis and working with the student after having read the thesis. The intent of the form is to ensure this practice happens routinely. If the form is unsuccessful in its purpose it may be doing more harm than good by putting faculty in the uncomfortable position of feeling pressured to sign a form to avoid delaying a student ♦'s exam, or signing something that is not true.

Dr. Smith suggested that the key to compliance with the philosophy was improving guidance from major professors, and felt that changing the language may dilute the educational value of the exam process. Other concerns included the possibility of increasing the likelihood of exams proceeding with unacceptable theses, but most Council members agreed that this occurrence was too rare to influence the decision about changing the language.

Other discussion included complaints about forms in general, and the possibility of making all forms available for electronic submission. Sally Francis (Interim Dean, Graduate School) pointed out that the Graduate School does not currently have that capability, and getting it would require more funds and more labor by Graduate School staff. Bruce Rettig (Associate Dean, Graduate School) indicated that such changes involve administrative implementation and do not require changes in policy, but the Council ♦'s input is valuable.

Suggestions from Council members concerning the Approval to Proceed form included creating a form that circulates among committee members before the two-week deadline with the stipulation that the thesis must be given to committee members two weeks before the exam. This form would simply give the committee

members an advance warning of the upcoming exam, prompting them to address concerns ahead of time.

The discussion ended with Associate Dean Rettig calling for suggestions and comments about how to improve the process, and agreeing to work with the Graduate School staff to develop new options.

5. PhD Residency Requirements

Maggie Niess (Graduate Admissions Committee) led a discussion about PhD Residency Requirements. Some view the requirement as conflicting with the OSU philosophy that ♦Oregon is our campus♦ as well as with distance education initiatives. The issue also becomes problematic if students are taking courses offered on campus as well as at a distance, or if students are using their dissertation hours for their residency requirement. No one is able to track them and verify that they are, in fact, on the Corvallis campus.

Dean Francis suggested it is appropriate to reconsider how we define residency in 2001, now that technology has enabled remote access to many resources. The residency requirement appears to be a barrier that could (and does) prevent prospective students from considering graduate work at OSU. The issue raises questions about the definition of mentoring, the principles of graduate education, and the value of daily contact and conversations with advisors and peers. Current technology and graduate student demographics (more married, older, working students) challenge many previous notions about how graduate education works. This university may soon be outdated unless the definition of residency is reconsidered. Associate Dean Rettig noted that the philosophy behind the requirement is that at least three terms of interaction with faculty and other students and access to the library is necessary, and he wondered if this philosophy was outdated.

While some Council members felt strongly that a student should be on campus, others wondered if the requirement could be changed so that the credits must be OSU credits, with no stipulation of location. Another suggestion was that departments could define residency for their individual programs. Further discussion led to questions about requiring full-time status.

Dr. Cull suggested tabling the issue until a later date. Dr. Tornquist suggested that Associate Dean Rettig create a document that clearly outlines the basic PhD requirements with the residency requirements for the Council to review. It would also be helpful to see how peers institutions are handling residency issues. The topic will be revisited at some time in the future.

6. Graduate Faculty Status

Mary Prucha (Coordinator of Graduate Services), a member of the Faculty Senate Executive Committee described continuing concerns of that group with the procedures to revoke graduate faculty status. The Committee is concerned that the recently adopted policy of the Graduate Council that requires that removal of graduate faculty status must be endorsed by academic deans did not fully address their earlier concerns. They suggested that signatures provided by deans were done with little attention to the action they were approving. The Committee felt that if a real breakdown in communication occurred, it was between the department chair and the faculty member being removed, and they requested consideration of additional language requiring that the department head contact the faculty member prior to his/her removal from graduate faculty. Prucha understood that the Committee would want a letter sent in advance of the removal, which would provide opportunity for dialogue. The letter would be part of a consultative process since the department chair does not have authority to remove graduate faculty without the dean's approval.

The Council will need to decide if this would be required only for regular faculty who are being removed or for adjunct or courtesy faculty as well. Associate Dean Rettig will draft supplemental language for the Council to approve. A straw vote was taken, and all members present thought that there should be communication between the faculty member and the dean prior to removal.

7. Conditional Admission Requirements

Dr. Niess opened a discussion about conditionally admitted students. These students cannot serve as graduate assistants and must achieve an average GPA of 3.25 on the first 18 credits they take as graduate students. Both of these items draw debate and criticism. Some believe that requiring a 3.25 is unfair because it expects higher achievement from conditionally admitted students than from regular students. Others believe that it simply requires students who were not otherwise acceptable to demonstrate that they can score grades higher than a ♦B,♦ thus proving they can be successful in graduate school. Additionally, there have been situations in which students who would otherwise have been admitted as conditional were admitted provisionally so that they could hold an assistantship.

Dean Francis addressed the assistantship issue by saying that the Graduate Dean can grant exceptions to that rule. In such a situation, the student should not have been admitted provisionally because, by definition, they did not meet the requirements for provisional admission (3.0 GPA).

Dr. Tornquist sought to clarify the issues, asking if Dr. Niess was proposing that the 3.25 requirement be changed. She was not making such a proposal, but rather raising the issue because it keeps coming up. Associate Dean Rettig mentioned that he, too, had received requests for the Graduate Council to review conditional admission. One question that arose was whether conditional admission was part of a true policy, or whether it was simply Graduate Admissions Committee practice. The crux of the issue was the fairness of the practices and whether the categories of admission need to be redefined or the associated rules need to be changed.

The discussion was tabled, with Associate Dean Rettig suggesting that Council members get opinions and views from their respective colleges. Dr. Tornquist announced that the issue would be revisited.

8. Other Business/Assignments

Future meetings of the Graduate Council are scheduled for:
Thursday, February 22nd 3:00-5:00pm 650 Kerr Admin. Bldg.
Thursday, March 8th 3:00-5:00pm 650 Kerr Admin. Bldg.
Thursday, March 22nd 3:00-5:00pm 650 Kerr Admin. Bldg.

Graduate Council

January 25, 2001 Minutes

Present: Tornquist (Chair), Cull, Ebbeck, Esbensen, Francis, Markle, Mishra, Niess, Prucha, Remcho, Rettig, Smith, and Young

Absent: Ayres, Brandt, Radosevich

1. Introductions, Operating Principles and Upcoming Agenda Items

2. Graduate Program Review Follow-up Reports

Steve Esbensen (Oceanic and Atmospheric Sciences) told the Council that a Follow-up Review of the Master of Business Administration program had taken place, but a written report had not yet been prepared. He did, however, raise a point of concern about one change in the MBA program. Dr. Esbensen understood the department was implementing a new team final oral examination, as opposed to the traditional individual examination. Chandra Mishra (College of Business) clarified the issue, explaining that the oral exam will still be an individual examination, but before their exams, a team of four graduate students will present a portfolio project. Each member will present a different aspect of the project. Dr. Mishra indicated that the College of Business had never discussed planning team examinations, and will confirm that fact in a meeting within his college on January 26, 2001. Bruce Rettig (Associate Dean of the Graduate School) noted that if there is a substantial change in the MBA program, it will require a Category II proposal.

This discussion led Sue Tornquist (Graduate Council Chair; Veterinary Medicine) to ask if follow-up reports should include projected changes. Although she did attempt to resolve that issue for the Graduate Council, Mary Prucha (Coordinator of Graduate Services) pointed out that follow-up reports went to Provost Tim White after approval by the Graduate Council.

A motion was made and seconded to accept the Atmospheric Sciences Program Review Follow-up Report presented to the Graduate Council on January 11, 2000 (and included in the January 11, 2001 Graduate Council minutes). Dr. Tornquist called for a vote, and all agreed to accept it.

3. MS in Home Economics: Category I to eliminate the degree

Dr. Tornquist introduced the Category I proposal by the Department of Human Development and Family Sciences to drop the Master of Science degree in Home Economics. Vincent Remcho (College of Science) moved that the Category I proposal be approved. Paul Cull (College of Engineering) seconded the motion, and Dr. Tornquist asked if there were further comments; hearing none, she asked for a vote. All were in favor of approving the Category I proposal.

4. Physical Presence at Committee Meetings

Sally Francis (Interim Dean, Graduate School) reviewed the updated version of the physical presence policy presented at the January 11, 2001 meeting. The first change made was an added stipulation that only one member of a graduate student's committee may participate at a distance.

The second issue concerned the cost of remote participation. Dean Francis stated that the potentially high cost of remote participation needed to be acknowledged. Dr. Esbensen suggested adding a requirement that cost arrangements should be made in advance, and Dean Francis added that she wanted it to be clear that the Graduate School would not pay for the remote participation. Doug Markle (College of Agricultural Sciences) suggested making the remote participant responsible for the cost, but allowing the department to help pay for it if they so desired. Dr. Tornquist suggested simply indicating that the Graduate School is not responsible for the costs, while Vicki Ebbeck (Health and Human Performance) advocated including a

resolution about deciding who would pay ahead of time.

Dr. Cull pointed out that, in item "a", commas should be inserted, making it read, "Advance written agreement of the student first, and then all committee members, has been obtained."

Mary Prucha asked whether if the policy is to be printed in the catalog or in the survival guide provided to graduate students. Currently, the catalog says that all members should be present. Dean Francis suggested including only the first paragraph. She also said she envisioned a form to ensure advanced written agreement (item a). She expressed some concern about the student being protected from costs and logistics, suggesting that the GCR could oversee that. Dean Francis did not think that the form needed to be included in the policy.

A motion was made to approve the revised policy, with the following changes:

- "any costs associated with remote participation are not the responsibility of the Graduate School and must be arranged in advance" replace item e;
- Commas be added to item a

Dr. Ebbeck seconded the motion, and all members of the Graduate Council approved the motion to accept the recommended policy for Remote Access for Graduate Council Meetings pending the changes mentioned in the motion. The approved policy reads as follows:

It is generally expected that all members of graduate committees should be physically present at all required graduate committee meetings (i.e. program meetings, preliminary examinations, and final examinations). However, it is permissible for one member to participate from a remote location when the conditions listed below will be met as documented by the GCR. Appeals for exceptions to this policy may be addressed to the Dean of the Graduate School.

1. Advance written agreement of the student first, and then all committee members, has been obtained;
2. Any visual aids or other materials have been distributed in advance to the remote member;
3. The remote member participates in the entire and complete conduct of the meeting;
4. The major professor has accepted responsibility for the oversight of any logistical arrangements necessary; and
5. Any costs associated with remote participation are not the responsibility of the Graduate School, and must be arranged in advance.

5. Graduate Admission Changes: Prior Masters and Narrative Transcripts

The proposed changes to the minimum entrance requirements were provided to the Graduate Council prior to the January 11, 2001 meeting. The Council had previously discussed eliminating review by the Graduate Admission Committee of applications from students who have earned a Master's degree from an accredited institution. A second issue was how to handle students coming from institutions with non-graded (narrative) transcripts. Should such applications be automatically rejected, go to the Graduate Admissions Committee (GAC), or result in an Advanced Notice of Rejection (ANR)? Associate Dean Rettig thought narrative transcripts should flow to departments for review.

Maggie Niess (GAC representative) said the GAC did not feel qualified to review narrative transcripts (of which they receive 5-7 per year), but expressed concern that departments may admit students without thoroughly assessing their transcripts. The GAC wanted the departments held accountable for maintaining appropriate admissions standards.

Court Smith (College of Liberal Arts) asked who received letters of justification from departments who wanted to admit students with a GPA of less than 3.0. Dr. Niess indicated that the GAC would receive those letters.

According to Dr. Niess, the only concern the GAC had was with the ANR. ANR's due to narrative transcripts can be bad in the case where the students are of high caliber, and often schools that use narrative transcripts are good schools. Associate Dean Rettig provided an example of this happening in the College of Atmospheric and Oceanic Sciences (COAS) which has received applications from UC Santa Cruz, a quality institution that uses narrative transcripts. The ANR presents an obstacle to giving early notification of admission and may cause qualified students to choose another graduate school.

Dr. Tornquist asked whether the Council could adopt policy that the GAC does not send an ANR for applicants with narrative transcripts to the departments. Dr. Niess explained that there would still be a delay factor, but

often the GAC accepts these students when the department is willing to accept the student.

Dr. Smith responded to Dr. Niess' concerns that some departments do not adhere to acceptable admissions standards, suggesting that the GAC report such practices to the dean. He wondered if this could be included as part of a graduate program review. Dr. Niess assured the Council that the GAC has kept the dean informed. Associate Dean Rettig said that oversight of admission decisions may be something to include in program review procedures.

Dean Francis suggested changing the official language. She said that she understood that the Council did not want the GAC to be involved with narrative transcripts. She also understood that the Council did not want an ANR to be issued, thus deleting the GAC from the process. Dean Francis also suggested that the application file would be incomplete until a written evaluation of the transcript is included.

Dr. Cull brought up a new issue, related to the minimum entrance requirement of a four-year degree. He noted that numerous applicants from outside the US have three-year degrees. Dr. Mishra affirmed that OSU loses those students to other schools because of the four year requirement. Dr. Smith suggested changing the minimum requirement to simply say "baccalaureate degree" without a specification for years. Dean Francis, Associate Dean Rettig, and Dr. Mishra thought that issue might require a separate discussion.

Dr. Ebbeck moved that the Council approve the proposal regarding minimum entrance requirements, deleting the routing of the narrative transcripts to the GAC and removing the 45-hour requirement for Masters degrees, with the stipulation that the Graduate Council return to the issue of admissions at the next meeting. Dr. Markle seconded the motion, and Dr. Tornquist called for a vote. All Council members were in favor.

Further discussion:

Dr. Tornquist suggested that the issue of the four-year baccalaureate degree should be discussed in the future. Dean Francis indicated that a task force should look at admission standards after the current task force completes its appraisal of the admissions process.

Associate Dean Rettig said that the Graduate Admission Task Force has heard requests that alternatives to the 3.0 minimum be developed. Those suggesting alternatives argue that GPA and standardized test scores may understate the probability of success in some, and perhaps all, programs. A task force could document criteria--different from what is in the catalog--that departments could use in appealing rejections, thus speeding up the appeal process. Another issue is unaccredited international institutions.

Dr. Tornquist suggested that the Council form a task force to analyze graduate admissions standards with Dr. Mishra as its representative, and Dean Francis appoint other members from areas including minority affairs and international education among others.

6. Change in Status of Graduate Faculty

Associate Dean Rettig presented alternative wording for the Council's statement on the Membership on Graduate Faculty from the proposal considered at the January 11, 2001 meeting. The new draft incorporates Council language from its November 30, 2000 Graduate Council meeting. He asked whether the policy should refer to what faculty members whose graduate faculty responsibilities are reduced should do if they disagree. The Graduate Council previously agreed that if there is specific reference to grievance procedure in the faculty handbook, then the policy should not mention it. The faculty handbook indeed does adequately explain how a faculty member would file a grievance. The policy should then be sent back to the President of the Faculty Senate as information.

Dr. Cull moved to approve the changes, including needing department head and dean to sign approval for removing any faculty member from graduate status for reasons aside from general housekeeping. The motion was seconded, and Dr. Tornquist called for a vote. All approved.

7. Graduate Student Grievance Guidelines

Associate Dean Rettig presented the Graduate Student Grievance Guidelines, which were not significantly changed. The discussion was set aside at the January 11, 2001 meeting due to confusion about whether the Council had received the entire document; they had. One issue that had been discussed at the January 11, 2001 meeting was whether the Provost had to respond in writing. The Guidelines were modeled after the CGE bargaining unit guidelines. Section 1.3 states that any decision shall be in writing. Associate Dean Rettig asked the Council if stating that again was necessary or redundant. After little discussion, the Council decided that it should be included in both places.

Dr. Smith moved that the guidelines be accepted; Dr. Cull seconded; there was no further discussion, and all Graduate Council members voted to approve the guidelines. Associate Dean Rettig will give the guidelines to Caroline Kerl (Legal Advisor).

8. Other Business/Assignments

Dr. Tornquist announced that at the next meeting the Council is anticipating a visit from the Bioresource Engineering Department, which will present its Category I proposal for graduate degrees in Bioengineering. Another item will be the form that faculty members must sign before students may proceed to schedule their final theses defenses. The PhD residency requirement will also be an item at the next meeting.

Future meetings of the Graduate Council are scheduled for:

Thursday, January 25th	3:00-5:00pm	650 Kerr Admin. Bldg.
Thursday, February 8th	3:00-5:00pm	650 Kerr Admin. Bldg.
Thursday, February 22nd	3:00-5:00pm	650 Kerr Admin. Bldg.

Graduate Council

January 11, 2001 Minutes

Present: Tornquist (Chair), Ayres, Brandt, Cull, Ebbeck, Esbensen, Markle, Mishra, Radosevich, Remcho, Rettig, Smith, and Young

Absent: Francis, Niess, and Prucha

1. Introductions, Operating Principles and Upcoming Agenda Items

Bruce Rettig, Associate Dean for the Graduate School introduced Jill Anderson, new Assistant to the Dean of the Graduate School, and the present 2000-2001 members introduced themselves.

2. Physical Presence at Committee Meetings

Associate Dean Rettig introduced the topic of physical presence at thesis committee meetings in Dean Sally Francis's absence. Associate Dean Rettig, referring to a handout, reviewed standing policy which states that all committee members must be present at students' program reviews. Recently the number of requests from people who have special circumstances that prevent their attendance has grown. Dean Francis has considered seven such circumstances a "group of experiments" to see how successful remote access to meetings (via tele- or video-conferencing) could be. All involved in these "experiments" concluded that remote participation was successful, but had recommendations for guideline for remote access.

The Council discussed several areas of concerns:

- The requirement that remote participation should not be used for meetings where visual aids will be used unless two-way high-quality video is used. Dr. Jim Ayres (College of Pharmacy) suggested that visual aids could be transmitted to the absent party in advance.
- Whether there was a problem with a member of a student's committee not participating in all aspects of the oral defense (e.g. did not witness the student's public presentation of his/her research, nor the questions from the audience). The Council agreed that all members needed to be included in any formal presentation if it is considered part of the exam.
- Whether the major professor should be required to be physically present. Dr. Steve Radosevich (College of Forestry) felt that all members were equally important, and that the major professor's presence was no more important than that of the other committee members.
- The recommendation to disallow remote participation if the student's success is uncertain, which the Council cited as too ambiguous.
- Whether there should be different criteria or restrictions for different kinds of committee meetings, and whether these rules applied only to final defenses.
- Who will cover cost of remote participation.

Associate Dean Rettig suggested tabling the discussion until Dean Francis was present. Dr. Sue Tornquist (College of Veterinary Medicine, Council chair) asked for a count of how many committee members, in principle, think there should be a way to have remote access to committee meetings. The council voted affirmatively, with one dissenter. Dr. Tornquist concluded that the Council will develop a policy for remote participation, and some of the recommendations that Dean Francis had submitted needed revision. The Council should give its list of concerns to Dean Francis. The Council hopes for a revised list from Dean Francis at the January 25, 2001 meeting.

3. Graduate Review Follow-up Reports

Dr. Tornquist asked Dr. Vincent Remcho (College of Science) and Dr. Jeannette Brandt (College of Education) to report on their December 8, 2000 follow up review with Dr. Steve Esbensen (College of Oceanic and

Atmospheric Sciences) and Irma Delson of the graduate program in Atmospheric Sciences. Atmospheric Sciences is now part of Oceanic and Atmospheric Sciences, and Dr. Remcho reports that the transition has been smooth. See attached follow-up report.

Dr. Remcho reported that the College of Oceanic and Atmospheric Sciences is currently searching for a new dean. There is hope that this person will try to foster greater interaction between faculty and students.

Results of the review process include:

- Weekly seminars, a recommendation of the review committee, are affording better interaction and information exchange. One seminar series is being held more frequently than recommended.
- Burt Hall expansions may overcome some physical limitations to faculty/student interaction. Some faculty and students are housed at a distance and feel removed from the college.
- Students and faculty see a need for a Synoptics course (weather analysis/forecasting). The faculty does not include an individual who would be appropriate to teach such a course. A search is underway for a new faculty member, and the new hire may have that area of expertise.
- Journal discussions have helped with faculty/student interactions.
- Integrated seminars have begun, but are not as popular as was hoped.
- The number of faculty is increasing, which bodes well for the program.

Dr. Tornquist asked if the report had been forwarded and concluded that no further action was needed. Dr. Tornquist then asked for an update on other follow-up reviews. No follow-up action had yet been taken for the other reviews; Dr. Tornquist agreed to have reports re-sent to the appropriate Council members and to ask Mary Prucha to clarify which Council members were responsible for which programs.

4. Graduate Student Grievance Guidelines

Since the last meeting, Associate Dean Rettig had asked David Shaw (Human Resources) and Caroline Kerl (Legal Office) to review the Graduate Student Grievance Guidelines. Editorial comments included the need to articulate that it was the duty of administrators to issue responses in writing, but it is not unusual to include a provision describing what to do when this does not happen within required time limits. This addressed concerns of some Council members about contradictory language concerning whether written responses were required.

A major new section of the guidelines concerned the use of designee, (now section 2.6). At any step an administrator may appoint a designee to act on his/her behalf. Most other changes were simple editing, smoothing of previous drafts. There was uncertainty about whether the guidelines were a Graduate Council document. Associate Dean Rettig said it was important to make sure the Council circulated it, but other bodies may need to look at it.

Associate Dean Rettig was asked to clarify whether the Council had a committee that handles grievances. When a grievance rises to Dean Francis, she may call on 2 members of the Graduate Council to serve on a grievance committee but she is not obligated to do so.

Handouts of the guidelines provided to Council members were found to have discrepancy in their numbering, raising the question of whether they had a chance to fully review the guidelines. Associate Dean Rettig will check the copies and will contact Council members, sending out a new document if needed. The discussion was tabled until the January 25 2001 meeting. Dr. Court Smith (College of Liberal Arts) suggested using "track changes" feature in word processing to help Council members review changes to the document.

5. Change in Status of Graduate Faculty

Associate Dean Rettig reviewed current formal procedures, which do not require a letter being sent to a faculty member if he or she is removed from graduate faculty status. A proposed change would mean that a letter is sent even if the status change is for removal from graduate faculty.

Dr. Esbensen began a discussion about grievance procedures, asking whether the actions are clear that a faculty member can take if they object to the change in status, and thought it might be helpful to add a line clarifying how a faculty member would file a grievance. Dr. Ayres thought that unless a specific channel of grievance was specified, no such line was needed; it is not standard to state grievance specifics when describing processes. Associate Dean Rettig indicated that sending a letter notifying a faculty member of their removal would be a compromise that would give the faculty member recourse to grievance procedures. He also stated that faculty grievance procedures from Oregon University System (OUS) are being revised, but they do exist. Dr. Court Smith asked if this was an action subject to grievance under those rules. Dr. Brandt thought that putting the removal through the dean's office might avoid some grievances.

The Council discussed whether it was appropriate to require only the department head's signature when a faculty member is removed from graduate faculty, particularly when the dean's signature is required for giving faculty member graduate faculty status. Dr. Tornquist raised the point that faculty are often removed as general "housekeeping," when a faculty member no longer works for the university due, for example, to relocation or death. Associate Dean Rettig suggested a limited involvement of the dean in the appointment to graduate faculty status, explaining the presumption that the department head knows the particulars for the faculty and has reason for nominating the faculty, while the dean simply endorses the recommendation. He also indicated that, even without deans' oversight, faculty would still have access to an appeals process. Very heavy deference is given to department heads' recommendations. Dr. Vicki Ebbeck (College of Health & Human Performance) noted that dean oversight could protect faculty from arbitrary action by the department head.

Dr. Tornquist referred to previous minutes in which the Council decided that most cases, which are "housekeeping" should be exempt from the dean's signature. Several suggestions were made to address the discrepancy between the nomination and removal process. Dr. Paul Cull (College of Engineering) suggested having all appointments done solely by the head of the department as well. Dr. Radosevich suggested that during the annual process in which the Graduate School requests updated lists of faculty status from the departments, the Graduate School also request to be notified of the reason for removal from graduate faculty status. Dr. Esbensen suggested that only routine, non-controversial modifications to faculty status be included in such annual updates, and that all others must go through the dean's office.

Dr. Remcho expressed concern that such procedures would be too bureaucratic and might be unnecessary due to the infrequency of grievances.

Council expressed general agreement that a faculty member should be notified if they are removed from graduate faculty status. Dr. Tornquist asked for a hand count of whether this was an issue that the Council should pursue. Six agreed that it was; two abstained from the vote. Dr. Tornquist asked for the Council to consider Dr. Esbensen's alternative and to plan to discuss the issue further at the January 25 meeting.

Dr. Brandt raised the question of whether graduate faculty status in an interdisciplinary program was different from that for a particular graduate department. She suggested making clear that the director of the interdisciplinary program has the power to determine the status for that program. Associate Dean Rettig commented that no problems had arisen due to this, but that it could be addressed.

Associate Dean Rettig will revise the guidelines and review the November 3, 2000 Council minutes. He will clarify that the Graduate School will draft the letter that the faculty member will receive informing him/her of change in status.

6. Graduate Admission Changes: Prior Masters and Narrative Transcripts

Associate Dean Rettig spoke briefly about this topic. He indicated that he had thought he knew what changes in admissions policy that the Council wanted, but that difference of opinion still exists on narrative transcripts. Discussion was postponed to a council meeting when Dr. Maggie Niess, chair of the Graduate Admissions Committee, can be present.

7. Relationship Between Graduate Credits and Student Work Commitments

Associate Dean Rettig mentioned that a question has arisen concerning what obligation a student incurs for signing up for thesis credits. He cited major differences between advisors' and students' understanding of this issue.

8. Category II Proposals

Associate Dean Rettig, on behalf of the Graduate Council, approved the following course requests:

NEW COURSE

BIO 520 (00-C321)
BIO 521 (00-C322)
BIO 530 (00-C323)
BIO 550 (00-C324)
BIO 551 (00-C325)
BIO 552 (00-C326)
BIO 650 (00-C334)
BIO 651 (00-C335)

BIO 652 (00-C336)

ANTH 537 (00-C353)

This proposal is approved under the assumption that it is a 3-credit course. If this is not correct, additional review may be needed.

FE 534 (00-C370)

Because the course appears to be aimed at graduate students and fifth-year undergraduates, the Graduate Council suggests that the Department consider offering the course only as FE 534 and encouraging undergraduates to take the course with that course number.

FE 549 (00-C373)

The Graduate Council suggests that the Department consider offering the course only as FE 549 and encouraging undergraduates to take the course with that course number.

FE 560 (00-C376)

FST 540 (00-C337)

PH 517 (00-C289)

The Graduate Council approves this course under the condition that adjustments recommended by Gary Beach be implemented (especially a syllabus that meets Curriculum Council requirements).

FOR 385 (00-C385)

The Graduate Council approves adding a cross-listing for this team-taught course

COURSE DROP

BIO 556 (00-C327)

CHANGE IN EXISTING COURSE

BIOE 557 (00-C328)

BIOE 558 (00-C329)

BIOE 560 (00-C330)

BIOE 562 (00-C331)

X-COURSE

FW 560X (00-C381)

9. Other Business/Announcements

Associate Dean Rettig alerted the Council to the upcoming Category I proposal from bioengineering for the creation of graduate programs. Invitations are out to see if the Council can get representation there. New material will follow at the next meeting.

Task force handouts are available at two open forums on Tuesday, January 16, 2001 and Wednesday, January 17 from 11/11:30-12:30/1:00. The forum on Tuesday will be in the MU Council Room, and Wednesday's meeting will be in MU104. The handouts set out guiding principles that need to be taken into consideration before making changes in admissions process and a group of sample questions to seed discussions and get things going. Each forum will be open-ended for comments and suggestions on the process. Anyone who can attend either or both forums is invited; comments should be sent to John Westall, chair of the task force.

Future meetings of the Graduate Council are scheduled for:
Thursday, January 25th 3:00-5:00pm 650 Kerr Admin. Bldg.
Thursday, February 8th 3:00-5:00pm 650 Kerr Admin. Bldg.
Thursday, February 22nd 3:00-5:00pm 650 Kerr Admin. Bldg.

Appendix: OSU Graduate Council Follow-Up Review

Atmospheric Sciences Graduate Program
College of Oceanic and Atmospheric Sciences

Introduction:

On Friday 8 December 2000, a follow-up to the 1997 Graduate Council Review of the Atmospheric Sciences (ATS) Graduate Program in the College of Oceanic and Atmospheric Sciences (COAS) was conducted. Graduate Council representatives were Vincent T. Remcho (Chair; Chemistry) and Jeanette Brandt (Member;

Housing, Apparel & Interiors). Representing the Atmospheric Sciences Program were Steven Esbensen (ATS) and Irma Delson (COAS). The follow-up review considered aspects of and factors affecting graduate education in the unit, primarily focusing on attributes of the program directly commented on in the 1997 review.

Administration:

As this review is being prepared, a search is underway for a new Dean for the College of Oceanic and Atmospheric Sciences. The appointment of this new Dean will bring some measure of change for the College as a whole and for the ATS program in particular. The 1997 review indicated that a greater synergy between ATS faculty and students and their counterparts in other disciplines within COAS was desirable. While this goal has been achieved to some extent, it is hoped that the new Dean will encourage and foster to an even greater extent the continued integration of ATS into COAS.

Faculty:

The composition of the faculty remains unchanged since the formal Graduate Council review in 1997. COAS intends to open a search for a faculty member in the near future. As per the outcome of a meeting held earlier in the day among selected COAS faculty, the position description would overlap heavily with the field of Atmospheric Sciences. This may lead to the hire of a much needed junior faculty member in ATS.

Students:

ATS has graduate programs leading to the MS and the Ph.D. All indications are that the students and faculty interact comfortably. The graduate stipend in ATS is in common with all other units in COAS (0.49 FTE, \$1551/month) and is at a competitive level. Although the program continues to attract talented graduate students, the number of applicants is smaller than would be ideal. The facilities issue has been cited as adversely affecting the ability of the unit to attract the desired number of applicants and gain commitments from them.

Curriculum:

The 1997 review revealed a need for coursework on synoptics (weather analysis and forecasting). This need has not yet been addressed. It is hoped that the new COAS hire will be able to address this need for a new course in synoptics, which would open up the possibilities for OSU to participate in future research opportunities that incorporate aspects of synoptics with physical oceanography.

Facilities:

Both administration and faculty indicated that the continued physical separation of the majority of ATS faculty, staff, and students from the bulk of other COAS personnel is a problem. Most of ATS is housed in Strand Hall, while the majority of Physical Oceanography personnel (with whom favorable research overlap exists) are in Burt Hall. It would be advantageous to ATS and COAS as a whole to house ATS with the other programs in the college. There is some indication that the planned expansion of Burt Hall may allow for this to be accomplished in part, though concerns exist as regards the plan to move only faculty from Strand Hall into Burt, leaving the graduate students in a separate facility. Indications that the ATS faculty might not be given contiguous space in the expanded facility are also a concern.

Action on Recommendations from the 1997 Review:

1. Seminars are being held on a regular basis, as recommended by the 1997 review team. These provide opportunities for information exchange between new/existing students and faculty.
2. The seminar series listed in item (1) extends beyond the recommendations of the 1997 review by meeting weekly. Informal research presentations and journal discussions at these weekly meetings have enhanced the graduate academic experience for students and been a benefit to faculty as well.
3. An integrated COAS seminar series was instituted in the time frame of the 1997 review, in keeping with the recommendation of the review team. The integrated seminars are not as popular or well attended as had been hoped, perhaps owing to the diversity of research in the college. The seminar series will continue for the foreseeable future with attendance by those interested in the topic at hand.
4. The needed synoptics course has not yet been added. ATS faculty and students still see the need for this course and remain hopeful that the new COAS hire will be able to fill this need. More importantly, ATS faculty forecast increasing research possibilities on the horizon with a new hire relevant to synoptics and the physical oceanography faculty.
5. The 1997 review team recommended housing ATS faculty and students in the same facility as the Ocean faculty and students. While this has not been achieved, some possibility remains that this may occur when the Burt Hall expansion is completed.
6. The number of collaborations between ATS faculty and Physical Oceanography faculty is slowly increasing. This bodes well for COAS as a whole and ATS in particular. The new Dean should strive to foster these collaborations.

Submitted to the Graduate Council on 11 January 2001:

Graduate Council

November 30, 2000 Minutes

Present: Tornquist (Chair), Ayres, Brandt, Cull, Ebbeck, Esbensen, Francis, Markle, Niess, Prucha, Radosevich, Remcho, Rettig, Smith and Young

Absent: Mishra

Guest: Leslie Burns, Director - Undergraduate Academic Programs

1. Finalization of November 9th Minutes

The November 9, 2000 Graduate Council minutes were finalized. No additional corrections or comments were made.

2. Professional Teacher Licensure Area Approval Process

Leslie Burns, Director of Undergraduate Academic Programs outlined the process for identifying and changing Professional Teacher Licensure Areas in the Graduate Catalog. The licensure areas "are listed in a footnote to the Teaching Area Concentration for the Teaching degree in the Graduate Catalog. Licensure Areas are described this way, rather than as areas of concentration, because they are recognized as individual graduate programs by the Office of the Chancellor."

Currently, Oregon State University provides a process for adding or deleting Areas of Concentration. To add or delete an area of concentration for a graduate degree, a memorandum must be forwarded to the Graduate Dean for review and approval. The memorandum should outline a justification for the new or deleted Area of Concentration. However, OSU does not have a formal process for adding or deleting Licensure Areas within the Masters of Teaching.

To formalize the licensure area process, Provost White assigned a Task Force to provide recommendations for the Professional Teacher Licensure Areas approval process. The Task Force proposed the following recommendations;

1. Professional Teacher Licensure Areas will be listed in the General and Graduate Catalogs under this heading rather than as Areas of Concentration for the M.A.T. degree.

2. The following wording will be added to the Curricular Procedures Handbook:

Professional Teacher Licensure Areas

The School of Education collaborates with other colleges to offer the Professional Teacher Education Program. The Professional Teacher Education Program offers teacher licensure preparation for students wishing to enter the teaching profession as well as for Continuing License.

Because students are recruited and admitted to graduate programs approximately one year prior to enrollment, proposals must be submitted at least 18 months prior to effective dates.

Proposal for New or Changes in Professional Teacher Licensure Area

1. A memorandum is prepared that includes the following:
 - an outline of the curriculum in the Professional Teacher Licensure Area,
 - justification for the licensure areas or changes in licensure area, and
 - effective date for implementation
2. The Licensure Faculty Curriculum Committee reviews the proposal.
3. Upon Licensure Faculty approval, the proposal is forwarded to the Council of Education Deans for their review and approval (signature required).
4. Upon the Council of Education Deans approval, the proposal is forwarded to Academic Affairs for review concurrently by the Faculty Senate Graduate Council and Curriculum Council.
5. Upon approval by the Graduate Council and Curriculum Council, notification will be made to appropriate OSU offices, the Chancellor's office and TSPC.

Proposal to Drop a Professional Teacher Licensure Area

1. A memorandum is prepared that includes the following:
 - a justification for dropping the licensure area and
 - effective date for implementation.
2. The Licensure Faculty Curriculum Committee reviews the proposal.
3. Upon Licensure Faculty approval, the proposal is forwarded to the Council of Education Deans for their review and approval (signature required).
4. Upon the Council of Education Deans approval, the proposal is forwarded to Academic Affairs for review concurrently by the Faculty Senate Graduate Council and Curriculum Council.
5. Upon approval by the Graduate Council and Curriculum Council, notification will be made to appropriate OSU offices, the Chancellor's office and TSPC.

The recommendations have been approved by the Deans of Education Council and the Curriculum Council.

The Graduate Council inquired as to how often Licensure Areas change. Dr. Burns stated that they could change as often as every year. The Council supported the recommendations, but emphasized that the Licensure Areas for the M.A.T. program should be clearly visible and defined in the Graduate Catalog.

On November 30, 2000 the Graduate Council voted to approve the recommendations of the Task Force. The recommendations will be included in the Curricular Procedures Handbook and communication of this new process will be provided to appropriate OSU offices and faculty in the near future.

3. Graduate Student Grievance Guidelines

Bruce Rettig, Associate Dean of the Graduate School, stated that the collective bargaining agreement between OSU and the Coalition of Graduate Employees provides, in Article 18, a grievance process that differs from the process for employment grievances in the current guidelines provided by the Graduate School. As a result, the current Graduate policy *Grievance Procedures for Graduate Students at Oregon State University* is being reviewed and revised by the Graduate School. The Graduate School would like the endorsement of the Graduate Council on the revised policy prior to its implementation.

The Graduate Council urged that the mechanisms for action be clearly stated within the document. In

addition, members suggested that section 1.3,

A reasonable effort should be made to resolve any grievance at the lowest level possible. Any decision rendered at or above the level of the departmental administrator shall be in writing.

be expanded to require written notification when no decision is rendered.

Associate Dean Rettig will incorporate these suggestions into a draft to be forwarded to the Legal Advisor's Office for approval. Once the Legal Advisor's Office responds, Associate Dean Rettig will bring the revised policy back to the Council for final endorsement.

4. Change in Status of Graduate Faculty

Associate Dean Rettig stated that, at OSU and its peer institutions, faculty who are affiliated with graduate education as either teachers or researchers must have Graduate Faculty status. Graduate Faculty status is granted in a variety of ways nationwide, ranging from processes conducted by councils to Graduate School approval.

At OSU, faculty members are nominated to graduate faculty status by the head or chair of the academic unit and the academic dean of that college or school. The nomination consists of filling out a nomination form and providing either a resume or curriculum vitae to show appropriate credentials for Graduate Faculty status. Final review and approval is given by the Graduate Council. Currently, Associate Dean Rettig acts on the behalf of the Graduate Council in granting Graduate Faculty status. Once the approval has been completed then the faculty member is put into the Graduate Faculty database and a letter of notification of status is mailed to the faculty member.

The Faculty Senate Executive Committee is considering a recommendation arising from the Faculty Grievance Committee and requested Graduate Council input. The recommendation focused on the different procedures for appointment of graduate faculty status versus removal of graduate faculty status. Currently, the Department Chair and academic Dean must sign the nomination form for appointment, but the Department Chair's signature is the only one required to remove Graduate Faculty status. The Executive Committee provided two major points for consideration by the Graduate Council on this issue:

- most removals from graduate status are "housekeeping" to remove the names of people who have moved, died or become inactive; and
- under current arrangement, faculty is not formally notified when their graduate faculty status is altered.

The Graduate Council suggested that the same process for nomination to Graduate Faculty be used for the removal or reduction in responsibility of Graduate Faculty Status when the Graduate Faculty member's status was initially provided for continuing research or teaching duties. Cases in which the faculty member was hired for a fixed term/assignment, retired, died, moved or became inactive will be exempt from the removal process.

In addition, the Graduate School should communicate the process for nomination and removal to Graduate Faculty with the OSU campus.

Associate Dean Rettig agreed to draft procedural language for removal or reduction in responsibility of Graduate Faculty. This will be reviewed by the Graduate Council at a future meeting. The approved process will then be forwarded to the Executive Committee in response to their October 13th request.

5. Graduate Admission Changes: Prior Masters and Narrative Transcripts

Last year, Dr. Doug Barofsky, Chair of the Graduate Admissions Committee provided the Council with a brief summary of the graduate admissions policy recommendations at the April 27, 2000 meeting. The first recommendation re-examined the review of 24-Hour Rule applicants. The second recommendation revised the current policy on minimum admission requirements into a graduate program. The recommendations for new language were approved and appear on pages 6-7 of the Graduate Catalog 2000-2001 as follows:

The minimum entrance requirements are as follows:

- *A four-year baccalaureate degree from an accredited college or university, and*
- *A combined GPA of 3.00 on the last 90-quarter credit hours of graded undergraduate work on the first baccalaureate degree plus all work completed thereafter.*

Or

- *A four-year baccalaureate degree from an accredited college or university, a 45 quarter credit hour graduate degree from an accredited university, and*
- *A GPA of 3.00 on the last 45 quarter credit hours of graded graduate work on the first graduate degree.*

The Office of Admission & Orientation and the Graduate Admissions Committee (GAC) have asked the Graduate Council to provide further clarification on the final bullet point. Specifically, how should GAC and Admissions handle students with more than one graduate degree? and how should students whose last 45-quarter credit hours are narrative vs. graded graduate work be evaluated?

After some discussion, Associate Dean Rettig and Maggie Niess, Chair of the Graduate Admissions Committee 2000-2001 agreed to draft new language for discussion and approval by the Graduate Council at a future meeting.

6. Physical Presence at Committee Meetings

To be discussed at a future meeting

7. Category II Proposals

Bruce Rettig, on behalf of the Graduate Council, approved the following course requests:

CHANGE IN EXISTING COURSE

HDFS 530 (00-C350)

HDFS 531 (00-C351)

HDFS 532 (00-C352)

FE 515 (00-C368)

FE 516 (00-C369)

FE 540 (00-C371)

FE 541 (00-C372)

FE 550 (00-C374)

FE 551 (00-C375)

FE 570 (00-C377)

FE 571 (00-C378)

8. Other Business/Announcements

Future meetings of the Graduate Council are scheduled for:

Thursday, January 11th 3:00-5:00pm 650 Kerr Admin. Bldg.

Thursday, January 25th 3:00-5:00pm 650 Kerr Admin. Bldg.

Thursday, February 8th 3:00-5:00pm 650 Kerr Admin. Bldg.

Graduate Council

November 9, 2000 Minutes

Absent: Francis, Mishra, Niess and Radosevich

Guests: Andrew Young, Chair - Graduate Student Senate

1. Finalization of October 26th Minutes

The October 26, 2000 Graduate Council minutes were finalized. No additional corrections or comments were made.

2. Category I Curriculum Proposal: Master of Public Policy

Dr. Susan Tornquist, Chair of the Graduate Council, summarized the October 12th and October 26th discussions the Council had with key participants in the Master of Public Policy (MPP) degree program. Dr. Tornquist stated that as a result of these prior discussions the following concerns were addressed:

- Table 2 of the proposal, "Proposed MPP Prerequisites and Core Courses" was revised to correctly reflect the number of total credits required;
- The final essay requirement was changed from 10 credits to 6 credits and would be a non-thesis requirement; and
- Funding was assured through the strong support of Dean Schaffer of the College of Liberal Arts.

Dr. Tornquist asked the Council if there was any further discussion on the MPP proposal. The Council was still concerned about the lack of clear language defining the final essay as a non-thesis requirement in the proposal. The understanding of the Graduate Council members present at the previous meeting was that the paper would not be a thesis. Council members noted that the reference to thesis occurs only in the cover memo and not in the body of the proposal. It was agreed that the language in the cover letter of the MPP proposal referring to essay/thesis requirement be replaced with non-thesis requirement.

On November 9, 2000 the Graduate Council voted to accept the proposal with the requirement that the cover letter to the proposal replace language referring to thesis/essay requirement with non-thesis requirement.

3. Rangeland Resources Graduate Program Review Report

Dr. Tornquist briefly summarized the October 26th discussion of the Rangeland Resources report. She stated that Dr. Krueger felt that some errors were made in the review report concerning graduate student involvement in the hiring process of new faculty and in the description of problems with department to department relations. Dr. Jeanette Brandt, chair of the review committee, reiterated that review team members were reporting student perceptions and that these should stay in the report as a discussion point for the program. Dr. Krueger will be invited to submit a commentary on the review report.

On November 9, 2000 the Graduate Council voted to accept the report with the option for Dr. Krueger to attach a statement to the report prior to its transmittal to Provost White.

4. Category II Curriculum Proposal Review Issues

Dr. Jeanette Brandt of the College of Home Economics & Education volunteered to serve as the third member

of the Category II subcommittee.

Associate Dean Bruce Rettig of the Graduate School briefed the Council on the Category II process. On May 23, 1991, the Graduate Council approved the following policy regarding Category II requests:

"The Graduate Dean, on behalf of the Graduate Council, may approve the following types of Category II graduate course requests:

A. Changes in course:

- 1. Descriptions***
- 2. Titles***
- 3. Numbers***
- 4. Prefix***
- 5. Prerequisites or co-requisites***
- 6. In the amount of credit***

A. Decrease in course level from graduate to undergraduate credit

B. X-course requests

C. Dropping of existing course

"The Graduate Council (through the Category II subcommittee) should review and approve the following types of Category II graduate course requests

A. New graduate courses

B. Increase in course level from undergraduate to graduate credit

Process for Reviewing Category II Proposals

1. The Graduate School receives a copy of the Category II proposal for a graduate course from Academic Affairs.

2. Bruce Rettig, on behalf of the Graduate Council, approves those proposals described in A-D above. This is done via email messages to Academic Affairs, Chair of the Curriculum Committee, Catalog, Chair of the Graduate Council, and Chair of the Graduate Council Category II subcommittee.

3. Bruce Rettig meets with the Category II subcommittee to discuss those proposals described in E-F.

4. For proposals in which subcommittee members had questions or concerns, the subcommittee chair or Bruce Rettig emails the chair/head of the proposing department asking for additional information. In order to keep all parties informed and to prevent duplicate inquiries, this email is copied to the subcommittee members, Chair of the Curriculum Committee and Academic Affairs. Academic Affairs will forward it to the proper liaison of the Curriculum Council.

5. When information is received, it is forwarded to the subcommittee and Academic Affairs. Academic Affairs will forward the information to the Chair and Liaison of the Curriculum Council. The subcommittee reviews the additional information and makes a recommendation regarding approval.

When a proposal is approved (or disapproved), Bruce Rettig reports their action to the Chair of the Graduate Council and Academic Affairs.

On November 7th the Category II subcommittee met and discussed a proposal for a 500/600 course in the Department of Entomology. The current Graduate Council policy does not permit 500/600 courses. As a result, the subcommittee agreed to approve the 500 level course and the 600 level course as two separate courses. In addition, Associate Dean Rettig emailed the Department of Entomology inviting them to a future Graduate Council meeting to discuss their reasoning for a 500/600 course if they wish to continue to pursue the initial proposal.

The Graduate Council raised concerns regarding the approval of the 500 level course and the 600 level course as independent courses. It was strongly argued that separating the 500/600 level course into two

independent courses allowed for the same course to exist with two different course numbers. It was suggested that only the 500 or the 600 level course should be approved, but not both.

A motion was made to retract the approval of the subcommittee for a 500 level and 600 level course and instead approve only the 600 level course. The motion failed.

A second motion was made to instruct the Category II subcommittee in the future to approve only one course when a proposal for a slash course with the same syllabus or two courses with the same syllabus is received. The motion was passed.

5. Introduction of Graduate Student Grievance Guidelines

Associate Dean Rettig stated that the collective bargaining agreement between OSU and the Coalition of Graduate Employees provides, in Article 18, a grievance process that differs from the process for employment grievances in the current guidelines provided by the Graduate School. As a result, the current Graduate policy Grievance Procedures for Graduate Students at Oregon State University is being reviewed and revised.

Associate Dean Rettig has been working to revise the current *Grievance Procedures for Graduate Students at Oregon State* policy to make employment grievance procedures more consistent with the processes specified in Article 18 of the bargaining agreement.

Associate Dean Rettig shared with the Council that the Graduate School expects to make the grievance policy more accessible to students and faculty by placing it on the Graduate School website and providing links to additional information and forms concerning grievance procedures and processes.

The Council was concerned about some of the differences between the academic grievance process and the employment grievance process, such as time limits and written decision requirements.

Associate Dean Rettig will take these concerns under consideration. He encouraged the Council to review the revised *Grievance Procedures for Graduate Students at Oregon State* policy and Article 18 – Grievance Procedures prior to the next Graduate Council meeting. In addition, he stated that any comments or suggestions regarding the policy and disbursement of the policy to students and faculty could be emailed to him prior to the November 30th meeting.

6. Graduate Admissions Task Force Update

Associate Dean Rettig provided the Council with an update on the Graduate Admissions Task Force. The Task Force includes:

- John Westall (Chair) – Chemistry
- Chris Bell – College of Engineering
- Irma Delson – College of Oceanic & Atmospheric Sciences
- Maggie Niess – Graduate Admissions Committee
- Bruce Rettig – Graduate School
- Valerie Rosenberg – International Education
- Michelle Sandlin – Admissions & Orientation
- Andrew Young – Graduate Student Senate

The Task Force was charged to:

- Analyze our current graduate admission practices with respect to efficiency and effectiveness in enabling academic units to meet their recruitment goals;
- Identify campus concerns about graduate admissions; and
- Provide specific recommendations regarding reengineering the graduate admissions process at OSU with the goals of (i) increasing the efficiency of the admissions process for applicants, academic units, and the University Administration, and (ii) increasing the effectiveness of academic units in meeting their recruitment goals.

The first meeting of the Graduate Admissions Task Force took place on November 3rd. The first meeting primarily focused on shaping the charge around specific concerns raised by members of the Task Force and assigning members of the group to research certain areas, such as other institutional graduate admissions processes and concerns about graduate admissions procedures within departments campus-wide.

Associate Dean Rettig encouraged the Council to provide continual input to the Task Force as it moves forward on this issue and to offer concerns and topics to further assist the group with developing the objectives to be achieved by the Task Force.

The Council suggested that the Task Force take under consideration the following:

- The time it takes between the receipt of a student's application and the final action on a student's application;
- The notification process to students of acceptance or denial; and
- The inclusion of a web-based application process.

Associate Dean Rettig will take these suggestions to the Task Force and again encouraged any additional suggestions be shared with the Task Force.

The targeted date for recommendations by the Task Force is March 1, 2001.

7. Future Agenda Items

Dr. Tornquist announced that the following items would be discussed at future Graduate Council meetings:

- Ph.D. residency requirements
- Change in Status of Graduate Faculty
- Requirement for a Minimum Registration of 3 Credits
- Seven-Year Limit to Complete a Masters

Information regarding these topics will be provided to Council members prior to the meeting in which they will be discussed.

In addition, Dr. Tornquist encouraged Follow-Up Review committees to begin their review of graduate programs soon. Dr. Tornquist also asked the Council if they wished to further discuss the voting quorum issue. No discussion occurred. Dr. Tornquist encouraged any further comments regarding the voting quorum to be sent to the Graduate Council via email.

8. Category II Proposals

Bruce Rettig, on behalf of the Graduate Council, approved the following course requests:

CHANGE IN EXISTING COURSE

COMM 526 (00-C284)

NEW COURSE

ANTH 489/589 (00-C280)

Approved. Although liaison completion may be required by the Curriculum Council, the proposal addresses concerns of the Graduate Council. The syllabus draws on course material that draws on topics treated in the College of Business, but may references are quite different form those that would be required in a College of Business course and thus should not duplicate material already taught on campus.

BB 656 (00-C266)

ENT 554 and ENT 654 (00-C249) & (00-C250)

Approved as two separate courses. I will repeat an earlier message sent to the department indicating that these courses are approved, but not for slash listing. At the request of the subcommittee, I will also invite the Department of Entomology to visit with the Graduate Council and share their reasons for preferring the slash arrangement. The Graduate Council will then have the opportunity to revisit the standing policy against 5XX/6XX courses.

FOR 564 (00-C275)

FS 629 (00-C271)

PHAR 537 (00-C262)

TOX 656 (00-C267)

9. Other Business/Announcements

Future meetings will be held:

- Thursday, November 30th 3:00-5:00pm 650 Kerr Admin. Bldg.
- Thursday, January 11th 3:00-5:00pm 650 Kerr Admin. Bldg.
- Thursday, January 25th 3:00-5:00pm 650 Kerr Admin. Bldg.
- Thursday, February 8th 3:00-5:00pm 650 Kerr Admin. Bldg.
- Thursday, February 22nd 3:00-5:00pm 650 Kerr Admin. Bldg.

Present: Tornquist (Chair), Ebbeck, Francis, Markle, Niess, Prucha, Radosevich, Rettig and Smith.

Absent: Ayres, Brandt, Cull, Esbensen, Mishra and Remcho.

Guests: Leslie Burns, Director – Undergraduate Academic Program; Neil Davison, Assistant Professor – Department of English; Thayne Dutson, Dean –College of Agricultural Sciences; Leonard Friedman, Chair – Curriculum Council; Erik Fritzell, Associate Dean – College of Agricultural Sciences; William Krueger, Department Head – Department of Rangeland Resources; Kay Schaffer, Dean – College of Liberal Arts; and Brent Steel, Associate Professor – Department of Political Science.

1. Introduction, Operating Principles and Upcoming Agenda Items

The October 12, 2000 meeting notes were approved. A correction was made to the Graduate Council roster. A new roster will be forwarded to Graduate Council members in the near future. No additional comments or suggestions were provided.

Susan Tornquist, Chair of the Graduate Council, stated that, due to the nature of her work, emergencies in the lab do occur on rare occasion. As a result, if an emergency were to happen simultaneously with a Council meeting, Dr. Tornquist would be unable to attend the meeting. If this scenario were to occur, Dr. Tornquist asked the Council members if they should elect a vice-chair to intervene in her absence or if she should appoint a member prior to the meeting to represent her at the meeting. The Council agreed that Dr. Tornquist should appoint a member of the Council to serve in her absence.

2. Changes in Curricular Procedures

Leslie Burns, Director of Undergraduate Academic Programs outlined current, Category I and Category II procedures for graduate programs and coursework. Category II proposals focus on changes in coursework ranging from new permanent courses to minors. Category I proposals center on major curricular changes which require approval at the State Board level, such as new degree programs.

Curriculum proposals are first reviewed at the college level. Once the college has approved either the Category I or II proposals, the proposal is forwarded to the Office of Undergraduate Academic Programs, Academic Affairs. The Office of Undergraduate Academic Programs then routes the proposal for approval to the Academic Program Coordinator, Catalog Coordinator, Graduate Council and/or the Curriculum Council.

Dr. Burns and Leonard Friedman, Chair of the Curriculum Council, encouraged Council members to be aware of deadlines for class schedules, catalogs and printing schedules. Often the deadline for a particular term is one or two terms prior. In addition, they asked that Council members be aware of other departments that are offering like courses and that changes in one course create a much wider university effect than is often realized.

In addition, both Dr. Burns and Dr. Friedman informed the Council of several changes that have been implemented in the curricular process at OSU. First, Gary Beach, Coordinator of Assessment and Academic Programs, will be limiting his edits on future proposals due to time constraints and workload. In addition, the Curriculum Council and the Office of Undergraduate Academic Programs will continue to offer training sessions each term that will focus on how to complete a Category II proposal. The training sessions usually

take place either the second or third week of the term. The winter term training session has yet to be scheduled. Another change requires all Category I proposals to have a peer review by three highly qualified individuals in the specific field of the proposed program. For more details see, <http://www.ous.edu/aca/ext-review.html>.

Finally, the Curriculum Council and the Office of Undergraduate Academic Programs has placed the Category II proposal forms on the web. They hope this will facilitate the process and exchanges between academic units and the Curriculum Council.

3. Master of Public Policy

Dr. Tornquist stated that this was the second review of the Master of Public Policy (MPP) proposal and indicated that Brent Steel, Associate Professor of Political Science, and Dean Schaffer of Liberal Arts would provide additional clarification regarding questions that were raised at the previous Graduate Council meeting.

Dr. Steel stated that he has been involved in a variety of masters level Public Policy degree programs. He strongly thinks that the MPP is a natural fit for Oregon State University based on the strengths of the College of Liberal Arts (CLA). One of those strengths is the high level of familiarity amongst CLA faculty with Public Policy programs nationwide. Another strength has been the attractiveness of the MPP program at OSU in recruiting new faculty in the department of Political Science.

The three main departments involved in the implementation of the MPP degree program - Sociology, Economics and Political Science - have all provided high levels of input into the proposal and are extremely excited at the opportunity to have this program at OSU. In addition, the proposal has also received input and edits from a wide variety of external reviewers and committees. The overall goal of this degree program is to develop a Masters of Public Policy that is both strong in its integrity and respected professionally through accreditation.

Dr. Steel then addressed a number of the questions and/or concerns raised at the October 12th meeting of the Graduate Council. The value of a Master of Public Policy degree versus an MS in Public Policy is in its name recognition nationwide and the professional training that it suggests. A MPP is to the public sector what an MBA is considered to the private sector. In addition, enrollment in this type of degree program is booming nationwide, so there appears to be a growing demand for public sector oriented graduate programs.

In response to the concern regarding whether the MPP degree program is a thesis, non-thesis or thesis/non-thesis degree program, Dr. Tornquist clarified that the Council was concerned at the ambiguity in the proposal. The Council does not want to dictate whether the program should be a thesis or non-thesis program, but instead wants to make sure that whatever the option is that students are clear from the beginning.

Dr. Steel began addressing this concern by providing Council members with a copy of final project/paper requirements for Public Affairs/Policy degrees in the Pacific Northwest. The handout listed five different degree programs from California to Washington and their master essay requirements. The two that resemble the MPP program at OSU the most were the Master of Public Affairs at the University of Washington and the Master of Public Policy at the University of California, Los Angeles (UCLA). The University of Washington requires a final degree project (6 credits). Every student who graduates with an MPP degree is expected to complete a substantial piece of independent research. While not a thesis, the degree project enables students to work closely with University of Washington faculty members on a topic of serious interest. UCLA requires an internship and a "major research paper addressing a real-life policy question".

In addition, to these existing degree programs, Dr. Steel also provided the Council with the proposed requirements for the final thesis/essay in the MPP degree program. The guidelines for the master's thesis/essay state that the master's thesis/essay is required of all MPP students. The student will be judged on how well his/her paper addresses the four goals listed below:

- Illustrate an in depth, detailed and nuanced understanding of a specific issue, topic or question in the field;
- Illustrate an awareness of the theoretical issues and arguments raised and discussed in the literature on the subject;
- Express the ideas, concepts and arguments advanced in the paper with precision and rigor;
- Enlarge the reader's understanding of the issue and topic.

In sum, as an analogy, the Master's Thesis/Essay should strive to be equivalent in content, sophistication and technical expertise to a publishable paper in a respected scholarly journal. The Master's Thesis/Essay can be on any subject, as agreed upon by your committee, in political science or criminal justice and there are no limitations or preferences for a particular theoretical or methodological approach. The Master's Thesis/Essay should be 40-60 pages in length.

The Council asked whether a 6 credit Master's Thesis/Essay would still allow the program to be accredited. Dr. Steel stated that yes, the MPP degree program would still be able to be accredited by the National Association of Schools of Public Affairs and Administration. After some discussion and clarification of Oregon State University's processes, Dr. Steel concluded that the Master's Thesis/Essay described above would be a non-thesis requirement and would not interfere with the ability of the program to be accredited nor negatively affect student's employment opportunities.

Finally, with concern to the area of funding for the MPP degree program, Dr. Steel stated that CLA already possesses the strong and informed faculty needed to carry out this program. Dean Schaffer stated that she thinks that the MPP degree program is an excellent program and that it is a solid opportunity for the Departments of Sociology, Political Science, Economics and Agricultural & Resource Economics and the College of Liberal Arts. In addition, she confirmed that in the first two years there will not be any initial budget allocation for the MPP degree program because the College of Liberal Arts currently has the resources and faculty needed to implement this program. After two years, CLA will require additional funds to hire three new faculty members. The College of Liberal Arts also expects additional revenue as enrollment grows which would be targeted towards additional resources, such as GTA positions. Overall, Dean Schaffer strongly endorsed the MPP degree program.

Dean Schaffer asked the Graduate Council, in term of future proposals, whether or not it would be helpful for her to include a statement specifically focused on the funding for a program and how the CLA budget will accommodate the new program? The Council strongly encouraged Dean Schaffer to provide this statement with future proposals.

Dr. Tornquist stated that due to a lack of quorum, that the MPP degree program proposal would be tabled until the next Graduate Council meeting.

4. Review of Rangeland Resources Graduate Program Review Report

Dean, College of Agricultural Sciences, Thayne Dutson, Associate Dean, College of Agricultural Sciences, Erik Fritzell and Department Head, Rangeland Resources, William Krueger were present as representatives of the Rangeland Resources program. Dr. Neil Davison, College of Liberal Arts represented the Program Review committee.

Dr. Davison presented the following summary:

The review of the Rangeland Resources department took place during the week of May 22nd. The internal Graduate Council review team and the external review teams, the Society for Range Management and the Cooperative State Research Education and Extension Service (CSREES), reviewed the graduate and research programs of the Department. The Graduate Council review team, including the external reviewer, consisted of:

- Dr. Jeanette Brandt, Apparel, Interiors, Housing and Merchandising
- Dr. Neil Davison, English
- Dr. Terri Fiez, Electrical & Computer Engineering
- Dr. John Walstad, Forest Resources
- Dr. Jeff Mosley, Department of Animal and Range Sciences, Montana State University.

The Rangeland Resources Department has wide recognition among its constituents in the State of Oregon. Following the Land Grant mission, department faculty are encouraged to bring the University research findings to the people of the State and to serve them through teaching and pertinent research both on campus and at various field sites. The Department not only offers a bachelor's degree program on the OSU campus but also on the Eastern Oregon University (EOU) campus in La Grande with graduates receiving an OSU degree. Two department faculty members are housed on the EOU campus. Thus, connections that are just now being formed within some disciplines across the State have historic connection within this program. Additionally, a position in distance education for the Natural Resources undergraduate degree program has been established with this faculty member housed on the Central Oregon Community College campus. Field sites are at Burns and Union.

Dr. Davison presented the following recommendations provided by the Review Team:

During the course of our examination, we identified several items that may assist in future growth and development of the department. For the sake of brevity, these are highlighted below, accompanied by a brief explanation of each. We believe these suggestions are reasonably straightforward, but if further elaboration is warranted, members of the Graduate Council Review Team are readily available for comment.

1. Prepare a **strategic plan** that focuses on staffing needs and changes in the department over the next 5-10 years. This plan should address factors such as impending retirements, gender and ethnic diversity, disciplinary needs, emerging issues, and other items surrounding faculty infrastructure.
2. Evaluate the current **balance among teaching, research, and extension activities** in the department. Is it optimal for long-term sustainability of the department? Our analysis suggests that teaching and extension activities take precedence over research and other scholarly pursuits. This trend could render the department obsolete or ineffectual if more emphasis isn't given to innovative, creative, and scientific aspects.
3. Foster more **interdepartmental collaboration and collegiality**. Significant opportunities exist to further leverage departmental expertise and resources through cooperative enterprises with other College and University departments. Sharing courses, conducting joint research projects, and fostering integrated approaches to natural resource management are but a few examples. In addition, attention needs to be given to the rift (real or perceived) between the Rangeland Resources Department and the Fisheries and Wildlife Department. While no one expects (or wants) a monolithic view from these two sectors, there should be more cooperation and collegiality involved in working toward scientifically sound and politically acceptable solutions to natural resource problems.
4. Develop **formal policies and procedures concerning departmental governance**. Some areas where this might prove helpful as the department grows in size and complexity are: specifying the graduate admissions, orientation, and committee selection process; developing methods for handling graduate student concerns and complaints (short of formal grievance procedures) that protect the anonymity of the student; and establishing departmental staffing priorities and protocols for recruitment.
5. The affiliation of **Extension agents** and **Experiment Station specialists** with the Department of Rangeland Resources as their academic home provides both challenges and opportunities. Considerable diligence and finesse are needed to ensure that these faculty are effectively integrated into the department. As personnel and financial arrangements continue to grow in number and complexity, this aspect of departmental administration will need increased attention.
6. A couple of important housekeeping items deserve attention. The first involves ensuring that **faculty position descriptions** are accurate and up-to-date. This will facilitate a variety of reviews (annual, mid-term, P&T, post-tenure) as well as help focus faculty efforts in appropriate areas. The second item is related and involves **partitioning of faculty FTE** in an accurate manner. For example, the current allocation of teaching FTE appears skewed in some cases and may not reflect the actual effort involved.

Overall, Dr. Davison stated that both students and faculty within the Department were very satisfied with their success in research and post-graduate opportunities. Though the Department of Rangeland Resources is suffering from changes within the discipline and there is some dissatisfaction with department to department relations, the faculty and students were satisfied with the quality of the education in the Department.

Dean Dutson and Associate Dean Fritzell supported both the Department of Rangeland Resources and the review report.

Dr. Krueger stated that some errors were made in the review report concerning graduate student involvement in the hiring process of new faculty and department to department relations. However, Dr. Krueger stated, that overall, he supported the report and was taking the recommendations into account within the Department.

Due to a lack of quorum the Graduate Council was unable to take action on the report. It was stated that the Chair of the Program Review Team, Dr. Jeanette Brandt would not change the report to reflect the issues pointed out by Dr. Krueger. Instead, Dr. Krueger will be able to provide a statement in addition to the report prior to its transmittal to Provost White.

5. Committee Assignments

The following committee assignments were made:

Oregon Sports Lottery Graduate Scholarship

(Selection conducted in early April)

- Court Smith
- Vincent Remcho
- Jim Ayres

Bayley and Yerex Graduate Fellowships

(Selection conducted in early March)

- Vicki Ebbeck
- Doug Markle
- Steve Radosevich

Frolander Outstanding GTA Award

(Selection conducted mid-May)

- Paul Cull

If there are any requests for reassignment please contact Mary Prucha in the Graduate School as soon as possible.

The Graduate Council will fill the final opening on the Category II Course Review committee at the next Council meeting.

6. Informational Items

Graduate Education Round Table (GERT)

Sally Francis, Interim Dean of the Graduate School, updated the Council on the work of the Graduate Education Round Table. At the October 20th GERT meeting a single agenda item was the focus of the meeting. The Round Table reviewed the Graduate School Review report and narrowed down the recommendations to the three most important items that the Graduate School should work to implement this year. The Round Table's recommendations were:

- Recommendation 1: A comprehensive institutional vision statement for graduate education should be developed through a collaborative effort of the faculty, the Graduate Dean, and other institutional stakeholders.
- The combined recommendations of: Recommendation 5: The Graduate School should assume a more aggressive role to encourage improvements and expansion of services for graduate students across the University. Particular attention should be paid to areas of counseling, health care, childcare and financial aid;

Recommendation 12: The Graduate School should take the lead in lobbying the Development Office to place a high priority on soliciting funds directed to graduate education. An effort comparable to that underway for development of undergraduate scholarships should be initiated for graduate scholarships;

Recommendation 10: The Graduate School should be a strong voice in the distribution of internal funds and should help to ensure that adequate state and tuition funds are directed towards graduate education. Given the role of graduate education and graduate students in reaching the goals of the University, it is imperative that the Graduate Dean continues to champion the role of graduate education at OSU; and

- Recommendation 13: The Graduate School should seek ways to shift more authority for defining what graduate education is to departments, programs and colleges. The Graduate School should concentrate instead on facilitating new initiatives, such as distance delivery of graduate education, *with an emphasis on interdisciplinary programs as stated in recommendation 14.*

Central Oregon State University (COSU)

Dean Francis provided the Council with an update on COSU. Over the last month, Dean Francis has been working, through conversations and meetings, to gather ideas for graduate program offerings in Central Oregon. There will not be any new graduate programs coming to Central Oregon until the second or third year of COSU. However, current graduate programs that are offered by OSU will be available when COSU begins.

Dean Francis provided the Council with the final criteria for brokering graduate programs. The criteria are as follows:

In general, graduate programs offered at COSU will be developed and offered by COSU and OSU Graduate Faculty. However, in certain instances when it is neither feasible nor efficient for COSU or OSU to be the program provider, graduate programs may be brokered from other institutions. The following are the criteria by which COSU will determine whether a given graduate program may be outsourced.

1. Institutional quality

- a. The institution providing the graduate program must be fully accredited.***
- b. The faculty members who are involved in offering the program must be qualified to hold Graduate Faculty status at OSU.***
- c. The provider must have appropriate facilities and library collections to support the program.***

2. Evidence of need

- a. There must be sufficient market demand for students to generate a cost-effective enrollment.***
- b. Employment potential for graduates must exist.***

3. Relationship to strategic direction

- a. The program must further the mission of COSU and OSU.***
- b. The program must be in alignment with the strategic direction of COSU and OSU.***
- c. The program must not have a negative impact on the ability of OSU to sustain its current program offerings.***
- d. For cases in which a similar degree currently exists at OSU, the offering unit at OSU must be consulted prior to brokering with another provider.***

4. Program quality

- a. The program must be accredited by any accrediting body or professional society that has established standards in the area in which the proposed program lies.***
- b. If the program is in an area in which the institution offers an undergraduate program, the undergraduate program must be accredited.***
- c. The program must meet the following standards outlined in the Graduate Catalog:***
 - i. Credits required***
 - ii. Transfer credits allowed***
 - iii. Grade requirement***

- iv. Blanket-numbered course limits*
- v. Residency*
- vi. Time limits*

5. Program evaluation

- a. The provider must have a means of assessing the degree to which program objectives are met.*
- b. The provider must have a means by which program improvements and enhancements are made.*
- c. The provider must have a means by which program quality is assessed that is comparable in depth and scope to OSU Graduate.*

The final proposal for COSU from Oregon State University is due in the Chancellor's office December 1st.

Graduate Student Orientation

The Graduate School will be holding two student focus groups in November to gain additional insight for planning the 2001 Orientation. Any suggestions or input that Council members may have with regard to Graduate Student Orientation is welcomed.

Graduate Admissions Task Force

Invitations to serve on the Graduate Admissions Task Force have been sent this week by Dean Francis and Bob Bontrager, Director of Admissions and Orientation. John Westall, Department Chair of Chemistry will chair the Task Force.

Status of Graduate Program Review Follow-Ups

Dean Francis asked the Council for an update on the progress of Follow-Up Reviews this term. Mary Prucha, Coordinator for Graduate Services in the Graduate School, stated that no reassignments have been made. The committees will stand as stated in the October 12th minutes. A review of the Follow-Up reports will be placed on the agenda of a future Graduate Council meeting.

7. Category II Course Requests

Bruce Rettig, on behalf of the Graduate Council, approved the following course requests:

CHANGE IN EXISTING COURSE

ANTH 471/571 (00-C268)

BA 436/536 (00-C272)

CSS 460/560 (00-C270)

ANTH 441/551

COURSE DROP

TOX 450/550 (00-C276)

TOX 460/560 (00-C277)

8. Other Business/Announcements

The meetings for the rest of fall term:

Thursday, November 9 3:00-5:00pm 650 Kerr Admin. Bldg.

Thursday, November 30th 3:00-5:00pm 650 Kerr Admin. Bldg.

Graduate Council

October 12, 2000 Minutes

Present: Tornquist (Chair), Ayres, Brandt, Cull, Ebbeck, Francis, Markle, Mishra, Niess, Prucha, Remcho and Rettig.

Absent: Esbensen, Radosevich and Smith

Guests: Chris Bell, Associate Dean – College of Engineering; Mark Edwards, Assistant Professor – Department of Sociology; James Foster, Department Chair – Department of Political Science; Bob Frank, Associate Dean – College of Liberal Arts; Michael Kassner, Coordinator – Material Science Program; Gordon Reistad, Department Head – Department of Mechanical Engineering; and Vic Tremblay, Department Chair – Department of Economics.

1. Introduction, Operating Principles and Upcoming Agenda Items

Susan Tornquist, Chair of the Graduate Council, introduced herself and the new 2000-2001 members to the Council, Jim Ayres – College of Pharmacy and Doug Markle – College of Agricultural Sciences.

Dr. Tornquist summarized the Standing Rules of the Graduate Council and led a discussion concerning the operating principles for the Graduate Council in the upcoming academic year. At the end of the 1999-2000 Council session, absences among members increased. In addition, the lack of participation in Council meetings made it difficult for the Council to act on issues at hand. As the year came to a conclusion, email was used on occasion to complete discussions and collect votes from faculty members who were not present at a Council meeting.

In an effort to prevent this from recurring, Dr. Tornquist emphasized the value of attendance at Graduate Council meetings. In addition, she asked the Council to define what a quorum would be. The Council was uncomfortable using email as a means to vote on Council issues. Instead it was decided that email would be limited to the discussion of issues and that votes would take place only at Council meetings. It was also concluded that a quorum will consist of seven of the total twelve members of the Graduate Council and that a majority of those in attendance would decide a vote.

2. Follow-up Program Reviews and Program Reviews for 2000-2001

Dr. Tornquist announced that both the academic program review and academic program follow-up review committees have been tentatively formed (located below). Any concerns regarding the review assignments should be addressed to Mary Prucha, Coordinator of Graduate Services, in the Graduate School as soon as possible. Currently, the Graduate School is working to develop schedules and target dates, including dates for submission of the self-study, dates for the program reviews to take place and the submission of final reports. In addition, Associate Dean Bruce Rettig of the Graduate School is working to set up an informational meeting on graduate program review policies and procedures for Council members and representatives of departments being reviewed.

3. Appoint Committees

The Council was briefed on the status and number of individuals needed to serve on various committees. Assignments were made to the following committee:

Category II Course review: Cull and Mishra. The Category II Course review committee is still searching for a third member.

Additional assignments will be made to the following Scholarship and Fellowship review committees at the next Graduate Council meeting:

Oregon Sports Lottery (need 3 – beginning of Spring Term)
Bayley & Yerex Fellowships (need 3 – end of Winter Term)
Herbert P. Frolander Fellowship (need 1- during May)

4. Category I Curriculum Proposal: Ph.D. in Material Science

Dr. Tornquist introduced the Category I Curriculum proposal for a PhD in Material Science. Currently, Oregon State University offers only an MS in Material Science. Dr. Kassner, Coordinator of the Material Science Program was available by speaker phone to discuss the proposal and answer questions.

Dr. Kassner stated that the proposal had been widely circulated throughout the College of Engineering and the College of Science and viewed by external reviewers prior to its presentation at the Graduate Council. The MS in Material Science has been in existence for the last ten years. The Material Science Program has been waiting until now to move forward with this proposal for a PhD in Material Science to ensure that existing enrollment, faculty recruitment and course offerings supported this program.

The Material Science Program has been weakened in the past as graduate students who have received their MS in Material Science at OSU have gone elsewhere to get their PhD due to the absence of this degree program. Over the past five years graduate students wishing to pursue a PhD in Material Science at OSU have earned their PhD in another discipline, such as Mechanical Engineering, although their degree program reflected the Material Science discipline. Overall, the ability of OSU to offer a PhD in Material Science would allow the program to retain students and offer a degree in Material Science for those students whose degree programs reflect this discipline.

Chris Bell, Associate Dean of Engineering, and Gordon Reistad, Head of Mechanical Engineering, were also in attendance to show their support and the support of the College of Engineering for this proposal. Associate Dean Bell stated that the College of Engineering feels this Program fits well into the future growth plans of the College and meets the demands of Oregon's economy.

Dr. Tornquist opened the topic for discussion to the Council. The Council expressed strong concern regarding the zero dollar amounts on the proposal's budget. Dr. Kassner and Dr. Reistad stated that the resources for the PhD program would be allocated out of the current funds provided to the MS in Material Science. Overall, Dr. Kassner expects that there will be no additional costs for the Program due to the use of current resources to support the Program. However, if enrollment grows at a faster rate than expected there may be some financial stress in the short-run. Dr. Kassner stated that it is also difficult to project the budget of the PhD in Material Science because it will be funded out of different departments as they contribute to the teaching and resources for the program. In addition, Dr. Reistad stated that he expected additional budget allocations to be made in the future as enrollment in the College of Engineering grows.

The Council strongly suggested that Dr. Kassner and the College of Engineering establish a budget for the proposal that reflects something other than zero prior to its consideration by the Curriculum Council.

On October 12, 2000 the Graduate Council voted to accept the proposal.

5. Category I Curriculum Proposal: Master of Public Policy

James Foster, Chair of Political Science, opened the discussion by stating that the Master of Public Policy (MPP) proposal is unique because of its clientele focus. The MPP is directed towards graduate students interested in the discipline, undergraduate students interested in graduate work in public policy, and individuals currently working in the field outside of academia. Foster indicated that the proposal is fiscally conservative. The first years of the degree program will be supported by internal reallocation of funds by the College of Liberal Arts and any expansion in the degree program will be supported by enrollment dollars. If enrollment does not increase then the degree program will be capped to minimize costs. The MPP degree is in line with the goals of the College of Liberal Arts to expand its current graduate degree offerings and Oregon State University's goal to become a Tier 1 university.

Associate Dean, Bob Frank of Liberal Arts, backed Dr. Foster's comments. He stated that the proposal has been widely circulated in the College of Liberal Arts. He also stated that both he and Dean Schaffer strongly support and are committed to the implementation of this proposal. Vic Tremblay, Chair of Economics, and Mark Edwards, Department of Sociology, were also present to answer questions and show their support for this proposal.

The Council stated that Table 2 of the proposal, "Proposed MPP Prerequisites and Core Courses", was confusing. The 42-credit minimum required of core courses did not add up to 42-credits with the courses listed in the table. Dr. Foster stated that the 42 credit minimum was a combination of the listed core course credits, the 10 credits issued for the internship for pre-service students, and additional course work for students with prior relevant work experience. The Council suggested that the table be clarified regarding the minimum core requirements. When asked why the MPP degree requires 62 credits instead of the standard 45 credits of master degree programs, Dr. Foster stated that 62 credits is required for this to be a professionally accredited degree.

The Council asked if language ability in Spanish would make sense as an option or requirement for this program. Dr. Foster confirmed that Spanish makes sense as an option. To respond further to this question Dr. Foster pointed out that the MPP degree under each area of concentration includes the statement, "Other pertinent courses at OSU may be selected subject to approval of the MPP committee" in order to allow for flexibility within the program. Upon review of the concentrations, the Council noted only courses listed for AREC, ECON, PS and SOC. Since other social science areas have experience in policy areas; the Council questioned whether courses would be limited to AREC, ECON, PS and SOC. Dr. Foster stated no, the coursework is not limited to these areas and cited the same statement listed above.

When asked by the Council for justification as to why 10 credits were being provided for a MPP capstone research paper, Dr. Foster was unclear as to the answer and stated that he would discuss it with his colleagues and provide a response to the Graduate Council after the meeting. He did, however, state that the MPP program would give the capstone research paper the weight and rigor of a thesis. This raised the question whether the research paper was actually a thesis or not. The Council strongly agreed that the proposal must be very clear in its language regarding the research paper and whether there is an option for thesis or non-thesis work.

The Council also questioned why a MPP degree was being proposed instead of a Masters of Science in Public Policy. Dr. Foster and Dr. Tremblay both stated that the MPP has more value to the clientele that will be targeted for this degree. In addition, though the MPP degree program will have the rigors of an MS degree program, the MPP degree is a recognized degree within the field of public policy and the degree's focus on public policy analysis is very clear in the title of the degree.

Concerns were also raised regarding prevalence of slash courses within the proposal. Dr. Edwards stated that the faculty are very supportive of this proposal and are excited at the prospect of teaching graduate students in a public policy degree program. As the proposal states, core courses, including two that he teaches (SOC 515 and SOC 516) will be taught completely independently of courses offered for 4XX credit. The slash courses will be used as an initial step for electives in the program and will be replaced by 500 level courses as the program grows.

Finally, the Council expressed concern regarding the proposed budget and funding of the MPP degree program. Associate Dean Frank assured the Council that the College of Liberal Arts and the departments involved in the degree program are strongly committed to and supportive of this proposal. In addition, Dean Schaffer is very committed to the funding of this degree program.

The Graduate Council expressed several areas of concern:

- whether the MPP degree program is a thesis, non-thesis or thesis/non-thesis degree program;
- how the MPP degree program fits into the goals of the College of Liberal Arts and Oregon State University;
- funding;
- the predominance of 400/500 level courses; and
- the value of an MPP degree versus an MS in Public Policy.

As a result, the Graduate Council agreed that further clarification and information on these areas is needed. The Graduate Council will ask Dr. Brent Steel, author of the proposal, Department of Political Science, and Dean Schaffer, College of Liberal Arts to discuss the MPP proposal at a future Graduate Council meeting.

6. Branch Campus Proposal

Sally Francis, Interim Dean of the Graduate School briefly updated the Council on the status of the Branch Campus proposal in Central Oregon. Dean Francis has been working on the graduate component of the proposal for incorporation into the overall proposal due on October 15th. As a result of this work, she has drafted a proposal for criteria for brokering graduate programs at the Branch Campus. A copy of the draft criteria was provided to those in attendance at the time of the discussion.

Dean Francis stated that currently the Branch Campus is considering brokering a Nursing program from OHSU and a Masters of Teaching Education degree from Eastern Oregon University. The Council questioned the strength of point (a.) under 2. Evidence of need, which states that "the program must address a community need.

" It was stated that this line seemed limiting in its focus on community need with disregard to forward thinking needs by the state and nation. It was suggested that this line be omitted. In addition, the question was raised as to what should be done when a brokered program competes with a program offered by OSU, such as the MTE and the MAT. It was suggested that language be included in the criteria to address this possible conflict.

The Council also raised concern whether faculty under a brokered program would be considered Graduate Faculty at OSU. Dean Francis stated that when a degree is brokered from another institution that it is the name of the providing institution that will be on the transcript for that degree. In brokering that degree, those faculty associated with the program would not go through the same process as faculty being considered for Graduate Faculty status at OSU. However, the assumption is that OSU would not broker a graduate or professional program with faculty that did not meet the high standards that Graduate Faculty must meet at OSU.

Finally it was suggested that those programs brokered by OSU should go through a Graduate Council program review and that language reflecting this request be incorporated into the criteria.

Dean Francis asked for any additional comments to be forwarded to her via email no later than October 15th.

Finally it was suggested that those programs brokered by OSU should go through a Graduate Council program review and that language reflecting this request be incorporated into the criteria.

Dean Francis asked for any additional comments to be forwarded to her via email no later than October 15th.

7. Category II Course Requests

Sally Francis, on behalf of the Graduate Council, approved the following course requests:

X-COURSE

CSS 531X (00-C239) and (00-C240)

CHANGE IN EXISTING COURSE

CSS 630 (00-C236)

CSS 590 (00-C243)

NEW COURSES

GEO 536 (00-C208)

Approved on the condition that each of the suggestions/issues raised by Gary Beach in his review are specifically addressed prior to final approval.

GEO 537 (00-C209)

Approved on the conditions that each of the suggestions/issues raised by Gary Beach in his review are specifically addressed prior to final approval and that additional detail regarding the grading system to be used is requested.

BA 465/565, ENGR 465/565, HORT 490/590 and H 490/590 (00-C198)

Approved on the conditions that each of the suggestions/issues raised by Gary Beach in his review are specifically addressed prior to final approval and that the confusion of course numbers for HORT and H is cleared up.

CSS 530 (00-C237)

TOX 514 (00-C217)

Approved on the condition that the suggestions/issues raised by Gary Beach in his review are specifically addressed prior to final approval.

TOX 555 (00-C218)

Approved on the condition that the suggestions/issues raised by Gary Beach in his review are specifically addressed prior to final approval.

TOX 611 (00-C216)

Approved on the condition that the suggestions/issues raised by Gary Beach in his review are specifically addressed prior to final approval.

MCB 668 (00-C234)

Approved on the condition that the suggestions/issues raised by Gary Beach in his review are specifically addressed prior to final approval.

MB 668 (00-C235)
Approved on the condition that the suggestions/issues raised by Gary Beach in his review are specifically addressed prior to final approval.

8. Other Business/Announcements

The meetings for the rest of fall term:

Thursday, October 26th 3:00-5:00pm 650 Kerr Admin. Bldg.

Thursday, November 9th 3:00-5:00pm 650 Kerr Admin. Bldg.

Thursday, November 30th 3:00-5:00pm 650 Kerr Admin. Bldg.

Graduate Council

June 8, 2000 Minutes

Present: Christensen (Chair), Cull, Francis, Higginbotham, Prucha, Remcho

Rettig

Absent: Barofsky, Brandt, Davison, Ebbeck, Esbensen, Mishra, Radosevich,
Tornquist

I. Approval of Category I Curriculum Proposal: OSU Elementary Teacher Licensure Program in Central Oregon

Dr. Mark Christensen, Chair, College of Pharmacy, reintroduced the proposal for the OSU Elementary Teacher Licensure Program in Central Oregon. The Council was generally accepting of the proposal, however some concern was expressed regarding current community and budgetary support for the program.

On June 14, 2000 the Council voted by email to accept the proposal.

II. Introduction of Category I Curriculum Proposal: Master of Fine Arts in Creative Writing

Associate Dean Jack Higginbotham, Graduate School, informed the Council that the Department of English requested that the Graduate Council move forward with the proposal for an M.F.A. in Creative Writing. The Department accepted all edits suggested to the proposal except for the inclusion of external liaison with other Oregon universities at this stage. Associate Dean Higginbotham expressed the strong support of the Provost as well as Dean Schaffer, College of Liberal Arts, for this program. In addition, he stated that the Department asked for swift action on the proposal so that it could reach the Curriculum Council early in the 2000-2001 academic year.

The Council viewed the proposal as clean and well supported by the University. In addition, the Council thought that the proposal was well established structurally. Concern was expressed regarding the absence of external liaison with other Oregon universities.

On June 14, 2000 the Council voted by email to accept the proposal.

III. Update on the Category I Curriculum Proposal: Master of Arts in Public Policy

Dr. Christensen stated that the Category I proposal for a Master of Arts in Public Policy will be postponed for approval until after the September 6th meeting with the Provost to discuss the Graduate Council review of the Economics program. The Department of Economics has a strong role in the proposed Public Policy program and the outcome of the September 6th meeting may affect this role and structure of the Public Policy program. In addition, this extra time will provide new 2000-2001 Council members with the opportunity to review the proposal and bring their views on the issue in the fall.

IV. Update on Graduate Issues

Dr. Christensen and Interim Dean Sally Francis, Graduate School updated the Council on the status of several graduate issues. The updates were as follows:

- Clinical Faculty

Dr. Christensen updated the Council on the status of the proposed guidelines for clinical faculty appointments and promotion sponsored by the College of Pharmacy. According to Andy Hashimoto, Vice Provost for Academic Affairs, the clinical faculty category will be included in the Faculty Handbook this summer.

- Category II subcommittee

Dr. Christensen stated that new appointments needed to be made to fill recent vacancies on the Category II subcommittee. The Council discussed whether to appoint Council members to the committee to serve over the summer or to wait until the fall term. Concern was expressed that if the Council waited until fall term to appoint the full committee, Category II proposals submitted in the summer would not be acted on in an efficient manner nevertheless. It was agreed that the Council would wait until fall to fill the vacancies on the Category II subcommittee with the realization that very few Category II proposals are submitted over the summer and those that are would be better served by the full committee in the fall.

- Collective Bargaining Contract

Dean Francis updated the Council on the status of the bargaining negotiations. On June 6th OSU and the Union reached a tentative contract agreement. The contract covers the next four years and includes:

- \$110 credit to be provided to all graduate students, both Union and non-union, to be used for such items, as health insurance and fees;
- Graduate Teaching Assistants will be paid in wages vs. a stipend. Stipends will be reserved for academic appointments; and
- No incremental increase in salary for GTAs and GRAs was incorporated in the contract.

The next step is to ratify the contract by the graduate student Union and the University. This is expected to occur in the near future. Dean Francis thanked the members of the Bargaining Team for their work and time.

- Associate Dean of the Graduate School Position

Dean Francis stated that the Graduate School is underway in its search for a new Associate Dean. Associate Dean Jack Higginbotham's last effective day as Associate Dean was June 9, 2000. The Graduate School expects to begin advertising for the position in the next week.

- Graduate Certificate Programs Policy

The Graduate Certificate Program policy has been submitted to the Faculty Senate for approval. The policy was submitted too late to make it on the 1999-2000 agenda, however, it is hoped that it will be on the agenda of the first Faculty Senate meeting in 2000-2001.

V. Category II Course Requests

Jack Higginbotham, on behalf of the Graduate Council, approved the following course requests:

NEW COURSES

ECON 562 (00-C076)
ED 613 (00-C168)
ED 614 (00-C169)

The following three courses were approved pending confirmation that effective liaison was conducted. That is, at least a couple of the effected units needed to respond with either a note of support or objection. For example, it was stated that John Westall was contacted but there is no evidence that he responded.

ME 578 (00-C190)
ME 579 (00-C191)
ME 682 (00-C192)

CHANGE IN EXISTING COURSES

TOX 512 (00-C204)

TOX 511 (00-C203)

X-COURSES

FW 570 (00-C201)

HSTS 570 (00-C202)

DROP COURSE

FP 561 (00-C206)

VI. Other Business/Announcements

Dean Francis thanked the members of the Council for their time and service during the 1999-2000 academic year. She also expressed her appreciation for the Graduate Council member's participation on the Graduate Council program review teams and grievance advisory committees.

Graduate Council

May 25, 2000 Minutes

Present: Christensen (Chair), Cull, Ebbeck, Esbensen, Francis, Mishra, Prucha Radosevich, Rettig

Absent: Barofsky, Brandt, Davison, Higginbotham, Remcho, Tornquist

Guests: Mike Burke, Associate Dean – College of Agricultural Sciences; Thayne Dutson, Dean - College of Agricultural Sciences; Wayne Haverson, Director – School of Education; Jim Males, Department Head - Animal Sciences; Barbara Moon, Director – Distance & Continuing Education; Arthur O'Sullivan, Professor –Economics; Kay Schaffer, Dean – College of Liberal Arts; Victor Tremblay, Department Chair – Economics; and Ken Winograd, Associate Professor – School of Education.

I. Introduction of Category I Curriculum Proposal: Master of Public Policy and Category I Curriculum Proposal: Master of Fine Arts in Creative Writing

Dr. Mark Christensen, College of Pharmacy introduced the Category I Curriculum proposals for an M.A. in Public Policy and a M.F.A in Creative Writing to the Council. At this time, OSU does not offer either of these programs, but will be considering their approval and implementation in the future. Dr. Christensen asked the Council to review these proposals, paying specific attention to the following areas:

- The Administration of the Program – How is the program going to be administered? Who will be the lead in administering the program?
- The Funding Sources proposed for the Program – Is the funding proposed reasonable for the long-term success of this program?
- The Admissions Process into the Program – Who will handle admissions into the program at the departmental level? Who and how will students be monitored in the program?
- The Need for the Program – Is the program based on short-term or long-term demand? Is the program sustainable?
- The Library Resources for the Program – Does the Library have the support and background to carry out this program?

Dr. Christensen asked the Council to review these proposals and expect action on them by the Council in the future. In addition, Dr. Christensen asked that any suggestions or concerns be emailed to him regarding either proposal by May 31st. Dr. Christensen will work with Associate Dean Jack Higginbotham, Graduate School, to communicate this input to the submitters of the proposals so that they can prepare a final copy of the proposal for Graduate Council consideration and action.

II. Approval of Category I Curriculum Proposal: OSU Elementary Teacher Licensure Program in Central Oregon

Dr. Ken Winograd, School of Education, stated that the OSU Elementary Teacher Licensure Program currently exists on-campus. The School of Education has continued to see a high demand for the program statewide and would like to extend the program to Central Oregon, specifically Bend, Oregon.

The program is similar to the on-campus program in that it is intended to prepare individuals for their initial licensure into elementary education. However, the Central Oregon program would differ from the on-campus program in three significant ways:

1. The Central Oregon program is a part-time program. Unlike the full-time program offered on-campus, the Central Oregon program would allow students to take between 6-7 credit hours per term and primarily target homemakers and professionals.
2. The faculty will not be solely campus-based. Though on-campus faculty will administer the program, the program will be taught by non-campus based faculty. This would include individuals with local expertise and professionals.
3. The program will be based on self-supported funding. Though the administrative portion of the program will come from state funds, the instructional portion will be funded on a tuition-basis.

In addition, Dr. Winograd stated that the faculty in the Central Oregon program will meet with the on-campus administrators for evaluation of syllabi and class structures to ensure that a high level of rigor is maintained within the program. The School of Education is optimistic about the potential for the program in Central Oregon. They project an initial enrollment of 35 students with many more applications for the program.

Dr. Christensen opened up the discussion to the Council and invited questions for Dr. Winograd, Dr. Wayne Haverson, School of Education and Ms. Barbara Moon, Distance & Continuing Education. The Council asked how students would be funded? Dr. Winograd stated that students would be self-funded. The option for financial aid and student loans would be available, however students would not be eligible for scholarships through the program. In addition, the Council asked how the faculty of the Central Oregon program would be classified? Dr. Winograd and Dr. Haverson responded by stating that they would be fixed-term instructors or assistant professors. The classification of assistant professors would allow the faculty to be eligible for graduate faculty status.

Dr. Winograd, when asked, also stated that he anticipates the program will need at least 2-5 terms prior to actual admission in order to allow students to prepare for the program and the School of Education to work through any details. The School of Education is currently waiting for the approval of the proposal prior to hiring faculty and advertising admissions.

The Graduate Council also suggested that Dr. Winograd clarify the following in his final proposal:

- How students will be admitted to the Central Oregon program.
- How the School of Education will differentiate between students enrolled on-campus vs. those enrolled in the Central Oregon program. Specifically, in terms of differentiating between the two student programs in Banner.

Dr. Christensen asked the Council to review this proposal and expect action on the proposal by the June 8th meeting. In addition, Dr. Christensen asked that any further suggestions or concerns be emailed to him regarding the proposal by May 31st. Dr. Christensen will work with Associate Dean Jack Higginbotham, Graduate School, to communicate this input to Dr. Winograd so that he can prepare a final copy of the proposal for Graduate Council by no later than June 5th.

III. Economics Program Review

Dean, College of Liberal Arts, Kay Schaffer, Chair, Department of Economics, Victor Tremblay, and Chair, University of Graduate Faculty of Economics, Arthur O'Sullivan was present as representatives of the Economics program. Dr. Steven Radosevich, Forest Science and Dr. Vicki Ebbeck, Exercise & Sport Science represented the program review committee.

Dr. Radosevich presented the following summary:

The Economics graduate program was reviewed on April 17, 2000. The review included a self-study report, site visit and additional information as requested by the review committee. The Graduate Council review committee consisted of:

- Dr. Steven Radosevich, Forest Science
- Dr. Vicki Ebbeck, Exercise & Sport Science

- Dr. Sam Stern, School of Education
- Dr. Stella Coakley, Botany & Plant Pathology

and two external reviewers:

- Dr. John Siegfried, Department of Economics, Vanderbilt University
- Dr. Ronald Oaxaca, Department of Economics, University of Arizona

The Economics graduate program is a relatively new venture at OSU, having begun in 1988. The graduate program in Economics focuses primarily on International Economics and Industrial Organization and is supported and staffed by a competent and dedicated faculty. However, the Department of Economics is small by standards of most U.S. institutions granting a Ph.D. in Economics. The department consists of 10.5 full-time tenured or tenure-track faculty. Although OSU is one of the smallest Economics faculties in the country that offers a Ph.D. program, this may be misleading in that the Economics department is greatly influenced by the programs in Agricultural & Resource Economics (AREC) and Forest Resources (FR) through the University of Graduate Faculty in Economics.

Dr. Radosevich presented the recommendations of the graduate program review committee:

- Further develop joint appointments across participating UGFE departments.
- Develop a work load/balance policy that permits faculty to initiate and sustain programs of research and scholarship that will lead to tenure or advancement in rank. Consider the use of an intensive third-year review to provide new faculty members with feedback on their progress (Note: a mentoring system is being developed for the new faculty appointment beginning Fall 2000).
- Develop a mechanism to solicit graduate student feedback on curriculum, seminars and other department matters that involve them.
- At least two additional evaluations seem warranted: (1) Evaluation of the UGFE, perhaps as part of a review of AREC and (2) evaluation of the undergraduate program in relation to needs, demands, expectations in the Department.
- A prioritization by the Dean of Liberal Arts about whether graduate or undergraduate education will have greater or decreased priority in the future would be helpful to the Department. At the very least, an evaluation of the UGFE core as used by AREC and FR should be done.
- Is it appropriate to maintain a separate M.S. and Ph.D. core just because AREC students enrolled for M.S. degrees are unable to succeed in the core offered for Economics Graduate students? Perhaps AREC should provide/staff their own M.S. core or more formally swap teaching of lower division economics courses in return for graduate level core offerings.
- Upgrade and/or repair computing facilities.
- Change ECON 627 from required in the Economics Department's core to an elective that can be offered in alternate years.
- Organize a two-course swap with the University of Oregon, wherein a group of OSU students travel to Eugene for two days per week and take two courses. A following term, a group of UO students would travel to Corvallis two days per week and take two courses at OSU. Cater to the comparative advantage of each Program. Dr. Rolf Fare should clearly be an attraction for UO students. Because the institutions are both on a quarter system, the implications of such a swap imply only about 20 round trips for each group for only one term of their graduate career. In addition to the exploitation of comparative advantage for the two Programs, such an exchange would help to broaden the contacts of students and faculty of two relatively small programs.
- Add seminars and brown bag workshops to enliven the scholarly atmosphere among economists in Corvallis. Get economics in AREC and FR to join in.
- Do not use independent study courses for fields of specialization. This does not save faculty time and can spread the students even more thinly. Stick with the three field offerings--International Economics, Industrial Organization, and Natural Resources and Environment.
- The Perspectives requirement for the Doctoral program is antiquated and should be eliminated. This requirement requires students to select from courses in the history of economic thought, comparative economic systems, and research methods. History of economic thought and comparative economic systems are not of sufficient importance to merit inclusion in the core of a modern graduate program in economics. Documentation of the research methods course (Econ 617) in the self-study report is vague. It does not appear to serve any function that cannot already be served by other courses in the core.
- Although International Economics is listed as one of the two areas of emphasis in the program, there is presently no one on the resident faculty with international economics as a field of specialization. There is the expressed hope that the faculty member on leave with expertise in international economics will

return to the Department. (However, we have since learned that this will not occur.) Solution to this problem is not anticipated until September 2001 at the earliest. Previous staffing shortages have necessitated the commuting by students to take a graduate course in macroeconomics at the University of Oregon. The faculty should now reevaluate its expertise and commitment to the field of specialization. (Note: After the review, the Department met and decided to continue with the field of International Economics.)

The committee also stated in the report that the faculty made the right decision to not admit graduate students in 1998 because such admissions would have been under false pretenses given the department's inability to provide the graduate education promised in its literature. Such a step is extraordinary but is viewed as a sensible response to a temporary and aberrant situation. One has to be concerned that the situation is giving the appearance of becoming the norm.

- We did not get the sense that there has been sufficient attention paid to the tradeoffs between offering only master's degrees versus offering only Ph.D. degrees. Such consideration should be necessitated by the resources available for graduate programs in economics at Oregon State University. The faculty should prepare and follow an "exit" plan for withdrawing from its present graduate programs in the event that the institution cannot commit additional support at the present time. The Economics Department has taken an enormous stride in the recruitment of Professors Färe and Grosskopf. It would be extremely unfortunate if the institution cannot afford to take advantage of the contribution of these internationally visible scholars to a viable niche Ph.D. economics program.
- Short of eliminating entirely either or both the Masters and Ph.D. graduate program, there are a number of alternatives that could be considered.

1. In many institutions, a terminal master's degree is considered a professional degree so that financial support is not offered to those who apply for a terminal master's degree. The terminal master's program could be revamped into a five year BA/MA program.

2. A common Ph.D. core could be required of both master's and Ph.D. students. The 500 level courses in econometrics correspond to what Ph.D. students would encounter at most other institutions. Therefore, at least one of the 600 level econometrics courses could be eliminated from the core.

3. Given the necessity of sending students to take a core course at the University of Oregon, it might be worthwhile to explore joint arrangements with the graduate economics program at the University of Oregon. There could be opportunities for sharing teaching responsibilities between the two programs (see recommendations; Curriculum).

Dr. Tremblay was supportive of the review process. He asked the Council to make a stronger statement regarding the programmatic problems within the department, such as budgetary constraints, faculty workloads, and lack of adequate resources that need to be remedied in order for the program to be sustainable and grow.

The Council asked if the development of a more collaborative relationship with the University of Oregon's Department of Economics is probable. Dr. Tremblay stated that currently the two universities do have a good working relationship, however the concern with field courses through the UO is follow-up. In the areas of dissertation and research it makes it difficult for students when the faculty member is not in residency. The Council also asked why not discontinue the program. Dr. Tremblay stated that in 1998 the faculty did vote to suspend admission into the program because there was a lack of resources to support additional graduate students. However, currently the faculty would like to see the program continue forward and build on its strengths, which is possible as long as the department receives the budgetary and resource support that it needs.

Dean Schaffer stated that she views this program as one with excellent faculty but one that is facing hard times. She stated that in her view it would be disadvantageous to OSU, especially as it moves towards establishing Top Tier status, to lose this strong program in Liberal Arts.

The Graduate Council voted to accept the program review report without any changes. Dr. Tremblay was encouraged to provide the Budget Proposal for the Department of Economics as an addendum to the report to the Provost.

IV. Animal Sciences Program Review

Dean, College of Agricultural Sciences, Thayne Dutson, Associate Dean, College of Agricultural Sciences, Mike

Burke, and Department Head, Animal Sciences, Jim Males were present as representatives of the Animal Sciences program. Dr. Steve Esbensen, College of Oceanic & Atmospheric Sciences represented the Program Review committee.

Dr. Esbensen presented the following summary:

The review of the Animal Sciences department took place from April 3rd-6th, 2000. The internal Graduate Council and Undergraduate Program review teams and the external CSREES (Cooperative State Research Education and Extension Service) review team reviewed the graduate, undergraduate and research programs of the Department. The material in the Graduate Council review committee report was based primarily on the Animal Sciences self-study report and the site visit. The Graduate Council review team, including the external reviewer, consisted of:

- Dr. Steven Esbensen, College of Oceanic & Atmospheric Sciences
- Dr. Vincent Remcho, Chemistry
- Dr. Steven Tesch, Forest Engineering
- Dr. Janine Trempey, Microbiology
- Dr. Richard Reynnells, USDA-CSREES

The Department of Animal Sciences offers M.S. and Ph.D. degrees in Animal Science or Poultry Science and a Master of Agriculture. The Department has 36 faculty members, of which 14 are full professors, 8 associate professors, 9 assistant professors, 4 instructors and 1 emeritus professor, and 20 graduate students. Overall the graduate programs in Animal Science are very good with strong faculty and solid graduate students. However, the graduate program in the Department of Animal Sciences (ANS) are facing challenges and major transitions that are a prototype for those faced by departments across the OSU campus. ANS is experiencing surging undergraduate enrollments, declining graduate enrollments and a deteriorating physical plant in the face of severely constrained budgets.

Dr. Esbensen presented the following findings identified during the review process:

- The research and education environment for Animal Sciences has changed dramatically. The CSREES report states that the 1990s brought significant and permanent shifts in the livestock and poultry industries. The Department of Animal Sciences has faced these changes during a time of severe OSU budgetary constraints, while experiencing rapidly growing enrollment at the undergraduate level and decreasing enrollment at the graduate level. Further, many of the undergraduate students are now interested in domestic animals that are not a part of the animal products industry, presenting a challenge to a graduate curriculum and faculty that is oriented toward production animals and research.
- Despite the challenges of the 1990s, ANS has managed to continue to provide successful educational and research opportunities for its graduate students. The quality of the graduate faculty is very high and the department has a rich history of nationally and internationally recognized research, coupled with the quality educational opportunities.
- It is our assessment, however, that this is a critical time for the ANS graduate program. The department must replace some of its most productive senior faculty as they retire and establish a clear identity and direction for graduate research and education over the next 2-5 years. At the same time, a major infusion of resources is needed to meet the demands of the rapidly growing undergraduate population. Unless a means to cope with the rapidly growing undergraduate program is found, it is difficult to see how the unit will be able to maintain a high quality graduate program. Graduate teaching and research resources will be siphoned away to meet the needs of the undergraduate program. Achieving a proper balance between undergraduate and graduate education is clearly a crucial task for the ANS faculty.

As a result of these findings, the graduate program review committee provided the following recommendations:

- The ANS graduate faculty should develop a clear vision and plan for graduate research and education within the context of a departmental Strategic Plan addressing facilities, equipment, undergraduate and graduate education, research efforts and extension activities. The plan should be consistent with the mission statements for the department, the College of Agricultural Sciences and the University. The plan must establish an equitable balance between the undergraduate and graduate educational responsibilities and expectations.
- ANS should hire top quality new faculty members with strong research potential to replace retirees, and provide them with the opportunity to establish their research programs. The importance of ANS graduate faculty development in creating new opportunities for graduate student research and

instruction cannot be overemphasized. The surge in undergraduate enrollment may justify the addition of new faculty at the college level, but the ANS faculty must mentor the new faculty and provide them with the opportunity to obtain grants, graduate students and build their research programs.

- The ANS graduate faculty should take steps to improve the quality of the graduate curriculum. Efforts should be made to reduce reliance on 4XX/5XX courses, or improve the experience of graduate students in those classes. Efforts should also be made to create or take advantage of opportunities to cross list graduate level basic animal science courses with complementary departments across campus.
- ANS should develop a more aggressive graduate student recruitment program to increase the size, quality and academic diversity of the applicant pool.
- Improve graduate level course offerings. As graduate student numbers have declined and undergraduate numbers have sharply increased, along with some faculty retirements, there has been a tendency to reduce the number of "graduate level only" classes in favor of 4xx/5xx slash classes. While the reasons for this trend are understandable, it is important to have sufficient 5xx or higher graduate classes to challenge graduate students. ANS should critically review its current graduate coursework offerings and rejuvenate the graduate curriculum. Consideration should be given to providing resources for faculty to development of 500- and 600-level courses. 4xx/5xx level coursework should be eliminated wherever possible. Current 4xx/5xx level courses could be reclassified as 400, 500 or 600 level as appropriate, and their content adjusted appropriately. This process would involve elimination of outdated courses and the introduction of new, more relevant coursework. Alternatively, if budget and faculty realities prevent significant increases in graduate level classes, we recommend efforts be made to clearly develop a more challenging graduate education element within the slash classes. This might come in the form of a "graduate student only" lecture or discussion sections that would allow the graduate students to interact at a higher level with the professor, and yet not require a significant increase student contact hours.
- Evaluate opportunities to cross list graduate level basic animal science courses with complementary departments across campus. The department should consider encouraging students to take some graduate classes covering fundamental animal science topics in companion departments across campus. While there are some tradeoffs, the students are likely to benefit from additional perspectives and ideas, and budget dollars might be utilized more effectively. Collaborative teaching ventures may allow teaching some courses every year that are offered currently on an alternate year basis, increasing the opportunities for timely completion of graduate degrees.
- Restructure undergraduate advising responsibilities to accommodate the increasing undergraduate enrollment without impacting the graduate program. Faculty with less demanding research programs could undertake the bulk of undergraduate advising. This approach would provide consistency in advising and opportunities for new faculty members to develop fundable and nationally recognized research programs that provide graduate student research opportunities.
- ANS should consider more aggressive recruiting of graduate students to increase the size of the applicant pool. The decline in the numbers of graduate students is a serious concern for the department's research programs. There is no obvious mechanism in place for the active recruitment of quality graduate students, and the annual rotation of the Graduate Committee chair has not provided sufficient continuity. A larger applicant pool could broaden the demographic base of the pool, altering the current situation in which students holding an OSU ANS degree predominate in the graduate ranks. An increase in the number of students could potentially increase the quality of the pool, though the current small pool seemed reasonably strong. More students could provide enough critical mass to legitimize offering more graduate level classes and to offer existing classes more frequently than alternating years. Some specific suggestions are
- Generate an updated, more informative web site specifically directed to graduate recruitment. The current ANS web pages are well designed – only the graduate program pages are in need of work.
- Produce a new graduate recruiting brochure. This could highlight research opportunities in all fields and focus on the future of the department.
- Target Animal Science undergraduates in the western US by advertising assistantship opportunities at regional and national meetings and to programs and faculty in targeted universities. Use of the National Department Heads Listserv for advertising graduate student positions is encouraged. (CSREES recommendation)
- Have Graduate Committee members make direct, personal contact with qualified applicants on their first indication of interest.
- Place emphasis on selecting a Chair of the Graduate Committee who will be able to serve for the full 3-year term. Continuity allows for enhancements in graduate recruiting to be realized more effectively.

Faculty members who are in the early stages of their careers should be considered as candidates for this role; they have the greatest interest in recruiting outcomes – their success and longevity are dependent on their research productivity.

- The department and college should revisit the issue of graduate teaching assistantships. At present, there are no dedicated funds in the department's budget because the college does not support graduate-teaching assistantships. Thus, teaching opportunities for ANS graduate students have only been realized in an informal manner and as a function of grant funding. In light of the rapidly increasing undergraduate enrollment, it may be time to revisit this issue. Most graduate students expressed an interest in teaching. Greater involvement of graduate students in teaching undergraduate courses could free up some faculty time for the development of quality graduate courses.
- Make a concerted effort to improve the number and quality of opportunities for graduate student research. Some specific suggestions are:
 - The department should continue its good effort to foster strong participation of students in presentation and publication of research findings.
 - Every effort should be made to encourage the development of the research programs of the 3 new faculty members in order to provide more opportunities and options to incoming students. (see also Section 3 below).
 - The department should generate a long-range plan for critical hiring in areas where graduate student involvement in research is languishing – e.g., Poultry Science.
 - Necessary facilities and equipment updates should be made wherever possible, to ensure an appropriate environment for top-tier researches.
- Hire top quality new faculty, with strong research potential, to replace retirees.

The composition and reputation of the faculty is undergoing a change as numerous senior faculty prepare for retirement. In many cases those retiring are the department's most experienced and successful in obtaining competitive grants. These folks are also the most well known and widely sought after to mentor graduate students. A broad suite of faculty backgrounds and interests must be maintained as new hiring decisions are made. A strategic plan will be helpful in avoiding incremental decisions. The department may selectively choose to fill some positions at advanced levels in order to maintain some core of experienced faculty who have stronger reputations, are more experienced grant writers, and who can help mentor the cohort of junior faculty. The hiring decisions that are made in the next decade will set the stage for the composition and quality of the ANS Dept for several decades. At this time it does not appear that the declining budgets for higher education in Oregon and reduced ANS allocations have negatively affected the department's ability to recruit new top quality entry-level faculty to replace retirees. The department has a strong national reputation that remains attractive to new faculty despite the challenging budget climate and salary structure. We were warned however, that as more widely recognized senior faculty retire, it could become more difficult to attract faculty to OSU on the strength of the department's reputation. Attracting top quality new faculty is a key element of strengthening the graduate program. Salary compression is the key issue that may influence retention of the experienced faculty, but we were not provided with specific examples of faculty leaving for higher salaries elsewhere.

- Provide junior faculty with development opportunities and mentoring on competitive grantsmanship. When entry-level faculty members are hired, it is critical to provide them with an opportunity to establish an active and functional research program. While difficult with inadequate teaching budgets, it is important to carefully manage teaching loads in the first few years, so that grant proposals can be written and research networking can be established. The chances for research success can also be increased through the strategic use of start up funds for equipment, by upgrading facilities or providing graduate student support. New faculty members should be carefully mentored by the department head and senior faculty to ensure that expectations for long term success at OSU are clearly understood. Assisting junior faculty to be successful in competing for long-term competitive grants will pay large long-term dividends to the department. Longer-term grants will be very helpful in providing stability to a faculty member's research program, enabling more focused research and less need for opportunistic chasing of what tend to be smaller and shorter term grants. The longer-term grants will provide a predictable flow of resources to fund GRAs, which in turn will help support a productive research program and allow for better planning in recruiting high quality graduate students.
- Develop proposals for facilities/equipment improvements for submission to various funding outlets. The Graduate Review Committee did not visit the animal production facilities, laboratory facilities on campus, or the computer equipment/labs available to graduate students. Our impression from discussions with faculty and students is that some upgrading of farm facilities might facilitate research by graduate students and faculty alike, that wet lab facilities were sorely lacking in Withycombe Hall,

and that computing resources were adequate, but variable, across the department. There is always an insatiable demand for the latest generation of computers and software. The department might explore opportunities to raise funds for needed facilities and equipment by targeting them as priorities for development efforts. Alternatively, well thought out proposals for equipment and facilities may receive funding through various University sources such as the Vice-Provost for Research.

- Develop a plan for the future. The department does not appear to have a current strategic plan in hand that contains a vision for the role of graduate education within the department's priorities. The development of a focused strategic plan will be helpful in providing direction and in avoiding incremental decisions in the coming years. This will be especially important as faculty retires and new positions are negotiated with the Agricultural Sciences administration and then filled.
- Seek ways to better incorporate Extension faculty, especially those from off-campus locations, into the graduate program. The Extension specialists and the Extension agents represent a large proportion of ANS faculty. These folks represent a huge potential resource for graduate students that may underutilized. It will be difficult to engage the off campus agents in teaching on a regular basis, but they could provide significant intellectual capital for graduate student committees and to assist in identifying/developing field sites for research/demonstration projects, etc. Incorporation of off-campus Extension faculty into the academic units is still a work in progress, but represents an opportunity for leveraging on-campus resources if off-campus folks can be motivated to interact with the graduate students.
- Carefully evaluate funding for the required teaching assistantship experience, especially in view of the new Graduate Student Union. ANS should be congratulated for requiring that graduate students participate in a classroom teaching assistance/ teaching experience. This is particularly beneficial for Ph.D. students who intend to pursue a career in academia. The challenge is that the department currently had no source of funds for Graduate Teaching Assistants and instead assigns GRAs to work in the classroom. This is reasonable for a few hours, but we are concerned that it could have the unintended effect of distracting students from progress on research efforts or thesis projects, especially if students are asked to provide teaching assistance for numerous hours a week over several terms. The subsidization may become increasingly difficult as the Graduate Student Union is installed.
- Encourage the creation of resources to support graduate student training. Graduate faculty should be encouraged to solicit extramural funds to support graduate students and be rewarded for these efforts. Graduate student support includes salaries and stipends, research support and graduate student travel. Graduate students should be encouraged to apply for graduate fellowships.
- Broaden activities at the international level. Little international program focus was apparent during the review. Graduate students and faculty alike can benefit from international collaboration and travel. The benefits can include broadening the global view of the department by bringing in visiting faculty and students to the department.

In conclusion the committee remarked that there is every reason to be optimistic about the future of the ANS graduate program. The graduate faculty cares about the students and the students respect the faculty for their efforts and expertise. The Department, College and University administrators all seem to be pushing in the same direction. Three new faculty members have been added recently and the surge in undergraduate enrollment is an opportunity to add and develop young graduate faculty members who will be the future ANS leaders. Furthermore, there is an environment on campus that may foster research and instructional cooperation between units for the benefit of graduate students and faculty. The Graduate Council Review Committee wishes the ANS graduate faculty and students every success as they face the current challenges.

Dean Dutson, College of Agricultural Sciences, thanked the program review committee for their work and considered the report to be excellent. With regard to the strategic plan for the Department of Animal Sciences, Dean Dutson remarked that the Department considered the review process, including the self-study report and the external reviewer's input, as the starting point for the development of a strategic plan. In addition, Dean Dutson stated that the Department and the College will examine the issue of 4xx/5xx courses and is optimistic about the potential to work with complimentary departments on campus in collaborative efforts. Finally, in terms of balancing the undergraduate with the graduate population in the Department, the issue of resources is a large barrier that the College and the Department need to overcome in order to address this issue.

Dr. Males, Animal Sciences, was very supportive of the work conducted by the graduate program review team. The Department is currently working to arrange a faculty retreat in August 2000 to concentrate on the development of a strategic plan. In addition, Dr. Males is equally concerned about the large use of 4xx/5xx courses within the Department and looks forward to seeing the recommendations by the 4xx/5xx Task Force

of which he is a member.

The Graduate Council voted to accept the program review report without any changes.

V. Category II Course Requests

Jack Higginbotham, on behalf of the Graduate Council, approved the following course requests:

CHANGE IN EXISTING COURSES

SED 572 (00-C155)
SED 573 (00-C156)
SED 574 (00-C157)
SED 576 (00-C159)
SED 577 (00-C160)
PH 527 (00-C086)
ED 612 (00-C167)
SED 571 (00-C154)

DROP COURSE

SED 575 (00-C158)

VI. Other Business/Announcements

The final meeting for 1999-2000 of the Graduate Council is:

Thursday, June 8th 3:00-5:00pm 300 Kerr Admin. Bldg.

Graduate Council

May 11, 2000 Minutes

Present: Christensen (Chair), Brandt, Cull, Ebbeck, Esbensen, Francis, Prucha, Remcho, Rettig, Tornquist

Absent: Barofsky, Davison, Higginbotham, Mishra, Radosevich

I. Movement Studies Review Report

Interim Dean, College of Health & Human Performance, Jeff McCubbin and Chair, Department of Exercise & Sport Science, Anthony Wilcox were present as representatives of the Human Performance & Movement Studies in Disability programs. Dr. Bruce Rettig, Agricultural & Resource Economics and Dr. Paul Cull, Computer Science, represented the program review committee.

Dr. Rettig presented the following summary:

The Graduate Council review of the Human Performance & Movement Studies in Disability programs was conducted on March 10, 2000. A strong self-study report was prepared by the department of Exercise & Sport Science and provided to the review committee. In addition, the program review committee included two external reviewers:

- ☐ Karen DePauw, Graduate School Dean, Washington State University
- ☐ Russell Pate, Exercise Science Department, University of South Carolina

The review included meetings with the Interim Dean, the Department Chair, the Department's graduate faculty and graduate students. Overall, the review team found the programs to be strong and couched many of their findings and recommendations as ideas that would enable the programs to become even stronger.

Dr. Rettig presented the following findings and concerns identified during the review process:

Findings

- ☐ The Department of Exercise & Sport Science and its graduate program have made enormous progress since it began awarding graduate degrees (MS in movement studies in disability in 1988 and both MS and Ph.D. in human performance in 1989).
- ☐ In this, the first review of this program ever conducted by the Graduate Council, we found that it currently enjoys an excellent reputation within the field. It is the most highly regarded program in the Northwest and certainly one of the best in the western states.
- ☐ The Department has a graduate faculty that is very well trained and several of the younger faculty (i.e. ten years or less at OSU) have established and are maintaining highly productive research programs. Several of the most recent hires would be considered excellent additions to any comparable program in the U.S.
- ☐ The Department faculty manifests an exceptionally high level of collegiality, and it appears that most, if not all, of the graduate faculty are fully invested in the Department

and its graduate program. This high level of collegiality and satisfaction appears to extend to the graduate students, most of whom express great satisfaction with the faculty and their overall experience in the graduate program.

☐ The Department consistently receives a large number of applications for its graduate program and the academic qualifications of the accepted/enrolled applicants are good and comparable to that of other strong programs in this field.

☐ Physical resources, though not outstanding, appear adequate to support the program. Laboratory facilities are well equipped, and the amount of space is adequate at the present time.

☐ Administrative support for this graduate program appears to be very high. Members of the faculty currently serve as Interim Provost, Vice-President for Research, and Interim Dean of the College of Health & Human Performance. Also, the Department Chair appears highly supportive of strengthening the graduate program. Graduate students participate in the departmental governance structure and are pleased with their role.

☐ The Department has attempted to address concerns of slash courses (400/500).

☐ Graduate students are expected to, and do, present and publish research. A variety of support (FTE) including tuition waivers is available for many students.

Concerns

☐ Although many students are well mentored and receive good feedback, improvements could be made. Students housed in the Athletic Department and in remote locations, primarily involved in internships or practical experiences, report that they do not feel as integral to the department as those located closer to the department's offices.

☐ There appears to be a very limited amount of collaboration with the Department of Public Health, and attempts should be made to overcome whatever factors explain this.

☐ A key student concern which has been addressed by the department is the existence of 4xx/5xx courses. The department has attempted to address this problem by developing, where possible, separate graduate courses and offering these on an alternate year basis. However, this attempt to solve one problem may have led to the creation of another. Some students were concerned that their degree progress was, or may be, delayed because courses needed in their programs were offered on an alternate year basis. Ph.D. students in some sub-disciplines are apparently not gaining much research experience until after completing their course work.

☐ The required interdisciplinary seminars (two credits for masters' students and four credits for doctoral students) were also cited as problematic. Students questioned the number of seminar credits required, the meaningfulness of such seminars, the rotation of seminar offerings, and the topics addressed.

☐ Many students stated that they desired constructive evaluation regarding their performance of assistantship assignments.

☐ Students also desired greater preparation for their roles as teachers.

☐ Some master's students expressed concern regarding guidance and/or support for those who were involved in completing a graduate project in lieu of a thesis.

☐ The Department tries to cover many of the specialties in the field and as a result the research interests of the faculty are very fragmented. As a result, there are very few faculty members in each specialty and the critical mass needed for a successful program might not be present in all fields.

☐ The research funding base in the Department is extremely narrow.

☐ Although graduate students working in well-funded facilities also have good computer access students in some sub-disciplines report a need for newer equipment.

According to Dr. Rettig, despite these findings and concerns, the department is very strong. Based on this the committee provided the following recommendations with the note that some of these recommendations, especially the first one, may require additional resources. In addition, although the committee is aware of this and that additional resources may be limited in the near future, the recommendations were designed to suggest ways to further enhance graduate education in the Department of Exercise & Sport Science.

☐ Reduce the teaching load of graduate faculty, especially those supervising Ph.D. students. Possible ways to do this could include reducing the size of the very large undergraduate program, reducing the number of courses delivered by the Department and required in both the undergraduate and graduate curricula, making more extensive use of graduate students as instructors in undergraduate courses, and employing instructors who function primarily as teachers. Whether any of these are reasonable will require a careful assessment of the consequences of such actions on the quality of undergraduate teaching and research at Oregon State University.

☐ Review administrative practices, including hiring, tenure/promotion, and salary adjustment decisions, and peer review guidelines to insure that proper incentives (and disincentives) are in place to encourage the scholarly productivity of its faculty.

☐ Examine the composition of the graduate student body and consider reducing the fraction of the student body pursuing Ph.D. degrees, especially in specialties in which job opportunities are limited and extramural research support is most limited. Also consider reducing the number of sub-disciplines participating in the Ph.D. program. The M.S. program appears to be able to fully support all seven of the sub-disciplines in the Department.

☐ Eliminate the use of slash courses (4xx/5xx) in Ph.D. programs and continue the Department's efforts to limit the number of those courses in M.S. programs.

☐ Increase research collaboration between graduate students and faculty in the Department and their counterparts in the Department of Public Health.

☐ Develop a few courses intended to serve the specific needs of Ph.D. students. In doing so, carefully consider whether this jeopardizes the need to reduce the teaching load of graduate faculty.

☐ Involve graduate students, especially Ph.D. students, in research earlier. Although early involvement in some sub-disciplines is now common, this practice should be expanded. Also, review the number of courses required in the Ph.D. program and consider making the Ph.D. more research-intensive and less coursework intensive.

☐ Develop a strategic plan for graduate programs in the Department. Pay special attention to the number of faculty needed in each sub-discipline to provide a critical mass for research and graduate education.

☐ Review the seminar series to insure that it provides value to graduate students. Emphasize topics, such as proposal preparation, that receive strong support from students.

☐ Review progress of all graduate students on at least an annual basis.

☐ Provide feedback for students involved in internships and practical experiences.

☐ Examine the adequacy of technical support and computer access across the various specializations.

☐ Provide increased training for teaching assistants including mentoring all students teaching their own courses.

☐ Increase the number of faculty at the rank of professor.

Dr. Wilcox stated that he felt well served by the graduate program review process and the committee. He agreed with many of the recommendations and viewed them as steps that will allow the programs to continue to move forward. In addition, Dr. Wilcox asked the Council to modify the statement in the second to last paragraph in the Faculty section. The statement reads:

Three quarters of the funding in the fiscal years 1996 through 1998 was due to McCubbin. In the 1999 fiscal year 95% was due to Hayes, McCubbin, and Snow while in the current fiscal year almost everything was due to McCubbin.

Dr. Wilcox asked that the Council lay less emphasis on the research conducted by Jeff McCubbin, Interim Dean, due to an incomplete grant report that was provided to the Committee at the time of the review. The report at the time of the review, according to Dr. Wilcox, excluded continuing grants and presented miscalculated grant amounts for the Movement Studies in Disability program.

The Council agreed to consider this request in their discussion.

Dean Sally Francis, Graduate School, stated that the Department's self-study document was well prepared and served as a useful and strong document for the review. She also thanked the Committee for its work on the program review report.

The Council agreed, given the opportunity to provide a more accurate report at this time, to reword the statement in the original report as requested by Dr. Wilcox. The Graduate Council voted to accept the program review report with the rewording of this statement.

II. Graduate Certificate Policy

Dr. Vincent Remcho, Department of Chemistry presented the Council with the revised version of the Graduate Certificate Program policy. Dr. Remcho stated that at the request of the Council the following changes had been made to the policy:

- ☐ The requirement of a cumulative GPA of 3.00 was reflected throughout the policy.
- ☐ A section that explicitly stated the role of the Program Coordinator was added.
- ☐ The statement that the Graduate School will be responsible for certification of program completion was added.
- ☐ The use of transfer credits was made more explicit throughout the policy.
- ☐ Referring to the general transfer policy of master's degrees, a maximum of eight credits can be transferred into the graduate certificate program. This will allow 1/3 of the total credits required to be transferred.

In addition, to these changes the Council asked that the following changes also be made:

- ☐ Include both the MBA and MF in footnote *.
- ☐ Move the seven year limit rule from footnote ** to the Proposed Policy Statement.
- ☐ Under the section Admissions revise the statement to read, "This requires that the student hold a four-year baccalaureate degree from an accredited college or university."
- ☐ Under the section Curriculum delete the word "degree" from the first sentence.
- ☐ Under the section Curriculum delete the words "for application" from the last sentence.

The Council voted to approve these changes to the Graduate Certificate Program policy.

The Council also expressed concern regarding the possible inconsistency that may occur if admissions requirements were left to the discretion of the Program Coordinator. In addition, questions were raised concerning the certification process at the end of the program. The possibility of students finding out at the end that they did not meet initial admission requirements and therefore will not receive a graduate certificate would have negative impacts on the programs and OSU. Overall, the tension between providing a dynamic program, access and strong eligibility requirements seemed difficult to resolve.

The Council shared possible ways to address these concerns, including:

- ☐ Creating a new admissions category.
- ☐ Redefining the non-degree application process.
- ☐ Providing stricter admission guidelines for graduate certificate programs.
- ☐ Allow for an earlier audit in the program to catch any deficiencies prior to the completion of the program.

Dr. Remcho stated that the subcommittee drew the line at implementation and simply developed policy language. In comparison to other graduate certificate program proposals this policy appears to be a well thought out proposal and in the middle in terms of eligibility requirements. It was suggested by the Council that this proposal be viewed as a living document to change as situations rise. In addition, it was also proposed that allowing for a dynamic policy would permit review of graduate certificate programs on a case by case basis as they developed. The Council agreed that the subcommittee had completed their charge to develop policy language and that proposal could be forwarded to the Graduate Education Round Table for further discussion in the area of implementation.

The Council voted to accept this proposal as amended (4 in favor and 2 against). The proposal will move to the Curriculum Council for further action.

III. Update from Graduate Education Round Table

Mark Christensen, College of Pharmacy, informed the Council that the Graduate Student Association and the Graduate Student Senate recently merged into one organization, the Graduate and Professional Student Association (GPSA). The GPSA would like to appoint the President of the organization as the ex-officio student member of the Graduate Council. Dr. Christensen would like to discuss the role of the student representative on the Graduate Council as well as the proposal to adopt the President of the GPSA as the student representative at the next meeting.

IV. Introduce Category I Curriculum Proposal: OSU Elementary Teacher Licensure program in Central Oregon

Dr. Christensen asked the Council to review the Category I Curriculum Proposal for discussion at the May 25th Graduate Council meeting.

V. Scheduling for Fall Academic Program Reviews

To be discussed at the May 25th Graduate Council Meeting.

VI. Other Business/Announcements

The meetings for the rest of 1999-2000 are as follows:

Thursday, May 25th 3:00-5:00pm Kerr Admin.Bldg. 650

Thursday, June 8th 3:00-5:00pm Kerr Admin. Bldg. 650

April 27, 2000 Minutes

Present: Christensen (Chair), Barofsky, Brandt, Ebbeck, Esbensen, Francis, Prucha, Remcho, Rettig

Absent: Cull, Davison, Higginbotham, Mishra, Radosevich, Tornquist

I. Discussion of Graduate Faculty Status for Clinical Faculty

Dr. Mark Christensen, College of Pharmacy and Chair, opened up the discussion with a brief summary of the April 20th presentation on Clinical Faculty Status by Dean Wayne Kradjan, College of Pharmacy and Dr. John Block, College of Pharmacy. The purpose of the proposal to develop a clinical faculty appointment category is to recognize faculty who spend the majority of their time teaching (i.e. classroom and clinical service areas) and providing "patient" care. The goal would be to define and differentiate clinical track faculty appointments from the traditional academic appointments (tenure track).

The appointment category, "clinical track faculty", would apply to teacher/clinicians in pharmacy, veterinary medicine and clinical psychology. In addition, like the tenure track titles, assistant professor, associate professor, and professor, the clinical track would establish similar titles, such as clinical assistant professor, clinical associate professor, and clinical professor. Positions would be advertised with a clear statement of the nature and expectations of the position and would be fixed term and based on annual reappointment.

Faculty hired in these categories would be required to meet established performance expectations. For instance, a tenure track faculty member is required to demonstrate teaching ability, research and scholarship (20-80%) and college/university service. A clinical track faculty member would also be required to demonstrate teaching ability, and college/university service as well as clinical service and research and scholarship (5-15%). The reasoning behind the reduced research and scholarship expectation for clinical faculty is that often between teaching and clinical service demands "clinical faculty" do not have the opportunity to devote 20-80% of their time to research. Instead, under this model they would be required to demonstrate only 5-15% research and scholarship, such as case studies, clinical trials, literature reviews, book chapters, abstracts, poster and podium presentations, and innovative practice and teaching techniques, which is achievable in light of the limitations on their time.

The issue pertinent to the Graduate Council is how to interpret professional degrees and the new clinical classification when granting graduate faculty status. According to the 1983 Graduate Faculty Guidelines, the eligibility requirements for graduate faculty status include that individuals hold a graduate degree. Dean Francis asked the Council to consider, assuming that the clinical faculty classification is implemented, what the implications of this new classification on graduate education will be, specifically related to graduate faculty status.

The Council suggested that although professional degrees do not meet the eligibility criteria for graduate faculty status, the Graduate Dean may evaluate professional degrees and clinical faculty on a case by case basis.

Dr. Christensen will incorporate this suggestion into the Graduate Council's response to Vice Provost Hashimoto regarding the proposal for clinical faculty status. He encourages the Council to provide him, via email, any other suggestions. He will draft this response and provide it to the Council for review with the intention of sending it to Vice Provost Hashimoto who is overseeing the clinical faculty proposal.

II. Graduate Certificate Policy

Dr. Vincent Remcho, Department of Chemistry, presented the following summary of the graduate certificate policy subcommittee and its charge. The graduate certificate policy subcommittee consisted of Dr. Remcho, Dr. Christensen, Associate Dean Jack Higginbotham, Graduate School, and Dr. Joanne Engel, School of Education. The charge of the subcommittee was to:

- (1) gather information on existing graduate certificate policy programs and
- (2) develop a proposal and guidelines, utilizing this information, for the implementation of graduate certificate programs at Oregon State University.

The subcommittee developed the following policy statement:

The Graduate Certificate Program at Oregon State University is a linked series of graduate level courses that constitute a coherent body of study with a defined focus within a single discipline or logical combination of disciplines. It is designed for a post-baccalaureate or post-master's level participant and reflects the educational mission of the University. All certificate programs require a minimum of twenty-four (24) graduate credits with grades of "B" or better or a Pass (P). Students desiring a graduate certificate must be admitted to the University but are not required to be on track for a specific degree. There is no residency or formal committee requirement for graduate certificates. Certificate students are subject to all general policies governing the courses for the master's degree.

In addition, the subcommittee supported the policy statement with the following guidelines:

Admissions

Student must be admitted to the University as "non-degree graduate students" as defined in the Graduate Catalog. This requires that the student hold a baccalaureate degree. Individual certificate programs may specify additional requirements, including minimally acceptable grade point averages. Students may be reclassified as "advanced degree students" by following the procedure listed in the Graduate Catalog. Up to 9 hours of coursework completed at OSU prior to formal admission to the certificate program may be applied to the total certificate requirement; these courses must be regular components of the curriculum of the certificate program.

Curriculum

The certificate curriculum is a structured progression or collection of courses approved and offered for graduate degree credit at OSU. The curriculum consists of a minimum of twenty-four (24) quarter credit hours, and may include a final project, portfolio, or report for integration of the sequence of course materials.

Transcript

Courses and certificates completed will be transcribed by the University Registrar as a part of the student's Permanent University record. The certificate is awarded when all course material is satisfactorily completed and a cumulative grade point average of 3.00 has been attained in all courses to be used toward the certificate. Award of a separate document suitable for framing will be at the discretion of (and will be the responsibility of) the unit administering the certificate program.

Integration with Current Degree Programs

Credits earned in fulfillment of a certificate program may be applied to a graduate degree program at OSU, so long as they meet the appropriate standards for use in the degree* (grade, completion date, etc.). Courses completed for a degree program may likewise be applied toward a certificate program. **

Approval

Before offering certificate programs, the program must be proposed by a department, program, or by combinations of departments or programs, be reviewed and approved by the appropriate School or College committee(s), and must receive approval from the Graduate Council and the Graduate School.

* Includes all current graduate degree programs at OSU (Ph.D., EdD, MS, MA, Ed.M., MBA, MF, MAIS, MAT,

MEng, MAgr, MOcE, MPH, MSE).

** Courses completed no more than 7 years prior to the certificate award date may be used to satisfy certificate requirements

Overall the subcommittee's goal was to develop a policy of graduate certificate programs that remained flexible and evolutionary as better practices are developed. In addition, the guidelines are intended to be open enough to allow for graduate certificate programs to emerge quickly and yet be rigorous. Finally, it was determined that graduate certificate programs need to be designed to be dynamic in order to be competitive with other graduate certificate programs.

After his presentation, Dr. Remcho opened the topic to discussion by the Council. The Council supported the rigor of the proposed graduate certificate program policy, however several questions regarding implementation and process were proposed.

The Council asked who would be responsible for tracking graduate certificate program students. Under the current system of tracking graduate students, there is no established responsibility for tracking non-degree graduate students. Dr. Remcho responded that it would be the responsibility of the graduate certificate program coordinator to track the admission and progress of the students within the program as well as final certification. The Council suggested that the subcommittee explicitly state in the guidelines that a graduate certificate policy coordinator be designated. In addition, the coordinator should also be required to file a formal statistical and informational report to the Graduate School to keep the Graduate School abreast of the existing graduate certificate programs and the number of students enrolled in these programs. No action would be required on the part of the Graduate School with regard to this report.

The Council also inquired how currently enrolled graduate students would apply to a graduate certificate program in another department. Under the current wording in the proposed guidelines, it is unclear whether advanced degree students would be eligible for the certificate programs. According to Dr. Remcho advanced degree seeking students are eligible for the graduate certificate programs. It was agreed, for greater clarity, that under the guideline marked Admissions, the first line would be re-worded to say, "Students must minimally be admitted to the University as "non-degree graduate students", as defined in the Graduate Catalog.

The Council recommended that the proposed guidelines state more explicitly the handling of transfer coursework including the number of transfer credit that could be applied toward a graduate certificate program. It was further suggested that the last sentence under the Integration with Current Degree Programs guideline would be amended to state, "credits earned in fulfillment of a certificate program may be applied to a graduate degree program at OSU so long as they meet the appropriate standards for use on the degree and the criteria for transfer credit as defined in the Graduate Catalog."

Secondly, a contradiction between the policy statement and the guidelines was cited. As it read, the policy statement required "all certificate programs require a minimum of twenty-four (24) graduate credits with grades of "B" or better or a Pass (P)". While the guidelines titled "transcript" stated "the certificate is awarded when all course material is satisfactorily completed with a cumulative grade point average of 3.00...". It was agreed that the policy statement would be changed to reflect a cumulative grade point average of 3.00.

Dr. Remcho will incorporate these recommendations into a final draft of the graduate certificate program policy proposal and provide the revised copy to Dr. Christensen, Chair of the Graduate Council, for further action.

III. Graduate Admission Policy, Recommendations from the Graduate Admissions Committee (GAC)

Dr. Doug Barofsky, Department of Chemistry provided the Council with a brief summary of the graduate admissions policy recommendations. Last year, the Council was presented three recommendations from the Graduate Admissions Committee (GAC) regarding internal policy changes. However, at that time the Council did not have a quorum present to vote on the recommendations.

Since then, on the recommendation of Associate Dean Jack Higginbotham, Graduate School, Dr. Barofsky withdrew the third recommendation on narrative transcripts due to the infrequency with which they are

brought to the GAC. However, the two remaining recommendations still needed further action.

The first recommendation re-examined the review of 24-Hour Rule applicants. The current reclassification policy of postbaccalaureate and non-degree students states that under the second provision a student must "complete 24 credits of courses each with a grade of B (3.00) or better, or (b) complete sufficient credits to bring the cumulative grade point average (that for the last 90 credits of undergraduate work plus that for courses taken as part of the 24-hour rule) to 3.00 or better before being eligible to apply for graduate admission". Once a student meets the requirements in provision 2, the policy states that:

The completion of 24 credits with a grad of B (3.00) or better does not guarantee graduate admission. Reclassification decisions employ the same procedures and requirements as those for admission. Postbaccalaureate and non-degree graduate students who seek reclassification must be acceptable both to the University Graduate Admissions Committee and the department in which they plan to major.

The GAC recommends that this statement be revised to read:

Completion of either 2(a) or 2(b) does not guarantee graduate admission. Reclassification decisions employ the same procedures and requirements as those for admission. Postbaccalaureate and non-degree graduate students who seek reclassification must be acceptable to the department in which they plan to major.

This change eliminates the need for the file to be re-routed through the GAC for approval once the department has made an admit decision. Students who successfully meet the 24-Hour Rule need only to be accepted by their academic major. The Council voted and approved this change for the 2000-2001 Graduate Catalog.

The second recommendation revises the current policy on minimum admission requirements into a graduate program. Currently the policy states:

The minimum entrance requirements are as follows:

A four-year baccalaureate degree from an accredited college or university, and A combined GPA of 3.00 on the last 90-quarter credit hours of graded undergraduate work on the first baccalaureate degree plus all work completed thereafter.

For International Students:

The equivalent of an American baccalaureate degree of at least four years duration with a B average (equivalent 3.00 on an American 4.00 grading scale) in the last two years, plus all subsequent graded course work, and...

The GAC recommended that the current language be replaced with the following:

The minimum entrance requirements are as follows:

A four-year baccalaureate degree from an accredited college or university, and

A combined GPA of 3.00 on the last 90-quarter credit hours of graded undergraduate work on the first baccalaureate degree plus all work completed thereafter.

Or

A four-year baccalaureate degree from an accredited college or university, a 45 quarter credit hour graduate degree from an accredited university, and A GPA of 3.000 on the last 45 quarter credit hours of graded graduate work on the first graduate degree.

For International Students:

The equivalent of an American baccalaureate degree of at least four years duration with a B average (equivalent 3.00 on an American 4.00 grading scale) in the last two years, plus all subsequent graded course work; or a four-year equivalent baccalaureate degree with a two year equivalent graduate degree and a equivalent B average for the graded graduate course work and...

This change permits students with a sub-standard GPA on the first baccalaureate degree to have only their master's degree GPA count in the GPA calculation. The master's degree must be from an accredited institution, be 45 term credits or greater, and contain a GPA of 3.00 or greater on the last 45 quarter hours of the master's degree. The Council voted to approve the new language for the 2000-2001 graduate catalog.

IV. Attendance Policy for Graduate Committee Members during Exams

Dr. Mark Christensen stated that in recent years the dawn of new technology as well as the increased mobility of faculty has led to the recommendation by faculty to revisit the current policy stated in the survival guide that "all committee members or approved substitutes must be physically present for all formal meetings with the student.

To help with a re-examination of this issue, Dean Francis has organized the presence of a Graduate Council member to observe the use of various technologies during three scheduled meetings. The first two meetings will examine the use of a speakerphone, while the third meeting will observe the use of real-time audio and video technology. Currently, these trial observations will take place on May 25th from 1:00-4:00pm and May 31st from 2:25-5:00pm. The remaining one has yet to be scheduled.

Dean Francis asked for two volunteers to sit on the May 25th and the remaining meeting. Dr. Bruce Rettig, Department of Agricultural & Resource Economics will serve as the observer for the May 31st meeting. The observers will report back their observations to the Council upon completion of the meeting. The hope is to incorporate these observations into the discussion by the Council on the current policy. The Council agreed that the regularly appointed GCR could also fulfill this special role.

V. Items for Future Meetings

Dr. Mark Christensen previewed upcoming agenda items for the 1999-2000 Graduate Council. He asked the Council to review OSU's current policies on residency and 400/500 courses and to come to the meetings prepared to discuss the topics below.

- ☐ Residency
- ☐ Academic Progress for PhD candidates
- ☐ Graduate Council Policy on 400/500 courses
- ☐ Academic Program Reviews: EXSS (5/11),
- ☐ Animal Sciences (5/25/), Economics (6/8)

VI. Category II Course Requests

Jack Higginbotham, on behalf of the Graduate Council, approved the following course requests:

NEW COURSES

NE 581 (00-C022)

Provided that the syllabus is revised to address the differentiation requirement and that a statement of what liaison was conducted.

RHP 581 (00-C023)

Provided that the syllabus is revised to address the differentiation requirement and that a statement of what liaison was conducted.

ME 577 (00-C115)

OC 648 (00-C068)

BOT 566 (00-C106)

CHANGE IN EXISTING COURSE

BOT 565 (00-C105)

Absent: Barofsky, Higginbotham, Mishra, Radosevich, Rettig

I. Botany & Plant Pathology- Academic Review Report

Dean, College of Science, Sherman Bloomer, Associate Dean, College of Agricultural Sciences, Mike Burke, and Dr. Stella Coakley were present as representatives of the Botany & Plant Pathology program. Associate Dean Chris Bell, College of Engineering, and Dr. Kermit Cromack, Forest Science represented the Program Review committee.

Associate Dean Bell presented the following summary:

The Graduate Council review of the Botany & Plant Pathology graduate program was conducted on May 24, 2000. An extensive self-study report was prepared by the department of Botany & Plant Pathology and provided to the Review Committee.

The report gave an in-depth history of the program since its inception.

The Department of Botany & Plant Pathology is large and complex with over 40 professional faculty tenured (tenure-track and courtesy), 35 Faculty Research Assistants/Associates, 10 administrative staff, 33 Graduate Research Assistants and 15 Graduate Teaching Assistants. The total annual budget is over \$7 million split almost equally between state funds and research funding.

Associate Dean Bell presented the following major issues and problems identified during the review process:

- ☐ The tracking of graduate students enrolled in interdepartmental programs;
- ☐ The faculty's lack of understanding of University policies and procedures;
- ☐ The need to upgrade and/or replace computing facilities for the staff and graduate students;
- ☐ A lack of adequate space, funding and time; and
- ☐ Lack of stable funding for graduate students.

It was stated that of these problems and issues some, if left uncorrected, would diminish the research capacity of faculty in Botany & Plant Pathology. The problems are:

- ☐ The inability to recruit top graduate students due to low stipends and lack of guaranteed funding;
- ☐ The inadequate university support of research facilities; and
- ☐ The lack of institutional support of administration of interdisciplinary programs.

According to Associate Dean Bell, despite these issues and problems the department maintains a positive morale and continues to be successful given these limitations. As a result, Associate Dean Bell provided the Council with the Committee's recommendations and concerns:

- ☐ An improved system for tracking graduate students enrolled in interdepartmental programs should be developed;

- ☐ Some faculty lack understanding of University policies and procedures regarding graduate programs (particularly courtesy faculty) even though the department has published guidelines. Graduate students indicate that there are some advising problems, particularly at the "front-end" of their programs;
- ☐ The administrative staff are badly in need of upgraded and/or replacement computing facilities. Graduate students computing facilities also need improvements;
- ☐ The faculty indicated that the biggest issue for them is the lack of stable funding for graduate students (an issue also identified by the chair and the graduate studies committee). There was a clear consensus that recurring funding for 15 students is essential if the department is to be competitive in the future. This is a problem requiring immediate attention;
- ☐ Recruiting of high quality graduate students is vital to achieving top tier status and OSU is not competitive with top tier institutions, indeed, our enrollments are dropping in most programs;
- ☐ There are severe space limitations. It was also clear that deferred maintenance of the building as a whole is a barrier for the department, and, therefore for many of the faculty. ☐ As with nearly every unit on campus, the department needs funding restored to address these problems;
- ☐ Financial problems in the College of Science have created a morale problem among faculty. The differences in salary (9 vs. 12 month) between faculty in the College of Science and College of Agricultural Sciences creates another kind of morale issue. If possible, steps should be taken to mitigate the cause of the financial problems and develop a more equitable approach to salaries;
- ☐ At the time of the review, health insurance was a major issue for graduate students. Although a union has now been established, problems will likely persist, and, OSU needs to be proactive in providing appropriate benefits; and
- ☐ Several Botany & Plant Pathology faculty spend significant time directing interdepartmental programs that benefit research at OSU (for example, the Molecular & Cellular Biology Program and the Environmental Sciences Program), yet they are not rewarded for this effort, which must detract from their own research and/or availability to teach classes. An appropriate portion (25% is regarded as equitable for this kind of appointment) of their salaries should be covered by the institution, and the salary savings to the department used to enhance the individual's research or to replace teaching.

Dr. Cromack remarked that despite the problems cited in the report, the department demonstrates a high level of morale and use of shared resources. However, if the department is to grow and expand its current success these problems need to be addressed.

In addition, Dr. Coakley reported to the Council that since the review, approximately one year ago, several recommendations identified from this process have been incorporated into the department. She also stated that the department found that self-study component was the most valuable aspect of the review as well as the external review team.

The Council asked how many graduate students are currently in the program? The response was approximately 35 graduate students in Botany & Plant Pathology with an additional 15 in interdisciplinary programs, such as Molecular & Cellular Biology and Environmental Sciences. Therefore, the total was estimated to be about 50 graduate students. In addition, the Council asked how many courtesy faculty are in the department? Approximately, 26 courtesy faculty are currently in the department.

The Graduate Council voted to accept the program review report with an additional clarification and/or rationale for the statement that "recurring funding for 15 students is essential if the department is to be competitive in the future."

II. Clinical Faculty

Dr. Mark Christensen, Chair of the Graduate Council, opened the discussion of proposed guidelines for clinical faculty appointments and promotion. This proposal is an informational item for the Council at this time. The proposal proposes the establishment of guidelines, criteria and procedures for evaluation and promotion of clinical track faculty at Oregon State University.

Dean, College of Pharmacy, Wayne Kradjan and Dr. John Block, College of Pharmacy presented an overview of this information to the Council.

According to Dean Kradjan the purpose of this proposal is to develop an appointment category that recognizes faculty who spend the majority of their time teaching (i.e. classroom and clinical service areas) and providing "patient" care. The goal is to

define and differentiate clinical track faculty appointments from the traditional academic appointments (tenure track).

The appointment category, "clinical track faculty", would apply to teacher/clinicians in pharmacy, veterinary medicine and clinical psychology. In addition, like the tenure track titles, assistant professor, associate professor, and professor, the clinical track would establish similar titles, such as clinical assistant professor, clinical associate professor, and clinical professor. Positions would be advertised with a clear statement of the nature and expectations of the position and would be fixed term and based on annual reappointment.

Faculty hired in these categories would be required to meet established performance expectations. For instance, a tenure track faculty member is required to demonstrate teaching ability, research and scholarship (20-80%) and college/university service. A clinical track faculty member would also be required to demonstrate teaching ability, and college/university service as well as clinical service and research and scholarship (5-15%). The reasoning behind the reduced research and scholarship expectation for clinical faculty is that often between teaching and clinical service demands "clinical faculty" do not have the opportunity to devote 20-80% of their time to research. Instead, under this model they would be required to demonstrate only 5-15% research and scholarship, such as case studies, clinical trials, literature reviews, book chapters, abstracts, poster and podium presentations, and innovative practice and teaching techniques, which is achievable in light of the limitations on their time.

Utilizing established performance expectations, evaluations and promotion of clinical faculty would be conducted as follows:

- ☐ An annual review by the department chair, with the faculty member and department chair determining timing of request for promotion;
- ☐ and Assessment of teaching, clinical service, scholarship and college service.

Dean Kradjan, concluded his remarks, by stating that the value of establishing criteria and guidelines for the category of clinical faculty is high when you take into account some considerations. First, this category is consistent with schools of medicine and pharmacy in academic health science centers nationwide. Secondly, these titles allow faculty members to compete for pharmaceutical industry and some NIH/AHCPR grants. In addition, this category raises a variety of questions, such as can clinical faculty do more research? Can an individual move from clinical track to tenure track and vice versa? and Aren't the current tenure guidelines flexible enough to allow clinician/teachers to be promoted and tenured?

In response, Dean Kradjan stated the following in support of the establishment of this faculty category:

Under this category clinical faculty are not required but are encouraged to seek out additional scholarship and research; Clinical track and tenure tracks are not exchangeable positions. To change from one track to the other faculty would need to apply for an open and advertised position; and Past experience has illustrated that under the current tenure guidelines faculty that would be considered clinical faculty are less likely to be promoted without demonstrating 20-80% scholarship and research.

Overall, the establishment of this new track would provide two separate and different tracks in the College of Pharmacy and any other unit that would find such categories useful. Finally, it would decrease the anxiety of promotion and evaluation under the tenure track that many faculty experience and instead increase the focus on their work.

The Council then opened the discussion to questions. It was asked what units on campus would utilize this faculty track? Dean Kradjan and Dr. Block responded by stating that in their discussions with Deans they found that most units on campus would not use this classification. Instead it would remain largely a medical model to be used by the College of Pharmacy and potentially the College of Veterinary Medicine. The proposal and classification, however, would be available campus wide to be used by any unit that saw purpose for it in their college or department.

More pertinent to Graduate Council policy, was the issue of how to interpret professional degrees and the new clinical classification when granting graduate faculty status to faculty in these units under this track. It was determined that the Graduate Council needed to further absorb the materials provided to them on this topic and revisit the issue at the next Graduate Council meeting. The goal would be to discuss this issue in depth,

particular
to the question of graduate faculty status and provide comments to Vice Provost, Andy Hashimoto.

III. Counseling Education Program - Academic Review Report

Dean, College of Home Economics & Education, Kinsey Green and Director, School of Education, Wayne Haverson were present as representatives of the Counseling program. Dr. Susan Tornquist, College of Veterinary Medicine and Dr. Mark Christensen, College of Pharmacy represented the Program Review Committee.

Dr. Tornquist presented the following summary:

The Graduate Council review of the Counseling graduate program was conducted on January 24th-26th, 2000. Despite a short preparation period, the Counseling program provided a solid self-study report and access to the Council of Accreditation of Counseling and Related Programs (CACREP) self-study report.

Overall, the program is a relatively small graduate professional program functioning as a unit in the School of Education within the College of Home Economics and Education. The Counseling Education Program (CEP) trains school counselors and community counselors with direct links to schools. The CEP program at OSU is the primary program in the state of Oregon training school counselors at this time. The program offers both a Master of Science and a Doctor of Philosophy in Counseling.

Dr. Tornquist provided the recommendations of the committee. Overall, the Graduate Council Review team found the CEP to be a valuable program serving the needs of the State of Oregon and preparing graduate students for jobs in an area with high demand for well-trained graduates. However, the Council Review members did identify the following areas that should be addressed to strengthen this program:

- ☐ Improve communication between site supervisors, adjunct faculty and CEP faculty. This should include regularly-scheduled visits to site supervisors, meetings of the faculty, adjunct faculty and site supervisors to promote communication and collegiality and to provide continuing education for site supervisors, a better-defined procedure for communicating information about the program to site supervisors, and a more formalized evaluation process for each practicum;
- ☐ Develop clear guidelines for distribution of funds for travel to national meetings or other professional development;
- ☐ Re-consider the effectiveness of scheduling of the M.S. practicum experience after only one quarter. It appears that additional clinical training and course work before starting the practicum would increase the value of this experience for all involved;
- ☐ and Clarify the future direction for the program based on the comprehensive self-study and outside review just completed, an assessment of the needs of the state, the resources available, and the strengths and interests of the current faculty.

Specifically, the Committee recommended the following:

- ☐ Improve internship assignments and communication with site supervisors;
- ☐ Provide an orientation for preceptors;
- ☐ Clarify the differences between the master's level practicum experience and the doctoral level experience;
- ☐ Strengthen relationships with other departments for cognate areas and mentoring for research outside thesis work;
- ☐ Examine the course offerings within the CEP to address possible overlaps in course offerings with other departments;
- ☐ Seek additional opportunities for PhD students to increase their GTA above 0.15 FTE; increase financial support available to students where possible;
- ☐ Review statistics requirements and increase opportunities for students to take the HDFS statistics series;
- ☐ Provide a clear policy on disbursement of funds for faculty travel to national meetings;
- ☐ Clarify the policy for use of money obtained through faculty-initiated workshops;
- ☐ Continue to make a concerted effort to attract students and faculty from a diverse racial and ethnic pool

of applicants;

- ☐ Provide encouragement and support for faculty to move up in ranks;
- ☐ Consider re-scheduling the program so it doesn't end in December;
- ☐ Consider having students on CEP or School of Education committees where appropriate; and
- ☐ Within financial constraints, consider minor improvements to facilities (such as painting) and to computer equipment for faculty.

Dr. Christensen remarked that the program was articulate and perceived as a valuable program in the State of Oregon and at OSU by the students and site supervisors. In addition, despite its limited resources and areas of concern, the program is succeeding as well as can be expected.

Dr. Wayne Haverson thanked the review team for their time and courtesy. He offered clarification regarding the Committee's recommendation for future direction in the program. As a program for training School Counselors, the program is required to provide recommendations for counselors and teachers in the community in addition to maintaining quality control standards according to CACREP, and attaining the standards held by the Graduate School for graduate programs. In addition to these external demands there is a constant internal demand of how to best utilize the program and available resources, whether it is to train individuals with agency backgrounds or educational backgrounds to be counselors in schools and the community. The combination of such demands can be perceived as lacking direction in a program and cause confusion as the situation is resolved. This is the situation in which the Counseling program at OSU finds itself.

In addition, Dean Green also updated the Council on the status of the final CACREP report, which has yet to be concluded. She also asked the Council to provide a more specific recommendation in terms of how to provide greater direction for the future of the Counseling program.

The Graduate Council voted to accept the program review report with an additional recommendation by the Council Review Team identifying processes to achieve greater direction in the Counseling program.

IV. Graduate Certificate Policy

To be discussed at the next Graduate Council meeting

V. Other Business/Announcements

The next Graduate Council meetings will be:

April 27, 2000	3:00-5:00pm	650 Kerr
May 11, 2000	3:00-5:00pm	650 Kerr
May 25, 2000	3:00-5:00pm	650 Kerr
June 8, 2000 (Last Meeting)	3:00-5:00pm	650 Kerr

Graduate Council

March 9, 2000 Minutes

Present: Christensen (Chair), Barofsky, Brandt, Cull, Ebbeck, Francis, Prucha, Radosevich, Remcho, Rettig

Absent: Davison, Esbensen, Higginbotham, McAlexander, Tornquist

I. Counseling Education Program - Academic Review Report

Postponed until a future Graduate Council Meeting.

II. Scholarship Review Teams

Mary Prucha, Coordinator of Graduate Services, briefed the Council on the status and number of individuals needed to serve on the Oregon Sports Lottery scholarship committee. The following assignments were made to the Oregon Sports Lottery scholarship committee: (1) Cull and (2) Radosevich.

III. Review of Standing Rules

The Council reviewed the standing rules for the Graduate Council. Some discussion occurred regarding the "one graduate student" listed in the Graduate Council member profile and how this position is designated. In addition, questions as to where the general policies and program reviews are located were raised.

The Council agreed to retain the current standing rules for the Graduate Council. Mark Christensen, Chair, will relay this to the Faculty Senate.

IV. GERT Update

Dean Francis updated the Council on the Graduate Education Round Table (GERT). Over the last few months, the Round Table has focused on graduate enrollment targets. As a university, OSU is focusing a great deal on undergraduate enrollment, but has not made any formal proposals or recommendations regarding graduate enrollment. As a result, GERT has proposed to establish a Graduate Enrollment Working Group to further examine this issue, including capacity and growth potential issues, and provide specific recommendations regarding graduate enrollment.

The Graduate Enrollment Working Group, as suggested by the Round Table, will take place during the spring term and likely include the following individuals:

- ☐ a member of the University Growth Committee
- ☐ a dean of a college that represents a high number of graduate students
- ☐ a representative from admissions (i.e. Bob Bontrager)
- ☐ the Dean of the Graduate School
- ☐ a representative from the College of Liberal Arts
- ☐ a representative from the Research Office
- ☐ a representative from GERT
- ☐ a representative from Distancing Education

Dean Francis also relayed the Round Table's proposed items for the spring term. They include: (1) the merger of the two graduate student organizations, (2) 400/500 split level classes, (3) teacher training for graduate teaching assistants, and (4) domestic student recruitment.

V. Informational Items

Mark Christensen asked the Graduate Council for any items to be discussed on future agendas this spring.

The Council proposed the following items:

- ☐ formally approve the admissions policy from last year,
- ☐ graduate certificate programs,
- ☐ 400/500 level classes,
- ☐ issues of residency and off-campus research,
- ☐ final oral examination via teleconference,
- ☐ review of the current policy of not allowing second Ph.Ds, and
- ☐ an intermediate degree for Ph.D. students that complete all their requirements except the dissertation.

VI. Tuition Remission

Dean Francis has been working with the Task Force on Tuition Remission to develop and present a proposal on graduate tuition remission at OSU. She shared this proposal with the Academic Deans Council and the Graduate Education Round Table on March 8th.

Dean Francis opened this discussion with a presentation on the draft proposal, "Graduate Assistant Tuition Remission at OSU," developed by the Task Force.

The Task Force on Tuition Remission consisted of the following individuals:

- ☐ Sally Francis, Interim Dean, Graduate School (Chair)
- ☐ Sherman Bloomer, Interim Dean, College of Science
- ☐ Thayne Dutson, Dean, College of Agricultural Sciences
- ☐ Roy Arnold, Executive Associate Dean, College of Agricultural Sciences
- ☐ Toby Hayes, Vice Provost, Research Office
- ☐ Wayne Kradjan, Dean, College of Pharmacy
- ☐ Mary Prucha, Coordinator of Graduate Services, Graduate School
- ☐ Kay Schaffer, Dean, College of Liberal Arts
- ☐ Robert Specter, Vice President, Finance & Administration

The Task Force used three principles to guide their discussions and proposal: (1) to maximize graduate student enrollment, (2) to maximize the quality of graduate students, and (3) to maximize revenue.

In the past previous investment, in terms of income in graduate tuition remission has come from the General Fund income for enrollment (\$15M) and Tuition Income from all sources (\$8M). In terms of costs, tuition remission went to: (a) non-residential waiver (\$4.4 M), general fund tuition remission (\$3.2 M), assistantship stipends (\$4.7M), cost share (\$1 M), and laurels scholarships (tuition scholarships) (\$.5 M).

Utilizing these guiding principles and past investment data the Task Force developed the following model of graduate tuition remission at OSU.

Student eligibility

To be eligible for tuition remission students must be admitted to a degree program, full-time (12 credits), and be making satisfactory progress in their degree program.

Appointments

Tuition remission will be offered to graduate teaching assistant, graduate research assistant, and graduate fellow/trainee appointments.

Tuition Remission & Assistantship Stipend Eligible Units

Only academic colleges and interdisciplinary degree programs reporting to the Graduate School are eligible

units for tuition remission and assistantship stipends. Research centers and administration units may only award remissions/waivers indirectly through eligible units (i.e. academic colleges and interdisciplinary degree programs reporting to the Graduate School).

In addition, the model also proposes that assistants at 0.20 FTE (increasing to 0.25 in 2001-02) will receive remission at resident rate, Fellows on Foundation funds at 0.49 FTE equivalent may receive tuition remission, and Fellows/trainees at 0.49 FTE may receive tuition offset. Finally, cost share of tuition for assistants on grants/contracts at 0.20 FTE (0.25 2001-02) can occur with prior approval and the Graduate School will set up a 5% total pool of remission/waiver funds to address institutional interests.

In conclusion, graduate tuition remission will be the responsibility of the Graduate School. All initial commitments will be based on the current commitments in each unit, estimates of future cost share commitments in each unit, and estimates of general fund growth. Tuition remission will also be assessed at resident rates, provided in full, and allocated in dollars and non-resident tuition differential waivers for grants/contracts will not be capped. Finally, the Graduate School will provide an annual estimate and an annual report on graduate tuition remission.

After her presentation, Dean Francis opened the topic to discussion. The Graduate Council expressed concern regarding the increase in FTE from 0.15 to 0.20 (0.25 2001-02). It was argued that this increase could have a negative impact on research in terms of the time available to fulfill a student's research component of their program as well as the ability to utilize the 0.15 FTE as a means to grant tuition remission when other grant proposals do not permit tuition remission.

Dean Francis encouraged the Graduate Council to continue to absorb the proposal and to provide any feedback or suggestions to her by Friday, March 10th at 5pm. On Monday, March 13th Dean Francis will take the final proposal to the President's Cabinet, after which the Provost will make a decision on the final policy for fall 2000.

VII. Category II Course Requests

Jack Higginbotham, on behalf of the Graduate Council, approved the following course requests:

CHANGE IN EXISTING COURSE:

FP 553 (00-C036)

Providing that a 400/500 differentiation statement is added to the syllabus.

PHL 541 (00-C093)

PSY 570 (00-C075)

GEN 530 (00-C037)

Dr. Blouin provided an update syllabus, which addressed appropriate differentiation.

CSS 535 (00-C038)

Provided Gary Beach's three questions are addressed.

NEW COURSES:

HSTS 540 (00-C074)

And the following pending resolution of Gary Beach's comments.

OC 648 (00-C068)

AT 683 (00-C067)

OC 683 (00-C066)

OC 682 (00-C065)

X-COURSE

CHE 546X (99-C422)

VIII. Other Business/Announcements

The meetings for spring term:

April 13, 2000	3:00-5:00pm	650 Kerr
April 27, 2000	3:00-5:00pm	650 Kerr
May 11, 2000	3:00-5:00pm	650 Kerr
May 25, 2000	3:00-5:00pm	650 Kerr
June 8, 2000	3:00-5:00pm	650 Kerr

January 13, 2000 Minutes

Present: Christensen, Barofsky, Brandt, Cull, Ebbeck, Francis, Higginbotham, Prucha, Radosevich, Remcho, Rettig, and Tornquist

Absent: Davison, Esbensen, McAlexander

I. Status of Graduate Certificate Policy

Dean Francis reported that an abundance of information about graduate certificate policies has been emerging nationally. Associate Dean Jack Higginbotham and Dr. Vincent Remcho will be attending a conference on the topic in February to learn about the latest trends.

The graduate certificate sub-committee is drafting guidelines for graduate certificate programs. The sub-committee hopes to incorporate information from the conference into its final recommendations. The Council was asked whether waiting for additional information from the conference would disadvantage units from proceeding with plans to develop graduate certificate programs. Council members were unaware of any programs that would be delayed. It was concluded that researching this information fully would lead to a stronger policy statement while informing departments about the opportunities that exist in the area of graduate certificates.

Dean Francis reported she would be meeting with the Graduate Deans from Portland State University and the University of Oregon, as well as the OUS Vice Chancellor for Academic Affairs to discuss graduate certificates January 28th.

II. GERT Update

The Graduate Education Round Table (GERT) met on January 12th. GERT continued its discussion of enrollment targets and strategies. The Round Table is focusing on an enrollment target of 25% and working on a draft capacity survey to be distributed to all departments. Once GERT receives input from the survey, the Round Table will examine where and if there is capacity to increase enrollment to 25%. GERT then will examine stipend and revenue data to assess the costs associated with an enrollment target of 25%.

The next meeting of the Graduate Education Round Table is Wednesday, February 9th from 3:30-5:00pm in 650 Kerr.

III. Academic Program Review - Schedule Update

Dean Francis announced that the academic program review committees have been formed (located below). Currently, Dean Francis and Mary Prucha, Coordinator of Graduate Services, are working to develop schedules and target dates, including dates for submission of the self-study, the submission of final reports, and the presentation of this information to the Graduate Council, with the programs that are to be reviewed.

IV. Graduate School Review Team Update

The Graduate School Review Team finished their work and submitted their report into the Office of the Provost on January 6th. Currently the report is being circulated widely and the Provost is inviting comment on the report from the OSU community. The report is available on the web at <http://arec.orst.edu/gsr/>.

Dr. Bruce Rettig offered some insight into the report. He reported that several items in the report would require Graduate Council consideration. He encouraged the Graduate Council to review and discuss the Graduate School Review Report and provide comments.

V. Proposed Graduate Minor in Ethnic Studies

Associate Dean Higginbotham presented a request for a proposed graduate minor in Ethnic Studies for Graduate Council consideration. A memorandum outlining details of the minor was provided to the Curriculum Council and the Graduate Council for approval. Associate Dean Higginbotham asked if Council members viewed the memorandum process as an acceptable means of requesting graduate minors or if a more detailed process was desirable. The answer from the Council was yes provided that resources (i.e. faculty, facility, etc.) and liaison issues are addressed.

The Council expressed caution in accepting a minor in an area that is not fully developed as a major. There was discussion concerning whether the proposal for a graduate minor in Ethnic Studies fit into the Category I or Category II process. Associate Dean Higginbotham explained that Category II proposals focus on course approvals while Category I proposals focus on degree proposals. A request for a graduate minor does not fall squarely in either category. Questions were raised regarding graduate faculty status of participating faculty and whether the minor would be used on doctoral programs.

The Council approved the minor in Ethnic Studies provided that Associate Dean Higginbotham would find out if the faculty teaching in the minor have appropriate graduate faculty status and if all the courses in the minor have been approved through the Category II process.

VI. Ethics Education at OSU

Dr. Mark Christensen, Chair, received an email from Dr. Erik Fritzell, member of the Curriculum Council, regarding a discussion of the issue of ethics education at the graduate level at OSU and a proposal to conduct a survey of ethics education in OSU curricula. Dr. Fritzell suggested that the survey would be developed in Winter 2000 and distributed Spring 2000.

Dr. Christensen raised this issue with the Council for suggestions and input. It was agreed that the ethics of professional behavior at the graduate level should be examined. The Council may also review the resources that exist at OSU regarding ethical academic behavior, such as policies and/or codes of ethics. Departments may be asked how they satisfy the interest and the issue of ethics in their fields. The discussion by the Graduate Council did not ask to mandate a code of ethics but to examine this issue and develop a means to disburse information regarding current resources available on ethics education at OSU.

Dr. Christensen volunteered to follow-up with Dr. Kathleen Moore, Chair, Department of Philosophy and Erik Fritzell to determine how the Graduate Council will participate in the development of the survey. The Council agreed that they would like to see a draft of the survey prior to its release in order to make sure it responds to the appropriate areas of concern to ethics education at the graduate level, such as the treatment of animals, patent issues, and ownership of data. Finally, the Graduate Council would like to see the results of the survey and any recommendations that may come forth.

VII. Category II Course Requirements

Associate Dean Higginbotham, on behalf of the Graduate Council, approved the following course requests:

X-COURSE

CHE 546X (99-C422)

VI. Other Business/Announcements

Next Meeting:

January 27, 2000 3:00-5:00pm Kerr Admin. Bldg. 650

Graduate Council

December 9, 1999 Minutes

Present: Christensen, Cull, Davison, Ebbeck, Esbensen, Francis, Higginbotham, McAlexander,
Pierson-Charlton, Prucha, Rettig, and Tornquist

Absent: Barofsky, Brandt, Radosevich, and Remcho

I. Status of Graduate Certificate Policy

Postponed until the next Graduate Council meeting.

II. GERT Update

Dean S. Francis provided the Graduate Council with an update of the status and focus of the Graduate Education Round Table (GERT). GERT has met three times over the fall term and plans to continue to meet regularly over the rest of the year. The current focus of the Round Table has been and will continue to be the development of graduate enrollment targets. The next meeting of GERT will be Wednesday, January 12th, 3:30-5:00pm, in the President's Conference Room.

III. Academic Program Review - Identify review teams for winter and spring 2000

Mark Christensen, Chair, assigned the winter and spring 2000 academic program review teams. Each will consist of two representatives from the Graduate Council and two members from faculty at-large. The assignments are as follows:

Counseling (1/24)

Chair: Tornquist

Graduate Council Member: Christensen

Human Performance, Movement Studies in Disability (winter)

Chair: Rettig

Graduate Council Member: Cull

Economics (spring)

Chair: Radosevich

Graduate Council Member: Ebbeck

Animal Science (spring)

Chair: Brandt

Graduate Council Member: Davidson

Rangeland Resources (spring)

Chair: Esbensen

Graduate Council Member: Remcho

It was also announced that beginning January 1st Dean S. Francis will manage the program review process for the Graduate School because of the reassignment of Associate Dean Higginbotham to the union bargaining team. Finally, a reminder that the Graduate School will hold a seminar on Friday, December 17th from 3:00-4:30pm in the Radiation Center, Rm. C104 to explain the review process.

IV. Graduate Catalog

Associate Dean J. Higginbotham and Mary Prucha, Coordinator of Graduate Services, informed the Graduate Council that the OSU bulletin series was under review. The Graduate Catalog is currently used by the Graduate School to inform students of policies and regulations as well as to provide department descriptions, faculty, and course listings. The catalog is available to current graduate students on an annual basis from the Graduate School. In addition, the catalog is used as a recruitment tool and is mailed to domestic applicants upon request.

Associate Dean Higginbotham and Ms. Prucha opened the discussion to suggestions for future changes in the Catalog. Changes suggested by the Council included increasing the capacity of the Catalog on the web; combining the Graduate Catalog with the General Catalog; designing a new "Graduate View Book" with course descriptions, faculty interests, and department research, and publishing a graduate student handbook for policy and regulations.

These suggestions will be brought into the discussion as the review process of the Graduate Catalog moves forward.

V. Change in Category II Review Process

Associate Dean Higginbotham announced that there will be a change in the review of Category II submissions. In the past, Gary Beach, Coordinator, Assessment & Academic Programs edited and reviewed the submissions prior to their examination by the Category II Review Committee. This consisted of verifying that the course met the various standards required by the Graduate School and the University. Due to time conflicts, Mr. Beach will not be able to continue this task so the Category II Review Committee will be taking on this initial editing process.

VI. Scientific and Technical Communications Program Review - Final Report

Associate Dean, College of Liberal Arts, Robert Frank and Dr. Bill Keith were present as representatives of the Scientific and Technical Communications (STC) program. Scott Reed and Jim Good represented the Program Review committee.

Dr. Good presented the following findings:

- STC, founded in 1990, has never really functioned as designed because it centered on Journalism, which was eliminated the same year in the wake of Measure 5.
- To the extent that STC prospered, it did so because of the dedication of its first director, the now-retired Dr. Simon Johnson.
- There are many good reasons for a STC program to exist at OSU:
 1. the mission of the University,
 2. the demand for such training (evidenced by successful programs elsewhere),
 3. the enthusiasm of present students (despite the program's problems), and
 4. the support it could provide to other disciplines at OSU.

Today, the program is moribund, lacks uniform support among the four departments that contribute to it (owing mainly to continued budget cuts in the last decade and resulting prioritization of limited resources), and lacks strategic direction.

The program today exists mostly on paper and needs to be reinvigorated or eliminated.

Associate Dean Reed provided the recommendations of the committee. Overall the College of Liberal Arts and the three principal participating departments along with others from the University who would like to see the program continue should:

1. Convene a strategic planning session to examine the state of the program,
2. Decided whether or not it should be continued,

3. Develop a consensus vision for the program (including appropriate tracks),
4. Identify the specific steps and resources that are needed to implement that vision. In addition

Specifically, the Committee recommended the following:

- for stability and commitment, the program needs a funded directorship,
- listed courses need to be offered to attract students and provide needed integration and program identity,
- to help in strengthening the program through faculty involvement, advising should be decentralized to a multi-departmental committee,
- CLA should reach out to the rest of the University to determine potential service functions of the STC program,
- if the decision and resources are made available to reconstitute STC, a strong marketing effort to attract students should be mounted,
- and provide office space and common area for graduate students.

The Graduate Council voted to accept the program review report with an additional summary of findings and recommendations appended.

VII. Status of WICHE Proposals

Mary Prucha updated the Graduate Council on the current status of the WICHE, Western Regional Graduate Program (WRGP) proposals. The WICHE WRGP program provides students from 15 Western states the opportunity to enroll at resident rates of tuition in specific programs. This year, OSU has one vacancy in the WICHE WRGP program. The WICHE Proposal Review sub-committee has begun their review process, and will forward their recommendation to the Graduate Dean in a few weeks.

VIII. Category II Course Requirements

Associate Dean Higginbotham, on behalf of the Graduate Council, approved the following course requests:

NEW COURSES

ANTH 577 (99-C310)
AREC 532 (99-C253)
FS 565 (99-C242)

For the CSS 620, 621, 622 series, the subcommittee had the same comments for each. They endorse Gary Beach's comments that these can be approved if an appropriate syllabus is prepared and if a meaningful liaison is made with MCB and GEN to ensure that cross listing is appropriate.

CSS 622 (99-C269)
GEN 622 (99-C276)

McAlexander, Pierson-Charlton, Prucha, Radosevich,
Remcho, Rettig, Tornquist

Absent: Barofsky

I. Proposed Modification to Admission Policies

Postponed due to absence of Doug Barofsky

II. Presentation of Current Program Review Procedure

Jack Higginbotham, Associate Dean of the Graduate School, provided an overview of the current program review procedures

III. Discussion of Revising Program Review Procedures

Sally Francis, Interim Dean of the Graduate School, presented the status of the program review process. The Graduate Council conducts program reviews on a 10-year cycle but has fallen behind schedule and a backlog currently exists. Dean Francis suggested it is time to look at the process and review it to determine if the Graduate School and the Graduate Council can make a new commitment to resolve the current situation and how the process could be modified to make it more manageable.

Dean Francis presented two goals that focus on the current situation. The first goal is to continue to have the Graduate Council be responsible for graduate reviews. The second goal is to work toward eliminating the backlog of program reviews and to prevent future backlogs.

In addition, she presented suggested "next steps" towards achieving these goals. They were as follows: changing the number and structure of the review committee, such as the number of Graduate Council members; establishing a paper-only review process; and developing a process that combines a paper-only review with an on-site component.

The discussion was then opened to the Graduate Council for feedback. Mark Christensen and Jack Higginbotham outlined how Graduate Council recommendations, which result from the program review process, are implemented and enforced. Though it is ultimately up to the Provost to decide what recommendations are implemented, the weight of the recommendations from the program review committee is great. There are also budgetary concerns that need to be realized but it is clear that the recommendations and the work of the program review committee is taken seriously and discussed thoroughly.

In terms of committee structure it was suggested that if there was a change from two Graduate Council members to one that it be considered that every first year Graduate Council member should be seated in a second chair capacity.

The issue of process was also raised. A couple of suggestions were communicated, such as abbreviating the process for those programs with strong self-studies; and conducting a preliminary consultation to determine the placement of a program for review, especially for those programs existing in the backlog.

The issue of process also presented the option for a paper-only review. It was suggested that a process be created for a program to be self-reviewed. This process would analyze the self-study conducted by the program and make colleges responsible for their programs. This process would also allow for a paper-only review with the incorporation of other resources, such as student surveys, to provide for a balanced review.

Several concerns were raised regarding a paper-only review. The inability of a paper-only review process to mirror all sides of a program was raised. In addition, the difficulty to successfully detect a solid program versus a program that is lacking from paper only was also an area of concern. As a result, a variety of solutions were proposed, such as developing a paper-only review on a case by case basis, providing guidelines for the review process early on to ensure that multiple sides are heard, creating a faculty sign-off on the paper review to allow for comprehensive input into the process, and establishing a process that combines an on-site review with a paper review.

Finally, the issue of product from the review process was expressed. It was suggested that the review process enforce a consistent format for the self-studies in order to create greater consistency among self-studies, decrease repetition in the review of programs, and to minimize the time spent by the review committee in reviewing programs.

After this discussion it was determined that the following actions would take place.

Workshops on how to write the self-study would be set-up.

A schedule of what programs are to be reviewed and when as well as suggested deadlines for the self-study would be developed. Both of which Dean Francis will address in an upcoming memo to Deans.

Provide a precise description of the report format and follow-up that the program review committee should conduct. Jeanette Brandt volunteered to work with Jack Higginbotham to develop the format.

The Graduate Council will commit to keeping up with the review process from this point forward.

Copies of the program recommendations will be sent to all program faculty and the full program report will be made available to the faculty via the Department Head.

Deans Francis and Higginbotham will investigate further into what paper-only reviews exist and how they are conducted.

Jack Higginbotham committed to reporting the status of reviews and follow-up reviews to the Graduate Council.

IV. Discussion of 400/500 Differentiation

Sally Francis introduced for discussion 400/500 level differentiation after the issue was raised in recent meetings with graduate students across campus. The concern surrounding this issue is that graduate level standards and quality are not being provided in 400/500 classes. Dean Francis asked the Council to consider how graduate level standards and quality can be maintained in the 400/500 classes. The discussion by the Graduate

Council raised a variety of ideas: ensuring graduate level work in the class curriculum, coupling the class with a Reading in Conference class, providing the logic behind the numbering system, establishing 400/500 classes as the exception and not the rule, and discontinuing 400/500 classes.

In addition, the discussion generated the following "next steps": provide workshops to develop guidelines for 400/500 classes, create a panel of students to provide their input into the discussion of the current system and what changes may need to be made, and revise the language defining expectations of 400/500 classes.

V. Graduate School Strategic Plan

Sally Francis briefly summarized the Graduate School Strategic Plan to the Council. The Graduate School is open to discussion and feedback from the Council.

Bruce Rettig also announced that the Graduate School Strategic Plan will be one item on the agenda for the

upcoming Open Forums that the Graduate School Review Team will be conducting. He encouraged members of the Graduate Council to attend one of the following Open Forums:

Tuesday, November 16th 2:00-3:30pm
American Indian Conference Room, MU 211

Wednesday, November 17th 12:30-2:00pm
American Indian Conference Room, MU 211

VI. Category II Course Requests

Jack Higginbotham, on behalf of the Graduate Council, approved the following course requests:

CHANGE TO EXISTING

CH 548 (99-C290)

CH 545 (99-C289)

On the condition that the curriculum council is in agreement that the change is not substantive enough to require a new course syllabus for each class.

VII. Other Business/Announcements

The Category II Course Review committee is still searching for a third member. In addition, Steve Radosevich has volunteered to serve as a Graduate Council subcommittee member for the selection of the Oregon Sports Lottery Graduate Scholarship recipients this year.

The meetings for the rest of Fall term:

November 11, 1999 3:00-5:00pm Kerr Admin. Bldg. 650

December 9, 1999 3:00-5:00pm Kerr Admin. Bldg. 650

Absent: Cull, McAlexander, Pierson-Charlton, Radosevich, Tornquist

I. Introduction of New Member and Continuing Members

II. Standing Rules of the Graduate Council

III. Appointments and Committee Updates

The Council was briefed on the status and number of individuals needed to serve on various committees. Assignments were made to the following committees:

Category II Course review: Brandt and Remcho. The Category II Course review is still searching for a third member.

Scholarship/Fellowship Review:

- Bayley/Yerex: Davison, Rettig, and Tornquist
- Sports Lottery: Ebbeck, still searching for two additional members
- Frolander Outstanding GTA Award Review: Esbensen

WICHE review: Christensen, Barofsky, and Rettig

The committee created to develop guidelines for graduate certificate programs is continuing to move forward. They have received information from Portland State University and are awaiting information from the University of Oregon.

IV. Graduate Education Round Table

Sally Francis provided an update of the Round Table. At this time membership to the Round Table has been established with the exception of one faculty position. Since the last Graduate Council meeting a few changes in the membership of the Round Table occurred. These changes were an increase in the number of faculty members by one and the designation that the graduate student slots be filled by the presidents of the Graduate Student Senate and the Graduate Student Association.

The Round Table will conduct its first meeting on Tuesday, October 19th from 4:00-5:00pm. The meeting will include introductions, the goals/purpose of the group, and the development of a work plan for Fall 1999. In addition, a brief presentation by Sally on the status of the Graduate School including the Graduate School Review Committee and the campus wide discussions with graduate students will also be included.

The Graduate Education Round Table meetings for the rest of Fall term are:

Thursday, November 18th 1:30-3:00pm
(President's Conference Room)

Wednesday, December 8th 2:00-3:30pm
(President's Conference Room)

V. Status of Graduate Student Communications

Graduate student surveys will be mailed to both new and returning students in the next week. A third survey of the admitted/non-matriculated students will be conducted.

Communications with graduate students by the Graduate School along with the offices of the Vice Provost for Research and the Vice Provost for Academic Affairs are underway. On Wednesday, October 13th the first session of informal discussions with graduate students took place with the College of Science. The purpose of this meeting and those to follow is to listen to the needs and concerns of graduate students at OSU. The topics raised with students of the College of Science varied from the lack of assistantships offered to issues of mentoring and advising.

The Informal Discussions with Graduate Students will continue as follows:

College of Forestry & the College of Health & Human Performance
Wednesday, October 20th - 4:00-5:00pm
Richardson Hall 313

College of Engineering
Thursday, October 21st - 10:00-11:00am
Apperson 212

College of Liberal Arts & the College of Business
Wednesday, October 27th - 10:00-11:00am
MU 105

College of Home Economics & Education
Thursday, October 28th - 10:00-11:00am
Education 301

College of Agricultural Sciences
Thursday, November 18th - 3:00-4:00pm
Withycombe 217

College of Oceanic & Atmospheric Sciences, the College of Pharmacy, & the College of Veterinary Medicine
Thursday, November 18th - 4:00-5:00pm
Burt Hall 176

In addition, on Friday, October 15th Sally Francis met with graduate student organization leaders to discuss their concerns and ideas.

VI.. Category II Course Requests

Jack Higginbotham, on behalf of the Graduate Council, approved the following course requests:

NEW COURSES

ECE 578 (99-C208)
ECE 663 (99-C207)
BA 576 (99-C182)
BA 575 (99-C181)
BA 543 (99-C180)

Graduate Council

September 23, 1999 Minutes

I. Introduction of New Member and Continuing Members

II. Standing Rules of the Graduate Council

Mark Christensen, Chair of the Graduate Council committee summarized the Standing Rules of the Graduate Council. A handout was provided with the Standing Rule of the Graduate Council to those in attendance.

III. Potential Agenda Item for 1999-00

Mark Christensen provided an overview of potential agenda items for the 1999-2000 academic year. They are as follows:

1. Programs to be Reviewed in 99-00

The overall goal of the Graduate Council is to review each graduate program every 10 years. To date the following four programs have been identified for review:

- (1) Human Performance and Movement Studies in Disability-Winter
- (2) Economics-Spring
- (3) Animal Sciences- Spring
- (4) Rangeland Resources-Spring

In addition, the following four programs have been identified for follow-up review:

- (1) Fisheries and Wildlife
- (2) Entomology
- (3) Marine Resource Management
- (4) Atmospheric Sciences

2. Category I Proposals

The council members were briefed on the new graduate program proposals to be reviewed this year. They are as follows:

- MPIA -- Master of Public and International Affairs
- MFA for the Creative Writing Program in English
- Master of Ethics -- Philosophy
- MA in History

The council will set-up committees to review the new graduate program proposals as they come forward.

3. Certificate Programs

The council members were briefed on the emergence of interest in graduate certificate programs at OSU. A committee to develop guidelines for graduate certificate programs

has been identified. The following individuals are on this committee: Jodi Engle, Steve Radosevich, Bruce Rettig, and Mark Christensen.

4. Electronic Dissertations

OSU will conduct a pilot project this year, whereby selected students will be asked to submit to the Graduate School both electronic and paper versions of their dissertation library copies.

5. Graduate Admission Policies

Mark Christensen informed the Graduate Council that there has been no conclusion to the adoption of changes in graduate admission policies as proposed by the Graduate Admissions Committee last Spring. The Council will review the graduate admission policies this year for final approval.

IV. Appoint Committees

The Council was briefed on the status and number of individuals needed to serve on the following committees:

Category II Course review (need 3 – year long)

Scholarship/Fellowship Review
Bayley/Yerex (need 3-Winter term)
Sports Lottery (need 3-Winter term)

Frolander Outstanding GTA Award Review (need 1 member – Spring)

V. Graduate Education Round Table

Sally Francis, Dean of the Graduate School was present to provide an explanation and status of the Graduate Education Round Table proposal. The Graduate Education Round Table is modeled after the Undergraduate Education Council (see OSU website for further detail). The Round Table would act as an advisory committee and consist of a mix membership including administrators, faculty, and students.

After Dean Francis gave a brief explanation of the proposal she prompted the Council for input. The Council raised a variety of concerns, including the role of the Round Table as a "standing" committee versus an "ad-hoc" committee, the specific role and reach of the Round Table, establishing credibility of the Round Table, and the overall make-up of the Round Table's membership

The Council in conversation appeared to be in general support of the idea.

VI. Graduate Student Communications

Sally Francis informed the Council that two events will occur to enhance graduate student communications. The first event is a meeting of the graduate student organization leaders with Dean Francis, Vice Provost for Student Affairs, Larry Roper, and Vice Provost for Research Toby Hayes to take place on October 15th from 3:00pm- 4:00pm in the President's Conference Room. The second event will be a series of campus wide meetings by Dean Francis, Vice Provost Larry Roper, and Vice Provost Toby Hayes with the graduate students to hear their ideas and concerns about the graduate educational experience at OSU.

Sally Francis also briefed the Council on the status of graduate surveys. In order to maximize the Graduate School's market strategy the Graduate School along with the Survey Research Center will focus on collecting data from three groups of students: (1) new students, (2) returning, and (3) "no-shows" students that were fully admitted but did not attend OSU. The surveys will be mailed in October.

VII. Status of GTA/GRA Unionization Activities

Sally Francis and Jack Higginbotham briefed the Council on the current status of GTA/GRA unionization activities. According to Dean Francis and Dean Higginbotham the following information was disbursed on September 23, 1999 to Department Chairs and Faculty Advisors/Supervisors concerning unionization: a timeline, a sheet of Frequently Asked Questions and a management document. In addition, the Office of

Human Resources has placed a hot link on their website which has been active since September 23, 1999. Finally, a copy of the Frequently Asked Questions sheet and a cover letter will be sent to all graduate students.

VIII. Other Business/Announcements

The meetings for the rest of Fall term:

October 14, 1999 3:00-5:00pm Kerr Admin. Bldg. 650

October 28, 1999 3:00-5:00pm Kerr Admin. Bldg. 650

November 11, 1999 3:00-5:00pm Kerr Admin. Bldg. 650

December 9, 1999 3:00-5:00pm Kerr Admin. Bldg. 650

Absent: Esbensen, Maresh, McAlexander, Pierson-Charlton

I. Approval of the April 8, 1999 Minutes

The Council approved the minutes from the April 8, 1999, Graduate Council Meeting.

II. Graduate Council Standing Rules

Bruce Rettig informed the Council that the Faculty Senate incorporated the Graduate Council's suggestions into the current standing rules.

III. MS and PhD Diploma

Jack Higginbotham explained to the Council why graduate diplomas solely list the degree level and not the disciplinary specialization. He referred the Council to the following information:

The State Board of Higher Education grants to the graduate schools of the universities the authority for all graduate degree programs and for the awarding of all graduate degrees. The determination of what is specified on the diploma is the responsibility of the Graduate School.

The Graduate School's policy is that the diploma recognizes the level of degree (e.g., MS, MA, PhD), whereas the transcript specifies the discipline and area of concentration. This is the recognized practice throughout the majority of graduate schools in this country.

This information may be put on the diploma application or in the survival guide.

IV. Other Business/Announcements

Rettig informed the Council that they would revisit the recommendations brought up by the Graduate Admissions Committee at the next Graduate Council Meeting.

Jack Higginbotham briefed the Council on the current activity surrounding the formation of a Graduate Student Union.

V. Category II Course Requests

The Category II subcommittee, on behalf of the Graduate Council, approved the following Category II requests:

CHANGES IN CREDIT:

CE 571 (99-C079)
CE 592 (99-C110)
NFM 520 (99-C109)

NEW COURSES:

AREC 553 (99-C078)
ES 557 (99-C120)
H 590/HORT 590 (99-C034)

CHANGE TO EXISTING COURSE:

BA 565 (99-C033)

Jack Higginbotham, on behalf of the Graduate Council, approved the following course requests:

CHANGES TO EXISTING COURSES:

ECON 524 (99-C118)

Graduate Council

April 8, 1999 Minutes

Present: Rettig (Chair), Doug Barofsky for Robson, Bell, Brandt, Christensen, Cromack, Davison, Esbensen, Higginbotham, McCune, Pierson-Charlton, Tornquist

Absent: Donatelle, McAlexander, Maresh

I. 1998-1999 Faculty Senate Committee/Council Charges

The Council reviewed the charges brought forth by the Faculty Senate's Committee on Committees. They motioned to retain the current standing rules for the Graduate Council except for a change in wording which would allow the Graduate Student Senate to be included in the selection process of a graduate student representative.

Bruce Rettig will provide this information to the Faculty Senate.

II. Appointment to Frolander Committee

Susan Tornquist was appointed to serve on the Outstanding GTA (Frolander) Award selection committee.

III. Administrative Change for Permitting Final Oral with I Grades Present on Transcript

Jack Higginbotham informed the Council that students possessing incomplete grades on their program coursework will not be allowed to proceed with their final defense until the incompletes have been removed.

IV. Graduate Admissions Committee Suggestions

The Council reviewed the Graduate Admissions Committee's (GAC's) recommendations concerning policy changes. The GAC's recommendations are as follows:

The GAC recommended that the 24 hour rule cases be reviewed only by the student's department (or departments) and checked for fulfillment as is currently done by A&O and the Graduate School. If a department supports a student's application and it is determined that the student has fulfilled the rule, either by completing 24 hours with at least a 3.00 or raising the GPA to 3.00 or above, the student should be admitted without need for further review by the GAC.

Only cases of students who have not successfully completed the 24 hour rule and who are nonetheless supported by their department should go to the GAC. This should be done with the understanding that the GAC will not normally admit students who are currently enrolled under (but have not completed) the 24 hour rule unless there are clearly extenuating circumstances or a compelling justification.

The GAC recommended that students with postgraduate degrees that represent at least 45 hours of work and that were granted by an accredited institution be admitted on the basis of their postgraduate record and without regard to their undergraduate record. Cases of students with strong postgraduate records would not need to go before the GAC.

The GAC recommended that students who apply with narrative transcripts be evaluated

by their department(s). No review by the GAC should be necessary.

The Graduate Council suggested that the Graduate School review the language of these recommendations and bring them before the Council for their consideration.

V. Other Business/Announcements

Bruce Rettig asked the Council to submit their recommendations for the 1999/2000 Graduate Council Chair. In addition, he asked departing members to provide recommendations of potential replacements. Council members will send their recommendations to Rettig by email.

VI. Category II Course Requests

The Category II subcommittee, on behalf of the Graduate Council, approved the following Category II requests:

CHANGES IN CREDIT:

Graduate Council

February 25, 1999 Minutes

Present: Rettig (Chair), Brandt, Champeau for Donatelle, Christensen, Cromack, Davison, Esbensen, Higginbotham, McAlexander, McCune, Pierson-Charlton, Robson, Tornquist

Absent: Bell, Maresh

Guests: Sandra Helmick, Ann Messersmith, Kinsey Green

I. 1998-1999 Faculty Senate Committee/Council Charges

This agenda item was postponed. It will be addressed at the same time the council addresses the Faculty Senate's Committee on Committee's charge.

II. Category II Requests - Reports on Clarity of Instructions

The Council reported on what they discovered during their review of the Category II approval process. Their findings showed that instructions for this process were adequate and the efficiency of this process was mainly determined by experience. To aid someone through this process more effectively, they suggested the web address which provides tracking information about the status of the proposal be added to the instructions. Jack Higginbotham will communicate this information to the Curriculum Council.

III. NFM Program Review Report

Steve Esbensen, Chair of the Graduate Council committee for the February 12, 1999 Nutrition & Food Management graduate program review, summarized the committee's findings, recommendations and essential elements for revitalization. Those elements are:

- a revised graduate program mission that combines the areas of Foods, Food Management and Dietetics into a single focussed graduate program initiative,
- new graduate faculty hires that support the revised departmental mission,
- new externally funded research and departmental initiatives to generate resources for graduate students,
- a graduate student recruitment initiative that includes an increase in graduate stipend levels and improved facilities for graduate students, and a college and departmental leadership initiative that produces the necessary graduate faculty teamwork to carry out the new NFM mission.

Kinsey Green, Dean of the College of Home Economics & Education, and Ann Messersmith, Head of Nutrition & Food Management, were present to answer the Council's questions and provide additional information on the progress of the recommendations. They reported that they have been making progress on the elements stated above, and mentioned that student computers have been replaced with newer ones. They also informed the Council that they are in the process of interviewing new graduate faculty.

The Council approved the graduate program report subject to editorial revisions. Esbensen will work with Messersmith to implement these corrections, and once they have been made, the report will be forwarded to the Provost.

IV. Other Business/Announcements

Bruce Rettig distributed the memo from the Faculty Senate's Committee on Committees, which asks the Council to review and consider their standing rules and functions and report on the appropriateness of them given OSU's strategic goals and new budget model. This issue will be addressed at the next council meeting. The report is due by April 10, 1999.

Jack Higginbotham asked for the Council's suggestions and input on boosting graduate enrollment. He will provide this information to the new Graduate Enrollment "Issues and Action" team.

V. Category II Course Requests

The Category II subcommittee, on behalf of the Graduate Council, approved the following Category II requests:

APPROVED PENDING RESOLUTION OF NOTED ISSUE:

ECE 566 (98-C449) *Syllabus needs clear statement of graduate differentiation.
HORT 514 (99-C010) *Syllabus needs clear statement of graduate differentiation.

Graduate Council

January 28, 1999 Minutes

Present: Rettig (Chair), Bell, Christensen, Cromack, Davison, Esbensen, Higginbotham, Maresh,
McCune, Pierson-Charlton, Tornquist

Absent: Brandt, Donatelle, McAlexander, Robson

Guests: Mike Burke, Jim Moore

I. BRE Program Review Report

Mark Christensen, Chair of the Graduate Council committee for the October 19, 1998 Bioresource Engineering graduate program review summarized the committee's findings and recommendations:

1. Formally assign a graduate student to be a member on appropriate departmental committees, Graduate, Curriculum, etc.
2. Develop a more formal setting for students to present their research to the department, one or two open seminars, or a day-long retreat, etc., where the student must make an oral presentation.
3. Develop a tracking system, computerized would be best, to monitor the progress of students through the program.
4. Prepare a vision statement for the future direction of the BRE graduate program.

Mike Burke, Associate Dean of the College of Agricultural Sciences, and Jim Moore, Head of Bioresource Engineering, were present to answer the Council's questions and provide additional information on the progress of the recommendations. They reported that students have been placed on departmental committees and stated that faculty within the Bioresource Engineering program are preparing a vision statement. At this time, they are not certain the type of process they will use to monitor students' progress, and they are working on providing more opportunities for graduate students to present their research.

The Council approved the graduate program report and will forward it to the Provost.

II. Discussion of Graduate Student Enrollment/Relation Issues

Jack Higginbotham informed the Council that a Graduate Enrollment "Issues and Action" Team has been established to address graduate issues and form an action plan to increase the number of students pursuing graduate education at Oregon State University. He will continue to keep the Council informed of this team's progress.

III. 1998-1999 Faculty Senate Committee/Council Charges

A draft memo addressing the 1998/99 Faculty Senate Council Charges was distributed to the Council for their review and comments. Because of time constraints, the review of this memo was deferred until the next Council meeting.

IV. Category II Subcommittee - Report on Meeting with Chair, Curriculum Council

The council members were briefed on the meeting that took place between the Category II Subcommittee and the Chair of the Curriculum Council concerning the Category II approval process.

The Council decided that the three person Category II subcommittee should remain in place for the continuation of the academic year. They also discussed ways to make the current proposal process more efficient and noted that one way to expedite this process is to ensure that adequate instructions are given to the people preparing these documents. It was recommended that each council member communicate with people who prepare proposals in their departments to determine if the current instructions are providing them with sufficient guidance.

Council members will express their findings at the next council meeting.

V. Scholarship Committees: Oregon Sports Lottery, Bayley/Yerex and Frolander Outstanding GTA

The following committees were appointed:

Oregon Sports Lottery Bell, Christensen, McCune

Bayley/Yerex: Bell, Christensen, Tornquist

VI. Category II Course Requests

Jack Higginbotham, on behalf of the Graduate Council, approved the following course requests:

I. Introduction of New Member

Candace Pierson-Charlton will be replacing Nancy Wolford as a representative for the Graduate Student Senate.

II. 1998-1999 Faculty Senate Committee/Council Charges

The Council reviewed and discussed the 1998/99 Faculty Senate Council charges. Bruce Rettig will draft a memo to Maggie Niess, Faculty Senate President, addressing these charges and will submit it to the Council for their review and comments.

Graduate Council

November 12, 1998 Minutes

Present: Rettig (Chair), Bell, Brandt, Christensen, Cromack, Donatelle, Esbensen, Higginbotham, McAlexander, McCune, Tornquist, Wolford

Absent: Davison, Maresh, Robson

Guests: Mike Quinn, Bruce Schafer

I. Introduction of New and Continuing Members

Jim McAlexander has been selected to represent the College of Business.

II. Category II Course Approval

Jack Higginbotham reviewed the Graduate Council's current Category II approval process and asked the Council to specify areas they address when reviewing Category II proposals.

Higginbotham said that he will arrange a time for the Graduate Council subcommittee to meet with the Chair of the Curriculum Council to discuss the current approval process and define criteria that will aide the subcommittee in their review of Category II proposals.

III. Status of Graduate Program Reviews

Jack Higginbotham stated that reports from the Bioresource Engineering and Nutrition & Food Management reviews were not yet available and encouraged timely completion of the review documents by subcommittee members.

IV. Software Engineering Category I Proposal

Mike Quinn, Head of the Computer Science department, and Bruce Schafer, of Oregon College of Engineering and Computer Science (OCECS) joined the council to present the revised Oregon Master of Software Engineering proposal. They informed the Council that comments and concerns previously raised by the Council were addressed and incorporated in the revised proposal.

The Council reviewed and approved this proposal contingent upon a sentence change on page 14 to specify that a student's final presentation will be evaluated by the student's graduate committee.

V. Other Business/Announcements

The following subcommittee was appointed to review the University Graduate Fellowships:

Chris Bell
Becky Donatelle
Jim McAlexander

Jack Higginbotham asked for the Council's comments and concerns on the unionization of graduate students. He will update the Council on this issue at the next Council meeting.

Council members were reminded that the next Graduate Council Meeting will take place on

December 3, 1998 instead of December 10, 1998.

VI. Category II Course Requests

Higginbotham, on behalf of the Graduate Council approved the following course requests:

CHANGES IN EXISTING COURSES:

AIHM 432/532 98-C299
AIHM 429/529 98-C302
AIHM 443/543 98-C305

VI. Computerized TOEFL - Change in Reported Results

Jack Higginbotham discussed the new computer-based TOEFL scores and how they compare to the paper-based scores and to the TOEFL score requirements published by institutions.

He pointed out that departments need to make sure they have consistent admission standards for the paper-based scores and the computer-based scores, and indicated that he will address this in a memo which will be sent to departments on campus and will include the new TOEFL concordance table.

He also requested that the Council members inform their departments that TOEFL testing has not been disregarded for graduate admissions.

VII. OUS/OSU Budget Model

Maresh reviewed the implications for graduate education resulting from the new OUS budget model.

This topic will be discussed at a subsequent meeting when there is more definite information to give the Council members.

Graduate Council

October 8, 1998 Minutes

Present: Rettig (Chair), Bell, Christensen, Higginbotham, Maresh, McCune, Robson

Absent: Cromack, Davison, Donatelle, Esbensen, Tornquist

I. Introduction of New and Continuing Members

The following new members joined the Graduate Council this year:

Kermit Cromack
Steve Esbensen
Susan Tornquist

As of this time, representatives from the College of Business and the College of Home Economics & Education have not been identified. A graduate student, representing the Graduate Student Association, also must be selected.

II. Standing Rules of the Graduate Council

The standing rules of Graduate Council were distributed to the Council members.

III. Potential Agenda Items for 1998-99

A. Graduate Programs to be reviewed this year are:

Bioresource Engineering
October 20th (Joint CSREES)

Nutrition and Food Management
November 10th (Joint CSREES)

Scientific and Technical Communication

B. Category I proposals:

Master of Engineering

Physical Therapy

C. Appoint Scholarship/Fellowship Review Committees:

Bayley/Yerex (3 members – Winter term)

Sports Lottery (3 members – Winter term)

Frolander Outstanding GTA Award Review (1 member – Spring term)

D. New OUS/OSU funding model (discuss during October 22nd meeting)

E. Certificate programs

F. Review policy prohibiting a student from obtaining a second Ph.D.

G. Computerized TOEFL (informational topic)

IV. Appoint Committees

Category II Committee (3 members needed): Because many Council members were absent, members for this committee will be appointed at the next Graduate Council meeting (10/22/98).

Research Review Committee: Chris Bell and Mark Christensen will continue to serve on the research review committee. Additional members will be needed to replace Jerry Heidel and Nancy Wolford. The selection of these members will take place at the next Graduate Council meeting (10/22/98).

VI. Category II Course Requests

a. The Graduate Council's summer subcommittee approved the following course requests:

NEW COURSES

AREC 434/534 (98-C127)
BRE 460/560 (98-C215)
CSS 468/568 (98-C239)*

Graduate Council

June 11, 1998 Minutes

Present: Heidel, Barnes, Bell, Brandt, Christensen, Davison, Drexler, Gupta, Maresh, McCune,
Rettig, Ringle, Robson, Wolford

Guests: Ilene Kleinsorge, Roger Graham

Absent: Donatelle

I. Category I Proposal: Masters in Business Information Systems (M.B.I.S.)

Ilene Kleinsorge and Roger Graham of the College of Business presented the Category I proposal for the Master in Business Information Systems which is designed to be offered through the Department of Accounting, Finance, and Information Systems. The Council reviewed the proposal and approved it with the following two recommendations:

Clarify the comprehensive examination/exit requirements. Briefly describe what an information systems specialist does.

II. Follow-up Report: Graduate Program Review of Oceanography

Jeannette Brandt presented the follow-up review report for the Oceanography graduate program which focused on the eight follow-up actions outlined in the memorandum from Provost Arnold dated January 2, 1997. The Graduate Council approved the follow-up review report as submitted and will forward it to the Provost.

III. Follow-up Report: Graduate Program Review of Veterinary Medicine

Mark Christensen presented the follow-up review report for the Veterinary Medicine graduate program. The follow-up report concentrated on the January 2, 1997, letter from the Provost's office and the "Update" document from the College of Veterinary Medicine. The Graduate Council approved the follow-up review report contingent upon the correction in item #1 that the Mechanism of Disease course will be offered fall term. After the correction has been made, it will be forwarded to the Provost.

IV. Category II Course Requests: Summer 98

Drexler, Barnes and Davison were appointed to serve as the summer Category II subcommittee, and Drexler will serve as Chair. They will act on all Category II requests received during the summer months on behalf of the Council.

V. Other Business/Announcements

John Ringle distributed to the Council a notebook of compiled Graduate Council Policies that were approved during the period of October 15, 1971 through June 12, 1997.

VI. Category II Course Requests

John Ringle, on behalf of the Graduate Council, approved the following course requests:

DROPS:

MTH 661, 662, 663 (98-C200)

MTH 665, 666, 667 (98-C208)

Absent: Robson

I. Follow-up Report: Graduate Program Review of Horticulture

Nancy Wolford presented the follow-up review report for the Horticulture graduate program. She noted that the follow-up review focused primarily on the recommendations of the original review committee and the summary of the review from the Provost. The Graduate Council approved the follow-up review report as submitted and will forward it to the Provost.

II. Follow-up Report: Graduate Program Review of FRM

Jack Drexler presented the Family Resource Management (FRM) follow-up review report which centered around the recommendations contained in the original Graduate Council program review report and the FRM response to that report. The Graduate Council approved the follow-up review report as submitted and will forward it to the Provost.

III. Modified Preliminary Oral Exam

The Graduate Council continued their discussion of the essential components of the oral exam that need to be retained if a decision is made to modify the exam. They agreed on the following six essential components:

The oral exam creates an opportunity for faculty-student interaction that allows assessment of the breadth and depth of the student's knowledge and understanding of a discipline.

The oral exam allows for immediate probes into the meaning of what students have said or written. The oral exam allows for questions that immediately build on a student's response to an earlier question. The oral exam assesses a student's ability to be a credible participant in a conversation on matters of theoretical or empirical significance to a discipline. The oral exam allows a student, through the interaction and probes, to demonstrate synthesis of his/her knowledge and understanding of a discipline beyond mere rote recitation of theories, research facts and figures. The oral exam allows a student to show that she/he has acquired sufficient mastery of material to pass from apprentice to professional status in a discipline.

Guests: Tracy Bentley, Angelo Gomez, Donald Parker, Ilene Kleinsorge

Absent: Christensen

I. Approval of March 12, 1998 Minutes

The Council approved the minutes from the March 12, 1998, Graduate Council Meeting.

II. Modified Preliminary Oral Exam

The Council discussed the possibility of modifying the preliminary oral exam for a student with a documented disability. Material from other graduate deans relevant to this topic was distributed to the Council. Questions that the Council considered and discussed were:

- What features distinguish an oral exam from a written exam?
- What characteristics make the oral exam unique?
- What information do you gain about the student from an oral exam that is not gained from a written exam?
- Are the goals of an oral exam different from a written exam? If so, how?
- What features of the exam and methods of assessment are essential to accomplish the purpose of the exam?
- Can alternative methods of assessment accomplish the purpose?
- What effect, if any, does the specific discipline have on the answers to these questions? Is the oral exam more important in some disciplines than in others?

Tracy Bentley, Director of Services for Students with Disabilities, and Angelo Gomez, Equal Opportunity Investigator with Affirmative Action were there to provide the Council with information and answer questions about the Americans with Disabilities Act.

Gomez informed the Council of the need to accommodate students with documented disabilities, as long as the accommodation does not lower academic standards or remove an essential element. He suggested the Council first establish the purpose and the essential components of the oral exam and then decide if there has to be a specific format to accomplish that purpose or if an alternative means of assessment may be chosen. Secondly, he proposed that if the Council felt that the oral exam could not be changed, they would need to articulate how and what essential elements would be lost.

Bentley said that more ADA students may be seeking accommodation of the established standards, and a statement clarifying the essential elements of the oral exam is needed. Although each student is reviewed on a case-by-case basis, this statement will help us accommodate students with disabilities.

Discussion on this issue will continue at the next Graduate Council. The Council will need to discuss the components of the oral exam that need to be retained if a decision is made to modify the exam. Another question to consider is: Would an oral exam with an open book be acceptable?

III. Graduate Program Review: Master of Business Administration

Jeanette Brandt, Chair of the Graduate Council committee for the April 13, 1998, Master of Business Administration Graduate program review, summarized the committee's findings and made the following recommendations:

1. The Graduate Program Committee (GPC) explore the future market for students for the MBA Program at OSU. The most recent Program revision was targeted at full-time, domestic (65%) students either with business degrees and three years work experience or with non-business degrees and with or without three year's work experience. As enrollment declined, however, the target population was widened to include admission of a larger fraction of international students, more part-time students, and more students without business experience than was preferred. The COB's graduate faculty need to decide whether or not to live with current problems or to adapt their Program to accommodate shifting markets for their program. In the self-study report, a vision statement for the program seems to be missing.
2. The College of Business attempts to staff all core courses and, preferably, all elective courses taken by MBA students with tenure-track faculty to reduce reliance on acting or visiting appointees. We recognize, however, that given the tight academic job market for business faculty, this is equivalent to recommending that substantial additional recurring budget be found for the COB.
3. The two-person operation managing the MBA Program was a strong feature. The Coordinator of Business Graduate Programs position should be retained, as this person was viewed as a key element in the day-to-day operation and success of the Program.
4. The three-term project should be continued and that an increase in the nominal fee now charged for participation should be considered.
5. The portfolio as an exit hurdle should be continued and that the GPC should prepare clear guidelines for both the faculty and the students.
6. The students should be made aware of the much improved services of the Career and Placement Center. The Review Committee supports the initiative in the Coordinator's office to provide more outreach to alumni, including a job placement component.

Donald Parker, Dean of the College of Business and Ilene Kleinsorge, Associate Professor and Chair of Accounting, Finance & Information Management, were present to answer questions and provide additional information on the progress of the recommendations. They stated that the recommendations have already caused them to change things that they were doing and the way they are starting to work on projects. They reported that they have added a new module in the Career Services to help students select careers, and the Graduate Program Committee will be meeting to discuss the first recommendation. They had no objections to the report and said that it will be useful to their program.

The Council approved the graduate program review report and will forward it to the Provost.

IV. Progress Report: Research Review Committee

Bell said that he is still in the process of drafting guidelines and will present these to the Council when they are complete.

V. Other Business/Announcements

Jerry Heidel said that the Physics department had addressed the Council's concerns expressed at the April 23rd meeting in their revised proposal for the Master of Science in Applied Physics.

Heidel also informed the Council that their recommendations on the 2nd Draft Report on the Faculty Senate Task Force on Assessment of Teaching were summed up and sent to the Faculty Senate on May 7th.

Chris Bell passed out the latest proposal for the Master of Software Engineering and indicated that they are making progress in drafting a document that will satisfy all four involved campuses.

VI. Category II Course Requests

- a. The Category II subcommittee, on behalf of the Graduate Council, approved the following Category II requests:

NEW COURSES

BRE 512 (98-C115)
CE 419/519 (98-C139)
ENVE 425/525 (98-C141)

Graduate Council

April 23, 1998 Minutes

Present: Heidel, Barnes, Donatelle, Drexler, Gupta, Maresh, McCune, Rettig, Ringle, Wolford

Absent: Bell, Brandt, Christensen, Davison, Robson

I. Category I Proposal: MS in Applied Physics

The Council reviewed the revised April 17, 1998 Category I proposal for the MS program in Applied Physics and approved it contingent upon the following two changes:

1. The first full paragraph on page 2 should be deleted ("This program takes advantage of the strength..."). The proposal cannot provide an open-ended listing of possible subspecialties, but must provide specific requirements for subspecialties that will be offered. Optics, Materials Science, Computational Physics, and Environmental Physics, as described on pages 4 and 5, are the subspecialties being approved with this proposal. As additional subspecialties are developed, approval from the Graduate School will be required prior to being offered to students.
2. The division of credits between the major (Applied Physics) area of concentration and minor is confusing as the reader tries to develop a program and follow Graduate School credit allocations. The credit summary listed on page 3, under Course of Study should be modified to reflect the following:

Major: Applied Physics Area of Concentration: 15 credits
General Practical Training: 9 credits
Research: 3-12 credits (as needed to total 30 credits)
Total: 30 credits

Minor: Physics Graduate Core Courses: 12 credits
Elective Courses: 0-6 credits (as needed to total 15 credits)
Total: 15 credits

This would provide a major in Applied Physics with a subspecialty emphasis, and for most students, a minor in physics (as stated in the proposal).

The Council continued to be troubled by the lack of budgetary acknowledgment, which could cause possible consequences in the future, and encouraged the Physics department to include a projected budget in their proposal. They advised the Physics department that other review committees (Curriculum Committee, Budgets & Fiscal Planning Committee) would likely require information on the delivery costs of this program prior to their approval.

II. Appointment of Follow-up Review Committees for Graduate Program Reviews

Council members were selected to conduct follow-up reviews of graduate programs which were reviewed in the past two years. The following committee assignments were made:

Horticulture

Bruce McCune, Chair
Nancy Wolford

Veterinary Medicine

Mark Christensen, Chair
Becky Donatelle

Oceanography

Jeanette Brandt, Chair
Bruce Rettig

Family Resource Management

Jack Drexler, Chair
Jeff Barnes

III. Appointment to Frolander Committee

Jeanette Brandt was selected to serve on the Outstanding GTA (Frolander) Award selection committee.

IV. Listing of Full Committee in Thesis

A suggestion was made to the Graduate School to list all members of a student's committee on the thesis title page. The Council discussed this proposed revision and voted to list all committee members in the thesis effective Fall 1998. The Graduate School thesis editor will assist the Dean in determining the most appropriate location in the thesis to list the names of the committee members.

V. Admission Acceptance Criteria of Unqualified Applicants

John Ringle asked the Council to consider the admission acceptance criteria of unqualified applicants. The current requirements say that all applicants initially unqualified for graduate admission (GPA < 3.00) must be reviewed by the Graduate Admissions Committee. Also, if the applicant begins taking classes here as a non-degree graduate student or a postbac student, then the applicant must complete up to 24 credits of appropriate courses before applying for reclassification. If the student's undergraduate GPA is close to 3.00, then the student only has to complete the necessary number of credits to bring the cumulative GPA to 3.00, and in some cases this is less than 24. Most applicants, however, need to take the full 24 credits and their cumulative GPA is still below 3.00.

Ringle raised the following questions to the Council: The maximum number of credits (24) that unqualified applicants must take is the same regardless of the student's undergraduate GPA. Is this reasonable, or should students with a lower undergraduate GPA have to take more credits to "prove themselves"? If everyone takes the same number of credits (e.g. 24), then is the undergraduate work basically ignored and the admission decision based primarily on the grades received on the 24 credits?

The Council discussed this; no changes to the present policy were made. Ringle asked the Council members to send their thoughts or recommendations on this subject to the Graduate School.

VI. Other Business/Announcements

The second Draft Report of the Faculty Senate Task Force on Assessment of Teaching was given to the Council for their review and recommendations.

Category II Course Requests

The Category II subcommittee, on behalf of the Graduate Council, approved the following Category II requests:

NEW COURSES

BA 465/565
(98-C093)

Note: The correct "slash differentiation" for this course is 'In addition to the course requirements for undergraduates, graduate students will be required to write an academic paper, 12-15 pages in length, based on the completed project.'

ENT 455/555 (5 cr.) (98-C072)

I. Category I Proposal: MS in Applied Physics

The Council continued its review of the Category I Proposal for the MS in Applied Physics. They discussed the Physics Department's responses to the Council's previous questions and concerns. After a careful review, the Council voted to send the proposal back to the Department of Physics along with a list of suggested revisions (see attached). The Physics Department should then revise the proposal by incorporating the Council's suggested revisions and resubmit it to the Graduate Council for a final review.

II. TOEFL Discussion

The Council continued its discussion of the TOEFL exam being used as the only English proficiency criteria in determining admission. Significant points raised in this discussion include:

Letters of recommendation should specifically address the applicant's abilities in English; this request for detailed information should be placed on the application form.
Students would not be denied admission based upon our ELI proficiency test; this would be used to alert the student of deficiencies in their abilities, identify the problem early in their career, and correct deficiencies to assure their success in graduate school. How do we handle a US citizen with poor English skills? Who will pay fees and costs of ELI? The state legislature would probably not approve using state funds to cover this cost generated by international students. Should the student pay, making this just another cost of getting the desired education? Should we build the cost into the application fee, or make it a separate fee, payable only if the testing is needed? Improved screening criteria in English language assessment is needed. With the new computerized TOEFL system, how do we insure that the applicant is taking the test? Are the current required TOEFL scores appropriate?
Are the TOEFL system and its administrators becoming a monopoly? Should we develop our own alternative? We will encourage anyone to come to OSU who is academically qualified. Any subsequent English language training required to bring an applicant to a specified level of performance will be at the applicant's expense.

After a thorough discussion, the Council concluded that this issue was broader than they could address at this time. Further discussion will be scheduled in the future.

III. Progress Report: Research Review Committee

Chris Bell reported on the current progress of the Research Review Committee. He informed the Council that the committee had met with Bill Hostetler of the Research Office and had reviewed copies of patent and copyright information from other universities. He stated that he was in the process of drafting guidelines for the committee's consideration.

These proposed guidelines will be presented to the Council during Spring Term.

IV. Category II Course Requests

John Ringle, on behalf of the Graduate Council, approved the following course requests:

CHANGES IN EXISTING COURSES

Graduate Council

February 26, 1998 Minutes

Present: Heidel, Bell, Brandt, Christensen, Davison, Donatelle, Drexler, Gupta, Maresh, McCune, Rettig, Ringle, Wolford

Absent: Barnes, Robson

Guests: Dave McIntire, Bill Smart, Deborah Healey, Steve Massott

I. Category I Proposal: Master of Science in Applied Physics

Dave McIntire, of the Physics department was available to represent the Category I Proposal for the Master of Science in Applied Physics and to answer the Council's questions. The proposal was reviewed, and the following questions and comments were raised:

Is the budget truly \$0, or can some realistic figures for the program (printing, advertising, etc.) be offered? Consider a different name (Master of Applied Physics) to make it more distinct from a Master of Science in Physics. Specifically identify and list the areas of concentration that the department will offer students. Consider adding a practicum/internship to the student's training, to further enhance marketability of students with the applied background. How will students be tracked with respect to progress towards the degree; will a Program Director be appointed? Clarify the role of a minor in this degree program. Verify the "mechanics" of credit accumulation toward the Master's degree for courses taken as an undergraduate; i.e., only credits in excess of those required for Bachelors degree are applicable.

Because of time restraints, the Council moved to table the proposal review until the next scheduled Graduate Council meeting. In the interim, the above questions were sent to the Physics Department for their review and consideration.

II. TOEFL Discussion

Bill Smart, Assistant Director of Admissions and Foreign Student Advisor at OIE, Deborah Healey, TOEFL Coordinator at ELI, and Steve Massott, Assistant Director of Admissions & Orientation, joined the Council to provide them insight into the TOEFL exam and to answer the Council's questions.

They explained to the Council that the TOEFL exam is not always accurate in determining the English proficiency of incoming students and stated that the exam should not be the only criteria used in determining admission. They suggested that the ideal situation might be to conduct additional testing upon arrival.

The Council discussed the idea of using the TOEFL exam as a screening test instead of a final measure of a student's English proficiency. They further discussed the possibility of requiring an evaluation of spoken English to enable early intervention where potential problems with English are indicated, and to maximize the chances of success for students in their graduate programs. It was moved that the present criteria for the TOEFL exam should remain as is, however the following should be added in the application materials:

"All new international students (for whom English is not their first language) should undergo a placement test on their arrival at OSU, and they will be advised on any deficiency and appropriate corrective measures. The student's department will be informed of the result of the evaluation. Furthermore, prospective students should be clearly advised

on expectations for English proficiency."

"Other new students, for whom English is not the first language, should also undergo a similar evaluation."

The Council decided that before such a motion could be voted on, the following ramifications would have to be looked into:

Does ELI have sufficient resources to administer the placement tests, and do they have the capability to provide the needed programs that these tests would create? What are the current legal requirements and ETS standards used to determine if an institution is qualified to provide testing? What effect would this test have on students who have approved funding for a limited number of years?

The Council decided to table the motion until the next Graduate Council to determine if the motion should be voted on or if a subcommittee should be formed to look into the matter more thoroughly. In the meantime, the Council members were directed to check within their Colleges to see if departments felt they were having problems with the way students are currently admitted.

III. Progress Report--Research Review Committee

This agenda item was moved to the next Graduate Council meeting.

IV. Category II Course Requests

a. The Category II subcommittee, on behalf of the Graduate Council, approved the following Category II request:

NEW COURSE

VM 630 (98-C005)

b. John Ringle, on behalf of the Graduate Council, approved the following course requests:

X COURSES

FW 430X (3 credits) (98-C052)

FW 530X (4 credits) (98-C053)

NFM 548X (98-C065)

Graduate Council

February 12, 1998 Minutes

Present: Heidel, Barnes, Bell, Brandt, Christensen, Davison, Drexler, Gupta, Maresh, McCune,
Rettig, Ringle, Wolford

Absent: Donatelle, Robson

I. Approval of October 23rd and November 13th Minutes

The Council approved the minutes from the October 23 and November 13, 1997, Graduate Council Meetings.

II. Discussion of Draft Assessment of Teaching Report

The Council thoroughly reviewed the draft Assessment of Teaching report. They noted the report failed to address the important role of graduate education in relation to the teaching and mentoring of graduate students. Jerry Heidel, Chair of the Graduate Council, will send a memo to the task force summarizing the Council's concerns and recommendations (see attached).

III. Appointment of Scholarship Review Committees

The following scholarship subcommittee members were appointed:

Bayley/Yerex Graduate Scholarship

Jeanette Brandt
Mark Christensen
Jack Drexler

Oregon Sports Lottery Scholarship

Rakesh Gupta
Becky Donatelle
Bruce Rettig

IV. Discussion of Criteria for TOEFL

John Ringle led this discussion by explaining the role and purpose of the TOEFL. He defined the current criteria used to distinguish if a student should or should not take the exam and gave the following situations where these criteria may not always result in an accurate determination.

Students exempt from the TOEFL who possibly shouldn't be:

1. U.S. citizens who have lived outside the U.S. in a non-English speaking country and who have received all of their education in this particular country.
2. Permanent residents and immigrants from non-English speaking countries.
3. Non-U.S. citizens with a master's degree from a U.S. university.

Students who possibly should be exempt from the TOEFL but are not:

1. Non-U.S. citizens from countries where English is a second language and the education system (K-12,

college) uses English as the primary language.

2. Non-U.S. citizens who attended K-12 in the U.S., but received a baccalaureate or master's degree in a non-English speaking country.

Additionally, there are concerns about changes in the administration of the TOEFL that are resulting in wide spread discussions among institutions.

John Ringle suggested the Council form a subcommittee to review and compare the current criteria with other universities' throughout the United States to decide if changes should be made.

The Council proposed that someone from the English Language Institute attend the next Council meeting to provide them more information on the TOEFL and to answer questions they might have before a such a subcommittee is formed.

V. Status of Graduate Program Reviews for 1997-98

Two Program reviews have been scheduled for Spring term:

Master of Business Administration - April 13, 1998

Scientific & Technical Communication Program - Date TBA

VI. Other Business/Announcements

Fall Term Graduate Enrollment and Assistantship Data Tom Maresh informed the Council that 1997 Fall term graduate application and admittance had increased about 5% from 1996, however, he handed out 1997 Fall Term Graduate Enrollment & Assistantship data which showed that graduate enrollment and assistantships had declined. He attributed this to the current budget constraints which have caused financial strain on departments giving them less funding flexibility to support graduate assistantships. He further stated that the institution is in the process of developing and implementing a university scholarship campaign through the OSU Foundation. It is hoped that this will provide additional resources for graduate student funding.

Summary of Graduate Admissions Committee Petitions Tom Maresh notified the Council that he had received complaints from various departments regarding the GAC's (Graduate Admissions Committee) review of petitions. There have been requests that the Graduate School overrule the GAC's decisions. He distributed summarized data to the Council, showing the amount of graduate petitions that have been submitted to the GAC from January 1996 through January 1998. He stated that after examining the data, he found that the GAC had approved approximately 70-80% of the petitions submitted and had been equitable in their assessments and decisions.

Other Announcements The Research Review Committee said that they would give a progress report on their findings at the next Graduate Council meeting.

VII. Category II Requests

a. The Category II subcommittee, on behalf of the Graduate Council, approved the following Category II requests:

Graduate Council

November 13, 1997 Minutes

Present: Heidel, Barnes, Bell, Brandt, Christensen, Davison, Friedman for Donatelle, Gupta, Maresh, McCune, Rettig, Ringle, Robson, Wolford

Absent: Drexler

Guests: Mina McDaniel, David Lundahl, David Birkes

I. Approval of October 13, 1997 Minutes

The Council approved the minutes from the October 13, 1997, Graduate Council Meeting.

II. Category I Pre-proposal: MS, PhD in Sensometrics

Mina McDaniel and Dave Lundahl, representatives from Food Science and Technology, and David Birkes, from Statistics, were available to present the pre-proposal in Sensometrics and to answer questions. The proposal was reviewed and the following questions were raised:

Would it be an interdisciplinary degree or offered through Food Science & Technology and/or Statistics?

Where's the additional FTE funding going to come from?

How different would Sensometrics be from the current degree in Food Science & Technology with an area of concentration in sensory evaluation and why is a separate department needed?

Should the current title of Food Science & Technology as a department or major name be reviewed to include Sensometrics?

If Sensometrics will be a separate interdisciplinary program, how will it be funded on a sustaining basis?

Is Sensometrics the best name for this program?

Does anticipated enrollment justify a new degree?

After discussion and review, the council approved the pre-proposal for the Sensometrics program. Jerry Heidel, Chair of the Graduate Council, will send a memo to the Provost indicating the Council's approval along with some recommendations and suggestions.

III. Follow-up Review: Master of Agriculture program

Jeanette Brandt presented the follow-up review report which focused on the recommendations of the initial Master of Agriculture program review that took place in May of 1995. Brandt stated that all the recommendations made at the time had been satisfied. The Council approved the report as submitted and will forward it to the Provost.

IV. PharmD Program

Mark Christensen provided background on the changes to the PharmD program. This program was approved

as a post-baccalaureate program in 1987, but was not implemented until 1994. With the new changes, the program would become the first professional degree program in Pharmacy and would replace the BS program. This discussion was for information purposes only and no action was required by the Council.

V. Other Business/Announcements

John Ringle asked the Council for their comments and suggestions regarding questions that have been raised frequently in the Graduate School. The questions that were raised and the Council's recommendations are as follows:

- How strict should the Graduate School be on accepting transfer courses that have been delivered electronically?

It was suggested that if the student wishes to transfer an electronic course to his/her degree, it should be the student's responsibility to provide enough information on the course so that the student's committee and the Graduate School can verify that it meets OSU's policies and guidelines.

It was also recommended that we should accept courses only if the granting institution has considered them as resident credit.

Should the Master of Science final exam instructions in the Graduate Catalog be modified to make them more explicit regarding who may attend the thesis presentation portion?

After discussing this question, the Council decided that it would be best to keep the instructions as they are currently. Different departments have different ways in which they conduct their students' exams. Some departments allow anyone to attend, others restrict attendance to faculty members only, and some allow only the student's committee members. The Council concluded that the current system seemed to be working well and they saw no reason to try to enforce uniformity in this area. This discussion pertained only to the presentation portion, and not to committee examination and discussion.

VI. Category II Requests

The Category II subcommittee, on behalf of the Graduate Council, approved the following Category II requests:

NEW COURSES:

FS 440/540 (97-C355) Option #1
FS 441/541 (97-C357) Option A
CSS 441/541 (97-C356) Option A

Graduate Council

October 23, 1997 Minutes

Present: Heidel, Barnes, Bell, Brandt, Christensen, Davison, Donatelle, Drexler, Gupta, Maresh,
McCune, Rettig, Ringle, Robson, Wolford

I. Role of Graduate Students in Grading Other Graduate Students

The Graduate Council discussed the role that one graduate student should have in assessing the performance of another graduate student. The current policy states that "students working toward advanced degrees are not permitted to teach graduate courses."

Council members acknowledged that this policy has been interpreted historically as meaning that graduate students may not be the instructor of record for graduate courses. Extensive discussion reflected on the range of graduate teaching assistant activities which varies widely across campus units. Graduate assistants often assist graduate faculty in the instructional effort by setting up laboratories and grading lab reports, grading homework assignments, giving lectures, and handling recitation sections.

The Council agreed that developing applicable policy language to fully encompass the variety of assignments and roles of graduate teaching assistants would be difficult and overly prescriptive. However, there was consensus by Council members that caution should be taken by departments and each faculty member within them to assure that graduate faculty be fully responsible for the oversight and appropriate delegation of graduate assistant activities, and that final evaluation of student performance and grade assignment for courses remain with the graduate faculty.

Having specified these points above, the Graduate Council voted to leave the policy unchanged.

II. Review of "No exam between terms" Policy

The current "No exam between terms" policy as stated in the Graduate Catalog (p.18) is:

"Program meetings, preliminary examinations, and final examinations may be held during any period when school is in session. This excludes the periods between the regularly scheduled quarters and during official vacation periods. Students must be registered for a minimum of three credits during terms in which they undertake MAIS or doctoral program meetings, departmental written examinations, or oral preliminary examinations."

This policy has been in effect for at least 30 years, however, the Graduate School often gets requests from students to hold exams between terms, particularly during the 3-4 week periods between Summer and Fall terms, and between Fall and Winter terms. In the past, the Graduate School has granted exceptions as long as all the members of student's committee agree to meet voluntarily and the student has been appropriately registered either the term before or preregistered for the following term.

These requests for exceptions have sometimes caused controversies, such as, when faculty members who are not on appointment during the vacation period feel pressured to work without pay, knowing that if they refuse, they run the chance of the student replacing them with another committee member rather than delaying the meeting until the next term.

Because of these controversies, the Graduate Council reviewed this policy to determine if it should be should

be modified. After carefully examining this rule, considering both the needs of the students and the faculty, the council voted to leave the policy unchanged and recommended that the Graduate School develop guidelines that could be used to evaluate requests for exceptions to the policy.

Graduate Council

October 9, 1997 Minutes

Present: Heidel, Barnes, Bell, Brandt, Christensen, Davison, Donatelle, Drexler, Gupta, Maresh,
McCune, Rettig, Ringle, Robson, Wolford

Guests: Brent Dalrymple, Dean of the College of Oceanic & Atmospheric Sciences; Larry Mahrt,
Professor - Oceanic & Atmospheric Sciences

I. Introduction of New and Continuing Members

The following new members joined the Graduate Council this year: Chris Bell, College of Engineering, Neil Davison, College of Liberal Arts, Bruce Rettig, College of Agricultural Sciences

II. Standing Rules of the Graduate Council

Heidel reviewed the standing rules for the Graduate Council. It was noted that the Graduate Student Senate Representative, Nancy Wolford, should be listed as a voting member.

III. Potential Agenda Items for 1997-98

A. Several graduate programs will be reviewed this academic year. A final selection of these programs has not yet been made.

B. Follow-up reviews tentatively scheduled for this academic year are as follows: Master of Agriculture, Horticulture, Veterinary Medicine, Oceanography, Family Resource Management

C. Category I Pre-proposal: MS, PhD in Sensometrics

D. Scholarship/Fellowship Review Committees (3 to be appointed Winter term)

E. Review of graduate admission criteria and the "24-hr" rule.

F. Review and establish a policy on the role of graduate students grading other graduate students.

G. Review of criteria for TOEFL and SPEAK testing.

H. Review of "no exam between terms" policy.

I. Discuss whether or not the Graduate Council will continue to review new off-campus graduate programs.

J. Review of the Graduate Council policies for the past 25 years.

IV. Appoint Committees

The following committees were appointed:

Category II Review Committee:

Jack Drexler, Chair

Jeff Barnes

Neil Davison

Research Review Committee:

Chris Bell, Chair
Mark Christensen
Jerry Heidel
Nancy Wolford

V. Final Report - Graduate Program Review of Atmospheric Sciences

Mark Christensen, Chair of the Graduate Council committee for the May 6, 1997, Atmospheric Sciences Graduate Program review, summarized the committee's findings and made the following recommendations:

1. At the beginning of each academic year, a seminar should be held for the ATS faculty and graduate students to introduce new students to faculty and to explain or refresh the requirements of the ATS graduate program.
2. Develop a weekly journal club meeting or course for graduate students to present, participate and listen to atmospheric science subjects.
3. Integrate college seminars so that a healthy mix of Oceanography and ATS subject material is presented so that better attendance by faculty and graduate students from both areas is assured.
4. Add a synoptics course (weather analysis and forecasting) to the graduate program's core of courses.
5. Locate the ATS faculty and graduate students in the same building as the Ocean faculty and graduate students.
6. Facilitate the ability of ATS faculty to have greater collaboration not only with Oceanography faculty but also with Forestry and Agriculture.

Brent Dalrymple, Dean of the College of Oceanic & Atmospheric Sciences, and Larry Mahrt, Professor in Oceanic & Atmospheric Sciences, answered questions and provided additional information on the progress of the recommendations.

Mahrt stated that some of the recommendations have already been implemented. He mentioned that they have not decided how to accomplish the 4th recommendation, and it was suggested that they may look into a web class. Dean Dalrymple stated that here are some difficulties pertaining to recommendation #5, to locate the ATS faculty and students in the same facility as the Ocean faculty and students. He explained that they are having a difficult time finding an available location that would be large enough to house the combined students and faculty and indicated the building the Ocean students and faculty are currently using is very limited in space.

The Graduate Council approved the graduate program review report and will forward it to the Provost.

VI. Category II Course Requests

The Graduate Council's summer subcommittee approved the following requests:

Proposal for Graduate Options

Proposal.

To create a Graduate Option that would appear on the official academic record and transcript for a student. The definition of an option at the graduate level is as follows:

A graduate option consists of a minimum of 12 designated quarter credits of related coursework, comprised of coursework offered by the sponsoring unit as well as by other academic units. The option may be comprised of specific courses, completion of a designated number of credits from a longer list of alternative courses, or a combination of specific and alternative course lists. Approved options may be added to a graduate Program of Study, and approved by the faculty advisor(s) and the director of the sponsoring unit. When the unit submits the final examination card to validate awarding of the major to the Graduate School, the unit will also validate that the requirements of the option have been completed.

To create, change, or drop an option, departments submit a Category II proposal. The proposal must contain a list of courses as they will appear in the OSU Catalog and documented liaison with all departments involved. The proposal must also list the graduate faculty and appropriate facilities associated with delivery of the option (necessary facilities and faculty expertise to support the option must be available). Upon approval by the Graduate Council and the Curriculum Council, the option will appear in the OSU catalog and an option code will be created for use within the Banner system.

Concept.

The graduate-level option would be similar to the options that are currently available at the undergraduate level. The options will facilitate tracking and degree accountability of graduate students pursuing specialized areas of study within a graduate degree program. The options differ from an Area of Concentration (see background below) in that the designated students will be assigned a specific option code within the Banner system and the option will appear on the academic transcript. The use of Banner option codes necessitates a restriction of graduate options to recurring areas of study.

Implementation Considerations.

Oversight over the faculty who participate in a particular option (teaching courses or serving on committees) will be left to the director of the degree program. The Graduate School will verify that all faculty listed on the program plan are associated with the degree program. The director of the degree program is responsible for validating that coursework on the program plan are adequate to satisfy option requirements and that the faculty committee is comprised of appropriate faculty academically qualified to represent the option.

Declaration of an option is not required. The decision to declare an option should be made by the individual student and their faculty committee.

Conversion from an “area of concentration” to an option is not required. Degree programs may contain both areas of concentration and options.

Options

Options are for students of a specific major. An option is one of several distinct variants of course aggregations within a major that focus on an area of study designed to provide a student with specialized knowledge, competence, and skills while sharing a minimum core of courses.

Options consist of a minimum of 21 designated quarter credits of related course work, 15 of which must be at the upper-division level.

For an undergraduate option to appear on a student's official academic record and transcript, the student must make application to the Registrar's Office at the same time formal application is made for a degree. The Graduation Audit from the Registrar's Office will list the option as well as the major and degree. This audit is sent to the student's dean for certification of the option at the same time the student is cleared for graduation.

To create, change, or drop an option, departments submit a [Category II proposal](#). Proposals must contain a list of courses as they will appear in the OSU Catalog and documented liaison with all departments involved.

- Courses required for an option may not count towards a minor in the same field of study. Students may not take an option and a minor from the same field of study.
- Options must be approved by all academic units involved.
- Courses may be selected from those offered by the sponsoring unit as well as by other academic units.
- Course substitutions must be approved by the dean of the sponsoring college, who must certify that all requirements are fulfilled.

Proposed change:

Options are for students of a specific major. An option is one of several distinct variants of course aggregations within a major that focus on an area of study designed to provide a student with specialized knowledge, competence, and skills while sharing a minimum core of courses.

An undergraduate option consist of a minimum of 21 designated quarter credits of related course work, 15 of which must be at the upper-division level. For an undergraduate option to appear on a student's official academic record and transcript, the student must make application to the Registrar's Office at the same time formal application is made for a degree. The Graduation Audit from the Registrar's Office will list the option as well as the major and degree. This audit is sent to the student's dean for certification of the option at the same time the student is cleared for graduation.

A graduate option consists of a minimum of 12 designated quarter credits of related coursework, comprised of coursework offered by the sponsoring unit as well as by other academic units. The option may be comprised of specific courses, completion of a designated number of credits from a longer list of alternative courses, or a combination of specific and alternative course lists. Approved options may be added to a graduate Program of Study, and approved by the faculty advisor(s) and the director of the sponsoring unit. When the unit submits the final examination card to validate awarding of the major to the Graduate School, the unit will also validate that the requirements of the option have been completed.

To create, change, or drop an option, departments submit a [Category II proposal](#). Proposals must contain a list of courses as they will appear in the OSU Catalog and documented liaison with all departments involved.

- Courses required for an option may not count towards a minor in the same field of study. Students may not take an option and a minor from the same field of study.
- Options must be approved by all academic units involved.
- Courses may be selected from those offered by the sponsoring unit as well as by other academic units.
- Course substitutions must be approved by the dean of the sponsoring college, who must certify that all requirements are fulfilled.
- For graduate options, the category II proposal must also list the graduate faculty and appropriate facilities associated with delivery of the option (necessary facilities and faculty expertise to support the option must be available).

Background.

Table 1 below shows the minimum credit hours for various degree programs at OSU.

Table 1. Minimum Credit Hours for OSU Degree Programs

	Major	Minor	Option
Undergraduate	36	27	21
Masters	45	15	12*
Doctorate	108 beyond UG	18	12*

* - Proposed

Graduate Area of Concentration:

An area of concentration is a subdivision of a major or minor in which a strong graduate program is available. They may be shown on the student's program of study, but they are not listed on the student's transcript. Areas of concentration are listed in the OSU Catalog.

The Graduate School provides departments instructions for adding/dropping areas of concentration for their graduate major and minor offerings in conjunction with the annual production of the Graduate Catalog. In addition to this annual process, departments may change their areas of concentration at any time without having to do a full curriculum proposal (unless the proposed change would constitute a major shift in the thrust of the program, in which case a more comprehensive curriculum proposal may be required). Any new courses would need to be submitted for approval as [Category II proposals](#).

To change an area of concentration, the graduate department or program should submit a memo to the Associate Dean of the Graduate School specifying:

- the curriculum and faculty associated with the new area,
- how the new area differs from other areas that exist, and
- evidence of appropriate liaison with other programs that may be affected.

If approved by the Graduate School, the changes will appear in the OSU Catalog, and students may use the new area on their programs of study.

Ref: <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/curricular-policies-and-procedures#90>

Graduate Minor:

A graduate minor is an academic area that clearly supports the major. It consists of a group of related courses totaling at least 15 credits in a specific topical area. On a master's or doctoral program, a minor may be:

- an academic area available only as a minor,
- a different major,
- the same major with a different area of concentration,
- an approved major at another institution in the Oregon University System, or
- an integrated minor. An integrated minor consists of a series of cognate courses from two or more areas. These courses must be outside the major area of concentration, with most of the courses being outside the major department. The graduate faculty member representing the integrated minor must be from outside the major department.

Although the courses in a graduate minor may be from more than one academic department, one academic unit/program must be responsible for directing the minor. Necessary facilities and faculty expertise to support the minor must be available. For a graduate minor to appear on a student's official academic record and transcript, the minor must be listed on the student's approved degree program.

To create, change, or drop a graduate minor, departments submit a [Category II proposal](#).

To propose a graduate minor, units without an approved graduate major must include in their proposal:

- Identification of the academic unit/program responsible for the minor.
- Listing of a sufficient number of approved and related graduate course offerings to support the minor, at least 15 credits. Please list courses as they will appear in the OSU Catalog.
- Identification of sufficient faculty expertise and facilities to support the minor.
- Liaison with other academic units must be addressed.

Ref: <http://oregonstate.edu/ap/curriculum/policies.html#38>

Graduate Major.

A graduate major is the area of academic specialization, approved by the State Board of Higher Education, in which the student chooses to qualify for a graduate degree. Upon completion of a graduate degree, the degree awarded and the graduate major are listed on the student's transcript. To create, or change an undergraduate or graduate major or certificate, units must submit a [Category I Proposal](#). An [Abbreviated Category I](#) is necessary to do any of the following:

- Rename a major
- Move responsibility for an academic program
- Merge or split an academic unit
- Terminate a degree, certificate, or academic unit
- Suspend or reactivate a degree, certificate, or academic unit

From the January 12, 2012 Graduate Council Minutes:

Theresa moved to postpone the Botany & Plant Pathology graduate program review to fall 2012 with a provision that, by the first day of fall term, the documentation and review team would be in place and scheduled for fall term. Failure to do this WILL result in a suspension of admission to the graduate program; Denise seconded the motion. Cass and Andrew opposed and Vinod abstained; the motion passed.

Review Panel report of Oregon State University's Graduate Programs in Geology and Geography

1. Overall Recommendation:

Expand the Geography Graduate Program

Maintain the Geology Graduate Program

2. Summary of Findings and Recommendations

Both graduate programs are small in size, but of very high quality and populated by excellent faculty and graduate students. Overall performance indicators, in terms of external funding productivity, research publication, and graduate placement, all compare favorably to competing programs in the Geosciences. Graduate education thrives within both programs despite resource constraints, especially within Geography. Program personnel in Geosciences, moreover, play a critical role in graduate training across campus, with teaching and advising efforts that benefit allied programs in natural resources and environmental sciences. We have identified five key areas in which these programs are in need of increased resources.

1. The Geography program requires an **infusion of new faculty FTE** in order to maintain its viability, but we also believe that faculty in other OSU graduate programs (e.g., Forestry, Marine Resource Management) could be recruited to teach dedicated graduate (as opposed to so-called “slash”) courses in support of graduate education and training.
2. The **high proportion of slash courses** in the Geology graduate program is also a problem, although this issue (as well as some others delineated throughout this report) may be resolved when the Geosciences graduate programs are integrated within COAS in the coming year.
3. Recruitment of the best students in both Geosciences graduate programs is compromised by the **inequity of TA and RA stipends** relative to those in other Colleges at OSU. This issue is also impacting the morale of the Geosciences student body and needs to be resolved prior to the merger into COAS.
4. The Geosciences graduate programs also have some key infrastructure needs that must be addressed soon: (i) increased **suitable space for research laboratories and graduate student offices**, and (ii) **enhanced computer technology capabilities and support**, specifically acquisition of both hardware and software, as well as better computer lab accessibility for students.
5. Finally, we believe Geosciences graduate students would benefit from further **professional development in the areas of teacher training and grant proposal preparation**.

Detailed findings

Introduction

This review of the Geography and Geology graduate programs in the Department of Geosciences at OSU was undertaken by a committee consisting of: Peter Schiffman (Geology, U.C. Davis), Paul Robbins (Geography, U. Arizona), Anne MacDonald (GeoEngineers, Portland), James Strittholt (Conservation Biology Institute, Corvallis), and Walt Loveland (Chemistry, OSU). The review is based upon an extensive self-study document prepared by Geosciences, as well as on meetings conducted with OSU administrators, faculty and students on February 27th and 28th, 2011. This report uses the organizational template suggested by the OSU Graduate Council

Inputs

1. The fit of the mission etc.

Geography

The fit of the Geography program to both college and university mission is strong. Specifically, Geography faculty research and graduate training focuses closely on topics including: maintenance of sustainable marine ecosystems, measurement and provisioning of water resources, and the linkages between resource availability, natural hazards, and political conflicts. These match directly with OSU strategic initiatives in the area of a “healthy planet” and College of Science efforts to match basic research with practical policy to advance human and ecosystem health.

Geology

The fit of the Geology program to both college and university mission is similarly strong: Geology faculty research and graduate training focuses on topics including volcanic and tectonic hazards, economic geology, hydrogeology, Earth surface processes, and climate and biogeochemical cycles. The Geology faculty also has strong research and teaching ties with a wide range of groups on the OSU campus.

2. Quality of students

Data on student quality/admissions selectivity were provided for three graduate programs: Geography, Geology, and the interdisciplinary Water Resources program housed in the Graduate Council, but strongly supported by Geosciences faculty advisors. Objective measures of student quality (i.e., GPAs and GRE scores) were highest for matriculated students in Water Resources, lowest for Geography, and intermediate in Geology. This is explained by the dominant “audience” for each of these programs: the Water Resources program is relatively unique in the western United States, and completely unique within the Oregon higher education system.

The Geography program dominantly attracts students who intend to carry their graduate education only through a Master's level before embarking upon their professional careers. The Geology program attracts a more typical blend of Master's and Doctorate graduate students, with commensurately higher entering qualifications.

Selectivity on the part of the admitted students is also an important consideration. Relative student quality is measured as the average of GPA and GRE scores (exclusive of analytical writing, which is not uniformly available). The "quality" ratio of matriculated students to those who refused their OSU admissions offer was 99% in Geology, 96% in Water Resources, and 92% in Geography. This indicates that OSU is not losing their "best" applicants in Geology, but may be in Geography. Nonetheless, the overall quality of geography graduate students is consistent and strong. Students in this program have shown a notable ability to secure fellowships and scholarships, as well as external support from agencies including the National Science Foundation. There is some reported modest difficulty retaining the very best students in the area of human dimensions and social/environmental issues, owing to competition from parallel institutions, including University of Oregon. The overall success rate for students in finding external funding and their excellent post-graduation placement speaks to the strength of the program in maintaining a strong student pool this regard, however.

3. Admissions selectivity

Admissions selectivity can be measured in a number of ways. Geology has the highest applicant: matriculated ratio (nearly 11:1), while Geography and Water Resources are comparable (6:1 and 4:1, respectively). With respect to qualifications, as measured by the average of GPA and GRE category scores (exclusive of analytical writing), matriculated students are slightly (2-3%) better qualified than the entire applicant pool across all three programs. Using this same "quality" measure and comparing admitted to rejected students, the OSU programs are only slightly more selective: admitted students score 3% higher than rejected applicants in Geology, and 8 and-9% higher, respectively, in Geography and Water Resources.

Geography

The percentage of applicants admitted between 2005 and 2009 averaged 39% in Geography, and 51% in Water Resources. Compared to peer institutions, the Quantitative GRE scores of OSU Geography students is 30 points lower (see Table 3 of the self study report). No similar data are available for Water Resources students. Average quantitative GRE scores for admitted Geography students fall only marginally below those of peer institutions.

Geology

The GPA and quantitative GRE scores of admitted and matriculated students are very high, but the GRE scores are lower than those at peer institutions by nearly 80 points (see data from Table 3 of the self-study report). Between 2005-2009, 399 students applied to the Geology graduate program and 133 of these (or 33%) were granted admission.

4. Level of financial support of students

In the current and near-future economic climate, financial support for students is imperative. Geosciences graduate students are at the bottom of the pay scale on the OSU campus. This issue is affecting student morale and potentially will affect the ability to be competitive in recruiting the highest quality graduate students into these programs. Once student stipends are made comparable to those of other COAS students, we suggest that the OSU Geosciences program compare stipends to those of their peer institutions on an “affordability” basis as a means of evaluating the competitiveness of student support.

Geography

This program periodically admits some students without financial support but some of these students have been given teaching assistantships, so only a small proportion of students are self-funded.

Geology

This program does not admit students without a promise of financial support. Since 2005, 93 % of graduate students have had either a TA or RA stipend, and 96% have had a tuition fee waiver. Students expressed concern regarding the security of their grants over their degree programs.

5. Curriculum strength

All students take a course in Geosciences Communication, which provides an introduction to research methods and provides the opportunity to develop a thesis proposal. This course also begins the development of a graduate student cohort. Cohort development is strengthened by an orientation field trip (Geology graduate students) or GE0534 (Field Research in Physical Geography). The Geology graduate students expressed interest in further tailoring of these courses to match the skill levels of incoming students.

The Geology graduate program has elected to maintain strengths in three main areas: (1) Volcanology and Igneous Petrology (VIPR) (i.e., volcanology, igneous petrology, economic geologic) (2) Structural Geology/Geophysics/Tectonics (including neotectonics and earthquake geology), and (3) Surface Earth processes

and history (i.e., Earth system history, hydrology and hydrogeology, geomorphology, and climate and biogeochemical cycles). The number and range of course offerings are good to strong in each of these categories: 10 courses listed for VIPR, 6 courses listed for structural geology/tectonics/ geophysics, and 12 courses listed in surficial processes and history. The course offerings are strengthened when geography courses are included: geography course are useful to increasing degrees from areas 1 to 3. There are a significant proportion of offerings as joint upper division/graduate “slash” courses (an average of 46%, ranging from 33-52% per school year from 2005-2010), which proves somewhat problematic for Masters students interested in attaining a degree within 2 years. Students are sent to other departments as needed (e.g., mathematics, chemistry, civil engineering) for specialized advanced analytical training.

Geography graduate curriculum focuses largely in the area of physical geography, techniques, and resource management. In the area of Geographic Information Science, the curriculum is thoroughly rigorous and includes fully updated techniques and methods.

A crucial area of program success has been the creation and flourishing of the graduate program in Water Resources. That degree area has consistently attracted, retained, and graduated students with higher GREs and GPAs than the other units within Geosciences, and represents a signature program area for Oregon State University that is unavailable elsewhere. That program’s success has been predicated on utilizing already existing resources (especially faculty advising time and GTA lines), moreover, with little additional institutional support. Further modest investment in this area, therefore, will likely pay dividends in terms of matriculation, graduation, placement and increasing program and university profile.

6. Quality of personnel and adequacy to achieve mission and goals

Geography

The Geography program is extremely small in comparison to peer institutions, with 7 current FTE. These numbers are further constrained in their ability to deliver graduate teaching and advising, owing to faculty commitments to key programs, especially E-campus courses and the GIS certificate. Nevertheless, the program has maintained a relatively short time to graduation, successful pursuit of external funding sources support students, and excellent graduate placement.

Geology

There are currently only 10 faculty FTE in the Geology program, which is small relative to comparably ranked programs (most of which are in the 20+ range). The small size of the Geology faculty restricts its ability to comprehensively offer graduate courses in some programs areas (particularly structural geology/ tectonics and stratigraphy/sedimentary petrology) and eliminates the option to provide

coverage in other Geoscience topics (e.g., paleontology, which is comprehensively provided at the University of Oregon).

7. Quality of organizational support

The impending merger with COAS should have a positive effect on the Geology graduate program as students will have more access to COAS courses, facilities, and faculty. The campus has created 32 new positions across campus of which one position will come to Geosciences, in Geography. The College of Sciences is trying to assist Geosciences with their space needs by providing storage space off-campus for collections, thus freeing up space in Wilkinson Hall.

Productivity

1. Level and quality of student performance

Geography and Geology

Completion and retention rates in the program meet and exceed those of comparable programs, with very good time-to-degree for both Masters and PhD students. These students, moreover, demonstrate high levels of productivity when involved in faculty research, with research presentation at international meetings (including venues like the Association of American Geographers and the Ecological Society of America, the Geological Society of America, and the American Geophysical Union) as well as co-authored publications (in outlets including *Land Use Policy*, *Bulletin of the Geological Society of America*, *Journal of Geophysical Research*, *Geophysical Research Letters*, *Earth and Planetary Sciences Letters*). Graduate students in Geology have also received prestigious national fellowships (i.e., NSF IGERT and Research Fellowships, NASA Space Grant Fellowships).

2. Level and quality of faculty performance

The Geography faculty maintains rates of publication and citations per publication (2.22 – double that of those programs compared) far higher than peer institutions, indicating an extremely high level of productivity as well as a very high individual and institutional profile. Publications are consistently in major and high profile outlets. Approximately 80% of faculty members hold grants, a high rate relative to peer institutions.

In terms of research productivity (e.g., % with extramural grants and publications/year), the Geology faculty ranks well with peer institutions (see compilation of data from recent NRC report on graduate programs, as summarized in Table 47 of the self-study document).

3. Viability of scholarly community within which students can interact

The scholarly community within the Geosciences graduate programs remains at a good size to represent a breadth of investigations. This provides a benefit to graduate students directly or indirectly; after OSU, these students are not likely to work in a professional world composed solely of those similarly trained. Continued efforts to build a cohort across the department are encouraged to provide a strong level of investment in their colleagues' research. Furthermore, the OSU scholarly community has been robust and attractive to graduate students regionally for over 30 years thanks to the faculty, students, and programs in the Colleges of Oceanography and Atmospheric Sciences, Forestry, Agriculture, Engineering and Arts and Sciences, along with the contribution of the USDA Forest Services' Forest Science Lab (FSL) and related facilities such as the HJ Andrews Experimental Forest. [n.b., Although it is not within the control of OSU, disinvestment in FSL by the federal government and key retirements by USFS personnel within the next decade could reduce the quality of this interaction in the area of surface processes.]

Geography

The high ratio of students to faculty, coupled with high levels of research and instructional commitments on the part of Geography faculty, make student interaction with faculty more difficult, though there is little evidence of an impaired intellectual atmosphere. Graduate students report very high satisfaction both with the quality of their interactions with their major professor as well as overall intellectual interactions with their peers. Then program also facilitates student access to linked research groups across campus.

Geology

Although there are only 10 faculty members in Geology, the close proximity between Geology and COAS greatly increases the number of potential scholars available to Geology graduate students. Also, the University of Oregon's Geology Department is relatively close, and some OSU students have taken graduate courses in Eugene.

Outcomes

1. Professional viability of graduates

Geography and Geology

A central measure of program productivity and success is the excellent record of graduate placement. The direction and emphases of graduate employment reflects program strengths, moreover, specifically in crucial, applied, problem-solving areas in natural resource management. Graduates are consistently employed in key sectors, including state land management agencies (e.g. National Parks Service),

non-governmental and multi-lateral institutions (e.g. World Bank), and private sector areas (e.g. environmental consulting). The range and prestige of these institutions speaks directly to the overall success of the graduate training mission of the program, along with the list of peer institutions to which many students go on for further study or employment. Multiple specific elements contribute to this effective professionalization, including a well-established, cohort-centered approach (reflected in things like the annual field camp and student-student mentoring activities) as well as an effective effort to network students with potential employers. This has unquestionably produced a viable scholarly community.

2. Satisfaction of students and graduates

The Department of Geosciences can't guarantee office space to new graduate students, but has been able to do so to date. Most students don't like their assigned spaces because most offices have no windows. Some have expressed frustration with privacy issues, particularly as it pertains to accomplishing their research – some students reported conducting telephone interviews on their cell phones in the hallways or empty classrooms rather than in their crowded offices. There is also no communal space for graduate students to meet and, e.g., eat their lunch.

Geology

When interviewed, the Geology graduate students expressed their happiness with choosing the OSU graduate program, primarily because of the reputation of their research advisors. It was also pretty evident that they didn't choose this program because of the quality of the facilities or the financial support that was offered them. The TA stipend inequity issue is having an adverse affect on graduate student morale. The students also expressed concern about the seismic safety hazard in Wilkinson Hall. Students felt that laboratory safety issues are not well addressed, and that some are expected to establish these for their own labs. Students who work with rocks noted the lack of suitable space for rock crushing/sample preparation. Students expressed unhappiness with the limited number of graduate course offerings: many are so-called "slash" courses (offered to both grads and undergrads) but campus only allows 50% of grad courses for degree requirements. Curriculum in slash classes is generally less advanced. Courses offered through COAS help because none are slash. Students would welcome a dedicated proposal writing class in fall quarter. They felt that Geosciences 518, offered in winter quarter, is not filling their needs (e.g., many felt that many of the topics covered were too elementary). Students felt that they need more teacher-training to be better TA's: they feel that the single day course they currently receive is not adequate. Students felt they have very little input into suggesting seminar speakers.

Geography

Geography students uniformly reported satisfaction in their choice to come to OSU, specifically citing the high caliber of the faculty. Some Geography students stated a concern about the uneven and low levels of assistantship stipends. Students also explicitly expressed concern about the work levels and work/life balance of their professors: “burning the candle at both ends”.

3. Rankings/ratings

Geography

NRC rankings of the Geography program released in 2010 show a reputational rank range of 15-38, among 49 doctoral programs overall. Most notable in terms of comparative achievement, OSU’s program performed in the top-ten of smaller programs for Placement Rate of students, confirming internal assessment of the very high rate of success in training students for professional activities.

Geology

In the recent NRC survey of graduate programs, the OSU Geology program ranked well relative to peer institutions. Overall, it ranked 38th amongst 140 programs in the “reputational” category and 56th in the “statistical” category.

Conclusion and recommendations:

Both of these graduate programs are of excellent quality, but the Geography program is in dire need of FTE infusion to maintain its viability. We offer the following recommendations on issues we feel need to be addressed:

1. Need for Geography FTE

Across the university, but especially in any new CEOAS formation, there will be increasing demands for human dimensions expertise, spatial and spatiometric analysis, as well as synthesis experience and theory. Larger interdisciplinary solicitations from NSF (coupled natural human system research, LTER, ULTRA, etc.) and other agencies - which require human dimensions participation - will create further demand in these areas. Given the development of such solicitations and an overall increase in demand for science-society collaboration, as well as human dimensions and global change adaptation research and training, the need for ongoing development of faculty strengths in geographic science is not only desirable, but likely inevitable. In this sense, if there is not a strong Geography program when this area of critical work begins, the university and CEOAS will likely have to *create one*. The committee concludes, therefore, given the demonstrated current efficiencies and strengths of the graduate program in Geography, which will be the only PhD-granting unit performing human dimensions research in the new

unit, it would be advisable to “double-down” on the existing program and support its expansion precisely into these area of human-environment research, environmental management, and spatially-explicit resource planning (the program’s historic strengths).

This would represent a reversal of the current trajectory. Despite dramatically increasing productivity of individual geography faculty, increasing advising by individual faculty, and a relatively short time to degree, the diminution of faculty FTE over time (from 11 to 7), has led to a decreasing GRA opportunities and funding, with a concomitant decrease in graduate admissions in the program. In terms of the overall resources and time available to meet multiple goals, the Geography unit has reached an apparent breaking point and requires reinvestment. Given the likelihood of an additional retirement within the next five-years, moreover, the window for retaining the program’s viability is time-limited.

To that end, there is a demonstrable need to expand the core Geography faculty if the program is to remain viable and crucial graduate training is to continue. There are several key areas where hires in geography might foster effective cross-campus collaborations and external funding flows, including biogeography, science / policy analysis, coastal marine spatial planning and the geography of food security. Most urgent, however, especially for leveraging synergies in allied units (e.g. the new climate center), *three* key hires would maintain the viability of the unit and its critical role across campus:

- 1) Human dimensions of global change adaptation and sustainability science
- 2) Environmental risks and hazards
- 3) Geographic information science, modeling, in the area of adaptation and risk

2. Need to increase number of dedicated graduate courses in Geosciences.

Geosciences can’t continue to rely on other units on campus to provide dedicated (i.e., non-slash) courses for Geology and Geography graduate students. This issue is less significant for Geology graduate students as they have access to courses offered through COAS. An infusion of faculty FTE for Geography would improve this situation for their graduate students.

3. Need for resolving stipend inequity for graduate students

This issue is undermining student morale and must be resolved prior to the merger with COAS. We recommend that stipends for Geosciences graduate students should be identical to those in COAS.

4. Need for increased laboratory and graduate space for teaching and research missions.

One of the principal challenges for the future health of the Geology and Geography graduate programs is the lack of adequate research and teaching space. The self-study reports that as of 2006, the Geosciences Department had 9563 ft² of research space and 10285 ft² of office space. The relevant University metrics for this department would indicate the research space should be 19194 ft² and the office space should be 11879 ft², deficits of 9631 and 1594 ft². In 2007, the department requested 1700 ft² of office space, 4200 ft² of lab space and 2900 ft² of storage space. In the intervening time, the situation has worsened, as the research funding of the department increased. Without new or renovated facilities, growth of the graduate and research programs will be limited. Additional space is needed for graduate student offices and laboratories, graduate instruction, graduate student communal space, and faculty research. Apart from computer facilities, the majority of space in Wilkinson Hall has not been renovated in four decades.

The space deficit is significant (11,225 ft²) but not overwhelming. The ultimate solution would be a new Geosciences building built in cooperation with other groups in the Earth Sciences Division. However, given this building is not on the current OSU building priority list, that solution is decades away.

The Department needs to develop a realistic plan to address space issues in the short and medium term. The forthcoming merger of Geosciences with COAS may offer opportunities to increase the space available for Geosciences. The review panel urges the Department to make a series of realistic shorter-term estimates for various plans to address space issues. One of these plans should deal with various options for the renovation/remodeling of Wilkinson Hall. (We understand Wilkinson Hall was built to accommodate the addition of another floor for the building although the need for seismic retrofitting may impact that option). The review panel encourages the Department to develop a set of smaller short-term projects that will improve the quality of the present space and increase it in modest increments. The Department needs to seek external funding for these improvements in cooperation with the College of Science, the Earth Sciences Division and the OSU Foundation.

5. Need for enhanced computing facilities

Geography and related disciplines are growing increasingly dependant on high-end computer mapping technologies including remote sensing and geographic information systems (GIS). Modeling and statistical software is becoming increasingly demanding as it keeps pace with rapid advances in computer hardware. In order to attract and keep high-quality students, it is imperative for any modern Geography department to remain at the forefront of these technologies.

Currently, students of the Department of Geosciences have various computer facilities for their use. There is 30-seat Digital Earth Classroom (Wilkinson 210), which is largely used for teaching, the small Terra Cognita Lab (Wilkinson 208), and even smaller Graduate Student Research Facility (Wilkinson 106). Graduate students working under some faculty also have access to additional computing facilities for their research. The Digital Earth facility is primarily for teaching but allows some use by students for research.

Based on the site visit, review of facility specifications, discussions with faculty, and interviews with graduate students, the current computing facility is not fully meeting the current demand by students and will deteriorate without clear planning for the future. There is an overwhelming sense of frustration by the students in terms of not having the computing tools available to do their best work. Students frequently reported that they had to resort to purchasing their own hardware and software in order to carry-out their classroom work and research, because these resources were not being provided or were not easily accessible by the department. In order to remain a strong Geosciences department, close and continued attention to the computing facility is fundamentally important.

The following recommendations are -

1. Consider developing a lab similar to Digital Earth (~15-20 stations) to be used exclusively for research. This would relieve pressure on the Digital Earth Classroom and dramatically improve the current demand for dedicated computer facilities for graduate students.
2. A hardware upgrade policy should be formalized that maximizes graduate student access to the most current technology.
3. Current hardware performance is generally good, but some number of machines should be dedicated as state-of-the-art machines and reserved for projects that are computationally demanding. Most computers are using fast processors but are beginning to lag on RAM and video card speed. Hard drive space is also limiting in some instances and relatively inexpensive to address. Computers built for spatial analysis and visualization need to keep pace with the technology.
4. Student access to current resources should be improved and the changes clearly communicated to students. Some facilities should be available to graduate students 24/7.
5. For those students with heavy computer needs, a dedicated workstation should be assigned for their research.

6. Software review should be regularly conducted with student involvement and the most useful packages maintained, including the high-end functions that are often not included in base packages.

6. Need for improved professional development for graduate students in the areas of teacher training and proposal writing.

We recommend that Geosciences establish a 1 unit, fall quarter-length TA training course that brings up real, on-going issues that TA's are facing as well as topics such as syllabus development. Revise Geosciences 518 into 2 separate courses. Create a writing class for all new students, and a separate (NSF-style) proposal writing class for PhD students who have already completed a MS thesis.

Oregon State University Graduate Program Review Nutrition Graduate Program, May 2011

PREFACE

Professor Martin Fisk, Associate Dean of the Graduate School, Oregon State University (OSU), appointed a team to review the Nutrition Graduate Program (NGP) on May 4, 2011. The Review Team included the following: Denise Lach (Professor, OSU Department of Sociology, and Transitional Director of School of Public Policy); Thomas Wolpert (Professor, OSU Department of Botany and Plant Pathology); Patrick Stover (Professor and Director, Division of Nutritional Sciences, Cornell University); and Mark Failla (Professor, Department of Human Nutrition, and EHE Associate Dean for Research, Ohio State University). Review Team members received a copy of the Self-Study prepared by the Nutrition Graduate Faculty several weeks before the on-site meeting. Dean Fisk hosted the Review Team for dinner on the evening of May 3rd to provide an opportunity to meet one another, learn the background associated with review, and share expectations for the evaluation process. The following morning the team first met Professors Anthony Wilcox, Chair of the Department of Nutrition and Exercise Sciences, and Donald Jump, Nutrition Graduate Program Director, for an overview of the NGP and the faculty. Professor Tammy Bray, Dean of the College of Health and Human Sciences, shared insights about the rebuilding of the NGP and her vision for its continued maturation. This was followed by a meeting with graduate students (8 of 14 in attendance), a tour of the laboratory facilities in Milam and Weniger buildings that house NGP faculty and graduate students, and a meeting with NGP Faculty. The Review Team and Dean Fisk met once again with Professors Wilcox and Jump for final questions prior to initiating an Executive Session to share perspective on programmatic activities during the past five to six years and the stated perspective of the faculty, students and Dean Bray. The Review Team agreed to individually prepare a draft for assigned sections of the final report. The completed draft was shared, revised and accepted by all Review Team members prior to submission to Dean Fisk.

INPUTS

1. Fit of the mission of the program and its relationship to the mission to the academic colleges and university mission.

1.1 Background. The Nutrition Graduate Program (NGP) is affiliated with the Department of Nutrition and Exercise Sciences, chaired by Professor Anthony Wilcox. In this capacity, Professor Wilcox has oversight responsibility for the very large undergraduate programs, as well as two graduate programs: 1) Exercise Sports Science and 2) Nutrition. Professor Donald Jump was recruited in 2007 from Michigan State University to strengthen molecular nutrition at Oregon State University (OSU) and was appointed as NGP Director in 2008. The Department of Nutrition and Exercise Sciences is affiliated with the College of Health and Human Sciences. Professor Tammy Bray serves as Dean of this College and is a member of the Department of Nutrition and Exercise Sciences. All eight core NGP faculty members, including Professors Jump and Bray, are affiliated with the Department of Nutrition and Exercise Sciences. This core group was recently enriched by the recruitment of an additional seven adjunct NGP faculty who have primary affiliations with Animal Science (1), Biochemistry/Biophysics (3) Pharmacology (1), Public Health (1), and Environmental/Molecular Toxicology (1). The stated mission of the Nutrition Graduate Program is to: 1) provide state-of-the-art graduate level training in nutrition for the next generation of scientific leaders entering careers in academia, government and industry; 2) carry out cutting edge research in areas relevant to human health, including bone metabolism, cancer biology, diabetes, exercise, metabolism, obesity, and aging; and 3) communicate research outcomes to the public to improve health and well-being. The NGP self study identified five short-term goals and three long-term goals, which centered on growing the number of doctoral students, post-doctoral fellows and faculty, and increasing the quality and visibility of the program.

The Dean of the College of Health and Human Sciences expressed to the committee an ambitious vision for nutrition and NGP during the planned transition to a College of Public Health and Health Sciences. In keeping with the Land-Grant mission of the University, nutrition was viewed comprehensively in the context of linking healthy individuals to healthy families to healthy communities. In this context, nutrition was described as key to bridging the basic sciences, through its molecular nutrition emphasis, to community outreach with a strong emphasis on health disparities.

1.2 Challenges facing the NGP. The NGP is a relatively small program that has recently been reorganized and revitalized with the appointment of Professor Donald Jump as program director beginning in the 2008-2009 academic year. Professor Jump has taken the lead to revise and modernize the curriculum and the NGP Handbook, and importantly has established a critical mass for the NGP by recruiting outstanding adjunct faculty from across the campus who appear to be committed to the

success of NGP. Prior to Professor Jump's initiative, the NGP did not fare well in the NRC graduate program rankings, and the committee became aware during the review that the current number of NGP doctoral students is below the minimum size required by the OSU Graduate School. The committee noted the recent excellent progress and improvements in the NGP over the past two years, spearheaded by Professor Jump. An excellent framework has been established for the NGP, and the program is now well positioned to scale up the number of doctoral students to meet size expectations set by the OSU Graduate School, and to meet research and training goals put forward in the self study. Specific recommendations follow.

Recommendation 1. *Decrease or phase out recruitment of MS students. The number of doctoral students needs to be increased to meet OSU Graduate School standards and to enhance the research and training missions of the NGP. MS student recruitment seems to be justified based on the following: 1) the ability of OSU to recruit students interested in completing Didactic Program in Dietetics (DPD) requirements through post-baccalaureate education in preparation for a dietetic internship (DI); and 2) filling teaching assistantships (TAs) with students qualified to support the undergraduate teaching program. While there are exceptions, research does not appear to be the primary motivation for MS student recruitment. Because the NGP has limited resources available to support doctoral training, the wisdom of using these resources to recruit and support MS students and the possibility of transitioning as many of these positions as possible to the PhD program should be considered by the faculty. The Review Team also encourages the NGP faculty to discuss the possibility of establishing a larger post-baccalaureate DPD program that generates full-tuition that could be directed towards support of the Director's salary.*

Recommendation 2. *Doctoral student recruitment should be made a priority. The quality of the NGP has been enhanced significantly the past five years by faculty recruitments to the Department of Nutrition and Exercise Sciences and recruitment of adjunct NGP faculty across the OSU campus. These changes should improve the ability of the NGP to recruit a strong pool of high quality graduate students. Currently, the quality and quantity of PhD applicants are inadequate to meet the stated missions and goals of the NGP. An aggressive doctoral student recruitment plan should be developed and financially supported by the program, department and college. Doctoral student recruitment should be the highest priority for the program and all NGP faculty should actively engage in the recruitment of strong students to the NGP doctoral program.*

Recommendation 3. *Develop a diversified funding plan for doctoral student training.* The funding plan for scaling up the doctoral program is centered on increasing faculty extramural research support (and hence GRAs), and obtaining a NIH- and/or USDA doctoral training grant(s). Dr. Manore is complemented for her success with obtaining a USDA training grant. However, the committee has some doubts that this approach will be sufficient to achieve the increase in PhD students that is required to meet enrollment minimums set by the Graduate School. The USDA National Needs Fellowship Program is not well funded and characteristically funds only two to three students. Currently, the NGP would not likely be competitive for a NIH training grant because of the small size of the current program, low matriculation of students from Underrepresented Minority (URM) groups, and the lack of graduates hired as postdoctoral fellows and appointed to tenure track faculty positions at Research 1 institutions. A training program that is “theme” centered and extends beyond the NGP may be feasible. While the desire to increase extramural funding is applauded, the current funding environment is challenging. The committee recommends that funding for the NGP doctoral training become a priority or the program may continue to not meet OSU program standards. We recommend that the NGP, departmental, and college officials work together to develop a diversified funding portfolio to fully fund (0.49 FTE) all first year doctoral students with opportunities for competitive funding of some candidates with dissertation year fellowships. The plan might include income and funding from e-campus, the Dean’s initiative, return of a portion of faculty salary recovery, and return of a portion of cost recovery from grants generating full indirect costs. The review team suggested that full funding for first year NGP students from program resources is essential to allow students to enter the doctoral program without an appointed faculty mentor, thus providing opportunities to rotate among faculty research groups before selecting a doctoral mentor.

Recommendation 4. *Maintain and build on current NGP strengths.* The primary strength of the revitalized NGP, both in its core and adjunct faculty, is in the area of molecular nutrition. The size of the faculty is modest, yet the aspirations for the program appear to be much broader, and the pressure to become a comprehensive nutrition program (molecules to populations and policy) will increase with the new focus on Public Health. The NGP self-study also calls for the recruitment of a new professor at the assistant or associate level to enhance graduate training. The committee supports this recommendation and views such recruitment as essential to establish a critical mass for the NGP. The Moore Family Center for Whole Grain Foods, Nutrition

and Preventive Health offers additional and immediate opportunities for the NGP, including the hire of one or two faculty. Dean Bray shared that the donors have stated their preference that the hire(s) have expertise in translational and not simply mechanism driven research. The review team recommends the need to develop a strategic plan for new faculty recruitments that is built around core strengths of the revitalized NGP. The review team concluded that achieving a broader vision that meets long-term aspirations of the college will require significant new investments and greater integration of the NGP with other related OSU programs.

2. Quality of Students and Admissions Selectivity. Total number of graduate students in the program from 2007 to 2010-2011 has ranged from 11-14 students. The number of applicants has increased during the 2006-2011 period by approximately 50%. Admission has been highly selective during this period with only 10-15% of the applicants accepted during the past three years. The majority of admitted students have matriculated in the MS program with a range of only zero to two PhD annual admits from 2006-2011. Mean test scores for admitted students (V=525, Q=627, A=4.5) are well above rejected applicants, but somewhat below the test scores desired to achieve stated aspirations. Also, there has only been one international student admitted to the program during the past five years.

The profile of applicants and admitted students does not compare favorably with many other graduate nutrition programs. This is explained in part by the marked changes in the program characterized by turnover of the faculty, the need to renovate laboratories, and development of a modern curriculum. Also, there have been no systematic efforts to recruit strong students. The current model for recruiting and funding first year students will not attract the best students for graduate study in nutrition at OSU. Rapid turnaround will be challenging without additional resources as the college is only providing 0.33 FTE towards each first year student. Faculty are understandably hesitant to provide additional support to beginning students, especially as the students are expected to assist with the teaching mission, take a full load of courses during the first year, and are largely admitted to the MS program.

The committee had the opportunity to meet with graduate students. Eight (five PhD and three MS students) of the 14 currently in the program attended the session. The entire group actively engaged in the discussion and exhibited impressive awareness of one another's projects. Students acknowledged the greater flexibility of the revised curriculum, the open door policy of the faculty that facilitates the use of equipment in the various laboratories and the culture that encourages collaboration. Unanimous concern was expressed about the poor quality of the soon to be renovated graduate student "bullpen". Other issues mentioned included the following: general lack of intellectual challenge in *slash* courses; the absence of meaningful interactions with faculty in the Exercise Science program that has largely

resulted from the departure of a highly productive kinesiologist; apparent inequity in faculty support for presentation of research at professional meetings; and, lack of formal feedback by some faculty for graduate student teaching activities.

Recommendation 5. It is imperative that the faculty immediately develop and implement an aggressive program of recruitment to begin in autumn 2011. *Recruitment needs to be as a collective responsibility and not merely an additional activity for Dr. Jump in his role as director of the NGP. As OSU is the only institution in Oregon that awards the PhD in Nutrition, recruitment of strong students in undergraduate nutrition program and the biological sciences on campus, as well as other institutions in the state seems to provide an opportunity for this effort. The NGP faculty are also encouraged to take advantage of ongoing recruitment efforts by life science programs on campus. These include the Molecular and Cellular Biology program and the departments of Biochemistry and Biophysics, Botany and Plant Pathology, and Microbiology. The review team recommends that the department, college and university provide funding to NGP to facilitate initiatives designed to recruit strong doctoral students for a period of three years.*

3. Level of Financial Support of Students. As stated above, department support of graduate students is limited to 0.33 FTE for first year students with contributions from faculty potentially increasing the level of support to 0.49 FTE. Such support is associated with service as a teaching assist. Many of the graduate students also receive college scholarships in the range of \$1000-2000 annually. These funds can be used to supplement stipends or for enrichment activities such as travel to professional meetings. However, the graduate students shared that the scholarships are generally used to pay “fees” that are not typically provided in GTA/GRA appointments and can be relatively expensive. Thus, the scholarships do not seem to be facilitating the intended enrichment process. The Graduate School appears to lack competitive funding programs for dissertation year fellowships or other means of effectively partnering with faculty to support the best and brightest doctoral students with research assistantships. As mentioned above, this situation places a heavy burden on faculty to generate and commit long term support to doctoral students at a time when federal funding of sponsored research is extremely tight. The funding issue represents a major barrier to scaling up recruitment of highly competitive graduate students.

Recommendation 6: The faculty should consider strategies to diversify the research funding portfolio as a means of increasing available support for doctoral students. *Alternative funding sources such as the food industry in the northwest region may represent a means to obtain*

support for graduate students. The record of high productivity and visibility of the NGP core and adjunct faculty provide a sound foundation for seeking such support. The faculty is also encouraged to discuss the possibility of establishing an external advisory board of industry and government scientists as a means of securing additional funding, as well as opportunities for graduate student internships.

4. Curriculum strength. Admission into the NGP requires proficiency equivalent to bachelor's degree level competency in human nutrition, biochemistry and physiology, otherwise these minimal competencies must be met in the graduate program of study. The doctoral core curriculum includes 22 credits of didactic course work in metabolism (6 credits), nutritional status (3 credits) and statistics (9-12 credits). Course requirements in the Responsible Conduct of Research (RCR) can be fulfilled through IST 520 (1 credit) or MCB 557 (3 credits). The curriculum for neither of these RCR courses is likely to meet the NIH training grant standards. The core curriculum electives provide in depth and specialized instruction in nutritional aspects of cancer, bone physiology, energy metabolism, and metabolic disease. Concentration specific electives in biochemistry, genomics, epidemiology, public health, exercise, and functional foods provide both breadth and depth to the core curriculum. This curriculum appears to be excellent in fully supporting the NGP goals to span molecular and human nutrition, and provides a strong academic foundation for the NGP research programs. Current graduate students expressed satisfaction in the quality and availability of course offerings.

The curriculum does not include foundational courses in the social/behavioral sciences, and therefore does not support the long-term college vision of building a program that links healthy people, healthy families and healthy communities.

Recommendation 7: *The NGP faculty should discuss the possibility of requiring a minor for the PhD to increase the breadth of doctoral students.*

5. Quality of personnel and adequacy to achieve mission and goals.

The quality of the faculty associated with NGP has improved substantially since the previous review. This was achieved by hiring new faculty and by the inclusion of adjunct faculty, especially those from the Linus Pauling Institute, in the program. The committee reviewed core faculty extramural research support, publications, and Impact H-Index. There are many faculty with very strong funding and publications records, and only one faculty member currently lacked funding. These faculty provide a strong foundation for the NGP with its focus on molecular nutrition, but not necessarily the critical mass

of core faculty required for a broad based program that provides quality training in both applied and basic aspects of nutrition.

The recent effort in increasing the quality and productivity of faculty members associated with the NGP has outpaced the recruitment of strong graduate students, especially PhD students. Faculty have choices regarding their commitment of time and effort to training graduate students and if they don't find strong students in the NGP program, they have access to other graduate programs with potentially stronger students. As discussed above, investments in doctoral student recruitment and first year funding will be essential to support, leverage and maximize the successful investments in NGP faculty.

6. Level and quality of infrastructure. During the past decade, the institution and college have made considerable investments to re-build the Nutrition faculty by hiring strong senior and junior faculty into tenure track positions. Also, there has been major investment in renovating laboratory facilities in Milam Hall and Weniger Hall. These renovations continue and provide faculty with a modern research facility. Appropriate accommodations for the Moore Family Professor have been undertaken. Presently, space is adequate for the current faculty at their level of funding. Laboratory space also will be assigned to several core faculty in the NGP in the soon to be completed LPI building. This will provide additional workspace for graduate students and research staff, and also ensures continued and possibly increased opportunities for NGP core faculty to collaborate regularly with colleagues at LPI. Space for scholarly activities has the potential to be a limiting factor for consideration of additional faculty hires to the NGP.

In addition to the high quality of the physical facility, laboratories visited by the committee were well equipped with a wide variety of both state-of-the-art and standard instrumentation essential for addressing problems in cellular and molecular nutrition. Also, Dr. Traber and colleagues at LPI possess state-of-the-art instrumentation required for metabolism studies. Although specific information was not provided, it appears that the facilities were equipped by a combination of start-up packages and the success of the faculty with obtaining competitive funds. Students expressed appreciation for the willingness of faculty to provide training and access to the instruments, regardless of specific location and faculty advisor.

The committee did not visit the Nutrition and Physical Activity laboratory directed by Dr. Manore.

PRODUCTIVITY

1. Level and Quality of Student Performance. Current graduation rates are averaging about 71% for both MS and PhD students, with an average 2.5 years and 4.5 years to completion of the MS and PhD, respectively. Efforts are underway to reduce attrition although these numbers continue to be relatively high (Between 2005-2010, only 67% of students finished in less than eight years).

Doctoral students and some MS students are regularly publishing in leading peer reviewed journals in the discipline, including the *Journal of Nutrition*, *American Journal of Clinical Nutrition* and the *Journal of Nutritional Biochemistry*. As modern nutrition is an integrative science, it is noteworthy that students are also co-authors of papers published in other high impact journals that often serve as vehicles for dissemination of nutritional biochemistry and nutrition and physical activity including *J. Lipid Research*, *Experimental Biology and Medicine* and *Medical Science of Sports and Exercise*. Students reported during their interview that they felt “publication pressure” from their major advisors. A large number of students are making scholarly presentations at professional meetings. For example, eleven nutrition grad students have given presentations/abstracts at professional meetings during the first four months of 2011. The meetings include the annual meetings of Experimental Biology and the American Chemical Society, which are important venues for molecular nutrition scientists. It appears that all faculty encourage students to attend professional meetings, although students report that some faculty provide financial support to attend and present at professional meetings, whereas others promote but do not.

In interviews with the students, we heard that the fellowships were relatively small (~\$1-2,000/per term) and were primarily used to pay student fees. Students also suggested that notification of information about fellowships is not necessarily distributed to all and depends primarily on the PI/major advisor. There was limited evidence that Nutrition Graduate students have been successful in attracting external awards, although over the years several have won poster competitions at the American Society of Nutrition meetings.

Recommendation 7: *Characterize causes for lack of completion of the degree and develop strategies to increase completion rate.*

Recommendation 8: *Continue publication expectations for students and provide support for travel to present results at a professional meeting at least once during the PhD degree program.*

Recommendation 9: *Encourage faculty and graduate students to seek prestigious graduate fellowships, including OSU Graduate Fellowships.*

2. Level and Quality of Faculty Performance. The department reports a highly commendable increase in research productivity as measured by receipt of grants, publication of peer-reviewed manuscripts, and presentations at professional meetings, both in absolute numbers and on a per faculty basis. The department has been intentional about encouraging research and recruiting senior faculty with active research agendas and the success of this strategy is most evident. Over the last five years, scholarly activity increased substantially by a variety of metrics including peer reviewed publications and presentation, citation counts and external funding. The self-study reports that the H-Index (index of impact) ranges from 4 to 46. Several faculty members have won internal awards for scholarship, and two have received professional awards for excellence in scholarship. This success is echoed in reports from students who are impressed by the quality of faculty, believing they are pushing the forefront of nutrition and human medicine. Students appreciate the ability to collaborate closely with this productive faculty.

Recognizing the difficulties of finding resources to support graduate students, there does appear to be inequities in the distribution of mentoring responsibilities. Some faculty members do not appear to mentor NGP PhD students, although they may work with students from other PhD programs. It was mentioned that Nutrition Graduate students may not be sufficiently strong to participate in emerging faculty research programs. This further supports the need for aggressive recruitment of strong students to NGP by the faculty.

Recommendation 10: Include mentoring Nutrition Doctoral Students as part of every faculty member's Position Description and consider the success of graduate students in faculty performance reviews.

3. Viability of Scholarly Community within Which Students Can Interact. Both students and faculty shared that there are weekly seminars in the department at which research from both OSU and external researchers is discussed. There was some concern among students that the topics of the seminars were not always of interest as they addressed physical activity rather than nutrition. Students suggested that the time might be better used to talk about their research with other nutrition students in informal settings. Although the College of Health and Human Sciences has several interdisciplinary centers (e.g., Healthy Aging, Children and Family), students do not identify these as part of their scholarly community (neither did most faculty members). Finally, we did not hear from either faculty or students that students were engaged in any program or departmental governance or decision-making.

Recommendation 11: Review required and elective slash courses to ensure that they have appropriate learning outcomes and assignments for graduate students.

Recommendation 12: *Find ways to engage students in program decision-making as part of their professional development (e.g., serve on search committees, participate in curriculum reform, etc.).*

Recommendation 13: *Encourage the Nutrition graduate students to organize and lead a “journal club” as a means of sharing interests and expertise with one another.*

OUTCOMES

1. Professional viability of Graduates. As indicated earlier, previous to the arrival of the current program leadership, the Nutrition Graduate Program (NGP) was in a state of disarray. Consequently, records for graduate placement prior to 2005 are not available. Since 2005 ten MS and five PhDs have graduated from the program. Of the five PhD graduates, one owns a nutrition consulting business, one is a sports nutrition specialist with adjunct faculty status, one is employed as an industry research scientist and two are postdoctoral fellows. Thus, while the total number of PhD graduates from the program is very low, success of the PhD students as determined by placement within their respective areas of study is noted. Many of the MS students were completing undergraduate DPD (Didactic Program in Dietetics) requirements to qualify for admission to a Dietetics Internship program, a requirement to become a Registered Dietician (RD). Available data suggest that the majority of these students have been admitted to dietetic internship programs. Of the students for which placement data are available, the majority are employed as Registered Dieticians or in a related field.

2. Satisfaction of Students and Graduates. Data for the satisfaction level for graduates of the program was obtained through a survey conducted in late 2010 and consisted of six responses. Although quite limited in scope, graduates generally indicated satisfaction with their experience in the NGP.

Data for satisfaction of current graduate students is based on a meeting with eight of the graduate students during the on-site review and a student survey conducted toward the end of 2010. The survey was sent to 14 students in the program and responses were received from eleven individuals.

Responses for the survey indicated satisfaction that met or exceeded the averages obtained from the OSU Graduate School graduate exit survey for all OSU graduate programs. During the meeting of the committee with Nutrition graduate students, they expressed an overall, very positive assessment of the program. It was felt that significant improvements have recently been made in the curriculum and core requirements for the program. Program-related courses are provided in a timely manner such that there are no problems with availability. Students felt that the program provided a positive learning environment that inspired a great deal of camaraderie. Students were pleased with the research facilities and indicated a high level of collaboration and sharing of facilities. A significant point of dissatisfaction was expressed over the quality of the student office space. There are plans for extensive renovation of these office facilities in the near future. Most students felt that the diversity of research conducted in the Department of Nutrition and Exercise Science presented a strength for the NGP, but were disappointed by the limited number of collaborations occurring between faculty in the program and other members of the Department. Some students also commented that the research diversity in

the Department was reflected in the Departmental Seminar series and often led to seminars not relevant to their interests. One student expressed strong concern over limited rigor in *slash* courses; several other students agreed with this assessment.

3. Rankings/ratings. Recent NRC (National Research Council) ratings for the NGP from OSU (out of 44 programs surveyed) produced an S-ranking of 31 (5th percentile) and 41 (95th percentile) and an R-ranking of 16 (5th percentile) and 32 (95th percentile), suggesting that the NGP at OSU is ranked fairly low among other comparator programs. NRC rankings were based on data spanning the period of 2000-2006. However, the NGP has undergone significant changes since 2005. Consequently, current NRC rankings are not a valid reflection of the current state of the program. Comparison of a number of metrics associated with program success from the period reflected in the NRC rankings (2000-2006) with the period since the reorganization of the program (2005-2011) suggests substantial improvement. For example, the average number of faculty publications/year increased from 0.85 to 7.8, faculty with external grants increased from 42.5% to 87.5%, and first year student support increased from 25% to 100%. These metrics suggest that the program is currently on an improved trajectory.

CONCLUSIONS

The NGP program experienced difficulties during the late 1990s, necessitating complete restructuring of the faculty, renovation of the physical facilities, and revision of the graduate curriculum. The unit can proudly conclude that it has successfully accomplished these goals. The committee was very impressed by the scholarly productivity and positive attitude of the faculty, the quality of the research environment, and the enthusiasm of the graduate students, especially in regards to the learning experience they are receiving from the faculty. The program is now well positioned to address the major problem of recruiting and retaining a sufficient number of strong students to produce the standard number of graduates expected by the Graduate School. The current funding model and the distribution of the limited funds to both the MS and PhD programs represent the major barrier to accomplish this goal. The graduate faculty need to develop a strategic plan for recruiting more doctoral students to the program. The faculty and the administration must partner to develop a more diversified funding portfolio for shared support of graduate students in order to achieve the aspirations of the NGP. The NGP is the only program in Oregon that confers the PhD in Nutrition. This and the widespread recognition that diet and physical activity are key environmental factors that determine the balance between health and chronic disease make it imperative that the program is retained and expands capacity for training more graduate students in nutrition and its intersection with physical activity. Such growth is expected to increase the quality and visibility of NGP both on and off campus. It is noteworthy

that Professor Wilcox stated strong support for retention of the NGP when directly asked his opinion by the review team.

Full Category I and Abbreviated Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,

Executive Summary:

Abbreviated Category 1 to Extend the OSU-Corvallis Accounting Certificate Program to OSU-Cascades

CPS Tracking # 88672

CIP # 520301

The Post Baccalaureate Accounting Certificate program is designed for students who have earned a Bachelor's degree in a non-accounting field. The curriculum supports the preparation for the Certified Public Accounting (CPA) exam and employment in professional accounting careers in public, private, or governmental agencies. Although, this program prepares students to take the CPA licensing exam, there are additional course credits a student needs to earn prior to the exam.

OSU-Cascades currently offers a Bachelor of Science in Accountancy. The Accountancy major was approved for OSU-Cascades in AY 2012-13. The College of Business supports extension of the OSU-Corvallis Post Baccalaureate Accounting Certificate to OSU-Cascades. No additional courses or resources are required at OSU-Cascades to be able to offer this certificate.

The Accounting Certificate requires successful completion of a total of 60 credits. Eight of these credits must be completed prior to applying to the program, while others may be taken prior to applying or during the program. Forty-four credits are accounting courses and the balance are business courses.

The Occupational Information Network (O*NET) developed under the sponsorship of the US Department of Labor/Employment and Training Administration lists the accounting profession as projected to grow much faster than average (employment increase of 29% or more over the period 2010-2020 with 100,000 or more job openings over this same period. Southern Oregon University, Portland State University and Linfield College offer Accountancy post baccalaureate certificate programs in Oregon. Southern Oregon University offers both online and face-to-face programs. Linfield College offers an online program.

**Abbreviated Category 1 to
Extend the OSU-Corvallis Accounting Certificate Program
to OSU-Cascades
CPS Tracking # 88672
CIP # 520301**

1. Program Description

- a. Program title, level, and delivery sites.
 - Accounting Certificate, a post baccalaureate credential, and delivered at OSU-Cascades.
- b. Department and school/college that will offer the program. Include the name of the institution program coordinator.
 - College of Business, OSU-Corvallis and OSU-Cascades.
 - Dr. Jim Coakley, Associate Dean for Academic Programs OSU-Corvallis, Dr. Jared Moore, Accounting Program Director OSU-Corvallis and Dr. Marla Hacker, Associate Dean of Academic Programs OSU-Cascades.
- c. Briefly describe the academic program. List all course titles, including number of credits.
 - The Post Baccalaureate Accounting Certificate program is designed for students who have earned a Bachelor's degree in a non-accounting field. The curriculum supports the preparation for the Certified Public Accounting exam and employment in professional accounting careers in public, private, or governmental agencies.
 - OSU-Cascades currently offers a Bachelor of Science in Accountancy. The Accountancy major was approved for OSU-Cascades in AY 2012-13. The College of Business supports extension of the OSU-Corvallis Post Baccalaureate Accounting Certificate to OSU-Cascades.
 - No additional courses are required at OSU-Cascades to be able to offer this certificate.

Accounting Certificate Requirements

Certificate Requirements:

The Accounting Certificate requires successful completion of a total of 60 credits. Eight of these credits must be completed prior to applying to the program, while others may be taken prior to applying or during the program. ACTG 317, ACTG 318 and ACTG 319 must be taken from OSU. A minimum of 51% of all ACTG designated credits must be taken from OSU.

A: Minimum prerequisites to apply to Accounting Certificate Program (approved equivalents for other colleges are acceptable).

BA 211 Financial Accounting (4 cr)

BA 213 Managerial Accounting (4 cr)

B: Prerequisites for required courses in the Certificate Program (approved equivalents for other colleges are acceptable)

ECON 201 Microeconomics (4 cr)

BA 276 Introduction to Statistical Analysis (2 cr)

BA 302 Business Process Management (4 cr)

C: Required Accounting Courses (28 credits)

ACTG 317 External Reporting I (4 cr)

ACTG 318 External Reporting II (4 cr)

ACTG 319 External Reporting III (4 cr)

ACTG 321 Cost Management I (4 cr) (note prerequisite change to 319 in process)

ACTG 325 Introduction to Taxation (4 cr) (note: number change in process ACTG 424)

ACTG 378 Accounting Information Management (4 cr)

ACTG 427 Assurance and Attestation Services (4 cr)

D: Required Accounting Elective Courses –choose two courses from list below--(8 credits)

ACTG 417 Advanced Accounting (4 cr)

ACTG 420 I.T. Auditing (4 cr)

ACTG 422 Strategic Cost Management (4 cr)

ACTG 425 Advanced Taxation (4 cr)

ACTG 429 Topics in Accounting (4 cr)

E: Other Required Business Courses (6 credits)

BA 233 Legal Environment of Business (2 cr)

BA 340 Finance or BA 360 Introduction to Financial Management (4 cr)

Not required, but suggested for CPA exam: BA 333 Legal and Ethical Business Solutions (2 cr)

Note: Although this program does prepare PBAC certificate students to take the Certified Public Accounting (CPA) licensing exam, there may be additional credits a student will need to earn. According to the Oregon Board of Accountancy requirements, students must also have at least 36 credits of other Business related course work, in addition to a minimum of 36 credits of accounting-specific course work.

- d. Indicate in what ways the proposed program at OSU-Cascades will differ from the OSU main campus program.
 - The proposed program does not differ in requirements although some upper division courses will not be scheduled with the same frequency as at the Corvallis campus. Currently, all lower division course work for OSU-Cascades programs is offered by COCC and/or Ecampus.
- e. List any special requirements or prerequisites for admission to the program at OSU-Cascades
 - There are no special requirements or prerequisites. Students are admitted by the OSU Office of Admissions as a Post Baccalaureate student, followed by applying to the Accounting certificate program.
- f. Is there an accrediting agency or professional society that has established standards for this program? If so, is the program currently accredited? If accredited, what steps would be needed to ensure that accreditation is maintained vis-à-vis the OSU-Cascades offering?
 - The College of Business and the Accountancy Program are both (separately) accredited by the Association to Advance Collegiate Schools of Business (AACSB). Along with the processes currently utilized to ensure compliance with AACSB requirements for the existing Business Administration and Accountancy majors at OSU-Cascades, additional AACSB requirements specific to accounting accreditation will be applied to the Accountancy major. Specifically, at OSU-Cascades:
 - Full and part-time faculty teaching at OSU-Cascades are currently vetted and approved by the College of Business (COB) and the Accountancy program. This process will continue for the accounting certificate program.
 - Annual sufficiency reporting (as defined by the AACSB) is currently completed each year by OSU-Cascades for the COB and the Accountancy program. This will continue for the accounting certificate program.
 - Learning outcomes and assurance of learning, developed by the COB Accountancy program to ensure program outcomes are achieved, will be the same at OSU-Cascades.
 - Student exit surveys are currently completed on the same timetable as in the COB and will continue for the Accountancy program.

2. Demand

a. List any similar programs offered at the proposed or nearby location(s).

- Southern Oregon University, Portland State University and Linfield College offer Accountancy post baccalaureate certificate programs in Oregon. Southern Oregon University offers both online and face-to-face programs. Linfield College offers an online program.

b. Provide evidence of need for the program at the new location(s).

- The Occupational Information Network (O*NET) developed under the sponsorship of the US Department of Labor/Employment and Training Administration lists the accounting profession as projected to grow much faster than average (employment increase of 29% or more over the period 2010-2020 with 100,000 or more job openings over this same period).

An accounting certificate is not offered east of the Cascades.

c. Estimate enrollment and number of graduates over the next five years. Will any enrollment limitation be imposed? If so, how will prospective students be selected?

Estimated enrollments are shown below. When offered at the Corvallis campus the certificate program admitted approximately 5 to 10 students per year. A similar number of students are expected for the Bend campus.

Students complete the certificate program rather than graduate. Note that the certificate program provides a series of credit courses that are more than the minimum credit requirements set by the State of Oregon in order to take the Uniform Certified Public Accountant examination. Thus it is the courses that are needed for the exam and not the certificate. Some students will choose to complete the series of courses but not apply for the certificate and some students will choose to take the minimum courses required by the State of Oregon.

The certificate program can be completed in five quarters thus resulting in a one-year lag between starting and completing the program (or completing sufficient courses for the exam). Experience with the certificate program at the Corvallis campus suggests very few students fail to complete the course work, but that very few apply for the certificate.

	Year 1 (Fall 14)	Year 2	Year 3	Year 4	Year 5	Totals
Enrollment	5	10	15	20	25	75
Completion		5	10	15	20	50

- No enrollment limitations will be imposed at this time as the capacity exists for a minimum of 20 certificate students.
- Students will be selected using the GPA criteria for undergraduate accountancy majors applied to their overall undergraduate degree GPA.

3. Personnel

- a. List the names and qualifications of faculty (regular and adjunct) who will be involved in delivering the program at OSU-Cascades. Will new faculty be needed?
 - No new faculty beyond the faculty hired for the accountancy major are required for offering the post bacc certificate in accounting.
 - OSU-Cascades faculty include:
 - a. Accounting assistant professor Dr. Susan McMahon
 - b. Finance associate professor Dr. Julie Elston
 - c. Professionally qualified adjuncts that teach in the accountancy major
 - OSU-Corvallis faculty include:
 - a. One of the existing eight academically qualified faculty for one course (actual person will vary across years by course)
 - No new tenure track faculty are required.
- b. Estimate the number and type of support staff needed to provide the program at the new location.
 - Current OSU-Cascades staff will serve both accountancy and accounting certificate students.

4. Other Resources

- a. Describe facilities (e.g., buildings, labs, equipment) necessary to offer the program at the new location(s).
 - Facilities needed to offer the current program are available at OSU-Cascades and Central Oregon Community College. No new facilities are needed.
- b. Indicate how library needs will be met.
 - The Library Assessment to extend the accountancy major to OSU-Cascades was completed last year. The accountancy major and accounting certificate both have the same needed library resources. By providing the library resources (expenditure

expected in 2013-14) to accountancy students, these same resources can be accessed by accounting certificate students.

- c. Indicate how students at the new location(s) will receive student services (e.g., academic advising, etc.).
- All OSU-Cascades students receive advising from professional advisors located in Cascades Hall. OSU-Cascades follows the same advising guidelines as the main campus of 300 students per professional advisor and will hire additional advisors to maintain that guideline.
 - All other student services will be provided for accounting certificate students just as they are for all OSU-Cascades students.

5. Alternative Delivery Methods/Formats

- a. Are alternative delivery methods being used (e.g., distance learning or technology-enhanced)? Please describe.
- The coursework will primarily be delivered face-to-face, in a traditional format although some courses may be delivered in a hybrid or blended format. Some of the existing lower division coursework is offered both face-to-face and online.
- b. Will this program be delivered in an alternative format (e.g., weekend, evening, on-site)? Please describe.
- The coursework will primarily be delivered between 8am-7pm during the week. Some courses may be delivered in an executive, weekend format. This format would be typically an option that would enable the Corvallis professors to teach at the OSU-Cascades campus.

6. Budgetary Impact

- a. Indicate the estimated cost of the program for the first four years of its operation. (Use the *Budget Outline* form, accessible from the Provosts' website).
- There are no additional incremental resources required for the Post Baccalaureate Certificate in accounting. The courses are currently being offered for students enrolled in the Accountancy major and the Business Administration major at OSU-Cascades.

Thank you for checking in with us. Provost Andrews conferred with our Dean of the School of Business Administration and he has no concerns about your extending the certificate to OUS-Cascades. Best wishes,
Donna

Subject: LIAISON REQUEST: proposal to extend the OSU-Corvallis post-bacc certificate in accounting to OSU-Cascades

To: "sona.andrews@pdx.edu" <sona.andrews@pdx.edu>

Provost,

I am writing to initiate the required liaison with your campus prior to extending programs from OSU-Corvallis to OSU-Cascades. It is OSU's intent to extend the existing Post-Baccalaureate Certificate in Accounting program from OSU-Corvallis to OSU-Cascades. The certificate program will continue to be offered at OSU-Corvallis.

OSU-Cascades already offers undergraduate degree programs in Accountancy (BS) and in Business Administration (BA, BS).

The formal proposal is attached. The process requires that I receive an email noting whether your organization has any comments, questions, or concerns that should be discussed prior to proceeding. I appreciate your help in forwarding this request to appropriate respondents within your organization. Thank you.

Sincerely,

Marla Hacker
Dean of Academics
OSU-Cascades

**Oregon State University Libraries Evaluation of the Collection supporting a
Proposal to Extend the OSU Corvallis Accounting Certificate to OSU-Cascades**

This Oregon State University Libraries' (OSUL) assessment reviews the print monographic, e-book, and electronic serials collections as related to broad science information needed to extend the proposed post-baccalaureate certificate in Accounting to OSU-Cascades.

The OSU Libraries, including the OSU-Cascades library, were reviewed in 2012 to assess the ability to the Libraries to support Bachelor of Arts degree in Accounting at OSU-Cascades. At that time, the monograph and journal collections were determined to be adequate with the purchase of additional print monographs in accounting for the OSU-Cascades library. See Appendix I for this library assessment.

The monographic collection needs to be bolstered, as the additional accounting monographs recommended in the original review still need to be purchased. With these additional titles, the monograph collection will be adequate to support the proposed certificate.

The journal collection is currently adequate to support the proposed certificate.

Respectfully submitted,

Laurel Kristick
Collection Assessment and Science Librarian
November 6, 2013

Appendix I. Library Support for the Accounting Program on Cascades Campus

This report is an analysis of the capacity of the OSU Cascades local library collection and services, in combination with access to the resources of the whole of OSU Libraries and Summit, to support the proposed Accounting degree on the Cascades campus. The Accounting degree curriculum will be identical to the one on main campus in Corvallis.

Attached is a copy of the 2006 Category I proposal for the new Bachelor of Science in Accounting degree on the main campus of Oregon State University. This is the most recent review of the library's collections and services that support this discipline. At the time of the review, OSU Libraries collection was determined to be adequate to support the program.

Journals

At the time of the 2006 review, the journal collection was adequate to support the Accounting program. Since then, we have increased the number of online journals, including some that would be used by Cascades students. We currently have over 100 accounting journals and magazines available electronically, including 7 accounting journals listed in the Journal Citation Report for the Business subject category.

Unfortunately, since 2006, the library has been forced to make a number of cancellations due to a flat budget and high annual inflation rates for journals, including 7 accounting journals. OSU Libraries offers the "Scan and Deliver" service for journals we hold in print and Interlibrary Loan for titles not held at OSU.

Monographs

The monographs collection for accounting at OSU is adequate to support the program in Corvallis, and Cascades students can request titles as needed. In addition, the library has added over 200 electronic books on accounting that are available to Cascades students at any time and is continuing to build its electronic book collection.

OSU students, faculty and staff have access to the monograph collections of over forty academic libraries through the Orbis Cascades Alliance and its union catalog, Summit. Authorized OSU users can easily request books from Pacific Northwest libraries, including Portland State University, University of Oregon, University of Washington, and Washington State University. Items are delivered to OSU within 3-5 business days.

The COCC/Cascades library has a very small collection of books on accounting (~150 titles) – this should be increased to allow students the ability to browse and find relevant material. I recommend that a one-time addition of \$500 be added to the Cascades library budget to support the purchase of videos and books for the local collection.

Databases

The library subscribes to several databases that provide access to accounting literature and data. These are available to Cascades students and include the following:

- Business Source Premier: indexes business literature, includes full text of 3,300 business journals
- Lexis-Nexis Academic: full text major newspapers, news transcripts, legal material and SEC filings
- Mergent Online: Information on NYSE, AMEX and NASDAQ companies
- Business Insights: Essentials: topical business information and company and industry intelligence on thousands of global companies
- Checkpoint: Primary tax documents and secondary analysis for research in federal, state, and local taxation, estate planning, pensions and benefits, international taxation, and payroll taxation
- Wall Street Journal: online index and full-text.
- WRDS/Compustat (Wharton Research Data Services): Financial, economic and marketing data

Library staff and expertise

Librarian support for this program includes OSU Cascades Librarian, Sara Thompson, as well as OSU Libraries Business Subject Librarian, Laurie Bridges.

Summary

OSU Libraries collections are adequate to support the proposed Accounting degree at Cascades campus, with the additional funding for collections recommended specifically for the Cascades Campus:

Books & Videos: \$ 500 (year one only)

Journals: \$0

Databases: \$0

Total funding: \$500

Respectfully submitted,
Laurel Kristick

Oregon State University Libraries
Evaluation of the Collection Supporting:
Proposal to offer a Bachelor of Science in Accountancy

Oregon State University
College of Business
Department of Accounting, Finance and Information Systems

In response to this request for an evaluation, we reviewed the library collection assessment for Business, completed in March 2000. This assessment reviewed the monographic and serials collections in Business. Because the proposed degree program does not introduce any new courses, the 2000 assessment gives a good overview of the ability of the OSU Libraries collection support for the existing courses in Accounting. Support for the elective courses in Accounting was also considered in this evaluation.

Monographs:

According to the 2000 OSU Libraries Collection Assessment, the monograph collection in Accounting and Finance is adequate to support upper division undergraduate study.

OSU students, faculty and staff have access to the monograph collections of over forty academic libraries through the Orbis Cascades Alliance and its union catalog, Summit. Authorized OSU users can easily request books from Pacific Northwest libraries, including Portland State University, University of Oregon, University of Washington, and Washington State University. Items are delivered to OSU within three days.

Serials/Journals:

The 2000 OSU Libraries Collection Assessment revealed that the serials collections were adequate to support upper division undergraduate study. Online journal access has increased the number of journals available to the Oregon State University community in the past several years. Major packages from publishers such as Elsevier, Wiley and Springer have been added, and we intend to move the Blackwell journals to online only in the next year. The online subscriptions represent an overall increase in journal titles. For those titles we have not added, OSU Libraries subsidizes Interlibrary Loan so that students and faculty can obtain journal articles not available at Oregon State University.

Government Information

OSU Libraries is partial federal depository, meaning that a core collection of government documents are housed here. These documents include U. S. Congressional hearings which can be useful in the study of Sarbanes Oxley and other accounting-related legislation. FASB pronouncements, technical reports and bulletins are also available. SEC filings can be accessed through Edgar online and also through our subscription to Lexis-Nexis Academic. Lexis-Nexis Academic can also be used to search for pending legislation and current laws.

Subject-Specific Indexes and Abstracts

The library subscribes to several databases that provide access to accounting literature and data. These include the following:

- Business Source Premier; online access to business literature
- Lexis-Nexis Academic: online access to major newspapers and magazines and to SEC filings.
- EconLit: economic literature
- CCH Tax: tax accounting
- Wall Street Journal: online index and full-text.
- Value Line
- Research Insight/Compustat – Standard & Poor's market data (this license will come up for re-negotiation in 2007)

Summary

Current library resources are adequate to support the program as described.

October 29, 2013

Marla Hacker,

We appreciate the opportunity to review the OSU-Cascades proposal to extend the accounting certificate to its campus. Given that no additional space resources are required to offer the program, Capital Planning and Development supports this proposal.

Sincerely,

Jean Duffett, AIA
University Space Planner

cc: Kirk Pawlowski, Executive Director of Capital Planning and Development, OSU
Kelly Sparks, Associate Vice President, OSU Cascades

Subject: Re: Additional GPC items for Friday-- accounting certificate

Hi John,

Rodger Graham let me know that the COB faculty agreed to extend the accounting certificate to OSU-Cascades.

I need an email from you stating this, which includes your role as chair for the COB graduate curriculum council to upload as part of the university approval process. Really appreciate it. Thank you.

Marla Hacker
OSU-Cascades

From: <Becker-Blease>, John - COB <john.becker-blease@bus.oregonstate.edu>

Date: Tuesday, November 5, 2013 9:34 AM

To: "Hacker, Marla E" <Marla.Hacker@oregonstate.edu>

Subject: RE: Additional GPC items for Friday-- accounting certificate

Hi Marla,

The COB faculty had a meeting on Friday, Nov 1. One of the agenda items was a vote on the Abbreviated Cat-1 requesting the Accountancy Certificate Program be extended to the Cascades campus. As the Chair of the Graduate Program Committee, it is traditional that I bring forth these items. Following review and discussion by the faculty, there was unanimous approval of this Cat-1.

Please let me know if there are any questions and congratulations.

Best,

John R. Becker-Blease
Associate Professor of Finance
Chair, Graduate Program Committee (2011-present)

Liaison	Status	Required
<p>William Braunworth Jr - Department Head / Horticulture These options should be helpful in the recruitment of students seeking more specific degrees related to these topics. (Responded on Sep 20, 2013)</p>	Responded	Yes
<p>Katherine Kelly Donegan - Advisor-Academic / Horticulture Support this proposal. (Responded on Sep 20, 2013)</p>	Responded	No
<p>William Edge - Department Head / Fisheries and Wildlife We have no objection to this proposal, but we wonder why BPP is not rolled into this proposal at this time, rather than anticipating that they may come under this proposal in the future. (Responded on Oct 11, 2013)</p>	Responded	No
<p>CSS reply - BPP could file a separate proposal to create the same two options under BPP, if they so desire. Until we determine whether the umbrella "plant science" degree will move ahead as a two party (HORT/CSS) or three party (HORT,CSS,BPP) agreement and file the needed CAT I to do so, we are obliged to do these separate proposals.</p>		
<p>Craig Marcus - Department Head / Enviro / Molecular Toxic EMT would have no concerns regarding this proposal and would support the new programs. (Responded on Oct 13, 2013)</p>	Responded	No
<p>Robert Mason - Chair-Biology Program / Zoology This proposal doesn't affect the Biology Program. If that is the case, Biology has no objections. (Responded on Oct 23, 2013)</p>	Responded	No
<p>Claire Montgomery - Interim Department Head / Forest Eng/Resources/Mgmt I have no concerns about this proposal. (Responded on Oct 10, 2013)</p>	Responded	No
<p>Gregory Thompson - Department Head / General Agriculture The College of Agricultural Sciences Curriculum and Assessment Committee supports this proposal. (Responded on Sep 30, 2013)</p>		
<p>Dr. Lynda Ciuffetti provided this comment - "The faculty in Botany and Plant Pathology had the opportunity to review the proposal and support the ENT and PBG graduate options. Several comments were made in particular on the PBG option. Faculty welcomed participation of BPP in the PBG option as it is very relevant to the work of faculty in BPP. Faculty suggested that a course in Genomics should be required. Finally, it is noticed that Dr. Chris Mundt is not listed as supporting faculty - it is suggested that he be contacted as to his interest in participating in this option due to the relevance of his research program.</p>		

We have responded to the suggestions from BPP faculty to add Dr. Chris Mundt as a member of the PBG group and added a genomics class among those that can be taken to meet the PBG class requirement.

Category II Proposal to Create an Entomology Option in the Existing Horticulture Graduate Degree

Justification

The Departments of Horticulture (HORT) and Crop and Soil Science have agreed to combine their graduate plant science curricula into one, shared degree program. Under this merger, the HORT and Crop Science (CS) graduate programs would be eliminated and the new program created. The Soil Science graduate degree will remain a separate entity at this time. The hoped for establishment timeframe for this new degree is during AY14, but this will depend on continued conversations with the new department head in HORT and discussions with BPP through which that unit may also come under the combined degree umbrella.

In anticipation of this new degree and in order to move several new study areas to recognized status, we are asking that two transcript visible graduate degree options be created under the existing HORT and CS degrees. The faculty of both HORT and CS believe it is important to establish these new options at this time in order to best serve student needs and utilize departmental resources.

This proposal requests the creation of an Entomology (ENT) option for both M.S. and Ph.D. degrees under the existing HORT degree

General Requirements for a Horticulture (HORT) M.S. or Ph.D. Degree

Coursework

There are few specific course requirements for a HORT degree. Most needed coursework is determined by the student's committee based on the student's specific interest and prior education. These requirements do exist:

1. Follow all Graduate School rules and regulations in place when your degree program begins
2. Complete HORT 511 – Research and Education Perspectives in Horticulture (2)
3. Complete 4 credits (for M.S) or 6 credits (for Ph.D.) from among a selection of the three sister current topics courses: HORT 518 (2), HORT 519 (2), HORT 520 (2)
4. Give one seminar in addition to their thesis defense (HORT 507 or 607)
5. Ph.D. students are required to include a teaching experience in their program of study (HORT 609)
6. All students must document that they have participated in professional ethics training activities.

Research

In addition to the coursework required in the student's program of study, M.S. thesis and Ph.D. students will complete a comprehensive research project in some aspect of horticulture under the direction and with the support of their major professor. M.S. non-thesis students will complete a research project or write a paper in some aspect of horticulture under the direction and with the support of their major professor.

Learning Outcomes and Assessment

M.S.

1. Conduct research with the outcome being a creative work

- a. Assessed during oral exam with Grad Council Rep having specific responsibility for assessment
- 2. Demonstrate mastery of subject material
 - a. Assessed by coursework grades and during oral exam
- 3. Be able to conduct scholarly activities in an ethical manner
 - a. Documentation of training activities on Program of Study

Ph.D.

- 1. Produce and defend an original significant contribution to knowledge
 - a. Assessed during final oral exam with Grad Council Rep having specific responsibility for assessment
- 2. Demonstrate mastery of subject material
 - a. Assessed by coursework grades and during oral exam
- 3. Be able to conduct scholarly activities in an ethical manner
 - a. Documentation of training activities on Program of Study

Additional Requirements for an Option in Entomology

Program Information

The Entomology (ENT) option at Oregon State University embodies the Land Grant mission of integrated research, teaching and extension in the context of understanding the basic biology of insects and with this knowledge then working with insects in natural and/or managed environments. Programs range from basic to applied and can include enhancement of environments to increase insect numbers to management of environments to diminish the numbers of insect pests. Entomologists regularly cooperate with plant scientists, physiologists, pathologists, soil scientists, genomicists, molecular biologists and experts in other fields.

Students in the Entomology option will learn an interdisciplinary approach to entomology by taking courses across a broad spectrum of disciplines. The option may be tailored to meet students' career goals including further graduate education or directly entering public or private sector positions. After completing their degree, students will have gained fundamental knowledge in entomology that may be applied in a range of agricultural, forested, aquatic, or human environments.

Supporting Faculty

Crop and Soil Science

Sujaya Rao, Professor, insect pest management, native bees and pollination
 Amy Dreves, Assistant Professor, pest management of horticultural, field and oilseed crops
 Silvia Rondon, Associate Professor, pest management in irrigated crops
 Stuart Reitz, Professor, Extension, insect pest management in irrigated crops
 Paul Marquardt, Assistant Professor, insect pest management, transgenic crops, insect behavior

Horticulture

Ramesh Sagili, Assistant Professor, honey bee nutrition and health
 Vaughn Walton, Associate Professor, pest management in vineyards and hazelnuts
 Jana Lee (Courtesy), biological-based pest management
 John Lambrinos, Associate Professor, landscape ecology
 Gail Langellotto, Assistant Professor, urban entomology
 Louisa Hooen, circadian rhythms in insects

Jeffrey Miller, Professor, insect biodiversity, biological control, Lepidoptera/caterpillars biology
Peter W. Shearer, Professor, tree fruit entomology and toxicology
Robin Rosetta, Associate Professor, pest management in horticultural crops

Botany and Plant Pathology

Peter McEvoy, Professor, ecology, biological control of invasive plants
Andrew Moldenke, Professor, soil invertebrates, pollination ecology, native bees
Len Coop, Assistant Professor, IPM decision support systems

Environmental and Molecular Toxicology

Paul Jepson, Professor, ecotoxicology, epidemiology, field ecology

Fisheries and Wildlife

Sandy DeBano, Associate Professor, riparian ecology, terrestrial invertebrates
David Wooster, Associate Professor, stream ecology, aquatic invertebrates

Forest Engineering, Resources and Management

David Shaw, Associate Professor, forest entomology, forest health/protection

Zoology

David Lytle, Associate Professor, evolutionary ecology, aquatic insects
David Maddison, Professor, insect Systematics
Jaga Giebultowicz, Professor, insect Physiology, circadian clocks
Chris Marshall, Curator, Arthropod Museum, insect systematics

Facilities

OSU Branch Experiment Stations
OSU Extension Offices
Hyslop Farm
Lewis Brown Farm
Vegetable Farm
State of the art laboratories: on- and off-campus
West Greenhouse
IPPC facilities- library, meeting room

Requirements – 12 credits from the following list

ENT 507. Seminar (1-2)
ENT/HORT 518. Current Topics in Entomology (2)
ENT 520. Insect Ecology (3)
ENT 542. Principles of Integrated Pest Management: Systems Design (4)
ENT/Z 547X. Insect Systematics: Diversity and Evolution (5)
ENT 599. Special Topics: Explorations in OSU Entomology (2)
Z 540. Insect Physiology (3)

1. Review - College Approver - Agricultural Sciences

Approved by [Penelope Diebel](#) Assistant Dean / College of Ag Admin, *December 4, 2013 4:50am*

Comments

Penelope Diebel (College Approver - Agricultural Sciences) November 26, 2013 8:18am

The College of Agricultural Sciences supports the creation of this graduate option for the Crop Science degree.

Penelope Diebel (College Approver - Agricultural Sciences) December 4, 2013 4:50am

The College of Agricultural Sciences supports the addition of these graduate options.

2. Review - Curriculum Coordinator

Approved by [Sarah Williams](#) Coord-Curriculum / Acad Prgms/Assess/Accred, *December 5, 2013 4:17pm*

Comments

Sarah Williams (Curriculum Coordinator) December 5, 2013 4:17pm

This proposal seeks to create a new graduate option, Entomology, within the M.S. and Ph.D. degrees in Horticulture.

Please note that liaison comments are attached as a document. The proposal was originally created before graduate options became a feature of the CPS, and was entered as an undergraduate option as a workaround.

BRIEFING: International Joint/Dual Degree Graduate Programs Joint/Dual Degree Task Force

Background

In December 2011 an OSU task force assembled to review and recommend processes for the development of International dual degree and joint degree programs at Oregon State University. The charge of the committee was to *“propose a clear set of guidelines and strategies to develop international joint-degree and dual/double-degree undergraduate and graduate programs.”* Provost Sabah Randhawa has since shared an interest in OSU developing two to three dual degree relationships over the next year.

Summary

With the current focus on strategic internationalization and international institutional partnerships, both joint and dual degree programs are becoming increasingly attractive to higher education institutions around the world¹. Recent surveys show that these programs support the strategic intent of many institutions by permitting them to attract international students and potentially diversify international student enrollments, strengthen academic research quality, increase international visibility and prestige, and increase revenue among other motivating factors². Further, international partnerships—in the form of dual or joint degree programs allow us to work in a global context on student learning and curriculum building, help us build the international capacity of faculty and staff, and connect to key parts of the world where we contribute to pressing global issues as reflected in OSU’s strategic priorities for healthy people, a healthy economy, and a healthy planet.

Definitions:

Dual (or double) degree: A student receives a separate diploma issued by each institution and represents work completed at two or more institutions.

Joint degree: A student receives a single diploma signed jointly by all institutions involved and represents work completed at two or more institutions.

International Dual and Joint Degree Programs: Added Value

- Increased research collaboration (more faculty and student visits)
- Opportunities for faculty to teach OSU courses at partner institution
- Recruitment of graduate students
- Enhance international visibility and global reach of College and OSU at large
- Increased enrollment of quality international students
- Internationalized curricula
- Increased outbound mobility of OSU students

¹ Chevallier, Arnaud (2013) A Process for Screening and Authorizing Joint and Double Degree Programs. Institute of International Education. Report prepared by Arnaud Chevallier, Rice University.

² Recent survey reports include: “Joint Degrees, Dual Degrees, and International Research Collaborations,” Council of Graduate Schools, 2010; and “Joint and Double Degree Programs in the Global Context,” Institute of International Education, 2011.

- Enhanced learning outcomes (skills/abilities, knowledge, and attitudes/beliefs) that students will gain from collaborative degree programs (specifically those that would not likely be addressed in traditional programs)

2011 IIE Joint Double Degree Survey Report Findings

Major findings from the 2011 Survey Report of 245 higher education institutions from 28 different include conclude that double/dual degrees are much more common than joint degrees. The majority of the reported joint or double/dual degree programs are at the master's level; however, the majority of programs reported by U.S. institutions are at the undergraduate level. The majority (76 percent) of participating institutions report joint and double degree programs with student enrollment of 25 or fewer. The double-counting of credits was one of the least important challenges and 66 percent of respondents indicated that they have measures in place to regulate the double counting of credits. (See [Appendix](#) for complete report) [\(link the appendix on page 6\)](#)

Dual Degree Proposal Process

Dual and Joint degrees have the potential to transform the educational experience, but we must take into account the very real issues surrounding resources needed, governance complexities and assessment over time. In order for programs to have a Dual Degree program approved, there is a four-step process (inquiry, exploration, development and approval) to ensure oversight of such agreements.

- 1) **Inquiry:** Submit pre-proposal online which will be received by a representative from the International Joint/Dual Degree Committee (currently a task force). Submissions will need department support prior to submitting to committee. Once reviewed, proposers will either be requested to submit additional information for consideration or will be granted approval to move to the next stage—exploration.
- 2) **Exploration:** Proposals proceeding past the inquiry stage will use guided questions for consideration in development of a Full Proposal and subsequently a Joint/Dual Degree Program Agreement contract. A significant study of the partner university and the structure of the basic academic, financial, student care, and partner relationship development components will need to be completed before fully committing resources to program development.
- 3) **Development:** The fully designed program proposal will need to be outlined in a Program Agreement document and vetted through the OSU Procurement and Contract Services office. Any curricular or academic elements will need to be approved at the appropriate levels (Graduate Dean for Graduate program proposals, the Academic Programs Assessment and Accreditation for undergraduate program proposals).
- 4) **Approval:** Programs will need signatory approval of Program Chair, Department, College, Dean of Graduate School, Contracts, and Provost, prior to officiating relationship with partner institution. Dual degree graduate program proposals must keep the Graduate School and International Programs informed to ensure policy regulations and processes are in place for the program.

PROPOSAL: Graduate Council Changes for International Joint/Dual Degrees

Policy Topics:

- 1) Continuous Enrollment
- 2) Graduate Committee Membership
- 3) Transfer Credit
- 4) Current Residence Requirements

Points of Discussion:

- Differences in Dual Degree vs. Joint
- Differences in Masters vs. Ph.D

1) Continuous Enrollment

Current Catalog Language:

Minimum Registration <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=38#Section1804>

Unless on approved leave of absence (see Section II), all graduate students in graduate degree and certificate programs must register continuously for a minimum of 3 graduate credits until their degree or certificate is granted or until their status as a credential-seeking graduate student is terminated. This includes students who are taking only preliminary comprehensive or final examinations or presenting terminal projects. Students must register for a minimum of 3 credits and pay fees if they will be using university resources (e.g. facilities, equipment, computing and library services, or faculty or staff time) during any given term, regardless of the student's location. If degree requirements are completed between terms, the student must have been registered during the preceding term.

Joint/Dual Degree Proposal: In cases where students are completing their degree or research overseas, they will be exempt from the continuous enrollment policy when they are enrolled or involved in research at the overseas institution. Students must be enrolled in the overseas institution or completing program requirements as set by the dual degree program, to avoid the minimum of 3 graduate credits enrollment requirement. For any break in enrollment, students must have prior approval or alert the graduate school prior to departure in order to document and verify leave status. Planned leaves can be set in advance.

2) Graduate Committee Membership

Dual degree programs at the graduate level need to consider the composition of the graduate committee. If student's research is guided by an overseas faculty member or conducted in part at the overseas institution, the graduate committee must include an OSU faculty member, OSU Graduate Council Representative, and faculty member from the overseas university and vice versa. The overseas faculty member proposed will need to be nominated by a major/department/program to be a Courtesy Faculty or Affiliated Faculty member http://oregonstate.edu/admin/hr/sites/default/files/documents/general/courtesy_affiliate.pdf

The remaining committee members for doctoral committees can be from either institution, but the overseas representative must be eligible for graduate faculty status at OSU. These individuals would be responsible for all duties expected of Masters and Doctoral committees, including advice on the student's research or project, approval of the program of study, examination of the student during Preliminary and final exams, and approval of the thesis or dissertation.

3) Transfer Credit

Current Catalog Language:

Catalog: <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=38#Section1802>

Up to 15 graduate credits may be transferred toward a 45-credit master's degree. Up to 6 graduate credits may be transferred toward an 18-credit graduate certificate. Graduate courses to be transferred to a doctoral degree program can be courses that were used to satisfy the graduate course requirements for a graduate certificate or a master's degree (or equivalent). Selected 700-level courses that have been deemed equivalent to graduate-level learning may be used on doctoral programs of study upon approval of the student's graduate committee. There is no limit on transfer credit toward the doctoral degree as long as the doctoral residence requirement is satisfied.

Joint/Dual Degree Proposal:

Oregon State University Graduate Programs proposing to develop Joint/Dual Degree partnerships with another University may develop a program that allows no more than 50% of the program of study to be completed at the other institution for a Masters Degree. Program proposals meeting these criteria do not need approval by Graduate Council or Faculty senate as long as the program is developed from an existing program. All new programs and courses will need to follow Academic Senate guidelines for development of courses (Category 2 proposal) or development of new programs not in existence (Category 1 proposal).

Programs deciding to develop a Joint/Dual degree program may set their own requirements to be more restrictive than the set upon agreement. Programs will need to ensure Joint/Dual Degree meet all learning outcomes and assessment requirements. Non OSU curriculum from the overseas institution that are approved for transfer credit should be evaluated prior to the confirmation of the number of credits transferred. In addition, prior to finalizing Joint/Dual Degree agreement, programs should assess program fit, course and academic structure match and offering times of the overseas program and OSU.

- **Point of discussion:**

Dual (or double) degree: Counting double credit and if additional credits should be required. (Example: 2 year master program: 1 year at partner institution and 1 year at OSU. The student receives a degree from both institutions. Are there additional OSU credits needing to be taken to differentiate from the normal 2 year master option? Such as additional 15 graduate credits for Masters.)

Joint degree: What stipulations are there, if any, for the Joint degree option? Such as programs developing a brand new and innovative program. Or melding two or more programs together for one degree signed by both institutions on diploma.

4) Current Residence Requirements

Current Catalog Language:

a) **Masters** <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=39#Section2265>

The residence requirement for the master's degree is 30 graduate Oregon State University credits after admission as a degree-seeking graduate student. These 30 graduate credits must appear on the master's degree program. (This does not include credits reserved as an

undergraduate or postbaccalaureate student, credits taken as a postbaccalaureate or graduate nondegree-seeking student, nor transfer courses.) Deviation from the residence requirement requires a petition to the Graduate School.

Joint/Dual Degree Proposal: At least 50% of the program of study must be completed at OSU in order to grant an OSU degree. NOTE: Currently, OSU students on Education Abroad programs bring credits in as institutional credit and “O” codes are used. These credits are counted as OSU credits and hence contribute toward residency requirements.

- **Point of discussion:** What should count as 50% of program of study—Coursework versus research credit.

Current Catalog Language:

b) Doctoral <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=40#Section2285>

For the doctoral degree, the residence requirement consists of two parts:

1. *a minimum of 36 graduate Oregon State University credits must be completed; and*
2. *the student must spend at least three terms of full-time graduate academic work (at least 9 credits per term) on campus or at an off-campus site approved by the Graduate School. The latter requirement of three terms of full-time enrollment does not have to take place in consecutive terms.*

Adequate fulfillment of the residence requirement shall be determined by the Graduate School.

Joint/Dual Degree Proposal: Must meet current minimum requirements of Doctoral Program.

BRIEFING: International Joint/Dual Degree Graduate Programs Joint/Dual Degree Task Force

Appendix

Proposal Task Force membership: Taifo Mahmud (College of Pharmacy), Charlotte Moats-Gallagher (International Programs) Valerie Rosenberg (International Programs), Yuliya Dennis (International Programs), Bill Warnes (College of Engineering, Chair), and Kim Johnson (Graduate School).

PROPOSAL FOR A CO-DEGREE MASTERS PROGRAM

Proposed Combined Undergraduate-Graduate Degree (Co-Degree Masters) program

This proposal defines foundational requirements for an OSU combined undergraduate-graduate combined degree program in which undergraduate students could apply to designated master's programs during their junior year. Students typically would begin some of their graduate coursework and thesis or project work during their senior year. Completion of the program allows both a bachelors and master's degree to be conferred. We propose this as a 3-year pilot to assess interest and success. Participation by individual master's programs is entirely voluntary, although the pilot phase will be limited to existing master's programs. Programs deciding to participate may set their own requirements for their program to be more restrictive than what is described in this proposal. The following requirements are based on a review of programs at other universities with co-degree programs ([Appendix 1](#)), on feedback from OSU Students ([Appendix 2](#)) and previous discussions with members of the OSU Curriculum Council and Graduate Council.

Foundational Requirements

Outstanding undergraduate OSU students who have completed a minimum of 105 of the (minimum) required 180 credits toward their degree with an overall GPA of 3.25 or better are eligible to apply to an OSU co-degree master's program during the winter term of their junior year. Master's programs are responsible for determining any additional admissions criteria and competitiveness. The master's program will notify applicants of admissions decisions during spring term. Accepted students will matriculate during the following fall term. With careful planning students can then complete a master's degree within 1 year beyond the bachelor's. Students admitted to the co-degree program must maintain a GPA of 3.0 or better throughout their undergraduate and master's degree programs or they will be subject to dismissal from the co-degree program.

Successful applicants are allowed to apply up to 9 credits of graduate coursework (taken for a letter grade) taken as an undergraduate to both their undergraduate and master's degree.

These 9 credits are deducted from allowed transfer credits for students who have transferred into OSU. Only credits with letter grades of B (3.00) or better may be counted for graduate credit. In addition, those students in undergraduate programs requiring a thesis can allow the undergraduate thesis to be a step toward completion of the master's thesis (for those programs requiring a thesis).

Admission to the co-degree master's program is not automatic and will be competitive with students applying directly to the program. Students must identify a graduate advisor prior to application to the program. Students requiring a thesis for their degree must have a professor who agrees to serve as the thesis advisor prior to application. For students completing an undergraduate thesis, this may be the student's undergraduate thesis advisor. For students in non-thesis master's programs, the graduate advisor must be willing to work with the student to guide the scheduling of required coursework.

TOEFL and ID portfolios are not required, but the following are required:

- Online application via the Graduate School website
- A co-degree study proposal or coursework plan of study, including details of the nine graduate credits to be applied toward both graduate and undergraduate degrees, is required to complete the application for admission and should be signed by the graduate advisor for non-thesis master's programs or graduate thesis advisor for master's programs with thesis.
- Statement of Purpose essay of 2-3 pages. This must include details of the graduate plan of study and, for programs with a thesis, the master's thesis topic.
- Three letters of recommendation from individuals knowledgeable of the student's academic background and potential for success in a graduate degree program.
- Transcripts from all undergraduate institutions attended.

Students enrolled in a co-degree program will be eligible for financial aid (Pell Grant) until they complete 180 credit hours toward their undergraduate degree. Once the undergraduate degree requirements are met, then the student typically would be supported on a Teaching or Research Assistantship or they would pay graduate tuition and fees. The bachelor's degree will be conferred after all requirements for the bachelor's degree are met; the master's degree will be conferred after all requirements for the master's degree are met.

Assessment of Pilot Program

The Graduate School, Office of Assessment, Graduate Council and Curriculum Council will assess the success of the program after 3 years. Indicators of success will include, but not be limited to, number of programs participating, enrollment trends in each program for both co-degree and direct admits, time to degree and degree completion rates.

Full Category I and Abbreviated Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

For Instructions, see <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/category-1-proposals>
Please attach Transmittal Sheet; Executive Summary, Proposal, Letters of Support (external to OSU); Accessibility Form*,

Proposal for the Initiation of New Instructional Program Leading to the Graduate Certificate in Urban Forestry

Oregon State University

College of Forestry

Department of Forest Ecosystems and Society

Proposed Effective Term: Fall, 2014

Submitted October 29, 2013; Revised December 27, 2013

Executive Summary

This proposal would establish a Graduate Certificate in Urban Forestry. The 18-20 credit Graduate Certificate would be available as a stand-alone program, or as the foundation for a student's participation in OSU's online Master of Natural Resources (MNR), where it would join the five existing Graduate Certificates (Sustainable Natural Resources, Fisheries Management, Water Conflict Management, Geographic Information Science, and Marine Resources Management) as a new offering. Urban forestry involves the planning, planting, and management of trees and related vegetation in and around cities. The urban forest is made up of the mosaic of the planted landscape and native forest remnants left behind as cities have developed. Urban forestry is an academic discipline that is related to Forestry, Horticulture, Urban Planning, Landscape Architecture, and Land Use Planning. Urban foresters work in municipal governments, non-profit organizations, other public agencies, and the private sector.

The target audience for this Graduate Certificate includes professionals already working in urban forestry programs at the state, local, national, and non-profit levels. The online delivery of this proposed program via Ecampus will allow time- and place-bound natural resource professionals new access to graduate level education by allowing them to remain in their jobs and not have to move to a residential university setting. This new program will train professionals to further advance their urban forestry programs, to address critical contemporary challenges such as climate change and invasive species, and to make their cities more livable by capitalizing on the ecosystem services produced by the urban forest and reaping the economic, environmental, and social benefits that urban trees provide.

OSU's Graduate Certificate in Urban Forestry would be the first of its kind in North America – no other university currently offers graduate urban forestry education online. OSU Ecampus has agreed to invest in the development of this new program, and numerous urban forestry professionals have already expressed interest in the potential new program.

Proposal for the Initiation of New Instructional Program Leading to the Graduate Certificate in Urban Forestry

Oregon State University

College of Forestry - Department of Forest Ecosystems and Society

Submitted October 29, 2013, Updated December 27, 2013

CIP # 03.0508

Proposed Effective Term: Fall, 2014

Executive Summary

This proposal would establish a Graduate Certificate in Urban Forestry. The 18-20 credit Graduate Certificate would be available as a stand-alone program, or as the foundation for a student's participation in OSU's online Master of Natural Resources (MNR), where it would join the five existing Graduate Certificates (Sustainable Natural Resources, Fisheries Management, Water Conflict Management, Geographic Information Science, and Marine Resources Management) as a new offering. Urban forestry involves the planning, planting, and management of trees and related vegetation in and around cities. The urban forest is made up of the mosaic of the planted landscape and native forest remnants left behind as cities have developed. Urban forestry is an academic discipline that is related to Forestry, Horticulture, Urban Planning, Landscape Architecture, and Land Use Planning. Urban foresters work in municipal governments, non-profit organizations, other public agencies, and the private sector.

The target audience for this Graduate Certificate includes professionals already working in urban forestry programs at the state, local, national, and non-profit levels. The online delivery of this proposed program via Ecampus will allow time- and place-bound natural resource professionals new access to graduate level education by allowing them to remain in their jobs and not have to move to a residential university setting. This new program will train professionals to further advance their urban forestry programs, to address critical contemporary challenges such as climate change and invasive species, and to make their cities more livable by capitalizing on the ecosystem services produced by the urban forest and reaping the economic, environmental, and social benefits that urban trees provide.

OSU's Graduate Certificate in Urban Forestry would be the first of its kind in North America – no other university currently offers graduate urban forestry education online. OSU Ecampus has agreed to invest in the development of this new program, and numerous urban forestry professionals have already expressed interest in the potential new program.

1. Program Description

a. Proposed Classification of Instructional Programs (CIP) number: 03.0508

Title: Urban Forestry

Definition: A program that prepares individuals to apply the principles of forestry and related sciences to the development, care, and maintenance of individual trees and forested areas within or close to areas of dense human habitation. Includes instruction in urban environments; effects of pollution on tree species; environmental design and landscaping; urban pest infestation; urban forest management; and applicable policies and regulations.

b. Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.

Urban forestry – the management of trees and vegetation in and around cities – first appeared in academic literature in 1965, in federal US policy in 1978, and in academic degree offerings in the late 1980s. Urban forestry is a diverse field that takes in concepts from many natural resource disciplines. Today, urban forestry professionals deal with critical urban natural resource issues while employed at the government, non-profit, and private sector levels. Due to the relatively young nature of the profession, most urban foresters have varied academic backgrounds and few have advanced degrees. Most lack the ability to complete an advanced degree without leaving the workforce, making them a prime audience for online education.

OSU is the first US University to offer a regularly scheduled online urban forestry course (2009 to present) and the first to offer an online urban forestry degree option (the new BS in Natural Resources – Urban Forest Landscapes Option). OSU's initial offering of online urban forestry courses (FES/HORT 350 Urban Forestry, FES/HORT 447/547 Arboriculture, and FES/HORT 455/555 Urban Forest Planning Policy and Management) have been well received by urban natural resource professionals across the United States, Canada, and beyond. Many urban foresters have approached OSU inquiring about a graduate level offering, and initial market research suggests that it would have great potential to attract students. OSU has a highly successful and innovative online Master of Natural Resources (MNR) degree program that provides an ideal framework for expansion. There are already five areas of emphasis in the online MNR degree, with a set of core courses and an emerging visibility among natural resource professionals. Consequently, this proposal will create a Graduate Certificate in Urban Forestry as a sixth academic concentration within OSU's online MNR degree program.

c. Course of study – proposed curriculum, including course numbers, titles, and credit hours.

The Proposed Curriculum for an 18-20 credit Graduate Certificate in Urban Forestry would use existing OSU courses, supplemented by three proposed new course offerings. The Certificate would align with the online Master of Natural Resources, giving students the option to complete a stand-alone Urban Forestry Certificate, or to continue on to the MNR graduate degree with the Urban Forestry Certificate as their

area of concentration. Students would complete 12 required credits, and take two elective courses resulting in a combined credit hour total of between 18 and 20 depending on the electives selected. These courses are:

Required Courses (12 credits)

- (4) FES/HORT 555 Urban Forest Planning, Policy, Management
- (1) SNR 511 Sustainable Natural Resources
- (3) FES 5XX (new) Urban Natural Resource Planning
- (2) FES 5XX (new) Urban Forestry Leadership
- (2) FES 506 (new section) Urban Forestry Capstone

Elective Courses – Chose TWO (6-8 credits total)

- (3) FES 545 Ecological Restoration
- (4) FES/HORT 547 Arboriculture
- (3) FES 554 Managing at the Wildland-Urban Interface
- (4) FES 593 Environmental Interpretation
- (3) FES 585 Consensus and Natural Resources
- (3) GEO 551 Environmental Site Planning
- (4) GEO 565 Geographic Information Systems
- (3) FES 5XX (new) Urban Ecosystems
- (3) FES 592 Ecosystem Services or (3) FW 562 Ecosystem Services

Each of the existing courses, with the exception of GEO 551, is currently available online, or in development with OSU Ecampus. GEO 551 and the various new courses (listed here as 5XX) will be available online by AY 2014-15, pending completion of CAT II approval processes. The Director of the Certificate program may approve the substitution of a similar course or course at a higher level at his/her discretion on petition by a registered student. The Director may also approve any other course deemed relevant to the study of urban forestry as a substitute for any of the above courses based on the experience level of the student. Transfer credits may be approved based on Graduate School guidelines.

d. Manner in which the program will be delivered, including program location

This program will be delivered exclusively online in order to meet the needs of its target audience – working professionals. No other university in North America offers online urban forestry curricula at either the graduate or undergraduate level. By making this graduate education opportunity available online, this program will attract graduate students who might not otherwise attend OSU. The online nature of the program, and the focus on working professionals, will create access to higher education for a diverse population who can not currently access it in their preferred discipline.

e. Ways in which the program will seek to assure quality, access, and diversity.

Application Review - All applications will be reviewed by the Graduate Certificate Director. Applicants must have a bachelor's degree and an undergraduate GPA of at least 3.0 plus a demonstrated interest in the Graduate Certificate for career or academic advancement (as shown in the application materials). Students with a bachelor's degree

in a non-natural resources field may be required to take preparatory courses prior to admission unless they have relevant work experience that can serve as a basis for admission. Students who do not meet the 3.0 GPA requirements may petition for conditional admission at the discretion of the Graduate Certificate Director, pending review by the Department Graduate Admissions Committee. Students who do not meet admission requirements will be advised to take 1-2 graduate-level courses as a non-degree seeking student, or apply to an appropriate post-baccalaureate program. As a unique program in all of North America, this program is expected to attract significant interest among practicing urban foresters, and enrollment may need to be limited to the most qualified applicants.

Retention and Evaluation – An advisor will check the status of currently enrolled Graduate Certificate students at the end of each academic term to assure that they are making progress and are meeting Continuous Enrollment requirements. Students who need to file Leave of Absence forms will be contacted by email, and those who are struggling will be referred to the Graduate Certificate Director and the Academic Success Center. Final grades, capstone products, and mentor evaluations of the capstone project will be reviewed by the Graduate Certificate Director prior to awarding the Graduate Certificate in Urban Forestry to a student.

Access and Diversity - Access to higher education and opportunities and the diversity of student populations should increase under this proposal. Natural resources has historically been a profession that has struggled to attract a large number of minority students. Urban Forestry typically attracts a more diverse racial, ethnic, and gender composition than other fields within the natural resources profession. Urban Forestry training has historically been diverse – urban foresters are often hired from a variety of backgrounds, including Forestry, Horticulture, Landscape Architecture, and Urban Planning. The focus on urban areas has the potential to attract more minorities than a rural-focused program.

Course Quality – Paul Ries, the proposed Graduate Certificate Director, has completed the Peer Review Course from *Quality Matters*, an online course design review process recently implemented by OSU. The required content courses for this Certificate will be designed using the Quality Matters Rubric and may be submitted for Peer Review prior to the third year they are taught. Required courses will be updated on a regular basis.

f. Anticipated fall term headcount and FTE enrollment over each of the next five years.

Applications for the Graduate Certificate in Urban Forestry will be accepted year-round. Based on interest conveyed to OSU faculty over the past two years that this idea has been under discussion, the program should attract 6 students enrolled in the first term, Fall Quarter 2014. The Certificate should take at least four quarters to complete. Once the program is fully operational, there should be an estimated 20 students in the program at any given time. The program goal by year 5 will be to have a stable enrollment of 20 students at any one time, including students just entering the program, students completing a Certificate, and students continuing on to complete the Master of Natural Resources degree.

g. Expected degrees/certificates produced over the next five years.

It is estimated that of the students enrolling in the program, up to 50% would continue on to the MNR online degree, using the Graduate Certificate in Urban Forestry as their program option. Thus, while the first Certificate graduates will complete the program by Fall 2015, the first MNR graduates will complete their programs in Summer 2016. By the end of the 2016-17 academic year, the program could be producing 5 Certificate holders and 5 MNR degree graduates each year. It should be recognized that with working professionals as a target audience, the program should expect a few students who need a leave of absence from the program and thus will take longer to complete the curriculum. However, with subsequent growth and assuming an average of 4 terms per student, the program should produce 50 Certificate holders by the five-year mark at end of the 2018-19 academic year.

h. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

Urban Forestry professionals work in a variety of capacities in local, regional, and state governments, the private sector, and in non-profit organizations. Almost 80% of the US population lives in urban areas and Urban Foresters have increasingly pivotal roles in dealing with the interface of the natural and the built environments. According to the UN, it is estimated that by 2030, 60% of the world's population will live in urban areas. The 2005 UN Millennium Ecosystem Assessment details the surprisingly direct connections between the ecosystems services and human well-being. Thus, urban foresters with a greater understanding of complex climate, environmental, and social issues should be able to play valuable roles in improving the quality of life in their cities.

The target audience for this proposal includes working professionals who are already contributing to the quality of life in their communities by working on sustainable natural resource issues. Today, all major US cities, most medium cities, and even many smaller ones employ urban forestry professionals who deal with a myriad of environmental issues, and who have a great untapped potential to play an increased role in addressing more complex issues such as climate change. The new Graduate Certificate in Urban Forestry will be appropriate to all students, especially mid-career, company, industry or agency employees who want more training and experience in natural resources management. Typical students would come from across North America, and have a Bachelor's Degree and preferably at least two years' experience working in the urban forestry field. Students will be attracted by the online nature of the program, allowing them the opportunity to continue employment while working on the Graduate Certificate.

i. Adequacy and quality of faculty delivering the program.

The Graduate Certificate Director will be Mr. Paul D. Ries, MS, an Instructor in the Department of Forest Ecosystems and Society (FES). Mr. Ries has over 25 years of urban forestry experience at the local, state, national, international, non-profit, and academic levels. He has been affiliated with OSU for the past 9 years, and currently holds a .50 FTE appointment at OSU. He was the 2011 recipient of the OSU Vice Provost's Award for Excellence in Innovation - Online Credit Teaching for his teaching efforts at OSU. He currently serves on the Board of Directors of the International

Society of Arboriculture, a worldwide professional association of arborists and urban foresters with over 20,000 members. In 2006, he received the President's Award from the Society of Municipal Arborists for his work as the curriculum chair for the innovative Municipal Forestry Institute – a weeklong leadership course in urban forestry. Under this proposal, Mr. Ries will teach many of the core courses in the program, and will handle the administrative duties as Certificate Director. He will coordinate student advising, review all applications and programs of study, be a resource for students with questions about their program or career paths, and review coursework and capstone projects for Certificate completion.

All courses in this Certificate program will be taught by graduate faculty members having expertise in a broad range of natural resource topics applicable to an Urban Forestry setting.

j. Faculty resources – full-time, part-time, adjunct.

The following table lists the graduate faculty will supervise and/or teach graduate courses in the proposed Graduate Certificate. CVs are available upon request.

Faculty Member	Area of Expertise	Course(s) taught in the Certificate Program
Badege Bishaw, PhD Director of MNR Program	Agroforestry, Social Forestry, Silviculture	SNR 511 Sustainable Natural Resources
John Bliss, PhD Professor, Forest Ecosystems and Society	Private forest policy, Forest-based rural development	FES 592 Ecosystem Services: Ecology, Sociology, Policy
Sandra DeBano, PHD Associate Professor of Wildlife	Ecosystem services	FW 562 Ecosystem Services
Anita Morzillo, PhD Assistant Professor, Forest Ecosystems and Society	Landscape ecology, Wildlife ecology, Human dimensions	FES 585 Consensus and Natural Resources FES 5XX Urban Ecosystems
Mark Reed, MA Instructor, Forest Ecosystems and Society	Forest ecosystems and society	FES 545 Ecological Restoration
Paul D. Ries, MS Instructor, Forest Ecosystems and Society	Urban forestry, Arboriculture, Tree risk assessment	FES/HORT 555 Urban Forest Planning, Policy, Management FES/HORT 547 Arboriculture FES 5XX Urban Forestry Leadership FES 5XX Urban Natural Resource Planning FES 506 Urban Forestry Capstone

Bruce Shindler, PhD Professor, Forest Ecosystems and Society	Social aspects of natural resources	FES 554 Managing at the Wildland-Urban Interface
David Stemper, MA Instructor, Forest Ecosystems and Society	Environmental interpretation	FES 593 Environmental Interpretation
Jenna Tilt, PhD Instructor, CEOAS	Land use planning, Urban forestry	GEO 551 Environmental Site Planning GEO 565 Geographic Information Systems

Additional faculty members in the FES Department, the College of Forestry, and other Departments across the Ecampus platform may eventually help deliver the program as mentors as the program matures.

k. Other Staff

Capstone project members will be drawn from the ranks of urban forestry professionals serving in local, state, or federal agencies. The Certificate Director will serve as the capstone project coordinator and instructor of record for the FES 506 section. Support staff from the FES Department will handle graduate program admissions coordination. In the later two years, a Graduate Teaching Assistant would be added at .25 FTE. OSU faculty members who have agreed to serve as capstone project mentors include:

- Glenn Ahrens, MS, Extension Forester, OSU Extension Service
- Max Bennett, MS, Extension Forester, OSU Extension Service
- Stephen Fitzgerald, MS, Extension Forester, OSU Extension Service
- Amy Grotta, MS, Extension Forester, OSU Extension Service
- John Lambrinos, PhD, Associate Professor, OSU Horticulture Department
- Gail Langelotto, PhD, Associate Professor, OSU Horticulture Department
- David Shaw, PhD, Extension Forester, OSU Extension Service
- Al Shay, MS, Instructor, OSU Horticulture Department

Additional mentors involved with capstone projects will come from urban forestry, horticulture, urban planning, and natural resource professionals from public agencies throughout the state. In Oregon, the following individuals are willing to mentor students:

- Jenn Cairo, MS, MPA, City Forester, City of Portland, OR
- Jennifer Karpis, MS, Urban Canopy Coordinator, City of Portland, OR
- Kristin Ramstad, MF, Community Assistance Forester, Oregon Dept. of Forestry
- Vivek Shandas, PhD, Associate Professor of Urban Studies, Portland State Univ.

These individuals are eligible for courtesy faculty status while serving as mentors. CVs are available upon request. Additional mentors in different geographic areas will be recruited to assist students as the program expands.

I. Facilities, library, and other resources.

The Department of Forest Ecosystems and Society is housed in two buildings on the Corvallis campus. Because students admitted to the Graduate Certificate in Urban Forestry will be Ecampus online learners, the current facilities are sufficient for meeting the needs of these students. OSU Library resources are also readily available to online students, though some additional library resources may later be needed. One new journal, *Urban Forestry and Urban Greening*, would be added to the library collection.

m. Anticipated start date.

Pending all appropriate reviews, the program should be available by Fall Quarter, 2014. Several individuals from across the country have already inquired about enrolling in this new Graduate Certificate program following approval.

2. Relationship to Mission and Goals

a. Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.

This program is very directly aligned with OSU's Strategic Plan and advances its Phase I goal aimed to place OSU among the ten best Land Grant universities in the nation. The proposed Graduate Certificate in Urban Forestry and MNR degree option is closely aligned with the elements of the OSU Strategic Plan for interdisciplinary collaboration, the land-grant mission, national and international dimensions to the curricula, and the environmental and socio-economic health of the state, the nation and globe. Of the six strategic initiatives that focus on interdisciplinary approaches to education, the Graduate Certificate in Urban Forestry directly supports three of these initiatives:

- Understanding the origin, dynamics, and sustainability of the Earth and its resources.
- Optimizing enterprise, technological change, and innovation.
- Managing natural resources that contribute to Oregon's quality of life, and growing and sustaining natural resources-based industries in the Knowledge Economy.

The Graduate Certificate in Urban Forestry also supports the Initiatives found in Phase II's Strategic Plan Goals:

- The Graduate Certificate in Urban Forestry supports Goal 1 (*Provide outstanding academic programs that further strengthen our performance and pre-eminence in the thematic areas*) through its contribution to the following strategies:
 - Strategy D (enhance collaboration and coordination among academic units, centers, institutes, and programs).
 - Strategy I (focus outreach programs from the thematic areas on the state's most critical economic and environmental issues, as well as on issues affecting human well-being, while creating new programs that target the critical needs of Oregon's increasingly diverse population).
 - Strategy K (focus on scholarship creating international partnerships that address critical issues of environment, health, and socio-economic well-being in the context of a global society).

The Graduate Certificate in Urban Forestry also supports Goal 2 (*improve the teaching and learning environment, and achieve student persistence and success through graduation and beyond, that matches the best land grant universities in the country*). This initiative contributes to the OSU mission to serve the people of Oregon and the nation by providing a flexible professional training program through an extended campus format that can provide new job skills and opportunities for Oregonians to work in municipalities and public agencies across the state.

b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

The OSU Strategic Plan goal to '*focus even more intently on enhancing OSU's ability to produce strategies and solutions for the most important – and intractable – issues facing Oregon, the nation, and the world*' is addressed by this proposal. These goals encompass faculty development for both instruction (to enable students to think critically and solve complex problems) and research (to develop skills and capacities for research to help create solutions).

The Graduate Certificate in Urban Forestry helps educate working professionals as well as other students in dealing with climate change to improve livability in communities and other natural resource issues. The capstone project and connection to a mentor gives even more exposure to critical thinking skills and processes.

Phase II of the OSU Strategic Plan includes a signature area of focus that can be addressed by this new program. *Advancing the Science of Sustainable Earth Ecosystems – "Improving the understanding of the earth ecosystems upon which all life depends, and promoting their sustainability through high-impact public policy involvement with issues such as climate change, food security and safety, renewable energy production, and economically viable natural resource management."* The Graduate Certificate in Urban Forestry is designed to help advance the science of sustainable earth ecosystems. It is targeted at professionals who work in management and interpretation to the public of the trees, parks and open spaces in cities. These areas, as much as or more than other places on earth, are subject to issues related to climate change such as how will mature plantings survive, how much water do urban trees use and during what seasons, how do their new stresses affect performance in the face of typical urban stressors (e.g. from air pollution, invasives, vandalism), and other contemporary issues.

c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

Online degrees and certificates are a high priority for the Oregon University System. OSU's College of Forestry is recognized as the premier provider of forestry professionals in the United States. Adding a strong urban forestry component to the College's offerings has enormous growth potential. With 80% of the US population (and 68% if all Oregonians) living in cities, the demand for skilled people who can help cities maintain a livable environment will only increase.

As an online program, the Graduate Certificate in Urban Forestry will be fully accessible by students from around Oregon, the West, the entire US, and the world. The courses will focus on specific knowledge, skills, and competencies to address critical urban natural resource issues. The online delivery component makes this an innovative program because it involves a new Graduate Certificate and degree option that isn't currently available anywhere in North America.

d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.

The proposed Graduate Certificate in Urban Forestry involves an integrated curriculum with courses, case studies and readings coordinated throughout the Program by the course instructors and the Graduate Certificate Director. Students will work on a capstone project throughout their course of study with the input of faculty members and professional mentors who will help each student frame and analyze a problem important to his/her city, organization, or region.

The proposed Graduate Certificate in Urban Forestry is needed to help natural resource professionals respond to the challenges of managing urban environments in such a way that captures the economic, environmental, and social benefits that trees provide. Each student will complete the Graduate Certificate in Urban Forestry only after having demonstrated:

- Skill in integrative thinking and collaborative learning across several disciplines within the natural resource professions.
- Familiarity with a wide variety of disciplinary knowledge and capacity to apply knowledge to natural resource problems at multiple scales.
- Ability to construct a study project about a specific policy issue using multiple data collection techniques, cross-disciplinary interactions, and integrated analysis methods.

The Graduate Certificate in Urban Forestry will not only help students gain new knowledge, it will also be a problem-solving experience. The program's capstone projects provide students with extensive experience developing their problem-solving skills. This project focuses the substantial capabilities of our students and faculty on real-world natural resource problems faced by agencies, institutions, and organizations – problems which often involve balancing the “triple bottom line” of sustainability – economic, environmental, and social aspects.

Within the field of Urban Forestry, this Certificate fills an important niche – providing graduate level training to natural resource professionals who play an on-the-ground role in responding to social, economic, and environmental challenges and opportunities facing our cities, where 68% of all Oregonians live. The flexibility of the program will attract urban foresters from cities both large and small. Given that the Certificate Director has 25 years of experience in this professional field, he has extensive contacts throughout the US that can help connect students to a variety of urban forestry problems and issues that can be addressed during the capstone projects, making this a real-life problem-solving experience rather than a theoretical one.

3. Accreditation

- a. **Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.**

There are no accreditation programs in the field of urban forestry graduate education.

- b. **Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.**

While there is no accreditation program for urban forestry education programs, there are similar efforts for individuals and municipal programs. The closest approximation to professional accreditation program available for urban foresters would be the International Society of Arboriculture (ISA) Municipal Specialist Certification. This program is a voluntary one that individual urban foresters can attain. A related organization, the Society of Municipal Arborists (SMA), accredits municipal urban forestry programs. The Graduate Certificate in Urban Forestry could be a valuable tool in helping individuals obtain ISA Municipal Specialist certification and in helping municipal urban forestry programs gain SMA accreditation.

- c. **If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.**

The Society of American Foresters accredits undergraduate Forestry curricula, and OSU has held this accreditation since 1935.

- d. **If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.**

There is no suitable accreditation program available for the proposed Graduate Certificate in Urban Forestry.

4. Need

- a. **Evidence of market demand.**

The Society of Municipal Arborists (SMA), a professional society for arborists and urban foresters working at the municipal level, surveyed graduates of their innovative annual national leadership course, the Municipal Forestry Institute (MFI). The survey results provide some interesting “market research” for OSU regarding the relevance of the Graduate Certificate in Urban Forestry. SMA surveyed 319 MFI graduates, and obtained a 45% response rate. The following table reveals that 60% of the respondents had some interest in an online urban forestry program such as the one in this proposal.

Table: Survey of Municipal Forestry Institute Alumni interest in advanced Urban Forestry credit based courses and degree.		
Would have applied for credit for MFI if it had been offered		36%
Interest in obtaining an online Urban Forestry graduate degree	Very Interested	22%
	Somewhat Interested	21%
	Interested if assisted by employer	17%
	Total interested	60%

The SMA has a membership of approximately 1,500 people in the United States and Canada, while the ISA has a membership of over 20,000 people worldwide. This group of nearly 400 MFI graduates and 20,000 ISA urban foresters and arborists would be the primary target audience of the new Graduate Certificate in Urban Forestry.

- b. If the program’s location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).**

After review of Environmental Science and Natural Resources Programs with the Oregon University System (OUS), it was determined that this program does not overlap with any other OUS institution.

- c. Manner in which the program would serve the need for improved educational attainment in the region and state.**

In OSU’s Strategic Plan, the University commits itself to “Focus even more intently on enhancing OSU’s ability to produce strategies and solutions for the most important – and intractable – issues facing Oregon, the nation, and the world”. The Graduate Certificate in Urban Forestry would be a significant step towards that goal. OSU is in a prime competitive position to offer the Certificate for several reasons: 1) it would be the only online program being offered in this topic area in the entire US, 2) OSU has a track record of existing online natural resource courses that is unparalleled anywhere else, and 3) Urban Forestry continues to be an emerging topic of importance, and OSU’s national leadership role in the Forestry profession makes this offering a natural addition to an already excellent program.

- d. Manner in which the program would address the civic and cultural demands of citizenship.**

The Graduate Certificate in Urban Forestry emphasizes the integration of social and biological sciences, balanced with critical thinking skills and a strategic thinking approach to natural resource management. The online courses encourage thoughtful debate through discussion boards, group projects, case studies, and simulations. Because urban foresters are engaged in managing the environment for public benefits, the civic nature of this endeavor is always present. Urban forestry programs at the municipal level almost always have a civic engagement and cultural diversity component, and this Graduate Certificate program will address those components.

5. Outcomes and Quality Assessment

a. Expected learning outcomes of the program.

The curriculum requirements for the Graduate Certificate in Urban Forestry are intentionally designed to be broad in order to provide students with flexibility in scheduling and tailoring their program of study to meet their individual needs, educational background, and work experience. For example, a city forester working in a municipal program may have some commonality but also some very different needs or interests than an executive director of a non-profit tree-planting group. Both would be able to tailor the program by taking elective courses that suit their needs, in addition to taking a common set of required courses. All students will be expected to meet the following learning outcomes of the proposed program:

- *Demonstrate* proficiency (overall GPA of 3.0 or greater) in graduate-level coursework in urban forestry and natural resources.
- *Integrate* biological and social science concepts in a capstone project designed to address a specific urban forestry situation, issue, or problem.
- *Synthesize* scientific information from a variety of sources and demonstrate research and writing skills through a capstone project proposal, outline, and revision process, as well as correct citation and documentation of sources.
- *Improve* knowledge and understanding of critical urban forestry issues to prepare for advancement in the field.

A rubric will be developed to create a uniform measure for these outcomes as part of the Capstone project process, along with a Graduate program competency assessment similar to what is in development for other programs, in order to monitor and ensure academic rigor.

b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

Faculty advisors and mentors will provide a review of each student's capstone project and overall coursework to assess learning outcomes described above during an oral presentation (in person or virtually) prior to graduation. All students will receive an exit questionnaire that includes an opportunity to evaluate their courses and experience in the program. The Certificate Director and the Forest Ecosystems and Society Department Head will annually review the results in order to identify program needs and potential improvements. The Quality Matters Rubric will also be used to improve the courses.

c. Program performance indicators, including prospects for success of program graduates and consideration of licensure, if appropriate.

Program success will be measured by the number of graduates, and the success those graduates achieve post-Certificate completion (promotion or movement to higher levels of managerial responsibility). A LinkedIn group, Facebook page, or annual newsletters are possible tools that may be used to maintain contact with graduates.

- d. Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.**

The Certificate Director will review exit surveys, course evaluations, and employment histories of Certificate students in this program, potentially synthesizing the information for publication in an education journal or commentary in an online forum, as well as presentations at regional and national meetings. When a critical mass of graduates is achieved, a survey will be conducted to quantify the experience and subsequent ways the graduates have applied the information they learned in the program.

6. Program Integration and Collaboration

- a. Closely related programs in other OUS universities or Oregon private institutions.**

No other OUS institution offers an urban forestry curriculum at either the undergraduate or graduate level. Portland State University offers a single undergraduate Geography course in Urban Forestry. PSU offers an Urban Studies Masters Degree encompassing urban planning, transportation, livability, and sustainability, and is tangentially related to forestry and natural resources. The University of Oregon offers an Ecological Design Certificate that relates to architecture and landscape architecture, and is tangentially related to forestry and natural resources. No private colleges or universities in the state offer any related programs.

- b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.**

The Graduate Certificate in Urban Forestry would complement the two aforementioned programs at PSU and UO. Those programs are focused on urban planning and design, whereas the OSU Graduate Certificate would focus on the broader management of urban natural resources and particularly the urban forest component. There are several potential collaborations possible here, including guest lectures by PSU and UO faculty in OSU courses (and vice-versa), collaborative networks for group projects with PSU or UO graduate students, and even the possibility of adding PSU or UO courses as an elective if the latter two institutions offer any of these classes online in the future. Such collaboration would strengthen all three programs.

- c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.**

Not applicable.

- d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.**

Other Departments teach several of the elective courses listed in the Graduate Certificate curriculum. As with the MNR degree and other certificate programs, we seek collaboration across campus and hope that our courses and majors enhance the diversity and quality of all natural resource-based programs.

7. Financial Sustainability (attach the completed *Budget Outline*)

- a. **Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.**

The Graduate Certificate in Urban Forestry utilizes many existing OSU courses, plus new graduate level courses that would be created as part of this proposal. Ecampus has awarded a faculty development grant to the Forest Ecosystems and Society Department for these new courses, which will be developed and submitted through the CAT II process during the 2013-14 academic year. Beginning in 2014-15, the Graduate Certificate program will be supported by tuition revenues resulting from an increase in FTE created by the student enrollment in the three new courses and one existing graduate course. Since 80% of Ecampus tuition revenues are returned to the College, these funds should be sufficient to support the new Graduate Certificate program.

Expected revenues are based on an estimate of 6-20 enrolled students per year multiplied by 7 credit hours of new required FES coursework and 4 credit hours of existing FES coursework (FES 555). Revenues are calculated at the 2013-14 Ecampus graduate tuition rates that can be expected to return \$410 per credit hour to the academic unit, less 15% allocated to the College of Forestry. No inter-college reallocation of resources is expected to be needed to support this proposal.

Anticipated Ecampus Tuition Revenues from new Graduate Certificate in Urban Forestry			
Year 1 6 students	Year 2 10 students	Year 3 15 students	Year 4 20 students
\$23,001	\$38,335	\$57,502	\$76,670

The addition of this Graduate Certificate will create a larger online graduate student body that will add to the credit hours in the elective courses offered by the other departments represented in the proposed curriculum. Those increased tuition revenues will be retained by the departments hosting the elective courses.

As noted on the proposed Budget Worksheet, the Graduate Certificate Director will be supported by .25 FTE, which will cover instruction (.15 FTE for the three new classes totaling 7 credits), and administration (.10 FTE for program coordination and student advising). The remaining .25 FTE of the Graduate Certificate Director's faculty position (for a total of .50 FTE) is already devoted to undergraduate instruction. Graduate Teaching Assistant and Support Staff FTE would be added in years 3 and 4 as the workload increases. Ecampus does not provide funding for advising and administrative support for graduate-level programs at this time. Tuition revenue from the three new courses and the one existing course are expected to cover these costs. Library resources are adequate to begin the program, however as the program expands, there may be additional need to increase regular and electronic library resources required for the program. The budget calls for one new journal, *Urban Forestry and Urban Greening*, to be added to the OSU collection to support this new Graduate Certificate.

b. Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.

Given the online nature of this program, brick-and-mortar facilities are not as relevant as they would be in a residential graduate program. OSU's nationally recognized Ecampus program has sufficient infrastructure to support this increase in enrollment. This Graduate Certificate will join existing online MNR graduate certificates offered via Ecampus. Currently, over 60 students are pursuing the MNR degree, and the addition of this Graduate Certificate will contribute to the MNR program growth as well. We are dedicated to providing the best available online education, utilizing cutting-edge technologies and continually updating course materials and delivery. The Certificate Director has already completed the Quality Matters course requirements to become a Peer Reviewer of online courses. We will continue to work with Ecampus on technological advances, continually updating courses and improving our efforts to connect with distance education students.

The quality of the program will be based on the quality of the classes, and the reputations and teaching abilities of the instructors. Another key piece of the experience for this program will be the case studies. OSU is working with the Oregon Department of Forestry's (ODF) Urban Forestry Assistance Program to identify cities across the state that would be willing to work with students to make their Capstone Project a real-life experience rather than a theoretical exercise. ODF has contacts with urban forestry programs in the other 49 states, and we expect that eventually we should be able to help students find a Capstone Project close to their home.

c. Targeted student/faculty ratio (student FTE divided by faculty FTE).

1:10, moving to 1:20 when the Certificate is fully operational.

d. Resources to be devoted to student recruitment.

This new Certificate will be promoted widely through various urban forestry professional association meetings and publications. Ecampus will help market the Graduate Certificate in Urban Forestry through its extensive networks. OSU is also a member of the Natural Resource Distance Learning Consortium, a collaboration of multiple land-grant institutions offering online courses. The Certificate Director's personal contacts formed through 25 years experience in the Urban Forestry professional will be leveraged to recruit new students from throughout Oregon and across the country.

8. External Review (if the proposed program is a graduate level program, follow the guidelines provided in *External Review of new Graduate Level Academic Programs* in addition to completing all of the above information)

This proposal is a Certificate and not a stand-alone graduate degree program. Although the specific Certificate is new, this proposal is an extension of the Master of Natural Resources program at OSU, where five other related Certificates currently exist. The MNR program has already undergone an external review.

Date: September 10, 2013

Dr. Paul Doescher, Head
Department of Forest Ecosystems and Society
Oregon State University College of Forestry
321 Richardson Hall
Corvallis, OR 97331

Dear Dr. Doescher,

As the National Program Leader for the USDA Forest Service's Urban & Community Forestry Program, I would like to take this opportunity to voice our agency's support for Oregon State University's proposed Graduate Certificate in Urban Forestry. This proposal involves an innovative approach that adds great value to the urban forestry movement in the US.

The USDA Forest Service's Urban and Community Forestry Program works cooperatively with state forestry agencies, non-profit organizations, universities, and other partners to enhance the quality of life in our nation's cities, towns, and communities. Our urban forests are valuable assets that help address a myriad of issues, including local approaches to climate change, pollution reduction, and water quality issues. The proposed online Graduate Certificate in Urban Forestry and Masters of Natural Resources Degree would be of great interest to our state, local, and non-profit partners throughout the US. Graduates from this new program would be well positioned to address the critical challenges of managing our urban forests for their economic, environmental, and social benefits. I expect this program to be very popular, and to fill an important educational need in urban forestry.

On behalf of the USDA Forest Service's Urban and Community Forestry Program, I want to lend our support for this important proposal.

Sincerely,

Jan Davis

JAN DAVIS
Assistant Director, Cooperative Forestry
National Program Leader, Urban and Community Forestry Program

September 18, 2013

Dr. Paul Doescher, Head
Department of Forest Ecosystems and Society
Oregon State University College of Forestry
321 Richardson Hall
Corvallis, OR 97331

Dear Dr. Doescher:

This letter is in support of the Graduate Certificate in Urban Forestry proposed by Mr. Paul Ries. As we understand it, this would be the first online graduate level urban forestry program in North America, and as such, it would be a great opportunity for our members who are currently employed in cities across the continent who may want to further their education but lack the resources to do so via the more traditional format.

As researchers develop new understanding of the complex urban forest, our members must continue to further their education while holding down a full-time job. City budgets seldom provide for advanced degrees. While the knowledge required or an urban forester continues to grow, so, too, do the demands on his/her daily job duties.

We believe this program will offer a solution to this problem and will be well received by our members. We appreciate the opportunity to offer this letter of support.

Sincerely,

A handwritten signature in black ink that reads "Jerri J. LaHaie".

Jerri J. LaHaie, CAE, Executive Director

A Division of The Davey Tree Expert Company

9/25/2013

Dear Dr. Doescher:

I am writing to encourage approval for the proposed Graduate Certificate in Urban Forestry. I enthusiastically support the proposal for the following reasons:

- In my role as manager of a leading international urban forestry consulting firm, I am continuously recruiting and hiring individuals with degrees in urban forestry, particularly with advanced degrees. A Graduate Certificate in Urban Forestry would enable working professionals (including my own employees) to earn an advanced degree while continuing to gain critical experience in the field.
- As an advisor and visiting lecturer to Cal Poly State University's Natural Resource and Environmental Science Department, I have seen how the perceived lack of opportunities for advanced degrees in urban forestry have led some talented students to pursue other fields of study. This program would provide a much needed option here in the West.
- Perhaps most importantly, with higher percentages of people living in urban areas, the emerging focus on urban greening and urban ecology is here to stay. This program will help society meet the needs of people to live well in an increasingly urbanizing world.

In short, I strongly believe that Graduate Certificate in Urban Forestry will be an asset to the industry and to Oregon State University. I applaud the vision for the Certificate and hope that my support provides insight into the final determination to approve it.

Sincerely,

Jack McCabe

Arbor Day Foundation™

211 N. 12th St. • Lincoln, NE 68508 • 888-448-7337 • arborday.org

September 20, 2013

We inspire people to plant, nurture, and celebrate trees.

Dr. Paul Doescher, Head
Department of Forest Ecosystems and Society
Oregon State University College of Forestry
321 Richardson Hall
Corvallis, OR 97331

Dear Dr. Doescher,

On behalf of the Arbor Day Foundation, I am writing this letter to endorse Oregon State University's proposed Graduate Certificate in Urban Forestry. The Arbor Day Foundation is a nonprofit conservation and education organization of nearly one million members, with a mission to inspire people to plant, celebrate and nurture trees. The Foundation works very closely with the urban forestry community, including the USDA Forest Service, state urban foresters, city foresters and other local urban forestry professionals, and non-profit tree planting organizations. Begun in 1972 to celebrate the 100th anniversary of the first Arbor Day, the Foundation is one of the world's largest nonprofit conservation organizations dedicated to planting trees, planting and distributing than 10 million trees each year.

Our urban forestry educational efforts would be well complemented by OSU's proposed Graduate Certificate in Urban Forestry. OSU's initiative to provide online graduate level urban forestry education is both innovative and unique, and we believe that it will fill an important role in the urban forestry profession. We work with communities and urban forestry professionals all across the US, and we know that geographic and time limitations can severely limit people's access to higher education. OSU's proposal will reach professionals that wouldn't otherwise have access to this type of education.

The Arbor Day Foundation is pleased to offer our support in making this new opportunity available to urban forestry professionals.

Sincerely,

Dan Lambe
Vice President
Arbor Day Foundation

Your love of trees can make a lasting difference.
Please consider the Arbor Day Foundation in your will.

d. Urban Forestry Administration

October 2, 2013

Dr. Paul Doescher, Head
Department of Forest Ecosystems and Society
Oregon State University College of Forestry
321 Richardson Hall
Corvallis, OR 97331

Dear Dr. Doescher:

This is a letter of support for Paul Ries' proposal to develop a new Graduate Certificate in Urban Forestry at the Oregon State University College of Forestry. I am the current Chair of the National Association of State Foresters Urban and Community Forestry Committee and District of Columbia State Forester.

As State Forester, I manage a team of 16 certified urban foresters in the Urban Forestry Administration. My staff members are always looking for new and meaningful educational opportunities to maintain and increase their skills. In recent years, online programs offering certification in important technical areas have emerged as viable options for continuing education. I have two employees that are earning certificates in Green Stormwater Infrastructure Design and Management from the University of Washington and one earning a certificate in Green Roofs from Iowa State University. Benefits are that these courses can be done on your own time and complete access to educational opportunities are available to you as long as you can get online. I encourage and pay for these courses for my staffers.

Please feel free to contact me at 202-671-5114 or at monica.lear@dc.gov if you have any questions.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Monica M. Lear', is written over the word 'Sincerely,'.

Monica M. Lear, Ph.D.
Deputy Associate Director
District of Columbia State Forester
Urban Forestry Administration

September 30, 2013

Dr. Paul Doescher, Head
Department of Forest Ecosystems and Society
Oregon State University College of Forestry
321 Richardson Hall
Corvallis, OR 97331

Dear Dr. Doescher,

On behalf of the International Society of Arboriculture (ISA), I'd like to offer our support for Oregon State University's proposed Graduate Certificate in Urban Forestry. ISA is a 20,000+ professional society and non-profit educational organization for arborists and urban foresters from around the world. OSU's new proposal is clearly aligned with our mission statement *"Through research, technology, and education, the International Society of Arboriculture promotes the professional practice of arboriculture and fosters a greater awareness of the benefits of trees."*

ISA administers certification credentials and continuing education events that help arborists and urban foresters keep current on best management practices, equipment innovations, and technologies that help us plant, manage, and care for trees. We believe that academic proposals such as OSU's fulfill a need that is not currently being met – providing these professionals with access to graduate certificate and degree programs to further their formal education. In fact, I know of only one other program in this area, and that one is not in the United States. We have our own Online Learning Center, which provides opportunities for continuing education to professionals who wouldn't otherwise have access, worldwide, any time of day. Many working professionals cannot attend traditional college to advance their careers, so online education has proven to be a popular strategy. Yet formal, higher education possibilities online are virtually non-existent in our profession.

I believe that future leaders of our organization will benefit from opportunities like these. Graduates from this new program would be well prepared to address the complex challenges of managing our urban forests and well positioned to improve the livability of our cities through planting and caring for trees. OSU's new program should be of great interest to our members.

Sincerely,

Jim Skiera
ISA Executive Director

Category I Proposal Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Oregon State University Libraries Evaluation of the Collection supporting a Proposal to Initiate a Graduate Certificate in Urban Forestry

This Oregon State University Libraries' (OSUL) assessment reviews the print monographic, e-book, and electronic serials collections as related to broad science information needed to support the proposed Urban Forestry graduate certificate program. As stated in the Cat 1 proposal, "Urban forestry involves the planning, planting, and management of trees and related vegetation in and around cities. The urban forest is made up of the mosaic of the planted landscape and native forest remnants left behind as cities have developed. Urban forestry is an academic discipline that is related to Forestry, Horticulture, Urban Planning, Landscape Architecture, and Land Use Planning." From the OSUL perspective, students and researchers will tap various components of the library collections.

Summary of Recommendations

The monographic collection appears to be adequate to support this program. The journal collection is currently marginally adequate and would be significantly enhanced with a subscription to *Urban Forestry and Urban Greening* at \$352/year.

Print Monographs and E-Books

Library evaluations of proposed programs have traditionally included the analysis of OSUL's print monograph collection. Due to the interdisciplinary nature of this program, spanning the sciences and social sciences, a full analysis of all relevant monographs collections would be difficult, so a sampling of subject headings in the relevant subjects has been analyzed.

Urban Forestry Monograph Collection

Subject Headings	OSU	OSU + Summit
Arboriculture	39	121
City planning	1,550	15,136
Horticulture	321	887
Land use planning	6	26
Landscape architecture	283	2,077
Landscape design	77	430
Landscape gardening	369	1,551
Trees in cities	52	277
Urban forestry	63	209
Urban policy	340	2,125
Total**	2,885	18,159

While OSUL's holdings are adequate to support this program, the number of available titles is significantly increased by the OSUL investment in the Orbis Cascade Alliance. Students and faculty can order from the collections of all the libraries in the Orbis Cascade Alliance through the Summit catalog. University of Oregon, Portland State University, University of Washington and Washington State University are some of the larger research libraries represented in the Summit catalog. Books requested through Summit are delivered to OSUL within three to five working days. For more specialized titles not held by any library in the Alliance, Interlibrary Loan service is available.

The growing availability of e-books makes it possible to expedite access to more information from various locations. This obviously better serves our distance learners and is a convenience for our on-campus students and faculty. As this is an exclusively online program, this type of access is very important.

Serials/Journals

In the sciences, ready access to current information is expected. The OSUL maintain an excellent collection of journals in the subjects of forestry and horticulture, with a more limited collection of journals in urban planning, landscape architecture and land use planning. There is concern that with regular price increases to our licenses and a flat budget that access may be eroded over time. The OSUL already have sacrificed timely access to some titles in favor of an embargo period to cut costs.

The Urban Forestry database, maintained by the University of Minnesota, indexes 90 journals in the relevant disciplines. See Appendix 1 for a full list of these journals and OSUL holdings. OSUL has current access to 37 of these titles and archival access to an additional 15 titles. Many of the unsubscribed titles are regional (e.g., *Minnesota Horticulturist*) and/or not scholarly in nature (e.g., *Christmas Trees*). Of the 7 scholarly journals (as indicated by the presence of ISI impact factors), most are in related disciplines, with the exception of *Urban Forestry and Urban Greening*, a journal published by Elsevier.

With the exception of 2 titles, all current subscriptions are available online, so the Ecampus students will have access at all times. For the 2 print subscriptions, and for older volumes only available in print, OSUL offers the "Scan and Deliver" service, where PDFs of requested articles are e-mailed to faculty and students.

We recommend establishing a subscription to *Urban Forestry and Urban Greening* at \$352/year and monitoring use of inter-library loan for current issues of those titles without current subscriptions and see if usage justifies licensing of additional current content.

Indexes and Databases

The core indexes to the relevant information for this program are CAB Abstracts, which includes Forestry Abstracts, Web of Science, and PAIS International (for public policy-related material). In addition, the University of Minnesota Forestry Library maintains an Urban Forestry database that is freely available.

Key library services & librarian expertise

Expertise within the OSUL is covered by Bonnie Avery. In that capacity, she provides instruction as requested either in-class or via the web, responds to reference inquiries, and develops materials to assist faculty members and students in their research.

The collection in Forestry is built by Bonnie Avery; the social sciences related to this discipline are covered by Valery King. Providing access to items not owned by OSUL is the domain of the Interlibrary Loan and Summit staff both at OSUL and at lending libraries. Print articles located in the OSU Libraries collections may be requested via the Scan and Deliver service, which provides PDFs of the requested articles. Additional services for students include the physical attributes of the libraries including excellent computer facilities, study areas for individual and group work, and practice rooms for students.

Respectfully submitted,

Laurel Kristick
Collection Assessment and Science Librarian

TEACHING and EXTENSION EXPERIENCE

2004 – Present, Department of Forest Ecosystems and Society, College of Forestry, Oregon State University

2009 – Present, Instructor and Extension Specialist - Serve as curriculum developer and instructor for three online Urban Forestry courses (FOR/HORT 350, 447/547, and 455/555) and provide leadership for the B.S. in Natural Resources – Urban Forest Landscapes option, and a new proposed Graduate Certificate in Urban Forestry. This is a .50 FTE appointment since the 2013/14 academic year; previously it was at .25 FTE beginning with the 2009-10 academic year. Currently teaching 100 students per year in four online classes. Also teach/organize the annual OSU Arboriculture Short Course and serve as Extension technical specialist in support of Extension agents. Recently completed the Quality Matters Peer Review training for online courses.

2004-2009, Affiliate Faculty Member - Developed and taught the first-ever urban forestry undergraduate seminar class at OSU (2005 and 2006), guest lectured in a variety of Forestry and Horticulture courses, and received three faculty development grants to create new online courses (approximately .10 FTE per year).

Graduate Students Supervised

Bradley Hamel, MF, 2013
Abbey Driscoll, MS, 2014
Daniel Gleason, MS, 2015

Awards

2011 – OSU Vice Provost's Award for Excellence - Innovation in For-Credit Teaching

Grants Awarded – Project grants written and awarded as Principal or Co-Principal Investigator or Project Manager through the Oregon Department of Forestry (ODF) and with Oregon State University, or both, include:

- *Best Management Practices to Reduce Forest Fragmentation During Development*, (ODF, in conjunction with Washington Department of Natural Resources), by the USDA Forest Service, 2008, \$50,000.
- *Reducing Forest Fragmentation in Interface Forest Landscapes*, (ODF, in conjunction with OSU) by the USDA Forest Service, 2009, \$257,580.
- *Tree Board University: Online Training for Cultivating Urban Forestry Supporters*, (ODF in conjunction with the Arbor Day Foundation) by the National Urban & Community Forestry Advisory Council, 2009, \$49,261.
- *Online Urban Forestry & Urban-Rural Interface Forestry Technology Transfer*, (ODF, in conjunction with state forestry agencies in WA, AK, ID, and with OSU and PNW-ISA), 2010, \$165,123.
- *Urban Forest Inventory Analysis*, (ODF), by the USDA Forest Service Pacific Northwest Research Station, 2010, \$776,375.
- *Linking People and Landscapes: Using Public Perceptions of Urban Forestry Services to Create New Management Strategies*, (with Washington DNR and OSU), by the USDA Forest Service, 2011, \$270,763.
- *A Regional Urban Forestry Strategy for Portland/Vancouver* (ODF, In conjunction with Washington DNR and OSU), by the USDA Forest Service, 2012, \$166,348
- *The Oregon Forest Action Plan Mobility Project*, (ODF, in conjunction with OSU), by the USDA Forest Service, 2013, \$241,234.

PROFESSIONAL EXPERIENCE

2001 - Present: Urban and Community Forestry Program Manager, Oregon Dept. of Forestry, Salem, Oregon.

- Manage a statewide program delivering technical, financial, organizational, and educational urban forestry assistance by providing leadership and technical services to support a staff of three professionals and seasonal interns (Currently .50 FTE; previously .75 - 1.0 FTE). Responsible for policy, budget, performance measures, and strategic planning functions, partnership projects, federal contract fulfillment, accomplishment reporting, and representing agency before the media, and elected officials.
- Performance indicators – Provide an average of 500 technical assists per year and successfully managed over \$8 million worth of federal-state project and program grants since 1991.

2004 – 2013: Lead Incident Public Information Officer (PIO), Oregon Dept. of Forestry, Salem, Oregon.

- Served as a lead PIO on a Type 1 Incident Management Team, responsible for media support and community relations, managing incident communications efforts, coordinating with federal, state, and Emergency Management agencies and elected officials, and supervision of other PIOs.
- Performance indicators: Successfully completed assignments with more than a dozen wildfire and all-risk incidents in nine US states, as well as Hurricane Katrina Support.

1998 – 2001: Executive Director, Pacific Northwest Chapter ISA, Silverton, Oregon.

- As the first incumbent of this new position, served as the executive officer of a 501(c)(3) non-profit professional educational organization with 1100 members in OR, AK, ID, WA, BC. Established an office, hired support staff, wrote policies and procedures, negotiated contracts, managed finances, supervised volunteers, developed a continuing education program, served as meeting planner and instructor for seminars, conferences, and events attracting 700 attendees per year, managed implementation of a professional certification program, and served as staff to a 12 member Executive Board.
- Performance indicators: Increased the organizational financial reserves by 400% and membership by 30%.

1991 - 1998: Urban Forestry Coordinator, Oregon Department of Forestry, Salem, Oregon.

- As the first incumbent of this new position, I created, implemented, and managed a new statewide urban and community forestry assistance program providing technical, financial, and educational assistance. Developed, from “scratch”, the program structure, vision, mission, goals, position descriptions, budgets, performance measures, short and long range planning documents, marketing strategies, and other program elements.
- Performance indicators: shepherded the first-ever urban forestry bill through the Oregon Legislature; developed and taught educational seminars for over 2000 leaders and professionals, initiated and managed over \$1 million in cost-share grant programs dispersing leveraging over \$2 million for urban forestry projects.

1987 - 1991: Urban Forester, City of Cincinnati, Ohio.

- Administered urban forest management programs for one-third of the city, supervising technicians, tree crews, and volunteers to coordinate street tree planting and pruning projects. Evaluated the health and condition of landscape trees, responded to citizens’ tree care inquiries, and addressed schools and civic organizations.
- Performance indicators: Successfully developed and supervised contracts for over \$500,000 worth of tree planting and maintenance operations with small businesses, planned special innovative projects such as Christmas tree recycling, mass tree distributions, and tree inventory management applications.

1985 - 1987: Forester, Division of Forestry, Ohio Department of Natural Resources, Columbus/Newark, Ohio.

- Provided technical forestry assistance to private landowners. Forest planning responsibilities included developing new information technology and data management applications. I was also responsible for tracking inventory and developing and implementing forestry related computer applications.
- Performance indicators: Created new computer applications for forestry business functions, successfully served landowners, and revitalized the Ohio Big Tree Program.

EDUCATIONAL BACKGROUND

Master of Science, 1985, The Ohio State University, Columbus, Ohio. I obtained a graduate degree from the School of Natural Resources with emphasis on Forest Resource Planning. My coursework centered on forestry, recreation resource planning, regional planning, and education. My Masters thesis evaluated the planning process for non-timber resources in Ohio's State Forest system. I served as a graduate teaching assistant for Forest Recreation classes for one year, and managed the use of an environmental studies field laboratory for one year.

Bachelor of Science, 1983, The Ohio State University, Columbus, Ohio. I completed an undergraduate degree in Natural Resources with extensive coursework in both Forestry and Recreation Resource Management.

LEADERSHIP AND SERVICE EXPERIENCE

- *2011 – present:* Board of Directors, International Society of Arboriculture (ISA). Elected as one of 15 Board members of this professional society with 20,000 members and an annual budget of \$7 million. Serve on various committees including Conference and Events and as Conference Program Chair (11-13).
- *2005 - present:* Lead curriculum developer and instructor for the Municipal Forestry Institute, an innovative leadership training program organized by the Society of Municipal Arborists that has trained almost 400 urban foresters from the US and Canada.
- *2005 – 2008:* Member and Chair, Council of Western State Foresters Urban and Community Forestry Committee, a group that advises state foresters on policy issues. I also served from 1995-1997, including one year as Chair, and served as project manager for a minority outreach publication.
- *2002 – 2006:* Editorial Review Committee Member, *City Trees* magazine, published bimonthly by the Society of Municipal Arborists.
- *2001 – 2008:* Member of the steering committee for the International Tree Failure Database.

- *2001 – 2005:* Appointed by Oregon's Governor to two terms as a citizen member of the Oregon Landscape Contractors Board, a state regulatory body licensing landscapers and ensuring consumer protection. I wrote the agency's first-ever strategic plan, hired the agency staff during transition to a semi-independent agency, served as Board Chair for one year, adjudicated contested case appeals, and chaired Administrative Rule Hearings.
- *2001 – 2010:* Served as a member of the Board of Directors of Oregon Community Trees, a 501(c)(3) non-profit organization. I was a founding member and also served on this Board from 1991 to 1997.
- *2000 – 2002:* Served as Assistant Conference Chair of the International Society of Arboriculture (ISA) 2002 Annual Conference in Seattle, which attracted 2500 attendees from around the world.
- *1995 – present:* Member of the Oregon Heritage Tree Committee. As a founding member, I wrote the organization's charter and served one term as chair.
- *1994 – 2000:* Board of Directors, International Society of Arboriculture (ISA). Elected twice as a Board member of this then 14,000 member professional society. Served in various volunteer capacities including Membership Committee member and chair, Constitution and Bylaws Committee member and chair, and Organizational Review Committee member.
- *1993 – 1995:* Secretary, Urban Forestry Working Group, Society of American Foresters.
- *1991 – 1997:* Board of Directors, Pacific Northwest Chapter - International Society of Arboriculture (PNW-ISA). Elected three times to the governing Board of this 501(c)(3) group during a time of rapid growth and organizational change, including tripling of membership and budget, and transition from volunteer to paid staff. Served as the group's annual training conference chair in 1996.

SPECIALIZED TRAINING

- Certified Arborist #OH0065, International Society of Arboriculture, granted 1989, and recertified every third year since then. Certification currently valid through 12/31/2013.
- Trained Workshop Facilitator, Project Learning Tree (PLT). Since 1988, I have conducted workshops for over 1000 elementary and secondary school teachers.
- Completed Leadership and Management Training Courses including: Time Management, High Involvement Leadership Teams, Building Capacity for Cooperative Action, Increasing Personal Effectiveness, 7 Habits of Highly Effective People, Agency Leadership Program, and Diversity in Communications.
- Wildland Fire/Incident Management Courses Completed: S-203, S-403, S-420, S-445, S-130, S-190, IS-700, IS-800, Complex Incident Management Course. Currently hold PIO1 and TNSP qualifications.

AWARDS and RECOGNITION

Subject: CAT 1 Certificate Budget Forms

Hello Roger -

Just getting back in touch with you regarding our conversation last week. After talking to Paul Doescher, we decided to put .10 FTE support staff funding into the later two years of the budget. So these forms should now be ready for submission. In the event you want to take another look at them, I've attached them to this email.

Thanks.

Paul

CAT I Proposal - Graduate Certificate in Urban Forestry Summary of Internal Reviewers and External Supporters

As part of the proposal development process for the Graduate Certificate in Urban Forestry, input was requested from the following individuals, academic units, agencies, or organizations:

Internal Review of Initial Draft by Other Certificate or Program Contacts

Selina Heppell, Department of Fisheries and Wildlife (no response received)
Alfonso Bradoch, Ecampus (no response received)
Kuuipo Walsh, GIS Graduate Certificate Director (no response received)
Badege Bishaw, Master of Natural Resources Program (responses incorporated in final)
Linda Brewer, Horticulture Department (responses incorporated in final)

Internal Review - Curriculum Liaisons from other OSU Academic Units

Mark Abbott, Dean, CEOAS (response attached)
Bill Braunworth, Interim Head, Department of Horticulture (response attached)
Dan Edge, Head, Department of Fisheries and Wildlife (no response received)
Brenda McComb, Graduate School (response attached)
Lisa Templeton, Executive Director, Ecampus (no response received)
Badege Bishaw, Master of Natural Resources Program (response attached)

Internal OSU Budget Center Review

Roger Admiral, Director of Operations, College of Forestry/FOBC (response attached)

Letters of Support External to OSU

Jan Davis, USDA Forest Service National Urban Forestry Program (response attached)
Jerri LaHaie, Society of Municipal Arborists (response attached)
Dan Lambe, Arbor Day Foundation (response attached)
Dr. Monica Lear, National Association of State Foresters (response attached)
Jack McCabe, Davey Resource Group (response attached)
Jim Skiera, International Society of Arboriculture (response attached)

Review Requested from Other Oregon University System Units

Dr. Connie Ozawa, Portland State University, Director of the Toulon School of Urban Studies and Planning (no response received)
Elisabeth Chan, University of Oregon, Head of the Department of Landscape Architecture and Ecological Design Certificate Director (no response received)

SUBJECT: Curriculum Liaison Review

The attached Category I proposal describes a new online Graduate Certificate in Urban Forestry being developed by the Department of Forest Ecosystems and Society.

In accordance with the liaison criteria in the Curricular Procedures Handbook, this memo serves as notification to your unit of our intent to make this curricular change. An earlier draft of this document was sent to Selina Heppell in FW, Kuuipo Walsh in CEOAS, Alfonso Bradoch in Ecampus, and Linda Brewer in Horticulture.

Please review the attached materials and send your comments, concern, or support to me by October 14. Your timely response is appreciated.

Please note that a lack of response will be interpreted as support.

Thank you for your time and input.

Paul squared: We have reviewed this proposal in hort with our Graduate Education Committee. John Lambrinos takes the lead for graduate education in Hort and his comments with my edits that directly relate to this are below. Overall I think this is an excellent program to which Hort might contribute more in the future, but this is a good launching point. We also think it is good to have 2 graduate level classes available to us in Hort through the cross listing. Thanks much!

I'll approve on line when I see the official notification.

Subject: Re: FW: Request for Curriculum Liaison Review--Cat I- Graduate Certificate in Urban Forestry

Hi Bill: (includes edits from Braunworth)

I am broadly very supportive of the proposal. Here are some thoughts relative to Hort:

1. As Brenda points out, the undergraduate option is offered under both Hort and FES and was developed collaboratively (Anita would be the best source for the plan and vision behind that). Part of the idea for the joint approach was that potential students could come into the field from either a Hort or Forestry emphasis. The sister undergraduate options have 16 students. As I understand it, the proposed grad certificate will be offered as a standalone piece or as part of an online Master of Natural Resources. So from a subject matter perspective I don't think there is a clear need to have a specific Hort role at this time. Also, I do not think that any of our existing HORT graduate courses would be an obvious fit for the certificate curriculum.
2. If we wanted to be involved, I think there are some opportunities for course development and participation in courses (e.g. the new urban ecosystems course). But that would of course involve commitments of resources, and working out the funding model. We understand Paul Ries will do most of the instruction with an increase in FTE from 0.25 to .50 FTE.....but are there others?
3. A positive attribute of this program is the new graduate courses will enhance our existing graduate offerings. There are currently few natural resource oriented course offerings in urban and community systems.
4. Because of the link to the undergraduate program two of the courses in the certificate are FES/HORT Crosslisted course FES/HORT 555 and FES/HORT 547. If there are funds tracking back to the unit that crosslisting might cause an issue; but this should be covered by the new agreement we have on ecampus revenue sharing.
5. On a technical note, FES/HORT 555 is listed in the catalog under on campus courses with a note that it is only offered via ecampus, but FES/HORT 547 only appears in the catalog under ecampus offerings. Is there a reason for the difference in how the two courses are listed and presented in the catalog?

John.

On 10/5/2013 10:07 AM, Braunworth, Bill wrote:

Colleagues: I need your input on this proposal. It seems like it would be nice to have Hort more integrated. As it is now, the program stands alone in forestry. The question is how do we effectively integrate Hort, what courses if any? John, look at the courses especially Urban Ecosystems below. Please let me know of any issues that I need to bring up to Paul as soon as you can. Thanks much.

Required Courses (12 credits)

- (4) FES 555 Urban Forest Planning, Policy, Management
- (1) SNR 511 Sustainable Natural Resources

(3) FES 5XX (new) Urban Natural Resource Planning

<image001.png>

(2) FES 5XX (new) Urban Forestry Leadership

(2) FES 506 (new section) Urban Forestry Capstone

Elective Courses – Chose TWO (6-8 credits total)

(3) FES 545 Ecological Restoration

(4) FES 547 Arboriculture

(3) FES 554 Managing at the Wildland-Urban Interface

(4) FES 593 Environmental Interpretation

(3) FES 585 Consensus and Natural Resources

(3) GEO 551 Environmental Site Planning

(4) GEO 565 Geographic Information Systems

(3) FES 5XX (new) Urban Ecosystems

(3) FES 592 Ecosystem Services or (3) FW 562 Ecosystem Services

Here is a note from Brenda McComb related to this:

Paul

The initiation of the Urban Forestry effort was collaborative with Horticulture and so I would have expected to see this certificate proposal be collaborative with Horticulture as well. Is there interest in a shared cross-college effort? Anita can provide background.

If not then I do not have concerns and support it as a program that hopefully will grow into a degree program that would allow us to link more meaningfully with the Urban areas in our state.

Paul,

I have been involved from the inception in developing the Urban Forestry Graduate Certificate program at OSU. I have shared my knowledge and experiences in program development to Paul Ries to write the Category I proposal for the Certificate. I have also provided my comments and suggestions to shape the draft Category I proposal. This program is very useful and timely to train professionals in Urban Forestry as most of the population in the U.S. and worldwide live in urban areas. Besides, this program is also designed to be one Area of Emphasis for the Master of Natural Resources degree program, which is a win-win situation for both programs. As Program Director for the MNR program, I strongly support the development of the Urban Forestry Graduate Certificate at OSU.

Thanks,
Badege

Paul Ries December 27, 2013 11:51am

Hi Sarah,

I've updated the Proposal, Executive Summary, and four budget detail worksheets based on our conversation from December 11 with the APC.

Please let me know if there is anything else you need. It was nice to finally meet you earlier this month, and I appreciate your assistance.

Paul

4. Review - Curriculum Coordinator

Additional comments have been sent to Paul Ries via e-mail.

Full Category I and Abbreviated Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

For Instructions, see <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/category-1-proposals> Please attach Executive Summary, Proposal, Library Evaluation (performed by the Library), Accessibility Form, Letters of Support (External to OSU), Liaison Correspondence (Internal to OSU), Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check One:

Full Proposal (Category I)

[Category I Final Approval: Oregon State Board of Higher Education]

- ☒ New degree program
☐ Major (substantive) change in existing program

Abbreviated Proposal (Abbreviated Category I)

[Abbreviated Category I Final Approval: OSU Provost]

- ☐ Rename of an academic program or unit
☐ Establishment of a new college, school, department or program
☐ Reorganization – moving responsibility for an academic program from one unit to another
☐ Merging or splitting an academic unit
☐ Termination of an academic program or unit
☐ Suspension or reactivation of an academic program or unit
☐ New certificate program or academic unit

For proposals to establish a new center or institute, contact the Research Office (541-737-3467)

For requests to offer existing certificate and degree programs at new locations, use the Memorandum of Understanding (MOU) form available at <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/mou-process>

Proposal for MS, MEng, PhD Graduate Degrees in Robotics

Executive Summary

The College of Engineering proposes to establish a new multi-disciplinary graduate program in Robotics. This program will offer MEng, MS and PhD degrees. A graduate minor in Robotics will be also offered. The proposed degrees will provide an integrated program that will embrace the multi-disciplinary nature of robotics. The program will include core areas of concentration from different disciplines: actuation, locomotion, manipulation, dynamics, control (Mechanical Engineering); sensors, vision, motors (Electrical Engineering); artificial intelligence, human robot interactions (Computer Science).

The Robotics program will directly support the three signature areas of distinction in OSU's strategic plan. It will support: (i) sustainable ecosystems (robotic monitoring of oceans and forests, as well as maintenance robots for renewable energy systems); (ii) human health and wellness (robotic surgery, prosthetics, exoskeletons, and assistive robots for the elderly and disabled); and (iii) economic growth (robots for new markets such as self-driving cars and exploration, as well as advanced manufacturing).

The evidence of need is shown by the continued demand for our graduate students who specialize in robotics. In addition, recent analysis shows robotics to be one of the fastest growing fields in the United States. For example, sale of robotics for manufacturing grew by 44% in 2011, the number of surgeries performed by robots grew by 40% (with a 80% decrease in post-surgery complications); and service robots grew by 30%. OSU already has a strong presence in robotics (sixteen core faculty spread across two schools in the College of Engineering) and is well positioned to deliver a quality graduate program in Robotics.

**New Graduate Degree Program Proposal:
Ph.D., M.S., and M.Eng. in Robotics**

**College of Engineering
School of Mechanical, Industrial and Manufacturing Engineering**

**August 2013
Proposed Effective Term: Fall Term 2014 (201403)**

CPS Tracking #: 87438

Institution: Oregon State University

College/School: College of Engineering, School of Mechanical, Industrial and Manufacturing Engineering

Department/Program: Graduate Program in Robotics

1. Program Description

a. Proposed Classification of Instructional Programs (CIP) number: 14.4201

CIP #: 14.4201

Title: Mechatronics, Robotics and Automation Engineering

A program that prepares individuals to apply mathematical and scientific principles to the design, development and operational evaluation of computer controlled electro-mechanical systems and products with embedded electronics, sensors, and actuators; and which includes, but is not limited to, automata, robots and automation systems. Includes instruction in mechanical engineering, electronic and electrical engineering, computer and software engineering, and control engineering.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed. (<http://nces.ed.gov/ipeds/cipcode/cipdetail.aspx?y=55&cipid=89345>)

- b. *Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.*

The field of robotics has grown tremendously in the last decade as new research has demonstrated its relevance and impact to fields as diverse as manufacturing, planetary exploration, medicine, healthcare, military, and consumer products. We have reached a turning point where this technology is moving from the purview of a handful of specialists (Mars rovers) to the general public (robotic car, household robots, elderly care, and unmanned search and rescue).

fApring

This picture shows six magazine covers from the last year alone, dedicated to robots. What's remarkable here is not that there are so many covers for robotics but that only one of them is dedicated to a traditional robotics concept (robots for space exploration). The other covers show the intent of robots to penetrate every day life, from music to the workplace, while also introducing new societal issues such as dialogs with robots, and the social implication of humans interacting with robots.

A graduate program in Robotics is needed to complement the existing MEng, MS, PhD programs in Mechanical Engineering, and Electrical Engineering and Computer Science. Currently, students interested in Robotics must choose one of these disciplines and take courses from the other disciplines to complete their degree

program. Though this approach has been acceptable up to now, it does not capture the truly multi-disciplinary nature of robotics.

The proposed degrees will provide an integrated program that will embrace the multi-disciplinary nature of robotics. The program will be directed towards advanced studies related to robotics and include core areas of concentration from each of the disciplines: actuation, locomotion, manipulation, dynamics, control (Mechanical Engineering); sensors, vision, motors (Electrical Engineering); artificial intelligence, human robot interactions (Computer Science).

The academic home of the new degrees will be the School of Mechanical, Industrial and Manufacturing Engineering (MIME) at Oregon State University (OSU). Other programs on campus will be able to offer graduate minors in Robotics.

PhD, MS, MENG in Robotics (CIP # 14.4201)

- CPS #: 87438
- Degree Types:
 - Master of Science (MS)**
 - Master of Engineering (MEng)**
 - Doctor of Philosophy (PhD)**
- Program Type: **Graduate**
- Academic Home: **School of Mechanical, Industrial, Manufacturing Engineering**
- Areas of Concentration:
 - Legged locomotion
 - Mobile Robots
 - Multi-robot coordination
 - Autonomous Robots
 - Manipulation
 - Assistive Robots
 - Human Robot Interaction
- Graduate Minor: **Robotics**
- Course Designator: **ROB, ME, CS, ECE**
- Credit hours: MS/MEng = 45 (minimum); PhD = 108 (minimum)
- Delivery Mode and Location: **On-Campus/OSU-Main**
- Admission Requirements: BS; 3.0 GPA; GRE; Transcripts; Letters of recommendation (3); Personal Statement
- Enrollment Limitations: **None**
- Accreditation: **None**
- Proposed Effective Date: **Fall Term 2014**

c. *Course of study – proposed curriculum, including course numbers, titles, and credit hours.*

Students enrolled in the PhD degree will complete a total of 108 graduate credits, including at least 45 credits of graduate, non-blanket numbered coursework and at least 36 credits of dissertation. Students enrolled in the MS degree will complete a total of 45 graduate credits. The MS thesis option will require at least 30 credits of graduate level coursework and 12 thesis credits. The remaining credits can come from coursework or seminar credits. The MS project option will require 39 hours of coursework and 6 project credits. Students enrolled in the MEng degree will complete a total of 45 graduate credits.

Unless otherwise specified, students will conform to the rules and regulations (e.g., qualifying exam timing, structure) of the academic home (MIME).

The coursework for all degrees in Robotics (including minors) will consist of at least 15 credits of core courses, selected from the following list:

ENGR 521: Applied Robotics (4)

ME 531: Linear Multivariable Control Systems I (4)

ME 532: Linear Multivariable Control Systems II (4)

ME 533: Nonlinear Dynamic Analysis (4)

ME 536: Actuator Dynamics (4)

ME 537: Learning-Based Control (4)

ME 538: Autonomous Agents and Multi-agent Systems (4)

Cat II proposal in planning/progress (Have been/will be offered as ME 539: Selected Topics)

ME 551: Biomechanisms (4) (Taught as ME 539 in Winter 2013)

ME 554: Geometric Mechanics (4) (Taught as ME 539 in Spring 2013)

ME 557: Programming Mobile Robots (4) (Taught as ME 539 in Fall 2012)

ME 558: Intelligent Mobile Robotics (4) (Offered as ME 539 in Winter 2014)

CS 515: Algorithms and Data Structures (4)

CS 531: Artificial Intelligence (4)

CS 532: Advanced Artificial Intelligence (4)

CS 533: Intelligent Agents and Decision Making (4)

CS 534: Machine Learning (4)

CS 536: Probabilistic Graphical Models (4)

CS 556: Computer Vision (4)

ECE 550: Linear Systems (4)

Courses in **bold** will use the new ROB designator. Others will be cross-listed as appropriate.

For a PhD, MS or MEng in robotics, the remaining course credits can come from either courses in this list or other courses relevant to the program of study as approved by the students' thesis committee. The completion of 15 credits from this list will satisfy the minor requirements in Robotics.

- d. Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).*

The program will be delivered on-campus through classroom and laboratory formats. There are no plans for off-campus delivery at present.

- e. Ways in which the program will seek to assure quality, access, and diversity.*

The program will continue to recruit students nationally and internationally. Currently, about 60-70 students apply to the Mechanical Engineering program with the intent to specialize in Robotics. About half the applications are from international students and currently only a small fraction is from women.

Underrepresented students will be encouraged to apply for admission in all recruiting materials and all efforts are made to provide financial aid to all qualified underrepresented students. In particular, we intend to emphasize the applications of robotics to health care (prosthetics, exoskeletons, rehab, elderly assistance) as well as humanitarian engineering (disaster recovery, minesweeping), which are topics that have been shown to have broader appeal to underrepresented groups.

The program will be reviewed by the Graduate School five years after initial approval, and every 10 years thereafter, in a manner consistent with the Guidelines for the Review of Graduate Programs published by the OSU Graduate Council.

- f. Anticipated fall term headcount and FTE enrollment over each of the next five years.*

The number of graduate students in the Mechanical Engineering Program who specialize in Robotics is 20-30, with about half of them being in the PhD program. Both sets of numbers will rise as recent faculty hires (four robotics hires in the last two years, doubling the size of the MIME robotics group) establish and grow their research labs.

g. Expected degrees/certificates produced over the next five years.

MS program: 5-8 per year
MEng program: 1-3 per year
PhD program: 2-3 per year

Over the first five years, we expect to graduate at least 10 PhD students and 30 MS/MEng students.

h. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

The students to be served are primarily expected to be full-time, traditional students. The program has traditionally had a small number of part-time students who are working in the Corvallis area. We expect that the student population will be about 50% US and 50% international.

i. Adequacy and quality of faculty delivering the program.

The Mechanical Engineering program presently has eight faculty directly engaged in research in robotics. These eight faculty teach all the ENGR/ME graduate courses listed in 1.c. All faculty have active research programs and advise graduate students in robotics. In addition, there are at least eight faculty in the School of Electrical Engineering and Computer Science who teach the CS and ECE courses listed in 1.c, and also have active research programs relevant to robotics.

Five of the faculty listed below (1.j) accounted for about \$4 Million in expenditures in 2012, making them one of the most active groups within the College of Engineering. In addition, the faculty hold (or have recently held) critical positions in international conferences and editorial boards of international journals. The combined expertise of the sixteen faculty members (listed below) will allow the delivery of a unique and high quality robotics program.

j. Faculty resources – full-time, part-time, adjunct.

The faculty members currently in the School of Mechanical, Industrial and Manufacturing Engineering with an emphasis in robotics are:

Ravi Balasubramanian, Assistant Professor, MIME. PhD from Carnegie Mellon University. Robotic manipulation, robotic hands.

Belinda Batten, Professor, MIME. PhD from Clemson. Optimal Control, Unmanned aerial vehicles, marine energy.

Cindy Grimm, Research Associate Professor, MIME. PhD from Brown University. Computer graphics, human-computer interactions.

Ross Hatton, Assistant Professor, MIME. PhD from Carnegie Mellon University. Geometric mechanics, locomotion, snake robots.

Geoff Hollinger, Assistant Professor, MIME. PhD from Carnegie Mellon University. Field robotics, marine robotics, and motion planning.

Jonathan Hurst, Assistant Professor, MIME. PhD from Carnegie Mellon University. Legged robots, passive dynamics.

Bill Smart, Associate Professor, MIME. PhD from Brown University. Software architectures for robotics, mobile robots, human robot interactions.

Kagan Tumer, Professor, MIME. PhD from The University of Texas. Autonomous robots, multi-robot coordination, multiagent learning.

In addition, the following faculty in the School of Electrical Engineering and Computer Science teach courses or are active in research in topics directly related to Robotics:

Glencora Borradaile, Assistant Professor, EECS. PhD from Brown University. Algorithms, computational geometry, planar graph algorithms

Tom Dietterich, Professor, EECS. PhD from Stanford University. Machine learning, intelligent systems.

Alan Fern, Associate Professor, EECS. PhD from Purdue University. Artificial intelligence, automated planning/control

Xiaoli Fern, Associate Professor, EECS. PhD from Purdue University. Machine learning, data mining.

Raviv Raich, Associate Professor, EECS. PhD from Georgia Institute of Technology. Adaptive sensing/sampling, manifold learning.

Prasad Tadepalli, Professor, EECS. PhD from Rutgers University. Artificial intelligence, machine learning, automated planning.

Sinisa Todorovic, Assistant Professor, EECS, PhD from University of Florida. Computer vision, object recognition, video object segmentation.

Weng-Keen Wong, Associate Professor, EECS. PhD from Carnegie Mellon University. Machine learning, anomaly detection, human-in-the-loop learning.

k. Other staff.

Support staff (at least 0.5 FTE), funded by the School of MIME and/or the College of Engineering, will provide administrative support. Also, the program will partner with the School of Mechanical, Industrial and Manufacturing Engineering administration to accomplish necessary organizational functions such as curriculum delivery, recruitment and admission.

l. Facilities, library, and other resources.

Computer, teaching and research laboratories and faculty offices are presently located in Rogers, Covell, Graf and Dearborn Halls as well as the Kelley Engineering Center. Computer services are provided through the College of Engineering and include access to graduate-level software packages for analysis and design. Graduate students are provided offices in Rogers, Covell and Graf Halls as well as Kelley Engineering Center.

Library evaluation revealed that the current support was “marginally adequate” to support this program. Subscriptions to the journals listed in the library study will enhance the program. The additions of the “*International Journal of Robotics Research*” and “*Robotics and Autonomous Systems*” will be particularly useful.

m. Anticipated start date.

Fall 2014, or as soon as approval of this proposal.

2. Relationship to Mission and Goals

a. Manner in which the proposed program supports the institution’s mission and goals for access; student learning; research, and/or scholarly work; and service.

The robotics degrees will support OSU’s mission and goals through education, research and service by providing graduates with expertise in the design, control, programming and operation of robots. These degrees will provide access for national and international students as well as OSU’s mechanical engineering, manufacturing engineering, industrial engineering, electrical and computer engineering, and computer science students.

Robotics is a truly multi-disciplinary field that directly supports OSU’s commitment to a wide variety of fields that is impossible to capture within the confines of a traditional degree. Here is a list of disciplines that are relevant to robotics (grouped by the primary “home” of the relevant topics in the current degree structure):

- Traditional Core Robotics Fields:
 - Mechanical Engineering (actuators, locomotion, exoskeletons, prosthetics)
 - Electrical Engineering (Sensors, vision, motors)
 - Computer Science (artificial intelligence, human robot interactions)
- Fields that Directly Support or Benefit from Robotics:
 - Alternative Energy (robotic diagnostic/maintenance for wave energy buoys)
 - Biomedical Engineering (artificial muscles)
 - Medical care delivery (robotic surgery)
 - Healthcare (long term care for the elderly)
 - Oceanography (underwater communication, robots for sensing, repair)
 - Civil Engineering (traffic studies and impact of robotic cars on roadways)
 - Biology (mammal/insect/bird studies for locomotion)
 - Anthropology (use robots to animate/estimate locomotion of extinct species)
 - Exercise Science (gait studies for walking robots)
 - Nuclear Engineering (robots for maintenance, safety in harsh environments)
 - Game Theory (incentives for robots)

Currently, we address most of the topics in the first bullet by having students interested in robotics pursue ME, ECE or CS degrees. This approach works to a point, but does not allow OSU to showcase the unique strengths of robotics (the multi-disciplinary nature of the field) and does not provide an internationally visible platform to attract and retain the best students in the field. In addition, it does not allow the flexibility to naturally include topics in the second bullet in the students' programs of study, nor does it provide a path forward to address the challenges of the future. The creation of the robotics degree will allow OSU to address the current needs and implications of the growing intersection of robotics and everyday life, while also positioning the University in a way to allow us to frame future questions within this program.

In addition, OSU is the current home of ROS (Robot Operating System). ROS serves the worldwide robotics community by supporting the development of new software for robotics and has over 100,000 users. The proposed graduate degrees are a new step in increasing OSU's commitment to robotics, and cementing OSU's impact and visibility in this growing field.

b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

The proposed robotics degrees contribute to all three signature areas of distinction in OSU's strategic plan: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress. Broadly, the robotics program will impact all three areas through new devices and new ways in which those devices and humans will interact:

- Robotics supports sustainable ecosystems by providing key technologies in different renewable energy devices. The contributions include advanced wave energy converters, and autonomous robots for maintenance of marine or wind energy devices. In addition, robotic monitoring devices for oceans and forests provide invaluable information about the health of our natural resources.
- Robotics supports human health and wellness through advances in robotic surgery, prosthetics, rehab technologies and exoskeleton research that are critical in improving the mobility of patients with disabilities. In addition, robots for assisting the elderly and disabled are becoming both more capable and more accepted, bringing the possibility of affordable in-house care for all who need it closer every day.
- Robotics supports economic growth by both opening new markets (new robots for exploration, education, hazardous environments) and by supporting established markets by improving the manufacturing processes (through automation and robotic manipulation of hazardous processes).

c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

OSU and OUS strategic goals overlap in general and the addition of the robotics graduate degrees will support both. A strong robotics program that serves the manufacturing, healthcare and high tech industries industry in Oregon will provide significant economic benefits. (More supporting detail is provided in Section 4)

d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.

Robotics is a growing field, and the proliferation of robots into our everyday lives (from iRobot Roomba vacuum cleaner robot to robot lawn mowers to manufacturing robots to robotic cars to robotic assistants) is likely to be one of the key transformations of the 21st century. This technology will impact the economic and social structure of our society, and training our students in robotics is key to ensure that Oregon reaps the benefits of this transformation.

Having graduates with advanced degrees in robotics will ensure that Oregon trains and retains a workforce ideally suited to these challenges and will provide leadership, expertise and innovation to keep Oregon at the forefront of these advances.

3. Accreditation

- a. *Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.*

There are no plans to accredit the graduate degrees in robotics.

- b. *Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.*

Not applicable.

- c. *If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.*

Not applicable.

- d. *If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.*

The program will need to satisfy standards applicable to all graduate programs at OSU, including undergoing a periodic review.

4. Need

- a. *Evidence of market demand.*

Robotics is growing field and there is an explosion of applications in manufacturing, medical, service and military applications. Many technology leaders (including Bill Gates) have likened the current growth of robotics to the growth of the internet in the 80s. Here are specific numbers taken from “A Roadmap for Robotics – 2013” a document that highlights the need for and growth of robotics in the US and the world (available at:

<http://robotics-vo.us/sites/default/files/2013%20Robotics%20Roadmap-rs.pdf>), for several key areas of robotics:

- **Manufacturing:** The sale of robotics for manufacturing grew by 44% in 2011. This is a remarkable figure considering that manufacturing accounts for 14% of US GDP, 11% of employment and a staggering 70% of exports.
- **Medical Robots:** The number of medical procedures performed by robots grew by 40% *annually* over the last few years. A study shows that use of robots can reduce complications in surgery by 80%.
- **Service Applications:** The annual growth in service robots is 30% (more than 6 million autonomous vacuum cleaners and 200,000 lawn movers have been sold worldwide).

In addition to these growth numbers, fields such as healthcare (over 11 million people with severe disabilities in the US who require personal assistants), space exploration (Spirit, Opportunity and Curiosity as well as earlier robots going back to Viking program in the 1970s) and defense (today, more than 50% of pilots entering the Air Force become operators of remotely piloted systems) are primed to become even larger markets for robotics.

Furthermore, there are multiple national programs to promote robotics. The National Science Foundation (NSF) started the *National Robotics Initiative* in 2012, one of the largest new initiatives in research. The Defense Advanced Research Projects Agency (DARPA) has continued to invest in robotics, including the autonomous Grand Challenge in 2006 to the current DARPA Robotics Challenge. The President's Advanced manufacturing Partnership also specifically calls for robots in manufacturing:

(http://www.whitehouse.gov/sites/default/files/microsites/ostp/amp_final_report_annex_1_technology_development_july_update.pdf)

Finally, in addition to the economic drivers, there are significant pressures to educate and prepare researchers in this field. Only a handful of schools offer specific PhD programs in robotics (Carnegie Melon and Georgia Tech). As such last year there were over 442 applicants to the CMU robotics program, of whom, 40 were admitted). Offering this degree will not only serve a great need in the US, but also allow our graduates to be leaders and innovators in this field. (Our recent graduates in Mechanical Engineering with a robotics focus, for example, have gotten jobs at NASA and Meka Robotics, a leading robotics company.)

- b. *If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).*

Not applicable.

- c. *Manner in which the program would serve the need for improved educational attainment in the region and state.*

There is great demand for robotics in both Oregon and the Pacific Northwest. This need is growing with the recognition of robotics as either a key final product, or a key competitive advantage in many industries. Our graduates are well poised to fill positions in startup companies, large established companies, and governmental agencies. These Oregon companies include DW Fritz (hired recent graduate), Concept Systems, ESCO (has employees pursuing MS at OSU), Intel (hired recent graduate), and Korvis Automation (hired recent graduate).

- d. *Manner in which the program would address the civic and cultural demands of citizenship.*

Graduate students with advanced degrees in robotics will be well positioned to make decisions related to technology and shape our state and national policy in the coming decades. Because robotics is a multidisciplinary topic, the students in the program will have different backgrounds (mechanical engineering, electrical engineering, physics, computer science, mathematics, ethics) and learn both to generate innovative solutions and to integrate diverse views before making decisions. In addition, some of the policies and decisions that impact our workforce (role of automation, job creation) will require leaders with a full grasp of the technical subtleties and the implications of those technologies. Graduates in robotics will be important contributors to such debates as society grapples with such complex social issues.

5. Outcomes and Quality Assessment

- a. *Expected learning outcomes of the program.*

The following table indicates what the College of Engineering has identified as “universal” **graduate learning outcomes**, which are assessed by specific mechanisms that are administered by the individual programs. The same set of outcomes is listed for the MS and PhD degree programs but, as should be self-evident, for the PhD degree there are significantly greater expectations. The MEng program has a more limited set of outcomes, which represents the coursework focus of that program.

Ph.D. Outcomes	MS Outcomes	MEng Outcomes
Outcome 1: Knowledge and Scholarship The student will be able to identify and conduct original research, scholarship or creative endeavors.	Outcome 1: Knowledge and Scholarship The student will be able to identify and conduct original research, scholarship or creative endeavors.	Outcome 1: Knowledge and Scholarship The student will be able to identify and conduct original research, scholarship or creative endeavors.
Outcome 2: Communication The student will be able to effectively communicate in their field of study.	Outcome 2: Communication The student will be able to effectively communicate in their field of study.	
Outcome 3: Critical Thinking and Problem Solving Students will be able to think critically, creatively and solve problems in their field of study.	Outcome 3: Critical Thinking and Problem Solving Students will be able to think critically, creatively and solve problems in their field of study.	Outcome 2: Critical Thinking and Problem Solving Students will be able to think critically, creatively and solve problems in their field of study.
Outcome 4: Ethical Conduct Students will be able to conduct research in an ethical and responsible manner and have a basic understanding of their ethical responsibilities as future scientists and/or engineers.	Outcome 4: Ethical Conduct Students will be able to conduct research in an ethical and responsible manner and have a basic understanding of their ethical responsibilities as future scientists and/or engineers.	Outcome 3: Ethical Conduct Students will have a basic understanding of their ethical responsibilities as future scientists and/or engineers.
Outcome 5: Professional Development Students will be able to demonstrate attributes of professional development consistent with expectations within their field of study.	Outcome 5: Professional Development Students will be able to demonstrate attributes of professional development consistent with expectations within their field of study.	

b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

The mapping guidelines for each degree as well how each learning outcome will be measured is presented in Appendix A.

The format and procedure for the PhD qualifying exam in Robotics is presented in Appendix B.

c. *Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.*

- Number of applicants, offers and acceptance rates
- Academic qualifications of applicants and accepted students
- Graduation rates
- Employment upon graduation
- Student satisfaction from exit interviews
- Survey information from employers

d. *Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.*

All faculty members who identify with the robotics graduate program are active in research including funded projects. For the twelve of the sixteen faculty listed in Section 1 who have been at Oregon State university for more than two years, the present research funding is about \$5 million per year. We anticipate that number to exceed \$6 million per year as the new faculty continue building their research programs. The scholarly publication rate for these faculty combined is about 30 refereed journal articles per year. Performance parameters continually collected by the College of Engineering include:

- Scholarly publications
- Participation in professional meetings, conferences and workshops
- External funding for research
- Number and magnitude of proposals written
- Number of PhD/MS students supervised
- Participation in professional societies, committees, boards, and commissions

These indicators are evaluated each year in the faculty member's annual review.

6. Program Integration and Collaboration

a. *Closely related programs in other OUS universities and Oregon private institutions.*

No program in Oregon overlaps with the proposed program. The proposed interdisciplinary robotics program is unique.

- b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.*

There are engineering degrees at Portland State University, as well as Computer Science degrees at Portland State University and the University of Oregon that provide some of the topics in a robotics program. They can be considered complementary. For example, the Intelligent Robotics Laboratory (Prof. Marek Perkowski) in the Electrical and Computer Engineering Department at Portland State University would be a potential collaborator in this endeavor. In addition, this program would be complementary with research at the Oregon Health and Science University, particularly in robotics in medicine. Finally, the proposed Robotics program will provide opportunities to undergraduates (for example at the Oregon institute of Technology) who aim to pursue a graduate degree in Robotics in Oregon.

- c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.*

Not applicable.

- d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.*

No impact on existing programs is expected.

7. Financial Sustainability (attach the completed *Budget Outline*)

The budget outline and justification documents prepared by the College of Engineering business office are attached.

- a. *Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.*

The support of these graduate degrees is part of the College of Engineering's present budget and future strategic plan. No changes to present plans for financial viability, funding, and recruitment of faculty or library support are expected.

- b. *Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.*

The research programs associated with the proposed degree are currently located in Graf, Covell and Rogers Halls and are funded by MIME and the on-going research program, as well as located in the Kelley Engineering Center and funded by ongoing research in EECS. There are plans for the renovation of Graf Hall to host all robotics activity (research, education, student clubs), that would significantly enhance our current capabilities. These plans are enthusiastically supported by the leadership in the school of MIME and the COE, and fundraising efforts are ongoing. The University Planning committee has provided support for the program and the redevelopment plan (see Liaison letter from Jean Duffett).

- c. *Targeted student/faculty ratio (student FTE divided by faculty FTE).*

The target ratio is to have approximately 5 graduate students per faculty, leading to a total graduate enrollment of about 40 students.

- d. *Resources to be devoted to student recruitment.*

Present resources for student recruitment include the costs of promoting the program including creating and distributing marketing material (~\$2,000), creating and maintaining an up-to-date webpage (~\$2,000), and organizing a recruiting event in Feb/Mar each year (~\$3,000). This will result in \$7,000 of recurring cost, as well as \$500 of start-up costs to cover "branding" material (posters, cards etc.).

8. **External Review** (if the proposed program is a graduate level program, follow the guidelines provided in *External Review of new Graduate Level Academic Programs* in addition to completing all of the above information)

The proposed external reviewers for this program include:

Howie Choset

Professor, Robotics Institute
Carnegie Mellon University
choset@ri.cmu.edu
<http://www.cs.cmu.edu/~choset/>

Gaurav S. Sukhatme

Professor and Chairman

Appendix A: Outcomes and Quality Assessment

Mapping guidelines for the Ph.D. Degree in Robotics:

Learning Outcomes: <i>Graduate students in the PhD program will demonstrate →</i>	Outcome 1: Knowledge and Scholarship	Outcome 2: Communication	Outcome 3: Critical Thinking and Problem Solving	Outcome 4: Ethical Conduct	Outcome 5: Professional Development
Activities and Evidence:	Identify and conduct original research, scholarship or creative endeavors	Effectively communicate their field of study	Think critically, creatively and solve problems in their field of study	Conduct research in an ethical and responsible manner	Demonstrate attributes of professional development consistent with expectations within their field of study
1. Seminar Series			- Critically analyze ideas and data presented and discussed by others and participate in the peer review process	- Attend workshops or take online training on and responsible conduct of research and engineering - Participate in discussions on responsible conduct of research and engineering	- Gain appreciation for membership in professional societies - Attend scientific seminars across campus - Understand the importance of membership in professional societies
2. Plan of Study Coursework	Gain knowledge needed for conducting original research		Gain critical thinking and problem solving skills		
3. Research credits	Earn a Satisfactory in at least 36 credits of ME 603 or ROB 603			Earn a Satisfactory in at least 36 credits of ME 603 or ROB 603	
4. PhD Preliminary Exam – Written Component	Define and justify a set of original research objectives in a formal research proposal	Write and defend an original proposal	Define and defend a set of research methods and analyses that will achieve the research objectives	Define methods to achieve the research objectives in an ethical and responsible manner	

5. PhD Preliminary Exam – Oral Component	Demonstrate sufficient knowledge of subject matter to become a PhD Candidate	Demonstrate ability to communicate knowledge and research through a written and oral preliminary exam	Demonstrate the ability to think clearly and solve problems through a written and oral preliminary exam		
6. Ph.D. Dissertation	Prepare a dissertation that meets expectations for original, independent research		Prepare a dissertation that demonstrates critical thinking and creativity	Prepare a dissertation based on ethical and responsible research	
7. PhD Final Oral Exam		Present the research in a public seminar and defend the dissertation	Defend the dissertation research before the student's Advisory Committee		Present the dissertation research in a public seminar and defend the dissertation research before the student's Dissertation Committee

Mapping guidelines for the M.S. Degree in Robotics:

Learning Outcomes: <i>Graduate students in the PhD program will demonstrate →</i>	Outcome 1: Knowledge and Scholarship	Outcome 2: Communication	Outcome 3: Critical Thinking and Problem Solving	Outcome 4: Ethical Conduct	Outcome 5: Professional Development
Activities and Evidence:	Identify and conduct original research, scholarship or creative endeavors	Effectively communicate their field of study	Think critically, creatively and solve problems in their field of study	Conduct research in an ethical and responsible manner	Demonstrate attributes of professional development consistent with expectations within their field of study

1. Seminar Series			- Critically analyze ideas and data presented and discussed by others and participate in the peer review process	- Attend workshops or take online training on and responsible conduct of research and engineering - Participate in discussions on responsible conduct of research and engineering	- Gain appreciation for membership in professional societies - Attend scientific seminars across campus - Understand the importance of membership in professional societies
2. Plan of Study Coursework	Gain knowledge needed for conducting original research		Gain critical thinking and problem solving skills		
3. Research credits	Earn a Satisfactory in at least 6/12 credits of ME 506/503 or ROB 506/503			Earn a Satisfactory in at least 6/12 credits of ME 506/503 or ROB 506/503	
4. MS Project or Thesis	Prepare a project report or thesis that meets expectations for original, independent research		Prepare a project report or thesis that demonstrates critical thinking and creativity	Prepare a project report or thesis based on ethical and responsible research	
5. MS Final Oral Exam		Present the research project report or thesis in a public seminar (as required) and defend the research project report, thesis	Defend the research project report or thesis before the student's Advisory Committee		Present the research project report or thesis in a public seminar and defend the body of work before the student's Thesis Committee

Mapping guidelines for the M.Eng. Degree in Robotics:

Learning Outcomes: <i>Graduate students in the PhD program will demonstrate →</i>	Outcome 1: Knowledge and Scholarship		Outcome 2: Critical Thinking and Problem Solving	Outcome 3: Ethical Conduct	
Activities and Evidence:	Identify and conduct original research, scholarship or creative endeavors		Think critically, creatively and solve problems in their field of study	Understanding of their ethical responsibilities as future scientists and/or engineers	
1. Seminar Series			- Critically analyze ideas and data presented and discussed by others and participate in the peer review process	- Attend workshops or take online training on and responsible conduct of research and engineering - Participate in discussions on responsible conduct of research and engineering	
2. Plan of Study Coursework	Gain knowledge needed for mastery of the subject matter		Gain critical thinking and problem solving skills		
3. Project Course	All MEng programs of study must include a course which includes an independent scholarly project				
4. MEng Final Oral Exam	Present the graduate program of study before the student's MEng Committee		Present the graduate program of study before the student's MEng Committee		

Appendix B: PhD Qualifying Examination in Robotics

The purpose of the PhD qualifying exam is to assess students' research skills (their ability to analyze, interpret, and communicate fundamental scientific, mathematical, and engineering concepts) for the purpose of determining their aptitude for the PhD program. The examination also includes a diagnostic function to highlight potential weaknesses in the students' background that can be addressed through additional coursework or independent study.

Exam Format

The qualifying examination for Robotics consists of three components:

1. A written research paper on a topic selected by the committee. This will generally consist of literature review with a discussion highlighting the interesting research directions in that topic. The committee will specify the format and length of the paper, which will be due one week prior to the scheduled oral examination.
2. A 30 minute oral presentation on the topic of the research paper.
3. A 30 minute questioning session on topics presented in the research paper, as well as topics identified by the committee as a result of evaluating the research paper. These topics will be communicated to the students at least three days prior to the oral examination.

The qualifying exam will be evaluated by the faculty in Robotics. At least four faculty members must be present at the examination.

Exam Scheduling

The qualifying exam will be conducted in the first three weeks of Winter term every year. The timeline for taking the qualifying exam is as follows:

- **For students entering the program with an MS degree:** No later than their second year in graduate school.
- **For students entering the program with a BS degree:** No later than their third year in graduate school.

Students who fail to meet this deadline will not be allowed to continue in the PhD program.

Students who fail the qualifying examination will be allowed to re -take it **once** within 60 days.

Students who fail the qualifying examination a second time will not be allowed to continue in the PhD program and may be re-directed toward an MS or MEng degree, if appropriate.

Summary of Support Letters:

We received support from the Industry Advisory Board members, Pacific Northwest researchers as well as prominent Robotics program directors across the nation (including the Director of the robotics institute at Carnegie Mellon University). Enclosed are a few quotes from the support letters. (Full letters are attached.)

Matt Mason, Professor, Computer Science and Robotics, Director, Robotics Institute, Carnegie Mellon University:

"I strongly support the creation of a new Robotics graduate program at Oregon State University."

"The faculty at OSU has a well-established international reputation, particularly on topics such as legged locomotion, manipulation, marine robotics, multi-robot coordination, artificial intelligence and software architectures for robots. With the strong research focus and the diverse course offerings, they are well positioned to deliver a top robotics program."

Michael Gennert, Professor, Computer Science and Computer & Electrical Engineering Departments, Director, Robotics Engineering Program, Worcester Polytechnic University:

"The proposed program addresses a critical need for multi-disciplinary engineers and scientists in robotics."

"... no single discipline provides the breadth necessary for robotics, making it increasing important to offer programs such as yours."

"In industry, IEEE-US Today's Engineer reported that the robotics industry will create 1,000,000 jobs in the next 5 years."

"Not only does it have a core of well-established faculty members, the recent addition of extremely talented junior faculty members, some of whom I know personally as rising stars in the field, should enable OSU to become a top university for robotics research and education."

"... I enthusiastically support the program and commend you for your leadership in this effort. I wish you and your colleagues the very best of success."

Christopher Allan (Associate Professor, University of Washington, Hand and microvascular surgery):

“Given my experience with your team and the rapid changes in all fields of surgery, I strongly believe that a graduate-level program in robotics at Oregon State University could be of tremendous benefit to the region and the nation through collaborative biomedical engineering research projects.”

“In summary, I strongly support the development of a graduate-level robotics program at Oregon State University. I look forward to continued close and productive interactions with your excellent robotics faculty and students.”

David Browning, MIME Industry Advisory Board member, Altman Browning and Company:

“During my tenure on the IAB, I witnessed and encouraged amazing growth in the robotics group... The resulting research in mobility, recognition and decision making on a robotic level is inspiring and technically highly advanced.”

“With these factors in mind, I think it is essential for the OSU robotics program to include a graduate degree program.”

Rick Williams, College of Engineering IAB member, Leidos Maritime Solutions:

“This letter is written in strong support of the proposed new graduate degree program in Robotics that would result in Ph.D., M.S., and M.Eng degrees. “

Kevin Lynch, Professor and Chair, Mechanical Engineering, Northwestern University:

“The number of job opportunities and research funding in robotics are currently undergoing significant growth.”

“The faculty at Oregon State are well positioned and have sufficiently diverse research interests to offer a robust Robotics curriculum.”

Professor Kagan Tumer
Oregon State University
Mechanical Engineering Department
204 Rogers Hall
Corvallis, OR 97331-6001

Dear Professor Tumer,

I strongly support the creation of a new Robotics graduate program at Oregon State University. I have served as director of the Robotics Institute at Carnegie Mellon University since 2004, and served as chair of the Ph.D. program from 1995-2004. The Robotics Institute is the largest and oldest robotics graduate program in the world. We have seen very strong student demand for Robotics degrees, and consistent demand from industry and academia for Robotics graduates. I personally know many of the faculty at Oregon State who are initiating this graduate program, and I have confidence that they have the capability to build a strong program.

I have been closely involved with the robotics community for more than three decades. In that time, I have seen the community grow by orders of magnitude, and this growth continues to accelerate. The growth of robotics industries has also accelerated. The role of robotics in manufacturing, transportation, logistics and services is reaching such proportions that a National Robotics Initiative was launched by the Obama administration. Both local and national companies would benefit greatly from a strong robotics program at OSU.

The faculty at OSU has a well-established international reputation, particularly on topics such as legged locomotion, manipulation, marine robotics, multi-robot coordination, artificial intelligence and software architectures for robots. With the strong research focus and the diverse course offerings, they are well positioned to deliver a top robotics program.

I'm excited by Oregon State's trajectory and look forward to working together to take robotics to new heights.

Sincerely,

Matthew T. Mason
Professor, Computer Science and Robotics
Director, Robotics Institute
Carnegie Mellon University

Prof. Kagan Tumer
School of Mechanical, Industrial and Manufacturing Engineering
College of Engineering
Oregon State University
Corvallis, OR 97331-6001

Re: Letter of Support for Proposed Graduate Degree Program in Robotics

Dear Prof. Tumer,

I am pleased to write this letter of support for the proposed M.Eng., M.S., and Ph.D. program in Robotics at Oregon State University.

I feel well-qualified to evaluate the proposed program, having led the faculty team at Worcester Polytechnic Institute that developed B.S., M.S., and Ph.D. degrees in Robotics Engineering and serving as Director of the Robotics Engineering program since 2007. A complete CV is available at <http://web.cs.wpi.edu/~michaelg/work/CV.pdf>.

The proposed program addresses a critical need for multi-disciplinary engineers and scientists in robotics. Traditionally, engineers in the robotics industry have degrees in one of the core disciplines of Computer Engineering, Computer Science, Electrical Engineering, or Mechanical Engineering. Yet no single discipline provides the breadth necessary for robotics, making it increasingly important to offer programs such as yours. Robotics is also a rapidly growing discipline. In academia, the robotics-worldwide email list (<http://duerer.usc.edu/pipermail/robotics-worldwide/>) distributes notices of faculty and research positions and conference announcements. For example, in a 6-day period 23-28 August 2013, robotics-worldwide listed approximately 20 positions available, mostly for Ph.D.s, and mention of over 10 conferences, workshops, and symposia in robotics. In industry, IEEE-USA Today's Engineer reported that the robotics industry will create 1,000,000 jobs in the next 5 years (<http://www.todaysengineer.org/2012/Feb/career-focus.asp>).

The OSU School of Mechanical, Industrial and Manufacturing Engineering has clearly positioned itself to offer a very strong graduate program in robotics. Not only does it have a core of well-established faculty members, the recent addition of several extremely talented junior faculty members, some of whom I know personally as rising stars in the field, should enable OSU to become a top university for robotics research and education. Tighter integration of EECS faculty into the program would further strengthen it. The curriculum appears sound and appropriate for the degrees proposed.

One expects graduates of the proposed program will be in high demand by industry and academia. I would welcome M.S. students into our Ph.D. program and would consider Ph.D. recipients and post-docs for positions at WPI.

In summary, I enthusiastically support the program and commend you for your leadership in this effort. I wish you and your colleagues the very best of success.

Sincerely,

A handwritten signature in black ink, reading "Michael A. Gennert". The signature is fluid and cursive, with a long horizontal stroke extending from the end of the name.

September 10, 2013

To Whom It May Concern:

I am delighted to write this letter in support of the creation of a robotics graduate program at Oregon State University. I am a hand surgeon at Harborview Medical Center, one of busiest trauma centers in the country and a part of University of Washington (UW) Medicine, which has a strong robotic-assisted surgery program. My core research interests are in the area of hand reconstruction and regenerative medicine. I have been working closely over the last eighteen months with Dr. Ravi Balasubramanian of the OSU School of Mechanical, Industrial, and Manufacturing Engineering on a project that seeks to implant robotic mechanisms in the human hand to advance post-surgery hand function. As we progress in our work and I learn of the variety of surgical procedures conducted using robotic platforms both at UW Medicine and worldwide, it is becoming increasingly evident to me that robotics is poised to play a much greater role in the field of surgery in the coming years.

Given my experiences with your team and the rapid changes in all fields of surgery, I strongly believe that a graduate-level program in robotics at Oregon State University could be of tremendous benefit to the region and the nation through collaborative biomedical engineering research projects. It is notable that your institution has brought together a group of faculty who provide skills across a broad range of research topics, including human-robot interaction, robotic manipulation, highly dexterous robots, graphics and visualization, and automatic learning. I have every expectation that this group will be able to build and grow a thriving robotics graduate program.

In summary, I strongly support the development of a graduate-level robotics program at Oregon State University. I look forward to continued close and productive interactions with your excellent robotics faculty and students. Please let me know if I can answer any questions.

Yours sincerely,

Christopher H Allan, MD

September 5, 2013

To Whom It May Concern,

I am writing this letter of recommendation in support of the Department of Mechanical, Industrial, and Manufacturing Engineering (MIME) for a graduate degree program in robotics. I am a graduate of the MIME department, a practicing licensed professional mechanical engineer, a business owner, and an active alumnus of OSU.

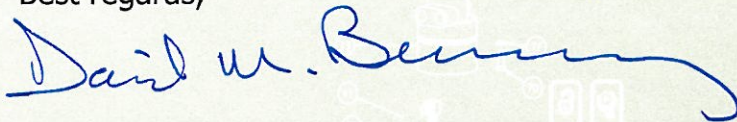

As an active alumnus I have served on the MIME Industry Advisory Board (IAB) for several years, just completing my last term on that board. During my tenure on the IAB I witnessed and encouraged amazing growth in the robotics group. The department has made a major commitment to the program, bringing in highly qualified research professors and greatly expanding the robotics lab. The resulting research in mobility, recognition, and decision making on a robotic level is inspiring and technically highly advanced.

As an engineer and business owner I oversee a group of engineers commercializing new technologies originating research laboratories. The research area of robotics is full of new technologically innovative opportunities and a potential driver for technology jobs in an emerging field of applied physics.

With these factors in mind I think it is essential for the OSU robotics program to include a graduate degree program.

Please feel free to contact me directly if you wish to discuss this further.

Best regards,

David M. Browning, P.E.

18000 S Shiloh Lane
Oregon City, OR 97405

Dr. Sandra Woods
Dean of Engineering
College of Engineering
Covell Hall 101
Oregon State University
Corvallis, OR 97331-2409

October 9, 2013

Dear Dean Woods.

This letter is written in strong support of the proposed new graduate degree program in Robotics that would result in Ph.D., M.S., and M.Eng degrees (CPS Tracking #: 87438).

The Robotics Program proposal is compelling. The industrial need is strong. Many of the companies at the core of Oregon's industrial base already employ a range of automation and robotics. Industry needs qualified applicants resulting in a demand for graduates. Additionally, the industrial workplace realities provide a practical input into the academic program, provides opportunities for interns and undergraduate and graduate projects.

Demand can also be found in the emerging wave energy industry and our nationally-recognized ocean observation program at OSU where underwater robotic systems are employed. Looking to aviation, land and surface sectors as well, the Pacific Northwest region hosts several companies that produce autonomous air vehicles, autonomous land vehicles and autonomous surface vessels.

The School of Mechanical, Industrial and Manufacturing Engineering (MIME) is an ideal home for this new program and is well suited to integrate societal needs, student needs, and industry needs into the program.

Sincerely,

Rick Williams, Captain, US Navy (Ret)
Member, OSU College of Engineering Advisory Board
Director, Columbia Region

FAX (847) 491-3915

September 9, 2013

Dear Sir/Madam,

I am writing in support of the proposed MS, MEng, and PhD programs in Robotics at Oregon State University. The number of job opportunities and research funding in robotics are currently undergoing significant growth. In response to this, Northwestern University is also currently starting up an MS Program in Robotics, accepting first students for Fall 2014. Programs such as the Northwestern program and the proposed Oregon State programs will find a good number of interested applicants, and graduates will have plenty of opportunities. The faculty at Oregon State are well positioned and have sufficiently diverse research interests to offer a robust Robotics curriculum.

I am Professor and Chair of the Department of Mechanical Engineering at Northwestern. I am a member of the Executive Committee of the IEEE Robotics and Automation Society, General Chair of the 2014 International Conference on Intelligent Robots and Systems (IROS 2014), Senior Editor of the IEEE Transactions on Automation Science and Engineering, former Senior Editor of the IEEE Transactions on Robotics, and an IEEE Fellow.

Sincerely,

A handwritten signature in black ink that reads 'Kevin M. Lynch'.

Kevin M. Lynch
Professor and Chair, Mechanical Engineering

Student Interest:

Attached are ten student letters, spanning multiple schools within the college of engineering expressing interest in a robotics program.

Some of these students are about to graduate with advanced degrees and express their willingness to obtain a “Robotics” degree instead of a traditional degree, Some are early graduate students expressing interest in a new curriculum, while some are undergraduates expressing interest in attending a school that offers a graduate degree in robotics.

In all cases, it is apparent that the term “robotics” captures a body of knowledge that cannot be encapsulated into a single discipline.

Christian Michael Hubicki
228 NW 11th Street
Corvallis, OR 97330
October 25, 2013

Dr. Robert Stone, School Head and Professor of Mechanical Engineering
Oregon State University
208 Rogers Hall
Corvallis, OR 97331

Dear Dr. Stone:

I am writing to you in support of instituting a graduate robotics program here at Oregon State University.

The title "Robotics" is a far more apt reflection of my education and specialty here at Oregon State. For one, it better encompasses my classwork in computer science and advanced control techniques, which constituted the bulk of my curriculum. This academic blend of software and mechanics is quintessentially robotics.

Robotics is also the best moniker for my career aspirations. As an aspiring faculty member, I aim to work in one of a growing number of robotics departments in this country. In a competitive market for such positions, where applications may be judged in an instant, a PhD in robotics would be a headline announcing that I belong. At a glance of my degree, a search committee will know exactly the kind of specialist they are hiring and the skill set I offer.

Robotics was also the motivation to move from Pennsylvania to Corvallis in the first place. I sought to work with Dr. Jonathan Hurst because he is an excellent roboticist. I want to wear this badge as well, as robotics encapsulates my professional interests and drives my research. I want "PhD in Robotics" to be my emblem, emblazoned on my business cards and hung on my wall for the duration of my career.

I appreciate all that you have done as school head for the school, department, and our laboratory. Thank you for your continued support.

Sincerely,

A handwritten signature in black ink that reads "Christian Hubicki". The script is fluid and cursive, with the first letters of the first and last names being capitalized and prominent.

Christian Hubicki
PhD Student in Mechanical Engineering

Matthew Rueben
001 Covell Hall
Oregon State University Campus
October 28, 2013

To whom it may concern:

I support the creation of a graduate Robotics program here at Oregon State University.

My interest is as a PhD student studying assistive robotics for persons with disabilities. Accordingly, my interests span many disciplines: mechanical, industrial, and electrical engineering, computer science, psychology, sociology, philosophy, and history.

I believe that graduate students in particular should have the freedom and resources to pursue studies centered upon a societal need or personal goal, not on previously-defined subject areas. A graduate degree in Robotics will propel OSU in this direction.

The OSU Robotics Group has already begun training multidisciplinary robotics researchers with much success; why not make it official?

Enthusiastically yours,

A handwritten signature in dark ink, reading "Matthew Rueben", followed by a long horizontal flourish line.

Matthew Rueben
PhD Student in Robotics
OSU School of MIME

October 28, 2013

Dr. Rob Stone
208 Rogers Hall
Oregon State University
Corvallis, OR 97331

To Whom it May Concern:

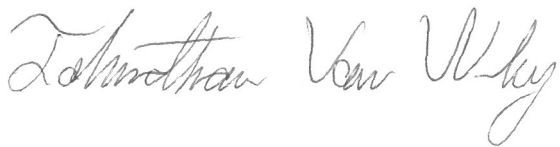

I am currently an undergraduate at Oregon State University with a strong interest in robotics. To fulfill this interest, I have been working at the Dynamic Robotics Laboratory, and have recently begun my own research through this laboratory.

In roughly a year's time from now, I will be beginning the graduate school application process. I will be looking for a school that enables me to continue focusing on robotics and controls; I believe Oregon State University can be this school.

Creating a robotics program would make Oregon State University one of only a few universities with a competitive robotics curriculum. This program would benefit both the robotics students and Oregon State University itself.

Thank you very much for considering this important proposal and how it can effect Oregon State University, its students, and local industry.

Sincerely,

A handwritten signature in cursive script that reads "Johnathan Van Why". The signature is written in dark ink and is positioned above the printed name and address.

Johnathan Van Why
2792 NW Arlington Dr
Albany, OR 97321

To whom it may concern,

I would appreciate the addition of a robotics degree at Oregon State University. Currently, I am on track to get a PhD in Mechanical Engineering. I think that a degree in Robotics would represent my skill set in a much stronger way. Mechanical engineering is a very broad field, and includes fluid dynamics, thermodynamics, heat transfer, dynamics, control theory, and more. So, a degree in mechanical engineering often does not specify a student's unique skill set. However, a degree in robotics much more uniquely describes what a student is capable of, as robotics is clearly tied to hardware development and control programming. Personally, I would much prefer my degree to be one in robotics, rather than one in mechanical engineering.

► **Dr. Stone**

Dear Dr. Stone,

A graduate robotics program is exciting news for me because there is an opportunity for me to be engaged in my favorite area, robotic. Being an industrial robot engineer has been my career goal for several years. The great enthusiasm is always inspiring me to overcome difficulties. I learned C language programming on MCU and C# by myself. I have 5-year experience of designing and building robots for competitions during the school. Also, I had been a leader of a robotic club for 3 years in my previous university. Until now, I am still keeping this enthusiasm. This is the reason why the robotics program is so attractive to me.

Actually, I have not known much about the local industry. However, I believe that robotics is becoming more and more popular. There must be a lot of students who have the similar interests toward robotics like mine. I met some of this kind of people in OSU Robotic Club last year. We need more chances to train the abilities to solve real problems.

Please forgive my limited English writing.

Thank you for your time.

Dear Dr. Stone,

I'm interested in working on a M.S. in Robotics. I have been wanting to make plans on getting a Master's degree, but I was at a loss as to which field to go into to have more knowledge of the robotics field. This potential degree would resolve this issue as well as enhance my abilities. It would help me design robots more efficiently and with higher skill. It would allow me to be a more valued asset to the robotics industry due to my increase in knowledge. But overall I believe I would be better able to serve the community, the society, and the robotics company that hires me with this degree.

Thank you for your time.

October 26, 2013

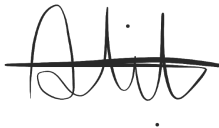

Dear Dr. Stone,

I am a PhD student at Oregon State University, at the department of EECS. My major research topic is Artificial Intelligence, especially multiagent learning and intelligent controls. During my PhD degree, I have taken many ME classes related to Robotics. Moreover, I have spent more than a year at NASA Ames Research Center as a Research Intern working on intelligent controls and development of a Tensegrity Robot. I contributed to the papers that are currently under submission in robotics journals, and I presented our work at a robotics workshop.

In addition to my current research, I am planning to follow a career related to robotics also after my graduation. Considering all the reasons above, if possible, I would be highly interested in receiving a degree in Robotics.

Sincerely yours,

Atil Iscen

A handwritten signature in black ink, appearing to read 'Atil Iscen', with a horizontal line drawn through the middle of the signature.

Dr. Stone
School Head
School of Mechanical, Industrial, and Manufacturing Engineering
Oregon State University
208 Rogers Hall
Corvallis, OR 97331

Dear Dr. Stone,

I have an undergraduate in Mechanical Engineering and a Master's degree in Mechanical Engineering, however my main research focus is in robotics, specifically artificial intelligence used for control of robots. I would like my PhD to reflect this fact. I have taken courses in classical controls, which is what employers may expect when they see that I have a degree in Mechanical Engineering, but my main area of expertise is much closer to computer science.

I feel that having a Robotics degree would much more accurately reflect the skillset that I have developed through my research, and would typecast me less as a 'hardware person'. This would clarify to employers that I have significant practical programming and algorithm experience in a way that having a degree in Mechanical Engineering would not.

Additionally, having this degree would enable me to count challenging classes that are relevant to my research interest (such as CS classes like Artificial Intelligence, Adaptive Agents, or Machine Learning) as more than just 'filler' courses.

Thank you for your time, and I hope that you will consider the creation of a Robotics degree.

Sincerely,

A handwritten signature in dark ink, reading "Carrie Rebhuhn". The signature is fluid and cursive, with a long horizontal flourish extending to the right.

Carrie Rebhuhn

Dr. Rob Stone
206 Rogers Hall

Dear Dr. Stone;

I am very interested in the possibility for a degree option in Robotics. This would give a more complete description of the time I have spent at OSU relating to my course work and research. It also gives future employers a snapshot of my focus and interest in robotics, rather than a generic degree in mechanical engineering. Thank you for your consideration of a creating an addition option for a degree.

Sincerely,

A handwritten signature in black ink that reads "Kadee Mardula". The script is cursive and fluid, with the first name "Kadee" and last name "Mardula" clearly distinguishable.

Dr. Stone
School Head
School of Mechanical, Industrial, and Manufacturing Engineering
Oregon State University
208 Rogers Hall
Corvallis, OR 97331

Dear Dr. Stone:

I understand that the MIME faculty is currently working on adding a graduate Robotics program to Oregon State University. As a Computer Science student in the Mechanical Engineering department I am very interested in this degree.

The Computer Science M.S. and PhD program are very focused on theory, so it becomes very difficult to apply research toward a real world application. The Mechanical Engineering department is a perfect fit for PhD students to apply theoretical approaches in real world applications, such as robotics. However, if I become a Mechanical Engineering PhD student, I will confuse future potential employers as I do not have a traditional Mechanical Engineering background. Having a PhD in Robotics will alleviate this issue.

Furthermore, with the addition of Dr. Bill Smart in the Mechanical Engineering program, I can apply my prior experience toward robotic assistants, directly helping people with disabilities and researching the field of human robot interaction.

Sincerely,

A handwritten signature in dark ink that reads "William Curran". The signature is written in a cursive, flowing style.

William Curran

Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Engineering
College

The subject librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

- ☐ inadequate to support the proposal (see budget needs below)
☒ marginally adequate to support the proposal
☐ adequate to support the proposal

Estimated funding needed to upgrade collections or services to support the proposal (details are attached):

Year 1:
\$6,196

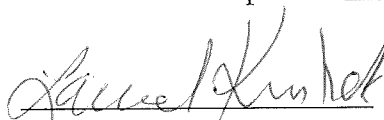

Ongoing (annual):
\$6,196

Oregon State University Libraries Evaluation of the Collection supporting a Proposal to Initiate a PhD, MS, and MEng program in Robotics

This Oregon State Libraries' (OSUL) assessment reviews the print monographic, e-book, and electronic serials collections as related to broad science information needed to support the proposed Robotics program. As stated in the Cat 1 proposal, the proposed program "prepares individuals to apply mathematical and scientific principles to the design, development and operational evaluation of computer controlled electro-mechanical systems and products with embedded electronics, sensors, and actuators; and which includes, but is not limited to, automata, robots and automation systems. Includes instruction in mechanical engineering, electronic and electrical engineering, computer and software engineering, and control engineering." From the OSUL perspective, students and researchers will tap various components of the library collections. This makes it challenging to make recommendations on adequacy and funding needs as the entire engineering collection must be maintained to provide adequate access to information.

Summary of Recommendations

The monographic collection appears to be adequate to support the program.

The journal collection is currently inadequate to support the collection; it is strongly recommended that subscriptions to *Robotica* (\$1,700) and *International Journal of Robotics Research* (\$2,196) be reinstated and new subscription to *Robotics and Autonomous Systems* (\$2,300) be initiated. This would cost \$6,196/year for three years to adequately support the program. At a minimum, the subscription to *International Journal of Robotics Research* (\$2,196) should be reinstated.

Print Monographs and E-Books

Library evaluations of proposed programs have traditionally included the analysis of OSUL's print monograph collection. Comparing the monograph collection with other universities' collections is routine. This analysis includes a comparison of the monograph collection with peer institutions with a program similar to the one proposed. For this program, OSUL monograph holdings were compared with two libraries supporting PhD programs in robotics (Georgia Tech and CMU) and four libraries supporting MS programs (Johns Hopkins, University of Utah, Worcester Polytechnic Institute, and Northwestern). Because currency of the collections is very important in this field, the comparisons are monographs published since 2008. See Appendix 1 for the comparison details.

Overall, the OSUL collection is somewhat below that of the peer institutions (OSUL collection is 85% the size of the average collection). This is mitigated by OSU's membership in the Orbis/Cascades Alliance, which more than doubles the number of available monographs on robotics topics. Students and faculty can order from the collections of all the libraries in the Orbis Cascade Alliance through the Summit catalog. University of Oregon, Portland State University, University of Washington and Washington State University are some of the larger research libraries represented in the Summit catalog. Books requested through Summit are delivered to OSUL within three to five working days.

The growing availability of e-books makes it possible to expedite access to more information from various locations. This obviously better serves our distance learners and is a convenience for our on-campus students and faculty. In 2012, OSUL purchased the IEEE books collection. OSUL also has a subscription to Safari Books Online; robotics-related titles can be included in this collection based on recommendations from students and

faculty. The library also has purchased the Morgan and Claypool Synthesis Digital Library of Engineering and Computer Science - the basic component of the library is a 50- to 100-page "Lecture"; a self-contained electronic book that synthesizes an important research or development topic, authored by an expert contributor to the field.

Serials/Journals

In engineering, ready access to current information is expected. Unfortunately, the OSUL collection is inadequate to support a doctoral level program in Robotics. Of the 21 titles in the Journal Citation Reports (JCR) Robotics category, OSUL only has current subscriptions to 6 titles. Several titles have been cancelled in the past few years due to budget constraints, and one title is only available with an 18-month embargo on current issues. See Appendix 2 for details. In addition, OSUL subscribes to IEEE Electronic Library (all IEEE and IET journals), ACM Digital Library, and journals from ASME and other publishers.

OSU faculty currently doing research in this field have identified 7 core titles for the field; OSUL has current subscriptions to 4 of these. We recommend that the Category I proposal include \$6,196 in new funding for 3 years of subscriptions to the additional core titles, which will make the journal collection marginally adequate for a PhD program.

New Subscriptions	ISSN	Impact Factor	Cost/year
<i>International journal of robotics research</i>	0278-3649	2.863	\$2,196
<i>Robotica</i>	0263-5747	1.144	\$1,700
<i>Robotics and autonomous systems</i>	0921-8890	1.156	\$2,300
			\$6,196

Other Resources

In engineering disciplines, conference proceedings are valuable and timely resources. OSUL subscribes to the IEEE Electronic Library, which provides access to all IEEE and IET conference proceedings from 1988 to the present.

Standards are also an important resource for engineering. OSUL has online access to the IEEE and ASTM standards and a print ANSI standard collection.

Indexes and Databases

The core indexes to the relevant information for this program include the ACM Digital Library, IEEE Electronic Library, Compendex and Web of Science. The OSUL maintain access to all as these are core to many of OSU's primary research areas.

Key library services & librarian expertise

Expertise for this discipline within the OSUL is covered by Margaret Mellinger. In that capacity, she provides instruction as requested either in-class or via the web, responds to reference inquiries, and develops materials to assist faculty members and students in their research.

The collection in robotics and related engineering and computer science subjects is built by Margaret Mellinger. Providing access to items not owned by OSUL is the domain of the Interlibrary Loan and Summit staff both at OSUL and at lending libraries. Print articles located in the OSU Libraries collections may be requested via the Scan and Deliver service,

which provides PDFs of the requested articles. Additional services for students include the physical attributes of the libraries including excellent computer facilities, study areas for individual and group work, and practice rooms for students.

Respectfully submitted,

Laurel Kristick
Collection Assessment and Science Librarian

October 30, 2013

Jim Lundy,

We appreciate the opportunity to review the proposal for graduate degrees in Robotics. Given that additional space resources are not required at this time and plans are being developed to renovate Graf Hall for all the future robotics activity, Capital Planning and Development supports this proposal.

Sincerely,

Jean Duffett, AIA
University Space Planner

Graduate Degree Program (Ph.D., M.S., and M.Eng.) in Robotics

Budget Justification

This proposal is to create a Graduate Degree Program in Robotics program in the College of Engineering, School of Mechanical, Industrial and Manufacturing Engineering. In general, we anticipate the costs to include a half-time assistant, some new library subscriptions, an increase in marketing and recruitment to support the program, plus some miscellaneous expenses. Services and supplies expenses are increased at a 3% annual inflation factor. Below is a breakdown of the costs.

	<u>2014-15</u>	<u>2015-16</u>	<u>2016-17</u>	<u>2017-18</u>
Personnel:				
<u>Salaries & Wages</u>				
Support Staff, 0.50 FTE (5% annual increase)	16,716	17,552	18,430	19,352
<u>OPE</u>				
Support Staff, at 34.75%, +.25% each year	<u>5,809</u>	<u>6,143</u>	<u>6,497</u>	<u>6,870</u>
Total Personnel Expenses	22,525	23,695	24,927	26,222
 Other Expenses:				
<u>Services & Supplies</u>				
Library costs, subscriptions	6,196	6,382	6,573	6,770
Printing, signage, business cards, etc.	500			
Webpage creation and maintenance	2,000	2,060	2,122	2,186
Marketing materials	2,000	2,060	2,122	2,186
Travel stipend for Graduate candidates	<u>3,000</u>	<u>3,090</u>	<u>3,183</u>	<u>3,278</u>
Total Other Expenses	<u>13,696</u>	<u>13,592</u>	<u>14,000</u>	<u>14,420</u>
 Total Program Expenses	36,221	37,287	38,927	40,642

Kagan,
Sorry for the delay.

EECS is supportive of creating this program and expect to have faculty advising students that will receive this degree. This collaboration is very similar to the current materials science program where faculty from across the college advise graduate students to completion in an inter-disciplinary fashion.

Terri

To: Kagan Tumer <kagan.tumer@oregonstate.edu>
CC: Kipp Shearman <shearman@coas.oregonstate.edu>

Several faculty are very interested in this program. Kipp Shearman (cc'd here) will be our primary contact. I think CEOAS could offer opportunities in regards to operational uses of robots, including internships and senior theses. Some of our faculty (like Kipp) might be willing to jointly teach a course. In regards to the oceanography section, you should add some material about communications (always a challenge underwater). In regards to Needs, you could add a paragraph about the expanding uses and applications of robots in oceanography (including gliders, wave gliders, AUVs, and ROVs). I didn't see it but it would be good to have one overview courses to cover principles and concepts for the non-specialists.

Kagan,

I fully support the Robotics graduate program as described in the attached Cat I proposal. The MEng, MS, Ph.D. programs that you outline are needed by both industry in the Pacific Northwest and the nation beyond. This program also meets the needs of students that are working with our eight robotics and controls faculty in MIME (and the eight plus additional faculty in EECS and beyond the COE) and will place OSU as one of the top five robotics programs in the US.

Rob

October 30, 2013

Jim Lundy,

We appreciate the opportunity to review the proposal for graduate degrees in Robotics. Given that additional space resources are not required at this time and plans are being developed to renovate Graf Hall for all the future robotics activity, Capital Planning and Development supports this proposal.

Sincerely,

Jean Duffett, AIA
University Space Planner

REVIEW PANEL REPORT, OREGON STATE UNIVERSITY,

PROGRAM OF ADULT EDUCATION

CONDUCTED NOVEMBER 22, 2013

1. OVERALL RECOMMENDATION:

The Review Panel recommends that the admissions to the program be suspended for a time to allow for sufficient program review to consider and adopt specific recommendations made by the review panel. The basis for this recommendation is outlined in the next section, Summary of Findings and Recommendations with detailed discussion in the body of the report in section three.

2. SUMMARY OF FINDINGS AND RECOMMENDATIONS 1-2 PAGES.

An on-site program review was conducted for the adult education program at Oregon State university on Friday, November 22, 2013 by a team consisting of four individuals, Dr. Stephanie Bernell, faculty member in the school of public health at OSU, Dr. James Coakley, associate dean of the business school and Chair of the Graduate Council at OSU, and two external members, Dr. Joe Campbell, director of corporate training, Nike, Inc., and Dr. Talmadge C. Guy, professor of adult education at the university of Georgia. The review team collected information on a variety of categories specified by the Oregon State university guidelines for program review through interviews and a review of documents.

RECOMMENDATIONS

1. Clarify program leadership roles in order to provide adequate intellectual and administrative leadership for continuous program improvement.
2. Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.
3. Work more closely with ecampus to develop a marketing campaign that has a broader outreach to increase the number of quality applicants.
4. Create a core faculty dedicated to adult education active in HRD and adult education professional associations.
5. Program faculty should consult with professional associations such as the Commission of Professors of Adult Education, American Association of Adult and Continuing Education regarding professional standards for graduate programs as it considers revisions and updates to the curriculum.
6. Support faculty engagement in national/international associations in human resource development or adult education professional fields.
7. Establish an advisory panel that would incorporate industry/professional representatives.

3. DETAILED FINDINGS

INTRODUCTION: OBJECTIVES OF THE REVIEW, PARTICIPANTS, ORDER OF EVENTS AND ORGANIZATION OF THE REPORT

The review team conducted a program review of the Oregon State university adult education program on Friday November 22, 2013. The team was comprised of four individuals, two Oregon State university personnel, Dr. Stephanie Bernell, faculty member in the school of public health, Dr. James Coakley, Associate Dean of the Business School and Chair of the Graduate Council, and two external team members, Dr. Joe Campbell of Nike, Inc. and Dr. Talmadge C. Guy of the University of Georgia. The team held its initial meeting on Thursday, November 21 and was hosted at dinner by Graduate Dean Brenda McComb. The team made introductions, overviewed the review process, raised questions resulting from an initial review of the program self-study and discussed the agenda for the following day.

On November 22, the team convened at Furman Hall, College of Education to hold a series of meetings with program coordinator, Dr. Shelley Dubkin-Lee and Dean Larry Flick and Associate Dean Randy Bell and Dr. Sam Stern, faculty member and admissions committee member. At the conclusion of these meetings, the team traveled to Clackamas Community College in Willsonville where program classes are held. The team held a working lunch and then met with first and second year cohort students, and program faculty including the disciplinary liaison, Dr. Darlene Russ-Eft, Jonan Donaldson, Dr. Lucy Arellano, and Lori Bosteder. The team concluded its visit with a business meeting at the where issues were identified, recommendations were discussed and decided and assignments made for the preparation of the report.

The following sections provide a detailed discussion of the team's observations and recommendations. The main sections of the report are divided into Inputs, Productivity, and Outcomes and Impact of the adult education program. The final section summarizes the Conclusions made by the review team. The team was unable to comment on some of the factors identified in the self-study guide as data were not available in the program self-study or in other program records.

INPUTS

Mission

The mission of the adult education program is "to prepare work force education specialists to lead education and training programs in the work place, the community and in community colleges." (p. 5, Adult Education Program Self Study). The program emphasis recognizes the importance of developing leaders who promote, design and deliver lifelong learning opportunities in the context of the workplace. This is consistent with the mission of the college as specified in the college's mission statement and that of the university. Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.

Recruitment and Enrollment Trends

Program enrollment and matriculation trends are presented in Table 1. The absolute number of applicants to the program has increased since 2008 (2008: 18; 2009: 27; 2010: 48; 2011: 45 and 2012: 32). Although, from 2011 to 2102 there was a 29% decrease in the number of applications to the program. The percent admitted was 83, 89, 38, 33 and 40, in 2009, 2010, 2011, 2012 and 2013, respectively.

The number matriculated is quite modest. (2008: 8; 2009: 20; 2010: 15; 2011: 13 and 2012: 11). Notwithstanding 2008 when about half of those admitted chose to actually enroll, most students who are admitted chose to matriculate.

These numbers suggest that while the number of applications per year is increasing, the same trend does not hold for actual enrollment. In 2008, 8 students were enrolled in the Adult Education program. In 2012, 11 students enrolled in the program. According to the self-study and meetings with faculty and program leadership, recruitment is done ‘word of mouth’ and via ecampus. If the goal is to increase the number of quality applicants, it may be the case that program leadership needs to work more closely with ecampus to develop a marketing campaign that has a broader outreach to quality applicants.

Table 1.
Program Enrollment Trends

Data	2008	2009	2010	2011	2012
# of Applicants	18	27	48	45	32
Number Admitted	9	20	16	14	13
Number Graduating	6	15	11	13	11 (on track to graduate – 1 student is on leave)

The Adult Education degree does not seem to have a rigorous screening process for applicants. Applicants are required to have a 3.0 GPA in the last 90 credit hours of work, provide 3 letters of recommendation, and write an essay describing why they wish to pursue the Adult Education degree. One or two faculty members review the applicant file and determine whether the applicant is a good match for the program. If the applicant is determined to be a good fit for the program, an interview is scheduled. The interview can be face-to-face, by phone, or via Skype. The program does not require GRE scores as part of the applicant screening. From conversations with faculty, it seems as though all acceptable applications are accepted; however, applications from other countries are discouraged.

GRE scores are not a perfect indicator of success in a graduate program; however, the metric can provide some useful information. It is possible that by not requiring the GRE scores, there may be a perception of ‘easy entry’ into the program.

Curriculum strength

The curriculum is a 45 quarter hour program offered on a cohort model in which students enroll for four credits across seven academic terms. Currently, the program offers a series of four credit hour courses that comprise the main content areas in the curriculum. Additionally, a one credit course offered each quarter that focuses on instructional technology and design. Students enroll for five credit hours each term except for summer when they enroll for nine credit hours. A required internship experience is intended to provide an integrative an opportunity for students to apply knowledge and concepts to practice. Internship experiences are identified and developed by students and approved by faculty. A capstone experience is also required in which students develop a portfolio designed as an integrative learning experience. Based on information provided to the review team, the curriculum has been revised on several occasions most recently in 2011. The program is offered exclusively through eCampus at the Clackamas Community College in Willsonville.

There are three primary emphases in the curriculum-instructional technology and design, organizational development and leadership, and adult learning and instruction. A review of the courses as well as interviews with students reveals that the curriculum offers a set of experiences that can be disjointed. For example, students are required to take a series of instructional technology and design courses but are not able to put these skills to use in developing the final portfolio for faculty review. The curriculum map provided in the self-study does not provide a clear indication of the overall conceptual framework that drives the curriculum. While students expressed satisfaction with courses and instructors, particularly the instructional technology and design courses, they were less clear about the value and meaningfulness of the organizational development or leadership aspects of the curriculum. The learning outcomes specified cover a broad range of roles and competencies. However, based on the review of the content and curriculum design, there are several recommendations for improving the curriculum overall.

The curriculum currently focuses equally on developing competencies in five professional roles, four of which are defined by the International Society for Performance Improvement (ISPI). The equal weighting of these roles in the curriculum addresses breadth while sacrificing the depth one might expect from a successful masters candidate. To address this, the faculty should consider creating a core curriculum with options that allow more in-depth specialization in, for example, leadership, design or organizational development. This will allow candidates to specialize and tailor their program to specific professional pursuits. In its current design, each of the individual roles might be considered a certificate program. Together they do not constitute a degree of mastery over any role or the profession.

The current program is solely based on ISPI standards. There is a missed opportunity to consider perspectives from other professional bodies including The American Society of Training and Development (ASTD) and the American Association of Adult and Continuing Education's Commission of Professors of Adult Education regarding professional standards for graduate programs. As a point of reference, the Commission of Professors has published a set of standards for graduate programs as a guide to program quality and program development. (See Standards for Graduate Programs in Adult Education, Revised November 2008-Commission of Professors of Adult Education.

<http://cpae.memberclicks.net/assets/documents/CPAE%20Grad%20Standards%202008.pdf>).

There was some confusion overall whether the program is designed to develop training design

professionals and/or Adult learning experts. A curriculum redesign of the program should clarify design intent and consider some of the standards from other appropriate professional bodies in the redesign.

Quality of personnel and adequacy to achieve mission

The program is staffed by four full time faculty members and several part-time faculty. The program is housed in an organizational unit with two other programs, College Student Services Administration and Community College Leadership, share faculty resources across programs. As a consequence, there is no full-time dedicated faculty to the adult education program. Program leadership is provided by the Graduate Program Coordinator (Shelley Dubkin-Lee) and the Discipline Liaison (Darlene Russ-Eft). Full-time faculty teach in the adult education program as well as the concentration in Community College Leadership

There are no dedicated faculty to the program as most faculty teach across the two programs in the academic unit, Adult and Higher Education. The leadership roles of Discipline Liaison and Program Coordinator together should provide intellectual and administrative leadership. However in conversation with the faculty it is evident that these roles are unclear and are being refined to clarify leadership responsibility. The consequence of this is a void in terms of intellectual leadership for the program. Critically important matters relating to vision, direction, strategic planning and resources remain underdeveloped.

Level and Quality of Infrastructure

The program is housed in Furman Hall on the Corvallis campus. The program is delivered at the Clackamas Community College Wilsonville Training Center. Given the hybrid format of the program (25 percent online, monthly delivery of the in-person sessions) the Wilsonville facilities are very adequate to support the curriculum. The students do not appear to need space outside of classroom activities.

The program coordinator indicated that most administrative support is provided by graduate students from other College programs on the main campus. Dean Flick indicated that administrative support was available from the Dean's office. There does appear to be some confusion on this issue, with the program suggesting they needed dedicated administrative support and the Dean's office indicating that such support was available.

Quality of Organization Support

Since the reorganization of the College of Education (merger with the Science and Math Education program from the College of Science and appointment of a new Dean), the organizational support structure for the Adult Education Program appears to be in flux. The program appears to be held together by Shelley Dubkin-Lee, the program coordinator. The Review Team was especially concerned that the Dean of the College was not familiar with the program.

The College is not providing adequate support to maintain sufficient academically-qualified faculty for delivery of the academic component of the program. The academic faculty (Russ-Eft, Stern, and Arellano) also support other academic programs within the College. While Russ-Eft is the academic director of the program, she only teaches one course in the program and has a very heavy advising load of doctoral students (approximately 20). Professor Stern teaches two courses in the program, and Arellano teaches one course. Of the 36 credits of academic coursework within the program,

only 20 credits are delivered by academic faculty. The review team strongly recommends that adequate resources be provided for program leadership and faculty support.

Table 2.

AE Faculty and Courses

Faculty Member	Course(s) Taught	# of Credits
Arellano	AHE 553 – Adult Learning Theory & Adult Development	4
Stern	AHE 533 – Needs Assessment & Research	4
	AHE 534 – Organization & Systems Theory	4
	AHE 567 – Leadership & Human Relations	4
Russ-Eft	AHE 532 – Instructional Systems Design II (Prog. Eval.)	4
Reese (Adjunct)	AHE 531 – Instructional Systems Design I (Prog. Dev.)	4
Grenz (Adjunct)	AHE 547 – Instructional Strategies for Adult Learners	4
Bosteder (Adjunct)	AHE 539 – Designing Training Documentation	4
Donaldson (Adj.)	AHE 522-525 – Instructional Technology I-IV – 1 Credit Each Term	4
Dubkin-Lee	AHE 510 – Internships	5
	AHE 505 – Reading & Conference Portfolio Development	4

PRODUCTIVITY

Summary data were not available for evidence relating faculty and student scholarly productivity. The review did note that Professor Russ-Eft is a noted scholar and has held leadership positions in professional associations related to the field of HRD. A new faculty member, Dr. Arellano has just been appointed with a degree in higher education and organizational change. Based on a review of faculty vitae, it does not appear that the faculty, apart from Dr. Russ-Eft, have a strong record of scholarly activity particularly in the fields of HRD or adult education. Students are part-time and are not involved in scholarly activities or research with faculty.

Data available in the program the self-study and through group interviews with students in both currently active cohorts indicate that students are generally satisfied with the program. Students did have some suggestions for improvement and the self-study notes this as well. Suggestions for improvement had to do with the additional faculty assistance with internships, eliminating duplication or overlap in course content across courses, and developing electronic portfolios to use skills learned in coursework.

OUTCOMES AND IMPACTS

The placement and success of graduates is one key success measure of any academic program and the self-study report and in-person reviews indicated anecdotally that graduates have had some success progressing or retaining positions. This was reinforced by conversations with existing students, several of whom said the course was opening up new opportunities. The final recommendation regarding placement is to consider the establishment of an advisory panel that would incorporate industry/professional representatives. This would be a direct way to ensure the programs are meeting the needs of potential employers.

4. CONCLUSION AND RECOMMENDATIONS FOR IMPROVEMENT

The adult education program appears to be in a state of flux as it seeks to stabilize its faculty, curriculum, and organizational position in the college of education. This statement recognizes that the college itself is currently undergoing a state of transition in which the adult education is seeking to find its strategic position. This situation creates an excellent opportunity for the program to re-evaluate its market, curriculum, and goals.

The team recommends the following actions be taken.

1. Clarify program leadership roles in order to provide adequate intellectual and administrative leadership for continuous program improvement.
2. Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.
3. Work more closely with ecampus to develop a marketing campaign that has a broader outreach to increase the number of quality applicants.
4. Create a core faculty dedicated to adult education active in professional associations in the field of HRD and adult education.
5. Program faculty should consult with professional associations such as the Commission of Professors of Adult Education, American Association of Adult and Continuing Education regarding professional standards for graduate programs as it considers revisions and updates to the curriculum.
6. Support faculty engagement in national/international associations in human resource development or adult education professional fields.
7. Establish an advisory panel that would incorporate industry/professional representatives.

Graduate Program Review of EE and CS

The site visit for the Graduate Program Review of Electrical Engineering and Computer Science took place on April 3-4. It included meetings with many constituencies including students, faculty, staff and several levels of administration such as the leadership of the School and College. The final itinerary of the visit is reproduced as Appendix 1 of this report. The review team members express their appreciation for the thorough *Graduate Self Study* and the hospitality of our hosts, as well as their responsiveness and openness throughout the process.

Review Team:

Stephen Phillips, Ph.D., P.E.
School Director and Professor

Overall Recommendation

The review team agrees that the EE/CS Program is functioning well and should be expanded.

Graduate Program

The School offers three graduate degrees: Ph.D., M.S. (with thesis) and M.Eng. (coursework only). In the past decade, the School expanded enrollment in the Ph.D. program, while reducing enrollment in the Masters programs.

The survey data and the conversations with current graduate students indicated a remarkably clear satisfaction with their graduate experience. The program appears to, in the perception of the students and alumni, to be meeting or exceeding all expectations. The graduate students and faculty are generally satisfied with the structure of the ECE and CS graduate programs. The committee did not have an opportunity to meet with any M.Eng. students and there seems to be minimal interaction between the M.Eng. students and the M.S. and Ph.D. students.

Ph.D. Recruiting

The faculty were generally satisfied with the quality of the Ph.D. students. As indicated in the *Self Study* (pp. 13-16), ECEE has a well-developed admissions process with key admissions decisions made by faculty within research groups, and all incoming students admitted to a research group. The quality of students is generally high and admission appears to be highly competitive – only 31 percent of the ECE applicants are admitted (on average) while 45 percent of the CS applicants are admitted.

Still, there was concern that the strongest applicants, even those awarded Fellowship offers, typically declined the offer to attend higher-ranked schools. Also, there was a general unease that the best candidates are not even applying to OSU. The percentage of admitted students who actually matriculate to the program appears to be low (37 percent for ECE, 29 percent for CS), with 62 and 71 percent of the students (ECE and CS respectively) refusing the offer to come to OSU. The faculty are developing initiatives to increase the perception and international awareness of the faculty and programs in the hope of attracting high quality faculty and students.

The School does have specific goals to increase the representation of women and under-represented minority students, with strategies to provide scholarships and to recruit through personal connections.

Admitting and recruiting Ph.D. students is delegated to research groups, rather than handled centrally. This has the benefit of incentivizing faculty to be involved in the process. Also, it's an appropriate response to the fact that the student demand and selectivity varies across the research groups. On the other hand, groups that are small and less selective struggle to recruit strong students, possibly because their top prospects are less interested in committing to the research group in the first year than they would be in joining the school generally, without an early affiliation.

Recommendation: To recruit from a larger pool of candidates, and perhaps to bring in some star students, consider recruiting students who have non-traditional backgrounds. This might include students who majored in another area of math, science or engineering; also, it might include computing professionals who have been out of school for awhile. This will require creating an alternate path through the graduate programs – one that enables students to gain a solid foundation before progressing to graduate work.

Strength of Curriculum

The breadth and depth of ECE courses listed in the catalogue appears more than adequate to support the graduate programs in Electrical and Computer Engineering (M.S., M.Eng. and Ph.D.). The structure of the required breadth and depth courses for these programs seems appropriate and appears to be consistent with practice at peer institutions.

The CS curriculum is considerably weakened by the lack of faculty in some core areas. Examples include operating systems, compilers and cybersecurity. This is likely to hurt student recruitment into the graduate program, as well as their job prospects afterwards.

Recommendation: The long-term solution is to recruit faculty in these core areas of CS. In the short-term, consider re-assigning a few professors to develop and teach courses in these core areas, even if it is outside of their research areas. Also, consider hiring adjunct faculty for these core classes. For example, you might offer a compiler class taught by a visitor from Intel. To solve the logistical problem, the class might be taught using tele-presence equipment, or it might be offered in a 1-week compressed form.

A general consensus of graduate students is that they struggle to find graduate courses they want to take. This is exacerbated by an unusually high coursework requirement, at least in CS.

Recommendation: Consider reducing the number of courses required of Ph.D. students. In CS, students are required to take two core courses, then three courses in each of three areas. Perhaps it would be better to require the two core courses, one course in each of three areas (for breadth), and three courses in the student's research area (for depth). This reduces the course load from eleven to eight, which might help students, faculty and administrators.

Recommendation: In addition to meeting the coursework requirement, Ph.D. students are required to pass a qualifying exam as well. Commonly, a degree program requires either courses or a qualifying exam, but not both. Consider dropping one.

Recommendation: Students generally agreed that the "slash courses" (which enroll both undergraduates and graduate students) are ineffective. Some faculty assign different exercises and projects (and possibly exams) to the two groups of students, and this seems to improve the experience. Consider requiring this practice in slash classes.

Recommendation: There is some concern among the graduate students and faculty that not enough "pure" 500 and 600 level courses are offered on a regular basis. The students report some unpredictability in the schedule of how often, and in which quarters, specific graduate courses are offered. (This appears to be, at least in part, due to the need to cover teaching of the courses in the fast-growing undergraduate program.) Consider publishing course schedules, at least tentative ones, two years in advance so that graduate students can make plans.

Recommendation: Students receive little feedback from the Departments on their progress through the Ph.D. program. It seems that all students are reviewed annually – in CS by the faculty, and in ECE by the Director. Based on these reviews, consider providing regular feedback and guidance to the students.

Enrichment Opportunities for Students

Recommendation: About one-third of the Ph.D. students expressed interest in teaching an undergraduate class, serving as the instructor, not just as a TA. Consider offering this opportunity to selected students, not only for their benefit, but also to help meet the School's teaching mission.

Recommendation: While some students felt they had enough contact with companies, others wanted more contact in order to explore internships and careers. These students expressed frustration with the School's career fairs because they are focused on undergraduate students. Consider holding a separate career-fair event for graduate students or making the current fairs more explicitly graduate-student oriented.

Recommendation: Some graduate students requested more opportunities for professional development, such as grant writing workshops. Consider providing these opportunities within the School, College or University.

Student Performance

As indicated in the NAS survey, the GRE scores of the OSU students are competitive with student scores at peer institutions, as are the percentage of students with external fellowships.

As pointed out in the self-study, the graduate students have won a number of honors and awards. 83% of the surveyed alumni found jobs within 6 months after graduation. Most of them (82%) found employment directly related to their degree.

Level and quality of infrastructure

The EECS information technology support group was noted by many as being outstanding. The computing and teaching laboratory equipment appears to be first-rate with a regular equipment maintenance and replacement schedule. The ECE and CS faculty research labs and graduate student office space is well appointed, attractive and state-of-the-art. The Kelley building comfortably houses nearly all of the EECS personnel and laboratories (except for some teaching labs and the clean-room which are in nearby buildings). The open design of this building appears to be very effective in encouraging student and faculty interaction both formally and informally (e.g. coffee shop and atrium). If the projected aggressive growth rate is accomplished the facility will become very stressed in the next few years.

Rankings and ratings

The *Self Study* notes the U.S. News & World Report ranking of the CS program is number 63 (out of 94 programs) and the ECE program is number 72 (out of 134 programs). These rankings have not changed in the last 10 years. The program indicates some concern with these rankings in that they set a goal of improving these rankings.

Some insight as to what might be affecting these rankings and how these programs rank relative to the peer institutions (defined by OUS and OSU for such comparisons) can be obtained from the 2010 NAS survey of graduate programs. In the attached spreadsheet (OSU-EECS-ProgramReview.xlsx), we show the values of some comparators for the OSU programs and those of the peer institutions. The OSU program is competitive with a strong group of peer institutions in faculty grantsmanship, support of students, gender equity, demographic tenure profile, and GRE scores. As the programs note, OSU has a smaller number of students and faculty than their peers, they published less and are less cited than their peers. (This issue might be addressed, in part, with senior faculty hires). The data on completion rates in the NAS survey do not agree with current evaluations.

The school is strong relative to its current peer group (top 50-75 EE, CE and CS programs) and has realistic aspirations for achieving many of the metrics of the top 25-50 peer group, especially in its research and graduate programs.

Rankings often do not reflect the true strength of the program but, instead, represent the lagging perception among peers. This requires very long timescales to change. Faculty recognition and size are generally also correlated with rankings. This suggests that recruiting high-profile faculty (IEEE and ACM Fellows and NAE members) to fill faculty vacancies can be especially effective. This often requires the use of endowed professorships and identifying donors for this must be started very early in the planning process. Another effective approach is to identify niches where EECS can build internationally recognized top programs. Leveraging the state's particular natural, human and infrastructure resources may be a starting point. The planned growth in faculty size will also contribute positively to improved rankings over time.

Recommendation: Consider a faculty recruiting strategy that leverages local strengths (e.g. natural resources, Intel), focuses on a few targeted interdisciplinary areas and pursues recruits in groups so that start-up equipment and facilities can be shared. Begin to raise funds now for future endowed faculty positions.

Organizational Support

The current leadership of the College and School seems to be very effective, and the leaders seem to have a shared vision. Moreover, the leadership is strongly supported by the faculty. The department administration takes pride in its academic and research programs and promotes them vigorously. The leadership appears to be very effective in procuring

resources and charting a direction for the school and its programs while the associate director effectively manages the existing programs and facilities. There were very few criticisms from the faculty about the overall leadership of the unit. A few of the faculty have concerns about the growing administrative burden on the faculty for budgeting, procurement, time reporting, etc.

The collegiality among the faculty seems extraordinarily high. Everyone is to be congratulated for helping to create and sustain that environment.

Recommendation: Currently it seems that all available funds – both current funds and anticipated funds – are earmarked for faculty growth. While this is clearly important, consider using a portion of the funds for administrative, instructional and other supporting activities.

Recommendation: The plan for faculty growth is very ambitious, and it carries some risks. One of the sources of funding for the growth is the INTO program. The leadership of the College and School should assess the reliability of the funding.

Recommendation: The EECS advisory board is large and engaged in the Program. Consider leveraging the Board for specific support of the program, in the form of cash, internships, funded research, scholarships, endowments and faculty support.

Recommendation: It seems that the ECE and CS programs are largely distinct. Building strength at the intersection of ECE and CS could leverage the successful integration of the two programs in one academic unit. Consider, for example, hiring joint faculty and conducting EECS-wide seminars of broad interest to graduate students and faculty.

Mission of the Program in Relation to the University

The *Self Study* of this graduate program provides clear evidence of alignment to the mission of the College of Engineering and to the three Signature Areas of Distinction in Phase II of the Strategic Plan for the University (advancing science of sustainable earth ecosystems, improving human health and wellness, and promoting economic growth and social progress). The ECEE faculty collaborate extensively with researchers across campus, and are nationally and internationally recognized for their outstanding research contributions. As such, the School enhances the reputation of the College of Engineering and OSU.

Thursday, April 4th

7:30 AM Breakfast at Hilton Garden Inn with School Head Terri Fiez
(Bruce Porter & Stephen Phillips)

8:15 - 9:00 Terri Fiez and Bella Bose (Kelley Engineering Center Boardroom, KEC 1126)

9:00 - 9:45 Dean of College of Engineering, Sandra Woods (KEC 1126)

9:45 —10:00 Break

10:00 - 10:45 EECS Graduate Committee (KEC 1126)
(Bella Bose, Prasad Tadepalli, Thinh Nguyen, Nicole Thompson)

10:45 - 11:45 EECS Faculty (KEC 1126)

11:45 - 12:30 Working Lunch for Review Panel (KEC 1126)

12:30 - 1:45 Facilities Tour (Dearborn, Kelley and Owen Labs, Graduate student offices)

1:45 - 3:00 Graduate Students (KEC 1007)

3:00 - 3:15 Break

3:15 - 4:00 Program Director (Terri Fiez and Bella Bose) (KEC 1126)

4:00 - 5:00 Executive Session (KEC 1126)
(Brenda McComb, Bruce Porter, Stephen Phillips, James Coakley, Walt Loveland)

6:30 PM Dinner at Big River
(Bruce Porter, Stephen Phillips, Bella Bose, Terri Fiez, EECS Faculty)

EECS Action Plan for Graduate Programs

The School of EECS thanks the graduate review team -- Stephen Phillips, Bruce Porter, James Coakley and Walt Loveland -- for their thorough analysis and review of our graduate programs and their thoughtful recommendations for improvement.

The review team has applauded the current leadership of the College and the School and commended the remarkable collegiality of the faculty members. They wrote, *"the EECS faculty collaborate extensively with researchers across campus, and are nationally and internationally recognized for their outstanding research contributions. As such, the School enhances the reputation of the College of Engineering and OSU."*

The review team has made a number of good recommendations which we have carefully considered. We summarize the recommendations below with our analysis and implementation plan.

Ph.D. Recruiting

Recommendation 1: To recruit from a larger pool of candidates, and perhaps to bring in some star students, consider recruiting students who have non-traditional backgrounds. This might include students who majored in another area of math, science or engineering; also, it might include computing professionals who have been out of school for a while. This will require creating an alternate path through the graduate programs – one that enables students to gain a solid foundation before progressing to graduate work.

Action Plan: We agree that the current setup is not conducive to non-traditional students without appropriate undergraduate background. There is some interest in relaxing the requirements to attract non-traditional students from disciplines such as Mathematics and Psychology, and some evidence here and elsewhere that this improves diversity without lowering the standards. The research group structure of the graduate admissions process allows us to do this selectively on an experimental basis. We will let the research groups to gradually relax the requirements in some areas, e.g., Theoretical Computer Science, Signal Processing, and Human Computer Interaction, measure their success, and expand to other areas.

Strength of Curriculum

Recommendation 2: The CS curriculum is considerably weakened by the lack of faculty in some core areas. Examples include operating systems, compilers and cybersecurity. This is likely to hurt student recruitment into the graduate program, as well as their job prospects afterwards. The long term solution is to recruit faculty in these core areas of CS. In the short term, consider re-assigning a few professors to develop and teach courses in these core areas, even if it is outside of their research areas. Also, consider hiring adjunct faculty for these core classes. For example, you might offer a compiler class taught by a visitor from Intel. To solve the logistical problem, the class might be taught using tele-presence equipment, or it might be offered in a 1-week compressed form.

Action Plan: The current faculty searches include areas such as Systems,

Programming Languages, and Security and would mitigate these weaknesses. A joint undergraduate/graduate Operating Systems course has been proposed as a stop gap measure until we hire a systems person. We will do our best to cover all areas as much as possible, but we really need more faculty members in many critical areas.

Recommendation 3: Consider reducing the number of courses required of Ph.D. students. In CS, students are required to take two core courses, then three courses in each of three areas. Perhaps it would be better to require the two core courses, one course in each of three areas (for breadth), and three courses in the student's research area (for depth). This reduces the course load from eleven to eight, which might help students, faculty and administrators.

Action Plan: We are considering changing the requirements to three courses in the students' research area and two courses each in two other areas, plus two core courses. This would make the requirements to 9 courses, which is the minimum required by the graduate school.

Recommendation 4: In addition to meeting the coursework requirement, Ph.D. students are required to pass a qualifying exam as well. Commonly, a degree program requires either courses or a qualifying exam, but not both. Consider dropping one.

Action Plan: We find the qualifier to play a crucial role in filtering the unprepared students as soon as possible. Course requirements are also important to prepare the students for research. We have recently revised our qualifier exam processes so that they are more uniformly applied and fair to the students. We will review the results of the exams and fine-tune our processes in light of this suggestion.

Recommendation 5: Students generally agreed that the "slash courses" (which enroll both undergraduates and graduate students) are ineffective. Some faculty assign different exercises and projects (and possibly exams) to the two groups of students, and this seems to improve the experience. Consider requiring this practice in slash classes.

Action Plan: There are only three slash courses in CS. We will try to reduce the number of slash courses in ECE as much as possible and will use different projects and exams as suggested for the remaining.

Recommendation 6: There is some concern among the graduate students and faculty that not enough "pure" 500 and 600 level courses are offered on a regular basis. The students report some unpredictability in the schedule of how often, and in which quarters, specific graduate courses are offered. (This appears to be, at least in part, due to the need to cover teaching of the courses in the fast-growing undergraduate program.) Consider publishing course schedules, at least tentative ones, two years in advance so that graduate students can make plans.

Action Plan: We will publish a two year rolling plan to allow students to plan better. We plan to hire at least 12 new faculty in the next 2-3 years, which will help us introduce more advanced graduate classes.

Recommendation 7: Students receive little feedback from the Departments on their progress through the Ph.D. program. It seems that all students are reviewed annually – in

CS by the faculty, and in ECE by the Director. Based on these reviews, consider providing regular feedback and guidance to the students.

Action Plan: We will work on improving the review process and provide useful feedback to students. We are moving towards a web-based evaluation of the students where students can upload their resumes and their CVs to “Portfolio Central” website (see below for details) which could ease the burden on the students and make it more useful for them.

Enrichment Opportunities for Students

Recommendation 8: About one-third of the Ph.D. students expressed interest in teaching an undergraduate class, serving as the instructor, not just as a TA. Consider offering this opportunity to selected students, not only for their benefit, but also to help meet the School's teaching mission.

Action Plan: The E-campus program is already providing a number of opportunities for CS students to teach. The ECE students are also teaching some sections for the INTO students. In addition, the summer classes are mostly taught by the graduate students. We will consider having more of the lower level courses taught by the graduate students based on the interest of the students. We will also consider the long-term goals of the students in doing the teaching assignments.

Recommendation 9: While some students felt they had enough contact with companies, others wanted more contact in order to explore internships and careers. These students expressed frustration with the School's career fairs because they are focused on undergraduate students. Consider holding a separate career fair event for graduate students.

Action Plan: We will highlight our Masters students during the Undergraduate career fairs so that they will benefit more from them. We are also planning to build a “Portfolio Central” website where all of our students (undergrad + grad) can upload their resumes/CVs, plus screenshots and information about the projects that they worked on and the kinds of internships or jobs they seek. This would make it easier for students to get internships and for companies to find interns. It would provide EECS some documentation of what our students are accomplishing and would curate a mass of information that EECS could draw upon for marketing.

Recommendation 10: Some graduate students requested more opportunities for professional development, such as grant writing workshops. Consider providing these opportunities within the School, College or University.

Action Plan: There are some grant writing workshops offered by the graduate school. Some faculty members are interested in offering courses on research methods in the school, which we will pursue. We will also try to offer courses in technical writing and presentations which will benefit everyone.

Recommendation 11: It seems that the ECE and CS departments are largely distinct. Building strength at the intersection of ECE and CS could leverage the successful integration of the two programs in one academic unit. Consider, for example, hiring joint

faculty and conducting EECS-wide seminars of broad interest to graduate students and faculty.

Action Plan: We currently have close to 20% members who work across disciplinary boundaries, e.g., in Communications, Systems, and Signal Processing. We are planning to make more hires in these bridge areas such as Computer Engineering, Systems, Security and Theory. We have a weekly EECS-Colloquium that covers both areas. Currently the attendance is only required for first year students. We are considering changes to make it more attractive to all students and especially useful for advanced research students. We will start a distinguished colloquium series where leading scholars and academics will be invited to speak to our students and faculty.

Rankings and Ratings

Recommendation 12: Consider a faculty recruiting strategy that leverages local strengths (e.g. natural resources, Intel), focuses on a few targeted interdisciplinary areas and pursues recruits in groups so that start-up equipment and facilities can be shared. Begin to raise funds now for future endowed faculty positions.

Action Plan: We are trying to recruit in areas, e.g., Security, Embedded Systems, and Communications, that are important for local industry. We have one endowed chair so far and are raising funds for more.

Organizational Support

Recommendation 13: Currently it seems that all available funds – both current funds and anticipated funds – are earmarked for faculty growth. While this is clearly important, consider using a portion of the funds for administrative, instructional and other supporting activities.

Action Plan: We hired a number of instructional faculty and advisors to help with increased teaching loads. We are also using our discretionary funds for scholarships and teaching assistantships that go to graduate students. Currently, we are evaluating the staffing of our computer support and seeing if additional resources are needed in this area.

Recommendation 14: The EECS advisory board is large and engaged in the Program. Consider leveraging the Board for specific support of the program, in the form of cash, internships, funded research, scholarships, endowments and faculty support.

Action Plan: The board helps us with different kinds of internships, and scholarships. Some of the funding for the ECE program comes from the industries on the advisory board. We will plan to engage them more in the future by giving them better access to our students and their work through our Portfolio Central Website.

PROPOSAL FOR THE ACCELERATED GRADUATE PLATFORM

Proposed Combined Undergraduate-Graduate Degrees through the Accelerated Graduate Platform

This proposal describes foundational requirements for an OSU undergraduate or graduate degree program should the program choose to develop a combined undergraduate-masters degree platform – the Accelerated Graduate Platform (AGP) – in which undergraduate students apply to a masters program during their junior year. Students typically would begin some of their graduate coursework and thesis or project work during their senior year. Completion of the AGP allows both a bachelors and masters degree to be conferred. Participation by individual programs is entirely voluntary, and we propose this as a 3-year pilot of two admitted cohorts to assess interest and success. The Office of the Registrar will work with the Graduate School to create a Banner attribute to allow tracking of program participants. Any programs deciding to participate in this co-degree program may set their own requirements for their program, which allows programs to be more restrictive than what is described in this proposal.

Foundational Requirements

Outstanding undergraduate OSU students who have completed 105 of their required 180 credits (or more for some undergraduate programs) toward their degree with an overall GPA of 3.25 or better are eligible to apply to an OSU Accelerated Graduate Platform during the winter term of their junior year. The masters program will notify co-degree applicants of admissions decisions during spring term. Accepted students will matriculate into the masters program during the following fall term. With careful planning students can then complete a masters degree within 1 year, beyond completion of the bachelors. Students admitted to the co-degree program must maintain a GPA of 3.0 or better throughout their undergraduate and masters degree programs, or they will be subject to dismissal from the AGP.

Successful applicants are allowed to apply a maximum of three graduate courses (taken for a letter grade and not including blanket-numbered courses), taken as an undergraduate, to both their undergraduate and masters degrees. An illustration of how this would work for an undergraduate program requiring 180 credit hours is shown in Figure 1. (Note that some undergraduate programs require more than 180 credit hours.)

Figure 1: Example of how three 3-credit courses (9 credits) would count towards both undergraduate and graduate programs for a 180-credit hour undergraduate program

The credits from these three courses are deducted from the allowed 15 transfer credits for students who have transferred into OSU. Only credits with letter grades of B (3.00) or better may be counted for graduate credit. In addition, those students in the Honors College or in other undergraduate programs that require a thesis, may use the undergraduate thesis as a step towards completion of the masters thesis. However, the undergraduate thesis would not serve as a replacement for a required masters thesis.

Admission to the AGP is not automatic and will be competitive with students applying directly to the graduate program. Students must identify a graduate advisor prior to applying to the AGP. Students applying to a graduate program that requires a thesis for their masters degree must have a professor who agrees to serve as the thesis advisor prior to application. For honors students, this may be the student's honors thesis advisor. For students in non-thesis masters programs, the selected graduate advisor must be willing to work with the student to guide the scheduling of required coursework.

Applicants must meet English language proficiency standards per the Graduate Catalog. (link to <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=36#Section3831>) The following steps must also be completed by all applicants to the AGP:

- Online application via the Graduate School website
- An AGP study proposal or coursework plan of study signed by the graduate advisor for non-thesis masters programs or graduate thesis advisor for masters programs with thesis.
- Statement of Purpose essay of 2-3 pages. This statement must include, at a minimum, the details of the graduate plan of study and, for programs with a thesis, the masters thesis topic.
- Three letters of recommendation from individuals knowledgeable of the student's academic background and potential for success in a graduate degree program.
- Transcripts from all undergraduate institutions attended.

Students enrolled in an AGP will be eligible for financial aid (Pell Grant) until they complete their undergraduate degree. Once the undergraduate degree requirements are met, the student may be supported on a Teaching or Research Assistantship, or the student will pay graduate tuition and fees. The bachelors degree will be conferred after all requirements for the bachelors degree are met; the masters degree will be conferred after all requirements for the masters degree are met.

Assessment of Pilot Program

The Graduate School, the Office of Academic Programs, Assessment and Accreditation, and the Graduate and Curriculum Councils will assess the success of the first two AGP cohorts after 3 years. Indicators of success will include, but are not limited to, number of programs participating, enrollment trends in each program for both AGP and direct admits, time to degree, and degree completion rates.

Additional Background on Programs at Other Universities:

Cal Poly: (link to <http://me.calpoly.edu/about/degree-programs/graduate/>) up to 8 units of undergraduate technical electives may be double-counted towards the masters requirements

Southern Methodist: (link to <http://www.smu.edu/Lyle/Departments/EMIS/Programs/41MastersDegree>) Up to nine (9) SCH of graduate course work can be applied towards the undergraduate degree requirements.

Western Carolina: (link to <http://www.wcu.edu/6589.asp>) Up to 12 credit hours of these upper level courses can be transferred toward the 30 credit hour requirements of the M.S. program

Claremont Graduate University: (link to <http://www.cgu.edu/pages/623.asp>) variable credits double counted depending on program – 16 credits is the maximum

Duke University: (link to <http://meng.pratt.duke.edu/4plus1>) four departmental graduate courses taken during the senior year can toward the MEng degree.

Tulane: (link to <http://tulane.edu/sse/psyc/academics/graduate/masters-program.cfm>) Up to 6 graduate credit hours may count toward the bachelors and the M.S. degree

University of Delaware: (link to http://www.ce.udel.edu/current/graduate_program/4plus1.pdf) Up to 6 credits of graduate course work (600 level and above) taken while a senior, may be “dual-counted” towards the Bachelor’s and the Master’s degrees.

Purdue (link to https://ag.purdue.edu/foodsci/Pages/4plus1_program.aspx)

Arizona State University: (link to <http://sbhse.engineering.asu.edu/academics/accelerated-degree/>) It allows students to SHARE up to nine credit hours between their bachelor’s and master’s degrees, and RESERVE up to nine hours to use later in their graduate program.

University of Florida: (link to <http://www.admissions.ufl.edu/ugrad/combdegree.html>) Students who meet the combined-degree application requirements can enroll in 12 to 21 credits of approved graduate courses (depending on the major) during their junior and senior years. These credits will satisfy undergraduate degree requirements and, if admitted to graduate school at UF, they also will satisfy graduate degree requirements if the courses are completed with grades of B or better.

San Diego State University: (link to http://www.engineering.sdsu.edu/mechanical/msme_4plus1.aspx) students who plan to specialize in Design and Manufacturing can take as double counted classes two of the following courses

Washington University at St Louis (link to <http://engineering.wustl.edu/DualDegreeProgram.aspx>)

Stanford University: (link to <http://gap.stanford.edu/4-2.html>) no units may be double-counted

Rensselaer Polytech: (link to <http://srfs.rpi.edu/update.do?artcenterkey=291>) credits applied to satisfying requirements of the undergraduate degree cannot be used to satisfy the requirements for the master's degree.

Vanderbilt University: (link to <http://as.vanderbilt.edu/academics/specialdegreeprograms/4plus1/>) There is no double-counting of credits

University of Massachusetts Amherst (link to http://www.umass.edu/sphhs/public_health/academics/undergraduate/4plus1DegreeProgram.html)

Florida State University: (link to <http://www.gradstudies.fsu.edu/Academics-Research/Degree-Programs/Combined-Bachelors-Masters-Degree-Programs>) double counting of up to 9 credits allowed in some programs.

Yale University (link to <http://yalecollege.yale.edu/content/combined-bachelors-and-masters-degree-programs-professional-schools>)

SUNY Albany: (link to http://www.albany.edu/undergraduate_bulletin/joint_degree.html) Combined programs require a minimum of 138 credits and up to 12 graduate credits may be applied simultaneously to the requirements for the baccalaureate.

University of Maryland: (link to http://www.provost.umd.edu/PCC_DOCUMENTS/DesignX_Combined.htm) Normally no more than nine credits of graduate courses applied to the bachelor's degree may be counted also for graduate credit in an individual student program.

Northwestern University (link to <http://www.tgs.northwestern.edu/academics/academic-programs/degree-programs/bachelors-masters/index.html>)

Miami University of Ohio: (link to <http://www.units.muohio.edu/reg/bulletins/GeneralBulletin2012-2013/combined-bachelors-and-masters-degree-program.htm>) Departments or programs with a combined degree may allow students to double-count up to 9 hours of graduate course work toward their undergraduate degree.

Rutgers (link to <http://soe.rutgers.edu/oaa/BS-Masters-programs>)

Clemson (link to <http://www.clemson.edu/ces/math/combined-bachelors-masters-program.html>)

Category II Proposal to Create a Clinical Sciences Option in the existing Comparative Health Sciences Graduate Degree

Justification

The College of Veterinary Medicine, in collaboration with partners in the Division of Health Sciences, has established a new interdisciplinary graduate program of Comparative Health Sciences. This program offers both MS and PhD degrees and focuses on health sciences graduate education and research at the whole animal level, but will be complementary to and supportive of existing programs at the molecular and cellular level. Students are encouraged to study topics that bridge two distinct areas of study in order to benefit from the interdisciplinary structure of the program. Administered by the Graduate School, this interdisciplinary program provides an opportunity for all units within the College of Veterinary Medicine to participate in graduate education and encourages the integration of several related areas of emphasis currently existing in other units. Students are required to complete a program core curriculum as well as an option-specific curriculum. The program currently has one transcript-visible option, Biomedical Sciences, which is intended to accommodate students with advisors in the College of Veterinary Medicine.

The new Clinical Sciences option will reflect the unique program of dual clinical residents/graduate students. The purpose of this option will be to educate veterinarians in the conduct of research in a specialty clinical environment, consistent with the overall goals of comparative veterinary medicine.

Program Requirements

This option will be available only to dual clinical residents/graduate students of the College of Veterinary Medicine, in conjunction with 2-, 3- or 4-year residencies in a veterinary specialty. These residency programs are structured according to the guidelines defined by the individual Specialty Colleges (e.g. American College of Veterinary Surgeons, etc.). Dual clinical residents/graduate students enrolled in the Clinical Sciences option must fulfill programmatic requirements of their individual specialty college residencies including satisfactory annual performance evaluations, in addition to graduate degree requirements for successful completion of their concurrent MS or PhD degree.

Residency training programs provide in-depth knowledge of veterinary clinical specialties and supporting disciplines under the guidance and supervision of Diplomates of specialty colleges. The objectives of these programs are to promote aptitude and clinical proficiency in the diagnosis, treatment, and management of animals with specific issues (dependant on specialty), as well as to instruct the resident in the science and practice of veterinary specialties, and to provide the resident with the opportunity to pursue career goals in teaching, research, clinical service, and/or specialty practice. Clinical skills and judgment are built through clinical experience, teaching of professional students, and participation in veterinary specialty rounds and seminars.

Dual clinical residents/graduate students on a clinical specialty service shall be responsible for receiving clinic appointments and obtaining history and pertinent information from clients, supervising daily management of hospitalized animals, participating in clinical teaching, and providing optimal clinical service and prompt professional communications. Duties will also include a limited number of didactic lectures and participation in laboratory and continuing education courses. Responsibilities will include night and weekend emergency duty in the

hospital. These assignments are rotated among the residents, clinical fellows, and interns. These responsibilities are integral to residency training and required coursework for the Clinical Sciences option, including Postgraduate Medicine, Surgery or other specialty (VMC 632, VMC 634, or similar) and Topics in Medicine, Surgery, or other specialty (VMC 682, VMC 684, or similar) courses.

Coursework Requirements for Comparative Health Sciences Major (MS, PhD): Clinical Sciences Option

Students enrolled in the MS degree in Comparative Health Sciences will complete a total of 45 graduate credits, including 12 thesis credits. Students enrolled in the PhD degree will complete a total of 108 graduate credits, including 36 thesis credits. The following tables list the courses required to obtain the Clinical Sciences option in Comparative Health Sciences. Highlighted courses are option-specific, while the remaining courses are required for the major.

Course Title	Course number	Number of credits
Topics in Medicine, Surgery, or other clinical specialty	VMC 682, VMC 684, or similar	6
Postgraduate Medicine, Surgery or other clinical specialty	VMC 632, VMC 634, or similar	6
Research Perspectives	New (PhD only)	3 (1 per quarter) (PhD only)
Methods of Data Analysis	ST 511 or similar	4
Biomedical Ethics	GRAD 520 or equivalent	1
Grant Application Preparation	New	1
Seminar	VMB 507	1
Thesis	VMC 503(MS), VMC 603 (PhD)	12 (MS), 36 (PhD)
Electives (including required electives chosen below)		14 (MS), 50 (PhD)

Required Electives - must include at least 2 of the following courses (or similar courses approved by student's graduate committee and College graduate committee):

Course Title	Course number	Number of credits
Biochemistry	BB 550 or similar	3
Molecular and Cellular Biology Techniques	MCB 524 or similar	1
Introduction to Bioinformatics	New	1
Introduction to Epidemiology	New	1
Introduction to Genomics	New	1
Introduction to Immunology	New	1

Research

In addition to coursework required in the student's program of study, MS thesis and PhD students will complete an interdisciplinary research project in comparative health sciences, under the support and direction of their major professor.

Learning Outcomes and Assessment

MS

1. Conduct research with the outcome being an original manuscript.
 - Assessed by the production and evaluation of a written thesis and during oral exam, with Grad Council Rep having specific responsibility for assessment
2. Demonstrate mastery of subject material
 - Assessed by coursework grades and during oral exam
3. Be able to conduct scholarly activities in an ethical manner
 - Documentation of training activities in Program of Study (GRAD 520)
4. Fulfill residency program requirements of veterinary specialty college
 - Assessed by annual evaluations by Resident Advisor and/or specialty section, completion of residency training log (ACVS only) and/or specialty board examination(s)

PhD

1. Produce and defend an original significant contribution to knowledge
 - Assessed by written thesis and during final oral exam with Grad Council Rep having specific responsibility for assessment
2. Demonstrate mastery of subject material
 - Assessed by coursework grades, during oral exam
3. Be able to conduct scholarly activities in an ethical manner
 - Documentation of training activities in Program of Study (GRAD 520)
4. Fulfill residency program requirements of veterinary specialty college
 - Assessed by annual evaluations by Resident Advisor and/or specialty section, completion of residency training log (ACVS only) and/or specialty board examination(s)

Statement Regarding Students with Disabilities

"Accommodations are collaborative efforts between students, faculty and Disability Access Services (DAS). Students with accommodations approved through DAS are responsible for contacting the faculty member in charge of the course prior to or during the first week of the term to discuss accommodations. Students who believe they are eligible for accommodations but who have not yet obtained approval through DAS should contact DAS immediately at (541) 737-4098."

Graduate Master's Program Assessment Plan

Process

How does your unit reflect on the assessment data gathered and who is involved? How do the results of your assessment efforts relate to strategic planning and overall program review?

The college graduate committee reviews the data gathered. The results are taken into consideration for future planning.

What data are archived? Where, how and for what duration?

So far, 2 years of assessments have been archived. In the future, a minimum of 10 years will be kept on file.

Program Outcomes, Measures and Benchmarks or Milestones

List the university and program level student learning outcomes (GLO).	Conduct research or produce some other form of creative work	Demonstrate mastery of subject material	Conduct scholarly or professional activities in an ethical manner	Program level GLO 1 ^y Fulfill residency requirements of veterinary specialty college
What year will you report on this outcome? (Every outcome must be assessed at least once every five years.)	Annually	Last year in program	Last year of program	Last year in program
List the measures/methods /instruments to be used to assess the outcome. Identify measures, methods, and/or instruments as being direct (D) or indirect (I). (At least one of these must be direct measures.)	Annual evaluation by student and committee	Annual evaluation by student's committee, coursework	Annual evaluation by student's committee, documentation of training activities on Program of Study	Option specific coursework, annual evaluation by Resident Advisor and specialty section
What benchmarks/milestones will you use to determine if the outcome has been satisfactorily met by the students? ^z	Written thesis and final exam (thesis defense)	Coursework grades, final oral exam	Completion of GRAD 520 or comparable course, documented on Program of Study	Completion of residency training log (ACVS only) and/or completion of specialty board exam

^z Examples include courses, workshops, program of study, internship/externship, research proposal, presentations of research or project results, project or thesis defense, final report or thesis. This is not an exhaustive list of possibilities.

^y Programs especially with options will likely have specific learning outcomes (competencies, goals, etc.). State those and how they are being assessed.

SUMMARY: This proposal seeks to create a new Clinical Sciences option. Cheryl

Policy Governing Graduate Student Teaching

Current policy

"Students working toward graduate certificates or advanced degrees are not permitted to teach graduate courses"

Faculty as Student Policy

"OAR 580-020-0005 specifies that one may not simultaneously be an OUS faculty member and an OUS graduate student." "Exceptions to OAR 580-020-0005 will be granted only in cases in which the individual requesting the exception has presented a compelling case justifying such an exception including assurance that there are no issues of conflict of interest deriving from the petitioner's student status and faculty employment." This generally requires that the unit/program of enrollment is separate and distinct from the unit/program of employment.

Non-teaching professional faculty members are not required to submit petition materials. However, a non-teaching professional faculty member's employment supervisor cannot serve as a major professor or graduate program committee member.

Professional faculty in teaching positions are subject to the policy. As a result, the policy also applies to graduate students who are appointed as instructors based on their academic or professional qualification.

Graduate Faculty Membership

Activity 1 – Teach Graduate Courses.

All faculty who are listed as the instructor of record for a graduate-course must be appointed as graduate faculty.

Proposed Revision to Current Policy:

Appointment as Instructor of Record. For a graduate student to be appointed as the Instructor of Record for a graduate course (including the 500-level component of a slash course):

- The unit/program of employment must be separate and distinct from the unit/program of enrollment.
- The instructor must be appointed to the graduate faculty based on their academic/professional qualification by the unit/program of employment.
- In the event students from the instructor's unit/program of enrollment are enrolled in the course, alternative arrangements must be made for evaluating the work of graduate students.

Appointment as Teaching Assistant. For a graduate student to be appointed as the Teaching Assistant for a graduate course (including the 500-level component of a slash course), the Instructor of Record for the course must ensure that all potential conflicts of interest are avoided to the maximum extent possible. This must include, at a minimum:

- Making alternative arrangements to evaluate the work of graduate students from the same unit/program as the Teaching Assistant, OR
- Ensuring that the Teaching Assistant has advanced to candidacy status (after prelims) and all graduate students in the class have not advanced to candidacy

Proposed Revision to Current Policy:

Appointment as Instructor of Record. For a graduate student to be appointed as the Instructor of Record for a graduate course (including the 500-level component of a slash course):

- The unit/program of employment must be separate and distinct from the unit/program of enrollment.
- The instructor must be appointed to the graduate faculty based on their academic/professional qualification by the unit/program of employment.
- In the event students from the instructor's unit/program of enrollment are enrolled in the course, alternative arrangements must be made for evaluating the work of graduate students.

Appointment as Teaching Assistant. For a graduate student to be appointed as the Teaching Assistant for a graduate course (including the 500-level component of a slash course), the Instructor of Record for the course must ensure that all potential conflicts of interest are avoided to the maximum extent possible. This must include, at a minimum:

- Making alternative arrangements to evaluate the work of graduate students from the same unit/program as the Teaching Assistant, OR
- Ensuring that the Teaching Assistant has advanced to candidacy status (after prelims) and all graduate students in the class have not advanced to candidacy

Appointment as Teaching Assistant. For a graduate student to be appointed as the Teaching Assistant for a graduate course (including the 500-level component of a slash course), the ~~Instructor of Record~~ Director of the Graduate Program must seek approval from the Graduate School and provide assurances for the course must ensure that all potential conflicts of interest are avoided to the maximum extent possible. This ~~must may~~ include, at a minimum:

- Making alternative arrangements to evaluate the work of graduate students from the same unit/program as the Teaching Assistant, OR
- Ensuring that the Teaching Assistant has advanced to candidacy status (after prelims) and all graduate students in the class have not advanced to candidacy

Rationale for change:

- 1) Make it the responsibility of the Department to determine how to resolve potential conflicts of interest. Do not dictate how to resolve.
- 2) Seeking approval of the graduate school is similar to the process of having instructors appointed to the Graduate Faculty. It would require the Department to defend the qualifications of the GTA to evaluate graduate work.

Standing Rules

The Graduate Council has jurisdiction over the policies, procedures, and requirements of graduate education. The Council establishes and reviews admission standards, basic degree requirements, and general policies; approves all ~~graduate faculty members,~~ new programs, and courses; and periodically reviews all existing graduate programs. The creation, design, and specific requirements of graduate programs and of individual student's programs are the responsibilities of the academic units; however, no academic unit has authority to waive or supersede the general policies of the Graduate Council. As needed, the Graduate Council reviews applications and nominations for specific university-level graduate student awards and recommends award recipients. Upon request, the Council also reviews university-level proposals for extramural funding of graduate training and education programs.

Rationale: Review and approval of graduate faculty members is not a curricular issue. This function has, in essence, been delegated to the Graduate School. The Graduate School should be responsible for evaluating the qualifications of individuals to be appointed to the Graduate Faculty.

Oregon State University Continuous Enrollment Policy *Effective Fall term, 2002*

Approved, February 25, 2002
Timothy P. White
Provost and Executive Vice President

Preface

Implementation of this policy will occur over the interval Fall 2002 to Fall 2004. Categories of students will be affected as described below:

- The policy is effective as of Fall 2002 for all new graduate students admitted for the first time in Fall 2002 or thereafter, and for all currently inactive graduate students who are next readmitted beginning Fall 2002 or thereafter.
- Currently enrolled graduate students who change into a different degree program (e.g., from masters to doctorate, or from one degree to another) in Fall 2002 or thereafter are subject to the policy at the time of change..
- Currently enrolled students who become inactive by failing to register for more than two consecutive terms will become subject to the policy, effective with the term of readmission to the University.
- All graduate students, including currently enrolled students, will become subject to this policy no later than Fall 2004, regardless of their original matriculation date.

Executive Summary

Continuous graduate enrollment refers to the policy of requiring continuous registration of graduate students from original matriculation until all degree requirements are met.

All graduate students in graduate degree and certificate programs must register continuously for a minimum of 3 graduate credits and pay fees, regardless of the student's location, if they will be using any University resources (e.g. facilities, equipment, computing and library services, or faculty or staff time) until their degree or certificate is granted or until their status as a credential seeking graduate student is terminated. This includes students who are taking only preliminary or final examinations or presenting terminal projects. Graduate students who do not plan to make use of University resources during summer session are not required to register during the summer and do not need to submit an Intent to Resume Graduate Status form. However, if students do plan to utilize University resources during summer session, they must register for the minimum 3 graduate credits. It is the student's responsibility to register for the appropriate number of credits that may be required for any funding eligibility and/or compliance as outlined by specific agency regulations under which their funding may be governed.

A graduate student intending to resume active graduate student status following interruption of his/her study program for one or more terms must apply for Regular Leave of Absence (Maximum: 3 terms for master's students; 3 terms prior to candidacy and 3 terms after advancement to candidacy for doctoral students) or Planned Leave of Absence (Maximum: 9 terms) to maintain graduate student standing in their programs and to avoid registration for 3 credits for each term of unauthorized break in registration. Intent to Resume Graduate Status Forms must be received by the Graduate School at least 15 working days prior to the first day of the term involved. The time the student spends in approved on-leave status will be included in any time limits relevant to the degree. Students in on-leave status may not a) use any University facilities, b) make demands upon faculty time, c) receive a fellowship or financial aid, or d) take course work of any kind at Oregon State University. Regular Leave of Absence is granted in cases where the student indicates good cause (e.g. illness, employment, family issues, financial need, personal circumstances). Planned Leave of Absence is granted to students for whom the design of their academic program is such that the offering of courses and/or the conduct of research/scholarly work are not on a continuous term-to-term basis. Planned Leave of Absence is set by the program with the approval of the Graduate School. Approval of the Major Professor, Department/Program Chair, and Graduate Dean are required for all Leaves; multiple terms of leave may be requested at one time.

Continuous Enrollment Policy

Page 2 of 4

A graduate student who takes an unauthorized break in registration by failing to maintain continuous enrollment or by failing to obtain Regular or Planned Leave of Absence will relinquish his/her graduate standing in the University. Students who wish to be reinstated will be required to file an Application for Graduate Readmission, pay the readmission fee, and register for 3 graduate credits for each term of unauthorized break in registration.

In the case of extraordinarily extenuating circumstances, students may appeal the provisions of the Continuous Graduate Enrollment Policy by submitting a detailed request in writing to the Dean of the Graduate School for additional terms of Leave of Absence or forgiveness of additional credits of registration.

PHILOSOPHY

Graduate study is a learner-focused activity that is characterized by partnerships between graduate students and the Graduate Faculty and is supported by the Graduate School. As a learning community we are committed to a learning environment that fosters a collaborative approach to the goal of graduate student success. We believe that graduate student success includes timely completion of academic goals and is dependent on access to programs, services, and University resources and a high degree of interaction between graduate students and the Graduate Faculty.

BACKGROUND

Continuous graduate enrollment refers to the policy of *requiring* continuous registration of graduate students from original matriculation until all degree requirements (i.e. successful completion of the final examination and/or submission of library copies of thesis to Graduate School) are met. Such policies generally specify that, once admitted to a program, graduate students must maintain active enrollment for a specified minimum number of credits every term until the degree is completed. Such policies are commonplace in many U.S. universities. The intent of such regulations is to encourage graduate students to complete their degrees in a timely manner and without dropping out of school unless approved.

RATIONALE

The primary objectives of the Continuous Enrollment Policy are to:

1. encourage graduate student degree completion;
2. minimize time to degree for graduate students;
3. require registration at any time when University resources, including facilities and faculty time, are used;
4. provide the University with an accurate account of active graduate students;
5. provide the University with an indication of student intent when students break registration; and
6. hold a place for students who intend to resume graduate study following a Leave of Absence.

POLICY**I. Minimum Registration**

Unless on approved Leave of Absence (see Section II), all graduate students in graduate degree and certificate programs (level 02) must register continuously for a minimum of 3 graduate credits, excluding summer session, until their degree or certificate is granted or until their status as a credential seeking graduate student is terminated. This includes students who are taking only preliminary comprehensive or final examinations or presenting terminal projects. Students must register for a minimum of 3 credits and pay fees if they will be using University resources (e.g. facilities, equipment, computing and library services, or faculty or staff time) during any given term, regardless of the student's location. If degree requirements are completed between terms, the student must have been registered during the preceding term.

For students who have successfully completed the final examination in accordance with *Survival Guide* diploma deadlines (see Graduate School web site), registration during the subsequent term is not required. However, for students whose final examination occurs after the diploma deadlines published in the *Survival Guide*, minimum registration of three graduate credits during the subsequent term is required only if library copies of the thesis have not been submitted to the Graduate School within the first two weeks of the subsequent term.

Graduate students who do not plan to make use of University facilities or faculty time during summer session are not required to register during the summer and do not need to submit an Intent to Resume Graduate Status form. In such instances, summer session will not be counted within allowed Leave of Absence limits (see section II.C.). However, if students do plan

to utilize facilities or faculty time during summer session, they must register for a minimum of 3 graduate credits.

It should be noted that graduate assistantship eligibility requires enrollment levels that supercede those contained in this Continuous Enrollment Policy. Various agencies and offices maintain their own registration requirements that also may exceed those specified by this Continuous Enrollment Policy (e.g., those of the Veterans Administration, Immigration and Naturalization Service for international students, and those required for federal financial aid programs.) Therefore, it is the student's responsibility to register for the appropriate number of credits that may be required for funding eligibility and/or compliance as outlined by specific agency regulations under which they are governed.

II. Leave of Absence

On-leave status is available to students who need to suspend their program of study for good cause. Students who desire a leave of absence will work with their major professor, program administrator, and the Graduate School to arrange authorized leave. Graduate programs that are designed such that the offering of courses and/or the conduct of research/scholarly work are not on a continuous term-to-term basis will work with the Graduate School to arrange planned leave. Students understand that while on leave they will not use University resources. Graduate Faculty members are students' most important resource at the University and will work closely with graduate students to ensure timely completion of academic goals, understanding of the Continuous Graduate Enrollment Policy, and that graduate students enroll each term other than when they are on authorized leave. The Graduate School will assist graduate students and Graduate Faculty members with administrative procedures related to the Continuous Graduate Enrollment Policy. The Graduate School recognizes the diverse circumstances and unpredictability of graduate students' lives and will work in partnership with the graduate community in arranging leaves and responding to unanticipated situations.

A graduate student intending to resume active graduate student status following interruption of his/her study program for one or more terms, excluding summer session, must apply for Regular or Planned Leave of Absence to maintain graduate student standing in his/her degree program and to avoid registration for 3 graduate credits for each term of unauthorized break in registration (See Section IV below). Intent to Resume Graduate Status Forms must be received by the Graduate School at least 15 working days prior to the first day of the term involved. The time the student spends in approved on-leave status will be included in any time limits relevant to the degree (See Sections C.1. and C.2. below). Students in on-leave status may not a) use any University facilities, b) make demands upon faculty time, c) receive a fellowship or financial aid, or d) take course work of any kind at Oregon State University.

A. Eligibility. Only graduate students in good standing are eligible for Leave of Absence.

B. Leave of Absence Categories.

1. Regular. Regular Leave of Absence is granted in cases where the student demonstrates good cause (e.g. illness, temporary departure from the University for employment, family issues, financial need, personal circumstances). The student must indicate reason for on-leave status.

2. Planned. Planned Leave of Absence is granted to students for whom the design of their academic program is such that the offering of courses and/or the conduct of research/scholarly work are not on a continuous term-to-term basis. Planned Leave of Absence is set by the program with the approval of the Graduate School. (For a current list of Planned Leaves, consult the Graduate School at 737-4881.) Planned Leave of Absence includes students enrolled in summer-only programs and graduate students in other programs that have been pre-approved by the Graduate School for Planned Leave of Absence. Summer-only students and other students who qualify for Planned Leave of Absence must a) be in good standing, b) submit the Intent to Resume Graduate Status Form indicating *each term* for which leave is requested, and c) complete all degree requirements within the time limits established in the *Graduate Catalog*. Requests for multiple terms of Leave may be submitted at one time.

C. Limits.

1. Regular Leave of Absence is granted for a specified time period that may not exceed three terms, excluding summer session. In no case may Regular on-leave status exceed the maximum listed below throughout the student's entire degree program.

- a. Master's degree. Master's degree students, except for summer-only students, may request a maximum of three academic terms of Regular on-leave status during the course of study for the degree. The time spent in approved on-leave status will be included in the 7-year time limit for completing all requirements to the master's degree.
- b. Doctoral degree. Doctoral degree students may apply for a maximum of three academic terms of Regular on-leave status prior to advancement to candidacy, and they may apply for a maximum of three academic terms of on-leave status after advancement to candidacy. The time spent in approved on-leave status will be included in the maximum 5 years that may elapse between the preliminary oral examination and the final oral examination.

2. Planned Leave of Absence is available for a maximum of 9 terms, excluding summer session, to students enrolled in programs for which Planned Leave has been approved by the Graduate School. However, time spent in Planned on-leave status will be included in all time limits pertaining to the student's degree program.

D. Approval. Approval of the Major Professor, Department/Program Chair, and Graduate Dean are required.

III. Student Fees

Students with approved on-leave status are not required to pay tuition or fees. However, students who must register as per section I, "Minimum Registration" (p. 1), must pay both tuition and student fees.

IV. Unauthorized Break in Registration

A graduate student who takes an unauthorized break in registration by failing to maintain continuous enrollment or by failing to obtain Regular or Planned Leave of Absence will relinquish his/her graduate standing in the University. Students who wish to have their graduate standing reinstated will be required to file an Application for Graduate Readmission, pay the readmission fee, and register for 3 graduate credits for each term of unauthorized break in registration. The Readmission application must be approved by the student's Major Professor, Department/Program Chair, and Graduate Dean. Acceptance back into a graduate program is not guaranteed even if the student departed in good standing. The petitioner for readmission will be required to meet University and departmental admission requirements and degree completion requirements that are in effect on the date of readmission. Review of the Application for Readmission may also result in a change of residency status from resident to nonresident.

When readmission is approved, the student must register for a minimum of 3 graduate credits for each term of unauthorized break in registration in addition to the minimum 3 credit registration required during the first term of reinstatement and each subsequent term until all degree requirements have been met except for any subsequent term of approved Leave as provided in Section II of this policy. If the accumulated credits total more than 16, the student may be required to enroll in more than one term of increased registration.

V. Appeal

In the case of extraordinarily extenuating circumstances, students may appeal the provisions of the Continuous Graduate Enrollment Policy by submitting a detailed request in writing to the Dean of the Graduate School for additional terms of Leave of Absence or forgiveness of additional credits of registration.

Materials linked from the May 19, 2014 Graduate Council agenda.

From: Sarah Williams in APAA

We are updating our Policies and Procedures, which generally have been created by the Curriculum Council, the Graduate Council, and other Faculty Senate committees over the years. Here is the website within Academic Programs, Assessment, and Accreditation:

<http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/curricular-policies-and-procedures>.

I would like The Graduate School's and or the Graduate Council's advice or input on the following policy, **since it was last revised on June 12, 2001:**

Certificates - Graduate

A graduate certificate is defined in the OSU Catalog (** see below) as "a structured progression of graduate-level courses that constitute a coherent body of study with a specific defined focus within a single discipline or a logical combination of disciplines. It is designed for students who have completed a baccalaureate degree and are in pursuit of advanced-level learning." A graduate certificate requires a minimum of 18 graduate credits, and may include a final project, portfolio, or report for integration of the sequence of course materials. Up to 8 quarter credits may be transferred toward an 18-credit graduate certificate.

A designated graduate certificate program coordinator oversees each individual program. The program coordinator is responsible for all aspects of administration of the program—applicant screening, admissions recommendations, and annual reporting to the graduate school. Annual reports will briefly summarize program status and provide statistics on enrollment and student progress. The Graduate School is responsible for certification of program completion.

Students must be admitted to the university, either into a graduate degree program or into a graduate certificate program. This requires that the student hold a four-year baccalaureate degree from an accredited college or university. Individual certificate programs may specify additional requirements, including minimally acceptable grade point averages. Students may be reclassified as "advanced degree students" by following the procedure listed in the Graduate Student Information section of the OSU Catalog. Credit earned at OSU prior to admission to the certificate program may be applied toward a certificate as transfer credit, per current graduate credit transfer policy.

Courses and certificates completed will be transcribed by the university registrar as a part of the student's permanent university record. The certificate is awarded when all course material is satisfactorily completed and a cumulative grade point average of 3.00 has been attained for all courses to be used toward the certificate. Award of a separate document suitable for framing will be at the discretion of (and will be the responsibility of) the unit administering the program.

Credits earned in fulfillment of a certificate program may be applied to a graduate degree program at OSU, so long as they meet the appropriate standards for use in the degree and the criteria for transfer credit as defined in the Graduate Student Information section of the OSU Catalog. Courses completed for a degree program may likewise be applied toward a certificate program. Courses completed no more than 7 years prior to the certificate award date may be used to satisfy requirements.

Proposals to establish a new undergraduate certificate follow the OUS Outline for New Certificates [sic: no longer available] and are approved via the Category I approval process [broken link: see: <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/category-1-proposals>].

Approval & Revisions: 6/12/01 Graduate Council Additional Information: OUS Outline for New Certificates [sic: no longer available]; Category I Proposals [broken link: see: <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/category-1-proposals>]

**In fact, the current language in the OSU Catalog is as follows:

The graduate certificate curriculum consists of a minimum of 18 graduate credits, and may include a final project, portfolio, or report for integration of the sequence of course materials. All graduate student programs of study submitted to the Graduate School must consist of, at a minimum, 50 percent graduate stand-alone credits. The remaining credits may be the 500 component of 400/500 slash courses. No final examination is required.

We would like to have the most current information about Graduate Certificates in our Policies, in language consistent with the Catalog and approved by both the Graduate School and the Graduate Council.

Materials linked from the May 19, 2014 Graduate Council agenda.

Rosemary pulled up all certificates on the books of which two that highlighted do not appear to be active.

College Student Service Administration (CSSA) Program
Adult Education & Higher Education Leadership, College of Education, Oregon State University

REVIEW PANEL REPORT*
Submitted December 2013; Revised January 2014

1. Overall Recommendation:

Based on our review, our recommendation is to **restructure** and **expand** the College Student Service Administration (CSSA) program.

2. Summary of Findings and Recommendations

The Oregon State University (OSU) CSSA program is a nationally known and highly regarded graduate preparation program and one of a few graduate programs in student services administration in the Pacific Northwest. The program is nearly 50 years old and has 500 alumni in various positions in higher education, many of whom have served as national leaders in the student affairs field. The program delivers quality graduate education experiences to enrolled students, indeed the review panel heard pride about program quality and that faculty members “do it exceptionally well”. The program is notably successful in graduation rates and job placement success of matriculated students. The program provides a substantial contribution to OSU campus life through graduate assistant work, internship service, and through professional development opportunities for the practitioners who serve as faculty members. Enabling scholar-practitioners to serve as faculty members in this program is a major program asset. As one faculty member noted, “we are seamless, the [relationship] is woven into the fabric of the institution”; indeed, another faculty member observed, “Campus would be fundamentally different if the program went away”.

The CSSA program aptly used the phrase, “A Timely Opportunity”, in their self-study. The convergence of the appointment of a new VP/SA, a new strategic plan for the College of Education, and the emergence of the Ecampus concept make it timely to address critical questions in this review. As noted in the self-study, the CSSA program must be stabilized, while continuing to build on its strengths, including the ability to attract a well-qualified cohort of students and a strong adjunct faculty of practitioner-scholars.

Introductory needs are framed here by the goals of the CSSA program from the self-study and specific recommendations follow in the report.

1. The CSSA program must affirm and commit to an academic home that would include identifying a sustainable funding source(s) for the program.
2. The home for the CSSA program should hire at least one full-time faculty member to provide a stable base of teaching, advising, theoretical perspective and scholarship--to complement existing adjunct faculty.
3. The CSSA program should develop a parallel ECampus/online program--to complement the on-campus program and extend the reach of CSSA nationally/internationally.
4. The CSSA program should continue to update the current on-campus program to maintain a robust and cutting-edge approach to pedagogy, practice, and encourage faculty scholarship.
5. The CSSA program seeks to continually improve and update its curriculum and practices. The CSSA program should build on its current commitment and strengthen the social justice focus or orientation in the program. The program graduation requirements should remain 60-72 quarter credit hours or two academic years in compliance with the Council for the Advancement of Standards in Higher Education (CAS) statement on master's graduate preparation. Other recommendations appear later in this report.

3. Detailed Findings

This section will briefly identify the strengths and weaknesses of the CSSA program or its context. They provide a basis of rationale for the recommendations that appear in the remainder of the report.

Strengths. The CSSA program has numerous strengths. It is a testament to the quality of the professional student affairs staff members who serve as faculty members in the program that the program has maintained these strengths in the face of diminishing academic and non-academic resources.

- a. The student affairs division, colleagues from area institutions, and the VPSA have maintained strong, consistent, quality support of the program evidenced by their teaching, advising, hiring GAs, and supervising internships. Those student affairs professionals who serve as faculty members in the program manage all program dynamics from recruitment and admission to internships placement and thesis supervision. These faculty members are practitioner-scholars who are active in their field evidenced by their publication, refereed presentations, and national leadership roles.
- b. The curriculum (i.e., program of study) is in voluntary compliance with the CAS standards evidenced by attention to (a) foundational studies, (b) professional studies, and (c) supervised practice.
- c. The CSSA program is organized around guiding values and competency areas. Students demonstrate evidence of these competencies throughout the program resulting in a capstone e-portfolio and/or thesis.
- d. The program allows appropriate flexibility for students in key choices such as areas of specialization or minor, sites for internships, and capstone experience.
- e. The program is appropriately selective enrolling approximately 20 students in each new cohort admitted from an applicant pool that averaged 72 in the last 5 years.
- f. The cohort model that begins with the social justice immersion retreat builds a cohort that trusts each other, creates a safe space community, and is open to learning and growing together. Students recognize that they learn from each other.
- g. Students demonstrate successful completion of the program with 85%-100% graduation rates and 100% job placement of those who graduate.
- h. Student affairs and academic affairs offices across campus hire CSSA students into graduate assistantships.
- i. The opportunity to be a graduate faculty member is excellent professional service to OSU, professional development for the faculty involved, and is a strength of a practitioner-based graduate program. The opportunity to have professional masters students in OSU offices as GAs or interns brings the latest of research, theory, and practice to benefit OSU students.
- j. The CSSA program addresses its own needs. At the time of this review faculty members were meeting to resolve issues with GA placement and funding of graduate students as well as holding preliminary discussions on the nature/role of an Ecampus program.

Weaknesses. Changes in the administrative structure and support have led to areas that we viewed as program weaknesses. These are addressed in more detail later in this report.

- a. The program needs financial stability from academic support and should not be dependent on student affairs for all funding. Student affairs will always be a partner in graduate preparation and any academic home has to both support and advocate for this program.

- b. The current CSSA faculty is comprised of one part time (.3FTE) Instructor (as of Jan. 1) who teaches three courses per year and co-coordinates the program, one Student Affairs administrator who devotes .5 of her full time administrative position FTE to co-coordinating the program and teaching in CSSA, and twelve adjunct faculty members. The program faculty members who are adjuncts typically teach one course per year and some also advise CSSA students and/or serve on their committees. These adjunct faculty members hold positions in student affairs or academic affairs at OSU, and are classified as "professional faculty" members. They receive no additional compensation for their CSSA work, although their teaching/advising responsibilities are expected to be included in their position descriptions. In addition, there are currently two adjuncts who hold positions outside OSU; they each receive a stipend for teaching one CSSA course per year.
- c. There is no full-time core faculty member aligned with an academic home and no budgeted administrative support from academic affairs. The evolution from two budgeted full-time faculty in the last ten year review was not clear to us particularly when one of those faculty lines was paid out of the VPSA budget. The program seeks to be CAS compliant as are other nationally known programs and the CAS standards assert: "At least one faculty member must be designated full-time to the program. Faculty must be adequate for the student enrollment and nature of the program requirements."
- d. Although there is an assessment and research course in the curriculum, students completing a thesis should be required also to take an appropriate research methods course prior to engaging with their thesis research.
- e. Obtaining a GA position is critical to the professional development of master's students and to the funding of their graduate study. The GA process is hard to navigate for prospective students. The funding levels are prohibitive of many offices offering a GA position that might like to do so.

4. Introduction:

This was a regularly scheduled ten-year review. The reviewers studied the CSSA self-study, the CSSA website, program faculty CVs, course syllabi, materials on professional association directories, and held meetings on the site visit day. We met with Graduate School Dean, Brenda McComb, on December 1 and were accompanied by her on our campus site visit on December 2. We met with program co-coordinators, Tom Scheuermann and Kim McAloney, Dean Larry Flick and Associate Dean Randy Bell of the College of Education, VPSA Larry Roper, a group of a fourteen (14) program faculty members, and nineteen (19) masters graduate students across several years in the program. Comments were welcomed after the review and several were received.

Reviewers. Internal reviewers were Dr. Michael Lerner, Professor of Chemistry, representing the OSU Graduate Council and Dr. Jack Higginbotham, Professor, Director of Space Science, representing the OSU Graduate Council. External reviewers were Dr. Leslie Webb, Associate Vice President for Student Affairs at Boise State University, representing student affairs employers and Dr. Susan R. Komives, Professor Emerita from the student affairs graduate program at the University of Maryland and past president of CAS.

Organization of the report. This report includes an overview that explains the national context of graduate programs such as this one under review. The report then addresses elements in the guidebook for program reviews. After a summary of key findings in critical areas, specific recommendations follow in that same section in a boxed format for ease in reading.

Context. *Graduate Programs in Student Affairs/College Student Services*

It was apparent from our review that readers would benefit from some perspective on the role of student affairs and the nature of graduate preparation in this field. The Student Affairs field is distinct in several regards: (1) it is a unique American pedagogical and administrative practice developed in the late 1800s now adopted world wide to use both the curriculum and co-curriculum to advance student learning, development, and success; and (2) it is unique in being a field of study embedded in the context that it studies (i.e., most fields prepare professionals for fields outside the academy or to teach a discipline in the academy). The Student Affairs profession encompasses administrative, educational, and counseling staff on over 5,000 college and university campuses in the USA (and others around the world) who engage in the educational and development experience of college students. The profession provides education programs and services to college students in the co-curriculum and supports the work of faculty in the curriculum. Student Affairs professionals contribute to institutional learning and developmental outcomes and promote retention, develop a campus community supportive of diversity, and enrich the learning of students through their involvement in campus life. Guided by professional values and ethical practices, student affairs professionals design programs and services based on developmental theory and data-based evidence from research and assessment of student outcomes. Developmental approaches refer to the concept that students move from simple, dualistic, less-complex thinking to complex, critical perspectives recognizing diverse frameworks. Developmental theory includes such domains as cognitive, psychosocial, social identities, moral, and spiritual. Student Affairs professionals work in departments such as career centers, academic advising offices, residence life, counseling centers, student activities, service-learning, leadership, health centers, recreation and intramurals, multicultural programs offices, admissions offices, or serve as Deans of Students or Vice Presidents for Student Affairs.

Graduate Programs. Just over 100 Student Affairs graduate preparation programs exist and are found predominantly at regional public state colleges and universities. With few exceptions, these programs are not found at Carnegie Doctoral/Research Extensive Universities. CSSA graduate programs are not ranked; however, they may be located in counseling departments or higher education departments and be part of those rankings. Occasional studies of program reputations among various stakeholders (e.g. senior student affairs officers) typically identify such nationally recognized programs as Bowling Green State University, The Ohio State University, University of Vermont, the University of Georgia, Indiana University, Iowa State University, the University of Maryland, and Miami University of Ohio. Other nationally recognized programs can be found at Colorado State University, Florida State University, the University of Arizona, California State University Long Beach, and Michigan State University. OSU indicates their peer competitive programs in the region are Seattle University and Colorado State University. There is no program accreditation and most programs are in voluntary compliance with the Council for the Advancement of Standards in Higher Education (CAS) standard on graduate preparation.

Focus of Graduate Programs. Student Affairs graduate programs may be found as a specialty within Higher Education Programs, within Counseling programs and as stand-alone departments usually within a College of Education. No particular undergraduate degree leads to graduate study in CSP although many students come from the behavioral or social sciences. The Master's degree is largely focused on foundational knowledge and skills for entry-level professional practice. The Doctoral degree is focused on advanced scholarship and research on college students, advanced developmental theory, and the student experience in higher education.

Faculty and Practitioners Linked. In this field, full-time graduate faculty are active members of practitioner associations; likewise, full-time practitioners with terminal degrees are often affiliate or adjunct faculty in the graduate program. The American College Personnel Association (ACPA) has a

Commission on Graduate Preparation that includes most graduate faculty in Student Affairs programs in the United States. Likewise, the National Association of Student Personnel Administrators (NASPA) also involves graduate faculty as active members. Graduate faculty members regularly serve in leadership roles in these associations including President of the associations. Full-time CSSA faculty members are often also members of educational research associations such as the American Educational Research Association (AERA) and the Association for the Study of Higher Education (ASHE). Faculty scholarship values practitioner-oriented books, chapters of books, and national convention presentations and papers that influence practice as well as research in refereed scholarly journals.

5. Inputs:

Mission. The first and most fundamental question raised during the program review is whether the CSSA program aligns with the strategic mission of Oregon State University:

As a land grant institution committed to teaching, research, and outreach and engagement, Oregon State University promotes economic, social, cultural and environmental progress for the people of Oregon, the nation and the world. This mission is achieved by producing graduates competitive in the global economy, supporting a continuous search for new knowledge and solutions, and maintaining a rigorous focus on academic excellence, particularly in the three Signature Areas: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress.

As currently configured, the CSSA mission is:

"... to prepare individuals for professional leadership and administrative positions in student services and academic affairs units/departments at four-year colleges and universities and –with limited specific focus in this area – community colleges.

However in the self-study, the CSSA faculty listed a goal to contemplate moving the academic focus to social justice. Accepting the shift of emphasis to social justice would the modified mission appears to align the program with the University's mission phrase: "... social progress." We conclude the mission is consistent with objectives of this profession and is in concert with the OSU mission.

Recruitment and enrollment trends of students. The applicant pool has been steady over the past 10 years with about 70 total applicants for about 15-20 positions, with the number of minority applicants rising steadily to about 1/3 of the 2012 total. Approximately 30 applicants are admitted to yield the 15-20 matriculated students. A high percentage of accepted students do matriculate at OSU. Although the original pool is modest for the number of slots, the matriculation rate for admitted candidates seems high relative to other programs at OSU.

Recruitment efforts largely focus on being in the NASPA and ACPA Graduate Directories, participating in the national NASPA Annual Conference graduate fair, and OSU Campus Days, which involves activities for visiting invited applicants. Students indicated that attractions to the program included the evident interest and attention provided by faculty, flexibility (as perceived in selecting an area of specialization and the thesis/project track option), no GRE requirement, and location in the Pacific NW. The admission committee consistently hears that location is the #1 motivator to apply; students also shared the commitment and quality of the faculty members as practitioners was a substantial reason in their decision to accept the admission offer. The program website is current and generally complete. The CSSA program is considering adding an Ecampus on-line program.

It is of note that CSSA participates, and indeed is a national leader, in the NASPA Undergraduate Fellows Program (NUFP) that provides mentoring to historically underrepresented and disenfranchised undergraduate students at OSU. CSSA has a very large NUFP population, with 10+ undergraduate students, and the graduate program benefits by matriculating several of these fellows (3-5) each year

from this pool. The program has national recognition for this commitment. This brings strong diversity to the program and appears to be a real strength of the program.

Recommendation: The Ecampus online program marketing should be integrated with the current campus-based program marketing.

Recommendation: The web site should include information on the credentials of faculty members who teach/advise in the program including such information as their graduate degrees and offices in which they work. Further, the website should contain a clear statement on courses required in the program and those that are offered as electives.

Admissions selectivity and other indications of selecting high quality students. CSSA students meet OSU graduate requirements for admission. We note again that the GRE is not required, and this was an attraction to some applicants. GPA and consistent GRE data were not available for accepted and matriculated students. These or other student academic metrics are important in evaluating the academic strength of student cohorts and the trends. Data should be available from the graduate school and collected and analyzed by the program annually to help guide and assess program recruitment changes. The rubric used in admissions decisions does take life experiences into account in making admissions decisions.

Level of financial support of students compared to peers. Most, but not all, students in the program receive graduate assistantships (GAs). Assistantships are offered in both student affairs and academic affairs departments. The GA remuneration package is highly competitive among peers (e.g. tuition remission, stipend, medical benefits).

CSSA students and faculty/staff both noted challenges with the assignment of these assistantships. The GAs are not guaranteed or coupled with the offer of admission, and most students apply for GA openings multiple times (in a process that parallels a typical job application) to obtain a GA position weeks or months after acceptance into the program. The problems with such processes are multiple: the process appears very stressful for applicants, the lack of an upfront assistantship policy probably discourages some top tier students from applying, and the delayed process forces some students to matriculate without clarity about support. That latter point has resulted in occasional students expecting, but not finding a placement, which is especially problematic for those required to pay out-of-state tuition. Finally, it seems that the process results in students accepting GAs that may be less relevant to their interests simply to ensure support.

On the other hand, it should be noted that support for Master's students is more the exception than the rule in OSU programs, so that CSSA is doing very well to find support for most of its students. We further note that the program faculty members were meeting even during our visit to realign the assistantship process and seeking avenues to address both the cost to sponsoring departments and the method of placement.

It cannot be overstated how important the role of the assistantship is to the success of the program. The number of offered/available assistantships has decreased over the past few years. In addition to internships for credit, the assistantship provides a practitioner experience that allows the student to experience and demonstrate the theoretical concepts learned in the classroom. Although students are encouraged to reflect the learning they achieve in their assistantships through their portfolios, there currently exists no evaluative link between program content and what is learned through the assistantship experience.

Recommendation: Because students successfully complete their academic requirements and graduate in large numbers, we recommend CSSA keep the GRE as optional, but obtain and evaluate GPA or other metrics for applicants and incoming classes.

Recommendation: CSSA should identify a mechanism to coordinate admissions with assistantship offers. At a minimum, the process should be streamlined for students so that the issue of support is resolved earlier in the process.

Recommendation: Explore and create a sustainable plan to stabilize the number of assistantships offered. This work is underway and it should be finalized for the 2014 cohort.

Recommendation: Articulate clearly the role of the assistantship in student learning and competency development and develop an evaluative component linked to the mission of the program. We are pleased that a draft rubric on goal setting for assistantships has been developed and a process to use it should be implemented.

Curriculum strength. The CAS standard on graduate preparation states “All programs of study must include (a) foundational studies, (b) professional studies, and (c) supervised practice. Demonstration of necessary knowledge and skill in each area is required of all program graduates.” The program is lauded for identifying a solid set of core values and identifying competencies reflective of good practices as enumerated by a joint NASPA and ACPA project. The e-portfolio requirement is an effective tool to help students assess their progress on those competencies and provides a useful tool for faculty advising.

The CSSA program clearly and appropriately identifies itself as a practitioner-focused degree program and requires 54 quarter credits for graduation spread over two years for a full-time student. This focus is appreciated by students and builds on the strengths of the faculty members and quality functional areas in student affairs that host their assistantships and internships. The CSSA program offers numerous internships and requires an appropriate number of credits hours as per CAS standards. Special topics courses and electives are regularly offered. Credit is offered for portfolio development, projects, and transition seminars. Students have numerous learning opportunities such as the opportunity to teach undergraduate courses through their GA role or as volunteers.

Currently there is one assessment and research methods course required of students. This may be adequate for a practitioner-based program. The review team finds it is insufficient however for those seeking an M. S. degree who need more foundation in their chosen research methodology to engage in their original research. It is too much to expect this one current course to cover such extensive material or for advisors to handle methodology as a tutorial.

The current degree program requires a minor or an area of specialization. Some intensive study (i.e., minors or specializations) is desirable and an attractive feature of the program. Students reported difficulty finding minors in which they could enroll. Most students seek an area of specialization. Areas of specialization are typically well-conceived, but some were “packaged” retrospectively and should be more intentionally designed with the faculty advisor as part of the degree requirements.

Syllabi show evidence of timely readings and effective assignments. The CSSA self-study indicated faculty member’s interest in creative pedagogies and appropriate hybrid course platforms.

The CSSA self-report indicated a commitment to social justice in the curriculum. Students and faculty members alike strongly supported this direction and it is congruent with good practices in the student affairs field and in graduate preparation. This focus is evident in the fall orientation retreats, program values/competencies, curriculum, and thesis topics. We applaud the CSSA community for articulating and enacting this commitment.

The CSSA program is investigating the market for expanding into an Ecampus on-line degree program. This program would appeal to and meet the needs of full-time professionals who currently lack a professional degree particularly those in international settings. There are very few on-line degree programs in this field and a great demand for them for those in remote regions, those not moveable, and those in developing countries whose institutions are expanding their expectations of co-curricular learning and student services. Funding structures at OSU also provide an incentive for programs to expand in the on-line environment with program support, faculty, stipends, and support in marketing and recruitment.

Recommendation: We recommend consideration be given to requiring a research methods course in the methodology planned for the thesis project. This course should be taken spring or summer of the first year. Ideally this would be a course already offered in the College of Education or one of the behavioral or social science fields and not drain current faculty resources.

Recommendation: We support and applaud the focused inclusion of a social justice perspective in curriculum, pedagogy, and program practices. Consideration should be given to audit program practices (e.g., admission decisions, internship placements) to modify those that may not currently uphold those social justice principles so the program is congruent in this message and in the lived student experience.

Recommendations: CSSA coordinators should work with the graduate school on (1) accessibility of existing minors to CSSA students and (2) transcript visible options for the chosen areas of specialization.

Recommendation: We support the Ecampus program development currently underway. As CAS requires, it is essential that an on-line CSSA program provide the quality of a similar curriculum and supervision as the campus-based program. Appropriate on-line courses should be available to campus-based students as well. Campus-based students should be encouraged to completed at least one course on-line to experience that environment and prepare them for supporting on-line learners in their professional positions.

Organizational Supports. The review panel examined the question of where does the CSSA program fit within the organizational structure of OSU? Four possibilities were identified through the process of the review – the Office of Student Affairs, the OSU Graduate School, the College of Education, or the School of Language, Culture, and Society in the College of Liberal Arts.

Despite the fact that the majority of the CSSA instructional faculty hold their primary OSU positions within the Office of Student Affairs and CSSA office space and resources are provided by this unit, it is OSU policy that administrative units cannot be organizationally responsible for academic programs. Hence, short of a waiver from the Provost, the Office of Student Affairs cannot serve as the

primary administrative home for CSSA. The review has revealed that the strong support for CSSA from the position of the Vice Provost for Student Affairs and his organization is the root cause for the program's success over the past decade. The CSSA program has been an invaluable pathway for professional development for staff within his organization and has led to national recognition for the program. While undeniably successful from the point of view of the students and faculty of the program, this type of "unofficial" administrative support is a systemic organizational problem for CSSA. With the upcoming change of leadership in this Vice Provost position, there is the additional concern that the priorities of the new leader may not include the historical depth of support for the CSSA program. Further, it is of grave concern that there is no longer a full time faculty member in the CSSA program.

Recommendation: The Provost and Vice Provost for Student Affairs affirm support for the continuation of the CSSA program and that the Provost identify an organizational home for the College Student Services Administration program (see more in the next section).

We suggest the Provost appoint a workgroup with the charge to conduct an analysis of the advantages and disadvantages of the CSSA being assigned to one of the following options:

- i. The College of Education
- ii. The School of Language, Culture, and Society within the College of Liberal Arts
- iii. The Graduate School and Vice Provost of Student Affairs partnership.

Based on this introspective review of the CSSA program, some issues and topics came to light that could assist the workgroup with its focused work.

College of Education. It appears that the CSSA program is not considered a core focus for the College although the CSSA mission does align several emergent themes in the new college strategic plan including free choice learning (e.g. experiential learning and life long learning) and in social justice. Examination of the College of Education Performance Metrics¹ from the present back to 2002 reveals a unit undergoing transition. A number of significant reorganizations have occurred during that period; most recently elimination of the department organization structure to a College consisting of the faculty of the whole. The performance metrics provide insight into the significance of the CSSA program within the College of Education and whether organization changes impacted the CSSA program. The data indicate the College of Education Graduate student enrollment averaged 371 +/- 9% over the ten year period 2003 – 2013, with a high of 409 in academic year 2005-06 and a low of 287 in 2011-2012. The self- study shows CSSA student enrollment steady with annual cohort of 15-20 matriculated students. Assuming any year will have two cohorts in the pipeline and an average cohort size of 18 students then the CSSA program represents 10% of the graduate student enrollment in the college. What is unclear is whether the CSSA students are included in each of these years because the self-study mentions a period during which the program was administered out of the Graduate School.

What was the contribution of the CSSA faculty to the College of Education? Are they counted as Non-Professorial faculty? The College Performance metrics show the faculty headcount widely varying during the past decade – averaging 94 +/- 41% with a high of 160 in 2005 and a low of 47 in 2011-2012. For the past three years the faculty headcount has stabilized: 53, 47 and 56. What is unclear is whether the CSSA faculty, while members of the College of Education Graduate Faculty, roll up in the records of the Office of Institutional Research as Non-Professorial faculty. Assuming the dozen CSSA faculty members are included as Non-Professorial faculty, then CSSA represents 27% of the faculty resources for the College. Although, for a brief period of 2-3 years, the College paid the salary of a 1.0

¹ <http://oregonstate.edu/leadership/sites/default/files/strategic-plan/college-metrics-2012-13-part-i.pdf>

FTE, assistant professor, tenure track position, but the position is currently vacant with no plans to refill it. In summary, the CSSA graduate students account for about 10% of the College graduate student population over past decade, and contribute to the graduate student credit hours earned by the College, but the CSSA program currently receives little direct support from the College.

College of Liberal Arts. The second organizational option of moving the CSSA program to the School of Language, Culture, and Society within the College of Liberal Arts is based on the CSSA faculty's expressed desire to move towards a focus on social justice and the pragmatic opportunity afforded the College of Liberal Arts with the return of the current Vice Provost for Student Affairs to his tenured, professor position. The question of alignment of the CSSA social justice mission with the School's mission *was not examined by this review panel*. One pragmatic solution to the CSSA organizational issue is to reassign the CSSA to the tenure home of the most senior and highly regarded (and only tenured) member of the CSSA faculty and task him with growing support from his colleagues in the School and growing the program within the administrative structure of the College of Liberal Arts. As in the case of option 1, is the College of Liberal Arts School of Language, Culture, and Society sufficiently stable to accommodate the infusion of a new graduate program? The data for College Performance Metrics does not report down to the School level, so examination is made at level of the College of Liberal Arts. Graduate student enrollment has been steadily increasing the ten year period from a low of 93 to the current high of 220. Using the same CSSA annual enrollment figure of 36 means that should CSSA move to CLA then represent 16% of the College's graduate enrollment. The CLA Performance metrics show the faculty headcount flat between 2003 and 2010 averaging 280 +/- 16%. But significant institutional investment by the University has grown the CLA faculty ranks to 331 in 2011 and 383 in 2012.

Graduate School. The third organization option – a Graduate School and Vice Provost of Student Affairs partnership would require the Graduate School to take an active management role for the program by hiring a Director and appointing faculty to administer the program. The advantage of this structure is it acknowledges the practitioner focus of the program does not align well with historic academic infrastructure but that it serves the training need for development of professionals in student affairs. This fits within the Land Grant university mission and consideration could be given to appointing the faculty of the CSSA program to the newly created positions of Professor of Practice. In the case of CSSA these would be partial FTE appointments, with workload expectations, would be budget visible and provide professional recognition to these faculty. The Professor of Practice position provides promotion opportunities given it carries the designators of Assistant, Associate and Full but are not tenure track. *The review panel did not thoroughly investigate this option as part of our review.*

In addition we would note that students are highly engaged in the life of the program including having a student organization. However, there is no current representation of students in faculty meetings.

Recommendation: Final thoughts regarding organizational support for CSSA, whichever administrative model is implemented in order for the program fully realize its potential; the issue of place needs to be addressed. A dedicated office for the Director and Administrative support position needs to be identified as the unique academic home of the program.

Recommendation: As per the CAS standards, the program must have a full-time faculty member (preferably a senior faculty member) as a core to the program. Hiring two faculty members would be preferred with one being a senior faculty member and one a junior faculty member. We caution that if only one faculty member is hired and that person as an untenured assistant professor, then the academic home must provide sufficient administrative support that the person can be successful in a research and scholarly agenda sufficient to earn tenure and promotion.

Recommendation: There must continue to be a half time administrative support for the program.

Recommendation: The student organization should be brought into the governance structure of the program by inviting their leadership to participate in regular faculty meetings where personnel and specific student issues are not being addressed.

6. Productivity, outcomes and Impacts. The program has a high graduation rate ranging from 83-100% in recent years. All students graduate having completed a portfolio or a thesis. Graduation rates range between 100% and 83%, with a ten-year average of 93%. Students report a high degree of personalization, encouragement, and a feeling of belonging. Placement services are not offered, however a focus in the second year, spring semester, includes navigating the job search, transition issues, and application of knowledge and skills to post-graduate positions.

Since 2006, there have been 23 theses uploaded to Scholars Archive showing large numbers of downloads for use in other research. Topics are appropriate for the student affairs field and reflect the social justice interest in the curriculum. We did not expect the practitioners who serve as faculty-members to have substantial scholarship yet several do regularly publish their work. Most faculty members engaged in refereed conference presentations and serve as good models for students in promoting good practices and in scholarly inquiry. There are no grants among these scholar-practitioners. This can be addressed further in the staffing needs of core full-time faculty to provide this role.

Recommendation: When a full-time faculty member is added to the program, data is needed to track cohort success in the field. Minimally, it would be helpful to track how long it takes graduates to obtain full time employment, in what types of functional areas and in what job titles they are hired, institutional type and location, and if possible entry salary ranges. Periodic data should be gathered to address alumni satisfaction and preparedness for post-graduation employment.

Recommendation: When a full-time faculty member is added to the program, consideration should be given to creating an alumni database and an electronic program alumni newsletter that would share program news and accomplishments and alumni updates. Alumni are a critical recruiting tool for the program and also bring the potential of gifting to support program goals.

Conclusion

The College Student Services Administration graduate program at OSU is well-designed and offers a quality graduate education and graduate preparation to matriculated students. This is indeed a time of “timely opportunity” for the program. The program should be restructured and enhanced. The CSSA program exists in dynamic reciprocity with the student affairs division making a substantial contribution to the quality of OSU undergraduate life. The program is in transition and must establish an academic home that will support the program including hiring a full-time core faculty member as it continues to rely on resources from practitioners in student affairs who serve as faculty members in the program. Our recommendations were designed to aid in achieving that goal.

* note that portions of this report were taken directly from the CSSA self-study.

CSSA Graduate Report – Action Plan

FINAL – submitted April 22, 2014

CSSA Faculty Reviewed/Commented/Discussed a total of 7 drafts, in:

- Faculty forums/meetings (a total of four in March, April)
- CSSA Faculty Meeting, April 15th.

Faculty also submitted individual comments and edits throughout the process.

A proposed Action Plan adopted/ supported by the CSSA Faculty as a whole.

Action Plan Prepared by:

Tom Scheuermann, Kim McAloney

Co-Coordinators, CSSA Program, in collaboration with CSSA Faculty

ACTION PLAN

>Based on the Review Team Final Report, December 2013

Format of the CSSA proposed Plan:

- A. Introduction to the Graduate Review Report – Summary
- B. Summary of Report Findings and CSSA Response
- C. Specific Recommendations and CSSA Response

A. Introduction to the Graduate Review Report - Summary

[From CSSA Graduate Report, Dec.2013; verbatim--not edited by CSSA Faculty]

1. Overall Recommendation:

Based on our review, our recommendation is to **restructure** and **expand** the College Student Service Administration (CSSA) program.

2. Summary of Findings and Recommendations

The Oregon State University (OSU) CSSA program is a nationally known and highly regarded graduate preparation program and one of a few graduate programs in student services administration in the Pacific Northwest. The program is nearly 50 years old and has 500 alumni in various positions in higher education, many of whom have served as national leaders in the student affairs field. The program delivers high quality graduate education experiences to enrolled students, indeed the review panel heard pride about program quality and that faculty members “do it exceptionally well.” The program is notably successful in graduation rates and job placement success of matriculated students. The program provides a substantial contribution to OSU campus life through graduate assistant work, internship service, and through professional development opportunities for the practitioners who serve as faculty members. Enabling scholar-practitioners to serve as faculty members in this program is a major program asset. As one faculty member noted, “we are seamless, the [relationship] is woven into the fabric of the institution”; indeed, another faculty member observed, “Campus would be fundamentally different if the program went away.”

The CSSA program aptly used the phrase “A Timely Opportunity” in their self-study. The convergence of the appointment of a new VPSA, a new strategic plan for the College of Education, and the emergence of the Ecampus concept make it timely to address critical questions in this review. As noted in the self-study, the CSSA program

2. Summary of Findings and Recommendations (continued)

must be stabilized, while continuing to build on its strengths, including the ability to attract a well-qualified cohort of students and a strong adjunct faculty of practitioner-scholars.

Introductory needs are framed here by the goals of the CSSA program from the self-study and specific recommendations follow in the report.

1. The CSSA program must affirm and commit to an academic home that would include identifying a sustainable funding source(s) for the program.
2. The home for the CSSA program should hire at least one full-time faculty member to provide a stable base of teaching, advising, theoretical perspective and scholarship--to complement existing adjunct faculty.
3. The CSSA program should develop a parallel ECampus/online program--to complement the on-campus program and extend the reach of CSSA nationally/internationally.
4. The CSSA program should continue to update the current on-campus program to maintain a robust and cutting-edge approach to pedagogy, practice, and encourage faculty scholarship.
5. The CSSA program seeks to continually improve and update its curriculum and practices.
6. The CSSA program should build on its current commitment and strengthen the social justice focus or orientation in the program. ¹The program graduation requirements should remain 60-72 quarter credit hours or two academic years in compliance with the Council for the Advancement of Standards in Higher Education (CAS) statement on master's graduate preparation. Other recommendations appear later in this report.

----[End of verbatim excerpt from the CSSA Graduate Report]-----

B. Summary of Report Findings, and CSSA Response

The CSSA faculty, students, and partners appreciate the work of the Graduate Review Panel in Fall 2013 and Winter 2014 to review and assess our graduate program and produce a report comprising both broad and detailed comments and recommendations. The CSSA Faculty has carefully reviewed their report, individually and collectively, and our response is detailed in this Action Plan.

We welcome comments and questions on this Action Plan. We look forward to working with our AHE, College of Education, Graduate School, and University colleagues to act expeditiously on the Review Team's recommendations and move CSSA forward to reach its potential as an exceptional graduate program at Oregon State University. Our goal is to enhance and continue to develop a master's program that serves the state, region and nation (and potentially beyond) with a premier learning experience, innovative scholarship, and a social justice focus. CSSA prepares graduates to contribute to and make a difference in students' lives, in academic and student services units, and in higher education institutions.

¹ The Social Justice focus recommendation is addressed as a separate item in the Action Plan.

B. Summary of Report Findings, and CSSA Response (continued)

Limitations to Greatness (i.e. current shortcomings) of the CSSA Program

While the Report is generally complimentary of the CSSA Program, it does point out several areas across a set of seventeen recommendations that should be addressed, some in the immediate future and others over the longer term. The review team comments on areas that need to be addressed are focused on: Core faculty and staffing (Recs. 11, 12, 13, 14), Alignment of learning outcomes and experiences in and out of the classroom (Recs. 4, 5, 6), Measuring success of current students, and graduates (Recs. 3, 6, 9, 16), and Communication with students, as well as alumni through various media (Recs. 1, 2, 16, 17).

Of particular urgency, and noted in the Report, is the need to clarify the status of the CSSA Program in terms of a stable, sustainable academic home and Oregon State University, and to hire and assign full time faculty and [half-to-fulltime] staff support to CSSA. Doing so will provide a necessary base from which to stabilize and further develop an already successful program which has long been an OSU asset.

PRIORITY ACTIONS: The CSSA Faculty collectively and strongly encourages the leadership of the College of Education or [other] future Academic Home (AH) of the Program, the Graduate School, and the University take the following actions – prior to the end of the current academic year – to stabilize the CSSA program and position it for success, growth, and excellence:

1. Decide on a long-term, stable academic unit (“home”) for the CSSA Program.
2. Allocate specific, adequate physical space(s) to the CSSA Program, in the same building as the academic home.
3. Begin a search as soon as possible to hire effective September 15, 2014 -- and per the *Graduate Review Panel Report* (Dec.2013/Jan.2014) – “...a full-time faculty member (preferably a senior faculty member) as a core to the program. Hiring two faculty members would be preferred: one senior faculty member and one junior faculty member.” (see: Rec. 13, p. 10 of the Review Panel Report; Rec. 13 Goals/Actions, below in this *Action Plan*).

Hiring a senior (ideally tenured) faculty member is a critical component of the stabilization and revitalization of the CSSA program -- particularly at this juncture. A senior faculty member would bring a research agenda; and have more time to teach and advise students, bring greater consistency and stability to the program, and assist in developing the curriculum for a parallel online Ecampus program (if the Sept.2014 proposal is accepted) than would a tenure-*track* faculty member. Hiring a second (e.g. junior) faculty member per the Review Panel recommendations would meet the CAS standards regarding program faculty, as well as provide additional teaching and service capacity for the program.

[Note: *This recommendation is consistent with a recommendation made in the previous 10-year Graduate Review of CSSA, from 2003-2004.² That recommendation has yet to be implemented. In 2004 CSSA had one full-time faculty member, but after that position was vacated three years ago, it was not refilled. The CSSA program has not had two full-time faculty members since 1999, and even then, one of those faculty members also served as Dean of Students and professor in CSSA. CSSA Faculty see the lack of action on this item after 10 years as a serious barrier to achieving the level of success the program is capable of.*

4. Hire [effective July 1, 2014] Program Coordinator(s) of .5 – 1.0 FTE to administer the CSSA program; and coordinate processes/policies/activities/communications with faculty, students, alumni, and AH and University administration. [If the Coordinator FTE can be provided at a level of 1.0 FT or more, the position(s) could include teaching responsibilities, and possibly Ecampus parallel program development]

CSSA Faculty agree and note that it is essential that we (and CSSA students, alums) be represented and involved in the above priority decisions and actions, as well as in search processes and related committees.

The specific recommendations from the CSSA Graduate Report, and the CSSA Faculty response and proposed actions, are detailed in the following section.

² [excerpt, verbatim from: Graduate Council Program Review, CSSA, April 19, 2004, pp. 5-6]
Regular Faculty FTE

The program currently operates on 1 FTE (1 FTE 9-month; 0.25 FTE 12-month) of non-tenured faculty. This is insufficient for the current program.

- I. Having tenure-track faculty as the base of this program will be essential for on-going program stability. All accounts suggest that Drs. White and Scheuermann are doing an excellent job in their positions. If Dean Stern concurs, seek waiver of searches for converting the White and Scheuermann positions to tenure-track, assistant professor positions.
- II. Additional regular faculty FTE is needed in the program. The program is not sustainable at current FTE levels. As one adjunct faculty member commented, “superwoman” should not be part of anyone’s job description. Drs. White and Scheuermann are doing an excellent job of trying to hold the program together but this will only happen as long as there is hope that conditions will improve. If this hope is lost, both have too many skills to not easily find jobs elsewhere. In our opinion, if either were to leave, the program would be “dead in the water” as those remaining could not possibly provide needed backup in class load.
- III. Reviewing the needs and through discussion with participants, it is apparent that two FTE for the program would be a minimum for sustainable operation. Responsibilities of current faculty could then be more equally divided. This addition of faculty would allow only modest potential for program increase as current faculty seem to be working beyond a sustainable limit.
- IV. Sharing of part of a position with another unit in the School is an option suggested by Dean Stern and several others. While this option may be workable, having two full time faculty in CSSA would be preferable to give the needed support to adjunct faculty and students.

C. Specific Report Recommendations and CSSA Response

[Specific guidance from the Graduate School, email of 3/19/14]:

A. *Clearly answer each of these questions for each recommendation:*

1. What are the goal(s) that your program established based on the recommendation?
2. What actions will your program take to achieve those goals?
3. What will you measure (identify one or more metrics) to document progress toward the goal, based on the proposed action when the plan is assessed in three years?
4. What is your target for your metrics three years from now?

--or--

B. *Rebut the recommendation if you do not agree with it.*

Following the above guidelines, the CSSA Program response is organized by Recommendation (Rec. 1 through Rec. 17); including a statement of whether the faculty agree with the Recommendation with or without qualification, followed by these proposed specifics:

- a. Goals -- established by Program based on the recommendations
- b. Actions -- to achieve the goals
- c. Metrics -- to document progress toward the goals
- d. Target 3 Year Metrics -- in anticipation of follow-up to the review
- e. Faculty Lead(s) for Actions--who in CSSA will be on point for these
- f. Timeline for the Actions—proposed start, completion dates

See also: Action Plan grid (separate document)

- ❖ Note: The Graduate Report grouped some Recommendations together, in boxes shown in the actual report. The grouped (as well as individual) recommendations are represented below as they appear in the Report. The Faculty then discussed and responded to each Recommendation separately, per the Graduate School format and instructions (above).

Recommendations 1 and 2:

[1] Recommendation: The Ecampus online program marketing should be integrated with the current campus-based program marketing.³

[2] Recommendation: The web site should include information on the credentials of faculty members who teach/advise in the program including such information as their graduate degrees and offices in which they work. Further, the website should contain a clear statement on courses required in the program and those that are offered as electives.⁴

³ Our current marketing efforts include: Participation in the NASPA Graduate Preparation Program Fairs (National and Regional), CSSA website, NASPA Graduate Directory, Alumni referrals (word of mouth).

⁴ Efforts to update the website, e.g. for faculty information and courses, will begin Spring 2014.

1. Recommendation: Ecampus online program marketing alignment

Response: Faculty agree that this recommendation should be implemented.

a) Goals

Align the Corvallis campus [i.e. current] program, and the Ecampus [in development] online program, in terms of curriculum, capstones, internships. Once the parallel Ecampus and [Corvallis] campus-based programs are established and aligned, also align their marketing and communication messages and resources. ⁵

b) Actions:

The CSSA Faculty, in consultation with the leadership of the CSSA academic home (AH), Ecampus, and the Graduate School -- and based on applicable standards and guidelines of these units -- will develop in writing specifics on curriculum, capstones, and internships, showing that they are equivalent, parallel degree programs. As these specifics are developed, the Faculty will also determine/confirm whether Ecampus program will offer both the Ed.M. (Portfolio capstone) and M.S. degrees (thesis + demonstration of competencies capstone).

c) Metrics to document progress

- The Campus-based CSSA program remains in existence, with a cohort of 15-20 entering each year.
- A parallel Ecampus program is established to the point where Ecampus is prepared to market it, and to partner with the AH on marketing the Ecampus program in alignment with the campus-based program.

d) Target 3-Year Metrics

Campus-based and Ecampus parallel programs are updated/established, an entering cohort of 15-25 students enrolled in each of the parallel programs, in addition to second-year cohorts of 15-20 in each program. [Note: 3 years out is anticipated to be Year 2 or 3 of the parallel Ecampus CSSA online program].

e) Faculty Lead(s)

Tom Scheuermann

[and, if CSSA's academic home remains in the College of Education]

Consult with: Jennifer Bachman on Ecampus courses and program development.

f) Timeline

Program alignment – beginning Spring 2014 and continuing through the establishment of a parallel Ecampus program (est. launch-- Fall 2015).

⁵ Need to specify how Social Justice will be incorporated into internships, including in the online program.

2. Recommendation – Website information on faculty, courses

Response: Faculty agree that this recommendation should be implemented.

a) Goals

Update website to include appropriately detailed information on program faculty members.

Update website to include a specific and readily-accessible list of [AHE] required courses and elective courses in the CSSA program.

b) Actions:

CSSA faculty (i.e. faculty committee, with full faculty review) will review the website, in consultation and collaboration with College of Education or Academic Home (AH) staff, to ensure that it is consistent in format with the College's/AH's other websites, and that all information on the website meets or exceeds OSU accessibility requirements for websites.

CSSA faculty member information will be added to (or updated on) the existing CSSA website, including: Name, degrees, courses taught (with current syllabi linked), scholarship/research focus, vita, photo, and other pertinent information.

c) Metrics to document progress

A review of the website will show that all CSSA faculty are listed, with appropriate academic credentials, details, and documents accompanying each faculty member's listing. This information will be readily accessible (i.e. within 1-2 clicks).

d) Target 3-Year Metrics

In addition to the metrics/information listed in (c) immediately above being current/updated, each faculty member will have posted with their listing an introduction, as well as a brief overview of their pedagogy and/or scholarship, using current multi-media as appropriate to convey this information.

e) Faculty Lead(s)

Kim McAloney

f) Timeline

Website updates and coordination – currently underway; to be completed by the end of Spring Term, 2014. To be reviewed/updated again prior to Fall 2014.

Recommendations 3, 4, 5, 6

[3] Recommendation: Because students successfully complete their academic requirements and graduate in large numbers, we recommend CSSA keep the GRE as optional, but obtain and evaluate GPA or other metrics for applicants and incoming classes. ⁶

[4] Recommendation: CSSA should identify a mechanism to coordinate admissions with assistantship offers. At a minimum, the process should be streamlined for students so that the issue of support is resolved earlier in the process.

[5] Recommendation: Explore and create a sustainable plan to stabilize the number of assistantships offered. This work is underway, and it should be finalized for the 2014 cohort. ⁷

[6] Recommendation: Articulate clearly the role of the assistantship in student learning and competency development and develop an evaluative component linked to the mission of the program. (NOTE: See draft rubric on goal setting for assistantships; separate document)

3. Recommendation: Keep GRE optional, develop admissions metrics

Response: Faculty agree that this recommendation should be implemented.

a) Goals

Develop specific admissions criteria and metrics for program applicants, to include GPA and other measures.⁸ Confirm and state in our application materials that GRE will continue to be optional rather than required.

b) Actions:

CSSA faculty (committee with full faculty oversight) will review existing admissions criteria and weighting to determine which metrics should be retained/modified/added to the admissions process (e.g. GPA, full time higher ed. experience, GRE). Once confirmed/established, these criteria will be tracked annually, and student success measures (e.g. GPA) will be compared to the admissions criteria to assess validity and reliability over time.

c) Metrics to document progress

The metrics are to be determined by the Faculty, but could include: Candidate (and enrolled student) GPA, communication and writing skills (with appropriate measurements/scales); Candidate and enrolled student professional and educational experience (years, work area e.g. higher education, student services; quality and depth of experience).

d) Target 3-Year Metrics

The success of this goal/actions will be determined by how strongly the admissions criteria correlate with enrolled student (and if possible, alumni) success criteria and measures, per Recommendation 16 Goals and Actions, below.

⁶ We understand that these data are collected and maintained by the Graduate School

⁷ In process, to be in place for Fall 2014

⁸ Need to determine and note these "other measures" as they are developed

e) Faculty Lead(s)

Janet Nishihara
Daniel Newhart

f) Timeline

Admissions criteria to be reviewed in Summer 2014, with criteria to be confirmed/modified prior to the initiation of the CSSA application process for the 2015-16 academic year.

4. Recommendation: Coordinate assistantships with admissions offers

Response: Faculty agree that this recommendation should be implemented.

a) Goals

Identify the number and type of assistantships that are needed to support a sustainable Corvallis-based program, with an [incoming] cohort of approximately 20 students, noting that the exact number of assistantships may vary somewhat each year given the number of part time students in the cohort (as part time students normally hold full time employment and rarely seek GTA positions). Once this process is established, offer the incoming students (cohort) a GTA position at the same time as the offer of admission to the CSSA academic program. The connection between academic program admission and graduate teaching assistantship (GTA) should be strong and clear, particularly to the student.

b) Actions:

The process for simultaneously offering admission and a GTA position (to full time students) has been established, and will be effective for students entering in Fall 2014. The leadership of the College of Education, Vice Provost for Student Affairs (VPSA), and Provost have collaborated on an approach that has all CSSA GTAs offered/hired under the purview of the VPSA, with the exception of GTAs outside of Student Affairs – which will be managed by the respective academic unit (e.g. Academic Success Center, College hiring the GTA).

b) Actions (continued):

Review and document the standards and practices of 3 – 5 comparable graduate preparation programs, related to coordination of assistantship offers with admissions offers. Seek and note best practices that could be applied to OSU's process for CSSA graduate students.

c) Metrics to document progress

Documentation (including lists and offer letters) will exist and be on file in CSSA/AHE showing that all students who are admitted to the CSSA academic program and who desire a GTA position (i.e. nearly all full time students each year) have been offered admission and their GTA position simultaneously.

Track: Total number students applying/admitted/enrolling/graduating;
Number of students from *underrepresented groups* (as defined
by the Graduate School/University)
applying/admitted/enrolling/graduating
Number of NUFP (NASPA Undergraduate Fellows Program)
students applying/admitted/enrolling/graduating

d) Target 3-Year Metrics

Maintain the process for simultaneous academic program/GTA offers that was established in 2014; increase/adjust the number of GTA positions to match the total number of fulltime students admitted to the Corvallis-based program each year (i.e. 15-25). Make offers of admission + GTA position in accordance with OSU and CAS/graduate preparation program timelines, with the goal of being timely and appropriately cooperative/competitive with other student affairs graduate preparation masters programs.

e) Faculty Lead(s)

Eric Alexander
Kim McAloney
Dave Craig
Vice Provost for Student Affairs

f) Timeline

Simultaneous academic program/GTA offers process – effective for the incoming cohort of students, Fall 2014. Review of comparable program standards and practices: by January 2015.

5. Recommendation: Stabilize number of assistantships

Response: Faculty agree that this recommendation should be implemented.

a) Goals

Closely aligned with the Goals for Recommendation 4, immediately above, the leadership of the College of Education, Vice Provost for Student Affairs (VPSA), and Provost have collaborated on an approach that has all CSSA GTAs offered/hired under the purview of the VPSA, with the exception of GTAs outside of Student Affairs – which will be managed by the respective academic unit (e.g. Academic Success Center, College hiring the GTA). This will not only allow for a “simultaneous offer” approach but will maintain a sustainable, stable number of GTA positions that can/will be offered.

b) Actions:

Faculty will implement, beginning for Fall 2014 the process of having all GTA positions that are not based in an academic unit/departments at that time, under the purview of the Vice Provost for Student Affairs (VPSA). CSSA Program leadership will collaborate with the VPSA to ensure a clear and efficient GTA offer/assignment process.

c) Metrics to document progress

Documentation (including lists and offer letters) will exist and be on file in CSSA/AHE showing that all students who are admitted to the CSSA academic program and who desire a GTA position (i.e. nearly all full time students each year) have been offered admission and their GTA position simultaneously. Student Affairs and the respective academic units and programs (e.g. colleges, Academic Success Center) will be adequately funded to support CSSA – GTA positions in their units each year, noting that nearly all GTA positions are two-year appointments given the two-year CSSA curriculum.

d) Target 3-Year Metrics

Maintain the process for simultaneous academic program/GTA offers that was established in 2014; increase/adjust the number of GTA positions to match the total number of fulltime students admitted to the Corvallis-based program each year (i.e. 15-25). Stable and adequate funding will have been provided to Student Affairs and the respective academic units to support all GTA positions for the CSSA cohort each year.

e) Faculty Lead(s)

Eric Alexander
Kim McAloney
Larry Roper

f) Timeline

As of Fall 2014 (and presumably in following years) a stable number of GTA positions will be funded and made available to all full time students in the incoming CSSA cohort.

6. Recommendation: Articulate role of assistantships in student learning

Response: Faculty agree that this recommendation should be implemented, in collaboration with assistantship supervisors.

a) Goals

Develop a mechanism for articulating clear links between the student's learning in their GTA position⁹ and the academic program (courses, internships, etc.), and how these are both in alignment with the CSSA Competencies and Graduate Learning Outcomes in Assessment Plan.

⁹ >Consider: Developing, with assistantship supervisors, learning outcomes for GTAs, to be included in their p.d.s and linked to CSSA Competencies.

b) Actions:

CSSA Faculty representatives will meet with colleagues who are CSSA assistantship supervisors to develop a process for incorporating the CSSA Competencies into and aligning them with the respective student's GTA position description. Learning outcomes, based on the Competencies and appropriate to particular GTA position, will be jointly developed by the CSSA Faculty and assistantship supervisors. An evaluation process to assess the alignment and outcomes will be jointly established by faculty and supervisors.

The above process and outcomes will be discussed, and periodically (at least annually) reviewed by the CSSA Faculty Advising group.

c) Metrics to document progress

CSSA Competencies and related learning outcomes will explicitly be included in the GTA position descriptions of CSSA students who have GTA positions. The exact format of this alignment may vary to some extent with the particular GTA position, but will reflect measurable learning outcomes. This may be done on a pilot basis (e.g. with a select number of GTA positions) in year 1 to better determine the precise approach to alignment.

Evaluation process (proposed annually) will demonstrate a strong relationship between the GTA position and CSSA Competencies and related [out of class, experiential] learning outcomes.

d) Target 3-Year Metrics

CSSA Competencies and related learning outcomes will explicitly be referenced or included in position descriptions of all CSSA students with GTA positions

e) Faculty Lead(s)

Kim McAloney
Daniel Newhart
Eric Alexander

f) Timeline: Fall 2014 – alignment process piloted with at least five CSSA student GTA positions. Fall 2015 – alignment process will be in place for all CSSA student GTA positions.

Recommendations 7, 8, 9, 10

[7] Recommendation: We recommend consideration be given to requiring a research methods course in the methodology planned for the thesis project. ¹⁰This course should be taken spring or summer of the first year. Ideally this would be a course already offered in the College of Education or one of the behavioral or social science fields and not drain current faculty resources.

[8] Recommendation: We support and applaud the focused inclusion of a social justice perspective in curriculum, pedagogy, and program practices. Consideration should be given to audit program practices (e.g., admission decisions, internship placements) to modify those that may not currently uphold those social justice principles so the program is congruent in this message and in the lived student experience.¹¹

[9] Recommendations: CSSA coordinators should work with the graduate school on (1) accessibility of existing minors to CSSA students and (2) transcript visible options for the chosen areas of specialization.¹²

[10] Recommendation: We support the Ecampus program development currently underway. As CAS requires, it is essential that an on-line CSSA program provide the quality of a similar curriculum and supervision as the campus-based program. Appropriate on-line courses should be available to campus-based students as well. Campus-based students should be encouraged to completed at least one course on-line to experience that environment and prepare them for supporting on-line learners in their professional positions.

7. Recommendation: Require research methods course to match theses

Response: Faculty agree that this recommendation should be implemented, taking into account the courses already offered in AHE/CSSA, as well as other courses in other departments that may be applicable to CSSA student research.

a) Goals

Require students pursuing the thesis capstone to enroll in and successfully complete appropriate research methodology coursework. The course(s) should address qualitative, quantitative, and mixed methods research as appropriate and necessary. The Faculty recognizes that offering the appropriate instruction in various methodologies may require that more than one research course be taken by students.

¹⁰ This should be a requirement, with specific course requirement(s) for (1) All CSSA students, and (2) CSSA students pursuing the Thesis capstone. Need to specify the type of course(s) required, e.g. qualitative, quantitative, both.

¹¹ Conversations need to occur about: curriculum, pedagogy, admissions, orientation, internships, assistantships, student associations, advising.

¹² Consult with Graduate School about the process for addressing this.

b) Actions

The CSSA program currently has a research and assessment course as a requirement. The next step will be for Faculty to assess and confirm that the existing course is sufficient (or needs modification) to meet the recommendation for all CSSA students, regardless capstone they choose. Following the step above: Identify or develop and offer an additional course(s) specifically for students who choose the thesis option (i.e. M.S.). This course(s) may be an existing course currently offered outside of CSSA or may be a new one offered by CSSA if such a course in another department college cannot be identified or is not open to CSSA students.¹³ This could require that students pursuing the M.S. degree take an additional courses/credits, beyond the 54 currently required for the CSSA master's degree (which is consistent with the Review Panel recommendations as well as the CAS Standards).

Since all CSSA students are required to take a research and assessment course as part of their graduate program, Faculty will also determine which course(s) approach is necessary to properly prepare Ed.M students as well. Per the recommendation [7] this approach should be undertaken in a way that does not “drain current faculty resources.”

c) Metrics to document progress

Review of the current research and assessment course will determine whether a different approach to that course for all CSSA students, as well as an additional research course(s) for M.S. students will be necessary to meet this recommendation [7]. Success in meeting this recommendation will be demonstrated by Faculty and student agreement (i.e. the student and their thesis committee) that the research course(s) required, and additional course(s) offered as advanced/elective courses provide the M.S. students adequate education in the methodology needed to conduct their thesis research.

d) Target 3-Year Metrics

Research and assessment courses which have been demonstrated to have adequately met the needs of both M.S. students in their research and learning, and Ed.M. student in their learning, will be available to CSSA students. In addition to the required assessment and research course that all CSSA student must take additional research course(s) required for M.S. students will also be available and have a record of student enrollment and success in them.

e) Faculty Lead(s)

Daniel Newhart

¹³ Need to specify the discipline of the course(s) (e.g. Education, Sociology?), as well as whether the course is focused on qualitative, quantitative, or mixed methods research. See also: fn 10, above.

f) Timeline

Research course identification/development/refinement – eff. Fall 2014
Research course identification/development – advanced, elective –
effective Fall 2015.

8. Recommendation: Inclusion of social justice

Response: Faculty agree that this recommendation should be implemented.

a) Goals

Incorporate the inclusion of a social justice perspective into the various aspects of the CSSA program (e.g. curriculum, experiential learning), conduct an audit of program practices, develop a congruent message related to social justice in CSSA.

b) Actions:

Movement toward realizing this goal has already begun among the CSSA faculty. Specific steps include:

Faculty (a committee of faculty) will discuss and outline the social justice focus and its dimensions in relation to the CSSA program, and the Faculty will develop a shared understanding of its meaning and application. This could be accomplished through faculty engaging in common readings and discussion and individual and group learning that will take place in the context of retreats and strategic planning.

Faculty will conduct an audit of CSSA practices, including the recruitment and admissions process and decisions, course design/instruction/evaluation, internships, and other learning experiences to ensure that these are consistent with social justice principles. Once the audit is completed, a plan for communicating the social justice focus of CSSA will be developed, that will include information provided on the website, written materials, course syllabi, and program evaluation.

c) Metrics to document progress

Inclusion of a social justice focus will be evidenced by:

- The publication of a statement of shared understanding on its meaning in CSSA, at the appropriate time; noting that the SJ focus is “a continuous work in progress for faculty and students.”
- Inclusion of the SJ focus in admissions information and criteria, course syllabi and
- Inclusion of the SJ focus in capstone requirements, notably the demonstration of competencies and Portfolio guidelines.

d) Target 3-Year Metrics

In addition to the above metrics, the 3-year metrics will include necessary modifications of the CSSA Competencies to explicitly reflect the SJ focus

e) Faculty Lead(s)

Kris Winter

Jeff Kenney

Clare Cady

f) Timeline

Publication of shared statement of understanding, and inclusion of SJ focus in the syllabi of required courses: Fall 2014

Modification of CSSA Competencies as needed: Fall 2015

9. Recommendation: Minors, transcript-visible specializations

Response: Faculty agree that this recommendation should be implemented in regards to Minors, but not Specializations.

a) Goals

Specializations -- Areas of Specialization are available as an informal, program-based option that allow students to focus on courses and an internship that are within the student's graduate program of study, and to reflect on this focused area of learning in their capstone project (i.e. Portfolio, Demonstration of Competencies). Given that Minors are already available to students, and are transcript-visible, the CSSA Faculty does not see the value in pursuing transcript visibility for Areas of Specialization. Doing so would likely be difficult in terms of balancing consistency requirements with flexibility in the student's program of study, with little value-added seen in specializations transcript-visible.

Minors – identify academic units that would be open to CSSA students and faculty who would serve as Minor professors; and what specific minors would be desired/available for CSSA students.

b) Actions:

Specializations:

Faculty (Committee) will review the criteria for CSSA Specializations to ensure that an appropriate set of courses/internships are required for this aspect of the student's experience and capstone project. Transcript visibility will not be pursued.

Minors:

Minors are already transcript-visible. The actions to be taken here are for Faculty to research and establish, in collaboration with other academic units (e.g. Ethnic Studies) specific [approaches to] Minors in the CSSA program – in terms of courses, internships, capstones, and other learning experiences. The requirements and process for declaring one of these Minors will be published in CSSA materials and communications, as well as in the materials and communications of the academic units in which the Minors are based.

c) Metrics to document progress

Areas of Specialization as defined and written into students' capstone projects will be reviewed for consistency and rigor by the student's capstone (Portfolio or Thesis) Committee, and guidelines on specializations will be revised as needed, and updated in the CSSA student manual and website. Students and faculty (90%+) will report that the Area of Specialization continues to be a valuable complement to the student's learning experience and graduate program.

d) Target 3-Year Metrics

Specific Minors will have been explored, identified, and made available to CSSA students. To the extent that these minors can be identified and supported by their respective academic units, they will have a record of being open to CSSA students who desire to pursue them, and students (90%+) will report that these minors have met their program needs.

e) Faculty Lead(s)

Tom Scheuermann
Janet Nishihara

f) Timeline

Transcript-visible options (may require Cat II? Proposal) – effective Fall 2015 entering cohort(s).¹⁴

Students will begin declaring their enrollment in established Minors as of Winter Term 2016.

10. Recommendation: Continue development of Ecampus/online program

Response: Faculty agree that this recommendation should be implemented.

a) Goals

Continue development of a parallel Ecampus/online program in CSSA. Make one or more of the online courses available to Corvallis-based CSSA students to include in their program of study.
[See also: Recommendation 1, above on Ecampus alignment]

¹⁴We should establish the requirement first (for Ed.M. and M.S. students – may be different), and then – determine which course and discipline it will be.

b) Actions:

Faculty will develop and submit to Ecampus a proposal for a CSSA online master's program.

Faculty will identify, in consultation with CSSA's academic program home and Ecampus 1-2 CSSA courses (and/or sections) in the CSSA parallel Ecampus program that would be available to Corvallis campus CSSA students. Determine which online course(s) identified would be required and then assess the experience of these students. [Note: funding issues would need to be worked out so as not to have this be a barrier for Corvallis-based students.]

c) Metrics to document progress

An online master's program proposal will be submitted to Ecampus.

One online course will be identified and included in the required CSSA course program for Corvallis-based CSSA students.

d) Target 3-Year Metrics

Two online courses will be identified and included in the required CSSA course program for Corvallis-based CSSA students. Two additional online courses will be identified as electives available to CSSA Corvallis campus students.

e) Faculty Lead(s)

Tom Scheuermann

[and, if CSSA's academic home remains in the College of Education]

Consult with: Jennifer Bachman on Ecampus courses and program development.

[Note: CSSA will develop and submit an Ecampus program proposal for a parallel online CSSA program, by September 1, 2014.]

f) Timeline

Ecampus program proposal for parallel online CSSA program submitted: September 1, 2014.

Online CSSA Ecampus course identified and included in CSSA required courses: Fall 2015.

Online CSSA Ecampus courses identified and included in CSSA electives listing: Fall 2016 (Fall 2015, if feasible).

Recommendation 11

[11] Recommendation: The Provost and Vice Provost for Student Affairs affirm support for the continuation of the CSSA program and that the Provost identify an organizational home for the College Student Services Administration program (see more in the next section).¹⁵

11. Recommendation: Continue CSSA program, identify organizational home

Response: Faculty agree that this recommendation should be implemented. This is a recommendation that requires decisive action by the Provost as well as the academic home (AH) unit and program.

a) Goals

This goal is one for the Provost and Vice Provost for Student Affairs to adopt and affirm.

Identify an academic home (AH) in which CSSA will be based for the long term, as soon as possible.

b) Actions

Faculty (committee) in consultation with the AHE and College of Education leadership will draft a recommendation to the Provost regarding the academic “home” for CSSA in the future. Alternatives noted in the Review Report will be addressed as part of this action item.

Provost and Vice Provost for Student Affairs, in consultation with the appropriate academic unit(s) will identify an academic unit to house CSSA and commit to this arrangement for the long term.

c) Metrics to document progress

CSSA will have an explicit academic home/unit.

d) Target 3-Year Metrics

CSSA will have an explicit academic home/unit, and be thriving in that unit as evidenced by: A Corvallis-based masters program, an Ecampus parallel online program, and have identified three Minors that are available to CSSA students who wish to include them in their program of study (see: Recommendation/Action 9, above).

e) Faculty Lead(s)

Tom Scheuermann
Kim McAloney

¹⁵ The CSSA Faculty believes it critical that they have representatives on the team/ in the process to make this decision.

f) Timeline

Academic unit for CSSA – to be determined by July 1, 2014.

Students admitted to CSSA in the established academic unit – effective Fall 2015.

Recommendations 12, 13, 4, 15

[12] Recommendation: Final thoughts regarding organizational support for CSSA, whichever administrative model is implemented in order for the program fully realize its potential; the issue of place needs to be addressed. A dedicated office for the Director and Administrative support position needs to be identified as the unique academic home of the program.

[13] Recommendation: As per the CAS standards, the program must have a full-time faculty member (preferably a senior faculty member) as a core to the program. Hiring two faculty members would be preferred with one being a senior faculty member and one a junior faculty member. We caution that if only one faculty member is hired and that person as an untenured assistant professor, then the academic home must provide sufficient administrative support that the person can be successful in a research and scholarly agenda sufficient to earn tenure and promotion.

[14] Recommendation: There must continue to be a half time administrative support for the program.

[15] Recommendation: The student organization should be brought into the governance structure of the program by inviting their leadership to participate in regular faculty meetings where personnel and specific student issues are not being addressed.¹⁶

12. Recommendation: Address the issue of place for the CSSA faculty, staff support

Response: Faculty agree that this recommendation should be implemented. This is a recommendation that requires decisive action by the Provost as well as the academic unit and program.

a) Goals

Identify and establish a dedicated office for the CSSA program director and administrative support position as the unique academic home of the program.

b) Actions:

Faculty will identify a dedicated office space, and propose to the academic home leader and Provost that it be assigned to CSSA faculty and staff.

c) Metrics to document progress

CSSA will have a dedicated space to house the program.

¹⁶ Should student(s) be invited to attend the first part of the meeting? And/or create committees for students to join?

d) Target 3-Year Metrics

CSSA will continue to have a dedicated space to house the program, and it will be modified as needed to accommodate the needs of CSSA (Corvallis campus and Ecampus programs) as needed.

e) Faculty Lead(s)

Tom Scheuermann, in consultation with CSSA academic home unit leader.

f) Timeline

Dedicated CSSA space identified: July 1, 2014; occupied and communicated: September 1, 2014.

13. Recommendation: CSSA should have one, preferably two, faculty members -- per the CAS Standards

Response: Faculty agree that this recommendation should be implemented. This is a recommendation that requires timely action by the Provost as well as the academic unit and program, particularly given that the program does not currently have a full time, dedicated core faculty member, and is also in transition in terms of program coordination and leadership.

a) Goals

Establish (actually re-establish) a full time core faculty position in CSSA, preferably two, as soon as possible. This core position should be held by a tenured or tenure track faculty member.

b) Actions:

Faculty will develop a proposal and submit it to the AHE and College of Education (if that is determined to be the sustainable academic home (AH) of CSSA), as well as the Provost if appropriate -- requesting that as of September 1, 2014 (prior to the start of Fall Term orientation and classes) the following position(s) will be established and filled, to provide core academic and scholarly leadership for the CSSA program:

Two full-time faculty members – one senior faculty member and one junior faculty member, per the Graduate Review Report recommendation.

CSSA Coordinator(s) comprising 1.0 FTE. See Recommendation 14, below for details on the staff coordination/support action plan. [Note: If only one faculty member is hired by Fall 2014, the statement on the core faculty position will include a proposal to add the second [recommended] full time faculty member by Fall 2015, particularly if the parallel Ecampus program is established effective Fall 2015.]

Specific next steps:

- Draft position descriptions
- Appoint search committee(s) and begin search
- Hire faculty members

c) Metrics to document progress

Faculty member(s) hired and in place.

d) Target 3-Year Metrics

Faculty members retained and engaged in teaching, scholarship and service.

e) Faculty Lead(s)

Tom Scheuermann
Darlene Russ-Eft
Jessica White

f) Timeline

Two full time faculty members hired -- effective Fall 2014

[If only one faculty member hired by Fall 2014]:
Second faculty member hired – effective Fall 2015.

14. Recommendation: Continue half time administrative support for the program

Response: Faculty agree that this recommendation should be implemented, by the AH providing/funding a program coordinator(s) at the .5FTE level or greater – preferably at the 1.0 FTE level (which could include some teaching/advising responsibilities. This is a recommendation that requires timely action by the AH unit as well as the CSSA program.

a) Goals

Hire 1-2 positions (or parts of existing positions) comprising a total of .5 – 1.0 FTE for program coordination of CSSA, which may include teaching responsibilities depending on FTE.

b) Actions:

Faculty will draft a statement to the AH, as well as the Provost if appropriate -- requesting that as of September 1, 2014 (prior to the start of Fall Term orientation and classes) the following position(s) will be established and filled. Specific next steps:

- Draft position descriptions
- Appoint search committee(s) and begin search
- Hire faculty member(s)

c) Metrics to document progress

Program coordinator position(s) filled.

d) Target 3-Year Metrics

Program coordinator position(s) retained and demonstrating the ability to fully support the CSSA program coordination and student support needs.

e) Faculty Lead(s)

Kim McAloney

Melissa Yamamoto

Tom Scheuermann

f) Timeline

Program coordinator position(s) established and filled (hired) – by July 1, 2014.

15. Recommendation: Bring the student organizations (CSSA-SA) into the governance structure

Response: Faculty agree that this recommendation should be implemented, specifically as stated below.

a) Goals

Provide opportunities for CSSA students/representatives to engage in CSSA planning and decision-making where possible and appropriate.

b) Actions:

Faculty will consult with CSSA students, and specifically with the CSSA-SA (student association) group and its representatives to determine how best to regularly solicit student feedback and incorporate students (cohorts) into planning and decision making efforts. Students will continue to be invited to share questions, concerns, and input individually with their advisor and/or the program coordinator.

g) Metrics to document progress

CSSA students will report that they have been solicited for feedback as a cohort(s) at least once each academic term, and that they have been involved in appropriate planning and decision-making processes for the program. Students will report that they are satisfied with their level of involvement in these processes.

h) Target 3-Year Metrics

Students (80%+) will report that they are satisfied or very satisfied with their level of involvement in these processes (noted in (c), above).

i) Faculty Lead(s)

Kim McAloney

Clare Cady

j) Timeline

Initiate/pilot a basic group feedback process during Spring Term 2014.
Student input and participation plan established – by Fall Term 2014

Recommendations 16, 17

[16] When a full-time faculty member is added to the program, data is needed to track cohort success in the field. Minimally, it would be helpful to track how long it takes graduates to obtain full time employment, in what types of functional areas and in what job titles they are hired, institutional type and location, and if possible entry salary ranges. Periodic data should be gathered to address alumni satisfaction and preparedness for post-graduation employment.¹⁷

[17] Recommendation: When a full-time faculty member is added to the program, consideration should be given to creating an alumni database and an electronic program alumni newsletter that would share program news and accomplishments and alumni updates. Alumni are a critical recruiting tool for the program and also bring the potential of gifting to support program goals.¹⁸

16. Recommendation: Track cohort success in the field, gather alumni data (once a full-time faculty member is added to program)

Response: *When a full-time faculty member is added to the program*, per the Recommendation -- Faculty agree that this recommendation should be implemented.

a) Goals

Establish a system for and begin to engage in tracking CSSA student success post-graduation (i.e. in the field), focusing on their employment process, placement, and compensation.

b) Actions

As noted in the recommendation, once the core CSSA full time faculty member position is filled and the faculty member is on board – CSSA faculty, in consultation with Colleagues from their Academic Home (AH) and other University units as appropriate, will develop a “success” matrix comprising key, track-able academic success data.¹⁹ This data will begin to be gathered as of the end of the 2013-14 academic year, and will continue annually – enabling long-term data analysis and information that can be used as a basis for future admission, curricular, advising, and other related program decisions.²⁰

¹⁷ Check to see if the Graduate School is, or will be tracking this data.

¹⁸ The Alumni Committee has already begun to address this – verify details of what can occur in the short term, and what needs to wait until the faculty and staff structure is in place, per the Recommendation.

¹⁹ We need to specify the type and categories of data that will be tracked.

²⁰ We will need more than academic success data to address this.

c) Metrics to document progress

A student-graduate success matrix and system will be established, tracking the following data (including but not limited to):

- Time that graduates take to achieve employment
- Functional areas and titles of positions employed in (i.e. first post-grad position)
- Institutional type and location of employment
- Entry salary range of initial position
- Alumni satisfaction – based on OSU and Graduate School surveys/metrics, with CSSA specifics added as appropriate.

d) Target 3-Year Metrics

Assuming that CSSA is appropriately and sustainably staff (i.e. faculty as well as coordinator position(s)) –

The above metrics will be gathered on an annual basis, and year-year comparisons will begin to be tracked and reported.

e) Faculty Lead(s)

The full-time CSSA faculty member

Daniel Newhart

Jessica White

f) Timeline

Success matrix – by January 1, 2015

Data tracking – beginning with graduating class of 2016 (June 2016)

17. Recommendation: Create alumni database and newsletter

Response: *When a full-time faculty member is added to the program*, per the Recommendation, Faculty agree that this recommendation should be implemented.

a) Goals

CSSA faculty will work with Colleagues/units in their Academic Home and the OSU Alumni Association [and alumni affairs/staff] to develop an alumni database. This database will be used for a variety of communications w/alumni; e.g. newsletter, announcements, recruitment, recognition, friend-raising and fund-raising efforts.

b) Actions

As noted in the recommendation, once the core CSSA full time faculty member position is filled and the faculty member is on board –

The program coordinator, in consultation with the academic home unit marketing/communications coordinator, OSU Alumni Association, and CSSA faculty and alumni, will create:

- A CSSA alumni database
- An electronic CSSA alumni newsletter to share program news and accomplishments and alumni updates.
- A basic plan for CSSA alumni “friend-raising” and fund raising, in consultation with the academic home Foundation staff person, and the OSU Foundation.

c) Metrics to document progress

- Alumni database established, with 50-100 listed to start.
- Alumni newsletter published and distributed
- Basic friend/fund-raising plan developed

d) Target 3-Year Metrics

- Alumni database established, updated and expanded to be as accurate and complete as possible, with 150-250 listed
- Alumni newsletter published and distributed; communications are being regularly received from alumni who read the newsletter
- Basic friend/fund-raising plan developed.

e) Faculty Lead(s)

The full-time CSSA faculty member
Kim McAloney
Dave Craig

f) Timeline

- Preliminary alumni database developed – by January 1, 2015.
- Alumni newsletter developed – by May 2015
- Friend/fund-raising plan developed – by January 2016

COMMENTS, QUESTIONS on this document:

College of Education

Oregon State University, 104 Joyce Collin Furman Hall, Corvallis, Oregon 97331-3502

T 541-737-4661 | F 541-737-8971 | <http://education.oregonstate.edu>

Adult Education EdM Program Action Plan April 23, 2013

As stated in our new strategic plan, OSU College of Education is committed to understanding and facilitating learning-focused solutions to significant 21st century societal issues. We address these issues transdisciplinarily with the goal of creating evidence-based solutions for life-long learning. In addition, we are committed to preparing the next generation of learning leaders capable of navigating a rapidly changing landscape of learning environments. Adult Education is a significant component of our mission to develop and share understandings that encompass multiple settings with the goal of building human capacity across all ages from childhood through adulthood. As the vehicle through which we prepare leaders to address the needs of adult learners in diverse settings, the Adult Education EdM is critical to the mission of the College of Education.

The Adult Education Program faculty have reviewed the Graduate Review Team's report individually, and discussed it as a group during our January 15 faculty meeting. We appreciate the work and recommendations of the external reviewers and the Graduate Review Panel, and believe that this report provides a helpful framework for improving the Adult Education Program. The present document represents the collective input of the Adult Education faculty and comprises our response to the seven recommendations and outlines an Action Plan for moving forward.

Before sharing our responses, however, we want to note one very important outcome of the Review Team's visit in November. In carefully considering the Review Team's report we gained a profound clarity regarding where the program has been, where it is now, and where it needs to go in the future. In particular, the recommendation regarding professional organizations resulted in a frank conversation about who we really are and what population we serve.

At its inception, this program was designed to provide advanced degrees for professionals in the Adult Education field (GED, Adult Basic Education, ESL, now referred to as Developmental Education), as well as people from business and industry. At that time, however, the Adult Education participants outnumbered the others and set the focus for the program. As the years progressed, our students and their needs changed, resulting in a gradual shift in the focus of their work, along with a concurrent shift in the focus of the EdM. In discussing our responses to the recommendations, we realize that the program has evolved to meet the current need for professional development in workplace learning/education/training. Our students are coming to us from: 1) the corporate world interested in HR training; 2) the non-profit sector interested in training volunteers; 3) clients and students interested in how to use technology to design online curriculum; and 4) individuals running their own organizations or their own consulting businesses. In our current cohort, for example, we have no students providing Adult Education in its traditional form. Given that the demand for a master's degree focused on educating adults has shifted to an emphasis on workplace learning, and that we had already begun the work of

expanding our curriculum, materials, and assignments to address this change, the responses below reflect this recognition of our evolved identity and practice.

Following are the Review Panel's recommendations and the specific actions we will take to address them.

1. *Clarify program leadership roles in order to provide adequate intellectual and administrative leadership for continuous program improvement.*

Background

The Dean and Associate Dean of the College have identified the faculty who will continue for the following roles: Darlene Russ-Eft will maintain her role as Discipline Liaison and provide overall discipline leadership for Adult and Higher Education; Sam Stern will assume the academic leadership for the Adult Education program which will include the oversight of curriculum planning, integration, and development; Shelley Dubkin-Lee will continue in her role as Program Coordinator overseeing the day-to-day operations of the program. See Appendixes I and II for the AE EdM Program and College of Education organizational charts.

Faculty contributions to the AE EdM include the following:

- **Darlene Russ-Eft** has an appointment as Discipline Liaison for Adult and Higher Education, of which the Adult Education EdM is part. This is not a new appointment—she has been serving in this capacity for some time and has an FTE allocation and job description reflecting this assignment.
 - .10 FTE for Discipline Liaison for the AE EdM
 - .13 FTE for instruction in AE EdM (one course)
- **Jennifer Bachman** has recently been appointed as Director of Online Services for the College of Education. As such, she provides curricular and administrative support and leadership for our online presence. We anticipate that approximately 10% of her time will be devoted to the AE EdM.
 - .10 FTE for Director of Online Services for AE EdM
- **Sam Stern** has accepted appointment as Academic Lead for the Adult Education EdM. His job description and FTE allocation will reflect this appointment.
 - .20 FTE for Program Lead of the AE EdM Program
 - .40 FTE for instruction in AE EdM
- **Shelley Dubkin-Lee** has an appointment as Program Coordinator for the Adult Education EdM. This is not a new appointment—she has been serving in this capacity for some time and has an FTE allocation and job description reflecting this assignment.
 - .30 FTE for Program Coordinator of the AE EdM is 30%.
 - .40 FTE for instruction in AE EdM

- **Lucy Arellano** is currently advising and teaching one of the core classes in the program, which equates to .13 FTE. Dr. Arellano will take on additional instructional responsibility as her instructional load increases according to the College of Education Work Load Policy. Ultimately, her contribution will be two courses, or .26 FTE.

The total academic and professional FTE for the program is currently 1.76 FTE and will be 1.89 FTE when Dr. Arellano takes on her full teaching load.

In addition to these academic/professional faculty contributions, we use courtesy faculty for four courses in which their expertise as practitioners is invaluable to our students. (This is a reduction from seven courses previously). This amounts to .53 FTE.

Therefore, total current faculty effort devoted to AE EdM is 2.29 FTE, and this will grow to 2.42 when Dr. Arellano takes on her full instructional load. Our marketing plan calls for enrollment increases over the next five years. When we reach a consistent enrollment of 24 students, we will explore the possibility of hiring another AE tenure track or professional faculty member to assist with the program. Assuming about half of this faculty member's time will be devoted to the AE EdM program, this will bring the total FTE for the AE EdM to approximately 3.0, and result in a ratio of just over 8 students per faculty member.

Goal

Clarify program leadership roles to provide adequate intellectual and administrative leadership for continuous program improvement.

Action

- i) Appoint senior-level faculty member academic lead for AE EdM. Develop position description for this leadership role
- ii) Increase tenure track faculty FTE in the AE EdM program.
- iii) Limit use of courtesy faculty in program to instances where practitioner knowledge is critical to student understanding and development, and where there is an outstanding individual available.
- iv) Add professional faculty member when AE EdM enrollment is consistently at 21 or above.

Metrics

- i) Program lead appointed and position description created.
- ii) Additional tenure-track faculty FTE devoted to AE EdM.
- iii) Limit the number of courses in the AE EdM taught by courtesy faculty.
- iv) Add additional professional faculty member as necessitated by enrollments.

Target

- i) Program Lead assigned and position description completed by end of spring term, 2014.
 - ii) At least 75% of all courses will be taught by tenure-track faculty during the 2015-16 year.
 - iii) Courses taught by courtesy faculty were limited to four Fall, 2013. Further limit courtesy faculty-taught courses to three by Fall 2015.
 - iv) We will add a professional faculty member to the EdM when enrollment exceeds the current average of 10 to exceeding the target of 25 or more. With our marketing plan, we anticipate that this will happen by Fall, 2018.
2. *Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.*

Background

Working with select faculty and the Dean's Council, Dean Flick has recently completed a draft of the College of Education Strategic Plan. The Strategic Plan is currently being circulated among all College of Education faculty for feedback and minor revision. We will have the finalized version by the end of spring term. Thus, the development of the plan has progressed enough to inform the AE EdM Action Plan, in that no major revisions are expected to the Strategic Plan at this point.

An important component of the Strategic Plan is its focus on life-long learning in diverse settings. Therefore, Adult Education in general, and the AE EdM program in particular, will continue to occupy an important niche in the College of Education. Further, the Strategic Plan includes a goal of matching College of Education demographics to those of the state of Oregon, particularly in regard to underrepresented groups. As an online program, the AE EdM has been successful in attracting such students. Students who enroll in the AE EdM are generally in careers that make it difficult if not impossible to complete a campus-based program.

A key element of the Strategic Plan is to examine the market in the general areas of adult education and professional development in government and corporate settings. The AE EdM, K12 EdM, and MS in SME are being examined for optimal use of faculty expertise to meet emerging market demands for professionals working in adult education, free-choice learning, and K12 educators. As shown in the organizational chart, the college has created the position of Manager of Online Education to oversee a coherent conceptual framework. This person will sit at the Dean's Council level and work with program faculty and coordinators to achieve sharing of students across programs within key courses and that reduces the total number of courses delivered and increases the quality of program integrity and content.

Goal

Align AE EdM program with the College of Education Strategic Plan.

Action

- i) Finalize College of Education Strategic Plan.
- ii) Working with Manager of Online Education, create conceptual framework document for the AE program that explicitly delineates alignment with Strategic Plan.
- iii) Use these documents to inform process of combining/aligning programs working with Manager of Online Education to optimize use of faculty and create greater efficiencies and synergies in course offerings.

Metrics

- i) Completed Strategic Plan.
- ii) Completed AE Conceptual Framework Document.
- iii) Program realignment completed.

Target

- i) Strategic Plan will be finalized Spring 2014.
- ii) Conceptual Framework document completed by Fall 2014.
- iii) Program realignment will be completed by Fall 2016.

3. *Work more closely with Ecampus to develop a marketing campaign that has a broader outreach to increase the number of quality applicants.*

Background

Between the time that the AE Self Report was submitted in early November and the time the Review Team recommended suspension of admissions to the program for fall 2014, we have been working very closely with Ecampus on a detailed marketing plan. While we have more work to complete on the plan, initial enrollment targets are presented in Appendix III. Expectations for increases in AE faculty to reflect these enrollment targets were covered in our response to recommendation #1.

Goal

Collaborate with Ecampus in the completion of a comprehensive marketing campaign that reaches a broader audience with high quality information on our program, and improve the admissions process.

Action

- i) Finalize comprehensive marketing campaign, including an informational webinar, phone campaign to follow-up with initial contacts, updated recruitment fliers and websites, and videos for the Ecampus website.
- ii) Ensure that at least two faculty members review application packets for each potential student.
- iii) Create a specific scoring rubric for the interview process for each applicant.
- iv) Ensure that at least two faculty members are present for every applicant interview.
- v) Review and revise (if needed) application review process

Metrics

- i) Completed Comprehensive Marketing Plan.
- ii) Creation of new admissions protocol including interview scoring rubric.

Target

- i) Comprehensive Marketing Campaign will be completed by Summer 2014.
By the end of Spring 2014, we will work with Ecampus on Marketing plan; see Appendix III as an initial step.
By Fall 2014, implement Marketing plan:
Increase visitors to our website by 25%
 - Increase email or phone contact with prospective applicants by 30%
 - Increase general applicant pool by 15%
 - Increase applicants from underserved populations by 15%]As a “stretch goal” assume target number of applicants for the program to be 40 each year, with target number of cohort students to be 20 to 25 per year starting in 2017.]
Review and revise (if needed) Marketing plan in Spring 2015; then implement Marketing plan by Fall 2015.
- ii) New admissions protocol with at least two faculty members reviewing application packets for each applicant – by Spring 2014
- iii) Interview scoring rubric will be completed by Spring 2014
- iv) Schedule two faculty members for each interview – by Spring 2014
- v) Review and revise (if needed) application review process – by Fall 2014

4. *Create a core faculty dedicated to adult education active in professional associations in the field of HRD and adult education.*

Background

This past few years has been a time of transition for the program. As discussed during the review team visit and in our response to recommendation #2, we have been working to create just such a core of dedicated faculty for the AE Program. We now have three core faculty members who have ownership in and provide leadership for the program (including two full professors).

Further, AE faculty members are very involved in the field of Human Resource Development (HRD), in both research and practitioner organizations. The resumes and vitae included in our Self Report reflect the depth of this involvement. The organizations in which our faculty are involved include the Academy of Human Resource Development (AHRD), the University Forum for Human Resource Development (UFHRD), Association for the Study of Higher Education (ASHE); American Educational Research Association (AERA), American Society for Training and Development (ASTD – national, regional, and local chapters); the American Evaluation Association (AEA), and the Council for the Study of Community Colleges. In just the last five years, our faculty have published and presented an estimated total of 44 papers at the annual conferences of these organizations – representing work by all tenure-track, professional, and adjunct faculty. Most of this work has been produced by Darlene Russ-Eft, since she was the only tenure-track faculty member in the program until two years ago. Sam Stern rejoined the faculty after having served as dean since 2002. Sam has extensive expertise in work related education and training, and has been active in the Academy for Human Resource Development (AHRD) and serves as a reviewer for the AHRD Journal. Lucy Arellano joined the faculty in Fall 2013, and brings important expertise on diversity and student success.

Faculty members within the AE Program are active as board members of those organizations, as conference stream or track chairs, and as conference paper reviewers. Further, our faculty members serve as reviewers for HRD-related journals, including the *American Journal of Evaluation*, *Evaluation and Program Planning*, *European Journal of Training and Development*, *Human Resource Development International*, and *Human Resource Development Quarterly*.

The Adult Education program is a marriage of theory and practice, thus the professional involvement of our tenure track and non-tenure track faculty reflects this uniting of disciplinary approaches. Consequently, the organizations to which they belong and in which they are involved also reflect this marriage.

Goal

Create a core faculty and sustain and advance core faculty professional involvement in the fields of HRD and adult education.

Action

- i) Create/strengthen core faculty in the fields of HRD and adult education.
- ii) Monitor and support core faculty professional involvement.

Metrics

- i) Double the number of academic and professional faculty associated with the AE EdM program from two (prior to 2014 to four).
- ii) Track and promote professional development and presence in relevant professional publication venues and professional associations (e.g. committees, memberships, officers, and journal reviewers).

Target

- i) By the end of spring term, 2014 there will be three College of Education academic faculty members whose job descriptions include direct involvement/leadership in the AE EdM program. By Fall 2015 we will have four faculty members directly associated with the AE EdM program.
 - ii) Beginning Spring term 2014, we will specifically track all core AE faculty's scholarly activities and professional association engagements annually as part of the College annual review process.
5. *Program faculty should consult with professional associations such as the Commission of Professors of Adult Education, American Association of Adult and Continuing Education regarding professional standards for graduate programs as it considers revisions and updates to the curriculum.*

Background

In response to this recommendation, AE faculty examined the standards for graduate programs provided by the organizations that the Review Team had recommended. Given the new awareness we gained from this process, we believe that the standards from AHRD more closely reflect the goals and learning outcomes of our AE program.

Core Concepts in HRD. These standards were developed by the AHRD Standing Committee on Ethics and Integrity (2009) (www.AHRD.org).

Curriculum should provide an understanding of perspectives that form the context for workplace education, training and professional development. The table below shows the AHRD standards and the courses in which those standards are addressed.

Subsequent to the development of these standards, AHRD created the Program Excellence Network (PEN), and the Adult Education program (represented by Dr. Russ-Eft) has recently become a member of that network.

Standards	Courses in which standards are addressed
Analysis and Assessment	AHE 533 (Needs Assessment & Research); AHE 532 (Instructional Systems Design II)
Design and Development of Interventions	AHE 532 (Instructional Systems Design II)
Measurement and Evaluation	AHE 532 (Instructional Systems Design II)
Organization Development and Change	AHE 534 (Organization and Systems Theory), AHE 567 (Leadership and Human Relations)
Improving Human Performance	AHE 534 (Organization and Systems Theory), AHE 567 (Leadership and Human Relations), AHE 539 (Designing Training Documentation)
Organizational Learning & Systems	AHE 534 (Organization and Theory)
Knowledge Management	AHE 567 (Leadership and Human Relations)
Career Development & Talent Management	AHE 567 (Leadership and Human Relation)
Managing the HRD Function	AHE 534 (Organization and Systems Theory), AHE 567 (Leadership and Human Relations)
Consulting	AHE 534 (Organization and Systems Theory), AHE 567 (Leadership and Human Relations), AHE 539 (Designing Training Documentation)
Coaching	AHE 534 (Organization and Systems Theory); AHE 567 (Leadership and Human Relations)
Adult Learning	AHE 553 (Adult Learning and Development)
Design and Delivery of Learning	AHE 531 (Instructional Systems Design I); AHE 547 (Instructional Strategies for Adult Learners); AHE 522-525 (Instructional Technology I-IV)
Ethics in HRD and Organizations	AHE 533 (Needs Assessment and Research; AHE 532 (Instructional Systems Design II); AHE 567 (Leadership and Human Relations)
Organization Behavior	AHE 534 (Organization and Systems Theory); AHE 567 (Leadership and Human Relations)

As we explored the standards from the Commission of Professors of Adult Education (2008) (<http://cpae.memberclicks.net/assets/documents/CPAE%20Grad%20Standards%202008.pdf>), as well as a recent study of these standards (Sonstrom, Rachal, & Mohn, 2012) (<http://aeq.sagepub.com/content/63/2/147.abstract>), we noted that there are concepts in these standards that we can use as a framework for developing the conceptual framework and standards for the Adult Education program.

Goal

Articulate program standards that are informed by relevant professional associations. These standards will serve to guide curricular revisions.

Action

- i) Development of new program standards.
- ii) Incorporate new learning outcomes into the graduate learning outcomes which will guide our assessment plans and reports on a yearly basis.
- iii) Revise portfolio requirements to reflect new program standards.

Metrics

- i) Program standards established.
- ii) New learning outcomes articulated and assessed annually via the Graduate School's Annual Assessment process.
- iii) New portfolio requirements established.

Target

- i) New program standards articulated by Summer 2014.
- ii) New learning outcomes articulated by Summer 2014 and assessed Spring 2015.
- iii) New portfolio requirements implemented for the cohort admitted in Fall 2014.

6. *Support faculty engagement in national/international associations in human resource development or adult education professional fields.*

Background

The program will continue to provide encouragement and collegial support for faculty engagement in national/international associations in human resource development. Discussions will continue with College administration regarding financial support for such engagement. As the College reconfigures shared programs and resources, funds for such engagement may become more available. As stated earlier, AE faculty are members of Academy of Human Resource Development (AHRD), the University Forum for Human Resource Development (UFHRD), Association for the Study of Higher Education (ASHE); American Educational Research Association (AERA), American Society for Training and Development (ASTD – national, regional, and local chapters); the American Evaluation Association (AEA); and the Council for the Study of Community Colleges (CSCC). Faculty members within the program are active as board members of those organizations, as conference stream or track chairs, as conference paper reviewers, and as reviewers for the related journals, such as *American Journal of Evaluation*, *Evaluation and Program Planning*, *European Journal of Training and Development*,

Goal

Sustain and advance faculty engagement in national/international associations in human resource development or adult education professional fields.

Action

AE faculty members have been and will continue to participate in professional development, both as leaders and participants at conferences and workshops. The Dean's Office appropriates approximately \$5000 per year for travel/professional development funds specifically for professional faculty across the college (including Shelley Dubkin-Lee). This amount allows us to cover most, but not all, of the costs associated with travel/professional development for our professional faculty. Based in part on the review panel's recommendation, we intend to increase this to \$8000 per year within the next three years (assuming that budget constraints allow). This will allow us to cover a greater percentage of professional faculty travel needs. We will target a substantial amount of this increase on AE professional faculty. Each of our recent hires (including AE faculty member Lucy Arellano) has received a \$20,000 start-up package that includes funds for professional development travel. Our senior faculty members provide their own travel funds, largely through grants and their professional development accounts.

Metrics

- i) Increased funding for professional development and participation in professional organizations.
- ii) 100% AE faculty participation at regional, national, and international AHRD conferences and organizations.

Target

- i) College professional development fund established for faculty travel to conferences/workshops (\$8,000/yr). This fund will primarily be used by professional faculty who do not get start-up packages and whose job description typically does not include pursuing external funding (that could potentially cover professional travel).
- ii) The following represents anticipated faculty participation in professional organizations for the next three years:

Darlene Russ-Eft will undertake the following:

- Participate in the AHRD Asian Conference, the AHRD Americas Conference, the AHRD-UFHRD Conference, and the American Evaluation Association. (ongoing)
- Participate in the AHRD Program Excellence Network – focused on advancing academic programs. (ongoing)
- Serve as reviewer for *American Journal of Evaluation, Evaluation and Program Planning, European Journal of Training and Development,*

Human Resource Development International, Human Resource Development Quarterly (ongoing).

- Serve as Director of the International Board of Standards for Training, Performance, and Instruction (until the end of 2014).

Sam Stern will undertake the following:

- Participate in relevant professional conferences and meetings.
- Provide service to AHRD on the nominations committee.
- Serve as a reviewer for the *Academy for Human Resource Development* journals.
- Serve as advisor and member of the advisory board for the NSF funded research project, *Exploring the Alignment Among Employer Expectations for STEM Skills and the Design of Education Curricula and Interventions*

Lucy Arellano will undertake the following:

- Present and participate in relevant professional conferences and meetings.
- Continue to serve as an AERA Division J (Postsecondary Education) Officer through the year 2016
- Continue to serve on the ASHE Conference Planning Committee
- Serve as a mentor for junior faculty and graduate students through the ASHE Council on Ethnic Participation
- Serve as reviewer for ASHE, AERA, AIR, and NASPA

Shelley Dubkin-Lee will undertake the following:

- Participate in the Portland area ASTD
- Attend ASTD workshops
- Attend Oregon Program Evaluator Network workshops

7. *Establish an advisory panel that would incorporate industry/professional representatives.*

Background

The faculty has discussed the need for an advisory panel in the past, but this review gave us the stimulus to take action and move forward. We envision a group comprised of approximately seven members, including two-three non-profit/governmental organizations; two-three corporate/industry individuals; one-two academics; and two-three independent consultants/educators. Below are potential advisory group members.

Non-Profit/Governmental:

Steve Bass – Oregon Public Broadcasting
Neal Keny-Guyer – Mercy Corps
Keith Thomajan – United Way – Columbia Willamette
Commissioner’s Office of the Oregon Bureau of Labor and Industry

Industry:

Joe Campbell – Nike University
Gary Ewer – Platt University
Sue Melone – Adec Inc. (graduate of the program)

Academia:

Ken Bartlett – University of Minnesota
Laura Bierma – University of Georgia
Greg Hamann – Linn-Benton Community College
Benjy Howe – Oregon Health Sciences University (graduate of the program)
Peter Kuchinke – University of Illinois
Sharan Merriam – University of Georgia
Lisa Templeton – OSU – Ecampus (graduate of the program)

Independent Consultants/Educators:

Anna Heinrich – independent consultant (graduate of the program)
Tracy Schiffman – independent consultant (graduate of the program)
Sequoia Star – independent consultant (graduate of the program)
Jennifer Webster - Consultant

Goal

Highly effective advisory group that provides valued input to the program annually.

Action

- i) Invite potential advisory group members.
- ii) Convene initial meeting for review of proposed program standards, learning outcomes, and admissions protocol.

Metrics

- i) Advisory group in place
- ii) Advisory group engagement with and approval of program standards, learning outcomes, and admissions protocol.

Target

- i) Advisory group is formed by Spring 2014.
- ii) First meeting is held during Spring or early Summer 2014.

Below are anticipated advisory committee meetings and goals for the next two years. In addition to these topics, we anticipate that part of the agenda will be emergent, coming

from the advisory members themselves and program needs. It is anticipated that this advisory committee, after the first year, would continue to meet annually.

Spring 2014 meeting

- *Review College Strategic Plan and program history and current status.*
- *Discussion of employer needs in relation to the program.*
- *Consider and approve new program standards.*

Summer 2014 meeting

- *Discussion and recommendations for course revisions in light of new standards.*
- *Review of marketing plan with recommendations for marketing activities.*
- *Review profile of 2014 cohort*

Fall 2014 meeting

- *Meet with new students in 2014 cohort*
- *Consideration of program assessment, including comprehensive examination.*
- *Review plans for Category II curricular revisions (course titles, descriptions, etc.)*

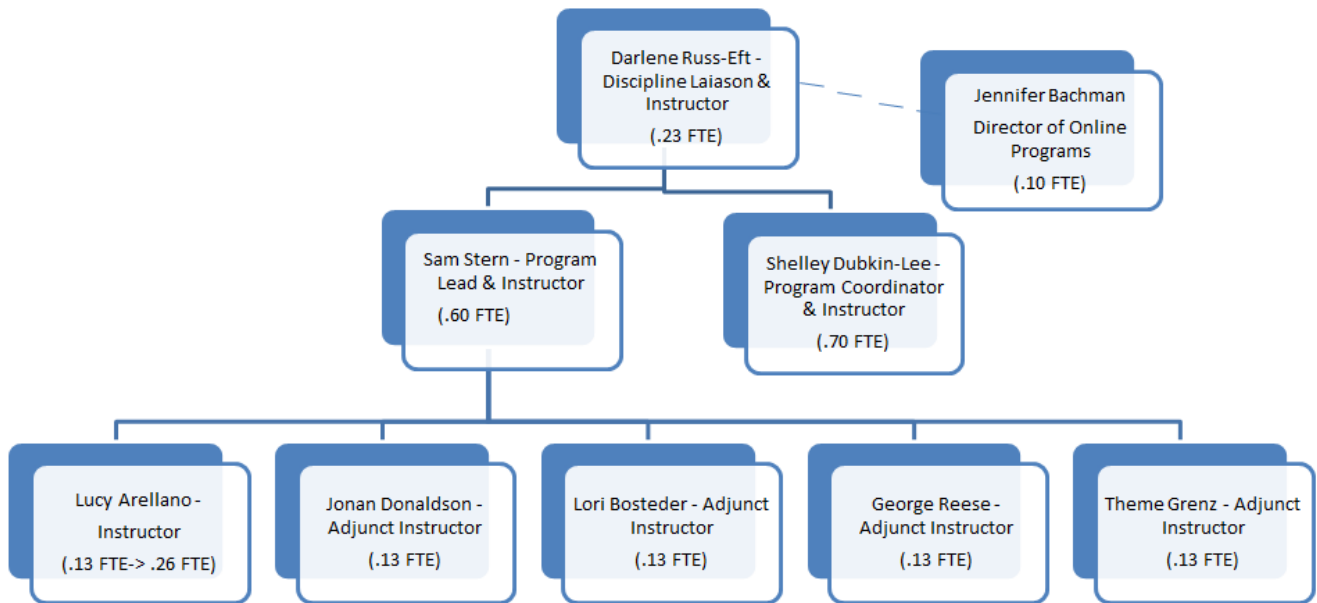

Spring 2015 meeting

Planning for two-year program assessment.

Fall 2015 meeting

- *Review success of course revisions and further needed revisions*
- *Consider revisions to marketing plan*
- *Review profile of 2015 cohort*
- *Meet with new students in 2015 cohort*

Appendix III Past Enrollments and Projections

Past Enrollments for Adult Education EdM						
FALL TERM	2009	2010	2011	2012	2013	Means
1. Applied	27	41	28	23	19	28
2. Admitted	21	14	13	15	16	16
3. Matriculated	17	12	12	13	11	13

Enrollment Projections for Adult Education EdM						
	2014	2015	2016	2017	2018	
1. Projections for Applications	22	26	33	37	40	
2. Projection for Students Admitted	16	18	21	23	25	
3. Projection for Students Matriculating	14	16	19	21	24	
eCampus Revenue Generated <i>per Cohort</i>	\$ 217,728	\$ 248,832	\$ 295,488	\$ 326,592	\$ 373,248	
Additional Revenue Due to Growth	\$ 15,552	\$ 46,656	\$ 93,312	\$ 124,416	\$ 171,072	
additional revenue = (matriculated*\$345.60*45 credit hours) - (5-yr mean*\$345.60*45 credit hours)						

Note: enrollment and associated revenue for the 2014 cohort will be 0 if suspension remains in effect.

Appendix IV

Review Panel Report, Oregon State University Program of Adult Education Conducted November 22, 2013

1. Overall Recommendation:

The Review Panel recommends that the admissions to the program be suspended for a time to allow for sufficient program review to consider and adopt specific recommendations made by the review panel. The basis for this recommendation is outlined in the next section, Summary of Findings and Recommendations with detailed discussion in the body of the report in section three.

2. Summary of Findings and Recommendations 1-2 pages.

An on-site program review was conducted for the adult education program at Oregon State university on Friday, November 22, 2013 by a team consisting of four individuals, Dr. Stephanie Bernell, faculty member in the school of public health at OSU, Dr. James Coakley, associate dean of the business school and Chair of the Graduate Council at OSU, and two external members, Dr. Joe Campbell, director of corporate training, Nike, Inc., and Dr. Talmadge C. Guy, professor of adult education at the university of Georgia. The review team collected information on a variety of categories specified by the Oregon State university guidelines for program review through interviews and a review of documents.

Recommendations

1. Clarify program leadership roles in order to provide adequate intellectual and administrative leadership for continuous program improvement.
2. Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.
3. Work more closely with e-campus to develop a marketing campaign that has a broader outreach to increase the number of quality applicants.
4. Create a core faculty dedicated to adult education active in HRD and adult education professional associations.
5. Program faculty should consult with professional associations such as the Commission of Professors of Adult Education, American Association of Adult and Continuing Education regarding professional standards for graduate programs as it considers revisions and updates to the curriculum.
6. Support faculty engagement in national/international associations in human resource development or adult education professional fields.
7. Establish an advisory panel that would incorporate industry/professional representatives.

3. Detailed Findings

Introduction: Objectives of the review, participants, order of events and organization of the report

The review team conducted a program review of the Oregon State university adult education program on Friday November 22, 2013. The team was comprised of four individuals, two Oregon State university personnel, Dr. Stephanie Bernell, faculty member in the school of public health, Dr. James Coakley, Associate Dean of the Business School and Chair of the Graduate Council, and two external team members, Dr. Joe Campbell of Nike, Inc. and Dr. Talmadge C. Guy of the University of

Georgia. The team held its initial meeting on Thursday, November 21 and was hosted at dinner by Graduate Dean Brenda McComb. The team made introductions, overviewed the review process, raised questions resulting from an initial review of the program self-study and discussed the agenda for the following day.

On November 22, the team convened at Furman Hall, College of Education to hold a series of meetings with program coordinator, Dr. Shelley Dubkin-Lee and Dean Larry Flick and Associate Dean Randy Bell and Dr. Sam Stern, faculty member and admissions committee member. At the conclusion of these meetings, the team traveled to Clackamas Community College in Willsonville where program classes are held. The team held a working lunch and then met with first and second year cohort students, and program faculty including the disciplinary liaison, Dr. Darlene Russ-Eft, Jonan Donaldson, Dr. Lucy Arellano, and Lori Bosteder. The team concluded its visit with a business meeting at the where issues were identified, recommendations were discussed and decided and assignments made for the preparation of the report.

The following sections provide a detailed discussion of the team's observations and recommendations. The main sections of the report are divided into Inputs, Productivity, and Outcomes and Impact of the adult education program. The final section summarizes the Conclusions made by the review team. The team was unable to comment on some of the factors identified in the self-study guide as data were not available in the program self-study or in other program records.

Inputs

Mission

The mission of the adult education program is "to prepare work force education specialists to lead education and training programs in the work place, the community and in community colleges." (p. 5, Adult Education Program Self Study). The program emphasis recognizes the importance of developing leaders who promote, design and deliver lifelong learning opportunities in the context of the workplace. This is consistent with the mission of the college as specified in the college's mission statement and that of the university. Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.

Recruitment and Enrollment Trends

The absolute number of applicants to the program has increased since 2008 (2008: 18; 2009: 27; 2010: 48; 2011: 45 and 2012: 32). Although, from 2011 to 2012 there was a 29% decrease in the number of applications to the program. The percent admitted was 83, 89, 38, 33 and 40, in 2009, 2010, 2011, 2012 and 2013, respectively.

The number matriculated is quite modest. (2008: 8; 2009: 20; 2010: 15; 2011: 13 and 2012: 11). Notwithstanding 2008 when about half of those admitted chose to actually enroll, most students who are admitted chose to matriculate.

These numbers suggest that while the number of applications per year is increasing, the same trend does not hold for actual enrollment. In 2008, 8 students were enrolled in the Adult Education program. In 2012, 11 students enrolled in the program. According to the self-study and meetings with faculty and program leadership, recruitment is done 'word of mouth' and via eCampus. If the goal is to increase the number of quality applicants, it may be the case that program leadership needs to work more closely with eCampus to develop a marketing campaign that has a broader outreach to quality applicants.

The Adult Education degree does not seem to have a rigorous screening process for applicants. Applicants are required to have a 3.0 GPA in the last 90 credit hours of work, provide 3 letters of recommendation, and write an essay describing why they wish to pursue the Adult Education degree. One or two faculty members review the applicant file and determine whether the applicant is a good match for the program. If the applicant is determined to be a good fit for the program, an interview is scheduled. The interview can be face-to-face, by phone, or via Skype. The program does not require GRE scores as part of the applicant screening. From conversations with faculty, it seems as though all acceptable applications are accepted; however, applications from other countries are discouraged. GRE scores are not a perfect indicator of success in a graduate program; however, the metric can provide some useful information. It is possible that by not requiring the GRE scores, there may be a perception of 'easy entry' into the program.

Curriculum strength

The curriculum is a 45 quarter-hour program offered on a cohort model in which students enroll for four credits across seven academic terms. Currently, the program offers a series of four credit hour courses that comprise the main content areas in the curriculum. Additionally, a one credit course offered each term that focuses on instructional technology and design. Students enroll for five credit hours each term except for summer when they enroll for nine credit hours. A required internship experience is intended to provide an integrative an opportunity for students to apply knowledge and concepts to practice. Internship experiences are identified and developed by students and approved by faculty. A capstone experience is also required in which students develop a portfolio designed as an integrative learning experience. Based on information provided to the review team, the curriculum has been revised on several occasions most recently in 2011. The program is offered exclusively through eCampus at the Clackamas Community College in Willsonville.

There are three primary emphases in the curriculum-instructional technology and design, organizational development and leadership, and adult learning and instruction. A review of the courses as well as interviews with students reveals that the curriculum offers a set of experiences that can be disjointed. For example, students are required to take a series of instructional technology and design courses but are not able to put these skills to use in developing the final portfolio for faculty review. The curriculum map provided in the self-study does not provide a clear indication of the overall conceptual framework that drives the curriculum. While students expressed satisfaction with courses and instructors, particularly the instructional technology and design courses, they were less clear about the value and meaningfulness of the organizational development or leadership aspects of the curriculum. The learning outcomes specified cover a broad range of roles and competencies. However, based on the review of the content and curriculum design, there are several recommendations for improving the curriculum overall.

The curriculum currently focuses equally on developing competencies in five professional roles, four of which are defined by the International Society for Performance Improvement (ISPI). The equal weighting of these roles in the curriculum addresses breadth while sacrificing the depth one might expect from a successful masters candidate. To address this, the faculty should consider creating a core curriculum with options that allow more in-depth specialization in, for example, leadership, design or organizational development. This will allow candidates to specialize and tailor their program to specific professional pursuits. In its current design, each of the individual roles might be considered a certificate program. Together they do not constitute a degree of mastery over any role or the profession.

The current program is solely based on ISPI standards. There is a missed opportunity to consider perspectives from other professional bodies including The American Society of Training and Development (ASTD) and the American Association of Adult and Continuing Education's Commission of Professors of Adult Education regarding professional standards for graduate programs. As a point of reference, the Commission of Professors has published a set of standards for graduate programs as a guide to program quality and program development. (See Standards for

Graduate Programs in Adult Education, Revised November 2008-Commission of Professors of Adult Education.

<http://cpae.memberclicks.net/assets/documents/CPAE%20Grad%20Standards%202008.pdf>). There was some confusion overall whether the program is designed to develop training design professionals and/or Adult learning experts. A curriculum redesign of the program should clarify design intent and consider some of the standards from other appropriate professional bodies in the redesign.

Quality of personnel and adequacy to achieve mission

The program is staffed by four full time faculty members and several part-time faculty. The program is housed in an organizational unit with two other programs, College Student Services Administration and Community College Leadership, share faculty resources across programs. As a consequence, there is no full-time dedicated faculty to the adult education program. Program leadership is provided by the Graduate Program Coordinator (Shelley Dubkin-Lee) and the Discipline Liaison (Darlene Russ-Eft). Full-time faculty teach in the adult education program as well as the other two programs in the unit.

There are no dedicated faculty to the program as most faculty teach across the three programs that comprise the academic unit, Adult and Higher Education. The leadership roles of Discipline Liaison and Program Coordinator together should provide intellectual and administrative leadership. However in conversation with the faculty it is evident that these roles are unclear and are being refined to clarify leadership responsibility. The consequence of this is a void in terms of intellectual leadership for the program. Critically important matters relating to vision, direction, strategic planning and resources remain underdeveloped.

Level and Quality of Infrastructure

The program is housed in Furman Hall on the Corvallis campus. The program is delivered at the Clackamas Community College Wilsonville Training Center. Given the hybrid format of the program (25 percent online, monthly delivery of the in-person sessions) the Wilsonville facilities are very adequate to support the curriculum. The students do not appear to need space outside of classroom activities.

The program coordinator indicated that most administrative support is provided by graduate students from other College programs on the main campus. Dean Flick indicated that administrative support was available from the Dean's office. There does appear to be some confusion on this issue, with the program suggesting they needed dedicated administrative support and the Dean's office indicating that such support was available.

Quality of Organization Support

Since the reorganization of the College of Education (merger with the Science and Math Education program from the College of Science and appointment of a new Dean), the organizational support structure for the Adult Education Program appears to be in flux. The program appears to be held together by Shelley Dubkin-Lee, the program coordinator. The Review Team was especially concerned that the Dean of the College was not familiar with the program.

The College is not providing adequate support to maintain sufficient academically-qualified faculty for delivery of the academic component of the program. The academic faculty (Russ-Eft, Stern, and Arellano) also support other academic programs within the College. While Russ-Eft is the academic director of the program, she only teaches one course in the program and has a very heavy advising load of doctoral students (approximately 20). Professor Stern teaches two courses in the program, and Arellano teaches one course. Of the 36 credits of academic coursework within the program, only 16 credits are delivered by academic faculty. The review team strongly recommends that adequate resources be provided for program leadership and faculty support.

Productivity

Summary data were not available for evidence relating faculty and student scholarly productivity. The review did note that Professor Russ-Eft is a noted scholar and has held leadership positions in professional associations related to the field of HRD. A new faculty member, Dr. Arellano has just been appointed with a degree in higher education and organizational change. Based on a review of faculty vitae, it does not appear that the faculty, apart from Dr. Russ-Eft, have a strong record of scholarly activity particularly in the fields of HRD or adult education. Students are part-time and are not involved in scholarly activities or research with faculty.

Data available in the program the self-study and through group interviews with students in both currently active cohorts indicate that students are generally satisfied with the program. Students did have some suggestions for improvement and the self-study notes this as well. Suggestions for improvement had to do with the additional faculty assistance with internships, eliminating duplication or overlap in course content across courses, and developing electronic portfolios to use skills learned in coursework.

Outcomes and Impacts

The placement and success of graduates is one key success measure of any academic program and the self-study report and in-person reviews indicated anecdotally that graduates have had some success progressing or retaining positions. This was reinforced by conversations with existing students, several of whom said the course was opening up new opportunities. The final recommendation regarding placement is to consider the establishment of an advisory panel that would incorporate industry/professional representatives. This would be a direct way to ensure the programs are meeting the needs of potential employers.

4. Conclusion and Recommendations for Improvement

The adult education program appears to be in a state of flux as it seeks to stabilize its faculty, curriculum, and organizational position in the college of education. This statement recognizes that the college itself is currently undergoing a state of transition in which the adult education is seeking to find its strategic position. This situation creates an excellent opportunity for the program to re-evaluate its market, curriculum, and goals.

The team recommends the following actions be taken.

1. Clarify program leadership roles in order to provide adequate intellectual and administrative leadership for continuous program improvement.
2. Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.
3. Work more closely with campus to develop a marketing campaign that has a broader outreach to increase the number of quality applicants.
4. Create a core faculty dedicated to adult education active in professional associations in the field of HRD and adult education.
5. Program faculty should consult with professional associations such as the Commission of Professors of Adult Education, American Association of Adult and Continuing Education regarding professional standards for graduate programs as it considers revisions and updates to the curriculum.
6. Support faculty engagement in national/international associations in human resource development or adult education professional fields.
7. Establish an advisory panel that would incorporate industry/professional representatives.

REVIEW PANEL REPORT, OREGON STATE UNIVERSITY,
PROGRAM OF ADULT EDUCATION

CONDUCTED NOVEMBER 22, 2013

1. OVERALL RECOMMENDATION:

The Review Panel recommends that the admissions to the program be suspended for a time to allow for sufficient program review to consider and adopt specific recommendations made by the review panel. The basis for this recommendation is outlined in the next section, Summary of Findings and Recommendations with detailed discussion in the body of the report in section three.

2. SUMMARY OF FINDINGS AND RECOMMENDATIONS 1-2 PAGES.

An on-site program review was conducted for the adult education program at Oregon State university on Friday, November 22, 2013 by a team consisting of four individuals, Dr. Stephanie Bernell, faculty member in the school of public health at OSU, Dr. James Coakley, associate dean of the business school and Chair of the Graduate Council at OSU, and two external members, Dr. Joe Campbell, director of corporate training, Nike, Inc., and Dr. Talmadge C. Guy, professor of adult education at the university of Georgia. The review team collected information on a variety of categories specified by the Oregon State university guidelines for program review through interviews and a review of documents.

RECOMMENDATIONS

1. Clarify program leadership roles in order to provide adequate intellectual and administrative leadership for continuous program improvement.
2. Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.
3. Work more closely with ecampus to develop a marketing campaign that has a broader outreach to increase the number of quality applicants.
4. Create a core faculty dedicated to adult education active in HRD and adult education professional associations.
5. Program faculty should consult with professional associations such as the Commission of Professors of Adult Education, American Association of Adult and Continuing Education regarding professional standards for graduate programs as it considers revisions and updates to the curriculum.
6. Support faculty engagement in national/international associations in human resource development or adult education professional fields.
7. Establish an advisory panel that would incorporate industry/professional representatives.

3. DETAILED FINDINGS

INTRODUCTION: OBJECTIVES OF THE REVIEW, PARTICIPANTS, ORDER OF EVENTS AND ORGANIZATION OF THE REPORT

The review team conducted a program review of the Oregon State university adult education program on Friday November 22, 2013. The team was comprised of four individuals, two Oregon State university personnel, Dr. Stephanie Bernell, faculty member in the school of public health, Dr. James Coakley, Associate Dean of the Business School and Chair of the Graduate Council, and two external team members, Dr. Joe Campbell of Nike, Inc. and Dr. Talmadge C. Guy of the University of Georgia. The team held its initial meeting on Thursday, November 21 and was hosted at dinner by Graduate Dean Brenda McComb. The team made introductions, overviewed the review process, raised questions resulting from an initial review of the program self-study and discussed the agenda for the following day.

On November 22, the team convened at Furman Hall, College of Education to hold a series of meetings with program coordinator, Dr. Shelley Dubkin-Lee and Dean Larry Flick and Associate Dean Randy Bell and Dr. Sam Stern, faculty member and admissions committee member. At the conclusion of these meetings, the team traveled to Clackamas Community College in Willsonville where program classes are held. The team held a working lunch and then met with first and second year cohort students, and program faculty including the disciplinary liaison, Dr. Darlene Russ-Eft, Jonan Donaldson, Dr. Lucy Arellano, and Lori Bosteder. The team concluded its visit with a business meeting at the where issues were identified, recommendations were discussed and decided and assignments made for the preparation of the report.

The following sections provide a detailed discussion of the team's observations and recommendations. The main sections of the report are divided into Inputs, Productivity, and Outcomes and Impact of the adult education program. The final section summarizes the Conclusions made by the review team. The team was unable to comment on some of the factors identified in the self-study guide as data were not available in the program self-study or in other program records.

INPUTS

Mission

The mission of the adult education program is "to prepare work force education specialists to lead education and training programs in the work place, the community and in community colleges." (p. 5, Adult Education Program Self Study). The program emphasis recognizes the importance of developing leaders who promote, design and deliver lifelong learning opportunities in the context of the workplace. This is consistent with the mission of the college as specified in the college's mission statement and that of the university. Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.

Recruitment and Enrollment Trends

Program enrollment and matriculation trends are presented in Table 1. The absolute number of applicants to the program has increased since 2008 (2008: 18; 2009: 27; 2010: 48; 2011: 45 and 2012: 32). Although, from 2011 to 2102 there was a 29% decrease in the number of applications to the program. The percent admitted was 83, 89, 38, 33 and 40, in 2009, 2010, 2011, 2012 and 2013, respectively.

The number matriculated is quite modest. (2008: 8; 2009: 20; 2010: 15; 2011: 13 and 2012: 11). Notwithstanding 2008 when about half of those admitted chose to actually enroll, most students who are admitted chose to matriculate.

These numbers suggest that while the number of applications per year is increasing, the same trend does not hold for actual enrollment. In 2008, 8 students were enrolled in the Adult Education program. In 2012, 11 students enrolled in the program. According to the self-study and meetings with faculty and program leadership, recruitment is done ‘word of mouth’ and via ecampus. If the goal is to increase the number of quality applicants, it may be the case that program leadership needs to work more closely with ecampus to develop a marketing campaign that has a broader outreach to quality applicants.

Table 1.
Program Enrollment Trends

Data	2008	2009	2010	2011	2012
# of Applicants	18	27	48	45	32
Number Admitted	9	20	16	14	13
Number Graduating	6	15	11	13	11 (on track to graduate – 1 student is on leave)

The Adult Education degree does not seem to have a rigorous screening process for applicants. Applicants are required to have a 3.0 GPA in the last 90 credit hours of work, provide 3 letters of recommendation, and write an essay describing why they wish to pursue the Adult Education degree. One or two faculty members review the applicant file and determine whether the applicant is a good match for the program. If the applicant is determined to be a good fit for the program, an interview is scheduled. The interview can be face-to-face, by phone, or via Skype. The program does not require GRE scores as part of the applicant screening. From conversations with faculty, it seems as though all acceptable applications are accepted; however, applications from other countries are discouraged.

GRE scores are not a perfect indicator of success in a graduate program; however, the metric can provide some useful information. It is possible that by not requiring the GRE scores, there may be a perception of ‘easy entry’ into the program.

Curriculum strength

The curriculum is a 45 quarter hour program offered on a cohort model in which students enroll for four credits across seven academic terms. Currently, the program offers a series of four credit hour courses that comprise the main content areas in the curriculum. Additionally, a one credit course offered each quarter that focuses on instructional technology and design. Students enroll for five credit hours each term except for summer when they enroll for nine credit hours. A required internship experience is intended to provide an integrative an opportunity for students to apply knowledge and concepts to practice. Internship experiences are identified and developed by students and approved by faculty. A capstone experience is also required in which students develop a portfolio designed as an integrative learning experience. Based on information provided to the review team, the curriculum has been revised on several occasions most recently in 2011. The program is offered exclusively through eCampus at the Clackamas Community College in Willsonville.

There are three primary emphases in the curriculum-instructional technology and design, organizational development and leadership, and adult learning and instruction. A review of the courses as well as interviews with students reveals that the curriculum offers a set of experiences that can be disjointed. For example, students are required to take a series of instructional technology and design courses but are not able to put these skills to use in developing the final portfolio for faculty review. The curriculum map provided in the self-study does not provide a clear indication of the overall conceptual framework that drives the curriculum. While students expressed satisfaction with courses and instructors, particularly the instructional technology and design courses, they were less clear about the value and meaningfulness of the organizational development or leadership aspects of the curriculum. The learning outcomes specified cover a broad range of roles and competencies. However, based on the review of the content and curriculum design, there are several recommendations for improving the curriculum overall.

The curriculum currently focuses equally on developing competencies in five professional roles, four of which are defined by the International Society for Performance Improvement (ISPI). The equal weighting of these roles in the curriculum addresses breadth while sacrificing the depth one might expect from a successful masters candidate. To address this, the faculty should consider creating a core curriculum with options that allow more in-depth specialization in, for example, leadership, design or organizational development. This will allow candidates to specialize and tailor their program to specific professional pursuits. In its current design, each of the individual roles might be considered a certificate program. Together they do not constitute a degree of mastery over any role or the profession.

The current program is solely based on ISPI standards. There is a missed opportunity to consider perspectives from other professional bodies including The American Society of Training and Development (ASTD) and the American Association of Adult and Continuing Education's Commission of Professors of Adult Education regarding professional standards for graduate programs. As a point of reference, the Commission of Professors has published a set of standards for graduate programs as a guide to program quality and program development. (See Standards for Graduate Programs in Adult Education, Revised November 2008-Commission of Professors of Adult Education.

<http://cpae.memberclicks.net/assets/documents/CPAE%20Grad%20Standards%202008.pdf>).

There was some confusion overall whether the program is designed to develop training design

professionals and/or Adult learning experts. A curriculum redesign of the program should clarify design intent and consider some of the standards from other appropriate professional bodies in the redesign.

Quality of personnel and adequacy to achieve mission

The program is staffed by four full time faculty members and several part-time faculty. The program is housed in an organizational unit with two other programs, College Student Services Administration and Community College Leadership, share faculty resources across programs. As a consequence, there is no full-time dedicated faculty to the adult education program. Program leadership is provided by the Graduate Program Coordinator (Shelley Dubkin-Lee) and the Discipline Liaison (Darlene Russ-Eft). Full-time faculty teach in the adult education program as well as the concentration in Community College Leadership

There are no dedicated faculty to the program as most faculty teach across the two programs in the academic unit, Adult and Higher Education. The leadership roles of Discipline Liaison and Program Coordinator together should provide intellectual and administrative leadership. However in conversation with the faculty it is evident that these roles are unclear and are being refined to clarify leadership responsibility. The consequence of this is a void in terms of intellectual leadership for the program. Critically important matters relating to vision, direction, strategic planning and resources remain underdeveloped.

Level and Quality of Infrastructure

The program is housed in Furman Hall on the Corvallis campus. The program is delivered at the Clackamas Community College Wilsonville Training Center. Given the hybrid format of the program (25 percent online, monthly delivery of the in-person sessions) the Wilsonville facilities are very adequate to support the curriculum. The students do not appear to need space outside of classroom activities.

The program coordinator indicated that most administrative support is provided by graduate students from other College programs on the main campus. Dean Flick indicated that administrative support was available from the Dean's office. There does appear to be some confusion on this issue, with the program suggesting they needed dedicated administrative support and the Dean's office indicating that such support was available.

Quality of Organization Support

Since the reorganization of the College of Education (merger with the Science and Math Education program from the College of Science and appointment of a new Dean), the organizational support structure for the Adult Education Program appears to be in flux. The program appears to be held together by Shelley Dubkin-Lee, the program coordinator. The Review Team was especially concerned that the Dean of the College was not familiar with the program.

The College is not providing adequate support to maintain sufficient academically-qualified faculty for delivery of the academic component of the program. The academic faculty (Russ-Eft, Stern, and Arellano) also support other academic programs within the College. While Russ-Eft is the academic director of the program, she only teaches one course in the program and has a very heavy advising

load of doctoral students (approximately 20). Professor Stern teaches two courses in the program, and Arellano teaches one course. Of the 36 credits of academic coursework within the program, only 20 credits are delivered by academic faculty. The review team strongly recommends that adequate resources be provided for program leadership and faculty support.

Table 2.

AE Faculty and Courses

Faculty Member	Course(s) Taught	# of Credits
Arellano	AHE 553 – Adult Learning Theory & Adult Development	4
Stern	AHE 533 – Needs Assessment & Research	4
	AHE 534 – Organization & Systems Theory	4
	AHE 567 – Leadership & Human Relations	4
Russ-Eft	AHE 532 – Instructional Systems Design II (Prog. Eval.)	4
Reese (Adjunct)	AHE 531 – Instructional Systems Design I (Prog. Dev.)	4
Grenz (Adjunct)	AHE 547 – Instructional Strategies for Adult Learners	4
Bosteder (Adjunct)	AHE 539 – Designing Training Documentation	4
Donaldson (Adj.)	AHE 522-525 – Instructional Technology I-IV – 1 Credit Each Term	4
Dubkin-Lee	AHE 510 – Internships	5
	AHE 505 – Reading & Conference Portfolio Development	4

PRODUCTIVITY

Summary data were not available for evidence relating faculty and student scholarly productivity. The review did note that Professor Russ-Eft is a noted scholar and has held leadership positions in professional associations related to the field of HRD. A new faculty member, Dr. Arellano has just been appointed with a degree in higher education and organizational change. Based on a review of faculty vitae, it does not appear that the faculty, apart from Dr. Russ-Eft, have a strong record of scholarly activity particularly in the fields of HRD or adult education. Students are part-time and are not involved in scholarly activities or research with faculty.

Data available in the program the self-study and through group interviews with students in both currently active cohorts indicate that students are generally satisfied with the program. Students did have some suggestions for improvement and the self-study notes this as well. Suggestions for improvement had to do with the additional faculty assistance with internships, eliminating duplication or overlap in course content across courses, and developing electronic portfolios to use skills learned in coursework.

OUTCOMES AND IMPACTS

The placement and success of graduates is one key success measure of any academic program and the self-study report and in-person reviews indicated anecdotally that graduates have had some success progressing or retaining positions. This was reinforced by conversations with existing students, several of whom said the course was opening up new opportunities. The final recommendation regarding placement is to consider the establishment of an advisory panel that would incorporate industry/professional representatives. This would be a direct way to ensure the programs are meeting the needs of potential employers.

4. CONCLUSION AND RECOMMENDATIONS FOR IMPROVEMENT

The adult education program appears to be in a state of flux as it seeks to stabilize its faculty, curriculum, and organizational position in the college of education. This statement recognizes that the college itself is currently undergoing a state of transition in which the adult education is seeking to find its strategic position. This situation creates an excellent opportunity for the program to re-evaluate its market, curriculum, and goals.

The team recommends the following actions be taken.

1. Clarify program leadership roles in order to provide adequate intellectual and administrative leadership for continuous program improvement.
2. Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.
3. Work more closely with ecampus to develop a marketing campaign that has a broader outreach to increase the number of quality applicants.
4. Create a core faculty dedicated to adult education active in professional associations in the field of HRD and adult education.
5. Program faculty should consult with professional associations such as the Commission of Professors of Adult Education, American Association of Adult and Continuing Education regarding professional standards for graduate programs as it considers revisions and updates to the curriculum.
6. Support faculty engagement in national/international associations in human resource development or adult education professional fields.
7. Establish an advisory panel that would incorporate industry/professional representatives.

Adult Education

1. *Clarify program leadership roles in order to provide adequate intellectual and administrative leadership for continuous program improvement.*

Issue:

Lack of dedicated faculty supporting program

Proportion of coursework taught by academically qualified faculty

Action:

- i) Increasing tenure/tenure-track FTE in program
- ii) Appointing senior faculty lead
- iii) Limit use of courtesy faculty
- iv) Add another faculty member once program enrollment grows.

2. *Based on the dean's strategic vision for the college the program appears to be well situated to enhance the college's strategic mission through adult education's foci on lifelong and life-wide learning as fundamental conceptual foundation for program development. The program leadership may need to explore these connections with the college's leadership to better position the program for additional resources.*

Issue:

At the time of the review, the strategic plan for the College was being developed. With the recent merger with SMED, and appointment of new Dean and Associate Dean, it was deemed critical for the Adult Education program to become more formally aligned with the new vision for the College.

Action:

- i) Finalize College of Education Strategic Plan.
- ii) Working with Manager of Online Education, create conceptual framework document for the AE program that explicitly delineates alignment with Strategic Plan.
- iii) Use these documents to inform process of combining/aligning programs working with Manager of Online Education to optimize use of faculty and create greater efficiencies and synergies in course offerings.

3. *Work more closely with Ecampus to develop a marketing campaign that has a broader outreach to increase the number of quality applicants.*

Issue:

The number of admitted students has declined over the past few years. According to the self-study and meetings with faculty and program leadership, recruitment is done 'word of mouth' and via ecampus. If the goal is to increase the number of quality applicants, it may be the case that program

leadership needs to work more closely with ecampus to develop a marketing campaign that has a broader outreach to quality applicants.

Action:

- i) Finalize comprehensive marketing campaign, including an informational webinar, phone campaign to follow-up with initial contacts, updated recruitment fliers and websites, and videos for the Ecampus website.
 - ii) Ensure that at least two faculty members review application packets for each potential student.
 - iii) Create a specific scoring rubric for the interview process for each applicant.
 - iv) Ensure that at least two faculty members are present for every applicant interview.
 - v) Review and revise (if needed) application review process
4. *Create a core faculty dedicated to adult education active in professional associations in the field of HRD and adult education.*

Issue:

Based on a review of faculty vitae, it does not appear that the faculty, apart from Dr. Russ-Eft, have a strong record of scholarly activity particularly in the fields of HRD or adult education.

Action:

- i) Create/strengthen core faculty in the fields of HRD and adult education.
 - ii) Monitor and support core faculty professional involvement.
5. *Program faculty should consult with professional associations such as the Commission of Professors of Adult Education, American Association of Adult and Continuing Education regarding professional standards for graduate programs as it considers revisions and updates to the curriculum.*

Issue:

The current program is solely based on ISPI standards. There is a missed opportunity to consider perspectives from other professional bodies including The American Society of Training and Development (ASTD) and the American Association of Adult and Continuing Education's Commission of Professors of Adult Education regarding professional standards for graduate programs.

Action:

- i) Development of new program standards.
 - ii) Incorporate new learning outcomes into the graduate learning outcomes which will guide our assessment plans and reports on a yearly basis.
 - iii) Revise portfolio requirements to reflect new program standards.
6. *Support faculty engagement in national/international associations in human resource development or adult education professional fields.*

Action:

Appropriated funds to support professional development, identified specific activities for all faculty supporting the program.

7. Establish an advisory panel that would incorporate industry/professional representatives.

Action:

The faculty has discussed the need for an advisory panel in the past, but this review gave us the stimulus to take action and move forward.

- i) Invite potential advisory group members.
- ii) Convene initial meeting for review of proposed program standards, learning outcomes, and admissions protocol.

Oregon State University Graduate Program Review

Applied Anthropology Graduate Program (AAGP)

October 2012

1. Overall recommendation.

The MA program should be continued and the newly developed PhD program shows great promise. The Administration, however, needs to decide if it is going to provide the support necessary for the Applied Anthropology Graduate Program (**AAGP**) to flourish within the newly reorganize College of Liberal Arts (**CLA**). Key target areas that need attention are: 1) improved financial (stipend) support for AAGP graduate students; 2) improved student-to-faculty ratio in the AAGP; 3) increased staff support is necessary to keep faculty from being overwhelmed with clerical work; and 4) the perception amongst the faculty and students that the reorganization of CLA has led to a loss of identity, power and control of their program must be remedied.

2. Introduction.

Professor Brenda McComb, Dean of the Graduate School, Oregon State University (OSU), appointed a team to review the Applied Anthropology Graduate Program (**AAGP**) on Oct. 2, 2012. The Review Team included the following: Barbara Bond (Emeritus Professor; Director, OSU Office of Postdoctoral Programs-Graduate School); Donald B. Jump (Professor, OSU Nutrition Program in the School of Biological and Population Health Sciences-College of Public Health and Human Sciences); Roberta Baer (Professor, Department of Anthropology, University of South Florida); and Bill Roulette (Owner, Applied Archaeological Research, Inc.). Review Team members received a copy of the Self-Study prepared by the Applied Anthropology Graduate Faculty several weeks before the on-site meeting. Dean McComb hosted the Review Team for dinner on the evening of Oct. 1st to provide an opportunity to meet one another,

learn the background associated with review, and share expectations for the evaluation process. The following morning the team first met with Professors Susan Shaw, Director of the School of Language, Culture and Society (SLCS) and Larry Rodgers, Dean of the College of Liberal Arts (CLA) to share insights about the reorganization of the college and Dean Rodgers' vision for its continued maturation. Bryan Tilt (Anthropology Graduate Program Director) and Leah Minc (Anthropology Program Coordinator) provided an overview of the AAGP and the faculty. This was followed by a meeting with the faculty (10 in 3 groups: Food-Culture and Social Justice group (5); Bio-cultural group (3), Archeology group (3), a tour of the department offices and laboratory facilities and meeting with graduate students (~17 in attendance). The Review Team and Dean McComb met once again with Professors Shaw, Tilt and Minc for final questions. Once done, the Review Team met in Executive Session to share perspectives on programmatic activities during the past 10 years and the stated perspective of the faculty, students and Dean Rodgers. The Review Team agreed to individually prepare a draft for assigned sections of the final report. The completed draft was shared, revised and accepted by all Review Team members prior to submission to Dean McComb on **Oct 25, 2012**.

3. DETAILED FINDINGS

A. The fit of the mission of the program and its relationship to the mission of the academic colleges and University mission.

The AAGP seeks to apply anthropological insights to human problems. This is an excellent fit for a major Land Grant university like OSU. Furthermore, the specific focal areas of the program (articulated on p. 14 of the self-study) align very well with OSU's Strategic Plan. Interestingly, the mission and goals of the program do not align as closely with the theme of the School of Language, Culture and Society, "Social Justice", which is not presented in the Self Study document but was described during the Site Review. While some of the focal research areas in the AAGP are a very good fit with a "Social Justice" theme (food equity, for example), other areas of strength in research and teaching (archaeology, for example) are more loosely connected. The apparent mis-match may be partly a function of the very recent re-organization of the units, which eliminated a stand-alone Department of Applied Anthropology and put the

AAGP into the structure of a larger school. It is inevitable that a change such as this will result in some level of confusion, and that some of this confusion might clear up over time. On the other hand, the Review Team is concerned that there may be fundamental differences in focus between the School of Language, Culture and Society and the AAGP that could make it especially difficult to achieve a cohesive culture.

Recommendation 1: Administrators from the CLA, School of LCS and AAGP should revisit the linkages between the missions of the School and the AAGP.

B. Reorganization, Vision and Culture Issues

The reorganization has led to a perceived loss of identity, power and control among faculty and graduate students in the (now) Anthropology Program. Some subgroups within anthropology feel particularly marginalized. Students particularly note that the program has been placed with a school in which humanities approaches predominate, as opposed to social science approaches. This is a key attack on their identity as applied anthropologists are concerned with mixed methods. The vision of the school is also an issue—it is not clear that everyone has bought into “social justice” as a unifying theme, or that this is appropriate. Moreover, and importantly, justice is a culturally-imbedded concept. The idea of Social Justice may or may not be directly exportable to the international locations where Applied Anthropology faculty and students conduct research and fieldwork. In some settings, “Social Justice” may sound like jingoism.

One motivation for the reorganization is that there is a feeling among higher university administration that departments/disciplines are not suited to solved contemporary social problems. An interdisciplinary approach is favored. The irony of this is that anthropology, probably the most applied and interdisciplinary unit of the new school, is the one feeling the most threatened.

In addition, these reorganization efforts have the potential to undermine the overall goals of OSU. Applied anthropology has a long history at OSU, and was well known nationally for the department’s commitment to graduate training in applied anthropology. MA graduates easily found jobs working in public and private agencies devoted to the solving of contemporary

social problems. But without the autonomy necessary to maintain a coherent vision and long term plan, and the authority over the budget necessary to carry this out, applied anthropology at OSU may not be able to maintain this nationally recognized position. Faculty feel the need to preserve the autonomy and identity of anthropology. They are concerned about development of a vision of where applied anthropology program should go and how it should develop, but are not clear how they can move towards that without a chair and a budget. And they need the ability to hire the type of faculty they need. Since new hires pick their tenure home, anthropology cannot necessarily determine what kind of hire will be made in these cases. This is a key problem. Anthropology at OSU is one of less than two dozen programs/departments in the US which train students in applied anthropology. Certain standard curricular offerings are expected in these programs, and to remain competitive with the other programs, the OSU AAGP must continue to provide these courses. Additionally, there must be the opportunity for specialized training in fields such as medical anthropology, archaeology, etc. Competing for hires against the needs of other programs, or operating in an environment where a hire must be leveraged to meet the needs of multiple other programs in the school (let's just get an archaeologist who works in France on women in prehistory), will not adequately address the needs of the OSU AAGP. Ultimately, the program will become less competitive nationally.

Higher administration at OSU needs to understand that applied anthropology is in itself a multidisciplinary endeavor. But it is built from a solid core of values and approaches unique to anthropology. These include a focus on culture and cultural differences, and a holistic perspective. Anthropologists are particularly adept at being the ones on a multidisciplinary team who can identify the larger picture and co-ordinate ways in which diverse perspectives and all contribute to the problem at hand. This approach is fundamentally different from an interdisciplinary unit such as women's studies, where people trained in many different fields bring their expertise to bear on women's issues. Applied anthropologists do the reverse—from a core culture, they move out to interact with scholars and activists coming from other disciplinary perspectives.

Recommendation 2. Applied anthropology needs a more autonomous position within OSU. The fit in the current school is not good. Discussions should first take place within the anthropology program about these issues. Then they should be discussed with

higher administration. While OSU wants to move away from departments, perhaps a center/institute for applied anthropology might be appropriate. Additionally, each anthropologist might be given a joint appointment in another appropriate unit—such as public health, geology, nutrition, etc. This might be a way to finesse the identity needs of applied anthropology while recognizing that these faculty members are indeed highly involved and committed to the interdisciplinary goals of the university.

C. Quality of students

Overall, the quality of students is reasonably good. More importantly, student quality – at least as measured by GRE scores, appears to be increasing, although the apparent trend is strongly influenced by the fact that both verbal and quantitative GRE scores were much lower in 2007 –the first year presented in the document – than in subsequent years.

The gender and resident vs. non-resident distribution of the student population are reasonable. Of course it would be nice to see a greater proportion of minority students, but their representation is not out of line with other OSU graduate programs.

Recommendation 3: There should be continued effort to improve student quality. This can be achieved through 1) improved funding for students (see below), 2) developing a more active recruitment of high quality students, perhaps through closer coordination with the recruitment efforts in the Graduate School.

D. Admissions selectivity

Overall, the program admits slightly less than 1/3 of the applicants, which represents a reasonably high level of selectivity. On the other hand, for the six years of data provided in the self-study report, only in the most recent year (2012) were the average GRE scores for admitted students greater than for rejected students. It appears that the ‘selection’ process is more likely to favor higher GRE scores now than in the past. Interestingly, the GRE scores of applicants have not changed significantly over the six year time period presented in spite of the

fact that there is a trend to improved scores in the admitted students, so the improvement in student quality noted above (at least in terms of GRE scores) is entirely a function of the selection process rather than recruitment. Obviously, GRE scores are only one of many metrics for evaluating student quality, and probably a poor one at that. But these are the only metrics available to the Review Team.

Recommendation 4: Develop a more deliberate process for selecting high quality graduate students. This might include identifying metrics in addition to GRE scores that predict student success and recruitment and selection on the basis of those metrics.

E. Level of financial support of students

The level of support for students in the AAGP is poor compared with the general graduate student population at OSU. Compared with other OSU graduate students, graduate students in AAGP are more than four times more likely to be dissatisfied with the level of financial support, and an equal proportion is more likely to be dissatisfied with the equity of distribution of support within the program, which is curious in a School that explicitly focuses on social justice. Few graduate students in AAGP have an externally-funded scholarship or fellowship, and only 20% have continuous internally-funded scholarships or fellowships. Most students are funded on Teaching Assistantships at the minimum level (0.2 FTE) that provides tuition. From one perspective, this is a reasonable distribution of limited funds in a way that provides support for the maximum number of students and still covers their tuition. From another perspective, the students in the program are likely to have severe financial challenges that distract them from their academic pursuits, and they will be saddled with significant debt that will persist for many years after they graduate. Improved financial support for students will greatly enhance recruitment of high-quality graduate students (above).

Recommendation 5: Develop a multi-faceted plan to increase financial resources to support graduate students. The plan should have explicit goals that include targets for increased faculty support of graduate students as GRAs on grants, increased internal and external scholarships and fellowships, and increasing the average FTE per student (we suggest a target of 0.49 for PhD students). A program that provides assistance to

faculty in grant writing and developing interdisciplinary collaborations for grants, incentives for including graduate student support in grant budgets, and rewards for success in obtaining student funding is most likely to be successful.

F. Curriculum strength

The graduate students in AAGP seem pleased with the quality of the individual faculty in their program and their commitment to teaching and advising. On the other hand, students are not at all pleased with the availability, or in some cases, the quality of some of the courses available to them. In terms of availability, many required courses are taught only every other year or every three years, and students seem mystified about when and whether courses will be offered. Apparently this problem has been most severe in the recent year because many faculty were on sabbatical leave or had other conflicts at the same time, and the Director of the School is aware of the problem and has resolved to make sure it doesn't happen again. However, the ratio of students to faculty is very high in this program, and the inevitable consequence is that there is very little flexibility in course offerings.

Another consequence of the high student-to-faculty ratio is the necessity of combining a large number of graduate courses with undergraduate courses – which at OSU are known as “slash courses”. Slash courses have been at the top of the “complaint” list for OSU Graduate Students for many decades, and are a particularly serious problem in programs that have a large number of undergraduates in comparison with graduate students and a relatively small faculty. In the AAGP it may be possible to alleviate this problem in part by improving the quality of the slash courses. The Review Team noted that well over half of the course descriptions provided in the Self Study document for “slash courses” did not even articulate graduate-level outcomes, and many of those that did attempt to distinguish between graduate and undergraduate level expectations mentioned course requirements (such as a term paper) rather than learning outcomes. Assistance for faculty in better understanding appropriate learning outcomes for graduate students, as well as assistance in instruction to achieve these outcomes, could be helpful. But there is no denying the fact that this faculty is stretched to its limit in providing high-quality graduate instruction. This is not a condemnation of the quality of the faculty, but rather a consequence of their small number.

Most of the graduate students are unaware of the university-level requirements for graduate students. For example, they do not know about the policy requiring training in Research Ethics, recently adopted by the Graduate Council. The AAGP self-study does not specify how this training is delivered. We suggest this issue be addressed directly.

Recommendation 6: Review course outcomes for all graduate courses and revise as necessary to make sure that graduate outcomes are explicit and appropriate. Offer convenient workshops to faculty to help with this and to help them design learning activities to achieve the stated outcomes without over-burdening the faculty. The Center for Teaching and Learning can assist with this.

Recommendation 7: Develop a plan to reduce the faculty-to-student ratio. This plan should be proactive rather than reactive – i.e., it should anticipate retirements and future needs and should lay out a commitment by School and College administration to provide sufficient faculty numbers and expertise to sustain the program. The plan might also consider enhancing the teaching capacity of the AAGP by adding adjunct and courtesy faculty.

Recommendation 8: Improve communications with graduate students about course offerings and program requirements, including university-level requirements.

Recommendation 9: Develop a plan for ethics training of AAGP graduate students consistent with the standards and practices in the field of Applied Anthropology.

G. Level and quality of infrastructure

The program is housed in a large, old building that has been under-occupied for many years. Consequently, there is quite a bit of space available to the program, even though it is spread out over many floors. The faculty offices are simply stunning, and the new faculty lounge is nice – especially for a faculty of this size. Office space for graduate students is uneven, in some cases with eight or more students crammed into a very small office with barely room for their chairs, and in other cases with much more commodious office conditions. Also we are not sure whether there is any common space, such as a lounge, available to graduate

students. (We note that in many departments at OSU, the “lounge” space is open to faculty and students alike). The laboratory space available to the archaeology program appears ample and the computing infrastructure is impressive, although there may be a need for additional storage for archival of artifacts and for field equipment. There are other programs that do not have such ample laboratory space available, but they do not appear to be cramped. In the short time available to the Review Team there were many questions that could not be addressed, but we have some concern that graduate students are not provided adequate support for access and training to computer software. It appears that this support is provided ad hoc by individual advisors or teams and that there is no provision on the program or School level to provide such support to students.

Recommendation 10: Make sure all students in the program have access to computer software and computer support.

H. Quality of organizational support

Largely because of the recent reorganization, the support structure within and external to the Anthropology Program is still in flux. Students seem very pleased with the clarity and direction that Bryan Tilt is bringing to the graduate program. On the other hand, students and faculty alike appear to feel “leaderless” – which is not to fault the current leadership structure so much as to point out that there are difficulties in the transition. The Review Team was especially concerned that the ideas and perspectives offered by Dean of the College of Liberal Arts did not indicate a strong alliance with the Anthropology Program. Potentially problematic is the limited evidence that the administration is willing or able to provide adequate support to maintain sufficient faculty numbers in this program to sustain a high quality PhD program. It is noteworthy that the Director of SLCS intends to attend all of the Anthropology Program faculty meetings, and this interaction may go a long way to improve support for and communications with the Program.

Recommendation 11: The Anthropology program and the AAGP should actively seek to elevate the profile of their program within the School, College and University. One way to do this is to rotate responsibilities among faculty and students to write “press

releases” or other promotional materials. Such a project might be integrated into the “Uses of Anthropology” course, which would provide valuable training for students in making applied anthropological research available to multidisciplinary audiences. These materials might be included in newsletters and other communications on all of these levels, and also be included on the AAGP’s website.

Recommendation 12: In addition to attending Anthropology faculty meetings the Director should periodically meet with small groups of anthropology faculty and graduate students to gain a more personal sense of the program.

I. PRODUCTIVITY

1. Level and Quality of Student Performance. The graduate students in AAGP are composed primarily of MA candidates (~75%) with some Ph.D. candidates (~25%). From 2007 to 2012, 60 MA candidates entered the program, 4 (6.7%) left without completing the degree requirements, 29 (48%) completed the degree requirements. Most MA students completed their degree requirements within 4 years of entering the program. The remaining students (27 or 45%) are still enrolled in the program. The Ph.D. program began in 2006; from 2007-2012, 19 students entered the program. Three students have completed the Ph.D. (~16%), 1 (~5%) left the program; the remaining 15 (79%) are still enrolled in the program.

The students have received several awards [Alumni Scholarship, Wilbur “Buck” Davis Memorial, Service to undergraduate education, Thomas Hogg Book scholarship, SYLFF fellowship for international research, McNair scholarship, et al]. While MA and doctoral students’ thesis/dissertation titles are listed, there is no evidence of publication of student research in peer reviewed journals. In fact, the Alumni Survey indicated that the majority of students do not publish their research. While there is evidence that graduate students in the AAGP attend national meetings (46 awards to graduate students for travel to conferences are noted in the self-study), it is not clear how many of these students presented their research.

Recommendation 13: Characterize causes for lack of completion of the degree and develop strategies to increase completion rate.

Recommendation 14: Articulate publication expectations for students.

Recommendation 15: Encourage faculty and graduate students to seek graduate fellowships, including OSU Graduate Fellowships.

Recommendation 16: Roughly 75% of the students in the program are MA candidates. The Provost has emphasized the training of Ph.D. candidates. If the AAGP wants to increase the # of Ph.D. candidates, the AAGP needs to develop a plan (with metrics) for the growth of # of Ph.D. candidates in the AAGP. In conjunction with this, the AAGP needs to develop funding mechanisms that assures students of adequate GTA/GRA/Fellowship support for the duration of their graduate program.

2. Level and Quality of Faculty Performance. The faculty, on average, published 3 refereed or other manuscripts/books per year during the 2007-2012 timeframe. During this same time the faculty received over \$5 million (~\$1 million/year) in research support from federal, state, industry and foundation sources. This represents highly commendable research productivity as measured by receipt of grants/research support and publication of peer-reviewed manuscripts. The webpages for the faculty, however, do not contain updated lists of publications or research support. The Program Review document also does not contain a list of presentations at professional meetings or invited presentation.

Over the last five years, however, the faculty received many awards and honors and served on numerous editorial boards for peer-review journals and reviewed books. They have also provided service to the state and national boards, societies/associations and government. As such, the faculty are well-engaged at the local, state, national and international level. The faculty appear to be doing a good job of publishing scholarly work and obtaining extramural support.

Recommendation 17: Faculty websites need to be updated for publications, presentations and grants. This could be done by a staff person, were one available.

Recommendation 18: Extramural support should include GRA support for graduate students.

3. Viability of Scholarly Community within Which Students Can Interact.

While seminars occur in the program, neither students or faculty shared information on these seminars, such as the # of internal and external speakers, or seminars devoted to professional development/preparation. Thus, it is unclear if the students are exposed to views of their discipline outside of OSU. Moreover, it was unclear if the students have the opportunity to present their research in a public forum.

Recommendation 19: Engage graduate students in periodic seminars as speakers in and organizers of the seminar series.

Recommendation 20: Develop a Graduate Colloquium for which each graduate student is required to present their thesis/dissertation findings. This could be held once a year. Discussants could be drawn from appropriate other disciplines across campus, thus contributing to the interdisciplinary goals of the university as well as publicizing applied anthropology in other areas of the university.

Recommendation 21: Maintain a list of seminar speakers. Provide an opportunity for students to meet with outside speakers to discuss research issues.

J. OUTCOMES

1. Professional viability of Graduates.

The AAGP is dominated by MA candidates. Since 2007, 52 MA and 2 PhD graduated from the program. Of the MA graduates, 30 are employed by various states (Oregon, Washington, California, Florida, Michigan, etc), federal agencies (US military) or enrolled in Ph.D. programs. Of the 3 PhD graduates, one is employed by NOAA in Seattle and the others

are program coordinators at OSU. Of the students for which placement data are available, the majority are employed in fields related to anthropology.

Employers of graduates from programs such as the AAGP at OSU note that the skills they find most important in new hires are ability to write and critical thinking. Such skills are not always identified by those of the opinion that learning should be oriented to fill the needs of the market place; that the primary job of the academy is to prepare students to compete in the market place. However, training for employment in applied anthropology should focus on opening and stimulating the minds of its students. The AAGP should have as its primary goal helping students learn to be curious, to have open minds, to be able to approach a problem from multiple sides, and to think critically. The market will absorb such thinkers and teach them the skills they need to be successful.

Recommendation 22: The AAGP should continue to stress writing abilities and the development of critical thinking in students in the program

2. Satisfaction of Students and Graduates.

Data for the satisfaction level for graduates of the program was obtained through 3 surveys: 1) a survey of current graduate students; 2) an exit survey of graduating students between 2010-2012; 3) a survey of alumni from the past 10 years. The current students were generally satisfied with their program and would choose the AAGP again. Moreover, they would recommend the program to prospective students. Their reason for coming to OSU-AAGP is the quality of the faculty and the Anthropology program.

Concerns expressed by the current students in both the surveys and in our meeting with the students were: 1) scheduling and availability of graduate level courses for completion of degree requirements, this applied to major and minor courses; 2) teaching graduate level courses at the appropriate level, this likely concerns slash courses; 3) initial advising could be improved. The exit survey by the Graduate School provides a comparison of the AAGP with all OSU graduate programs. Areas where the AAGP deviated negatively from other OSU graduate programs include: 1) fairness in distribution of graduate student financial support in the form of

GTA, fellowships and other sources of funding; 2) need to obtain student loans, financial aid or borrow money for program completion, it is high amongst AAGP students; 3) ~40% of students were not satisfied with the program advising and guidance; 4) ~50% were not satisfied with the explanation of survival strategies in graduate school and 40% were not satisfied with help received to find professional employment. The alumni survey indicated that the top reason for getting a graduate degree at OSU was to get a promotion at a job. Of these respondents (28 former students) most were satisfied-very satisfied with their program at OSU. As stated earlier, most of these students did not publish their research in a scholarly format, other than their thesis/dissertation.

Recommendation 23: Provide adequate GTA/GRA support for the graduate students.

Recommendation 24: Provide adequate advising for all entering students. Assess mentoring yearly through reviews/surveys/townhall meetings; and make changes in the program accordingly.

Recommendation 25: Encourage students to publish their research in peer-reviewed journals.

3. **Rankings/ratings.**

The Program Review document provided no information on rankings or ratings.

Recommendation 26: The program needs to identify methods to establish rankings and/or ratings for the MA and Ph.D. program. This information is useful to measure how the program compares to other programs nationally. Such information can be used for faculty and student recruitment.

4. **CONCLUSIONS**

A. Strengths of the Program

1. The staff, faculty, and facilities are impressive, in particular the archaeology labs.
 2. Bryan Tilt is doing an excellent job as Graduate Director.
 3. The faculty are open to the graduate students; the students really seem to like the faculty.
 4. There is a good sense of camaraderie among the faculty
- B. Needs Internal to the Anthropology Program
1. Slash courses continue to be an issue, though efforts have been made and continue to be made to address this issue.
 2. There should be a departmental list-serve for grad students and faculty through which jobs (and other important information) can be widely and quickly shared.
 3. Availability of courses for graduate students, slash courses, and funding are all concerns for grad students.
 4. More graduate students are needed for the stand-alone graduate courses—consider development of an anthropology certificate.
 5. Archaeology labs need more space, particularly for curated materials.
 6. The balance of MA/PhD students needs to be considered in terms of faculty workloads. Support for Ph.D students should be sought from grants.
- C. Reorganization, Vision and Culture Issues
1. The reorganization has led to a perceived loss of identity, power and control among faculty and graduate students in the (now) Anthropology Program. Some subgroups within anthropology feel particularly marginalized.
 2. Students particularly note that the program has been placed with a school in which a humanities approach predominates, as opposed to social science approaches. This is a key attack on their identity as applied anthropologists concerned with mixed methods.
 3. The vision of the school is an issue—it is not clear that everyone has bought into “social justice” as a unifying theme, or that this is appropriate.
 4. The department needs to explain to Susan, Larry, and others the differences between the culture of anthropology vs. interdisciplinary culture. The identity needs of the anthropology need to be finessed.

5. There is a feeling among higher university administration that departments/disciplines are not suited to solve contemporary social problems. An interdisciplinary approach is favored. This runs counter to the culture of anthropology.
6. Susan does not agree that the reorganization has created identity problems as well as problems for long term program development.
7. New hires are a problem. While they pick their tenure home, anthropology may not be able to determine what kind of hire will be made.
8. Faculty feel the need to preserve the autonomy and identity of anthropology
9. Faculty are concerned about development of a vision of where applied anthropology program should go and how it should develop, but are not clear how they can move toward that without a chair and a budget. And the ability to hire the type of faculty they need.

D. Graduate Student Issues

1. Some of the required courses are not felt to be relevant for the archaeologists. Either requirements need to be changed or the relevance of these courses (ethnographic methods) needs to be clarified.
2. Most grad students are appointed at the same FTE, but workloads vary.
3. Scheduling of the methods course and other required courses may not be optimal for student requirements. Regular meetings between faculty and students should be instituted. Having graduate representation at faculty meetings and/or town hall meetings held biannually would help bring student concerns to the faculty.

E. Support Staff

1. Staff support is woefully inadequate.
2. About a quarter time position needs to be solely devoted to the graduate program.
3. Faculty need staff support for grant writing. This should not be in terms of required workshops, and /or web based instructions for faculty, but rather actual support staff who can do some of the hands on work required for larger grants (e.g., NIH).

F. New Faculty Lines Needed

1. The student/faculty ratio is much too high.

2. Medical anthropology is carrying too heavy a load of advisees (one person is on 20 committees, 10 as advisor). Another medical anthropologist is needed.
 3. More archaeologists are needed. Currently 2.5 faculty are serving 22 students.
- G. Relationships between the Anthropology Program and Other units in the University
1. There is a need for funding transparency. Faculty need to know where the money comes from and where it goes. This is true within the school and between the college and the school.
 2. The faculty are fearful that their voices won't be heard about the future of anthropology within the school
 3. The Anthropology program coordinator must have authority to make decisions that are in the best interest of the AAGP, such as graduate student stipend levels, recruitment of students, scheduling classes, assigning teaching, scheduling faculty meetings, etc.
 4. The dean gave frequent examples drawn from women's studies. Susan must advocate for anthropology to the dean.
 5. Anthropology needs more self-promotion within the University. Faculty and students are involved in a wide range of interdisciplinary projects. They must make sure that these activities are recognized by a university increasingly giving attention and resources to interdisciplinary approaches.

Memorandum of Understanding

Proposal to Extend an Existing OSU Program From OSU-Main (Corvallis) to OSU-Cascades (Bend)

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

For Instructions, see <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/mou-process>
Please attach Executive Summary Proposal, Library Evaluation (performed by the library), Letters of Support (if any), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Title of Program (include if it is a major, minor, option or certificate)

1. Review - College Approver - Liberal Arts

Approved by [Helene Serewis](#) Exec Asst to-Dean / Liberal Arts Admin, April 20, 2012 12:57pm

Comments

Helene Serewis (College Approver - Liberal Arts) April 20, 2012 12:57pm

The CLA Curriculum Committee approves this proposal.

2. Review - Curriculum Coordinator

Approved by [Sarah Williams](#) Coord-Curriculum / Acad Prgms/Assess/Accred, April 23, 2012 4:12pm

Comments

Sarah Williams (Curriculum Coordinator) April 23, 2012 4:12pm

Following approval of the CLA Curriculum Committee, this proposal is being moved to review by Budgets and Fiscal Planning.

3. Review - Budgets and Fiscal Planning Committee

Sent Back by [Walter Loveland](#), May 25, 2012 10:01pm

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) May 25, 2012 10:01pm

The BFP group would like to see a detailed breakdown of the anticipated revenues for this program and a detailed breakout of the personnel, their salaries, FTE and OPE costs

4. Originator Response

[Cornelius Browne](#) Associate Professor / Acad Prog / Student Aff, September 20, 2012 12:03am

Comments

Cornelius Browne September 20, 2012 12:03am

I have added two explanatory paragraphs about hiring in response to questions from the BFP group. The additional paragraphs can be found on page eight, section 3a of the proposal.

Also in response to queries from the BFP group, I have posted a budget addendum under "Other Attachments."

5. Review - Budgets and Fiscal Planning Committee

Sent Back by [Walter Loveland](#), October 3, 2012 10:50am

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) October 3, 2012 10:50am

This proposal is being returned because the BFP group, the Graduate Council and the Provost have, in the past, indicated that they do not regard programs where large numbers of faculty are appointed at 0.49 FTE as sustainable, appropriate ways to construct programs. While these groups recognize the utility and need for part time faculty, a program that seems to be largely based upon faculty who are not receiving health insurance and retirement benefits is not acceptable. We suggest that these faculty be appointed at > 0.5 FTE allowing them to have full benefits. In addition, it is not clear to us the number of regular OSU faculty and the number of newly hired Cascades faculty participating in this program in each year and how these people are designated in the budget.

6. Originator Response

[Cornelius Browne](#) Associate Professor / Acad Prog / Student Aff, November 8, 2012 5:28pm

Comments

Cornelius Browne November 8, 2012 5:28pm

I have attached a newly revised MOU and budget sheets addressing the BFP group's concerns.

It is essential to understand that, by contrast to tenure-line commitments made by universities in full-residency MFA Programs, prestigious low-residency programs across the country (from Warren Wilson to Sarah Lawrence) recruit their staff from high-profile authors with MFA training to work as professional mentors and to teach in biannual residencies on term contracts. These professional mentors are not physically housed at OSU Cascades Campus. They work from their own home base on a contract basis. They are people who have reached the upper levels of their craft and are not seeking tenure or full time employment at OSU. This is the norm, and is expected by both students and mentors. Of the top-ten-rated low residency creative writing programs in the United States, all function on this model

7. Review - Budgets and Fiscal Planning Committee

Sent Back by [Walter Loveland](#), November 16, 2012 9:54am

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) November 16, 2012 9:54am

We are returning this proposal for corrections and needed additional information. The items needing attention are: (1) Please edit the proposal to remove the "mfa mou browne .doc (10/03/2012) and the "MFA Budget Addendum.xlsx" (10/03/2012). We believe these obsolete files could confuse readers. (2) Under Personnel in the budgets, please either footnote the budget page or describe, in the narrative, that the 70K\$ is the salary of the director, the 33.5K\$ is the OPE for that salary (and how that number was estimated). (3) Under Personnel in the budgets, please add the salaries to be paid to OSU faculty participating in the program and the relevant OPE costs (and the basis for the estimates.) (4) Under Supplies and Service, please indicate the breakdown between Supplies and Services (where we understand the Services are the Personal Service Contracts for the "guest faculty" and how these estimates were made.) (5) Indicate the inflation factor used in estimating the expenses in years 2-4. (6) In Column E of the budget, please indicate the estimated revenue from tuition (or other sources) for each year

8. Originator Response

[Cornelius Browne](#) Associate Professor / Acad Prog / Student Aff, November 17, 2012 8:53pm

Comments

Cornelius Browne November 17, 2012 8:53pm

All changes have been made to the budget sheets, and the proposal has been edited to reflect the most recent changes only.

9. Review - Budgets and Fiscal Planning Committee

Sent Back by [Walter Loveland](#), November 19, 2012 3:30pm

Please correct errors in the budget

10. Originator Response

[Cornelius Browne](#) Associate Professor / Acad Prog / Student Aff, November 19, 2012 9:16pm

Comments

Cornelius Browne November 19, 2012 9:16pm

Errors in the budget have been corrected, 11/19/12.

11. Review - Budgets and Fiscal Planning Committee

Approved by [Walter Loveland](#), November 20, 2012 1:43pm

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) November 20, 2012 1:43pm

This proposal is approved with the following conditions and advisories. All of the supply expense should be put together in the supplies budget with appropriate adjustments elsewhere. This includes the \$12,000 of general supplies, the \$15,000 of director's supplies and the computer (\$3000) for the director. The Director of the Office of Budgets also advises that the RAM monies are not allocated to the units and you should plan without that revenue.

**Extend: MFA in Creative Writing (Low Residency)
From OSU-Main to OSU Cascades**

**School of Writing, Literature, and Film
College of Liberal Arts**

**March 2012
Proposed Effective Term: Fall 2013**

CPS Tracking #: 83436

1. Program Description

a. Program title, level

- MFA in Creative Writing
- CIP# 231302

CIP # 231302

Title: Creative Writing

Definition: A program that focuses on the process and techniques of original composition in various literary forms such as the short story, poetry, the novel, and others. Includes instruction in technical and editorial skills, criticism, and the marketing of finished manuscripts. .

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

b. OSU main campus department and school/college under which the program is offered.

- School of Writing, Literature, and Film, College of Liberal Arts

c. Who will be the administrator(s) of the OSU-Cascades program?

- Marla Hacker, Dean of Academic Programs
- Neil Browne, Director, American Studies
- A faculty board with representation from English and creative writing at OSU/Corvallis and at OSU Cascades will be created to oversee the program.
- The OSU Low-Residency Faculty Board will be an appointed board consisting of 2 OSU Cascades faculty members, along with 3 members the OSU Corvallis MFA. The Low-Residency MFA Faculty Board would draw on strengths of faculty knowledgeable in low-residency programs to provide artistic and curricular guidance for a 21st century program suited to OSU and the unique opportunities of OSU/Cascades. The Low-Residency Faculty

Board would also be represented in the hiring of a Director through a national search process. Once a Director is hired, the Board would serve in an ongoing function as a recommending body on artistic and curricular direction, while day-to-day operations are in Bend.

- The low-residency program is administered under the same conditions as other graduate programs at OSU-Corvallis, with governing authority ultimately belonging to the Chair of English/Director of the School of Writing, Literature and Film, and local authority on day-to-day operations belonging to OSU-Cascades.
- d. Briefly describe the academic program, and provide a program degree audit sheet that lists all courses (including number of credits) and indicates how each course will be offered at OSU-Cascades [resident course {COCC, OSU, OU, EOU, other}, distance education, web, etc.].
- The proposed MFA in Creative Writing at OSU-Cascades (low residency) extends the Advanced Creative Writing workshop-based side of the MFA in Creative Writing on the Corvallis campus and delivers the same high quality training in writing and literary craft. The delivery significantly differs. Studying under a low-residency studio/mentorship model, students in the OSU-Cascades MFA Program must satisfy graduate degree requirements parallel to those established by the OSU-Corvallis MFA in Creative Writing. The MFA in Creative writing at Cascades—through its different delivery method—will add diversity to, not duplication of, the established writing programs at Oregon State University. The OSU-Cascades MFA Program offers a curriculum requiring 60 credit hours, during which students come to develop the skills needed for writing an original book-length creative work. This curriculum is equivalent to the requirements of the OSU-Corvallis MFA: 40 hours in Advanced Fiction Writing / Advanced Poetry Writing and other course work appropriate to the degree, and 20 hours in thesis, writing and conference, or 599 craft courses. Students enroll in at least nine credit hours per term. Students are required to write original fiction, creative nonfiction, or poetry. A project focusing on the craft of writing is required in the form of an essay, lecture or teaching a seminar. The key requirement of the course of study is a creative thesis, an original literary work in the student's chosen genre.

request a site visit in two years.)

- Proposed Start Date: **Summer Term or Fall Term 2013** (Banner 201300 or 201301)

- The OSU-Cascades MFA Program in Creative Writing is comprised of two parts: a mentoring section and a residency section. Central to the OSU-Cascades MFA Program are the residencies and the one-on-one mentoring relationship between student and teacher which, in combination, accelerate the participating students' development as writers.
- Students are not in residence on campus during the mentorship section. They work from a distance. During the off-campus mentorship period, students work one-on-one with professional mentors who guide each student's study of craft and provide written commentary on their student's work. The emphasis is on one-on-one coaching of writing, transmitting professional experience, professional editing, and introduction to the publishing world. Included in the requirements of both professional mentors and students is a regularly scheduled exchange of packets, which include students' original creative work, responses to reading assignments and responses to the mentor's critiques and advice. Also included in the packet assignments are students' analyses and critical papers in craft, and required entries for an annotated bibliography.
- The OSU-Cascades MFA Program in Creative Writing requires four residencies of eight to ten days for 40 days in residence overall. Residencies are typically scheduled at the beginning of summer and winter terms. Students are required to attend each residency. During the eight- to ten-day residencies at the host campus, students attend workshops, lectures, panel discussions, seminars and literary readings led by the program's professional mentors as well as guest authors and representatives of the publishing industry. During the residency period, students, with the professional mentor's assistance, develop a reading list and study plan for the mentored portion of the term. The goal of each residency is to 1) broaden and deepen each student's knowledge and practice of creative writing; 2) develop a supportive literary community for students that offers encouragement and constructive criticism in workshops, seminars and one-on-one discussions with professional mentors; 3) educate students about publishing and editing through panels and informal conferences involving publishers, editors and agents during the residency period; and 4) generate a list of works to be included in the annotated bibliography.
- Assessment:

Learning Outcomes

Outcome 1: Produce original work in a specified genre, culminating in a thesis of publishable quality and of high literary merit. The student and professional mentor confer to determine length, form, and content, but typically a thesis will be for prose, 80-120 pages, and for poetry, 38-45 pages.

Outcome 2: Develop and employ methods of intensive revision.

Outcome 3: Demonstrate mastery of various literary theories and techniques. Mastery will be achieved through participation in the poetry or fiction/non-fiction workshop (24 total credit hours of WR 521 or WR 524), as well as in courses that focus on specific aspects of craft. Craft courses concentrate on a particular theory, genre, theme, technique, author or topic. Examples include courses on dialogue, the "uncanny" novella, linked story collections, the prose poem, the lyric essay, literary imitations, etc.

Outcome 4: Demonstrate an understanding of the contemporary creative writing profession. In addition to the instruction received in workshops on the profession, students attend mandatory residencies each year. These events feature nationally acclaimed writers who give public readings of their work and conduct colloquia specifically designed for the MFA

students. Students engage in in-depth conversations with the writers about craft, the creative process, publishing, creative writing pedagogy, and other topics. Students also benefit from panels on a wide range of subjects relevant to the profession, as well as readings, roundtable discussions, and other events.

Outcome 5: Perform all activities in an ethical manner. This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's coursework in literature, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately.

Measurement

Outcome 1: The student's writing is assessed in three ways. Students submit original work to the workshop throughout the two-year program, and receive extensive feedback, both oral and written, from their peers and professional mentor; students enroll in 12 credit hours of thesis/writing and conference, in which they work one-on-one with a professional mentor who assesses their progress; and students take a two-hour oral examination. The exam measures the quality of the thesis's individual parts, as well as how it coheres as whole.

Outcome 2: Students study and practice methods for revision in workshops and in consultation with the professional mentor. In workshop, participants describe, explore, and evaluate the premises of works in progress, with an eye toward editorial improvement. Revised drafts are submitted to the workshop for consideration and further suggestions. In conferences, students present revisions of work, and professional mentors offer both conceptual and sentence-level suggestions, as well as providing literary models that may assist in the revision process.

Outcome 3: Mastery of various literary theories and techniques is assessed through craft courses and workshop. Craft courses involve both critical writing and creative writing: Students study technique as demonstrated in their readings, analyze technique in their critical papers, and practice technique in creative exercises.

Outcome 4: The understanding of the contemporary creative writing field is measured through the oral examination.

Outcome 5: This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's bibliography project, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately.

- **AUDIT SHEET:**
Master of Fine Arts in Creative Writing

To complete the course of study for the MFA degree in Creative Writing, a minimum of 60 quarter/term hours are required in the following categories:

36 hours/credits in Advanced Fiction Writing / Advanced Poetry Writing and
12 hours/credits in Literary Craft Courses
12 hours/credits in Thesis and/or Writing and Conference

Built into the course work is a sustained critical engagement with a broad range of literature and contemporary writing, which will be demonstrated by an annotated bibliography of at least 60 entries and by the students' participation in literary craft courses during the residencies. This work is equivalent to the literature and composition requirements in the program in Corvallis. Because the low residency program will not be primarily focused on training future teachers, the

requirements in the OSU-Cascades MFA Program in Creative Writing will be tailored to the individual student's need as determined by the student and mentor.

Advanced Creative Writing Courses (a total of 40 credit hours is required). This requirement demands that the student complete ten Advanced Creative Writing courses. The topics will vary. All courses will be offered as 500 level courses only.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)

Thesis/Writing and Conference (a total of 20 credit hours is required).

- WR 503: THESIS
- WR 504: WRITING AND CONFERENCE

Year 1 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop Summer term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Year 2 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop summer term (low-residency):

10 hours WR 503 Thesis

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

All MFA candidates will be required to complete a thesis, which is to be a sustained piece of creative writing of literary merit (for prose, 80-120 pages, and for poetry, 38-45 pages). The thesis will be read by the student's primary advisor and a second reader and approved by the program director. A formal examination will be also required of MFA students. The exam consists of two parts, oral and written, and will usually be given in the student's final term of study, and consists of questions assessing the student's grasp of the history of the genre, the contemporary creative writing situation, influences and models, and matters of craft, all within the context of the student's own writing.

- e. Indicate in what ways the proposed program at OSU-Cascades will differ from the OSU-Corvallis campus program.
- Though the OSU-Cascades MFA Program in Creative Writing satisfies the same degree as its traditional high residency counterpart in the School of Writing, Literature, and Film in Corvallis, it differs in that students do not reside on campus for the duration of the graduate program but only during the eight to ten day on-campus residency periods. It will not duplicate, but add diversity to the creative writing offerings at Oregon State University. Also, the low-residency program does not have the primary goal of preparing teachers, so the literature and composition requirements will be shifted to bibliographic aspect of the low-residency program and attendance at craft lectures and literary craft workshops held on site during the residencies. The emphasis is on one-on-one coaching of writing, transmitting professional experience, professional editing, and introduction to the publishing world.
 - The professional mentorship/residency model offers a different approach to delivering the same quality instruction as is offered with the high-residency model. The low-residency

professional mentors are employed on a contract basis which allows the program to assemble highly qualified writers from across the country and represents a cost-savings relative to payroll and benefit costs. The average number of professional mentors, to maintain one-on-one mentoring during off-campus periods is calculated at one professional mentor per four students. The low-residency model emphasizes the professional mentor and student relationship as a way to accelerate learning, thanks in part to the low professional mentor-student ratio and the collaboration of professional mentor and student in designing a program best suited to the student's needs and goals.

- During the mentorship period, students and professional mentors exchange what are referred to as packets. Clear guidelines are provided for regularly scheduled exchanges and responses from the mentor. For each mentoring period of ten weeks (excluding residencies), students submit packets and receive corresponding substantive critical responses from professional mentors at least once a month. A typical packet from the student includes new and/or revised creative work, bibliography of completed reading, critical analysis of reading, and responses to directions and questions from the professional mentor in previous exchange of packets. A typical packet from the professional mentor includes critiques of student's creative work with suggestions for new and substantially revised work, return of student's manuscripts with line-specific suggestions, comments on student's critical analyses of reading assignments, suggestions for related reading to be included in the annotated bibliography, especially books on craft related to student's particular ambitions and style of learning, and individualized instruction about aspects of craft. A student typically studies with a different professional mentor each term and during residencies with several different workshop leaders, thus exposing the student to a variety of literary sensibilities and academic approaches to the study and practice of writing.
 - To graduate, per the established requirements of the OSU-Corvallis high residency program, students must demonstrate expertise in at least one genre and produce a literary work. In addition to required creative work, students are also required to write and present an essay, and to give a public lecture on an issue of literary craft or tradition. The accomplishment of the essay/lecture portion of the graduation requirement is second in importance to the thesis (usually 38 to 45 pages of poetry and 80 to 120 pages in prose). (See also 1.d). The thesis must be defended before a committee of OSU professors.
- f. List any special requirements or prerequisites for admission to the program in Creative Writing at OSU-Cascades
- The requirements will be equivalent to the requirements of the MFA on the Corvallis Campus, with the emphasis shifted to the Advanced Creative Writing and thesis credits.
- g. Is there an accrediting agency or professional society that has established standards for this program? If so, is the program currently accredited? If accredited, what steps would be needed to ensure that accreditation is maintained vis-à-vis the OSU-Cascades offering? Does the accrediting body require notification of the program offering at a new location?
- The program at OSU-Cascades would operate under the accreditation of the English Department and the School of Writing, Literature, and Film.
 - The Associated Writing Programs (AWP) has established standards for low-residency programs, and these will be followed closely in the operation of the program at Cascades. We will invite AWP representatives to Bend for a site visit after two years.

2. Demand

- a. List any similar programs offered at the proposed or nearby location(s).

- In Oregon, there is one, Pacific University; three in Washington, Pacific Lutheran University, Seattle Pacific University, and Goddard's Port Townsend campus. The University of British Columbia has a low-residency program in Vancouver. Naropa in Boulder, Colorado and two southern California low-residency programs round out the competition regionally.

b. Provide evidence of need for the program at the new location(s).

- The Oregon, Washington, and Vancouver low-residency programs are all located west of the Cascades. A program at OSU-Cascades could potentially draw students from Central Oregon, eastern Washington, Idaho, Montana, Nevada, and Northern California. According to the Low Residency MFA Directors' Survey, eight of the 31 programs polled responded that their program is composed of 50% or more in-state students which bodes well for attracting students to an Oregon-based low-residency MFA in Creative Writing program.
- Student populations have grown at state universities and community colleges during the current recession. When the recession ends, the Central Oregon region's population will grow again. Both scenarios contribute to an expected growth in the student population. When family or economics or jobs keep students place-bound, it is the local campus that can offer what they need. However, the MFA in Creative Writing at Cascades will also strive to attract students nationwide. With a strong, nationally recognized pool of professional mentors, the program will draw from across the United States. While serving the region is a central part of the mission of OSU-Cascades, so too is the effort to build nationally known and respected programs in Bend, which in turn contributes to the heightened national visibility of Oregon State University as a whole.
- Therefore, it is important that an OSU-Cascades MFA in Creative Writing program aim to rival the most respected programs in quality and academic rigor. Given the differing goals of the students who enroll, also reinforced by a survey of graduates of other low-residency programs, the great appeal of a low-residency program is its flexibility, which involves the student in the design of his or her individualized curriculum while meeting the requirements of the program itself. The low-residency model attracts more age-diverse applicants annually than the traditional creative writing program. The average age of the student is 36, more in line with the demographic served by OSU-Cascades. Given the population served by OSU-Cascades, the low-residency program will also attract employed students seeking an additional degree while maintaining employment. Low residency answers the requirements of the current economic times as people strive to better position themselves professionally while maintaining employment. The program emphasizes the study of literary craft from within the writer's perspective. It is not, however, a technical or narrow degree. The reading and analytical components of each mentorship period, and the variety of classes and workshops offered during the residency periods, provide well-integrated curricula in the humanities, with the emphasis falling on direction of individual manuscripts, instruction in literary craft, and the actual work of writing. While the balanced study of literature and the craft of writing does make graduates viable candidates for teaching positions, the OSU-Cascades MFA in Creative Writing is not geared toward specifically educating teachers. It can open the doors to many professions, including journalism, editing, marketing and communications and is recognized as important to improve writing, communication and abstract thinking skills in engineering and the sciences.
- For a state university system to offer both a low and high residency MFA in Creative Writing is unique to Oregon and most of the country and would help both programs at both OSU campuses. The OSU-Cascades MFA Program in Creative Writing complements the established high-residency program at OSU Corvallis/School of Writing, Literature, and Film and adds to the breadth of graduate offerings at OSU-Cascades. The addition of a graduate degree in the Liberal Arts creates balance with the current focus on professional graduate programs at Cascades, and also enhances OSU-Cascades' reputation as a well-rounded undergraduate institution, while increasing student enrollment at both the graduate and

undergraduate level. The proposed graduate program underscores OSU-Cascades' growing potential as a destination for writers with national visibility.

c. Estimate enrollment and number of graduates over the next five years. Will any enrollment limitation be imposed? If so, how will prospective students be enrolled be selected?

- AY 2012-2013: 16
- AY 2013-2014: 36
- AY 2014-2015: 40
- AY 2015-2016: 40
- Future enrollment levels will be reevaluated at the five year mark.

3. Personnel

a. List the names and qualifications of faculty (regular and adjunct) who will be involved in delivering the program at OSU-Cascades, and their tentative teaching assignments. Will new faculty be needed?

The following list includes Corvallis faculty in the School of Writing, Literature, and Film, who are able to participate in The OSU-Cascades MFA Program in Creative Writing.

-
- Tracy Daugherty, PhD, Distinguished Professor of English and Creative Writing/OSU/Corvallis
- Karen Holmberg, PhD, Associate Professor of English (poetry), OSU/Corvallis
- Ted Leeson, PhD, Senior Instructor, OSU/Corvallis:
- Susan Rodgers, MFA, Associate Professor of English, OSU/Corvallis
- Keith Scribner, MFA, Associate Professor of English, OSU/Corvallis
- Neil Browne, PhD, Associate Professor of English, OSU:
- Henry Sayre, PhD, Distinguished Professor of Art, OSU

The OSU-Cascades MFA Program in Creative Writing will have to hire new professional mentors. As in most low-residency programs, professional mentors are contracted specifically for workshop during the summer periods of service and for extended mentoring. All new professional mentors will be term-limited contract employees, which permits the program and the professional mentors a certain flexibility not possible with a resident faculty. Participation by OSU-Corvallis contracted employees during 9-month period of regular service would be subject to approval by the Director of English/School of Writing, Literature, and Film.

The MFA in Creative Writing (low residency) at OSU-Cascades will offer students a close, sustained working relationship with masters in the field of creative writing, who will function as professional mentors. They will consist of writers who have reached the apex of their profession and are dedicated, committed mentors. The program will build a core mentoring staff, writers who will build extended experience in the program—professional mentors familiar with our format and standards, and able to ensure continuity in the work and development of current students. The program will utilize a rotating pool of highly respected writers.

It is essential to understand that, by contrast to tenure-line commitments made by universities in full-residency MFA Programs, prestigious low-residency programs across the country (from Warren Wilson to Sarah Lawrence) recruit their staff from high-profile authors with MFA training to work as professional mentors and to facilitate biannual residencies on term contracts. These professional mentors are not physically housed at OSU Cascades Campus. They work from their own home base on a contract basis. They are people who have reached the upper levels of their craft and are not seeking tenure or full time employment at OSU. This is the norm, and is expected by both students and mentors. Of the top-ten-rated low residency creative writing programs in the United States, all function on this model.

- Professional mentors will be drawn from distinguished writers from across the country and internationally who will be contracted on a term to term basis. The importance of a distinguished and artistically diverse pool of accomplished writers who are also excellent teachers can't be underestimated in attracting students and establishing the program's reputation regionally and nationally. In addition, as an extension of the OSU-Corvallis program, the low-residency professional mentors at OSU-Cascades must meet the requirements of instructional faculty as established by OSU-Corvallis standards. Each professional mentor must have at least one book published by a respected press in the genre the professional mentor teaches. Each professional mentor must hold a terminal degree (PhD or MFA).
 - It is important to achieve a balance between the flexibility of part-time mentors and the need for core individuals who work in the program year after year. Given the resources available to the OSU-Cascades program, thanks to its relationship with the OSU-Corvallis MFA program and English department, the OSU-Cascades American Studies program, The Nature of Words and other literary organizations in the region and nation, the OSU-Cascades MFA Program in Creative Writing can assemble a pool of professional mentors of the highest caliber. This strategy guarantees the development of not only a core of accomplished writers and gifted instructors and advisors, but also a rich resource of guest lecturers and panelists qualified to address a wide range topics including perspectives on career, craft and creativity.
- b. Estimate the number and type of support staff needed to provide the program at the new location(s).
- The low-residency program would require a full-time director.

4. Other Resources

- a. Describe facilities (e.g., buildings, labs, equipment) necessary to offer the program at the new location(s).
- The facilities at OSU-Cascades' new graduate center will be used.
- b. Indicate how library needs will be met.
- Library needs will be met in the same way they are met for all Cascades programs. Students can draw on the OSU Cascades and COCC library collections, can order materials from the Valley Library, can access all the same material via databases that all OSU graduate students can access, and students have access to the entire Summit System and the Orbis Cascade Alliance. (See attached letter from library services.)
- c. Indicate how students at the new location(s) will receive student services (e.g., academic advising, etc.).
- Students will receive the identical services to which all OSU Cascades students have access. Additionally, support will be offered by the director of the low residency program.

5. Budgetary Impact

- a. Indicate the estimated cost of the program for the first four years of its operation. (Use the "Budget Outline" and "Budget Outline Instructions" forms on the Forms and Guidelines Web site.)
- Please see attached documents. OSU Cascades will fundraise to support the OSU-Cascades MFA Program in Creative Writing until it is financially self sustaining.
- b. If the program will be financed from existing resources:
1. Describe what the budgetary unit will be doing that is not currently done in terms of additional activities.

- The unit will draw funds from existing resources in OSU-Cascades' fund balance in order to start the program, which includes the hiring of a director. The program will support itself on tuition monies once it is underway.
 - 2. State what these new activities will cost and whether financed or staffed by shifting of assignments within the budgetary unit or reallocation of resources within the institution. State which resources will be moved and how this will affect those programs losing resources.
- There will be no reallocation of resources from OSU Corvallis. There will be no allocation of resources from existing OSU-Corvallis MFA Program in Creative Writing or English/School of Writing, Literature, and Film programs. OSU-Cascades' fund balance will provide the investment to start up the program, and tuition will provide the ongoing monies for the program.

OSU Cascades MFA Program in Creative Writing (low residency)

CIP# 231302

Fall 2013

The proposed low-residency MFA in Creative Writing at OSU-Cascades extends the Advanced Creative Writing workshop-based side of the MFA in Creative Writing on the Corvallis campus and delivers the same high quality training in writing and literary craft. The delivery significantly differs. Studying under a low-residency studio/mentorship model, students in the OSU-Cascades Low Residency MFA Program must satisfy graduate degree requirements parallel to those established by the OSU-Corvallis MFA in Creative Writing. The low-residency MFA in Creative writing—through its different delivery method—will add diversity to, not duplication of, the established writing programs at Oregon State University. The OSU-Cascades Low Residency MFA Program offers a curriculum requiring 60 credit hours, during which students come to develop the skills needed for writing an original book-length creative work. This curriculum is equivalent to the requirements of the OSU-Corvallis high residency MFA: 40 hours in Advanced Fiction Writing / Advanced Poetry Writing and other course work appropriate to the degree, and 20 hours in thesis, writing and conference, or 599 craft courses. Students enroll in at least nine credit hours per term. Students are required to write original fiction, creative nonfiction, or poetry. A project focusing on the craft of writing is required in the form of an essay, lecture or teaching a seminar. The key requirement of the course of study is a creative thesis, an original literary work in the student's chosen genre.

The OSU-Cascades MFA Program in Creative Writing (low residency) is comprised of two parts: a mentoring section and a residency section. Central to the OSU-Cascades Low Residency MFA Program are the residencies and the one-on-one mentoring relationship between student and teacher which, in combination, accelerate the participating students' development as writers.

Students are not in residence on campus during the mentorship section. They work from a distance. During the off-campus mentorship period, students work one-on-one with a writer/faculty member who guides each student's study of craft and provides written commentary on their student's work. Included in the requirements of both faculty and students is a regularly scheduled exchange of packets, which include students' original creative work, responses to reading assignments and responses to the mentor's critiques and advice. Also included in packet assignments are students' analyses and critical papers in craft, and required entries for an annotated bibliography.

Though the OSU-Cascades MFA Program in Creative Writing (low residency) satisfies the same degree as its traditional high residency counterpart in the proposed School of Writing, Literature, and Film in Corvallis, it differs in that students do not reside on campus for the duration of the graduate program but only during the eight to ten day on-campus residency periods. It will not duplicate, but add diversity to the creative writing offerings at Oregon State University. Also, the low-residency program does not have the primary goal of preparing teachers, so the literature and composition requirements will be shifted to bibliographic aspect of the low-residency program and attendance at craft lectures and literary craft workshops held on site during the residencies.

**Extend: MFA in Creative Writing (Low Residency)
From OSU-Main to OSU Cascades**

**School of Writing, Literature, and Film
College of Liberal Arts**

**March 2012
Proposed Effective Term: Fall 2013**

CPS Tracking #: 83436

1. Program Description

a. Program title, level

- MFA in Creative Writing
- CIP# 231302

CIP # 231302

Title: Creative Writing

Definition: A program that focuses on the process and techniques of original composition in various literary forms such as the short story, poetry, the novel, and others. Includes instruction in technical and editorial skills, criticism, and the marketing of finished manuscripts. .

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

b. OSU main campus department and school/college under which the program is offered.

- School of Writing, Literature, and Film, College of Liberal Arts

c. Who will be the administrator(s) of the OSU-Cascades program?

- Marla Hacker, Dean of Academic Programs
- Neil Browne, Director, American Studies
- A faculty board with representation from English and creative writing at OSU/Corvallis and at OSU Cascades will be created to oversee the program.
- The OSU Low-Residency Faculty Board will be an appointed board consisting of 2 OSU Cascades faculty members, along with 3 members the OSU Corvallis MFA. The Low-Residency MFA Faculty Board would draw on strengths of faculty knowledgeable in low-residency programs to provide artistic and curricular guidance for a 21st century program suited to OSU and the unique opportunities of OSU/Cascades. The Low-Residency Faculty

Board would also be represented in the hiring of a Director through a national search process. Once a Director is hired, the Board would serve in an ongoing function as a recommending body on artistic and curricular direction, while day-to-day operations are in Bend.

- The low-residency program is administered under the same conditions as other graduate programs at OSU-Corvallis, with governing authority ultimately belonging to the Chair of English/Director of the School of Writing, Literature and Film, and local authority on day-to-day operations belonging to OSU-Cascades.
- d. Briefly describe the academic program, and provide a program degree audit sheet that lists all courses (including number of credits) and indicates how each course will be offered at OSU-Cascades [resident course {COCC, OSU, OU, EOU, other}, distance education, web, etc.].
- The proposed MFA in Creative Writing at OSU-Cascades (low residency) extends the Advanced Creative Writing workshop-based side of the MFA in Creative Writing on the Corvallis campus and delivers the same high quality training in writing and literary craft. The delivery significantly differs. Studying under a low-residency studio/mentorship model, students in the OSU-Cascades MFA Program must satisfy graduate degree requirements parallel to those established by the OSU-Corvallis MFA in Creative Writing. The MFA in Creative writing at Cascades—through its different delivery method—will add diversity to, not duplication of, the established writing programs at Oregon State University. The OSU-Cascades MFA Program offers a curriculum requiring 60 credit hours, during which students come to develop the skills needed for writing an original book-length creative work. This curriculum is equivalent to the requirements of the OSU-Corvallis MFA: 40 hours in Advanced Fiction Writing / Advanced Poetry Writing and other course work appropriate to the degree, and 20 hours in thesis, writing and conference, or 599 craft courses. Students enroll in at least nine credit hours per term. Students are required to write original fiction, creative nonfiction, or poetry. A project focusing on the craft of writing is required in the form of an essay, lecture or teaching a seminar. The key requirement of the course of study is a creative thesis, an original literary work in the student's chosen genre.

Included in the requirements of both professional mentors and students is a regularly scheduled exchange of packets, which include students' original creative work, responses to reading assignments and responses to the mentor's critiques and advice. Also included in the packet assignments are students' analyses and critical papers in craft, and required entries for an annotated bibliography.
- The OSU-Cascades MFA Program in Creative Writing requires four residencies of eight to ten days for 40 days in residence overall. Residencies are typically scheduled at the beginning of summer and winter terms. Students are required to attend each residency. During the eight- to ten-day residencies at the host campus, students attend workshops, lectures, panel discussions, seminars and literary readings led by the program's professional mentors as well as guest authors and representatives of the publishing industry. During the residency period, students, with the professional mentor's assistance, develop a reading list and study plan for the mentored portion of the term. The goal of each residency is to 1) broaden and deepen each student's knowledge and practice of creative writing; 2) develop a supportive literary community for students that offers encouragement and constructive criticism in workshops, seminars and one-on-one discussions with professional mentors; 3) educate students about publishing and editing through panels and informal conferences involving publishers, editors and agents during the residency period; and 4) generate a list of works to be included in the annotated bibliography.
- Assessment:

Learning Outcomes

Outcome 1: Produce original work in a specified genre, culminating in a thesis of publishable quality and of high literary merit. The student and professional mentor confer to determine length, form, and content, but typically a thesis will be for prose, 80-120 pages, and for poetry, 38-45 pages.

Outcome 2: Develop and employ methods of intensive revision.

Outcome 3: Demonstrate mastery of various literary theories and techniques. Mastery will be achieved through participation in the poetry or fiction/non-fiction workshop (24 total credit hours of WR 521 or WR 524), as well as in courses that focus on specific aspects of craft. Craft courses concentrate on a particular theory, genre, theme, technique, author or topic. Examples include courses on dialogue, the "uncanny" novella, linked story collections, the prose poem, the lyric essay, literary imitations, etc.

Outcome 4: Demonstrate an understanding of the contemporary creative writing profession. In addition to the instruction received in workshops on the profession, students attend mandatory residencies each year. These events feature nationally acclaimed writers who give public readings of their work and conduct colloquia specifically designed for the MFA

students. Students engage in in-depth conversations with the writers about craft, the creative process, publishing, creative writing pedagogy, and other topics. Students also benefit from panels on a wide range of subjects relevant to the profession, as well as readings, roundtable discussions, and other events.

Outcome 5: Perform all activities in an ethical manner. This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's coursework in literature, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately.

Measurement

Outcome 1: The student's writing is assessed in three ways. Students submit original work to the workshop throughout the two-year program, and receive extensive feedback, both oral and written, from their peers and professional mentor; students enroll in 12 credit hours of thesis/writing and conference, in which they work one-on-one with a professional mentor who assesses their progress; and students take a two-hour oral examination. The exam measures the quality of the thesis's individual parts, as well as how it coheres as whole.

Outcome 2: Students study and practice methods for revision in workshops and in consultation with the professional mentor. In workshop, participants describe, explore, and evaluate the premises of works in progress, with an eye toward editorial improvement. Revised drafts are submitted to the workshop for consideration and further suggestions. In conferences, students present revisions of work, and professional mentors offer both conceptual and sentence-level suggestions, as well as providing literary models that may assist in the revision process.

Outcome 3: Mastery of various literary theories and techniques is assessed through craft courses and workshop. Craft courses involve both critical writing and creative writing: Students study technique as demonstrated in their readings, analyze technique in their critical papers, and practice technique in creative exercises.

Outcome 4: The understanding of the contemporary creative writing field is measured through the oral examination.

Outcome 5: This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's bibliography project, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately.

- **AUDIT SHEET:**
Master of Fine Arts in Creative Writing

To complete the course of study for the MFA degree in Creative Writing, a minimum of 60 quarter/term hours are required in the following categories:

36 hours/credits in Advanced Fiction Writing / Advanced Poetry Writing and
12 hours/credits in Literary Craft Courses
12 hours/credits in Thesis and/or Writing and Conference

Built into the course work is a sustained critical engagement with a broad range of literature and contemporary writing, which will be demonstrated by an annotated bibliography of at least 60 entries and by the students' participation in literary craft courses during the residencies. This work is equivalent to the literature and composition requirements in the program in Corvallis. Because the low residency program will not be primarily focused on training future teachers, the

requirements in the OSU-Cascades MFA Program in Creative Writing will be tailored to the individual student's need as determined by the student and mentor.

Advanced Creative Writing Courses (a total of 40 credit hours is required). This requirement demands that the student complete ten Advanced Creative Writing courses. The topics will vary. All courses will be offered as 500 level courses only.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)

Thesis/Writing and Conference (a total of 20 credit hours is required).

- WR 503: THESIS
- WR 504: WRITING AND CONFERENCE

Year 1 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop Summer term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Year 2 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop summer term (low-residency):

10 hours WR 503 Thesis

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

All MFA candidates will be required to complete a thesis, which is to be a sustained piece of creative writing of literary merit (for prose, 80-120 pages, and for poetry, 38-45 pages). The thesis will be read by the student's primary advisor and a second reader and approved by the program director. A formal examination will be also required of MFA students. The exam consists of two parts, oral and written, and will usually be given in the student's final term of study, and consists of questions assessing the student's grasp of the history of the genre, the contemporary creative writing situation, influences and models, and matters of craft, all within the context of the student's own writing.

- e. Indicate in what ways the proposed program at OSU-Cascades will differ from the OSU-Corvallis campus program.
 - Though the OSU-Cascades MFA Program in Creative Writing satisfies the same degree as its traditional high residency counterpart in the School of Writing, Literature, and Film in Corvallis, it differs in that students do not reside on campus for the duration of the graduate program but only during the eight to ten day on-campus residency periods. It will not duplicate, but add diversity to the creative writing offerings at Oregon State University. Also, the low-residency program does not have the primary goal of preparing teachers, so the literature and composition requirements will be shifted to bibliographic aspect of the low-residency program and attendance at craft lectures and literary craft workshops held on site during the residencies. The emphasis is on one-on-one coaching of writing, transmitting professional experience, professional editing, and introduction to the publishing world.
 - The professional mentorship/residency model offers a different approach to delivering the same quality instruction as is offered with the high-residency model. The low-residency

professional mentors are employed on a contract basis which allows the program to assemble highly qualified writers from across the country and represents a cost-savings relative to payroll and benefit costs. The average number of professional mentors, to maintain one-on-one mentoring during off-campus periods is calculated at one professional mentor per four students. The low-residency model emphasizes the professional mentor and student relationship as a way to accelerate learning, thanks in part to the low professional mentor-student ratio and the collaboration of professional mentor and student in designing a program best suited to the student's needs and goals.

- During the mentorship period, students and professional mentors exchange what are referred to as packets. Clear guidelines are provided for regularly scheduled exchanges and responses from the mentor. For each mentoring period of ten weeks (excluding residencies), students submit packets and receive corresponding substantive critical responses from professional mentors at least once a month. A typical packet from the student includes new and/or revised creative work, bibliography of completed reading, critical analysis of reading, and responses to directions and questions from the professional mentor in previous exchange of packets. A typical packet from the professional mentor includes critiques of student's creative work with suggestions for new and substantially revised work, return of student's manuscripts with line-specific suggestions, comments on student's critical analyses of reading assignments, suggestions for related reading to be included in the annotated bibliography, especially books on craft related to student's particular ambitions and style of learning, and individualized instruction about aspects of craft. A student typically studies with a different professional mentor each term and during residencies with several different workshop leaders, thus exposing the student to a variety of literary sensibilities and academic approaches to the study and practice of writing.
 - To graduate, per the established requirements of the OSU-Corvallis high residency program, students must demonstrate expertise in at least one genre and produce a literary work. In addition to required creative work, students are also required to write and present an essay, and to give a public lecture on an issue of literary craft or tradition. The accomplishment of the essay/lecture portion of the graduation requirement is second in importance to the thesis (usually 38 to 45 pages of poetry and 80 to 120 pages in prose). (See also 1.d). The thesis must be defended before a committee of OSU professors.
- f. List any special requirements or prerequisites for admission to the program in Creative Writing at OSU-Cascades
- The requirements will be equivalent to the requirements of the MFA on the Corvallis Campus, with the emphasis shifted to the Advanced Creative Writing and thesis credits.
- g. Is there an accrediting agency or professional society that has established standards for this program? If so, is the program currently accredited? If accredited, what steps would be needed to ensure that accreditation is maintained vis-à-vis the OSU-Cascades offering? Does the accrediting body require notification of the program offering at a new location?
- The program at OSU-Cascades would operate under the accreditation of the English Department and the School of Writing, Literature, and Film.
 - The Associated Writing Programs (AWP) has established standards for low-residency programs, and these will be followed closely in the operation of the program at Cascades. We will invite AWP representatives to Bend for a site visit after two years.

2. Demand

- a. List any similar programs offered at the proposed or nearby location(s).

- In Oregon, there is one, Pacific University; three in Washington, Pacific Lutheran University, Seattle Pacific University, and Goddard's Port Townsend campus. The University of British Columbia has a low-residency program in Vancouver. Naropa in Boulder, Colorado and two southern California low-residency programs round out the competition regionally.

b. Provide evidence of need for the program at the new location(s).

- The Oregon, Washington, and Vancouver low-residency programs are all located west of the Cascades. A program at OSU-Cascades could potentially draw students from Central Oregon, eastern Washington, Idaho, Montana, Nevada, and Northern California. According to the Low Residency MFA Directors' Survey, eight of the 31 programs polled responded that their program is composed of 50% or more in-state students which bodes well for attracting students to an Oregon-based low-residency MFA in Creative Writing program.
- Student populations have grown at state universities and community colleges during the current recession. When the recession ends, the Central Oregon region's population will grow again. Both scenarios contribute to an expected growth in the student population. When family or economics or jobs keep students place-bound, it is the local campus that can offer what they need. However, the MFA in Creative Writing at Cascades will also strive to attract students nationwide. With a strong, nationally recognized pool of professional mentors, the program will draw from across the United States. While serving the region is a central part of the mission of OSU-Cascades, so too is the effort to build nationally known and respected programs in Bend, which in turn contributes to the heightened national visibility of Oregon State University as a whole.
- Therefore, it is important that an OSU-Cascades MFA in Creative Writing program aim to rival the most respected programs in quality and academic rigor. Given the differing goals of the students who enroll, also reinforced by a survey of graduates of other low-residency programs, the great appeal of a low-residency program is its flexibility, which involves the student in the design of his or her individualized curriculum while meeting the requirements of the program itself. The low-residency model attracts more age-diverse applicants annually than the traditional creative writing program. The average age of the student is 36, more in line with the demographic served by OSU-Cascades. Given the population served by OSU-Cascades, the low-residency program will also attract employed students seeking an additional degree while maintaining employment. Low residency answers the requirements of the current economic times as people strive to better position themselves professionally while maintaining employment. The program emphasizes the study of literary craft from within the writer's perspective. It is not, however, a technical or narrow degree. The reading and analytical components of each mentorship period, and the variety of classes and workshops offered during the residency periods, provide well-integrated curricula in the humanities, with the emphasis falling on direction of individual manuscripts, instruction in literary craft, and the actual work of writing. While the balanced study of literature and the craft of writing does make graduates viable candidates for teaching positions, the OSU-Cascades MFA in Creative Writing is not geared toward specifically educating teachers. It can open the doors to many professions, including journalism, editing, marketing and communications and is recognized as important to improve writing, communication and abstract thinking skills in engineering and the sciences.
- For a state university system to offer both a low and high residency MFA in Creative Writing is unique to Oregon and most of the country and would help both programs at both OSU campuses. The OSU-Cascades MFA Program in Creative Writing complements the established high-residency program at OSU Corvallis/School of Writing, Literature, and Film and adds to the breadth of graduate offerings at OSU-Cascades. The addition of a graduate degree in the Liberal Arts creates balance with the current focus on professional graduate programs at Cascades, and also enhances OSU-Cascades' reputation as a well-rounded undergraduate institution, while increasing student enrollment at both the graduate and

undergraduate level. The proposed graduate program underscores OSU-Cascades' growing potential as a destination for writers with national visibility.

c. Estimate enrollment and number of graduates over the next five years. Will any enrollment limitation be imposed? If so, how will prospective students be enrolled be selected?

- AY 2012-2013: 16
- AY 2013-2014: 36
- AY 2014-2015: 40
- AY 2015-2016: 40
- Future enrollment levels will be reevaluated at the five year mark.

3. Personnel

a. List the names and qualifications of faculty (regular and adjunct) who will be involved in delivering the program at OSU-Cascades, and their tentative teaching assignments. Will new faculty be needed?

The following list includes Corvallis faculty in the School of Writing, Literature, and Film, who are able to participate in The OSU-Cascades MFA Program in Creative Writing.

-
- Tracy Daugherty, PhD, Distinguished Professor of English and Creative Writing/OSU/Corvallis
- Karen Holmberg, PhD, Associate Professor of English (poetry), OSU/Corvallis
- Ted Leeson, PhD, Senior Instructor, OSU/Corvallis:
- Susan Rodgers, MFA, Associate Professor of English, OSU/Corvallis
- Keith Scribner, MFA, Associate Professor of English, OSU/Corvallis
- Neil Browne, PhD, Associate Professor of English, OSU:
- Henry Sayre, PhD, Distinguished Professor of Art, OSU

The OSU-Cascades MFA Program in Creative Writing will have to hire new professional mentors. As in most low-residency programs, professional mentors are contracted specifically for workshop during the summer periods of service and for extended mentoring. All new professional mentors will be term-limited contract employees, which permits the program and the professional mentors a certain flexibility not possible with a resident faculty. Participation by OSU-Corvallis contracted employees during 9-month period of regular service would be subject to approval by the Director of English/School of Writing, Literature, and Film.

The MFA in Creative Writing (low residency) at OSU-Cascades will offer students a close, sustained working relationship with masters in the field of creative writing, who will function as professional mentors. They will consist of writers who have reached the apex of their profession and are dedicated, committed mentors. The program will build a core mentoring staff, writers who will build extended experience in the program—professional mentors familiar with our format and standards, and able to ensure continuity in the work and development of current students. The program will utilize a rotating pool of highly respected writers.

It is essential to understand that, by contrast to tenure-line commitments made by universities in full-residency MFA Programs, prestigious low-residency programs across the country (from Warren Wilson to Sarah Lawrence) recruit their staff from high-profile authors with MFA training to work as professional mentors and to facilitate biannual residencies on term contracts. These professional mentors are not physically housed at OSU Cascades Campus. They work from their own home base on a contract basis. They are people who have reached the upper levels of their craft and are not seeking tenure or full time employment at OSU. This is the norm, and is expected by both students and mentors. Of the top-ten-rated low residency creative writing programs in the United States, all function on this model.

- Professional mentors will be drawn from distinguished writers from across the country and internationally who will be contracted on a term to term basis. The importance of a distinguished and artistically diverse pool of accomplished writers who are also excellent teachers can't be underestimated in attracting students and establishing the program's reputation regionally and nationally. In addition, as an extension of the OSU-Corvallis program, the low-residency professional mentors at OSU-Cascades must meet the requirements of instructional faculty as established by OSU-Corvallis standards. Each professional mentor must have at least one book published by a respected press in the genre the professional mentor teaches. Each professional mentor must hold a terminal degree (PhD or MFA).
 - It is important to achieve a balance between the flexibility of part-time mentors and the need for core individuals who work in the program year after year. Given the resources available to the OSU-Cascades program, thanks to its relationship with the OSU-Corvallis MFA program and English department, the OSU-Cascades American Studies program, The Nature of Words and other literary organizations in the region and nation, the OSU-Cascades MFA Program in Creative Writing can assemble a pool of professional mentors of the highest caliber. This strategy guarantees the development of not only a core of accomplished writers and gifted instructors and advisors, but also a rich resource of guest lecturers and panelists qualified to address a wide range topics including perspectives on career, craft and creativity.
- b. Estimate the number and type of support staff needed to provide the program at the new location(s).
- The low-residency program would require a full-time director.

4. Other Resources

- a. Describe facilities (e.g., buildings, labs, equipment) necessary to offer the program at the new location(s).
- The facilities at OSU-Cascades' new graduate center will be used.
- b. Indicate how library needs will be met.
- Library needs will be met in the same way they are met for all Cascades programs. Students can draw on the OSU Cascades and COCC library collections, can order materials from the Valley Library, can access all the same material via databases that all OSU graduate students can access, and students have access to the entire Summit System and the Orbis Cascade Alliance. (See attached letter from library services.)
- c. Indicate how students at the new location(s) will receive student services (e.g., academic advising, etc.).
- Students will receive the identical services to which all OSU Cascades students have access. Additionally, support will be offered by the director of the low residency program.

5. Budgetary Impact

- a. Indicate the estimated cost of the program for the first four years of its operation. (Use the "Budget Outline" and "Budget Outline Instructions" forms on the Forms and Guidelines Web site.)
- Please see attached documents. OSU Cascades will fundraise to support the OSU-Cascades MFA Program in Creative Writing until it is financially self sustaining.
- b. If the program will be financed from existing resources:
1. Describe what the budgetary unit will be doing that is not currently done in terms of additional activities.

- The unit will draw funds from existing resources in OSU-Cascades' fund balance in order to start the program, which includes the hiring of a director. The program will support itself on tuition monies once it is underway.
 - 2. State what these new activities will cost and whether financed or staffed by shifting of assignments within the budgetary unit or reallocation of resources within the institution. State which resources will be moved and how this will affect those programs losing resources.
- There will be no reallocation of resources from OSU Corvallis. There will be no allocation of resources from existing OSU-Corvallis MFA Program in Creative Writing or English/School of Writing, Literature, and Film programs. OSU-Cascades' fund balance will provide the investment to start up the program, and tuition will provide the ongoing monies for the program.

Category I Proposal

Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Title of Proposal:
Low Residency MFA in Creative Writing / Cascades

Effective Date:

Fall 2013

Library Support for the MFA in Creative Writing on Cascades Campus

Cascades' library services offers the collections and services described below in support of the proposed MFA in Creative Writing at Cascades Campus. The curriculum for this program will be identical to the approved program in Corvallis. Consequently, the OSU Libraries already provide much of the support the program is expected to need.

Monographs

Scholarly monographs are the core of Cascades' English Language and Literature collection. We currently collect, in coordination with the Valley Library, monographs and literary texts by and about major American writers. Our local collection is particularly focused on works by Native American, Northwest and Western authors as well as nature and ecology writing. The MFA students' individual needs are expected to be diverse and may often be best served by access to collections beyond OSU. This access is facilitated by our consortial agreements and interlibrary loan services.

The library may need to purchase more monographs in the future to support the MFA literature and craft coursework. This can be done in collaboration with the faculty and students of the program through our Purchase on Demand and Patron Drive Acquisitions services. We plan to focus purchases in Environmental Literature rather than developing a thin and broad literature collection. Currently 11% of the monograph budget goes towards literature. This should remain adequate unless the faculty significantly changes its focus.

Journals

The OSU Libraries subscribe to a range of literary journals. Many core titles such as *Kenyon Review* and *Virginia Quarterly Review* are available electronically. Titles available at Valley Library in Corvallis in print-only, whether the restriction is a result of age, format preference, or publisher availability, are accessible to Cascades students via the Libraries' "Scan and Deliver" program, a service to scan and send electronic copies of articles held in the libraries' print collection.

Cascades also has subscriptions to a few print journals, notably *Publications of the Modern Language Association of America*, along with access to Central Oregon Community College's subscriptions to locally relevant titles such as *High Desert Journal*.

Other important titles such as *New England Review* are included in our state licensed database packages, available online to all members of the OSU community.

Databases

OSU Libraries subscribe to the Modern Language Association (MLA) International Database, a critical resource indexing more than two million books, book reviews,

journal articles, and dissertations back to 1926. This is the primary tool for accessing research and criticism in the language and literature disciplines.

The libraries also subscribe to Project MUSE, a full-text interdisciplinary humanities database and to several JSTOR collections including Arts & Sciences I which includes the full-text of some humanities journals.

All members of the OSU community, including Cascades faculty and students, have online access to OSU Libraries' subscription databases.

Library Staff and Expertise

OSU Libraries English Subject Librarian Stefanie Buck along with the Cascades Librarian will provide needed reference, instruction, and collection support to the program's faculty, staff, and students.

Summary

The OSU Libraries collections are adequate to support the proposed MFA in Creative Writing at the Cascades Campus. The local collection, while small, is focused and addresses the current faculty members' needs and research interests. Additional funding is not needed at this time. If the program grows or its focus shifts, funding may be necessary to build a foundation collection or fill gaps.

Oregon State University Graduate Program Review

Applied Anthropology Graduate Program (AAGP)

October 2012

1. Overall recommendation.

The MA program should be continued and the newly developed PhD program shows great promise. The Administration, however, needs to decide if it is going to provide the support necessary for the Applied Anthropology Graduate Program (**AAGP**) to flourish within the newly reorganized College of Liberal Arts (**CLA**). Key target areas that need attention are: 1) improved financial (stipend) support for AAGP graduate students; 2) improved student-to-faculty ratio in the AAGP; 3) increased staff support is necessary to keep faculty from being overwhelmed with clerical work; and 4) the perception amongst the faculty and students that the reorganization of CLA has led to a loss of identity, power and control of their program must be remedied.

2. Introduction.

Professor Brenda McComb, Dean of the Graduate School, Oregon State University (OSU), appointed a team to review the Applied Anthropology Graduate Program (**AAGP**) on Oct. 2, 2012. The Review Team included the following: Barbara Bond (Emeritus Professor; Director, OSU Office of Postdoctoral Programs-Graduate School); Donald B. Jump (Professor, OSU Nutrition Program in the School of Biological and Population Health Sciences-College of Public Health and Human Sciences); Roberta Baer (Professor, Department of Anthropology, University of South Florida); and Bill Roulette (Owner, Applied Archaeological Research, Inc.). Review Team members received a copy of the Self-Study prepared by the Applied Anthropology Graduate Faculty several weeks before the on-site meeting. Dean McComb hosted the Review

Team for dinner on the evening of Oct. 1st to provide an opportunity to meet one another, learn the background associated with review, and share expectations for the evaluation process. The following morning the team first met with Professors Susan Shaw, Director of the School of Language, Culture and Society (SLCS) and Larry Rodgers, Dean of the College of Liberal Arts (CLA) to share insights about the reorganization of the college and Dean Rodgers' vision for its continued maturation. Bryan Tilt (Anthropology Graduate Program Director) and Leah Minc (Anthropology Program Coordinator) provided an overview of the AAGP and the faculty. This was followed by a meeting with the faculty (10 in 3 groups: Food-Culture and Social Justice group (5); Bio-cultural group (3), Archeology group (3), a tour of the department offices and laboratory facilities and meeting with graduate students (~17 in attendance). The Review Team and Dean McComb met once again with Professors Shaw, Tilt and Minc for final questions. Once done, the Review Team met in Executive Session to share perspectives on programmatic activities during the past 10 years and the stated perspective of the faculty, students and Dean Rodgers. The Review Team agreed to individually prepare a draft for assigned sections of the final report. The completed draft was shared, revised and accepted by all Review Team members prior to submission to Dean McComb on **Oct 25, 2012**.

3. DETAILED FINDINGS

A. The fit of the mission of the program and its relationship to the mission of the academic colleges and University mission.

The AAGP seeks to apply anthropological insights to human problems. This is an excellent fit for a major Land Grant university like OSU. Furthermore, the specific focal areas of the program (articulated on p. 14 of the self-study) align very well with OSU's Strategic Plan. Interestingly, the mission and goals of the program do not align as closely with the theme of the School of Language, Culture and Society, "Social Justice", which is not presented in the Self Study document but was described during the Site Review. While some of the focal research areas in the AAGP are a very good fit with a "Social Justice" theme (food equity, for example), other areas of strength in research and teaching (archaeology, for example) are more loosely connected. The apparent mis-match may be partly a function of the very recent re-organization

of the units, which eliminated a stand-alone Department of Applied Anthropology and put the AAGP into the structure of a larger school. It is inevitable that a change such as this will result in some level of confusion, and that some of this confusion might clear up over time. On the other hand, the Review Team is concerned that there may be fundamental differences in focus between the School of Language, Culture and Society and the AAGP that could make it especially difficult to achieve a cohesive culture.

Recommendation 1: Administrators from the CLA, School of LCS and AAGP should revisit the linkages between the missions of the School and the AAGP.

B. Reorganization, Vision and Culture Issues

The reorganization has led to a perceived loss of identity, power and control among faculty and graduate students in the (now) Anthropology Program. Some subgroups within anthropology feel particularly marginalized. Students particularly note that the program has been placed with a school in which humanities approaches predominate, as opposed to social science approaches. This is a key attack on their identity as applied anthropologists are concerned with mixed methods. The vision of the school is also an issue—it is not clear that everyone has bought into “social justice” as a unifying theme, or that this is appropriate. Moreover, and importantly, justice is a culturally-imbedded concept. The idea of Social Justice may or may not be directly exportable to the international locations where Applied Anthropology faculty and students conduct research and fieldwork. In some settings, “Social Justice” may sound like jingoism.

One motivation for the reorganization is that there is a feeling among higher university administration that departments/disciplines are not suited to solved contemporary social problems. An interdisciplinary approach is favored. The irony of this is that anthropology, probably the most applied and interdisciplinary unit of the new school, is the one feeling the most threatened.

In addition, these reorganization efforts have the potential to undermine the overall goals of OSU. Applied anthropology has a long history at OSU, and was well known nationally

for the department's commitment to graduate training in applied anthropology. MA graduates easily found jobs working in public and private agencies devoted to the solving of contemporary social problems. But without the autonomy necessary to maintain a coherent vision and long term plan, and the authority over the budget necessary to carry this out, applied anthropology at OSU may not be able to maintain this nationally recognized position. Faculty feel the need to preserve the autonomy and identity of anthropology. They are concerned about development of a vision of where applied anthropology program should go and how it should develop, but are not clear how they can move towards that without a chair and a budget. And they need the ability to hire the type of faculty they need. Since new hires pick their tenure home, anthropology cannot necessarily determine what kind of hire will be made in these cases. This is a key problem. Anthropology at OSU is one of less than two dozen programs/departments in the US which train students in applied anthropology. Certain standard curricular offerings are expected in these programs, and to remain competitive with the other programs, the OSU AAGP must continue to provide these courses. Additionally, there must be the opportunity for specialized training in fields such as medical anthropology, archaeology, etc. Competing for hires against the needs of other programs, or operating in an environment where a hire must be leveraged to meet the needs of multiple other programs in the school (let's just get an archaeologist who works in France on women in prehistory), will not adequately address the needs of the OSU AAGP. Ultimately, the program will become less competitive nationally.

Higher administration at OSU needs to understand that applied anthropology is in itself a multidisciplinary endeavor. But it is built from a solid core of values and approaches unique to anthropology. These include a focus on culture and cultural differences, and a holistic perspective. Anthropologists are particularly adept at being the ones on a multidisciplinary team who can identify the larger picture and co-ordinate ways in which diverse perspectives and all contribute to the problem at hand. This approach is fundamentally different from an interdisciplinary unit such as women's studies, where people trained in many different fields bring their expertise to bear on women's issues. Applied anthropologists do the reverse—from a core culture, they move out to interact with scholars and activists coming from other disciplinary perspectives.

Recommendation 2. Applied anthropology needs a more autonomous position within OSU. The fit in the current school is not good. Discussions should first take place within the anthropology program about these issues. Then they should be discussed with higher administration. While OSU wants to move away from departments, perhaps a center/institute for applied anthropology might be appropriate. Additionally, each anthropologist might be given a joint appointment in another appropriate unit—such as public health, geology, nutrition, etc. This might be a way to finesse the identity needs of applied anthropology while recognizing that these faculty members are indeed highly involved and committed to the interdisciplinary goals of the university.

C. Quality of students

Overall, the quality of students is reasonably good. More importantly, student quality – at least as measured by GRE scores, appears to be increasing, although the apparent trend is strongly influenced by the fact that both verbal and quantitative GRE scores were much lower in 2007 –the first year presented in the document – than in subsequent years.

The gender and resident vs. non-resident distribution of the student population are reasonable. Of course it would be nice to see a greater proportion of minority students, but their representation is not out of line with other OSU graduate programs.

Recommendation 3: There should be continued effort to improve student quality. This can be achieved through 1) improved funding for students (see below), 2) developing a more active recruitment of high quality students, perhaps through closer coordination with the recruitment efforts in the Graduate School.

D. Admissions selectivity

Overall, the program admits slightly less than 1/3 of the applicants, which represents a reasonably high level of selectivity. On the other hand, for the six years of data provided in the

self-study report, only in the most recent year (2012) were the average GRE scores for admitted students greater than for rejected students. It appears that the 'selection' process is more likely to favor higher GRE scores now than in the past. Interestingly, the GRE scores of applicants have not changed significantly over the six year time period presented in spite of the fact that there is a trend to improved scores in the admitted students, so the improvement in student quality noted above (at least in terms of GRE scores) is entirely a function of the selection process rather than recruitment. Obviously, GRE scores are only one of many metrics for evaluating student quality, and probably a poor one at that. But these are the only metrics available to the Review Team.

Recommendation 4: Develop a more deliberate process for selecting high quality graduate students. This might include identifying metrics in addition to GRE scores that predict student success and recruitment and selection on the basis of those metrics.

E. Level of financial support of students

The level of support for students in the AAGP is poor compared with the general graduate student population at OSU. Compared with other OSU graduate students, graduate students in AAGP are more than four times more likely to be dissatisfied with the level of financial support, and an equal proportion is more likely to be dissatisfied with the equity of distribution of support within the program, which is curious in a School that explicitly focuses on social justice. Few graduate students in AAGP have an externally-funded scholarship or fellowship, and only 20% have continuous internally-funded scholarships or fellowships. Most students are funded on Teaching Assistantships at the minimum level (0.2 FTE) that provides tuition. From one perspective, this is a reasonable distribution of limited funds in a way that provides support for the maximum number of students and still covers their tuition. From another perspective, the students in the program are likely to have severe financial challenges that distract them from their academic pursuits, and they will be saddled with significant debt that will persist for many years after they graduate. Improved financial support for students will greatly enhance recruitment of high-quality graduate students (above).

Recommendation 5: Develop a multi-faceted plan to increase financial resources to support graduate students. The plan should have explicit goals that include targets for increased faculty support of graduate students as GRAs on grants, increased internal and external scholarships and fellowships, and increasing the average FTE per student (we suggest a target of 0.49 for PhD students). A program that provides assistance to faculty in grant writing and developing interdisciplinary collaborations for grants, incentives for including graduate student support in grant budgets, and rewards for success in obtaining student funding is most likely to be successful.

F. Curriculum strength

The graduate students in AAGP seem pleased with the quality of the individual faculty in their program and their commitment to teaching and advising. On the other hand, students are not at all pleased with the availability, or in some cases, the quality of some of the courses available to them. In terms of availability, many required courses are taught only every other year or every three years, and students seem mystified about when and whether courses will be offered. Apparently this problem has been most severe in the recent year because many faculty were on sabbatical leave or had other conflicts at the same time, and the Director of the School is aware of the problem and has resolved to make sure it doesn't happen again. However, the ratio of students to faculty is very high in this program, and the inevitable consequence is that there is very little flexibility in course offerings.

Another consequence of the high student-to-faculty ratio is the necessity of combining a large number of graduate courses with undergraduate courses – which at OSU are known as “slash courses”. Slash courses have been at the top of the “complaint” list for OSU Graduate Students for many decades, and are a particularly serious problem in programs that have a large number of undergraduates in comparison with graduate students and a relatively small faculty. In the AAGP it may be possible to alleviate this problem in part by improving the quality of the slash courses. The Review Team noted that well over half of the course descriptions provided in the Self Study document for “slash courses” did not even articulate graduate-level outcomes, and many of those that did attempt to distinguish between graduate and undergraduate level expectations mentioned course requirements (such as a term paper)

rather than learning outcomes. Assistance for faculty in better understanding appropriate learning outcomes for graduate students, as well as assistance in instruction to achieve these outcomes, could be helpful. But there is no denying the fact that this faculty is stretched to its limit in providing high-quality graduate instruction. This is not a condemnation of the quality of the faculty, but rather a consequence of their small number.

Most of the graduate students are unaware of the university-level requirements for graduate students. For example, they do not know about the policy requiring training in Research Ethics, recently adopted by the Graduate Council. The AAGP self-study does not specify how this training is delivered. We suggest this issue be addressed directly.

Recommendation 6: Review course outcomes for all graduate courses and revise as necessary to make sure that graduate outcomes are explicit and appropriate. Offer convenient workshops to faculty to help with this and to help them design learning activities to achieve the stated outcomes without over-burdening the faculty. The Center for Teaching and Learning can assist with this.

Recommendation 7: Develop a plan to reduce the faculty-to-student ratio. This plan should be proactive rather than reactive – i.e., it should anticipate retirements and future needs and should lay out a commitment by School and College administration to provide sufficient faculty numbers and expertise to sustain the program. The plan might also consider enhancing the teaching capacity of the AAGP by adding adjunct and courtesy faculty.

Recommendation 8: Improve communications with graduate students about course offerings and program requirements, including university-level requirements.

Recommendation 9: Develop a plan for ethics training of AAGP graduate students consistent with the standards and practices in the field of Applied Anthropology.

G. Level and quality of infrastructure

The program is housed in a large, old building that has been under-occupied for many years. Consequently, there is quite a bit of space available to the program, even though it is spread out over many floors. The faculty offices are simply stunning, and the new faculty lounge is nice – especially for a faculty of this size. Office space for graduate students is uneven, in some cases with eight or more students crammed into a very small office with barely room for their chairs, and in other cases with much more commodious office conditions. Also we are not sure whether there is any common space, such as a lounge, available to graduate students. (We note that in many departments at OSU, the “lounge” space is open to faculty and students alike). The laboratory space available to the archaeology program appears ample and the computing infrastructure is impressive, although there may be a need for additional storage for archival of artifacts and for field equipment. There are other programs that do not have such ample laboratory space available, but they do not appear to be cramped. In the short time available to the Review Team there were many questions that could not be addressed, but we have some concern that graduate students are not provided adequate support for access and training to computer software. It appears that this support is provided ad hoc by individual advisors or teams and that there is no provision on the program or School level to provide such support to students.

Recommendation 10: Make sure all students in the program have access to computer software and computer support.

H. Quality of organizational support

Largely because of the recent reorganization, the support structure within and external to the Anthropology Program is still in flux. Students seem very pleased with the clarity and direction that Bryan Tilt is bringing to the graduate program. On the other hand, students and faculty alike appear to feel “leaderless” – which is not to fault the current leadership structure so much as to point out that there are difficulties in the transition. The Review Team was especially concerned that the ideas and perspectives offered by Dean of the College of Liberal

Arts did not indicate a strong alliance with the Anthropology Program. Potentially problematic is the limited evidence that the administration is willing or able to provide adequate support to maintain sufficient faculty numbers in this program to sustain a high quality PhD program. It is noteworthy that the Director of SLCS intends to attend all of the Anthropology Program faculty meetings, and this interaction may go a long way to improve support for and communications with the Program.

Recommendation 11: The Anthropology program and the AAGP should actively seek to elevate the profile of their program within the School, College and University. One way to do this is to rotate responsibilities among faculty and students to write “press releases” or other promotional materials. Such a project might be integrated into the “Uses of Anthropology” course, which would provide valuable training for students in making applied anthropological research available to multidisciplinary audiences. These materials might be included in newsletters and other communications on all of these levels, and also be included on the AAGP’s website.

Recommendation 12: In addition to attending Anthropology faculty meetings the Director should periodically meet with small groups of anthropology faculty and graduate students to gain a more personal sense of the program.

I. PRODUCTIVITY

1. Level and Quality of Student Performance. The graduate students in AAGP are composed primarily of MA candidates (~75%) with some Ph.D. candidates (~25%). From 2007 to 2012, 60 MA candidates entered the program, 4 (6.7%) left without completing the degree requirements, 29 (48%) completed the degree requirements. Most MA students completed their degree requirements within 4 years of entering the program. The remaining students (27 or 45%) are still enrolled in the program. The Ph.D. program began in 2006; from 2007-2012, 19 students entered the program. Three students have completed the Ph.D. (~16%), 1 (~5%) left the program; the remaining 15 (79%) are still enrolled in the program.

The students have received several awards [Alumni Scholarship, Wilbur “Buck” Davis Memorial, Service to undergraduate education, Thomas Hogg Book scholarship, SYLFF fellowship for international research, McNair scholarship, et al]. While MA and doctoral students’ thesis/dissertation titles are listed, there is no evidence of publication of student research in peer reviewed journals. In fact, the Alumni Survey indicated that the majority of students do not publish their research. While there is evidence that graduate students in the AAGP attend national meetings (46 awards to graduate students for travel to conferences are noted in the self-study), it is not clear how many of these students presented their research.

Recommendation 13: Characterize causes for lack of completion of the degree and develop strategies to increase completion rate.

Recommendation 14: Articulate publication expectations for students.

Recommendation 15: Encourage faculty and graduate students to seek graduate fellowships, including OSU Graduate Fellowships.

Recommendation 16: Roughly 75% of the students in the program are MA candidates. The Provost has emphasized the training of Ph.D. candidates. If the AAGP wants to increase the # of Ph.D. candidates, the AAGP needs to develop a plan (with metrics) for the growth of # of Ph.D. candidates in the AAGP. In conjunction with this, the AAGP needs to develop funding mechanisms that assures students of adequate GTA/GRA/Fellowship support for the duration of their graduate program.

2. Level and Quality of Faculty Performance. The faculty, on average, published 3 refereed or other manuscripts/books per year during the 2007-2012 timeframe. During this same time the faculty received over \$5 million (~\$1 million/year) in research support from federal, state, industry and foundation sources. This represents highly commendable research productivity as measured by receipt of grants/research support and publication of peer-reviewed manuscripts. The webpages for the faculty, however, do not contain updated lists of publications or research support. The Program Review document also does not contain a list of presentations at professional meetings or invited presentation.

Over the last five years, however, the faculty received many awards and honors and served on numerous editorial boards for peer-review journals and reviewed books. They have also provided service to the state and national boards, societies/associations and government. As such, the faculty are well-engaged at the local, state, national and international level. The faculty appear to be doing a good job of publishing scholarly work and obtaining extramural support.

Recommendation 17: Faculty websites need to be updated for publications, presentations and grants. This could be done by a staff person, were one available.

Recommendation 18: Extramural support should include GRA support for graduate students.

3. Viability of Scholarly Community within Which Students Can Interact.

While seminars occur in the program, neither students or faculty shared information on these seminars, such as the # of internal and external speakers, or seminars devoted to professional development/preparation. Thus, it is unclear if the students are exposed to views of their discipline outside of OSU. Moreover, it was unclear if the students have the opportunity to present their research in a public forum.

Recommendation 19: Engage graduate students in periodic seminars as speakers in and organizers of the seminar series.

Recommendation 20: Develop a Graduate Colloquium for which each graduate student is required to present their thesis/dissertation findings. This could be held once a year. Discussants could be drawn from appropriate other disciplines across campus, thus contributing to the interdisciplinary goals of the university as well as publicizing applied anthropology in other areas of the university.

Recommendation 21: Maintain a list of seminar speakers. Provide an opportunity for students to meet with outside speakers to discuss research issues.

J. OUTCOMES

1. Professional viability of Graduates.

The AAGP is dominated by MA candidates. Since 2007, 52 MA and 2 PhD graduated from the program. Of the MA graduates, 30 are employed by various states (Oregon, Washington, California, Florida, Michigan, etc), federal agencies (US military) or enrolled in Ph.D. programs. Of the 3 PhD graduates, one is employed by NOAA in Seattle and the others are program coordinators at OSU. Of the students for which placement data are available, the majority are employed in fields related to anthropology.

Employers of graduates from programs such as the AAGP at OSU note that the skills they find most important in new hires are ability to write and critical thinking. Such skills are not always identified by those of the opinion that learning should be oriented to fill the needs of the market place; that the primary job of the academy is to prepare students to compete in the market place. However, training for employment in applied anthropology should focus on opening and stimulating the minds of its students. The AAGP should have as its primary goal helping students learn to be curious, to have open minds, to be able to approach a problem from multiple sides, and to think critically. The market will absorb such thinkers and teach them the skills they need to be successful.

Recommendation 22: The AAGP should continue to stress writing abilities and the development of critical thinking in students in the program

2. Satisfaction of Students and Graduates.

Data for the satisfaction level for graduates of the program was obtained through 3 surveys: 1) a survey of current graduate students; 2) an exit survey of graduating students between 2010-2012; 3) a survey of alumni from the past 10 years. The current students were generally satisfied with their program and would choose the AAGP again. Moreover, they would recommend the program to prospective students. Their reason for coming to OSU-AAGP is the quality of the faculty and the Anthropology program.

Concerns expressed by the current students in both the surveys and in our meeting with the students were: 1) scheduling and availability of graduate level courses for completion of degree requirements, this applied to major and minor courses; 2) teaching graduate level courses at the appropriate level, this likely concerns slash courses; 3) initial advising could be improved. The exit survey by the Graduate School provides a comparison of the AAGP with all OSU graduate programs. Areas where the AAGP deviated negatively from other OSU graduate programs include: 1) fairness in distribution of graduate student financial support in the form of GTA, fellowships and other sources of funding; 2) need to obtain student loans, financial aid or borrow money for program completion, it is high amongst AAGP students; 3) ~40% of students were not satisfied with the program advising and guidance; 4) ~50% were not satisfied with the explanation of survival strategies in graduate school and 40% were not satisfied with help received to find professional employment. The alumni survey indicated that the top reason for getting a graduate degree at OSU was to get a promotion at a job. Of these respondents (28 former students) most were satisfied-very satisfied with their program at OSU. As stated earlier, most of these students did not publish their research in a scholarly format, other than their thesis/dissertation.

Recommendation 23: Provide adequate GTA/GRA support for the graduate students.

Recommendation 24: Provide adequate advising for all entering students. Assess mentoring yearly through reviews/surveys/townhall meetings; and make changes in the program accordingly.

Recommendation 25: Encourage students to publish their research in peer-reviewed journals.

3. **Rankings/ratings.**

The Program Review document provided no information on rankings or ratings.

Recommendation 26: The program needs to identify methods to establish rankings and/or ratings for the MA and Ph.D. program. This information is useful to measure how

the program compares to other programs nationally. Such information can be used for faculty and student recruitment.

4. CONCLUSIONS

A. Strengths of the Program

1. The staff, faculty, and facilities are impressive, in particular the archaeology labs.
2. Bryan Tilt is doing an excellent job as Graduate Director.
3. The faculty are open to the graduate students; the students really seem to like the faculty.
4. There is a good sense of camaraderie among the faculty

B. Needs Internal to the Anthropology Program

1. Slash courses continue to be an issue, though efforts have been made and continue to be made to address this issue.
2. There should be a departmental list-serve for grad students and faculty through which jobs (and other important information) can be widely and quickly shared.
3. Availability of courses for graduate students, slash courses, and funding are all concerns for grad students.
4. More graduate students are needed for the stand-alone graduate courses—consider development of an anthropology certificate.
5. Archaeology labs need more space, particularly for curated materials.
6. The balance of MA/PhD students needs to be considered in terms of faculty workloads. Support for Ph.D students should be sought from grants.

C. Reorganization, Vision and Culture Issues

1. The reorganization has led to a perceived loss of identity, power and control among faculty and graduate students in the (now) Anthropology Program. Some subgroups within anthropology feel particularly marginalized.
2. Students particularly note that the program has been placed with a school in which a humanities approach predominates, as opposed to social science approaches. This is a key attack on their identity as applied anthropologists concerned with mixed methods.

3. The vision of the school is an issue—it is not clear that everyone has bought into “social justice” as a unifying theme, or that this is appropriate.
4. The department needs to explain to Susan, Larry, and others the differences between the culture of anthropology vs. interdisciplinary culture. The identity needs of the anthropology need to be finessed.
5. There is a feeling among higher university administration that departments/disciplines are not suited to solve contemporary social problems. An interdisciplinary approach is favored. This runs counter to the culture of anthropology.
6. Susan does not agree that the reorganization has created identity problems as well as problems for long term program development.
7. New hires are a problem. While they pick their tenure home, anthropology may not be able to determine what kind of hire will be made.
8. Faculty feel the need to preserve the autonomy and identity of anthropology
9. Faculty are concerned about development of a vision of where applied anthropology program should go and how it should develop, but are not clear how they can move toward that without a chair and a budget. And the ability to hire the type of faculty they need.

D. Graduate Student Issues

1. Some of the required courses are not felt to be relevant for the archaeologists. Either requirements need to be changed or the relevance of these courses (ethnographic methods) needs to be clarified.
2. Most grad students are appointed at the same FTE, but workloads vary.
3. Scheduling of the methods course and other required courses may not be optimal for student requirements. Regular meetings between faculty and students should be instituted. Having graduate representation at faculty meetings and/or town hall meetings held biannually would help bring student concerns to the faculty.

E. Support Staff

1. Staff support is woefully inadequate.
2. About a quarter time position needs to be solely devoted to the graduate program.

3. Faculty need staff support for grant writing. This should not be in terms of required workshops, and /or web based instructions for faculty, but rather actual support staff who can do some of the hands on work required for larger grants (e.g., NIH).

F. New Faculty Lines Needed

1. The student/faculty ratio is much too high.
2. Medical anthropology is carrying too heavy a load of advisees (one person is on 20 committees, 10 as advisor). Another medical anthropologist is needed.
3. More archaeologists are needed. Currently 2.5 faculty are serving 22 students.

G. Relationships between the Anthropology Program and Other units in the University

1. There is a need for funding transparency. Faculty need to know where the money comes from and where it goes. This is true within the school and between the college and the school.
2. The faculty are fearful that their voices won't be heard about the future of anthropology within the school
3. The Anthropology program coordinator must have authority to make decisions that are in the best interest of the AAGP, such as graduate student stipend levels, recruitment of students, scheduling classes, assigning teaching, scheduling faculty meetings, etc.
4. The dean gave frequent examples drawn from women's studies. Susan must advocate for anthropology to the dean.
5. Anthropology needs more self-promotion within the University. Faculty and students are involved in a wide range of interdisciplinary projects. They must make sure that these activities are recognized by a university increasingly giving attention and resources to interdisciplinary approaches.

DRAFT PROPOSAL FOR A CO-DEGREE MASTERS PROGRAM

Proposed Combined Undergraduate-Graduate Degree (Co-Degree Masters) program

Graduate programs may choose to develop a combined undergraduate-masters-degree program in which undergraduate students apply to a masters program during their junior year. Students typically would begin some of their graduate coursework and thesis or project work during their senior year. Completion of the program allows the student both a bachelors and masters degree to be conferred. The foundational requirements for the program are described in this proposal, but each participating program may set their own requirements for their program to be more restrictive than what is described in this proposal.

Foundational Requirements

Outstanding undergraduate OSU students who have completed 105 of their required 180 credits toward graduation with an overall GPA of 3.25 or better are eligible to apply to an OSU co-degree masters program during the winter term of their junior year. The masters program will notify applicants of admissions decisions during spring term. Accepted students will matriculate during the following fall term. With careful planning students can then complete a masters degree within 1 year beyond the bachelors. Students admitted to the co-degree program must maintain a GPA of 3.0 or better throughout their undergraduate and masters degree programs or they will be subject to dismissal from the co-degree program.

Successful applicants are allowed to apply up to 9 credits of graduate coursework (taken for a letter grade) taken as an undergraduate to both their undergraduate and masters degree. Only credits with letter grades of B (3.00) or better may be counted for graduate credit. In addition, those students in the Honors Program can allow the honors thesis to be a step toward completion of the masters thesis (for those programs requiring a thesis).

Admission to the co-degree masters program is not automatic. Students must identify a graduate advisor prior to application to the program. Students requiring a thesis for their degree must have a professor who agrees to serve as the thesis advisor prior to application. For Honors students, this may be the student's honors thesis advisor. For students in non-thesis masters programs, the graduate advisor must be willing to work with the student to guide the scheduling of required coursework.

TOEFL and ID portfolios are not required but the following are required:

- Online application via the Graduate School website
- A co-degree study proposal or coursework plan of study is required to complete the application for admission and should be signed by the graduate advisor for non-thesis masters programs or graduate thesis advisor for masters programs with thesis .
- Statement of Purpose essay of 2-3 pages. This must include the details of the graduate plan of study and, for programs with a thesis, the masters thesis topic.
- Three letters of recommendation from faculty knowledgeable of the student's academic background and potential for success in a graduate degree program.

- Transcripts from all undergraduate institutions attended.

Students enrolled in a co-degree program would be eligible for financial aid (Pell Grant) until they complete all requirements for their undergraduate degree (typically 180 credit hours). Once the undergraduate degree requirements were met, then the student typically would be supported on a Teaching or Research Assistantship or they would pay graduate tuition and fees.

Additional Background on Programs at Other Universities:

Cal Poly: <http://me.calpoly.edu/about/degree-programs/graduate/> up to 8 units of undergraduate technical electives may be double-counted towards the masters requirements

Southern Methodist: <http://www.smu.edu/Lyle/Departments/EMIS/Programs/41MastersDegree> Up to nine (9) SCH of graduate course work can be applied towards the undergraduate degree requirements.

Western Carolina: <http://www.wcu.edu/6589.asp> Up to 12 credit hours of these upper level courses can be transferred toward the 30 credit hour requirements of the M.S. program

Claremont Graduate University <http://www.cgu.edu/pages/623.asp> variable credits double counted depending on program – 16 credits is the maximum

Duke University <http://meng.pratt.duke.edu/4plus1> four departmental graduate courses taken during the senior year can toward the MEng degree.

Tulane <http://tulane.edu/sse/psyc/academics/graduate/masters-program.cfm> Up to 6 graduate credit hours may count toward the bachelors and the M.S. degree

University of Delaware http://www.ce.udel.edu/current/graduate_program/4plus1.pdf Up to 6 credits of graduate course work (600 level and above) taken while a senior, may be “dual-counted” towards the Bachelor’s and the Master’s degrees.

Purdue https://ag.purdue.edu/foodsci/Pages/4plus1_program.aspx

Arizona State University <http://sbhse.engineering.asu.edu/academics/accelerated-degree/> It allows students to SHARE up to nine credit hours between their bachelor’s and master’s degrees, and RESERVE up to nine hours to use later in their graduate program.

University of Florida <http://www.admissions.ufl.edu/ugrad/combdegree.html> Students who meet the combined-degree application requirements can enroll in 12 to 21 credits of approved graduate courses (depending on the major) during their junior and senior years. These credits will satisfy undergraduate degree requirements and, if admitted to graduate school at UF, they also will satisfy graduate degree requirements if the courses are completed with grades of B or better.

San Diego State University http://www.engineering.sdsu.edu/mechanical/msme_4plus1.aspx students who plan to specialize in Design and Manufacturing can take as double counted classes two of the following courses

Washington University at St Louis <http://engineering.wustl.edu/DualDegreeProgram.aspx>

Stanford University <http://gap.stanford.edu/4-2.html> no units may be double-counted

Rensselaer Polytech <http://srfs.rpi.edu/update.do?artcenterkey=291> credits applied to satisfying requirements of the undergraduate degree cannot be used to satisfy the requirements for the master's degree.

Vanderbilt University <http://as.vanderbilt.edu/academics/specialdegreeprograms/4plus1/> There is no double-counting of credits

University of Massachusetts Amherst
http://www.umass.edu/sphhs/public_health/academics/undergraduate/4plus1DegreeProgram.html

Florida State University <http://www.gradstudies.fsu.edu/Academics-Research/Degree-Programs/Combined-Bachelors-Masters-Degree-Programs> double counting of up to 9 credits allowed in some programs.

Yale University: <http://yalecollege.yale.edu/content/combined-bachelors-and-masters-degree-programs-professional-schools>

SUNY Albany http://www.albany.edu/undergraduate_bulletin/joint_degree.html Combined programs require a minimum of 138 credits and up to 12 graduate credits may be applied simultaneously to the requirements for the baccalaureate.

University of Maryland http://www.provost.umd.edu/PCC_DOCUMENTS/DesignX_Combined.htm
Normally no more than nine credits of graduate courses applied to the bachelor's degree may be counted also for graduate credit in an individual student program.

Northwestern University <http://www.tgs.northwestern.edu/academics/academic-programs/degree-programs/bachelors-masters/index.html>

Miami University of Ohio <http://www.units.muohio.edu/reg/bulletins/GeneralBulletin2012-2013/combined-bachelors-and-masters-degree-program.htm> Departments or programs with a combined degree may allow students to double-count up to 9 hours of graduate course work toward their undergraduate degree.

Rutgers: <http://soe.rutgers.edu/oaa/BS-Masters-programs>

Clemson: <http://www.clemson.edu/ces/math/combined-bachelors-masters-program.html>

Low Residency MFA in Creative Writing - MOU – *Reviewer:* Janet Lee

Unit representatives: Anita Helle and Neil Browne, OSU Cascades

- [Online](#)
- [PDF](#)
- Janet reported that the MOU proposes to extend the MFA to OSU-Cascades; it is a low-residency alternative to the high-residency program in Corvallis. Issues raised during the first discussion included the mentorship aspect, non-OSU faculty on committees, the role of the director, and assessment issues.
- Anita Helle noted that the low-residency notion is new for OSU and the structure has a very solid national precedence, including term-renewal faculty serving on thesis committees.
- Neil Browne distributed an [assessment document](#) to address concerns. The first paragraph addressed concerns about the stability of mentors. He questioned whether the Graduate School requires a certain number of faculty to which Brenda responded that one must be approved by the Graduate School as a graduate faculty member. She noted that, if they are a non-OSU faculty member, it is recommended that they co-chair the first couple of committees.
- Neil stated that they will seek out faculty with terminal degrees who are nationally known writers to serve on committees, and he will also serve on every committee. The idea is to build a solid core of faculty to work in the program on an on-going basis. Some mentors serving on committees will be ongoing faculty and they will be carefully selected to assist students in meeting benchmarks. The goal is to have the program sustain itself.
- The structure consists of two kinds of activities: 1) remote correspondence with a mentor and 2) an on-site face-to-face ten-day session where mentors are present. Core faculty will be prepared to take on the direction of theses by the beginning of the second year.
- Walt noted that the Budgets & Fiscal Planning Committee was under the impression that the non-OSU faculty would be short-term only, but it appears that they will be ongoing which would change the budget. Anita indicated that the core professional mentors contracts will be renewed. She indicated that OSU-Cascades will follow the national trend, which will be to request non-OSU faculty to consider renewing their contracts on an on-going basis after they have proven themselves. Nine-month OSU faculty would need to operate on overload during the summer. Lodging and meals will be paid for all guests. Walt questioned the figure of 54 guest writers per year. Anita responded that many more writers would be brought in than are used for correspondence terms; the average number of students in a correspondence term is 3-5. The 54 figure is not meant to imply that all would participate in correspondence terms. It was clarified that, during the summer, there will be 2 OSU faculty, 2 guest faculty and 40-50 guests for a shorter period of time.
- What is the substantive difference in the structures between Corvallis and Bend? Anita noted the

difference is in the delivery consisting of an intensive face-to-face workshop, which is the same, but requires 10 weeks in Corvallis and 10 days in Bend; the learning objectives are the same.

- Becky Johnson and Marla Hacker have indicated overwhelming support for the proposal.
- It was noted that the Corvallis MFA is highly regarded and there is carry-over from that program.
- Regarding transferability of credits, because the CLA dean felt that managing the two programs would be difficult, there will not be any reciprocal transfer at this point.
 - It was noted it's difficult to argue they are the same programs if the credits are not transferable. The proposal will serve place-bound students and those who are already in the workplace; the criteria are the same. Brenda stated that, if these are the same degrees, and they are issued by OSU, the OSU-Cascades credits must be transferable. Anita suggested adding a letter to the course numbers, such as an H used by the Honors College, to distinguish the two programs; it was argued that Honors credits are transferable.
 - The difference is that the Corvallis courses have a cap. If in a workshop in Corvallis, students are being advised on their thesis by Corvallis faculty; in Bend they will be advised by mentors.
 - It was suggested that this issue could be handled via advising.
 - Jim asked that the proposers think through the transferability, sort it out, and come back with a revised proposal.
- Regarding mentors serving as chairs, normally the MFA director would oversee the mentors. It was requested that there be a more formal process outlined in the proposal when they return.
- Neil noted that program-added benchmarks were included on page three of the document he distributed.

Discussion of Low Residency MFA in Creative Writing – MOU

- It was noted that the budget does constrain exactly the type of program they can offer.
- Is it OK to hire adjunct faculty without paying benefits? The contracts will be eligible for renewal. It was noted that one college has side-stepped paying benefits by rehiring the same faculty for over ten years. It was countered that there is a generous travel and meal allowance in the budget.

Applied Anthropology Graduate Program Review – Reviewer: Don Jump

Unit Representatives: Leah Minc Dean Larry Rodgers, Susan Shaw, Bryan Tilt

- Leah felt that the tone in the report regarding realignment was harsh in places; she noted it has been a rough couple of years and the review team picked up on the anxiety surrounding realignment. The faculty would rather that the process not be a referendum on realignment, rather, it should focus on moving forward.
- Don questioned whether the unit had problems with the report and questioned whether the concern with mixed methods on pages 16 and 17 was inaccurate (social sciences vs. humanities approach). Leah felt it comes down to the mission statement because anthropologists view themselves as social scientists and it would be problematic having a strong political or social agenda. Don suggested to 'lump together' the issues and address them in the Action Plan.
 - Another Graduate Council member felt that the social justice aspect was not as important as the focus between social sciences and humanities.
 - Leah indicated a need for them to be social scientists, but there is room for both.
- The report noted it appeared that faculty were overextended and there was not much clerical assistance available.
- Leah mentioned they were in a bind to offer a diversity of classes and suggested an advisor to assist with the graduate population, which is a priority. The faculty would like another partial FTE for support to administer the graduate program. Susan indicated when she knows the issues, she will address them. Bryan noted there is a proposal for staffing that will appear in the Action Plan.
- Another solution that may not be palatable to the program is to appoint anthropology faculty who are not in the unit – Leah was only aware of one or two faculty outside the unit with a PhD who would qualify. It was suggested that the unit rethink the PhD requirement, which may open the door to additional faculty. Leah noted they have required a PhD, but may be willing to consider this option on a case-by-case basis. It was suggested that the unit rethink who constitutes the graduate faculty members. Bryan felt there were gradations of graduate faculty. It was noted that many faculty have graduate appointments in multiple units. Leah indicated they would be open to assistance from the Graduate School in identifying graduate faculty.
- Regarding metrics, if there is anything in the Action Plan that requires a measure, make sure that metrics are included. If there is an action, include a metric so it can be measured in subsequent years.
- Leah indicated that faculty feel there has been a lack of leadership at the discipline level which strongly affects the health of both the undergraduate and graduate programs. Susan indicated she is open to

considering longer appointments in the disciplines.

Graduate Council Discussion of the Applied Anthropology Graduate Program Review

- Don will strike #C.2 under Reorganization, Vision and Culture Issues, as Don felt it may have been misphrased. Jim noted he will mention in the memo that it's felt that this is no longer an issue.

Action: Jim will recommend maintenance of the program in his memo and indicate that the report was accepted; Don will address the C.2. issue in the report.

Discussion of [Co-Degrees Proposal](#)

Brenda explained that the idea began with her and Susie Brubaker-Cole and would provide a way for students to move smoothly from a Masters to a PhD program. This proposal would create a platform for a university standard that could occur for any of the 80+ degrees and units would have the ability to increase standards above the platform. Brenda noted the proposal was considered by the Curriculum Council, which provided input; she would like approval from both the Graduate and Curriculum Councils, and then it will be presented to the Faculty Senate Executive Committee. If the proposal results in changes to entry requirements and credit counting, it would require approval by the Faculty Senate.

- The proposal would require an undergraduate 3.25 GPA to apply; the College of Public Health & Human Sciences preferred 3.0 and Engineering preferred 3.5, so they took the median. They discussed with Doug Severs at what point is a student no longer an undergraduate and no longer eligible for financial aid. The proposal is for 180 credits and Brenda acknowledged that double-counting nine credits may be controversial; some universities don't allow double-counting, while others do. The nine would be treated as transfer credits, but additional transfers would not be counted. Brenda noted that the Willamette law degree allows double-counting. This is a change that would allow undergraduates to double-count. When students take slash courses, they would have to take the 500 level courses.
 - What is the reason for the proposal? There are two primary reasons: 1) there is a large number of undergraduates who pursue an advanced degree and this proposal would reduce the amount of time and money students spend; 2) The Strategic Plan calls for recruiting high achieving students into the university and this offers incoming high achieving students the ability to finish one year earlier.
 - How does it reduce breadth and depth of coursework? Is it realistic for students to finish in one year? Some colleges are already doing something similar, but the proposal may not be attractive for some programs. This proposal would apply to exceptional students. It was noted that this may lead some students to a PhD program who may not have previously considered advancing.
 - Regarding requiring letters of recommendation from faculty, it was suggested that letters from professionals also be allowed.
 - Regarding transfer student credits, the proposal should state that a student has X number of credits toward the degree program, not just transfer credits, because some transfer students have 105 credits, but no credits in the degree program. Following discussion, the consensus was to leave decisions on admission requirements at the program level.
 - External support was questioned – how would it work in this program? At the undergraduate level, they're paid student wages, but students would be paid as a TA at the graduate level.

Action: Graduate Council members were asked to send additional comments to Brenda; she will distribute a revised proposal for Graduate Council consideration.

Housekeeping

Jim had hoped to transition meetings to every other week but, due to the workload, the Graduate Council will meet on February 4, 11 and 18.

Category I and Abbreviated Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

For Instructions, see <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/category-1-proposals> Please attach Executive Summary, Proposal, Library Evaluation (performed by the Library), Accessibility Form, Letters of Support (External to OSU), Liaison Correspondence (Internal to OSU), Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check One:

Full Proposal (Category I)

[Category I Final Approval: Oregon State Board of Higher Education]

- ☒ New degree program
- ☐ New certificate program or Administrative unit
- ☐ Major (substantive) change in existing program
- ☐ Establishment of a new college

Abbreviated Proposal (Abbreviated Category I)

[Abbreviated Category I Final Approval: OSU Provost]

- ☐ Rename of an academic program or unit
- ☐ Establishment of a school, department or program
- ☐ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation of an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (541-737-3467)

For requests to offer existing certificate and degree programs at new locations, use the Memorandum of Understanding form available at <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/mou-process>

Executive Summary

The College of Veterinary Medicine in collaboration with partners in the Division of Health Sciences proposes to establish a new interdisciplinary graduate program in Comparative Health Sciences. This program will offer both MS and PhD degrees and will replace a recently terminated PhD program in Comparative Veterinary Medicine and an existing MS program in Veterinary Science. Focusing on health sciences graduate education and research at the whole animal level, the program will be complimentary to and supportive of existing programs that are focused primarily at the molecular and cellular level, such as the OSU MS and PhD in Molecular and Cellular Biology program.

Students will be required to complete a program core curriculum as well as an option-specific curriculum. The latter will be tailored to meet the needs of the participating academic unit and the individual student. Initially, the program will have one transcript-visible option, Biomedical Sciences, which will accommodate students with advisors in the College of Veterinary Medicine. There will be opportunity, however, to add other options as the interdisciplinary program expands to include related areas of emphasis in the health sciences.

Administered by the Graduate School, this interdisciplinary program will provide an opportunity for all units in the College of Veterinary Medicine to participate in graduate education and encourage the integration of several related areas of emphasis currently existing in other units. This program proposal represents a deliberate effort to achieve critical mass in a disciplinary area identified by Oregon State University and the OSU Division of Health Sciences for priority development.

New Degree Program Proposal

MS, PhD in Comparative Health Sciences

This proposal is ready for review by Budgets and Fiscal Planning.

9. Review - Budgets and Fiscal Planning Committee

Sent Back by [Walter Loveland](#), *October 14, 2012 8:54pm*

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) October 14, 2012 8:54pm

This proposal was sent back to the proposers for clarification of the budget in the following areas: (a) The Library Assessment must be fully funded in each year of the budget, not partially funded. (b) The total incremental funding relative to today should be indicated in the budget. Thus if the \$207K is to be spent in each of the four years, it should be indicated in each year in addition to new expenditures in succeeding years. (c) The salaries of the graduate assistants need to be clarified. It appears the grad students are paid \$30,000 per year with a small \$5000 OPE charge. Is that for a 0.49 FTE per person or is it (as suggested by the budget) 1.0 FTE /person? How is the OPE calculated? (d) The narrative speaks of an investment of \$560K from the College. Where does that appear in the budget? (e) The narrative mentions a director + staff position. Where is that in the budget? (f) The distinction between "student" and "resident" needs to be clarified.

10. Originator Response

Beth Chamblin Asst to Dept Head / Vet Biomedical Science, *October 25, 2012 5:06pm*

Comments

Beth Chamblin October 25, 2012 5:06pm

Thank you for the review of our proposal for a new graduate program, Comparative Health Sciences. We answered your specific questions below and have modified the proposal accordingly.

a) The library assessment must be fully funded... answer: It is. As specified in the proposal, the library has recommended the subscription of a journal (Infection Control & Hospital Epidemiology) that we already have in our library. It will be available to students.

b) The total incremental.... answer: Each year (1st to 4th) has its own budget that is shown in the budget pages. All four years together will have a budget of \$1,053,600.

c) Salaries and OPE.... answer: The College of Veterinary Medicine has a program of residency (in Medicine, Surgery, etc.) Those residents are enrolled in the MS (current MS of Veterinary Medicine) program. The resident position is 1.0 FTE and is paid \$30,000 with \$5,000 of OPE.

d) The narrative speaks of an investment of \$560K... answer: This represents the total investment of the College in the program. It has been updated.

e) The narrative mentions a director.... answer: The positions do not represent new faculty, but re-assignments. Because of that, they do not infer new money. However, we have changed the budget page to show those costs.

f) the distinction between.... answer: As mentioned before, resident/graduate student (MS) is a program existing in the College. Professional schools have MD/MS, MD/PhD, DVM/MS, DVM/PhD, that follows a different model compared with other programs in the University. We added a few sentences in the text to make it clearer.

We appreciate the comments and the opportunity to improve the presentation of our proposal.

11. Review - Budgets and Fiscal Planning Committee

Sent Back by Sarah Williams Coord-Curriculum / Acad Prgms/Assess/Accred, *November 13, 2012 10:47am*

Comments

Sarah Williams (Budgets and Fiscal Planning Committee) November 13, 2012 10:47am

Per email from Gary Beach on 11/12/12, I am returning this proposal to the Originator at the request of the Budgets and Fiscal Planning Committee for requested changes. SW

Beth Chamblin November 14, 2012 9:33am

Budget documents were updated.

13. Review - Budgets and Fiscal Planning Committee

Approved by Walter Loveland, *December 4, 2012 10:22am*

14. Review - Graduate Council Chair

**New Interdisciplinary Graduate Degree Program
Proposal:
M.S., Ph.D. in Comparative Health Sciences**

**College of Veterinary Medicine
College of Public Health and Human Sciences
College of Pharmacy
Graduate School**

**May 2012
Proposed Effective Term: Winter Term 2013 (201302)**

CPS Tracking #: 84096

Institution: Oregon State University

College/School: Division of Health Sciences (DHS), including the College of Veterinary Medicine (CVM), the College of Public Health and Human Sciences (PHHS) and the College of Pharmacy (CoP)

Department/Program: Interdisciplinary graduate program in Comparative Health Sciences (CHS)

1. Program Description

a. Proposed Classification of Instructional Programs (CIP) number: 51.2509

CIP #: 512509

Title: Comparative and Laboratory Animal Medicine

A program that focuses on the scientific study of animal models of human disease and related experimental procedures, and prepares veterinarians and animal health specialists to manage the laboratory use and care of experimental animals. Includes instruction in laboratory animal husbandry, laboratory animal disease, biohazard control, gnotobiology, breeding, comparative anatomy and physiology, comparative gene mapping, protein function, physical and mathematical modeling, computer modeling, stem cell technology, colony and genetic stock management, cryopreservation, applicable regulations, and bioethics.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

- b. *Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered:*

An interdisciplinary MS, PhD graduate program in Comparative Health Sciences (CHS) is needed to complement the existing MS, PhD Molecular and Cell Biology (MCB) graduate program, which focuses on studies at the molecular level. The CHS program will offer both MS and PhD degrees and focus at the whole animal level, particularly the use of animal models of disease. It will replace a PhD program in Biomedical Sciences (recently terminated) and an MS program in Veterinary Science, and provide an opportunity to achieve critical mass in a disciplinary area identified by the Division of Health Sciences (DHS) for priority development. This program will provide an opportunity for students to be trained in multidisciplinary approaches to address biological and medical problems.

Administered by the Graduate School, this interdisciplinary program will provide an opportunity for all units in the College of Veterinary Medicine to participate in graduate education and encourage the integration of several related areas of emphasis currently existing in other units.

New Graduate Degree

- Proposal Title: MS, PhD in Comparative Health Sciences
- Proposal Type: Full Category I
- CPS #: 84096
- <https://secure.oregonstate.edu/ap/cps/proposals/view/84096>
- CIP #: 512509
- SIS #: To Be Determined (by the Registrar's Office)
- College Code: 09 – Graduate School
- Program Type: Graduate
- Credential Type: Master of Sciences (MS), Doctorate of Philosophy (PhD)
- Academic Home: Graduate School
- Participating Academic Units: College of Public Health and Human Sciences, College of Pharmacy, College of Veterinary Medicine, Graduate School
- Program Location: OSU – Main (Corvallis)
- Options: Biomedical Sciences
- Areas of Concentration:
- Undergraduate Minors: Not Applicable
- Graduate Minors: Comparative Health Sciences
- Course Designators: VMB and VMC
- Credit Hours: MS Degree = 45 (minimum); PhD Degree = 108 (minimum)
- Delivery Mode and Location: On-Campus in Corvallis
- Admission Requirements: Baccalaureate Degree; 3.0 GPA; GRE; Transcripts; Letters of Recommendation (3); and Personal Statement
- Enrollment Limitations: None
- Accreditation: None
- Proposed Start Date: **Winter Term 2013** (Banner 201302)

Termination

- **MS in Veterinary Science** (to be submitted separately via an Abbreviated Category I proposal).

c. *Course of study – proposed curriculum, including course numbers, titles, and credit hours:*

Students enrolled in the MS degree will complete a total of 45 graduate credits, including 12 thesis credits. Students enrolled in the PhD degree will complete a total of 108 graduate credits beyond the bachelor's or professional (DVM, MD) degree, including at least 36 credits of non-blanket course work.

In Year 1 of either the MS or PhD programs, students will be required to complete three laboratory rotations (organized under a course title "Research Perspectives") that will provide an opportunity to experience several research environments and investigators that they may consider for their thesis research. These rotations will run congruently with academic quarters. In addition, all students will be expected to complete the following program core curriculum, including all required courses and a selection of at least two of the listed electives, for a total of 12 credits:

<u>Course Title</u>	<u>Course Number</u>	<u>Credit Hours</u>
<i>Required:</i>		
Research Perspectives	New (600)	3 (1 per quarter)
Methods of Data Analysis	ST 511 or similar	4
Biomedical Ethics	New (600)	1
Grant Application Preparation	New (600)	1
Seminar	New (507)	1
<i>Electives:</i>		
Molecular and Cellular Biology Techniques	MCB 524 or similar	1
Introduction to Bioinformatics	New (600)	1
Introduction to Epidemiology	New (600)	1
Introduction to Genomics	New (600)	1
Introduction to Immunology	New (600)	1
Biochemistry	BB 550 or similar	3

In addition to the program core curriculum, students will be required to complete option-specific curricula, as approved by respective graduate committees. Initially, the program will have one option, Biomedical Sciences, which will accommodate students with advisors in the College of Veterinary Medicine. There will be opportunity, however, to add other options as the interdisciplinary program expands to include related areas of emphasis in the health sciences. The option-specific curriculum for the Biomedical Sciences option will be as follows:

<u>Option</u>	<u>Degree</u>	<u>Course Title</u>	<u>Course Number</u>	<u>Credit Hours</u>
<i>Biomedical Sciences</i>				
	MS	Animal Models	VMB 521	3
		Elective courses	Various	24
		Research	VMC/VMB501	5
		Thesis	VMC/VMB503	12
		Seminar	New	1
	PhD	Animal Models	VMB 521	3

Molecular Tools	VMB 671	3
Elective courses	Various	53
Thesis	VMB 603	36
Seminar (dissertation defense)	New	1

An abundance of graduate courses are currently available to complete the elective course requirements in each of the options, including courses with the VMB (Veterinary Medicine Biomedical), VMC (Veterinary Medicine Clinical), PHAR (Pharmacy), H (Public Health), NUTR (Nutrition), EXSS (Exercise and Sport Science), Molecular and Cell Biology (MCB), Microbiology (MB), and TOX (Toxicology) prefixes. For a complete listing, please refer to the OSU Graduate Catalog

(<http://catalog.oregonstate.edu/CourseDescription.aspx?level=grad>).

d. *Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).*

The program will be delivered on the Corvallis campus. Depending on individual courses, instruction will include both lecture and laboratory experiences, with an emphasis placed on small group discussion and relevant experiential contexts. There are no plans for off-campus delivery at present, although it is anticipated that opportunities to provide students access to rich educational resources available at other locations, such as at Oregon Health Sciences University and international sites, will be explored.

e. *Ways in which the program will seek to assure quality, access, and diversity.*

Once a student is admitted into the program and a mentor(s) is selected, the following required steps will assure appropriate advisement and assessment of student progress at the department level:

1. Before the end of the second quarter, the advisory committee must be established, necessary documentation required by the Graduate School must be submitted, and the student must meet with the graduate committee.
2. The student and mentor must provide an annual report to the departmental/college-based graduate committee for review of progress and accomplishment of any program option benchmarks (student/mentor assessment form included as Appendix 1).

The program will be reviewed by the Graduate School five years after initial approval and every 10 years thereafter, in a manner consistent with the Guidelines for the Review of Graduate Programs published by the OSU Graduate Council.

In addition to promoting racial, ethnic and gender diversity, effort will be committed to include students from rural, international and different socioeconomic communities. Specific strategies that are used to advance diversity in professional degree programs will be employed, such as partnering with undergraduate programs to reach promising students in high schools with high proportions of underrepresented populations.

- f. *Anticipated fall term headcount and FTE enrollment over each of the next five years.*

Program enrollment in the MS degree is at least expected to equal the total headcount in the existing MS in Veterinary Science program (15 students). All these students are also residents (residency/MS program).^{*} Two additional students are scheduled to be added to the MS program in September, 2012, bringing the total to at least 17. Five prospective students have already expressed an interest in enrolling in the PhD program.

Enrollment is expected to increase by at least 10-20% per year for the first 5 years, based on: (1) applications submitted to the existing MS program and expressions of interest in the PhD program; and (2) strategic investments that will be made in student support, resulting partly from growth of extramurally-funded research programs.

^{*}The College has an MS/residency program. In the future it **may** have an MS/DVM and PhD/DVM program.

- g. *Expected degrees/certificates produced over the next five years.*

The numbers of degrees anticipated are expected to exceed the following:

MS program: 5/year

PhD program: 3/year from the third year

- h. *Characteristics of students to be served (resident/non-resident/international; traditional/nontraditional; full-time/part-time; etc)*

The goal of the program is to attract bright students, including residents, non-residents, international, minority, and economically disadvantaged. Scholarships will be offered on a competitive basis. Many approaches will be used to recruit students, including advertisement of the program, word of mouth, recruitment at foreign institutions with which the College has established relationships, etc. The effectiveness of recruitment efforts will be evaluated on an annual basis by consulting faculty advisors and by monitoring academic progress of students.

- i. *Adequacy and quality of faculty delivering the program.*

Graduate faculty from the College of Veterinary Medicine and other health sciences units will deliver the program (see Appendix 2). These faculty collectively have a large commitment of FTE to extramurally-funded research, primarily from the NIH, but also NSF, USDA, CDC and the Bill and Melinda Gates Foundation.

- j. *Faculty resources – full-time, part-time, adjunct.*

Consistent with other interdisciplinary programs in the life sciences, participating professorial faculty will represent several OSU colleges and will primarily be tenure-track/tenured appointments with significant assignments to research and scholarship (Appendix 2). Faculty members from a number of departments in

DHS as well as outside of the Division have shown interest in participating in the program by co-mentoring students.

The program will be managed by a director who will be a participating tenured faculty member (20% assignment), appointed to a 2-year renewable term. The duties of the director will involve general administration of the program, including: (1) organizing activities such as student seminars and workshops; (2) monitoring student progress and responsibilities of advisory committees, in conjunction with the departmental/college graduate committees; (3) resolving disputes or referring them to appropriate University offices; and (4) student recruitment.

k. *Other staff.*

Support staff (at least 0.5 FTE), funded by the College of Veterinary Medicine, will provide administrative support. Also, the program will partner with the Graduate School administration to accomplish necessary organizational functions such as recruitment and admission.

l. *Facilities, library, and other resources.*

Classrooms, seminar rooms, IT and library resources are already available centrally on campus and in participating academic units. Other research resources, such as laboratories and core facilities for genomics, proteomics, electron microscopy, etc., are available on campus.

m. *Anticipated start date.*

Winter term 2013, or as soon thereafter as approved.

2. Relationship to Mission and Goals

a. *Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.*

There is an urgent need for cross-disciplinary graduate programs in underserved areas of clinical and translational research involving animal models of disease and biomedical investigation. The proposed program will be used as an organizational infrastructure to facilitate development of a community of students and faculty across DHS and other life sciences units on campus. It will be complimentary to existing graduate programs focusing on molecular/cellular biology and social/behavioral studies.

In anticipation of the establishment of this graduate program, the CVM recently terminated its doctoral program in Biomedical Sciences. Rather than invest in an independent PhD program with research ranging from the molecular to whole animal levels, the College decided instead to be an active participant in the existing interdisciplinary Molecular and Cell Biology (MCB) program and then create a new interdisciplinary Comparative Health Sciences program to address the developing interest in whole animal studies, including clinical sciences. This

interdisciplinary approach provides an opportunity for multiple academic departments to create and sustain the critical mass of students and extramurally-funded research activity necessary for long-term success of graduate programs.

At the masters level, the new interdisciplinary program will replace the MS in Veterinary Science program. Although the existing MS program had low enrollment in the past, it now has 15 students, primarily with clinical sciences interests. This area of graduate education is projected to continue its rapid growth as additional pathology graduate students are enrolled. Incorporation of the existing program into the new interdisciplinary Comparative Health Sciences program will provide a core strength that will serve as a basis for further program development.

Consistent with the interdisciplinary/integrative philosophy of the new program, faculty from other colleges will be invited to participate in instruction of the core curriculum. The option-specific curricula are anticipated to become increasingly interdisciplinary as a community of scholars collaborates to address complex biomedical challenges, such as the diagnosis and management of chronic diseases. This process will be encouraged through the use of internal interdisciplinary research grants (DHS has already implemented these) and grantsmanship workshops (already initiated in 2009-2010). An annual symposium will be organized to bring all the program members and students together to share their research interests and findings.

- b. *Connection of the proposed program to the institution's strategic priorities and signature areas of focus.*

Phase II of OSU's strategic plan (<http://oregonstate.edu/leadership/strategic-plan>) seeks to advance three signature areas of distinction: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress. As stated in the plan, improving human health and wellness depends on "building more holistic and interdisciplinary approaches to healthy aging, chronic infectious disease control, new drug development, mental health, and disease prevention to enhance the human lifespan, decrease health care costs, and maintain a healthy population."

Consistent with the strategic plan, the 11 discipline-based colleges of the university were aligned into four divisions in 2010. The overriding goal of this realignment was to facilitate collaboration across colleges and departments and to promote the development of interdisciplinary programs. One of the divisions, the Division of Health Sciences, has developed a strategic plan that states as its first priority the development of integrative, cross-disciplinary research, together with interdisciplinary graduate programs.

- c. *Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.*

As noted above, the proposed program will promote translational biology/medicine research, which involves the integration of research across the

basic sciences and application of biological discoveries to optimize patient care and disease prevention. The new knowledge created in this interdisciplinary research environment will serve as a rich experiential context in which graduate students will be educated to serve Oregon and its communities. Without the contribution of such graduates, complex challenges relating to healthcare cannot be solved.

To ensure that students benefit from the interdisciplinary structure of the program, they will be challenged to study topics that bridge two distinct areas of study such as immunology and nutrition or infectious disease and exercise or nutrition under the mentorship of experts in each of the areas. DHS already has made significant progress developing integrated projects involving infectious diseases, public health, nutrition, exercise, development, chronic diseases, immunology, genomics, and pharmaceuticals. Consistent with the DHS strategic plan, faculty across the three colleges in the Division have collaborated to develop a research project, titled “Environmental and Infectious Determinants of Chronic Disease: a ‘One Health’ Approach.”

- d. *Manner in which the program meets broad statewide needs and enhances the state’s capacity to respond effectively to social, economic, and environmental challenges and opportunities.*

With the recent creation of DHS, OSU is positioned to build integrative research and academic programs to investigate the multidimensional causes of chronic diseases and discover new health promotion/disease prevention strategies. For example, many chronic diseases result from complex interactions between infectious agents, people, animals, and the environment. To treat and prevent these chronic diseases, health professionals must match competency in biological sciences in both people and animals with an understanding of behavioral and public health sciences. It is expected that the integrated study of Comparative Health Sciences involving research projects across DHS will facilitate attainment of an even broader perspective as students interact with colleagues who are knowledgeable about the behavioral and policy issues relevant to public health.

3. Accreditation

- a. *Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.*

The program will be subject to the existing standards under which the OSU Graduate School is accredited. Periodic reviews will be conducted consistent with the Guidelines for the Review of Graduate Programs published by the OSU Graduate Council.

- b. *Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify*

the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.

Not applicable. The program is expected to meet all Northwest Commission on Colleges and Universities (NWCCU) accreditation standards for graduate education.

- c. *If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.*

The baccalaureate degree must be from an accredited higher education institution.

- d. *If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.*

The program will need to satisfy standards applicable to all graduate programs at OSU.

4. Need

- a. *Evidence of market demand.*

Based on data published by the US Bureau of Labor Statistics (Occupational Outlook Handbook, 2010-2011 Edition, <http://www.bls.gov/oco/ocos309.htm>), the market demand for biomedical scientists is predicted to grow “much faster than average” over the next decade. Employment of graduates trained in comparative health sciences and related areas of biomedical research is expected to increase by 40% by 2018, an expansion of the relevant job market that will add approximately 40,000 jobs. Considering that the median annual wage of these graduates is approximately \$73K, the potential economic impact of the graduate program is significant.

The importance of focusing on clinical and translational research was confirmed recently at the national level when the National Institutes of Health created the National Center for Advancing Translational Sciences (NCATS), with a budget of \$575M. In light of the urgent need to solve complex scientific problems and translate scientific discoveries into effective treatments and cures, it is clear that universities must educate graduates to think in more innovative and interdisciplinary ways, and to understand the value of using animal models of disease to advance public health. The broad interdisciplinary emphasis of the proposed program will address this need by fostering creation of an intellectual environment in which different perspectives can be integrated into novel strategies for addressing animal and public health concerns.

In addition to the students graduating from undergraduate degree programs in the life sciences, particularly those with primary interests in biology, biomedical sciences and zoology, it is anticipated that a large proportion of students enrolled in pre-health science programs will be interested in the proposed graduate program. Nationally, only about 9% of students who apply for admission to medical schools are admitted, leaving a large number of students who are good candidates for graduate education in the clinical and translational health sciences.

Irrespective of the trends described above, the MS and PhD programs in Comparative Health Sciences will be the only graduate programs at OSU available for veterinarians who are interested in advancing their education in comparative health sciences, particularly at the whole animal level.

Considering the complexity of animal and human health care challenges, it is imperative that research activities adopt a “One Health” approach. This approach is characterized by comparative (cross species) investigation, conducted by a variety of health sciences professionals both locally and globally. The proposed program will educate graduates who are able to address this need.

- b. *If the program’s location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).*

The program is unique in terms of its scope and interdisciplinary philosophy. The unique aspects of the program are as follows:

1. Graduate education and associated research projects will focus on the whole animal level of investigation, using an approach that will be complementary to and supportive of existing programs that are focused primarily at the molecular and cellular level, such as the MCB program (see attached letter from Dr. Barbara Taylor, Director of the MCB program). Furthermore, education and research will be limited to animal species, including humans and emphasize translational health sciences. This cross-species, comparative approach is only possible through very close collaboration involving a college of veterinary medicine and human health sciences colleges.
 2. The program will have an interdisciplinary and integrative culture that is unique among biomedical sciences programs on campus and in Oregon. This will be achieved by encouraging co-mentorship of students using internal research grants.
- c. *Manner in which the program would serve the need for improved educational attainment in the region and state.*

This program introduces the concept of translational biology/medicine to basic sciences disciplines. It will provide an opportunity for students in the clinical and

basic science branches of medicine to be educated in the philosophies and practices necessary to solve complex healthcare issues.

- d. *Manner in which the program would address the civic and cultural demands of citizenship.*

Delivery of affordable and effective healthcare represents one of the most urgent and socially responsible missions in contemporary society. Graduates from this program will be exceptionally well qualified to address this mission, thereby addressing the civic and cultural demands of citizenship.

5. Outcomes and Quality Assessment

- a. *Expected learning outcomes of the program.* (see Appendix 1 for assessment forms already in use for graduate students in Comparative Health Sciences and monitored annually by the Graduate Committee of the College)

In general, expected learning outcomes of the program will include:

- mastery of the knowledge base underlying an option field, sufficient to support scholarly investigation of a related problem;
- the ability to formulate a research question relevant to a specific option field or one that requires integration of two or more fields to be addressed;
- evidence of ability to perform research either in a single option field or in integrated fields; and
- production of scholarship that advances the option field(s).

It is anticipated that MS students in Comparative Health Sciences will address research questions that are applicable to clinical medicine, with a special emphasis on translational strategies. In most cases, these students will already have the DVM degree and their future research careers will most likely involve collaborations with colleagues in the more basic sciences. Doctoral graduates are expected to attain a higher level of expertise in both the planning and conduct of research as principal investigators, and have the ability to compete for extramural funding.

Consistent with the recently approved Graduate Learning Outcomes for doctoral and master's programs, doctoral students shall: (a) produce and defend an original significant contribution to knowledge; (b) demonstrate mastery of subject material; and (c) be able to conduct scholarly activities in an ethical manner. The latter will be facilitated in part by successfully completing a required course in Biomedical Ethics (see program core curriculum above). Master's students will be expected to: (a) conduct research or produce some other form of creative work; (b) demonstrate mastery of subject material; and (c) be able to conduct scholarly or professional activities in an ethical manner.

b. *Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.*

- Graduate Committee annual evaluation of students and quality of the program.
- Filing the program of study with the Graduate School.
- Completion of Preliminary Exam (for PhD students).
- Survey of students, annually and at graduation.
- Survey of employers of graduates.
- Satisfying graduation requirements, including completion of courses and successful completion of scholarly and research requirements.
- Periodic assessment of alumni.

c. *Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.*

- Graduation rate and time to graduation.
- Student's refereed publication record.
- Student's review of the program.
- Evaluation provided by Graduate Steering Committee.
- Post-graduation position and survey information from employers.

d. *Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas*

The majority of the faculty to be included in the program have extramurally-funded research and produce high-quality scholarship (see Appendix 2). Number and quality of peer-reviewed scholarship and the availability of research funding will be the primary indicators of success.

6. Program Integration and Collaboration

a. *Closely related programs in other OUS universities and Oregon private institutions.*

No program in Oregon overlaps with the proposed program. The interdisciplinary organization extending from animal to human health sciences is unique.

b. *Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.*

Collaborative opportunities exist with other biology and health sciences programs at the University of Oregon and Oregon Health Sciences University, respectively.

- c. *If applicable, proposal should state why this program might not be collaborating with existing similar programs.*

As stated above, the disciplinary scope of the program, ranging from animal to human health sciences, is unique.

- d. *Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.*

Constituent programs in DHS and other OSU divisions that are expected to participate in the new interdisciplinary program will benefit from the larger critical mass of research. Researchers and students, will engage in more cross-disciplinary projects involving researchers in different departments and colleges, and enhanced competitiveness of extramural research grant applications. Negative impacts on other programs are not expected.

7. Financial Sustainability (attach the completed *Budget Outline*)

- a. *Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.*

Graduate student/resident salaries (\$30,000 per year, plus \$5,000 OPE) for MS students will be committed by the College of Veterinary Medicine. The College currently funds 15 post-DVM clinical residency positions, all of which are being transitioned to dual graduate student-clinical residency positions. Generally, clinical residents are appointed for a period of three years, with terms of appointment staggered. Starting with the planned enrollment of 4 new residents in the Fall of 2013, the attached *Budget Outline* projects additions of 4 students per year until all clinical residents are enrolled in the program. This projection represents a conservative estimate of program growth and does not take into account the probability of residents currently enrolled in the MS in Veterinary Science (which will be terminated) program transferring immediately into the new program as soon as it is approved. Irrespective of the enrollment schedule, the College is committing at least \$633,600K in clinical resident positions (salary plus OPE) to the new program. These financial resources will be supplemented with additional funding, derived from the earnings of a \$1.2M trust (\$60K per year) that has been committed to graduate student scholarships. Approximately \$5,000/year will be committed by the CVM for miscellaneous services and supplies.

The disciplinary scope of the program is centered in core areas of health sciences that currently exist in the University. Faculty recruitment, retention and library resources currently are expected to be more than adequate to establish and develop the program. Indeed, faculty positions already selected by DHS for recruitment in the Provost's Faculty Investment Initiative are exceptionally well suited to participation in the program, thus demonstrating strategic relevance. Taking into account the new positions hired under the Initiative, the CVM has sufficient FTE capacity to meet the workload demands of creating and delivering the program core

and option-specific curricula. Existing instructional assignments to DVM elective courses will be reprioritized to meet graduate program requirements. The Courses and Curriculum Committee of the CVM is already reviewing DVM elective courses in a broader context of possible curricular revision.

As indicated in Section 1, parts j and k above, CVM will commit 0.2 and 0.5 FTEs, respectively, to director and staff support. These commitments will be accomplished through reassignments of existing personnel. The latter has been made possible by redistribution of work assignments from an administrative assistant to a new Safety Officer position funded in the CVM FY12 E&G budget.

- b. *Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.*

At this point, all of the needed resources are in place. As the program evolves, the Graduate Committee and the Director of the Program may identify additional resources that need to be addressed.

- c. *Targeted student/faculty ratio (student FTE divided by faculty FTE).*

The targeted student:adviser ratio is 1.5:1 for both MS and PhD programs.

- d. *Resources to be devoted to student recruitment.*

Recruitment of students will be coordinated through the Graduate School.

- 8. **External Review** (if the proposed program is a graduate level program, follow the guidelines provided in *External Review of new Graduate Level Academic Programs* in addition to completing all of the above information)

The program proposal has been submitted for preliminary external review (see letters from Drs. Van Meter at Colorado State University and Jeffrey Lakritz at The Ohio State University). A more comprehensive external review, coordinated by the Graduate School, will be conducted in the near future.

(Site 5 names outside of Oregon, not associated with OSU)

Ad Hoc review of New Academic Program, conducted by Dr. Jeffry Lakritz, Professor, Department of Veterinary Clinical Sciences, The Ohio State University

Oregon State University, Interdisciplinary graduate program in Comparative Health Sciences

Things I like about this proposal-

Looks at whole animal level; graduate DVM (residents, fellows) likely would fit into this well.

Increases opportunities for working with broader range of expertise throughout campus.

Multi-disciplinary approaches

Laboratory rotations (especially for PhD candidates)

Preparation of clinician scientists and scientists

Theoretically will reduce the effort of clinical faculty and may increase the quality of individual students work (i.e. clinical problem requiring molecular diagnostics/collaboration with others at Health Science center/pharmacy etc.)

Things that could be problematic

Required courses. At least in our college, residents taking course across campus leave holes in clinical coverage. Assuming enough faculty FTE to cover clinical requirements?

Number of didactic courses required and relevance to overall training of residents. I am not sure medicine or surgery residents will gain much in terms of board certification if they take basic science classes. Our residents have little time for class work as it is. With emergency duty, coursework is problematic for them.

We are evaluating ways in which to train clinical residents (in 2 or 3 years) with 4th year for science. There are obviously problems with this.

Faculty who maintain publication list through resident research projects

Taking residents away from faculty for research and developing project outside of their area of expertise.

Some faculty will attract a greater number of students than others.

Head, Department of Clinical Sciences
College of Veterinary Medicine
Oregon State University
Corvallis, OR 97331

15 April 2012

Dear Dr. Cebra,

I was pleased to review, upon your request, the draft proposal for a novel graduate program at your college entitled, "Interdisciplinary graduate program in Comparative Health Sciences." After review, I consider the proposal to be a very well-designed and highly relevant plan for a multidisciplinary graduate studies program. In a separate document, I will provide for you my few comments and edits on the draft; the primary point that I feel important enough to emphasize in this letter is this: Since the program is new, I offer the opinion that a minimum number of graduate committee meetings be set for each student in the program, and that minutes from those meetings be kept and forwarded to the program director. This may help prevent a potential loss of focus or direction in the students' progress; in my experience, novel graduate studies programs may incur such problems early on. That said, I applaud your college's efforts to develop a highly relevant program that will have a positive impact on the profession and reflect very positively on Oregon State University.

Sincerely,

A handwritten signature in dark ink, appearing to read "David Van Metre". The signature is fluid and cursive, with a long, sweeping underline.

David C. Van Metre, DVM
Diplomate, American College of Veterinary Internal Medicine

Animal Population Health Institute

Category I Proposal Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Collection Development**

Library Evaluation for Category I Proposal

Comparative Health Science
Title of Proposal
Biomedical Sciences
Department
Veterinary Medicine
College

The subject librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

- ☒ inadequate to support the proposal (see budget needs below)
☐ marginally adequate to support the proposal
☐ adequate to support the proposal

Estimated funding needed to upgrade collections or services to support the proposal (details are attached)

Year 1:

\$1500 ebooks in various subjects
\$595 *Infection Control and Hospital Epidemiology*
\$2460 maintenance of Veterinary Medicine
journal collection

Ongoing (years 2-4):

\$1500 ebooks in various subjects
\$595 *Infection Control and Hospital Epidemiology*
\$10,000 maintenance of current
subscriptions & new ones as needed
\$2608, \$2753, \$2950 maintenance of
Veterinary Medicine journal collection

Comments and Recommendations:

If we need to license immediate access to some of the identified journals, this will be a cost that we have not quantified.

Oregon State University Libraries Evaluation of the Collection supporting a Proposal to Initiate a MS and PhD program in Comparative Health Sciences

This Oregon State Libraries' (OSUL) assessment reviews the print monographic, e-book, and electronic serials collections as related to broad science information needed to support the proposed comparative health sciences graduate program. As stated in the Cat 1 proposal, the proposed program "will offer both MS and PhD degrees and focus at the whole animal level, particularly the use of animal models of disease. It will replace a PhD program in Biomedical Sciences (recently terminated) and a MS program in Veterinary Science, and provide an opportunity to achieve critical mass in a disciplinary area identified by the Division of Health Sciences (DHS) for priority development. This program will provide an opportunity for students to be trained in multidisciplinary approaches to address biological and medical problems." From the OSUL perspective, students and researchers will tap various components of the library collections. This makes it challenging to make recommendations on adequacy and funding needs as the entire science collection must be maintained to provide adequate access to information.

Summary of Recommendations

The monographic collection appears to be adequate as long as it is maintained and access is expanded through e-books. This will require an investment of \$1500 annually in addition to the funds the OSU already allocates.

The journal collection is currently adequate with the exception of immunology. We recommend acquiring *Infection Control and Hospital Epidemiology* for \$595 annually and allocating \$10,000 for years 2-4 to cover inflation of the current core journals and add other journals identified as the program progresses.

The College of Veterinary Medicine will need to adjust its library funding for inflation as well. We anticipate this to be \$2500 to \$3000 annually over the next four years.

Print Monographs and E-Books

Library evaluations of proposed programs have traditionally included the analysis of OSUL' print monograph collection. Comparing the monograph collection with other universities' collections is routine. This analysis includes a comparison of the print monograph collection with a peer institution with a program similar to the one proposed, Colorado State University.

Table 1: Monographic Comparison between OSU and Colorado State University

Broad Subjects	OSU	CSU	OSU to CSU	OSU ebooks	CSU ebooks	OSU to CSU
Bioinformatics	212	152	140%	123	244	50%
Epidemiology	1200	1133	106%	57	181	31%
Ethics (Medical, Bio)	856	856	100%	43	153	28%
Genomics	237	386	61%	83	186	47%
Immunology	1239	1220	102%	94	233	40%
Veterinary Medicine	1325	1362	97%	20	71	28%

The broad subject areas searched reflect the proposed curriculum as well as the core of veterinary medicine. We compare favorably with CSU except for e-books that are discussed

below and genomics. Our current direct allocation for genomics is limited as we order genetics material throughout the life sciences. Even so, more emphasize on this area will be needed as well as sustaining the other areas.

The growing availability of e-books makes it possible to expedite access to more information from various locations. This obviously better serves our distance learners and is a convenience for our on-campus students and faculty. As the proposed program will have students scattered across the Corvallis campus, facilitating access is essential. OSUL are acquiring e-books with more frequency but we lag in comparison to CSU. This discrepancy should lessen in the next four years as we purchase electronic format over print. For example, we recently acquired the 2012 Elsevier Veterinary Medicine e-book package for \$1100 for 10 titles in part to compare usage between the print format and electronic. We recommend allocating \$1500 annually towards monographic purchases with emphasize on genomics and e-books.

OSU is served well by our investment in the Orbis/Cascades Alliance, whose combined collection is substantial. Students and faculty can order from the collections of all the libraries in the Orbis Cascade Alliance through the Summit catalog. University of Oregon, Portland State University, University of Washington and Washington State University are some of the larger research libraries represented in the Summit catalog. Books requested through Summit are delivered to OSUL within three to five working days.

Serials/Journals

In the sciences, ready access to current information is expected. The OSUL maintain a satisfactory collection of journals appropriate for comparative health sciences including the major titles in bioinformatics, epidemiology, genetics and veterinary medicine. There is concern that with regular price increases to our licenses and a flat budget that access may be eroded over time. The OSUL already have sacrificed timely access to some titles in favor of an embargo period to cut costs. We identified 147 titles indexed in the Web of Science of possible interest to those involved in the proposed program (Table 2). The categories represent the broad scope and consequent importance of collaboration across disciplines. We indicate those titles that we have current access to, those with 6 months to 2 years embargoes and those not owned by the OSUL.

Table 2 – First Quartile Journals from Web of Science

Broad Subjects	# of titles	current	embargoed	not owned
Bioinformatics	19	14	4	1
Epidemiology	33	19	8	4
Genomics	30	18	8	4
Immunology	30	14	8	8
Veterinary Medicine	35	27	5	3
Totals	147	94	33	20

Those 20 titles we do not own would cost on average \$1000 for an annual license for each title with subscriptions ranging from \$340 to over \$16,000. This would total \$20,000. To get immediate access to those titles currently embargoed is more difficult to figure; using the same average, though, a ballpark figure would be 33 times \$1000 or \$33,000. This later number would likely be lower given the OSUL ability to negotiate consortial deals. Even so, the investment is large if current access to everything is considered necessary.

We recommend monitoring usage of inter-library loan for current issues of those titles under embargo and see if usage justifies licensing of current content. Given the focus of this program on whole animal and clinical research rather than human health and medical research, currency may not be imperative. At this time, only one title is generating significant borrowing - *Infection Control and Hospital Epidemiology*. We recommend adding this at a cost of \$595 annually.

The OSUL journal collection in immunology is the weakest component from this data. Again, we can monitor requests for articles from journals we do not own to make suggestions for further purchases. At this time, it is difficult to assess demand. We recommend \$10,000 in the second through fourth years to address emerging gaps in the journal collection.

We also recommend that the College of Veterinary Medicine maintain its current access to the journals it purchases. These are managed by the OSUL, but the funding is through the College. Journal subscriptions in FY12 were \$41,000. Annual inflation is estimated at 6% over the next four years. Consequently, the College will need to invest additional funds to maintain its robust journal collection that will be one cornerstone of this new program (FY13 \$2460, FY14 \$2608, FY15 \$2763, FY16 \$2950).

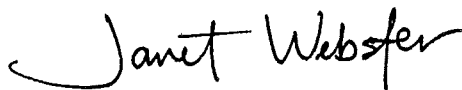

Indexes and Databases

The core indexes to the relevant information for this program are Medline (1950-present), CAB Abstracts (1973-present) and Web of Science (1970-present). The OSUL maintain access to all as these are core to many of OSU's primary research areas.

Library staff and expertise:

Expertise within the OSUL is spread among several librarians with varying responsibilities. These include Laurel Kristick, Janet Webster and Hannah Rempel. In 2011, the librarian who oversaw Veterinary Medicine, Pharmacology and the Medical Science departed, and we have not replaced that expertise. Given staffing shortages in the faculty ranks, this position is currently partially covered by Janet Webster.

Respectfully submitted,

A handwritten signature in black ink that reads "Janet Webster". The signature is fluid and cursive, with the first name "Janet" written in a larger, more prominent script than the last name "Webster".

Category I Proposal Review: MS, PhD in Comparative Health Sciences

Proposal Contacts: Luiz Bermudez, Cyril Clarke, (Beth Chamblin)

Graduate Council Review

Overall Impression:

The proposed graduate program could 1) be a welcome and valuable addition to the OSU campus, 2) provide opportunities for training in the use of whole animals that is currently piecemeal across campus and yet very much in demand, 3) support the research efforts in the CVM and provide expanded career opportunities for its residents, and 4) serve as an incubator for expanded collaborative research and drive greater translational research in the division of health sciences and in life sciences at OSU generally. However, to reach these goals, this proposal needs to: 1) focus on the stated goal of providing training at the whole animal level, 2) provide details on how a sustainable supply of quality, diverse matriculants will be achieved, 3) either become truly interdisciplinary by engaging faculty more broadly across OSU with common interest in use of whole animals and translational research or focus on the needs of the CVM and house the program in the CVM, and 3) provide specific, measurable program outcomes and a robust assessment plan. Details with questions and comments are below.

1. Program Description: An interdisciplinary MS, PhD graduate program in Comparative Health Sciences will replace the discontinued Vet Med PhD program in Biomedical Sciences and an MS program in Veterinary Science, focusing on a multidisciplinary approach to address biological and medical problems on the whole animal level using animal models of disease. This program will be administered by the Graduate School. The program is stated to provide an opportunity for all units within the College of Veterinary Medicine to participate in graduate education and encourage integration of several related areas of emphasis currently existing in other units. Initially, there will be one option, Biomedical Sciences, which will accommodate graduate students within the College of Veterinary Medicine. In the future, there will be opportunity to add other options as the interdisciplinary program expands to include related areas in the health sciences. The proposed course of study includes a program core curriculum of 12 credits and an option-specific curriculum for the remainder of the credits.

Questions/Comments on Section 1:

- The program is proposed to provide a unique niche at OSU and in Oregon with a “focus at the whole animal level, particularly the use of animal models of disease” (pg.2, section 1b) and is proposed to “introduce[s] the concept of translational biology/medicine to basic sciences disciplines” (pg. 10, section 4c).¹

The primary purpose of the program is stated as focusing on whole animals as a distinction from the MCB and other molecular-oriented graduate programs at OSU. However, the

¹ There are many basic science disciplines at OSU that will likely take exception to the characterization that they are not sufficiently aware of translational biology and medicine in their research and graduate program endeavors.

required curriculum proposed for both the MS and PhD degrees does not include a required or selective course in, for example, animal handling, whole animal experimental techniques, experimental animal physiology, developmental biology, or animal models of disease. The required/selective coursework includes molecular techniques (MCB 524) and introductory courses with a molecular basis (Immunology, Biochemistry, Genomics). The animal models course (VMB 521) looks great but isn't included in the required/selectives list.

After studying the proposal for a while and conferring with others, it seems to me that this new program actually has two purposes. The first is to educate DVM residents, who have abundant knowledge of whole animal physiology and animal handling, in research techniques and particularly more molecular techniques. The second purpose seems to be to provide a place to train graduate students without DVM degrees in the use of animal models and whole animal experimental techniques. If, in fact, this is the dual purpose of the proposed new graduate program, then that needs to be made more clear in the proposal. If not, then I am still confused. It would be helpful to delineate two tracks/options in the degree programs—one for DVM residents and one for non-DVM graduate students—and give details on how these two tracks would overlap and how they would differ. The CVM seems the perfect place to offer such a program and thus increases enthusiasm for this proposal. The interactions between the DVM resident graduate students and the non-DVM students would seem to provide a richer experience for everyone in the program and could be highlighted as a strength and adds to the uniqueness of the program in Oregon and the region.

- There are many units on campus not included in this proposal that could contribute expertise on translational research and the use of animals models, including for example, fish models for epidemiology studies, sheep for studies of reproduction, voles for the study of social relationships, etc. Have the proposal authors considered inclusion of these other faculty on campus to create a truly interdisciplinary program focused on translational research incorporating the use of whole animals?
- Why will the program be housed in the Graduate School? Only one unit is currently involved in the program even if other units are supportive. Does this align with the Graduate School guidelines for housing interdisciplinary programs?
- The description of required, selected and optional courses is a bit confusing. For clarity, it would be helpful to see a sample graduate program of study for an MS student who is also concurrently a DVM resident (the majority of the students currently in the program fall into this category). The credits don't add up for the MS degree if you look at core program requirements plus option-specific requirements. The top of page 3 says 45 credits total for MS, but core requirements are 12 credits and option specific credits are 45 for a total of 57 credits. The credits add up okay for the PhD at 108 total (12 core + 96 option specific). However, both degree descriptions appear to count the 507 seminar as both required and option specific so this is part of the accounting confusion
- Three terms of Research Perspectives (research rotation) will be required by both the MS and PhD degree programs. Will research rotations be required of all MS students (including DVM residents) or is this meant only to apply to PhD students? If this will apply to MS students, will this increase the time to graduation, particularly those concurrently working as residents (see concerns of Dr. Lakritz in Letters of Support)?
- Enrollment calculations are based on rolling all current Veterinary Science MS students into the new program. Is it realistic to expect that all current Vet Science MS students will choose to transfer to the new program and fulfill the new requirements, particularly those who have

already completed at least a year in Vet Science? Has a survey been taken of current Vet Sci MS students to gauge interest in transferring? Enrollment calculations should not necessarily include the current students in the Vet Sci MS degree. This doesn't preclude counting all new CVM residents in the enrollment numbers but suggests a bit of a longer delay to fully meeting university minimums.

- We would like to see copies of the category II proposals for the new courses: Research Perspectives, Biomedical Ethics, Grant Application Preparation, Introduction to Bioinformatics, etc. Have syllabi been prepared and are there instructors with enough FTE to teach the new courses in the program given that no new instructional FTE is included in the proposal? Who are the faculty experts in the College of Vet Med that will teach an Introduction to Bioinformatics or Biomedical Ethics at the graduate level? There is a general list of possible mentors/instructors but nothing specific.
- What is the number of faculty in CVM who are approved to advise PhD students?
- Does the proposal anticipate that CVM faculty will discontinue taking MCB students into their labs and preferentially take PhD students through the proposed new program? This isn't clear in the proposal.
- How will PhD students be recruited into the program? Under section e, "Ways in which the program will seek to assure quality, access and diversity" the recruitment plan is vague and lacks any detail on how a diverse, high quality applicant pool will be filled. Please provide details on diversity recruitment.
- How many domestic underrepresented minorities, women, and international students are currently in the Vet Med MS program? Is the Comparative Health Sciences MS degree expected to draw from the same pool of prospective students as the Vet Med MS?
- The proposal projects a 10 to 20% expansion in student numbers over the next five years. At full capacity, how many students will the program enroll? Does the quality of the current applicant pool—beyond the DVM residents—support such an aggressive expansion? If not, please give details on how the applicant pool will be expanded while maintaining quality. Also, scholarships are mentioned in the proposal. Please describe what types of competitive scholarships will be available to recruit bright students (section 1h) and if the scholarships will supplement or substitute for GTA/GRA positions.
- How will co-mentoring of students be encouraged? Does OSU have a policy on how to handle co-mentored students? Will a policy be developed to clarify financial and academic responsibility for a student in a co-mentored situation?
- How will the program graduate three Ph.D. students per year starting in the third year of the program assuming that PhD students take an average of five years to complete a program (section 1h)? Five years or longer would seem to be a more realistic timeline for ramping up to three PhD graduates per year.

2. Mission Statement- Fits with university strategic plan.

3. Accreditation- No problems

4. Need (Evidence of market demand)- Evidence of need expressed.

5. Outcome and Quality Assessment- Section 5a refers to an “Appendix 1 for assessment forms” but the online version of the proposal and supporting documents did not include an appendix 1 that we could find. Please include. If we are in error, please advise.

Although general learning outcomes are listed consistent with the approved OSU graduate learning outcomes, OSU also requires each program to develop its own specific learning outcomes and a detailed assessment plan. These are missing from the proposal. We would like to see specific learning outcomes, several of which would be expected to be unique to a program in Comparative Health Sciences, as a means of focusing the program more on the niche of whole animal studies. An assessment plan should then be provided that is linked to the specific learning outcomes. The graduate committee of the CVM is encouraged to consult with the Graduate School and the Assessment Office to develop a robust and useful assessment plan.

6. Program Integration and Collaboration- The program is stated as interdisciplinary but only a small number of faculty from two other colleges (Pharmacy and CPHHS) are included relative to the majority of the faculty from CVM. The potential for collaborations across campus seems much bigger for this program as many faculty in more molecular disciplines such as Biochemistry and Microbiology already welcome and would potentially increase interactions with partners with expertise in whole animals.

7. Financial Stability-Clinical residents are currently funded but how will other MS students not linked to a residency be funded?

It is stated that FTE of current faculty will be reprioritized to cover new courses but that no new FTE will be added. How will FTE be re-prioritized to meet the new courseload and the increased number of students requiring thesis advisors. In other words, what will faculty discontinue to meet the new responsibilities of this program? Will mentoring of MCB students will be reduced to accommodate mentoring of PhD students in Comp Health Sci?

8. External Reviews/Liaison letters- Reviews and letters are generally positive but with concerns about clinical residents and number of required didactic courses (see letter from Dr. Lakritz). Please provide a response to the concerns cited by Dr. Lakritz

Has the graduate studies committee acted upon the recommendation of setting a minimum number of graduate committee meetings for each student and keeping minutes suggested by Dr. Van Metre?

Graduate Program Review Summary – Exercise and Sport Sciences

Background: This was a combined review of the graduate and undergraduate programs. There were originally three external reviewers: Michael Delp, University of Florida; Diane Gill, University of North Carolina – Greensboro; and Bob McMurray, University of North Carolina – Chapel Hill. Michael Delp volunteered to coordinate the Graduate Program Review and Bob McMurray coordinated the undergraduate program review.

Michael Delp basically opted out of his responsibility, so Jim Coakley (OSU Grad Council Rep) became the defacto coordinator for the Graduate Program Review. Thus, this review is very late (over one year after the visit) and is based on notes from the review taken by Coakley, McMurray and Gill. We received no input from Michael Delp.

We apologize that the review tends to focus on constructive criticisms versus outlining many of the positive aspects of the EXSS graduate program. Michael Delp was also the primary person for evaluating the strength of the graduate curriculum.

Conclusions:

The review committee concluded the graduate program in EXSS should be **maintained**. The following recommendations are intended to strengthen the EXSS program and should be followed up with a response on how the program is going to address the issues raised:

- a. Develop a recruiting effort that targets diverse populations interested in EXSS. This may be done in conjunction with related programs (e.g., Nutrition, Public Health). One idea used successfully in other programs is a “recruitment weekend,” that brings together a group of excellent candidates to learn more about the opportunities available at OSU. Resources at OSU can help identify low-income, first generation, and other non-representative student populations.
- b. Related to recommendation a, increase efforts to broaden the applicant pool to non-resident and international student populations. The program should also follow-up with admitted students who declined to attend and develop strategies to retain the highly qualified applicants.
- c. Expand the Graduate Student Handbook to include sample coursework for each program track.
- d. Consider using broader themes to consolidate the six current specializations into a smaller set that promotes collaboration in research and course offerings.
- e. Provide professional development regarding mentoring relationships for both faculty and students.
- f. Develop strategies to improve receipt of external grants, including grant writing workshops, mentoring, and guidelines for release time to pursue and administer grants.
- g. The OSU Graduate School is in the process of offering a teaching certificate. Consider adding this teaching certificate to both M.S. and Ph.D. degree programs.

OVERALL RECOMMENDATION

Maintain

INTRODUCTION

The external review committee organized its review and assessment by the evaluation criteria suggested by the Guidelines for the Review of Graduate Programs offered by the Graduate Council of Oregon State University. The Exercise and Sport Science (EXSS) Program organized a detailed and comprehensive self-study document that allowed the committee to prepare for the review and explore questions in detail. Interviews with Dean of the College of Health and Human Sciences, and graduate faculty and students in the EXSS program all revealed uniform support for the program while recognizing resource limitations. The external review committee shares that support, although notes some limitations presented by current methods for organizing the program. Our recommendation, therefore, is for the program to **maintain** its direction while experimenting with new ways for supporting graduate education and students.

DETAILED FINDINGS

1. The fit of the mission of the program and its relationship to the mission of the academic college(s), and the university mission.

The mission “to promote health through physical activity across the lifespan in all populations” is clear, and appropriate for the program now and as it moves into the new College structure. The program report summarizes the goals and challenges well. In particular, the challenges of balancing competing demands, cultivating revenue streams and aligning with the changing culture of the College, are indeed major challenges to be addressed.

The fact that the ESS program is not moving INTO a College of Public Health, but is involved in the process of forming a College of Public Health, along with other existing units, allows the program to take some control and work with other units as well as within the program to address the challenges. However, the faculty should reconcile how the Physical Education Teacher Education program and the non-thesis offering for the master’s program will fit within the confines of a College of Public Health.

2. Quality of Students and Admissions Selectivity

According to Table A in Appendix 2, admission to the EXSS program is selective, with approximately 30 percent of the applicants admitted to the program. However, in the past four years, only 60 percent of the admitted students actually matriculate into the program.

On average over the past five years, the GRE scores of the matriculated students are lower than those of the admitted students. This is especially true in the last year reported (2010-11) where the predominant matriculated students were Oregon residents. This is compared to the previous four years where only 37 percent of the matriculated students were Oregon residents.

There is some concern regarding the diversity of the student population. The EXSS program does provide a diversity action plan, but more effort may be needed within the College to support recruitment of a more diverse population of graduate students.

3. Level of financial support for students

Financial support is provided for almost all of the matriculated students.

4. Curriculum strength

Connection with MPH courses and programs are desirable but limited. It appears that several EXSS doctoral students are also getting a minor or MPH degree, and others take MPH courses. That's good on several counts – EXSS doctoral student education and career/research preparation, connections with public health for the programs and research, etc. However, it appears that students have difficulty getting the MPH courses. The EXSS and MPH programs might try to develop strategies to allow EXSS students access to courses and promote other collaborative program and research options.

Both the Student Handbook and web site were vague regarding required coursework for the programs.

5. Quality of personnel and adequacy to achieve mission and goals

Faculty. The faculty are active researchers and professionals with strong scholarly records. Those scholarly areas include behavioral and epidemiological approaches to physical activity and health, as well as biological, and that's good for connecting with public health. The *Movement Studies in Disability* area is a unique strength of the OSU EXSS graduate program, and one that fits well with public health. Moreover, the faculty appear to be collegial and collaborative which bodes well for making changes to advance within the new College of Public Health.

Large undergraduate enrollment (1000+) is a major source of competing demands and barrier to graduate excellence as well as faculty research productivity and revenue generation. The large UG enrollment reflects interest in allied health professions, and that's a plus within College of Public Health. However, some steps toward enrollment management (secondary admission, enrollment caps, etc.) are needed to avoid spreading faculty resources too widely, while maintaining quality in the UG program.

Several (six) graduate specializations leads to uneven resources and isolation. Physical Activity & Health has only one faculty, other areas have two or three. A different organization, perhaps without advertised specializations or with broader "themes" might be more appropriate and promote more collaboration in research and programs.

The PETE M.S. program is an oddity, but one that has a purpose and seems to be supported by the faculty. As a non-thesis, practice-oriented, MS-only program, and the only one in the state, it does serve a purpose. However, faculty and other resources for PETE must be balanced with other demands. For example, PETE might be staffed by non-tenure track, adjunct or part-time faculty.

6. Level and quality of infrastructure

The research "infrastructure" is not adequate to support current faculty and graduate student research, let alone to expand research and grant funding efforts. College-level support is needed in grant preparation/planning/processing stages and in support for ongoing funded projects. For example, budget support is needed in planning and also in administering the grant and monitoring budget. As a related issue, the indirect costs do not seem to be distributed in any way to provide incentive and reward to those faculty who receive funding. Some portion should be coming back to the PI and department/program.

7. Quality of organizational support

The faculty appear to receive little reward for their overload efforts. One way to reward faculty is to pursue endowed chairs. These entitlements can provide a stipend and research dollars, which can be a way to show support for the faculty member in times of limited funding. This would take efforts from the central administration, but usually cost the college very little and provide a great reward. The funds are usually un-restricted so that faculty could use them for their own benefit (research, travel) or can use the funds for the graduate student's benefit. Travel funds for faculty are critical with the greater focus on research.

Overall, if faculty are to develop a solid research program which is typically required by a College of Public Health, then the University has to improve its infrastructure to obtain that funding. Thus help with finding, writing, and administration of grants needs to be improved. Also, the University or College should develop a mentorship program with new faculty; possibly assigning two mentors, one in faculty member's specialization and a secondary in another area of interest within the department.

8. Level and quality of student performance

Graduate students appear well-qualified, make good progress, are actively engaged in research and find positions, usually in academia, after graduation.

Most graduate students are funded. Many are funded through training grants, which is good and relevant for a land-grant university with a public service/engagement commitment, although more NIH and federal research grant support would be desirable.

9. Level and quality of faculty performance

Faculty workloads/roles need adjustment to increase funded research. Teaching loads are heavy for faculty expected to seek and obtain federal funding. On the plus side, the teaching loads for the newest faculty are appropriately reduced. It is not clear if those faculty have formal mentoring/support at the program or College level to help them establish their research programs as well as their overall faculty career – but that would certainly be desirable. Moreover, support (release time for grant writing, support services, etc.) should be available to all faculty with clear guidelines and criteria.

10. Viability of scholarly community within which students can interact

Current and potential connections and collaborations with other units within the College, across campus and with the community are a good match with physical activity and health. Current Centers for Healthy Aging and for Obesity and Chronic Disease are particularly good connections and sites for interdisciplinary research and programs for EXSS.

11. Ranks/rating:

The OSU EXSS doctoral program has a strong tradition, is ranked well (#11) among all kinesiology doctoral programs in the 2010 report of the National Academy of Kinesiology. OSU has the only doctoral program in kinesiology in the state, and indeed, on the west coast. *Physical Activity and Health* is a “hot” topic or emphasis in kinesiology program, with many shifting hires and resources in this direction. OSU's program is well-positioned for this trend, and the move to a College of Public Health could be a benefit if EXSS can maintain its unique identity within the College.

CONCLUSION

The review committee concluded the graduate program in EXSS should be maintained. The following recommendations are intended to strengthen the EXSS program and should be followed up with a response on how the program is going to address the issues raised:

- a. Develop a recruiting effort that targets diverse populations interested in EXSS. This may be done in conjunction with related programs (e.g., Nutrition, Public Health). One idea used successfully in other programs is a “recruitment weekend,” that brings together a group of excellent candidates to learn more about the opportunities available at OSU. Resources at OSU can help identify low-income, first generation, and other non-representative student populations.
- b. Related to recommendation a, increase efforts to broaden the applicant pool to non-resident and international student populations. The program should also follow-up with admitted students who declined to attend and develop strategies to retain the highly qualified applicants.
- c. Expand the Graduate Student Handbook to include sample coursework for each program track.
- d. Consider using broader themes to consolidate the six current specializations into a smaller set that promotes collaboration in research and course offerings.
- e. Provide professional development regarding mentoring relationships for both faculty and students.
- f. Develop strategies to improve receipt of external grants, including grant writing workshops, mentoring, and guidelines for release time to pursue and administer grants.
- g. The OSU Graduate School is in the process of offering a teaching certificate. Consider adding this teaching certificate to both M.S. and Ph.D. degree programs.

Approved by [Walter Loveland](#), *January 17, 2013 9:40pm*

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) January 17, 2013 9:40pm

The BFP group voted to approve this proposal on the condition that the proposers describe in the proposal the financial arrangements associated with the participation of the Botany and Plant Pathology department in offering the Biology program.

6. Review - Graduate Council Chair

Pending Review

Proposed School of Life Sciences Executive Summary

As part of OSU's strategic reorganization, begun in AY2010-2011, we propose to create a School of Life Sciences (SLS) within the College of Science by integrating the Departments of Biochemistry and Biophysics, Microbiology, and Zoology, and the Biology Program and General Science Major into a single coordinated organization. The SLS will include the largest number of undergraduate majors in the College, with over 2,300 majors; 100 graduate students; and an average new grant portfolio of \$6M to \$9M per year.

Our goals in creating the School of Life Sciences are to:

- Lead, promote and grow the instructional and research success of the basic life sciences at OSU
- Coordinate planning for faculty hires, research clusters, and research facilities
- Coordinate and integrate curriculum in support of undergraduate and graduate degrees in the life sciences
- Coordinate advising for majors in the life sciences to provide easy access to pre-health advising, degree advising, and seamless transitions to faculty advisors
- Connect students now in the Biology Program and General Science (pre-health) Major to degrees aligned to units, moving significant numbers of students into each of the major unit areas of the School
- Develop and coordinate experiential learning opportunities for the large undergraduate population pursuing majors in the life sciences

Proposal to create the SLS changes administrative structure only: it does not include changes to curricula

- The proposal will create the School of Life Sciences, with three Departments: Biochemistry and Biophysics, Microbiology and Zoology.
- Changes in curricular structure and degrees are not part of this proposal. However related curricular proposals will modernize degree choices for students of the life sciences to provide better alignment with major subject matter areas and career options in the basic life sciences.
- The Biochemistry and Biophysics, Microbiology and Zoology undergraduate and graduate degrees remain.
- The Biology Program will be eliminated. However, the Biology Major will remain and will be administered by the Department of Zoology.
 - The continued contribution of the Department of Botany and Plant Pathology (CAS) to the instruction of courses in the Biology Major and participation in curricular decisions such as redesign and modernization will be instrumental in maintaining the strength and breadth of the major.
- A parallel Cat II proposal aims to create two options in the General Science Major: Molecular Biology and Biohealth Sciences.
 - These options will be administered within the SLS by the Departments of Biochemistry and Biophysics and Microbiology respectively.
 - The Department of Microbiology will take over the administration of the students already enrolled in the General Science Major.
- Creation of the School will be critical in developing a structure to promote coordination and integration of the 5 degrees and ~2500 life sciences undergraduate majors.

a. Proposed Classification of Instructional Programs (CIP) number: 26.9999

CIP # 269999

Title: Biological and Biomedical Sciences, Other

Definition: Any instructional program in the biological and biomedical sciences not listed above.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

b. Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.

As part of OSU's strategic reorganization, begun in AY2010-2011, we propose to create a School of Life Sciences (SLS) within the College of Science by integrating the Departments of Biochemistry and Biophysics, Microbiology, and Zoology, and the Biology Program and General Science Major into a single coordinated organization. The SLS will include the largest number of undergraduate majors in the College, with over 2,300 majors; 100 graduate students; and an average new grant portfolio of \$6M to \$9M per year.

Our goals in creating the School of Life Sciences are to:

- Lead, promote and grow the instructional and research success of the basic life sciences at OSU
- Coordinate planning for faculty hires, research clusters, and research facilities
- Coordinate and integrate curriculum in support of undergraduate and graduate degrees in the life sciences
- Coordinate advising for majors in the life sciences to provide easy access to pre-health advising, degree advising, and seamless transitions to faculty advisors
- Connect students now in the Biology Program and General Science (pre-health) Major to degrees aligned to units, moving significant numbers of students into each of the major unit areas of the School
- Develop and coordinate experiential learning opportunities for the large undergraduate population pursuing majors in the life sciences

Proposal to create the SLS changes administrative structure only: it does not include changes to curricula

- The proposal will create the School of Life Sciences, with three Departments: Biochemistry and Biophysics, Microbiology and Zoology.
- Changes in curricular structure and degrees are not part of this proposal. However, related curricular proposals will modernize degree choices for students of the life sciences to provide better alignment with major subject matter areas and career options in the basic life sciences.
- The Biochemistry and Biophysics, Microbiology and Zoology undergraduate and graduate degrees remain unchanged.
- The Biology Program will be eliminated. However, the B.S. Biology major will remain and will be administered by the Department of Zoology.
 - The continued contribution of the Department of Botany and Plant Pathology in the College of Agricultural Sciences to the instruction of courses in the Biology major and participation in curricular decisions such as redesign and modernization will be instrumental in maintaining the strength and breadth of the major.
- A parallel Category II proposal aims to create two options in the General Science major: (1) Molecular Biology and (2) Biohealth Sciences.
 - These options will be administered within the SLS by the Departments of Biochemistry and Biophysics and Microbiology respectively.
 - The Department of Microbiology will take over the administration of the students already enrolled in the General Science major.
- Creation of the School will be critical in developing a structure to promote coordination and integration of the 5 degrees and ~2500 life sciences undergraduate majors. Proposed changes resulting from the creation of the School are summarized in Table 1.

Table 1. Summary of proposed changes

Program Specification	Type of Change
New Administrative Unit	School of Life Sciences (SLS)
CPS #	84452
CIP #	269999
SIS #	NA
Degree Types	Bachelor of Science (BS), Master of Arts (MA), Master of Science (MS), Doctorate (PhD)
Program Type	Undergraduate and graduate
Academic Home	College of Science
Program Termination	Biology Program: However the B.S. in Biology major will remain
Majors (undergraduate and graduate)	No change
Options	No change
Areas of Concentration	No change
Undergraduate Minors	No change
Graduate Minors	No change
Course Designators	No change
Delivery Mode and Location	No change, On-Campus/OSU-Main (No change to existing E-campus delivered programs)
Unique Admissions Requirements	None
Enrollment Limitations	None
Accreditation	None (No national accreditation for these programs)
Proposed Start Date	January 1, 2013 (Banner 201302)

SLS Management Structure is more streamlined than the previous structure of the life sciences units in COS (Figure 1). The structure is outlined below.

1. Management duties

- a. Director. Appointed by the Dean from among the three unit Chairs in consultation. Position will rotate every 2 years. Director will receive a stipend of 1 month of summer salary. Director will manage a discretionary budget of \$10,000 provided by the COS from OSU Foundation accounts to invest in seed projects within the School. The principal duties of the Director include:
 - Chair the Executive Committee (see duties below)
 - Ensure that the Curriculum Committee addresses the curricular agenda identified by the units and the Executive Committee
 - Work with College Head Advisor and lead life science advisor (if the School decides to use one) to coordinate access requests for the School
 - Manage the seed funds provided by the College
 - Coordinate with OSU Foundation on fundraising
 - The Director will not make decisions about hiring or space.
- b. Executive Committee
 - Comprised of the Director and the other two life sciences chairs.
 - Coordinate the annual development of staffing requests, developed by the three units, for the School in consultation.
 - Coordinate with the College Head Advisor and other professional advisors to maintain overall high quality and consistency of advising across the School
 - The Executive Committee will not make decisions about space
 - Insure that there are consistent and fair practices throughout the School for major policy issues. These might include GTA salaries, promotion and tenure processes, etc.
 - Tenure, personnel and programmatic decisions will remain at the department level but will be coordinated by the School through the Director, Executive Committee and Curriculum Committee.
- c. Chairs
 - Lead management of curriculum delivery in units
 - Lead the promotion and tenure process, annual reviews of faculty, periodic reviews for merit or equity raises
 - Work with unit faculty on developing staffing requests and directing strategic planning for the unit
 - Make space decisions for the unit, in coordination with the Dean
 - Manage budgets for units
 - Coordinate access requests, course planning, etc. with School Director and College Head Advisor
 - Work with the life sciences advisors
 - Represent unit and discipline at Chairs meetings for the College
 - Manage personnel decisions and issues, consulting with the Director and Dean as necessary
 - Manage initial student complaints and concerns about programs.

2. Curriculum Committee

- Two representatives from each unit and two from the Department of Botany and Plant Pathology (CAS). 2-3 year terms
- Curriculum Committee will coordinate and review curricular changes in the School and their approval will be necessary for proposals. Proposals, however, cannot advance

without the approval of the faculty of the School, either through unit level committees or by faculty review.

3. Life Science and Health Professional Advising

- Comprised of
 - i. COS head advisor
 - ii. pre-health professional advisors
 - iii. life science professional advisors embedded in each department
- Work with the Executive Committee and Director to coordinate and streamline advising practices while maintain consistency and a high quality student experience

Figure 1a. Current management structure

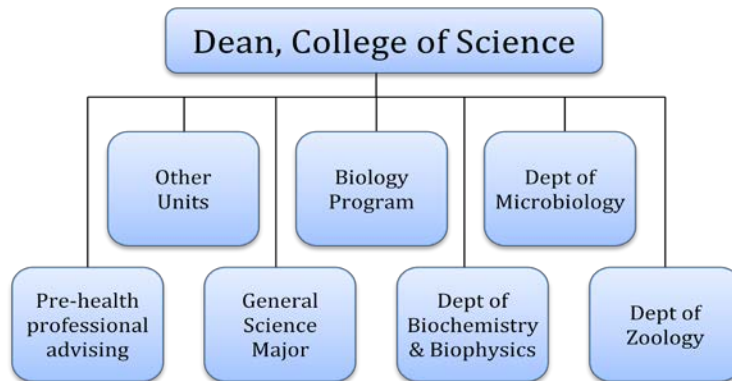

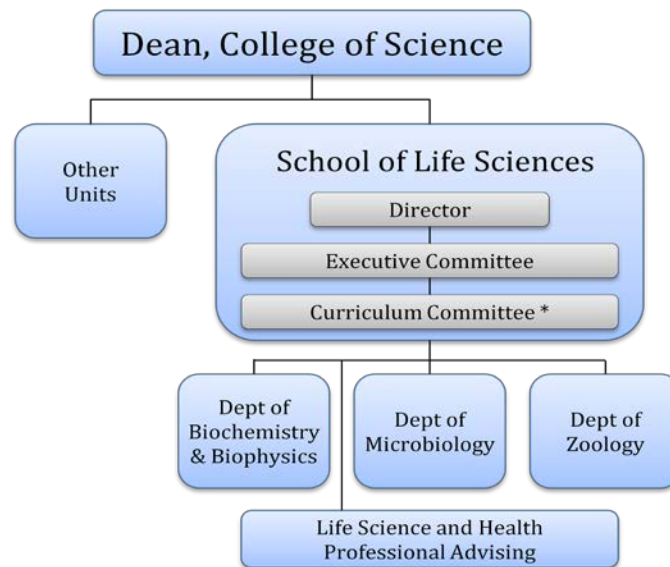

Figure 1b. Proposed management structure

* Includes representation from Dept of Botany and Plant Pathology (CAS)

Course of study – proposed curriculum, including course numbers, titles, and credit hours.

No changes to the existing undergraduate or graduate programs will occur as a result of the creation of the School. The School has robust and well-known graduate programs rooted in the Departments of Biochemistry and Biophysics, Microbiology, and Zoology, so those components will retain a clear identity in the proposed new School. The current degree and course designators will be retained. The degrees offered will include:

Biochemistry and Biophysics:	BS, HBS, MA, MS, PhD, grad minor
Biology:	BS, HBS, undergrad minor
General Science:	BS, HBS
Microbiology:	BS, HBS, MA, MS, PhD, grad and undergrad minor
Zoology:	BA, BS, HBA, HBS, MA, MS, PhD, undergrad and grad minor

c. Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on- campus and off-campus delivery).

There will be no changes in delivery mode. All of our current undergraduate and graduate degrees are offered face-to-face on the Corvallis campus. Courses which have been offered via Ecampus as an option for place-bound students will continue to be offered and the School will look for opportunities to expand their Ecampus offerings. The agreements in place to offer the Biology B.S. degree at OSU-Cascades will remain in place through the SLS.

d. Ways in which the program will seek to assure quality, access, and diversity.

The College of Science's life science and health preparation degrees and programs have always attracted talented undergraduate and graduate students from Oregon, the nation, and the world. The Biology major provides the largest cohort of students to the Honors College of any program on campus. Many of OSU's winners of prestigious scholarships (Goldwater, Udall, etc.) have come from the Biology and the Biochemistry and Biophysics programs.

The graduate programs have had long-standing success in recruiting high quality graduate students, both through their degrees and their participation in interdisciplinary programs like Molecular and Cellular Biology, and Environmental Sciences. Zoology is a program ranked in the top 15 nationally, Biochemistry and Biophysics has several faculty working with the Center for Healthy Aging and the Linus Pauling Institute, and Microbiology has joint faculty and projects with Veterinary Medicine and Agricultural Sciences. The graduate degree programs in the School will maintain these collaborative relationships that are a key factor in student recruiting.

The School will continue to deliver a comprehensive life science curriculum and will, as the College has in the past, provide access for all students who need the courses for their degree programs. Coordinated proposals for enhancing the degree choices for life science students are being submitted. Access will be managed through conversations between the head advisors, key administrators in the unit, and programs across campus.

Because such a large proportion of undergraduate majors in the College are in life science degree programs, those programs have always been involved in initiatives designed to improve the student experience and to increase the diversity of the student population. The large research portfolio of the SLS faculty includes commitments to student recruitment and diversity (programs like IGERTs and those with broader outreach requirements).

One of the principal goals in creating the School is to improve coordination and collaboration between the various units who have been delivering the life science curriculum. This coordination will improve assessment of courses used in common and will be a critical tool in modifying existing degrees and creating new programs in the future to improve program choices for students. A case in point will be a future Category II proposal to create two new options of the General Science degree program: Molecular Biology and Biohealth Sciences. The future options will be managed by the Departments of Biochemistry and Biophysics and Microbiology, respectively. Furthermore, the alignment of the 800 Biology and 900 General Science majors within department units will greatly improve the overall student experience by providing these students with increased opportunities to engage in department activities and to interact with faculty.

e. Anticipated Fall term headcount and FTE enrollment over each of the next five years.

Undergraduate enrollments have been growing at 2-8% a year, total SCH at 4-6% per year, and graduate majors at 6-9% per year (Table 2).

Table 2 Proposed School of Life Science Headcount and SCH AY 2008-09 to AY 2011-12

	SLS Total	Biochem Biophys	Biology	General Science	Micro	Zoology
2008-2009						
Undergrad majors	2,034	128	685	868	143	210
Total SCH	51,913	5,507	26,448	37	6,644	13,277
Graduate majors	81	18	-	-	23	40
2009-2010						
Undergrad majors	2,205	139	692	965	145	264
Total SCH	55,043	6,174	27,921	210	6,964	13,774
Graduate majors	86	19	-	-	34	33
2010-2011						
Undergrad majors	2,328	163	737	1,018	173	237
Total SCH	57,267	6,141	28,411	140	7,317	15,258
Graduate majors	93	21	-	-	32	40
2011-2012						
Undergrad majors	2,385	181	756	961	215	272
Total SCH	58,985	N/A	N/A	N/A	N/A	N/A
Graduate majors	100	20	-	-	40	40

Assuming a 3% growth in the next five years as the University's enrollment grows, we expect to see 2,700 undergraduate and 115 graduate majors by AY 2015-2016 (Table 3).

Table 3. Fall Term Headcount and SCH AY 2011-12 to AY 2015-2016

Academic Year	Undergraduate Majors	Total SCH	Graduate Majors
2011-12	2,385	58,985	102
2012-13	2,470	60,755	105
2013-14	2,544	62,580	108
2014-15	2,620	64,545	111
2015-16	2,700	66,390	115

f. Expected degrees/certificates produced over the next five years.

The programs that will contribute to the SLS have graduated 320-350 undergraduate majors, 2-5 Masters students, and 5-15 Ph.D. students over the last three years (Table 4). We expect to see growth in the graduate degree completion rates because of the recent addition of new faculty who will expand the mentoring capacity of the units. The undergraduate graduation rates will begin to grow in proportion to the undergraduate enrollments. The graduation growth has not tracked the enrollment growth precisely, because students in many of the pre-health programs transfer to professional degree completion paths at other institutions (pharmacy, nursing, therapy, etc.). An estimate of graduates from the proposed School by AY2015-16 is at least 385 baccalaureate, 6-8 masters, and 13-18 doctorate degrees awarded each year (Table 5).

Table 4. Degrees awarded: AY 2008-09 to AY 2010-11

	SLS Total	Biochem Biophys	Biology	General Science	Micro	Zoology
2008-2009						
Undergrad Degrees	328	16	122	119	36	35
Masters Degrees	2	1	-	-	1	-
PhD Degrees	5	2	-	-	-	3
2009-2010						
Undergrad Degrees	345	19	112	145	30	39
Masters Degrees	3	2	-	-	1	-
PhD Degrees	15	3	-	-	4	8
2010-2011						
Undergrad Degrees	327	19	107	145	26	30
Masters Degrees	5	1	-	-	3	1
PhD Degrees	12	4	-	-	4	4

Table 5. Undergraduate and graduate degrees projected AY2011-12 to AY2015-16

Academic Year	Undergraduate Degrees	M.S. Degrees*	Ph.D. Degrees
2011-12	345	3-5	10-15
2012-13	355	4-6	10-15
2013-14	365	4-6	11-16
2014-15	375	4-6	12-17
2015-16	385	6-8	13-18

*Graduate programs in the SLS are predominantly Ph.D.; this assumes no addition of non-thesis M.S. degrees.

g. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

The creation of the SLS will not change the current demographics of the students. The undergraduate programs are among the most diverse in the College of Science, attracting large numbers of women and persons of color. This is due in part to the broad interest in health professional careers. The programs attract a high proportion of high-achieving students and programs like Marine Biology (an option in the Biology major) are attractive to many out-of-state students.

The graduate programs that will comprise the new School recruit nationally and internationally and bring a substantial number of non-resident students to OSU.

The coordination and visibility that the SLS will create will enhance our ability to recruit students at both the graduate and undergraduate levels.

h. Adequacy and quality of faculty delivering the program.

The programs that will be part of the proposed School are already strong, with a committed and talented group of faculty fully supporting the existing degrees and majors. The continuing increase in the student population at OSU will require additional faculty resources over time (as the life science degrees will continue to be in high demand).

i. Faculty resources – full-time, part-time, adjunct.

Faculty appointed in units of the proposed School are listed in Table 6.

Table 6. Corvallis campus faculty of professorial or instructor rank appointed in the Departments comprising the School of Life Sciences. There are additional Ecampus, summer, or term-to-term instructors as required. (Does not include FTE of faculty in BPP (CAS) who contribute to instruction in the Biology major.)

Name	Rank	9 or 12	FTE
Arnold, S	Prof	9	1.0

Quick, D	Instr	13	1.0

* Departmental home in COS but with no COS FTE.

j. Other staff.

There are a number of staff assigned to the proposed School of Life Sciences already, because of the size of the undergraduate populations. As we see increased growth in enrollments, the addition of more advising capacity will be a high priority. Current staff include:

Table 7. Corvallis Campus Staff (1.0 FTE unless noted)

Name	Rank	9 or 12	FTE
Aljets, A	Advisor	12	1.0
Colvin, C	Advisor	12	1.0
Harvey, S	Advisor	12	1.0
Kneece, K	Advisor	12	1.0

Marshall, C	Curator	12	1.0
Partridge	MB1	12	1.0
Powell, T	OS2	12	1.0
Robe	OS2	12	1.0
Stoneman, D	OS2	12	1.0
Tatala, S	OS1	12	0.625

Note: Two new advising positions have been added this year to support advising of pre-Pharmacy and other life sciences students.

Facilities, library, and other resources.

As this is a reorganization of existing programs and staff, no new library or facility resources will be required. Space currently assigned to the units and programs of the proposed School will remain assigned to the School. The new School will work with Facilities Services on requests for appropriate additional space as the degree programs continue to grow.

- k. **Anticipated start date:** January 1, 2013

2. Relationship to Mission and Goals

- a. **Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.**

The programs that will constitute the proposed School are already critical elements of the University's strategic goals. The creation of the School will foster improved coordination and development of undergraduate and graduate curriculum and will be attractive in recruiting faculty in the future. The clear interaction and collaboration of different parts of life sciences is an important feature of modern biological research.

- b. **Connection of the proposed program to the institution's strategic priorities and signature areas of focus.**

The teaching programs and component courses delivered through the proposed School comprise the core educational opportunities in the fundamental life sciences at OSU. Several Biology courses are critical service courses that are key components of many other programs at OSU, including programs in CAS, PHHS, and CEOAS. Certain courses in the Biochemistry and Biophysics, Microbiology, and Zoology majors are likewise key courses in other programs. Baccalaureate Core courses serve students from CLA and other colleges. These contributions are consistent with the core educational roles expected of the CLA/COS. The component Departments of the proposed School currently teach a variety of courses for the OSU Honors College, and are the home to many Honors College students. (Biochemistry and Biophysics, Biology, Microbiology and Zoology together have 198 Honors College students, which comprise 13% of these majors. Indeed the Biology major has the highest number of Honors students and International Degree students of any major at OSU.) The proposed School will allow us to coordinate, advertise, expand and improve Honors course offerings, and to improve the ability of OSU to attract high caliber undergraduate students.

The research programs in the proposed School will contribute directly to OSU's strategic focus areas of "Advancing the Science of Sustainable Earth Ecosystems" and "Improving Human Health and Wellness". Scientists in the School are engaged with colleagues at other OUS institutions and most of the research hospitals in Oregon. The undergraduate programs are the College's major focus for "sustaining and accelerating improvements in student learning and experience through creation of outstanding academic and student engagement programs".

Current members of the proposed School are campus leaders in efforts to: involve

undergraduates in research; head the successful HHMI summer fellowship program for over ten years; serve on the OSU URISC panel; and direct the new Office of Undergraduate Research. The proposed School will help us extend these opportunities for research and faculty interaction to students currently transiting OSU in the non-departmental Biology Program and General Science Major. College advisors cannot provide the same contact between student and faculty that department-embedded professional advisors and faculty advisors can provide.

- c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.**

The programs in the proposed School are already well aligned with the goals of OSU and OUS. The undergraduate programs are an important part of preparing future health professionals and are among OSU's largest and most successful research programs. The introductory life science courses are a part of undergraduate degrees across the campus and the research programs contribute to the work in biomedical sciences, ecological and environmental sciences, and genome-enabled biology. Existing program connections to OSU-Cascades will continue, as will the close connections to the Honors College. The life sciences have always been well represented in outreach and recruiting activities such as Discovery Days.

- d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.**

The undergraduate degree programs are an important part of developing the workforce Oregon needs in the health professions, including medicine, dentistry, pharmacy, nursing, physicians' assistants and other areas, including biotechnology. Scientists and graduate students in the proposed School will be working on problems relevant to marine reserves, environmental quality, infectious diseases, biomedical sciences, nutrition and health, and other areas of critical importance to Oregon's future.

3. Accreditation

- a. Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.**

There are no accrediting bodies or societies for the proposed School's programs. However, we do use some national tests as part of assessment in individual programs. (In recent tests, in which 40,000 students from across the nation participated, OSU Biology majors scored above the national average in every life sciences category, including an astonishing 14% above the average in Biochemistry. The proposed School and the integration of its Programs into Departments will allow us to more widely assess how effective we are in preparing students for the next stage of their careers.)

- b. Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.**

Not applicable.

- c. **If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.**

Not applicable.

- d. **If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.**

Not applicable.

4. Need

- a. **Evidence of market demand.**

The student numbers clearly show the demand for the programs that will constitute the proposed new School of Life Sciences. The life sciences are the gateway degrees to careers in health sciences and represent an area of high demand and of actual and potential growth.

- b. **If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).**

Not applicable.

- c. **Manner in which the program would serve the need for improved educational attainment in the region and state.**

The degree programs in the proposed School of Life Sciences are important for Oregon's plan for the future, both in terms of a health care professional workforce and in the goals for growth in the biotechnology-based economic sector. These programs provide access for Oregon students to pursue degrees that prepare them for these areas. Our recent offering of the Biology degree at the OSU-Cascades campus is an effort to increase the opportunity for educational attainment in these areas.

- d. **Manner in which the program would address the civic and cultural demands of citizenship.**

The programs in the School of Life Sciences will be responsible for delivering much of the lower-division Baccalaureate Core instruction in Biology and many of the courses in the Synthesis category. These courses provide an insight and understanding of life sciences and biology that is increasingly important to informed citizenship. Advances in biotechnology, our understanding of the human genome, and knowledge of the effects of climate change on the world's ecosystems will increasingly raise political, ethical, and religious issues that an informed citizenry must be able to understand.

5. Outcomes and Quality Assessment

- a. **Expected learning outcomes of the program.**

The student learning outcomes for these programs will not change due to the creation of the School. The learning outcomes for the undergraduate programs are:

Biochemistry and Biophysics B.S.:

Biochemistry Specific Core Knowledge:

- Biochemistry Specific Core Knowledge: Students will be able to acquire, articulate, retain and apply specialized language and knowledge relevant to Biochemistry.
- Biophysics Specific Core Knowledge: Students will be able to acquire, articulate, retain and apply specialized language and knowledge relevant to Molecular Biophysics.
- Biochemistry & Biophysics Specific Laboratory Knowledge: Students will participate in research laboratories and contribute meaningfully to research efforts by applying skills from coursework supplemented with laboratory-specific techniques.
- General knowledge and skills: Students will communicate scientific concepts, experimental results and analytical arguments clearly and concisely, both verbally and in writing.
- Student Engagement: Students will demonstrate engagement in the Biochemistry & Biophysics discipline through involvement in research or internship activities, the Biochemistry & Biophysics Club (BB Club) and outreach or mentoring activities specific to Biochemistry & Biophysics.

Biology B.S.:

Students will understand:

- Conceptual Understandings. Students will demonstrate competency in:
 - fundamental concepts that characterize Biology, including concepts that characterize the various life science fields.
 - how scientific knowledge develops, including the historical development of foundational theories and laws, the nature of science (particularly tentativeness and creativity), and the relationship between science, technology, and society.
 - the process of scientific inquiry, including that scientists use varied methods; scientists test ideas; scientists use creativity, critical thinking, and current knowledge; and investigations commonly lead to additional questions.
- Skills. Students will be able to:
 - conduct background research on life science topics to make informed decisions, and develop understanding of basic concepts, processes and keywords necessary to investigate topics; skills for accessing and critiquing information; decision-making steps for specific Biology issues; and ways to present and discuss potentially controversial information.
 - function successfully within laboratory and field settings, including use of basic equipment (microscopes, measurement devices, and computer technologies); developing and utilizing appropriate safety protocols; and putting into practice conceptual understandings of the research process.
 - utilize a variety of skills related to learning Biology, including thinking skills of reasoning, critical thinking, creative thinking, and problem solving; and self-regulatory behaviors of organization, self-management, and monitoring through feedback from classmates and instructors.
 - utilize a variety of skills to share knowledge effectively, including oral and written communication skills; planning skills; and implementation skills of presenting material, motivating others, clarifying concepts and confirming understandings.
- Student Engagement and Professional Development. Students will:

- work, volunteer or intern as a biologist in a professional context.
- perform relevant professional activities such as laboratory and/or field research, clinical work, presentations at professional meetings, and scientific writing.
- apply conceptual understandings (LOA) and skills (LOB) learned in coursework to professional situations in biology.
- explore professional avenues in various biological disciplines.

General Science B.S.:

- Students will demonstrate understanding of the skill set needed for successful integration into a research university setting.
- Professional communication skills used in a health profession related career:
 - Students will communicate professionally both verbally and in writing.
- Student Engagement:
 - Students will demonstrate engagement in the General Science discipline through involvement in research or internship activities, the Pre-Health Clubs (i.e. pre-Nursing, pre-Pharmacy, pre-Medical, pre-Dental, pre-Physical Therapy, etc.) and outreach or mentoring activities specific to their health professional discipline.
- Life Sciences Specific Core Knowledge:
 - Students will be able to acquire, articulate, retain and apply specialized language and knowledge relevant to life sciences.
- Professional School Acceptance: Students will meet pre-requisite requirements for application to health professions school

Microbiology B.S.:

- Microbiology Specific Core Knowledge: Students will be able to acquire, articulate, retain and apply specialized language and knowledge relevant to microbiology.
- Microbiology Specific Laboratory Knowledge: Students will acquire and demonstrate competency in laboratory safety and in routine and specialized microbiological laboratory skills applicable to microbiological research or clinical methods, including accurately reporting observations and analysis.
- General knowledge and skills: Students will communicate scientific concepts, experimental results and analytical arguments clearly and concisely, both verbally and in writing.
- Student Engagement: Students will demonstrate engagement in the Microbiology discipline through involvement in research or internship activities, the Microbiology Student Association Club (MSA) and outreach or mentoring activities specific to microbiology.

Zoology B.S.:

- Students will be able to recall, integrate, and apply essential core information about key components of the zoological sciences (ecology, evolution, physiology, cell biology).
- Students will be able to effectively communicate ideas orally, graphically, and in writing.
- Students will be able to use mathematics and statistics to analyze and propose evidence based solutions to zoological problems.

The Graduate Programs in the School will use a similar approach to outcomes and assessment. As an example, the graduate learning outcomes for the Zoology M.S. and Ph.D. are:

Graduate Learning Objectives/Outcomes for Ph.D. and M.S. Programs in Zoology, College of Science

Table 8 indicates what we have identified as “universal” **graduate learning objectives**, by which we assess **graduate learning outcomes**. For each we include the broadly used means of assessment. Individual programs and Departments may have additional graduate learning objectives; most often these are explicitly stated in a Departmental Graduate Handbook, in documentation provided by a professional organization or society, or included as degree requirements. The overarching objectives in the table address what are considered to be critical areas of competency (a comprehensive appreciation of the field of study, an understanding of current issues of importance in the field, and a demonstration of creativity) at various points on the path through graduate studies (admissions, matriculation to candidacy, graduation). Some of the objectives apply to any degree program, and some are specific to the non-thesis (coursework) MS, the non-thesis (project) MS, the thesis MS, or the PhD, as indicated. Likewise there is some variation amongst the degree programs as regards means of assessment.

Table 8. Graduate learning outcomes in Department of Zoology

Ph.D. Objective	M.S. Objective
Students will have met the objectives for learning outcomes in an undergraduate discipline relevant to their graduate field of study. <i>Scoring methods: 1</i>	Students will have met the objectives for learning outcomes in an undergraduate discipline relevant to their graduate field of study. <i>Scoring methods: 1</i>
Graduates will be able to summarize major central issues and current research problems in their field. <i>Scoring methods: 2-7</i>	Graduates will be able to summarize major central issues and current research problems in their field. <i>Scoring methods: 2,4-7</i>
Graduates will be able to communicate the major tenets of their field and their work orally and in writing for students, peers and the lay public. <i>Scoring methods: 3-7</i>	Graduates will be able to communicate the major tenets of their field and their work orally and in writing for students, peers and the lay public. <i>Scoring methods: 4-7</i>
Graduates will be able to explain and identify areas of uncertainty in their fields. <i>Scoring methods: 3-7</i>	Graduates will be able to explain and identify areas of uncertainty in their fields. <i>Scoring methods: 4-7</i>
Graduates will have designed, carried out and presented an original work of research at the leading edge of their discipline. <i>Scoring methods: 4-7</i>	<p>Graduates will have completed and defended:</p> <p>(1) an original manuscript based on either a review and synthesis of the primary literature [non-thesis (project) MS] or original research [thesis MS]; or</p> <p>(2) mastery of appropriate advanced coursework in the field. [non-thesis (coursework) MS]</p> <p><i>Scoring methods: 2,5,6,7</i></p>

Means of assessment referenced in the table above include:

- (1) minimum admission standards, assessment of application materials, admissions process interviews
- (2) meeting a predetermined standard in graduate level coursework (content/subject matter and GPA)
- (3) a pass/fail oral preliminary exam
- (4) written research proposal
- (5) written thesis or research paper
- (6) oral defense
- (7) publication of research in peer reviewed journals

b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

The programs are using a wide variety of methods to assess these outcomes, depending upon the outcome and the nature of the course or program that addresses the outcome. Detailed reports on assessment activities for these degrees are available on the website for OSU's Office of Academic Programs, Assessment, and Accreditation. <http://oregonstate.edu/admin/aa/apaa/>

c. Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.

The performance indicators for these programs will not change. Some important metrics include:

- Retention rates of majors
- Graduation rates
- Acceptance rates to graduate school
- Acceptance rates to health professional programs
- Percentage of students with a research experience
- Percentage of students with an international experience

d. Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.

The faculty members of the proposed School of Life Sciences are accomplished and visible scholars. The standards for scholarly work will not change and will be enhanced by the integration across programs. Some of the key metrics used include:

- Publication of peer-reviewed articles in high impact journals in the life sciences
- Success in securing extramural research funding
- Participation in national and international meetings, conferences, and review panels in the discipline
- Contributions to reviewing and editing disciplinary journals
- Participation in national conferences for the development of research agendas
- Mentoring and advising graduate and undergraduate students

6. Program Integration and Collaboration

a. Closely related programs in other OUS universities and Oregon private institutions.

Degrees in life sciences are a core part of programs at all universities, particularly research universities. Degrees in biology and general science type programs (pre-health professional tracks) are common at those universities and both Portland State University and the University of Oregon offer Biology degrees and tracks to allow students to enter pre-health professional programs.

- b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.**

Because OSU has the largest life science research and teaching program in Oregon, we have more diversity in our life science degrees. The B.S. degrees in Microbiology, Biochemistry and Biophysics, and Zoology are unique in OUS and offer unique opportunities for our students.

Many faculty members of the proposed School have had long-standing collaborations with colleagues at OSU and other OUS institutions. Those will certainly continue and will likely expand through work on collaborative facilities, programs, and statewide initiatives like the Oregon Translational Research and Drug Development Institute (OTRADI).

Courses in the Biology major serve students from several colleges and have been delivered in a collaborative manner involving faculty from the departments within the proposed School as well as the Department of Botany and Plant Pathology, which is now in the College of Agricultural Sciences. This collaborative delivery will continue and is critical to the continued diversity of course offerings.

- c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.**

We anticipate close collaboration with colleagues throughout Oregon, as has been the case already.

- d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.**

The component programs, budgets, and staff of the proposed School already exist, so the creation of the School will not adversely impact other programs in the College or University. The improved communication will aid coordination of Life Sciences programs across campus and between colleges.

7. Financial Sustainability (attach the completed *Budget Outline*)

- a. Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.**

The programs that will make up the proposed School already constitute a major portion of the College's budget. The programs have high demand and are clearly sustainable for the long-term. Growth in Summer Term, Ecampus, and returned overhead revenues have been important in meeting the needs created by constant enrollment growth.

The library support is already strong for this area, as life sciences are one of OSU's signature

research areas. One of the goals of the proposed School is to provide coordination and integration in faculty hiring, so this will only be a plus for programs that already are very successful in recruiting some of the very best scientists in the world.

b. Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.

The programs are strong and nothing will change with the creation of the School in regards to resources. The most pressing need remains modern laboratory space and adequate classroom space. These needs exist whether the School is created or not. The College is working with units and Facilities Services on individual issues and on a larger plan for long-term growth.

c. Targeted student/faculty ratio (student FTE divided by faculty FTE).

The ratio of undergraduate majors to instructional faculty is currently about 39:1. This reflects the very high demand for these programs. One of the issues to consider in faculty growth is creating adequate faculty capacity to provide research experiences for this large undergraduate population.

The ratio of equivalent student FTE (Total SCH/45) to instructional faculty is 21:1.

The ratio of graduate students to tenure-rank faculty is 2:1. There is some capacity for growth here, in large part because the faculty numbers reflect the recent recruitment of a number of junior faculty.

d. Resources to be devoted to student recruitment.

The recruitment of undergraduates is largely through the University's Admissions Office. The investments in graduate recruitment made by individual units, both individually and jointly with other life science units or programs will continue as at present.

8. External Review:

No new graduate programs are proposed so no external review is required.

Appendices: Supporting documents

Appendix A: Support from Department and Program Liaisons and Chairs

Our signatures below certify that the proposal has been reviewed and approved by the constituent faculties of the proposed School of Life Sciences:

Gary Merrill, Biochemistry and Biophysics

Date

Robert Mason, Biology

Date

Janine Trempey, General Science

Date

Theo Dreher, Microbiology

Date

Virginia Weis, Zoology

Date

Appendix B: Budget outline pages

Costs for the School are detailed below. These include:

- a) One month of summer salary for the School Director (The highest salary of the current three Chairs is provided in the budget sheets as an estimate). This will be reallocated from existing budgets in the College.
- b) Transfer of FTE from the Biology Program to the Zoology Department for an office specialist and for Administrative FTE. The position of Head of the Biology Program will be eliminated. However Zoology will appoint an Associate Chair to assist in running the Biology major.
- c) Costs of \$2,000 to add stationery and signage, other printing expenses and other expendable consumption as necessary (from Foundation funds).
- d) Recurring commitment of \$8,000 per year to the School Director for use as an investment fund to seed projects in the School for curriculum, student engagement, or research initiatives. This will be reallocated from existing budgets in the College.
- e) A 4% annual inflationary increase is included in the costs after AY2012-13.

B. Budget Outline Form: Estimated Costs and Sources of Funds for Proposed Program

Appendix C: Campus Liaison Comments

Liaison Response to comments from Department of Botany and Plant Pathology

Liaison comments shown in blue. Responses in black.

Although many points were voiced and discussed by the faculty, the main issue of concern was dissolution of the Biology Program and transformation of this Program to a major in the Zoology Department. Pat Muir and Bruce McCune independently voice some of these additional points through this liaison process; these points will not be restated here. The consensus view of the faculty of Botany and Plant Pathology, with which I agree, is that the Department is not supportive of the dissolution of the Biology Program and the movement of Biology, as a major, into the Zoology Department. Major concerns of this action are provided below:

- **Pedagogical.** Modern education is becoming more distributed, as students need broader exposure to more interdisciplinary instruction. The intellectual and human resources necessary to offer a modern degree in Biology are not housed in one department at OSU. If anything, the program should become more inclusive of the rich strengths in biological sciences on the OSU campus, which exists across different units. This inclusive approach fits well within the National Academies Report on "The New Biology for the 21st Century" and is an approach visible at some of the major Universities in the country; e.g., The Institute for Biology Education, University of Wisconsin, <http://jwww.biology.wisc.edu/>

We looked extensively into the ways in which peer institutions and aspirational peer institutions structure their Life Sciences majors and we found that there is a large diversity of models that are determined in part by the history and context of the different units involved. We do not believe that creation of the School, as described in the proposal, would exclude the broad strengths in the biological sciences represented across campus. It is our intent to have BPP continue to contribute the teaching mission of the School in the Biology major, as detailed in the MOU between COS and BPP, and to contribute to curriculum design and planning. We believe the proposed changes will increase coordination between the different departments and the 5 majors offered within the School.

- **Practical.** The Department of Botany and Plant Pathology has long been committed, and remains so, to the Biology Program. It is simply unrealistic to assume, however, that a department should commit its valuable and limited human and monetary resources to another department's major. Also, it remains a challenge to distribute and assign credit for student credits hours; the proposed move would significantly complicate an already difficult situation.

We agree that equitable distribution of credit for student credit hours is a challenge for all departments whose faculty teach in other units. In the case of the Biology major in its current form, this includes BPP, BB and Zoology. The School leadership will take every measure possible to ensure that due credit is given for the appropriate effort given, including assignment of student credit hours and allocation of graduate teaching assistantships and the concomitant graduate tuition remissions.

- Education about the biology of plants and the role of plants in human life and the entire biosphere should be enhanced in the Biology Program. Movement of Biology to a major in the Zoology Department has the grave potential to short-change the plant sciences in the minds of the students, relegating this component of their education as subsidiary to the biology of animals or bio-medical components. Biology majors need also to consider, for example, that it could be their job to find ways to feed the planet.

Faculty in the departments of the proposed School share these concerns as well and are supportive of BPP's continued contribution to the curriculum design and delivery of teaching in the Biology major. The contribution made by faculty in BPP to the teaching mission of the Biology major would not change with administrative realignment.

- Although not part of this proposal, we understand there has been discussion related to the potential elimination of the Zoology major and folding this major under the Biology major as an "option". If this scenario were to become a reality, it would only enhance the branding problem for Biology and further exacerbate concerns addressed above.

There have indeed been multiple discussions around different curricular scenarios in the School, including elimination of the Zoology major. It is one of the scenarios discussed, but is not a part of this proposal and no decisions have been made regarding elimination of this degree. Indeed there is not agreement among Zoology faculty that elimination of the degree is a good idea.

- The extent of BPP's involvement in the Biology Program, from our perspective, was not adequately represented in the Proposal.

The focus of the proposal is, quite intentionally, on the proposed administrative structure of the School of Life Sciences, not on the relative contributions of individuals and Departments to the Biology Program.

In summary, the Department of Botany and Plant Pathology, a unit that contributes to a substantial portion of the teaching FTE in Biology, was not sufficiently consulted on this matter prior to receiving a copy of this Abbreviated Category 1 Proposal. We recognize the faculty involved with the preparation of this Proposal spent a great deal of time and effort in its design. However, we do not agree with the curricular changes as proposed and request that additional and more extensive liaison be conducted to resolve the issues in a manner that is equitable to all parties.

BPP's involvement is focused on the Biology degree, while the School of Life Sciences represents broader issues dealing with teaching and research in the life sciences as delivered by the three departments in COS. BPP did have representation on a curriculum planning committee that met periodically during the 2011-2012 academic year, in order to participate in discussion affecting Biology. It was felt appropriate that discussions regarding unit re-alignment and the design of the School be initiated and carried out within the College of Science, allowing the liaison process to serve as the forum in which to hear and address all reasonable concerns (such as how SLS organization may affect the Biology major and BPP participation). BPP will have equal representation with each of the three SLS units on the curriculum committee in the new School.

Liaison Response to comments from Environmental Sciences

Liaison comments shown in blue. Responses in black

I appreciate all of the hard work and thought that has gone into the development of the proposal.

Fundamentally, however, I am not sure what the reorganization accomplishes besides attempting to provide General Science majors with a more concrete home and identity. I am not convinced that it will actually accomplish this, except on paper.

We agree that a major goal of the proposal is to improve the General Science major experience and to give more attention to and provide more resources for this very large group of students. This proposal takes the first step in this process by proposing changes in the administration of the degree that will result in departments taking the responsibility for administering the major and embedding advising at the department level. Subsequent proposals, still to be developed, will address curricular changes and other improvements to the student experience

A second fundamental concern is loss of visibility for the Biology Major (formerly Program); will prospective and current students know to look for it under Zoology?

We do not foresee a loss of visibility. The web presence for the major, the primary way that students find programs, will remain the same: embedded in COS.

I do not see cost savings associated with the proposal – BI will no longer have a Chair, but there will still be an Associate Chair in Zoology to assist in running the BI major. There is also a statement that BI will no longer have a Head Advisor, but I'm not sure that there are cost savings associated with that change?

Cost savings is not a part of the goal of formation of the School.

I am concerned about the advisor:student ratio. The proposal indicated that there will be 2,300 students in the School (on page 2 – but on page 3 the number is 2,500). I see a total of 7.49 advising FTE listed on Table 7, page 10, which = 334 students per advisor using the 2,500 student number. However, that counts Claire Colvin at 1.0 FTE, and she is Head Advisor for the entire College. Take her out and you have 6.49 advisor FTE which means 385 students per advisor. This exceeds the recommended ratio (300 : 1) by a good bit, and even that ratio, while accepted by many, is unrealistic in my view. More advising FTE is badly needed.

We agree that there should be additional investment in professional advising in the future. The SLS leadership will strongly advocate for this at the College level. However, the estimation stated above for advisor:student ratios is incorrect. This is because of the significant role of faculty in the advising mission for Biology, Zoology and Biochemistry and Biophysics students. In all three of these majors, 1st and 2nd year students are advised by professional advisors and 3rd and 4th year students are given faculty advisors who assist them in planning and decisions related to continuing on to graduate school and career paths. Indeed, BPP faculty currently serve as advisors to Biology majors.

Couple this with the statement (near the bottom of page 2) that part of the point of the school is to help coordinate and develop experiential learning experiences for the huge student population of this school, and I don't see a connect. How can the existing faculty in the various departments/programs that will comprise the school plus 6.49 advisor FTE really advance experiential learning? It seems, frankly, pretty clear to me that General Science majors will still basically be orphans, and that, at a minimum, additional advising FTE is needed.

We agree that General Science students in the present administrative configurations are not well-served or paid attention to by departments. This proposal is aimed at taking the first steps to improve their experience by structuring the units in the School to focus resources and attention on better serving the General Science students. This will result in the departments setting up student clubs, much like the existing Life Science Club, Microbiology Club and BB Club that will connect them with their peers and provide them with structured experiential opportunities. Likewise, development of a 1st year experience for General Science majors and providing advising that sets them up with research and internship experiences will be a priority once the new structure is in place.

Re advisor roles – page 12 (*sic* page 10), top paragraph, seems misleading – BI advisors were not college-level, but were program-level and were well equipped to guide students to appropriate advisors and faculty research mentors – that is, it seems to me that this paragraph is somewhat misleading re the roles of BI advisors.

The advising structure is laid out explicitly at the top of page 4. The pre-health advising will take place at the school level. Professional advisors for other life sciences students will be embedded in the departments. This is the current structure and there are no plans to change this. The two new hires listed on page 10 are 1 pre-health advisor, to advise at the School level, and one Biology advisor, to be housed with the other Biology advisors in Cordley Hall.

Page 4 – a 1-month summer stipend for the Director is not enough. I've worked way too many summers on a 2-week stipend, just directing Environmental Sciences, while working at least ½ time for the whole summer. The proposal should be realistic about this.

We believe that this will be sufficient compensation for the Director. The Director will also have administrative FTE as a Department Chair and the associated resources affiliated with that position.

I will leave comments on the BPP contributions up to Lynda to provide (she is collating departmental responses). I know that BPP feels a deep commitment to the BI Program, but I'll just offer, without her advance approval, because I was contacted for liaison as Env Sci Director independently of my role in BPP, the following comments/questions:

(1) It seems odd to refer to this as a School of Life Sciences when it does not include plant sciences. I wonder about a name that is more reflective of the fact that the school, for the most part, is Life Sciences excluding plants? A related comment involves the statement on page 6 that a "comprehensive life science curriculum" will be delivered. Comprehensive, but excluding plants (again for the most part; I realize that some folks in Biochem/Biophysics probably study plant systems, and that some folks in MB may do the same, and that some faculty in Zoology include plants in their work).

(2) Pages 3 and 4 and org chart on page 5 – reference is made to BPP continuing to contribute to teaching and curriculum review/development in the BI major. It made good sense for BPP to contribute to an interdisciplinary BI Program, but I'm not sure that it will make as much sense to do so in a major nested within a Zoology Dept...? We have valued our contributions to the BI Program, of course; the BI major within a Zoology Dept may be more challenging, but that is not for me to weigh in on!

The proposed structural change is focused on administrative changes to the way the units are run and operated. We do not propose to change the curriculum of any of the majors in this proposal. It is our firm hope and desire that Department Botany and Plant Pathology remain a crucial contributor to the delivery of the Biology major and that they will have a voice in determining future curricular modifications within the majors in the School. This would be achieved by representation equal to the three departments in the School on the curriculum committee (see bottom of page 3).

(3) The MOU that established the continuing relationship between BPP and BI was between BPP and a Biology Program – how does the elimination of the Biology Program affect the MOU?

It is our intent to honor the existing MOU.

(4) Table 6 page 10 excludes BPP faculty FTE even though many of us teach in BI – there's a disconnect between statements about continued BPP involvement and this table, I think?

The table list only faculty in the College of Science.

I thought of one additional comment on the Cat I re School of Life Sciences. I know from having worked through (or partially through!) the move of the Env Sci undergrad program from COS to CEOAS that changes in administrative structure, names of units, curricular re-alignments and so forth all seem simple until you start getting into "details." These are largely, but not exclusively, associated with Registrar's Office and OSU catalog and MyDegrees changes – there are all kinds of numeric codes that need to be changed; innumerable places emerge from the shadows, in which a program is listed as one thing but now must be listed as another (e.g., Biology Program versus Biology major)....I have been astonished by how much work is involved! The three primary Env Sci advisors and I have all spent innumerable hours over the past two terms trying to track everything down, communicate with everyone who needs to be communicated with, and get all of the needed changes made and communicated effectively, where relevant, to students.

Of course "time is money" and time spent on these sorts of things can't be spent doing other things. The time is well spent IF the change or changes will constitute a significant improvement. In the case of Env Sci's move to CEOAS, I believe this to be the case. I hope that will be the case with this proposal, but, as noted before, I'm not convinced of that.

We believe that the time it will take for these changes will be worth it because we believe that a change in structure will be good for the students in Life Science majors in the College.

Just one more thought about the Cat I – here's the nutshell:

(1) I don't see that the Biology Program as it exists now is anything that needs "fixing" – it seems to me that it functions quite well, student performances are strong as are the impressions that

they convey about their experiences in the BI Program during exit interviews. I fear that the proposed rearranging will not help it at all, and will weaken it if anything. It “ain’t broke,” in my view.

(2) I don’t see that the proposal will fix what needs fixing, which is hundreds of semi-homeless General Sciences students and their needs. Simply allocating a batch of them to MB and another batch of them to BB without also allocating significant support to help them – first year orientations, advising with an improved ratio of students to advisors, serious faculty commitment to guiding them towards experiential learning opportunities, and the oversight of a leader who really cares about THEM (not just as tacked on, possibly “second class” add ons to their departmental lists) are needed. Maybe I missed it in my quick skim of the proposal, but I didn’t see a serious commitment to them in it – frankly more as if people’s attitudes were “this General Science thing has been a problem for years – let’s just stick them in some departments!” This one IS “broke” and I don’t see the proposed arrangements as fixing what is broken.

We agree that the Biology major is on good footing. We also agree that the General Science majors are not well-served by the current structure. We believe that creation of the School will preserve the strength of the Biology major, take a first step toward committing departments and faculty to General Science majors and greatly improve coordination and future planning for all majors in the school.

Liaison Response to comments from College of Agricultural Sciences

Liaison comments shown in blue. Responses in black.

The College of Agricultural Sciences is strongly committed to the continued success of the Biology Program. The Biology Program annually serves thousands of students including over 750 majors (2010-11). All colleges with undergraduate students utilize core biology courses offered by this program.

However, we have identified key issues with the current CAT I proposal that need addressing.

- Structure of proposed curriculum committee that may limit opportunity for meaningful input by faculty outside of the school. This is especially critical for BPP faculty, who offer over 27% of the biology program SCH.

As stated on page 3 and in Figure 1b, faculty in BPP would have representation on the School curriculum committee equal to each of the three departments in the school. They would therefore contribute fully to curriculum planning and coordination among the majors and they would be able to represent the interests of the plant sciences.

- Potential for incongruence with the Provost’s MOU (Aug 19, 2010) that moved BPP to CAS.

- “Faculty expertise in biological sciences at OSU is distributed among many units and colleges. It is important that OSU brings together those resources effectively to provide teaching, mentoring and research opportunities for its undergraduate students, particularly in the collaborative, interdisciplinary environment that is central to its vision.”

Creation of the School is not an attempt at exclusion. It is our full intent and hope to have BPP’s continued participation in the teaching, mentoring and undergraduate research mission of the Biology major. We fully intend to honor the MOU between COS and BPP.

We are in discussion with the relevant departments and College of Science leadership to address our concerns. We anticipate reaching a mutually acceptable modified CAT I that will insure that the Biology Program continues to provide an excellent undergraduate experience.

Liaison Response to comments from College of Public Health and Human Sciences

Liaison comments shown in blue. Responses in black.

The Abbreviated Category I proposal to create a School of Life Sciences in COS was distributed to the leadership in PHHS. The proposal was reviewed and comments were collected and summarized (below).

The proposal would be stronger if the justification more specifically explained how the School of Life Sciences contributes to the University’s Healthy People Initiative beyond what appears to be a logical grouping of disciplines.

The proposal contributes to the University’s Healthy People initiative by creating administrative changes that will enhance the delivery of coursework to and improving the curriculum for all students interested in pursuing careers in the health sciences. By increasing coordination between departments and decreasing overlap and redundancies in coursework, the proposed changes will allow the proposed School of Life Sciences to more efficiently deliver an evolving and dynamic curriculum .

There is concern that the proposed reorganization does not create a school in the same way that school formation has occurred in the recent past at OSU. Other colleges (Engineering, Liberal Arts, Public Health & Human Sciences) have created schools that merged existing departments into a new and larger academic unit. As proposed, this reorganization does not create a new academic unit by merging previously existing academic units. The proposed unit ‘school’ formalizes an affiliation of 3 departments which continue to have individual autonomy in the normal departmental functions of budgeting, tenure and promotion, personnel, and

program administration. The affiliation of the 3 departments is more like the affiliation of 3 colleges of a division, which were also formed to promote coordination and integration among the units. Divisions are not considered academic units and have not historically engaged the Category I curricular process.

There is more than one way to design a school. The creation of the School as a confederation of departments is endorsed by the faculty within the three departmental units and has the support of the Dean of Science and the Division Dean (see liaison support). We believe that this administrative alignment will increase coordination between units regarding strategic planning, faculty hiring and formation of research clusters or areas of concentration. It will also improve coordination of the curricula of the 5 life sciences majors within the school by aligning courses and course content, reducing redundancy and working towards a unified vision on curricular growth and planning

By retaining the departmental academic unit structure, the Academic Systems Guidelines mandate to create academic units that have at least 20 faculty and that have 3-yr averages of graduating 5 masters and 2 doctoral students, respectively, is not met by this proposal. It appears that Biochemistry & Biophysics and Microbiology fail to meet one or more of these requirements.

With recent growth in student numbers driving recent faculty hiring that has not yet resulted in the expected increased graduate student output. The guideline numbers should be realized in the near term. Also, the guidelines of 5 MS and 2 PhD students must be considered generic, as some programs train primarily PhD candidate while others train primarily MS candidates. For example, the overwhelming majority of BB graduate students are PhD candidates.

Since this proposal does not constitute a merger of existing academic units or the creation of a new academic unit, the focus of this proposal is limited to the discontinuation of the Biology Program. The discontinuation of the Biology Program is proposed to be accomplished by moving the administration of the Biology major to Zoology, the assignment of one track of the General Science major to Biochemistry & Biophysics (Molecular Biology), and the other track to Microbiology (Biohealth), pending approval of the Category II proposal to effect this division of the major.

The use of “Health Professional” in the name of the advising office does not appear necessary (“Health” does not appear in the name of any of the units) and may cause confusion for students outside of COS looking for information about health professions. A number of locations on campus exist where health profession advising occurs; therefore, the name “Life Sciences Advising” for the proposed school’s advising office appears more appropriate.

Pre-health advising has been a major part of the advising mission in the College for years. With 800 General Science Major in the School, many of whom are pre-health in focus, pre-health advising remains an important focus in the School.

Dear Virginia,

RE: Category I to create a School of Life Sciences

On behalf of the College of Agricultural Sciences (CAS), we wish to enter the follow liaison comments into the record. When our initial liaison comments were submitted by the College of Agricultural Sciences, we believed that further conversations between the biological science units within the College of Science (COS) and the Department of Botany and Plant Pathology (BPP) would lead to some resolution of the issues we have raised. Whereas we have no objections to the creation of a School of Life Sciences, we have continued to raise concerns about the elimination of the biology program and the placement of those majors under the supervision of zoology. The liaison responses provided by you in late July (attached) do not address these concerns adequately. Since the subsequent conversations appear not to have changed the CAT I, we wish to add the following information to the record:

The College of Agricultural Sciences remains strongly committed to the continued success of the Biology Program which annually serves thousands of students including over 750 majors (2010-11). All colleges with undergraduate students utilize core biology courses offered by this program, and the number of colleges requiring strong plant science undergraduate training requires that the proposed School not exclude a mechanism by which additional FTE can be added in plant science.

We believe key issues with the current CAT I proposal need further addressing.

- Structure of proposed curriculum committee may appear to include a voice for Botany and Plant Pathology (BPP) but since staffing for the biological sciences is decided only by members of the COS units and approval of curriculum requires those same faculty vote, there remains a lack of opportunity for meaningful input by faculty outside of the school. This is especially critical for BPP faculty, who offer over 27% of the biology program SCH. Whereas you believe this has been addressed, as the number of biology majors increase, additional courses will be needed. At present, no process proposed would allow additional plant science FTE to be assigned to a department outside of the College of Science.
- Incongruence with the Provost's MOU (Aug 19, 2010) that moved BPP to CAS.
 - "Faculty expertise in biological sciences at OSU is distributed among many units and colleges. It is important that OSU brings together those resources effectively to provide teaching, mentoring and research opportunities for its undergraduate students, particularly in the collaborative, interdisciplinary environment that is central to its vision."
 - Your response that you intend to honor the MOU does not address our belief that moving the biology major to a department of zoology is not in the best interests of the students or the university.
- Based on data provided by Program director Bob Mason, in 2010-2011, 30,404 SCH were delivered by the biology program. Of those, 8,003 SCH were taught by BPP and 234 by crop and soil science (CSS). That represents 27% of the SCH offered. In addition, BPP faculty advise

undergraduate biology students and host dozens of others in research laboratories for undergraduate research experiences. Under the proposed changes, it is not clear how students would retain access to those opportunities.

- The proposed construct of having a department of zoology offer a biology degree is awkward, especially since over 27% of the SCH are offered by faculty in another college.
- Currently, as an autonomous program, the Biology Program serves a diverse undergraduate population, engages all departments in the life sciences, and provides a broad foundation in Biology education. Zoology is a sub-discipline of Biology. The plan to administer a Biology major by Zoology has the potential to change student perception of Biology into a more narrow discipline at the expense of other sub-disciplines such as Microbiology, Biochemistry, and especially Agricultural sciences, i.e., plant biology.
- In the Provost's MOU, references are made to:
 - "The CAS will be responsible and accountable for contributing to a strong university-wide Biology Program, for participating in active advising and mentoring of undergraduate biology students, for providing Graduate Teaching Assistants for the Biology Program, and for working with the COS and other relevant academic colleges to manage and sustain a strong Biology program and curriculum at OSU"
 - "It is critical that the University continues to provide a strong Biology Program for its undergraduate students....Faculty expertise in biological sciences at OSU is distributed among many units and colleges. It is important that OSU brings together those resources effectively to provide teaching, mentoring and research opportunities for its undergraduate students, particularly in the collaborative, interdisciplinary environment that is central to its vision."

We do not see the proposal for the School of Life Sciences providing such an opportunity for broadening and supporting a strong major in biology.

Ultimately, the importance of biological sciences and the wide distribution of faculty with expertise in this area at OSU would suggest that the biology program might be placed at the university level; this has happened at other institutions. However, we are not proposing that at this time but rather that the biology major be placed at the School level and be managed similarly to how it has been in the past. We are sure that one can find many different models for how biology is offered at other institutions but the construct proposed here is highly unusual, if not unique.

Input from faculty who have taught in the biology program includes "I do believe that this point in time is ripe for action to address the current awkwardness in the administration and curricula within the Life Science programs. There has been recent turnover in leadership in both colleges and this category I proposal as well as liaison responses may serve as nucleation points for more than just discussions, but action that can mutually benefit colleges and departments associated with the Life Sciences." We believe that if the biology program is placed at the School level, that we can collectively work to address the concerns we have expressed.

The following Technical corrections are needed to the CAT I which we originally reviewed:

Table 6: BPP was specifically excluded from this table; further, FTE presented for MB faculty is inflated by FTE paid for by the CAS or the Center for Genome Research and Biocomputing (CGRB).

Correct COS FTE:

Dreher, T.	0.25 (0.25 CAS, 0.50 CGRB)
Giovannoni	0.8 (0.2 CAS)
Ream	0 (1.0 CAS)
Trempey	0.75 FTE (0.25 CAS)
Field	0.75 FTE (0.15 FTE paid by BRR/CAS)
Schuster	0.50 FTE (0.50 CAS)
Halsey, K.	0.75 FTE (0.25 CAS Patent funds)
Mueller, R.	0.75 FTE (0.25 CAS Patent)

Marshall, C. 0.80 FTE (0.20 CAS extension)

Fulton, M. 0.25

p. 20: Targeted student/faculty ratio (student FTE divided by faculty FTE): this calculation is not accurate; the 27% contributed by BPP is not taken into account here.

Cary J Green
Associate Dean
College of Agricultural Sciences

Review of Cat I Proposal – Creating a School of Life Sciences

NOTE: This is a proposal that primarily impacts undergraduate programs. Our role as the Graduate Council is to analyze the impact of the proposal on the Graduate Programs offered by the units impacted by the reorganization.

Overview:

Cat I for restructuring. Propose to create a School of Life Sciences (SLS) within the College of Science by integrating the Departments of Biochemistry and Biophysics, Microbiology, and Zoology, and the Biology Program and General Science Major into a single coordinated organization. Will result in three Departments within the School: Biochemistry and Biophysics, Microbiology and Zoology. The Biology Department is being eliminated, with the undergraduate Biology major being moved to the Department of Zoology. The undergraduate General Science major is split into two options: Molecular Biology (administered by Biochemistry and Biophysics) and Biohealth Sciences (administered by Microbiology).

Graduate Programs currently offered by affected Departments:

Biochemistry and Biophysics Graduate Major (MA, MS, PhD, MAIS)

Microbiology Graduate Major (MA, MS, PhD)

Zoology Graduate Major (MA, MS, PhD)

The creation of the School does not directly involve any graduate academic programs.

Page 3 of proposal states:

“The Biochemistry and Biophysics, Microbiology and Zoology undergraduate and graduate degrees remain unchanged.”

Page 16 of the Cat I does provides learning outcomes and assessment for graduate programs in Zoology. The proposal states that these are “universal” objectives applicable to all graduate programs. They clearly are sufficiently general to apply to all graduate programs.

Liaison support: There were multiple issues raised in the liaison requests. These are summarized, with responses, at the end of the Cat I proposal (pg 27) – see URL <https://secure.oregonstate.edu/ap/cps/documents/view/109415/Abbreviated%20Cat%20I%20prop%20school%20of%20life%20sciences%209-25.pdf>

Category I and Abbreviated Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

New Graduate Degree Program Proposal:
Doctor of Philosophy (PhD) in Business
Administration
with
Innovation / Commercialization Option
Accounting Option

Oregon State University
College of Business
December 2012
Proposed Effective Term: Fall Term 2014 (201501)
CPS Tracking # 85547

Executive Summary

This Full Category I proposal is for the establishment of a new degree program at OSU identified as a Doctor of Philosophy (PhD) in Business Administration. The program will offer two graduate options: Innovation / Commercialization and Accounting. The Innovation / Commercialization option will extend the current Master of Business Administration (MBA) program with its focus on developing and commercializing new technologies. The Accounting option will primarily emphasize tax. The primary objective of this degree is to prepare its graduates for careers in research and teaching at research-oriented colleges and universities. Accordingly, the program is designed to provide all students (regardless of option) with strong training in discipline-specific research, methods, and teaching to set them up for success in the market and throughout their careers in academia. The program is also designed with a flexible structure to facilitate expansion to emphasize other business disciplines in the future.

As a leading research institution, doctoral education is at the heart of OSU's mission. Unlike other OSU land-grant peer institutions and PAC-12 universities, OSU offers no doctoral degree focused on business. The proposed program will provide OSU students with a terminal degree program in business. Further, the proposed program will help to address a well-documented shortage of academically qualified (i.e., PhD) business faculty that has developed over the last two decades and is expected to worsen in years to come. This shortage is evident in both areas of study on which the options in the PhD program will focus but is particularly acute in Accounting. Within Accounting, the shortage is most severe in the areas of tax (the primary focus of the Accounting option) and audit, so much so that the Accounting profession has invested significantly in programs aimed at addressing the currently unmet demand.

The PhD program will leverage existing resources (e.g., faculty, data, library, etc.) but will also require significant additional investment, from both the College and the University. Upon approval, the PhD program will begin in fall of 2014.

New Graduate Degree Program Proposal: Doctor of Philosophy (PhD) in Business Administration

with
Innovation / Commercialization Option
Accounting Option

Oregon State University
College of Business
CPS Tracking # 85547
December 2012

1. Program Description

a. Proposed CIP number: #520201

CIP # 520201

Title: Business Administration and Management, General

Definition: A program that generally prepares individuals to plan, organize, direct, and control the functions and processes of a firm or organization. Includes instruction in management theory, human resources management and behavior, accounting and other quantitative methods, purchasing and logistics, organization and production, marketing, and business decision-making.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

b. Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.

This proposal is for the establishment of a new degree program at OSU identified as a Doctor of Philosophy (PhD) in Business Administration. The program will offer two graduate options: Innovation / Commercialization and Accounting. The Innovation / Commercialization option will have its roots in Strategy / Entrepreneurship but will also draw heavily from Marketing and Management (i.e., organizational behavior) as well. The Accounting option will draw heavily from Finance in addition to its base focus and will emphasize tax (primarily) and financial accounting. The primary objective of this degree is to prepare its graduates for careers in research and teaching at research-oriented colleges and universities. Accordingly, the program is designed to provide all students (regardless of option) with strong training in discipline-specific research, methods, and teaching to set them up for success in the market and throughout their careers in academia. The program is also designed with a flexible structure to facilitate expansion to emphasize other business disciplines in the future.

The program will consist of approximately two years of course work for the typical student, followed by two to three years of dissertation work. Quality control and training measures including a written comprehensive exam, an oral preliminary exam (i.e., dissertation proposal defense), an oral dissertation defense, and a teaching requirement will also be part of the curriculum.

As a leading research institution, doctoral education is at the heart of OSU's mission. Unlike other OSU land-grant peer institutions and PAC-12 universities, students at OSU have no doctoral degree focused on business. The proposed program will provide OSU students with a terminal degree program in business, extending the graduate programs that already exist in the College of Business (COB); specifically, the MBA and Master of Business Administration and Accountancy (MBAA) degrees. The proposed program will provide doctoral business education that is unlike other programs in the region (especially the Innovation / Commercialization option) and that addresses a critical shortage in the academic market (especially the Accounting option).

NEW

PhD in Business Administration

- CIP #: **520201**
- SIS #: **XXXX - To Be Assigned by the Registrar's Office**
- College Code: **02**
- Course Designator: **ACTG** (existing); **BA** (existing)
- Courses: **A total of 22 new courses (to be submitted separately using Category II proposals)**
- Delivery Mode and Location: **On-Campus / OSU-Main**
- Enrollment Limitations: **Five to six students per year with 25 in the program annually after five years**
- Accreditation: **Association for the Advancement of Collegiate Schools of Business (AACSB)**
- Program Unique to Oregon University System: **No**
- Proposed Effective Term: **Fall Term 2014 (Banner: 201501)**

c. Course of study – proposed curriculum, including course numbers, titles, and credit hours.

PhD Program Courses

The PhD program will utilize graduate-level courses both within and outside the COB. Most of the COB courses will be newly created, and all of the non-COB courses already exist. Students in both of the options (Innovation / Commercialization and Accounting) will require training in economics and econometrics.¹ Therefore, most of the necessary non-COB courses will be those already offered by the Agricultural and Resource Economics (AREC) department in the College of Agricultural Sciences and already approved for its Applied Economics program. Course work within the COB will consist primarily of doctoral seminars. While most of these doctoral seminars will focus on discipline-specific research and thus apply to only one of the options, three will be required for all students completing the PhD program, regardless of option.

Table 1 summarizes the new courses to be created for the PhD program and provides a sample of non-COB courses expected to be most commonly taken by COB doctoral students. BA 650, BA 660-664, and BA 690 are the discipline-specific research seminars that will make up the core of the Innovation / Commercialization option. ACTG 620-623 and BA 640-642 are the discipline-specific research seminars that will make up the core of the Accounting option. All PhD students will be required to take BA 611, BA 613, and either BA 612 or DHE 607. Of particular note, BA 612 and DHE 607 are research foundations courses that contain (or will contain) a significant ethics component. AEC 512, 513, 523, 625, and 626 represent the bulk of the economics and econometrics training that students in the two options will need and thus will be the non-COB courses most commonly taken by COB doctoral students. However, students may take other courses in economics (AEC or ECON), statistics (ST), or other areas instead or in addition as deemed appropriate by their doctoral committee and the PhD Program Director to meet the program of study requirements (summarized in Table 2).

Basic Course of Study

Students will be required to complete a minimum of 110 quarter credit hours beyond the bachelor's degree. These 110 credit hours will be spread across four broad categories as shown in Table 2. The courses used to satisfy the requirements in each category will be a function of the student's area of study.¹ Where specific course requirements are absent, courses will be determined by the students, their doctoral committee, and the PhD Program Director. The course work portion of the program of study requirements will take approximately two years to complete for a student coming in with a business Masters degree and approximately three years for a student coming in without one.

¹ For purposes of this proposal, the term "option" refers to a (transcript visible) specialization within the Business Administration major that is rooted in some specific business discipline and has some distinct course requirements. The term "area of study" refers to the specific business discipline itself. For example, the Accounting option includes a core of courses in both Accounting and Finance. However, "area of study" courses for the Accounting option consist only of Accounting courses. In other words, "area of study" is a more specific term than "option."

Table 1: PhD Program Course Summary (All New Courses Plus Anticipated Most Commonly Taken Existing Courses)				
Course Number	Course Name	Credit Hours	College	New Course
BA 601	Research and Scholarship	1-16	Business	X

As discussed above, the program is designed with a flexible structure to facilitate possible expansion to emphasize other business disciplines in the future. The “Basic Program” requirements, in particular, are designed to acknowledge that different business disciplines rely on different sets of fundamental knowledge in terms of both theory and research methodology. For example, Accounting, Finance, and Strategy / Entrepreneurship generally (but not always) require heavier training in economics and econometrics whereas Management (i.e., organizational behavior) and Marketing generally require heavier training in psychology and/or sociology and experimental and/or qualitative research methodologies. Such a flexible structure ensures that the program of study for all students can be appropriately tailored to their option (i.e., populated with relevant courses) regardless of discipline.²

The “**Basic Program**” requirements are designed primarily to establish foundational research methodology skills and theory-based knowledge to prepare students for their discipline-specific doctoral research seminars. In addition, the teaching effectiveness component will serve as an introduction to teaching issues and best practices to

² Such variation in program requirements across business disciplines is common in a business PhD program. As examples, the University of Oregon (http://lcb.uoregon.edu/App_Aspx/Phd.aspx), the University of Washington (<http://www.foster.washington.edu/academic/PhD/Pages/PhDProgram.aspx>), and Arizona State University (<http://wpcarey.asu.edu/masters-phd.cfm>) all offer PhD degrees in Business with discipline-specific specializations. In all three cases, fundamental theory and methodology course requirements / expectations vary across disciplines.

prepare students for their subsequent teaching assignments during the program (both assistantships and stand-alone courses).

- The Economics and Behavioral / Social Sciences requirements will provide students with a theoretical base upon which to build. Every student will be required to take at least one graduate-level course in each category, and for purposes of the program, economics courses (AEC and/or ECON) may be used to satisfy both. Although students in the two options will generally satisfy these requirements with economics courses offered through AREC (see Table 1), courses offered by other programs (e.g., psychology (PSY), sociology (SOC), economics (ECON), etc.) may also be used as deemed appropriate by the student's doctoral committee and the PhD Program Director, particularly as the PhD program expands to emphasize other disciplines.
- The Quantitative Methods requirements will equip students with the basic statistical and analytical tools necessary to conduct research studies. Two courses required for all doctoral students (BA 613 and either BA 612 or DHE 607) will satisfy part of these requirements, and the remaining credit hours will be filled with other graduate-level research methods courses as deemed appropriate by the student's doctoral committee and the PhD Program Director. Although students in the two options will generally satisfy these requirements with econometrics courses offered through AREC (see Table 1), research methods courses offered by other programs (e.g., statistics (ST), psychology (PSY), economics (ECON), human development and family sciences (HDFS), etc.) may also be used, particularly as the PhD program expands to emphasize other disciplines.
- The teaching effectiveness requirement will provide students with basic teaching skills (e.g., course and syllabus development, classroom delivery techniques, definition and assessment of learning outcomes, performance evaluation, etc.) and exposure to common teaching pitfalls. This requirement will consist of two 1-credit seminars (BA 611) offered during the first two terms of the doctoral program. All students will be required to take these seminars.

The “**Advanced Program**” requirements comprise the discipline-specific research core of the PhD program and graduate-level courses that directly support that core. Each option will have a set of doctoral seminars that is required for every student in the option. In addition, students will take courses that directly relate to the material central to their option as deemed appropriate by their doctoral committee and the PhD Program Director.

- The “Option Requirements” category consists of courses that are in the student's area of study, including a minimum of 9 credit hours of doctoral seminar courses. The “Other Courses” subcategory will generally contain three independent study (BA 602) credits related to a required “pre-comprehensive exam paper” (discussed below in “Additional Program Requirements”) plus some combination of additional doctoral seminars (as each option may require a different number) and other courses in the student's area of study. For the two options, the required doctoral seminars within the core area of study are as follows:
 - o Innovation / Commercialization: BA 660, 661, 662, 663, and 664
 - o Accounting: ACTG 620, 621, 622, and 623

To the extent that the “Option Requirements” category (15 credit hours total) is not completely filled with the required doctoral seminars and the “pre-comprehensive exam paper” credits, students may fill out the category with other graduate-level courses in the their area of study. These courses may consist of electives taken during the PhD program and/or courses taken as part of a previously completed graduate program (i.e., Masters or PhD).

- The “Related Course Work” category consists of graduate-level courses that support the material central to a student’s option. These courses may be in the student’s area of study or in other related business disciplines as deemed appropriate by the student’s doctoral committee and the PhD Program Director. For example, related course work in the two options may consist of (but is not limited to) courses in the following areas:
 - o Innovation / Commercialization: Marketing, Accounting, Finance, Information Systems
 - o Accounting: Finance, Information Systems, Management, Marketing

The “**Additional Courses to Fulfill PhD Requirements**” category consists of all graduate-level courses applied to the 110 credit hour requirement beyond those used to satisfy the “Basic Program” and “Advanced Program” requirements. This category may consist of courses taken during the PhD program and/or courses taken as part of a previously completed graduate program (i.e., Masters or PhD) as deemed appropriate by the student’s doctoral committee and the PhD Program Director.

Consistent with OSU guidelines, a minimum of 36 quarter credit hours of “**Dissertation / Research**” will be required for the PhD program. These hours may begin as early as the student’s second year in the program and will continue until the student’s last term (i.e., once the dissertation is completed to the satisfaction of the student’s doctoral advisor and committee).

Additional Program Requirements

In addition to the program of study requirements previously discussed, students will be required to satisfactorily complete the following:

- All students will be required to complete a “**first summer research paper**” during the summer between their first and second year in the program. The purposes of this research paper are 1) to give students some initial experience with taking a research project from start to finish, 2) to provide feedback to students following their first year in the program, and 3) to serve as a preliminary comprehensive exam that all students must satisfactorily complete to remain in the program. The paper will be completed under the supervision of the student’s doctoral committee (led by the student’s doctoral advisor) and can take the form of an original research project or a replication of an existing study. Students will be required to present this summer paper in a “brown bag” research workshop during the fall term of their second year in the program.
- All students will be required to complete a “**pre-comprehensive exam paper**” during the term preceding the written comprehensive exam (discussed below). The purpose of this paper is to help students transition into the dissertation phase of the

PhD program as course work comes to a close. The paper will be administered as an independent study (BA 602) class under the supervision of the student's doctoral advisor and will result in three credit hours usable toward certain program of study requirements as discussed above. It can take any of a number of forms, including a comprehensive literature review, a preliminary proposal of a dissertation topic, a detailed analysis of multiple potential dissertation topics, etc., but is meant to be a first step in the student's dissertation process.

- All students will be required to pass a **written comprehensive exam** at or close to the completion of course work. This exam will test students' mastery of the subjects covered during the course work portion of the program (i.e., Basic Program, Advanced Program, etc.). Because different business disciplines rely on different sets of fundamental knowledge (as discussed above), this exam will generally be designed and delivered in the context of students' specific discipline.
- Consistent with OSU guidelines, all students will be required to pass an **oral preliminary exam** sometime after the completion of course work and after passing the written comprehensive exam. This oral exam will provide a follow-up test of students' mastery of the subjects in their area of study and will also be the forum through which students defend their dissertation proposal.
- Consistent with OSU guidelines, all students will be required to **orally defend their dissertation**. This defense will occur during the student's final term in the program. Students must pass the written and oral preliminary exams to be eligible to defend their dissertation.
- All students will be required to **teach a minimum of four stand-alone class sections**. The purpose of this requirement is to provide students with the opportunity to sharpen their teaching skills while simultaneously building a portfolio of teaching experience. These class sections may occur in the summer or during the school year, but at least two of the sections must be during the school year. The exact timing of these class sections for each student will be determined by the student, his/her doctoral committee, and course availability and will be arranged using class scheduling processes already in place in the COB.

Typical PhD Program Student Experience

Table 3 summarizes a typical student's path through the PhD program. Although not a requirement, we anticipate that the typical student will come into the program with a business Masters degree; Table 3 is built according to this assumption.³ Table 4 applies the program of study requirements shown in Table 2 to the course work shown in Table 3 to illustrate generally how a typical student could meet the credit hour requirements in each of the categories of courses and in total.

Although some students may complete the PhD program in four years, we anticipate that the typical student will take five. As shown in Table 3, once course work and the written comprehensive exam are completed, the student will move into the "dissertation phase" of the program, during which the student will register only for thesis / dissertation

³ Students entering the COB PhD program without a business Masters degree will need to take additional courses to satisfy the program of study requirements shown in Table 2.

credit hours (BA 603) and work toward building his/her dissertation project. At whatever point the student's doctoral committee deems the dissertation project to be at a sufficiently developed stage, the student will take the oral preliminary exam, during which he/she will defend his/her dissertation proposal. Once the dissertation project is completed, the student will orally defend it, completing the final requirement for the doctoral degree.

In addition to the activity shown in Table 3, all students (including the typical student) will teach four sections of stand-alone classes at some point during the program. As discussed above, the exact timing of these teaching assignments will vary by student and will be driven primarily by student preference and staffing needs. However, we anticipate that the typical student will teach one section in each of his/her first two summers and one section during each of two non-summer terms during his/her dissertation phase of the program (in order to meet the requirement discussed previously that two of the sections taught be during the academic year).

d. Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).

The PhD program will be delivered on the OSU Corvallis campus using processes already in place within the COB regarding course scheduling and the use of technology.

e. Ways in which the program will seek to assure quality, access, and diversity.

The PhD program will utilize well-established processes in place in the College of Business for acceptance into the MBA and MBAA programs plus new processes to account for the competitive nature of admissions into the PhD program. We will recruit for the PhD program from within Oregon, nationally, and internationally. A committee of faculty in each option (i.e., Innovation / Commercialization and Accounting) will review applications each winter and select finalists based on a combination of factors, including grade point average, GMAT score, work experience, and evidence of intellectual curiosity and commitment to educating others (via a personal statement). Finalists will then be subjected to an on-campus or telephone interview, after which the faculty committee in each option will select students to admit (about five total per year, on average). We believe that this admissions process and the related entrance requirements (discussed in more detail in Appendix A) will help to ensure that the students in the program are diverse and of the highest quality possible. Also see the discussion in Section 5 about outcomes and quality assessment.

f. Anticipated fall term headcount and FTE enrollment over each of the next five years.

We anticipate accepting about five highly qualified students into the PhD program each fall with the expectation that, ultimately, approximately 25 students will be in the program at any given time. The program is designed to move students through the coursework quickly (about two years for a student entering the program with a business Masters degree) with an additional two to three years for the dissertation research and writing.

g. Expected degrees/certificates produced over the next five years.

As with all PhD programs, we anticipate that there will be some attrition in the program, although we will devise systems of support and close mentoring to help students meet their educational goals on a timely basis. We expect that by the fifth year after initiation of the program (i.e., 2019-2020) we will consistently award about five degrees per year.

h. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

Students will be recruited for the PhD program from within Oregon, nationally, and internationally and thus will be a combination of residents and non-residents. We anticipate that COB PhD students will come from a variety of backgrounds (e.g., cultural, professional, etc.), with many returning to school for further education after spending time as professionals. Accordingly, COB PhD students will be a mix of traditional and nontraditional students. We expect that all COB PhD students will be full-time students.

i. Adequacy and quality of faculty delivering the program.

Faculty delivering the requirements for the PhD program will be primarily the same faculty who now provide instruction and mentoring for the MBA, MBAA, and COB undergraduate programs. Similar to our existing graduate programs, the PhD program will draw from faculty across the COB, particularly in the areas of Strategy / Entrepreneurship, Accounting, Finance, Marketing, Management, and Global Business Analysis. Faculty across all business disciplines routinely demonstrate excellence in research, with at least 111 studies published in peer-reviewed discipline-specific journals over the last five years, at least 47 in top-tier journals.⁴ COB faculty also excel in area of student success and learning. In the past five years COB faculty have won University-level awards for contributions toward internationalization of the University (Ping-Hung Hsieh, 2012), teaching excellence (Don Neubaum, 2011), and teamwork toward student learning and success (Marketing faculty, 2011; Accounting faculty, 2008). The COB's accreditation was renewed in 2010. Below is a list of current tenure/tenure-track business faculty available to serve on doctoral committees in the PhD program:

Accounting

Roger Graham (Prof)
Jared Moore (Assoc Prof)
Chris Akroyd (Asst Prof)
Huichi Huang (Asst Prof)
Kuan-Chen Lin (Asst Prof)
Bret Scott (Asst Prof)

Business Information Systems (BIS)

Rene Reitsma (Assoc Prof)
Byron Marshall (Assoc Prof)
Bin Zhu (Asst Prof)

Management

Erik Larson (Prof)
David Baldrige (Assoc Prof)
Jeewon Cho (Asst Prof)
Keith Leavitt (Asst Prof)
Pauline Schilpzand (Asst Prof)
Michele Swift (Asst Prof)

Marketing

James McAlexander (Prof)
Hal Koenig (Assoc Prof)
Michelle Barnhart (Asst Prof)
Colleen Bee (Asst Prof)
Marina Puzakova (Asst Prof)

⁴ Unlike Engineering and other sciences, pursuit of grants is not a common scholarly activity for business academics. Accordingly, publication of scholarly work (generally discipline-specific research) in respected peer-reviewed journals is the primary metric upon which a business academic's research activity is evaluated.

Finance

Raymond Brooks (Prof)
Prem Mathew (Assoc Prof)
Jimmy Yang (Assoc Prof)
Dave Berger (Asst Prof)
John Becker-Blease (Asst Prof)

Global Business Analysis

Ping-Hung Hsieh (Assoc Prof)
Nancy King (Assoc Prof)
Zhaohui Wu (Assoc Prof)
Yusoon Kim (Asst Prof)

Strategy / Entrepreneurship

Don Neubaum (Assoc Prof)
Jiyao Chen (Asst Prof)
Robert Garrett, Jr. (Asst Prof)
Todd Moss (Asst Prof)
Alex Vestal (Asst Prof)

Although we believe that we can likely provide an excellent education for an additional five to six PhD students each year currently, the MBA, MBAA, and undergraduate programs in the COB are growing rapidly and are expected to continue growing. Because we are proposing a new program in addition to the expected growth in our existing programs, delivery of high quality courses and mentoring requires an investment in new faculty, especially in the areas of Strategy / Entrepreneurship, Accounting, Finance, and Marketing (see Section 7a). New faculty will bring expertise in a specialty area that contributes to student success in the PhD program.

j. Faculty resources – full-time, part-time, adjunct.

Each student in the PhD program will be mentored and advised by a tenure/tenure-track business faculty member on the graduate COB faculty (see item i. above) whose expertise is in the student's option (e.g., Innovation / Commercialization, Accounting). PhD program courses will be taught almost entirely by tenure-track business faculty, although certain courses may draw from non-tenure-track business faculty (i.e., BA 611) and/or faculty in the School of Design and Human Environment (i.e., DHE 607). Further, as discussed in item c., certain courses in the program will draw from faculty in other programs and colleges such as Applied Economics (e.g., AEC 523, AEC 512, AEC 513, etc.) and Statistics (e.g., ST 511, ST 551, etc.).

k. Other staff.

The PhD program is currently staffed with a part-time Director of PhD Program Development who is appointed by the COB Dean and is responsible to the Dean and the Associate Dean for Research. Initial responsibilities for this position consist primarily of managing the proposal and implementation processes for the PhD program. Once the program is implemented, the title for this position will change to PhD Program Director, and its responsibilities will shift to management of the program (e.g., budget, head advisor for students, student recruitment, communications, and representing the program on campus and in the community). Distribution of work load includes approximately .25 FTE as Director of PhD Program Development / PhD Program

Director and .75 FTE as a COB business faculty member responsible for teaching, scholarship, and service.

The MBA program will provide administrative assistance for the PhD Program.

I. Facilities, library, and other resources.

PhD students will require access to data, research labs, etc. that are necessary to conduct research. Research in the two options relies heavily on archival data, which requires subscriptions to research databases. The COB already subscribes to many of the databases required for the two options, although additional investment in databases will be required. PhD students will also require access to the major academic journals in their field through the OSU library. The library currently subscribes to most of the major journals required for the two options, although some additional journal subscriptions will be necessary as well to move closer to the level of access that is standard at a PhD-granting business school. The library outlines suggestions for these additional subscriptions in its evaluation. Finally, each PhD student will be provided with office space, computer access, and necessary software licenses (e.g., for statistical packages). The office space needs have already been incorporated into the plans for Austin Hall, which is scheduled to open in fall 2014 (see Section 7b).

m. Anticipated start date:

Fall term 2014.

2. Relationship to Mission and Goals

a. Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.

OSU's mission statement is: *As a land grant institution committed to teaching, research, and outreach and engagement, Oregon State University promotes economic, social, cultural and environmental progress for the people of Oregon, the nation and the world. This mission is achieved by producing graduates competitive in the global economy, supporting a continuous search for new knowledge and solutions, and maintaining a rigorous focus on academic excellence, particularly in the three Signature Areas: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress.* OSU's vision is: *To best serve the people of Oregon, Oregon State University will be among the Top 10 land grant institutions in America.*

<http://oregonstate.edu/main/mission>

The College of Business and its programs support the OSU signature area of distinction: *Promoting Economic Growth and Social Progress.* The College of Business's mission statement is: *The College of Business provides internationally*

recognized research-based education that prepares profession-ready graduates who will lead in an innovation economy. <http://business.oregonstate.edu/about/mission>

As a leading research institution, doctoral education is at the heart of OSU's mission and its ambition to be one of the top-10 land-grant institutions in America. All of the colleges on campus currently offer PhD degrees in their core areas except for the COB.⁵ A PhD degree offering by the COB will contribute directly to the mission of the University in at least four ways.

- First, a stated initiative toward accomplishing the first Phase II goal in OSU's strategic plan is to *"Raise the profile of graduate education at OSU by repositioning existing programs and introducing targeted new programs to support OSU's three signature areas, and increasing professional and graduate programs to 25 percent of all enrollments."* A PhD program in the COB will contribute to this initiative, particularly in light of the fact that (as mentioned above) the COB is currently the only college on campus that does not offer one in its core areas.
- Second, doctoral programs represent a commitment to and an investment in research excellence, thereby generating positive reputational capital. Such a commitment and a strong standing in the academic community are crucial in the effort to attract and retain high-achieving faculty, which is another stated initiative toward accomplishing the first Phase II goal in OSU's strategic plan. It is often the case that upon entering the job market, graduates of high-ranking business doctoral programs and experienced business faculty at high-ranking institutions will dismiss business schools that do not offer a PhD program, labeling them "teaching schools" that do not value research. Offering a doctoral program in the COB will broaden the pool of high-achieving faculty available to OSU and enhance our ability to attract and retain such faculty.

Our anticipated PhD program has already had an impact in this area. The COB has hired multiple high-achieving faculty members since last year (2011-2012), and every one has noted the PhD program as a significant attraction to OSU. Included in this group is a senior faculty member in Accounting, one of the six faculty lines directly associated with the program (see Section 7a), who cited the proposed PhD program as *the* primary draw to the position.

- Third, while the COB faculty are already highly productive in terms of scholarship, the investment in new faculty (i.e., collaborators), research resources (e.g., databases), and graduate assistants associated with the PhD program will help to increase the quality and quantity of research output from the College, further enhancing our standing in the academic community.

⁵ The University Honors College (UHC) also does not offer a PhD degree. However, the UHC focuses only on undergraduate education, offering an honors degree that "attaches" onto a student's undergraduate major. Therefore, the UHC is not applicable to the discussion about doctoral education at OSU.

- Fourth, part of the land-grant mission of OSU is to serve the people of Oregon, the nation, and the world by promoting economic growth. A PhD program in the COB will allow us to better fulfill our responsibility toward this objective by contributing to the pool of business faculty available to provide the business education that is critical for economic growth. As discussed in Section 4 below, a shortage of business faculty exists in the US and is projected to worsen, particularly in Accounting. The COB currently draws from the business faculty pool but does not contribute to it, and the PhD program will enable us to do so by helping to educate next generation of business educators. Another benefit of contributing to the faculty pool is that doing so will improve the standing and expand the “footprint” of the COB (and thus OSU) in the academic community through placement of our graduates at respected universities across the nation and the world.

At a broader level, we believe that great universities have great business schools. Virtually every discipline in a university has some business application. Our current Integrated Business Plan process in the MBA program provides evidence of the relevance of business across a university campus.⁶ Further, in addition to contributing to knowledge generation through scholarship activities, business schools provide value to a university in multiple ways through their connections with the business community (e.g., fundraising, placement of graduates, etc.). Accordingly, a university benefits significantly in terms of the advancement of knowledge, collaboration with other colleges on campus, and external connections from having a highly respected business school. The great business schools in America tend to have doctoral programs, which is evident by looking at the percentage of universities that offer business doctoral degrees in several of OSU’s comparison groups: land-grant peers (90%),⁷ Association to Advance Collegiate Schools of Business (AACSB) aspirant universities (100%), PAC-12 peers (100%), and Business Week’s top 50 undergraduate public business schools (approx. 80%).⁸ While we believe the COB is already strong in all of the areas discussed above, we also believe that establishing a PhD program will bring us closer to our aspirant schools (and even peers) in the comparison groups mentioned and will also bring OSU closer to its desired top-10 land-grant university status.

As a final point, we believe that establishing a PhD program will contribute to the COB mission, particularly the provision of “*internationally recognized research-based education*” to our students. First, we believe that good researchers make good

⁶ The exit hurdle for the MBA program is an Integrated Business Plan project, for which a team of MBA students devises a plan for the commercialization of a newly developed technology. All of the technologies used for this project are real inventions, and most are inventions by OSU faculty in areas across campus (e.g., Engineering).

⁷ The University of California - Davis (UCD) is the only one of OSU’s land-grant peers without a PhD program in its College of Business. However, it should be noted that UCD is part of the University of California system, which does offer doctoral programs in Business at several of its campuses (e.g., Berkeley, Irvine, Los Angeles, San Diego). Further, UCD was originally established as an agricultural extension of the Berkeley campus, the original home of the land-grant mission in California.

⁸ www.businessweek.com/interactive_reports/ugtable_3-20.html

teachers. Therefore, we expect that the program will add value to the classroom experience for students in our current undergraduate and graduate (i.e., MBA and MBAA) programs, partially due to current faculty bringing their research into the classroom and partially from the addition of high-achieving new faculty who will do the same. Second, the positive reputational capital generated by the PhD program will enhance the international recognition part of the mission by raising the standing of the COB in the academic community.

b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

See Section 2a above.

c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

The mission and goals of OSU overlap significantly with the mission and goals of the Oregon University System (OUS). Accordingly, much of the general discussion in Section 2a above applies here as well.

At a more detailed level, in its Annual Performance Progress Report for the most recent biennium (2010-2011), the Oregon University System (OUS) lists "Total number of advanced degrees awarded (master's, doctoral, and professional)" as a performance measure toward the goal "State economic development: Employability of graduates; Student success." The report communicates a desire to increase the number of graduate students entering and completing advanced degrees at OUS institutions. With respect to this performance measure, the report states that "Oregon's ability to compete globally requires a solid foundation of strong graduate programs and advanced degree production." The report also states that "Oregon needs to reinvest in its graduate programs to remain competitive in the academic marketplace," and "investments in faculty recruitment and retention, coupled with investment in graduate programs and students are essential to increase advanced degree awards." Although doctoral programs will naturally account for only a small portion of the total graduate student body, a PhD program in the COB at OSU is consistent with OUS's goals for graduate education in Oregon.

d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.

We believe the Oregon job market is strong for graduates from undergraduate- and Masters-level programs in Innovation / Commercialization and Accounting. The COB is currently constrained (by capacity) at both levels in its ability to meet demand for our programs, and the PhD program (and the related investment in new faculty) will allow the COB to expand its offerings to better meet statewide needs in these areas.

The need for skills and knowledge in innovation in the state of Oregon has never been stronger. In his fiscal year 2009-2010 state budget, the Governor earmarked \$20.5 million for the Innovation Plan developed by the Oregon Innovation Council (Oregon InC), which includes an innovation-based economic development strategy that will enable Oregon's businesses to stay competitive in a global economy. Oregon InC stressed the need for innovation in traditional industry sectors, such as agriculture and forestry, where innovation can help maintain and increase the number of good, family-wage jobs. The focus on innovation in Oregon speaks to a demand for people with training in Entrepreneurship and was part of the motivation for recently creating a new undergraduate degree program in Innovation Management in the COB.

On the Accounting side, as the economy grows and the number of business establishments increases, more accountants and auditors are required to set up books, prepare taxes, and provide management advice. Increased need for accountants and auditors also arises from a greater emphasis on accountability, transparency, and controls in financial reporting. Evidence of the growing national market demand for accounting graduates is not hard to find. For instance, the US Department of Labor and the AICPA have both recently published data and survey results projecting strong demand for accountants for years to come.⁹ At OSU, we have seen our own Accountancy program pushed beyond capacity in recent years requiring expansion of course offerings and suggesting that these demand projections are reflective of Oregon as well.

3. Accreditation

a. Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.

The COB and the Accountancy program are accredited by the Association to Advance Collegiate Schools of Business (AACSB). AACSB accreditation was reviewed in 2010 and subsequently renewed (at both levels) through the 2015-2016 academic year. Review of the College and the Accountancy program by the AACSB, including the PhD program, if approved, will occur in two years during the 2014-2015 academic year.

⁹ <http://www.bls.gov/ooh/Business-and-Financial/Accountants-and-auditors.htm#tab-6>;

Reigle, D. 2009. *"Trends in the Supply of Accounting Graduates and the Demand for Public Accounting Recruits"* American Institute of Certified Public Accountants, Inc., New York, NY.

b. Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited. All classes will be taught by terminal degree qualified faculty.

We anticipate no issues regarding the ability of the College or the Accountancy program to maintain accreditation after the PhD program is approved.

c. If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.

The COB offers undergraduate business degrees in Accountancy, Business Information Systems, Business Administration, Finance, Innovation Management, Management, and Marketing. All of these degrees except Accountancy are accredited as a single program by the AACSB; Accountancy is accredited separately. Given our recent reaccreditation, we expect no additional requirements to qualify again for reaccreditation (at either level). The COB business faculty are sufficiently qualified and quality assurance processes are in place in the College.

d. If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.

N/A

4. Need

a. Evidence of market demand.

A well-documented shortage of academically qualified (i.e., PhD) business faculty has developed over the last two decades and is expected to worsen in years to come. Specifically, the AACSB estimated the excess of demand over supply in the US at 1,000 in 2008 and projects that the shortage could more than double in the next decade. Among the most commonly cited reasons for shortfall in business faculty are growth in undergraduate and MBA programs, anticipated faculty retirements, and stunted investment in doctoral programs (in terms of both availability and student financial support).¹⁰ The shortage is further exacerbated by AACSB accreditation standards

¹⁰ See Alsop, R. 2007. "PhD Shortage: Business Schools Seek Professors." *Wall Street Journal* Jan. 9 (<http://online.wsj.com/article/SB116830887516070925.html>);

AACSB International. 2008. "Business School Faculty Trends.";

Bisoux, T. 2009. "Solving the Doctoral Dilemma." *BizED* March/April;

Braun, R. and S. Mauldin. 2012. "From Practice to the Classroom." *Journal of Accountancy* Oct.

requiring that total faculty be comprised of at least 50 percent academically qualified faculty (vs. professionally qualified or other non-PhD faculty).

Although the scarcity of PhDs is evident across business disciplines, it is more pronounced in some than others. AACSB data (from a 2011 report) suggest that in terms of both absolute numbers and percentage of total faculty size, 1) anticipated short-term faculty needs, 2) current unfilled positions, and 3) anticipated retirements in the next five years are all consistently higher for Management, which includes Innovation, Entrepreneurship and Strategy, and (especially) Accounting than for other business disciplines.¹¹

As indicated above, the AACSB data suggest that demand is strong for faculty with expertise in Management, including Innovation, Entrepreneurship, and Strategy. Innovation / Commercialization is a new and emerging specialization within the broad scope of the Management discipline, so detailed market data on this specific area are difficult (if not impossible) to attain. However, the roots of Innovation / Commercialization are in Entrepreneurship and Strategy, and although these specific areas have only recently begun to identify and track themselves separately from Management, there is some available information that speaks to the demand for faculty with such expertise. During the past two decades, tremendous growth has occurred in the number of Entrepreneurship courses offered by colleges and universities. In 1985, studies indicate there were about 250 Entrepreneurship courses offered across all college campuses in the US. Today, more than 5,000 Entrepreneurship courses are now offered in two-year and four-year institutions, with at least 2,000 universities offering at least one course in the area.¹² A recent study examining Entrepreneurship educator profiles in business programs in the US found that only one-fifth of the faculty members teaching these courses hold a PhD in Entrepreneurship (alone or in combination with another business discipline).¹³ Such findings suggest a need for additional faculty with expertise in Entrepreneurship and related fields (i.e., Innovation / Commercialization).

The business faculty shortage is particularly acute in Accounting, translating into a high level of currently unmet demand for faculty in the discipline.¹⁴ In its 2005 report on the supply and demand for Accounting PhD's, the American Accounting Association (AAA)

¹¹ See AACSB International. 2011. "Faculty Focus: Exploring the Number of Faculty Members by Field/Discipline Data Faculty Focus." <http://aacsbblogs.typepad.com/dataandresearch/2011/05/2010-11-salary-survey-new-hire-status.html>

¹² See http://www.kauffman.org/uploadedfiles/entrep_high_ed_report.pdf; Cone, J. "Teaching Entrepreneurship in Colleges and Universities: How (and Why) a New Academic Field Is Being Built." Kauffman Thoughtbook 2005: pp. 72-79.

¹³ Kabongo, J. and P. McCaskey. 2011. "An Examination of Entrepreneurship Educator Profiles in Business Programs in the United States." *Journal of Small Business and Enterprise Development* 18(1): 27-42.

¹⁴ See Alsop, R. 2007. "PhD Shortage: Business Schools Seek Professors." *Wall Street Journal* Jan. 9 (<http://online.wsj.com/article/SB116830887516070925.html>); AACSB International. 2008. "Business School Faculty Trends."; AACSB International. 2010. "AACSB Explores Global Trends in Doctoral Education." *eNEWSLINE* June/July.

estimated the demand for new PhD Accounting faculty to be about half met during the 2005-2008 timeframe.¹⁵ Evidence of unmet demand continues beyond 2008 as well. Business schools regularly report having difficulty hiring academically qualified Accounting faculty. Similarly, the AAA provides a clearinghouse placement service each year, and the list of schools with positions routinely outstrips the available candidates.¹⁶ The 2011 AACSB data discussed above tell a similar story, reflecting current unfilled positions and anticipated retirements in the next five years that are notably higher for Accounting (6.6 and 13.8 percent, respectively) than for other business disciplines (average 4.6 and 9.6 percent, respectively, for Finance, Management and Marketing). The shortage of Accounting faculty, most notably in the tax and audit areas, has become severe enough of an issue to attract intervention on the part of the Accounting profession. In 2008, the American Institute of Certified Public Accountants (AICPA) and several of the largest accounting firms and state CPA societies launched the Accounting Doctoral Scholars (ADS) Program, which has the objective of combatting the shortage by providing funding to help and encourage accountants with recent public accounting experience in tax and auditing obtain their doctorates.¹⁷¹⁸

The AAA and AACSB data and reports reflect an expectation that the shortage of PhD business faculty will continue. Supporting new business doctoral programs is one of the stated objectives of the AACSB in the effort to mitigate this trend, and one of the objectives of the proposed PhD program is to contribute to this goal.

b. If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).

N/A

c. Manner in which the program would serve the need for improved educational attainment in the region and state.

The PhD program will provide OSU business students with an option for a terminal degree. Further, to the extent that the Oregon job market is strong for graduates from business undergraduate- and Masters-level programs (particularly in the Innovation / Commercialization and Accounting areas), the PhD program will allow the COB to

¹⁵ American Accounting Association. 2005. "Report of the AAA/AAPLG Ad Hoc Committee to Assess the Supply and Demand for Accounting PhDs."

¹⁶ Fogarty, T. and A. Holder. 2012. "Exploring Accounting Doctoral Program Decline: Variation and the Search for Antecedents." *Issues in Accounting Education* 27(2): 373-397.

¹⁷ See <http://www.adsphd.org/index.asp>.

¹⁸ The 2005 AAA report also noted that the faculty shortfall during the 2005-2008 period was especially severe in the tax and audit specialties (27.1 and 22.8 percent of demand met, respectively). As previously discussed, tax is the primary specialty emphasized in the Accounting option of the proposed PhD program.

expand its offerings to better meet an ever-increasing demand for our programs and graduates. See Section 2d above for further discussion on this point.

d. Manner in which the program would address the civic and cultural demands of citizenship.

The business academic community and the COB have high ethical standards that are continually emphasized and reinforced in our undergraduate, MBA, and MBAA programs and will be emphasized heavily in the PhD program as well.

5. Outcomes and Quality Assessment

a. Expected learning outcomes of the program.

The expected learning outcomes of the PhD program and the assessment strategies (AS) from Section 5b below that apply to each one are as follows. Graduates will:

- a. Develop substantive knowledge in their area of specialization. **(AS: 1, 2, 4, 5, 6, 7, 10, 11, 12, 13)**
- b. Master the analytical and methodological skills required to evaluate and conduct research in their area of specialization and related areas. **(AS: 1, 3, 4, 5, 6, 7, 10, 11, 12)**
- c. Design and conduct original research in their area of specialization. **(AS: 4, 5, 6, 7, 10, 11, 12, 13)**
- d. Demonstrate the ability to communicate the results of their research in a clear and effective manner. **(AS: 4, 6, 7, 10, 11, 12, 13)**
- e. Demonstrate an ability to work effectively with other people from various ethnic, educational, and work experience backgrounds. **(AS: 1, 2, 13)**
- f. Demonstrate an understanding and concern for the high ethical standards in business research, teaching, and service. **(AS: 1, 2, 4, 5, 6, 7, 13)**
- g. Demonstrate the ability to teach college-level courses in their area of specialization. **(AS: 8, 9)**

b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

Assessment strategies (AS) for the learning outcomes listed above are:

1. Annual program of study review with doctoral advisor and PhD Program Director
2. Successful completion of discipline-specific doctoral seminars
3. Successful completion of Quantitative Methods program of study requirements
4. Successful completion of first-year summer paper
5. Successful completion of written comprehensive exam
6. Successful completion of oral preliminary exam, i.e., dissertation proposal defense
7. Successful completion and defense of dissertation

8. Successful completion of teaching requirements, both teaching assistantships and stand-alone course requirements
9. Stand-alone course student evaluation of teaching (SET) scores of an acceptable level
10. Acceptance of original research at a national conference and/or for publication in peer-reviewed journal
11. Presentation of original research and/or discussion of others' research at a national conference
12. Presentation of original research in a workshop at OSU and/or another university
13. Co-authorship on original research projects

The PhD Program Director will keep data on the results of assessment of the PhD learning outcomes plus program-level information such as 1) number of applicants, offers, and acceptances on a yearly basis, 2) student background qualifications (e.g., undergrad/grad degrees, schools attended, GPA, GMAT scores, etc.), 3) retention and graduation rates, 4) post-graduation employment, 5) continued support and funding from the College and University, and 6) results of external reviews. All graduates will also participate in an exit interview with the PhD Program Director to describe their experience with the program – good and bad – as well as suggestions for improvement. Students will also be provided the opportunity to submit anonymous information to the PhD Program Director as appropriate. All of the assessment information listed above will be reviewed biennially in a meeting between the PhD Program Director and the COB Graduate Program Committee. At this meeting, the full assessment package will be discussed in detail to determine if program goals are being met. As evidence is collected that curriculum, program requirements, or any other aspect of the program needs improvement, the PhD Program Director and the COB Graduate Program Committee will move to make necessary changes.

In addition, students in the PhD program must maintain a 3.25 GPA on all coursework. If at any point a student's cumulative GPA falls below 3.25, the student will meet with his/her doctoral advisor and the PhD Program Director to develop an educational plan for addressing difficulties. The student will have one term to raise the GPA to appropriate levels or will face termination from the program. Further, any student who fails (i.e., earns lower than a B- in) more than one course during the program will also face termination from the program. Information about classes taken by students, grades and GPAs, as well as educational plans will be tracked by the PhD Program Director and reviewed annually.

c. Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.

See Section 5b above.

d. Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.

The COB sets expectations for the nature and level of research and/or scholarly activity of its business faculty.¹⁹ With few exceptions, COB business faculty members have PhD degrees from accredited universities and tenure-track positions. Like faculty across campus, PhD program faculty are expected to conduct original research and publish in appropriate disciplinary journals. We anticipate that these expectations for scholarly activity will continue, and we also expect that program faculty will advise and mentor PhD students and involve the students in their research. Program faculty will also be expected to continue their involvement with academic and/or professional associations to ensure visibility of the COB and the PhD program in the academic community. Indicators of success of faculty will include but not be limited to:

- Scholarly productivity in disciplinary and/or interdisciplinary journals
- Participation in national conferences and invited research workshops
- Participation and leadership in relevant committees of applicable academic and professional associations
- Participation on editorial boards and editorship of scholarly journals

6. Program Integration and Collaboration

a. Closely related programs in other OUS universities and Oregon private institutions.

The University of Oregon (UO) offers an established PhD program in its College of Business with concentrations in Accounting, Decision Sciences, Finance, Management, and Marketing. No other school in Oregon offers a PhD degree in business.

b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.

We believe that the PhD program will be more complementary than competitive with UO's program.

First, our PhD program will differ from UO's on a couple of important dimensions. The OSU MBA program currently fosters partnerships with technically-oriented colleges on campus, including Engineering, Agricultural Sciences, Science, and Forestry. Through these partnerships, MBA students create integrated business and commercialization plans around new technologies developed by faculty in these colleges. The Innovation / Commercialization option in the PhD program will leverage these partnerships as well,

¹⁹ Accreditation is one variable in the determination of these expectations as the AACSB sets research productivity standards for purposes of establishing whether faculty are academically qualified.

providing a research extension to the MBA program and a more applied experience for our doctoral students. We view this aspect of the program as a general competitive strength. Further, although there is overlap between the Innovation / Commercialization option in our PhD program and UO's Management concentration in the sense that they are both rooted in Strategy and Entrepreneurship, our program specifically incorporates a Commercialization component, which includes additional marketing-oriented learning objectives. Also see Section 7b below.

Second, as discussed in Section 4, a shortage of academically qualified (i.e., PhD) business faculty has developed over the last two decades and is expected to worsen in years to come. This shortage is evident in both areas of study on which the options in the PhD program will focus but is particularly acute in Accounting. Within Accounting, the shortage is most severe in the areas of tax and audit, so much so that the Accounting profession has invested significantly in programs aimed at reversing this trend. The tax area will be the primary emphasis of the Accounting option because it maps particularly well into the strengths of our Accounting faculty. We believe that this need / strength match constitutes another general competitive strength of our program. Overall, with a high level of currently unmet demand for faculty in both disciplines, especially Accounting, our PhD program will help address a need in the market for academically qualified business faculty.

Potential exists for collaboration between our PhD program and UO's program as applicable and appropriate. For example, the two schools may in time develop joint doctoral seminars and/or research workshops. Further, we believe that the doctoral program may facilitate collaboration between UO and OSU faculty and PhD students on specific research projects. There has been some such collaborative interaction between OSU faculty and UO faculty / PhD students in the past, but the PhD program introduces opportunity to further develop those relationships.

The highest potential for collaboration on campus is with the Applied Economics program. As previously discussed, we expect that our PhD students will take multiple AREC courses as part of the course of study. However, we also expect that a stronger tie with AREC will facilitate some AREC graduate students taking MBA courses that are relevant to their area of interest. Further, we believe the PhD program will facilitate partnership with AREC on joint course offerings, e.g., a potential preparatory "Economics / Math Boot Camp" course that could be jointly taught and would benefit students in both programs. Finally, a stronger tie with AREC through the PhD program would facilitate potential research collaboration between COB and AREC faculty and students.

c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.

N/A; See Section 6b above.

d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.

As discussed above, the PhD program will extend the MBA and MBAA programs already in place at OSU. We do not expect this program to take enrollment away from existing programs (PhD or otherwise) at OSU.

The COB will need to initiate several new 600-level courses, including blanket (e.g., research, seminar), advanced theory, and methods courses. Along with development and delivery of the new courses, success of the PhD program will require that faculty be available as mentors to graduate students, providing research and teaching experience and oversight. This will be in addition to their current teaching, scholarship, and service expectations, which are already high. Faculty who are heavily involved with the PhD program may be less available to serve on exit hurdle (e.g., Integrated Business Plan project) committees for the MBA program. However, with the addition of six new business faculty by the 2014-2015 academic year, we expect to be able to support the PhD program and the targeted expansion of the MBA programs, which are currently limited, in part, due to faculty availability.

As discussed above, the PhD program will interact closely with the Applied Economics program. Enrollment in the relevant AREC classes will increase slightly due to the PhD program. The stronger connection between the COB and AREC will likely also result a slight increase in enrollment for some MBA courses as some Applied Economics students may have interest in taking them to supplement their Economics courses. Finally, the stronger connection between the COB and AREC may also result in AREC faculty serving on COB doctoral committees and vice versa as applicable and appropriate.

7. Financial Sustainability (completed *Budget Outline* pages attached)

a. Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.

The business plan for the first four years of the program after implementation (i.e., beginning with the 2014-2015 academic year) is developed in the Budget Outline Form.

We expect that the costs of implementing the PhD program will be primarily associated with filling six new tenure track faculty lines (~\$1,500,000 per year ongoing including OPE), PhD student research and teaching graduate assistantship stipends / benefits (~\$450,000 per year ongoing), and data resource costs (~\$270,000 per year ongoing).

We propose a funding model in which the costs associated with the PhD program are shared between the COB and University support. The COB is currently funding the

Director for PhD Program Development / PhD Program Director position and roughly 45 percent of the necessary data resource costs. In addition, the COB will fund the graduate assistantships for doctoral students, increase its investment in data resources, and make the initial pre-implementation investment in the first two (of the total six) faculty lines associated with the PhD program (one for each option). One of those two lines has been filled (i.e., offer accepted for the Accounting position), and a search is ongoing for the other. We expect that the new faculty will be in place beginning fall 2013.²⁰ Existing staff devoted to the MBA and MBAA programs will assume administrative duties relative to the PhD program (shown as .25 FTE in the Budget Outline Form). We request University support for the remainder of the cost of the program as the creation of a doctoral program in the COB is a priority for the University as well as for the College.

Expanding on a few line items in the Budget Outline Form, in addition to the six new faculty lines discussed above, the “Faculty” line includes the annual stipend for the Director for PhD Program Development / PhD Program Director (approximately \$7,500 per year ongoing). The “Library/Electronic” line includes both database resources and additional journal subscriptions. The database subscriptions will be managed by the COB directly, whereas the academic journal subscriptions will be managed through the library (also see Section 1I). The portion applicable to journal subscriptions is approximately \$17,000 per year ongoing (see library evaluation), and the remainder of the “Library/Electronic” amount relates to data resources. The “Nonrecurring” line relates to the cost of two years of summer research support for each of the six new faculty lines discussed above, which is shared by the COB and the University. Finally, the “Supply and Svcs” line includes basic equipment and supplies (e.g., computers, printing, software licenses, etc.) as well as travel costs (i.e., conferences and research workshops) for faculty, doctoral students, and guest presenters.

Although the success of the program will depend on significant institutional support, we expect that the proportion of PhD program costs covered by COB funds will increase over time. One of the other major priorities of the College at present is to aggressively grow our MBA programs. In addition to providing for instruction and student mentorship for the PhD program directly, the six new faculty lines discussed above will allow us to increase our course offerings in our undergraduate and graduate (i.e., MBA and MBAA) programs, expanding capacity in areas that complement the OSU and COB strategic plans. Growing our current programs, especially the MBA programs, will provide for more tuition revenues, which will be used in part to cover PhD program costs.

b. Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.

Austin Hall, the future home of the COB, is scheduled to open in fall 2014. Partially in anticipation of the PhD program, designated space for a state-of-the-art experimental

²⁰ We expect that the other four new faculty will be in place starting fall 2014.

research lab has been incorporated into the plans for the new building. As discussed in Section 1I above, the plans for Austin Hall also include allocation of office space for doctoral students.

In addition, the COB plans to develop the Venture Accelerator (VA) initiative with the OSU Office for Commercialization & Corporate Development. VA will be a program designed to provide a formal outlet for the creation of commercialization plans for innovations / technologies developed at OSU. One objective of VA is to further advance the OSU strategic plan and COB mission by fostering industry partnerships, attracting high-achieving students, and providing research-based education in Innovation and Commercialization for MBA students. However, VA will also serve as a lab through which to study Innovation and Commercialization processes and will therefore be a valuable resource for PhD students in the Innovation / Commercialization option.

c. Targeted student/faculty ratio (student FTE divided by faculty FTE).

The chair of a given student's PhD committee must be in the student's option (Innovation / Commercialization or Accounting), and other committee members may come from any of several relevant disciplines (e.g., Finance, Marketing, Management, etc.). Faculty participating in the PhD program will do so in addition to their other assignments. If we look at the COB faculty who can serve on PhD committees, we expect about 40 FTE across the COB (those listed in Section 1i plus the six new faculty lines). If we estimate that there will be 25 PhD students in the program at any given time, a rough calculation of the student/faculty ratio is approximately 0.625, which is consistent with the 0.652 ratio for other public PAC 12 schools according to AACSB data. However, considering that other than those in the PhD program options, faculty will not participate in the PhD program at equal rates (some not at all), it is useful to also look at a student/faculty ratio that is based on faculty who will be consistently involved with the program. If we look at the COB faculty who can serve as chairs of PhD committees, we expect 3 to 4 FTE in Innovation / Commercialization and 3 to 4 FTE in Accounting. Using the same estimate mentioned above of 25 students in the program at any given time, a rough calculation of the student/faculty ratio is approximately 3 or 4 to 1.

d. Resources to be devoted to student recruitment.

The COB has well-established resources and staff devoted to graduate student recruitment that will be utilized by the PhD program. In addition, the program will use advertising in standard academic outlets and personal outreach. The interview process will consist of phone interviews plus a small number of campus visits each year. Overall, the annual budget for the recruiting effort is small at roughly \$5,000.

Appendix A: Description of the Admission Criteria and Process for the PhD Program

General OSU and COB admission criteria

The minimum Graduate School admissions requirements for all applicants are as follows:

- a four-year baccalaureate degree from a regionally-accredited college or university, and
- a combined GPA of 3.00 on the last 90 quarter (60 semester) credit hours of graded undergraduate work toward the first baccalaureate degree plus all work completed thereafter,

OR

- a four-year baccalaureate degree from a regionally-accredited college or university, and
- a 45 quarter credit-hour graduate degree from a regionally accredited university.

If the student has completed his or her baccalaureate degree in a country that is a signatory of the Bologna Declaration, then

- A baccalaureate degree of at least three years duration with a B average (equivalent 3.00 on a U.S. 4.00 grading scale) in the last two years, plus all subsequent graded course work,

OR

- A baccalaureate degree of at least three years duration with a two-year (equivalent to 45-quarter credits) graduate degree.

The COB has established the following minimum requirements for the MBA programs that apply in addition to general University and Graduate School requirements for applicants seeking admission to the program.

- A Graduate Management Admission Test (GMAT) minimum overall score of 500 with verbal and quantitative sub scores in at least the 20th percentile range, and an analytical writing score of at least 4.0.
 - o The GMAT requirement is waived if the applicant has completed a 45 (quarter) credit-hour graduate degree from a regionally-accredited university.
- International students must submit the Test of English as a Foreign Language (TOEFL) with the following minimum score:
 - o 575 on the paper-based version,

- 233 on the computer-based version, or
- 91 total, with subset scores of at least 22, on the Internet-based version (iBT).

PhD program admission criteria and procedures

In addition to the OSU and COB graduate program admission criteria discussed above, the PhD program will require a minimum GMAT score of 600.

Once the application deadline has passed for a given year, applications received by the PhD program will be reviewed by the PhD Program Director and a committee of faculty representing the two options (Innovation / Commercialization and Accounting). This review process will result in elimination of applications that do not meet the basic admission criteria and selection of finalists for each option based on a combination of factors, including grade point average, GMAT score, work experience, and evidence of intellectual curiosity and commitment to educating others (via a personal statement). Finalists will then be subjected to an on-campus or telephone interview, after which the faculty committee in each option will select students to admit (about five total per year, on average).

MEMO TO: Jared Moore, Associate Professor

FROM: Brenda McComb, Dean

RE: Proposed PhD in Business Administration

Thank you for sharing a draft of the Category 1 proposal to establish a PhD in Business Administration. Having discussed this proposed degree with Associate Dean Coakley and then reviewing the Category 1 proposal, it is clear to me that this will allow the College of Business to increase its level of engagement in graduate education significantly, while also filling a niche in a Business-focused doctoral degree program in Oregon.

The program seems rigorous with higher standards for retention in the program than is required by University policy. Graduates will be required to defend a research-based dissertation with scholarly publications resulting from the work that will bring visibility to the College and the program. Having a firm commitment for funding to support the necessary personnel and infrastructure will be critical to program success. Hence, it will be important to have a letter from central administration indicating that support for this program will be forthcoming.

Assuming that the above points are addressed, and the minor edits that I provided to you over the phone, I support moving forward with this proposal. It would be a significant addition to graduate programs at the University and to the College of Business. If I can assist you in ensuring its success, please don't hesitate to ask.

November 5, 2012

Ms. Ilene Kleinsorge

Re: College of Business Doctoral Program

Ilene:

I was interested to learn that OSU's College of Business does not have a Doctoral program. If someone had told me that earlier, I would have probably argued with them, but I now discover that I would have argued in ignorance. It is disheartening to me that OSU is the only Pac-12 school that does not offer a COB doctoral degree, and that the COB is the only college on the OSU campus that does not have a doctoral program within its core. I am a proud OSU alum, but when I see that OSU has fallen behind other (lesser) institutions, I scratch my head in dismay.

OSU's COB needs to move forward with its plans for a doctoral program. I can see many advantages including:

- Attracting qualified, high-achieving faculty.
- Providing additional instructors and instructor support for a growing COB student population.
- Improving the educational opportunities for OSU students.
- Increasing OSU's status and reputation within the business community

As an employer, I am interested in hiring the best and brightest students that I can, and I always look towards OSU student graduates first. Adding a doctoral program will improve the COB in many ways and will help to enhance student preparedness when they graduate.

You and your staff have made great strides with OSU's College of Business over the last few years. I know that you can keep the momentum and achieve your goal of finalizing the much needed doctoral program.

Thank you and keep up the good work.

Sincerely,

Rich Jansen

Dear Dean Kleinsorge,

Please let this letter represent my full support and encouragement for the development of a PhD degree in business at Oregon State University. This effort reinforces this university's commitment to education excellence and provides significant opportunity for the future. I strongly endorse moving forward on this program.

Sincerely,

Dave Williams

Dean Ilene Kleinsorge:

I would like to provide a letter of support for your proposed Ph.D. Business program specializing in innovation and commercialization.

As 2013 Chair of the Academy of Management's Entrepreneurship Division I am familiar with the need for scholarly activity and faculty expertise in the areas of innovation and commercialization. Innovation and Commercialization is a relatively new disciplinary specialization within Entrepreneurship and but it is clearly one that is emerging more strongly because it meets the need to better understand these processes as well as the academic demand within universities for faculty expertise in the area of broader Entrepreneurship studies.

We have seen tremendous growth in the number of Entrepreneurship courses offered by colleges and universities in the US during the last few decades. In 1985, studies indicate there were about 250 Entrepreneurship courses offered across all college campuses in the US. Today, more than 5,000 Entrepreneurship courses are now offered in two-year and four-year institutions, with at least 2,000 universities offering at least one course in the area. A recent study by Kabongo and McCaskey (2011) in the Journal of Small Business and Enterprise Development examining Entrepreneurship educator profiles in business programs in the US found that only one-fifth of the faculty members teaching these courses hold a Ph.D. in Entrepreneurship (alone or in combination with another business discipline).

I believe that your program would directly address this increasing demand for new faculty in Entrepreneurship. Further, I think that your proposed focus on innovation and commercialization would be relatively unique and provide a real value added in terms of an important focus within the profession.

I wish you the very best in your endeavors.

Ilene:

Happy New Year. Congrats on a strong proposal. There may be opportunities to work together in the areas you outlined. You have our support.

Would you be willing to support us on another matter? We would like to have one of your faculty - Professor Ping-Hung Hsieh – continue teaching in the Exec MBA in Portland. Any objections?

Best ... Kees

Hi Ilene,

No problem on our end. Good luck! That's very ambitious.

On another matter, I never heard back from either of you regarding our new MS in Supply Chain, so assume neither of you had concerns. The proposal should be at the provost's council by early spring and the degree will launch next year.

Thanks

Scott

December 18, 2012

Dear Dean Kleinsorge:

I am excited to hear that the College of Business at Oregon State University is proposing a doctoral program in Accounting. For the last several years, I have served in the leadership of the American Tax Association (ATA), a section of the American Accounting Association (AAA). My current role is President of the organization. In this capacity, I have been involved in many discussions both within the ATA and with the leadership of the AAA concerning the increasing shortage of academically qualified accounting faculty. The accounting faculty at OSU are recognized for their scholarship and leadership in the profession, and thus, are well positioned to develop a first rate doctoral program. Given the alarming demand for quality faculty facing our discipline in the near future, I enthusiastically encourage you to support their proposal.

I hope that you will further consider a concentration in the area of taxation. I believe this is an area with a unique opportunity to carve a niche. Tax has long been an area of concentration in many doctoral programs. However, we increasingly see tax students focus their research efforts in the area of financial accounting. To some extent, this is because financial accounting often better aligns with the research interests of the doctoral supervising faculty. The result is an even more pronounced demand, and reduced supply of tax faculty.

I believe that doctoral students concentrating in tax have some of the best development and career opportunities available to doctoral students in any business discipline. This is largely because of the supportive membership and targeted programs of the ATA. The ATA understands the need to cultivate future tax faculty and has implemented a variety of programs to support individuals both during their doctoral studies and through the early years of their career. ATA programs include an annual doctoral consortium, dedicated research sessions at research conferences, travel support, and a committee charged with addressing the concerns of new faculty. Oftentimes, doctoral students serve on ATA committees specifically identified as appropriate and conducive to their development. For example, they may be included on committees responsible for selecting research papers for conference sessions. Through this involvement, doctoral students begin to build a network of colleagues early in their career. Beyond these formal programs, the ATA provides an informal network of recognized faculty

widely known for their willingness to reach out and provide the mentorship so important to a successful academic career.

Again, I hope that OSU chooses to implement an accounting PhD program, particularly one that supports students interested in pursuing a tax concentration. Please feel free to contact me if I can provide additional information (817-726-8575, s.callaghan@tcu.edu).

Regards,

Dear Professor Moore:

The following is a letter in support of your planned doctoral program in accounting at Oregon State University. As Accounting Department Chairman and former Associate Dean at Idaho State University, I am keenly aware of the shortage of academically qualified Ph.D. candidates in all areas of accounting. This is the third consecutive year that we have had open positions, sometimes multiple open positions, for qualified Ph.D. graduates in accounting. Our experience has been that the applicant pool is shallow and good candidates entertain multiple offers. At present we will annually have openings for qualified candidates for the foreseeable future. Moreover I am quite active with AACSB and often serve on accounting accreditation teams. Far more often than not I hear that the accounting programs I visit have serious difficulty finding qualified Ph.D. candidates. I've come to the opinion that finding and hiring qualified Ph.D. candidates is one of the most significant challenges faced by accounting program chairs at most universities.

Idaho State University is a member of the academic community with a balanced teaching and research mission. All improvements in the supply of doctoral graduates in accounting in the Pacific Northwest would greatly benefit the quality of our program. It would give us the opportunity to attract more, better qualified faculty and in turn help us to maintain the level of rigor and contribution essential to the accounting professions.

Please let me know whenever I can be of assistance in the support of your proposed program. It would be a pleasure to aid it its success.

Very truly yours,

Robert R. Picard, Ph.D., CPA (inactive)
Professor and Chair

Subject: Liaison request re: OSU Space Committee

Hello Jean -

I am one of the accounting professors in the College of Business (COB), and I am currently serving the role of Director for PhD Program Development as we work toward the creation of a doctoral program. The program will initially focus in two areas: **accounting** and **innovation/commercialization**.

The CAT-1 proposal for the new graduate program (attached) is complete and has been approved by the COB. It is now making its way through the various University-level committees, and Academic Programs Committee recommended that I liaison with the chair of the OSU Space Committee to make sure that you do not see any problems with the proposal from a campus space standpoint. I sent the proposal to Anthony Wilcox last month, but Gary Beach recommended that I send to you as well since you are the new chair.

I don't really know (fully) how the process with all the OSU committees works, but for what it's worth, the Academic Programs Committee noted that only a liaison comment from the committee chair was required for their purposes.

At any rate, would you mind looking over the proposal and sending me your comment on whether you see issues with it from the perspective of the Space Committee? I would be happy to provide further details about the program via either e-mail or a telephone conversation if that would be helpful.

Thanks very much for your consideration!

Have a great day!
Jared

**New Graduate Degree Program Proposal:
Doctor of Philosophy (PhD) in Business
Administration
with
Innovation / Commercialization Option
Accounting Option**

Oregon State University
College of Business
December 2012
Proposed Effective Term: Fall Term 2014 (201501)
CPS Tracking #85547

Executive Summary

This Full Category I proposal is for the establishment of a new degree program at OSU identified as a Doctor of Philosophy (PhD) in Business Administration. The program will offer two graduate options: Innovation / Commercialization and Accounting. The Innovation / Commercialization option will extend the current Master of Business Administration (MBA) program with its focus on developing and commercializing new technologies. The Accounting option will primarily emphasize tax. The primary objective of this degree is to prepare its graduates for careers in research and teaching at research-oriented colleges and universities. Accordingly, the program is designed to provide all students (regardless of option) with strong training in discipline-specific research, methods, and teaching to set them up for success in the market and throughout their careers in academia. The program is also designed with a flexible structure to facilitate expansion to emphasize other business disciplines in the future.

As a leading research institution, doctoral education is at the heart of OSU's mission. Unlike other OSU land-grant peer institutions and PAC-12 universities, OSU offers no doctoral degree focused on business. The proposed program will provide OSU students with a terminal degree program in business. Further, the proposed program will help to address a well-documented shortage of academically qualified (i.e., PhD) business faculty that has developed over the last two decades and is expected to worsen in years to come. This shortage is evident in both areas of study on which the options in the PhD program will focus but is particularly acute in Accounting. Within Accounting, the shortage is most severe in the areas of tax (the primary focus of the Accounting option) and audit, so much so that the Accounting profession has invested significantly in programs aimed at addressing the currently unmet demand.

The PhD program will leverage existing resources (e.g., faculty, data, library, etc.) but will also require significant additional investment, from both the College and the University. Upon approval, the PhD program will begin in fall of 2014.

Innovation / Commercialization Option
Accounting Option

Oregon State University
College of Business
CPS Tracking # 85547
December 2012

1. Program Description

a. Proposed CIP number: #520201

CIP # 520201

Title: Business Administration and Management, General

Definition: A program that generally prepares individuals to plan, organize, direct, and control the functions and processes of a firm or organization. Includes instruction in management theory, human resources management and behavior, accounting and other quantitative methods, purchasing and logistics, organization and production, marketing, and business decision-making.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

b. Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.

This proposal is for the establishment of a new degree program at OSU identified as a Doctor of Philosophy (PhD) in Business Administration. The program will offer two graduate options: Innovation / Commercialization and Accounting. The Innovation / Commercialization option will have its roots in Strategy / Entrepreneurship but will also draw heavily from Marketing and Management (i.e., organizational behavior) as well. The Accounting option will draw heavily from Finance in addition to its base focus and will emphasize tax (primarily) and financial accounting. The primary objective of this degree is to prepare its graduates for careers in research and teaching at research-oriented colleges and universities. Accordingly, the program is designed to provide all students (regardless of option) with strong training in discipline-specific research, methods, and teaching to set them up for success in the market and throughout their careers in academia. The program is also designed with a flexible structure to facilitate expansion to emphasize other business disciplines in the future.

The program will consist of approximately two years of course work for the typical student, followed by two to three years of dissertation work. Quality control and training measures including a written comprehensive exam, an oral preliminary exam (i.e., dissertation proposal defense), an oral dissertation defense, and a teaching requirement will also be part of the curriculum.

As a leading research institution, doctoral education is at the heart of OSU's mission. Unlike other OSU land-grant peer institutions and PAC-12 universities, students at OSU have no doctoral degree focused on business. The proposed program will provide OSU students with a terminal degree program in business, extending the graduate programs that already exist in the College of Business (COB); specifically, the MBA and Master of Business Administration and Accountancy (MBAA) degrees. The proposed program will provide doctoral business education that is unlike other programs in the region (especially the Innovation / Commercialization option) and that addresses a critical shortage in the academic market (especially the Accounting option).

- Proposed Effective Term: **Fall Term 2014 (Banner: 201501)**

c. Course of study – proposed curriculum, including course numbers, titles, and credit hours.

PhD Program Courses

The PhD program will utilize graduate-level courses both within and outside the COB. Most of the COB courses will be newly created, and all of the non-COB courses already exist. Students in both of the options (Innovation / Commercialization and Accounting) will require training in economics and econometrics.¹ Therefore, most of the necessary non-COB courses will be those already offered by the Agricultural and Resource Economics (AREC) department in the College of Agricultural Sciences and already approved for its Applied Economics program. Course work within the COB will consist primarily of doctoral seminars. While most of these doctoral seminars will focus on discipline-specific research and thus apply to only one of the options, three will be required for all students completing the PhD program, regardless of option.

Table 1 summarizes the new courses to be created for the PhD program and provides a sample of non-COB courses expected to be most commonly taken by COB doctoral students. BA 650, BA 660-664, and BA 690 are the discipline-specific research seminars that will make up the core of the Innovation / Commercialization option. ACTG 620-623 and BA 640-642 are the discipline-specific research seminars that will make up the core of the Accounting option. All PhD students will be required to take BA 611, BA 613, and either BA 612 or DHE 607. Of particular note, BA 612 and DHE 607 are research foundations courses that contain (or will contain) a significant ethics component. AEC 512, 513, 523, 625, and 626 represent the bulk of the economics and econometrics training that students in the two options will need and thus will be the non-COB courses most commonly taken by COB doctoral students. However, students may take other courses in economics (AEC or ECON), statistics (ST), or other areas instead or in addition as deemed appropriate by their doctoral committee and the PhD Program Director to meet the program of study requirements (summarized in Table 2).

Basic Course of Study

Students will be required to complete a minimum of 110 quarter credit hours beyond the bachelor's degree. These 110 credit hours will be spread across four broad categories as shown in Table 2. The courses used to satisfy the requirements in each category will be a function of the student's area of study.¹ Where specific course requirements are absent, courses will be determined by the students, their doctoral committee, and the PhD Program Director. The course work portion of the program of study requirements will take approximately two years to complete for a student coming in with a business Masters degree and approximately three years for a student coming in without one.

¹ For purposes of this proposal, the term "option" refers to a (transcript visible) specialization within the Business Administration major that is rooted in some specific business discipline and has some distinct course requirements. The term "area of study" refers to the specific business discipline itself. For example, the Accounting option includes a core of courses in both Accounting and Finance. However, "area of study" courses for the Accounting option consist only of Accounting courses. In other words, "area of study" is a more specific term than "option."

Table 1: PhD Program Course Summary (All New Courses Plus Anticipated Most Commonly Taken Existing Courses)

Course Number	Course Name	Credit Hours	College	New Course
BA 601	Research and Scholarship	1-16	Business	X
BA 602	Independent Study	1-16	Business	X
BA 603	Thesis / Dissertation	1-16	Business	X

As discussed above, the program is designed with a flexible structure to facilitate possible expansion to emphasize other business disciplines in the future. The “Basic Program” requirements, in particular, are designed to acknowledge that different business disciplines rely on different sets of fundamental knowledge in terms of both theory and research methodology. For example, Accounting, Finance, and Strategy / Entrepreneurship generally (but not always) require heavier training in economics and econometrics whereas Management (i.e., organizational behavior) and Marketing generally require heavier training in psychology and/or sociology and experimental and/or qualitative research methodologies. Such a flexible structure ensures that the program of study for all students can be appropriately tailored to their option (i.e., populated with relevant courses) regardless of discipline.²

The “**Basic Program**” requirements are designed primarily to establish foundational research methodology skills and theory-based knowledge to prepare students for their discipline-specific doctoral research seminars. In addition, the teaching effectiveness component will serve as an introduction to teaching issues and best practices to prepare students for their subsequent teaching assignments during the program (both assistantships and stand-alone courses).

² Such variation in program requirements across business disciplines is common in a business PhD program. As examples, the University of Oregon (http://lcb.uoregon.edu/App_Aspx/Phd.aspx), the University of Washington (<http://www.foster.washington.edu/academic/PhD/Pages/PhDProgram.aspx>), and Arizona State University (<http://wpcarey.asu.edu/masters-phd.cfm>) all offer PhD degrees in Business with discipline-specific specializations. In all three cases, fundamental theory and methodology course requirements / expectations vary across disciplines.

- The Economics and Behavioral / Social Sciences requirements will provide students with a theoretical base upon which to build. Every student will be required to take at least one graduate-level course in each category, and for purposes of the program, economics courses (AEC and/or ECON) may be used to satisfy both. Although students in the two options will generally satisfy these requirements with economics courses offered through AREC (see Table 1), courses offered by other programs (e.g., psychology (PSY), sociology (SOC), economics (ECON), etc.) may also be used as deemed appropriate by the student's doctoral committee and the PhD Program Director, particularly as the PhD program expands to emphasize other disciplines.
- The Quantitative Methods requirements will equip students with the basic statistical and analytical tools necessary to conduct research studies. Two courses required for all doctoral students (BA 613 and either BA 612 or DHE 607) will satisfy part of these requirements, and the remaining credit hours will be filled with other graduate-level research methods courses as deemed appropriate by the student's doctoral committee and the PhD Program Director. Although students in the two options will generally satisfy these requirements with econometrics courses offered through AREC (see Table 1), research methods courses offered by other programs (e.g., statistics (ST), psychology (PSY), economics (ECON), human development and family sciences (HDFS), etc.) may also be used, particularly as the PhD program expands to emphasize other disciplines.
- The teaching effectiveness requirement will provide students with basic teaching skills (e.g., course and syllabus development, classroom delivery techniques, definition and assessment of learning outcomes, performance evaluation, etc.) and exposure to common teaching pitfalls. This requirement will consist of two 1-credit seminars (BA 611) offered during the first two terms of the doctoral program. All students will be required to take these seminars.

The “**Advanced Program**” requirements comprise the discipline-specific research core of the PhD program and graduate-level courses that directly support that core. Each option will have a set of doctoral seminars that is required for every student in the option. In addition, students will take courses that directly relate to the material central to their option as deemed appropriate by their doctoral committee and the PhD Program Director.

- The “Option Requirements” category consists of courses that are in the student's area of study, including a minimum of 9 credit hours of doctoral seminar courses. The “Other Courses” subcategory will generally contain three independent study (BA 602) credits related to a required “pre-comprehensive exam paper” (discussed below in “Additional Program Requirements”) plus some combination of additional doctoral seminars (as each option may require a different number) and other courses in the student's area of study. For the two options, the required doctoral seminars within the core area of study are as follows:
 - o Innovation / Commercialization: BA 660, 661, 662, 663, and 664
 - o Accounting: ACTG 620, 621, 622, and 623

To the extent that the “Option Requirements” category (15 credit hours total) is not completely filled with the required doctoral seminars and the “pre-comprehensive exam paper” credits, students may fill out the category with other graduate-level courses in their area of study. These courses may consist of electives taken during the PhD program and/or courses taken as part of a previously completed graduate program (i.e., Masters or PhD).

- The “Related Course Work” category consists of graduate-level courses that support the material central to a student’s option. These courses may be in the student’s area of study or in other related business disciplines as deemed appropriate by the student’s doctoral committee and the PhD Program Director. For example, related course work in the two options may consist of (but is not limited to) courses in the following areas:
 - o Innovation / Commercialization: Marketing, Accounting, Finance, Information Systems
 - o Accounting: Finance, Information Systems, Management, Marketing

The “**Additional Courses to Fulfill PhD Requirements**” category consists of all graduate-level courses applied to the 110 credit hour requirement beyond those used to satisfy the “Basic Program” and “Advanced Program” requirements. This category may consist of courses taken during the PhD program and/or courses taken as part of a previously completed graduate program (i.e., Masters or PhD) as deemed appropriate by the student’s doctoral committee and the PhD Program Director.

Consistent with OSU guidelines, a minimum of 36 quarter credit hours of “**Dissertation / Research**” will be required for the PhD program. These hours may begin as early as the student’s second year in the program and will continue until the student’s last term (i.e., once the dissertation is completed to the satisfaction of the student’s doctoral advisor and committee).

Additional Program Requirements

In addition to the program of study requirements previously discussed, students will be required to satisfactorily complete the following:

- All students will be required to complete a “**first summer research paper**” during the summer between their first and second year in the program. The purposes of this research paper are 1) to give students some initial experience with taking a research project from start to finish, 2) to provide feedback to students following their first year in the program, and 3) to serve as a preliminary comprehensive exam that all students must satisfactorily complete to remain in the program. The paper will be completed under the supervision of the student’s doctoral committee (led by the student’s doctoral advisor) and can take the form of an original research project or a replication of an existing study. Students will be required to present this summer paper in a “brown bag” research workshop during the fall term of their second year in the program.
- All students will be required to complete a “**pre-comprehensive exam paper**” during the term preceding the written comprehensive exam (discussed below). The purpose of this paper is to help students transition into the dissertation phase of the PhD program as course work comes to a close. The paper will be administered as an independent study (BA 602) class under the supervision of the student’s doctoral advisor and will result in three credit hours usable toward certain program of study requirements as discussed above. It can take any of a number of forms, including a comprehensive literature review, a preliminary proposal of a dissertation topic, a detailed analysis of multiple potential dissertation topics, etc., but is meant to be a first step in the student’s dissertation process.
- All students will be required to pass a **written comprehensive exam** at or close to the completion of course work. This exam will test students’ mastery of the subjects covered during the course work portion of the program (i.e., Basic Program,

Advanced Program, etc.). Because different business disciplines rely on different sets of fundamental knowledge (as discussed above), this exam will generally be designed and delivered in the context of students' specific discipline.

- Consistent with OSU guidelines, all students will be required to pass an **oral preliminary exam** sometime after the completion of course work and after passing the written comprehensive exam. This oral exam will provide a follow-up test of students' mastery of the subjects in their area of study and will also be the forum through which students defend their dissertation proposal.
- Consistent with OSU guidelines, all students will be required to **orally defend their dissertation**. This defense will occur during the student's final term in the program. Students must pass the written and oral preliminary exams to be eligible to defend their dissertation.
- All students will be required to **teach a minimum of four stand-alone class sections**. The purpose of this requirement is to provide students with the opportunity to sharpen their teaching skills while simultaneously building a portfolio of teaching experience. These class sections may occur in the summer or during the school year, but at least two of the sections must be during the school year. The exact timing of these class sections for each student will be determined by the student, his/her doctoral committee, and course availability and will be arranged using class scheduling processes already in place in the COB.

Typical PhD Program Student Experience

Table 3 summarizes a typical student's path through the PhD program. Although not a requirement, we anticipate that the typical student will come into the program with a business Masters degree; Table 3 is built according to this assumption.³ Table 4 applies the program of study requirements shown in Table 2 to the course work shown in Table 3 to illustrate generally how a typical student could meet the credit hour requirements in each of the categories of courses and in total.

Although some students may complete the PhD program in four years, we anticipate that the typical student will take five. As shown in Table 3, once course work and the written comprehensive exam are completed, the student will move into the "dissertation phase" of the program, during which the student will register only for thesis / dissertation credit hours (BA 603) and work toward building his/her dissertation project. At whatever point the student's doctoral committee deems the dissertation project to be at a sufficiently developed stage, the student will take the oral preliminary exam, during which he/she will defend his/her dissertation proposal. Once the dissertation project is completed, the student will orally defend it, completing the final requirement for the doctoral degree.

In addition to the activity shown in Table 3, all students (including the typical student) will teach four sections of stand-alone classes at some point during the program. As discussed above, the exact timing of these teaching assignments will vary by student and will be driven primarily by student preference and staffing needs. However, we anticipate that the typical student will teach one section in each of his/her first two summers and one section during each of two non-summer terms during his/her

³ Students entering the COB PhD program without a business Masters degree will need to take additional courses to satisfy the program of study requirements shown in Table 2.

dissertation phase of the program (in order to meet the requirement discussed previously that two of the sections taught be during the academic year).

d. Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).

The PhD program will be delivered on the OSU Corvallis campus using processes already in place within the COB regarding course scheduling and the use of technology.

e. Ways in which the program will seek to assure quality, access, and diversity.

The PhD program will utilize well-established processes in place in the College of Business for acceptance into the MBA and MBAA programs plus new processes to account for the competitive nature of admissions into the PhD program. We will recruit for the PhD program from within Oregon, nationally, and internationally. A committee of faculty in each option (i.e., Innovation / Commercialization and Accounting) will review applications each winter and select finalists based on a combination of factors, including grade point average, GMAT score, work experience, and evidence of intellectual curiosity and commitment to educating others (via a personal statement). Finalists will then be subjected to an on-campus or telephone interview, after which the faculty committee in each option will select students to admit (about five total per year, on average). We believe that this admissions process and the related entrance requirements (discussed in more detail in Appendix A) will help to ensure that the students in the program are diverse and of the highest quality possible. Also see the discussion in Section 5 about outcomes and quality assessment.

f. Anticipated fall term headcount and FTE enrollment over each of the next five years.

We anticipate accepting about five highly qualified students into the PhD program each fall with the expectation that, ultimately, approximately 25 students will be in the program at any given time. The program is designed to move students through the coursework quickly (about two years for a student entering the program with a business Masters degree) with an additional two to three years for the dissertation research and writing.

g. Expected degrees/certificates produced over the next five years.

As with all PhD programs, we anticipate that there will be some attrition in the program, although we will devise systems of support and close mentoring to help students meet their educational goals on a timely basis. We expect that by the fifth year after initiation of the program (i.e., 2019-2020) we will consistently award about five degrees per year.

h. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

Students will be recruited for the PhD program from within Oregon, nationally, and internationally and thus will be a combination of residents and non-residents. We anticipate that COB PhD students will come from a variety of backgrounds (e.g., cultural, professional, etc.), with many returning to school for further education after spending time as professionals. Accordingly, COB PhD students will be a mix of

traditional and nontraditional students. We expect that all COB PhD students will be full-time students.

i. Adequacy and quality of faculty delivering the program.

Faculty delivering the requirements for the PhD program will be primarily the same faculty who now provide instruction and mentoring for the MBA, MBAA, and COB undergraduate programs. Similar to our existing graduate programs, the PhD program will draw from faculty across the COB, particularly in the areas of Strategy / Entrepreneurship, Accounting, Finance, Marketing, Management, and Global Business Analysis. Faculty across all business disciplines routinely demonstrate excellence in research, with at least 111 studies published in peer-reviewed discipline-specific journals over the last five years, at least 47 in top-tier journals.⁴ COB faculty also excel in area of student success and learning. In the past five years COB faculty have won University-level awards for contributions toward internationalization of the University (Ping-Hung Hsieh, 2012), teaching excellence (Don Neubaum, 2011), and teamwork toward student learning and success (Marketing faculty, 2011; Accounting faculty, 2008). The COB's accreditation was renewed in 2010. Below is a list of current tenure/tenure-track business faculty available to serve on doctoral committees in the PhD program:

Accounting

Roger Graham (Prof)
Jared Moore (Assoc Prof)
Chris Akroyd (Asst Prof)
Huichi Huang (Asst Prof)
Kuan-Chen Lin (Asst Prof)
Bret Scott (Asst Prof)

Business Information Systems (BIS)

Rene Reitsma (Assoc Prof)
Byron Marshall (Assoc Prof)
Bin Zhu (Asst Prof)

Finance

Raymond Brooks (Prof)
Prem Mathew (Assoc Prof)
Jimmy Yang (Assoc Prof)
Dave Berger (Asst Prof)
John Becker-Blease (Asst Prof)

Global Business Analysis

Ping-Hung Hsieh (Assoc Prof)
Nancy King (Assoc Prof)
Zhaohui Wu (Assoc Prof)
Yusoon Kim (Asst Prof)

Management

Erik Larson (Prof)
David Baldrige (Assoc Prof)
Jeewon Cho (Asst Prof)
Keith Leavitt (Asst Prof)
Pauline Schilpzand (Asst Prof)
Michele Swift (Asst Prof)

Marketing

James McAlexander (Prof)
Hal Koenig (Assoc Prof)
Michelle Barnhart (Asst Prof)
Colleen Bee (Asst Prof)
Marina Puzakova (Asst Prof)

Strategy / Entrepreneurship

Don Neubaum (Assoc Prof)
Jiyao Chen (Asst Prof)
Robert Garrett, Jr. (Asst Prof)
Todd Moss (Asst Prof)
Alex Vestal (Asst Prof)

⁴ Unlike Engineering and other sciences, pursuit of grants is not a common scholarly activity for business academics. Accordingly, publication of scholarly work (generally discipline-specific research) in respected peer-reviewed journals is the primary metric upon which a business academic's research activity is evaluated.

Although we believe that we can likely provide an excellent education for an additional five to six PhD students each year currently, the MBA, MBAA, and undergraduate programs in the COB are growing rapidly and are expected to continue growing. Because we are proposing a new program in addition to the expected growth in our existing programs, delivery of high quality courses and mentoring requires an investment in new faculty, especially in the areas of Strategy / Entrepreneurship, Accounting, Finance, and Marketing (see Section 7a). New faculty will bring expertise in a specialty area that contributes to student success in the PhD program.

j. Faculty resources – full-time, part-time, adjunct.

Each student in the PhD program will be mentored and advised by a tenure/tenure-track business faculty member on the graduate COB faculty (see item i. above) whose expertise is in the student's option (e.g., Innovation / Commercialization, Accounting). PhD program courses will be taught almost entirely by tenure-track business faculty, although certain courses may draw from non-tenure-track business faculty (i.e., BA 611) and/or faculty in the School of Design and Human Environment (i.e., DHE 607). Further, as discussed in item c., certain courses in the program will draw from faculty in other programs and colleges such as Applied Economics (e.g., AEC 523, AEC 512, AEC 513, etc.) and Statistics (e.g., ST 511, ST 551, etc.).

k. Other staff.

The PhD program is currently staffed with a part-time Director of PhD Program Development who is appointed by the COB Dean and is responsible to the Dean and the Associate Dean for Research. Initial responsibilities for this position consist primarily of managing the proposal and implementation processes for the PhD program. Once the program is implemented, the title for this position will change to PhD Program Director, and its responsibilities will shift to management of the program (e.g., budget, head advisor for students, student recruitment, communications, and representing the program on campus and in the community). Distribution of work load includes approximately .25 FTE as Director of PhD Program Development / PhD Program Director and .75 FTE as a COB business faculty member responsible for teaching, scholarship, and service.

The MBA program will provide administrative assistance for the PhD Program.

l. Facilities, library, and other resources.

PhD students will require access to data, research labs, etc. that are necessary to conduct research. Research in the two options relies heavily on archival data, which requires subscriptions to research databases. The COB already subscribes to many of the databases required for the two options, although additional investment in databases will be required. PhD students will also require access to the major academic journals in their field through the OSU library. The library currently subscribes to most of the major journals required for the two options, although some additional journal subscriptions will be necessary as well to move closer to the level of access that is standard at a PhD-granting business school. The library outlines suggestions for these

additional subscriptions in its evaluation. Finally, each PhD student will be provided with office space, computer access, and necessary software licenses (e.g., for statistical packages). The office space needs have already been incorporated into the plans for Austin Hall, which is scheduled to open in fall 2014 (see Section 7b).

m. Anticipated start date:

Fall term 2014.

2. Relationship to Mission and Goals

a. Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.

OSU's mission statement is: *As a land grant institution committed to teaching, research, and outreach and engagement, Oregon State University promotes economic, social, cultural and environmental progress for the people of Oregon, the nation and the world. This mission is achieved by producing graduates competitive in the global economy, supporting a continuous search for new knowledge and solutions, and maintaining a rigorous focus on academic excellence, particularly in the three Signature Areas: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress.* OSU's vision is: *To best serve the people of Oregon, Oregon State University will be among the Top 10 land grant institutions in America.*

<http://oregonstate.edu/main/mission>

The College of Business and its programs support the OSU signature area of distinction: *Promoting Economic Growth and Social Progress.* The College of Business's mission statement is: *The College of Business provides internationally recognized research-based education that prepares profession-ready graduates who will lead in an innovation economy.* <http://business.oregonstate.edu/about/mission>

As a leading research institution, doctoral education is at the heart of OSU's mission and its ambition to be one of the top-10 land-grant institutions in America. All of the colleges on campus currently offer PhD degrees in their core areas except for the COB.⁵ A PhD degree offering by the COB will contribute directly to the mission of the University in at least four ways.

- First, a stated initiative toward accomplishing the first Phase II goal in OSU's strategic plan is to *"Raise the profile of graduate education at OSU by repositioning existing programs and introducing targeted new programs to support OSU's three signature areas, and increasing professional and graduate programs to 25 percent of all enrollments."* A PhD program in the COB will contribute to this initiative, particularly in light of the fact that (as mentioned

⁵ The University Honors College (UHC) also does not offer a PhD degree. However, the UHC focuses only on undergraduate education, offering an honors degree that "attaches" onto a student's undergraduate major. Therefore, the UHC is not applicable to the discussion about doctoral education at OSU.

above) the COB is currently the only college on campus that does not offer one in its core areas.

- Second, doctoral programs represent a commitment to and an investment in research excellence, thereby generating positive reputational capital. Such a commitment and a strong standing in the academic community are crucial in the effort to attract and retain high-achieving faculty, which is another stated initiative toward accomplishing the first Phase II goal in OSU's strategic plan. It is often the case that upon entering the job market, graduates of high-ranking business doctoral programs and experienced business faculty at high-ranking institutions will dismiss business schools that do not offer a PhD program, labeling them "teaching schools" that do not value research. Offering a doctoral program in the COB will broaden the pool of high-achieving faculty available to OSU and enhance our ability to attract and retain such faculty.

Our anticipated PhD program has already had an impact in this area. The COB has hired multiple high-achieving faculty members since last year (2011-2012), and every one has noted the PhD program as a significant attraction to OSU. Included in this group is a senior faculty member in Accounting, one of the six faculty lines directly associated with the program (see Section 7a), who cited the proposed PhD program as *the* primary draw to the position.

- Third, while the COB faculty are already highly productive in terms of scholarship, the investment in new faculty (i.e., collaborators), research resources (e.g., databases), and graduate assistants associated with the PhD program will help to increase the quality and quantity of research output from the College, further enhancing our standing in the academic community.
- Fourth, part of the land-grant mission of OSU is to serve the people of Oregon, the nation, and the world by promoting economic growth. A PhD program in the COB will allow us to better fulfill our responsibility toward this objective by contributing to the pool of business faculty available to provide the business education that is critical for economic growth. As discussed in Section 4 below, a shortage of business faculty exists in the US and is projected to worsen, particularly in Accounting. The COB currently draws from the business faculty pool but does not contribute to it, and the PhD program will enable us to do so by helping to educate next generation of business educators. Another benefit of contributing to the faculty pool is that doing so will improve the standing and expand the "footprint" of the COB (and thus OSU) in the academic community through placement of our graduates at respected universities across the nation and the world.

At a broader level, we believe that great universities have great business schools. Virtually every discipline in a university has some business application. Our current Integrated Business Plan process in the MBA program provides evidence of the

relevance of business across a university campus.⁶ Further, in addition to contributing to knowledge generation through scholarship activities, business schools provide value to a university in multiple ways through their connections with the business community (e.g., fundraising, placement of graduates, etc.). Accordingly, a university benefits significantly in terms of the advancement of knowledge, collaboration with other colleges on campus, and external connections from having a highly respected business school. The great business schools in America tend to have doctoral programs, which is evident by looking at the percentage of universities that offer business doctoral degrees in several of OSU's comparison groups: land-grant peers (90%),⁷ Association to Advance Collegiate Schools of Business (AACSB) aspirant universities (100%), PAC-12 peers (100%), and Business Week's top 50 undergraduate public business schools (approx. 80%).⁸ While we believe the COB is already strong in all of the areas discussed above, we also believe that establishing a PhD program will bring us closer to our aspirant schools (and even peers) in the comparison groups mentioned and will also bring OSU closer to its desired top-10 land-grant university status.

As a final point, we believe that establishing a PhD program will contribute to the COB mission, particularly the provision of "*internationally recognized research-based education*" to our students. First, we believe that good researchers make good teachers. Therefore, we expect that the program will add value to the classroom experience for students in our current undergraduate and graduate (i.e., MBA and MBAA) programs, partially due to current faculty bringing their research into the classroom and partially from the addition of high-achieving new faculty who will do the same. Second, the positive reputational capital generated by the PhD program will enhance the international recognition part of the mission by raising the standing of the COB in the academic community.

b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

See Section 2a above.

c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

The mission and goals of OSU overlap significantly with the mission and goals of the Oregon University System (OUS). Accordingly, much of the general discussion in Section 2a above applies here as well.

⁶ The exit hurdle for the MBA program is an Integrated Business Plan project, for which a team of MBA students devises a plan for the commercialization of a newly developed technology. All of the technologies used for this project are real inventions, and most are inventions by OSU faculty in areas across campus (e.g., Engineering).

⁷ The University of California - Davis (UCD) is the only one of OSU's land-grant peers without a PhD program in its College of Business. However, it should be noted that UCD is part of the University of California system, which does offer doctoral programs in Business at several of its campuses (e.g., Berkeley, Irvine, Los Angeles, San Diego). Further, UCD was originally established as an agricultural extension of the Berkeley campus, the original home of the land-grant mission in California.

⁸ www.businessweek.com/interactive_reports/ugtable_3-20.html

At a more detailed level, in its Annual Performance Progress Report for the most recent biennium (2010-2011), the Oregon University System (OUS) lists “Total number of advanced degrees awarded (master’s, doctoral, and professional)” as a performance measure toward the goal “State economic development: Employability of graduates; Student success.” The report communicates a desire to increase the number of graduate students entering and completing advanced degrees at OUS institutions. With respect to this performance measure, the report states that “Oregon’s ability to compete globally requires a solid foundation of strong graduate programs and advanced degree production.” The report also states that “Oregon needs to reinvest in its graduate programs to remain competitive in the academic marketplace,” and “investments in faculty recruitment and retention, coupled with investment in graduate programs and students are essential to increase advanced degree awards.” Although doctoral programs will naturally account for only a small portion of the total graduate student body, a PhD program in the COB at OSU is consistent with OUS’s goals for graduate education in Oregon.

d. Manner in which the program meets broad statewide needs and enhances the state’s capacity to respond effectively to social, economic, and environmental challenges and opportunities.

We believe the Oregon job market is strong for graduates from undergraduate- and Masters-level programs in Innovation / Commercialization and Accounting. The COB is currently constrained (by capacity) at both levels in its ability to meet demand for our programs, and the PhD program (and the related investment in new faculty) will allow the COB to expand its offerings to better meet statewide needs in these areas.

The need for skills and knowledge in innovation in the state of Oregon has never been stronger. In his fiscal year 2009-2010 state budget, the Governor earmarked \$20.5 million for the Innovation Plan developed by the Oregon Innovation Council (Oregon InC), which includes an innovation-based economic development strategy that will enable Oregon's businesses to stay competitive in a global economy. Oregon InC stressed the need for innovation in traditional industry sectors, such as agriculture and forestry, where innovation can help maintain and increase the number of good, family-wage jobs. The focus on innovation in Oregon speaks to a demand for people with training in Entrepreneurship and was part of the motivation for recently creating a new undergraduate degree program in Innovation Management in the COB.

On the Accounting side, as the economy grows and the number of business establishments increases, more accountants and auditors are required to set up books, prepare taxes, and provide management advice. Increased need for accountants and auditors also arises from a greater emphasis on accountability, transparency, and controls in financial reporting. Evidence of the growing national market demand for accounting graduates is not hard to find. For instance, the US Department of Labor and the AICPA have both recently published data and survey results projecting strong demand for accountants for years to come.⁹ At OSU, we have seen our own

⁹ <http://www.bls.gov/ooh/Business-and-Financial/Accountants-and-auditors.htm#tab-6>;

Reigle, D. 2009. “*Trends in the Supply of Accounting Graduates and the Demand for Public Accounting Recruits*” American Institute of Certified Public Accountants, Inc., New York, NY.

Accountancy program pushed beyond capacity in recent years requiring expansion of course offerings and suggesting that these demand projections are reflective of Oregon as well.

3. Accreditation

a. Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.

The COB and the Accountancy program are accredited by the Association to Advance Collegiate Schools of Business (AACSB). AACSB accreditation was reviewed in 2010 and subsequently renewed (at both levels) through the 2015-2016 academic year. Review of the College and the Accountancy program by the AACSB, including the PhD program, if approved, will occur in two years during the 2014-2015 academic year.

b. Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited. All classes will be taught by terminal degree qualified faculty.

We anticipate no issues regarding the ability of the College or the Accountancy program to maintain accreditation after the PhD program is approved.

c. If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.

The COB offers undergraduate business degrees in Accountancy, Business Information Systems, Business Administration, Finance, Innovation Management, Management, and Marketing. All of these degrees except Accountancy are accredited as a single program by the AACSB; Accountancy is accredited separately. Given our recent reaccreditation, we expect no additional requirements to qualify again for reaccreditation (at either level). The COB business faculty are sufficiently qualified and quality assurance processes are in place in the College.

d. If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.

N/A

4. Need

a. Evidence of market demand.

A well-documented shortage of academically qualified (i.e., PhD) business faculty has developed over the last two decades and is expected to worsen in years to come. Specifically, the AACSB estimated the excess of demand over supply in the US at 1,000 in 2008 and projects that the shortage could more than double in the next decade. Among the most commonly cited reasons for shortfall in business faculty are growth in undergraduate and MBA programs, anticipated faculty retirements, and stunted investment in doctoral programs (in terms of both availability and student financial support).¹⁰ The shortage is further exacerbated by AACSB accreditation standards requiring that total faculty be comprised of at least 50 percent academically qualified faculty (vs. professionally qualified or other non-PhD faculty).

Although the scarcity of PhDs is evident across business disciplines, it is more pronounced in some than others. AACSB data (from a 2011 report) suggest that in terms of both absolute numbers and percentage of total faculty size, 1) anticipated short-term faculty needs, 2) current unfilled positions, and 3) anticipated retirements in the next five years are all consistently higher for Management, which includes Innovation, Entrepreneurship and Strategy, and (especially) Accounting than for other business disciplines.¹¹

As indicated above, the AACSB data suggest that demand is strong for faculty with expertise in Management, including Innovation, Entrepreneurship, and Strategy. Innovation / Commercialization is a new and emerging specialization within the broad scope of the Management discipline, so detailed market data on this specific area are difficult (if not impossible) to attain. However, the roots of Innovation / Commercialization are in Entrepreneurship and Strategy, and although these specific areas have only recently begun to identify and track themselves separately from Management, there is some available information that speaks to the demand for faculty with such expertise. During the past two decades, tremendous growth has occurred in the number of Entrepreneurship courses offered by colleges and universities. In 1985, studies indicate there were about 250 Entrepreneurship courses offered across all college campuses in the US. Today, more than 5,000 Entrepreneurship courses are now offered in two-year and four-year institutions, with at least 2,000 universities offering at least one course in the area.¹² A recent study examining Entrepreneurship educator profiles in business programs in the US found that only one-fifth of the faculty members teaching these courses hold a PhD in Entrepreneurship (alone or in

¹¹ See AACSB International. 2011. "Faculty Focus: Exploring the Number of Faculty Members by Field/Discipline Data Faculty Focus." <http://aacsbblogs.typepad.com/dataandresearch/2011/05/2010-11-salary-survey-new-hire-status.html>

¹² See http://www.kauffman.org/uploadedfiles/entrep_high_ed_report.pdf;

Cone, J. "Teaching Entrepreneurship in Colleges and Universities: How (and Why) a New Academic Field Is Being Built." Kauffman Thoughtbook 2005: pp. 72-79.

combination with another business discipline).¹³ Such findings suggest a need for additional faculty with expertise in Entrepreneurship and related fields (i.e., Innovation / Commercialization).

The business faculty shortage is particularly acute in Accounting, translating into a high level of currently unmet demand for faculty in the discipline.¹⁴ In its 2005 report on the supply and demand for Accounting PhD's, the American Accounting Association (AAA) estimated the demand for new PhD Accounting faculty to be about half met during the 2005-2008 timeframe.¹⁵ Evidence of unmet demand continues beyond 2008 as well. Business schools regularly report having difficulty hiring academically qualified Accounting faculty. Similarly, the AAA provides a clearinghouse placement service each year, and the list of schools with positions routinely outstrips the available candidates.¹⁶ The 2011 AACSB data discussed above tell a similar story, reflecting current unfilled positions and anticipated retirements in the next five years that are notably higher for Accounting (6.6 and 13.8 percent, respectively) than for other business disciplines (average 4.6 and 9.6 percent, respectively, for Finance, Management and Marketing). The shortage of Accounting faculty, most notably in the tax and audit areas, has become severe enough of an issue to attract intervention on the part of the Accounting profession. In 2008, the American Institute of Certified Public Accountants (AICPA) and several of the largest accounting firms and state CPA societies launched the Accounting Doctoral Scholars (ADS) Program, which has the objective of combatting the shortage by providing funding to help and encourage accountants with recent public accounting experience in tax and auditing obtain their doctorates.^{17 18}

The AAA and AACSB data and reports reflect an expectation that the shortage of PhD business faculty will continue. Supporting new business doctoral programs is one of the stated objectives of the AACSB in the effort to mitigate this trend, and one of the objectives of the proposed PhD program is to contribute to this goal.

b. If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).

¹⁷ See <http://www.adsphd.org/index.asp>.

¹⁸ The 2005 AAA report also noted that the faculty shortfall during the 2005-2008 period was especially severe in the tax and audit specialties (27.1 and 22.8 percent of demand met, respectively). As previously discussed, tax is the primary specialty emphasized in the Accounting option of the proposed PhD program.

c. Manner in which the program would serve the need for improved educational attainment in the region and state.

The PhD program will provide OSU business students with an option for a terminal degree. Further, to the extent that the Oregon job market is strong for graduates from business undergraduate- and Masters-level programs (particularly in the Innovation / Commercialization and Accounting areas), the PhD program will allow the COB to expand its offerings to better meet an ever-increasing demand for our programs and graduates. See Section 2d above for further discussion on this point.

d. Manner in which the program would address the civic and cultural demands of citizenship.

The business academic community and the COB have high ethical standards that are continually emphasized and reinforced in our undergraduate, MBA, and MBAA programs and will be emphasized heavily in the PhD program as well.

5. Outcomes and Quality Assessment

a. Expected learning outcomes of the program.

The expected learning outcomes of the PhD program and the assessment strategies (AS) from Section 5b below that apply to each one are as follows. Graduates will:

- a. Develop substantive knowledge in their area of specialization. **(AS: 1, 2, 4, 5, 6, 7, 10, 11, 12, 13)**
- b. Master the analytical and methodological skills required to evaluate and conduct research in their area of specialization and related areas. **(AS: 1, 3, 4, 5, 6, 7, 10, 11, 12)**
- c. Design and conduct original research in their area of specialization. **(AS: 4, 5, 6, 7, 10, 11, 12, 13)**
- d. Demonstrate the ability to communicate the results of their research in a clear and effective manner. **(AS: 4, 6, 7, 10, 11, 12, 13)**
- e. Demonstrate an ability to work effectively with other people from various ethnic, educational, and work experience backgrounds. **(AS: 1, 2, 13)**
- f. Demonstrate an understanding and concern for the high ethical standards in business research, teaching, and service. **(AS: 1, 2, 4, 5, 6, 7, 13)**
- g. Demonstrate the ability to teach college-level courses in their area of specialization. **(AS: 8, 9)**

b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

Assessment strategies (AS) for the learning outcomes listed above are:

1. Annual program of study review with doctoral advisor and PhD Program Director
2. Successful completion of discipline-specific doctoral seminars
3. Successful completion of Quantitative Methods program of study requirements
4. Successful completion of first-year summer paper

5. Successful completion of written comprehensive exam
6. Successful completion of oral preliminary exam, i.e., dissertation proposal defense
7. Successful completion and defense of dissertation
8. Successful completion of teaching requirements, both teaching assistantships and stand-alone course requirements
9. Stand-alone course student evaluation of teaching (SET) scores of an acceptable level
10. Acceptance of original research at a national conference and/or for publication in peer-reviewed journal
11. Presentation of original research and/or discussion of others' research at a national conference
12. Presentation of original research in a workshop at OSU and/or another university
13. Co-authorship on original research projects

The PhD Program Director will keep data on the results of assessment of the PhD learning outcomes plus program-level information such as 1) number of applicants, offers, and acceptances on a yearly basis, 2) student background qualifications (e.g., undergrad/grad degrees, schools attended, GPA, GMAT scores, etc.), 3) retention and graduation rates, 4) post-graduation employment, 5) continued support and funding from the College and University, and 6) results of external reviews. All graduates will also participate in an exit interview with the PhD Program Director to describe their experience with the program – good and bad – as well as suggestions for improvement. Students will also be provided the opportunity to submit anonymous information to the PhD Program Director as appropriate. All of the assessment information listed above will be reviewed biennially in a meeting between the PhD Program Director and the COB Graduate Program Committee. At this meeting, the full assessment package will be discussed in detail to determine if program goals are being met. As evidence is collected that curriculum, program requirements, or any other aspect of the program needs improvement, the PhD Program Director and the COB Graduate Program Committee will move to make necessary changes.

In addition, students in the PhD program must maintain a 3.25 GPA on all coursework. If at any point a student's cumulative GPA falls below 3.25, the student will meet with his/her doctoral advisor and the PhD Program Director to develop an educational plan for addressing difficulties. The student will have one term to raise the GPA to appropriate levels or will face termination from the program. Further, any student who fails (i.e., earns lower than a B- in) more than one course during the program will also face termination from the program. Information about classes taken by students, grades and GPAs, as well as educational plans will be tracked by the PhD Program Director and reviewed annually.

c. Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.

See Section 5b above.

d. Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.

The COB sets expectations for the nature and level of research and/or scholarly activity of its business faculty.¹⁹ With few exceptions, COB business faculty members have PhD degrees from accredited universities and tenure-track positions. Like faculty across campus, PhD program faculty are expected to conduct original research and publish in appropriate disciplinary journals. We anticipate that these expectations for scholarly activity will continue, and we also expect that program faculty will advise and mentor PhD students and involve the students in their research. Program faculty will also be expected to continue their involvement with academic and/or professional associations to ensure visibility of the COB and the PhD program in the academic community. Indicators of success of faculty will include but not be limited to:

- Scholarly productivity in disciplinary and/or interdisciplinary journals
- Participation in national conferences and invited research workshops
- Participation and leadership in relevant committees of applicable academic and professional associations
- Participation on editorial boards and editorship of scholarly journals

6. Program Integration and Collaboration

a. Closely related programs in other OUS universities and Oregon private institutions.

The University of Oregon (UO) offers an established PhD program in its College of Business with concentrations in Accounting, Decision Sciences, Finance, Management, and Marketing. No other school in Oregon offers a PhD degree in business.

b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.

We believe that the PhD program will be more complementary than competitive with UO's program.

First, our PhD program will differ from UO's on a couple of important dimensions. The OSU MBA program currently fosters partnerships with technically-oriented colleges on campus, including Engineering, Agricultural Sciences, Science, and Forestry. Through these partnerships, MBA students create integrated business and commercialization plans around new technologies developed by faculty in these colleges. The Innovation / Commercialization option in the PhD program will leverage these partnerships as well, providing a research extension to the MBA program and a more applied experience for our doctoral students. We view this aspect of the program as a general competitive strength. Further, although there is overlap between the Innovation / Commercialization option in our PhD program and UO's Management concentration in the sense that they

¹⁹ Accreditation is one variable in the determination of these expectations as the AACSB sets research productivity standards for purposes of establishing whether faculty are academically qualified.

are both rooted in Strategy and Entrepreneurship, our program specifically incorporates a Commercialization component, which includes additional marketing-oriented learning objectives. Also see Section 7b below.

Second, as discussed in Section 4, a shortage of academically qualified (i.e., PhD) business faculty has developed over the last two decades and is expected to worsen in years to come. This shortage is evident in both areas of study on which the options in the PhD program will focus but is particularly acute in Accounting. Within Accounting, the shortage is most severe in the areas of tax and audit, so much so that the Accounting profession has invested significantly in programs aimed at reversing this trend. The tax area will be the primary emphasis of the Accounting option because it maps particularly well into the strengths of our Accounting faculty. We believe that this need / strength match constitutes another general competitive strength of our program. Overall, with a high level of currently unmet demand for faculty in both disciplines, especially Accounting, our PhD program will help address a need in the market for academically qualified business faculty.

Potential exists for collaboration between our PhD program and UO's program as applicable and appropriate. For example, the two schools may in time develop joint doctoral seminars and/or research workshops. Further, we believe that the doctoral program may facilitate collaboration between UO and OSU faculty and PhD students on specific research projects. There has been some such collaborative interaction between OSU faculty and UO faculty / PhD students in the past, but the PhD program introduces opportunity to further develop those relationships.

The highest potential for collaboration on campus is with the Applied Economics program. As previously discussed, we expect that our PhD students will take multiple AREC courses as part of the course of study. However, we also expect that a stronger tie with AREC will facilitate some AREC graduate students taking MBA courses that are relevant to their area of interest. Further, we believe the PhD program will facilitate partnership with AREC on joint course offerings, e.g., a potential preparatory "Economics / Math Boot Camp" course that could be jointly taught and would benefit students in both programs. Finally, a stronger tie with AREC through the PhD program would facilitate potential research collaboration between COB and AREC faculty and students.

c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.

N/A; See Section 6b above.

d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.

As discussed above, the PhD program will extend the MBA and MBAA programs already in place at OSU. We do not expect this program to take enrollment away from existing programs (PhD or otherwise) at OSU.

The COB will need to initiate several new 600-level courses, including blanket (e.g., research, seminar), advanced theory, and methods courses. Along with development and delivery of the new courses, success of the PhD program will require that faculty be available as mentors to graduate students, providing research and teaching experience and oversight. This will be in addition to their current teaching, scholarship, and service expectations, which are already high. Faculty who are heavily involved with the PhD program may be less available to serve on exit hurdle (e.g., Integrated Business Plan project) committees for the MBA program. However, with the addition of six new business faculty by the 2014-2015 academic year, we expect to be able to support the PhD program and the targeted expansion of the MBA programs, which are currently limited, in part, due to faculty availability.

As discussed above, the PhD program will interact closely with the Applied Economics program. Enrollment in the relevant AREC classes will increase slightly due to the PhD program. The stronger connection between the COB and AREC will likely also result a slight increase in enrollment for some MBA courses as some Applied Economics students may have interest in taking them to supplement their Economics courses. Finally, the stronger connection between the COB and AREC may also result in AREC faculty serving on COB doctoral committees and vice versa as applicable and appropriate.

7. Financial Sustainability (completed *Budget Outline* pages attached)

a. Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.

The business plan for the first four years of the program after implementation (i.e., beginning with the 2014-2015 academic year) is developed in the Budget Outline Form.

We expect that the costs of implementing the PhD program will be primarily associated with filling six new tenure track faculty lines (~\$1,500,000 per year ongoing including OPE), PhD student research and teaching graduate assistantship stipends / benefits (~\$450,000 per year ongoing), and data resource costs (~\$270,000 per year ongoing).

We propose a funding model in which the costs associated with the PhD program are shared between the COB and University support. The COB is currently funding the Director for PhD Program Development / PhD Program Director position and roughly 45 percent of the necessary data resource costs. In addition, the COB will fund the graduate assistantships for doctoral students, increase its investment in data resources, and make the initial pre-implementation investment in the first two (of the total six) faculty lines associated with the PhD program (one for each option). One of those two lines has been filled (i.e., offer accepted for the Accounting position), and a search is ongoing for the other. We expect that the new faculty will be in place beginning fall 2013.²⁰ Existing staff devoted to the MBA and MBAA programs will assume administrative duties relative to the PhD program (shown as .25 FTE in the Budget

²⁰ We expect that the other four new faculty will be in place starting fall 2014.

Outline Form). We request University support for the remainder of the cost of the program as the creation of a doctoral program in the COB is a priority for the University as well as for the College.

Expanding on a few line items in the Budget Outline Form, in addition to the six new faculty lines discussed above, the “Faculty” line includes the annual stipend for the Director for PhD Program Development / PhD Program Director (approximately \$7,500 per year ongoing). The “Library/Electronic” line includes both database resources and additional journal subscriptions. The database subscriptions will be managed by the COB directly, whereas the academic journal subscriptions will be managed through the library (also see Section 1I). The portion applicable to journal subscriptions is approximately \$17,000 per year ongoing (see library evaluation), and the remainder of the “Library/Electronic” amount relates to data resources. The “Nonrecurring” line relates to the cost of two years of summer research support for each of the six new faculty lines discussed above, which is shared by the COB and the University. Finally, the “Supply and Svcs” line includes basic equipment and supplies (e.g., computers, printing, software licenses, etc.) as well as travel costs (i.e., conferences and research workshops) for faculty, doctoral students, and guest presenters.

Although the success of the program will depend on significant institutional support, we expect that the proportion of PhD program costs covered by COB funds will increase over time. One of the other major priorities of the College at present is to aggressively grow our MBA programs. In addition to providing for instruction and student mentorship for the PhD program directly, the six new faculty lines discussed above will allow us to increase our course offerings in our undergraduate and graduate (i.e., MBA and MBAA) programs, expanding capacity in areas that complement the OSU and COB strategic plans. Growing our current programs, especially the MBA programs, will provide for more tuition revenues, which will be used in part to cover PhD program costs.

b. Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.

Austin Hall, the future home of the COB, is scheduled to open in fall 2014. Partially in anticipation of the PhD program, designated space for a state-of-the-art experimental research lab has been incorporated into the plans for the new building. As discussed in Section 1I above, the plans for Austin Hall also include allocation of office space for doctoral students.

In addition, the COB plans to develop the Venture Accelerator (VA) initiative with the OSU Office for Commercialization & Corporate Development. VA will be a program designed to provide a formal outlet for the creation of commercialization plans for innovations / technologies developed at OSU. One objective of VA is to further advance the OSU strategic plan and COB mission by fostering industry partnerships, attracting high-achieving students, and providing research-based education in Innovation and Commercialization for MBA students. However, VA will also serve as a lab through which to study Innovation and Commercialization processes and will therefore be a valuable resource for PhD students in the Innovation / Commercialization option.

c. Targeted student/faculty ratio (student FTE divided by faculty FTE).

The chair of a given student's PhD committee must be in the student's option (Innovation / Commercialization or Accounting), and other committee members may come from any of several relevant disciplines (e.g., Finance, Marketing, Management, etc.). Faculty participating in the PhD program will do so in addition to their other assignments. If we look at the COB faculty who can serve on PhD committees, we expect about 40 FTE across the COB (those listed in Section 1i plus the six new faculty lines). If we estimate that there will be 25 PhD students in the program at any given time, a rough calculation of the student/faculty ratio is approximately 0.625, which is consistent with the 0.652 ratio for other public PAC 12 schools according to AACSB data. However, considering that other than those in the PhD program options, faculty will not participate in the PhD program at equal rates (some not at all), it is useful to also look at a student/faculty ratio that is based on faculty who will be consistently involved with the program. If we look at the COB faculty who can serve as chairs of PhD committees, we expect 3 to 4 FTE in Innovation / Commercialization and 3 to 4 FTE in Accounting. Using the same estimate mentioned above of 25 students in the program at any given time, a rough calculation of the student/faculty ratio is approximately 3 or 4 to 1.

d. Resources to be devoted to student recruitment.

The COB has well-established resources and staff devoted to graduate student recruitment that will be utilized by the PhD program. In addition, the program will use advertising in standard academic outlets and personal outreach. The interview process will consist of phone interviews plus a small number of campus visits each year. Overall, the annual budget for the recruiting effort is small at roughly \$5,000.

Appendix A: Description of the Admission Criteria and Process for the PhD Program

General OSU and COB admission criteria

The minimum Graduate School admissions requirements for all applicants are as follows:

- a four-year baccalaureate degree from a regionally-accredited college or university, and
- a combined GPA of 3.00 on the last 90 quarter (60 semester) credit hours of graded undergraduate work toward the first baccalaureate degree plus all work completed thereafter,

OR

- a four-year baccalaureate degree from a regionally-accredited college or university, and
- a 45 quarter credit-hour graduate degree from a regionally accredited university.

If the student has completed his or her baccalaureate degree in a country that is a signatory of the Bologna Declaration, then

- A baccalaureate degree of at least three years duration with a B average (equivalent 3.00 on a U.S. 4.00 grading scale) in the last two years, plus all subsequent graded course work,

OR

- A baccalaureate degree of at least three years duration with a two-year (equivalent to 45-quarter credits) graduate degree.

The COB has established the following minimum requirements for the MBA programs that apply in addition to general University and Graduate School requirements for applicants seeking admission to the program.

- A Graduate Management Admission Test (GMAT) minimum overall score of 500 with verbal and quantitative sub scores in at least the 20th percentile range, and an analytical writing score of at least 4.0.
 - o The GMAT requirement is waived if the applicant has completed a 45 (quarter) credit-hour graduate degree from a regionally-accredited university.
- International students must submit the Test of English as a Foreign Language (TOEFL) with the following minimum score:
 - o 575 on the paper-based version,

- 233 on the computer-based version, or
- 91 total, with subset scores of at least 22, on the Internet-based version (iBT).

PhD program admission criteria and procedures

In addition to the OSU and COB graduate program admission criteria discussed above, the PhD program will require a minimum GMAT score of 600.

Once the application deadline has passed for a given year, applications received by the PhD program will be reviewed by the PhD Program Director and a committee of faculty representing the two options (Innovation / Commercialization and Accounting). This review process will result in elimination of applications that do not meet the basic admission criteria and selection of finalists for each option based on a combination of factors, including grade point average, GMAT score, work experience, and evidence of intellectual curiosity and commitment to educating others (via a personal statement). Finalists will then be subjected to an on-campus or telephone interview, after which the faculty committee in each option will select students to admit (about five total per year, on average).

**Unit Responses to Graduate Council Concerns Related to the MS, PhD in
Comparative Health Sciences Category I Proposal #84096**

From: Coakley, James - COB

Sent: Friday, February 08, 2013 4:01 PM

To: Bermudez, Luiz

Cc: McComb, Brenda

Subject: RE: CHS degree

Luiz,

There were a few questions raised at the last Graduate Council meeting that we were hoping you could briefly address on Monday. Sorry for the delay in sending these questions – I left right after the meeting on Monday and just returned last night. These may be more than you can address over the weekend. If so, please just focus on the main issues raised by Dean McComb for Monday and we can schedule a follow-up meeting for the questions below.

Q: The purpose of the program is stated as focusing on whole animals as a distinction. However, the required curriculum does not include a required course focused on animals (for example, animal handling, whole animal experimental techniques, animal models of disease, etc.).

A: This is a graduate program, and animal handling although part of our professional curriculum, is thought maybe not appropriate to a graduate program. My question to you is that, do you and the committee think that animal handling should be made a graduate course and offered to graduate students? If so, we can think about the direction. Regarding the other courses, "Animal Models" is already in place and will be offered for the first time this Spring.

Q: The program seems to have two distinct tracks – one to educate DVM residents and the other to educate graduate students without DVM degrees. It would be helpful to delineate these two options and give details on how they overlap and how they are different.

A: You are correct. The residents ARE REQUIRED to enroll in the MS program, not in the PhD. However, a few of them already expressed their interest in switch to the PhD once it is available. The intent is to offer both options to the two populations of students and have their graduate committee decide on the most appropriate courses to take. We have now in place a very good oversight system by the Graduate Committee of the College that would make sure about the rigor of the individual programs.

Q: If the program is housed in the Graduate School, who will be responsible for coordinating student support?

A: The College was planning to do it, in association with the Graduate School. Either way would be fine.

Q: We would like to see a sample graduate program of student for an MS student who is also concurrently a DVM resident.

A: I will have one for Cyril to bring to the meeting. As the Graduate Council is aware, the requirements of the program have been changed last year, to make it more stringent. Dr Semevolos can help you to understand the changes, but I am much more satisfied with the program now than I was before.

Q: Are the required credits for the MS 45 or 57? The core requirements are 12 credits and the option specific credits are 45 – yet top of page 3 says 45 credits are required.

A: Need to check.

Q: Will the research rotations be required of all MS students, or just the PhD students? If required of MS students, will it impact their time to graduation?

A: As I mentioned above about positive changes, research is one of the requirements for all MS students. All the current students are engaged in research and have to write a thesis. Rotations are not an absolute requirement for the MS students, but can be included in the program if requested by the Graduate Committee.

Q: Faculty sufficiency is always an issue for the Graduate Council. We concur with Dean McComb's suggestion to list all faculty across campus who will be included in delivering the program, and those that will be approved to advise PhD students. Are there sufficient faculties with appropriate expertise to deliver all of the proposed coursework?

A: We concur with the comment. More faculty will be joining the program. Dr Clarke will bring a more updated list of faculties. We do not need additional faculty to deliver courses, but laboratories to train students. Because one of the emphases of the program is the interdisciplinary research, and the adoption of it will be rewarded by the program (help to pay for tuition/stipend) we expect that many more faculty will join it in the future.

Q: Will this degree program impact the access of CVM labs by MCB students?

A: That is not the intent. In fact, the program is complementary to the MCB and is focus on the translational research. We expect that the University will be able to recruit additional students when this program is in place.

We are also working in strategies to recruit students who will bring at least some financial support, and will have small impact in the availability of labs to accommodate students of other programs.

Q: Another Graduate Council focus is a diversity action plan for recruiting. Please provide details on your diversity action plan that ensures you will have a diverse, high quality applicant pool. Is the Comparative Health Sciences MS degree expected to draw from the same pool of prospective students as the Vet Med MS?

A: First, I must clarify that once the program is approved, we plan to terminate the Vet Med MS program. There is no reason to have both. Second, we are working in several strategies to recruit good quality and diverse students, as outlined below:

1. Interested Veterinarian residents that want to pursue academic careers.
2. Veterinarian students with research interest that will be able to do a CVM and MS degree almost in parallel.
3. Students from foreign Universities that we have established close relationships over the past 5-6 years. We have brought some of these students for summer research program at the college and they proved to be excellent.
4. A dual-degree program with Universities in Brazil, currently a work in progress with the International programs and the Graduate School.
5. Students from several different backgrounds through a program being put in place with INTO.
6. Nationwide students that will be attracted by the quality of the program and faculty.

Q: The proposal projects a 10 to 20% expansion in student numbers over the next five years. At full capacity, how many students will the program enroll? Does the quality of the current applicant pool—beyond the DVM residents—support such an aggressive expansion? If not, please give details on how the applicant pool will be expanded while maintaining quality.

A: The answer above explains almost everything. The quality will be maintained by putting in place criteria approved by the faculty, that ensure that only quality students are recruited.

Q: Scholarships are mentioned in the proposal. Please describe what types of competitive scholarships will be available to recruit bright students (section 1h) and if the scholarships will supplement or substitute for GTA/GRA positions.

A: Cyril Clarke will answer it.

Q: How will co-mentoring of students be encouraged? Will a policy be developed to clarify financial and academic responsibility for a student in a co-mentored situation?

A: It will be encouraged by offering financial advantages. We believe that once some faculties are engaged in the process, other will join. Foreign students recruited by the program will only be accepted for interdisciplinary research.

The responsibility will be shared by the mentors, graduate committee and Graduate committed of the college. I am already seeding the share responsibility and accountability in the program. It is crucial, and many times I witnessed this problem in our current programs.

Q: How will the program graduate three Ph.D. students per year starting in the third year of the program assuming that PhD students take an average of five years to complete a program (section 1h)? Five years or longer would seem to be a more realistic timeline for ramping up to three PhD graduates per year.

A: I agree. This is not going to be a fact in the initial years, but may be real after 5 or so years of existence.

It can be modified.

Jim

Jim, please let me know if I responded the questions to your satisfaction. I am cc Cyril, because he will be at the meeting and we are working together on this.

Subject: RE: CHS degree

Hi Brenda. We can certainly do it. The point I would like to make is that although it at the current stage may not be impressive as a multi-department program, it is already multi-disciplinary. Just look at the diversity of faculty interest. And it will be functionally much more multi-disciplinary, due to the incentives we are going to put in place. At this point, the Departments of Microbiology, Nutrition and Animal Science are examining the proposal. What kind of participation we are going to get from them is unknown, but they initiated the process.

I will followed your suggestion, and try to add more faculty in a short time frame.

Thanks Luiz.

I'd also suggest getting more faculty from other departments/Colleges who would agree to be listed in the Cat 1 – it would help the proposal make it through councils I believe.

Subject: RE: CHS degree

Hi Brenda. I am fine with your concerns. We are not saying to anyone to apply to it. The April date was based on initial estimate, and should be removed.

Regarding the faculty, there is support from many more faculty than is explicit in the application, many of them are waiting to see how this develops. We had have consultation from departments and we may consider other tracks in the future. But the important is, this is a work in progress, and should be seen as it. You are aware of tremendous resistance to changes. Everyone recognizes the advantages, but changes are not easy, and do not come without effort.

As an action, we will change the website, and indicate that it is a plan program.

Thanks for your comments.

Subject: CHS degree

Hi Luiz,

Grad Council discussed the Cat 1 proposal for the CHS degree and as a result of that discussion I pulled up your website for the degree program. I know we have discussed this before, but you are already advertising the program. The website indicates that applications be accepted by the Grad School starting in April, but the Cat 1 is not even close to being approved yet. It must pass Grad Council, Curriculum Council, EC, Faculty Senate, and be brought to the OUS Provosts Council, and external review will need to be conducted at that point and then the proposal brought back to OUS PC for a final vote. So there are many steps left in the process. It might be complete by next fall. Or it might not.

Several things concern me. First we are advertising a program that does not exist. Second, I am not sure what we are supposed to do with any applications that come to us. Finally, the Cat 1 does not list a balance of faculty from other colleges and department, rather the vast majority of participating faculty in the program are from VetMed, making this disciplinary program, not an interdisciplinary program – this issue will raise questions with Grad Council as well as with Sabah and me. I had been under the impression that this was more broadly supported by other units on campus.

My suggestion is to take down the website <http://vetmed.oregonstate.edu/graduate-programs> or at the very least indicate that this is a planned program and not an existing one. If you want this to be a Grad School Administered ID program then ensure that < 60% of participating faculty are from any one college and that 3 or more colleges are actively involved. Let me know if you have questions.

brenda

**Graduate Program Review
Department of Botany and Plant Pathology
November 30, 2012**

1. Overall Recommendation:

Expand to Maintain

2. Summary of Findings and Recommendations:

The graduate program of the Department of Botany and Plant Pathology (BPP) was reviewed on Nov. 30, 2012 by a panel composed of external and internal evaluators. The objective of the review was to evaluate the graduate program of BPP, including its relevance to the land grant mission, strength of the curriculum, student quality and success, and productivity and strength of its faculty. The review team concluded that BPP at OSU brings together programs in three subdisciplines core to the mission of a land-grant institution. These are: i) the causes, control, and impact of diseases of important agricultural plants, ii) basic understanding of plant function (genomics, biochemistry, growth and development), and ii) the ecology, biodiversity and evolution of plants in their native environments. BPP addresses several of OSU's "Signature Area of Excellence" areas including "improving human health and wellness," "advancing the science of sustainable earth ecosystems," and "promoting economic growth and social progress".

BPP department attracts high quality students from across the United States and internationally. This graduate program has subdisciplines in ecology, systematics and plant pathology that attract a significant number of students and this is seen by the review team as a strength of the program. Fewer students pursue degrees in "plant function", but these subdisciplines are strengthened by the department's commitment and collaboration with the MCB program. Most students are supported on GRAs or GTAs, and the department's commitment to sustained graduate stipend support was noted by the students as a strength. The review team recommends that the department may want to pursue strategies for increasing international student enrollment. There is also a need to resolve the issue of COS GTAs being supported by departmental grant indirect costs. Student quality is high, with the majority completing their degrees and graduating in a timely manner. Students successfully move to positions appropriate for their training such as university faculty members, scientists at national government laboratories and agencies, scientists at non-governmental agencies, teachers and instructors, postdoctoral scientists, farming, and private practice.

BPP offers core courses in all areas related to their mission including courses in plant health, plant function, ecology, and systematics. Loss of faculty over the past ten years has reduced the diversity of offerings available to students, and students expressed a need for more specialized course offerings. The review team recommends that BPP review its curriculum to address student interests and changing needs.

BPP has faced a major loss in the number of on campus tenured/tenure track faculty over the past ten years. Twelve positions have been vacated due to retirement or departure from the department. BPP has, over this same time period, acquired six positions with only three based on strategic hires.

The department has benefited from excellent recent hires through various opportunities such as Provost hires and interdisciplinary hires that selected BPP as their tenure home, but has been less successful in hiring faculty based on its own strategic planning. The review team recommends that the CAS administration assess the impact of faculty losses over the past ten years and work with BPP to support BPP's strategic priorities in hiring faculty in critical areas including Forest Pathology, Plant Genomics and Computational Biology, Plant Ecology, Plant Systems Science, Plant-Microbe Interactions and Ecology and Evolution of Infectious Diseases.

The review team shares the concern of the BPP faculty of the poor facilities that house the department research and teaching programs in Cordley Hall. The review team recommends that the department and CAS administration address strategies to improve basic infrastructure.

The review team found that BPP contributes significantly to interdisciplinary programs at OSU such as the MCB and biology programs. These contributions have come at a cost to sustaining and expanding departmental programs due in part to BPP not receiving credit for interdisciplinary contributions. The team recommends that OSU and CAS evaluate their system of metrics to ensure that they capture total output and contributions in interdisciplinary programs, and that they award support and positions based on total productivity and contributions by BPP faculty.

BPP faculty are nationally and internationally recognized for their scholarly, academic, and outreach contributions. They are recipients of prestigious national awards and are highly competitive for federal grant funds, a measure of the quality and impact of their programs and of faculty stature and reputation. The department also has core responsibilities for education and outreach on plant diseases critical to the productivity of Oregon agriculture, and BPP's disease diagnostic clinic and its staff are nationally recognized.

3. Detailed findings

A. Introduction

The graduate program of the Department of Botany and Plant Pathology (BPP) was reviewed on Nov. 30, 2012 by a panel composed of external and internal evaluators. The Dean of the OSU Graduate Program, Brenda McComb, chaired the panel sessions with the department. Members of the review team were:

- Margaret Daub, Professor and Dept. Head, Dept. Plant Biology, NC State University (external)
- Susan Harrison, Professor, Dept. of Environmental Science and Policy, UC-Davis (external)
- Mark Mousseaux, Oregon/Washington State Botanist, Bureau of Land Management (external)
- Michael Lerner, Professor, Dept. of Chemistry, OSU (OSU Graduate Council representative)
- Jo Tynon, Associate Professor, Dept. of Forest Ecosystems and Society, OSU (OSU Graduate faculty-at-large)

The objective of the review was to evaluate the graduate program of BPP, including its relevance to the land grant mission, strength of the curriculum, student quality and success, and productivity and strength of its faculty. Lynda Ciuffetti, Head of the Department, provided the evaluation team with a comprehensive self-study document developed by the departmental faculty. During the review, the panel toured facilities, and met with Dr. Ciuffetti, with members of the Graduate Studies Committee, and with faculty, and with graduate students. The team also met with College of Agricultural Sciences Dean Daniel Arp and Associate Dean Stella Coakley. The graduate review was held simultaneously with a review of the undergraduate programs in the department, conducted by a team composed of external and internal participants. The evaluation of the undergraduate program is summarized in a separate report.

This report of the graduate program is organized based on an outline provided to the review team by Dean McComb. Below we provide our assessment of our findings and recommendations.

B. Inputs

1. Fit of the mission of the program and its relationship to the mission of the academic college and University

The Department of Botany and Plant Pathology conducts scholarship, outreach, and teaching and training in disciplinary areas that are central to the mission of all Land Grant Institutions. A core mission of Land Grant Institutions is to conduct fundamental and applied research and to disseminate information needed to strengthen agricultural productivity, to ensure a sustainable and safe food supply, and to protect our environment. Coupled with this mission is a commitment to train the next generation of scientists to ensure continued advances in promoting the land grant mission. BPP at OSU brings together three subdisciplines core to the land-grant mission. These include fundamental and applied programs that address: i) the causes, control, and impact of diseases of important agricultural plants, ii) basic understanding of plant function (genomics, biochemistry, growth and development), and iii) the ecology, biodiversity and evolution of plants in their native environments. As such, the department's mission and accomplishments are not only central to the mission of the College of Agricultural Sciences and to Oregon State University, but are also critical for addressing critically important "Grand Challenges" facing our world today: ensuring a sustainable and safe food supply, protecting our environment, and providing a sustainable source of bioenergy. As noted in the self-study document, BPP addresses several of OSU's "Signature Area of Excellence" areas. These include: "improving human health and wellness," "advancing the science of sustainable earth ecosystems," and "promoting economic growth and social progress". Thus BPP is core to the mission of CAS and OSU. BPP is nationally and internationally recognized for their outstanding faculty and programs, and as such, enhances the reputation of CAS and OSU.

2. Quality of students.

The department attracts high quality students from across the United States and internationally. Over the 2002-2012 review period, approximately half the students pursue studies in ecology and evolution, 40% in plant health, and approximately 10% in plant function.

Ecology and evolution is a strength at OSU, and BPP offers training in specialized areas within these disciplines including plant and fungal systematics, plant-insect interactions, and

community ecology. The Ecology and Evolution program has been recognized for its outstanding research productivity (#4 in US graduate programs in this area in 2005-06). Loss of faculty in this area may be affecting its numerical strength; based on Table 2.3a, it appears that toward the end of the review period (2009-2012), 14 of 61 current graduate students (23%) are in Plant Ecology, while 9 (15%) are in Systematics or Applied Systematics. The overall 10 year average for E&E is higher (48% total students, see Fig 4 in the self-study report).

The Graduate Program in Applied Systematics offered by BPP is designed to provide students with both advanced technical skills in plant systematics and taxonomy, as well as a good foundation in ecology, data analysis, and communication which are skills necessary to function effectively in either private industry or government plant conservation programs. This program leads to a Master's in Applied Systematics in Botany and has an internship component that emphasizes practical experience in-lieu of a thesis. Although not enrolling a large number of students due to the lack of financial support for these students, the program fits an important training niche for plant conservation in the U.S. and needs to continue to serve this important area of plant biology.

The Department of BPP at OSU offers one of the best environments in the western U.S. to pursue graduate study in plant systematics. The OSU Herbarium, is the central university facility in the state for research, instruction, and public service in plant identification and classification. The Herbarium is a modern facility that contains a plant collection of over 330,000 specimens and a mycological collection that exceeds 70,000 specimens. These collections are among the largest in the Pacific Northwest, and they are a major regional, national, and international resource for basic and applied work in plant and fungal systematics. The faculty associated with the OSU Herbarium and the program are nationally and internationally recognized for their expertise in the systematics of vascular plants, non-vascular plants (lichens and mosses) and fungi. This expertise, in combination with other programs in other Colleges at the University (e.g. forestry, statistics, communication), as well as other BPP programs like the Oregon Flora Project, provides students entering the systematics program with an exceptional education opportunity to obtain the skills needed to pursue a successful career in Applied systematics and plant conservation.

The programs in plant health are unique within the state of Oregon, and are nationally recognized. Programs available for graduate student training span from the very fundamental understanding of genomics and molecular biology of host-pathogen interactions, to understanding pathogens and disease at the population level, to programs that prepare students for applied research on plant diseases and disease control. Mentoring of graduate students in plant health is greatly strengthened by the participation of courtesy faculty with expertise in these areas. Although the courtesy faculty do not teach courses in the department, they have mentored approximately 25% of the students trained in plant health over the past ten years and thus play an important role in sustaining the strength of the plant health graduate program. Graduate training in this area is greatly enhanced by the outreach mission of the department including the resources and expertise of the OSU plant disease clinic, the off-campus research stations, and opportunities provided by Oregon's diverse agricultural economy.

Graduate opportunities in plant function, per se, are supported by a small number of faculty and attract the smallest number of students. However, members of the two other subdisciplines conduct work that overlaps with this area, and in addition, this track provides another linkage with the MCB program, enhancing interdisciplinary interactions. Basic research

on plant genetics and genomics, cell and molecular biology, physiology and biochemistry, and development are critical to promoting advancements in our understanding of plants. BPP programs address fundamental questions on plant function as well as how to manipulate plants for improved nutrition and stress tolerance. Faculty in BPP study model and agricultural terrestrial plants as well as marine algae.

On average, the department admits about 13 new graduate students per year in BPP (10) and in MCB (3). Students come with good GRE scores. Student quality and the strength of mentoring by faculty are also reflected in the high proportion of students who complete their degrees and the timeliness of completion. Two of their students were awarded NSF Graduate Research Fellowships, one of the most prestigious awards for graduate education in the US. BPP admits predominantly US students with a smaller cohort of international students. Although this demographic reduces diversity, the ability to attract high quality US students is seen by the review team as a strength.

3. Admissions selectivity

BPP applicant pools have ranged from 50-84 students over the past 7 years, with admission offered to the top 15-30% of applicants each year. Of these admitted students, an encouragingly high percentage (typically 60-70%) matriculate into the program. These data indicate a selective application process and a high interest by the selected students in the OSU program. Over the past 6 years, admitted student GRE score averages have remained high (72/62/51 percentiles).

As noted above, the international student numbers are low, in large part due to the ability to fill positions with strong domestic candidates. With about 25-50 international applicants per year, only five international students have been admitted into the graduate program in the past seven years. Although the relevant data are not broken out for domestic vs international students, the low number of international admissions may also result from differences in the applicant pool qualifications. Faculty indicated that concerns over GTA English abilities were one concern in evaluating international candidates.

Recommendation: BPP might explore ways to increase international involvement in their graduate program. Such an effort was suggested by students and would be in line with OSU strategic goals.

4. Level of financial support of students

Just over half of BPP graduate students are funded on Graduate Research Assistantships (GRA) from extramural grants. There are also many Graduate Teaching Assistant (GTA) positions supported from departmental or College of Science (COS, \$12,129) support as well as from funds returned to the Department from grant indirect costs (over \$200,000 in FY 2012). Seventy-seven percent of graduate students are supported as GTAs in their first year, and graduate students are grateful for the support. However, the use of indirect costs to support GTAs for teaching in the interdisciplinary undergraduate Biology program offered by COS is a significant source of concern for BPP faculty, as they see returned indirect costs as funds

intended to support BPP research and graduate training, not GTAs. External members of the review team were also perplexed by this funding arrangement for GTAs.

Students remarked positively on BPP's commitment to provide and sustain assistantship support. A source of concern for BPP faculty was the level of stipend and benefit support provided to students, which faculty view as non-competitive. A limited analysis done on stipend levels at other institutions showed BPP lagging some institutions, but competitive with others, particularly at the Master's level. Students remarked on the need for stipend levels adequate to support basic costs, but did not view relative stipend levels as a factor in their choice of graduate programs.

The Department also has funds to support graduate student travel to professional meetings and to support research. Creating BPP program-based funding sources (e.g., GTAs, Laurel Awards, Provost awards, eCampus) can allow the BPP program to be more strategic in its recruiting and also allow supplements and/or rewards be used to support students and faculty who contribute to the program.

Recommendation: BPP should seek institutional support for funding GTAs rather than the use of indirect cost funds returned to the department, freeing up returned indirect costs for GRAs and improvements to infrastructure.

Recommendation: BPP should continue to pursue avenues to increase graduate stipends to levels competitive with comparable institutions.

5. Curriculum strength

Graduate curriculum offerings in BPP face a challenge due to the diversity of subdisciplines covered (Plant Health, Plant Function, Ecology and Evolution). At many universities, these disciplines are separated into multiple departments. BPP attracts students in all of these subdisciplines, thus curriculum offerings need to address the diverse needs of students. BPP has also faced significant losses in faculty over the last ten years, further limiting course offerings. In the review team's meeting with students, lack of specific course offerings was the only area of discontent noted. Students expressed interest in having a greater diversity of course offerings tailored to their interest areas. Also, cancellation of courses due to low enrollments further limited course opportunities. The offering of "slash" (dual undergraduate/graduate) courses is one option to offer a greater diversity of courses, and is a tool also used by institutions of some of the review team. Students noted that there was a limit to the number of slash courses allowable by OSU. Also, some slash courses were viewed as successfully meeting the needs of graduate students, whereas others were not. Students suggested that the joint 300/500 level introductory plant pathology course, for example, was not advanced enough for graduate students.

In the area of plant health, BPP offers courses in forest insect and disease management, mycology, and plant pathology which are offered annually with solid enrollments. Alternate year courses include ones on plant disease management and molecular plant pathology. Together, these offerings provide a core of fundamental courses (i.e general plant pathology, disease management, and molecular plant pathology) widely viewed to be the foundation of a plant pathology graduate degree. Students expressed concern, however, about the combining of

the undergraduate and graduate general plant pathology course and noted that it does not meet the advanced needs of graduate students. BPP also offers more specialized courses in nematology, plant disease dynamics, plant disease diagnosis, and forest pathology, however, some have not been offered recently perhaps due to insufficient enrollment. Special topics courses have been offered in mycology and plant pathology to fill some of those needs. Additionally, some MCB offerings taught by BPP faculty are important offerings for students in molecular areas of plant pathology. Overall, the curriculum offers a basic foundation of courses needed by students in plant pathology, but lacks consistent offering of specialized courses particularly in the applied areas of plant pathology and the biology of plant pathogens. In the past, “plant health” graduate courses included ones on plant virology, plant pathogenic fungi, plant pathogenic bacteria, and fungal genetics, courses that are common at other institutions. However, these courses are no longer offered in BPP.

BPP offers few courses in the area of “plant function,” but the curriculum is strengthened by course offerings in MCB taught by BPP faculty including courses in genome organization, genome expression, cell and developmental biology, and bioinformatics. BPP has recently added a new course in comparative genomics, and also offers courses in photosynthesis and in physiological ecology, the latter covering water relations, plant stress, and growth. The only graduate offering in general plant physiology, plant anatomy, or plant development, is BOT505 (Plant Physiology Reading & Conference). Such courses are usually part of botany curricula and may be offered by other plant-based departments at OSU, and/or may not be possible due to the limited number of “plant function” faculty and their responsibilities to MCB. Graduate students commented that it was difficult for students entering the department without a plant background to obtain basic understanding of plants due to the lack of general offerings at the graduate level. Admitting students with diverse disciplinary background strengthens the graduate program; BPP may want to consider ways to offer course material in general plant function at the graduate level.

Graduate offerings in Ecology include Plant Population Ecology, Plant Community Ecology, Field Methods in Vegetation Science, Nutrient Cycling, and Environmental Physiology. This is a very basic set of coursework for a graduate program in plant ecology. Students commented on the need for more coursework in restoration ecology. Additional elements that would strengthen the program and complement its current foci include fire ecology, global change ecology, landscape ecology, evolutionary ecology, and perhaps a course that took a primarily ecological approach to plant-insect and plant-pathogen interactions. Finally, we note that many BPP graduate students go on to agency science jobs, and a conservation-oriented course that covered relevant aspects of environmental policy would be valuable.

The graduate curriculum in Plant Systematics provides graduates with the coursework necessary to address the conservation of endangered plants, the control of invasive plants, and habitat restoration. Core systematic and taxonomy courses like Mycology, Agrostology, Lichenology or Bryology, Aquatic botany and the Flora of the Pacific Northwest serve as the base platform of the program and should remain so. An improvement suggested by students would be to also offer an optional systematics courses at a larger scale, perhaps the Flora of North America, or in Tropical flora. Industry, private environmental consulting firms, and government agencies all continue to have a need for graduates that are trained in plant taxonomy and ecology. A number of optional electives (seven credits) are shared with Ecology, such as Population Ecology, and Community Ecology. Plant Genetics is an optional elective taught in

Crop and Soil Science (CSS 530) that is critical for a solid foundation in plant conservation. If the student's undergraduate experience did not cover genetics, then Plant Genetics should be required for a systematics Master's degree. Ecological restoration could be expanded (additional class or a practicum), to provide a more 'real' world experience given the future demands on systematics graduates in the work place. Course work on community structure and analysis, as well as data analysis methods, are also optional – at least one of these should be required. Graduates in the fields of plant conservation need to know how to analyze data. A number of excellent professional cohort courses (18 credits) are required, including Science Communication, Ethics, and Accounting and Finance for Scientists. Two required courses, Management and Marketing Scientific Technologies and Innovation Management, are two courses that could be optional, in lieu of a few other elective courses that should be required (e.g. Genetics, and Data Analysis). This program also has a required internship which is an excellent way to focus a graduate's work into a certain area and can provide a pathway for a non-thesis option.

Recommendation: BPP should review its curriculum to address student interests and changing needs. The use of 300/500 slash classes should be reassessed. A series of changing special topics classes may allow for specialized offerings based on student interests.

6. Quality of personnel and adequacy to achieve mission and goals

BPP has faced a major loss in the number of on campus tenured/tenure-track faculty over the ten years covered by this review. Of the current 23 TT faculty, four have primary or major administrative positions. The number of non-administrative tenured/tenure-track faculty is now equivalent to the number of courtesy faculty affiliated with the department. BPP is fortunate to have such a large number of courtesy faculty affiliated with their department, as these faculty mentor graduate students and contribute significantly to research productivity and reputation of the department. However, they do not have formal teaching responsibilities. As noted above, BPP spans disciplinary areas often separated into distinct departments at other institutions. The loss of faculty limits their ability to provide comprehensive curricula to their students. In addition, 16 of the 23 tenured/tenure-track faculty are full professors, and the department is facing additional retirements in the near future.

BPP has benefited from excellent recent hires through various opportunities such as Provost hires and interdisciplinary hires that selected BPP as their tenure home. BPP has been less successful in hiring faculty based on its own strategic planning. Of the 12 on-campus tenure-track faculty lost over the last ten years, three were refilled based on positions returned to the department and prioritized through strategic planning. In order for BPP to move strategically to meet the future needs and goals of their department and disciplines, faculty positions need to be provided with positions that meet the goals of their strategic plan. BPP has undergone strategic planning and prioritized positions in Forest Pathology, Plant Genomics and Computational Biology, Plant Ecology, Plant Systems Science, Plant-Microbe Interactions and Ecology and Evolution of Infectious Diseases. All of these positions would enhance BPP's research and academic mission.

Recommendation: CAS administration should assess the impact of faculty losses over the past ten years and work with BPP to support BPP's strategic priorities in hiring faculty in critical areas such as Forest Pathology, Plant Genomics and Computational Biology, Plant Ecology,

7. Level and quality of infrastructure

The Department is housed in Cordley Hall, built in 1959. Both faculty and graduate students expressed dissatisfaction with the size and functionality of the existing infrastructure (e.g., laboratories, classrooms, office space). Space allocations for labs and offices are too small to meet OSU guidelines. More space is needed for housing the fossil collection and herbarium specimens. There is no dedicated graduate common space; the only common area available for BPP graduate students is the Department-shared conference room. Electrical and plumbing problems and a lack of air conditioning in the summer have seriously impacted research efforts. External members of the review team did not understand why BPP faculty in unairconditioned space were not provided window air conditioning units, an inexpensive and functional approach to provide basic quality infrastructure critical to sustaining excellent research programs. Controlled environment rooms and growth chambers need upgrading. In recognition of the problems faced by BPP, new faculty negotiated for upgraded laboratory space as a condition of hire. The BPP program needs upgraded labs, teaching space, and offices if the program is to grow.

Recommendation: Freeing up indirect costs now targeted to paying COS GTAs would allow BPP to address some infrastructure improvements.

Recommendation: CAS administration should prioritize the most basic needs for infrastructure improvement such as providing air conditioning.

Recommendation: BPP should continue to be innovative and entrepreneurial in generating revenue to address infrastructure needs.

8. Quality of organizational support

As noted, the department has faced a significant loss of faculty over the last ten years, raising a concern by the faculty of diminishing support by the college and university and an inability to sustain their research and teaching programs. Some of this problem was due to the protracted separation from the College of Science and the lack of support for the department's programs by that college. However, the problem persists, and the faculty believe that their programs and contributions are not adequately measured and recognized by the upper administration.

In the view of the review team, the OSU administration appears to be facing a disconnect, common to many institutions of higher education, between what the institution values (i.e. interdisciplinarity, innovation, entrepreneurship, shared responsibility, a focus on providing quality educational programs) and the metrics universities use to measure output, many of which are designed to measure numbers rather than quality and to measure productivity within defined units such as traditional departments. BPP is a model for 21st century institutions of higher education. For example, they are major contributors to the interdisciplinary biology teaching program in addition to their own departmental programs. They are among the strongest in the

college in securing external funding for their programs. They provided ideas and funding to allow for the recent restructuring of the CGRB, an innovative facility that was the envy of some external members of the team. They have a strong record of providing research experiences for undergraduates from diverse majors, an expensive and time-consuming commitment that is poorly captured by numerical assessment but is increasingly core to a quality undergraduate experience. However, the metrics used to evaluate departments do not fully credit these contributions. For example, the Department does not receive credit for the credit hours it generates in teaching courses in the Biology Program. In order to accurately evaluate contributions, OSU needs to bring its system of metrics in-line with their value system. At a minimum, BPP faculty should be credited with the course credit hours of biology courses they teach. Other universities compile credit hour data both by the unit offering the course and by the unit of the faculty member teaching the course. This should be a very straight forward way to recognize BPP's many teaching contributions and to credit them for the credit hours delivered.

Recommendation: OSU should put in place a system that computes credit hours not only by the unit offering the course but also by the unit of the faculty member teaching the course.

Recommendation: CAS administration should give BPP credit for the total credit hours delivered by BPP faculty in all courses as well as credit for BPP's portion of enrollment increase in Biology in decisions about appropriating faculty positions.

C. Productivity

1. Level and quality of student performance

The self-study report documents success and productivity of graduate students. As noted previously, a high proportion of students receive degrees and do so in a timely manner. Many students receive awards from professional societies (American Phytopathological Society, Botanical Society of America, Ecological Society of America, Mycological Society of America) as well as other society awards. Students presented their research at diverse scientific meetings, and have a strong record of publications in excellent journals, noted in a 24 page list in the self-study document. Upon graduation, students have moved to positions appropriate for their training such as university faculty members, scientists at national government laboratories and agencies, scientists at non-governmental agencies, teachers and instructors, postdoctoral scientists, farming, and private practice.

2. Level and quality of faculty performance

BPP faculty are nationally and internationally recognized for their scholarly, academic, and outreach contributions. The quality of the faculty is evident in rankings of the graduate program and of OSU scholarly impact as noted in "Outcomes" below. Former and current faculty in BPP have been honored with prestigious awards including one member of the National Academy of Sciences, three faculty named as Fellows of the American Association for the Advancement of Science (AAAS), and ten faculty named as Fellows of their professional societies.

BPP faculty are highly competitive for federal grant funds, a measure of the quality and impact of their programs and of faculty stature and reputation. Over the last ten years, BPP

faculty have generated almost \$80,000,000 in grant funding, averaging around \$5 million to \$9 million annually. In the last two years, BPP was responsible for 14-15% of the total grant dollars in CAS, placing them among the top three departments on campus for extramural funding levels for fiscal years 2005-2011 (Self-study report, pg. 33)

BPP faculty also contribute significantly to interdisciplinary and outreach/extension programs and support of critical facilities. The department has core responsibilities for education and outreach on plant diseases critical to the productivity of Oregon agriculture. BPP's disease diagnostic clinic and its staff are nationally recognized. Extension faculty provide disease control recommendations for Oregon and other regions of the Pacific Northwest, essential to supporting a sustainable and productive agricultural industry. BPP faculty were core in the recent restructuring of the CGRB, an impressive facility that supports research of many students and faculty across campus. BPP houses and supports the OSU Herbarium, a resource nationally and internationally recognized for plant ecology and systematics research.

3. Viability of scholarly community within which students can interact

As noted above and in the section on ratings below, BPP faculty are nationally and internationally recognized for their scholarly contributions. Their scholarly reputation is evident in their recognition for distinguished national awards, their productivity, their competitiveness for funding, and the contributions they make to applied agriculture and the academic mission of OSU. It is notable that graduate students identified the excellence of faculty programs and faculty reputation as a major criterion for their decision to attend graduate school at OSU. Further, BPP faculty have expertise in a broad range of subdisciplinary areas, allowing for interdisciplinary scholarship and training.

D. Outcomes

1. Professional viability of graduates

As noted above, upon graduation, students have moved to positions appropriate for their training such as university faculty members, scientists at national government laboratories and agencies, scientists at non-governmental agencies, teachers and instructors, postdoctoral scientists, farming, and private practice. These positions overwhelmingly are in areas of responsibility relevant to their graduate training.

2. Satisfaction of students and graduates

The review team's discussion with students showed high enthusiasm by the students in the programs of the department. Students commented that they chose OSU because of the strength of their mentors' reputations and research programs and for the diversity of Oregon's agriculture. Many mentioned the department's culture of community and commitment to students as a significant strength of the graduate program. They noted that interdisciplinary projects were supported and encouraged, and that they had access to the equipment and facilities needed to conduct their research. Other strengths of the program included the commitment of the department to maintain assistantship support, funding to attend professional meetings, departmental social events (especially those connected with the seminar program), their participation and involvement in recruiting new students, the GTA mentoring program and opportunity to obtain teaching experience, and opportunities to develop mentoring skills due to the faculty's commitment to having undergraduates conduct research in their labs. Although the

self-study document expressed a concern about student diversity, several students valued the diversity present and noted that the department was one that valued diversity.

Surveyed graduate alumni indicated high rates of satisfaction over most of the program components queried (Table 4.5 in the self study document), with approx 60-90% indicating 4 or 5 scores on a 5 point scale. Two areas with slightly lower ratings were in the diversity of course offerings and the departmental advising/guidance efforts. These issues and associated recommendations are addressed elsewhere in this report. As noted, the high rates of student satisfaction likely reflects both individual mentorship and overall program effectiveness. Other contributing factors include: (1) high level of graduate student success -- from 2002-2011, 93% of matriculated students attained a degree or are currently in the program, with an average of 2.44 (MS) and 4.88 (PhD) years to degree over the past few years, (2) continual supported for PhD students by RA or TA appointments, and (3) successful employment search in their field (76% within 6 months of graduation).

3. Rankings/ratings

BPP is nationally and internationally recognized as a department and also for its graduate program. In the most recent National Research Council ranking of graduate programs, BPP ranked in the top 25-30% of 116 Plant Biology graduate programs evaluated across the US based on reputational rankings. This is an outstanding accomplishment.

Other rankings have also documented the strengths of BPP and its faculty. The Chronicle of Higher Education in 2007 ranked the plant pathology program as 5th in the US based on faculty productivity. High rankings were also noted for citation impact and numbers of published papers by OSU faculty in agriculture and environment and ecology, areas central to BPP.

E. Conclusions

1. *Maintain current program.* The BPP graduate program as presently configured has all the markers of success. A high-quality faculty is recruiting, supporting, and graduating an appropriate per-faculty number of high-quality students. Student productivity and morale are high. Students are especially positive about the program's cohesion and sense of identity, combined with a campus culture that encourages collaboration and sharing of facilities across departmental and disciplinary boundaries. Within the department, student productivity is supported by critical shared resources such as the genomics and informatics facilities and the biological collections. While many of these strengths might be maintained under other programmatic structures, we saw no need to recommend reorganization at present.
2. *Expand current program through targeted faculty hires.* Graduate students stressed the critical need to maintain current strengths that are vulnerable because of impending retirements (e.g. Forest Pathology), as well as to build strength in areas where need for graduate training is not being met (e.g., Restoration Ecology). Of the department's three broad areas, Ecology was regarded by students as the most understaffed, followed by Cell and Molecular Biology, while only Plant Pathology was seen as large enough to maintain overall viability. New faculty FTE would also help alleviate the students' strongly felt

need for more graduate-level courses, although we note that it may be inevitable that some of this need will continue to be met by mixed-level ('slash') courses.

3. *Maintain and expand the funding base for graduate studies.* The funding base is adequate at present, largely owing to the faculty's success at attracting grants and their conservatism in accepting only the number of students they can support. Students expressed general satisfaction with their support packages. However, this situation is threatened by the rapidly rising cost of student support. We note that this is a pervasive nationwide problem with no easy solution. Possibilities deserving of investigation include expanding e-campus offerings and urging the campus to support Biology GTA's from tuition-derived funds, thus freeing more of BPP's returned overhead to support graduate GRA's.
4. *Upgrade the facilities.* While the specialized equipment and facilities, collections, and field-based facilities are all adequate to excellent, the poor quality of the building is a problem for graduate student as well as faculty research productivity.
5. *Strengthen graduate advising.* Students described it as difficult to navigate course offerings across departments. This could be alleviated through a joint effort of faculty and staff to maintain the relevant information and extend it systematically to incoming students.

Summary of Botany and Plant Pathology Graduate Program Review

Two major issues identified.

- 1) Need a strategic plan for hiring.
Please see section 2, Summary of Findings and Recommendations, first and third paragraphs on pg 2; section 3B6, pp 8-9; and conclusion 2, pg 13.

There is a strong and productive faculty that appear to be spread too thin with respect to teaching, research and service. The areas of Ecology and Cell and Molecular Biology are considered understaffed.

- 2) Need a strategic plan developing adequate support
Please see section 2, Summary of Findings and Recommendations, second paragraph, pg 1; section 3B4, pg 6; section 3B8, pg 10; and conclusion 3, pg 13

Multiple issues.

- Level of student support not competitive with comparable institutions
- Use of returned indirect costs to fund GTA positions
- Question of whether/how department receives credit for teaching courses in Biology program.
- Department does not appear to offer eCampus courses – potential revenue generator?

Three minor issues

- 1) Facilities

Please see section 2, Summary of Findings and Recommendations, second paragraph on pg 2; section 3B7, pg 9;; and conclusion 4, pg 14

Suggestion that if alternative funding could be found for GTAs, then returned indirect costs could be focused on upgrades to facilities.

- 2) Need to modernize course offerings

Please see section 2, Summary of Findings and Recommendations, third paragraph on pg 1; section 3B5, pp 6-8;

Concern with the use of 300/500 slash courses.

Course cancellations due to insufficient enrollment

This creates the related issue regarding advising (conclusion 5)

- 3) Low international student enrollments

Please see section 3B2, second paragraph on pg 5; section 3B3 pg 5;

Given the current revenue model where departments receive subsidies for international students, BPP should place more effort on attracting high quality international students

**Extend: MFA in Creative Writing (Low Residency)
From OSU-Main to OSU Cascades**

**School of Writing, Literature, and Film
College of Liberal Arts**

**March 2012
Proposed Effective Term: Fall 2013**

CPS Tracking #: 83436

1. Program Description

- a. Program title, level
 - MFA in Creative Writing
 - CIP# 231302

CIP # 231302

Title: Creative Writing

Definition: A program that focuses on the process and techniques of original composition in various literary forms such as the short story, poetry, the novel, and others. Includes instruction in technical and editorial skills, criticism, and the marketing of finished manuscripts. .

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

- b. OSU main campus department and school/college under which the program is offered.
 - School of Writing, Literature, and Film, College of Liberal Arts
- c. Who will be the administrator(s) of the OSU-Cascades program?
 - Marla Hacker, Dean of Academic Programs
 - Neil Browne, Director, American Studies
 - A faculty board with representation from English and creative writing at OSU/Corvallis and at OSU Cascades will be created to oversee the program.
 - The OSU Low-Residency Faculty Board will be an appointed board consisting of 2 OSU Cascades faculty members, along with 3 members the OSU Corvallis MFA. The Low-Residency MFA Faculty Board would draw on strengths of faculty knowledgeable in low-residency programs to provide artistic and curricular guidance for a 21st century program suited to OSU and the unique opportunities of OSU/Cascades. The Low-Residency Faculty

Board would also be represented in the hiring of a Director through a national search process. Once a Director is hired, the Board would serve in an ongoing function as a recommending body on artistic and curricular direction, while day-to-day operations are in Bend.

-
- Along with the director, the Board will also assume the responsibility of overseeing the composition of MFA thesis committees, and the hiring of professional mentors. [The Board will provide orientation and direction to the Director. Procedure:](#)

RESIDENCIES

1. One Board member (and other veteran mentors) will attend any new mentor's lecture or class.
2. Board and veterans go to the lectures and classes by returning mentors.
3. Students evaluate every class and lecture and provide comments on workshops during residencies.

The Director will receive the board, faculty, and student evaluations and report on each to the Board in full.

MENTORSHIP TERMS

4. Both the faculty member and the student will fill out a form at the beginning of each term listing the mutually-agreed upon expectations for the term, covering both writing and reading assignments. These forms will be filed with the director.
 - a. Each student answers a prompt at the midterm and again at the end of the semester about work with his or her mentor. The director evaluates progress gauged on student and mentor agreed upon expectations (4).
 - b. At mid-term, both student and mentor will file, with the Program Director, a progress report; then again at the end of the term, the mentor and student will file a report on whether or not the term's goals had been satisfactorily met, gauged on student and mentor agreed upon expectations (4)—if not, why.

The director sees every faculty member's midterm evaluations and final evaluations, and will report to the Board in full about the faculty member's work. Only fully satisfactory mentors can be renewed.

The low-residency program is administered under the same conditions as other graduate programs at OSU-Corvallis, with governing authority ultimately belonging to the Director of the School of Writing, Literature and Film.. Local authority on day-to-day operations and hiring/renewals or non-renewals of professional mentors belongs to OSU-Cascades. The MFA Low Residency Director will have the responsibility of personnel decisions, advising, admissions, scholarships, and student appeals.

•

- d. Briefly describe the academic program, and provide a program degree audit sheet that lists all courses (including number of credits) and indicates how each course will be offered at OSU-Cascades [resident course {COCC, OSU, OU, EOU, other}, distance education, web, etc.].
- The proposed MFA in Creative Writing at OSU-Cascades (low residency) extends the Advanced Creative Writing workshop-based side of the MFA in Creative Writing on the Corvallis campus and delivers the same high quality training in writing and literary craft. The delivery significantly differs. Studying under a low-residency studio/mentorship model, students in the OSU-Cascades MFA Program must satisfy graduate degree requirements parallel to those established by the OSU-Corvallis MFA in Creative Writing. The MFA in Creative writing at Cascades—through its different delivery method—will add diversity to, not duplication of, the established writing programs at Oregon State University. The OSU-Cascades MFA Program offers a curriculum requiring 60 credit hours, during which students come to develop the skills needed for writing an original book-length creative work. This curriculum is equivalent to the requirements of the OSU-Corvallis MFA: 40 hours in Advanced Fiction Writing / Advanced Poetry Writing and other course work appropriate to the degree, and 20 hours in thesis, writing and conference, or 599 craft courses. Students enroll in at least nine credit hours per term. Students are required to write original fiction, creative nonfiction, or poetry. A project focusing on the craft of writing is required in the form of an essay, lecture or teaching a seminar. The key requirement of the course of study is a creative thesis, an original literary work in the student's chosen genre.

Extend

- CPS #: **83436**
<https://secure.oregonstate.edu/ap/cps/proposals/view/83436>

- Accreditation: **None currently** (Submission to the Associated Writing Programs (AWP) to request a site visit in two years.)
- Proposed Start Date: **Summer Term or Fall Term 2013** (Banner 201300 or 201301)

- The OSU-Cascades MFA Program in Creative Writing is comprised of two parts: a mentoring section and a residency section. Central to the OSU-Cascades MFA Program are the residencies and the one-on-one mentoring relationship between student and mentor, which, in combination, accelerate the participating students' development as writers.

- Students are not in residence on campus during the mentorship section. They work from a distance. During the off-campus mentorship period, students work one-on-one with professional mentors who guide each student's study of craft and provide written commentary on their student's work. The emphasis is on one-on-one coaching of writing, transmitting professional experience, professional editing, and introduction to the publishing world. Included in the requirements of both professional mentors and students is a regularly scheduled exchange of packets, which include students' original creative work, responses to reading assignments and responses to the mentor's critiques and advice. Also included in the packet assignments are students' analyses and critical papers in craft, and required entries for an annotated bibliography.
- The OSU-Cascades MFA Program in Creative Writing requires four residencies of eight to ten days for 40 days in residence overall. Residencies are typically scheduled at the beginning of summer and winter terms. Students are required to attend each residency. During the eight- to ten-day residencies at the host campus, students attend workshops, lectures, panel discussions, seminars and literary readings led by the program's professional mentors as well as guest authors and representatives of the publishing industry. During the residency period, students, with the professional mentor's assistance, develop a reading list and study plan for the mentored portion of the term. The goal of each residency is to 1) broaden and deepen each student's knowledge and practice of creative writing; 2) develop a supportive literary community for students that offers encouragement and constructive criticism in workshops, seminars and one-on-one discussions with professional mentors; 3) educate students about publishing and editing through panels and informal conferences involving publishers, editors and agents during the residency period; and 4) generate a list of works to be included in the annotated bibliography.
- Assessment:

Learning Outcomes

Outcome 1: Produce original work in a specified genre, culminating in a thesis of publishable quality and of high literary merit. The student and professional mentor confer to determine length, form, and content, but typically a thesis will be for prose, 80-120 pages, and for poetry, 38-45 pages.

Outcome 2: Develop and employ methods of intensive revision.

Outcome 3: Demonstrate mastery of various literary theories and techniques. Mastery will be achieved through participation in the poetry or fiction/non-fiction workshop (24 total credit hours of WR 521 or WR 524), as well as in courses that focus on specific aspects of craft. Craft courses concentrate on a particular theory, genre, theme, technique, author or topic. Examples include courses on dialogue, the "uncanny" novella, linked story collections, the prose poem, the lyric essay, literary imitations, etc.

Outcome 4: Demonstrate an understanding of the contemporary creative writing profession. In addition to the instruction received in workshops on the profession, students attend mandatory residencies each year. These events feature nationally acclaimed writers who give public readings of their work and conduct colloquia specifically designed for the MFA students. Students engage in in-depth conversations with the writers about craft, the creative process, publishing, creative writing pedagogy, and other topics. Students also benefit from panels on a wide range of subjects relevant to the profession, as well as readings, roundtable discussions, and other events.

Outcome 5: Perform all activities in an ethical manner. This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's coursework in literature, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately.

Measurement

Outcome 1: The student's writing is assessed in three ways. Students submit original work to the workshop throughout the two-year program, and receive extensive feedback, both oral and written, from their peers and professional mentor; students enroll in 12 credit hours of thesis/writing and conference, in which they work one-on-one with a professional mentor who assesses their progress; and students take a two-hour oral examination. The exam measures the quality of the thesis's individual parts, as well as how it coheres as whole.

Outcome 2: Students study and practice methods for revision in workshops and in consultation with the professional mentor. In workshop, participants describe, explore, and evaluate the premises of works in progress, with an eye toward editorial improvement. Revised drafts are submitted to the workshop for consideration and further suggestions. In conferences, students present revisions of work, and professional mentors offer both conceptual and sentence-level suggestions, as well as providing literary models that may assist in the revision process.

Outcome 3: Mastery of various literary theories and techniques is assessed through craft courses and workshop. Craft courses involve both critical writing and creative writing: Students study technique as demonstrated in their readings, analyze technique in their critical papers, and practice technique in creative exercises.

Outcome 4: The understanding of the contemporary creative writing field is measured through the oral examination.

Outcome 5: This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's bibliography project, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately. [WR 599X: ETHICS AND GRADUATE STUDIES IN CREATIVE WRITING \(1 credit\) will be required of all students](#)

MATRICES

Outcome 1: Produce original work in a specified genre, culminating in a thesis of publishable quality and of high literary merit. The student and professional mentor confer to determine length, form, and content, but typically a thesis will be for prose, 80-120 pages, and for poetry, 38-45 pages.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- WR 503: THESIS
- WR 504: WRITING AND CONFERENCE
- WR 599X

Outcome 2: Develop and employ methods of intensive revision.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- WR 503: THESIS
- WR 504: WRITING AND CONFERENCE
- WR 599X

Outcome 3: Demonstrate mastery of various literary theories and techniques. Mastery will be achieved through participation in the poetry or fiction/non-fiction workshop (24 total credit hours of WR 521, WR 524, or WR 548), as well as in courses that focus on specific aspects of craft. Craft courses concentrate on a particular theory, genre, theme, technique, author or topic. Examples include courses on dialogue, the “uncanny” novella, linked story collections, the prose poem, the lyric essay, literary imitations, etc.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- WR 503: THESIS
- WR 504: WRITING AND CONFERENCE
- WR 599X

Outcome 4: Demonstrate an understanding of the contemporary creative writing profession. In addition to the instruction received in workshops on the profession, students attend mandatory residencies each year. These events feature nationally acclaimed writers who give public readings of their work and conduct colloquia specifically designed for the MFA students. Students engage in in-depth conversations with the writers about craft, the creative process, publishing, creative writing pedagogy, and other topics. Students also benefit from panels on a wide range of subjects relevant to the profession, as well as readings, roundtable discussions, and other events.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- WR 504: WRITING AND CONFERENCE
- WR 599X

Outcome 5: Perform all activities in an ethical manner. This will be demonstrated by the student’s production of original work; by the student’s ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student’s coursework in literature, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately. An ethics component will be added to each residency period, here designated by 599X.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- WR 599X: ETHICS AND GRADUATE STUDIES IN CREATIVE WRITING (1 credit)

Initially, program success in a broad sense will be gauged by the following benchmarks:

A High Graduation Rate. A high percentage of matriculated students graduate from the program, and a small number of students drop out or transfer to other programs.

Acceptance Ratio. The program will maintain a high number of applications in relation to acceptances.

Literary Accomplishments in Post-Graduate Student Work. Many graduates go on to publish significant literary work and to win honors and awards for their writing.

Outside Assessment. After the program is up and running for two or three years, we will invite the AWP (Association of Writers and Writing Programs), the national organization for university creative writing programs to a program wide assessment.

- **AUDIT SHEET:**
Master of Fine Arts in Creative Writing

To complete the course of study for the MFA degree in Creative Writing, a minimum of 60 quarter/term hours are required in the following categories:

36 hours/credits in Advanced Fiction Writing / Advanced Poetry Writing and
12 hours/credits in Literary Craft Courses
12 hours/credits in Thesis and/or Writing and Conference

Built into the course work is a sustained critical engagement with a broad range of literature and contemporary writing, which will be demonstrated by an annotated bibliography of at least 60 entries and by the students' participation in literary craft courses during the residencies. This work is equivalent to the literature and composition requirements in the program in Corvallis. Because the low residency program will not be primarily focused on training future teachers, the requirements in the OSU-Cascades MFA Program in Creative Writing will be tailored to the individual student's need as determined by the student and mentor.

Advanced Creative Writing Courses (a total of 40 credit hours is required). This requirement demands that the student complete ten Advanced Creative Writing courses. The topics will vary. All courses will be offered as 500 level courses only.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)
- [WR 599X: ETHICS AND GRADUATE STUDIES IN CREATIVE WRITING \(1 credit\)](#)

Thesis/Writing and Conference (a total of 20 credit hours is required).

- WR 503: THESIS
- WR 504: WRITING AND CONFERENCE

Year 1 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop Summer term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Year 2 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop summer term (low-residency):

10 hours WR 503 Thesis

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

All MFA candidates will be required to complete a thesis, which is to be a sustained piece of creative writing of literary merit (for prose, 80-120 pages, and for poetry, 38-45 pages).

The thesis will be evaluated by a MFA thesis committee. The committee will consist of the Director, who must hold a terminal degree, the professional mentor (chair), Henry Sayre (Distinguished Professor) or Neil Browne (Associate Professor), and the Graduate Council Representative.* Low-residency programs maintain a stable core of professional mentors who are qualified to support thesis work and are typically renewed term by term in service of thesis advising. In addition, low residency programs typically have an additional group of professional mentors who may serve in a variety of shorter-term roles to lead workshops and provide programming. As the program develops and a solid core of professional mentors is established, these individuals will also be able to serve on MFA thesis committees. All professional mentors will hold a terminal degree. A formal examination will be also required of MFA students. The exam consists of two parts, oral and written, and will usually be given in the student's final term of study, and consists of questions assessing the student's grasp of the history of the genre, the contemporary creative writing situation, influences and models, and matters of craft, all within the context of the student's own writing.

e. Indicate in what ways the proposed program at OSU-Cascades will differ from the OSU-Corvallis campus program.

- Though the OSU-Cascades MFA Program in Creative Writing satisfies the same degree as its traditional high residency counterpart in the School of Writing, Literature, and Film in Corvallis, it differs in that students do not reside on campus for the duration of the graduate program but only during the eight to ten day on-campus residency periods. It will not duplicate, but add diversity to the creative writing offerings at Oregon State University. Also, the low-residency program does not have the primary goal of preparing teachers, so the literature and composition requirements will be shifted to bibliographic aspect of the low-residency program and attendance at craft lectures and literary craft workshops held on site during the residencies. The emphasis is on one-on-one coaching of writing, transmitting professional experience, professional editing, and introduction to the publishing world.
- The professional mentorship/residency model offers a different approach to delivering the same quality instruction as is offered with the high-residency model. The low-residency professional mentors are employed on a contract basis, which allows the program to assemble highly qualified writers from across the country and represents a cost-savings relative to payroll and benefit costs. The average number of professional mentors, to maintain one-on-one mentoring during off-campus periods is calculated at one professional mentor per four students. The low-residency model emphasizes the professional mentor and student relationship as a way to accelerate learning, thanks in part to the low professional mentor-student ratio and the collaboration of professional mentor and student in designing a program best suited to the student's needs and goals.
- During the mentorship period, students and professional mentors exchange what are referred to as packets. Clear guidelines are provided for regularly scheduled exchanges and responses from the mentor. For each mentoring period of ten weeks (excluding residencies), students submit packets and receive in timely return substantive critical responses from professional mentors at least once a month. A typical packet from the student includes new and/or revised creative work, bibliography of completed reading, critical analysis of reading, and responses to directions and questions from the professional mentor in previous exchange of packets. A typical packet from the professional mentor includes critiques of student's creative work with suggestions for new and substantially revised work, return of student's manuscripts with line-specific suggestions, comments on student's critical analyses of reading assignments, suggestions for related reading to be included in the annotated bibliography, especially books on craft related to student's particular ambitions and style of learning, and individualized instruction about aspects of craft. A student typically studies with a different professional mentor each term and during residencies with several different workshop leaders, thus exposing the student to a variety of literary sensibilities and academic approaches to the study and practice of writing.

- To graduate, per the established requirements of the OSU-Corvallis high residency program, students must demonstrate expertise in at least one genre and produce a literary work. In addition to required creative work, students are also required to write and present an essay, and to give a public lecture on an issue of literary craft or tradition. The accomplishment of the essay/lecture portion of the graduation requirement is second in importance to the thesis (usually 38 to 45 pages of poetry and 80 to 120 pages in prose). (See also 1.d). The thesis must be defended before a committee of OSU professors ([See p.8](#)).
- f. List any special requirements or prerequisites for admission to the program in Creative Writing at OSU-Cascades
- The requirements will be equivalent to the requirements of the MFA on the Corvallis Campus, with the emphasis shifted to the Advanced Creative Writing and thesis credits.
- g. Is there an accrediting agency or professional society that has established standards for this program? If so, is the program currently accredited? If accredited, what steps would be needed to ensure that accreditation is maintained vis-à-vis the OSU-Cascades offering? Does the accrediting body require notification of the program offering at a new location?
- The program at OSU-Cascades would operate under the accreditation of the English Department and the School of Writing, Literature, and Film.
 - **Initially, program success in a broad sense will be gauged by the following benchmarks (see also p. 2):**
 - **A High Graduation Rate.** A high percentage of matriculated students graduate from the program, and a small number of students drop out or transfer to other programs.
 - **Acceptance Ratio.** The program will maintain a high number of applications in relation to acceptances.
 - **Literary Accomplishments in Post-Graduate Student Work.** Many graduates go on to publish significant literary work and to win honors and awards for their writing.
 - The Associated Writing Programs (AWP) has established standards for low-residency programs, and these will be followed closely in the operation of the program at Cascades. We will invite AWP representatives to Bend for a site visit after two years.

2. Demand

- a. List any similar programs offered at the proposed or nearby location(s).
- In Oregon, there is one, Pacific University; three in Washington, Pacific Lutheran University, Seattle Pacific University, and Goddard's Port Townsend campus. The University of British Columbia has a low-residency program in Vancouver. Naropa in Boulder, Colorado and two southern California low-residency programs round out the competition regionally.
- b. Provide evidence of need for the program at the new location(s).
- The Oregon, Washington, and Vancouver low-residency programs are all located west of the Cascades. A program at OSU-Cascades could potentially draw students from Central Oregon, eastern Washington, Idaho, Montana, Nevada, and Northern California. According to the Low Residency MFA Directors' Survey, eight of the 31 programs polled responded that their

program is composed of 50% or more in-state students which bodes well for attracting students to an Oregon-based low-residency MFA in Creative Writing program.

- Student populations have grown at state universities and community colleges during the current recession. When the recession ends, the Central Oregon region's population will grow again. Both scenarios contribute to an expected growth in the student population. When family or economics or jobs keep students place-bound, it is the local campus that can offer what they need. However, the MFA in Creative Writing at Cascades will also strive to attract students nationwide. With a strong, nationally recognized pool of professional mentors, the program will draw from across the United States. While serving the region is a central part of the mission of OSU-Cascades, so too is the effort to build nationally known and respected programs in Bend, which in turn contributes to the heightened national visibility of Oregon State University as a whole.
 - Therefore, it is important that an OSU-Cascades MFA in Creative Writing program aim to rival the most respected programs in quality and academic rigor. Given the differing goals of the students who enroll, also reinforced by a survey of graduates of other low-residency programs, the great appeal of a low-residency program is its flexibility, which involves the student in the design of his or her individualized curriculum while meeting the requirements of the program itself. The low-residency model attracts more age-diverse applicants annually than the traditional creative writing program. The average age of the student is 36, more in line with the demographic served by OSU-Cascades. Given the population served by OSU-Cascades, the low-residency program will also attract employed students seeking an additional degree while maintaining employment. Low residency answers the requirements of the current economic times as people strive to better position themselves professionally while maintaining employment. The program emphasizes the study of literary craft from within the writer's perspective. It is not, however, a technical or narrow degree. The reading and analytical components of each mentorship period, and the variety of classes and workshops offered during the residency periods, provide well-integrated curricula in the humanities, with the emphasis falling on direction of individual manuscripts, instruction in literary craft, and the actual work of writing. While the balanced study of literature and the craft of writing does make graduates viable candidates for teaching positions, the OSU-Cascades MFA in Creative Writing is not geared toward specifically educating teachers. It can open the doors to many professions, including journalism, editing, marketing and communications and is recognized as important to improve writing, communication and abstract thinking skills in engineering and the sciences.
 - For a state university system to offer both a low and high residency MFA in Creative Writing is unique to Oregon and most of the country and would help both programs at both OSU campuses. The OSU-Cascades MFA Program in Creative Writing complements the established high-residency program at OSU Corvallis/School of Writing, Literature, and Film and adds to the breadth of graduate offerings at OSU-Cascades. The addition of a graduate degree in the Liberal Arts creates balance with the current focus on professional graduate programs at Cascades, and also enhances OSU-Cascades' reputation as an well-rounded undergraduate institution, while increasing student enrollment at both the graduate and undergraduate level. The proposed graduate program underscores OSU-Cascades' growing potential as a destination for writers with national visibility.
- c. Estimate enrollment and number of graduates over the next five years. Will any enrollment limitation be imposed? If so, how will prospective students be enrolled be selected?
- AY 2012-2013: 16
 - AY 2013-2014: 36
 - AY 2014-2015: 40
 - AY 2015-2016: 40
 - Future enrollment levels will be reevaluated at the five year mark.

3. Personnel

- a. List the names and qualifications of faculty (regular and adjunct) who will be involved in delivering the program at OSU-Cascades, and their tentative teaching assignments. Will new faculty be needed?

The following list includes Corvallis faculty in the School of Writing, Literature, and Film, who are able to participate in The OSU-Cascades MFA Program in Creative Writing.

-
- Tracy Daugherty, PhD, Distinguished Professor of English and Creative Writing/OSU/Corvallis
- Karen Holmberg, PhD, Associate Professor of English (poetry), OSU/Corvallis
- Ted Leeson, PhD, Senior Instructor, OSU/Corvallis:
- Susan Rodgers, MFA, Associate Professor of English, OSU/Corvallis
- Keith Scribner, MFA, Associate Professor of English, OSU/Corvallis
- Neil Browne, PhD, Associate Professor of English, OSU:
- Henry Sayre, PhD, Distinguished Professor of Art, OSU

The OSU-Cascades MFA Program in Creative Writing will have to hire new professional mentors. As in most low-residency programs, professional mentors are contracted specifically for workshop during the summer periods of service and for extended mentoring. All new professional mentors will be term-limited contract employees, which permits the program and the professional mentors a certain flexibility not possible with a resident faculty. Participation by OSU-Corvallis contracted employees during 9-month period of regular service would be subject to approval by the Director of the School of Writing, Literature, and Film.

The MFA in Creative Writing (low residency) at OSU-Cascades will offer students a close, sustained working relationship with masters in the field of creative writing, who will function as professional mentors. They will consist of writers who have reached the apex of their profession and are dedicated, committed mentors. The program will build a core mentoring staff, writers who will build extended experience in the program—professional mentors familiar with our format and standards, and able to ensure continuity in the work and development of current students. The program will utilize a rotating pool of highly respected and qualified writers.

It is essential to understand that, by contrast to tenure-line commitments made by universities in full-residency MFA Programs, prestigious low-residency programs across the country (from Warren Wilson to Sarah Lawrence) recruit their staff from high-profile authors with MFA training to work as professional mentors and to facilitate biannual residencies on term contracts. These professional mentors are not physically housed at OSU Cascades Campus. They work from their own home base on a contract basis. They are people who have reached the upper levels of their craft and are not seeking tenure or full time employment at OSU. This is the norm, and is expected by both students and mentors. Of the top-ten-rated low residency creative writing programs in the United States, all function on this model.

- Professional mentors will be drawn from distinguished writers from across the country and internationally who will be contracted on a term-to-term basis. The importance of a distinguished and artistically diverse pool of accomplished writers who are also excellent teachers can't be underestimated in attracting students and establishing the program's reputation regionally and nationally. In addition, as an extension of the OSU-Corvallis program, the low-residency professional mentors at OSU-Cascades must meet the requirements of instructional faculty as established by OSU-Corvallis standards. Each professional mentor must have at least one book published by a respected press in the genre the professional mentor teaches. Each professional mentor must hold a terminal degree (PhD or MFA).

- It is important to achieve a balance between the flexibility of part-time mentors and the need for core individuals who work in the program year after year. Given the resources available to the OSU-Cascades program, thanks to its relationship with the OSU-Corvallis MFA program and English department, the OSU-Cascades American Studies program, The Nature of Words and other literary organizations in the region and nation, the OSU-Cascades MFA Program in Creative Writing can assemble a pool of professional mentors of the highest caliber. This strategy guarantees the development of not only a core of accomplished writers and gifted instructors and advisors, but also a rich resource of guest lecturers and panelists qualified to address a wide range topics including perspectives on career, craft and creativity.
- b. Estimate the number and type of support staff needed to provide the program at the new location(s).
- The low-residency program would require a full-time director.

4. Other Resources

- a. Describe facilities (e.g., buildings, labs, equipment) necessary to offer the program at the new location(s).
- The facilities at OSU-Cascades' new graduate center will be used.
- b. Indicate how library needs will be met.
- Library needs will be met in the same way they are met for all Cascades programs. Students can draw on the OSU Cascades and COCC library collections, can order materials from the Valley Library, can access all the same material via databases that all OSU graduate students can access, and students have access to the entire Summit System and the Orbis Cascade Alliance. (See attached letter from library services.)
- c. Indicate how students at the new location(s) will receive student services (e.g., academic advising, etc.).
- Students will receive the identical services to which all OSU Cascades students have access. Additionally, support will be offered by the director of the low residency program.

5. Budgetary Impact

- a. Indicate the estimated cost of the program for the first four years of its operation. (Use the "Budget Outline" and "Budget Outline Instructions" forms on the Forms and Guidelines Web site.)
- Please see attached documents. OSU Cascades will fundraise to support the OSU-Cascades MFA Program in Creative Writing until it is financially self sustaining.
- b. If the program will be financed from existing resources:
1. Describe what the budgetary unit will be doing that is not currently done in terms of additional activities.
- The unit will draw funds from existing resources in OSU-Cascades' fund balance in order to start the program, which includes the hiring of a director. The program will support itself on tuition monies once it is underway.
2. State what these new activities will cost and whether financed or staffed by shifting of assignments within the budgetary unit or reallocation of resources within the institution. State which resources will be moved and how this will affect those programs losing resources.

- There will be no reallocation of resources from OSU Corvallis. There will be no allocation of resources from existing OSU-Corvallis MFA Program in Creative Writing or English/School of Writing, Literature, and Film programs. OSU-Cascades' fund balance will provide the investment to start up the program, and tuition will provide the ongoing monies for the program.

Graduate Council

February 25, 2013 Minutes

Voting Members Present: Jay Casbon (via phone), Jim Coakley, Theresa Filtz, Greg Herman, Don Jump, Janet Lee, Murray Levine, Darrell Ross, Stacey Semevolos

Voting Members Absent: Nancy Kerkvliet, Mike Lerner

Ex-officio Members Present: Brenda McComb

Guests: Neil Browne, Lynda Ciuffetti, Stella Coakley, John Fowler, Joey Spatafora

Welcome and introductions

Botany and Plant Pathology Graduate Program Review – Graduate Council reviewers' recap

Graduate Council Representative: Mike Lerner

- [External Panel Review](#)
- [Review Summary](#)

- Major issues found by the review team from Mike via Jim:
 - Botany and Plant Pathology (BPP) has good faculty, but are spread too thin in some cases between their own and interdisciplinary programs.
 - The student support is not competitive with peers. BPP is using indirect cost to fund GTA's; some funds are supposed to come from the College of Science (COS). Brenda noted that a case has been made to Sherm Bloomer to work with the University Budget Committee to develop an adjustment to reflect increases in head count or SCH. There is a detailed MOU from the College of Agricultural Sciences outlining funding coming from COS to teach BPP courses in Biology.
 - It doesn't appear that BPP offers Ecampus courses.
- Minor issues:
 - Inadequate facilities; can't do a lot about this issue. It was noted by a Council member that, if indirect revenue was used for other than GTAs, those funds could be used for facilities; do they have enough funding for the operation? BPP raises \$8 million per year from research – where does it go?
 - Regarding modernizing course offerings, are 300/500 courses allowable? Slash courses were a concern of the review group. BPP is cancelling courses due to insufficient enrollment.
 - The international student enrollment is low.
 - Courses need to be strengthened.
- Regarding the program size, the proposal anticipates 13 students per year, initially, for an eventual total of 60 graduate students. There would be 23 faculty with a large number of courtesy faculty; 16 of the 23 are full professors.
- They are not competitive for GTA's – what is the current rate? Need to clarify.
- Research funding? GRA's at .49 FTE are paid in the \$20,000 range.
- Were graduate learning objectives reviewed? Brenda was uncertain.
- Why the need to modernize? Brenda stated that the recommendation came from outside reviewers resulting from discussions with graduate students. The reviewers did review some syllabi.

Botany and Plant Pathology Graduate Program Review – Unit representatives present

Unit Representatives: Lynda Ciuffetti (Chair), Stella Coakley (College of Agricultural Sciences Associate Dean), John Fowler (Graduate Studies Committee Chair), Joey Spatafora (Associate Chair)

- The level of support for GTAs and where their funding comes from is not clear. Lynda responded that the total need is for 41.5 quarters; 7 quarters for mycology, 9 quarters for botany, and 25.5 quarters

for biology courses. The funding is approximately \$36,000 for the herbarium, \$47,000 for botany, \$133,000 for biology and \$12,000 comes from the College of Agricultural Sciences (CAS).

- Stella explained that the COS policy was to return all overhead to the unit; however, COS offered that the college could keep the returned overhead for GTAs or deployed to units. It's implicit that the college would provide more support for GTAs if they could. Commitments made to the herbarium and mycology were made at the time the faculty were hired, but COS did not stand behind the commitments. There is no adjustment in the base budget for Biology.
 - Is there an opportunity for renegotiating how the funding will be handled? Lynda responded that, in terms of the biology program, Botany and Plant Pathology (BPP) is committed on a pedagogical sense (plant scientists should be teaching in the program). BPP contributes to teaching 10 Biology courses and contributes to 8 MCB courses. BPP faculty are not pleased about having to pay for all the GTAs because it does not allow for competitive GTAs or GRAs (faculty pay GRAs from grants if that's available). The Biology program becoming a major in a department is of grave concern to BPP
 - Do they have access money for Biology? Lynda stated that, when in COS, BPP only could request access money for BOT101, which is a Baccalaureate Core course, but did not receive it. It is not their place to ask for Biology access funding – that is up to the Biology chair.
- As to the recommendation to modernize course offerings, has BPP looked at other offerings? Lynda responded that the department has looked at courses offerings, some of which were reduced when the Provost required a minimum number of students; and BPP has designed new courses due to a computational concentration. Regarding assessment at the undergraduate level, Lynda and Carol Riven met with Bill Bogley and identified issues on which to concentrate.
 - Joey felt that the statement was targeted to a few specific courses, such as BOT550, which is scheduled for discussion with the faculty; several courses have been added and strengthened in plant physiology. Botany and Plant Pathology 350 is the largest plant pathology course in the country and the lab is very extensive; all students attend the same lecture, but undergraduate and graduates have their own lab and graduates have an additional meeting. Students have expressed their desire for a stand-alone course. BPP did the best they could with what they have.
- Are there problems with graduate students running labs in courses in which they are enrolled? Lynda mentors all graduate students and discusses conflict of interest issues. There are enough TAs so no one is ever evaluating one who would be a potential conflict of interest. No graduate students teach lecture courses, but they do teach labs.
- It appears that BPP is understaffed for the number of courses taught. Lynda was thinking about faculty when preparing for this meeting and noted there are a number of BPP faculty who don't teach in Botany because they teach MCB and Biology courses. Has BPP thought of reducing offerings? Lynda stated that they have reduced courses and have been trying to develop Ecampus courses, mainly at the undergraduate level. They also have to pay temporary instructors with returned overhead, and quite a few Botany courses are taught by temporary instructors. BPP is at bare bones related to dropping classes and need to expand to meet student demand. Joey stated the outcome is that they are penalized for participating in interdisciplinary programs, which BPP values, but is at the expense of their own major. Lynda noted that BPP has a lot of courtesy faculty. From BPP's perspective, they are short in all three focus areas. Additionally, BPP professors are aging and there will likely be a large turn over at the same time; many of these professors don't teach, but they do train graduate students.
- Related to increasing international enrollment, Brenda stated that Kim Johnson in the Graduate School can assist BPP with recruiting international students. John noted he has been in contact with Kim, which has resulted in two potential international students.
- Lynda questioned whether BPP responds to the Graduate Council's final document or recommendations from the review team; Jim indicated that they respond to both.
- Lynda questioned what was meant by 'metrics' in the Action Plan. Brenda responded that they need indicate what will be measured so it can be determined in three years if progress is being made.
- Regarding graduate student stipends at comparable institutions, Joey indicated that students don't feel that stipend level is a deciding factor, but faculty agree that stipends need to be increased. Lynda explained that BPP GTA GRA students are paid the same rate; however, because Biology's rate is lower, BPP was not allowed to pay the BPP rate to students, so the Biology rate was at .4 FTE with an added BPP at a smaller rate. A comment in report stated that BPP was not as competitive in some cases, but in other cases they were. Additionally, competitiveness may result in a tier level for salaries. Lynda was advised to include the stipend issue in their Action Plan. Brenda suggested checking with Courtney Everson regarding salary rates at peer institutions.

Graduate Council Discussion of the BPP Graduate Program Review –

- Brenda felt that the COS and CAS deans should be talking about this issue.
- 23 faculty and 50 undergraduate majors is not sustainable.
- Not fair for BPP to fund Biology courses. There is partial support from MCB.

- To what extent is the graduate program affected? Staffing and support for GTAs.
- Faculty are overtaxed and under supported.

Action: Jim will draft a response.

New MOU Proposal – Low Residency MFA in Creative Writing at OSU-Cascades

Graduate Council Representative: Janet Lee

Unit Representative: Neil Browne

- [Online](#)
- [PDF](#)

- Neil Browne provided a revised MOU which included comments addressing the structure and how the Board will work. Regarding the transferability issue, Jim explained that there have been requests for a university solution so a student in similar degree programs at different campuses cannot transfer without the department accepting a student into the program at the other campus. The Registrar's Office is looking at ways to flag these students in Banner if there is a capacity issue. Because all coursework is transferable, Jim felt this should not be held up due to the transferability issue.
- The curriculum at OSU-Cascades is still an issue that needs to be resolved. Students would create with a professional mentor for a term and the work would be facilitated by an exchange of packets; the relationship is analogous to how a professional writer and a publishing house would work. There is a residency twice per year where the student and mentor would be onsite for 7-10 days, and then an exchange of work would continue. Brenda felt that this is a hybrid arrangement and is why Ecampus not involved. Neil stated that Ecampus has been consulted, and they are on board with the plan. Brenda noted that Lisa Templeton has not talked with anyone and understood that there would only be an exchange of packets. There was an e-mail from Natalie Dollar indicating that she had talked with Lisa Templeton; Brenda suggested that Neil contact Lisa. Neil explained that the model they are constructing is different and is engaged far more personally on a relationship basis between a small group of students and a mentor, but it has the possibility for an online platform. A student and mentor would exchange ideas, create reading lists, and topics for an annotated bibliography.
- It was noted that the Association of Writers & Writing Programs endorses the proposed model, and that close mentoring and relationship is supported by the AWP. Neil noted that AWP is the accrediting organization and publishes hallmarks for this type of program. It was important to create a program that distinguishes itself from other programs, yet complements the Corvallis program.
- The proposed courses exist, but delivery will be different.

Graduate Council Discussion of the Proposal –

- A member hesitated to hold up the program due to the model, and suggested the Graduate Council give approval, but require a full external review in three years after the first co-hort is admitted to evaluate the program.
- Brenda noted that Lisa Templeton was told that the Graduate School was on board with the proposal, which is not the case. Jay will make it known that incorrect information was conveyed to Ecampus.

Action: Jim will approve the proposal and include a request for a full external review of the program three years after the first co-hort is admitted.

Graduate School Report

- Brenda was asked to approve a waiver for a College of Education student to defend their dissertation in less than one full term. Because the Institutional Review Board (IRB) approval for a related survey occurred about four months prior to when she planned to defend, how does one accomplish the requirements in less than four months? It appears from website is that one chapter is literature review and the other is original research. She felt that's about what a master's student would do.
 - Original research is not required for a Master's, but a PhD does need to be original.
 - Apparently the major advisor agreeable with the student's plan.
 - A minimum of two publishable articles is required.
 - One Council member questioned what constitutes a level of research in granting a PhD at OSU?
 - One member didn't feel that the timeframe was a problem if the student could accomplish the requirements.
 - It was noted that a student could be prepping for a period of time before IRB approves the survey.
 - It's up to the graduate representative to ensure that the process is followed, but not to the detriment of the student.
 - Concern was expressed related to a literature review vs. a dissertation.

Is continuing to accept a literature review as one of the two pieces of work acceptable?
Some members were not aware this was acceptable.

Meeting adjourned at 12:55 PM.

**Department of Mathematics, Oregon State University
Review committee report**

February 2013

Section 1: Introduction and Overview

The external reviewers – Karen Graham (U. New Hampshire), Bernard Madison (U. Arkansas) and Simon Tavener (Colorado State U.) – conducted a site visit on Sunday and Monday, February 17-18, 2013. Prior to the site visit, the reviewers were provided with a self-study of the Mathematics Department and considerable data on productivity. Some of this information was updated and supplemented with written information during the visit. What follows is a report of the three external reviewers.

Six internal review committee members joined the external members for the visit. These were: William Bogley (Academic Programs, Assessment, and Accreditation), Gary Beach (Curriculum Coordinator, Office of Academic Affairs), Alix Gitelman (Statistics), Janet Lee (Women Studies), Brenda McComb (Graduate School Dean), and Prasad Tadepalli (Computer Science).

Principal meetings during the on-campus visit were:

Sunday, February 17 - Working dinner of the entire review team, both internal (OSU) members and external members

Monday, February 18

- Tom Dick, Chair of Mathematics Department and David Finch, Graduate Chair
- Mina Ossiander, Associate Chair & Undergraduate Chair and Mary Flahive, Head Faculty Advisor
- Christine Escher, Assistant Chair, Keith Schloeman, Lower Division Mathematics Advisor and Deanne Wilcox, Office Manager
- Vince Remcho, Interim Dean of the College of Science
- Undergraduate students (30-40) and Graduate students (3)
- Mathematics instructors
- Mathematics faculty
- Tour of the facilities in Kidder Hall, including the Mathematics Learning Center (MLC).

We provide overall recommendations in Section 2. In sections 3 and 4 we present our detailed findings and recommendations respectively (not ordered by priority). Section 5 lists final impressions.

The external reviewers were positively impressed with many circumstances of the entire mathematics program – undergraduate and graduate. The Tenure Track Faculty (TTF) appears fully engaged in producing research and upper level instruction for a cadre of graduate students who have mixed academic backgrounds and differing goals for graduate education. Most, if not all, of the TTF members are productive researchers and many are, in accordance with the strategic goals of OSU, engaging in interdisciplinary research and teaching. The Fixed-Term Faculty (FTF) is large and carries a heavy load of teaching of a rapidly increasing undergraduate student population. The leadership of the department is solid, apparently well respected, appropriately distributed, and committed to quality programs of service, teaching, and research.

The suggested categories for overall recommendations of expand, maintain, restructure, etc. do not seem applicable to most of the components of the mathematics program. First, the service teaching is fundamental and essential to OSU. The undergraduate major in mathematics is a staple of universities such as OSU and is similar in content and productivity to many programs at research universities across the US. The graduate programs – seemingly relatively healthy and productive – are an essential

ingredient of mathematics programs of research and teaching. Graduate programs also help to attract new and active faculty at all levels. Although all of these programs – as is the case almost universally – can be improved, no major restructuring is needed, nor should there be any consideration to reductions or suspensions. The mathematics programs at OSU are quite healthy, but they can be better. The recommendations offered are for improvements, for moving OSU's mathematics programs out of the middle of those at similar universities across the US and into positions of clear excellence and distinction. Overt expansion may not be necessary, but the resources and freedom to grow are essential.

Section 2: Overall recommendation

Construct a multi-year hiring plan and grow the tenure track faculty.

Growing the instructional capability of any unit by growing the number of fixed term faculty (FTF) has advantages and disadvantages. Typically (and the case at OSU) the university gains low cost SCH from well trained, dedicated instructors and maintains considerable year-to-year budgetary flexibility. While the university achieves its short term goals, the long term effects are harmful. Since there is no long-term career path for instructors the turnover must necessarily be large with instructors without personal connections to the Corvallis area leaving or becoming disaffected. More importantly, this structure encourages a dangerous disconnection between the faculty and the major source of revenue for the department. Tenure track faculty need to be engaged in and feel ownership for instruction at all levels. Secondly, holding TT mathematics faculty numbers constant as the university grows limits the scientific interactions mathematicians can engage in outside their own department. Joint grants such as "SOLAR: Enhanced photovoltaic efficiency through heterojunction assisted impact ionization," "Residence and first passage time functionals in heterogeneous ecological dispersion," and the NSF-IGERT program "Ecosystem informatics," suggest that the department is already engaged with many activities aligned with stated university goals. Without increase in TTF, those predisposed towards such interactions will simply become overwhelmed.

Because there are ample reasons why the OSU mathematics TTF should be expanded, the following recommendation is seen as critical in moving OSU to a position of national distinction in admittedly limited areas of mathematics research.

In consultation with the College of Science Dean, the Dean of the Graduate School, and the Provost, develop a documented and agreed-on strategic faculty-hiring plan with the following goals.

- Utilize and build on existing faculty research strength in mathematics and other science and engineering departments.
- Seek to build more research connections between the mathematics faculty and other OSU departmental faculties. These connections will broaden both the intellectual bases of OSU faculties (which are smaller than those in many of the faculties of universities that compete with OSU) and the employment market for graduates.
- Build a nationally prominent research and graduate education group that produces PHD graduates with strong employment opportunities.
- Advertise the research and graduate education group's strengths nationally to attract exceptional new faculty applicants and graduate students with exceptional potential.

- Raise the level of expectations and optimism about OSU's programs of graduate study and research.

Section 3: Findings

Undergraduate Program

The Mathematics Learning Center (MLC) seems to be well connected to the Fixed Term Faculty (FTF) and the Tenure Track Faculty (TTF). This appears to be a result of the various faculty administrators in the department as well as the MLC faculty advisory group. This situation is very healthy and should be nurtured.

Undergraduate majors do not have a consistent advisor across the four years. This situation could create a lack of personal relationship between students and mathematics department faculty. Upper level students feel this makes it difficult to obtain letters of recommendations for jobs or graduate school and faculty could find them difficult to write. In addition, students may not know where to go to get advice on jobs or graduate schools.

The Mathematics Department has primarily relied on data collected through surveys to evaluate its undergraduate programs.

There were signs that the undergraduate major program should be analyzed to see if it needs changes. Having only one significant course change in the past decade might signal neglect. However, the fact that the mathematics major has grown over the last five years at a rate greater than that of the university as a whole suggests the program is well perceived and meeting the needs of the students.

Mathematics Education

One of the strengths of the OSU faculty is in mathematics education. The recent addition of four promising young faculty (two in Mathematics and two in the College of Education) to the 3-4 established faculty gives OSU exceptional potential to become nationally prominent in mathematics education teaching and research. However, being split between two colleges (Science and Education) can hinder this development, so careful nurturing is needed. Currently, the academic employment market for mathematics education PhDs with strong mathematics backgrounds is good, and OSU has the potential to be a major contributor.

Graduate Program

The graduate program serves in two distinct ways: to educate students beyond the baccalaureate degree level in mathematics and to provide graduate teaching assistants to help with the undergraduate teaching. Partly because of this dual role, the graduate students have different backgrounds and different commitments to graduate study. This is a common situation at universities across the US that are similar to OSU. Some of the graduate students are aiming directly at a Ph.D. and are eager to be challenged; however, some are likely to end their studies with a master's degree. Serving both populations with one set of courses and one set of examinations is challenging, and some of the strains caused by this surfaced during the site visit. Some recommendations are offered below to address some of this.

There seemed to be little interaction between Statistics and Mathematics. With a probability and stochastic processes group in Mathematics, it would seem that the interaction would be more evident.

There seemed to be little interaction between Mathematics and Education. With new faculty being hired in mathematics education in both departments there is potential for a renewed culture of collaboration that could lead to joint degrees, research, and externally-funded initiatives.

General Issues

Budget – There is a heavy dependence on non-recurring funds for the mathematics programs. In particular the department's revenue comes from multiple sources of one-time funds, e.g. access funds (\$681K), distance courses (\$400K) and INTO funding (\$250K). These funds are used to fund the GTA program and must be considered rather precarious in view of still uncertain outcomes of distance courses and INTO program. Even though annual decisions seem to be made in a timely fashion, this dependence does increase the workload and worry load of the Chair.

Space – The space allocated to the Department is crowded, some uninviting, and currently dispersed. Exiling several FTF members to a re-purposed dormitory across campus has the potential to interfere with collegiality and, more importantly, to student-faculty interaction. GTAs lack facilities in which GTAs can hold office hours without disturbing their office mates. The Mathematics Department has only a single classroom it can schedule independently.

Collegiality – With two rather different large faculty components – TTF and FTF – continued attention to building rapport and mutual respect between these two groups is necessary.

Section 4: Recommendations

Undergraduate mathematics major program

1. Provide individual advisers for mathematics majors after their first year. Assign a single adviser for years 3–4 if a professional adviser has the capacity to handle the number of students for the first two years. Consider increasing the number of professional advisors by one FTE (two 50% instructor/advisers or one 100% adviser and one 100% instructor).
2. Offer courses Math 311/312 on a winter/spring schedule as well as the current fall/winter schedule.
3. The department's WIC courses should be examined to make sure there is consistency and a set of agreed upon expectations. For example, learning L^AT_EX is a valuable skill, but is this what is intended from these courses?
4. The department should consider adopting means to perform quantitative evaluations of undergraduate program, e.g. the major field test. Also, a capstone course offers various opportunities for assessing and consolidating the undergraduate major experience.
5. Examine the transition from 200- to 300- level courses (the bait and switch in mathematics programs that exists nationwide). The problem may be further complicated at OSU by the use of mymathlab.com for homework in all courses below the 300 level. Have numbers of mathematics majors grown to a size in which it is possible to run 200 level classes for mathematics majors? Failing that, is it possible to develop an introduction to proofs course for sophomores and transfer students? (These type of experiences can also be included in the first year seminar although this seminar reaches $<1/2$ the mathematics majors.)

6. Computer languages such as Matlab, (Octave, Scilab)), Maple, Mathematica, R, are valuable tools for mathematics majors. Consider developing or requiring an introductory course that can be developed as a calculus reinforcement course, eg. secants and tangents, Newton's method, rectangle, trapezoidal and Simpson's approximations, l'Hospital's rule.
7. The Department might reconsider the sequence of upper division courses to ensure students have the material required for the GMAT and GRE exams at the appropriate time and consider addressing this in a capstone experience.
8. There is a relatively low enrollment in the department's Honors option (as determined by relatively low number of Honors theses). Is this due to additional cost to the students? This seems a disincentive to the university as a whole. The long-term presence of an NSF REU site "Computation and modeling in pure and applied mathematics" indicates the Mathematics Department's interest in undergraduate research.
9. Work with Science and Mathematics Education faculty in both mathematics and education to review current program and facilitate connections and early field experiences for students with area schools.

Undergraduate Service Courses

10. There are several models across the US of courses in quantitative reasoning (QR), and some of these might be more effective for many OSU students than the current 105 course. The major difference between most QR courses and the 105 course is that QR courses focus on applying quantitative reasoning (as well as writing and reflection) to everyday contemporary problems in the students' world.
11. The lack of common exams and common grading schemes across multiple sections of lower division courses can cause problems of consistency. This seems to be a minor issue at present, but it is a potential source of conflict and is generally considered to be good practice. ["My roommate did half the work I did in math1xx and got an A but I got a B."]
12. The Department should keep checking the effectiveness of the mathematics course placement program. As student populations shift – and they likely have with the recent large increases – then new placement issues may arise.
13. The income earned through distance courses (currently \$400K/year) is an essential component of the Mathematics Department budget. Unfortunately little seems known about the effectiveness of these courses (though anecdotal information is not encouraging) and inappropriate given the university-wide investment in the e-campus.
 - Carefully monitor student performance in distance courses.
 - Understand the composition of students enrolled in distance courses and in particular the fraction of students taking distance classes who are also enrolled in regular face-to-face classes at OSU.

Fixed term faculty

1. Perform one-on-one annual reviews following submission of annual activity reports.
2. Provide opportunities for professional travel.

3. Consider involving the instructors more on departmental committees especially in the area of curriculum planning and assessment. Hold several department-wide meetings that include tenure track and fixed term faculty. .
4. Develop career paths for instructors.
5. Co-locate tenure track faculty and fixed term faculty. The worrying disconnection between regular faculty and fixed term instructors is exacerbated by the physical separation between these two groups. It is of vital importance to house these two groups in a single location or failing that, in a single region, e.g. neighboring buildings on campus.

Graduate program

1. Reconsider the nature of the graduate program, which is currently trying to achieve multiple objectives with limited resources. How can the department best serve both its terminal MS and its PhD students? Is this possible with a single set of courses? In particular courses numbered 4xx/5xx suffer from trying to achieve multiple objectives of the program.
2. Consider developing a joint PhD degree that would involve faculty and course work in both Mathematics and the College of Education. A combined or cooperative graduate program between Mathematics and Education could have several good effects: graduate students in mathematics education could be supported by mathematics GTAs; GTAs could be helped by the expertise of faculty members with special knowledge about undergraduate mathematics education; and the intellectual basis of the undergraduate mathematics instructional program would be expanded. Capitalize on the recent establishment of a Center for STEM Education and how this could be used to move the research agenda forward.
3. Rethink the qualifying exam structure, especially in view of how it interacts with students who are surely Ph.D. intending and those who are likely to end their study with a master's degree. As one can note from the comments in the self-study, a few graduate students see the qualifying exam system as too unforgiving and uneven in level of expectations between subject areas. The requirement to pass *all* exams or be delayed 12 months later seems unnecessarily discouraging. This is compounded by a reported pass rate less than 50%, which seems low.
4. Review source of incoming graduate students and consider how to enhance recruiting initiatives particularly among underrepresented groups.
5. Cultivate the employment market for all mathematics graduates – BS, MS, and Ph.D.. Expansion, articulation, advertisement, and documentation are all goals and can be used to attract new students.
6. The training and orientation of graduate teaching assistants needs to be evident to all new assistants. The two-day initial sessions should be followed on throughout the year with continued mentoring and support. Instructors could play a critical role here.

Section 5: Summary and Conclusions

Determining the nature and culture of a program as large and complex as the mathematics program at Oregon State University from written materials and a brief visit is likely to be incomplete. Nevertheless,

we offer our impressions in the interest of improvements. We have focused on things we believe can be better rather than things that seem to be as good as they are likely to be over the short term. We did not see our role as one of trumpeting the good; rather one of looking for cracks that can be rather easily filled. Among the three of us we have participated in numerous similar visits to institutions of various kinds over the years. Some of the programs visited had serious cracks, more often than not known to those at the institutions. We saw no serious cracks at OSU; rather we saw a department pretty much in tune with its parent institution and making remarkably efficient use of resources, some more limited than others.

Materials linked from the March 11, 2013 Graduate Council agenda

Proposal: Eliminate the requirement for OSU undergraduate and post baccalaureate students to “reserve credit”. Rational: We do not require students who complete graduate level courses as an undergraduate (or post-bac) from other institutions to “reserve credit”.

Suggested changes to URL: <http://catalog.oregonstate.edu/ChapterDetail.aspx?key=38#Section1801>

Transfer Credit

Students who wish to transfer graduate credits from other schools must provide transcripts for courses already completed to the Graduate School prior to the submission of a study program. Graduate courses taken at OSU while the student was a graduate nondegree-seeking student, a postbaccalaureate student, a professional degree-seeking student (PharmD or DVM), or an undergraduate student are considered transfer courses.

If a student undertakes a transfer course after his or her study program has been approved, the student must provide the Graduate School with a transcript of this course prior to the final examination. The Graduate School does not assume responsibility for obtaining transcripts from other institutions.

Courses to be transferred **must be graduate level**, ~~taken after the completion of a four-year baccalaureate degree (or equivalent)~~, with letter grades of B (3.00) or better. Courses delivered off-campus or by electronic means must satisfy the OSU guidelines for the electronic delivery of courses. It is the responsibility of the student wishing to transfer the course to provide the necessary documentation to satisfy the OSU guidelines. Traditional extension and correspondence courses with no live or real-time interaction with the instructor are not transferable.

Graduate courses may be transferred if:

1. the work is appropriate to and will be placed on the student's graduate certificate or degree program;
2. the transfer is approved by the student's committee (for degree-seeking students), by the major program or department, and by the Graduate School; and
3. grades of B (3.00) or better have been earned.

If the transfer credit is from a foreign university, the student must provide copies of the original transcript and an English translation of the transcript, with the courses to be transferred clearly indicated. Grades and credits for the courses must be clearly identified. In some countries, the first university degree, which OSU considers to be equivalent to a baccalaureate degree, may take five years or more to complete. All of the course work toward such a degree is considered a requirement for the first university degree, and hence none of it can be transferred to a graduate certificate or graduate degree at OSU.

Students may not transfer courses graded on a nonstandard basis (e.g., Pass/No Pass, Credit/No Credit, Satisfactory/Unsatisfactory) to their graduate certificate or degree

programs unless it can be verified from the registrar of the university offering the course that the grade is equivalent to a B (3.00) or better.

Graduate courses to be transferred to an OSU master's degree must not have been used to satisfy the requirements for a bachelor's degree, master's degree (or equivalent) or a doctoral degree ~~from another institution~~.

Graduate courses to be transferred from an OSU master's degree to a second OSU master's degree must meet the following three requirements:

1. Credits used to satisfy the residency requirements of one master's degree may not be used to satisfy the residency requirements of another master's degree.
2. Students who earn two master's degrees at Oregon State University must complete all degree requirements for each degree. This requires filing separate programs of study forms for each degree, filing separate commencement applications for each degree, completing separate projects or theses for each degree, scheduling separate final oral examinations for each degree, and passing final oral examinations for each degree.
3. Such credit will be granted only for graded course work earned at Oregon State University and completed with a grade of B or higher.

Up to 15 graduate credits may be transferred toward a 45-credit master's degree. Up to 6 graduate credits may be transferred toward an 18-credit graduate certificate.

Graduate courses to be transferred to a doctoral degree program can be courses that were used to satisfy the graduate course requirements for a graduate certificate or a master's degree (or equivalent). Selected 700-level courses that have been deemed equivalent to graduate-level learning may be used on doctoral programs of study upon approval of the student's graduate committee. There is no limit on transfer credit toward the doctoral degree as long as the doctoral residence requirement is satisfied.

Credits earned in fulfillment of a graduate certificate program may be applied to a graduate degree, so long as they meet the appropriate standards for use in the degree and the criteria to transfer credit as defined herein. Courses completed for a degree program may likewise be applied toward a certificate program.

~~Graduate courses taken at OSU while the student was a graduate nondegree-seeking student, a postbaccalaureate student, or a professional degree-seeking student (PharmD or DVM), and courses reserved for graduate credit while the student was an undergraduate or postbaccalaureate student are considered transfer courses.~~

MEMORANDUM

April 1, 2013

TO: Rebecca Warner
Senior Vice Provost, Academic Affairs

Brenda McComb
Dean, Graduate School

FROM: James R. Coakley
Chair, Graduate Council

SUBJECT: Graduate Council Recommendations for the Math GPR

The Graduate Council accepts the Graduate Program Review (GPR) of the Department of Mathematics. The Graduate Council supports the recommendation of the review committee report to “build a nationally prominent research and graduate education” and suggests the following strategies to achieve such a goal:

1. The Mathematics Department should **identify and develop specific sub-disciplines as centers of excellence**. The identification and marketing of areas for which they are nationally and internationally well-known would strengthen the department, provide opportunities for more strategic and targeted hiring of tenure-track faculty, and, in turn, lead to a stronger pool of highly qualified graduate students seeking to work in these areas.
2. Despite the best efforts of the department’s chair, Professor Tom Dick, the Mathematics Department **appears to suffer from a lack of inclusivity** with instructors and students, for example, having little influence in department affairs and activities. The Graduate Council suggests strategic representation of these groups in its committee structure as well as the consideration of more informal mechanism to build community within the department. It was noted that this hierarchical structure is replicated among graduate students whereby the Ph.D. students have more influence and a higher status than the Masters students. In conversation with the graduate students, the review team noted that such hierarchies promote divisiveness rather than collegiality. This, coupled with the high failure rate among students taking the preliminary exams, leads to anxiety and stress among graduate students that impairs positive student growth and development.
3. Although the self-study did not focus on collaboration between the Mathematics Department and other units on campus, it was clear from conversations with faculty that many are engaged to some extent with colleagues in other departments. Alongside the need for better collaboration with the College of Education, as noted in the report, the Graduate Council suggests that **collaboration with other departments** and units on campus (such as Statistics, Business, and Engineering) be formally structured. This would

improve opportunities for graduate student involvement in applied mathematics through, for example, participation in grants, joint research, cross-listed courses, and faculty mentoring. Collaborations with off-campus agencies such as private industry and federal/state agencies would also provide important opportunities for graduate students.

4. Graduate Council supports the report's recommendation "to enhance recruiting initiatives, particularly among underrepresented groups" and suggests the department work on a **structured strategic plan for targeted recruitment of women students and students of color**. This plan should include strategies for retention as well as recruitment of a more diverse student body. In addition, it is suggested that the department's plan for more tenure-track positions needs to be more strategic in hiring and retaining women faculty and faculty of color. A diverse faculty is the first step in attracting a diverse graduate student population. We suggest working with the Office of Equity and Inclusion, the Graduate School, and the Difference, Power, and Discrimination program for assistance with this plan.
5. The department also needs to be more actively involved in **recruiting accomplished graduate students worldwide** through generating, for example, INTO pathways. The Graduate School can assist in a cost-share arrangement to increase the pool of highly-qualified graduate applications.
6. Graduate Council supports the recommendation to **reconsider graduate curricula offerings**, especially in terms of meeting the needs of both Masters and Ph.D. students (including the problem with the qualifying exam). We suggest the department develop their own program-specific measures of direct assessment of learning outcomes, in addition to university-wide assessment metrics.
7. Finally, the self-study included a question about **appointing GTAs to a .49 FTE position** rather than a .40 FTE. This would increase a student's stipend, and, while it would reduce the total number of students funded, such a change might attract higher qualified students to choose OSU for their graduate work. The latter might also reduce the failure rate on the qualifying exams.

**Graduate Program Review
Department of Botany and Plant Pathology
November 30, 2012**

1. Overall Recommendation:

Expand to Maintain

2. Summary of Findings and Recommendations:

The graduate program of the Department of Botany and Plant Pathology (BPP) was reviewed on Nov. 30, 2012 by a panel composed of external and internal evaluators. The objective of the review was to evaluate the graduate program of BPP, including its relevance to the land grant mission, strength of the curriculum, student quality and success, and productivity and strength of its faculty. The review team concluded that BPP at OSU brings together programs in three subdisciplines core to the mission of a land-grant institution. These are: i) the causes, control, and impact of diseases of important agricultural plants, ii) basic understanding of plant function (genomics, biochemistry, growth and development), and ii) the ecology, biodiversity and evolution of plants in their native environments. BPP addresses several of OSU's "Signature Area of Excellence" areas including "improving human health and wellness," "advancing the science of sustainable earth ecosystems," and "promoting economic growth and social progress".

BPP department attracts high quality students from across the United States and internationally. This graduate program has subdisciplines in ecology, systematics and plant pathology that attract a significant number of students and this is seen by the review team as a strength of the program. Fewer students pursue degrees in "plant function", but these subdisciplines are strengthened by the department's commitment and collaboration with the MCB program. Most students are supported on GRAs or GTAs, and the department's commitment to sustained graduate stipend support was noted by the students as a strength. The review team recommends that the department may want to pursue strategies for increasing international student enrollment. There is also a need to resolve the issue of COS GTAs being supported by departmental grant indirect costs. Student quality is high, with the majority completing their degrees and graduating in a timely manner. Students successfully move to positions appropriate for their training such as university faculty members, scientists at national government laboratories and agencies, scientists at non-governmental agencies, teachers and instructors, postdoctoral scientists, farming, and private practice.

BPP offers core courses in all areas related to their mission including courses in plant health, plant function, ecology, and systematics. Loss of faculty over the past ten years has reduced the diversity of offerings available to students, and students expressed a need for more specialized course offerings. The review team recommends that BPP review its curriculum to address student interests and changing needs.

BPP has faced a major loss in the number of on campus tenured/tenure track faculty over the past ten years. Twelve positions have been vacated due to retirement or departure from the department. BPP has, over this same time period, acquired six positions with only three based on strategic hires.

The department has benefited from excellent recent hires through various opportunities such as Provost hires and interdisciplinary hires that selected BPP as their tenure home, but has been less successful in hiring faculty based on its own strategic planning. The review team recommends that the CAS administration assess the impact of faculty losses over the past ten years and work with BPP to support BPP's strategic priorities in hiring faculty in critical areas including Forest Pathology, Plant Genomics and Computational Biology, Plant Ecology, Plant Systems Science, Plant-Microbe Interactions and Ecology and Evolution of Infectious Diseases.

The review team shares the concern of the BPP faculty of the poor facilities that house the department research and teaching programs in Cordley Hall. The review team recommends that the department and CAS administration address strategies to improve basic infrastructure.

The review team found that BPP contributes significantly to interdisciplinary programs at OSU such as the MCB and biology programs. These contributions have come at a cost to sustaining and expanding departmental programs due in part to BPP not receiving credit for interdisciplinary contributions. The team recommends that OSU and CAS evaluate their system of metrics to ensure that they capture total output and contributions in interdisciplinary programs, and that they award support and positions based on total productivity and contributions by BPP faculty.

BPP faculty are nationally and internationally recognized for their scholarly, academic, and outreach contributions. They are recipients of prestigious national awards and are highly competitive for federal grant funds, a measure of the quality and impact of their programs and of faculty stature and reputation. The department also has core responsibilities for education and outreach on plant diseases critical to the productivity of Oregon agriculture, and BPP's disease diagnostic clinic and its staff are nationally recognized.

3. Detailed findings

A. Introduction

The graduate program of the Department of Botany and Plant Pathology (BPP) was reviewed on Nov. 30, 2012 by a panel composed of external and internal evaluators. The Dean of the OSU Graduate Program, Brenda McComb, chaired the panel sessions with the department. Members of the review team were:

- Margaret Daub, Professor and Dept. Head, Dept. Plant Biology, NC State University (external)
- Susan Harrison, Professor, Dept. of Environmental Science and Policy, UC-Davis (external)
- Mark Mousseaux, Oregon/Washington State Botanist, Bureau of Land Management (external)
- Michael Lerner, Professor, Dept. of Chemistry, OSU (OSU Graduate Council representative)
- Jo Tynon, Associate Professor, Dept. of Forest Ecosystems and Society, OSU (OSU Graduate faculty-at-large)

The objective of the review was to evaluate the graduate program of BPP, including its relevance to the land grant mission, strength of the curriculum, student quality and success, and productivity and strength of its faculty. Lynda Ciuffetti, Head of the Department, provided the evaluation team with a comprehensive self-study document developed by the departmental faculty. During the review, the panel toured facilities, and met with Dr. Ciuffetti, with members of the Graduate Studies Committee, and with faculty, and with graduate students. The team also met with College of Agricultural Sciences Dean Daniel Arp and Associate Dean Stella Coakley. The graduate review was held simultaneously with a review of the undergraduate programs in the department, conducted by a team composed of external and internal participants. The evaluation of the undergraduate program is summarized in a separate report.

This report of the graduate program is organized based on an outline provided to the review team by Dean McComb. Below we provide our assessment of our findings and recommendations.

B. Inputs

1. Fit of the mission of the program and its relationship to the mission of the academic college and University

The Department of Botany and Plant Pathology conducts scholarship, outreach, and teaching and training in disciplinary areas that are central to the mission of all Land Grant Institutions. A core mission of Land Grant Institutions is to conduct fundamental and applied research and to disseminate information needed to strengthen agricultural productivity, to ensure a sustainable and safe food supply, and to protect our environment. Coupled with this mission is a commitment to train the next generation of scientists to ensure continued advances in promoting the land grant mission. BPP at OSU brings together three subdisciplines core to the land-grant mission. These include fundamental and applied programs that address: i) the causes, control, and impact of diseases of important agricultural plants, ii) basic understanding of plant function (genomics, biochemistry, growth and development), and iii) the ecology, biodiversity and evolution of plants in their native environments. As such, the department's mission and accomplishments are not only central to the mission of the College of Agricultural Sciences and to Oregon State University, but are also critical for addressing critically important "Grand Challenges" facing our world today: ensuring a sustainable and safe food supply, protecting our environment, and providing a sustainable source of bioenergy. As noted in the self-study document, BPP addresses several of OSU's "Signature Area of Excellence" areas. These include: "improving human health and wellness," "advancing the science of sustainable earth ecosystems," and "promoting economic growth and social progress". Thus BPP is core to the mission of CAS and OSU. BPP is nationally and internationally recognized for their outstanding faculty and programs, and as such, enhances the reputation of CAS and OSU.

2. Quality of students.

The department attracts high quality students from across the United States and internationally. Over the 2002-2012 review period, approximately half the students pursue studies in ecology and evolution, 40% in plant health, and approximately 10% in plant function.

Ecology and evolution is a strength at OSU, and BPP offers training in specialized areas within these disciplines including plant and fungal systematics, plant-insect interactions, and

community ecology. The Ecology and Evolution program has been recognized for its outstanding research productivity (#4 in US graduate programs in this area in 2005-06). Loss of faculty in this area may be affecting its numerical strength; based on Table 2.3a, it appears that toward the end of the review period (2009-2012), 14 of 61 current graduate students (23%) are in Plant Ecology, while 9 (15%) are in Systematics or Applied Systematics. The overall 10 year average for E&E is higher (48% total students, see Fig 4 in the self-study report).

The Graduate Program in Applied Systematics offered by BPP is designed to provide students with both advanced technical skills in plant systematics and taxonomy, as well as a good foundation in ecology, data analysis, and communication which are skills necessary to function effectively in either private industry or government plant conservation programs. This program leads to a Master's in Applied Systematics in Botany and has an internship component that emphasizes practical experience in-lieu of a thesis. Although not enrolling a large number of students due to the lack of financial support for these students, the program fits an important training niche for plant conservation in the U.S. and needs to continue to serve this important area of plant biology.

The Department of BPP at OSU offers one of the best environments in the western U.S. to pursue graduate study in plant systematics. The OSU Herbarium, is the central university facility in the state for research, instruction, and public service in plant identification and classification. The Herbarium is a modern facility that contains a plant collection of over 330,000 specimens and a mycological collection that exceeds 70,000 specimens. These collections are among the largest in the Pacific Northwest, and they are a major regional, national, and international resource for basic and applied work in plant and fungal systematics. The faculty associated with the OSU Herbarium and the program are nationally and internationally recognized for their expertise in the systematics of vascular plants, non-vascular plants (lichens and mosses) and fungi. This expertise, in combination with other programs in other Colleges at the University (e.g. forestry, statistics, communication), as well as other BPP programs like the Oregon Flora Project, provides students entering the systematics program with an exceptional education opportunity to obtain the skills needed to pursue a successful career in Applied systematics and plant conservation.

The programs in plant health are unique within the state of Oregon, and are nationally recognized. Programs available for graduate student training span from the very fundamental understanding of genomics and molecular biology of host-pathogen interactions, to understanding pathogens and disease at the population level, to programs that prepare students for applied research on plant diseases and disease control. Mentoring of graduate students in plant health is greatly strengthened by the participation of courtesy faculty with expertise in these areas. Although the courtesy faculty do not teach courses in the department, they have mentored approximately 25% of the students trained in plant health over the past ten years and thus play an important role in sustaining the strength of the plant health graduate program. Graduate training in this area is greatly enhanced by the outreach mission of the department including the resources and expertise of the OSU plant disease clinic, the off-campus research stations, and opportunities provided by Oregon's diverse agricultural economy.

Graduate opportunities in plant function, per se, are supported by a small number of faculty and attract the smallest number of students. However, members of the two other subdisciplines conduct work that overlaps with this area, and in addition, this track provides another linkage with the MCB program, enhancing interdisciplinary interactions. Basic research

on plant genetics and genomics, cell and molecular biology, physiology and biochemistry, and development are critical to promoting advancements in our understanding of plants. BPP programs address fundamental questions on plant function as well as how to manipulate plants for improved nutrition and stress tolerance. Faculty in BPP study model and agricultural terrestrial plants as well as marine algae.

On average, the department admits about 13 new graduate students per year in BPP (10) and in MCB (3). Students come with good GRE scores. Student quality and the strength of mentoring by faculty are also reflected in the high proportion of students who complete their degrees and the timeliness of completion. Two of their students were awarded NSF Graduate Research Fellowships, one of the most prestigious awards for graduate education in the US. BPP admits predominantly US students with a smaller cohort of international students. Although this demographic reduces diversity, the ability to attract high quality US students is seen by the review team as a strength.

3. Admissions selectivity

BPP applicant pools have ranged from 50-84 students over the past 7 years, with admission offered to the top 15-30% of applicants each year. Of these admitted students, an encouragingly high percentage (typically 60-70%) matriculate into the program. These data indicate a selective application process and a high interest by the selected students in the OSU program. Over the past 6 years, admitted student GRE score averages have remained high (72/62/51 percentiles).

As noted above, the international student numbers are low, in large part due to the ability to fill positions with strong domestic candidates. With about 25-50 international applicants per year, only five international students have been admitted into the graduate program in the past seven years. Although the relevant data are not broken out for domestic vs international students, the low number of international admissions may also result from differences in the applicant pool qualifications. Faculty indicated that concerns over GTA English abilities were one concern in evaluating international candidates.

Recommendation: BPP might explore ways to increase international involvement in their graduate program. Such an effort was suggested by students and would be in line with OSU strategic goals.

4. Level of financial support of students

Just over half of BPP graduate students are funded on Graduate Research Assistantships (GRA) from extramural grants. There are also many Graduate Teaching Assistant (GTA) positions supported from departmental or College of Science (COS, \$12,129) support as well as from funds returned to the Department from grant indirect costs (over \$200,000 in FY 2012). Seventy-seven percent of graduate students are supported as GTAs in their first year, and graduate students are grateful for the support. However, the use of indirect costs to support GTAs for teaching in the interdisciplinary undergraduate Biology program offered by COS is a significant source of concern for BPP faculty, as they see returned indirect costs as funds

intended to support BPP research and graduate training, not GTAs. External members of the review team were also perplexed by this funding arrangement for GTAs.

Students remarked positively on BPP's commitment to provide and sustain assistantship support. A source of concern for BPP faculty was the level of stipend and benefit support provided to students, which faculty view as non-competitive. A limited analysis done on stipend levels at other institutions showed BPP lagging some institutions, but competitive with others, particularly at the Master's level. Students remarked on the need for stipend levels adequate to support basic costs, but did not view relative stipend levels as a factor in their choice of graduate programs.

The Department also has funds to support graduate student travel to professional meetings and to support research. Creating BPP program-based funding sources (e.g., GTAs, Laurel Awards, Provost awards, eCampus) can allow the BPP program to be more strategic in its recruiting and also allow supplements and/or rewards be used to support students and faculty who contribute to the program.

Recommendation: BPP should seek institutional support for funding GTAs rather than the use of indirect cost funds returned to the department, freeing up returned indirect costs for GRAs and improvements to infrastructure.

Recommendation: BPP should continue to pursue avenues to increase graduate stipends to levels competitive with comparable institutions.

5. Curriculum strength

Graduate curriculum offerings in BPP face a challenge due to the diversity of subdisciplines covered (Plant Health, Plant Function, Ecology and Evolution). At many universities, these disciplines are separated into multiple departments. BPP attracts students in all of these subdisciplines, thus curriculum offerings need to address the diverse needs of students. BPP has also faced significant losses in faculty over the last ten years, further limiting course offerings. In the review team's meeting with students, lack of specific course offerings was the only area of discontent noted. Students expressed interest in having a greater diversity of course offerings tailored to their interest areas. Also, cancellation of courses due to low enrollments further limited course opportunities. The offering of "slash" (dual undergraduate/graduate) courses is one option to offer a greater diversity of courses, and is a tool also used by institutions of some of the review team. Students noted that there was a limit to the number of slash courses allowable by OSU. Also, some slash courses were viewed as successfully meeting the needs of graduate students, whereas others were not. Students suggested that the joint 300/500 level introductory plant pathology course, for example, was not advanced enough for graduate students.

In the area of plant health, BPP offers courses in forest insect and disease management, mycology, and plant pathology which are offered annually with solid enrollments. Alternate year courses include ones on plant disease management and molecular plant pathology. Together, these offerings provide a core of fundamental courses (i.e general plant pathology, disease management, and molecular plant pathology) widely viewed to be the foundation of a plant pathology graduate degree. Students expressed concern, however, about the combining of

the undergraduate and graduate general plant pathology course and noted that it does not meet the advanced needs of graduate students. BPP also offers more specialized courses in nematology, plant disease dynamics, plant disease diagnosis, and forest pathology, however, some have not been offered recently perhaps due to insufficient enrollment. Special topics courses have been offered in mycology and plant pathology to fill some of those needs. Additionally, some MCB offerings taught by BPP faculty are important offerings for students in molecular areas of plant pathology. Overall, the curriculum offers a basic foundation of courses needed by students in plant pathology, but lacks consistent offering of specialized courses particularly in the applied areas of plant pathology and the biology of plant pathogens. In the past, “plant health” graduate courses included ones on plant virology, plant pathogenic fungi, plant pathogenic bacteria, and fungal genetics, courses that are common at other institutions. However, these courses are no longer offered in BPP.

BPP offers few courses in the area of “plant function,” but the curriculum is strengthened by course offerings in MCB taught by BPP faculty including courses in genome organization, genome expression, cell and developmental biology, and bioinformatics. BPP has recently added a new course in comparative genomics, and also offers courses in photosynthesis and in physiological ecology, the latter covering water relations, plant stress, and growth. The only graduate offering in general plant physiology, plant anatomy, or plant development, is BOT505 (Plant Physiology Reading & Conference). Such courses are usually part of botany curricula and may be offered by other plant-based departments at OSU, and/or may not be possible due to the limited number of “plant function” faculty and their responsibilities to MCB. Graduate students commented that it was difficult for students entering the department without a plant background to obtain basic understanding of plants due to the lack of general offerings at the graduate level. Admitting students with diverse disciplinary background strengthens the graduate program; BPP may want to consider ways to offer course material in general plant function at the graduate level.

Graduate offerings in Ecology include Plant Population Ecology, Plant Community Ecology, Field Methods in Vegetation Science, Nutrient Cycling, and Environmental Physiology. This is a very basic set of coursework for a graduate program in plant ecology. Students commented on the need for more coursework in restoration ecology. Additional elements that would strengthen the program and complement its current foci include fire ecology, global change ecology, landscape ecology, evolutionary ecology, and perhaps a course that took a primarily ecological approach to plant-insect and plant-pathogen interactions. Finally, we note that many BPP graduate students go on to agency science jobs, and a conservation-oriented course that covered relevant aspects of environmental policy would be valuable.

The graduate curriculum in Plant Systematics provides graduates with the coursework necessary to address the conservation of endangered plants, the control of invasive plants, and habitat restoration. Core systematic and taxonomy courses like Mycology, Agrostology, Lichenology or Bryology, Aquatic botany and the Flora of the Pacific Northwest serve as the base platform of the program and should remain so. An improvement suggested by students would be to also offer an optional systematics courses at a larger scale, perhaps the Flora of North America, or in Tropical flora. Industry, private environmental consulting firms, and government agencies all continue to have a need for graduates that are trained in plant taxonomy and ecology. A number of optional electives (seven credits) are shared with Ecology, such as Population Ecology, and Community Ecology. Plant Genetics is an optional elective taught in

Crop and Soil Science (CSS 530) that is critical for a solid foundation in plant conservation. If the student's undergraduate experience did not cover genetics, then Plant Genetics should be required for a systematics Master's degree. Ecological restoration could be expanded (additional class or a practicum), to provide a more 'real' world experience given the future demands on systematics graduates in the work place. Course work on community structure and analysis, as well as data analysis methods, are also optional – at least one of these should be required. Graduates in the fields of plant conservation need to know how to analyze data. A number of excellent professional cohort courses (18 credits) are required, including Science Communication, Ethics, and Accounting and Finance for Scientists. Two required courses, Management and Marketing Scientific Technologies and Innovation Management, are two courses that could be optional, in lieu of a few other elective courses that should be required (e.g. Genetics, and Data Analysis). This program also has a required internship which is an excellent way to focus a graduate's work into a certain area and can provide a pathway for a non-thesis option.

Recommendation: BPP should review its curriculum to address student interests and changing needs. The use of 300/500 slash classes should be reassessed. A series of changing special topics classes may allow for specialized offerings based on student interests.

6. Quality of personnel and adequacy to achieve mission and goals

BPP has faced a major loss in the number of on campus tenured/tenure-track faculty over the ten years covered by this review. Of the current 23 TT faculty, four have primary or major administrative positions. The number of non-administrative tenured/tenure-track faculty is now equivalent to the number of courtesy faculty affiliated with the department. BPP is fortunate to have such a large number of courtesy faculty affiliated with their department, as these faculty mentor graduate students and contribute significantly to research productivity and reputation of the department. However, they do not have formal teaching responsibilities. As noted above, BPP spans disciplinary areas often separated into distinct departments at other institutions. The loss of faculty limits their ability to provide comprehensive curricula to their students. In addition, 16 of the 23 tenured/tenure-track faculty are full professors, and the department is facing additional retirements in the near future.

BPP has benefited from excellent recent hires through various opportunities such as Provost hires and interdisciplinary hires that selected BPP as their tenure home. BPP has been less successful in hiring faculty based on its own strategic planning. Of the 12 on-campus tenure-track faculty lost over the last ten years, three were refilled based on positions returned to the department and prioritized through strategic planning. In order for BPP to move strategically to meet the future needs and goals of their department and disciplines, faculty positions need to be provided with positions that meet the goals of their strategic plan. BPP has undergone strategic planning and prioritized positions in Forest Pathology, Plant Genomics and Computational Biology, Plant Ecology, Plant Systems Science, Plant-Microbe Interactions and Ecology and Evolution of Infectious Diseases. All of these positions would enhance BPP's research and academic mission.

Recommendation: CAS administration should assess the impact of faculty losses over the past ten years and work with BPP to support BPP's strategic priorities in hiring faculty in critical areas such as Forest Pathology, Plant Genomics and Computational Biology, Plant Ecology,

7. Level and quality of infrastructure

The Department is housed in Cordley Hall, built in 1959. Both faculty and graduate students expressed dissatisfaction with the size and functionality of the existing infrastructure (e.g., laboratories, classrooms, office space). Space allocations for labs and offices are too small to meet OSU guidelines. More space is needed for housing the fossil collection and herbarium specimens. There is no dedicated graduate common space; the only common area available for BPP graduate students is the Department-shared conference room. Electrical and plumbing problems and a lack of air conditioning in the summer have seriously impacted research efforts. External members of the review team did not understand why BPP faculty in unairconditioned space were not provided window air conditioning units, an inexpensive and functional approach to provide basic quality infrastructure critical to sustaining excellent research programs. Controlled environment rooms and growth chambers need upgrading. In recognition of the problems faced by BPP, new faculty negotiated for upgraded laboratory space as a condition of hire. The BPP program needs upgraded labs, teaching space, and offices if the program is to grow.

Recommendation: Freeing up indirect costs now targeted to paying COS GTAs would allow BPP to address some infrastructure improvements.

Recommendation: CAS administration should prioritize the most basic needs for infrastructure improvement such as providing air conditioning.

Recommendation: BPP should continue to be innovative and entrepreneurial in generating revenue to address infrastructure needs.

8. Quality of organizational support

As noted, the department has faced a significant loss of faculty over the last ten years, raising a concern by the faculty of diminishing support by the college and university and an inability to sustain their research and teaching programs. Some of this problem was due to the protracted separation from the College of Science and the lack of support for the department's programs by that college. However, the problem persists, and the faculty believe that their programs and contributions are not adequately measured and recognized by the upper administration.

In the view of the review team, the OSU administration appears to be facing a disconnect, common to many institutions of higher education, between what the institution values (i.e. interdisciplinarity, innovation, entrepreneurship, shared responsibility, a focus on providing quality educational programs) and the metrics universities use to measure output, many of which are designed to measure numbers rather than quality and to measure productivity within defined units such as traditional departments. BPP is a model for 21st century institutions of higher education. For example, they are major contributors to the interdisciplinary biology teaching program in addition to their own departmental programs. They are among the strongest in the

college in securing external funding for their programs. They provided ideas and funding to allow for the recent restructuring of the CGRB, an innovative facility that was the envy of some external members of the team. They have a strong record of providing research experiences for undergraduates from diverse majors, an expensive and time-consuming commitment that is poorly captured by numerical assessment but is increasingly core to a quality undergraduate experience. However, the metrics used to evaluate departments do not fully credit these contributions. For example, the Department does not receive credit for the credit hours it generates in teaching courses in the Biology Program. In order to accurately evaluate contributions, OSU needs to bring its system of metrics in-line with their value system. At a minimum, BPP faculty should be credited with the course credit hours of biology courses they teach. Other universities compile credit hour data both by the unit offering the course and by the unit of the faculty member teaching the course. This should be a very straight forward way to recognize BPP's many teaching contributions and to credit them for the credit hours delivered.

Recommendation: OSU should put in place a system that computes credit hours not only by the unit offering the course but also by the unit of the faculty member teaching the course.

Recommendation: CAS administration should give BPP credit for the total credit hours delivered by BPP faculty in all courses as well as credit for BPP's portion of enrollment increase in Biology in decisions about appropriating faculty positions.

C. Productivity

1. Level and quality of student performance

The self-study report documents success and productivity of graduate students. As noted previously, a high proportion of students receive degrees and do so in a timely manner. Many students receive awards from professional societies (American Phytopathological Society, Botanical Society of America, Ecological Society of America, Mycological Society of America) as well as other society awards. Students presented their research at diverse scientific meetings, and have a strong record of publications in excellent journals, noted in a 24 page list in the self-study document. Upon graduation, students have moved to positions appropriate for their training such as university faculty members, scientists at national government laboratories and agencies, scientists at non-governmental agencies, teachers and instructors, postdoctoral scientists, farming, and private practice.

2. Level and quality of faculty performance

BPP faculty are nationally and internationally recognized for their scholarly, academic, and outreach contributions. The quality of the faculty is evident in rankings of the graduate program and of OSU scholarly impact as noted in "Outcomes" below. Former and current faculty in BPP have been honored with prestigious awards including one member of the National Academy of Sciences, three faculty named as Fellows of the American Association for the Advancement of Science (AAAS), and ten faculty named as Fellows of their professional societies.

BPP faculty are highly competitive for federal grant funds, a measure of the quality and impact of their programs and of faculty stature and reputation. Over the last ten years, BPP

faculty have generated almost \$80,000,000 in grant funding, averaging around \$5 million to \$9 million annually. In the last two years, BPP was responsible for 14-15% of the total grant dollars in CAS, placing them among the top three departments on campus for extramural funding levels for fiscal years 2005-2011 (Self-study report, pg. 33)

BPP faculty also contribute significantly to interdisciplinary and outreach/extension programs and support of critical facilities. The department has core responsibilities for education and outreach on plant diseases critical to the productivity of Oregon agriculture. BPP's disease diagnostic clinic and its staff are nationally recognized. Extension faculty provide disease control recommendations for Oregon and other regions of the Pacific Northwest, essential to supporting a sustainable and productive agricultural industry. BPP faculty were core in the recent restructuring of the CGRB, an impressive facility that supports research of many students and faculty across campus. BPP houses and supports the OSU Herbarium, a resource nationally and internationally recognized for plant ecology and systematics research.

3. Viability of scholarly community within which students can interact

As noted above and in the section on ratings below, BPP faculty are nationally and internationally recognized for their scholarly contributions. Their scholarly reputation is evident in their recognition for distinguished national awards, their productivity, their competitiveness for funding, and the contributions they make to applied agriculture and the academic mission of OSU. It is notable that graduate students identified the excellence of faculty programs and faculty reputation as a major criterion for their decision to attend graduate school at OSU. Further, BPP faculty have expertise in a broad range of subdisciplinary areas, allowing for interdisciplinary scholarship and training.

D. Outcomes

1. Professional viability of graduates

As noted above, upon graduation, students have moved to positions appropriate for their training such as university faculty members, scientists at national government laboratories and agencies, scientists at non-governmental agencies, teachers and instructors, postdoctoral scientists, farming, and private practice. These positions overwhelmingly are in areas of responsibility relevant to their graduate training.

2. Satisfaction of students and graduates

The review team's discussion with students showed high enthusiasm by the students in the programs of the department. Students commented that they chose OSU because of the strength of their mentors' reputations and research programs and for the diversity of Oregon's agriculture. Many mentioned the department's culture of community and commitment to students as a significant strength of the graduate program. They noted that interdisciplinary projects were supported and encouraged, and that they had access to the equipment and facilities needed to conduct their research. Other strengths of the program included the commitment of the department to maintain assistantship support, funding to attend professional meetings, departmental social events (especially those connected with the seminar program), their participation and involvement in recruiting new students, the GTA mentoring program and opportunity to obtain teaching experience, and opportunities to develop mentoring skills due to the faculty's commitment to having undergraduates conduct research in their labs. Although the

self-study document expressed a concern about student diversity, several students valued the diversity present and noted that the department was one that valued diversity.

Surveyed graduate alumni indicated high rates of satisfaction over most of the program components queried (Table 4.5 in the self study document), with approx 60-90% indicating 4 or 5 scores on a 5 point scale. Two areas with slightly lower ratings were in the diversity of course offerings and the departmental advising/guidance efforts. These issues and associated recommendations are addressed elsewhere in this report. As noted, the high rates of student satisfaction likely reflects both individual mentorship and overall program effectiveness. Other contributing factors include: (1) high level of graduate student success -- from 2002-2011, 93% of matriculated students attained a degree or are currently in the program, with an average of 2.44 (MS) and 4.88 (PhD) years to degree over the past few years, (2) continual supported for PhD students by RA or TA appointments, and (3) successful employment search in their field (76% within 6 months of graduation).

3. Rankings/ratings

BPP is nationally and internationally recognized as a department and also for its graduate program. In the most recent National Research Council ranking of graduate programs, BPP ranked in the top 25-30% of 116 Plant Biology graduate programs evaluated across the US based on reputational rankings. This is an outstanding accomplishment.

Other rankings have also documented the strengths of BPP and its faculty. The Chronicle of Higher Education in 2007 ranked the plant pathology program as 5th in the US based on faculty productivity. High rankings were also noted for citation impact and numbers of published papers by OSU faculty in agriculture and environment and ecology, areas central to BPP.

E. Conclusions

1. *Maintain current program.* The BPP graduate program as presently configured has all the markers of success. A high-quality faculty is recruiting, supporting, and graduating an appropriate per-faculty number of high-quality students. Student productivity and morale are high. Students are especially positive about the program's cohesion and sense of identity, combined with a campus culture that encourages collaboration and sharing of facilities across departmental and disciplinary boundaries. Within the department, student productivity is supported by critical shared resources such as the genomics and informatics facilities and the biological collections. While many of these strengths might be maintained under other programmatic structures, we saw no need to recommend reorganization at present.
2. *Expand current program through targeted faculty hires.* Graduate students stressed the critical need to maintain current strengths that are vulnerable because of impending retirements (e.g. Forest Pathology), as well as to build strength in areas where need for graduate training is not being met (e.g., Restoration Ecology). Of the department's three broad areas, Ecology was regarded by students as the most understaffed, followed by Cell and Molecular Biology, while only Plant Pathology was seen as large enough to maintain overall viability. New faculty FTE would also help alleviate the students' strongly felt

need for more graduate-level courses, although we note that it may be inevitable that some of this need will continue to be met by mixed-level ('slash') courses.

3. *Maintain and expand the funding base for graduate studies.* The funding base is adequate at present, largely owing to the faculty's success at attracting grants and their conservatism in accepting only the number of students they can support. Students expressed general satisfaction with their support packages. However, this situation is threatened by the rapidly rising cost of student support. We note that this is a pervasive nationwide problem with no easy solution. Possibilities deserving of investigation include expanding e-campus offerings and urging the campus to support Biology GTA's from tuition-derived funds, thus freeing more of BPP's returned overhead to support graduate GRA's.
4. *Upgrade the facilities.* While the specialized equipment and facilities, collections, and field-based facilities are all adequate to excellent, the poor quality of the building is a problem for graduate student as well as faculty research productivity.
5. *Strengthen graduate advising.* Students described it as difficult to navigate course offerings across departments. This could be alleviated through a joint effort of faculty and staff to maintain the relevant information and extend it systematically to incoming students.

MEMORANDUM

April 15, 2013

TO: Rebecca Warner
Senior Vice Provost, Academic Affairs

Brenda McComb
Dean, Graduate School

FROM: James R. Coakley
Chair, Graduate Council

SUBJECT: Graduate Council Recommendations for the Math GPR

The Graduate Council accepts the Graduate Program Review (GPR) of the Department of Mathematics with the following addendums:

The Graduate Council supports the recommendation of the review committee report to “build a nationally prominent research and graduate education” and suggests the following strategies to achieve such a goal:

1. The Mathematics Department should **identify and develop specific sub-disciplines as centers of excellence**. The identification and marketing of areas for which they are nationally and internationally well-known would strengthen the department, provide opportunities for more strategic and targeted hiring of tenure-track faculty, and, in turn, lead to a stronger pool of highly qualified graduate students seeking to work in these areas.
2. Despite the best efforts of the department’s chair, Professor Tom Dick, the Mathematics Department **appears to suffer from a lack of inclusivity** with instructors and students. For example, instructors and students appear to have little input into department affairs and activities. The Graduate Council suggests strategic representation of these groups in its committee structure as well as the consideration of more informal mechanism to build community within the department. It was noted that this hierarchical structure is replicated among graduate students whereby the Ph.D. students have more influence and a higher status than the Masters students. In conversation with the graduate students, the review team noted that such hierarchies promote divisiveness rather than collegiality. This, coupled with the high failure rate among students taking the preliminary exams, leads to anxiety and stress among graduate students that impairs positive student growth and development.
3. Although the self-study did not focus on collaboration between the Mathematics Department and other units on campus, it was clear from conversations with faculty that many are engaged to some extent with colleagues in other departments. Alongside the need for better collaboration with the College of Education, as noted in the report, the Graduate Council suggests that **collaboration with other departments** and units on campus (such as Statistics, Business, and Engineering) be formally structured. This would improve opportunities for

graduate student involvement in applied mathematics through, for example, participation in grants, joint research, cross-listed courses, and faculty mentoring. Collaborations with off-campus agencies such as private industry and federal/state agencies would also provide important opportunities for graduate students.

4. The Graduate Council supports the report's recommendation "to enhance recruiting initiatives, particularly among underrepresented groups" and suggests the department work on a **structured strategic plan for targeted recruitment of women students and students of color**. This plan should include strategies for retention as well as recruitment of a more diverse student body. In addition, it is suggested that the department's plan for more tenure-track positions needs to be more strategic in hiring and the retention of women faculty and faculty of color. A diverse faculty is the first step in attracting a diverse graduate student population. We suggest working with the Office of Equity and Inclusion, the Graduate School, and the Difference, Power, and Discrimination program for assistance with this plan.
5. The department also needs to be more actively involved in **recruiting accomplished graduate students worldwide** through generating, for example, INTO pathways. The Graduate School can assist in a cost-share arrangement to increase the pool of highly-qualified graduate applications.
6. Graduate Council supports the recommendation to **reconsider graduate curricula offerings**, especially in terms of meeting the needs of both Masters and Ph.D. students (including the problem with the qualifying exam). We suggest the department develop their own program-specific measures of direct assessment of learning outcomes, in addition to university-wide assessment metrics.
7. Finally, the self-study included a question about **appointing GTAs to a .49 FTE position** rather than a .40 FTE. This would increase a student's stipend, and, while it would reduce the total number of students funded, such a change might attract higher qualified students to choose OSU for their graduate work. The latter might also reduce the failure rate on the qualifying exams.

Category I and Abbreviated Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

For Instructions, see <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/category-1-proposals> Please attach Executive Summary, Proposal, Library Evaluation (performed by the Library), Accessibility Form, Letters of Support (External to OSU), Liaison Correspondence (Internal to OSU), Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check One:

Full Proposal (Category I)

[Category I Final Approval: Oregon State Board of Higher Education]

- ☒ New degree program
- ☐ New certificate program or Administrative unit
- ☐ Major (substantive) change in existing program
- ☐ Establishment of a new college

Abbreviated Proposal (Abbreviated Category I)

[Abbreviated Category I Final Approval: OSU Provost]

- ☐ Rename of an academic program or unit
- ☐ Establishment of a school, department or program
- ☐ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation of an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (541-737-3467)

For requests to offer existing certificate and degree programs at new locations, use the Memorandum of Understanding form available at <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/mou-process>

Title of Proposal:

Effective Date:

Interdisciplinary Graduate Program in Comparative Health Sciences

January, 2013

School/Department/Program:

N/A

College:

College of Veterinary Medicine/Division of Health Sciences

I certify that the above proposal has been reviewed by the appropriate Department, School, and College Committees. I approve this proposal.

Executive Summary

The College of Veterinary Medicine in collaboration with partners in the Division of Health Sciences proposes to establish a new interdisciplinary graduate program in Comparative Health Sciences. This program will offer both MS and PhD degrees and will replace a recently terminated PhD program in Comparative Veterinary Medicine and an existing MS program in Veterinary Science. Focusing on health sciences graduate education and research at the whole animal level, the program will be complimentary to and supportive of existing programs that are focused primarily at the molecular and cellular level, such as the OSU MS and PhD in Molecular and Cellular Biology program.

Students will be required to complete a program core curriculum as well as an option-specific curriculum. The latter will be tailored to meet the needs of the participating academic unit and the individual student. Initially, the program will have one transcript-visible option, Biomedical Sciences, which will accommodate students with advisors in the College of Veterinary Medicine. There will be opportunity, however, to add other options as the interdisciplinary program expands to include related areas of emphasis in the health sciences.

Administered by the Graduate School, this interdisciplinary program will provide an opportunity for all units in the College of Veterinary Medicine to participate in graduate education and encourage the integration of several related areas of emphasis currently existing in other units. This program proposal represents a deliberate effort to achieve critical mass in a disciplinary area identified by Oregon State University and the OSU Division of Health Sciences for priority development.

**New Interdisciplinary Graduate Degree Program
Proposal:
M.S., Ph.D. in Comparative Health Sciences**

**College of Veterinary Medicine
College of Public Health and Human Sciences
College of Pharmacy
Graduate School**

**May 2012
Proposed Effective Term: Fall Term 2013 (201302)**

CPS Tracking #: 84096

Institution: Oregon State University

College/School: Division of Health Sciences (DHS), including the College of Veterinary Medicine (CVM), the College of Public Health and Human Sciences (PHHS) and the College of Pharmacy (CoP)

Department/Program: Interdisciplinary graduate program in Comparative Health Sciences (CHS)

1. Program Description

a. Proposed Classification of Instructional Programs (CIP) number: 51.2509

CIP #: 512509

Title: Comparative Health Sciences

A program that focuses on the scientific study of animal models of human disease and related experimental procedures, and prepares veterinarians and animal health specialists to manage the laboratory use and care of experimental animals. Includes instruction in laboratory animal husbandry, laboratory animal disease, biohazard control, gnotobiology, breeding, comparative anatomy and physiology, comparative gene mapping, protein function, physical and mathematical modeling, computer modeling, stem cell technology, colony and genetic stock management, cryopreservation, applicable regulations, and bioethics.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

- b. *Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered:*

An interdisciplinary MS, PhD graduate program in Comparative Health Sciences (CHS) is needed to complement the existing MS, PhD Molecular and Cell Biology (MCB) graduate program, which focuses on studies at the molecular level. The CHS program will offer both MS and PhD degrees and focus at the whole animal level, particularly the use of animal models of disease. It will replace a PhD program in Biomedical Sciences (recently terminated) and an MS program in Veterinary Science, and provide an opportunity to achieve critical mass in a disciplinary area identified by the Division of Health Sciences (DHS) for priority development. This program will provide an opportunity for students to be trained in multidisciplinary approaches to address biological and medical problems.

Administered by the Graduate School, this interdisciplinary program will provide an opportunity for all units in the College of Veterinary Medicine to participate in graduate education and encourage the integration of several related areas of emphasis currently existing in other units.

New Graduate Degree

- Proposal Title: MS, PhD in Comparative Health Sciences
- Proposal Type: Full Category I
- CPS #: 84096
- <https://secure.oregonstate.edu/ap/cps/proposals/view/84096>
- CIP #: 512509
- SIS #: To Be Determined (by the Registrar's Office)
- College Code: 09 – Graduate School
- Program Type: Graduate
- Credential Type: Master of Sciences (MS), Doctorate of Philosophy (PhD)
- Academic Home: Graduate School
- Participating Academic Units: College of Public Health and Human Sciences, College of Pharmacy, College of Veterinary Medicine, Graduate School, Dept of Animal Sciences (College of Agriculture), and College of Engineering
- Program Location: OSU – Main (Corvallis)
- Options: Biomedical Sciences
- Areas of Concentration:
- Undergraduate Minors: Not Applicable
- Graduate Minors: Comparative Health Sciences
- Course Designators: VMB and VMC
- Credit Hours: MS Degree = 45 (minimum); PhD Degree = 108 (minimum)
- Delivery Mode and Location: On-Campus in Corvallis
- Admission Requirements: Baccalaureate Degree; 3.0 GPA; GRE; Transcripts; Letters of Recommendation (3); and Personal Statement
- Enrollment Limitations: None
- Accreditation: None
- Proposed Start Date: **Winter Term 2013** (Banner 201302)

Termination

- **MS in Veterinary Science** (to be submitted separately via an Abbreviated Category I proposal).

c. *Course of study – proposed curriculum, including course numbers, titles, and credit hours:*

Students enrolled in the MS degree will complete a total of 45 graduate credits, including 12 thesis credits. Students enrolled in the PhD degree will complete a total of 108 graduate credits beyond the bachelor's or professional (DVM, MD) degree, including at least 36 credits of non-blanket course work.

In Year 1 of the program, students will be required to complete three laboratory rotations (organized under a course title "Research Perspectives") that will provide an opportunity to experience several research environments and investigators that they may consider for their thesis research. The MS candidates should complete two 2-week rotations in laboratories to familiarize with the options available. These rotations will run congruently with academic quarters. In addition, all students will be expected to complete the following program core curriculum, including all required courses and a selection of at least two of the listed electives, for a total of 12 credits:

<u>Course Title</u>	<u>Course Number</u>	<u>Credit Hours</u>
<i>Required:</i>		
Research Perspectives	New (600)	3 (1 per quarter)
Methods of Data Analysis	ST 511 or similar	4
Biomedical Ethics	New (600)	1
Grant Application Preparation	New (600)	1
Seminar	New (507)	1
<i>Electives:</i>		
Molecular and Cellular Biology Techniques	MCB 524 or similar	1
Introduction to Bioinformatics	New (600)	1
Introduction to Epidemiology	New (600)	1
Introduction to Genomics	New (600)	1
Introduction to Immunology	New (600)	1
Biochemistry	BB 550 or similar	3

In addition to the program core curriculum, students will be required to complete option-specific curricula, as approved by respective graduate committees. Initially, the program will have one option, Biomedical Sciences, which will accommodate students with advisors in the College of Veterinary Medicine. There will be opportunity, however, to add other options as the interdisciplinary program expands to include related areas of emphasis in the health sciences. The option-specific curriculum for the Biomedical Sciences option will be as follows:

<u>Option</u>	<u>Degree</u>	<u>Course Title</u>	<u>Course Number</u>	<u>Credit Hours</u>
<i>Biomedical Sciences</i>				
	MS	Animal Models	VMB 521	3
		Elective courses	Various	24
		Research	VMC/VMB501	5
		Thesis	VMC/VMB503	12
		Seminar	New	1

PhD	Animal Models	VMB 521	3
	Molecular Tools	VMB 671	3
	Elective courses	Various	53
	Thesis	VMB 603	36
	Seminar (dissertation defense)	New	1

An abundance of graduate courses are currently available to complete the elective course requirements in each of the options, including courses with the VMB (Veterinary Medicine Biomedical), VMC (Veterinary Medicine Clinical), PHAR (Pharmacy), H (Public Health), NUTR (Nutrition), EXSS (Exercise and Sport Science), Molecular and Cell Biology (MCB), Microbiology (MB), and TOX (Toxicology) prefixes. For a complete listing, please refer to the OSU Graduate Catalog

(<http://catalog.oregonstate.edu/CourseDescription.aspx?level=grad>).

d. *Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).*

The program will be delivered on the Corvallis campus. Depending on individual courses, instruction will include both lecture and laboratory experiences, with an emphasis placed on small group discussion and relevant experiential contexts. There are no plans for off-campus delivery at present, although it is anticipated that opportunities to provide students access to rich educational resources available at other locations, such as at Oregon Health Sciences University and international sites, will be explored.

e. *Ways in which the program will seek to assure quality, access, and diversity.*

Once a student is admitted into the program and a mentor(s) is selected, the following required steps will assure appropriate advisement and assessment of student progress at the department level:

1. Before the end of the second quarter, the advisory committee must be established, necessary documentation required by the Graduate School must be submitted, and the student must meet with the graduate committee.
2. The student and mentor must provide an annual report to the departmental/college-based graduate committee for review of progress and accomplishment of any program option benchmarks (student/mentor assessment form included as Appendix 1).

The program will be reviewed by the Graduate School three years after initial approval and every 10 years thereafter, in a manner consistent with the Guidelines for the Review of Graduate Programs published by the OSU Graduate Council.

In addition to promoting racial, ethnic and gender diversity, effort will be committed to include students from rural, international and different socioeconomic communities. Specific strategies that are used to advance diversity in professional degree programs will be employed, such as partnering with undergraduate programs to reach promising students in high schools with high proportions of underrepresented populations and partner with foreign

institutions to enroll motivated and bright students. We are working with INTO to establish a rigorous selection of a diverse international pool of students.

- f. *Anticipated fall term headcount and FTE enrollment over each of the next five years.*

Program enrollment in the MS degree is at least expected to equal the total headcount in the existing MS in Veterinary Science program (15 students). All these students are also residents (residency/MS program).^{*} Two additional students are scheduled to be added to the MS program in September, 2012, bringing the total to at least 17. Five prospective students have already expressed an interest in enrolling in the PhD program. The association with the INTO program may increase the number of students per year.

Enrollment is expected to increase by at least 10-20% per year for the first 5 years, based on: (1) applications submitted to the existing MS program and expressions of interest in the PhD program; and (2) strategic investments that will be made in student support, resulting partly from growth of extramurally-funded research programs.

^{*}The College has an MS/residency program. In the future it **may** have an MS/DVM and PhD/DVM program.

- g. *Expected degrees/certificates produced over the next five years.*

The numbers of degrees anticipated are expected to exceed the following:

MS program: 5/year

PhD program: 3/year from the third year

- h. *Characteristics of students to be served (resident/non-resident/international; traditional/nontraditional; full-time/part-time; etc)*

The goal of the program is to attract bright students, including residents, non-residents, international, minority, and economically disadvantaged. Scholarships will be offered on a competitive basis. Many approaches will be used to recruit students, including advertisement of the program, word of mouth, recruitment at foreign institutions with which the College has established relationships, etc. The effectiveness of recruitment efforts will be evaluated on an annual basis by consulting faculty advisors and by monitoring academic progress of students.

- i. *Adequacy and quality of faculty delivering the program.*

Graduate faculty from the College of Veterinary Medicine and other health sciences units will deliver the program (see Appendix 2). These faculty collectively have a large commitment of FTE to extramurally-funded research, primarily from the NIH, but also NSF, USDA, CDC and the Bill and Melinda Gates Foundation. A number of recently hired faculty are now creating interdisciplinary courses that will come on line very soon.

j. *Faculty resources – full-time, part-time, adjunct.*

Consistent with other interdisciplinary programs in the life sciences, participating professorial faculty will represent several OSU colleges and will primarily be tenure-track/tenured appointments with significant assignments to research and scholarship (Appendix 2). Faculty members from a number of departments in DHS as well as outside of the Division have shown interest in participating in the program by co-mentoring students.

The program will be managed by a director who will be a participating tenured faculty member (20% assignment), appointed to a 2-year renewable term. The duties of the director will involve general administration of the program, including: (1) organizing activities such as student seminars and workshops; (2) monitoring student progress and responsibilities of advisory committees, in conjunction with the departmental/college graduate committees; (3) resolving disputes or referring them to appropriate University offices; and (4) student recruitment.

k. *Other staff.*

Support staff (at least 0.5 FTE), funded by the College of Veterinary Medicine, will provide administrative support. Also, the program will partner with the Graduate School administration to accomplish necessary organizational functions such as recruitment and admission.

l. *Facilities, library, and other resources.*

Classrooms, seminar rooms, IT and library resources are already available centrally on campus and in participating academic units. Other research resources, such as laboratories and core facilities for genomics, proteomics, electron microscopy, etc., are available on campus.

m. *Anticipated start date.*

Fall term 2013, or as soon thereafter as approved.

2. Relationship to Mission and Goals

a. *Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.*

There is an urgent need for cross-disciplinary graduate programs in underserved areas of clinical and translational research involving animal models of disease and biomedical investigation. The proposed program will be used as an organizational infrastructure to facilitate development of a community of students and faculty across DHS and other life sciences units on campus. It will be complimentary to existing graduate programs focusing on molecular/cellular biology and social/behavioral studies.

In anticipation of the establishment of this graduate program, the CVM recently terminated its doctoral program in Biomedical Sciences. Rather than invest in an

independent PhD program with research ranging from the molecular to whole animal levels, the College decided instead to be an active participant in the existing interdisciplinary Molecular and Cell Biology (MCB) program and then create a new interdisciplinary Comparative Health Sciences program to address the developing interest in whole animal studies, including clinical sciences. This interdisciplinary approach provides an opportunity for multiple academic departments to create and sustain the critical mass of students and extramurally-funded research activity necessary for long-term success of graduate programs.

At the masters level, the new interdisciplinary program will replace the MS in Veterinary Science program. Although the existing MS program had low enrollment in the past, it now has 15 students, primarily with clinical sciences interests. This area of graduate education is projected to continue its rapid growth as additional pathology graduate students are enrolled. Incorporation of the existing program into the new interdisciplinary Comparative Health Sciences program will provide a core strength that will serve as a basis for further program development.

Consistent with the interdisciplinary/integrative philosophy of the new program, faculty from other colleges will be invited to participate in instruction of the core curriculum. The option-specific curricula are anticipated to become increasingly interdisciplinary as a community of scholars collaborates to address complex biomedical challenges, such as the diagnosis and management of chronic diseases. This process will be encouraged through the use of internal interdisciplinary research grants (DHS has already implemented these) and grantsmanship workshops (already initiated in 2009-2010). An annual symposium will be organized to bring all the program members and students together to share their research interests and findings.

- b. *Connection of the proposed program to the institution's strategic priorities and signature areas of focus.*

Phase II of OSU's strategic plan (<http://oregonstate.edu/leadership/strategic-plan>) seeks to advance three signature areas of distinction: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress. As stated in the plan, improving human health and wellness depends on "building more holistic and interdisciplinary approaches to healthy aging, chronic infectious disease control, new drug development, mental health, and disease prevention to enhance the human lifespan, decrease health care costs, and maintain a healthy population."

Consistent with the strategic plan, the 11 discipline-based colleges of the university were aligned into four divisions in 2010. The overriding goal of this realignment was to facilitate collaboration across colleges and departments and to promote the development of interdisciplinary programs. One of the divisions, the Division of Health Sciences, has developed a strategic plan that states as its first priority the development of integrative, cross-disciplinary research, together with interdisciplinary graduate programs.

- c. *Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.*

As noted above, the proposed program will promote translational biology/medicine research, which involves the integration of research across the basic sciences and application of biological discoveries to optimize patient care and disease prevention. The new knowledge created in this interdisciplinary research environment will serve as a rich experiential context in which graduate students will be educated to serve Oregon and its communities. Without the contribution of such graduates, complex challenges relating to healthcare cannot be solved.

To ensure that students benefit from the interdisciplinary structure of the program, they will be challenged to study topics that bridge two distinct areas of study such as immunology and nutrition or infectious disease and exercise or nutrition under the mentorship of experts in each of the areas. DHS already has made significant progress developing integrated projects involving infectious diseases, public health, nutrition, exercise, development, chronic diseases, immunology, genomics, and pharmaceuticals. Consistent with the DHS strategic plan, faculty across the three colleges in the Division have collaborated to develop a research project, titled “Environmental and Infectious Determinants of Chronic Disease: a ‘One Health’ Approach.”

- d. *Manner in which the program meets broad statewide needs and enhances the state’s capacity to respond effectively to social, economic, and environmental challenges and opportunities.*

With the recent creation of DHS, OSU is positioned to build integrative research and academic programs to investigate the multidimensional causes of chronic diseases and discover new health promotion/disease prevention strategies. For example, many chronic diseases result from complex interactions between infectious agents, people, animals, and the environment. To treat and prevent these chronic diseases, health professionals must match competency in biological sciences in both people and animals with an understanding of behavioral and public health sciences. It is expected that the integrated study of Comparative Health Sciences involving research projects across DHS will facilitate attainment of an even broader perspective as students interact with colleagues who are knowledgeable about the behavioral and policy issues relevant to public health.

3. Accreditation

- a. *Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.*

The program will be subject to the existing standards under which the OSU Graduate School is accredited. Periodic reviews will be conducted consistent

with the Guidelines for the Review of Graduate Programs published by the OSU Graduate Council.

- b. *Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.*

Not applicable. The program is expected to meet all Northwest Commission on Colleges and Universities (NWCCU) accreditation standards for graduate education.

- c. *If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.*

The baccalaureate degree must be from an accredited higher education institution.

- d. *If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.*

The program will need to satisfy standards applicable to all graduate programs at OSU.

4. Need

- a. *Evidence of market demand.*

Based on data published by the US Bureau of Labor Statistics (Occupational Outlook Handbook, 2010-2011 Edition, <http://www.bls.gov/oco/ocos309.htm>), the market demand for biomedical scientists is predicted to grow “much faster than average” over the next decade. Employment of graduates trained in comparative health sciences and related areas of biomedical research is expected to increase by 40% by 2018, an expansion of the relevant job market that will add approximately 40,000 jobs. Considering that the median annual wage of these graduates is approximately \$73K, the potential economic impact of the graduate program is significant.

The importance of focusing on clinical and translational research was confirmed recently at the national level when the National Institutes of Health created the National Center for Advancing Translational Sciences (NCATS), with a budget of \$575M. In light of the urgent need to solve complex scientific problems and translate scientific discoveries into effective treatments and cures, it is clear that universities must educate graduates to think in more innovative and

interdisciplinary ways, and to understand the value of using animal models of disease to advance public health. The broad interdisciplinary emphasis of the proposed program will address this need by fostering creation of an intellectual environment in which different perspectives can be integrated into novel strategies for addressing animal and public health concerns.

In addition to the students graduating from undergraduate degree programs in the life sciences, particularly those with primary interests in biology, biomedical sciences and zoology, it is anticipated that a large proportion of students enrolled in pre-health science programs will be interested in the proposed graduate program. Nationally, only about 9% of students who apply for admission to medical schools are admitted, leaving a large number of students who are good candidates for graduate education in the clinical and translational health sciences.

Irrespective of the trends described above, the MS and PhD programs in Comparative Health Sciences will be the only graduate programs at OSU available for veterinarians who are interested in advancing their education in comparative health sciences, particularly at the whole animal level.

Considering the complexity of animal and human health care challenges, it is imperative that research activities adopt a “One Health” approach. This approach is characterized by comparative (cross species) investigation, conducted by a variety of health sciences professionals both locally and globally. The proposed program will educate graduates who are able to address this need.

- b. *If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).*

The program is unique in terms of its scope and interdisciplinary philosophy. The unique aspects of the program are as follows:

1. Graduate education and associated research projects will focus on the whole animal level of investigation, using an approach that will be complementary to and supportive of existing programs that are focused primarily at the molecular and cellular level, such as the MCB program (see attached letter from Dr. Barbara Taylor, Director of the MCB program). Furthermore, education and research will be limited to animal species, including humans and emphasize translational health sciences. This cross-species, comparative approach is only possible through very close collaboration involving a college of veterinary medicine and human health sciences colleges.
2. The program will have an interdisciplinary and integrative culture that is unique among biomedical sciences programs on campus and in Oregon. This will be achieved by encouraging co-mentorship of students using internal research grants.

- c. *Manner in which the program would serve the need for improved educational attainment in the region and state.*

This program introduces the concept of translational biology/medicine to basic sciences disciplines. It will provide an opportunity for students in the clinical and basic science branches of medicine to be educated in the philosophies and practices necessary to solve complex healthcare issues.

- d. *Manner in which the program would address the civic and cultural demands of citizenship.*

Delivery of affordable and effective healthcare represents one of the most urgent and socially responsible missions in contemporary society. Graduates from this program will be exceptionally well qualified to address this mission, thereby addressing the civic and cultural demands of citizenship.

5. Outcomes and Quality Assessment

- a. *Expected learning outcomes of the program.* (see Appendix 1 for assessment forms already in use for graduate students in Comparative Health Sciences and monitored annually by the Graduate Committee of the College)

In general, expected learning outcomes of the program will include:

- mastery of the knowledge base underlying an option field, sufficient to support scholarly investigation of a related problem;
- the ability to formulate a research question relevant to a specific option field or one that requires integration of two or more fields to be addressed;
- evidence of ability to perform research either in a single option field or in integrated fields; and
- production of scholarship that advances the option field(s).

It is anticipated that MS students in Comparative Health Sciences will address research questions that are applicable to clinical medicine, with a special emphasis on translational strategies. In most cases, these students will already have the DVM degree and their future research careers will most likely involve collaborations with colleagues in the more basic sciences. Doctoral graduates are expected to attain a higher level of expertise in both the planning and conduct of research as principal investigators, and have the ability to compete for extramural funding.

Consistent with the recently approved Graduate Learning Outcomes for doctoral and master's programs, doctoral students shall: (a) produce and defend an original significant contribution to knowledge; (b) demonstrate mastery of subject material; and (c) be able to conduct scholarly activities in an ethical manner. The latter will be facilitated in part by successfully completing a required course in Biomedical Ethics (see program core curriculum above). Master's students will

be expected to: (a) conduct research or produce some other form of creative work; (b) demonstrate mastery of subject material; and (c) be able to conduct scholarly or professional activities in an ethical manner.

b. *Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.*

- Graduate Committee annual evaluation of students and quality of the program.
- Filing the program of study with the Graduate School.
- Completion of Preliminary Exam (for PhD students).
- Survey of students, annually and at graduation.
- Survey of employers of graduates.
- Satisfying graduation requirements, including completion of courses and successful completion of scholarly and research requirements.
- Periodic assessment of alumni.

c. *Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.*

- Graduation rate and time to graduation.
- Student's refereed publication record.
- Student's review of the program.
- Evaluation provided by Graduate Steering Committee.
- Post-graduation position and survey information from employers.

d. *Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas*

The majority of the faculty to be included in the program have extramurally-funded research and produce high-quality scholarship (see Appendix 2). Number and quality of peer-reviewed scholarship and the availability of research funding will be the primary indicators of success.

6. Program Integration and Collaboration

a. *Closely related programs in other OUS universities and Oregon private institutions.*

No program in Oregon overlaps with the proposed program. The interdisciplinary organization extending from animal to human health sciences is unique.

- b. *Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.*

Collaborative opportunities exist with other biology and health sciences programs at the University of Oregon and Oregon Health Sciences University, respectively.

- c. *If applicable, proposal should state why this program might not be collaborating with existing similar programs.*

As stated above, the disciplinary scope of the program, ranging from animal to human health sciences, is unique.

- d. *Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.*

Constituent programs in DHS and other OSU divisions that are expected to participate in the new interdisciplinary program will benefit from the larger critical mass of research. Researchers and students, will engage in more cross-disciplinary projects involving researchers in different departments and colleges, and enhanced competitiveness of extramural research grant applications. Negative impacts on other programs are not expected.

7. Financial Sustainability (attach the completed *Budget Outline*)

- a. *Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.*

Graduate student/resident salaries (\$30,000 per year, plus \$5,000 OPE) for MS students will be committed by the College of Veterinary Medicine. The College currently funds 15 post-DVM clinical residency positions, all of which are being transitioned to dual graduate student-clinical residency positions. Generally, clinical residents are appointed for a period of three years, with terms of appointment staggered. Starting with the planned enrollment of 4 new residents in the Fall of 2013, the attached *Budget Outline* projects additions of 4 students per year until all clinical residents are enrolled in the program. This projection represents a conservative estimate of program growth and does not take into account the probability of residents currently enrolled in the MS in Veterinary Science (which will be terminated) program transferring immediately into the new program as soon as it is approved. Irrespective of the enrollment schedule, the College is committing at least \$633,600K in clinical resident positions (salary plus OPE) to the new program. These financial resources will be supplemented with additional funding, derived from the earnings of a \$1.2M trust (\$60K per year) that has been committed to graduate student scholarships. Approximately \$5,000/year will be committed by the CVM for miscellaneous services and supplies.

The disciplinary scope of the program is centered in core areas of health sciences that currently exist in the University. Faculty recruitment, retention and library

resources currently are expected to be more than adequate to establish and develop the program. Indeed, faculty positions already selected by DHS for recruitment in the Provost's Faculty Investment Initiative are exceptionally well suited to participation in the program, thus demonstrating strategic relevance. Taking into account the new positions hired under the Initiative, the CVM has sufficient FTE capacity to meet the workload demands of creating and delivering the program core and option-specific curricula. Existing instructional assignments to DVM elective courses will be reprioritized to meet graduate program requirements. The Courses and Curriculum Committee of the CVM is already reviewing DVM elective courses in a broader context of possible curricular revision.

As indicated in Section 1, parts j and k above, CVM will commit 0.2 and 0.5 FTEs, respectively, to director and staff support. These commitments will be accomplished through reassignments of existing personnel. The latter has been made possible by redistribution of work assignments from an administrative assistant to a new Safety Officer position funded in the CVM FY12 E&G budget.

- b. *Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.*

At this point, all of the needed resources are in place. As the program evolves, the Graduate Committee and the Director of the Program may identify additional resources that need to be addressed.

- c. *Targeted student/faculty ratio (student FTE divided by faculty FTE).*

The targeted student:adviser ratio is 1.5:1 for both MS and PhD programs.

- d. *Resources to be devoted to student recruitment.*

Recruitment of students will be coordinated through the Graduate School.

- 8. **External Review** (if the proposed program is a graduate level program, follow the guidelines provided in *External Review of new Graduate Level Academic Programs* in addition to completing all of the above information)

The program proposal has been submitted for preliminary external review (see letters from Drs. Van Meter at Colorado State University and Jeffrey Lakritz at The Ohio State University). A more comprehensive external review, coordinated by the Graduate School, will be conducted in the near future.

(Site 5 names outside of Oregon, not associated with OSU)

Ad Hoc review of New Academic Program, conducted by Dr. Jeffry Lakritz, Professor, Department of Veterinary Clinical Sciences, The Ohio State University

Oregon State University, Interdisciplinary graduate program in Comparative Health Sciences

Things I like about this proposal-

Looks at whole animal level; graduate DVM (residents, fellows) likely would fit into this well.

Increases opportunities for working with broader range of expertise throughout campus.

Multi-disciplinary approaches

Laboratory rotations (especially for PhD candidates)

Preparation of clinician scientists and scientists

Theoretically will reduce the effort of clinical faculty and may increase the quality of individual students work (i.e. clinical problem requiring molecular diagnostics/collaboration with others at Health Science center/pharmacy etc.)

Things that could be problematic

Required courses. At least in our college, residents taking course across campus leave holes in clinical coverage. Assuming enough faculty FTE to cover clinical requirements?

Number of didactic courses required and relevance to overall training of residents. I am not sure medicine or surgery residents will gain much in terms of board certification if they take basic science classes. Our residents have little time for class work as it is. With emergency duty, coursework is problematic for them.

We are evaluating ways in which to train clinical residents (in 2 or 3 years) with 4th year for science. There are obviously problems with this.

Faculty who maintain publication list through resident research projects

Taking residents away from faculty for research and developing project outside of their area of expertise.

Some faculty will attract a greater number of students than others.

Corvallis, OR 97331

15 April 2012

Dear Dr. Cebra,

I was pleased to review, upon your request, the draft proposal for a novel graduate program at your college entitled, "Interdisciplinary graduate program in Comparative Health Sciences." After review, I consider the proposal to be a very well-designed and highly relevant plan for a multidisciplinary graduate studies program. In a separate document, I will provide for you my few comments and edits on the draft; the primary point that I feel important enough to emphasize in this letter is this: Since the program is new, I offer the opinion that a minimum number of graduate committee meetings be set for each student in the program, and that minutes from those meetings be kept and forwarded to the program director. This may help prevent a potential loss of focus or direction in the students' progress; in my experience, novel graduate studies programs may incur such problems early on. That said, I applaud your college's efforts to develop a highly relevant program that will have a positive impact on the profession and reflect very positively on Oregon State University.

Sincerely,

A handwritten signature in dark ink, appearing to read "David Van Metre". The signature is fluid and cursive, with a long, sweeping underline.

MEMO TO: Luiz Bermudez, Professor

FROM: Brenda McComb, Dean

A handwritten signature in black ink, appearing to read "McComb", written over the printed name "Brenda McComb, Dean".

RE: Proposed Comparative Health Sciences Graduate Program

Luiz, I support the development of a new Graduate degree program in Comparative Health Sciences. I note that you wish to have this program administratively housed within the Graduate School as an Interdisciplinary program. In discussions with Provost Randhawa, we agree to such an administrative arrangement for a period of 3 years at which time we will reassess the administrative structure to assess if it meets expectations for being interdisciplinary.

Best of luck with your proposal.

Cc: Sabah Randhawa, Provost

Category I Proposal Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Library Evaluation for Category I Proposal

Comparative Health Science
Title of Proposal
Biomedical Sciences
Department
Veterinary Medicine
College

The subject librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

- ☒ inadequate to support the proposal (see budget needs below)
☐ marginally adequate to support the proposal
☐ adequate to support the proposal

Estimated funding needed to upgrade collections or services to support the proposal (details are attached)

Year 1:

\$1500 ebooks in various subjects
\$595 *Infection Control and Hospital Epidemiology*
\$2460 maintenance of Veterinary Medicine
journal collection

Ongoing (years 2-4):

\$1500 ebooks in various subjects
\$595 *Infection Control and Hospital Epidemiology*
\$10,000 maintenance of current
subscriptions & new ones as needed
\$2608, \$2753, \$2950 maintenance of
Veterinary Medicine journal collection

Comments and Recommendations:

If we need to license immediate access to some of the identified journals, this will be a cost that we have not quantified.

Oregon State University Libraries Evaluation of the Collection supporting a Proposal to Initiate a MS and PhD program in Comparative Health Sciences

This Oregon State Libraries' (OSUL) assessment reviews the print monographic, e-book, and electronic serials collections as related to broad science information needed to support the proposed comparative health sciences graduate program. As stated in the Cat 1 proposal, the proposed program "will offer both MS and PhD degrees and focus at the whole animal level, particularly the use of animal models of disease. It will replace a PhD program in Biomedical Sciences (recently terminated) and a MS program in Veterinary Science, and provide an opportunity to achieve critical mass in a disciplinary area identified by the Division of Health Sciences (DHS) for priority development. This program will provide an opportunity for students to be trained in multidisciplinary approaches to address biological and medical problems." From the OSUL perspective, students and researchers will tap various components of the library collections. This makes it challenging to make recommendations on adequacy and funding needs as the entire science collection must be maintained to provide adequate access to information.

Summary of Recommendations

The monographic collection appears to be adequate as long as it is maintained and access is expanded through e-books. This will require an investment of \$1500 annually in addition to the funds the OSU already allocates.

The journal collection is currently adequate with the exception of immunology. We recommend acquiring *Infection Control and Hospital Epidemiology* for \$595 annually and allocating \$10,000 for years 2-4 to cover inflation of the current core journals and add other journals identified as the program progresses.

The College of Veterinary Medicine will need to adjust its library funding for inflation as well. We anticipate this to be \$2500 to \$3000 annually over the next four years.

Print Monographs and E-Books

Library evaluations of proposed programs have traditionally included the analysis of OSUL' print monograph collection. Comparing the monograph collection with other universities' collections is routine. This analysis includes a comparison of the print monograph collection with a peer institution with a program similar to the one proposed, Colorado State University.

Table 1: Monographic Comparison between OSU and Colorado State University

Broad Subjects	OSU	CSU	OSU to CSU	OSU ebooks	CSU ebooks	OSU to CSU
Bioinformatics	212	152	140%	123	244	50%
Epidemiology	1200	1133	106%	57	181	31%
Ethics (Medical, Bio)	856	856	100%	43	153	28%
Genomics	237	386	61%	83	186	47%
Immunology	1239	1220	102%	94	233	40%
Veterinary Medicine	1325	1362	97%	20	71	28%

The broad subject areas searched reflect the proposed curriculum as well as the core of veterinary medicine. We compare favorably with CSU except for e-books that are discussed

below and genomics. Our current direct allocation for genomics is limited as we order genetics material throughout the life sciences. Even so, more emphasize on this area will be needed as well as sustaining the other areas.

The growing availability of e-books makes it possible to expedite access to more information from various locations. This obviously better serves our distance learners and is a convenience for our on-campus students and faculty. As the proposed program will have students scattered across the Corvallis campus, facilitating access is essential. OSUL are acquiring e-books with more frequency but we lag in comparison to CSU. This discrepancy should lessen in the next four years as we purchase electronic format over print. For example, we recently acquired the 2012 Elsevier Veterinary Medicine e-book package for \$1100 for 10 titles in part to compare usage between the print format and electronic. We recommend allocating \$1500 annually towards monographic purchases with emphasize on genomics and e-books.

OSU is served well by our investment in the Orbis/Cascades Alliance, whose combined collection is substantial. Students and faculty can order from the collections of all the libraries in the Orbis Cascade Alliance through the Summit catalog. University of Oregon, Portland State University, University of Washington and Washington State University are some of the larger research libraries represented in the Summit catalog. Books requested through Summit are delivered to OSUL within three to five working days.

Serials/Journals

In the sciences, ready access to current information is expected. The OSUL maintain a satisfactory collection of journals appropriate for comparative health sciences including the major titles in bioinformatics, epidemiology, genetics and veterinary medicine. There is concern that with regular price increases to our licenses and a flat budget that access may be eroded over time. The OSUL already have sacrificed timely access to some titles in favor of an embargo period to cut costs. We identified 147 titles indexed in the Web of Science of possible interest to those involved in the proposed program (Table 2). The categories represent the broad scope and consequent importance of collaboration across disciplines. We indicate those titles that we have current access to, those with 6 months to 2 years embargoes and those not owned by the OSUL.

Table 2 – First Quartile Journals from Web of Science

Broad Subjects	# of titles	current	embargoed	not owned
Bioinformatics	19	14	4	1
Epidemiology	33	19	8	4
Genomics	30	18	8	4
Immunology	30	14	8	8
Veterinary Medicine	35	27	5	3
Totals	147	94	33	20

Those 20 titles we do not own would cost on average \$1000 for an annual license for each title with subscriptions ranging from \$340 to over \$16,000. This would total \$20,000. To get immediate access to those titles currently embargoed is more difficult to figure; using the same average, though, a ballpark figure would be 33 times \$1000 or \$33,000. This later number would likely be lower given the OSUL ability to negotiate consortial deals. Even so, the investment is large if current access to everything is considered necessary.

We recommend monitoring usage of inter-library loan for current issues of those titles under embargo and see if usage justifies licensing of current content. Given the focus of this program on whole animal and clinical research rather than human health and medical research, currency may not be imperative. At this time, only one title is generating significant borrowing - *Infection Control and Hospital Epidemiology*. We recommend adding this at a cost of \$595 annually.

The OSUL journal collection in immunology is the weakest component from this data. Again, we can monitor requests for articles from journals we do not own to make suggestions for further purchases. At this time, it is difficult to assess demand. We recommend \$10,000 in the second through fourth years to address emerging gaps in the journal collection.

We also recommend that the College of Veterinary Medicine maintain its current access to the journals it purchases. These are managed by the OSUL, but the funding is through the College. Journal subscriptions in FY12 were \$41,000. Annual inflation is estimated at 6% over the next four years. Consequently, the College will need to invest additional funds to maintain its robust journal collection that will be one cornerstone of this new program (FY13 \$2460, FY14 \$2608, FY15 \$2763, FY16 \$2950).

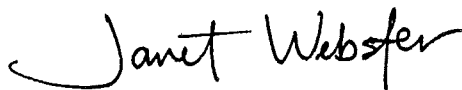

Indexes and Databases

The core indexes to the relevant information for this program are Medline (1950-present), CAB Abstracts (1973-present) and Web of Science (1970-present). The OSUL maintain access to all as these are core to many of OSU's primary research areas.

Library staff and expertise:

Expertise within the OSUL is spread among several librarians with varying responsibilities. These include Laurel Kristick, Janet Webster and Hannah Rempel. In 2011, the librarian who oversaw Veterinary Medicine, Pharmacology and the Medical Science departed, and we have not replaced that expertise. Given staffing shortages in the faculty ranks, this position is currently partially covered by Janet Webster.

Respectfully submitted,

A handwritten signature in black ink that reads "Janet Webster". The signature is fluid and cursive, with the first name "Janet" and last name "Webster" clearly legible.

Janet Webster

**Criteria to Define Satisfactory Progress of Graduate Students in the
College of Veterinary Medicine**

Report due July 1st, Faculty evaluation July 15th, Graduate Committee Evaluation September 1st

A graduate student will:

1. Maintain good academic performance, GPA of 3.0 or higher.
2. Participate in the academic activities of the Department/College/or important activities as directed by the mentor.
3. Demonstrate interest in the project by keeping abreast of the literature.
4. Communicate data generated in the project, either/or in meetings and publications.
5. Keep a good level of collegiality with peers and faculty.

Enrolled students will undergo annual review by the Graduate Committee, the mentor and the College Graduate Committee. If appropriate progress has not been made, the College Graduate Committee will make recommendations to the mentor and the student.

Two consecutive unsatisfactory reports should trigger a review by the student's Graduate Committee.

Learning Objectives for PhD and MS Programs

PhD	MS
1. Students will have met the objectives for learning outcomes in the undergraduate education relevant to the graduate field of study (minimal admission standards)	Students will have met the objectives for learning outcomes in the undergraduate education relevant to the graduate field of study (minimal admission standards)
2. Students are able to summarize central issues and current research problems in their fields (minimum standard in classwork).	Students are able to summarize central issues and current research problems in their fields.
3. Students are able to identify and explain areas of gap in knowledge in their fields.	--
4. Students are able to identify where ethical issues may arise in their work or discipline.	Students are able to identify where ethical issues may arise in their work or discipline.
5. Students are able to articulate strategies to address gaps in knowledge in the field of study (Preliminary exam).	--
6. Students will have designed, carried out and presented original work of research (written thesis and oral defense)	Students will have completed and defended: A. an original manuscript B. mastery of appropriate course work and techniques in the field (written thesis and oral defense)

RE: Interdisciplinary graduate program in Comparative Health Sciences

Dear Cyril,

In my position as the Director of the Molecular and Cellular Biology graduate program, it is my pleasure to provide enthusiastic support for the proposed Comparative Health Sciences graduate program. With its clinical focus on animal models of disease, this program will attract new graduate students to OSU and complements existing interdisciplinary programs, such as MCB, which are directed to more basic research areas. This new graduate program will provide students with an interdisciplinary curriculum and training opportunities. I anticipate that several MCB courses, such as Bioinformatics and Genomics, will be useful for some of these prospective graduate students.

Sincerely,

A handwritten signature in blue ink that reads "Barbara J. Taylor". The signature is written in a cursive, flowing style.

March 21, 2012

Dr. Cyril Clarke
Dean, College of Veterinary Medicine
Oregon State University

Dear Cyril:

I am writing on behalf of the OSU College of Pharmacy to enthusiastically endorse the Category I proposal you are submitting to establish an interdisciplinary graduate program in Comparative Health Sciences at OSU. This program is very well aligned with the OSU strategic plan, the goals of the Division of Health Science, and is particularly timely as our Division increases its focus on developing integrative, multidisciplinary collaborations and establishing a greater emphasis on translational research.

The timeliness of this proposal is further emphasized by the recent establishment at the National Institutes of Health of the National Center for Advancing Translational Sciences. The emphasis of NCATS is to promote the transfer of basic biomedical laboratory discoveries into clinical applications that will advance human health. This type of translation research is necessarily multidisciplinary and it relies on demonstrating effective outcomes in animal models before advancing to human trials – both factors that underscore the relevance of this initiative. NCATS emphasizes the need to educate and train clinicians and biomedical researchers who can navigate the intricacies of complex multidisciplinary research projects while opening new federal funding avenues for investigators and graduate trainees. A Comparative Health Sciences (CHS) program at OSU would be well positioned to capitalize on these opportunities.

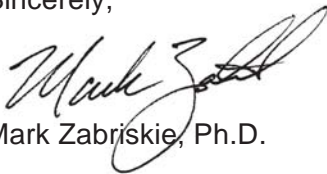

The focus of the CHS program on whole animal studies is particularly needed on campus and will nicely complement the existing interdisciplinary program in molecular and cellular biology (MCB). In fact, I believe it will be attractive to many of the same investigators, including a strong group of researchers in the Department of Pharmaceutical Sciences who work on developing novel mouse models of human diseases. I also envision opportunities for participation in the program by our growing number of investigators working in drug discovery, delivery and disposition. Additionally, several graduate classes offered by Pharmaceutical Sciences should be attractive electives to CHS students.

Importantly, I believe the Comparative Health Sciences program will eventually attract a new group of graduate students that are interested in the type of compelling applied biomedical problems that can only be addressed through multidisciplinary approaches and creative programs such as this one. These students will enrich the research and training climate in numerous laboratories across campus, just as the students in the MCB program have done. Additionally, offering such innovative programs will be an important element to expanding the graduate student population at OSU and

In summary, I want to reiterate my enthusiastic support for establishing an interdisciplinary graduate program in Comparative Health Sciences at OSU. It is a timely proposal that fulfills a need on campus to prepare graduates for new opportunities in biological and medical research that focus on whole animal models and their role in advancing human health.

Please let me know if I can provide any further support of this project.

Sincerely,

A handwritten signature in black ink, appearing to read "Mark Zabriskie", with a stylized flourish at the end.

Re: Proposal for a New Academic Program – Interdisciplinary Graduate Program in Comparative Health Sciences (CHS)

Dear Cyril,

As the Dean of the College of Public Health & Human Sciences (CPHHS), I am writing in support of the Proposal for a New Academic Program – Interdisciplinary Graduate Program in Comparative Health Sciences (CHS). This proposed program will provide an opportunity to achieve critical mass in a disciplinary program identified by the Division of Health Sciences (DHS) for priority development. DHS supports the value of educating graduates to think in more innovative and interdisciplinary ways, and to focus at the whole animal level and use animal models of disease. The CHS program will provide an opportunity for students to be trained in multidisciplinary approaches to address biological and medical problems. With this program in place, all units within College of Veterinary Medicine (CVM) will participate in graduate education and encourage the integration of several related areas of emphasis currently existing in other units.

My understanding is that initially the program will have one option, Biomedical Sciences, which will accommodate students with advisors in the CVM. The role of CPHHS will be to provide graduate courses currently available to complete the elective course requirements in the proposed option, including courses in Nutrition, Exercise and Sport Science, and Public Health. In addition, CVM students will benefit from taking courses taught by CPHHS faculty who receive extramural-funded research, primarily from NIH and USDA. At a later date, there will be opportunities to add other options as the interdisciplinary program expands to include related areas of emphasis in health sciences.

The CHS Program exemplifies both the OSU and the DHS Strategic Plan. The OSU Strategic Plan Phase II advances three signature areas of distinction and CHS relates to, *Improving Human Health and Wellness*. In 2010, consistent with the OSU Strategic Plan, realignment among the colleges produced the DHS with the overriding goal to promote the development of interdisciplinary programs. I am very supportive of the proposed new academic program and the opportunities for students and faculty to engage in multidisciplinary approaches to address complex biological, medical and public health problems.

Sincerely,

A handwritten signature in black ink, appearing to read "Tammy Bray".

Walter Loveland (Budgets and Fiscal Planning Committee) October 14, 2012 8:54pm

This proposal was sent back to the proposers for clarification of the budget in the following areas: (a) The Library Assessment must be fully funded in each year of the budget, not partially funded. (b) The total incremental funding relative to today should be indicated in the budget. Thus if the \$207K is to be spent in each of the four years, it should be indicated in each year in addition to new expenditures in succeeding years. (c) The salaries of the graduate assistants need to be clarified. It appears the grad students are paid \$30,000 per year with a small \$5000 OPE charge. Is that for a 0.49 FTE per person or is it (as suggested by the budget) 1.0 FTE /person? How is the OPE calculated? (d) The narrative speaks of an investment of \$560K from the College. Where does that appear in the budget? (e) The narrative mentions a director + staff position. Where is that in the budget? (f) The distinction between "student" and "resident" needs to be clarified.

10. Originator Response

[Beth Chamblin](#) Asst to Dept Head / Vet Biomedical Science, October 25, 2012 5:06pm

Comments

Beth Chamblin October 25, 2012 5:06pm

Thank you for the review of our proposal for a new graduate program, Comparative Health Sciences. We answered your specific questions below and have modified the proposal accordingly.

- a) The library assessment must be fully funded... answer: It is. As specified in the proposal, the library has recommended the subscription of a journal (Infection Control & Hospital Epidemiology) that we already have in our library. It will be available to students.
- b) The total incremental.... answer: Each year (1st to 4th) has its own budget that is shown in the budget pages. All four years together will have a budget of \$1,053,600.
- c) Salaries and OPE.... answer: The College of Veterinary Medicine has a program of residency (in Medicine, Surgery, etc.) Those residents are enrolled in the MS (current MS of Veterinary Medicine) program. The resident position is 1.0 FTE and is paid \$30,000 with \$5,000 of OPE.
- d) The narrative speaks of an investment of \$560K... answer: This represents the total investment of the College in the program. It has been updated.
- e) The narrative mentions a director.... answer: The positions do not represent new faculty, but re-assignments. Because of that, they do not infer new money. However, we have changed the budget page to show those costs.
- f) the distinction between.... answer: As mentioned before, resident/graduate student (MS) is a program existing in the College. Professional schools have MD/MS, MD/PhD, DVM/MS, DVM/PhD, that follows a different model compared with other programs in the University. We added a few sentences in the text to make it clearer. We appreciate the comments and the opportunity to improve the presentation of our proposal.

Comments

James Coakley (Graduate Council Chair) March 12, 2013 1:06pm

The Graduate Council feels this program would be a welcome and valuable addition to the OSU campus. However, we would like the proposal to provide additional details pertaining to establishment of an interdisciplinary graduate program. Specifically, an agreement for hosting the program within the Graduate School, a more expansive list of participating faculty and their tenure home to ensure sufficient faculty are engaged to deliver the needed coursework and mentoring, and additional information on sources of student support. Liaison letters from the Provost and the Graduate School would help to clarify the current and future intended structure of the program as an interdisciplinary program.

May 16-18, 2010

Review Panel

Cheryl L. Addy, Arnold School of Public Health, University of South Carolina, Panel Chair

Susan Allan, Northwest Center for Public Health Practice, University of Washington

Denise Lach, Department of Sociology, Oregon State University

Tom Wolpert, Department of Botany and Plant Pathology, Oregon State University

Overall Recommendation

The Department of Public Health in the College of Health and Human Sciences at Oregon State University has an ambitious plan of growth and reorganization to become a College of Public Health and Human Sciences and an accredited school of public health. The external review was conducted in the midst of university and college reorganization and plans for the future were in great flux and ambiguity. This report is therefore a balance between an evaluation of the current resources and programs and a prospective assessment of the proposed expansion. The review panel was impressed with the strategic planning in the department and college, the growth that has already occurred in the last few years, the enthusiasm of the departmental faculty for this plan, and the broad participation in development of the self-study. However, the department currently has only minimally sufficient faculty resources and/or course work to support available academic programs (e.g., international health, epidemiology, biostatistics, and the doctoral programs). The review panel recommends that initial investments in departmental growth be dedicated to the currently active and newly-approved instructional programs and the infrastructure to support these programs and faculty research, independent of current or proposed organizational structure and before expansion into additional areas is considered. The external review team recommends that Oregon State University maintain the Public Health Graduate Program and strengthen it by addressing concerns raised in the review. On a separate note, the external review team does not see the currently-proposed timeline for the goal of being an accredited school of public health as realistic given current and proposed resources and systems.

Summary of Findings and Recommendations

Students and Instructional Programs

- Work with students to create processes that include them in the life of the department including appropriate involvement in departmental governance, their own student organization and a clear process for communicating concerns.
- As curricular programs continue to expand, develop course work to support programs. Assess, in particular, the scope and depth of offerings for doctoral students.
- Complete creation of a departmental process for supporting development, implementation and evaluation of internships for MPH students.
- Increase research support for students, especially PhD students. Include student support on all proposals for external funds.
- Become more involved in interdisciplinary efforts on campus; encourage students to participate in seminars, courses, etc. in areas that are relevant to public health.
- Continue efforts to recruit and support students from racial/ethnic minorities while exploring what diversity means to the department beyond the usual definitions of gender, race and ethnicity.

Faculty

- Expand faculty, especially for current offerings in international health and for approved offerings in epidemiology and biostatistics.

- Ensure that faculty are appropriately involved in the planning and implementation of major organizational and curricular changes, especially those faculty who have significant experience in other schools or programs of public health.
- Provide opportunities for professional development in all aspects of faculty expectation (e.g., research, teaching and advisement, leadership development).

Infrastructure and Resources

- Hire sufficient faculty to support current programs before expanding into other areas. There are already significant faculty deficits in several key areas in the context of the graduate programs and research productivity. Not adequately considered in the current evaluation is the significant demand on departmental resources for the undergraduate programs.
- Assure adequate staff support and infrastructure for all aspects of departmental productivity. An immediate need stated by the faculty is for research support. A second need is for student services, which may not require a major investment in personnel but rather development of more efficient processes and better communication with students (e.g., application, enrollment, and registration issues).
- Any reorganization should be based on logical groupings of programs and should involve broad faculty input. At the time of the review, the College of Human Sciences was proposing to reorganize its three departments into two schools. Given the minimum number of faculty required to be a stand-alone department, the proposed alignment into two schools is strong and reflects arrangements at other schools of Public Health. However, the Panel is concerned whether the proposed reorganization will provide the professional and organizational focus that is needed. The review panel recognized that “School A” included disciplines oriented toward the natural and physical sciences and “School B” included those disciplines related to the social sciences. However, it is not clear that this division creates any efficiency or facilitates any enhanced collaborations within the disciplines. The College should also consider whether nonstandard organizational structure and nomenclature may hinder the ability of the faculty to participate in the larger public health community, and be less attractive and more confusing for students. In this context, the review panel would recommend either a non-departmentalized college or divisions that reflect well-defined disciplines or groupings but which could perhaps share staff and some non-personnel resources. There may be an intermediate grouping such as family sciences, health behavior and health promotion, and human development; health policy and international health; epidemiology and biostatistics; exercise science and nutrition; and environmental health and occupational safety. The exclusion of design and human environments is unfortunate but reasonable if that department is not willing or able to shift their focus more toward health-related issues.
- As noted above, encourage and facilitate more involvement in interdisciplinary opportunities on campus. For example, the Environmental Safety and Health (ESH) program has evolved toward a relatively narrow focus rather than capitalizing on the broad expertise in environmental sciences across the campus. These activities will enrich experiences for both faculty and students.
- The department presents an ambitious plan for faculty recruitment. However, the availability of financial resources to meet this plan is not clear. According to Dean Tammy Bray, resources for the

ten positions projected by March 2011 are from internal reallocation; conservatively expenses could easily be over a million dollars in recurring salary and fringe benefits plus any necessary start-up commitments. Whether the resources are available from attrition or from explicit reductions, the department (or college) must be careful not to create critical deficits in other program areas. Also, any reductions in one area to enhance another could cause resentment, so open communication about the strategic planning is critical. Some of the proposed faculty growth is contingent on successful competition within the university's strategic re-alignment process, suggesting that resources are not certain.

Detailed Findings

1. Introduction: Objectives of the review, participants, order of events, and organization of the report

At the request of Oregon State University, a four-member review team conducted an on-site review of the Department of Public Health in May, 2010. As its central objectives, the review team sought to assess the current structure, scope, and quality of the graduate programs in the department. In pursuing these objectives, the review team necessarily addressed related issues such as number and distribution of faculty, related programs and resources, and university budgeting guidelines. In all of its activities and deliberations, the review team followed the "Guidelines for the Review of Graduate Programs" provided by the Graduate Council of Oregon State University (approved May 2008) and consulted the "Self-Study: Review of Graduate Programs" submitted by the Department of Public Health (May 2010).

The review panel included panel chair Cheryl Addy (senior associate dean for academic affairs, Arnold School of Public Health, University of South Carolina), Susan Allan (director, Northwest Center for Public Health Practice, University of Washington), Denise Lach (Department of Sociology and Graduate Council, OSU) and Tom Wolpert (Department of Botany and Plant Pathology and Graduate Council, OSU); Dr. Wolpert was unable to participate in the on-campus site visit. Members of the review panel met from 6:00-8:30 pm on Sunday, May 16, 2010, and from 8:00 am to 7:00 p.m. on Monday, May 17, 2010. During the Monday sessions, members met with Martin Fisk, acting dean of the Graduate School, and Gita Ramaswamy, associate dean of the Graduate School. The sessions on Monday included interviews with administrators, faculty and students of the college and department. The on-campus review agenda ended in executive session, during which the review team drafted an initial set of recommendations, which it forwarded to the university in June 2010.

2. Inputs

2.1 The fit of the mission of the program and its relationship to the mission of the academic college and University mission

The mission of the program is the same as the mission of the College of Health and Human Sciences: It "advances knowledge, policies, and practices to enhance the lives, health, and environments of

individuals, families, and communities in Oregon and beyond.” This fits within the University mission: “As a land grant institution committed to teaching, research and outreach and engagement, Oregon State University promotes economic, social, cultural and environmental progress for the people of Oregon, the nation and the world.” In its strategic plan, the University references three signature areas of distinction, one of which is “Improving Human Health and Wellness”.

The program’s activities and goals fit within the stated missions of the College and the University. The concern is that there is no mission specifically for the program, to distinguish and focus its activities within the larger environment of the college and of the university. The program should have a mission that is compatible with those of the college and university, but that identifies the special roles and contributions of the program.

2.2 Quality of Students

In general, the students in both the MPH and the PhD programs appear to be of high quality as shown by their GPAs and high placement rates upon graduation. Students in the PhD program have received prestigious recognition, awards, and fellowships on a regular basis. MPH students have regularly been awarded OMPH (Oregon Master of Public Health) Outstanding Student Awards.

The review panel encourages the department to think about how the wide variety of students –the ages, experiences, first generation graduate students, and low-income– leads to a diverse student body, what kinds of services these students may expect or need as well as the competencies they bring to the program, and how existing students might serve as the “face” of diversity in the department. We also encourage the department to find ways to recruit minority students more successfully including direct mailings to undergraduate and graduate programs in parts of the country with larger minority populations and active recruitment of students from around the country who have received McNair fellowships (McNair fellowships are awarded to meritorious low-income and first-generation undergraduates from groups traditionally under-represented in graduate education).

2.3 Admissions Selectivity

As described by faculty and the self-study report, the admissions process is selective in that it examines not only undergraduate and graduate GPA and GRE scores, but also takes into consideration an applicant’s demonstrated capacity in jobs and life experience. This seems very appropriate for a program with an entering student average age of more than 35 years, although a quantitative comparison of applicants admitted and not admitted suggest the assessment process admits those applicants most qualified by traditional academic metrics. The academic qualifications of those offered admission have been stable for the last few years, with an average GPA of approximately 3.5, average GRE Verbal of 515, and average GRE Quantitative of 600 for MPH admissions (Appendix I, Table A). The number of applicants seems to fluctuate around 80. The number of doctoral applicants is much smaller (12-15 per year) with academic qualifications for those admitted similar to those of MPH admissions. The department should continue to monitor and review their own processes and criteria for admission

in light of the current high acceptance rate, to ensure that they do not lose appropriate selectivity in the interests of expanding the program.

2.4 Level of Financial Support for Students

The review panel congratulates the Public Health Department on their success in securing funds to support many graduate students through university, college, and departmental scholarships. In recent years, support for PhD students in particular has increased so the majority is receiving some kind of assistance. Students in some specialty areas (e.g., Environmental Safety and Health) are able to secure paid internships, although that is not common across all specialties. PhD students are also supported through graduate teaching assistantships, which is a standard practice and prepares students for academic jobs.

There does not appear to be a culture of faculty-funded research support for graduate students; only ~\$26,000 from ~\$3,000,000 in external grants was used to support a single graduate research assistantship during 2008-2009 (Appendix I, Table C). As the faculty become more active and successful in securing external funds, the review panel encourages them to provide more research assistantships for graduate students. Currently most doctoral students have graduate teaching assistantships, while some have scholarships from various sources.

2.5 Curriculum strength

Overall, the current MPH curriculum is strong for the fully-implemented concentrations. This curriculum was developed and evaluated in the context of program accreditation criteria from the Council on Education for Public Health. Because of the Oregon MPH program, OSU students have easy access to courses offered through the other collaborating institutions. Several students reported taking at least one course in Portland (either Portland State University or Oregon Health Sciences University). It was not clear to the review panel that the department has the resources to expand the MPH program to include additional concentrations as currently planned.

Of the four currently active concentrations in the MPH program, International Health (IH) is clearly the most popular, with 43 students. In contrast, a total of 46 students are enrolled in the ESH, Health Management and Policy (HMP) and Health Promotion concentrations combined. However, the IH concentration is the least supported by current faculty and available course work. One faculty member has primary responsibility for advising all IH students and coordinating IH internships. The IH concentration lists two courses in international/global health and other than one other course in medical anthropology, the remaining course work is all general public health with respect to the IH concentration. In other words, the IH concentration looks much like any other concentration in a core public health discipline with a limited emphasis in international health.

Students report need for more support for the required internship, including understanding requirements, site selection, and pursuit of funding, especially for international placements. This is

apparently a longstanding concern as it was cited in the most recent (2006) MPH program accreditation review for the collaborative program.

Historically, the department had two MS programs. Both have currently been suspended to allow the department to focus more completely on the MPH and PhD programs; the complete termination of the MS programs is anticipated.

The department currently offers three concentrations for the PhD in public health: ESH, HMP and Health Promotion and Health Behavior (HPHB). Over half of the current students are enrolled in the HPHB concentration. The 109 quarter credit hour curriculum includes 16 hours of public health core courses (MPH core or equivalent); 18 hours of courses in methodology and statistics, most of which are offered outside the department; 16 hours in the concentration area; and a cumulative 59 credit hours for proposal/grant writing, research project and manuscript, dissertation and doctoral seminar. From one perspective, the relatively small amount of formal course work suggests the curriculum follows a basic science philosophy for doctoral education (less course work and more independent research), but the minimal number of courses in the concentration area raises a concern that the department may not have adequate depth of course work for the doctoral programs. This was somewhat confirmed by doctoral students who indicated they often had to go outside the department or college to find appropriate course work and even then struggled to find relevant courses that were offered on a regular basis. In addition, the students seem unclear about the requirements for the second-year research project and manuscript, which is apparently a new policy for which guidelines are not yet clear to either faculty or students. The department should review the doctoral student handbook carefully to assure that the language about doctoral requirements is consistent with the Graduate School requirements, e.g., concerning the comprehensive exam.

2.6 Quality of personnel and adequacy to achieve mission and goals

The current faculty are well qualified for their positions. However, the quantity of faculty seems minimally adequate to support the current academic offerings. For example, the IH concentration critically needs more faculty to expand the course work and support the students. The department has an ambitious growth plan for the next few years, but some of the faculty expansion is contingent on new funding during a period of budget reductions and competition for limited available resources. The department must have the additional faculty to support the currently approved curricula (e.g., new concentration in epidemiology and biostatistics) before expansion into additional areas is considered. This need is especially critical in the context of also supporting a popular undergraduate program.

2.7 Level and quality of infrastructure

Faculty members expressed strong concern for the lack of infrastructure for research at either the department or college level. If the department expects to recruit and retain research-productive faculty, the infrastructure for pre- and post-award support (e.g., budget development and management, purchasing, human resources) for research activities must be provided at some level.

During the meetings, faculty shared few thoughts on general staff support in the department. The review panel met only one staff person (graduate programs manager and assistant to the chair). The college organizational chart listed a second person, the office coordinator, whose role was never referenced in the meetings. As the department pursues the intended growth in faculty and in academic program offerings, additional personnel will likely be needed both for general administration (e.g., human resources, budget, purchasing, and clerical support) and for the academic programs. For the latter, as the MPH program evolves out of the collaborative Oregon MPH program, additional infrastructure will be needed in the department. While the department can choose whether to maintain and expand the current centralized process for managing student applications and progress or to develop a more decentralized process, change must occur to provide sufficient support both for faculty and students. Masters students report concerns about apparent delays in communication between time of application, admission and information about enrollment. General communication about academic requirements, department and university policies, and relevant news and events is an ongoing challenge, exacerbated by websites that are difficult to navigate.

One specific detail noted is that all the course listings for the department are identified by “H”. As the varied concentrations develop, the department is encouraged to consider use of separate acronyms for the different disciplines to allow more efficient identification of the programs.

The division of responsibilities and the corresponding allocation of effort among the graduate coordinator and the concentration-specific graduate program coordinators was not clear to the review panel.

2.8 Quality of organizational support

As noted above, the university strategic plan includes three priority areas, one of which is “Improving Human Health and Wellness.” While the dean of the college has a vision of expanding the focus on public health throughout the programs of the college, it is not clear that the corresponding university priority has been translated into any campus-wide activities or developments. The university includes many other subject areas that would create mutual benefit if connected to the public health program and it is striking that there has been relatively little involvement with the many rich university programs beyond the college.

The other area of organizational support that was of concern was the sense voiced by many of the faculty that they have not been effectively used as a resource and sounding-board by the college and university as the proposals for reorganization and other major changes are being developed. Faculty who have considerable experience in the field of public health and experience at other academic institutions can help identify ways in which the proposed changes may be attractive or present barriers to the recruitment of new faculty and students, and may facilitate or hinder their participation in the professional community. They acknowledged that there had been opportunities to voice their opinions, but they identified a “top-down” approach that did not obviously incorporate or respond to their suggestions and concerns. Faculty highly value their role in governance, so communication and some

level of transparency are critical during this period of organizational change and budget reduction and reallocation.

3 Productivity

3.1 Level and Quality of Student Performance

The level and quality of student performance for both the MPH and PhD program is high. Two-year graduation rates for MPH cohorts is typically high (usually more than 90%), which is a strong indicator that students are performing as expected. The department reports 24 doctoral graduates for the period 2004 through 2008. In contrast to current enrollments dominated by the HPHB concentration, dissertation titles reflected more preference for the HMP concentration.

As described above, both MPH and PhD students regularly receive recognition from others for their scholarly activities. In addition, PhD students are presenting at professional conferences and publishing in peer-reviewed journals on a regular basis.

3.2 Level and quality of faculty performance

The department reports a highly-commendable increase in research productivity as measured by receipt of grants, publication of peer-reviewed manuscripts and presentations at professional meetings, both in absolute numbers and on a per faculty basis. The department has been intentional about encouraging research and recruiting senior faculty with active research agendas, and the success of this strategy is evident. Over the five years covered in the self-study, scholarly activity increased substantially by a variety of metrics: peer reviewed publications and presentations, citation counts, and external funding.

However, this success seems to have come with a significant cost to the academic programs. In both meetings with students, the review panel heard concerns about the quality of instruction and the advisement process. Student perception of teaching suggests that some faculty are outstanding instructors and some are ineffective for a variety of reasons. Specific negative examples include instructors who seemed to have no passion for the subject being taught and a class in which students were assigned topics to present for most class lectures but had little support or feedback from the instructor for doing so.

Faculty have primary responsibility for academic advisement of students, but the students report difficulty finding basic information about required documentation, registration procedures, etc. Students also report limited career-counseling support, other than inconsistent individual mentoring. Doctoral students do not understand the rationale behind or the process for the second-year research project and manuscript. A major concern from the MPH students is the lack of infrastructure for identifying and developing internship projects.

The department is commended for the broad participation of faculty in developing the self-study for this external review and in the site visit meetings.

3.3 Viability of Scholarly Community within Which Students can Interact

There appears to be little participation by graduate students in the life of the department or program. They do not participate in departmental decision-making and do not appear to have any governance structure of their own at OSU. Students do participate in governance of the OMPH program, but that is not a substitute for involvement with the OSU department. There is not a student organization that can bring graduate students together for professional and social purposes. While the department has supported peer-to-peer mentoring in the past, it appears as if this program is no longer in existence. The review panel was also surprised at how insulated students in this program are from other scholarly activities at OSU, particularly interdisciplinary programs for which expertise in public health would be welcomed and is needed, such as climate change. Faculty in the department are also somewhat isolated, so it is difficult for them to introduce their students to other opportunities on campus.

4. Outcomes

4.1 Professional viability of graduates

This is an area that merits some additional attention by the department and college, in that both MPH and doctoral students expressed a desire for more career counseling. From the survey information, site visit interviews and other information available for the review, it appears that MPH graduates have been able to obtain appropriate employment. As noted previously, some students have distinguished themselves professionally by winning various professional awards. However, many students expressed concerns that career counseling is limited and haphazard rather than systematic and explicit. Some students praised the assistance with career development provided to them by individual faculty. But others, especially doctoral students, voiced uncertainty about what their next steps should be and were frustrated with the lack of guidance in identifying a professional path. This may be an area where the students are looking for activities to be provided by OSU rather than by the OMPH program.

4.2 Satisfaction of students and graduates

During the site visit, there was the opportunity to talk with students from a range of degree programs and representing first year students through recent graduates. Results from student surveys were also available for review. In the meeting with the students, they appeared to be frank and reasonably expansive in their statements. It was striking that the students voiced a wide range of experiences and opinions about almost every aspect of the program, and that almost every opinion or experience voiced by a student was countered by an opposite experience from another student. Some students felt they had been well-served by virtually every aspect of the program, including the curriculum, teaching, advising, and career development. Others felt that almost every aspect of the program had been problematic. Particularly striking were the concerns voiced by more than one student about the following: lacking or inadequate career advising and development; quality of teaching (apparently a couple of teachers demonstrate little passion or enthusiasm); and difficulty obtaining the depth of coursework or availability of appropriate coursework that they need for their course of studies.

The most problematic concern is that when students were asked about the channels available to them for communicating their concerns to the program or college administration, they were not able to identify any regular or explicit ways to bring their concerns and recommendations to the program administration or faculty. They referenced instead their participation with the Oregon MPH program and student participation in committees and activities of the OMPH. But it was apparent that the OMPH channels are not a fully-satisfactory substitute for a more immediate communication and involvement with the OSU program.

4.3 Rankings/Rating

There is no official ranking or rating of Public Health programs, and the review panel does not perceive the US World and News Report ranking as a credible assessment of academic excellence. We do note, however, that the Oregon MPH program received accreditation from the Council on Education for Public Health (CEPH) in 2006. This indicates that the Public Health Program at OSU is a key component of the collaborative program that is meeting the standards of the public health discipline. However, because the accreditation includes consideration of resources and programs of OHSU and PSU, the significance specifically for the OSU program is limited. It is also to be noted that the accreditation did not include consideration of the doctoral programs, and that no rating is available that pertains to the doctorate.

5. Conclusion

The Department of Public Health offers the Master of Public Health and PhD degree programs with concentrations for both degrees in a variety of disciplines. The MPH is currently offered in conjunction with the CEPH-accredited Oregon Master of Public health collaboration. However, the department and college are considering withdrawal from the collaboration as one step toward a larger goal of becoming an accredited school of public health. A major organizational change to transform the current College of Health and Human Sciences to the College of Public Health and Human Sciences is scheduled for 2011 in conjunction with the planned initial application for CEPH accreditation. Associated with this organizational change is an ambitious effort to hire ten new faculty in the next 12 months and several more after that. The review panel believes some faculty growth is critical to maintain the currently active and approved instructional programs before any expansion is considered. Several of the programs do not have adequate faculty and/or course work now, and the department does not have the professional staff and infrastructure to support the expansion. In particular, this review highlights several limitations of support for faculty research, student advisement and career counseling, and student support and services in general. However, this concern should not negate the tremendous progress and growth the program has experienced in the last few years. Because of the advocacy of the department chair and college dean, public health is highlighted as a critical component of the university's strategic plan and therefore should be a priority area for strategic allocation of resources.

Summary of Recommendations and Action Plans

Students and Instructional Programs

1. Work with students to create processes that include them in the life of the department including appropriate involvement in departmental governance, their own student organization and a clear process for communicating concerns.

Action Plan: We are currently a member of the Oregon MPH Program in which each track has a student representative who serves on the Academic Program Committee and represents student ideas and student concerns to the overall governance of the OMPH. OSU has four track representatives and one of these track representatives also serves as the OSU representative to the Program. We have not created our own structure at OSU because it would be duplicative. As we move forward with the College of Public Health and Human Sciences, we will be a stand-alone college and we will continue having the MPH track representatives involved in program governance. We will also include PhD representatives from the three concentration areas. Related to student organizations, there is a very active International Health Club and Public Health Club in the department. Students from all tracks and also PhD students are invited and do participate in the club activities. Also, starting spring 2010, the Department Chair and Graduate Coordinator meet each term with the OMPH track representatives to hear their concerns and ideas for changes, so we currently have a process in place and regular schedule for students to communicate concerns about the program.

2. As curricular programs continue to expand, develop course work to support programs. Assess, in particular, the scope and depth of offerings for doctoral students.

Action Plan: In spring of 2010, the faculty developed competencies and additional courses for the three PhD Concentrations in Public Health in order to strengthen the PhD degree program and to meet CEPH requirements. These are detailed in the current PhD handbook. Per this recommendation, new courses will be introduced as we increase our faculty in all three concentrations.

3. Complete creation of a departmental process for supporting development, implementation and evaluation of internships for MPH students.

Action Plan: Beginning in fall 2011, one of the Public Health faculty members will assume the role of Internship Coordinator for the MPH program. She will oversee internships for students in all tracks, including the development, implementation, and evaluation of internships.

4. Increase research support for students, especially PhD students. Include student support on all proposals for external funds.

Action Plan: As documented in the Self-Study, the faculty has dramatically increased our research productivity in the last few years. Due to the increase in external funding, this year, in particular, we have been able to offer more GRA positions than in the past. We will work to continue this trend in the future. In addition, a number of students have been supported on hourly wages when the grant will not fully support a GRA.

5. Become more involved in interdisciplinary efforts on campus; encourage students to participate in seminars, courses, etc. in areas that are relevant to public health.

Action Plan: This is something that is important to us, and perhaps we did not adequately address this in the Self-Study. Students are encouraged to take classes from all department and programs on campus. For example, they routinely take courses from, but not limited to, Anthropology, Nutrition & Exercise Sciences, Human Development & Family Sciences, Sociology, Statistics, Toxicology, Engineering, Business, Women's Studies, and Water Resources. In addition, MPH and PhD students are on listservs and they receive numerous announcements about seminars, workshops, and other opportunities on campus and in the broader community. We will continue to encourage students to take advantage of these events.

6. Continue efforts to recruit and support students from racial/ethnic minorities while exploring what diversity means to the department beyond the usual definitions of gender, race and ethnicity.

Action Plan: We participate in a number of diversity-recruitment efforts in order to attract a larger number of diverse applicants to the Program. These efforts include but are not limited to: (1) corresponding with students interested in graduate studies in Public Health who participated in the California Forum for Diversity in Graduate Education and the Minority Recruiting Event with the Society for the Advancement for Chicano and Native Americans in Science; (2) recruiting of minority students at the annual American Public Health Association meetings; (3) corresponding with McNair Scholars interested in Public Health; (4) participating in the Graduate School's Minority Pipeline Scholarship Program; and, (5) working with our colleagues across campus and particularly with the faculty and staff in OSU's Educational Opportunities Program to attract and retain minority graduate students. We will continue these efforts and will keep records of the contacts we make to determine if any of the students contacted through these processes end up applying to our MPH Program. We have secured \$120,000 in Laurel Awards for MPH Student in AY 2009-2010 and \$100,000 for both AY 2010-2011 and 2012- 2013. One of the stated goals of this award is to attract diverse students.

Faculty

7. Expand faculty, especially for current offerings in international health and for approved offerings in epidemiology and biostatistics.

Action Plan: The College is currently recruiting 11 additional faculty trained and experienced in the core Public Health disciplines to complement the existing 75 tenured/tenure track faculty college-wide. Searches for faculty in biostatistics, epidemiology, health policy and environmental and occupational health began in October 2010. New hires will ensure that all areas are adequately staffed to support the academic, research, and service programs we offer. Regarding international health, this year we hired full-time a PhD fixed term faculty to teach courses and advise students in that track. In addition, one tenure-track faculty member will be reassigned to the International Health track starting Fall 2011.

8. Ensure that faculty are appropriately involved in the planning and implementation of major organizational and curricular changes, especially those faculty who have significant experience in other schools or programs of public health.

Action Plan: In June 2010, to increase the circle of engagement, the dean augmented the original Administrative Team (AT) with a Faculty Transition Team (FTT). Three faculty from Public Health are on the FTT. Assisted by an organizational development consultant, the joint Faculty-Administrative Transition Team (FTT/ATT) worked throughout the summer of 2010 to address faculty issues, develop options for organizational design and plan its leadership for the transition process. At the all-College meeting in September 2010, the FTT/ATT presented their planning and development work, and engaged faculty and staff in undertaking further development of the new CPHHS. Faculty and staff were enlisted in the creation, design and naming of the two new schools, their operations and governance.

9. Provide opportunities for professional development in all aspects of faculty expectation (e.g., research, teaching and advisement, leadership development).

Action Plan: In terms of support for faculty research, the College of HHS offers a grant-writing workshop annually in the summer. In addition, the College provides internal pilot funds to support new ideas from faculty that may lead to larger externally funded proposals. To provide professional development in teaching, the

faculty are encouraged to enroll in courses and workshops offered by the Center for Teaching, Learning and Assessment. To improve faculty advising, we focused on student advising and mentoring at our fall 2010 retreat, and came up with a tangible suggestions for improvement. We are now in the process of creating online assessment tools for both PhD and MPH students that will improve the ability of faculty to track student progress and achievement. Finally, to enhance faculty leadership, the Dean of the College of HHS is launching a new faculty leadership development program during this academic year. The details of this program are being coordinated with the Associate Provost for Academic Affairs leadership development program so there is no duplication. One faculty in Public Health attended the latter program.

Infrastructure and Resources

10. Hire sufficient faculty to support current programs before expanding into other areas. There are already significant faculty deficits in several key areas in the context of the graduate programs and research productivity. Not adequately considered in the current evaluation is the significant demand on departmental resources for the undergraduate programs.

Action Plan: As mentioned above, the College is currently recruiting 11 additional faculty trained and experienced in the core Public Health disciplines. We are currently searching and plan to hire one faculty in biostatistics, two faculty in epidemiology, five faculty in health policy and three faculty in environmental and occupational health by fall 2011. New hires will ensure that all areas are adequately staffed to support the academic, research, and service aspects of our current graduate and undergraduate programs.

11. Assure adequate staff support and infrastructure for all aspects of departmental productivity. An immediate need stated by the faculty is for research support. A second need is for student services, which may not require a major investment in personnel but rather development of more efficient processes and better communication with students (e.g., application, enrollment, and registration issues).

Action Plan: To support faculty research, the College supports a full-time professional faculty to assist in the pre-award phase of grant application. She is available to all faculty in the college, and Public Health faculty seek her services. In addition, this year the Department hired a Research Assistant to work part-time with any Public Health faculty member who is preparing proposals and needs assistance. A number of faculty have already used her services. Regarding the second recommendation, we have a talented professional faculty who is dedicated to assisting students with admission questions, enrollment issues, and registration problems. She is very knowledgeable about university processes and responsive to student concerns. Perhaps delays discussed in the report reflect glitches in the overall university system for admissions and registration.

12. Any reorganization should be based on logical groupings of programs and should involve broad faculty input. The current proposed organization of the three current departments in the College of Health and Human Sciences into two schools is not likely to provide the professional and organizational focus that is needed. The review panel recognized that "School A" included disciplines oriented toward the natural and physical sciences and "School B" included those disciplines related to the social sciences. However, it is not clear that this division creates any efficiencies or facilitates any enhanced collaborations within the disciplines. It should also be considered whether nonstandard organizational structure and nomenclature may hinder the ability of the faculty to participate in the larger public health community and may be less attractive or confusing for students. In this context, the review panel would recommend either a non-departmentalized college or divisions that reflect well-defined disciplines or groupings but which could perhaps share staff and some non-personnel resources. There may be an intermediate grouping such as family sciences, health behavior and health promotion, and human development; health policy and international health; epidemiology and biostatistics; exercise science and nutrition; and environmental health and occupational safety. The exclusion of design and human environments is unfortunate but reasonable if that department is not willing or able to shift their focus more toward health-related issues.

Action Plan: Several developments have occurred since the Program Review. The proposed organizational structure of the College of Public Health and Human Sciences (CPHHS) includes two academic units: 1) the School of Biological and Population Health Sciences, and 2) the School of Social and Behavioral Health

Sciences. The School of Biological and Population Health Sciences is the administrative home for the following academic programs: PhD in Public Health (with a concentration in Environment Safety & Health); MPH tracks in Environment, Safety & Health, Epidemiology, and Biostatistics; PhD, MS and BS in Nutrition; PhD, MS and BS in Exercise and Sport Science; BS in Nutrition and Exercise Sciences. The School of Social and Behavioral Health Sciences is the administrative home for the following academic programs: PhD in Public Health (Health Policy and Health Promotion/Health Behavior); MPH tracks in Health Promotion, Health Management & Policy; BS degree in Public Health; PhD, MS and BS degrees in Human Development and Family Sciences.

Despite the concerns raised by the reviewers, the proposed structure has been positively reviewed by the Executive Director of the Council on Education for Public Health (CEPH). She believes that the proposed structure will support visibility for the five core Public Health programs and that the structure will allow for faculty trained in Public Health to be responsible for development and oversight of the curriculum.

13. As noted above, encourage and facilitate more involvement in interdisciplinary opportunities on campus. For example, the Environmental Safety and Health (ESH) program has evolved toward a relatively narrow focus rather than capitalizing on the broad expertise in environmental sciences across the campus. These activities will enrich experiences for both faculty and students.

Action Plan: As mentioned earlier, students are encouraged to take courses from all department and programs on campus. For example, they routinely take courses from, but not limited to, Anthropology, Nutrition & Exercise Sciences, Human Development & Family Sciences, Sociology, Statistics, Toxicology, Engineering, Business, Women's Studies, and Water Resources. This applies to students in the Environment, Safety and Health track as well as students in all the other tracks. Because the Public Health discipline is by nature, interdisciplinary, the faculty collaborate with others in our college and across campus. In particular, related to the Environment, Safety, and Health track, faculty are co-investigators with faculty in Environmental & Molecular Toxicology, Linus Pauling Institute, Environmental Health Sciences Center, Superfund Research Center, and the College of Engineering. Students in this track are often co-mentored (and funded) by faculty from one of these programs or centers. In addition, faculty from other departments and programs very often serve on MPH or PhD student committees. We may not have made this clear to the reviewers, but there is considerable interdisciplinary collaboration by both faculty and students.

14. The department presents an ambitious plan for faculty recruitment. However, the availability of financial resources to meet this plan is not clear. According to Dean Tammy Bray, resources for the ten positions projected by March 2011 are from internal reallocation; conservatively expenses could easily be over a million dollars in recurring salary and fringe benefits plus any necessary start-up commitments. Whether the resources are available from attrition or from explicit reductions, the department (or college) must be careful not to create critical deficits in other program areas. Also, any reductions in one area to enhance another could cause resentment, so open communication about the strategic planning is critical. Some of the proposed faculty growth is contingent on successful competition within the university's strategic re-alignment process, suggesting that resources are not certain.

Action Plan: The internal funds redirected to support the new faculty in the proposed CPHHS are adequate to support 10 to 17 new faculty members. This is an ongoing commitment by the university and is not contingent upon additional state investment. The CHHS faculty members, the College Dean, OSU President, and Provost have all endorsed the establishment of a CPHHS at OSU. Reorganization of the College to fulfill both the university's restructuring and CEPH's accreditation criteria has been approved by all necessary OSU administrators. The College currently offers all required PH programs (5 MPH and 3 PhD) necessary for accreditation as a CPHHS. Contingent upon approval of this application, OSU President Ray will announce the new CPHHS in summer 2011. Fiscal operation under the new organizational design will commence July 1, 2011 and the College will be renamed the OSU CPHHS. Current students will continue in, and new students will be admitted into the CPHHS in fall 2011. During the 2011 fiscal year, the University provided funding to hire 11 new core PH faculty members and up to 6 additional faculty members with PH expertise for our Human Sciences foci. The College is currently conducting searches for 1 new faculty member in biostatistics, 2 new

faculty members in epidemiology, 5 new faculty members in health policy, and 3 new faculty members in environment, safety and health. In addition, we are offering Graduate Assistantships to high caliber students to help build student interest and enrollment in our newest MPH concentration areas. Financial support for the new faculty members and Graduate Assistantships has been provided by the Provost's and Dean's Offices, and funding for administrative staff will come from the College through enhanced efficiencies and ongoing reorganization efforts.

Follow-up Visit with Department of Public Health

Denise Lach, Grad Council Representative, met with Marie Harvey (Associate Dean for Research and Graduate Studies) and Anna Harding, Co-Director of the School of Biological and Population Health Sciences, both of whom were involved in the external review. The comments below include (a) recommendations from external review (May 16-18, 2010); (b) action plan proposed by Department of Public Health (January 28, 2011); and (c) specific issues raised in the action plan review on March 13, 2013.

Summary: Since the external review in May 2010, many things have changed in the Department of Public Health including a reorganization of the College and the graduate programs into Schools and programs that reflect the state of Public Health education in the 21st Century. Fifteen new hires have been made and two more are currently in the search process. Extensive work and resources have been devoted to creating opportunities for both faculty and graduate students to be successful in their efforts including a full time internship coordinator, a full time grants and contract support specialist, internal seed grant projects, and engagement processes for important tasks like the accreditation coming up next year. This College, all the related Schools and Programs, and especially the faculty should be commended for the amount of work they put into and subsequent success for their graduate programs since the external review was completed. There are many “best practices” in this program that should be shared with other graduate programs including the grant training workshop, a Health Sciences Division-wide information sharing retreat called “IGNITE,” and strategic planning for increasing diversity among faculty, staff, and students.

Students and Instructional Programs

1a. Work with students to create processes that include them in the life of the department including appropriate involvement in departmental governance, their own student organization and a clear process for communicating concerns.

1b. Action Plan: We are currently a member of the Oregon MPH Program in which each track has a student representative who serves on the Academic Program Committee and represents student ideas and student concerns to the overall governance of the OMPH. OSU has four track representatives and one of these track representatives also serves as the OSU representative to the Program. We have not created our own structure at OSU because it would be duplicative. As we move forward with the College of Public Health and Human Sciences, we will be a stand-alone college and we will continue having the MPH track representatives involved in program governance. We will also include PhD representatives from the three concentration areas. Related to student organizations, there is a very active International Health Club and Public Health Club in the department. Students from all tracks and also PhD students are invited and do participate in the club activities. Also, starting spring 2010, the Department Chair and Graduate Coordinator meet each term with the OMPH track representatives to hear their concerns and ideas for changes, so we currently have a process in place and regular schedule for students to communicate concerns about the program.

1c. Action Plan Review: A Graduate School Council has been created at the Dean’s level that includes representatives of all Public Health programs. The Council meets once a term; in addition, the Public Health representatives to the Council meet with the School Co-Directors at least once a term.

2a. As curricular programs continue to expand, develop course work to support programs. Assess, in particular, the scope and depth of offerings for doctoral students.

2b. Action Plan: In spring of 2010, the faculty developed competencies and additional courses for the three PhD Concentrations in Public Health in order to strengthen the PhD degree program and to meet CEPH requirements. These are detailed in the current PhD handbook. Per this recommendation, new courses will be introduced as we increase our faculty in all three concentrations.

2c. Action Plan Review: Required new 600-level courses for the PhD concentrations have been developed and implemented for all three programs (four in Health Policy, six in Health Promotion and Health Behavior, and five in Environmental and Occupational Health & Safety). A new dual MPH degree with DVM has been developed such that a DVM student may enroll in any of the MPH tracks to complete the dual degree. To date, most students have chosen the Epidemiology track. A Graduate Certificate in Public Health with six online courses taught by PhD level instructors was started in the fall of 2012. Two new courses have been created that all graduate students in the college who are not in Public Health programs are required to take (Epidemiology and Foundations of Public Health).

3a. Complete creation of a departmental process for supporting development, implementation and evaluation of internships for MPH students.

3b. Action Plan: Beginning in fall 2011, one of the Public Health faculty members will assume the role of Internship Coordinator for the MPH program. She will oversee internships for students in all tracks, including the development, implementation, and evaluation of internships.

3c. Action Plan Review: Immediately after the review, a faculty member was given a 0.5 FTE appointment as an internship coordinator. In 2012, a full time internship coordinator with an MPH was hired who helps with paperwork, record-keeping, securing new internship locations, meeting with preceptors, etc. Faculty members are still involved with placements, working with students on learning outcomes for internships, and career advising.

4a. Increase research support for students, especially PhD students. Include student support on all proposals for external funds.

4b. Action Plan: As documented in the Self-Study, the faculty has dramatically increased our research productivity in the last few years. Due to the increase in external funding, this year, in particular, we have been able to offer more GRA positions than in the past. We will work to continue this trend in the future. In addition, a number of students have been supported on hourly wages when the grant will not fully support a GRA.

4c. Action Plan Review: This is an ongoing initiative for the program; currently they have set a goal of having 80% of all research grants include student support by 2014/2015. This is complemented by the grant writing training described below and the hiring of young talented new faculty members who are actively submitting proposals.

5a. Become more involved in interdisciplinary efforts on campus; encourage students to participate in seminars, courses, etc. in areas that are relevant to public health.

5b. Action Plan: This is something that is important to us, and perhaps we did not adequately address this in the Self-Study. Students are encouraged to take classes from all department and programs on campus. For example, they routinely take courses from, but not limited to, Anthropology, Nutrition & Exercise Sciences, Human Development & Family Sciences, Sociology, Statistics, Toxicology, Engineering, Business, Women's Studies, and Water Resources. In addition, MPH and PhD students are on listservs and they receive numerous announcements about seminars, workshops, and other opportunities on campus and in the broader community. We will continue to encourage students to take advantage of these events.

5c. Action Plan Review: Students continue to take courses across campus and about 100 adjunct faculty have been recruited and now serve on committees, offer electives, etc. Dual degrees with Anthropology and Women Studies have been created, and a new college seminar series was instituted with 3-5 speakers each term. Speakers come from within the College, Division, and the community/profession. PhD students are required to attend a certain number of seminars for their program of study. The college has created seed

funding for interdisciplinary projects that must include a partner from outside the College. We have also created a dual degree with Vet Med:VDM/MPH, as previously described.

6a. Continue efforts to recruit and support students from racial/ethnic minorities while exploring what diversity means to the department beyond the usual definitions of gender, race and ethnicity.

6b. Action Plan: We participate in a number of diversity-recruitment efforts in order to attract a larger number of diverse applicants to the Program. These efforts include but are not limited to: (1) corresponding with students interested in graduate studies in Public Health who participated in the California Forum for Diversity in Graduate Education and the Minority Recruiting Event with the Society for the Advancement for Chicano and Native Americans in Science; (2) recruiting of minority students at the annual American Public Health Association meetings; (3) corresponding with McNair Scholars interested in Public Health; (4) participating in the Graduate School's Minority Pipeline Scholarship Program; and, (5) working with our colleagues across campus and particularly with the faculty and staff in OSU's Educational Opportunities Program to attract and retain minority graduate students. We will continue these efforts and will keep records of the contacts we make to determine if any of the students contacted through these processes end up applying to our MPH Program. We have secured \$120,000 in Laurel Awards for MPH Student in AY 2009-2010 and \$100,000 for both AY 2010-2011 and 2012- 2013. One of the stated goals of this award is to attract diverse students.

6c. Action Plan Review: An equity and diversity committee was established to develop a plan for increasing diversity through recruiting and program practices. Students, staff, and faculty all serve on the committee, which is chaired by a Native American faculty member. They are focusing their targets on Hispanic and Native American hiring but also using McNair to recruit first-generation grad students. The laurel awards are used only for MPH students and are focused on quality and diversity.

Faculty

7a. Expand faculty, especially for current offerings in international health and for approved offerings in epidemiology and biostatistics.

7b. Action Plan: The College is currently recruiting 11 additional faculty trained and experienced in the core Public Health disciplines to complement the existing 75 tenured/tenure track faculty college-wide. Searches for faculty in biostatistics, epidemiology, health policy and environmental and occupational health began in October 2010. New hires will ensure that all areas are adequately staffed to support the academic, research, and service programs we offer. Regarding international health, this year we hired full-time a PhD fixed term faculty to teach courses and advise students in that track. In addition, one tenure-track faculty member will be reassigned to the International Health track starting Fall 2011.

7c. Action Plan Review: During 2009 and 2011, 15 new hires were made , including four in biostatistics, five in epidemiology, two in Environmental and Occupational Health & Safety and four in health policy. They are currently hiring two additional faculty in Environmental and Occupational Health and Safety and one in Health Policy. Several full time instructors have also been hired to cover both undergrad and grad level classes.

8a. Ensure that faculty are appropriately involved in the planning and implementation of major organizational and curricular changes, especially those faculty who have significant experience in other schools or programs of public health.

8b. Action Plan: In June 2010, to increase the circle of engagement, the dean augmented the original Administrative Team (AT) with a Faculty Transition Team (FTT). Three faculty from Public Health are on the FTT. Assisted by an organizational development consultant, the joint Faculty-Administrative Transition Team (FTT/ATT) worked throughout the summer of 2010 to address faculty issues, develop options for organizational design and plan its leadership for the transition process. At the all-College meeting in September 2010, the FTT/ATT presented their planning and development work, and engaged faculty and staff in undertaking further development of the new CPHHS. Faculty and staff were enlisted in the creation, design and naming of the two new schools, their operations and governance.

8c: Action Plan Review: A College-wide steering committee was implemented fall 2012 that created several subcommittees on which Public Health faculty sit. The subcommittees are now deeply involved in the accreditation process, which will also include staff and student engagement. A mock site visit is planned for May with three outside reviewers. This process is complemented by information sessions for faculty and staff about status of planning and accreditation.

9a. Provide opportunities for professional development in all aspects of faculty expectation (e.g., research, teaching and advisement, leadership development).

9b. Action Plan: In terms of support for faculty research, the College of HHS offers a grant-writing workshop annually in the summer. In addition, the College provides internal pilot funds to support new ideas from faculty that may lead to larger externally funded proposals. To provide professional development in teaching, the faculty are encouraged to enroll in courses and workshops offered by the Center for Teaching, Learning and Assessment. To improve faculty advising, we focused on student advising and mentoring at our fall 2010 retreat, and came up with a tangible suggestions for improvement. We are now in the process of creating online assessment tools for both PhD and MPH students that will improve the ability of faculty to track student progress and achievement. Finally, to enhance faculty leadership, the Dean of the College of HHS is launching a new faculty leadership development program during this academic year. The details of this program are being coordinated with the Associate Provost for Academic Affairs' leadership development program so there is no duplication. One faculty in Public Health attended the latter program.

9c: Action Plan Review: A grant writing workshop was held in 2011-2012; all faculty who attended the workshop subsequently submitted a proposal (not sure about success rate yet). The grant-writing workshop will be repeated this year. An internal seed grant has been created at the Divisional level (Public Health, DVM, Pharmacy) to encourage interdisciplinary research. College leadership training has been implemented with PH faculty participating each year, allowing mid-career faculty to explore leadership opportunities and obligations.

Infrastructure and Resources

10a. Hire sufficient faculty to support current programs before expanding into other areas. There are already significant faculty deficits in several key areas in the context of the graduate programs and research productivity. Not adequately considered in the current evaluation is the significant demand on departmental resources for the undergraduate programs.

10b. Action Plan: As mentioned above, the College is currently recruiting 11 additional faculty trained and experienced in the core Public Health disciplines. We are currently searching and plan to hire one faculty in biostatistics, two faculty in epidemiology, five faculty in health policy and three faculty in environmental and occupational health by fall 2011. New hires will ensure that all areas are adequately staffed to support the academic, research, and service aspects of our current graduate and undergraduate programs.

10c: Grad Program Review: see 7c above.

11a. Assure adequate staff support and infrastructure for all aspects of departmental productivity. An immediate need stated by the faculty is for research support. A second need is for student services, which may not require a major investment in personnel but rather development of more efficient processes and better communication with students (e.g., application, enrollment, and registration issues).

11b. Action Plan: To support faculty research, the College supports a full-time professional faculty to assist in the pre-award phase of grant application. She is available to all faculty in the college, and Public Health faculty seek her services. In addition, this year the Department hired a Research Assistant to work part-time with any Public Health faculty member who is preparing proposals and needs assistance. A number of faculty have already used her services. Regarding the second recommendation, we have a talented professional faculty who is dedicated to assisting students with admission questions, enrollment issues, and registration problems. She is very knowledgeable about university processes and responsive to student concerns. Perhaps delays discussed in the report reflect glitches in the overall university system for admissions and registration.

11c: Action Plan Review: A 1.0 FTE Grants/Contracts specialist has been hired by the College to work with faculty submitting grants. The new internship coordinator brings in alums and employers, and helps students with career decisions as well as helping with internships. A young alum/career readiness program developed for undergrads is beginning to include some MPH students as appropriate.

12a. Any reorganization should be based on logical groupings of programs and should involve broad faculty input. The current proposed organization of the three current departments in the College of Health and Human Sciences into two schools is not likely to provide the professional and organizational focus that is needed. The review panel recognized that "School A" included disciplines oriented toward the natural and physical sciences and "School B" included those disciplines related to the social sciences. However, it is not clear that this division creates any efficiencies or facilitates any enhanced collaborations within the disciplines. It should also be considered whether nonstandard organizational structure and nomenclature may hinder the ability of the faculty to participate in the larger public health community and may be less attractive or confusing for students. In this context, the review panel would recommend either a non-departmentalized college or divisions that reflect well-defined disciplines or groupings but which could perhaps share staff and some non-personnel resources. There may be an intermediate grouping such as family sciences, health behavior and health promotion, and human development; health policy and international health; epidemiology and biostatistics; exercise science and nutrition; and environmental health and occupational safety. The exclusion of design and human environments is unfortunate but reasonable if that department is not willing or able to shift their focus more toward health-related issues.

12b. Action Plan: Several developments have occurred since the Program Review. The proposed organizational structure of the College of Public Health and Human Sciences (CPHHS) includes two academic units: 1) the School of Biological and Population Health Sciences, and 2) the School of Social and Behavioral Health Sciences. The School of Biological and Population Health Sciences is the administrative home for the following academic programs: PhD in Public Health (with a concentration in Environment Safety & Health); MPH tracks in Environment, Safety & Health, Epidemiology, and Biostatistics; PhD, MS and BS in Nutrition; PhD, MS and BS in Exercise and Sport Science; BS in Nutrition and Exercise Sciences. The School of Social and Behavioral Health Sciences is the administrative home for the following academic programs: PhD in Public Health (Health Policy and Health Promotion/Health Behavior); MPH tracks in Health Promotion, Health Management & Policy; BS degree in Public Health; PhD, MS and BS degrees in Human Development and Family Sciences.

Despite the concerns raised by the reviewers, the proposed structure has been positively reviewed by the Executive Director of the Council on Education for Public Health (CEPH). She believes that the proposed structure will support visibility for the five core Public Health programs and that the structure will allow for faculty trained in Public Health to be responsible for development and oversight of the curriculum.

12c: Action Plan Review. The reorganization and School names are not changeable at this point; they do expect to get feedback and/or recommendations from the accreditation process on this issue. The website was designed so students can find programs rather than having to know what School their major is associated with (one of the earliest consequences of the re-naming).

13a. As noted above, encourage and facilitate more involvement in interdisciplinary opportunities on campus. For example, the Environmental Safety and Health (ESH) program has evolved toward a relatively narrow focus rather than capitalizing on the broad expertise in environmental sciences across the campus. These activities will enrich experiences for both faculty and students.

13b. Action Plan: As mentioned earlier, students are encouraged to take courses from all department and programs on campus. For example, they routinely take courses from, but not limited to, Anthropology, Nutrition & Exercise Sciences, Human Development & Family Sciences, Sociology, Statistics, Toxicology, Engineering, Business, Women's Studies, and Water Resources. This applies to students in the Environment, Safety and Health track as well as students in all the other tracks. Because the Public Health discipline is by

nature, interdisciplinary, the faculty collaborate with others in our college and across campus. In particular, related to the Environment, Safety, and Health track, faculty are co-investigators with faculty in Environmental & Molecular Toxicology, Linus Pauling Institute, Environmental Health Sciences Center, Superfund Research Center, and the College of Engineering. Students in this track are often co-mentored (and funded) by faculty from one of these programs or centers. In addition, faculty from other departments and programs very often serve on MPH or PhD student committees. We may not have made this clear to the reviewers, but there is considerable interdisciplinary collaboration by both faculty and students.

13c. Action Plan Review: see 5c above.

14a. The department presents an ambitious plan for faculty recruitment. However, the availability of financial resources to meet this plan is not clear. According to Dean Tammy Bray, resources for the ten positions projected by March 2011 are from internal reallocation; conservatively expenses could easily be over a million dollars in recurring salary and fringe benefits plus any necessary start-up commitments. Whether the resources are available from attrition or from explicit reductions, the department (or college) must be careful not to create critical deficits in other program areas. Also, any reductions in one area to enhance another could cause resentment, so open communication about the strategic planning is critical. Some of the proposed faculty growth is contingent on successful competition within the university's strategic re-alignment process, suggesting that resources are not certain.

14b. Action Plan: The internal funds redirected to support the new faculty in the proposed CPHHS are adequate to support 10 to 17 new faculty members. This is an ongoing commitment by the university and is not contingent upon additional state investment. The CHHS faculty members, the College Dean, OSU President, and Provost have all endorsed the establishment of a CPHHS at OSU. Reorganization of the College to fulfill both the university's restructuring and CEPH's accreditation criteria has been approved by all necessary OSU administrators. The College currently offers all required PH programs (5 MPH and 3 PhD) necessary for accreditation as a CPHHS. Contingent upon approval of this application, OSU President Ray will announce the new CPHHS in summer 2011. Fiscal operation under the new organizational design will commence July 1, 2011 and the College will be renamed the OSU CPHHS. Current students will continue in, and new students will be admitted into the CPHHS in fall 2011. During the 2011 fiscal year, the University provided funding to hire 11 new core PH faculty members and up to 6 additional faculty members with PH expertise for our Human Sciences foci. The College is currently conducting searches for 1 new faculty member in biostatistics, 2 new faculty members in epidemiology, 5 new faculty members in health policy, and 3 new faculty members in environment, safety and health. In addition, we are offering Graduate Assistantships to high caliber students to help build student interest and enrollment in our newest MPH concentration areas. Financial support for the new faculty members and Graduate Assistantships has been provided by the Provost's and Dean's Offices, and funding for administrative staff will come from the College through enhanced efficiencies and ongoing reorganization efforts.

14c: Action Plan Review: All funds for growth in faculty and services have been from internal sources; the College made a commitment to growing the Public Health programs and dedicated resources to that growth. Right now, the program has the required number of faculty for accreditation; however, as noted above, increasing expectations for creating a School of Public Health with excellence in research, teaching, mentoring, and program support have put a heavy burden on existing and new faculty.

PROPOSAL FOR A CO-DEGREE MASTERS PROGRAM

Proposed Combined Undergraduate-Graduate Degree (Co-Degree Masters) program

This proposal defines foundational requirements for an OSU combined undergraduate-graduate combined degree program in which undergraduate students could apply to designated master's programs during their junior year. Students typically would begin some of their graduate coursework and thesis or project work during their senior year. Completion of the program allows both a bachelors and master's degree to be conferred. We propose this as a 3-year pilot to assess interest and success. Participation by individual master's programs is entirely voluntary, although the pilot phase will be limited to existing master's programs. Programs deciding to participate may set their own requirements for their program to be more restrictive than what is described in this proposal. The following requirements are based on a review of programs at other universities with co-degree programs (Appendix 1), on feedback from OSU Students (Appendix 2) and previous discussions with members of the OSU Curriculum Council and Graduate Council.

Foundational Requirements

Outstanding undergraduate OSU students who have completed a minimum of 105 of the (minimum) required 180 credits toward their degree with an overall GPA of 3.25 or better are eligible to apply to an OSU co-degree master's program during the winter term of their junior year. Master's programs are responsible for determining any additional admissions criteria and competitiveness. The master's program will notify applicants of admissions decisions during spring term. Accepted students will matriculate during the following fall term. With careful planning students can then complete a master's degree within 1 year beyond the bachelor's. Students admitted to the co-degree program must maintain a GPA of 3.0 or better throughout their undergraduate and master's degree programs or they will be subject to dismissal from the co-degree program.

Successful applicants are allowed to apply up to 9 credits of graduate coursework (taken for a letter grade) taken as an undergraduate to both their undergraduate and master's degree.

These 9 credits are deducted from allowed transfer credits for students who have transferred into OSU. Only credits with letter grades of B (3.00) or better may be counted for graduate credit. In addition, those students in undergraduate programs requiring a thesis can allow the undergraduate thesis to be a step toward completion of the master's thesis (for those programs requiring a thesis).

Admission to the co-degree master's program is not automatic and will be competitive with students applying directly to the program. Students must identify a graduate advisor prior to application to the program. Students requiring a thesis for their degree must have a professor who agrees to serve as the thesis advisor prior to application. For students completing an undergraduate thesis, this may be the student's undergraduate thesis advisor. For students in non-thesis master's programs, the graduate advisor must be willing to work with the student to guide the scheduling of required coursework.

TOEFL and ID portfolios are not required, but the following are required:

- Online application via the Graduate School website
- A co-degree study proposal or coursework plan of study, including details of the nine graduate credits to be applied toward both graduate and undergraduate degrees, is required to complete the application for admission and should be signed by the graduate advisor for non-thesis master's programs or graduate thesis advisor for master's programs with thesis.
- Statement of Purpose essay of 2-3 pages. This must include details of the graduate plan of study and, for programs with a thesis, the master's thesis topic.
- Three letters of recommendation from individuals knowledgeable of the student's academic background and potential for success in a graduate degree program.
- Transcripts from all undergraduate institutions attended.

Students enrolled in a co-degree program will be eligible for financial aid (Pell Grant) until they complete 180 credit hours toward their undergraduate degree. Once the undergraduate degree requirements are met, then the student typically would be supported on a Teaching or Research Assistantship or they would pay graduate tuition and fees. The bachelor's degree will be conferred after all requirements for the bachelor's degree are met; the master's degree will be conferred after all requirements for the master's degree are met.

Assessment of Pilot Program

The Graduate School, Office of Assessment, Graduate Council and Curriculum Council will assess the success of the program after 3 years. Indicators of success will include, but not be limited to, number of programs participating, enrollment trends in each program for both co-degree and direct admits, time to degree and degree completion rates.

APPENDIX 1. Additional Background on Programs at Other Universities:

Cal Poly: <http://me.calpoly.edu/about/degree-programs/graduate/> up to 8 units of undergraduate technical electives may be double-counted towards the masters requirements

Southern Methodist: <http://www.smu.edu/Lyle/Departments/EMIS/Programs/41MastersDegree> Up to nine (9) SCH of graduate course work can be applied towards the undergraduate degree requirements.

Western Carolina: <http://www.wcu.edu/6589.asp> Up to 12 credit hours of these upper level courses can be transferred toward the 30 credit hour requirements of the M.S. program

Claremont Graduate University <http://www.cgu.edu/pages/623.asp> variable credits double counted depending on program – 16 credits is the maximum

Duke University <http://meng.pratt.duke.edu/4plus1> four departmental graduate courses taken during the senior year can toward the MEng degree.

Tulane <http://tulane.edu/sse/psyc/academics/graduate/masters-program.cfm> Up to 6 graduate credit hours may count toward the bachelors and the M.S. degree

University of Delaware http://www.ce.udel.edu/current/graduate_program/4plus1.pdf Up to 6 credits of graduate course work (600 level and above) taken while a senior, may be “dual-counted” towards the Bachelor’s and the Master’s degrees.

Purdue https://ag.purdue.edu/foodsci/Pages/4plus1_program.aspx

Arizona State University <http://sbhse.engineering.asu.edu/academics/accelerated-degree/> It allows students to SHARE up to nine credit hours between their bachelor’s and master’s degrees, and RESERVE up to nine hours to use later in their graduate program.

University of Florida <http://www.admissions.ufl.edu/ugrad/combdegree.html> Students who meet the combined-degree application requirements can enroll in 12 to 21 credits of approved graduate courses (depending on the major) during their junior and senior years. These credits will satisfy undergraduate degree requirements and, if admitted to graduate school at UF, they also will satisfy graduate degree requirements if the courses are completed with grades of B or better.

San Diego State University http://www.engineering.sdsu.edu/mechanical/msme_4plus1.aspx students who plan to specialize in Design and Manufacturing can take as double counted classes two of the following courses

Washington University at St Louis <http://engineering.wustl.edu/DualDegreeProgram.aspx>

Stanford University <http://gap.stanford.edu/4-2.html> no units may be double-counted

Rensselaer Polytech <http://srfs.rpi.edu/update.do?artcenterkey=291> credits applied to satisfying requirements of the undergraduate degree cannot be used to satisfy the requirements for the master's degree.

Vanderbilt University <http://as.vanderbilt.edu/academics/specialdegreeprograms/4plus1/> There is no double-counting of credits

University of Massachusetts Amherst

http://www.umass.edu/sphhs/public_health/academics/undergraduate/4plus1DegreeProgram.html

Florida State University <http://www.gradstudies.fsu.edu/Academics-Research/Degree-Programs/Combined-Bachelors-Masters-Degree-Programs> double counting of up to 9 credits allowed in some programs.

Yale University: <http://yalecollege.yale.edu/content/combined-bachelors-and-masters-degree-programs-professional-schools>

SUNY Albany http://www.albany.edu/undergraduate_bulletin/joint_degree.html Combined programs require a minimum of 138 credits and up to 12 graduate credits may be applied simultaneously to the requirements for the baccalaureate.

University of Maryland http://www.provost.umd.edu/PCC_DOCUMENTS/DesignX_Combined.htm Normally no more than nine credits of graduate courses applied to the bachelor's degree may be counted also for graduate credit in an individual student program.

Northwestern University <http://www.tgs.northwestern.edu/academics/academic-programs/degree-programs/bachelors-masters/index.html>

Miami University of Ohio <http://www.units.muohio.edu/reg/bulletins/GeneralBulletin2012-2013/combined-bachelors-and-masters-degree-program.htm> Departments or programs with a combined degree may allow students to double-count up to 9 hours of graduate course work toward their undergraduate degree.

Rutgers: <http://soe.rutgers.edu/oaa/BS-Masters-programs>

Clemson: <http://www.clemson.edu/ces/math/combined-bachelors-masters-program.html>

Appendix 2. Feedback from Student Ambassadors in CAS, COEng, PHHS to the Co-Degree Proposal

CAS

- For programs that require a thesis (honors/BRR) would like to see a combined type thesis.
- Curious as to how reserving credits for graduate school and this would work together
- Curious as to how this would work with early entrance into professional programs like vet school and pharmacy programs that currently allow student to apply during their 3rd year
- Would this impact their full-time status as undergrads for financial aid and scholarship

COE

- Would like to see a combined honors/master's thesis similar to the "opportunity plus" program we had a few years ago in engineering
- They thought 3 years might be a bit short for a pilot...recommended 4
- They were curious about criteria for which 9 credits could be utilized...how would this be determined
- Some of our majors require 192 credits....so Venn diagram would need to be adjusted slightly
- Would any new master's programs come from this...specific request...biomedical
- How would admission be determined? Objective or subjective?

Overall students were very positive towards this concept and receptive to it.

PHHS

Would this co-degree be of interest to you and other students in your college if it were offered in your area of study?

What questions do you have about how the co-degree program would work?

- Yes this would be of interest to students in the dietetics option. Especially since many grad students are already in our 400 level classes, taking them as 500.
- I would love to see a co-degree option in our college. I believe with the option of fitness and nutrition, adding on additional experience or having the ability to explore the various options within our degree would help students hone in on a better understanding of what and why they are in this particular field.
- The co-degree would not be of interest to me and other students of my option in particular (PTAH). However, that is only because the pre-med, pre-PA, pre-nursing, pre-therapy kids don't have the opportunity of completing their desired graduate degrees here at OSU. I think that it is definitely intriguing to the others though! If OSU offered a PT grad program, I would love the opportunity for a co-degree program.
- This degree would be of interest to public health students in the HPHB track because many of our upper-division courses have equivalents in the 500-range. The ability to work on a co-degree would allow us to do similar coursework while allowing those interested in pursuing MPH to begin acquiring credits.
- I have talked to a number of students about the co-degree possibility, most of which were extremely interested. They were excited that they could apply and begin their co-degree while in undergrad. That aspect was very appealing. A few asked me about requirements. Would it be like a regular master's program admissions or would it be a set of requirements that, if met, would guarantee admission. Other than that the response was very positive regarding the program.
- First, I think that it is a great concept. However, I don't know that HDFS is the best degree to have this option in. I know few students who are seeking graduate degrees, and the only HDFS graduate degree that is offered here at OSU is a PhD program, and not a terminal Master's. However, I know a lot of child development students are also double degree in education students, so if they had the option of doing the Master's in Education, that could be great. So I guess my first question would be: would this only be offered for existing OSU Master's programs? Would students be able to choose any Master's to obtain, or would it have to be in the same career path? My second question is: What is the application/admittance process? What would the Junior level qualifications be? Since Juniors would not have the same number of upper division courses on their transcripts to judge by, I would be concerned that the requirements for them would have to be more 'lax', and might prevent high quality students from other schools from being able to attend the programs.

- I am having a tough time of seeing how this would directly benefit someone. If I am going to take the grad-level of say biomechanics during my undergrad, won't I still need my undergrad level biomechanics as a pre-req for that grad-level course? I don't really have any questions beyond that.
- Would those graduate credits be transferrable to institutions outside of OSU?
- I believe many students would be interesting in this type of program in the College of Public Health and Human Sciences. One thing that I believe would need to be taken into consideration is the amount of students from our college that go on to pursue degrees from specialized school, such as the allied health professions.
- One question I would have would be what master's programs would be available for this type of program? What would be the projected time of master's degree completion?
- Yes, I would be interested in the co-degree option if it were available for my degree.
- What master's programs would it apply to? Would only juniors be able to apply and what would determine junior status?
- Would this co-degree be of interest to you and other students in your college if it were offered in your area of study?
- I think the co-degree program would be of interest to other students in the college, also if this had been offered when I started I would have loved to take advantage of the opportunity
- Would the tuition cost all be for undergrad classes or be more to taking graduate level courses?
- Would classes for this program only be in the grad programs we already have or would new ones be added?
- Would any student in the college be able to enroll in this co-degree program or would there be an application process?

Full Category I and Abbreviated Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

For Instructions, see <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/category-1-proposals> Please attach Executive Summary, Proposal, Library Evaluation (performed by the Library), Accessibility Form, Letters of Support (External to OSU), Liaison Correspondence (Internal to OSU), Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Abbreviated Category I Proposal

Proposal to Rename an Existing Master of Science (MS) in Counseling Program to
Master of Counseling (MCoun)

**Oregon State University
College of Education**

April 2013

Proposed Effective Term: Fall Term 2013 (201401)

CPS Tracking # 86455

Executive Summary

National accreditation standards, federal law, and state law all set the entry-level degree for professional counselors as the master's degree. When the present degree type (MS without thesis) was approved in 1985, a professional counseling degree did not exist in American higher education. Today, the Master of Counseling degree is well known. In order to make the purpose of the OSU's entry-level Counseling degree more transparent to prospective students, the OSU community, and employers, the faculty of the Counseling Academic Unit (CAU) in the College of Education seeks to rename existing Master of Science (MS) in Counseling Program to Master of Counseling (MCoun). The title and requirements of the major (i.e., Counseling) and the title and requirements of the areas of concentration (i.e., School Counseling and Clinical Mental Health Counseling) *will remain exactly the same*. The current MS in Counseling is approved as a non-thesis degree program.

Abbreviated Category I Proposal

Executive Summary

National accreditation standards, federal law, and state law all set the entry-level degree for professional counselors as the master's degree. When the present degree type (MS without thesis) was approved in 1985, a professional counseling degree did not exist in American higher education. Today, the Master of Counseling degree is well known. In order to make the purpose of the OSU's entry-level Counseling degree more transparent to prospective students, the OSU community, and employers, the faculty of the Counseling Academic Unit (CAU) in the College of Education seeks to rename existing Master of Science (MS) in Counseling Program to Master of Counseling (MCoun). The title and requirements of the major (i.e., Counseling) and the title and requirements of the areas of concentration (i.e., School Counseling and Clinical Mental Health Counseling) *will remain exactly the same*. The current MS in Counseling is approved as a non-thesis degree program.

Abbreviated Category I Proposal

Proposal to Rename an Existing Master of Science (MS) in Counseling Program to
Master of Counseling (MCoun)

**Oregon State University
College of Education**

April 2013

Proposed Effective Term: Fall Term 2013 (201401)

CPS Tracking # 86455

A. Title of the proposed instructional, research, or public service unit. For name changes, give both the current and proposed names.

1.A. Current Name: Master of Science (M.S.) in Counseling

1.B Proposed Name: Master of Counseling (M.Coun.)

The title and requirements of the major (i.e., Counseling) and the title and requirements of the areas of concentration (i.e., School Counseling and Clinical Mental Health Counseling) *will remain exactly the same*. The current MS in Counseling is approved as a non-thesis degree program.

2. Describe the reason(s) for the proposed change.

This proposed change type is made in order to make the purpose of the degree (i.e., professional preparation in counseling) more transparent to prospective students, the OSU community, and employers.

3. Background.

3.A Overview:

Oregon State University (OSU) has provided counselor training since 1916. This date was only five years after Harvard University offered the first counseling course in the nation. OSU awarded its first counseling master's degree in 1929. The Master of Science (MS) in Counseling program was extended to OSU Distance and Continuing Education in 1976 and OSU-Cascades in 2005. At present, the Counseling Academic Unit (CAU) of the College of Education offers a MS with a Major in Counseling (with areas of concentration in School Counseling [75 credits] and Clinical Mental Health Counseling [90 credits]). These total credit requirements for each area of concentration are set by the OARs and Counseling's national program accreditation body. See [Appendix XI](#) for the Location of Areas of Concentration Table.

3.B Higher Education Board Mandates:

In 1932, the Oregon State Board of Higher Education exclusively charged OSU with the mission to provide counselor training access to the citizens of the State. In 1993, Oregon State Board of Higher Education reasserted its charge to OSU to provide access to counselor training statewide and made a special \$261,000 budget transfer to support the OSU's Counseling graduate program despite the era's severe financial crisis.

3.C Distance Education:

The College of Education first offered a graduate-level for credit course in counseling at an off-campus site in 1944. This course was offered at OSU's Portland Center under the auspices of the OSU Distance and Continuing Education. The CAU first offered a full master's degree in Counseling at an off-campus site in 1976. Since then, the CAU has continuously offered a MS with a Major in Counseling. Over time, the location of the face-to-face instructional component has included Astoria, Bend, Salem, and LaGrande. Since the beginning, CAU's programming has utilized an off-campus, hybrid instructional format. At first this hybrid instructional format involved face-to-face instruction in Portland with asynchronous instruction via mail. The CAU's present hybrid approach (offered via Extended Campus) has a three-part format that includes (1) synchronous web instruction via Adobe Connect, (2) asynchronous web instruction via Blackboard, and (3) face-to-face instruction in Salem, OR.

3.D Current in-force Category I.

The current in-force Category I proposal was approved by the Oregon State Board of Higher Education on 7-31-1985. Over the past 28 years there have been four revisions of the Category I. Three of these revisions were made as the result of changes in national accreditation standards and the OARs. The fourth change was the result of the reorganization of the College of Education. The following revisions have gone through OSU's curricular change processes and have been implemented:

1. Increase the credit hour requirements from 72 to 75 for School Counseling and from 72 to 90 for Clinical Mental Health Counseling.
2. Convert 15 credits of electives into 5 required courses (each of 3 credits).
3. Change the title of the Community Counseling area of concentration to Clinical Mental Health Counseling.
4. Change the course prefix from COUN to TCE (there were some course number changes as well to accommodate the merging EDUC and COUN).

Except for degree type change (i.e., MS to MCoun), this abbreviated Category I proposal does not make any changes to (a) the present in-force Full Category I, or (b) the approved revisions to the present in-force Full Category I.

3.E Program Accreditation:

The areas of concentration of the MS degree in Counseling program have held the prestigious CACREP national accreditation since 1986. Only 20% of counselor education programs in the country possess CACREP accreditation. At the last on-site accreditation

visit the CAU passed all 186 CACREP standards—an almost unheard of occurrence. Both the National Council for Accreditation of Teacher Education and Oregon's Teacher Standards and Practices Commission has approved the CAU to train school counselors. Oregon's Board of Licensed Professional Counselors and Therapists has approved the CAU to train Clinical Mental Health Counselors.

3.F CIP Information for the Degree

See [Appendix X](#) for CIP information on the CIP degree.

B. Location within the institution's organizational structure. Include "before" and "after" organizational charts (show reporting lines all the way up to the Provost).

Since this request is solely for a change of degree type no organizational changes will occur. Thus, before and after are exactly the same. See [Appendix VIII](#) for the before and after organizational charts.

C. Objectives, functions (e.g., instruction, research, public service), and activities of the proposed unit.

1.C. Explain how the program or unit's current objectives, functions, and/or activities will be changed. Where applicable, address issues such as course offerings, program requirements, admission requirements, student learning outcomes and experiences, and advising structure and availability. How will the reorganized program be stronger than the existing program?

Not applicable—degree type change only. **The major core course requirements, major type, area of concentration requirements, and concentration titles all remain *exactly* the same.** See [Appendix V](#) for current major and area of concentration requirements. The two current areas of concentrations are non-transcriptable. The CAU faculty is in Category II proposal process to convert the current non-transcriptable areas of concentration into transcriptable graduate options.

2.C. Explain how outcomes in the newly organized program or unit will be assessed.

Assessment processes remain *exactly* the same. For a narrative of the CAU's assessment process for the master's degree see [Appendix VI](#). For a table of assessment timing see [Appendix IX](#). For the student GLOs/CACREP LOs see: [Appendix VII](#).

D. Resources needed, if any: personnel, FTE academic, FTE classified, facilities and equipment.

1.D. Identify the staffing and resource needs for the proposed program or unit. Note any impact on the budgets of affected programs or units. Provide an analysis of how the resulting programs or units will be adequately staffed and funded.

Not applicable—degree type change only.

2.D. Explain the extent to which affected faculty and personnel support this change.

The faculty of the Counseling Academic Unit voted *unanimously* for this change in degree type at the 1-22-2013 joint campus faculty meeting.

E. Funding sources: state sources (institutional funds - state general fund, tuition and fees, indirect cost recoveries), federal funds, other funds as specified.

1.E. Identify the revenue and funding sources for the proposed program or unit (i.e., federal, state, other funding sources).

Not applicable—degree type change only.

2.E. If new resources will be required (e.g., for new faculty positions, graduate research/teaching assistants, facilities, equipment), explain where these resources will be coming from. Specify whether internal reallocation, college, institution, federal, state, private, or other funding sources. [Note: Deans/chairs/heads/directors of units committed to providing additional resources will be required to sign the proposal.]

Not applicable—degree type change only.

3.E. Provide an estimated annual budget for the proposed program or unit.

See [Appendix II](#).

F. Relationship of the proposed unit to the institutional mission.

1.F. How will the proposed program or unit support OSU's mission and goals?

The Counseling Academic Unit offers a master's level degree under a 1993 direct mandate from the Oregon State Board of Higher Education to maintain access to a counselor education program. The CAU program is funded by (1) the 1993 budget transfer from the Oregon State Board of Higher Education, (2) Education and General Funds allocated by the Oregon Legislature, and (3) tuition revenue.

2.F. Describe potential positive and negative impact of the proposed change on the program(s) or unit(s) involved. Identify other OSU programs or units which may be affected, and describe the potential positive and negative impact on their mission and activities.

2.F.1. Positive impact: Changing to a professional degree type creates greater transparency concerning the purpose of OSU's master's degree with a major in Counseling. Prospective students, the OSU community, and employers all benefit from a directly relatable degree type (e.g., Master of Counseling).

2.F.2. Negative impact: None.

G. Long-range goals and plans for the unit (including a statement as to anticipated funding sources for any projected growth in funding needs).

At present, there exists no addiction counseling master's program in Oregon. As such, the CAU faculty has a long-range plan to seek CACREP approval and Category II approval to offer an addiction counseling graduate option in the MCoun program. This graduate option would only be offered through Extended Campus and thus be self-supporting and not impinge upon current state funding for OSU.

H. Relationship of the proposed unit to programs at other institutions in the state.

1.H. What is the current relationship of the proposed program or unit to OUS and other higher education institutions in the state? Describe how this relationship might be altered based on the proposed change.

Both Portland State University and OSU offer a master's degree with an area of concentration in school counseling. Portland State University, Southern Oregon University, and OSU offer a master's area of concentration in clinical mental health counseling. These areas of concentration possess CACREP accreditation. These areas of concentration and related majors and degrees operate independently from each other. **Thus, a degree type change at OSU will not impact these other OUS programs in any manner.**

2.H. Describe how the proposed change will affect other constituencies outside of OUS.

George Fox (CACREP accredited), Lewis & Clark (CACREP accredited), Northwest Christian, Corban, and Pacific offer a master's area of concentration in clinical mental health counseling. Lewis & Clark and Northwest Christian offer a master's area of concentration in school counseling. These areas of concentration and related majors and degrees operate independently from each other and OSU. Thus, a degree type change at OSU will not impact these non-OUS programs in any manner.

I. If the program is professionally accredited, identify the accrediting body and discuss how the proposed change may affect accreditation.

Both areas of concentration hold national program accreditation from the Council for Accreditation of Counseling and related Educational Programs (CACREP) through 03/31/2016. CACREP is an independent agency recognized by the Council for Higher Education Accreditation to accredit master's degree programs in: (a) addiction counseling, (b) career counseling, (c) clinical mental health counseling, (d) marriage, couple, and family counseling, (e) school counseling, and (f) student affairs and college counseling.

For the school counseling area of concentration

see: http://www.cacrep.org/detail/directory.cfm?program_id=333

For the clinical mental health counseling area of concentration see:

http://www.cacrep.org/detail/directory.cfm?program_id=332

CACREP does not specify required master's degree types and as such a wide variety of master's degree types exists in the U.S. The geographically closest MCoun program is at Idaho State University (also CACREP accredited): <http://www.isu.edu/hpcouns/degreeinfo.shtml>

Notes:

1. The total credit requirements for each area of concentration (School counseling=75; Clinical Mental Health Counseling=90) are set by the OARs and Counseling's national program accreditation body.

Appendix VI: CAU's Assessment Narrative

CAU's program evaluation process assesses the following three components within the context of aligning the mission and goals of the CAU to those of the (a) College of Education, the Graduate School, the University, and the specific mandate to the CAU from the Oregon State Board of Higher Education.

These components include assessing and summarizing the following:

1. Expenditures (i.e., personnel and overhead) and Revenue (E&G, OSBHE, grants, Extended Campus).
2. Productivity. Specifically: (a) degree completion, (b) time to degree completion, (c) retention rate, (d) maintain CACREP accreditation, (e) maintain NCATE accreditation, (f) maintain TSPC accreditation and (g) faculty and student publications.
3. Program outcomes. Specifically: (a) alumni satisfaction, (b) alumni employment, and (c) employer of alumni satisfaction.
4. Learning outcomes. Specifically: (a) GLOs/CACREP LOs-Core Curriculum, (b) GLOs/CACREP LOs-SC area of Concentration, (c) GLOs/CACREP LOs-CMHC area of concentration, (d) TSPC-mandated School Counseling Testing, and (e) NBCC results.

The subcomponents enumerated above are evaluated on either an annual or biennial basis. See [Appendix IX](#) for a table of assessment timing.

Appendix VII: Current Approved GLO Assessment Form

For the Current Approved GLO Assessment form

see: <https://www.dropbox.com/s/rk3xpqvzaxnv6n0/Counseling%20MS%20Annual%20GLO%20Developmental%20Assessment%2012-11-11.pdf>

Appendix VIII: Before and After Organizational Charts

n.b., Because this proposal involves a degree rename only, the before and after organizational charts are the same.

Before and After Organizational Chart:

Level	Officer Responsible at Level	Name		
University	Provost	Oregon State University		
College	Dean	College of Education		
Unit	Unit Lead	Counseling Academic Unit		
Areas of Concentration	AoC Lead	School Counseling ¹	CMHC ²	Addiction Counseling ³

Chart Notes:

1. The school counseling area of concentration has appeared in the *OSU General Catalog* since 1932.
2. The CMHC area of concentration has appeared in the *OSU General Catalog* since 1977.
3. In terms of long-range plans, the Corvallis faculty will seek both CACREP and Category II approval to offer an addiction counseling graduate option.

Appendix X: CIP # 13.1101

CIP #: 13.1101

Title: Counselor Education/School Counseling and Guidance Services.

Definition: A program that prepares individuals to apply the theory and principles of guidance and counseling to the provision of support for the personal, social, educational, and vocational development of students, and the organizing of guidance services within elementary, middle and secondary educational institutions. Includes instruction in legal and professional requirements, therapeutic counselor intervention, vocational counseling, and related sociological and psychological foundations.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

Appendix XI: Location of Areas of Concentration

Area of Concentration	Previous Area of Concentration Titles	First Year in OSU Catalog	Offered through Extended Campus *	Offered through Cascades
School Counseling	Guidance	1932	X	X
Clinical Mental Health Counseling	Agency Counseling, Community Counseling	1977		X

* The Corvallis faculty has had OUS permission to offer through Distance and Continuing Education (and its successor units) graduate courses since 1944 and a full master's degree program since 1976.

<deborah.rubel@oregonstate.edu> wrote:

Dear Dr. Krause,

I hope that this email finds that you are well and that the Spring Quarter has gotten off to a good start. The reason I am writing is that the OSU Graduate Dean has asked all graduate programs to draw a clearer distinction between research and professional degrees. At present the OSU counseling degree is a Master of Science (MS) **without thesis**. We have submitted a Category I proposal to the OUS system to change the nomenclature of that degree to a Master of Counseling (M. Coun). We are not making any changes to the Major (Counseling) or the Major Concentrations (School Counseling and Mental Health Counseling). Curriculum is unchanged and is in line with CACREP, OBLPC and TSPC standards.

As part of this process we need letters of support (**emails are fine**) from other counseling programs in the OUS system. If you could send an email back to me with a brief note stating your support for this change, that would be very helpful. I can't think of any impact this nomenclature change would have on your program other than if your Graduate Dean ever makes such a request there will be precedent in the OUS system.

Thank you for your time and consideration. Please don't hesitate to contact me if I may ever be of service.

Sincerely,

Subject: Re: Request for Letter of Support for Oregon State University shift from MS Counseling to M.Coun

Deborah,

There have been some concerns raised about this by our faculty and our Dean, especially the precedent that this may set for the counseling field and OUS. We are discussing it, and may also request more information.

I'm sorry I can't provide a more detailed response yet. I will be in touch as this unfolds on our end.
best,

Rick

FW: Request for Letter of Support for Oregon State University shift from MS Counseling to M.Coun

Rubel, Deborah <deborah.rubel@oregonstate.edu>
To: Patrick Johnson <johnsonp@pdx.edu>

Tue, Apr 16, 2013 at 4:40 PM

Hi Rick –

Totally understandable. I want to clarify that we are only requesting this for the OSU program. The request is in response to internal – OSU Graduate School shifts. We have no requests or expectations for change at other OUS institutions as part of the abbreviated CAT I.

Please let me know if you need more information.

On a side note: My own degree is an M. Coun (90 quarter hours and 1000 hour mental health counseling internship – CACREP approved) from Idaho State - I had two cohort-mates who migrated to Oregon at the same time I did – one a mental health counselor and the other a school counselor and both were easily able to get OBLPC and TSPC licensure respectively.

To Whom It May Concern:

I am writing in support of the Oregon State University MS in Counseling program's proposed transition to the degree of M.Coun or Master's of Counseling. I received my Master's of Counseling (M.Coun) degree from Idaho State University's CACREP – accredited program shortly before moving to Oregon in August of 2000. I was able to obtain both a School Counseling license through the Teachers Standards and Practices Commission (TSPC) without any problem. Additionally, I was also able to obtain my LPC (Licensed Professional Counselor) through the Oregon Board of Licensed Professional Counselors and Therapists (OBLPCT) without any additional coursework. I also hold the professional certifications of Nationally Certified Counselor and Nationally Certified School Counselor. I do not feel that the degree of M.Coun has held me back professionally in any way.

Sincerely,

Ayme A. Hooper, NCC, NCSC, LPC

From: Barbara Slott [slowpie@hotmail.com]
Sent: Saturday, May 04, 2013 12:25 PM
To: Rubel, Deborah
Subject: M. Coun.

"To whom it may concern,

I am writing in support of the Oregon State University MS in Counseling program's proposed transition to the degree of M.Coun or Master's of Counseling. I received my Master's of Counseling (M.Coun) degree from Idaho State University's CACREP-accredited program shortly before moving to Oregon in 2002. I was able to obtain a professional counselor license in the State of Oregon without additional coursework. Additionally, with further experience, I became a licensed addictions counselor. I have not found the M.Coun degree to be an impediment to employment in this state.

Respectfully,

Barbara J. Slott, LPC Retired

ISU-Meridian Health Science Center • 1311 E. Central Drive • Meridian, Idaho 83642

May 6, 2013

Dear Reviewers,

Greetings from Idaho. I am writing to share our experiences with our degree designation of Master of Counseling (M.COUN). Within the Department of Counseling at Idaho State University, we offer four master's programs that are accredited by the Council for the Accreditation of Counseling and Related Educational Programs (CACREP). The principle mission of the Department of Counseling is to prepare quality counselors for various settings in Idaho and the nation. More specifically, we seek to prepare quality School Counselors for public schools in K-12 settings, Marital, Couple, and Family Counselors and Clinical Mental Health Counselors for community agencies and other mental health settings, and Student Affairs Counselors for working in college settings such as advising, residence halls, and career centers. All of our students, regardless of major, graduate with a Master of Counseling (M.COUN) degree.

With the M.COUN degree designation, all of our students are licensable in their disciplines within the State of Idaho and also meet the educational requirements dictated by licensure boards in other states. For those completing the school counseling program, they are additionally eligible for school counseling credentialing in the State of Idaho and across the nation. Our graduates are just as employable and able to be credentialed as any other graduates from CACREP-accredited programs. From my experience, having the M.COUN degree positions our graduates to be even more employable in their preferred sites because the degree itself showcases their professional identities and values.

Please let me know if I can provide any additional information about the Master of Counseling degree at Idaho State University.

Sincerely,

Nicole R. Hill, Ph.D., LPC
Department Chair and Professor

Deborah

We met as a faculty today to discuss your proposed change to M.COUN. There was much discussion. The outcome was that our faculty would like to be able to support you as colleagues, but we have concerns about the precedence that this might set within the OUS and in our field. We do not want the degree marginalized in any way. Thus, we are hesitant to provide our support to your proposal.

Please let us know if there is some other way we can support you. Also, feel free to contact me if you would like to chat about this.

Sincerely,

Liaison Letter Request for Curricular Proposal #864551 message

Cass Dykeman <cass.dykeman@gmail.com>

Thu, May 2, 2013 at 4:31 PM

To: Marla.Hacker@oregonstate.edu

Cc: CF-RubelDeborah <deborah.rubel@oregonstate.edu>

Hi Marla,

I hope this email finds that you are well. In a few minutes you will receive through OSU's curricular system a request for a liaison letter for Curricular Proposal #86455. On the behalf of the whole counseling faculty, Debbie Rubel and I have been shepherding this proposal through the OSU curricular system. The purpose of the proposal is to rename the Master of Science (MS) in Counseling Program to a Master of Counseling (MCoun). No changes to the requirements of the major or the areas of concentration are being made.

The counseling faculty took up the curricular change task at the request of the Dean of the Graduate School Brenda McComb. Following national trends, she wants to see the MS and MA degrees reserved to research degree programs that involves a thesis. The counseling degree program is a professional preparation program similar to a MBA.

Debbie Rubel holds an MCoun degree from a CACREP accredited program. She also reports that classmates from her program have had no problem with licensure in Oregon.

A short response similar to the one Dean Flick made would more than suffice: *Lawrence Flick (College Approver - Education) March 22, 2013 8:12am*

This change in nomenclature is consistent with the goals of the Counseling program and the College.

I have attached the proposal narrative. In that narrative you will see a discussion about a Category II proposal to convert our current non-transcriptable areas of concentration (i.e., CMHC and School Counseling) into transcriptable graduate options. The idea to make this conversion came from the Graduate Council and their reasoning made a lot of sense. Right now we have no way to easily track enrollment in SC or CMHC. With graduate options, specific identifying codes come into effect. For students, transcriptable graduate options makes their program more transparent to licensure agencies and employers. A liaison request for this Category II should be coming your way soon.

If you have any questions feel free to email Debbie or myself.

Sincerely,

Cass :)

Approved by [Walter Loveland](#), May 15, 2013 7:39pm

14. Review - Graduate Council Chair

Pending Review

Evaluation of the Department of Environmental and Molecular Toxicology Oregon State University

1. Overall Recommendations

The overall recommendation of the Review Panel is to maintain the research and Ph.D. graduate programs at their current level. As the certainty of extramural funding is dependent on outside forces such as the overall economy and federal allocations to NIH and NSF, the Department will need to make decisions on expansion and contraction of these programs based on their ability to support the educational and research missions of the department, as well as the overall mission of the School of Agriculture.

The Department may wish to consider expansion of their Masters' program offerings to include the development of instructional materials for online teaching through e-campus. This may better align the goals of the department with the teaching mission of the School of Agriculture.

2. Summary of Findings and Recommendations

The primary mission of the Department of Environmental and Molecular Toxicology (EMT) is to conduct high quality research in environmental toxicology and to train graduate students for careers in toxicology. The Department has 17 tenure/tenure track faculty, 9 adjunct, 3 research faculty, 21 Ph.D. Toxicology graduate students and 3 Masters' degree students. The goals of the department are well aligned with the mission of the College of Agricultural Sciences, providing strong training of graduate students, and carrying out nationally and internationally recognized research.

The Department has an extremely strong graduate program. The credentials of the student applicant pool are excellent, and the department is able to select the strongest of those students for acceptance. The Department has a policy of trying to provide tuition remission and stipends for all of their graduate students. This is made possible by the presence of an NIEHS training grant, an NIEHS-sponsored Superfund grant, and research assistantships funded by the numerous individual extramural grants of the faculty. Although this is a strong program, the faculty and staff are aware that this program relies on extramural funding. Consequently, the program must be constantly monitored to ensure that funding will remain available for these students. The review committee recommends that additional support for graduate training be provided using State resources to provide additional stability to this excellent program.

Overall, the Graduate curriculum for the department is strong, based on discussions with the students, and their ability to obtain positions post-graduation. There is sufficient flexibility in the curriculum to train students with interests in environmental toxicology as well as those interested in molecular toxicology.

The faculty are an essential asset to the EMT, and this critical mass of research expertise is necessary for the continuation of the effectiveness of the department. Faculty expressed a concern over the difficulty in replacement of faculty who have left the institution based on a new formula for hiring at the School level. The review panel recommends that the personnel needs of this department be seriously considered, particularly in the need to replace critical faculty. The result could be weakening of the department to the point where the core program grants (NIEHS Center grant, NIEHS training grant and Superfund grant) cannot be maintained.

Two main issues were brought out by the self-study and program review, including 1) physical separation of faculty and graduate students due to office and lab locations, and 2) limitations on overall square footage of space. The EMT faculty and their offices and research laboratories are located in 4 separate buildings on the OSU main campus and 2 research facilities east of

Corvallis. The physical separation of buildings has the potential to inhibit regular communication and collaboration among faculty and graduate students. Additionally, the self study provides evidence that laboratory and office space is limited, about 20% below the standard OSU space allotment. The space issue is most problematic for graduate students and to a lesser extent, faculty office space. Relocation of faculty to fewer buildings, to the extent possible, and providing additional research and office space, would further strengthen both research collaborations and the educational programs.

EMT receives support for its research, extension and training program from four main sources. The majority of the funds for EMT/Toxicology come from the State of Oregon, through the budget provided to the OSU College of Agricultural Sciences (CAS). Although the CAS has been highly supportive of EMT and the Toxicology Program, even during the current difficult times for the CAS statewide budget, EMT does not receive any base funding to support graduate education activities (fellowships, teaching assistantships, etc.) in excess of the faculty and support staff salaries.

The students receive excellent training in toxicology through the EMT graduate program with most students receiving their degrees within 5 years. The student applicant pool is extremely competitive, and the students who are accepted into the program have shown an ability to excel. Their performance can be seen not only in the awards and fellowships that they have received, but also their ability to obtain positions after graduation.

As mentioned above, the EMT faculty are an essential element in the success of the department. Most of the Faculty are nationally recognized research scientists and several have stellar international reputations. The EMT Faculty has an impressive record of publication productivity, with a high average H index, including several over 30. A primary attraction for toxicology students to study at OSU is the quality of the Faculty, particularly in the area of environmental chemistry. Studying with a world class faculty member, as well as the opportunity to interact with others at the same level of scholarship is a privilege that is recognized and appreciated by the students.

Generally speaking, the students exhibited a high degree of satisfaction with their training programs. In particular, they noted that quality and diversity of their research options as a strength. Additionally, they enjoyed their access to the faculty, the high quality of most of the facilities, library resources, and office space as positive aspects of their training environment. The students did have several recommendations to improve their educational experience including: (a) improving mentoring of 1st year students, particularly prior to their selection of a research mentor, (b) development of a substitute for the 400/500 level Biochemistry curriculum to one that is more focused on graduate level training, (c) formalizing student seminars on their research and improving faculty attendance at these seminar to provide feedback to the students, and (d) providing additional opportunities for graduate students to teach.

In conclusion, the Review Panel determined that the EMT possesses an excellent research and educational environment. Research excellence can be seen in the reputations of the faculty, their ability to publish, and their success in obtaining extramural funding. The Department also provides a strong educational experience for graduate students. The graduate student applicant pool is strong, and acceptance is selective. The students excel in this environment and graduate with the training necessary for their future success.

3. Detailed Findings

Introduction

- *Objectives of the review*

Evaluate the Research Programs, including the quality of independent investigator – initiated research programs, as well as the larger program grants.

Evaluate the educational opportunities in Environmental and Molecular Toxicology, the strength of the curriculum and the competitiveness of the matriculating students.

- *Participants*

Brenda McComb, Ph.D.
Dean OSU Graduate School

Anne Fairbrother, D.V.M., Ph.D.
Principal Scientist & Office Director
Eco Sciences
Exponent

Stacy Semevolos, D.V.M.
Associate Professor of Clinical Sciences
College of Veterinary Medicine
Oregon State University
OSU Graduate Council Representative

Wayne L. Backes, Ph.D.
Associate Dean for Research
Professor of Pharmacology
Louisiana State University Health Sciences Center – New Orleans

- *Order of Events*

The review panel met on the evening of March 20th, 2013 to discuss the goals and order of the review. The review panel met throughout the day of March 21st, 2013 and brief descriptions on various aspects of the department were presented. The meetings included:

Meeting with Craig Marcus (Department Head) and Andrew Buermeyer (Chair, Graduate Program Committee) – 1 hr

Department Support Staff, Susan Atkisson (EMT Office Manager) and Mary Mucia, (EMT Graduate Program Administrator) – 30 min

College Environment and Program Support – Larry Curtis (Associate Dean of the College of Agricultural Sciences and Associate Director of the Agricultural Experiment Station) – 30 min

Graduate Program Committee: Andrew Buermeyer (chair); Admissions: Robert Tanguay, Jennifer Field, Rod Dashwood; and Curriculum Committee: Kim Anderson, Nancy Kerkvliet, and Dave Stone – 45 min

Meeting with Graduate Students – 90 min

Meeting with Graduate Program Faculty – 45 min

Facilities Tour:

ALS – Kolluri Lab, Anderson Lab, EHSC Biomolecular Mass Spectrometry Core, EHSC Cell Imaging and Analysis Core – 45 min

SARL – Sinnhuber Aquatic Research Laboratory, Tanguay & Johnson – 30 min

Meeting with Craig Marcus and Andrew Buermeyer for final questions and exit interview – 30 min

Executive Session – 1 hr

- *Organization of the Report*

The report is organized according to the recommended outline and generally follows the same format as seen in the EMT Department self-study.

Inputs

- *Background*

Within the Department of Environmental and Molecular Toxicology (EMT), there are 17 tenure/tenure track faculty (16 FTE) and 4 fixed-term research professional faculty (3 FTE). The Department identifies nine adjunct, affiliate and courtesy faculty who regularly contribute to the graduate program (0 FTE). The Department receives 1.07 FTE through E/G funds from the college, with an additional 9.23 FTE through the experiment station and 1.61 through extension services. The remaining FTE are funded through extramural grant and contract funding.

The degree programs within EMT include a PhD in Toxicology (21 students), a Thesis Masters in Toxicology, a non-thesis MAg in Toxicology (3 students), and an undergraduate minor in Toxicology. Thus, the majority of the FTE are devoted to graduate education and research.

- *The fit of the mission of the program and its relationship to the mission of the academic college and University mission*

The self-study of this graduate program provides clear evidence of alignment to the mission of the College of Agricultural Sciences (CAS) and to the three Signature Areas of Distinction in Phase II of the Strategic Plan for the University: [Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress](#). The EMT faculty are nationally and internationally recognized for their outstanding research contributions and graduate programs, and as such, enhance the reputation of CAS and OSU.

One of the initiatives in Phase II of the OSU Strategic Plan is to “Raise the profile of graduate education at OSU by repositioning existing programs and introducing targeted new programs to support OSU's three signature areas, and increasing professional and graduate programs to 25 percent of all enrollments” (<http://oregonstate.edu/leadership/strategicplan/>). There is an initiative within the Department to create a new 4+1 Masters in Risk Analysis offered jointly with the Department of Agricultural Resources and Economics. This new program is supported by the Provost Initiative and will fund the addition of one FTE tenure-track faculty position. This appears to be a good strategy for the department to support the university initiative and increase the number of students within their graduate programs. The review committee did get the sense that this initiative was not fully supported by the entire faculty.

- *Quality of students and Admission selectivity*

As indicated in the Self Study, the quality of students is generally high with an average GPA typically above a 3.5. Average GRE scores were 521.5 for verbal and 647.7 for quantitative. The review committee did not have comparative data on GRE scores for other programs so cannot comment on whether these are representative of toxicology programs in general. On average, 16.5 percent of the applicants are admitted, and slightly over 15 percent of the applicants matriculate to these graduate programs.

The Department has a well-defined recruitment strategy to increase diversity in their trainees and devotes specific efforts to recruit students from under-represented groups.

- *Level of financial support of students*

All Toxicology graduate students are funded. The NIEHS Training Grant is used as a recruiting tool to allow students to perform laboratory rotations before choosing a thesis mentor and laboratory home. Departmental funds and Provosts Distinguished Fellowships have also been used to fund students. Providing support for all graduate students is a definite strength of this program although the source of funding (dependence on statewide

funding and NIEHS training grant) appears to be somewhat problematic for the future of the program as a whole.

The desire to only admit funded students does create variation in the student advising loads for the faculty. Over the past 10 years, 4 of the full professor faculty have advised an average of 15.25 students each. The remaining 10 faculty have advised an average of 2.8 students each (note that 3 relatively new Assistant Professors were excluded from this count). This variation in advisees appears to be related to the ability of the faculty to earn research grants that can be used to support the students. Those faculty without stable grant funding advise fewer students.

Recommendation: There appears to be an opportunity for faculty without stable grant funding to take a more active role in teaching. As the department develops the 4+1 Masters program, these faculty could be available to supervise self-funded and externally-funded students.

The Department does realize that dependence on grant and Statewide funding for both the faculty and PhD students is problematic. There are two opportunities that could be available to the Department to supplement the current university/college budget allocations:
