- 1) On-line course offerings through eCampus (where 80 percent of the tuition flows back to the unit). The Department should consider the feasibility of creating on-line (or hybrid format with some face-to-face meetings) courses to support the undergraduate minor. Another consideration would be to offer the TOX 360 course in an on-line format, especially given that it satisfies a baccalaureate core requirement for undergraduate majors. Once these courses are developed, they could be facilitated by either adjunct faculty or with GTA positions (thus providing additional sources of graduate student support as well as generating revenue for the department).
- 2) Consider creating an INTO OSU Graduate Pathways program that would feed international students into the 4+1 Masters program. The revenue model for this program would return approximately 64 percent of the tuition dollars paid by the students after admission to the Masters program to the department. The pathway coursework would provide language instruction, and could also include undergraduate coursework typically completed by 4th year undergraduate students who are candidates for the Masters program.

Recommendation: The Department should be thoughtful in considering new instructional opportunities that would generate revenue to the department.

- *Curriculum strength*

The goal of the EMT curriculum is to provide detailed expertise in Environmental Sciences, including (a) garnering substantive knowledge of toxicology and environmental chemistry, (b) how to analyze the scientific literature, (c) acquiring both verbal and written communication skills, (d) demonstrating ethical conduct in science, and (e) learning how to design experiments, analyze data, and prepare the results for publication. There are three graduate degrees currently being offered a non-thesis M.S. (or M. Ag.), a thesis M.S. (or M. Ag.), and a Ph.D. in Toxicology.

In the Masters Programs, students are required to take a minimum of 45 graduate credits. In the non-thesis Masters, students are required to take 3-6 hours of research (in-lieu-of-thesis). In the thesis Masters, students must 6-12 hours of thesis research. For the Ph.D. program the students are expected to take 3 years of full-time graduate work.

In each program, students are required to take 30 hrs of didactic courses (27 in the M.S. programs). Students are required to enroll in a seminar course each term, which is taught

Socratically. As described in the self-study, the course requirements are delineated and given to the students when entering the program.

This represents a strong educational program with sufficient flexibility to prepare students for careers in toxicology and environmental chemistry, which are by nature a trans-disciplinary programs.

Some EMT faculty also participate in graduate programs with other departments or colleges within OSU. These students are bound by the degree requirements of their home departments.

- *Quality of personnel and adequacy to achieve mission and goals*

According to the self-study, the faculty of the Toxicology Graduate Program currently consists of 17 tenured or tenure-track faculty. Supporting these tenure-track faculty and also contributing to Toxicology graduate training are 3 fixed-term Research-track (non-tenure track) faculty and 9 regularly contributing adjunct, affiliate and courtesy faculty (who receive no compensation from EMT). The Toxicology Graduate Program faculty has been relatively stable over the past 10 years at a steady-state of approximately 17 FTE. The few departures of faculty over the past 10 years have been replaced with new hires. Despite the relative stability of 17 FTE, faculty voiced concern about the difficulty in protecting positions and wanting to continue to have a critical mass of faculty without the fear of losing positions at the university or college level. The current faculty are a diverse group with many strong research programs that align well with the two main focus areas of 1) Molecular and Mechanistic Toxicology and 2) Environmental Chemistry and Ecotoxicology. The faculty members within this department appear to be sufficient to achieve the departmental mission and goals. There is currently a large proportion of full professors within the faculty; in the future, replacement of retiring faculty may become an issue.

The department currently employs 2 administrative support staff members which have decreased from 6 staff members 5 years ago. This is due in part to restructuring at the university level with the advent of the Business Centers. However, one administrative position was lost due to declining college and departmental funds. This reduction in support has burdened the current staff with many extra duties, resulting in a negative impact on departmental support. The Business Centers do not appear to be working in the intended fashion and many of the financial duties are being transferred back to the unit for logistical reasons. There is concern that this is impacting faculty productivity by placing increased burdens of grant and fiscal management on them.

Recommendation: More administrative support was deemed necessary to ensure adequate support of the department.

- *Level and quality of infrastructure*

Two main issues were brought out by the self-study and program review, including 1) physical separation of faculty and graduate students due to office and lab locations, and 2) limitations on overall square footage of space. The EMT faculty and their offices and research laboratories are located in 4 separate buildings on the OSU main campus and 2 research facilities east of Corvallis. The physical separation of buildings has the potential to inhibit regular communication and collaboration among faculty and graduate students. The department has a goal of one day housing all the EMT faculty and graduate students in one building, although this may be difficult to achieve in the current economic climate and limited space availability on campus. The self study provides evidence that laboratory and office space is limited, about 20% below the standard OSU space allotment. The space issue is most problematic for graduate students and to a lesser extent, faculty office space. Every graduate student is provided with an assigned desk and about 5 feet of workspace. Lack of

adequate research space may also be problematic, leading to crowding in the research lab, difficulties in acquiring new research instrumentation, and bringing more graduate trainees into the program. Significant investments have been made by the college (and an NIH G20 construction and renovation grant) in laboratory improvements during the past 10 years. The quality of research laboratories appears to be high, although there are exceptions that were brought up by faculty and self-study.

Recommendation: If possible in the future, decreasing the number of separate buildings housing faculty and graduate students is recommended. It is recognized that space is at a premium on campus and that capital improvements have been performed in off-site locations, as well as current financial constraints, may preclude the goal of having all EMT faculty and students in one building.

- *Quality of organizational support*

EMT receives support for its research, extension and training program from four main sources. The majority of the funds for EMT/Toxicology come from the State of Oregon, through the budget provided to the OSU College of Agricultural Sciences (CAS). The self-study makes it evident that CAS has been highly supportive of EMT and the Toxicology Program, even during the current difficult times for the CAS statewide budget. EMT does not receive any base funding to support graduate education activities (fellowships, teaching assistantships, etc.) in excess of the faculty and support staff salaries. EMT has been highly successful in competing for extramural grant awards, and has generated increased amounts of returned overhead funds. These funds have been utilized over the past 5 years in large part to replace declining State support, and as 'discretionary funds' devoted to support graduate instructional activities, Team Tox, and provide infrastructure support for instruction and research.

The organizational structure follows a Department Head and Vice Head leadership, with jurisdiction over faculty, departmental committees, administrative support staff, and the graduate program chair. There are several standing committees, including P&T, Graduate, Awards, Safety, and Space committees. The Safety and Space committees have yet to be assigned, according to the self-study. There has been a recent change in the structure of the Graduate committee, including the development of an executive committee and [42](#) subcommittees. This change was brought about due to a recognized weakness that the Graduate committee structure had fallen away in recent years and faculty had requested Graduate committee involvement to be more formalized. Also, there was some concern that the current Graduate chair may not be responsive enough to student inquiries. A suggestion was made that a senior grad student mentor might be helpful for first year grad students, in addition to the current system. Alternatively, having an advisor for each track (Environmental Chemistry and Ecotoxicology, Molecular and Mechanistic Toxicology) might provide better guidance for specific requirements, especially before a major professor was identified.

Recommendation: More formalized graduate committee involvement and first year graduate student mentoring is encouraged.

Productivity

- *Level and quality of student performance*

It is evident that the students in the EMT program receive excellent training. The large majority of Ph.D. students received their degrees within 4-5 years. Evidence of their performance can be found in their publication records and awards received. All of the Ph.D. students have obtained peer-reviewed publications with an average number per student of 3.4. This is an extremely important metric for the students' future, in that the quantity and quality of the publications is generally used as a major criterion in recruitment and hiring. Over 50% of Masters' degree students have at least one publication.

The quality of the students can also be seen by the number of awards. The graduate students have received numerous awards for their research, including scholarships, Graduate Fellowships, invitations for oral presentations at meetings, travel awards, as well as awards for oral and poster presentations at national and international meetings. This reflects not only on the students, but also their mentors and the strength of the program.

The graduation rate is 84%, which reflects both the high-quality pool of students entering the program and the commitment of the faculty to their training. However, there is evidence that the department adheres to high standards. About 8% of the students did not pass their qualifying exams necessary to obtain a Ph.D. Each of these students received Masters' degrees.

- *Level and quality of faculty performance*

The EMT Faculty has an impressive record of publication productivity, with a high average H index, including several over 30 (Table 3.5 Self Assessment report). Most of the Faculty are nationally recognized research scientists and several have stellar international reputations. The Faculty has a diverse mix of grants and contracts, although the historical dependence upon NIH is obvious and continuing (Table 3.6). Given the percentage of grant applications that are fully funded by NIH, this continued success rate is very commendable. There is evidence of continued scholarship by most of the Faculty and the Review Panel encourages the Department to continue to support them in the manner that has led to this success. However, the Review Panel noted that the majority of the graduate studies appear to be associated with [fivefour](#) of the faculty, while some Faculty have few to none. Understanding that not all Faculty are currently at high research productivity levels, the Review Panel suggests considering assigning a larger proportion of teaching duties to these Faculty members. In particular, the Department could consider a larger number of "4+1" Masters students that are mentored by Faculty with less research pressure. This would have the advantage of increasing the graduate program in alignment with University goals as well as generating additional revenue for the Department through student fees. The Review Panel cautions against instituting such a program without specific Faculty assignments as research output of highly productive faculty could be impaired if too high a teaching/mentoring load were added.

- *Viability of scholarly community within which students can interact*

The primary attraction for toxicology students to study at OSU is the quality of the Faculty, particularly in the area of environmental chemistry. Studying with a world class faculty member, as well as the opportunity to interact with others at the same level of scholarship is a privilege that is recognized and appreciated by the students. Secondly, the breadth of equipment available for training (e.g., GCs, HPLC, mass spec, flow cytometer) provides students with a high level training opportunity that qualifies them for multiple career options. Although Dr. Stubblefield's laboratory is more oriented toward contract research [and less towards hypothesis driven studies](#), the Review Panel encourages the department to rotate students through his laboratory to learn techniques and experience regulatory-driven studies. Similarly, Dr. Tanguay's laboratory provides unique experiences in toxicity testing for chemical screening and extrapolation of animal data to human health concerns. The blend of traditional scientific research with regulatory-driven studies is attractive to students and also provides a platform for dynamic discourse among the faculty.

Recommendation: Encourage participation of all the laboratories in the student rotation program.

A unique attraction that brings graduate students to the EMT Department at OSU is the NIH training grant that provides the ability for students to rotate through multiple laboratories during their first two years in the program. This broadens the base of their education and allows them to find the most suitable professor-student match. Participation in a rotation

prior to selection of a Focus Area for graduate studies undoubtedly contributes to the very low drop-out rate among EMT graduate students. Therefore, the Review Panel is alarmed by the prospect of the Training Grant moving towards funding postdoctoral positions and away from funding Ph.D. candidates. The Review Panel urges the department to search for alternative mechanisms to continue to support at least first year graduate students (preferentially, first and second year students) in a broad-based, multi-laboratory rotational program of study.

Recommendation: The Department should be looking towards alternative funding sources to replace the student support on the NIH Training Grant.

The Review Panel acknowledges and supports the students' high level of enthusiasm for continuing the departmental seminars in a manner similar to that which was trialed this year. Namely, an integrated seminar in Fall Quarter focused on a controversial relevant topic with students required and challenged to support any position and viewpoint. For Winter Quarter seminar, a focus on manuscript review skills, curriculum vitae presentation, and grant writing will provide the students additional competitive advantage. Finally, Spring Quarter can provide in-depth topical discussions in each focus area. The Review Panel encourages the students to continue to invite a broad diversity of professionals to their monthly seminar series, to experience a variety of potential job opportunities many of which may be outside the traditional realm for toxicologists but provide satisfying and challenging career options.

The Review Panel recognizes the strong role that TEAMTox plays in the departmental graduate student community. This provides a forum for interactive learning among the students and the opportunity to develop grant-writing skills and community service/teaching. TEAMTox is an idea that may be unique to OSU.

Recommendation: The Department is encouraged to continue to support the students in the TEAMTox initiative.

Outcomes

- *Professional viability of graduates*

The Review Panel is impressed with the diversity of placements of graduates from the EMT program (Table 4.2 in Self Study report), noting that all potential sectors (academia, industry, government) are represented. The broad background that all students acquire, covering both chemistry and toxicology regardless of the student's focus track, makes the EMT students highly competitive in the marketplace. The Review Panel encourages the continued integration of the student learning, with shared core courses and seminar classes. The experience gained by participation in TEAMTox is particularly noteworthy as the unique experience with outreach and teaching at the K-12 level enhances students' capabilities and attractiveness to potential employers. It was obvious to the Review Panel that the students gain a great deal of self-confidence during their tenure with the EMT department. The number of professional society awards (e.g., Best Student Paper), also indicates Faculty awareness of the necessity of introducing their students to a professional setting where they can begin networking and meeting other professionals. The Review Panel recognizes the importance of teaching experience for graduate students, particularly for those interested in an academic career, and encourages the Faculty to continue providing teaching opportunities to their students, through lectures in courses taught by their major Professors, leading seminars, or TA opportunities through other departments.

- *Satisfaction of students and graduates*

Students – Satisfaction of students was assessed through a survey sponsored by the graduate school and the meeting of our review committee with the students. The survey had only a 35% response rate; however, the same themes were borne out during our meeting with the graduate students where we received input from virtually every student.

Overall, the students described their training as exemplary. They mentioned that there were many opportunities that positioned them for their future careers, including, being able to write for NRSA grant support, and opportunities to present at National meetings. The students recognized that, once they received their degrees, they were extremely competitive for jobs. Interestingly, the majority of current students, when asked, favored careers in industry or government – not in academia. Additionally, the students noted very positive interactions with their mentors and other faculty, the quality of the research facilities, libraries, and office space.

Despite the overall positive impression that we received from the students regarding their training, the students expressed concerns and made recommendations for improvement.

- (a) Despite the well-described curriculum in the self-study and the graduate student handbook, many of the students were confused as to the courses that they should be taking over the first year, and felt that student advising could improve. Part of this confusion may be related to the many different mechanisms that are being used to support the students. About 50% are supported by an NIEHS training grant, others by a Superfund grant, and others by individual R01s. There was also a lack of clarity regarding when waivers of courses were granted.

Recommendation: Each of these problems can be ameliorated with additional attention being paid to first year advising – until the students have selected a mentor.

- (b) Many of the students took issue with the requirement for the 400 level (slash) courses in Biochemistry. They believed that the rigor of the course was not sufficiently geared toward graduate training. Comments on the MCB 553-555 series were much more positive.

Recommendation: The department may wish to consider improvement of the didactic course offerings by developing a graduate level course using the expertise of the faculty.

- (c) There were a few concerns regarding the inconsistent offering of required graduate courses – particularly the toxicology series. In some cases the students were unable to take the course prior to their preliminary examinations. The department may wish to consider offering this course more regularly – even if there are only a few students who register.

- (d) The students liked the seminar course, which was quite interactive; however, the students requested more opportunities to present their research on a regular basis (annually?) not only to their peers but also to the EMT faculty. They commented that faculty members generally do not attend student research presentations.

Recommendation: Student research presentations should be more formalized and attended by faculty.

- (e) Finally, the students requested that they be given more opportunities to teach. They were not requesting Teaching Assistantship types of positions, but actually giving a lecture or two, and writing examination questions.

Recommendation: Students should be given the opportunity to gain teaching experience, through course lectures, leading seminars, or TA opportunities through other departments.

Alumni – Although data on alumni satisfaction are rather sketchy, the responses were extremely positive. The department did send out a survey; however, only 7 alumni responded. It is unclear how many surveys were distributed. Ultimately, satisfaction with the program depends, in large part, to acquiring a rewarding full-time position. Of the respondents, the majority are employed in fields related to their degrees.

- *Rankings/ratings*

Student metrics are strong, and the average GPA and GRE scores of applicants appear to have increased in the past few years (Table 2.1). This provides the department the opportunity to select the best students into the graduate program. Graduate student quality is reflected in the high number of prestigious awards received by the students (Table 3.2), indicating a high ranking of both students and faculty. Overall, the students appear highly satisfied with their experience (page 108), expressing some dissatisfaction only with the new student orientation process and perceived paucity of teaching opportunities.

The Faculty appears to be moving towards gender balance, with 5/14 female, and is encouraged to continue to actively recruit female professors (Page 53 of Self Study). Faculty diversity is still under represented, with only one self-identified minority member. While the faculty currently is well-balanced by age class, the Review Panel is concerned that the department is top-heavy with more than 50% of the faculty at the Full Professor level. This will lead to aging of the faculty if new hires of younger professionals are curtailed in the future.

Recommendation: The Review Panel encourages the department to work with the College and Graduate School to continue to grow the faculty base.

The Department continues to rank high on competitive grants, including NIH and Superfund awards, with increasing graduate student support (page 83 of Self Study).

Conclusion

The Review Panel determined that the EMT possesses an excellent research and educational environment. Research excellence can be seen in the reputations of the faculty, their ability to publish, and their success in obtaining extramural funding. The Department also provides a strong educational experience for graduate students. The graduate student applicant pool is strong, and acceptance is selective. The students excel in this environment and graduate with the training necessary for their future success.

Recommendations

- The review committee recommends that additional support for graduate training be provided from State resources to provide additional stability to the exemplary program graduate program.
- There appears to be an opportunity for faculty without stable grant funding to take a more active role in teaching. As the department develops the 4+1 Masters program, these faculty could be available to supervise self-funded and externally-funded students.
- The Department should be thoughtful in considering new instructional opportunities that would generate revenue to the department.
- The recruitment needs of this department (particularly in terms of faculty) need to be seriously considered in order to maintain the critical mass necessary to maintain grant productivity.
- More administrative support was deemed necessary to ensure adequate support of the department.
- If possible in the future, decreasing the number of separate buildings housing faculty and graduate students is recommended. It is recognized that space is at a premium on campus and that capital improvements have been performed in off-site locations, as well as current financial constraints, may preclude the goal of having all EMT faculty and students in one building.
- More formalized graduate committee involvement and first year graduate student mentoring is encouraged.
- Encourage participation of all the laboratories in the student rotation program.

- The Department should be looking towards alternative funding sources to replace the student support on the NIH Training Grant.
- The Faculty should continue to support the TEAMTox initiative.
- Improving mentoring of 1st year students
- The department may wish to consider improvement of the didactic course offerings by developing a graduate level course using the expertise of the faculty.
- Student research presentations should be more formalized and attended by faculty.
- Students should be provided a wider range of opportunities to gain teaching experience.

Graduate Council Review of the Graduate Program in Toxicology
Department of Environmental and Molecular Toxicology

Notes from the Department on the Evaluation Report

On behalf of the Department of Environmental and Molecular Toxicology, we wish to reiterate and highlight our deep appreciation to the review team for their careful and thorough review of our graduate program. The report will serve as a most helpful guide as we continue to work to improve our training of graduate students in toxicology. We note several minor corrections (detailed below) to the Evaluation Report.

1. Page 2, second to last paragraph: reference is made to a student suggestion that there be “development of a substitute for the 400 level Biochemistry curriculum to one that is more focused on graduate training”.
 - 1.1. We note that the Biochemistry curriculum required for the Toxicology graduate program is three terms of the 590-592 Biochemistry series, a slash listed course (400/500 level, not an undergraduate class) and the same series required of Biochemistry graduate students.
2. Page 8, second paragraph: reference is made to the “recent change in the structure of the Graduate committee, including the development of an executive committee and 4 subcommittees.”
 - 2.1. We note that the Graduate Committee was restructured only into 2 subcommittees, one focused on admissions and recruitment and one focused on curricular issues. The two subcommittees may meet together to address significant issues, e.g. student grievances.
3. Page 9, first paragraph: reference is made to an uneven level of graduate advising within the department faculty, noting “that the majority of the graduate students appear to be associated with four of the faculty, while some Faculty have few to none.”
 - 3.1. We recognize that graduate training is indeed uneven within the faculty. This is not unexpected and tends to correlate with the amount of extramural grant funding available to each faculty member and the career stage of each faculty during the program review window, as well as the duties established in their position description. However, we also note the following correction to our self-study report. One error not noticed in the final report is in Table 3.4 EMT Toxicology Graduate Faculty Advising, included in the report on page 95. The number of students trained by Professor Williams was inadvertently listed as 0, when in fact, Dr. Williams has advised to graduation 5 PhD students, 2 Thesis MS students and 1 non-thesis MS student, with 2 additional PhD students currently in training. A corrected Table 3.4 is included below this list.
4. Page 9, middle paragraph: reference is made to research in Dr. Stubblefield’s laboratory being “more oriented toward contract research and less towards hypothesis driven studies...” We note that although research in Dr. Stubblefield’s laboratory is significantly funded with contracts rather than grants, it is hypothesis driven.
5. Page 10, first paragraph: reference is made to the organization and implementation of our seminar series class, and the use of Spring quarter to “provide in-depth topical discussions in each focus area.”
 - 5.1. We share the reviewers’ enthusiasm for continuing with the re-organized seminar class. Our plan, however, is to continue with all the students meeting together for a term-length, in-depth focus on a topical subject within toxicology or the development of professional skills. Based on student feedback, we have moved away from separate class meetings for the different focus areas within our student population.

**Table 3.4 EMT TOXICOLOGY GRADUATE FACULTY
ADVISING**

Graduate Program Review of EE and CS

The site visit for the Graduate Program Review of Electrical Engineering and Computer Science took place on April 3-4. It included meetings with many constituencies including students, faculty, staff and several levels of administration such as the leadership of the School and College. The final itinerary of the visit is reproduced as Appendix 1 of this report. The review team members express their appreciation for the thorough *Graduate Self Study* and the hospitality of our hosts, as well as their responsiveness and openness throughout the process.

Review Team:

Stephen Phillips, Ph.D., P.E.
School Director and Professor
School of Electrical Computer and Energy Engineering
Arizona State University

Bruce Porter, Ph.D.
Professor and Chair
Department of Computer Science
University of Texas at Austin

James Coakley, Ph.D.
Associate Dean for Academic Programs
College of Business
Oregon State University

Walt Loveland, Ph.D.
Professor
Department of Chemistry
Oregon State University

Overall Recommendation

The review team agrees that the EE/CS Program is functioning well and should be expanded.

Graduate Program

The School offers three graduate degrees: Ph.D., M.S. (with thesis) and M.Eng. (coursework only). In the past decade, the School expanded enrollment in the Ph.D. program, while reducing enrollment in the Masters programs.

The survey data and the conversations with current graduate students indicated a remarkably clear satisfaction with their graduate experience. The program appears to, in the perception of the students and alumni, to be meeting or exceeding all expectations. The graduate students and faculty are generally satisfied with the structure of the ECE and CS graduate programs. The committee did not have an opportunity to meet with any M.Eng. students and there seems to be minimal interaction between the M.Eng. students and the M.S. and Ph.D. students.

Ph.D. Recruiting

The faculty were generally satisfied with the quality of the Ph.D. students. As indicated in the *Self Study* (pp. 13-16), ECEE has a well-developed admissions process with key admissions decisions made by faculty within research groups, and all incoming students admitted to a research group. The quality of students is generally high and admission appears to be highly competitive – only 31 percent of the ECE applicants are admitted (on average) while 45 percent of the CS applicants are admitted.

Still, there was concern that the strongest applicants, even those awarded Fellowship offers, typically declined the offer to attend higher-ranked schools. Also, there was a general unease that the best candidates are not even applying to OSU. The percentage of admitted students who actually matriculate to the program appears to be low (37 percent for ECE, 29 percent for CS), with 62 and 71 percent of the students (ECE and CS respectively) refusing the offer to come to OSU. The faculty are developing initiatives to increase the perception and international awareness of the faculty and programs in the hope of attracting high quality faculty and students.

The School does have specific goals to increase the representation of women and under-represented minority students, with strategies to provide scholarships and to recruit through personal connections.

Admitting and recruiting Ph.D. students is delegated to research groups, rather than handled centrally. This has the benefit of incentivizing faculty to be involved in the process. Also, it's an appropriate response to the fact that the student demand and selectivity varies across the research groups. On the other hand, groups that are small and less selective struggle to recruit strong students, possibly because their top prospects are less interested in committing to the research group in the first year than they would be in joining the school generally, without an early affiliation.

Recommendation: To recruit from a larger pool of candidates, and perhaps to bring in some star students, consider recruiting students who have non-traditional backgrounds. This might include students who majored in another area of math, science or engineering; also, it might include computing professionals who have been out of school for awhile. This will require creating an alternate path through the graduate programs – one that enables students to gain a solid foundation before progressing to graduate work.

Strength of Curriculum

The breadth and depth of ECE courses listed in the catalogue appears more than adequate to support the graduate programs in Electrical and Computer Engineering (M.S., M.Eng. and Ph.D.). The structure of the required breadth and depth courses for these programs seems appropriate and appears to be consistent with practice at peer institutions.

The CS curriculum is considerably weakened by the lack of faculty in some core areas. Examples include operating systems, compilers and cybersecurity. This is likely to hurt student recruitment into the graduate program, as well as their job prospects afterwards.

Recommendation: The long-term solution is to recruit faculty in these core areas of CS. In the short-term, consider re-assigning a few professors to develop and teach courses in these core areas, even if it is outside of their research areas. Also, consider hiring adjunct faculty for these core classes. For example, you might offer a compiler class taught by a visitor from Intel. To solve the logistical problem, the class might be taught using tele-presence equipment, or it might be offered in a 1-week compressed form.

A general consensus of graduate students is that they struggle to find graduate courses they want to take. This is exacerbated by an unusually high coursework requirement, at least in CS.

Recommendation: Consider reducing the number of courses required of Ph.D. students. In CS, students are required to take two core courses, then three courses in each of three areas. Perhaps it would be better to require the two core courses, one course in each of three areas (for breadth), and three courses in the student's research area (for depth). This reduces the course load from eleven to eight, which might help students, faculty and administrators.

Recommendation: In addition to meeting the coursework requirement, Ph.D. students are required to pass a qualifying exam as well. Commonly, a degree program requires either courses or a qualifying exam, but not both. Consider dropping one.

Recommendation: Students generally agreed that the "slash courses" (which enroll both undergraduates and graduate students) are ineffective. Some faculty assign different exercises and projects (and possibly exams) to the two groups of students, and this seems to improve the experience. Consider requiring this practice in slash classes.

Recommendation: There is some concern among the graduate students and faculty that not enough "pure" 500 and 600 level courses are offered on a regular basis. The students report some unpredictability in the schedule of how often, and in which quarters, specific graduate courses are offered. (This appears to be, at least in part, due to the need to cover teaching of the courses in the fast-growing undergraduate program.) Consider publishing course schedules, at least tentative ones, two years in advance so that graduate students can make plans.

Recommendation: Students receive little feedback from the Departments on their progress through the Ph.D. program. It seems that all students are reviewed annually – in CS by the faculty, and in ECE by the Director. Based on these reviews, consider providing regular feedback and guidance to the students.

Enrichment Opportunities for Students

Recommendation: About one-third of the Ph.D. students expressed interest in teaching an undergraduate class, serving as the instructor, not just as a TA. Consider offering this opportunity to selected students, not only for their benefit, but also to help meet the School's teaching mission.

Recommendation: While some students felt they had enough contact with companies, others wanted more contact in order to explore internships and careers. These students expressed frustration with the School's career fairs because they are focused on undergraduate students. Consider holding a separate career-fair event for graduate students or making the current fairs more explicitly graduate-student oriented.

Recommendation: Some graduate students requested more opportunities for professional development, such as grant writing workshops. Consider providing these opportunities within the School, College or University.

Student Performance

As indicated in the NAS survey, the GRE scores of the OSU students are competitive with student scores at peer institutions, as are the percentage of students with external fellowships.

As pointed out in the self-study, the graduate students have won a number of honors and awards. 83% of the surveyed alumni found jobs within 6 months after graduation. Most of them (82%) found employment directly related to their degree.

Level and quality of infrastructure

The EECS information technology support group was noted by many as being outstanding. The computing and teaching laboratory equipment appears to be first-rate with a regular equipment maintenance and replacement schedule. The ECE and CS faculty research labs and graduate student office space is well appointed, attractive and state-of-the-art. The Kelley building comfortably houses nearly all of the EECS personnel and laboratories (except for some teaching labs and the clean-room which are in nearby buildings). The open design of this building appears to be very effective in encouraging student and faculty interaction both formally and informally (e.g. coffee shop and atrium). If the projected aggressive growth rate is accomplished the facility will become very stressed in the next few years.

Rankings and ratings

The *Self Study* notes the U.S. News & World Report ranking of the CS program is number 63 (out of 94 programs) and the ECE program is number 72 (out of 134 programs). These rankings have not changed in the last 10 years. The program indicates some concern with these rankings in that they set a goal of improving these rankings.

Some insight as to what might be affecting these rankings and how these programs rank relative to the peer institutions (defined by OUS and OSU for such comparisons) can be obtained from the 2010 NAS survey of graduate programs. In the attached spreadsheet (OSU-EECS-ProgramReview.xlsx), we show the values of some comparators for the OSU programs and those of the peer institutions. The OSU program is competitive with a strong group of peer institutions in faculty grantsmanship, support of students, gender equity, demographic tenure profile, and GRE scores. As the programs note, OSU has a smaller number of students and faculty than their peers, they published less and are less cited than their peers. (This issue might be addressed, in part, with senior faculty hires). The data on completion rates in the NAS survey do not agree with current evaluations.

The school is strong relative to its current peer group (top 50-75 EE, CE and CS programs) and has realistic aspirations for achieving many of the metrics of the top 25-50 peer group, especially in its research and graduate programs.

Rankings often do not reflect the true strength of the program but, instead, represent the lagging perception among peers. This requires very long timescales to change. Faculty recognition and size are generally also correlated with rankings. This suggests that recruiting high-profile faculty (IEEE and ACM Fellows and NAE members) to fill faculty vacancies can be especially effective. This often requires the use of endowed professorships and identifying donors for this must be started very early in the planning process. Another effective approach is to identify niches where EECS can build internationally recognized top programs. Leveraging the state's particular natural, human and infrastructure resources may be a starting point. The planned growth in faculty size will also contribute positively to improved rankings over time.

Recommendation: Consider a faculty recruiting strategy that leverages local strengths (e.g. natural resources, Intel), focuses on a few targeted interdisciplinary areas and pursues recruits in groups so that start-up equipment and facilities can be shared. Begin to raise funds now for future endowed faculty positions.

Organizational Support

The current leadership of the College and School seems to be very effective, and the leaders seem to have a shared vision. Moreover, the leadership is strongly supported by the faculty. The department administration takes pride in its academic and research programs and promotes them vigorously. The leadership appears to be very effective in procuring

resources and charting a direction for the school and its programs while the associate director effectively manages the existing programs and facilities. There were very few criticisms from the faculty about the overall leadership of the unit. A few of the faculty have concerns about the growing administrative burden on the faculty for budgeting, procurement, time reporting, etc.

The collegiality among the faculty seems extraordinarily high. Everyone is to be congratulated for helping to create and sustain that environment.

Recommendation: Currently it seems that all available funds – both current funds and anticipated funds – are earmarked for faculty growth. While this is clearly important, consider using a portion of the funds for administrative, instructional and other supporting activities.

Recommendation: The plan for faculty growth is very ambitious, and it carries some risks. One of the sources of funding for the growth is the INTO program. The leadership of the College and School should assess the reliability of the funding.

Recommendation: The EECS advisory board is large and engaged in the Program. Consider leveraging the Board for specific support of the program, in the form of cash, internships, funded research, scholarships, endowments and faculty support.

Recommendation: It seems that the ECE and CS programs are largely distinct. Building strength at the intersection of ECE and CS could leverage the successful integration of the two programs in one academic unit. Consider, for example, hiring joint faculty and conducting EECS-wide seminars of broad interest to graduate students and faculty.

Mission of the Program in Relation to the University

The *Self Study* of this graduate program provides clear evidence of alignment to the mission of the College of Engineering and to the three Signature Areas of Distinction in Phase II of the Strategic Plan for the University (advancing science of sustainable earth ecosystems, improving human health and wellness, and promoting economic growth and social progress). The ECEE faculty collaborate extensively with researchers across campus, and are nationally and internationally recognized for their outstanding research contributions. As such, the School enhances the reputation of the College of Engineering and OSU.

Electrical Engineering and Computer Science Graduate Program Review – Unit Responses to Final Report

Overall, the review team said many good things about our program. We thank you and the review team for taking time to review our program and give these constructive recommendations. These recommendations are very helpful to us. One or two minor corrections on the data mentioned in the report.

1. 8 Year Ph.D. Graduation Rate: The report said 37% for ECE and 29% for CS. Courtney came to our office and worked with Nicole Thompson (graduate coordinator) to get the correct data. In CS of the 23 Ph.D. students admitted in 2001-2003, 12 completed Ph.D., 5 got MS and 6 left. In ECE, of the of the 44 students admitted, 36 completed Ph.D., 2 got MS, 1 is still continuing and 5 left.

Thus, the graduate rates are:

CS - 52% (74% if MS is included)

ECE - 82% (86.4% if MS is included)

2. The NAS 2010 is for the year 2000-2005. However, we have made a lot of progress in the last 10 years. It would be nice to get data for the recent years, if it is available.

Full Category I and Abbreviated Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

For Instructions, see <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/category-1-proposals> Please attach Executive Summary, Proposal, Library Evaluation (performed by the Library), Accessibility Form, Letters of Support (External to OSU), Liaison Correspondence (Internal to OSU), Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check One:

Full Proposal (Category I)

[Category I Final Approval: Oregon State Board of Higher Education]

- ☐ New degree program
- ☐ Major (substantive) change in existing program

Abbreviated Proposal (Abbreviated Category I)

[Abbreviated Category I Final Approval: OSU Provost]

- ☐ Rename of an academic program or unit
- ☐ Establishment of a new college, school, department or program
- ☐ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation of an academic program or unit
- ☒ New certificate program or academic unit

For proposals to establish a new center or institute, contact the Research Office (541-737-3467)

For requests to offer existing certificate and degree programs at new locations, use the Memorandum of Understanding (MOU) form available at <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/mou-process>

Proposal for the Initiation of a New Instructional Program Leading to A Graduate Certificate in Wildlife Management

Executive Summary

The Department of Fisheries and Wildlife proposes a Graduate Certificate in Wildlife Management (GCWM) to complement its successful Graduate Certificate in Fisheries Management. This 18 credit, online Certificate requires courses in biological science and human dimensions, plus a 3 credit project, which will provide qualified applicants with training in wildlife sciences at the graduate level. Like our Fisheries Management Certificate, GCWM is expected to serve students who are:

- a) interested in a graduate degree but are not yet competitive enough, due to a lack-luster GPA or lack of experience in the field of wildlife science;
- b) interested in online education options but want to “test the waters” before committing to a full degree program;
- c) seeking advancement in their current job through graduate-level coursework and completion of a relevant capstone project (3 credit research paper or outreach product mentored by a local agency scientist);
- d) entering the Master of Natural Resources degree program or other graduate degree program at OSU that allows application of Graduate Certificate credits; or
- e) in need of particular coursework to qualify as a Wildlife Scientist or similar professional certification.

There is a demonstrated demand for this Certificate in the number of inquiries we receive from applicants to the Fisheries Certificate, Professional Science Master’s in Fisheries and Wildlife Management (PSM-FWA), and Master of Natural Resources. Many of these applicants desire coursework and training related to wildlife conservation, as opposed to fisheries or forest ecology (Sustainable Natural Resources Certificate). Students are likely to be in three primary groups: recent graduates seeking to improve their credentials for graduate school, students in existing OSU graduate degree programs, and natural resource professionals. Target enrollment is 40 students per year. Importantly, this Certificate will increase enrollment in existing graduate courses that have been developed for the PSM-FWA program, which is intentionally limited to a select number of professional-level students.

Because the Certificate relies entirely upon existing courses, administration, and infrastructure, it requires few additional resources. Applications and academic advising will be handled by our Graduate Program Advisor, and the program oversight and review will be included in the duties of the current Program Director for the Fisheries Certificate and PSM-FWA. Capstone projects will be reviewed by a local mentor and a faculty member assigned to the course, FW 506 Projects.

The Graduate Certificate in Wildlife Management is a logical and needed extension of our department's successful efforts to expand training opportunities to future managers of wildlife nationwide. It will enhance OSU's presence in the growing field of online graduate education in biological and resource sciences, promote sustainability in existing online programs, and contribute to our commitment to excellence and opportunity in conservation education.

Executive Summary

The Department of Fisheries and Wildlife proposes a Graduate Certificate in Wildlife Management (GCWM) to complement its successful Graduate Certificate in Fisheries Management. This 18 credit hour, online Certificate requires courses in biological science and human dimensions, plus a 3 credit hour project, which will provide qualified applicants with training in wildlife sciences at the graduate level. Like our Fisheries Management Certificate, GCWM is expected to serve students who are:

- a) interested in a graduate degree but are not yet competitive enough, due to a lack-luster GPA or lack of experience in the field of wildlife science;
- b) interested in online education options but want to “test the waters” before committing to a full degree program;
- c) seeking advancement in their current job through graduate-level coursework and completion of a relevant capstone project (3 credit hour research paper or outreach product mentored by a local agency scientist);
- d) entering the Master of Natural Resources degree program or other graduate degree program at OSU that allows application of Graduate Certificate credits; or
- e) in need of particular coursework to contribute to professional certification, such as Wildlife Scientist.

There is a demonstrated demand for this proposed Graduate Certificate in the number of inquiries we receive from applicants to the Fisheries Management Certificate, Professional Science Master’s in Fisheries and Wildlife Management (PSM-FWA), and the Master of Natural Resources. Many of these applicants desire coursework and training related to wildlife conservation, as opposed to fisheries or forest ecology (Sustainable Natural Resources Graduate Certificate). Students are likely to be in three primary groups: recent graduates seeking to improve their credentials for graduate school, students in existing OSU graduate degree programs, and natural resource professionals. Target enrollment is 40 students per year. Importantly, this Graduate Certificate will increase enrollment in existing graduate courses that have been developed for the PSM-FWA program, which is intentionally limited to a select number of professional-level students.

Because this proposed Graduate Certificate relies entirely upon existing courses, administration, and infrastructure, it requires few additional resources. Applications and academic advising will be handled by our Graduate Program Advisor, and the program oversight and review will be included in the duties of the current Program Director for the Fisheries Certificate and PSM-FWA. Capstone projects will be reviewed by a local mentor and a faculty member assigned to the course, FW 506 Projects.

The Graduate Certificate in Wildlife Management is a logical and needed extension of our department's successful efforts to expand training opportunities to future managers of wildlife nationwide. It will enhance OSU's presence in the growing field of online graduate education in the biological and resource sciences, promote sustainability in existing online programs, and contribute to our commitment to excellence and opportunity in conservation education.

Proposal for a New Academic Program

Graduate Certificate in Wildlife Management

**Oregon State University
College of Agricultural Sciences
Department of Fisheries and Wildlife**

April 2013

Proposed Effective Term: Fall Term 2013 (201401)

CPS Tracking # 86051

1. Program Description

a. Proposed Classification of Instructional Programs (CIP) number: 030601

Title: Wildlife, Fish and Wildlands Science and Management.

Definition: A program that prepares individuals to conserve and manage wilderness areas and the flora, marine and aquatic life therein, and manage wildlife reservations and zoological/aquarium facilities for recreational, commercial, and ecological purposes. Includes instruction in wildlife biology, marine/aquatic biology, environmental science, freshwater and saltwater ecosystems, natural resources management and policy, outdoor recreation and parks management, the design and operation of natural and artificial wildlife habitats, applicable law and regulations, and related administrative and communications skills.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

b. Overview

The Department of Fisheries and Wildlife proposes a Graduate Certificate in Wildlife Management to complement its successful Graduate Certificate in Fisheries Management. This 18 credit hour Certificate will require courses in biological science and human dimensions, plus a 3 credit project, which will provide qualified applicants with training in wildlife sciences at the graduate level. This Graduate Certificate, like our Fisheries Management Graduate Certificate, is expected to function in three primary ways: to prepare students who plan to apply to graduate school in a similar discipline, as advancement for students in their current positions as wildlife professionals, and to provide technical training or specific coursework that can contribute to professional certification by The Wildlife Society.

The Graduate Certificate in Wildlife Management will be offered entirely online through Ecampus, but will also be available to Corvallis on-campus students in Fisheries and Wildlife, Natural Resources, Environmental Science, and other departments. The curriculum provides the flexibility that online students need, but with learner outcomes that are commensurate with the requirements of our discipline and the preparation required for further study. Many of the courses have on-campus sections, and on-campus students can choose on-campus offerings or take the on-line courses with the appropriate tuition and fees.

c. Course of Study

The Graduate Certificate in Wildlife Management will require a minimum of 18 credits, including a 3-credit capstone project. Two courses must be from the Wildlife Sciences group, and 2 courses must be from the Human Dimensions group. A fifth course can be chosen from either group or from a list of Skills courses. Students may petition to apply a course not listed to the Certificate, including up to 6 graduate-level credits from another institution. Requests will be reviewed by the Certificate Program Director. We will request submission of a Program of Study for review by the Department's Graduate Advisor, although this document is not currently required by the Graduate School for Certificate students.

A capstone project (3 credits, 60-80 hours of effort expected) is required for the proposed Graduate Certificate. Capstone projects may be one of two options: a paper based on original research or a literature review, or an outreach product that benefits an agency or the student's local community. Projects are supervised by a local mentor (identified by the student, with assistance from our staff as needed) and the faculty member in charge of the capstone course, FW 506 Projects (described below). Mentors must submit a project evaluation form once the final draft of the project is submitted. The final capstone product is not equivalent to a thesis and does not get reviewed through a formal defense process, but is expected to demonstrate the concepts and integration of social and biological science that defines the field of Wildlife Management.

Curriculum

Capstone Project FW 506 Projects (3) – see Appendix D for course syllabus

Wildlife Sciences Core (2 courses minimum)

- FW 519 The Natural History of Whales and Whaling (3)
- FW 521 Aquatic Biological Invasions (4)
- FW 527 Principles of Wildlife Diseases (4)
- FW 535 Wildlife in Agricultural Ecosystems (3)
- FW 538 Structured Decision Making in Natural Resource Management Lab (2)
- FW 540 Vertebrate Population Dynamics (4) (Ecampus Only)
- FW 545 Ecological Restoration (4)
- FW 551 Avian Conservation and Management (3)
- FW 553 Forest Wildlife Habitat Management (4)
- FW 558 Mammal Conservation and Management (4)
- FW 562 Ecosystem Services (3) *counts as FW core OR Human Dimensions*
- FW 563 Conservation Biology of Wildlife (3)
- FW 575 Wildlife Behavior (4)

FW 579 Wetlands and Riparian Ecology (3)
FW 581 Wildlife Ecology (4)
FS 545 Advanced Forest Community Ecology (4)
FS 548 Biology of Invasive Plants (3)
SNR 530 Ecological Principles of Sustainable Natural Resources (3) (Ecampus Only)
SNR 540 Global Environmental Change (3) (Ecampus Only)

Human Dimensions Core (2 courses minimum)

FW 515 Fisheries and Wildlife Law and Policy (3)
FW 537 Structured Decision Making in Natural Resource Management (2)
FW 562 Ecosystem Services (3) *counts as FW core OR Human Dimensions*
FW 585 Consensus and Natural Resources (3)
FW 620 Ecological Policy (3)
ANTH 581 Natural Resources and Community Values (4)
AREC 532 Environmental Law (4)
AREC 534 Environmental and Resource Economics (3)
AREC 553 Public Land and Resource Law (4)
FS 592 Ecosystem Services Ecology, Sociology, Policy (3)
PHL 540 Environmental Ethics (3)
PHL 543 World Views and Environmental Values (3)
PS 575 Environmental Politics and Policy (4)
PS 577 International Environmental Politics and Policy (4)
SNR 520 Social Aspects of Sustainable Natural Resources (3) (Ecampus Only)
SNR 521 Economics of Sustainable Natural Resources Management (3) (Ecampus Only)
SNR 522 Basic Beliefs and Ethics in Natural Resources (3) (Ecampus Only)
SOC 580 Environmental Sociology (4)
SOC 581 Society and Natural Resources (4)
WRP 599 Special Topics (3)

Skills Courses (1 course recommended)

FW 514 Professional Development: Meeting Communications (1)
BOT 540 Field Methods in Vegetation Science (4)
FS 523 Natural Resource Data Analysis (4)
GEO 544 Remote Sensing (4)
GEO 565 Geographic Information Systems and Science (4)
ST 511 Methods of Data Analysis (4) (continues as ST 512, 513)

- Proposed Effective Term: **Fall Term 2013 (Banner: 201401)**

d. Program Delivery

All courses listed are offered online through Ecampus, and this Graduate Certificate is designed primarily for online students. Fisheries and Wildlife courses are scheduled to ensure that a variety of topics are covered each term. A complete schedule of courses (including those offered in other departments) will be made available for Graduate Certificate students each fall term, and distributed

through our quarterly newsletter. Our experience with the Graduate Certificate in Fisheries Management has been that most students are taking courses while committed to a full or part-time job, which limits them to 1-2 courses per term. Thus, it will typically take a student 1-1.5 years to complete the Certificate.

Networking is a critical aspect of graduate education, particularly for programs that are designed for professional training in applied disciplines. Through our newsletters, Blackboard Organization page, Facebook page, and course Discussion Boards, we will encourage Graduate Certificate students to communicate and assist one another by sharing project ideas, opportunities for future jobs or internships, and connections with state and federal natural resource agencies. We also maintain a list of local mentors that have assisted our Graduate Certificate students with their capstone projects.

Advising begins with the application process, where our Graduate Advisor and Program Director help prospective students choose among the variety of certificate and degree programs in natural resources at OSU. Our Graduate Advisor monitors student progress and enrollment to assure that students meet the requirements of the Continuous Enrollment Policy and other Graduate School regulations. We also assist with capstone project development and identification of mentors. If a local mentor cannot be identified, we will match the student with a courtesy or regular faculty member in the Department.

e. Ways in which the program will seek to assure quality, access, and diversity

Application Review Process. All applications will be reviewed by the Program Director. Applicants must have a bachelor's degree and a GPA of at least 3.0 for the last 90 credit hours, plus a demonstrated interest in the Graduate Certificate for career or academic advancement (as shown in the cover letter). Students with a bachelor's degree that is not in a biological field will be told to take preparatory courses such as BI 370 Ecology, FW 320 Introductory Population Dynamics, and/or FW 321 Applied Community and Ecosystem Ecology. Students who do not meet the 3.0 GPA requirement may petition for conditional admission (required to maintain a B or better in all coursework) at the discretion of the Program Director, pending review by the Graduate Council. Students who do not meet admission requirements will be advised to take 1-2 graduate-level courses as a non-degree seeking student, or apply to an appropriate post-baccalaureate program if they meet that program's requirements.

Retention and Evaluation. The Fisheries and Wildlife Graduate Advisor will check the status of currently enrolled Graduate Certificate students at the end of each academic term to assure that they are making progress and are meeting Continuous Enrollment requirements. Students who need to file Leave of Absence forms will be contacted by email, and those who are struggling will be referred to the Program Director and the Academic Success Center. Final grades, capstone products, and mentor

evaluation of the capstone project of each student will be reviewed by the Program Director prior to awarding the Graduate Certificate in Wildlife Management.

Diversity is a major issue within the Department of Fisheries and Wildlife because the Fisheries, Wildlife and Conservation Biology professions have historically been staffed predominately by white males. We have been actively engaged in enhancing diversity for many years through faculty hires with nine of our last 15 faculty hires having been women and/or minorities. One of our most recent hires under the Tenured Faculty Diversity Initiative is specifically working on diversity recruitment and retention as part of her position. We have actively promoted our graduate programs at the SACNAS (Society for the Advancement of Chicanos and Native Americans in Science) annual meeting.

f. Anticipated enrollment (first five years)

Applications for the Graduate Certificate in Wildlife Management will be accepted year-round. Based on current enrollment in our Graduate Certificate in Fisheries Management and the volume of inquiries about a Graduate Wildlife Certificate that we have received over the past 2 years, we anticipate 5-10 applications per term and predict the following enrollment:

Fall Term 2013: 10 students (includes a few current Fisheries Management Certificate students who will make a change of program request)

Winter and Spring Terms 2014: 10 additional students

Subsequent Fall Terms: 5-10 new students

Other terms, incl. Summer: 2-4 new students

Program enrollment goal by year 5: 40 students in the program annually

g. Expected certificates awarded (next five years)

Certificates awarded in first 5 years, assuming an average of 5 terms per student, including Summer: **50-60**

Statistics from our Graduate Certificate in Fisheries Management (established in Fall 2008) are shown in Appendix A. We have awarded 33 Graduate Certificates in the first 4 years of that Program, and currently have 36 students enrolled in the program. We anticipate that the Wildlife Certificate will be more popular, based on the relative proportion of wildlife vs. fisheries undergraduates in our program.

h. Characteristics of students to be served

The majority of our Graduate Certificate in Fisheries Management students are 3-5 years out from their bachelor's degree. We anticipate that the Graduate Certificate in Wildlife Management will attract older-than average, working professionals who are seeking additional training to advance in their current agency or move to a new position. We will also attract recent bachelor degree recipients who desire additional training but lack either a GPA sufficient for admission to a graduate degree program, or a degree in a relevant field. For students in the latter category, we will suggest 2-3 undergraduate preparatory courses before enrolling in the graduate certificate courses: BI 370 Ecology, FW 320 Introductory Population Dynamics, and/or FW 321 Applied Community and Ecosystem Ecology.

Corvallis campus and Ecampus online graduate students in degree-based programs at OSU who wish to add the Wildlife Management Graduate Certificate to their Program of Study may do so in accordance with the guidelines established for their degree. Courses can “double count” toward the student's degree and the Graduate Certificate if they are accepted by both programs, but to complete the Graduate Certificate in Wildlife Management the student must enroll in FW 506 Projects and submit a capstone project that is independent of his or her thesis work. This Certificate will be included in the list of options for students in the Master of Natural Resources program. Marketing research by Ecampus has found that Certificates are in demand as “add-ons” for degree-seeking students, because they provide evidence of breadth and dedication to education in a specific field that is greater than an academic minor.

We anticipate that the geographic distribution of Wildlife Management Graduate Certificate students will mimic that of our Fisheries Management Graduate Certificate: with approximately 30% coming from Oregon, 15% from Washington and California, 10% from Alaska, 35% from other US states, and 10% international.

Faculty and Staff

i. Adequacy and quality of faculty delivering the program

The Department of Fisheries and Wildlife is unique among OSU programs in our coordination and oversight of online courses. All courses are supervised by a faculty member who developed or modified the course content, and all graduate-level courses are taught by instructors or faculty with a graduate degree. Because the Graduate Certificate in Wildlife Management is not a graduate degree, most faculty involvement will be through Ecampus online courses, although capstone projects will occasionally be mentored by a faculty or courtesy faculty member of the Department.

The Certificate Programs in the Department of Fisheries and Wildlife are directed by Dr. Selina Heppell, an Associate Professor with a 0.25 FTE appointment to administer online programs in the Department. Dr. Heppell reviews all applications and Programs of Study, is a resource for students with questions about their program or career paths, and reviews coursework and final projects for Certificate completion.

j. Faculty resources

Table 1 lists the graduate faculty who will supervise and/or teach the graduate courses in this proposed Graduate Certificate program. Abbreviated CVs are available upon request.

Table 2 lists external faculty who supervise and/or teach graduate courses in this Certificate. Abbreviated CVs are available upon request.

Table 1. Department of Fisheries and Wildlife faculty that teach or supervise graduate classes and advise graduate students* in the area of Wildlife Science. Faculty CV's are available upon request.

Faculty Member	Area of Expertise	Course(s) Taught in GCWM Curriculum
C. Scott Baker, PhD Professor of Wildlife Associate Director of The Marine Mammal Institute	Molecular ecology of marine mammals, historical demography and population dynamics of whales, molecular taxonomy, conservation genetics. *Graduate Faculty Member	-FW 519 The Natural History of Whales and Whaling
Matthew Betts, PhD Adjunct Associate Professor of Forestry Forest Ecosystems and Society	Forest wildlife, landscape ecology. *Graduate Faculty Member	-FW 553 Forest Wildlife Habitat Management
John Chapman, PhD Courtesy Assistant Professor of Fisheries	Aquatic biological invasions, invertebrate zoology and peracaridan crustacean taxonomy.	-FW 521 Aquatic Biological Invasions
Robert Davison, PhD Instructor	Fisheries and wildlife.	-FW 515 Fisheries and Wildlife Law and Policy
Sandra DeBano, PhD Associate Professor of Wildlife	Riparian ecology and entomology, aquatic-terrestrial and riparian-upland linkages, trophic interactions. *Graduate Faculty Member	-FW 562 Ecosystem Services
Bruce Dugger, PhD Associate Professor of Wildlife	Ecology, conservation and management of waterbirds and their wetland habitat. *Graduate Faculty Member	-FW 579 Wetlands and Riparian Ecology

Katie Dugger, PhD Courtesy, Associate Professor of Wildlife, Asst. Unit Leader, USGS Cooperative Wildlife Research Unit	Avian population modeling, forest bird survival rates in relation to environmental variables. *Graduate Faculty Member	
Collin Eagles-Smith, PhD Courtesy, Assistant Professor of Wildlife, USGS Forest and Range Ecosystem Science Center	Ecotoxicology, food web ecology, contaminant bioaccumulation, wetland ecology, limnology, mercury toxicity. *Graduate Faculty Member	
W. Daniel Edge, PhD Department Head and Professor of Wildlife Ecology	Nongame wildlife, habitat management, wildlife relationships in forest and agricultural ecosystems. *Graduate Faculty Member	
Clinton Epps, PhD Assistant Professor of Wildlife	Ecology, conservation, and management of mammals; effects of climate and climate change on distribution and demography. *Graduate Faculty Member	-FW 558 Mammal Conservation and Management
M. Jesse Ford, PhD Associate Professor of Fisheries	Paleoecology, limnology. *Graduate Faculty Member	
Eric Forsman, PhD Courtesy Assistant Professor of Wildlife U.S. Forest Service	Spotted owls, other forest wildlife. *Graduate Faculty Member	
Tiffany Garcia, PhD Assistant Professor of Wildlife	Amphibian population decline, animal behavior freshwater community ecology. *Graduate Faculty Member	-FW 535 Wildlife Agricultural Ecosystems
Jen Gervais, PhD Instructor	Interactions of contaminants with natural stressors and their effects on population dynamics. *Graduate Faculty Member	-FW 540 Vertebrate Population Dynamics
Christian Hagen, PhD Assistant Professor of Wildlife, Senior Research	Avian ecology and management; conservation planning. *Graduate Faculty Member	
Susan Haig, PhD Courtesy, Professor of Wildlife, USGS Forest and Range Ecosystem Science Center	Conservation genetics, avian behavioral ecology. *Graduate Faculty Member	
Selina Heppell, PhD	Marine fishes population ecology, life history	-FW 506 Projects

Associate Professor of Fisheries	and population dynamics of marine vertebrates, impacts of invasive species. *Graduate Faculty Member	-FW 514 Professional Development: Meeting Communications
Markus Horning, PhD Associate Professor of Wildlife	Pinniped ecology, behavioral physiology and ecology of diving animals, population dynamics and life histories of marine mammals. *Graduate Faculty Member	
Michelle Kappes, PhD Instructor, Assistant Professor of Wildlife	Spatial ecology, tracking animal movements; behavior, habitat use, and energetics of marine birds.	
Boone Kauffman, PhD Professor of Wildlife, Senior Research	Interactions of ecosystems, land use, and climate change in wetlands and tropical forests (current emphasis is on mangroves and other coastal ecosystems, tropical swamp forests, and riparian zones). *Graduate Faculty Member	-FW 545 Ecological Restoration
Patricia Kennedy, PhD Professor of Wildlife	Wildlife ecology and management, conflicts associated with the private and public land management and the ecological impact of agricultural practices on the environment. *Graduate Faculty Member	
Holger Klinck, PhD Assistant Professor of Wildlife, Senior Research	Bioacoustics. *Graduate Faculty Member	
Robert Lackey, PhD Courtesy Professor of Fisheries U.S. EPA, retired	Ecosystem management, ecological risk assessment, ecological policy. *Graduate Faculty Member	-FW 620 Ecological Policy
Bruce Mate, PhD Professor of Wildlife Director of Marine Mammal Institute	Marine Mammals, migration of whales. *Graduate Faculty Member	
Anita Morzillo, PhD Assistant Professor, Senior Research	Forest ecosystems and society	-FW 585 Consensus on Natural Resources
Dave Paoletti, MS	Behavioral ecology, herpetology, introduced species.	-FW 575 Wildlife Behavior

Instructor		
W. Douglas Robinson, PhD Professor of Wildlife Mace Professor of Watchable Wildlife	Arid land ecology, community ecology, temperate and tropical forest birds community dynamics in fragmented landscapes. *Graduate Faculty Member	-FW 551 Avian Conservation and Management -FW 581 Wildlife Ecology
Daniel Roby, PhD Courtesy Professor of Wildlife; Unit Leader, USGS Cooperative Wildlife Research Unit	Physiological ecology, energetics of birds and mammals, seabird ecology. *Graduate Faculty Member	-FW 563 Conservation Biology of Wildlife
Dan Rosenberg, PhD Courtesy, Associate Professor of Wildlife	Applied population and landscape ecology. *Graduate Faculty Member	
TBA Dana Sanchez, PhD Assistant Professor and Extension Wildlife Specialist	TBA Mammalian space use and habitat selection. human-wildlife issues. *Graduate Faculty Member	-FW 527 Principles of Wildlife Diseases
Robert Suryan, PhD Associate Professor of Wildlife	Ecology and population dynamics of marine birds, marine ecosystem processes affecting food web dynamics and life history strategies *Graduate Faculty Member

TBA		-WRP 599 Special Topics

k. Other staff

Capstone Project mentors will be from federal and state natural resource agencies in each student's local area, or an OSU Faculty or Courtesy Faculty member if a local mentor cannot be found. The Certificate Program Director or the professor responsible for FW 506 Projects may also serve as a project mentor; this has occurred twice for the Fisheries Management Certificate when students were on active military duty. A list of mentors from Fisheries Management Capstone projects is provided in Appendix A1.

The Department of Fisheries and Wildlife has a Graduate Advisor, Ms. Lisa Pierson, who works with applicants and graduate students in our certificate and degree programs. The Graduate Advisor monitors student status and notifies the Program Director if a student is doing poorly or failing to submit Leave of Absence forms or other paperwork required by the Graduate School. The Advisor

serves as a liaison to the Graduate School, Financial Aid and Scholarship Office, and Registrar's Office for all certificate students.

The Graduate Certificate Program Director (currently Dr. Selina Heppell) will review all applications, be the signatory on Leave of Absence forms and other official documents, and provide general oversight for the program. Dr. Heppell will direct both the Fisheries Management Graduate Certificate and the Wildlife Management Graduate Certificate.

Adding 40 graduate students to the Department will increase the workload of the Graduate Advisor and Certificate Program Director. Up to 25% of one classified office staff FTE will be devoted to graduate program admissions, record-keeping, and student communications.

l. Facilities, library, and other resources

The Department of Fisheries and Wildlife is housed in two buildings on the Corvallis main campus and at several locations around the state. In addition, research is conducted at several off-campus facilities. Because most students admitted to the Graduate Certificate in Wildlife Management will be Ecampus online learners, the current facilities are sufficient for meeting the needs of these students.

Hatfield Marine Science Center (HMSC)--The HMSC (<http://hmsc.oregonstate.edu/index.html>) is located in Newport, Oregon, approximately 53 miles west of Corvallis. Several tenure-track faculty members, research faculty, instructors and courtesy faculty members are housed at HMSC. The HMSC brings OSU's diverse marine science programs together for effective collaboration and higher national and international visibility. The Center plays an integral role in marine and estuarine research and instruction, as a unique laboratory facility serving resident scientists and graduate students, and as a base for oceanographic research. The Department of Fisheries and Wildlife offers 16-24 credits of courses at HMSC during the fall term, some of which are applicable to the Graduate Certificate in Wildlife Management. There are also course offerings in the summer, although currently those are restricted at the undergraduate course level. Future course offerings are in the planning stages with Itchung Cheung, Director of Academic Programs at HMSC. We will encourage Certificate students to consider a term at HMSC for experiential learning and networking with the agency staff that are housed there.

m. Anticipated start date

Fall Term 2013, pending review.

2. Relationship to Mission and Goals

a. Manner in which the proposed program supports the institution's mission and goals for access, student learning, research and/or scholarly work, and service.

Our current graduate program is among the largest at OSU and thus supports OSU's goals for access and student learning. Graduate Certificates in Fisheries Management and Wildlife Management provide a non-degree option for prospective students that can enhance their employment options and broaden their training in ecology and management of wildlife resources. Many of our faculty serve on state or federal panels, task forces, endangered species recovery teams, as editors of scientific journals, etc., as well as the normal complement of college and university committees. Our courtesy faculty, which are primarily from state and federal agencies, are an excellent resource for students and will contribute to networking opportunities through course instruction. This Graduate Certificate program will strengthen ties between regular and courtesy faculty in our Department.

b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

OSU's Strategic Plan, Phase II identified science of sustainable Earth ecosystems as a signature area of distinction. Conservation and management of vertebrate organisms is central in this signature area. Vertebrate organisms have captured the imagination of the American public and conserving these organisms is a high priority based on national and state policies and funding levels. The Graduate Certificate in Wildlife Management will support teaching and outreach related to sustainability, ecosystem services, ecology and management of vertebrate species, communities and their habitats and ecosystems.

c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

Online degrees and certificates are a high priority for Oregon University System. OSU trains many of the fisheries and wildlife professionals in the state and region and have good to excellent employment success (Edge 2009). Furthermore, the fish and wildlife resources of the state, which our graduates manage, have substantial economic impact in Oregon. Based on a 2009 economic survey [http://www.dfw.state.or.us/agency/docs/Report_5_6_09--Final%20\(2\).pdf](http://www.dfw.state.or.us/agency/docs/Report_5_6_09--Final%20(2).pdf), Oregonians and visitors spent \$2.5 billion dollars per year on fishing, hunting, shell fishing and wildlife viewing activities and equipment. Other states around the country report similar statistics. The long-term sustainability of this economic engine is dependent on effective management of these resources.

Graduates of our Graduate Certificate programs will advance in the employment structure of the agencies they currently work for, or be able to move into advanced degree programs.

d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.

The teaching, research and outreach of the Department of Fisheries and Wildlife are central to meeting the nation's environmental challenges and opportunities. Fisheries and Wildlife Sciences are central to the concepts of sustainability, ecosystem services, and natural resources management. It is estimated that there are approximately 3,500 fish and wildlife professionals in the state of Oregon employed by state and federal agencies or non-government organizations, and over 50,000 nationwide. The Department anticipates that successful students will benefit from the Certificate through enhanced employment opportunities, improved qualifications for graduate degree programs, and a broader understanding of the human dimensions component of wildlife conservation and resource management that is at the core of many of our FW courses and is a required component of the Graduate Certificate program.

3. Accreditation

a. Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.

There is no organization that accredits Graduate Certificates in fisheries or wildlife. However, the three primary professional societies (American Fisheries Society, Society for Conservation Biology, and The Wildlife Society) all have specific missions and codes of ethics, and provide links to courses and degree programs that meet those standards.

b. Ability of the program to meet professional accreditation standards.

The Wildlife Society (TWS)¹ has a program designed to certify professionals at two levels (Associate and Full Certification). However, certification is not a requirement for employment in most state or federal agencies. Undergraduates of our programs generally qualify for certification depending on electives they choose in their programs. The proposed program of study for the Graduate Certificate will not provide all of the coursework required for certification (over 100 credit hours total), but can

¹ http://joomla.wildlife.org/index.php?option=com_content&task=view&id=29&Itemid=234)

contribute to a student's efforts to attain certification as a Certified Wildlife Biologist (TWS) by allowing students to select coursework that fulfills required courses missing from their undergraduate degrees. We will continue to work with the Education Committees of the Wildlife Society and other professional societies to have the Certificate and its courses recognized for excellence in training future wildlife managers.

c. If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.

Not Applicable—see 3a and 3b above.

d. If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not. Not Applicable.

4. Need

a. Evidence of market demand. The existing Fisheries Management Graduate Certificate has been quite successful (Appendix A). Several inquiries per quarter are received from applicants who are also interested in a Graduate Certificate in Wildlife Management. According to a marketing study for the Fisheries Management Graduate Certificate, the Department and Ecampus receive about 25 inquiries per month for that program. Likewise, many applicants to the Master of Natural Resources program at OSU are interested in a Wildlife Management specialization (see email from MNR Director Badege Bishaw, Appendix B). Dr. Heppell met with Alfonso Bradoch of Ecampus prior to submission of this proposal, and received supportive feedback. In particular, there is market demand for Certificates as “add-on” options for degree-seeking students.

b. If the program's location is shared with another or similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts). After review of Environmental Science and Natural Resource Science Programs at OUS institutions, it was determined that this program does not overlap with any other OUS

program, particularly due to its on-line delivery. Letters of support are provided by University of Oregon and Portland State University (Appendix C).

c. Manner in which the program would serve the need for improved

educational attainment in the region and state. Many natural resource agencies desire additional experience or training at the graduate level for positions in biological monitoring, assessment, and management. While the Graduate Certificate is not a degree, it is a good option for students who are

1. interested in a graduate degree but are not yet competitive enough, due to a lack-luster GPA or lack of experience in the field of wildlife science;
2. interested in online education options but want to “test the waters” before committing to a full degree program;
3. seeking advancement in their current job through graduate-level coursework and completion of a relevant capstone project;
4. entering the Master of Natural Resources degree program or other graduate degree program at OSU that allows application of Graduate Certificate credits; or
5. in need of particular coursework to contribute to professional certification, such as Wildlife Scientist (administered by the Wildlife Society).

d. Manner in which the program would address the civic and cultural demands of citizenship.

The Graduate Certificate in Wildlife Management emphasizes the integration of biological and social sciences for sound conservation and resource management. The Department’s online courses encourage synthesis and thoughtful debate through Discussion Boards and individual and group projects. Students are encouraged to think critically about public perception and societal goals in addition to the biological needs of wildlife. These are essential skills for natural resource agency employees and any citizen who values wildlife and their habitats.

5. Outcomes and Quality Assessment

a. Learner Outcomes

The curriculum requirements for the Graduate Certificate in Wildlife Management are intentionally broad, to provide students with flexibility in scheduling and tailoring their Program of Study to meet their individual needs. A working professional in a resource agency may have very different needs or interests than a new graduate who is seeking experience to get into a

graduate degree program. All students will be expected to meet the following Learner Outcomes of the proposed program:

Demonstrate proficiency (overall GPA of 3.0 or greater) in graduate-level coursework in wildlife ecology and human dimensions of fisheries management.

Integrate biological and social science in a capstone research paper or outreach product designed for a specific audience: science, management agency, or general public.

Synthesize scientific information from a variety of sources and demonstrate research skills through a project proposal, outline, and revision process, as well as correct citation and documentation of sources in the capstone project.

Improve knowledge and understanding of critical wildlife management issues to prepare for advancement in the field.

b. Assessment of Learner Outcomes

Individual courses will be reviewed annually through the Electronic Student Evaluation of Teaching scores. All students will receive an exit questionnaire that includes an opportunity to evaluate their courses and experience in the Program (Appendix E). The questionnaires and mentor review forms will be reviewed by the Program Director and the Fisheries and Wildlife Curriculum Committee annually to identify program needs and potential improvements.

c. Program performance indicators

The Department of Fisheries and Wildlife conducts a statistical survey of all graduates every three years (Edge 2009). Graduate Certificate students will be included in this survey. Because the professional benefits of Certificates have not yet been fully evaluated, an active database of contact information for our Graduate Certificate students, and periodically request updates on employment status, will be maintained. Finally, it is anticipated that the networking aspect of our Graduate Certificate programs will help students maintain long-term ties to each other and resource agencies. This will be enhanced by our Facebook page and postings on our departmental web pages.

d. Nature and level of research and/or scholarly work expected of program

faculty. The Program Director will review exit surveys, course evaluations, and employment histories of Certificate students in this program as well as the Graduate Certificate in Fisheries Management, potentially synthesizing the information for publication in an education journal or commentary in an online forum, as well as presentations at regional and national meetings.

6. Program Integration and Collaboration

a. Closely related programs in other OUS universities and Oregon private

institutions. There are no Graduate Certificate programs that are entirely online that emphasize Wildlife Science and Management. An online review of existing programs in Oregon and universities affiliated with the Natural Resources Distance Learning Consortium revealed the following certificates in Natural Resources that share some characteristics with our proposed program:

Graduate Certificate in Sustainable Natural Resources (OSU): this 18 credit certificate most strongly overlaps with our proposed program in that it also requires ecology and human dimensions courses, plus an integrative project. However, the courses for this Graduate Certificate are entirely housed in the SNR program, with a strong emphasis on forest ecology and management. We feel that the SNR program and the proposed Wildlife Management Graduate Certificate program will complement each other and provide a needed additional program option for students who plan to enter the Master of Natural Resources degree. (See email response to our initial proposal draft from The SNR Director, Badege Bishaw (Appendix B)).

Graduate Certificate in Wilderness Management (U. Montana): 14-credit program of 4 management-based courses. There is a little overlap with this proposal.

Certificate of Graduate Study in Natural Resources (Virginia Polytechnic): 12-credit program, which requires a course in Conservation Ecology plus 3 additional courses in ecology, management, or policy. No capstone project is required.

Graduate Certificate in Restoration Ecology (U. Idaho): 14 credit program with, 4 courses in ecology and human dimensions of habitat restoration. This is a very specific program. There is not much overlap with this proposal.

b. Ways in which the program complements other similar programs in other

Oregon institutions. This Graduate Certificate will complement the suite of graduate level opportunities in natural resource management at OSU, providing prospective students with a stepping stone to a graduate degree program such as Master of Natural Resources, Professional Science Masters degrees, and master's or PhD programs in Environmental Science, Fisheries or Wildlife Science, Marine Resource Management, or the biological sciences. With a growing number of students seeking post-baccalaureate education, and a growing number of agencies requiring graduate-level training, there is a growing niche for Graduate Certificates.

While there are no similar programs at other Oregon institutions, our Certificate may be of value to students in Environmental Science programs. We would like to develop a tuition agreement for students at other OUS schools, but this will require negotiations with Ecampus.

c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.

Not applicable.

d. Potential impacts on other programs. Several of the courses listed in this Graduate Certificate curriculum are in other units, particularly courses in the Human Dimensions group. As with the Department's other degree and certificate programs, we seek collaboration across campus and hope that our courses and majors enhance the diversity and quality of all natural resource-based programs.

7. Financial Sustainability (see Appendix G *Budget Outline*)

a. Business Plan

The Graduate Certificate in Wildlife Management depends entirely upon existing courses and infrastructure, so there is little additional overhead. No new courses are anticipated for this program; all courses are complete or under development through our existing MOU with Ecampus for the Professional Science Master's in Fisheries and Wildlife Administration.

On the proposed Budget Worksheet, a small increase in FTE for the Program Director, Graduate Advisor, and instructor FTE to handle the increased student load, with the latter primarily devoted to supervision of capstone courses (FW 506), has been included. **Ecampus does not provide funding for advising and administrative support for graduate-level programs at this time.** We have also included an increase in the electronic library resources required for the program (Appendix G). While we do not anticipate a dramatic need for new resources, the increase in graduate enrollment will put some burden on the library system. Following consultation with Janet Webster, we have included the same library resource budget that was proposed for the PSM in Fisheries and Wildlife Administration degree: \$2,500/year plus \$175 per student per year (Appendix G).

Expected revenues are based on a conservative estimate of 15-20 students per year multiplied by 9 credit hours of FW coursework, followed by a gradual increase in enrollment to the target of 40

students per year. Revenues are calculated using the current College of Agricultural Sciences and Ecampus funding model of \$336 per credit hour returned to the academic unit.

Anticipated Ecampus Tuition Resources			
Year 1	Year 2	Year 3	Year 4
\$45,000	\$60,000	\$90,000	\$121,000

As an added benefit to our graduate programs, the proposed Graduate Certificate is expected to increase student credit hours in online graduate level courses that are part of our PSM degree, making those courses more solvent financially and providing a critical mass of students for online discussion and group project work. The addition of this Certificate will create a larger online graduate student body that will add to the credit hours in our wildlife courses as well as those of other departments represented in our proposed curriculum.

b. Plans for development and maintenance of unique resources

This Graduate Certificate will join our other online graduate programs in a partnership with Ecampus. We are dedicated to providing the best available online education, utilizing cutting-edge technologies and continually updating course materials and delivery. We have invested in a variety of equipment to enhance online instruction, including hardware to produce instructional videos, interactive software, and communication tools. We will continue to work with Ecampus on technological advances, updating older online courses first and improving our efforts to connect with distance education students. Our proposal to Ecampus for support of the Wildlife Management Graduate Certificate curriculum will include requests for updates of older courses, with an emphasis on the graduate-level component of “slash” courses. In some cases, we are separating the 400- and 500-level sections of online courses to facilitate instructor assignments and improve the content and learner outcomes of the graduate sections.

c. Targeted student/faculty ratio (student FTE divided by faculty FTE). Our online graduate courses have enrollment caps of 15 students to ensure a high faculty:student ratio and good opportunity for individual feedback and group discussions. With a target enrollment of 40 students per year and 30 online graduate courses in wildlife sciences, this proposed program should maintain a faculty:student ratio of approximately 1:1.33 for instruction. Dividing by the number of FW faculty listed above, the ratio is 1:1.5.

d. Resources to be devoted to student recruitment. Most of the recruitment for this program will be combined with advertising for our Professional Science Master’s degree, with some additional emphasis on marketing opportunities with The Wildlife Society annual meetings. We will work on a marketing plan with Ecampus and develop a webinar for prospective students, similar to

the one for our Graduate Certificate in Fisheries Management
(<http://www.youtube.com/watch?v=iS4T8lfELic>).

Appendix A. Enrollment and completion statistics for the Graduate Certificate in Fisheries Management Program.

Academic	Applicants	Admissions	Certificates awarded
2007-2008	4	3	0
2008-2009	18	15	1
2009-2010	22	15	1
2010-2011	31	20	7
2011-2012	35	22	24
2012-2013 (to date)	18	7	---

Appendix A1. List of past mentors for Capstone Projects completed for the Graduate Certificate in Fisheries Management Program.

<u>Mentor</u>	<u>Location</u>
Shelly Miller	Oregon Department of Fisheries and Wildlife
Michael Harte	College of Earth, Oceanic and Atmospheric Sciences, OSU
Selina Heppell	Fisheries and Wildlife, OSU

Hannah Gosnell	College of Earth, Oceanic and Atmospheric Sciences, OSU
Ramana Rallapudi	New Zealand Ministry for Fisheries Management
Will Young	U.S. Forest Service
John Chapman	Hatfield Marine Science Center
Alyson Mack	U.S. Fish & Wildlife Service
Joe Ebersole	Environmental Protection Agency, Corvallis
William Poytress	U.S. Fish & Wildlife Service
Rick Nemeth	University of the Virgin Islands
Katie Hildenbrand	Oregon Sea Grant
Heidi Taylor	National Oceanic and Atmospheric Administration/NMFS, SW Region
Gene Galinat	South Dakota Game Fish & Parks
Scott Heppell	Fisheries and Wildlife, OSU
Colliin Eagles-Smith	Fisheries and Wildlife, OSU
Pete Bloom	Bloom Biological Consulting
Vaclav Biza	Pyxis Laboratories
Russell Bassett	Association of Northwest Steelheaders
Peter Lawson	National Marine Fisheries Service
Holly Campbell	OSU Marine Resource Management
Gil Sylvia	Hatfield Marine Science Center
Melinda Molnar	California Dept. of Transportation, Division of Environmental Analysis
John Drotts	Stillaguamish Tribe
Aaron Podey	Florida Fish and Wildlife Conservation Commission

Scott Highleyman	Pew Charitable Trust, International Arctic Program
Domingo Ochavillo	American Samoa Department of Marine and Wildlife Resources
John Odenkirk	Virginia Dept. of Game and Inland Fisheries
Barbara Samora	Mt. Ranier National Park

Cc: Edge, W.
Subject: RE: Cat I proposal for Wildlife Certificate

Hi Selina,

Thanks for your e-mail and sharing with me the I proposal for a Graduate Certificate in Wildlife Management. This Certificate will satisfy the request from prospective MNR applicants who want to specialize in Wildlife Management. It also complements other Certificate programs at OSU. I think, it will be a great addition to the online education at OSU.

Cheers,
Badege

Badege Bishaw, Ph.D., Program Director,

Subject: Cat I proposal for Wildlife Certificate

Dear Badege,
I hope you had a fun and relaxing holiday.
I am hoping you have time to review the attached Cat I proposal for a new online Certificate in Wildlife Management. We have discussed this before, and I think there will be a strong demand for this Certificate. It should enhance both of our programs, as there are a number of applicants to MNR that have asked about a Certificate like this one that is more wildlife conservation focused than SNR or Fisheries. However, I do want your feedback before submitting this proposal because there is some overlap with the SNR Certificate.
Thanks for your time –
Selina

Fisheries and Wildlife Administration (PSMFWA)  
Coming soon: Grad Certificate in Wildlife Management

## Appendix C. Letters of Support from University of Oregon and Portland

UNIVERSITY OF OREGON  
College of Arts and Sciences

May 3, 2013

To Whom It May Concern:

Professor Heppell has shared with me a draft of the proposal to develop a graduate certificate in Wildlife Management at Oregon State University.

We have no reason to object to development of this graduate certificate as a consequence of overlap in course or degree offerings. Indeed, some of our students might find such a certificate of interest.

However, I would like to raise a related point that has to do with online courses that are offered on a self-support basis. In the past, some of our students have used the joint campus option to take courses at OSU and we have touted that in our recruitment materials. But when students are receiving a tuition waiver, as most of ours are, and when that waiver does not extend to self-support courses, it causes frustration on the part of our students.

I would like to see exploration of a remedy for this problem, whether it be a reduction in the number of self-support courses offered, or a mechanism whereby by the tuition waiver we provide to our students would work for self-support courses.

Sincerely,

Alan Dickman, Ph.D.  
Senior Lecturer and Associate Professor of Biology  
Environmental Studies Program Director

### ENVIRONMENTAL STUDIES PROGRAM

5223 University of Oregon, Eugene OR 97403-5223 T (541) 346-5000 F (541) 346-5954

*An equal-opportunity, affirmative-action institution committed to cultural diversity and compliance with the Americans with Disabilities Act*

**Subject:** Re: OSU - Proposed Online Graduate Certificate in Wildlife Management

Hi Leighann

I passed this by the Department Chairs of both Biology and Environmental Sci & Mgmt at PSU. They returned no comments, so I take that as a positive!

In general this program looks like a good addition and we support it from our vantage at PSU. Thank you for asking our opinion and good luck with the proposal,

Alan Yeakley  
Director, School of the Environment  
Portland State University

Hello Dr. Yeakley,

I just wanted to check in to see if you've had a chance to compile the input from your department chairs?

We're trying to make our deadline for the June Faculty Senate committee, any input that you have compile so far will be a great placeholder for our proposal.

We appreciate your input and effort towards our proposal, thank you.

Thank you,

Leighann Auer

Dear Leighann,

Thanks for contacting me about this. Looks like a good program to me. I've decided, though, to circulate it among a few of the most closely related dept chairs here for any input they might

have. We probably won't be able to get back to you by Tuesday, but will likely get back to you by the end of the week, at least.

Best,  
Alan Yeakley

Hello Dr. J. Alan Yeakley,

Attached you will find our Category I proposal for the Graduate Certificate in Wildlife Management.

We would appreciate any feedback on how this proposed graduate certificate relates to your program. Please review the attached materials and send your comments, concern, or support to me by May 7<sup>th</sup>, 2013.

Your timely response is appreciated, and will help us meet the next deadline for our proposal. Demand for a Wildlife Certificate is high (5-10 inquiries per term) and we hope to expedite the review in time for Fall 2013.

Thank you,

## Appendix D. Syllabus for FW 506 Projects

### FW 506 Projects Capstone Project Guidelines

Students enrolled in FW 506 are required to complete a capstone project. The capstone project is essentially an extended term paper that can be based on a literature review and/or new research data.

Each capstone project will be designed by the student and his or her mentor; as such, we expect there to be considerable variety in the types of projects and subjects covered. All students should meet the following learner outcomes:

**Identify** a fisheries resource, ecology, or conservation issue that requires sound science to provide advice to management.

**Outline** the principle components of their project, including problem identification, background information, management issues, potential solutions, and recommendations for dissemination of information and management alternatives.

**Synthesize** available data and **apply** information to development of management alternatives.

**Demonstrate** proficiency in literature review and evaluation of primary research, through development of a complete bibliography.

**Interpret** his or her mentor's advice and comments to improve the final product for submission.

|                                     |                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Purpose</b>                      | To contribute to the field of wildlife management with a product that reflects the principles and applications you have learned in your classes.                                                                                                                                                                                       |
| <b>Format</b>                       | Format is choice of student and Project Mentor. Final projects can be in any communication format – a written report or “white paper”, a documentary, or even a podcast. Podcasts or video productions require a written script.                                                                                                       |
| <b>Data Collection and Analysis</b> | Use methodology appropriate to the practice of wildlife management. This can include scientific research methods, application of analytical tools such as GIS or remotes sensing, literature review and/or the collection of material for extension and outreach materials. All materials used or referenced should be properly cited. |

|                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Standard expected</b>          | The project report must effectively communicate findings, results and/or outreach materials to an audience of wildlife management practitioners and, in some cases, the general public. You can work on a project of relevance to your employer, but work submitted for the course should be new material completed during the certificate course of study. The project content must be well researched, relevant to its target audience, reliable and academically defensible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Length and Time Commitment</b> | The length of the research project is not an indication of quality. Actual length will depend on the topic, methods and final product as agreed with the student's Project Mentor, with feedback from the FW 506 Instructor. A project must be succinct as possible and effectively communicated to its target audience. Most written projects range from 5,000 to 10,000 words excluding references and appendices. As a 3-credit course, the expectation for your time commitment is a total of 60-90 hours of work on research, analysis, writing, editing and final product production.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Supervision</b>                | <p>Although Certificate Capstone Projects are not defended like a thesis or degree-level project, we do want to provide you with feedback and help you produce an excellent product that is valuable to the scientific community, a natural resource agency, and/or the general public. There are 3 people to assist you: your Project Mentor, the Instructor of FW 506, and the Certificate Program Director.</p> <p>Your primary mentor for the project should be a scientist in your local area who works in the field of Wildlife Management. This "Project Mentor" can be an agency, academic, or NGO scientist. The Certificate Program Director (Dr. Heppell) and the faculty instructor of FW 506 can help you identify a potential Project Mentor, or connect you with a departmental faculty member if there is not a suitable mentor in your area. Your employer or supervisor can serve as your Mentor.</p> <p>The Instructor of FW 506 will monitor your progress and provide feedback on your proposed project plan, final product, and drafts as necessary.</p> <p>The Certificate Program Director will review your final product and can also give you ideas about project topics and identifying a Project Mentor.</p> |

|                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Credits</b> | <p>You must obtain a written evaluation of your final product from your Project Mentor to receive pass/fail credit for FW 506 (3 credits). Your project will also be evaluated by the course instructor, who will provide feedback on its overall quality and merit, and the Certificate Program Director. In <b>rare</b> cases, a particularly detailed capstone project may be eligible for 4 credits instead of 3. You must submit a request to the FW 506 Instructor for approval <i>before registration</i>.</p> <p>If your project cannot be completed during a single term, you can choose to take a grade of Incomplete. Incomplete courses must be completed within one year to receive credit. You will be asked to sign a contract that specifies a timeline for project completion, and submit the contract to the Certificate Program Director. If you take FW 506 in your final term and receive an Incomplete, you will also need to register for at least 3 credits each subsequent term (or apply for a Leave of Absence) to satisfy OSU's Continuous Enrollment Policy.</p> |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## Writing your Project

Final projects can be in any communication format – a written report or “white paper”, a documentary, or even podcast. Videos and podcasts do require a written script. Regardless of format, though, the project needs to meet high academic standards. The following are basic guidelines for mentors and students.

1. Establish a topic and clearly address it from the beginning of the work and stay focused. Prepare a two to three page project proposal that outlines your project and share this proposal with your Project Mentor and the FW 506 Instructor. Get feedback on the scope of your project – is it too broad, too narrow, or appropriate for the amount of work expected? What problem are you planning to address?
2. Establish good communication with your Project Mentor early in the process. It is up to you and your mentor to establish a reasonable timeline and set of deliverables for feedback. If you change aspects of your project let your mentor know and discuss the change before making it.
3. The Oregon State University Libraries provide access, delivery and reference services that support the research of needs of students taking courses through Ecampus. The [Ecampus library services page](#) has the most complete information.
4. Structure your project carefully. You need a clear introduction, a well-structured body of the essay and a high-impact conclusion. Most written projects follow some variation of the following:

- Abstract/Executive Summary. A short summary of what you did, why you did it, what you found and why this matters.
- Introduction & research question(s). This explains what your research is about, why it is important and lists the research questions you are trying to answer.
- Background and method. This section or sections provides the foundation for your research. What does the peer reviewed literature say about the topic, what information is there in other reports and papers? How are you going about conducting your research explained in enough detail so someone else could repeat it. You should also describe similar studies and what they found.
- Results or case study. Use diagrams and tables to summarize what you found and highlight the most significant aspects of your findings.
- Discussion and conclusion. Here is where you describe the importance of your findings, the strengths and weaknesses of your study, areas for further investigation by someone else or you in the future, etc. Your concluding pages should highlight the main implications of what you found for fisheries management.
- References (see below).
- Appendices. Here is where you put additional information, details and results that are too long to include in the main text or are of less relevance to your key findings.

5. Writing style is important – this should be a professional document. Refer to writing guides such as Strunk and White’s Elements of Style. Proofread for spelling and grammar – again and again and again. If you are a poor writer, you should have your draft paper edited by someone before sending it to your mentor to review, and you may need to have the final draft professionally edited. You will likely need to do at least 2 drafts before finalizing your product; make sure you plan for the time needed to review and revise.

Reference your work appropriately, throughout the document and in your bibliography. A bibliography is required even if your final product is outreach material for the public. Referencing correctly is important for two reasons: (1) to give your own arguments greater weight by supporting them with references from peer reviewed journals and other sources; and (2) to acknowledge the source of a fact and/or other writers' thinking and the influence they have had on you.

The OSU Library has resources for how to cite appropriately. Do not use web sites as primary sources of information unless you can find no other source. It’s OK to use a footnote or endnote style of reference. You must include a citation in every sentence that includes information sourced from an article or other reference. You can’t just put a citation at the end of a paragraph. For example:

Multi-criteria methods are not based on monetary valuations like cost-benefit analysis, but on a more general weighting system (Kiker et al. 2005). The weighting system reflects preferences about the importance of differing outcomes such as environmental protection, economic efficiency or social well-being (Harte and Lonergan 1995; Leung 2006).

You are encouraged to go to this Rutgers webpage to learn more about proper citations:

<http://sociology.camden.rutgers.edu/curriculum/citation.htm>, which includes a citation generator called Citation Machine. <http://citationmachine.net/>. You are strongly urged to use it if you are unsure how to cite your references. Unless otherwise instructed by your mentor you can use any of the different "styles" listed although you are urged you to use APA or Chicago. These are the two most common styles. It is never OK to "cut-and-paste" material written by someone else into your document without quotations, and you should **use quotes sparingly**. We expect the writing and synthesis to be your own!

All podcast and videos or other outreach products must have a script that is referenced appropriately and in the recorded version appropriately acknowledges the contribution of others.

### **Timeline**

Start thinking about project ideas early in your Program. You may want to run your ideas for a project past the Program Director (Dr. Heppell), who can also give you ideas for appropriate people to approach about serving as your Project Mentor.

Although the course (FW 506) is only for one term, it is sometimes difficult to complete a project from start to finish in three months, particularly if you have a job, other classes, or family obligations. You can take an Incomplete for the course (with your Project Mentor's agreement), but a better plan is to get started on the basic information gathering and structure of your project before you actually register for FW 506. Incomplete courses must be completed within one year to receive credit. If you take FW 506 in your final term and receive an Incomplete, you will also need to register for at least 3 credits each subsequent term (or apply for a Leave of Absence) to comply with OSU's Continuous Enrollment policy.

An outline of your project should be submitted for evaluation by no later than the middle of your term of enrollment in FW 506 (approximately week 5). By the end of the term, you must submit either your final capstone project or a progress report and timeline for completing the project. Final capstone project reports should be submitted at least one week prior to the end of the term to allow adequate time for review and comments.

Work with your Project Mentor on a plan of work and detailed timeline with specific milestones and check-in dates. That way, you'll know if you are falling behind schedule and need to re-evaluate the project plan. Be sure to plan for adequate review and revision time; your complete draft should be completed in week 8 of the term, to allow at least a week for review and a final week for revision and product submission to the FW 506 Instructor.

## Appendix E. Assessment tools for the Graduate Certificate in Wildlife Management

### Exit Survey

#### Graduate Certificate Student Exit Questionnaire

Wildlife Management

Oregon State University

---

Please complete the following survey. We will send your signed Certificate by mail after we receive your survey.

StudentName:

---

*(Please Print or Type)*

(Last)

(First)

(Middle)

OSU ID number \_\_\_\_\_

Was your Wildlife Management Certificate completed through Ecampus? ☐ Yes ☐ No ☐ Partially (i.e. Some courses)

Did you apply for ☐ and/or receive ☐ financial aid for this program? Did you take out a student loan?  
☐ Yes ☐ No

Were you also pursuing an advanced degree while enrolled in the Certificate Program? ☐ Yes ☐ No

If yes, was it a... ☐ M.S. ☐ M.A. ☐ PhD ☐ Thesis ☐ Non-Thesis ☐ Other

If other, name degree and university\_\_\_\_\_

What was your motivation for joining this Certificate Program (choose all that apply):

- ☐ Job or career advancement
- ☐ General interest in topic
- ☐ “Stepping stone” to advanced degree in a related field
- ☐ Need for more breadth in my natural resource management field
- ☐ To try out online graduate courses and programs
- ☐ Other\_\_\_\_\_

Using the following scale, please indicate the extent to which you agree with each of the following statements about the program of study you completed. Please note that N/A means no opinion or not applicable.

|   |                                                                                                                                                           | Disagree |   |   | Agree |    |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------|----------|---|---|-------|----|
|   |                                                                                                                                                           | 1        | 2 | 3 | 4     | NA |
| 1 | Pre-enrollment information provided on the website and through the program advisor and/or director was helpful and matched my expectation and experience. | 1        | 2 | 3 | 4     | NA |
| 2 | I felt I was prepared for the coursework that I chose for my certificate                                                                                  | 1        | 2 | 3 | 4     | NA |
| 3 | I received adequate guidance and advice on my Plan of Study and procedures for completion of the Certificate.                                             | 1        | 2 | 3 | 4     | NA |
| 4 | I gained an appreciation for both ecological science and human dimensions components of fisheries management through this program.                        | 1        | 2 | 3 | 4     | NA |
| 5 | I gained useful skills and/or knowledge through my capstone project.                                                                                      | 1        | 2 | 3 | 4     | NA |
| 6 | I received appropriate and useful feedback on my capstone project from                                                                                    | 1        | 2 | 3 | 4     | NA |

my mentor.

|   |                                                                                                                |   |   |   |   |    |

| 8 | The Certificate helped prepare me for the next step in my career.                                              | 1 | 2 | 3 | 4 | NA |

What would you tell a student asking for advice about this program?

After reflecting on the program, please specify the course that was the best experience for you, and comment on the reasons why.

Course Number or Name:

---

Instructor:

---

Comments:

In contrast, please specify the course that was the biggest disappointment for you, and comment on the reasons for your disappointment.

Course Number or Name:

---

Instructor:

---

Comments:

After completing the certificate, I plan to:

☐ Continue my graduate education   ☐ Look for work   ☐ Travel   ☐ Continue at my current job.

Briefly describe the job or position you are looking for or have obtained:

Please complete/comment in the following statements: "If I were the Director of the Graduate Certificate in Wildlife Management, the first thing I would do to improve the program would be to ...

Do you have any other comments/advice regarding the Graduate Certificate Program in Wildlife Management?

As a follow-up, we hope to track how graduates are doing in terms of employment and satisfaction with the education they received from the program. If you are willing to participate in this, please provide your e-mail and mailing address below:

## Mentor Review Form

### Graduate Certificate in Wildlife Management Capstone Project Review Form for Mentors

All students taking the Graduate Certificate in Wildlife Management are required to complete a capstone project (FW 506). Thank you for agreeing to serve as a mentor for one of our students. This Project Evaluation Form is designed to help you review the student's progress and final product, which will also be evaluated by the Instructor of the course and the Certificate Program Director.

Please answer the following questions about each component of the project, along with any detailed comments that you wish to add. We are interested in hearing about your interactions with the student and your experience. This form and your comments will be reviewed by the Program Director and retained in the student's file.

Please rate the following from Poor to Exceptional by placing an "x" in the appropriate box:

| Project Component or quality                                                                         | Poor<br>1 | 2 | Good<br>3 | 4 | Exceptional<br>5 | Did not<br>review or<br>unable to<br>rate |
|------------------------------------------------------------------------------------------------------|-----------|---|-----------|---|------------------|-------------------------------------------|
| Initial conceptualization of the product or topic                                                    |           |   |           |   |                  |                                           |
| Project plan and outline                                                                             |           |   |           |   |                  |                                           |
| Product revisions (did the paper or outreach product improve according to your expectations/advice?) |           |   |           |   |                  |                                           |
| Use and proper documentation of scientific information (biological or social sciences)               |           |   |           |   |                  |                                           |
| Integration of fisheries-related ecology and human dimensions of natural resource management         |           |   |           |   |                  |                                           |
| Final Product                                                                                        |           |   |           |   |                  |                                           |
| Value of product to its intended audience                                                            |           |   |           |   |                  |                                           |

## Appendix F. Library Assessment for Wildlife Management Certificate

### OSU Libraries Collection Development

#### Library Evaluation for Category I Proposal

Proposal for the Initiation of New Instructional Program Leading to a Graduate  
Certificate in Wildlife Management  
Title of Proposal

Fisheries and Wildlife  
Department

College of Agricultural Sciences  
College

The subject librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

☒ [ X ] adequate to support the proposal

Estimated funding needed to upgrade collections or services to support the proposal (details are attached)

Year 1: \$1000      Ongoing: continuation of current e-campus support model

Comments and Recommendations:

Date Received: March 18, 2013

Date Completed: March 29, 2013

**Oregon State University Libraries Evaluation of the Collection supporting:  
A Certificate in Wildlife Management**

**Overview:**

The OSU Libraries maintain a strong wildlife management collection. However, wildlife management information entails more than biology, expanding into human dimensions, including anthropology and environmental policy and economics. The Libraries collect in all these disciplines at varying levels. Fortunately, the resources to support a wildlife management certificate are, for the most part, available in the OSU Libraries' collections. The OSU Libraries also provides a digital repository that may be a means to archive and deliver the program's anticipated collection of capstone projects. This would enhance our collections as well as support the certificate program.

**Collections:**

The current relevant collections are housed at the Valley Library. In the 2003 Collection Assessment that examined the monograph and periodical resources, wildlife components of the OSU Libraries' collections was deemed adequate to support PhD level research. These levels are more than adequate for the science components of the certificate program. The other subject areas that cover this field are also adequate to support the program.

*Journals*

OSU Libraries has online access to over 600 journals in the disciplines of zoology, ecology and environmental sciences. This includes almost all of the highest impact journals in the related disciplines, as determined by the Journal Citation Report (JCR). See Table 1 for details. The vast majority of these titles are available electronically, so all students will be able to access them. For titles not available online, OSU Libraries provides the Scan and Deliver service, which e-mails PDF scans of the print articles to the student.

*Subject-Specific Indexes and Abstracts:*

The library subscribes to a number of databases that provide access to the literature in this field. These include the following:

03/29/2013

- Wildlife and Ecology Studies Worldwide, 1935-present
- Environmental Sciences and Pollution Management (ESPM), 1967-present
- GreenFILE – 1960s-present
- Birds of North America - 2002
- Zoological Record, 1993-present
- Web of Science (Science Citation Index), 1965-present

These databases are accessible to all OSU students regardless of location. Combined with GoogleScholar, identifying relevant information should not be problematic.

#### *Monographs*

The monographs collection in wildlife management and the related disciplines is adequate to support graduate degree programs. Since the proposed certificate is online-based, the Libraries growing collection of electronic books (e-books) will be valuable for the program. The library owns over 100 e-books specifically on wildlife management. In addition, the e-book collection includes the Springer Environmental Sciences collection of over 1,500 books, plus individual e-book titles on relevant topics.

#### **Access costs:**

A significant part of this certificate program relies on distance delivery of the course and the materials needed by students not located on an OSU campus. The certificate program proponents intend to deliver much of the program via Blackboard. Consequently, it is imperative that ready access to available library resources be integrated into those online courses. The Libraries should be involved in the identification and incorporation of information resources into Blackboard as there are persistent quality and copyright issues.

For material not available electronically or physically at the OSU Libraries, students will need to borrow from other institutions. The cost for borrowing materials has decreased as the OSU Libraries develop more efficient systems and more extensive relationship. The average cost to borrow an item is around \$6.75; if we must purchase it, the cost averages around \$35. It is hard to estimate how much graduate students will need materials from beyond OSU; however, in the past, a typical graduate student in the College of Agricultural Science borrowed five items per year from outside the OSU libraries. Given current data, that number is probably still applicable. If a student spends a total of four quarters completing the certificate program, the cost per student for access to materials not readily available is ranges from \$30 to \$175. For a cohort of 20 students, this amounts to \$600 to \$3500. This cost should be covered by the Ecampus fee and the subsequent transfer of some Ecampus funds to the OSU Libraries.

#### **Library staff and expertise:**

Janet Webster is the subject librarian for wildlife management. In that capacity, she manages the collection, provides instruction as requested, responds to reference inquiries, and develops materials to assist faculty members and students in their research. As a professor, she also holds adjunct status in the Fisheries and Wildlife Department and CEOAS as part of the Marine Resource Management faculty. Additional services include the physical attributes of the libraries including excellent computer facilities, study areas for individual and group work, and practice rooms for students.

03/29/2013

Additional expertise is available through electronic reference and mediation for accessing materials not readily available.

**Summary:**

Given the anticipated enrollment for the Graduate Certificate in the Management of Wildlife, the OSU Libraries resources are adequate and would be excellent with the addition of international policy and management material. Delivery systems are in place to address the needs of distance students; however, ongoing access costs should be recognized and negotiated.

**Recommendations:**

Access costs:

- Integration of library resources into Blackboard
  - One time cost: \$1,000 (librarian time)

03/29/2013

## Appendix G. Budget Outline

### Budget Narrative

Because the Graduate Certificate in Wildlife Management depends on existing courses and administrative infrastructure, expected costs are limited to accommodation of additional students.

Administration: Dr. Selina Heppell, Program Director for the Graduate Certificate in Fisheries Management and the Professional Science Masters in Fisheries and Wildlife Administration, will be Director of this proposed Graduate Certificate Program. Duties include program oversight, scheduling classes, reviewing applicant files, arbitration of student-instructor conflicts, eSET and exit survey review, general student advising. Budget: 0.1 FTE + OPE

Administrative Support: Lisa Pierson, Graduate Advisor, is currently providing support to the Department's graduate programs. She will provide information to prospective students, compile application materials, monitor student progress, and serve as the liaison to the Graduate School and Ecampus. Budget: 0.2 FTE + OPE

Faculty: To cover additional sections of graduate-level online courses, as well as supervision of FW 506 Projects, we request 0.4 FTE + OPE of recurring funds for Instructors.

We are not planning to provide scholarships for Graduate Certificate students, as the program is only 18 credits and most students are part-time only. It is possible that GTA positions to cover online undergraduate courses will be available to highly qualified Certificate students (i.e, those with substantial expertise in the course subject matter and some level of teaching experience).

Library Budget: These line items are from the official Library Review (Appendix E.).

Revenue: Anticipated revenue is conservatively calculated for 9 online graduate credits per year at the current rates provided by Ecampus and the College of Agricultural Sciences (\$336/ SCH). With the addition of faculty and support staff FTE, the Program is expected to require support for the first 2 years (about \$21,000 in Year 1 and \$9,000 in Year 2), but should be self-sustaining thereafter, with Ecampus tuition resources at \$19,000 in Year 3 and \$48,000 in Year 4.

## Draft Budget Worksheet

### OSU Internal Budget Outline Form

Estimated Costs and Sources of Funds for Proposed Program

Total new resources allocated to the Proposed Program, if any.  
If no change in resources is required, the budgetary impact should be reported as zero.

PROGRAM TITLE: Graduate Certificate in Wildlife Management

BUDGET PERIOD: From FY 2013-2014 to FY 2017-2018

## U. S. GEOLOGICAL SURVEY

Forest and Rangeland Ecosystem Science Center  
777 NW 9<sup>th</sup> St., Suite 400  
Corvallis, Oregon 97330-6169

March 19, 2013

Dr. Daniel Edge  
Department of Fisheries and Wildlife  
Oregon State University, Nash 104  
Corvallis, OR 97331-3803

Dear Dan:

Thank you for sharing your program proposal for a Graduate Certificate in Wildlife Management with me. I am thrilled to see Oregon State University moving in this direction, and I am pleased to offer a letter of support for your proposal. I can speak most directly about the USGS Science Center I lead, but I am certain that other USGS Science Centers would have similar needs for training employees. Furthermore, having also been a manager with the U.S. Fish and Wildlife Service for many years, I believe they would also value the program you have proposed.

I have numerous employees on temporary assignment that only have a BS degree. I believe that many of these employees would benefit from your program in two ways. The additional training would enhance their skills and effectiveness in their current jobs. More importantly, a Graduate Certificate will allow some of these employees to go on to MS degrees and make them more competitive for other positions in the future. I also like the idea that the certificate would be available completely online. Many of our employees are at remote field stations and it is not feasible for them to complete a graduate certificate otherwise. In addition, many of these employees have jobs that would require the flexibility that only an online program will provide. What you have proposed in development of an online graduate program will fill a need for many of our current and future employees, and help them fulfill their full potential.

Thanks again for seeking my input. Please let me know if I can provide any additional support.

Sincerely,

Carol Schuler  
Director

Department of Fisheries and Wildlife  
Oregon State University  
Corvallis, Oregon 97331

March 15, 2013

W. Daniel Edge, Head  
Department of Fisheries and Wildlife  
Oregon State University  
Corvallis, OR 97331-3803

Dear Dan;

This letter is written based on my past experience as Deputy Director of the U.S. Environmental Protection Agency's national research laboratory located in Corvallis.

The proposed Graduate Certificate in Wildlife Management would be an invaluable option for students interested in pursuing graduate programs in environmental science, natural resources, marine resource management, forestry, range, and related disciplines. I enthusiastically support implementing the proposal.

Sincerely,

A handwritten signature in black ink that reads "Robert T. Lackey". The signature is written in a cursive, flowing style.

Robert T. Lackey

April 15, 2013

W. Daniel Edge  
Department Head  
Department of Fisheries and Wildlife  
Oregon State University, 104 Nash Hall  
Corvallis, OR 97331-3803

Dear Dr. Edge,

The Oregon Department of Fish and Wildlife (Department) would like to express its support for the development and implementation of a Graduate Certificate in Wildlife Management at Oregon State University. Opportunities for further career enhancement or professional development can be limited by the inability of many working professionals to return full time to a university to pursue additional coursework. By offering this type of on-line Graduate Certificate, Oregon State can fill a need for the working professional as well as the Department.

The Department would point to the successful implementation of the Graduate Certificate in Fish Management as reason enough to expand this program to include Wildlife. Department leadership is constantly evaluating staff and looking for avenues to provide them with meaningful opportunities to upgrade their technical skillsets in a manner that will benefit the Department. Staff that successfully completes this program would be more likely to critically evaluate routine biological and scientific exercises in a manner that strengthens the Department's programs. In addition, staff could utilize these new skillsets to be more competitive in future job opportunities. Finally, many of the professional societies require additional course work to maintain certification, and this program would certainly fill that role.

I hope that you are successful in implementing this new Graduate Certificate in Wildlife Management.

Sincerely,

Eric V. Rickerson  
Wildlife Division Deputy Administrator

C: Ron Anglin - Wildlife Division Administrator

May 12, 2013

Dr. W. Daniel Edge  
Department Head  
Department of Fisheries and Wildlife  
Oregon State University  
104 Nash Hall  
Corvallis, OR 97331-3803

Dear Dan:

Thank you for sending me a copy of your proposal for an online Graduate Certificate in Wildlife Management. I discussed the proposal with our Assistant Director and his deputy to see to see if the Bureau of Land Management would send an official letter of support. Unfortunately, while they agreed that the program would be an excellent opportunity for our employees, they were concerned that an official letter of support could be perceived as the Bureau showing preference to one university over another. I'm afraid the best I can do at this time is to offer my personal support.

Over the last 35 years I have worked as a wildlife biologist for the BLM and Forest Service in five states and now serve on Headquarters staff as BLM's wildlife program leader. In virtually every position in which I've served, including here in DC, other biologists with BS degrees have expressed to me their wish that they could pursue graduate level class work in wildlife. Also, a number of individuals who were employed in other specialties told me of their desire to gain the qualifications to apply for wildlife biologist positions. In many cases the main obstacle to pursuing these goals was a lack of appropriate distance education classes.

In my opinion, your proposed program would provide a valuable career enhancement opportunity for existing employees. It would also be of benefit to individuals in the federal, state, and private sector who wish to obtain professional certification from The Wildlife Society. During my 6 years serving on The Wildlife Society Certification Review Board, the most frequent reason for denial of applications for Associate or Certified Wildlife Biologist status was a lack of coursework in wildlife management and/or natural resource policy, law, and administration. When I was Chair of the CRB, rejected applicants often asked me if I knew of any way in which they could obtain the classes need for certification. At the time the options were very limited if they did not live near a university. Your proposed program would provide an excellent opportunity for individuals facing a similar situation today.

It is my understanding that one our biologists completed the OSU Certificate Program in Fisheries, has been doing excellent work in the field, and speaks highly of the program. I hope you are successful in obtaining approval for a similar program in Wildlife Management.

Best Wishes,

James M. Ramakka  
Certified Wildlife Biologist®  
National Wildlife Program Lead  
Bureau of Land Management

## Category I Proposal Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

*For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)*

## **Oregon State University Libraries Evaluation of the Collection supporting: A Certificate in Wildlife Management**

### **Overview:**

The OSU Libraries maintain a strong wildlife management collection. However, wildlife management information entails more than biology, expanding into human dimensions, including anthropology and environmental policy and economics. The Libraries collect in all these disciplines at varying levels. Fortunately, the resources to support a wildlife management certificate are, for the most part, available in the OSU Libraries' collections. The OSU Libraries also provides a digital repository that may be a means to archive and deliver the program's anticipated collection of capstone projects. This would enhance our collections as well as support the certificate program.

### **Collections:**

The current relevant collections are housed at the Valley Library. In the 2003 Collection Assessment that examined the monograph and periodical resources, wildlife components of the OSU Libraries' collections was deemed adequate to support PhD level research. These levels are more than adequate for the science components of the certificate program. The other subject areas that cover this field are also adequate to support the program.

### *Journals*

OSU Libraries has online access to over 600 journals in the disciplines of zoology, ecology and environmental sciences. This includes almost all of the highest impact journals in the related disciplines, as determined by the Journal Citation Report (JCR). See Table 1 for details. The vast majority of these titles are available electronically, so all students will be able to access them. For titles not available online, OSU Libraries provides the Scan and Deliver service, which e-mails PDF scans of the print articles to the student.

*Subject-Specific Indexes and Abstracts:*

The library subscribes to a number of databases that provide access to the literature in this field. These include the following:

- Wildlife and Ecology Studies Worldwide, 1935-present
- Environmental Sciences and Pollution Management (ESPM), 1967-present
- GreenFILE – 1960s-present
- Birds of North America - 2002
- Zoological Record, 1993-present
- Web of Science (Science Citation Index), 1965-present

These databases are accessible to all OSU students regardless of location. Combined with GoogleScholar, identifying relevant information should not be problematic.

### *Monographs*

The monographs collection in wildlife management and the related disciplines is adequate to support graduate degree programs. Since the proposed certificate is online-based, the Libraries growing collection of electronic books (e-books) will be valuable for the program. The library owns over 100 e-books specifically on wildlife management. In addition, the e-book collection includes the Springer Environmental Sciences collection of over 1,500 books, plus individual e-book titles on relevant topics.

### **Access costs:**

A significant part of this certificate program relies on distance delivery of the course and the materials needed by students not located on an OSU campus. The certificate program proponents intend to deliver much of the program via Blackboard. Consequently, it is imperative that ready access to available library resources be integrated into those online courses. The Libraries should be involved in the identification and incorporation of information resources into Blackboard as there are persistent quality and copyright issues.

For material not available electronically or physically at the OSU Libraries, students will need to borrow from other institutions. The cost for borrowing materials has decreased as the OSU Libraries develop more efficient systems and more extensive relationship. The average cost to borrow an item is around \$6.75; if we must purchase it, the cost averages around \$35. It is hard to estimate how much graduate students will need materials from beyond OSU; however, in the past, a typical graduate student in the College of Agricultural Science borrowed five items per year from outside the OSU libraries. Given current data, that number is probably still applicable. If a student spends a total of four quarters completing the certificate program, the cost per student for access to materials not readily available is ranges from \$30 to \$175. For a cohort of 20 students, this amounts to \$600 to \$3500. This cost should be covered by the Ecampus fee and the subsequent transfer of some Ecampus funds to the OSU Libraries.

### **Library staff and expertise:**

Janet Webster is the subject librarian for wildlife management. In that capacity, she manages the collection, provides instruction as requested, responds to reference inquiries, and develops materials to assist faculty members and students in their research. As a professor, she also holds adjunct status in the Fisheries and Wildlife Department and CEOAS as part of the Marine Resource Management faculty. Additional services include the physical attributes of the libraries including excellent computer facilities, study areas for individual and group work, and practice rooms for students.

Additional expertise is available through electronic reference and mediation for accessing materials not readily available.

**Summary:**

Given the anticipated enrollment for the Graduate Certificate in the Management of Wildlife, the OSU Libraries resources are adequate and would be excellent with the addition of international policy and management material. Delivery systems are in place to address the needs of distance students; however, ongoing access costs should be recognized and negotiated.

**Recommendations:**

Access costs:

- Integration of library resources into Blackboard
  - One time cost: \$1,000 (librarian time)

**To:** Duffett, Jean  
**Subject:** Proposal Graduate Certificate in Wildlife Management

Good Morning Jean,

Gary Beach has asked that we acquire a response from the University Space Committee for our new proposed Fisheries and Wildlife Online Graduate Certificate in Wildlife Management.

Attached is a copy of our Proposal for Review. Please let me know if you have any questions.

Thank you,

Leighann Auer

**DATE: February 14, 2013**

**TO:** Robert Allan, Director of Student Development

**FROM:** Selina Heppell, Director of On-line Graduate Programs, Department of Fisheries and Wildlife

**SUBJECT:** Curriculum Liaison: Graduate Certificate in Wildlife Management

The attached Category I proposal and attachments describe a new Certificate program in Wildlife Management. This proposal stems from our successful Graduate Certificate in Fisheries Management, which currently serves 36 students and has awarded 33 certificates over the past 4 years. This Certificate is designed to be completely on-line, but will also be available to students on-campus.

In accordance with the liaison criteria in the Curricular Procedures Handbook, this memo serves as notification to your programs of our intent to make this curricular change. Importantly, there may be courses listed in the proposed curriculum that are in your programs.

Please review the attached materials and send your comments, concern, or support to me by February 28<sup>th</sup>, 2013. Your timely response is appreciated. Demand for a Wildlife Certificate is high (5-10 inquiries per term) and we hope to expedite the review in time for Fall 2013.

Please note that a lack of response will be interpreted as support.

Thank you for your time and input.

A handwritten signature in black ink that reads "Selina Heppell". The signature is written in a cursive, flowing style.

**Subject:** Re: Curriculum Liaison: Graduate Certificate in Wildlife Management Proposal

Leighann,

I have reviewed the proposal for the Graduate Cert. in Wildlife Management and would support this certificate. Given the success DF&W has produced with the Fisheries Certificate, I'm confident they already know the challenges and issues associated with delivering a quality certificate. I'm confident it will be successful.

**Subject:** RE: Cat I proposal for Wildlife Certificate

Hi Selina,

Thanks for your e-mail and sharing with me the I proposal for a Graduate Certificate in Wildlife Management. This Certificate will satisfy the request from prospective MNR applicants who want to specialize in Wildlife Management. It also complements other Certificate programs at OSU. I think, it will be a great addition to the online education at OSU.

Cheers,  
Badege

**Subject:** Cat I proposal for Wildlife Certificate

Dear Badege,

I hope you had a fun and relaxing holiday.

I am hoping you have time to review the attached Cat I proposal for a new online Certificate in Wildlife Management. We have discussed this before, and I think there will be a strong demand for this Certificate. It should enhance both of our programs, as there are a number of applicants to MNR that have asked about a Certificate like this one that is more wildlife conservation focused than SNR or Fisheries. However, I do want your feedback before submitting this proposal because there is some overlap with the SNR Certificate.

Thanks for your time –  
Selina

Hi Alfonso,

Thank you for your review and questions about our Graduate Certificate Proposal. Answers to your questions are below. We will be submitting the final proposal today.

Cheers –

Selina

Ecampus Curriculum Liaison for the proposed Graduate Certificate in Wildlife Management

Although a formal proposal to Ecampus for offer of the program online has not yet been received, Ecampus does support this curricular proposal. That said, we do have several comments for consideration:

- Pg. 5 – Second full paragraph. “The Graduate Certificate in Wildlife Management will be offered entirely online through Ecampus, but *will also be available to Corvallis on-campus students ...*”
Is the proposed program intended to be available only through Ecampus, or also through Corvallis campus? Tuition would be problematic for campus-based students opting to take a fully online program, unless this is clearly articulated.

Many of the courses listed on the curriculum are available on campus, and a small number of on-campus students are expected to enroll in the Certificate. The Fisheries Management Certificate has seen on-campus enrollment of 2-4 students per year. On-campus students may choose courses that are offered on campus, or take Ecampus courses with appropriate tuition and fees. The following sentence has been added to the Overview page:

Many of the courses have on-campus sections, and on-campus students can choose on-campus offerings or take the on-line courses with the appropriate tuition and fees.

- Pg. 9 - Second paragraph, last sentence. The proposal states students will be able to add the proposed graduate certificate to the existing Master of Natural Resources program. Has there been discussion with the MNR about coordination, administration and potential revenue sharing to cover administrative costs?

Yes, please see liaison letter from Badege Bishaw, Director of MNR.

- Pg. 11- Other staff. Indicates Lisa Pierson, F&W Graduate advisor will advise this new population of students. Will this position coordinate in some way with the MNR director for students linking this graduate certificate to the MNR?

The FW Certificate Program Director (Selina Heppell) meets quarterly with MNR and other Certificate Directors to review MNR applications and discuss MNR enrollments and administration. Certificate students will have to apply to MNR and are not guaranteed admission.

- Pg. 14 – Accreditation, paragraph b. The proposed program will not provide all of the coursework required for certification through The Wildlife Society. What impact will this have on graduates’ employability if the student does not choose to take the additional coursework necessary to meet TWS certification requirements?

We have modified the language regarding Wildlife Society certification throughout the proposal. The Certification requires over 100 hours of coursework, but that includes undergraduate courses. We see the Wildlife Certificate as providing an opportunity for students to add coursework that they may be deficient in to obtain the certificate, but clearly 18 credits is not sufficient for certification. Our Graduate Advisor will be able to work with a student who is working on Certification to choose courses that can contribute to it. This Certification is administered by a professional society; we will be working with the Education Committee of The Wildlife Society (TWS) to develop this connection more fully. Here is how we are phrasing the TWS connection now:

- a) [for students who are] in need of particular coursework to contribute to professional certification, such as Wildlife Scientist.

(Executive Summary and section 4d Need)

- Pg. 16 – Ecampus questions the statement that “Graduate Certificates for natural resource fields are an experiment, along with graduate education.” The research literature supports the efficacy of online and hybrid learning as superior to solely site-based learning.

This sentence has been deleted.

**DATE: February 14, 2013**

**TO:** Flaxen Conway, Director of Marine Resource Management

**FROM:** Selina Heppell, Director of On-line Graduate Programs, Department of Fisheries and Wildlife

**SUBJECT:** Curriculum Liaison: Graduate Certificate in Wildlife Management

The attached Category I proposal and attachments describe a new Certificate program in Wildlife Management. This proposal stems from our successful Graduate Certificate in Fisheries Management, which currently serves 36 students and has awarded 33 certificates over the past 4 years. This Certificate is designed to be completely on-line, but will also be available to students on-campus.

In accordance with the liaison criteria in the Curricular Procedures Handbook, this memo serves as notification to your program of our intent to make this curricular change. Importantly, there may be courses listed in the proposed curriculum that are in your program.

Please review the attached materials and send your comments, concern, or support to me by February 28<sup>th</sup>, 2013. Your timely response is appreciated. Demand for a Wildlife Certificate is high (5-10 inquiries per term) and we hope to expedite the review in time for Fall 2013.

Please note that a lack of response will be interpreted as support.

Thank you for your time and input.

Leighann – thanks for letting me take a look at this Cat I for your proposed certificate in Wildlife Management. This looks like a well-thought out and robust program, drawing on your strengths and experiences from the Fisheries model. You have included the appropriate classes from the School of Public Policy, all of which are online and usually taught at least once a year so your students will have access to them. I wish you luck with the proposed program. Denise

**Subject:** RE: Curriculum Liaison: Graduate Certificate in Wildlife Management

Dear Brenda,  
Absolutely not! We do not expect any department to alter their course offerings to meet our needs, but we do want students to take advantage of relevant course offerings in other programs. It also promotes our goal of integration in our curricula. We just wanted to be sure to include the departments of courses we have listed as options so they would be aware of the potential for a few FW students in their courses.  
So, just to be more specific:

Basically, the question from the anthropology unit is – what is our participation committing us to in the future?  
Please just liaison with us if you develop new courses, particularly online, that might be of interest to our students.

Will we be obliged to offer the Anth 581 on a schedule F&W determines? Will we be required to offer it a certain number of times a year?  
Definitely not. It is very helpful for our planning to know when the course(s) will be offered, but if you choose not to offer a course we will simply remove it from our list of options. I anticipate that you will see 1-5 additional students per year in ANTH courses because of this program.

Will we be expected to develop any new classes in the future to support this program?  
There are no new courses planned for this program, so no, we are not expecting any!

Any information you can give me would be appreciated!  
Please let me know if there is anything else you may be concerned about.

Cheers –  
Selina

To: Kellar, Brenda
Subject: FW: Curriculum Liaison: Graduate Certificate in Wildlife Management

Hi Brenda

The email below and attached documents were sent to me by Fish and Wildlife regarding a new certificate program they will be teaching primarily online. It includes ANTH 581 as an elective, so I believe that is why I am being consulted.

I'm sending this because it would impact ANTH 581, but I can deal with them if you'd like. I think the main issue would be if there would be unreasonable demand for the course, which I don't think there would be but you are a better judge of that than I.

Let me know what you think and I can do the correspondence, or you can take it from here if you'd like.

Regards,

Michael

Hi Selina,

Thank you for sharing the Category I proposal with us. We have no objections to the graduate certificate in Wildlife Management. The program appears well thought out. And many of our GIScience students are likely to be interested in integrating GIScience with Wildlife Management.

Best wishes on a successful proposal,
Kuuipo

**An Action Plan for the
Master of Arts in Interdisciplinary Studies (MAIS)
Graduate Program**

The Graduate School
Oregon State University

September 2013

Prepared by
David Bernell
Director, Master of Arts in Interdisciplinary Studies Program

Introduction

The Master of Arts in Interdisciplinary Studies (MAIS) program has undergone a comprehensive review in 2013. As a result of this review, which has included the preparation of a self-study and an on-site review, the MAIS program has been provided with a number of recommendations to strengthen the program.

The review panel has recommended the following:

1. Expand the focus of the MAIS beyond the College of Liberal Arts, possibly including serving as an incubator for new interdisciplinary graduate programs, and increasing the Director appointment to .5 FTE or adding a Co-Director from STEM disciplines.
2. Rebrand and market the MAIS to attract top applicants and bolster the program's reputation.
3. Consider adding a writing requirement for applicants, and perhaps using GRE or GMAT scores.
4. Continue core MAIS courses and add a third on research methods.
5. Add a required research colloquium series for 2nd year students, either in addition to or in lieu of a third required core course.
6. Develop "tracks" in disciplines that cohorts could take together.
7. Establish one or two admissions cycles instead of continuing rolling admissions.
8. Require the same number of credits in each area of study.
9. Consider requiring an appendix to every thesis or project that provides an account of how interdisciplinary scholarship was achieved.
10. Develop a handbook for MAIS faculty and advisors.
11. Provide a "home" for MAIS students either in the form of a physical space or continuation of IST courses into the 2nd year.
12. Track information on students in a way that is accessible to departments and faculty.

These recommendations, along with the discussion of the MAIS program in the full report, all point to several broad objectives, which can be characterized as such:

- A. Broaden the appeal of the MAIS beyond the College of Liberal Arts
- B. Achieve a greater sense of interdisciplinarity in students' work and their identity on campus
- C. Clarify the roles, responsibilities and opportunities for students and faculty
- D. Improve program administration
- E. Enhance the reputation of the program

In order to achieve these outcomes, the MAIS program proposes to take action on several fronts. These action items are discussed below, and they include concrete steps to be taken, along with a timeframe for their implementation. Though these are broken down according to the objectives listed above, many of these changes will serve the attainment of more than one of the stated objectives.

Action Plan

A. Broaden the appeal of the MAIS (Recommendations 1 and 6)

A.1

Goal: Develop “tracks” or groups of courses/fields that work well together.

Such frameworks can broaden the appeal of the program by highlighting programs and departments that are not commonly used in the MAIS, along with those that are more commonly used. Trends that are emerging in academic research, such as human-technology interactions, or relations between humans and the built environment, can weave together fields in the social sciences and humanities with fields in the sciences, mathematics and engineering. Another possibility suggested by the review panel is a track to fulfill requirements for teaching in Northwest Community Colleges.

Action Item: The MAIS program will develop at least two “tracks” per year over each of the next two academic years. This will involve working in coordination with multiple departments and programs, with emphasis on those that have low participation in the MAIS. This will include the development of sample programs of study, and a featured web presence of these options.

Metric: The first proposed track will be developed by the end of winter term 2014, and the second one by the end of spring term 2014. A similar schedule will be followed in winter and spring of 2015 to complete a total of four tracks. New tracks will subsequently be added as the opportunity and need arises.

A.2

Goal: Engage in outreach to programs beyond those that are already well-subscribed by MAIS students.

Expansion of MAIS participation across campus will require outreach and cultivation. To that end, the MAIS Director and the faculty who serve on the admissions committee/advisory group will need to engage faculty, graduate advisors and administrators throughout campus.

Action Item and Metric: MAIS program representatives will hold a minimum of three meetings per term with faculty, chairs and directors over the next two academic years. They will target programs that have been attractive to MAIS applicants and students, but unavailable or minimally used as fields of study.

A.3

Goal: Serve as an incubator for new interdisciplinary programs at OSU.

The process of developing new degree programs at OSU is labor and time intensive, requiring the development of a Category I proposal and a comprehensive approval process. In addition to providing an interdisciplinary degree in the form of the MAIS, Interdisciplinary Programs in the Graduate School can potentially add a new function, that of housing proposed new interdisciplinary programs in order to test their feasibility. This can allow faculty and students to engage interdisciplinary projects earlier than could otherwise be achieved, while testing whether a program can be sustainable. This is an ambitious goal, and will require careful study and coordination to determine administrative needs and funding mechanisms, along with potential interest across campus and a suitable initial test case.

Action Item: The MAIS program will study this option and provide a report to the Dean and Associate Dean of the Graduate School. This report will consider the opportunities and barriers to this proposal, along with recommendations and a plan for moving forward if the proposal is deemed feasible.

Metric: The report will be provided to the Dean and Associate Dean of the Graduate School by December 2014.

One additional recommendation from the review panel was to consider expanding the appointment of the MAIS Director to .5 FTE, or to add a co-director from one of the STEM disciplines, to allow for broader program outreach, appeal and participation. It is uncommon to have Co-Directors for graduate programs, due to cost and feasibility of management. Moreover, since the MAIS has no faculty or facilities of its own, and only two courses it offers, employing two directors seems unnecessary, especially in comparison to other programs on campus. Expansion of the Director's appointment to .5 FTE could make sense if responsibility expands to include the development and supervision of an incubator type of program. However, with the current level of responsibility, the .25 FTE seems both reasonable and consistent (or better) than the level of FTE provided to other program directors on campus whose appointments include teaching, research, service and administration.

B. Achieve greater sense of interdisciplinarity in students' work and their identity on campus (Recommendations 4, 5, 8, 9 and 11)

B.1

Goal: Revise and expand core curriculum.

The MAIS program currently requires two courses, totaling 4 credit hours. The review panel recommended that additional attention be paid to research methods and interdisciplinarity in these courses, as well as an expansion of course requirements. An appropriate way to initiate this is to add a

1-credit research colloquium for students in the second year to present their research to fellow students, as well as faculty. (The MAIS already holds one or two of these types of sessions a year, but they are voluntary and few in number.) This would allow presenters to gain feedback and suggestions on their research and writing. It would also help to develop a sense of cohort among MAIS students, as added meetings throughout the entire degree program can serve in lieu of a physical space to help create a “home” for MAIS students. A colloquium can also serve to broaden program appeal by sharing interdisciplinary research and demonstrating the potential of the program to faculty across campus.

Action Item: The MAIS program will develop a required 1-credit research colloquium course for 2nd year MAIS students, and will complete the Category II approval process.

Action Item: The content and scheduling of IST 511 and 512 will be reviewed to ensure sufficient attention to diverse research methods, and to ensure optimal timing of the courses, as well as frequency of class meetings. Changes will be implemented in the current academic year.

Metrics: Completion of the Category II process for the new MAIS course will be done no later than the spring of 2014. The new course will be offered (and required of students) starting with those entering the MAIS program during the 2014-15 academic year.

B.2

Goal: Revise requirements for the program of study and thesis/project to promote interdisciplinarity. Currently, the MAIS program requires a minimum of 9 credits in each field of study and a maximum of 21 credits. The panel recommended making a change so that an equal number of credits is required in each field of study. While requiring full equality among fields may not be attainable (due to varying course credits among classes and departments, as well as course availability), diminishing the lower and upper limits to 12 minimum/18 maximum would help to achieve the goal. In addition, the panel recommended adding a requirement that each thesis/project include an appendix explaining how the student achieved interdisciplinary scholarship. This would also help to bolster the program and the work of the students.

Action Item: The MAIS Director will consult with the program’s stakeholders (the Dean and Associate Dean, the admissions/advisory group, faculty, graduate advisors, and students), to determine the support, appropriateness and feasibility of pursuing these two changes.

Metrics: A decision regarding adoption of these two proposals will be reached by the summer term 2014, and any changes to be made will be implemented no later than the end of fall term 2014.

C. Clarify the roles and responsibilities for students and faculty (Recommendation 10)

Goal: Revise the MAIS website and forms.

Meeting this objective is a communications-oriented task. It includes building on the work that is done on a periodic basis to improve the clarity and sometimes the scope of various MAIS documents, particularly the MAIS website. Some specific ideas of new materials from the review committee include a handbook for faculty to clarify their roles and responsibilities; information on new “tracks,” with sample programs of study; and a fact sheet for students to help them communicate about their work and their degree to prospective employers. Other useful ideas suggested are an FAQ section for applicants, students, faculty and administrators; and profiles of a few “success stories” from the program. All of these would be enhancements to the MAIS website, and some may be available as hard copies as well. Taking these steps will also serve the goal of improving the coordination and consistency among departments and programs, which was discussed by the review panel, but not added as a formal recommendation.

Action Item: The MAIS program will review and revise its website, and will develop new materials to ensure that all program stakeholders can 1) better understand and communicate their roles and responsibilities; and 2) maintain a clear understanding about program goals, rules and procedures.

Metric: A first round of revisions to the MAIS website will be completed by January 2014, though the process will be an ongoing one. A student fact sheet will be completed by the end of spring 2014, and a faculty handbook will be ready for use starting in the fall of 2014.

D. Improve program administration (Recommendations 7 and 12)

D.1

Goal: Simplify and streamline the admissions process.

The MAIS Director, the review panel, and the graduate advisors of programs participating in the MAIS all agree that the admissions process should be changed. Instead of having rolling admissions, the program should establish one or two admissions cycles. The MAIS will therefore establish a single admissions cycle. Applications will be due March 1 of each year, and admissions decisions will be communicated to applicants no later than April 1. (Some exceptions may be made on a case-by-case basis as warranted.) An expanded and clarified explanation of application process will be substituted for the current webpage, as per the review panel’s recommendation.

Action Item: The MAIS program will implement the admissions cycle change in the current year. The Director will revise all materials to clearly explain the new timeline and admissions process, and will work closely with staff in the Graduate School and advisors in participating programs to ensure that all stakeholders fully understand the process to be adopted. It should be noted that the program will phase

in this change, allowing applications to be submitted for the winter 2014 term, so as not to abruptly change the requirements for applicants who may have been planning to submit applications for the winter 2014 term.

Metric: This change is to be implemented right away, and all communications and web postings will be completed by the end of October 2013.

D.2

Goal: Improve information management.

The MAIS program needs to make better use of the limited administrative support it gets each year. In particular, the program has to systematize the collection and management of information about students (e.g., fields of study, enrollment status) so that information is readily available to not only the Director, but to faculty advisors as well.

Action Item: The MAIS Director will work with the administrative staff person supporting the MAIS to develop a plan for acquiring and distributing information about MAIS students (and the program in general) on a regular basis. The Director will consult with the MAIS admissions/advisory group (and the Associate Dean of the Graduate School as required) to receive recommendations about the type of data that needs to be compiled, the frequency with which it should be compiled and distributed, and who should receive it (or have access to it, depending upon the process used).

Metric: A schedule of the information to be collected and its distribution will be developed during the fall term of 2013. The plan that is developed will be implemented in the winter of 2014.

E. Enhance the program's reputation (Recommendations 2 and 3)

E.1

Goal: Raise the bar regarding admissions selectivity (without sacrificing diversity).

There is an understanding among some programs and faculty on campus that MAIS students tend to be weaker than those in disciplinary programs, or that the program provides a fallback for students not accepted into other programs. The MAIS program has at times been willing to take a chance on some students whose academic records might preclude them from other programs (with mixed results), though it has long since stopped admitting students who have done poorly in other OSU graduate programs. In addition, there is no GRE requirement for admission, nor is a writing sample beyond the statement of objectives required. At the same time, there is widespread support among committed MAIS faculty that the program serves a diverse body of students very well, and that MAIS students go on from the program to a variety of successful careers. Since participation in the MAIS depends upon the

ongoing support of faculty, the program Director will be certain to develop any changes to admissions requirements in consultation with key stakeholders.

Action Item: As part of the consultation process discussed in item B.2, the MAIS Director will consult with the program's stakeholders to determine what types of changes should be made regarding admissions requirements and selectivity.

Metric: A decision regarding admissions changes will be reached by summer term 2014 (concurrent with the process described in B.2), and any changes to be made will be implemented in the admission cycle in the following academic year.

E.2

Goal: Rebrand the program and market it as a dynamic driver of creativity.

The rebranding and marketing of the program to bolster its reputation is a longer term goal, and one that will be served by successful implementation of all the other recommendations. At the same time, there are some specific actions that can be taken right away in communicating the opportunities available to students and faculty, and in highlighting the program's success stories.

Action Item: The MAIS Director will solicit ideas for student "success stories" on an ongoing basis and develop brief profiles of 3-5 stories to be highlighted on the website. This will be part of the larger effort of revising the website to highlight the opportunities and benefits that come from a degree in interdisciplinary studies (along with requirements, responsibilities, etc.). Communication of these successes in face-to-face meetings will also be helpful in broadening the appeal of the program across campus.

Metric: Consistent with Item C, the first round of revisions to the MAIS website will be completed by January 2014, and this will include the first success story. At least two additional profiles will be added by the summer of 2014. After that, new profiles will be added as deemed appropriate.

Action Plan Schedule

All of the action items described above will be completed on the following schedule.

| Term | Action Items |
|-------------|--|
| Fall 2013 | Hold three outreach meetings
Revise website – include one success story
Change admissions process to once-a-year
Develop plan to collect and distribute program/student information |
| Winter 2014 | Hold three outreach meetings
Develop one program “track”
Begin collection and distribution of program/student information |
| Spring 2014 | Hold three outreach meetings
Develop one program “track”
Complete Category II for new class
Complete student fact sheet |
| Summer 2014 | Complete faculty handbook
Add two success stories to website
Reach decisions on credit distribution, adding appendix to thesis/project, and admissions requirements |
| Fall 2014 | Hold three outreach meetings
Offer new class
Submit report on feasibility of incubator role for interdisciplinary programs |
| Winter 2015 | Hold three outreach meetings
Develop one program “track” |
| Spring 2015 | Hold three outreach meetings
Develop one program “track” |

A Note on Program Finances

The review panel suggested the possible need for additional financial support, for both administration and GRA/GTA positions. This is, of course, a common theme regarding academic programs, as they can almost always expand/improve/do more, and additional funding helps to achieve such aims. At the same time, such support is not always available, and programs often need to rely on additional funding streams to either maintain or expand services.

With respect to the MAIS, it is not a costly program, with a budget of about \$45,000 annually, while graduating about 20 students per year. As the self-study revealed, these students tend to see great

value in their education, and they have gone on to diverse and productive careers. Still, the MAIS can be more entrepreneurial with regard to funding. Two potential sources of funding within OSU include INTO and E-campus, and a third, which extends beyond campus, involves soliciting donations from alumni.

The MAIS Director has explored the possibility of working with INTO in the past, though no action was pursued at the time. The MAIS admissions process, which requires approval from multiple departments, has been considered too slow and cumbersome for INTO, which wanted decisions to be communicated within one week of receipt of applications. It is possible that changes in the admissions process can offer an opportunity to work with INTO. To that end, the MAIS Director will initiate a dialogue with INTO in the current academic year to explore the possibility of an MAIS “Pathway” for international students.

Pursuit of an additional funding stream via E-campus is another option, though some barriers exist. The MAIS offers only two (and soon three) courses, while all other student credit hours come from departments and programs across campus. It would be inappropriate to offer these required courses through E-campus, since the MAIS is not an online degree, and the courses require students to be present on campus. Nor does it seem feasible to suggest revenue sharing with departments benefitting financially from MAIS students enrolled in their E-campus courses. This would serve as a disincentive to participation in the MAIS program at a time when it is seeking greater participation. Nonetheless, engaging in a discussion with E-campus can shed light on potential opportunities. Therefore, the MAIS Director will meet with representatives in the current academic year from E-campus to explore available options.

Lastly, there is a possibility of soliciting donations from MAIS alumni. The OSU Foundation has been working successfully with colleges and programs across campus for many years to develop new sources of financial support. The MAIS should be no different from these other programs. The MAIS Director will initiate a process for engaging the OSU Foundation (this will start with a conversation with the Dean of the Graduate School), so that the MAIS program can begin to emulate the fundraising success that many other programs at OSU have already achieved.

Review Panel Report for the Graduate School

Master of Arts in Interdisciplinary Studies Oregon State University

Reviewers:

William Graves

Associate Dean, Graduate College, Iowa State University

James Coakley

Associate Dean for Academic Programs, College of Business, Oregon State University

Melanie Marrone

Associate Principal, Oregon City High School

Stacy Semevolos

Associate Professor, College of Veterinary Medicine, Oregon State University

Institutional Facilitators:

Anita Azarenko

Associate Dean, Graduate School, Oregon State University

David Bernell

Director, Master of Arts in Interdisciplinary Studies

Nagwa Naguib

Executive Assistant to the Dean, Graduate School, Oregon State University

On-site Review Dates:

May 29 – 30, 2013

Overall Recommendation:

The MAIS program should be maintained but should update its mission statement, enhance its reputation on campus, and strive to overcome challenges inherent with interdisciplinary academic programs.

Summary of Findings and Recommendations:

The MAIS program self-identifies as fulfilling an institutional need to promote synthesis across the university's diverse range of disciplines. The committee concurs; many MAIS students capitalize on the opportunity to conduct truly interdisciplinary work that leads to scholarly outputs unlikely to be realized in the absence of the MAIS program. Increasing the number of disciplines that actively participate in the program would position it to meet the institutional need for interdisciplinary scholarship more fully. Most active disciplines are in the College of Liberal Arts, so the extent to which many students' scholarship is truly interdisciplinary is debatable. Some students have used the MAIS to substitute for the lack of degree programs in certain disciplines. Some other students come to MAIS after being declined admission to other programs. This contributes to a lingering thought somewhat diminishing reputation of the program as consisting of relatively weak students. Development of new programs in certain disciplines that have been a source of students for MAIS in the past is a threat to the program but also demonstrates a new way to view the MAIS, as an incubator or testing ground for new programs.

Recommendations

1. MAIS should expand with a deliberate focus beyond the College of Liberal Arts and update its mission statement to include a vision as serving the campus as an incubator for novel graduate programs. Significant expansion should be accompanied by either an increase in the FTE of the current director or the addition of a co-director, possibly from a STEM discipline. A total FTE commitment of 0.5 to directorship would allow for expansion.
2. Rebrand and market the program to attract the best possible applicants and to bolster the program's reputation on campus. Sell the program as a dynamic driver of creativity by highlighting student success stories on the program's web site.
3. Consider a minimum writing/verbal requirement for all applicants, perhaps by using GRE or GMAT scores as an indicator.
4. Continue the two courses designed for and required of MAIS students. Consider whether these classes could be scheduled such that MAIS students come together more frequently during their degree programs. Develop a third

core course that would focus on research methodologies and perhaps on communication to academic peers.

5. Either instead of or in addition to the third class proposed in recommendation 4, develop a colloquium series required of all MAIS students where research results are presented. This would continue the sense of a cohort among students and share the nature of interdisciplinary research on campus. Colloquia could be set on departmental schedules such that faculty from various departments could attend to see the type of interdisciplinary research in their area that is supported by the MAIS program. This might be used as a vehicle to recruit faculty for participation in the program.
6. Explore the creation of tracks, groups of classes in three disciplines that cohorts of students would take together. These tracks would identify a few core courses that would be available in the discipline, and the required prerequisites needed for those courses. Some disciplines offer graduate-level courses that could serve as prerequisite coursework. Developing tracks in these disciplines, which include public health and business, might make it easier for students to pursue interdisciplinary topics.
7. Establish one, or possibly two, admission cycles with clearly advertised deadlines for exactly what, how, and where to submit application materials.
8. Update the program of study form to show that students need to take the same number of credits in each of the three disciplines. Clarify which programs participate in the MAIS program on line and in the graduate catalog.
9. Consider requiring that all MAIS students who prepare a thesis have an appendix that provides the student's personal account of how he or she achieved interdisciplinary scholarship. Such statements could be viewed as persuasive arguments to defend against claims of disciplinary work being done by MAIS students.
10. A handbook should be developed for advisors in the MAIS program to delineate policies and to provide guidance.
11. Provide a "home" base for MAIS students, either in the form of a common space (lounge or study/discussion room) or continuance of IST courses into the second year to engage research and writing and to allow for the sense of a cohort among students. Some students said that IST512 might be more helpful later in the degree program.
12. Track the disciplinary areas of each MAIS student in Banner or via another system that is accessible to departments and faculty.

Detailed Findings:

Introduction

This review was the second of the MAIS program that included external reviewers. The self-study document included a summary of the

recommendations of the first review, conducted in 2002, and how the program responded to those recommendations.

The present review team was asked to evaluate the role of the MAIS in the context of new graduate programs that have been approved recently at Oregon State. Some of these new programs are in disciplines that historically have lacked graduate programs, which led students to pursue the MAIS due to the paucity of other options. The MAIS program and Graduate School are to be commended for the thoughtful self-study document that was prepared; survey data included in the document were particularly useful and appreciated. The review team was asked by the Graduate School to consider whether and how the MAIS program should expand, whether a new degree (master of interdisciplinary studies) should be offered, how the Cascades campus might factor into the future of the MAIS, and how the two current ITS courses might be changed to benefit the program and strengthen graduate studies more broadly.

The reviewers are grateful to the Program Director, the Dean and Associate Dean of the Graduate School, and the students and faculty participants in the MAIS. Their contributions to the self-study and the time they took to meet with the reviewers during the site visit were extremely helpful.

Inputs

Mission of the program and relationship to the institutional mission

The self-study states that supporting the mission of the university "...requires a graduate study option that allows for and promotes synthesis of knowledge across the university's diverse range of academic departments. This is the primary purpose of the MAIS program in providing options for graduate study that integrate three academic disciplines." The university mission also emphasizes academic excellence in the three signature areas: advancing the science of sustainable Earth ecosystems; improving human health and wellness; and promoting economic growth and social progress.

The MAIS program has evolved such that it predominately supports only a few of the academic departments of the university, notably departments within the College of Liberal Arts where discipline-specific graduate programs are newly formed or under development. Consequently, the MAIS program does not appear to meet its own stated mission. Some students are pursuing true interdisciplinary studies, but many are using the program as a substitute degree.

To serve as an incubator for new interdisciplinary degree programs is a legitimate function within the university; this is a mission that MAIS could embrace and celebrate. To do so, the program must expand beyond the College of Liberal Arts and should strongly consider offering the degree master of science with an

accompanying program name change to increase compatibility with STEM disciplines.

MAIS should not be the fall back degree for students who would prefer to be in other programs. It should serve the unique niche in which students have flexibility to integrate multiple disciplines in truly interdisciplinary scholarship. Under the current director, the program has made progress in this area.

Another potential role for the program is to help students fulfill requirements for teaching in Northwest Community Colleges. Program leadership should explore this possibility by confirming the coursework and/or graduate degrees to be required by the community colleges.

One student mentioned the MAIS program attracts many older, returning students who may be looking to continue their education, but are not necessarily interested in pursuing a content-specific degree leading to employment in a specific field. Expanding the program to offer traditional, online, or hybrid courses at an off-site location such as the Cascade campus would increase access for more of these “non-traditional” students. Graduate programs not currently participating in the MAIS, such as public health, might be included through this expansion.

Quality of students

Representatives from multiple academic units mentioned that quality of students limits participation in the program. Some MAIS students are perceived as lacking adequate background and prerequisite knowledge needed to gain access to classes. Another issue is lack of focus. Students who know what they want to do and how the different disciplines will integrate to support that purpose excel by being self-directed and by taking advantage of the interdisciplinary nature of the program. Students with less certainty of their direction may flounder and plan without a real sense of how the various classes will integrate to support their scholarship. There was a noted perception that some students pursue this degree as an alternate to more competitive programs. Within those competitive disciplines, MAIS students are identified as weaker in writing, development of ideas, and overall methodology. At least one interviewee expressed gratitude that MAIS is willing to partner with the ethnic studies program to provide academic homes for students from underrepresented populations with relatively weak language skills. This bi-modal distribution in the quality of the students also contributes to the perceptions of low quality of the overall program.

Admissions Selectivity

Admissions processes need to be clarified. The web site does not describe the application process clearly, nor does it highlight the need for an academic advisor in each disciplinary area of a degree program. Confusion was evident among

faculty, probably because departments use different processes for evaluating MAIS candidates. While the process of rolling admission has advantages, cons outweigh benefits. An overarching disadvantage of rolling admission is that it results in frustration for applicants and university personnel because of the complexity of requiring separate evaluations from each discipline as well as the Graduate School. Students also voiced frustration with the lack of clarity about what must be submitted where and about how to find help with planning an integrated program of study that involves three disciplines. Which disciplines are options for use in an MAIS program also was reported to be unclear.

Overall, the committee perceived that admissions selectivity has increased over the past several years. This has improved the regard for the MAIS program on campus. Nonetheless, a tension remains. Some stakeholders clearly want to see admissions standards continue to increase while others voiced the need to serve promising students who would be denied by other programs on campus. Similarly, the program director was proud that the program had graduated “diamonds in the rough” and stated his willingness to accept students with relatively weak academic credentials if at least a subset of them can succeed.

Financial support of students

Several faculty members mentioned the need for increased MAIS funding via assistantships from the Graduate School. In addition, faculty felt the Graduate School should actively promote the program rather than passively allowing it.

Curriculum Strength

Some faculty members reported the lack of a robust interdisciplinary perspective in the program plans of some students. The perception is that students are focused in two areas (sometimes within the same academic department), and are merely filling in with available coursework in the third area.

Quality of Personnel

Expansion of the program into STEM and other disciplines where the master of science would be preferred over the master of arts may require increasing the current 0.25 FTE assigned to the director of the MAIS program. The present director is highly regarded and credited for recent improvements in MAIS. He and the Graduate School should consider whether it would be better to increase his FTE in the MAIS or to maintain his present commitment and seek the services of a second faculty member from a STEM discipline.

Level and Quality of Infrastructure and Quality of Organizational Support

The MAIS program has 0.25 FTE allocated to the director and approximately 0.2 FTE for an instructor of two required courses (IST 511, IST 512). The committee supports the model of the Graduate School administering the MAIS program rather than having it housed in a department. Administrative support is limited to

funds covering a few hours a week. Based on the self-study document and information provided during the site visit, it is apparent that the current director is providing excellent leadership and management. The MAIS graduate faculty comprises about 50 members from a broad range of departments and colleges, with most residing in the College of Liberal Arts. There are administrative challenges associated with coordinating and advising across three disciplines. The infrastructure is limited and relies heavily on individual departments' willingness to provide space and resources for MAIS students. No space, equipment, or facilities are dedicated specifically or solely to either MAIS students or faculty members. Many students do not have a desk, and the lack of a "home" for each student is one of the issues brought up in the self-study document and site visit. No library holdings are specific to the MAIS program, but individual departments have library holdings.

Support from the Graduate School is good. And basing the program within the Graduate School makes it a university program vs. college-specific. However, some students do not have a real home. They typically associate with other graduate students in the department that is providing them the GTA funding or with other students of their major professor. It was noted that the two courses required of all MAIS students do result in the sense of a cohort for some students, but there was not much cohort interaction outside of those courses.

There needs to be a way to track the disciplinary areas of the students. The Banner system presently shows only that a student is pursuing the MAIS degree program; information about the pertinent disciplines within the program and the faculty advisors are not maintained. This information should be tracked and made available to departments and faculty.

Productivity

Level and quality of student performance

Based on the self-study document and on accounts provided during the site visit, many MAIS students capitalize on the opportunity to conduct truly interdisciplinary work. This leads to scholarly outputs unlikely to be realized in the absence of the MAIS program. Some faculty, however, perceive that some students in the program are not sufficiently integrating three disciplines and instead use the MAIS to substitute for disciplinary degree programs not offered at Oregon State. Therefore, the committee urges program leaders and faculty to attend to the need to integrate three disciplinary areas. One way that might be accomplished would be to require that all MAIS students who prepare a thesis have an appendix that provides the student's personal account of how he or she achieved interdisciplinary scholarship. Such statements could be viewed as persuasive arguments to defend against claims of disciplinary work being done by MAIS students. Another approach would be to institute required annual

meetings (review sessions) of students with their faculty committees with the expectation that the committee would challenge the student to defend the extent to which their work to date has been interdisciplinary.

Level and quality of faculty performance

The MAIS benefits from the dedicated faculty who contribute to student learning. Participating faculty should be encouraged to promote the scholarship that they disseminate due to the projects of MAIS students. Few faculty with whom the review team met reported that they had published refereed papers with MAIS students. A database of papers, and other scholarly products, generated by MAIS students should be maintained and made available on the program's web site. Participating faculty also should distinguish scholarship related to the MAIS service they provide on their CVs used during evaluations and consideration for promotion and tenure.

Visibility of scholarly community

The decentralized nature of the program leads to the absence of a sense of belonging among students. Program leadership and the Graduate School should strive to identify ways to overcome this problem. Student cohorts could be created, along with a colloquium series, and a club or association for MAIS students. One of the required courses could be scheduled for students to take in the second year, and a physical space (lounge, etc.) where MAIS students could interact should be considered. These approaches could improve the esprit de corps of MAIS students while promoting the visibility of the program on campus.

Outcomes

Concerns exist that employers do not understand the meaning of a degree in interdisciplinary studies. Branding the program more deliberately will ease this problem as well as help with the recruitment of students, faculty, and departmental partners. The program should consider developing a concise fact sheet for students to use to inform employers about the degree program. Graduates appear to be viable in the job market but have the burden of needing to explain their academic credentials to employers.

Overall, students leave the program with a sense of satisfaction. Nonetheless, considerable frustration is associated with the application process and with feeling a sense of homelessness during their programs

Conclusion

The MAIS program continues to serve the educational and discovery missions of Oregon State University, but its niche on campus is evolving rapidly. Since the last program review in 2002, significant change has occurred in the pallet of

graduate programs available at Oregon State, as well as in expectations for student quality and the amount of flexible time faculty members perceive they have to devote to a program outside of their disciplines. The MAIS program should be maintained but broadened through changes in its mission statement and in the location, number, and diversity of departments that participate.

Final Examination

Assessment of university and program-level learning outcomes is required for each individual candidate for a masters degree. For thesis programs, a final oral examination is required. For non-thesis programs, the individual level assessment may be completed with a final oral or written examination. Other mechanisms may be used for non-thesis programs if approved by both the Graduate School and the Graduate Council.

Final Oral Examination – thesis-based programs

The final oral examination for master's candidates may, at the discretion of the graduate program, consist of a public thesis defense followed by a closed session of the examining committee with the candidate. Under normal circumstances, the final oral examination should be scheduled for two hours.

For master's candidates whose programs require a thesis, not more than half of the examination period should be devoted to the presentation and defense of the thesis; the remaining time can be spent on questions relating to the student's knowledge of the major field, and minor field if a minor is included in the program of study. Graduate faculty serving on thesis-oriented master's degree programs may contribute to the direction of the student's thesis, will assess the student's thesis and his or her defense of it in the final oral examination, will vote to pass or fail the student, and may sign the thesis when it is in acceptable final form. The examining committee consists of at least four members of the graduate faculty—two in the major field, one in the minor field if a minor is included, and a Graduate Council representative. When a minor is not included, the fourth member may be from the graduate faculty at large. All members of the student's graduate committee must approve the scheduling of the final examination.

Students writing a thesis must have a Graduate Council representative on their committee. It is the student's responsibility to obtain his or her own Graduate Council representative from a list provided by the Graduate School. This must be done prior to scheduling the final exam.

Final Examination – non-thesis based programs

For non-thesis master's degree programs, a final cumulative examination (oral or written) is required. Additionally, a capstone experience is required that integrates concepts across multiple courses and is aligned with achieving program level learning outcomes. The capstone experience may take the form of research, culminating project, or creative work. Use of a portfolio or other collection of artifacts or alternative methods of assessment of student learning may be used if approved by the Graduate School and the Graduate Council. The capstone experience should be conducted outside of the didactic course requirements. The major professor is responsible for directing and assigning a final grade for the capstone experience. Other members of the examining committee will assess the capstone experience as well as the student's knowledge of his or her field, and vote to pass or fail the student.

The examining committee consists of three members of the graduate faculty—two in the major field and one in the minor field if a minor is included. When a minor is not included, the third member may be from the graduate faculty at large.

If a final oral examination is used, not more than half of the examination period should be devoted to the presentation of the capstone experience; the remaining time can be spent on questions relating to the student's knowledge of the major field, and minor field if one is included in the program.

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

Executive Summary for Category 1 Proposal

Renaming an Academic Program Proposal – Pharmaceutical Sciences

The College of Pharmacy seeks to rename our graduate degree program, such that graduate students in the College will receive a degree in ‘Pharmaceutical Sciences’ rather than the current designation of a degree in ‘Pharmacy’.

The description of graduate degrees for students in the College of Pharmacy was last altered in the 1970’s. At that time, small discipline specific programs (e.g. Pharmacology, Medicinal Chemistry, Pharmaceutics) were coalesced into one graduate degree program. The rationale in creating a single graduate degree designation of ‘Pharmacy’ was to encourage cross disciplinary interactions among students and faculty typical of these disciplines, and to assure the program had a critical mass of students and sustainable administrative structure. The goals of this restructuring have largely been accomplished.

Professional degree programs across the US went through a major restructuring in the early 2000’s. At that time, undergraduate degrees in Pharmacy were eliminated and an entry-level professional doctorate in pharmacy was established as the degree program accredited for individuals seeking licensure to practice in pharmacy. Many Doctor of Pharmacy programs require or encourage (like our own) completion of a bachelor’s degree prior to beginning the professional program. The evolution of the professional doctorate in pharmacy has created some confusion for students enrolled in the graduate program, when explaining their education to persons outside the College. An additional concern is that some external agencies, United States Department of State and United States Citizenship and Immigration Services, do not recognize ‘Pharmacy’ as a selection for graduate degree programs. These programs prefer and list ‘Pharmaceutical Sciences’ as the appropriate designation for graduate research degrees received in disciplines traditionally delivered by colleges of pharmacy.

Therefore, we request that the University approve changing the graduate program degree designation in the College of Pharmacy from ‘Pharmacy’ to ‘Pharmaceutical Sciences’. Students who have matriculated into the program prior to the implementation of the degree title change will have a choice of completing the program with the title ‘Pharmacy’ or selecting the new title ‘Pharmaceutical Sciences.’ This designation is more specific in describing the general area of study for persons pursuing research degrees in the College, while still retaining adequate breadth to accommodate all disciplines

**Rename Graduate Degree Proposal:
M.S., Ph.D. in Pharmacy
to
M.S., Ph.D. in Pharmaceutical Sciences**

**Oregon State University
College of Pharmacy**

**August 2013
Proposed Effective Term: Winter Term 2014 (201402)**

CPS Tracking #: 87166

CIP #: 512010

Title: Pharmaceutical Sciences

Definition: A program that focuses on the basic sciences that underlie drugs and drug therapy and that prepares individuals for further study and/or careers in pharmaceutical science and research, pharmaceutical administration and sales, biotechnology, drug manufacturing, regulatory affairs, and related fields. Includes instruction in mathematics, biology, chemistry, physics, statistics, pharmaceutics, pharmacology and toxicology, dosage formulation, manufacturing, quality assurance, and regulations.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

- A. Title of the proposed instructional, research, or public service unit. For name changes, give both the current and proposed names. Describe the reason(s) for the proposed change.**

The MS and PhD degrees in Pharmacy were named when the primary pathway to becoming a licensed, medication dispensing pharmacist was to obtain a BS degree in Pharmacy. The MS and PhD degrees in Pharmacy provide advanced training in research into medication discovery, use and delivery and do not, and never have, led to licensure as a professional pharmacist. The BS degree in Pharmacy no longer exists and was eliminated at OSU with the last graduating class in 2001. Currently, the minimum requirement to become a licensed pharmacist across the United States, including the State of Oregon, is the professional PharmD degree in Pharmacy. There now exists confusion internally at OSU and across the country regarding the distinction between the PharmD degree and the MS and PhD degrees in Pharmacy. Therefore, we propose to change the MS and PhD degree names to "Pharmaceutical Sciences" to better reflect the

nature of the training—that of a research scientist—to discover new medications. The name change is also intended to reduce confusion among the PharmD and PhD degree names, and to link the degree to the name of the department of Pharmaceutical Sciences at OSU and the name of the primary professional organization of the graduate students and faculty, the American Association of Pharmaceutical Sciences. Finally, the name change will provide international MS and PhD students in the College of Pharmacy with a degree that is recognized by the US State Department as a biomedical research degree eligible for extended training. Currently, the Immigration and Naturalization Service and State Department do not recognize degrees in “Pharmacy” as biomedical research degrees and do not allow for extended training periods for international students, whereas PhD degrees in “Pharmaceutical Sciences” are recognized. Making this change will provide significantly improved opportunities for our graduates.

Table 1: Proposal Summary

Rename Existing Graduate Degree Program

- Proposed Title: **Master of Science (MS) and Doctor of Philosophy (PhD) in Pharmaceutical Sciences**
- Existing Title: **Master of Science (MS) and Doctor of Philosophy (PhD) in Pharmacy**
- Proposal Type: **Abbreviated Category I**
- CPS #: **87166**
<https://secure.oregonstate.edu/ap/cps/proposals/view/87166>
- CIP #: **512010 (Changed from 512099)**
- SIS #: **To Be Determined** (by the Registrar’s Office)
- College Code: **07**
- Program Type: **Graduate**
- Credential Type: **Master of Science (MS) and Doctor of Philosophy (PhD)**
- Academic Home: **College of Pharmacy**
- Program Location: **OSU campus in Corvallis and satellite campus in Portland**
- Options: **Not Applicable**
- Areas of Concentration: **No Change to the existing Areas of Concentration**
 - **Biopharmaceutics**
 - **Medicinal Chemistry**
 - **Natural Products Chemistry**
 - **Pharmaceutics**
 - **Pharmacoeconomics**
 - **Pharmacokinetics**
 - **Pharmacology**
 - **Toxicology**

- Undergraduate Minors: **Not Applicable**
- Graduate Minors: **Pharmaceutical Sciences**
- Course Designators: **PHAR** (No Change)
- Delivery Mode and Location: **OSU Campus in Corvallis and satellite campus in Portland**
- Accreditation: There is no accrediting body; the Accreditation Council for Pharmacy Education is only responsible for accrediting the professional program.
- Proposed Start Date: **Winter Term 2014** (Banner 201402)

B. Location within the institution's organizational structure. Include "before" and "after" organizational charts (show reporting lines all the way up to the Provost).

The name change will not require or create any changes in the organizational chart of the College of Pharmacy at OSU. The current administrative structure is attached.

C. Objectives, functions (e.g., instruction, research, public service), and activities of the proposed unit.

1. The current MS and PhD degrees programs in Pharmacy will remain completely unchanged by the name change to MS, PhD in Pharmaceutical Sciences.
2. Outcomes for the MS and PhD degrees are assessed utilizing a series of rubrics, exams and surveys. Please see Appendix A for the assessment plans for the current MS and PhD degrees in Pharmacy. They will remain the same for the proposed change to MS, PhD in Pharmaceutical Sciences.

D. Resources needed, if any: personnel, FTE academic, FTE classified, facilities and equipment.

1. Staffing, resources and budgets will remain the same with the name change. As the College of Pharmacy website is regularly updated, the name change will be reflected on informational pages. Current recruitment literature utilizes the department name "Pharmaceutical Sciences", not the degree name of "Pharmacy" and thus will not need to be updated. We have estimated \$1,500 to account for costs associated with reprinting posters, post cards, and other recruitment materials.

2. All faculty in the College of Pharmacy were queried via email and then through discussion at department meetings regarding their support for the proposed name change. All faculty were supportive of the change.
3. This proposed change will not require additional space, facilities or the remodeling of existing facilities.

E. Funding sources: state sources (institutional funds - state general fund, tuition and fees, indirect cost recoveries), federal funds, other funds as specified.

1. No new revenue will be required
2. No new resources will be required
3. The minor costs associated with the proposed name change will come from internal reallocation.

F. Relationship of the proposed unit to the institutional mission.

1. The proposed name change does not change the relationship of the degree programs to the mission of OSU. The mission of the College of Pharmacy is:

The College of Pharmacy is dedicated to fostering graduates and professionals who will maximize the health of the public by advancing patient care and facilitating the discovery, understanding, and cost effective use of medicines.

The mission of the College of Pharmacy advances the mission of Oregon State University in the area of “improving human health and wellness”.

The MS and PhD degrees in Pharmacy are integral to the College mission of facilitating the discovery, understanding and cost-effective use of medicines, and thus the health and wellness mission of OSU.

Renaming the degree will not change this relationship in any way.

2. The positive impact of the proposed change will be that the purposes of the different advanced degrees offered by the College of Pharmacy (MS, PhD and PharmD) will be more clearly defined by the name change of the MS and PhD degrees to Pharmaceutical Sciences. The degree name of “Pharmacy” suggests a professional degree leading to a license to dispense medication and provide patient care. The “Pharmaceutical Sciences” degree will allow for greater differentiation of the intent of the course of study to produce a scientist capable of discovering new knowledge related to pharmaceutical agents. The name change should

help with recruiting in terms of providing more clarity to interested applicants. It will also help international students who request extended training for graduates of biomedical research programs.

We do not anticipate any negative impacts from the name change. As a college in the Division of Health Sciences, it is appropriate to have our research degrees renamed to “Pharmaceutical Sciences”. As discussions within the Division of Health Sciences and across other divisions offering graduate training in biomedical and biohealth research progress to better coordinate degree, course and co-curricular offerings, we anticipate that the name change to Pharmaceutical Sciences will not hinder those efforts. In fact, the proposed name change should provide more clarity for students who may in the future enter through an umbrella program encompassing biomedical and biohealth graduate programs at OSU.

G. Long-range goals and plans for the unit (including a statement as to anticipated funding sources for any projected growth in funding needs).

Graduate programs in the College of Pharmacy are expected to continue to expand over the next decade, both in numbers of students and breadth of concentration areas. Programmatic goals are reflected in plans for growth. Programmatic expansion, however, will be incremental and funded completely through internal redistribution of funds or extramural grants.

Items specified in our current strategic plan relating to graduate studies include:

- complete a critical evaluation of the graduate curriculum to identify gaps with regard to relevance, future trends and needs, and innovation.
- increase number of corporate internships for graduate students
- complete a feasibility analysis for re-establishing a health care outcomes area of concentration within the graduate program.

Additional goals identified by faculty include:

- expansion of sciences faculty to the Portland campus to take advantage of collaborative and translational research opportunities for graduate training programs.
- explore increased interactions and collaborative graduate program development across OSU.
- increase outreach to regional four year institutions to enhance graduate student recruitment

H. Relationship of the proposed unit to programs at other institutions in the state.

1. There are no other degrees in Pharmacy or in Pharmaceutical Sciences in the Oregon University System. Thus, we anticipate no impact on our relationships with any other state institutions.
2. We know of no other private institutions in the state offering MS or PhD degrees in Pharmacy, Pharmaceutical Sciences, or similar major. Oregon Health and Sciences University offers PhD degrees in Physiology and Pharmacology and in Chemical Biology through the medical school. The name change to Pharmaceutical Sciences at OSU will not affect our relationship with OHSU, and potentially, provides an opportunity for us to distinguish and highlight our program in Pharmaceutical Sciences at OSU in providing opportunities for research into drug metabolism, natural products drug discovery and drug delivery that differ from the expertise offered by the OHSU programs.

I. If the program is professionally accredited, identify the accrediting body and discuss how the proposed change may affect accreditation.

There is no accrediting body; the Accreditation Council for Pharmacy Education is only responsible for accrediting the professional program.

Daniel M. Dorsa, PhD
Senior Vice President for Research

Dana Director, MS
Assistant Vice President for Research Administration

Mark Zabriskie, Ph.D.
Dean, College of Pharmacy
Oregon State University
203 Pharmacy Building
Corvallis, OR 97331-3507

Dear Dr. Zabriskie:

Thank you for notifying us of the proposed change in the graduate degree name from "MS/PhD in Pharmacy" to "MS/PhD in Pharmaceutical Sciences". OHSU supports the proposed name change to one that is more representative of the education and training being provided.

We look forward to having an increased number of biomedical researchers from the College of Pharmacy at the Portland campus as the program expands with the opening of the OHSU/OUS Collaborative Life Sciences Building in 2014.

Please don't hesitate to contact me if you need clarification or further information.

Best regards,

A handwritten signature in dark ink, appearing to read "Daniel M. Dorsa", written in a cursive style.

Daniel M. Dorsa, Ph.D.
Senior Vice President for Research
Oregon Health & Science University

Category I Proposal Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Title of Proposal:

Effective Date:

**Rename of MS and PhD degrees in Pharmacy to
MS and PhD degrees in Pharmaceutical Sciences**

9/1/2013

Appendix A

Change of Designation

A primary driver for the change in degree designation is based upon disciplines identified by the Immigration and Naturalization Service for extended optional practical training. This website contains the list of stem-designated degree programs. Please note that on the last page, 51.2010 is “Pharmaceutical Sciences”. This general designation effectively includes disciplines for which graduate students in the College of Pharmacy may complete. The current designation of “Pharmacy” is not included on the list.

SUBJECT: Renaming the College of Pharmacy Graduate Program Degree

The College of Pharmacy seeks to rename our graduate degree program, such that graduate students in the College will receive a degree in 'Pharmaceutical Sciences' rather than the current designation of a degree in 'Pharmacy'.

The description of graduate degrees for students in the College of Pharmacy was last altered in the 1970's. At that time, small discipline specific programs (e.g. Pharmacology, Medicinal Chemistry, Pharmaceutics) were coalesced into one graduate degree program. The rationale in creating a single graduate degree designation of 'Pharmacy' was to encourage cross disciplinary interactions among students and faculty typical of these disciplines, and to assure the program had a critical mass of students and sustainable administrative structure. The goals of this restructuring have largely been accomplished.

Professional degree programs across the US went through a major restructuring in the early 2000's. At that time, undergraduate degrees in Pharmacy were eliminated and an entry-level professional doctorate in pharmacy was established as the degree program accredited for individuals seeking licensure to practice in pharmacy. Many Doctor of Pharmacy programs require or encourage (like our own) completion of a bachelor's degree prior to beginning the professional program. The evolution of the professional doctorate in pharmacy has created some confusion for students enrolled in the graduate program, when explaining their education to persons outside the College. An additional concern is that some external agencies, US Department of State and USCIS, do not recognize 'Pharmacy' as a selection for graduate degree programs. These programs

prefer and list 'Pharmaceutical Sciences' as the appropriate designation for graduate research degrees received in disciplines traditionally delivered by colleges of pharmacy.

We request that the University approve changing the graduate program degree designation in the College of Pharmacy from 'Pharmacy' to 'Pharmaceutical Sciences'. This designation is more specific in describing the general area of study for persons pursuing research degrees in the College, while still retaining adequate breadth to accommodate all disciplines. We greatly appreciate your concurrence with this request and would ask that you indicate the same to the Curriculum Council at your earliest convenience.

Sarah Williams (Curriculum Coordinator) October 25, 2013 12:49pm

This proposal seeks to create a new GRADUATE OPTION in Engineering Management.

[Please read the Comment box for an explanation of the CPS process and of the associated major]

Another policy to review

Graduate Student Teaching

Students working toward graduate certificates or advanced degrees are not permitted to teach graduate courses.

A hypothetical scenario using the College of Business.

The MBA is a degree program that prepares candidates for professional careers. Many of our graduate faculty are non-academics – they have an advanced degree related to the area they teach and five or more years of professional experience in that area. For example, we have the retired managing partner of one of the big four accounting firms out of Portland teaching a special topics course for us in the Accountancy MBA degree program.

Let's say we hire a professional with an advanced degree and over ten year's experience to teach a course for one of our MBA tracks (and the person is approved by the Graduate School and admitted to Graduate Faculty status). After teaching the course, the individual decides she really likes it and applies to our PhD in Accounting program. If we admit this person to the PhD program, then according to the current policy, she would no longer be able to deliver the special topics course she was professionally qualified to teach.

What is the real intent of this policy? Can graduate students be TAs for a graduate course? Can graduate students run labs or recitations associated with a graduate class? Is it ok for PhD students to teach Master-level students?

Subject: Re: BPP Program Review

Hi Carolyn,

If the Council feels this is what we must do then we will do our best. Given the time line you suggest, we will only have about 10 weeks to put the review document together as we would need to get this to external reviewers several weeks ahead of their visit. My schedule is not flexible during certain weeks throughout the remainder of the academic year and with all the activities currently going on with the state board of higher ed we have been and will continue to have many additional meetings.

Who do I talk with about scheduling the date of the review and how we go about identifying and inviting external reviewers? Also, who is the contact person that we can talk with about the format, contents, etc of the review document. My understanding is that changes have been made to what is required to be included in the review document.

Thank you,

Lynda

On 12/12/11 8:18 PM, Aldwin, Carolyn wrote:

Dear Lynda -- well, the grad council did vote on this issue, and there won't be another meeting until January, so we probably should go ahead and plan on doing a review as late as possible in spring term. I suspect that this may depend on the availability of the external reviewers(s). We should probably aim for mid spring quarter so the committee has a chance to write up the report and get it to the grad council before the end of the quarter. If I can be of any assistance to you in this endeavor, please do not hesitate to ask. Thank you for your flexibility. Carolyn

Ps I just started being chair as I'd last week.

Hi Brenda and Carolyn,

Thank you for your comments Brenda. If the Graduate Council feels strongly about this, we will do what is required. If so, I would like it to be the latest possible time spring quarter and also request that the individual who does the scheduling contact me prior to any scheduling as I have many times this spring when I will not be able to be on campus due to my activities with the State Board of Higher Education.

However, given that my request was still during 2012, I wonder if it would really make much of a difference or have an impact whether we did it spring or fall in 2012?

Thank you,

Lynda

Subject: Re: BPP Program Review

Hi Carolyn,

I did not know that you were Chair of the Council so I spoke with Walt Loveland, in his capacity as acting Chair fall quarter, about this on Dec. 2nd to update where we were with the Graduate Program in BPP. He notified me that you had just taken on the role as Chair of the Council

There are so many different things going on these days it is difficult to keep track in what direction things are moving. However, I agree that we do need to do our graduate review and would like to request the review to occur Fall quarter, 2012. The department is also now dealing with proposing a new undergraduate program that needs to be completed very soon and we are now already headed to winter quarter.

I would greatly appreciate consideration of the graduate review being scheduled for Fall 2012. If you need further details from me, please let me know and we can arrange a meeting or phone call.

Best regards,

Lynda

On 12/12/11 9:42 AM, Aldwin, Carolyn wrote:

Dear Lynda – I am writing to you in my capacity as Chair of the Graduate Council. Just a reminder that at a meeting last spring, BPP asked that it delay its review pending potential participation in the Cat I for the new Integrated School of Plant, Soil and Insect Science. We just finished our preliminary review of this, and BPP wasn't participating, so it's probably time to go ahead and schedule the program review.

I will ask Nagwa Naguib to contact you to start making the necessary arrangements. If you have any questions, please do not hesitate to call me.

Regards,
Carolyn

April 7, 2011 Minutes:

Botany and Plant Pathology (BPP) MOU

1. By end of Fall 2011, make a commitment to complete a Category I proposal to restructure or assimilate the BPP graduate program into an over-arching, multi-unit plant sciences program by Spring 2012; or
2. Schedule a graduate program review for BPP by end of Spring 2012.

Ciuffetti agreed to the suggested timeline.

APC Reports – December 2011

1. Environmental Engineering MS and PhD program cat I (Vinod Narayanan)

Here is a summary of the cat I and my take on it as far as the GC is concerned:

The request is for creating an MS, MEng and PhD program in Environmental Engineering.

Background- EE was a part of the Department of Civil and Environmental Engineering until a few years ago when EE was merged with Chemical Eng. to create the School of Chemical Biological and Environmental Engineering (CBEE). Prior to the merger, graduate students in the EE program were getting Civil Engineering PhDs and now they mostly get ChemE degrees. As a "truth in advertising" the ChemE faculty would rather that the EE majors got EE degrees. This sentiment has been apparently felt by the EE grad students as well for several years. So, there is no major change except to create the new degrees. The faculty and courses currently exist to support this graduate program and nothing much changes.

With respect to the GC, there were 4 things to consider:

1. need for this graduate program- the need is not an issue here since this program already existed; it is just that the students graduating from this program will receive a EE degree now rather than a Civil or ChemE degree.

2. Implementation- all courses exist and no major changes are needed; faculty are already bringing in grants to support students.

2. Resources- faculty, staff, infrastructure – all in place.

4. Output- placement, etc- not an issue either since students have been graduating for several years from this program and have found placement.

The only issue that i raised was that the Outcomes and Assessment piece must be rewritten with GLOs and assessment in mind. They will be fixing this bit.

I think overall this should be an easy one for the GC to review.

Vinod

2. MAT in Science Education/MAT in Mathematics Education (Jim Coakley)

Offered as suggestions for improvement, not criticism.

I would highly recommend that you add footnotes to explain the information in the spreadsheet.

As we discussed in the meeting, a footnote needs to break out the faculty FTE. Some of that FTE is subject to OPE, some of it is not. That needs to be clear. For example, in the year 1 budget, three FTE have a total salary of \$97,248. That is only \$32,416 per FTE. In the document, you mention hiring one faculty, adjuncts to teach six courses, and two part-time evaluators. Typically, the one FTE load for an adjunct is nine sections – so this would be 0.67 FTE for adjuncts. This leads one to conclude that the evaluators are also 2/3 FTE each. The OPE number also appears to be a percentage of this total 3 FTE salary. I think the three FTE number reflects the total faculty needed to deliver the program. It needs to reflect the additional budget required to deliver the program. What is presented in the budget spreadsheet does not appear to be consistent with the information provided in the document.

Also, the document suggests that the support staff is increasing from 0.49 to 0.75 FTE. Yet, the budget has the full 0.75 FTE cost. Should it be the 0.26 FTE incremental cost? You would have also have to absorb the incremental OPE costs (jumping from 10.5% on the 0.49 FTE to 42% on the 0.75 FTE).

OPE needs to be consistently applied across the years. Again, it is important to distinguish those salaries subject to benefits (higher OPE) vs those that are not (typically a 10.5% OPE to cover employer tax deductions). As I calculate OPE as a percentage of total salaries, it varies from 46.7% in year 1, 44.7% in year 2, 44.2% in year 3, and 44.7% in year 4. For our Cat I, we are starting with the current average of 42%, and adding 1% per year (recommended by Mark McCambridge to reflect projected increased employee benefit costs).

In second year, you added 0.5 FTE to faculty. I did not see where this was addressed at all in the document. After adjusting for 4% inflation, the incremental cost for the 0.5 FTE was \$6,640. That seems really low, even for an adjunct.

Also please footnote the amount you are using for inflation adjustments. Again, this needs to be consistently applied. As an example, the year four increase in faculty salary from year three is 2.65%, while the increase in support staff is 4%.

Good luck with the proposal.

Regards,

Jim

3. CLA Omnibus Cat 1 -- 12/19/2011 (Carolyn Aldwin)

CLA will be undergoing extensive reorganization, and are planning to do one omnibus proposal rather than separate ones for each new school. Thus, the organization chart is probably the most important part of this of the proposal == it is not clear why did GC said to take the org cht off the web.

Making sure faculty input is critical; not just arranging deck chairs but combining cultures and documenting faculty input.

What are the barriers?

Budget committee got stuck on curriculum; need to be differentiated:

- how much will it cost and who's paying?
- is it sufficient to make the change
- are there new initiatives/hires that should be in the budget?
- CLA says there will be no budget change, however, one change is that 17 chair stipends will be replaced by 6 directors with higher salaries
- Are there savings or costs? Have different budget pages for the schools?

One big problem concerns the forms. Cat I 's go to OUS, but Sabah is final person for abbreviated cat I. However, OUS dictates the forms; CPS = curricular proposal system.

Discrepancy between OSU & OUS -- change templates. OSU asks for

- where are savings?
- dean signs off budgets
- account for inflation

What is EC's role? Inquisitor vs. rubber stamp – neither model is appropriate. CLA challenged the notion that most problems should be resolved before it gets to the floor of the Faculty Senate, but EC representatives say that the approval process can be held up even more if the problems are not resolved before it is discussed at Faculty Senate.

Need summary of proposal. Create new schools and terminate depts.; lots of administrative problems.

In addition to documenting faculty input and that they agree to the proposed changes, the proposal also needs liaison feedback. These need not be external reviews but need to be outside the college.

The Cat 1 should be written from the school perspective. Much information can be included in appendices.

The budget approval process takes 1 to 1-1/2 months. Should come to faculty senate in May.

Should go into system in January; should be posted even if not submitted. Maybe we can have virtual apc, given how hard it was to get everyone to this meeting?

Budget at college level; narrative at school level. Budget is delta dollars, adjusted for inflation. Narrative for individual schools rather than ledger sheet. Curricular Program is at school level.

Other documents

- administrative team
- naming team
- ??

John Edwards will be originating person.

How give feedback? Track changes, phone call.

Carolyn

Follow up review of the graduate program in Masters of Agriculture

December 2011

Chrissa Kioussi, College of Pharmacy

The overall recommendations of the panel for the May 2009 graduate program review of the Masters of Agriculture degree program identified six areas of concern that were addressed in the action plan submitted by Cary Green, Assistant Dean for Academic Programs in the College of Agricultural Sciences. In January 2011, Greg Thompson, Professor and Head of the Agricultural Education and General Agriculture Department replaced Cary Green in providing oversight of the Masters of Agriculture (MAg) program. The follow-up review on December 2011, described below, was conducted with Dr. Thompson. Below, each area of concern is addressed by number followed by its current status in parentheses. Please refer to the previous full report of the review team for a complete description of each concern.

1. Low enrollment (in progress)

The Mag program had 4 enrolled students Fall 2008 with a 5-year average of 5.2 students per year. By fall 2011, the number of students had doubled. Eight students were enrolled from which three graduated by the end of Fall 2011. The administration is aware of the low enrollment and works with faculty and students to promote the program. Thompson has received several calls from students exhibiting interest in the program and he is working towards the formulation of a marketing plan to better promote the MAg program.

2. Lack of clarity and visibility (in progress)

A formal written description of the MAg program has been developed, projects from the current faculty have been collected and program examples analyzed. All these materials will be posted on the College's web page for better availability. Thompson currently provides this information to each interested individual upon request.

3. Learning Outcomes (fixed)

A list of learning outcomes for the MAg program has been developed which is in accord with the OSU graduate learning outcomes. A copy of this document is attached as an appendix.

4. Assessment Plan (fixed)

An assessment plan has been developed and submitted to the graduate school. A copy of this document is attached as an appendix.

5. Major concentration area, major professor (fixed)

The student needs to have indicated and been accepted by a major professor before entering the program. Thompson acts as the liaison. He also educates CAS faculty and students about the specifics of the Mag program.

6. Marketing plan (in progress)

This is an area of active work including discussions among the faculty and administration for developing e-courses and maybe an online MAg degree.

Masters of Agriculture (MAg) Learning Outcomes and Assessments

The Masters of Agriculture (MAg) program has identified three learning outcomes that align directly with the OSU Graduate Learning Outcomes:

1. Conduct research or produce some other form of creative work
2. Demonstrate mastery of subject material
3. Conduct scholarly or professional activities in an ethical manner

Graduates will have acquired fundamental knowledge in the three selected disciplines and will have developed an understanding of the principles underlying each field. Students will synthesize and assimilate information, its integration with other knowledge, and its intelligent use.

Students will be prepared for a variety of careers within the agricultural, food, and fiber and natural resources industries. Graduates will also demonstrate their ability to articulate their academic program and communicate, through writing, oral and visual presentations.

Assessments

- **Demonstrate Mastery of Subject Material**
 - Students will have sufficient course grades within the student's three program of study areas.
 - The final oral presentation will be evaluated for content depth and breadth.
 - During the oral examination, the committee members are provided an opportunity to ask questions pertinent to the student's coursework and to evaluate the student's content understanding and knowledge within the three program of study areas.
 - The final scholarly project will be evaluated by the committee to determine the extent of subject matter knowledge.
 - Graduates will have acquired fundamental knowledge in the three selected disciplines and will have developed an understanding of the principles underlying each field. Students will synthesize and assimilate information, its integration with other knowledge, and its intelligent use.
- **Conduct Research or Other Scholarly Work**
 - During the oral presentation, graduates will be assessed on their ability to evaluate and communicate scientific data to others in writing and in oral and visual presentations.
 - The oral examination will provide committee members the opportunity to evaluate students on their ability to communicate their research or scholarly work.
 - Through questioning, the committee members will assess the student's ability to conduct research or scholarly work.
- 4. **Conduct scholarly or Professional Activities in an Ethical Manner**
 - The oral examination will provide committee members with the opportunity to evaluate each student on their professional dispositions and ethics.
 - The oral presentation will be assessed to determine the student's professional communication.
 - The scholarly product will be evaluated by the committee members to determine ethical, as well as professional communication.

Materials linked from the January 26, 2012 Graduate Council Agenda.

**Graduate Assessment Plan (Master's programs)
DUE Dec 15, 2011 to Gita N. Ramaswamy, Director of Assessment**

Directions: Please complete this graduate student learning outcomes assessment plan for each Master's program with the distinct learning outcomes in your unit. Be concise, but provide as much information as needed to give a snapshot of your assessment plan/process. If you have this information in another format that articulates the following, please feel free to attach that document and refer to it as appropriate in the boxes below. If you have questions, please contact Gita at 7-2180

1. Program Information:

Standing Rules

The Graduate Council has jurisdiction over the policies, procedures, and requirements of graduate education. The Council establishes and reviews admission standards, basic degree requirements, and general policies; approves all graduate faculty members, new programs, and courses; and periodically reviews all existing graduate programs. The creation, design, and specific requirements of graduate programs and of individual student's programs are the responsibilities of the academic units; however, no academic unit has authority to waive or supersede the general policies of the Graduate Council. As needed, the Graduate Council reviews applications and nominations for specific university-level graduate student awards and recommends award recipients. Upon request, the Council also reviews university-level proposals for extramural funding of graduate training and education programs.

The Council consists of one graduate faculty member from each College and one graduate student. The Chair shall be a faculty member with immediate prior experience on the Council. The Dean and Associate Dean of the Graduate School and the Chair of the Graduate Admissions Committee shall be ex-officio, non-voting members.

Graduate School 8/11/2010 Revised 2/7/2012
Graduate Council Category II Course Proposal Review System and Review Guide

1. When a Cat II proposal requires Graduate Council review, an email will be sent to the appropriate council members. The goal is a one week turnaround of reviews.
2. The Council Chair has selected Primary and Secondary Reviewers for each college. The primary reviewer will be responsible for ensuring a timely response to each proposal. The primary reviewer will be the person who sends the proposal back for more information or approves the proposal. The secondary is just back up if the first has a question.
3. The criteria for evaluating Cat II proposals are as follows:
 - (a) The key question is, Does the syllabus indicate that the students will receive graduate level instruction?
 - i. Does the syllabus have learning outcomes?
 - ii. Are some learning outcomes more than memorization, comprehension, and attaining skills?
 - iii. Do at least some learning outcomes require analysis, experimentation, synthesis, proposing, evaluation, defending, predicting, evaluating, creating?
 - iv. Does grading assess if the graduate level learning outcomes have been achieved?
 - v. If the course is a slash course, is the graduate part of the class graduate level learning?
 - vi. Does the syllabus contain the minimum requirements – see the link and the list below.
(http://oregonstate.edu/ap/curriculum/policies/S_syllabus.html)?
 - (b) Has appropriate liaison been conducted with other graduate units?
 - (c) **Please be sure to check that the companion slash (4XX or 5XX) course, if any, has been identified in the Course Relationships, Slash Courses area of the cover page.**
 - (d) If the course is taught with a 4XX course (4XX/5XX slash course), are there appropriate distinctions in outcomes between the 4XX and 5XX versions of the course.
4. The detailed instructions for interacting with the electronic proposal system are as follows:
 - (a) Start at the Academic Planning and Assessment site for Category II proposals: <http://oregonstate.edu/ap/curriculum/catii.html> (Review the Cat II submission details.)
 - (b) Click "Online Curricular Proposal System"
 - (c) Log in with your ONID username and password.
 - (d) In this new page "Curriculum Proposal System Home" click the "All Proposals" link on the upper left.
 - (e) This gives you various search terms for proposals. Enter the proposal ID or change the "Review Group" to Graduate Council.

- (f) Click "Search" and then click the proposal to be reviewed.
- (g) Just below the Status line, Toggle the "Hide All Reviews" to reveal all previous reviews and originator responses.
- (h) Review the "Proposal" and the "Course Information" sections.
- (i) Review the documents in the "Documents" section.
- (j) If you are the Graduate Council secondary reviewer, send your recommendation by email to the Graduate Council primary reviewer. If your recommendation is to "Send Back", then include comments on what the proposal lacks. Note that your name will be automatically included in the comments that are returned to the originator.
- (k) If you are the Graduate Council primary reviewer, once you have received comments from the secondary reviewer either "Approve" or "Send Back" with comments.
- (l) **Do not approve the proposal unless you are the primary Graduate Council reviewer for this proposal and you have gotten comments from the secondary reviewer.**

5. CHECKLIST for Syllabus Minimum Requirements – *NOTE: This is likely to have been already checked by various folks before it gets to us.*

- Course Name
- Course Number
- Course Credits--include number of hours course meets per week/term in lecture, recitation, laboratory, etc. In the case of online courses, please comment on the number of hours on average that students will interact with course materials. For example, "This course combines approximately 90 hours of instruction, online activities, and assignments for 3 credits."
- Prerequisites, Co-requisites and Enforced Prerequisites
- Course Content--concise outline of topics and/or activities
- Measurable Student Learning Outcomes -- see Student Learning Outcomes for a definition and instructions.
(For 4XX/5XX courses, list appropriate distinctions in outcomes between the 4XX and 5XX versions of the course.)
- Learning Resources--textbooks, lab manuals, etc...indicate if required or optional
- Statement Regarding Students with Disabilities
"Accommodations are collaborative efforts between students, faculty and Disability Access Services (DAS). Students with accommodations approved through DAS are responsible for contacting the faculty member in charge of the course prior to or during the first week of the term to discuss accommodations. Students who believe they are eligible for accommodations but who have not yet obtained approval through DAS should contact DAS immediately at 737-4098."
- Link to Statement of Expectations for Student Conduct, Academic Honesty, etc.

Follow-up review for M of Agriculture program

From: Thompson, Greg
Sent: Friday, February 03, 2012 4:12 PM
To: Aldwin, Carolyn
Cc: Kioussi, Chrissa; Nunnemaker, Vickie L; Naguib, Nagwa
Subject: RE: Follow-up review for M of Agriculture program

Hi Carolyn,

I appreciate the opportunity to provide a response to the Graduate Council concerning the Masters of Agriculture (MAg) degree. The following steps will be implemented to market the program, address low enrollments, and implement new learning outcomes:

- 1) Market the MAg degree to: CAS Administrators, head advisors, and departmental faculty, and CAS curriculum council
- 2) Provide an information session for current undergraduate students
- 3) Identify a contact person from each department that will be the program "champion" and help students find a major professor for the MAg
- 4) Discussions with Graduate School to have MAg students counted at the department level, rather than the college level
- 5) work with the College Webmaster to develop a website for the MAg program
- 6) Start an Advisory committee - four faculty members have committed to being on an advisory committee for the MAg Degree Program.
- 7) The new Advisory Committee will reassess the learning outcomes and write specific assessments for the MAg.
- 8) meet with E-Campus to discuss MAg as an on-line degree option.

I had the CAS Head Advisor pull some MAg student numbers. According to the Student Information System we graduated the following student numbers:

2008-09 – 7 students

2009-10 – 3 students

2010-11 – 1 student

Currently there are 13 students enrolled in the MAg program. However, three of those students are inactive.

As the new coordinator for the MAg, I am committed to helping the degree program become a viable option for more students. I will commit to the steps outlined above and help to grow the program.

Let me know if you need additional information.

Thanks,
Greg

Subject: Follow-up review for M of Agriculture program

Dear Greg:

Thank you so much for coming to Graduate Council Meeting this afternoon. Our by-laws call for us to vote on whether or not to accept the report as showing sufficient progress or to reject it because we have significant concerns which we would then forward onto the Graduate Dean. In this instance, we voted to table our decision, and ask you to provide a little more information on three specific areas.

- (1) Low enrollment. We understand that you have been working on this issue and have doubled the incoming students from 2 to 4 or 5. However, we are still concerned that that will be too few students to meet the Provost's new guidelines concerning minimum graduation rates. Could you please tell us what steps you are taking to increase enrollment?
- (2) Marketing program. A related concern is the lack of a marketing program. Specifically, what steps are you taking to develop and marketing program? What strategies are you considering adopting to increase visibility and enrollment? We were unable to locate the Masters in Ag's website – when might you have a new one which is more visible and better involves key terms which would make it more visible to search engines?
- (3) Learning outcomes. While the learning outcomes you listed were fine, we were concerned that the list did not include anything specific to your program, as required by the faculty senate and the assessment office. Do you have a sense of what that might be?

We understand that you have admirably volunteered to take over a struggling program, and would very much like to assist you in either strengthening the program or in figuring out alternatives ways to serve the needs of the agricultural community (perhaps such as changing this to primarily a web-based or graduate certificate program).

We hope to resolve this issue over email, so we would appreciate receiving your answer by February 3rd, if possible. If you have any questions, please do not hesitate to contact me.

Regards,
Carolyn

Review Process for Ecampus Proposals

Programs:

- A. Review by the Curriculum Council and the Office of Academic Programs, Assessment, and Accreditation should take place for all online Ecampus program proposals, including undergraduate and graduate majors, minors, and certificates as well as undergraduate options of majors. The review process will entail the following steps for existing, previously approved programs:
1. Following submission by an academic unit, Ecampus evaluates the proposal to decide if the program should be offered online. This is part of the Ecampus review process. Ecampus evaluates a potential program based on the following criteria:
 - does the subject lend itself to online learning;
 - is there market need;
 - what is the cost to develop; and
 - does the program have potential for financial sustainability over time?
 2. If Ecampus approves the program for distance delivery, the proposal is forwarded to the Office of Academic Programs, Assessment, and Accreditation for review of the program requirements to determine equivalency with the campus-based program.
- B. Review by the Office of Academic Programs, Assessment, and Accreditation will include the following:
1. If a major, which options will be offered?
 2. What are the curricular requirements for the proposed program?
 3. What courses will be offered through Ecampus to meet those requirements?
 4. Are the minimum requirements of the program being met? If not, indicate in what ways the proposed program will differ from the one on the OSU main campus.
- C. As a result of the review by the Office of Academic Programs, Assessment, and Accreditation, a summary evaluation statement will be prepared and forwarded to the Curriculum Council (Graduate Council, if applicable) for its review and approval of the proposal.

- D. The Graduate Council (if applicable) and the Curriculum Council will review the proposal and suggest any needed changes/clarifications along with its approval. The approval is entered into the minutes and posted on the web.

-2-

- E. The Office of Academic Programs, Assessment, and Accreditation notifies the academic unit and Ecampus of the proposal's approval. In addition, a CPS (expedited Category II) form is prepared and submitted to the Catalog and Registrar's Office for implementation.
- F. Ecampus and/or academic unit will notify the Office of Academic Programs, Assessment, and Accreditation of any changes to the delivery of an approved program, including notification of its intent to terminate any previously approved online delivered program.
- G. The Office of Academic Programs, Assessment, and Accreditation will maintain a list of all approved Ecampus delivered programs (majors, minors, certificates, and options). Ecampus programs will be placed on the Office of Academic Programs, Assessment, and Accreditation home web page.

Courses:

- A. Ecampus will **not** fund or develop any course that has not been approved through the CPS Category II process. When a course proposal comes to Ecampus that has not been approved by the Curriculum Council, Ecampus will have the proposer submit the course through the regular Category II review process. Ecampus will review the course for online delivery, but will fund the course for development only after it has received Category II approval.
- B. Ecampus will accept course proposals for online delivery only if the course already appears in the OSU Catalog.
 - 1. Ecampus will not send course proposals for additional curricular review because they have already been reviewed and approved and exist in the OSU Catalog.
 - 2. Ecampus will copy the Curriculum Coordinator in the Office of Academic Programs, Assessment, and Accreditation on the approved course proposals.
 - 3. The Curriculum Coordinator will facilitate the implementation of course schedule-type coding by submitting an expedited Category II proposal through the CPS.

Approved by:

Academic Affairs: October 7, 2011

Extended Campus: October 13, 2011

Office of Academic Programs, Assessment, and Accreditation: October 14, 2011

Graduate Council: October xx, 2011

Curriculum Council: October xx, 2011 (Final Approval)

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☐ New degree program
- ☒ ~~New~~ certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☐ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

October 13, 2011

Graduate Certificate in Public Health

Executive Summary

As part of its strategic plan, Oregon State University (OSU) identified “Healthy People” as an area for development and investment. Establishing a College of Public Health and Human Sciences (CPHHS) in Oregon was proposed in September 2007 and adopted as an institutional goal in March 2009. It was accomplished June 18, 2011. Accreditation of our current Master of Public Health (MPH) program and the new CPHHS requires that OSU address public health workforce development and practice improvement. A Graduate Certificate in Public Health (GCPH), especially when offered through Distance Education, is a widely recognized means to accomplish that deliverable.

In 2008 the Oregon University System (OUS) approved the Graduate Certificate in Public Health (GCPH) for online delivery by OHSU as a strategy to remediate this specific deficiency of the collaborative Oregon Masters of Public Health (OMPH) program noted in its accreditation review. The GCPH program is coordinated by the Dean’s Oversight Committee of the OMPH, which executed a MOU among its members Oregon Health and Science University (OHSU), Portland State University (PSU) and OSU affirming that all three institutions could, and are encouraged to, offer the graduate certificate. In light of strategic reconsiderations, OHSU has suspended admitting applicants to the GCPH. As provided by OMPH in the attached agreement, CPHHS seeks approval to deliver the GCPH already approved by OUS in May 2008. Upon approval, CPHHS will deliver the certificate as a member of the OMPH and will continue to offer it, when in 2014 the College is established as a separate unit of public health accreditation.

Courses comprising the GCPH are the five core courses of the MPH degree offered at OSU plus one elective. Although acceptance into the graduate school will not be required for students in the GCPH, credit for GCPH courses taken may be applied to the MPH *providing the student is accepted into the graduate school*. All courses required for the GCPH at OSU are currently approved by the Graduate Council and Curriculum Council, and are taught on campus. We propose to deliver the courses online as well. Sufficient faculty resources exist to undertake and successfully deliver this engaged learning strategy.

Undertaking workforce development by the College is part of a larger, statewide effort among OSU’s key stakeholders to develop a fully functioning public health system, including state government, county public health practitioners and academia. Oregon’s public health workforce is inadequate, and its needs are growing. Between 1980 and 2000, the US population grew by nearly 55 million, yet the public health workforce declined by 55,000. Almost one quarter of the nation’s public health workforce is eligible to retire within the next 5 years. The Association of Schools of Public Health estimates that schools of public health will need to train three times the number of graduates over the next 12 years to meet workforce needs. For Oregon, that means increasing from approximately 80 to 240 public health graduates per year.

Development of the GCPH at OSU was expressly requested by the Oregon Public Health Division (OPHD) of Oregon Health Authority. See attached e-mail from Tom Engle, Director, Office of Community Liaison, OPHD. At least a third of the senior level administrative and clinical staff in local health departments (LHDs) are under-prepared according to Oregon Statute and Standards for public health hiring in Oregon. OPHD has found that neither geographic location nor employee cohort is associated with better preparation of public health staff, and has identified an urgent and ongoing need for the GCPH among LHD staff. Providing the GCPH as professional development for practicing public health professionals is in direct support of OSU’s strategic plan, its Carnegie Engaged designation, its land grant mission and its effort to accredit the new College of Public Health and Human Sciences.

Institution: Oregon State University
College/School: College of Public Health and Human Sciences
Department/Program: Dean's Office

CPS Tracking Number: 82511
October 2011

1. Program Description

a. Proposed Classification of Instructional Programs (CIP) number: *(contact your Registrar or campus Institutional Research office for this number).*

CIP #: 512201

Title: Public Health, General.

Definition: A program that generally prepares individuals to plan, manage, and evaluate public health care services; to function as public health professionals in public agencies, the private sector, and other settings; and to provide leadership in the field of public health. Includes instruction in epidemiology, biostatistics, public health principles, preventive medicine, health policy and regulations, health care services and related administrative functions, public health law enforcement, health economics and budgeting, public communications, and professional standards and ethics.

(Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.)

b. Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.

The Graduate Certificate in Public Health (GCPH) was established by OUS in May 2008 in response to a Category 1 proposal submitted by Oregon Health and Sciences University (OHSU). It is approved for delivery by OSU through the Oregon Master of Public Health (OMPH) Program through an agreement, which stipulates that "Each institution intending to grant the GCPH shall follow standard application procedures for providing a new program, as specified by the respective campus and the Oregon University System (OUS)." Accordingly, we are submitting this Category 1 proposal at OSU.

The GCPH is a certificate program designed for public health practitioners and others seeking professional development and continuing education. Its disciplinary foundations are the five core disciplines of public health: epidemiology, biostatistics, health promotion/health behavior, environmental safety health, and health management and policy. The programmatic focus is basic public health with an elective in health management/policy. No degrees, minors or areas are offered through this proposed program. Courses may be taken online or in person on campus.

Table 1. Summary of Proposed New Program

| |
|---|
| <u>NEW:</u> |
| • <i>Title:</i> Graduate Certificate in Public Health |
| <u>Areas of Concentration:</u> |
| • None |
| <u>Academic Unit:</u> |
| • College of Public Health and Human Sciences |
| <u>Delivery Mode and Location:</u> |
| • OSU Main Campus |
| • OSU E-Campus (Online, Distance Delivery) |
| <u>Accreditation:</u> |
| • Even though this proposed program is not professionally accredited, all 19 credit hours of the proposal program are part of the existing Master of Public Health (MPH) degree program. The MPH is accredited by the Council on Education for Public Health (CEPH). |
| <u>Effective Term:</u> |
| • Winter Term 2012 |

c. Course of study – proposed curriculum, including course numbers, titles, and credit hours.

Table 2. Proposed curriculum: 19 credit hours

| | Course Title | Credits |
|--|---|----------------|
| MPH Core Courses
(16 credits) | H 512 Environmental and Occupational Health | 3 |
| | H 524 Introduction to Biostatistics | 4 |
| | H 525 Principles and Practices of Epidemiology | 3 |
| | H 533 Health Systems Organization | 3 |
| | H 571 Principles of Health Behavior | 3 |
| Electives
(3 credits) | H 530 Health Policy Analysis | 3 |
| | H 536 Healthcare Organizational Theory and Behavior | 3 |

d. Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).

The program will be delivered onsite at the OSU campus in Corvallis, and certificate students may attend classes with Master of Public Health (MPH) students. If this proposal is approved, OSU Extended Campus (E-Campus) has agreed to consider our funding proposal to develop online versions of certificate courses and deliver them annually. Course scheduling and enrollment for certificate students will be handled by administrative support staff in the Dean's office in coordination with Ms. Nancy Creel, who currently

schedules all courses for MPH students. Use of technology is already established for on campus delivery of these courses and will be established through E-Campus for online delivery.

e. Ways in which the program will seek to assure quality, access, and diversity.

The 19 credit hour graduate certificate program is made up of existing MPH degree courses. Our MPH degree is nationally accredited by the Council on Education for Public Health (CEPH). The protocol for assuring quality, access and diversity will be identical for all graduate public health courses offered at OSU. The quality improvement process required for public health accreditation requires collection of data regarding the degree to which objectives are met and use of those data in making changes for improvement. All courses included in the GCPH were reviewed as part of the successful application to CEPH in May 2011. If approved, the GCPH will be part of the unit of accreditation and will be reviewed again by CEPH in 2013. See also section 5(b) below.

One key purpose of the GCPH is to expand the diversity of Oregon's public health workforce, especially when offered online. Through E-Campus, the GCPH will provide access to education in core public health disciplines to rural and traditionally underrepresented students, who otherwise might not be able to access coursework on campus. The College will recruit actively in partnership with community stakeholders, including the Office of Multicultural Health and Services of the Oregon Health Authority, to recruit a diverse cohort of students.

f. Anticipated fall term headcount and FTE enrollment over each of the next five years.

The program is designed to accommodate 30 students taking 19 credits/yr or 60 students taking 9 - 10 credits/yr. Because the GCPH is designed for full time working professionals, we anticipate that most GCPH students will take only 1-2 courses per term. The numbers below are calculated assuming all are part time (9-10 credits/yr) certificate students (60 @ full capacity). The full time equivalent (FTE) enrollment in the Certificate Program and the fall term head count of such students is expected to be:

Table 3. Anticipated Fall Term and FTE Enrollment

| | 2012 | 2013 | 2014 | 2015 | 2016 |
|-------------|------|------|------|------|------|
| Students | 10 | 25 | 40 | 50 | 60 |
| Student FTE | 3.5 | 8.8 | 14 | 17.6 | 21 |

g. Expected degrees/certificates produced over the next five years.

We anticipate that approximately 70 graduate certificates in public health will be completed over the next five years. The model is designed with the capacity to serve 60 full time students per year, and thus a maximum of 240 people could complete the course work over five years, if they took two courses (versus one course as assumed) per term. The program does not award degrees, but some students will likely elect to enroll in graduate school and go on to complete an MPH degree at OSU.

h. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

Anticipated certificate students will include both residential and non-residential students. They will be from Oregon, along with other states and nations of the world. The certificate is intended for non-

traditional professionals (mid career professionals who are employed full time). Since course content is identical to that required in the MPH degree program, traditional students may avail themselves of the convenience of taking these courses online. This aspect will be most useful to our dual degree programs (DVM/MPH and Pharm. D./MPH) students, who may not be able to attend core MPH classes on campus at the time they are taught.

i. Adequacy and quality of faculty delivering the program.

There is an adequate number of high quality faculty available to teach the graduate certificate program and deliver the program successfully. They are the same faculty who teach the same courses in the existing MPH program. Eleven new public health faculty members were hired in AY 2011-12. The quality of these teachers is outstanding. Please see the section below.

j. Faculty resources – full-time, part-time, adjunct.

Faculty who have agreed to teach GCPH courses include:

- **Stephanie Bernell, Associate Professor and Coordinator of the Health Management and Policy Programs.** PhD (Health Economics, Johns Hopkins University, 1999), MA (Economics, American University, 1992), BA (Economic Theory, American University, 1989). Dr. Bernell's research focuses on applying economic theories and methods to pressing public health problems. She has pursued this through three lines of research: (1) the employment effects of chronic health related conditions; (2) the contributions to and the effects of hunger; and (3) the relationship between urban sprawl and obesity. Dr. Bernell teaches health policy and health economics courses. **Program area: Health Management and Policy.**
- **Adam Branscum, Associate Professor and Coordinator of the Biostatistics Track.** PhD (Statistics, University of California at Davis, 2005), MS (Epidemiology, University of California at Davis, 2005), MS (Statistics, California State University, 2000), BS (Mathematics, California State University, East Bay, 1999). Dr Branscum's research interests include Bayesian nonparametric and semiparametric modeling and data analysis, epidemiology, diagnostic test methodology and protocols, and disease prevalence estimation. **Program area: Biostatistics.**
- **Sue Carozza, Associate Professor, Epidemiology;** PhD (Epidemiology, UNC Chapel Hill, 1995), MSPH (Epidemiology, UNC Chapel Hill, 1993), BS (Wildlife and Fisheries Sciences, Texas A and M University, 1983). Dr. Carozza's research focuses primarily on investigating environmental and genetic risk factors for childhood cancers. In addition, she has developed and applied Geographic Information Sciences (GIS) methods in epidemiologic research, particularly for environmental exposure assessment. Dr. Carozza teaches courses in epidemiology methods and cancer epidemiology. She has previously taught a core epidemiology course online. **Program area: Epidemiology.**
- **Chunhuei Chi, Associate Professor and Coordinator of the MPH International Health Track.** ScD (Health Policy and Management, Harvard University, 1990), MPH (International Health, University of Texas, Houston, 1982), BS (Public Health, China Medical College, 1978). Dr. Chi's research interests are in evaluating equity and efficiency in health care services and finance; measurement of equity and efficiency in health care systems and health development; extra-welfarist WTP methodology; improvement of international health professional education; economic globalization and health development; integrating allopathic, traditional, alternative and complimentary medicines into modern health care systems; and health development in low-income nations. Dr. Chi teaches courses in health care systems and finance, international health, global health issues, and health care marketing. **Program areas: International Health and Health Management and Policy.**

- **Karen Elliott, Instructor.** PhD (Public Health, Oregon State University, 2006), MS (Health Promotion and Health Education, University of Montana, 2002), BS (Biology, Carroll College, 1998). Dr. Elliott teaches health promotion and health behavior courses, and supervises internships in the undergraduate program. She teaches community organization in the graduate program. **Program area: Health Promotion and Health Behavior.**
- **Tom Eversole, Director. Director for Strategic Development for a College of Public Health and Human Sciences.** DVM (Veterinary Medicine, University of Georgia, 1975), MS (Counseling Psychology, Loyola University, 1989), MS (Veterinary Surgery, Colorado State University, 1978), BS (Biology, Virginia Polytechnic Institute and State University, 1971.) Dr. Eversole has served as Manager of HIV/STD/TB programs for Oregon Public Health Division. He served 8 years as Benton County Health Administrator, establishing and directing a new federally qualified health center. He has served as Co-chair of Oregon's Conference of Local Public Health Officials (CLHO), Vice Chair of the CLHO Legislative Committee and currently serves as Chair of the governor's appointed Public Health Advisory Board. He is adjunct faculty to OSU College of Veterinary Medicine, where he teaches veterinary public health. **Program area: Health Management and Policy.**
- **Nancy Seifert, Instructor.** PhD (Public Health, Oregon State University, 2005), MS (Management, Troy State University, 1979), BS (Business Education, Oregon State University, 1975). Dr. Seifert is also currently CEO of Quality Care Associates, Inc. Her research interests are in recruitment theory and practical strategies for recruiting physicians in Oregon. She is currently involved in the creation and exploration of Accountable Care Organizations. **Program area: Health Management and Policy.**
- **Shelley Su, Instructor.** PhD (Toxicology, Oregon State University, 1998), BS (Biochemistry/Biophysics, Oregon State University, 1982). Dr. Su's research interests include environmental causation of disease. Focus on the mechanisms of xenobiotic metabolism, and the dietary modulation of chemoprotective/cancer-causing enzyme systems. Dr. Su teaches classes in environmental health, including air toxics, hazardous wastes, public health toxicology, occupational health, and ethics. **Program area: Environment, Safety and Health.**

k. Other staff.

Other staff available to assist coordination, management and delivery of the GCPH include: Ms. Rena Thayer, (Administrative Assistant), Ms. Nancy Creel (Office Coordinator), Marie Harvey, Dr.PH (Associate Dean, Research and Graduate Programs, CPHHS), and Tom Eversole, DVM, MS, MS (Director of Strategic Development for Public Health.)

l. Facilities, library, and other resources.

The OSU library and E-Campus facilities are completely adequate to support the GCPH.

m. Anticipated start date.

We would like to offer coursework in the GCPH beginning January 1, 2012 and are prepared to do so if approved.

2. Relationship to Mission and Goals

a. Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.

The proposed GCPH supports the University's mission and goals in the following ways. It will create access to practice-oriented academic education without graduate school admission. The proposed graduate certificate program will allow students to progress through an applied education at a pace consistent with their other work and life responsibilities. The GCPH is an example of Engaged Scholarship, which supports the University's mission for engaged learning and research by creating a new cadre of co-investigators in communities. Engaged research is core to retaining OSU's designation as a Carnegie Engaged institution. Engaged scholarship provides an opportunity to enhance current research programs by expanding collaborative resources and increasing access to participants. Relationships established through the GCPH help support OSU's mission for applied research and community service.

b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

The University strategic plan identified three strategic priorities for development and investment: Healthy People, Healthy Planet and Healthy Economy. The field of public health spans all three. The GCPH will help develop the public health workforce Oregon needs to establish a robust public health system. A core area of public health is Environmental Public Health, which applies environmental science and the maintenance of healthy environments to population health. Developing a sufficient and competent public workforce is key to Oregon's economic development. The certificate helps CPHHS achieve its mission to develop the next generation of globally minded public health and human sciences professionals. Through interdisciplinary research and innovative curricula, CPHHS advances knowledge, policies, and practices that improve population health in communities across Oregon and beyond.

c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

The GCPH is consistent with OSU's land grant mission to make the academic resources of the university accessible to Oregonians throughout the state. Delivered online, the GCPH will be accessible to participants throughout Oregon and beyond. Courses comprising the GCPH will be held to the same standards of quality as the accredited MPH courses. The GCPH will foster applied research/knowledge creation by engaging more campus faculty with community-based co-investigators and co-learners. New techniques acquired by faculty through a distance education experience will enhance classroom delivery of academic content material.

d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.

The certificate program will provide continuing education to existing workforce members, based upon locally-specific needs assessment data. "As an independent sequence of courses to upgrade skills of non-degree students, [certificate programs are] a positive development for the field of public health practice" (CEPH, 2005, Criterion 3.3, Workforce Development). By improving the ability of state and local public health workers to address social, behavioral, environmental and economic determinants of health, the GCPH engages academia in responding to societal needs.

3. Accreditation

a. Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.

The Council on Education for Public Health (CEPH) has established standards for an academic degree, but not for certificates. Courses comprising the proposed certificate are part of OSU's MPH degree and are currently accredited by CEPH through OSU's membership in the consortium Oregon Masters of Public Health (OMPH) Program. The GCPH originally offered by the OHSU School of Nursing is governed by the OMPH. The governance section of the MOU among the three participating institutions (See Attachment A) states the following:

This Certificate, a product of the OMPH Program, shall be governed by the Deans Oversight Council, and administered by the Coordinating Council/Track Coordinators Committee through its subcommittee on Workforce Development. Participants in the GCPH include the partner academic units of the OMPH Program (Public Health and Preventive Medicine, School of Medicine, OHSU; Graduate and Interdisciplinary Programs, School of Nursing, OHSU; Department of Public Health, College of Health and Human Sciences, OSU; School of Community Health and Division of Public Administration, College of Urban and Public Affairs, PSU). It is the intent of this partnership that the certificate may be granted by any or all of the partner institutions, through the affiliated academic units.

b. Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.

Not applicable. Although degree programs are accredited by CEPH, *public health certificates* are not accredited. Therefore, nothing is required for the certificate to become accredited.

c. If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.

The CPHHS offers an undergraduate program. CEPH has not accredited undergraduate programs prior to 2011. OSU's undergraduate program in public health was included for approval as part of the CPHHS application to begin the accreditation process for the entire college. The BS in Public Health degree was designed in accordance with CEPH accreditation guidance, and the application was accepted. CEPH will evaluate the undergraduate program as part of the entire CPHHS accreditation review in 2013. The undergraduate Public Health program will become accredited as part of the College accreditation.

d. If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.

The certificate program will not be accredited. Its courses are part of the OMPH unit of accreditation, accredited by the Council on Education for Public Health (see www.CEPH.org).

4. Need

a. Evidence of market demand.

Oregon Public Health Division (OPHD) has requested that OSU offer the online certificate so that employees of county health departments may meet minimum job qualifications. According to a 2008 survey of local health departments by the Coalition of Local Health Officials (CLHO), (www.oregon.gov/DHS/ph/lhd/docs/capacity-assessment-report-final-10-08.pdf) health departments statewide were assessed as having only 57% of the required capacity as measured using national standards by the National Association of City and County Health Officials (NACCHO.) The study called for an additional 394 FTE of public health workers to meet Oregon's current need. Additionally:

- Oregon's public health workforce is inadequate, and needs are growing.
- Between 1980 and 2000, the US population grew by nearly 55 million, yet the public health workforce declined by 55,000. *
- 23% of the nation's Public Health workforce is eligible to retire within the next 5 years.
- Many among the workforce lack public health training and are not well prepared to conduct population based approaches, which is the heart of the profession.
- The Association of Schools of Public Health (ASPH) estimates that schools of public health will need to train three times the number of graduates over the next 12 years to meet workforce needs. For Oregon, that means increasing from approximately 80 to 240 public health graduates per year.
- Interest in academic preparation is growing, and Oregon is not recruiting or graduating the number of public health students it could. In 1997 and 2003 the number of MPH applicants was 133 and 348 respectively. About 60% of applicants are accepted into MPH programs. In 2002 and 2005, the number of graduates was 44 and 78 respectively. Current capacity will not meet the workforce needs (est. 240 MPH graduates/year) for a fully functioning, robust public health system once developed.

*Data from: UCLA Public Health Magazine, UCLA School of PH, June, 2008, pp. 12 – 16.

b. If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).

The GCPH program is shared by OHSU School of Nursing (SoN), OHSU School of Medicine, Portland State University and OSU through their partnership in the collaborative OMPH Program. In addition to the points listed above, evidence of need based on surveys was presented in the original GCPH Proposal approved by OUS on May 1, 2008. As part of a reevaluation of its strategic direction, the SoN ceased accepting new students into the GCPH in 2011. Please see liaison with OHSU. Furthermore, Oregon Public Health Division (OPHD) has requested that OSU offer a formal post-baccalaureate certificate program that focuses on the five core public health courses and that could be made available to Oregon's public health workforce. See Attachment B. As described above (section 1. c.), the certificate consists of 19 credits, using courses already offered through our accredited program.

All three institutions in the OMPH Program have a need, based upon program mission and accreditation mandate, to provide continuing education targeted toward meeting the specific needs of the local workforce. As a member of the OMPH, OSU's delivery of the GCPH will contribute toward fulfilling the

OMPH reaccreditation requirement for workforce development, which will be reassessed in 2013. The proposed certificate program is a synergistic opportunity to meet the needs of all three institutions, the state health division as well as to support public health services in the state of Oregon.

c. Manner in which the program would serve the need for improved educational attainment in the region and state.

The OPHD, Oregon's state health division, has recognized that at least a third of the senior level administrative and clinical staff in local health departments (LHDs) are under-prepared according to Statute and Standards for public health hiring in Oregon (See Attachment C, Minimum Standards for Local Health Departments in Oregon). OPHD has found that neither geographic location nor employee cohort is associated with better preparation of public health staff, and has identified an urgent and ongoing need for the GCPH among staff.

d. Manner in which the program would address the civic and cultural demands of citizenship.

Three of the certificate's learning outcomes support civic and cultural demands of citizenship: 1) employ ethical principles and behaviors, 2) enact cultural competence and promote diversity in public health research and practice, and 3) apply public health knowledge and skills in practical settings. Offering the certificate at OSU will meet OPHD's interest in the GCPH, which is to improve workforce competence and public service at the county level. It will improve public health and community health promotion services delivery to Oregon residents. Certificate training will increase proficiency of Oregon's LHD senior and mid-level staff to provide competent and compassionate services and to meet the standards for public health employment. The online program proposed by the OSU College of Public Health and Human Sciences, will meet the needs of employed public health workers in all 36 counties -- including rural and frontier counties -- while also allowing staff to remain employed in their counties, however remote.

5. Outcomes and Quality Assessment

a. Expected learning outcomes of the program.

Learning outcomes or objectives of the graduate certificate program are to:

- Apply evidence-based knowledge of health determinants to public health issues
- Select and employ appropriate methods of design, analysis, and synthesis to address population based health problems
- Integrate understanding of the interrelationship among the organization, delivery, and financing of health-related services
- Communicate public health principles and concepts through various strategies across multiple sectors of the community
- Employ ethical principles and behaviors
- Enact cultural competence and promote diversity in public health research and practice
- Apply public health knowledge and skills in practical settings.

Additionally, each of the courses comprising the curriculum develops practitioner competencies as a required component of public health accreditation. (See Syllabus, Attachment D.)

b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

Program effectiveness in achieving each course's learning objectives (see above) will be determined by the letter grade criteria. Student learning assessment will mirror the procedures currently in place in on-campus courses used in the certificate program, where a combination of graded exams, term papers, and research projects are used. Learning assessment will be embedded in the curriculum, with each course requiring demonstration of mastery of subject matter. The functionality of web delivery will be assessed through feedback from participants. Additionally, the Program Director, Associate Program Director and Program manager will monitor enrollment and program expenses to ensure continued financial sustainability and viability of the program.

Learning outcomes for the certificate program are listed in section 5.a. above. The level to which those outcomes are met will be monitored using a three-fold approach: (1) the PH Graduate Program Coordinators will review the curriculum every year and the entire program every five years in parallel with university graduate program and College accreditation reviews; (2) all students graduating from the program in the first five years will be given an exit interview in which they will be asked standard questions about how the program was successful and how the program could be improved; and (3) regular follow-up of graduates will be done with graduates and employers to track how graduates are doing in terms of employment and satisfaction with the education they received from the program.

c. Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.

The same performance indicators used for these classes when delivered on campus will be used. Oversight of academic standards, policies, and procedures governing the GCPH courses at OSU is coordinated by the CPHHS School Co-Directors with input and guidance from the Graduate PH Program Coordinators. This team will periodically review standards and assure uniformity across the courses. The CPHHS tracks data regarding student success not only grades, but also student progress, continuation into graduate school, job placement, and proficiency of competencies. Issues regarding licensure do not currently apply to public health workers.

d. Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.

Engaged scholarly activity associated with the GCPH will focus primarily on workforce development. Indicators of success may include, numbers of participants completing the certificate, job placement, career advancement, improvements in public health capacity and practice. Faculty publications in applied research journals are anticipated.

6. Program Integration and Collaboration

a. Closely related programs in other OUS universities and Oregon private institutions.

Oregon State University offers a graduate certificate in Health Management and Policy. OSU and Portland State University offer undergraduate certificates in Gerontology, but none contain the fundamental Core Courses in public health and would not be considered by the OPHD to meet workforce needs for preparation to practice public health.

The GCPH was approved by the OUS in 2008 for delivery by OHSU School of Nursing through the OMPH. As noted in the executive summary, as part of its strategic planning, OHSU stopped admitting students into the program in 2011, and OPHD requested that OSU offer the graduate certificate. As a member of the OMPH, OSU will provide the GCPH, contributing to the OMPH accreditation deliverable for workforce development. It is anticipated that upon successful accreditation of the CPHHS by CEPH in 2014, both OMPH and OSU will continue to offer the GCPH.

b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.

As part of the OMPH and the MOU signed in 2008, students may take GCPH courses at any of the participating institutions. Under its implementation section, the MOU states: The GCPH may be delivered through any of the learning formats provided by OMPH Program Tracks. Consistent with OMPH Program practice, certificate students may take their classes at any of the OMPH academic units, irrespective of whether the certificate is granted by that host institution. Intercampus registration for the GCPH shall follow the same protocols as for collaborative MPH degree students.

c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.

The graduate certificate program will be offered in collaboration with existing, similar programs. Upon successful accreditation of the College of Public Health and Human Sciences in 2014, OSU will continue delivering the GCPH under its own scope of work. OMPH institutions may continue and/or resume offering the certificate.

d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.

Certificate students can take the regularly offered onsite courses, plus we plan to offer online versions once a year. Both onsite and online delivery should positively affect the College budget. Faculty workload will be managed by increasing faculty when/if growth in student numbers requires it. On site delivery of the graduate certificate will not impact budget, faculty workload and facilities use of the other OMPH partner institutions. None of the OMPH partners are currently accepting new E-Campus students in the GCPH. Thus, online delivery of the GCPH by OSU will not impact current delivery levels by other OMPH partners, but it will avail this educational opportunity to residents of Oregon and beyond.

All GCPH courses are currently taught at OSU. The subject librarian concludes that present collections and services are adequate to support the proposal. No additional funding is needed in year one or ongoing to upgrade collections or services. Please see Library Evaluation attached.

7. Financial Stability (attach the completed *Budget Outline*)

a. Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.

Business Plan

We anticipate an enrollment of 5-10 students in the GCPH in year one, building to an average of 40/year by 2016. Currently, about 45 on-campus students complete the MPH every year. There are currently 125 MPH students enrolled in the program, and we anticipate 300 by 2016. The availability of online access to the graduate certificate should extend our student markets to central Oregon (OSU Cascades) and the professional community throughout the state. Additionally, our MOU with OHSU and PSU, which allows OSU students to take the five core PH courses at those schools, is slated to expire in 2014. At that time, the GCPH will allow our Portland-based students to take the five core MPH courses online, reducing their need to commute to Corvallis. It allows OSU pharmacy and veterinary students to begin double degree studies concurrent with their professional studies.

The GCPH will be sustained by tuition revenues after the two-year start up. Students will come from a variety of sources including traditional students and working public health professionals.

- The minimum qualifications for Health Administrators employed at County health departments are outlined in Oregon Administrative Rules. The Administrator must have a Bachelor degree plus graduate courses (or equivalents) that align with those recommended by the Council on Education for Public Health. These are: Biostatistics; Epidemiology; Environmental health sciences; Health services administration; and Social and behavioral sciences relevant to public health problems. Approximately 1 in 3 County Health Administrators lack such training as documented by triennial reviews of LHDs. Health plans for such LHDs must include a plan of corrective action. The GCPH is designed to meet that need, allowing working professionals to complete the requirement without travel or disrupting their work. In many counties, tuition for the GCPH qualifies for job-related education benefits for county public health employees. Additionally, OPHD and Northwest Health Foundation have committed to provide GCPH tuition payment as part of their investment in public health workforce development.
- As occurs with other courses delivered on campus, the GCPH online courses will be available to MPH students on campus, who require access to courses at times and sequences other than those offered on campus.

E-Campus Grant Funding Requested

With the assistance of E-campus, the Graduate Certificate in Public Health seeks to fulfill Oregon's public health workforce needs outlined above. The proposed biennial project period is FY 2012 and FY 2013. The E-Campus funding proposal requests \$150,000 in E-campus Program Development Grant funds to cover project start up and development costs, including course development, program administration, hardware, software and technical (IT) support. Instructor costs will be paid from tuition received. Beginning FY 2014, the GCPH is anticipated to be self-supporting through the College's share of tuition generated through E-campus.

Proposed Staffing

The program will be conducted through the CPHHS Dean's Office under the direction of Associate Dean, Marie Harvey. Dr. Harvey will serve as GCPH Program Director, providing administrative leadership in consultation with coordinators of each of the College's MPH programs and school co-directors. An Associate Program Director (Dr. Eversole) will supervise day to day operations performed by the Program Manager (TBN.) Eversole also will work with external stakeholders in the public health practice

community (OPHD and LHDs) and the OSU Cascades Campus to market the program and enroll students including public health practitioners.

We propose that the Associate Program Director (Eversole) be assisted in his capacity by a 0.49 FTE Program Manager (Graduate Assistant, TBN), who will conduct/manage the daily activities of the GCPH program. Her/his duties will include receiving student applications and enrolling certificate students in the program, certifying student completion of certificate requirements, maintaining the certificate program website, and responding to inquiries from prospective students and the general public. In addition to functional operation of the GCPH Program, this position will assist the Associate Director coordinating GCPH with affiliated academic units, the OSU Extended Campus, and the Graduate School. Administrative support will be provided by a 0.2 FTE Office Coordinator (Thayer), who will coordinate course scheduling, teaching assignments and serve as an operational point person for E-campus liaison.

During the two-year start-up period, E-campus grant funds will support the 0.49 FTE Program Manager and 0.2 FTE Office Coordinator noted above. Instructors will be paid by tuition generated. We anticipate sufficient enrollment by the end of the two year project period to continue funding these two positions and instructors through college tuition shares. In-kind contributions by the Program Director (Harvey) and Associate Program Director (Eversole) will be sustained by CPHHS during and after the project period.

Financial Assumptions

Annual operating costs include salary expenditures and OPE for the two paid staff positions (Program Manager and Office Coordinator) are \$44,500 plus an estimated \$13,000 to OSU Media Services for IT support. These expenses total \$57,500/year. Current MPH fees are \$466/credit for Oregon residents and \$749/credit for non-resident students. A \$75/credit E-Campus fee is also charged. Assuming* an 80%/10%/10% distribution of tuition revenue, we estimate that \$372.80/credit ($0.8 \times \466^*) is available to operate the program. In year 3 and subsequently, project expenses of \$57,500 can be generated by 154 credit hours ($\$57,500 / \$372.80 = 154$) delivered/year. Assuming that each student takes one course per term (12 credits per year), then 13 (i.e., $154 / 12 = 12.8$) students must matriculate each year to meet IT and administrative support expenses. This number is a reasonable goal by year two. At full capacity in 2016, we estimate 40 students per year will be matriculating, which is the number of students required to generate revenue equal to fully loaded costs of the program without E-Campus grant support.

As referenced above, funds for instructor salaries and OPE costs are generated by the E-campus college tuition share from student enrollments, which ensures continued availability of course offerings. In summary, the program needs to matriculate around 40 students per year to be self-sustaining (assuming only 9.5 credits/yr/student.) Considering that these courses could also be taken by MPH students (as well as GCPH and double degree students) online, we believe there will be sufficient enrollment and credit hours in online courses to ensure its sustainability beyond the two-year start-up period funded by E-campus.

The budget (see attached) for this plan assumes that through an E-Campus development grant, E-Campus will market the program, develop a website for the distance Graduate Certificate in Public Health, and will provide technical assistance for faculty needing help developing their courses. Seven courses currently taught at OSU will be developed for distance delivery to allow students to complete the GCPH entirely online.

**Assumes no out-of-state students in order to produce a conservative revenue estimate.*

| Proposed New Distance Course: | Credits | Faculty | Initial Offering | Frequency: |
|---|----------------|----------------|-------------------------|-------------------|
| H 512 Environmental and Occupational Health | 3 | Su | Summer 2102 | Yearly |
| H 524 Introduction to Biostatistics | 4 | Branscum | Fall 2012 | Yearly |
| H 525 Principles and Practices of Epidemiology | 3 | Carozza | Winter 2012 | Yearly |
| H 530 Health Policy Analysis | 3 | Bernell | Winter 2013 | Yearly |
| H 533 Health Systems Organization | 3 | Eversole | Fall 2012 | Yearly |
| H536 Healthcare Organizational Theory and Behavior | 3 | Seifert | Spring 2013 | Yearly |
| H 571 Principles of Health Behavior | 3 | Elliot | Spring 2012 | Yearly |

Faculty will be paid for adapting 3 existing courses in 2012 and 4 in 2013. Five courses to be modified for online delivery are a core requirement for the MPH program and may be used by enrolled MPH graduate students toward their degree. The two elective courses (H 530 Health Policy Analysis and H536 Healthcare Organizational Theory and Behavior) are required for the Health Management and Policy track of the MPH. The graduate certificate would make all seven courses available online.

Hardware/Software and Technical Support expenses needed to deliver a remote course online are significant. Pending Category 1 approval, we will request funds (\$25,500) from E-campus during the project period to cover these costs while we build student enrollment in the program. After the 2-year start-up period, we expect that tuition from students taking online courses used in the GCPH program will provide sufficient funding for ongoing licensing and IT system support (estimated at \$15,000/year in year 4.) All expenses are calculated at an assumed increase of 3%/year.

Pending Category 1 approval, we will request \$66,000 in support of a Program Manager (TBN) to be housed in CPHHS for the initial 2-years (0.49 FTE graduate assistant salary and benefits for 2 years). The Program Manager will act as the main contact person for students interested in and applying to the program, perform necessary management duties, admit students to the graduate certificate program, liaison with the Graduate School, and conduct student recruitment including diversity recruitment. After the initial 2-years, this position will be funded by tuition revenues from courses used in the certificate program that are delivered through E-campus. As the population of E-Campus students in the GCPH program grows, the position FTE can be increased accordingly to accommodate increasing levels of work and responsibility. The Program Manager will be under the supervision of the Associate Program Director (Eversole.)

The Program Manager (TBN) will be assisted by a 0.2 FTE Office Coordinator (Thayer) at a 2-year cost to project of \$23,000. After the initial 2-years, this position will be funded by tuition revenues from courses used in the certificate program that are delivered through E-campus. This position will be involved in all aspects of program development and coordination, liaison with E-campus, and provide ongoing support in scheduling courses, instructors and conducting general communications, etc. Our business plan

reflects capacity building and a responsible transition from E-Campus grant funding to revenue generated funds in year 3. Profit margin is smallest that year when we assume financial liability for all project staff. The fund balance is intended as a safeguard for that year while we reach full capacity.

The Associate Program Director (Eversole) will conduct engagement liaison with LHDs and OPHD to ensure program enrollment and sustainability. CPHHS Business Services will track program development funds, tuition and any other revenues, instructor salaries and revenue forecasts. Contributions by Eversole and Harvey will be supported entirely by existing College funding, and no E-campus funding is requested for their effort.

b. Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.

No maintenance of unique resources (buildings and laboratories) is required. Costs of Information Technology maintenance and support will be paid from program revenues (tuition.)

c. Targeted student/faculty ratio (student FTE divided by faculty FTE).

The anticipated student/faculty ratio is 5:1 initially, increasing to 20:1 at full capacity.

d. Resources to be devoted to student recruitment

Student recruitment will be primarily online and through our public health practice partners. The graduate certificate program will be publicized as part of the College of Public Health and Human Sciences, through our website, targeted presentations and print media. The GCPH is also publicized for us on the OMPH website. Oregon Public Health Division as well as the Conference of Local Health Officials have been very proactive in publicizing OSU's willingness to offer the GCPH if approved. An initial email communication by OPHD to CLHO members resulted in 9 respondents indicating that they were ready to enroll winter term if the GCPH courses were offered online.

8. External Review (if the proposed program is a graduate level program, follow the guidelines provided in *External Review of new Graduate Level Academic Programs* in addition to completing all of the above information.)

Increasingly, certificate programs are an important component of Public Health pedagogy. Portland State University initiated a new certificate in Health Systems and Public Health Management this fall. See <http://www.pdx.edu/cps/health-systems-and-public-health-management> OSU's proposed GCPH is a certificate and not a graduate degree program. Although it is a new offering at OSU, it is not a new graduate certificate program in the OUS system. In May 2008 the OUS Provosts' Council approved and established the Graduate Certificate in Public Health (GCPH). The GCPH program is coordinated by the Dean's Oversight Committee of the OMPH, which executed a MOU among its members (OHSU, PSU and OSU) affirming that the certificate may be delivered by any and all of the three member institutions of the accredited Oregon Master of Public Program. The proposed graduate certificate program is closely related to the institution's authorized existing degree program, the MPH. In light of these considerations we request that the OUS Provosts' Council modify or waive this review requirement. Thank you for your consideration of this proposal and support of OSU's Land Grant mission to provide education throughout Oregon.

S. Marie Harvey
Associate Dean for Research and Graduate Programs

September 21, 2011

Dear Dr. Harvey,

I am writing to enthusiastically support your proposed Graduate Certificate in Public Health (GCPH).

The Coalition of Local Health Officials (CLHO) represents Oregon's 34 local public health authorities. Supporting this proposed graduate certificate fits squarely into one of our purposes, which is to promote "public health knowledge and skills in the local public health workforce and leadership."

The Coalition of Local Health Officials is concerned about public health workforce on two key fronts. First, a significant number of public health administrators and staff are not fully academically prepared according to Oregon Standards for Local Public Health. We have a current and pressing need for the GCPH with our current workforce. In addition, public health is an aging workforce. The GCPH will be useful preparing the upcoming workforce and our succession planning efforts.

The five core courses in the GCPH will meet the minimum qualifications for local public health administrators as defined in our standards. Having those courses apply to the MPH for students accepted into your graduate school will also provide a ladder of educational opportunity for our workforce. This is a very attractive approach and we commend you for it.

We are very excited about this proposed opportunity. Please do not hesitate to contact me if you have any questions.

Sincerely,

Kathleen O'Leary, RN, MPH
Coalition of Local Health Officials, Chair

To: Eversole, Tom - HHS
Subject: Minimum Standards

Tom Eversole -

I am writing to you as the Director of Strategic Development for a CPHHS at OSU.

I hope that you will encourage OSU to develop a program that will provide opportunities for local health administrators in Oregon to meet their minimum standards. One of the critical needs we have in this state is assurance that our public health leadership is qualified and up to date on public health science. We need a mechanism for administrators to receive core public health education in a way that acknowledges the challenges of state geography and distances, and the challenge of time constraints of a working leadership.

The current minimum standards for local health administrators:

"The Administrator must have a Bachelor degree plus graduate courses (or equivalents) that align with those recommended by the Council on Education for Public Health. In 2008 these are: Biostatistics, Epidemiology, Environmental health sciences, Health services administration, and Social and behavioral sciences relevant to public health problems. The Administrator must demonstrate at least 3 years of increasing responsibility and experience in public health or a related field."

If a local health administrator does not meet the minimum standard, we ask that they have a plan in place to achieve the standard and we give them time to secure the course work. Currently there is no distance learning option in the Oregon system and administrators much go outside Oregon to try and find the courses.

thank you for the consideration.

tom

Northwest Health FOUNDATION

September 28, 2011

Marie Harvey, Dr. PH
Associate Dean for Research and Graduate Programs
WB 123, Oregon State University
Corvallis, OR 97331

Dear Dr. Harvey,

The Northwest Health Foundation strongly supports the establishment of a Graduate Certificate in Public Health at Oregon State University. As a Carnegie Engaged and as Oregon's Land Grant institution, the University is well positioned to fulfill its role of providing extended education for people throughout the state. Moreover, this program will help expand the capacity of Oregon's public health workforce by offering access to education in public health disciplines through OSU's distance learning infrastructure to rural and traditionally underrepresented students.

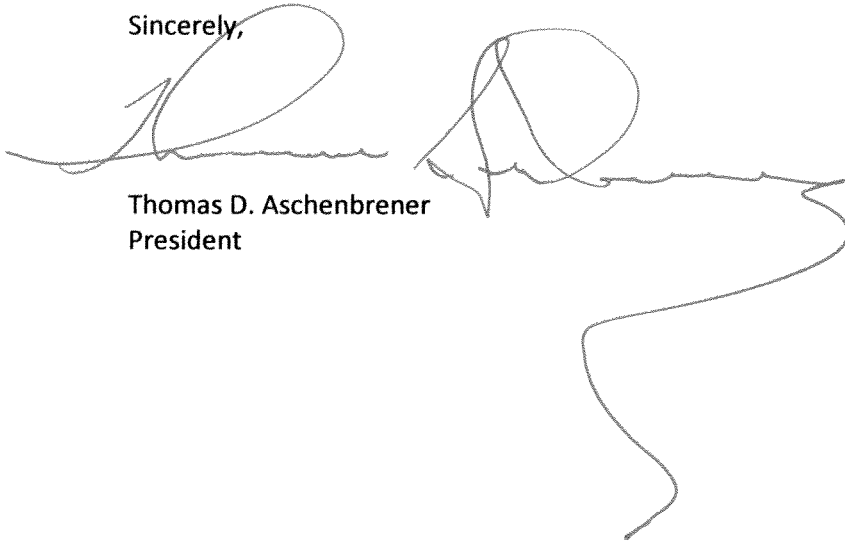

Oregon, like other states, faces significant shortages in the public health workforce as nearly a quarter of the current workforce is eligible to retire over the next five years. The Association of Schools of Public Health estimates that schools of public health will need to train three times the number of graduates over the next 12 years to meet workforce needs as Oregon's population grows – as it is estimated that by 2030 there will be a 41 percent increase from 2000 levels. For Oregon, that means increasing from approximately 80 to 240 public health graduates per year.

In addition to having a larger population to serve, Oregon's public health infrastructure will have to serve an increasingly older and more diverse public. The percent of Oregonians who identify themselves as Hispanic or Latino increased to 10 percent in 2006 from 4 percent in 1990. That's a 158 percent increase in just 16 years. To address the increasing gap between the population and the public health workforce, the GCPH program intends to partner with community stakeholders to recruit a diverse cohort of students and will create access to practice-oriented academic education without requiring graduate school admission, thus eliminating or lowering existing barriers for students from rural and ethnically diverse communities.

A significant proportion of the current workforce lacks public health training and the necessary academic preparation needed to help meet essential functions of local health departments and to implement community-based strategies to improve the public's health and reduce health disparities. According to a 2008 survey of local health departments by the Coalition of Local Health Officials, health departments statewide were assessed as having only 57 percent of the required capacity as measured using national standards by the National Association of City and County Health Officials (NACCHO). In response to this need, the Oregon Public Health Division of the Oregon Health Authority has requested that OSU offer the online certificate so that employees of county health departments may meet minimum job qualifications.

The Northwest Health Foundation sees OSU as an academic partner in translating public health research needed to promote and protect the health of Oregon communities. This program will not only help enrich OSU's investigative capacity in underserved communities, it will strengthen the capacity of local health departments to understand and serve the needs of their communities with a diverse and well trained public health corps. NWHF looks forward to working with the University and other community partners to strengthen Oregon's public health workforce and infrastructure.

Sincerely,

A handwritten signature in black ink, appearing to read 'Thomas D. Aschenbrener', with a long, sweeping underline that extends to the right.

Thomas D. Aschenbrener
President

September 28, 2011

S. Marie Harvey, DrPH
Associate Dean for Research and Graduate Programs
Professor of Public Health
College of Public Health and Human Sciences
Oregon State University
124 Women's Building
Corvallis, OR 97331

Dear Dr. Harvey:

This letter is to clarify OMPH support and approval of OSU College of Public Health and Human Science's Category 1 proposal to initiate a Graduate Certificate in Public Health (GCPH).

OSU is a partner institution, with OHSU and PSU, in the accredited Oregon Masters of Public Health (OMPH) Program. Following approval by the OUS Provost's Council on June 5, 2008, the OMPH began coordinating delivery of the GCPH through OHSU in 2008. The certificate was created in response to (a) a request from the Oregon Public Health Division (OPHD) to train its practicing professionals and (b) our accrediting body's requirement that we conduct workforce development.

I am writing to affirm the intent of the OMPH collaborative program was that the certificate could be offered by any of the partner institutions through the affiliated academic units. Each institution offering the GCPH is expected to follow standard procedures for a new program specified by its respective campus and the Oregon University System (OUS). A copy of the Memorandum of Understanding (MOU) verifying the Certificate planning of 2008 is enclosed.

OSU now seeks to offer the graduate certificate. As a current member of the OMPH, OSU will contribute to meet the requirement for Public Health Practice Improvement necessary for the Program's reaccreditation in 2014. It also will fulfill the requirement for OSU's own accreditation in 2014 as a stand-alone accredited College of Public Health and Human Sciences. Most importantly, it will strengthen Oregon's public health system and workforce development throughout the state.

I am aware that the Oregon Public Health Division of Oregon Health Authority has asked OSU to offer a certificate, and that a number of County Health Departments are looking to OSU to provide workforce education in order to comply with Oregon Administrative Rules. Their need is time sensitive. If approved by the OSU faculty senate, the OMPH will continue to provide sponsorship through its Deans Oversight Council and the OMPH Program Office. I wish the College well in this important endeavor, and I encourage the appropriate OSU bodies to move forward with approval as soon as possible.

Thank you.

Sincerely,

Gregory Lee, PhD

Greg Lee, PhD, Director

Encl. OMPH Memorandum of Understanding, May 2, 2008

Oregon State University • Oregon Health & Science University • Portland State University

**Oregon Master of Public Health Program
Graduate Certificate in Public Health
Memorandum of Understanding**

This Memorandum of Understanding is entered into by Oregon Health and Science University, Oregon State University, and Portland State University -- the partner institutions of the collaborative Oregon Master of Public Health (OMPH) Program -- regarding creation of a Graduate Certificate in Public Health (GCPH). The GCPH, requested by the Oregon Public Health Division in April 2007, has been developed in direct response to public health workforce development needs in the state of Oregon. The curriculum (specified, below) is that which was identified by the requestors as best meeting existing workforce needs.

In order to provide the GCPH, participants agree to the following:

Governance: This Certificate, a product of the OMPH Program, shall be governed by the Deans Oversight Council, and administered by the Coordinating Council/Track Coordinators Committee through its subcommittee on Workforce Development. Participants in the GCPH include the partner academic units of the OMPH Program (Public Health and Preventive Medicine, School of Medicine, OHSU; Graduate and Interdisciplinary Programs, School of Nursing, OHSU; Department of Public Health, College of Health and Human Sciences, OSU; School of Community Health and Division of Public Administration, College of Urban and Public Affairs, PSU). It is the intent of this partnership that the certificate may be granted by any or all of the partner institutions, through the affiliated academic units. Each institution intending to grant the GCPH shall follow standard application procedures for providing a new program, as specified by the respective campus and the Oregon University System (OUS).

Admission: Students applying to the GCPH shall hold earned baccalaureate degrees in any discipline. Priority admission shall be granted to working public health professionals in Oregon. OMPH GRE and undergraduate statistics course requirements will be waived for students entering the GCPH.

Curriculum: The GCPH is a "for credit" curriculum comprised of 19 academic units, all of which will be applicable to future pursuit of the MPH degree. The curriculum is to include the five core courses in public health (Epidemiology Survey, Introduction to Biostatistics, Principles of Health Behavior, Health Systems Organization, and Environmental Health), and two elective courses of which students are to select one (Program Evaluation or Principles and Practices of Public Health/Foundations of Public Health).

Oregon State University • Oregon Health & Science University • Portland State University

Implementation: The GCPH may be delivered through any of the learning formats provided by OMPH Program Tracks. Consistent with OMPH Program practice, certificate students may take their classes at any of the OMPH academic units, irrespective of whether the certificate is granted by that host Institution. Intercampus registration for the GCPH shall follow the same protocols as for collaborative MPH degree students.

Funding: As with all OMPH Program offerings, funding for support of the GCPH at the unit level shall be provided by the partner Institutions; funding for program-level administration shall be provided by the Deans Oversight Council through the OMPH Program Office.

Tuition: Students shall pay the respective tuition and fees of the Institution granting the GCPH, to which they were admitted.

Termination: The GCPH shall abide by the same policy as that of the parent OMPH Program, which states that any partner wishing to withdraw from, or terminate, this agreement must do so in writing no fewer than 12 months prior to the intended termination date. Such notice must be approved by the Chair of the Deans Oversight Council [Oregon Master of Public Health Program Memorandum of Understanding, March 2004, Section 2.4].

In signing below, the authorized representatives of the OMPH Deans Oversight Council agree to the terms stated, above, and confirm their intent to participate in the Oregon MPH Program Graduate Certificate in Public Health.

Category I Proposal Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

DRAFT

Library Assessment for Category I Proposal for Graduate Certificate in Public Health (GCPH)

In 2009, Alison Bobal, then public health librarian at OSU, did a graduate review of the public health program (attached). At the time, OSU Libraries collections and services were sufficient to support the graduate program in Public Health.

Since that time, there have been a few changes in the OSU Libraries collections as it relates to public health topics. We have lost access to one journal (*Genetic Epidemiology*) and one journal (*Medical Care*) has moved from a print to an online subscription. Of the 20 highest ranked public health journals, OSU has current online access to 11 titles and access to an additional 4 titles which are available with an embargo period of 6 months to a year. In addition, OSU Libraries has a print subscription to one of the 20 titles (*Tobacco Control*). See Table 1 for an updated list of the Libraries' journal holdings in public health.

OSU Libraries now purchases electronic books in a number of subject areas, including public health. These books are available to OSU faculty and students at all times and from any location.

There have also been some positive changes to library services since the 2009 program review. OSU Libraries has added Scan and Deliver, which is a service that provides quick, easy access to OSU Library's physical print collection (including microfilm/fiche). Library staff will scan and electronically deliver requested journal articles and book chapters to the patron's ONID email. Also, the Valley Library is now open 24 hours a day, 5 days a week during the term.

In conclusion, OSU Libraries supports the courses that will make up the Graduate Certificate in Public Health. The expanding electronic collections and library services provided will enable the library to support the forthcoming extended campus courses for the certificate as well as the on campus courses for the GCPH.

Laurel Kristick
Collection Assessment and Science Librarian
Associate Professor, OSU Libraries

Table 1: Top 20 Public, Environmental & Occupational Health Journals as Ranked by Journal Citation Reports Impact Factor with OSU Libraries' Holdings (October 2011)

| Rank | Journal Title | Impact Factor | OSU Access |
|------|--|---------------|--|
| 1 | Annual review of public health | 8.978 | 1997 – present (online) |
| 2 | Environmental health perspectives | 5.636 | 1972 – present (online) |

Public Health Graduate Program Review OSU Libraries Collections and Services

May 2009
Alison Bobal
Life Sciences Librarian
Assistant Professor, OSU Libraries

The OSU Libraries support graduate students and faculty in the Department of Public Health through collections, resources and services.

Collections

The Public Health collection consists of monographs and journals in print and electronic formats, videos on VHS and DVD, and bibliographic and full-text online databases. As part of the ongoing assessment of our value to the University, the Libraries conducted a comprehensive collection review in 2000. At that time, the Public Health collection was judged adequate to support master's degree programs, and in some areas (i.e. Environmental Health, Epidemiology and Toxicology) the collections were deemed adequate to support doctoral research. This assessment did not account for materials in other areas that support the interdisciplinary nature of Public Health.

Monographs

The WorldCat Collection Analysis tool was used to evaluate the monographs held by OSU Libraries. Both the holdings of the OSU Libraries' collection were reviewed as well as OSU holdings in comparison to four other university libraries that also support a graduate program in Public Health¹. This group of institutions is not intended to represent schools identical to OSU in size or research strength, but rather to provide an informal sample of library collections that also support a program offering degrees similar to those of OSU's Public Health graduate program.

Table 1 – OSU titles in selected public health subjects and age of collection

| Selected Public Health subjects | #Titles held by OSU | % of Collection purchased in 2000-2008 |
|---|---------------------|--|
| Communicable Diseases | 351 | 60% |
| Economics & Provision of Medical Care | 266 | 46% |
| Environmental Health | 361 | 29% |
| Epidemiology | 123 | 58% |
| Preventive Medicine, Hygiene | 642 | 48% |
| Public Health, Public Aspects of Medicine | 604 | 43% |

The table below compares OSU Libraries' holdings against the four libraries in the comparison group by looking at the number of titles held by at least three of the four libraries. Overall, OSU has a reasonable number of titles that overlap the holdings of the other libraries, particularly when considering that there are alternative methods for accessing books OSU does not own.

¹ University of Wisconsin – La Crosse, Hunter College – CUNY, Temple University, California State University, Long Beach

Table 2: Percentage of books held by OSU in comparison with number of books held by at least 3 other libraries in comparison group

| Selected Public Health subjects | Monographs held by at least 3 libraries in comparison group | Also held by OSU | % held by OSU |
|---|---|------------------|---------------|
| Communicable Diseases | 62 | 38 | 61% |
| Economics & Provision of Medical Care | 37 | 23 | 62% |
| Environmental Health | 29 | 22 | 76% |
| Epidemiology | 18 | 13 | 72% |
| Preventive Medicine, Hygiene | 94 | 58 | 62% |
| Public Health, Public Aspects of Medicine | 78 | 49 | 63% |

The Libraries' budget has deteriorated in recent years and this effect is felt in all subject areas. However, while the Libraries acquire fewer books, the subject librarian welcomes recommendations and requests from faculty. In addition, OSU Libraries, as a member of the Orbis-Cascade Alliance, provides access to the collections of 36 regional academic libraries which can be delivered within three working days.

Journals

The Libraries' journal collection has grown through the addition of new titles requested by faculty and, most significantly, the acquisition of full-text databases and "big package" negotiations with publishers. Access to journals not owned by OSU Libraries has been improved by consortial interlibrary loan agreements and improved software for electronic delivery. More than 60% of articles requested through OSU Libraries' interlibrary loan service are filled within 24 hours.

OSU Libraries subscribe to 14 of the top 20 Public Health journals as listed by impact factor in ISI's Journal Citation Reports. Most of the current library subscriptions are electronic only which reflects OSU Libraries' initiative to provide research materials "whenever, wherever" they are needed.

Table 3: Top 20 Public, Environmental & Occupational Health Journals as Ranked by Journal Citation Reports Impact Factor with OSU Libraries' Holdings

| Rank | Abbreviated Journal Title | Impact Factor | OSU Access |
|------|--|---------------|--|
| 1 | Annual review of public health | 8.978 | 1997 – present (online) |
| 2 | Environmental health perspectives | 5.636 | 1972 – present (online) |
| 3 | Epidemiologic reviews | 5.429 | 1996 – present (online)
1979 – 2006 (print) |
| 4 | American journal of epidemiology | 5.285 | 1996 – present (online)
1965 – 2006 (print) |
| 5 | Epidemiology | 5.283 | 1992 – 2002 (online) |
| 6 | WHO Technical Report Series | 5.273 | 1949 – present (online & print) |
| 7 | International journal of epidemiology | 5.151 | 1996 – 2007 (online) |
| 8 | Cancer epidemiology, biomarkers & prevention | 4.642 | 1991 – 2007 (online) |

| | | | |
|----|--|-------|--|
| 9 | Bulletin of the World Health Organization | 4.019 | 1947 – present (online & print) |
| 10 | American journal of public health | 3.612 | 1971 – present (online)
1971 – 2007 (print) |
| 11 | Medical care | 3.554 | 1963 – present (print) |
| 12 | Drug safety | 3.536 | 1998 – 2008 (online)* |
| 13 | American journal of preventive medicine | 3.489 | 1998 – present (online) |
| 14 | Genetic epidemiology | 3.338 | 1996 – present (online) |
| 15 | Cancer causes and control | 3.279 | 1990 – present (online) |
| 16 | Tobacco control | 3.277 | 1998 – present (print)
1992 – 2007 (online) |
| 17 | Infection control and hospital epidemiology | 2.989 | No subscription |
| 18 | Environmental research | 2.962 | 1995 – present (online)
1967 – 2005 (print) |
| 19 | Journal of epidemiology and community health | 2.956 | 1979 – 2007 (online) |
| 20 | Journal of exposure science and environmental epidemiology | 2.880 | 2006 – present (online) |

*Access to current issue delayed by 6 months

Databases

MEDLINE is the primary database for searching the Public Health literature. OSU Libraries offer access to multiple interfaces of MEDLINE allowing students the option of using a single interface to search across other relevant databases. Additionally, OSU Libraries subscribe to Web of Science, a multidisciplinary database of bibliographic information gathered from thousands of scholarly journals in both science and social science disciplines. Other relevant databases available include Business Source Premier, Environmental Sciences & Pollution Management, TOXLINE, ERIC and PsycINFO.

Library Services

The OSU Libraries offer practical services such as access to reserve materials and timely interlibrary loans, as well as more unique services including availability of laptop computers from the Valley Library Circulation Desk and presentation practice rooms for graduate students. The Valley Library is open, on average, 15 to 17 hours daily allowing students ample access to the collections, study spaces, and reference help. The Libraries also provide online reference services though chat and email, useful for those who do not visit the Libraries in person.

The Libraries use a subject librarian model giving each department and program a designated contact at the library. The subject librarian for Public Health assists graduate students with research tools and strategies and is responsible for selecting materials for the collections that support the Public Health graduate program.

Students are introduced to the OSU Libraries through course-related library instruction sessions or through individual sessions with the subject librarian. The emphasis in these sessions is to help students

understand the breadth of information resources available to them; to provide guidance to them on identifying and selecting appropriate resources; and, to effectively use electronic information which allows for more time to synthesize information.

In Fall 2008, a formal library orientation session was offered to all Public Health graduate students during the 3rd week of classes. This orientation was done at the request of several graduate students. The orientation provided a baseline awareness of library services and important resources and an introduction to their subject librarian. In the past, the subject librarian met with many new graduate students in the program on an individual basis, but a scheduled orientation offered to all new graduate students had not been offered in quite a few years. Because of the positive response to the orientation session, the Department of Public Health is encouraged to schedule this type of session for all new graduate students.

Each term librarians deliver workshops for graduate students covering the basics of the literature review process. There are also workshops on software applications that are useful in research, for example keeping up with newly published literature by using RSS feeds to deliver the tables of contents of newly published journal issues or search alerts from databases. As well as sessions on bibliographic management software, grant writing, and other research management topics of interest to graduate students. Since winter term 2007, 77 Public Health graduate students have enrolled in library workshops.

The Libraries also address the research needs of the Public Health graduate program through tailored services. These are usually related to the collections, e.g. identifying emerging research trends and making appropriate purchases. The OSU Libraries provide access to an institutional repository, ScholarsArchive@OSU (<http://ir.library.oregonstate.edu/jspui/index.jsp>), which enables faculty members to permanently store their research publications and provide open access to them. As this digital collection grows, we anticipate increased awareness of the research output of faculty and students.

Summary

Despite the challenges of rising costs of collections and shrinking budgets, the OSU Libraries are committed to providing access to resources to that ensure students and faculty will have access to the information they need. When taken in combination with the services and expanded access described above, the OSU Libraries' collections support the Public Health Graduate Program.

GRADUATE CERTIFICATE IN PUBLIC HEALTH

FACULTY

Curricula Vitae are available at the links below or upon request from Ms. Nancy Creel.

- **Stephanie Bernell, Associate Professor and Coordinator of the Health Management and Policy Programs.** PhD (Health Economics, Johns Hopkins University, 1999), MA (Economics, American University, 1992), BA (Economic Theory, American University, 1989). Dr. Bernell's research focuses on applying economic theories and methods to pressing public health problems. She has pursued this through three lines of research: (1) the employment effects of chronic health related conditions; (2) the contributions to and the effects of hunger; and (3) the relationship between urban sprawl and obesity. Dr. Bernell teaches health policy and health economics courses. **Program area:** *Health Management and Policy.* <http://health.oregonstate.edu/people/bernell-stephanie>
- **Adam Branscum, Associate Professor and Coordinator of the Biostatistics Track.** PhD (Statistics, University of California at Davis, 2005), MS (Epidemiology, University of California at Davis, 2005), MS (Statistics, California State University, 2000), BS (Mathematics, California State University, East Bay, 1999). Dr Branscum's research interests include Bayesian nonparametric and semiparametric modeling and data analysis, epidemiology, diagnostic test methodology and protocols, and disease prevalence estimation. **Program area:** *Biostatistics.* <http://health.oregonstate.edu/people/branscum-adam>
- **Sue Carozza, Associate Professor, Epidemiology;** PhD (Epidemiology, UNC Chapel Hill, 1995), MSPH (Epidemiology, UNC Chapel Hill, 1993), BS (Wildlife and Fisheries Sciences, Texas A&M University, 1983). Dr. Carozza's research focuses primarily on investigating environmental and genetic risk factors for childhood cancers. In addition, she has developed and applied Geographic Information Sciences (GIS) methods in epidemiologic research, particularly for environmental exposure assessment. Dr. Carozza teaches courses in epidemiology methods and cancer epidemiology. She has previously taught a core epidemiology course on line. **Program area:** *Epidemiology.* <http://health.oregonstate.edu/people/carozza-susan>
- **Chunhuei Chi, Associate Professor and Coordinator of the MPH International Health Track.** ScD (Health Policy and Management, Harvard University, 1990), MPH (International Health, University of Texas, Houston, 1982), BS (Public Health, China Medical College, 1978). Dr. Chi's research interests are in evaluating equity and efficiency in health care services and finance; measurement of equity and efficiency in health care systems and health development; extra-welfarist WTP methodology; improvement of international health professional education; economic globalization and health development; integrating allopathic, traditional, alternative and complimentary medicines into modern health care systems; and health development in low-income nations. Dr. Chi teaches courses in health care systems and finance, international health, global health issues, and health care marketing. **Program areas:** *International Health and Health Management and Policy.* <http://health.oregonstate.edu/people/chi-chunhuei>

- **Karen Elliott, Instructor.** PhD (Public Health, Oregon State University, 2006), MS (Health Promotion and Health Education, University of Montana, 2002), BS (Biology, Carroll College, 1998). Dr. Elliott teaches health promotion and health behavior courses, and supervises internships in the undergraduate program. She teaches community organization in the graduate program. **Program area: Health Promotion and Health Behavior.** <http://health.oregonstate.edu/people/elliott-karen>
- **Tom Eversole, Director. Director for Strategic Development for a College of Public Health and Human Sciences.** DVM (Veterinary Medicine, University of Georgia, 1975), MS (Counseling Psychology, Loyola University, 1989), MS (Veterinary Surgery, Colorado State University, 1978), BS (Biology, Virginia Polytechnic Institute and State University, 1971.) Dr. Eversole has served as Manager of HIV/STD/TB programs for Oregon Public Health Division. He served 8 years as Benton County Health Administrator, establishing and directing a new federally qualified health center. He has served as Co-chair of Oregon's Conference of Local Public Health Officials (CLHO), Vice Chair of the CLHO Legislative Committee and currently serves as Chair of the governor's appointed Public Health Advisory Board. He is adjunct faculty to OSU College of Veterinary Medicine, where he teaches veterinary public health. **Program area: Health Management and Policy.** <http://health.oregonstate.edu/people/eversole-tom>
- **Nancy Seifert, Instructor.** PhD (Public Health, Oregon State University, 2005), MS (Management, Troy State University, 1979), BS (Business Education, Oregon State University, 1975). Dr. Seifert is also currently CEO of Quality Care Associates, Inc. Her research interests are in recruitment theory and practical strategies for recruiting physicians in Oregon. She is currently involved in the creation and exploration of Accountable Care Organizations. **Program area: Health Management and Policy.** <http://health.oregonstate.edu/people/seifert-nancy>
- **Shelley Su, Instructor.** PhD (Toxicology, Oregon State University, 1998), BS (Biochemistry/Biophysics, Oregon State University, 1982). Dr. Su's research interests include environmental causation of disease. Focus on the mechanisms of xenobiotic metabolism, and the dietary modulation of chemoprotective/cancer-causing enzyme systems. Dr. Su teaches classes in environmental health, including air toxics, hazardous wastes, public health toxicology, occupational health, and ethics. **Program area: Environment, Safety and Health.** <http://health.oregonstate.edu/people/su-shelley>

September 30, 2011

Oregon State University • Oregon Health & Science University • Portland State University

**Oregon Master of Public Health Program
Graduate Certificate in Public Health
Memorandum of Understanding**

This Memorandum of Understanding is entered into by Oregon Health and Science University, Oregon State University, and Portland State University -- the partner institutions of the collaborative Oregon Master of Public Health (OMPH) Program -- regarding creation of a Graduate Certificate in Public Health (GCPH). The GCPH, requested by the Oregon Public Health Division in April 2007, has been developed in direct response to public health workforce development needs in the state of Oregon. The curriculum (specified, below) is that which was identified by the requestors as best meeting existing workforce needs.

In order to provide the GCPH, participants agree to the following:

Governance: This Certificate, a product of the OMPH Program, shall be governed by the Deans Oversight Council, and administered by the Coordinating Council/Track Coordinators Committee through its subcommittee on Workforce Development. Participants in the GCPH include the partner academic units of the OMPH Program (Public Health and Preventive Medicine, School of Medicine, OHSU; Graduate and Interdisciplinary Programs, School of Nursing, OHSU; Department of Public Health, College of Health and Human Sciences, OSU; School of Community Health and Division of Public Administration, College of Urban and Public Affairs, PSU). It is the intent of this partnership that the certificate may be granted by any or all of the partner institutions, through the affiliated academic units. Each institution intending to grant the GCPH shall follow standard application procedures for providing a new program, as specified by the respective campus and the Oregon University System (OUS).

Admission: Students applying to the GCPH shall hold earned baccalaureate degrees in any discipline. Priority admission shall be granted to working public health professionals in Oregon. OMPH GRE and undergraduate statistics course requirements will be waived for students entering the GCPH.

Curriculum: The GCPH is a "for credit" curriculum comprised of 19 academic units, all of which will be applicable to future pursuit of the MPH degree. The curriculum is to include the five core courses in public health (Epidemiology Survey, Introduction to Biostatistics, Principles of Health Behavior, Health Systems Organization, and Environmental Health), and two elective courses of which students are to select one (Program Evaluation or Principles and Practices of Public Health/Foundations of Public Health).

Oregon State University • Oregon Health & Science University • Portland State University

Implementation: The GCPH may be delivered through any of the learning formats provided by OMPH Program Tracks. Consistent with OMPH Program practice, certificate students may take their classes at any of the OMPH academic units, irrespective of whether the certificate is granted by that host Institution. Intercampus registration for the GCPH shall follow the same protocols as for collaborative MPH degree students.

Funding: As with all OMPH Program offerings, funding for support of the GCPH at the unit level shall be provided by the partner Institutions; funding for program-level administration shall be provided by the Deans Oversight Council through the OMPH Program Office.

Tuition: Students shall pay the respective tuition and fees of the Institution granting the GCPH, to which they were admitted.

Termination: The GCPH shall abide by the same policy as that of the parent OMPH Program, which states that any partner wishing to withdraw from, or terminate, this agreement must do so in writing no fewer than 12 months prior to the intended termination date. Such notice must be approved by the Chair of the Deans Oversight Council [Oregon Master of Public Health Program Memorandum of Understanding, March 2004, Section 2.4].

In signing below, the authorized representatives of the OMPH Deans Oversight Council agree to the terms stated, above, and confirm their intent to participate in the Oregon MPH Program Graduate Certificate in Public Health.

Subject: Minimum Standards

Tom Eversole -

I am writing to you as the Director of Strategic Development for a CPHHS at OSU.

I hope that you will encourage OSU to develop a program that will provide opportunities for local health administrators in Oregon to meet their minimum standards. One of the critical needs we have in this state is assurance that our public health leadership is qualified and up to date on public health science. We need a mechanism for administrators to receive core public health education in a way that acknowledges the challenges of state geography and distances, and the challenge of time constraints of a working leadership.

The current minimum standards for local health administrators:

"The Administrator must have a Bachelor degree plus graduate courses (or equivalents) that align with those recommended by the Council on Education for Public Health. In 2008 these are: Biostatistics, Epidemiology, Environmental health sciences, Health services administration, and Social and behavioral sciences relevant to public health problems. The Administrator must demonstrate at least 3 years of increasing responsibility and experience in public health or a related field."

If a local health administrator does not meet the minimum standard, we ask that they have a plan in place to achieve the standard and we give them time to secure the course work. Currently there is no distance learning option in the Oregon system and administrators much go outside Oregon to try and find the courses.

thank you for the consideration.

tom

Excerpt from: OREGON ADMINISTRATIVE RULES
6/25/2008

**MINIMUM STANDARDS FOR
LOCAL HEALTH DEPARTMENTS IN OREGON**

**PUBLIC HEALTH ADMINISTRATOR RESPONSIBILITIES AND
QUALIFICATIONS**

Statutory Authority:

431.416 Local public health authority or health district; duties. The local public health authority or health district shall:

(1) Administer and enforce the rules of the local public health authority or the health district and public health laws and rules of the Department of Human Services.

(2) Assure activities necessary for the preservation of health or prevention of disease in the area under its jurisdiction as provided in the annual plan of the authority or district are performed.

These activities shall include but not be limited to:

(a) Epidemiology and control of preventable diseases and disorders;

(b) Parent and child health services, including family planning clinics as described in ORS 435.205;

(c) Collection and reporting of health statistics;

(d) Health information and referral services; and

(e) Environmental health services. [1961 c.610 §8; 1973 c.829 §23; 1977 c.582 §28; 1983 c.398 §4; 2001 c.900 §150]

=====

OAR 333-014-0070 Organization. Each county and district health department shall:

(1) Employ a qualified administrator who is responsible for the operation of the health department....

**RESPONSIBILITIES OF THE PUBLIC HEALTH
ADMINISTRATOR**

- Responsible for assuring that ORS 431.416, regarding the local public health authority and public health laws and rules, is appropriately administered and enforced
- Develops and recommends public health policies; recommends the establishment and revision of rules and regulations; prepares various statistical, financial and special reports
- Plans, organizes and directs the work of professionals, technical and clerical personnel; establishes operational methods and procedures
- Develops, directs and monitors the budget and financial management systems for the local public health services

- Provides leadership with the local jurisdiction for overall health planning and development including assessing public health service needs in the county or health district; completes annual local health plan
- Directs operational analysis, program evaluation, standards development, research and planning programs of the department and management information systems
- Represents the county or district department in negotiation and coordination of public health services with the community, state and federal governments, and the Conference of Local Health Officials
- Insures performance of quality assurance activities, and that federal and state government regulations are met
- Represents the agency to community groups, other agencies and the media
- Participates in disaster preparedness planning and response as applicable
- Serves as liaison with state and national health organizations

MINIMUM QUALIFICATIONS

The Administrator must have a Bachelor degree plus graduate courses (or equivalents) that align with those recommended by the Council on Education for Public Health. In 2008 these are: Biostatistics, Epidemiology, Environmental health sciences, Health services administration, and Social and behavioral sciences relevant to public health problems. The Administrator must demonstrate at least 3 years of increasing responsibility and experience in public health or a related field.

OAR 431.345 Minimum standards for financial assistance to local boards of health.

In order to establish criteria for local boards of health to qualify for such financial assistance as may be made available, the Oregon Health Authority, upon receipt of written approval from the Conference of Local Health Officials shall adopt minimum standards governing:

- (1) Education and experience for professional and technical personnel employed in local health departments, such standards to be consistent with any applicable merit system.
- (2) Organization, operation and extent of activities which are required or expected of local health departments to carry out their responsibilities in implementing the public health laws of this state and the rules of the Oregon Health Authority. [1967 c.146 §5 (enacted in lieu of 431.320); 1977 c.582 §23; 2009 c.595 §557]

SYLLABUS

Proposed OSU Graduate Certificate in Public Health (GCPH)

Total Credits Required = 19

| | Course Title | Credits |
|--|--|---------|
| MPH Core Courses
(16 credits) | H 512 Environmental and Occupational Health | 3 |
| | H 524 Introduction to Biostatistics | 4 |
| | H 525 Principles and Practices of Epidemiology | 3 |
| | H 533 Health Systems Organization | 3 |
| | H 571 Principles of Health Behavior | 3 |
| Electives
(3 credits) | H 530 Health Policy Analysis | 3 |
| | H536 Healthcare Organizational Theory and Behavior | 3 |

H 512 Environmental and Occupational Health

Survey of basic concepts and issues in environmental and occupational health. Environmental and occupational hazards that affect human health are examined in the context of current social, political, and regulatory pressures. Topics include current issues, food protection, basic principles of toxicology and risk assessment, indoor and air pollution, drinking water and wastewater, solid and hazardous waste disposal, pesticides and health issues, radiation, and occupational injury. Global environmental health issues are included in discussions as time permits.

H 524 Introduction to Biostatistics

Quantitative analysis and interpretation of health data including probability distributions, estimation of effects, and hypothesis-tests such as Chi-square, one-way ANOVA, and simple linear regression.

H 525 Principles and Practice of Epidemiology

History of epidemiologic thought; measures of disease frequency and effect; etiologic fraction; design strategies; sources of imprecision and bias; basic epidemiological terminology.

H 533 Health Systems Organization

Examines the nature of health and health care services and reviews the role of government and the free market on health services. Alternative ways of organizing, financing, and delivery of health care services are explored.

H 571 Principles of Health Behavior

Theoretical approaches to behavior change in health promotion/education research and practice; factors influencing health behaviors, ethical behavior change issues, behavioral interventions for special populations.

H 530 Health Policy Analysis

Analysis of public policies affecting health care programs, services and organizations and the impact of those programs on citizens; processes by which health policy proposals are generated, promoted, defeated, modified and implemented.

H536 Healthcare Organizational Theory and Behavior

Administrative practice in health care settings with emphasis on long-term care and acute care services. Provides a framework for health care systems and managerial process and roles. Focus on operations, planning, marketing, human resources, finance, productivity and control as well as emerging trends in health services.

OSU Libraries
Collection Development

Library Evaluation for Category I Proposal

Graduate Certificate in Public Health

Title of Proposal

Public Health

Department

Health and Human Services

College

The subject librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

☐ inadequate to support the proposal (see budget needs below)

☐ marginally adequate to support the proposal

☒ adequate to support the proposal

Estimated funding needed to upgrade collections or services to support the proposal (details are attached)

Year 1: \$0

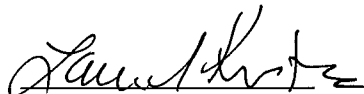

Ongoing (annual): \$0

Notice of Intent to Offer an Educational Program Gainful Employment Electronic Announcement #5

1. Institution Name: Oregon State University (OSU) College of Public Health and Human Sciences

2. OPEID Number: 003210-00

3. Program Name: Graduate Certificate in Public Health (GCPH)
Program CIP Code: (512201) supported by this documentation

4. Narrative description of how the institution determined the need for the program.

This program will address the following need:

The minimum qualifications for Health Administrators employed at County health departments are outlined in Oregon Administrative Rules. The Administrator must have a Bachelor degree plus graduate courses (or equivalents) that align with those recommended by the Council on Education for Public Health (CEPH). These are: Biostatistics; Epidemiology; Environmental health sciences; Health services administration; and Social and behavioral sciences relevant to public health problems. Approximately 1 in 3 County Health Administrators lack such training as documented by triennial reviews of Local Health Departments. Health plans for such departments must include a plan of corrective action. The GCPH is designed to meet that need, allowing working professionals to complete the requirement without travel or disrupting their work. Credit may transfer into OSU's Master of Public Health degree.

- The institution was made aware of this need through Tom Eversole's involvement with the Conference of Local Health Officials (CLHO) and a request from Oregon Public Health Division to offer the certificate.
- No program is being replaced
- The program will be offered in response requests from CLHO and to the state health division for Oregon State University to do so. See attached letters from Tom Engle and Kathleen O'Leary.

Background summary of need:

Oregon Public Health Division (OPHD) has requested that OSU offer the online certificate so that employees of county health departments may meet minimum job qualifications. According to a 2008 survey of local health departments by the Coalition of Local Health Officials, (www.oregon.gov/DHS/ph/lhd/docs/capacity-assessment-report-final-10-08.pdf) health departments statewide were assessed as having only 57% of the required capacity as measured using national standards by the National Association of City and County Health Officials. The study called for an additional 394 FTE of public health workers to meet Oregon's current need. Additionally:

- Oregon's public health workforce is inadequate, and needs are growing.
- Between 1980 and 2000, the US population grew by nearly 55 million, yet the public health workforce declined by 55,000. *
- 23% of the nation's Public Health workforce is eligible to retire within the next 5 years.
- Many among the workforce lack public health training and are not well prepared to conduct population based approaches, which is the heart of the profession.
- The Association of Schools of Public Health (ASPH) estimates that schools of public health will need to train three times the number of graduates over the next 12 years to meet workforce needs. For Oregon, that means increasing from approximately 80 to 240 public health graduates per year.

- Interest in academic preparation is growing, and Oregon is not recruiting or graduating the number of public health students it could. In 1997 and 2003 the number of MPH applicants was 133 and 348 respectively. About 60% of applicants are accepted into MPH programs. In 2002 and 2005, the number of graduates was 44 and 78 respectively. Current capacity will not meet the workforce needs (est. 240 MPH graduates/year) for a fully functioning, robust public health system once developed.

*Data from: UCLA Public Health Magazine, UCLA School of PH, June, 2008, pp. 12 – 16.

5. Narrative description of how the program was designed to meet local market needs, or for an online program, regional or national market needs.

The minimum qualifications for Health Administrators employed at County health departments are outlined in Oregon Administrative Rules. The OPHD, Oregon's state health division, has recognized that at least a third of the senior level administrative and clinical staff in local health departments (LHDs) are under-prepared according to Statute and Standards for public health hiring in Oregon (See Attachment, Minimum Standards for Local Health Departments in Oregon). OPHD has found that neither geographic location nor employee cohort is associated with better preparation of public health staff, and has identified an urgent and ongoing need for the GCPH among staff.

Course content was designed in accordance with requirements outlined in Oregon Administrative Rules. Course content, program length, and academic level are identical to courses offered through the Council on Education for Public Health (CEPH) accredited Oregon Masters of Public Health (OMPH) Program. Admission requirements and prerequisites were identified in consultation with the OMPH Program and university guidance. Information about course content, target students and potential employers was received from discussions with OPHD and CLHO, a governance body consisting of county health administrators and representing county boards of health.

6. Narrative description of any wage analysis the institution may have performed, including any consideration of Bureau of Labor Statistics wage data related to the new program. The institution must retain copies of analysis documents for review and submission to the Department upon request.

No wage analysis for the target student audience was conducted.

7. Narrative description of how the program was reviewed developed or approved.

The GCPH was originally developed in 2008 by Oregon Health Sciences University (OHSU) in conjunction with OMPH. The program was presented by OHSU to the Conference of Local Health Officials, representing county health departments (potential employers of graduates) for review and endorsement. It was approved by the Provosts Council of the Oregon University System in May 2008 and delivered for the first time by OHSU that fall. As outlined in a Memorandum of Agreement (attached) the OMPH Dean's Oversight Council coordinates administrative oversight of the certificate program and approves this institution to offer the certificate program. The program was reviewed by OSU faculty for program integrity through the institution's Category 1 Proposal process for new graduate certificates. OSU received a letter of support from the Conference of Local Health Officials in October 2011.

8. Date of the first day of class. Include both:

☐ First day the program was or will be offered by the institution: 9 JAN 2012

☐ Day to begin disbursing Title IV funds to students enrolled in the program: 1 JAN 2012

Tom Eversole _____ October 19, 2011
Director of Strategic Development, OSU College of Public Health and Human Sciences

From: Tom R ENGLE [mailto:tom.r.engage@state.or.us]

To: Eversole, Tom - HHS
Subject: Minimum Standards

Tom Eversole -

I am writing to you as the Director of Strategic Development for a CPHHS at OSU.

I hope that you will encourage OSU to develop a program that will provide opportunities for local health administrators in Oregon to meet their minimum standards. One of the critical needs we have in this state is assurance that our public health leadership is qualified and up to date on public health science. We need a mechanism for administrators to receive core public health education in a way that acknowledges the challenges of state geography and distances, and the challenge of time constraints of a working leadership.

The current minimum standards for local health administrators:

"The Administrator must have a Bachelor degree plus graduate courses (or equivalents) that align with those recommended by the Council on Education for Public Health. In 2008 these are: Biostatistics, Epidemiology, Environmental health sciences, Health services administration, and Social and behavioral sciences relevant to public health problems. The Administrator must demonstrate at least 3 years of increasing responsibility and experience in public health or a related field."

If a local health administrator does not meet the minimum standard, we ask that they have a plan in place to achieve the standard and we give them time to secure the course work. Currently there is no distance learning option in the Oregon system and administrators much go outside Oregon to try and find the courses.

thank you for the consideration.

tom

Tom Engle RN, Oregon Public Health
Director, Office of Community Liaison

Excerpt from: OREGON ADMINISTRATIVE RULES

6/25/2008

MINIMUM STANDARDS FOR LOCAL HEALTH DEPARTMENTS IN OREGON

PUBLIC HEALTH ADMINISTRATOR RESPONSIBILITIES AND QUALIFICATIONS

Statutory Authority:

431.416 Local public health authority or health district; duties. The local public health authority or health district shall:

- (1) Administer and enforce the rules of the local public health authority or the health district and public health laws and rules of the Department of Human Services.
- (2) Assure activities necessary for the preservation of health or prevention of disease in the area under its jurisdiction as provided in the annual plan of the authority or district are performed. These activities shall include but not be limited to:
 - (a) Epidemiology and control of preventable diseases and disorders;
 - (b) Parent and child health services, including family planning clinics as described in ORS 435.205;
 - (c) Collection and reporting of health statistics;
 - (d) Health information and referral services; and
 - (e) Environmental health services. [1961 c.610 §8; 1973 c.829 §23; 1977 c.582 §28; 1983 c.398 §4; 2001 c.900 §150]

=====

OAR 333-014-0070 Organization. Each county and district health department shall:

- (1) Employ a qualified administrator who is responsible for the operation of the health department....

RESPONSIBILITIES OF THE PUBLIC HEALTH ADMINISTRATOR

- Responsible for assuring that ORS 431.416, regarding the local public health authority and public health laws and rules, is appropriately administered and enforced
- Develops and recommends public health policies; recommends the establishment and revision of rules and regulations; prepares various statistical, financial and special reports
- Plans, organizes and directs the work of professionals, technical and clerical personnel; establishes operational methods and procedures
- Develops, directs and monitors the budget and financial management systems for the local public health services
- Provides leadership with the local jurisdiction for overall health planning and development including assessing public health service needs in the county or health district; completes annual local health plan
- Directs operational analysis, program evaluation, standards development, research and planning programs of the department and management information systems
- Represents the county or district department in negotiation and coordination of public health services with the community, state and federal governments, and the Conference of Local Health Officials

- Insures performance of quality assurance activities, and that federal and state government regulations are met
- Represents the agency to community groups, other agencies and the media
- Participates in disaster preparedness planning and response as applicable
- Serves as liaison with state and national health organizations

MINIMUM QUALIFICATIONS

The Administrator must have a Bachelor degree plus graduate courses (or equivalents) that align with those recommended by the Council on Education for Public Health. In 2008 these are: Biostatistics, Epidemiology, Environmental health sciences, Health services administration, and Social and behavioral sciences relevant to public health problems. The Administrator must demonstrate at least 3 years of increasing responsibility and experience in public health or a related field.

=====

OAR 431.345 Minimum standards for financial assistance to local boards of health.

In order to establish criteria for local boards of health to qualify for such financial assistance as may be made available, the Oregon Health Authority, upon receipt of written approval from the Conference of Local Health Officials shall adopt minimum standards governing:

- (1) Education and experience for professional and technical personnel employed in local health departments, such standards to be consistent with any applicable merit system.
- (2) Organization, operation and extent of activities which are required or expected of local health departments to carry out their responsibilities in implementing the public health laws of this state and the rules of the Oregon Health Authority. [1967 c.146 §5 (enacted in lieu of 431.320); 1977 c.582 §23; 2009 c.595 §557]

**MOU for new Online Program Development between
College of Public Health and Human Sciences
and
OSU Extended Campus**

| |
|--|
| OSU Graduate Certificate in Public Health |
|--|

OSU Extended Campus welcomes this opportunity to make this graduate program available to a worldwide audience. The OSU Graduate Certificate in Public Health (GCPH) will be an important addition to OSU online programs.

This funding and development agreement is made contingent upon full curricular approval of the new certificate program and posting to the OSU Catalog.

Program Personnel

Coordination

The College of Public Health and Human Sciences (hereafter referred to as “the College/School”) agrees to assign a year-round (12 month) program coordinator to serve as the main contact person to coordinate development of this degree program with Ecampus and to assist with marketing, and any issues that may arise. Position funding is described below. Coordination will include:

- Assisting Ecampus with marketing strategies, structuring academic advising, facilitating communications between Ecampus and instructors/course developers;
- Coordination and communications between the program and the College and other administrative units to ensure policy and procedures are in place to facilitate the offering of this program to distance students.

Program Coordinator/Director: Tom Eversole (tom.eversole@oregonstate.edu; 541-737-3827)

Administrative Support Staff: tbd

Funding Overview with Details of Budget Transfer per Program Component

For coordination, course development, and program delivery:

Total Funding = \$130,680 (recurring and non-recurring)

- Funds will be disbursed to the College per the agreements below;
- Ecampus will assume no direct payroll.

Budget will be transferred to the College as follows:

Non-recurring Total= \$33,700

1. Course development

○ \$30,000

- \$5,000 per course.
- Develop 6 existing OSU courses for online delivery: H512, H524, H530, H533, H536 and H 571.(see Course Development Plan, below)
 - Funds will be budget transferred to the academic department for support of course development only after a course is:

- deemed complete and up to standards,
- and has been reviewed and approved by the appropriate designee of the College in collaboration with the Ecampus Director of Project Development and Training.

2. Equipment/Supplies

- \$2,700
 - For purchase of 30 additional licenses of STATA to expand capacity on the Student Computing Services computers to support program needs.
 - Funding does not support infrastructure.
 - Transferred upon signing of this agreement.

3. End-of-Project Report

- \$1,000
 - Transferred upon completion of the project and acceptance of the final report (description below).

Recurring Total= \$96,980

Staffing

- Course development coordination, two positions.
 - Program Coordinator/Director
 - \$62,480 total; \$31,240 per year, for two years
 - First payment of \$31,240 will be budget transferred to the Department upon signing of the MOU
 - Administrative Support Staff
 - \$34,500 total; \$17,250 per year, for two years
 - First payment of \$17,250 will be budget transferred to the Department upon signing of the MOU
 - Ecampus will assume no direct payroll.

Understanding of Program Delivery, Course Development and Collaboration

- Students may enroll as distance certificate seeking students in this program effective Fall term, 2012. If students are enrolled in OSU graduate school, credit earned online may apply to a degree.
- Course development will start summer term 2012 and will be completed by the end of Summer term, 2013.
- The College will develop a total of 6 courses for online delivery through Extended Campus.
 - When development is complete, the College/Schools must give approval for on-going offerings of each course in order to accommodate student demand for the course and timely progress towards degree completion, and to allow Ecampus to recoup development costs over time.
 - The sequence and timing of course design, development, and offering are delineated in the Development Plan below.
 - Preliminary syllabi for each of the courses are to be submitted to Ecampus prior to course development.
- Courses will be collaboratively assessed, planned, designed, and developed by the content providing faculty (Course Developer) or their representatives with the Ecampus Project Development and Training unit (PDT).

- The Ecampus contact for course development is: Dianna Fisher, Director of PDT: dianna.fisher@oregonstate.edu; 541-737-8658.
- All courses making up the distance certificate will be focused on outcome-based learning and aligned with the accrediting standards for learning outcomes established by the OSU Office of Academic Programs. All courses in the proposed program will be developed using the best practices framework for instructional design for distance education courses and programs, aligned with OSU and national standards for distance education courses and programs, employing the Blackboard course management system.
- The Course Developers, under the guidance of the appointed program Coordinator, will engage in continued collaboration with PDT from project inception and will ensure course completion and approval of the course *prior to the start of registration of the initial term of offer*. Completion status of the course is determined by the Extended Campus Director of Project Development and Training in consultation with the College designee. Courses will be reviewed by designee(s) from the College/Schools and Ecampus upon completion and approval prior to initial course offering.
- If the course is not complete in Blackboard and ready to be taught prior to the beginning of registration for the initial term of offer, the PDT Director will consult with the Program Coordinator/Director concerning advisability of course cancellation.
- As delineated in the existing MOU with the College, Ecampus will provide (at no project cost) basic course development and production including: instructional design with best practices covering accessibility and copyright, project management, media development, Blackboard course development, training, marketing, and on-going student and instructor support.

Use of Course and Materials

The Course Developers will have control of the substantive and intellectual content of materials subject to review and approval of the College/School. Course Developers shall receive credit as a named author or a principal developer of the course. The College/School may add additional authors in accordance with their contribution to the course and as determined by the Course Developers. Course Developers have the right to remove his or her name from the course at any time, in coordination with the academic department and Extended Campus. The College/School can appoint others to teach the courses. Consistent with the rules of the State Board of Higher Education, the Board owns the course and materials, and OSU shall have the exclusive right to offer the course, whether through internet, video transmission, IP Video, interactive TV, or by other means, to any student at any location.

End-of-Project Report

Please submit a final report after completion of the project to include:

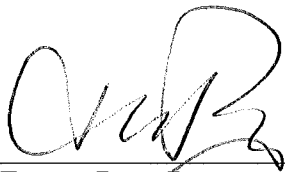

- Description of the development process,
- Two-year schedule for continued course and program delivery,
- Student feedback on their experience taking the courses,
- Data on course evaluation/assessment outcomes,
- Faculty response to the development activity,
- Final expense report,
- Plans for program sustainability.

After submission and acceptance of the final report, the Ecampus review team will verify that all program components are in place upon which time the remaining funds will be released.

Funding Agreement Terms

The funding agreements in this document are contingent upon completion of course development and offering as described above, and summarized in the Course Development Plan. Changes to the agreements, timetables or funding will be based on written agreement between the College and Ecampus designees. The funding agreements are subject to renegotiation if course development and delivery do not proceed according to the accepted Course Development Plan, with course development completed by the end of Spring term, 2014.

Signatures below indicate acceptance of these terms and conditions, which supersede any prior development funding agreement(s) for this program and/or the courses contained therein.

Subject: Memorandum of Agreement regarding the graduate certificate in public health administered by the OMPH

Paula,

Thanks for checking in. Much appreciated. We did finally find a copy of the signed MOU. I have attached. And, yes, we confirmed at our last DOC meeting that the understanding allows any partner to offer a certificate program. OSU is planning to offer a graduate certificate in Public Health. My understanding was that SON was not currently accepting students into their certificate program. Is this correct and do you know if you will continue to be offering it in the future? Yes, lets discuss and coordinate our efforts. Thanks again, Marie

Marie,

Yes, you are correct, we are not currently excepting students. We are in the process of curriculum revision work and I hope to begin accepting students for next fall (a year from now) so yes we are planning on offering a certificate in the future.

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin – Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☐ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☒ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

5/17/11

Abbreviated Category I
Reorganization of the College of Education
Executive Summary
July 6, 2011

The College of Education will be reorganized as a “college of the whole.” Faculty in the current Department of Science and Mathematics Education (SMED) in the College of Science will be administratively joined with faculty in the College of Education in the same organizational structure. Funding for the SMED faculty will continue to come through the College of Science but the dean of Education will administer this money as part of the overall Education budget.

The proposed change administratively consolidates and focuses the work of faculty from the Department of Science & Mathematics Education (College of Science) into the College of Education poised to create a nationally/internationally recognized signature program for OSU in the fields of science, technology, engineering, and mathematics (STEM) and cultural and linguistic diversity. This administrative change creates an innovative partnership between the Colleges of Education and Science. The partnership is built on the premise that developing understandings in STEM and cultural and linguistic diversity is necessary in an increasingly complex, global society. These foci for the College complement and directly support the OSU Strategic Plan and the three signature areas of excellence. The direct partnership with Science provides a model for expanding collaborations in research and programmatic activities across OSU colleges including Forestry, Agriculture, Engineering, Public Health and Human Science, and Liberal Arts. An MOU between the deans of Science and Education filed with the Provost will govern this partnership in the long-term.

Administration and staff in the current structure are supported by 10.25 FTE and the new structure will be made up of 11.0 FTE. The major transition cost is a six-month 1039 appointment of the retiring associate dean to facilitate the transfer of scheduling, budgetary, and other administrative tasks. The new administrative budget will be just over 80% of the current administrative budget. The savings comes from eliminating department chairs and better alignment of tasks among administrative, faculty and staff. The proposed structure also allows some flexibility for adding administrative support as the new college and partnership with Science takes shape.

The faculty and staff have already been at work anticipating this reorganization. SMED faculty served on governance committees in Education in FY11. SMED and Education faculty have worked together to successfully hire one new Provost position. SMED and Education faculty have also worked together as a design team for the proposed Center for Research in Lifelong STEM Learning.

**Reorganization of the College of Education
Oregon State University**

[Name(s) of Proposing College(s) or School(s)] College of Education

**Classification of Instructional Program number*

CPS Tracking #: _____

[Date of Proposal] Spring 2011

[Proposed Effective Date or Term] Fall 2011

- A. Title of the proposed instructional, research, or public service unit. For name changes, give both the current and proposed names. Describe the reason(s) for the proposed change.**

College of Education

- B. Location within the institution's organizational structure. Include "before" and "after" organizational charts (show reporting lines all the way up to the Provost).**

Administrative Structure. The College of Education includes the Cascades Campus and all references to the College organization assume programmatic connections to the Cascades Campus. The College of Education will be reorganized as a “college of the whole.” Faculty in the current Department of Science and Mathematics Education (SMED) in the College of Science will be administratively joined with faculty in the College of Education in the same organizational structure. Figure 1a shows the current organizational structure and Figure 1b shows the new organizational structure. Standing committees that exist in current College of Education will provide faculty governance. During AY 2010-11, Science and Mathematics Education faculty participated on College of Education governance committees. In a college of the whole senior faculty will assume leadership of degree programs through a faculty advisory group that periodically meets with the Associate Dean of Academic Affairs. Table 1 outlines the contrast between the current and proposed administrative structure. The current administrative structure of 10.25 FTE includes 0.5 FTE for the chair of SMED and 4.0 FTE in office staff. The structure for the new administration is a total of 11.225 FTE including 0.125 FTE in collaboration with Science for director of the proposed *Center for Research in Lifelong STEM Learning*, an additional 0.5 FTE of staff that comes with SMED, and 0.6 FTE in administrative transition expense (6 months). The Budget Outline pages show, in addition to

Abbreviated Category I: Reorganization of College of Education

the administrative changes, the addition of a Provost position from a successful search this year. Possible future positions are not shown nor are anticipated salary raises.

Table 1. College of Education Current and Proposed Administrative Leadership + FTE Contribution with Science for STEM Research Center Director

Abbreviated Category I: Reorganization of College of Education

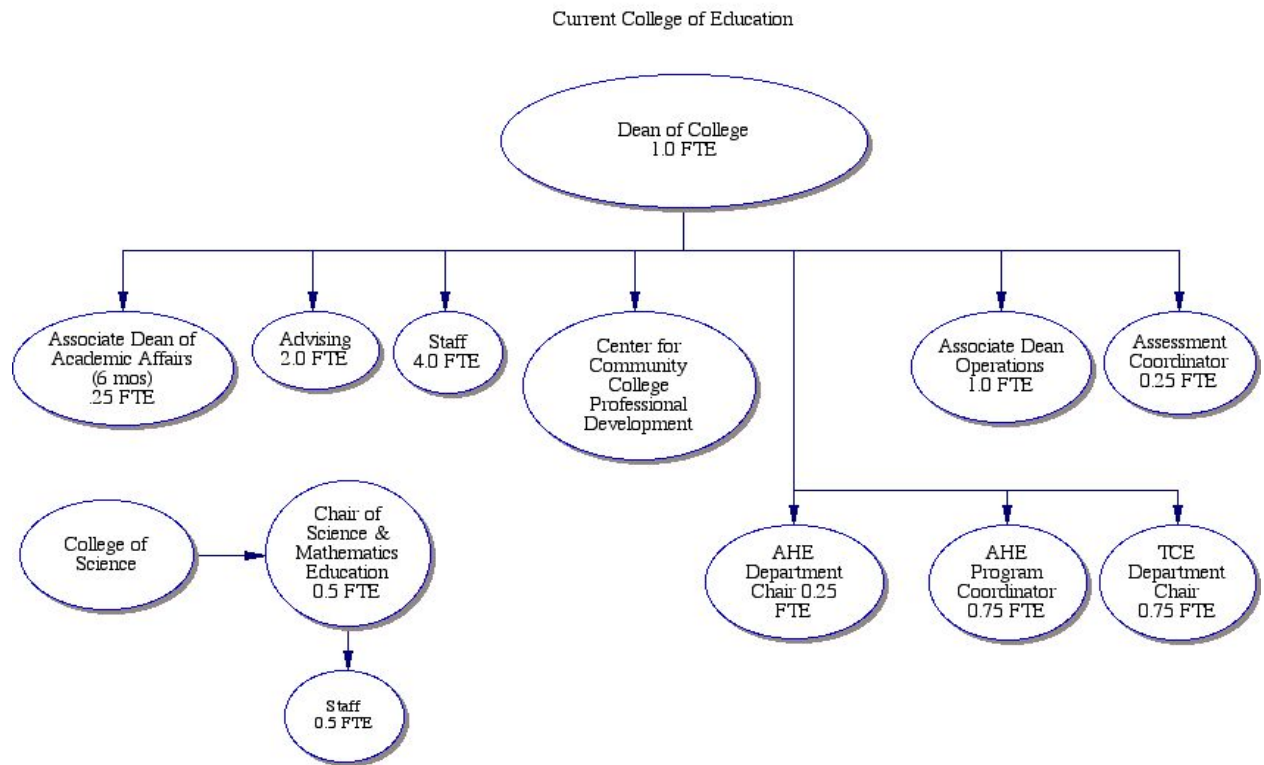

Figure 1a: Current College Organizational Structure.

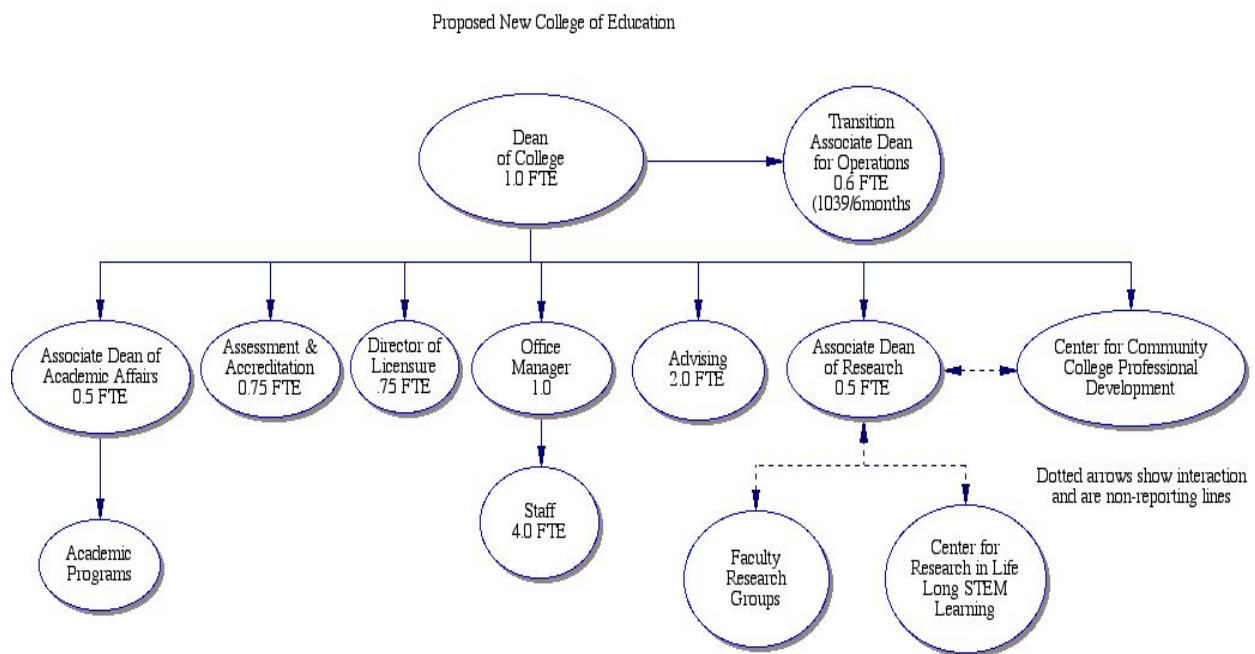

Figure 1b: College of the whole organizational structure.

C. Objectives, functions (e.g., instruction, research, public service), and activities of the proposed unit.

1. Explain how the program or unit's current objectives, functions, and/or activities will be changed. How will the reorganized program be stronger than the existing program?

The proposed change administratively consolidates and focuses the work of faculty from the Department of Science & Mathematics Education (College of Science) into the College of Education poised to create a nationally/internationally recognized signature program for OSU in the fields of science, technology, engineering, and mathematics (STEM) and cultural and linguistic diversity. This administrative change creates an innovative partnership between the Colleges of Education and Science. The partnership is built on the premise that developing understandings in STEM and cultural and linguistic diversity is necessary in an increasingly complex, global society. These foci for the College complement and directly support the OSU Strategic Plan and the three signature areas of excellence. The direct partnership with Science provides a model for expanding collaborations in research and programmatic activities across OSU colleges including Forestry, Agriculture, Engineering, Public Health and Human Science, and Liberal Arts. The mergers enable more strategic use of faculty to develop and implement program innovations and create opportunities that propel the university towards preeminence among land grant and other universities nationally and internationally.

There are already substantive signs of this partnership between Education and MS&ED taking shape through significant work underway since the fall of 2010. A Reorganization Committee representing all major departments started work in October 2010. The College of Education, in partnership with Science and Mathematics Education (SM&ED), held open forums for broad discussion of this venture. SM&ED faculty participated in the College of Education governance committees and the chair of SM&ED met with the Dean's Council throughout the year. SM&ED faculty is working with the dean and architects to be located in the renovated Education Hall.

The program descriptions below describe a reduced set of program offerings as a first step in concentrating faculty energies in order to better link research and program design and delivery. These changes impact programs in diversity, adult and higher education, counseling, and science and mathematics education.

This proposal also describes a process by which faculty will optimize reorganization by re-conceptualizing and coordinating programs resulting in stronger, more compelling doctoral, masters, and undergraduate experiences for students. This new organization will combine two on-line programs at the masters level creating an efficiency of scale with a broader reach in distance delivery. Consistent with the overall College mission, citizens of Oregon, the nation, and the world will have access to a unique program that supports lifelong learning and education in the science and technology arenas. Finally, this reorganization forges a substantive partnership with faculty in the College of Science. This gives institutional

expression to the principle that research in curriculum, instruction, and free-choice learning is rooted in the content of the disciplines.

The merging of the College of Education and the Department of Science and Mathematics Education will form a college with programmatic and research focus in two areas: (a) professional practices in and studies of teaching and learning in STEM, and (b) professional practices in and studies of teaching and learning in cultural and linguistic diversity. The mission, vision, and core values of the College express its position within the mission of the University and its contribution to OSU's signature areas of excellence.

Vision

The College of Education is an international leader in innovative research and the preparation of scholars and lifelong learning leaders in two signature areas critical to an increasingly complex and global society: science, technology, engineering, and mathematics (STEM) and cultural and linguistic diversity. Through our research and professional preparation, we contribute to the development of a literate citizenry prepared to be engaged, reflective, creative, and caring members of their communities, as well as the world.

Mission

The College of Education, in association with a College of Science partnership, develops multi-culturally competent researchers, scholars, learning leaders and practitioners who make a difference by promoting innovation, social justice, and lifelong learning with a focus on STEM and cultural and linguistic diversity. Our research and professional preparation fosters scholarship, intellectual stimulation, openness, flexibility, and a sense of community.

Values and Beliefs

- We believe that the discovery, dissemination, and application of knowledge in STEM disciplines must be situated in a context of social justice that acknowledges and embraces cultural and linguistic diversity.
- We value a collaborative, interdisciplinary approach to research and to teaching learners of all ages and cultural and ethnic backgrounds.
- Our programs are informed by research and our research is informed by our practice as educators.

Goals

- Conduct research that fosters a deeper understanding of STEM learning across the lifespan.
- Conduct research that furthers our understanding of the impact of cultural and linguistic diversity in a global society.
- Work with the Cascades Campus and in partnership with colleagues across the campus including those in OSU's proposed Center for Research in Lifelong STEM Learning, Western Center for the Study of Community Colleges, and Center for Teaching and Learning, to infuse our research and academic programs with interdisciplinary and multicultural approaches to learning.
- Work collaboratively with colleagues across Oregon and the nation in school districts, community colleges, free-choice learning institutions, community-based organizations, and other national centers such as the Center for the Advancement of Informal Science Education (CAISE) based in Washington, DC.
- Expand our capacity to meet the needs of learners of all ages who are from culturally and linguistically diverse backgrounds.

Faculty Development

A major component in reorganization is an overall alignment of tenure-track faculty roles on research and academic programs. This section provides guidelines for work to be done during the next year in examining faculty position descriptions, as well as instructor roles in program content, administration and delivery. This section also outlines a general approach to promotion and tenure to be reviewed by the faculty and the new dean. OSU Cascades faculty will be full participants in this process.

From the OSU Academic Affairs [<http://oregonstate.edu/admin/aa/>]

"Academic employees are engaged in a wide variety of activities, including teaching, research, creative activity, extending the university's programs and expertise to regional, national, and international publics, and providing service to the University and profession... Development of the position description should be done in consultation with the academic employee, but final authority for assigning duties and establishing a position description rests with the supervisor... A minimum of 15% should be allocated to scholarly and creative activity for all professorial rank faculty..."

Tenure-Track Faculty. In general tenure-track faculty positions will have job responsibilities distributed across Teaching, Research, and Service. The proportion will vary by academic rank, the nature of research within the sub-discipline, and availability of external funding. A research-oriented faculty is committed to seeking external support for research but sub-disciplines vary with respect to the amount of available research dollars. Tenure-track faculty at the OSU Cascades campus will possibly have different opportunities, but their positions will

be viewed in the same way as the Corvallis campus. Position descriptions will recognize these differences by adjusting expectations across teaching, research, and service. Within teaching, tenure-track faculty will have a portion of their load allocated toward graduate student advising. Particular consideration will be given to advising during dissertation and thesis writing.

Instructors. Instructors and senior instructors will have fixed-term appointments with primary responsibilities for instruction. A 100% teaching load will be reviewed in the coming year by faculty and dean. A full-time teaching load will be the benchmark by which teaching portions of tenure-track faculty will be judged. This load will vary based on the proportion of undergraduate and graduate courses and class size. A portion of an instructor position may be allocated to running the day-to-day work of a program. This may include, but is not limited to, scheduling program meetings, working with faculty to work out staffing, coordinating admissions, advising students, and helping to coordinate faculty research on and evaluation of programs. A portion of instructor time may also be allocated to scholarly accomplishments as described in OSU's Promotion and Tenure Guidelines (<http://oregonstate.edu/facultystaff/handbook/>), "scholarly accomplishment requires peer-review and dissemination" (Academic Appointment Guidelines, September 2008).

Professional Faculty. Professional faculty in the College will have roles in "academic support, administrative support, and student support units" (Academic Appointment Guidelines, September 2008). The proposed Assessment, Licensure, and Accreditation position is an example of professional faculty. This position will have a central role in coordinating the complex process of professional teacher licensure in the state as well as state and national professional accreditation processes.

Managing Joint Faculty. The joint venture between the College of Education and College of Science brings tenure-track faculty and instructors from Science and Mathematics Education in the College of Science into the administrative structure of the College of Education. The Science funded faculty will report to the Dean of Education. The deans of both colleges will manage the joint enterprise. Promotion and tenure will start in the College of Education with appropriate review in the College of Science to be determined by the two deans.

Implementation and Timeline

The faculties in this joint partnership have invested considerable time and effort in good faith to create a significant venture for OSU. This effort suggests a bright future for creating national leadership and world recognition in education in STEM and cultural and linguistic diversity. It is expected that the approval process will take some time but implementation must be ready. The following timeline puts in place a plan for achieving the launch of the new College.

July 1, 2011: The new College of Education will create a strategic partnership between the Colleges of Education and Science. This will formally close the Department of Science and Mathematics Education in the College of Science.

Spring/Summer 2011

- Initiate planning for new web presence
- Engage with the Advisory Board and other external constituencies to determine major branding elements
- Communicate with existing and future graduate students the nature of the proposed changes and the timeline for approval.
- Begin stake holding with other units in the University concerning vision and mission of the new College and open discussions concerning strategic hires of joint benefit.
- Begin process of filling administrative positions.

Standing committees for governance will be reviewed and begin work in September 2011.

Academic Affairs Committee. Function and authority: Academic program issues of the College. The functions of the Academic Affairs Committee will include: Assurance of fit of curriculum proposals with long-range goals of the College; elimination of duplication of effort; assurance of integrity of proposed course or program objectives, content, and evaluation; academic standing of students; student advising policies; program accreditation; and assurance that the best interests of students, programs, and the College are being met. Make recommendations to the Dean and to the Faculty Senate's Curriculum Committee regarding substance of Category II proposals. Make recommendations to the Academic Staff as a whole on Category I proposals.

Personnel Affairs Committee. Function and authority: Advise the Dean on policies related to personnel matters, including search and appointment, promotion and tenure, performance review, salary determination, professional development, and grievance. Personnel policy deliberations need to recognize that academic staff may hold appointment in one or more other units outside the College and this context must be taken into consideration. Academic staff at or above the level being evaluated must do evaluation of the dossiers of candidates for indefinite tenure and/or promotion, and recommendations to the Dean will be purview of academic staff only. Evaluation of dossiers for tenure and promotion will be given first priority in terms of the Committee's workload. Should other personnel matters need immediate attention, sub-committees to the Personnel Affairs Committee that include additional academic staff will be appointed as needed by the Dean.

Cultural and Social Affairs Committee. Function and authority: Advise the Dean and Staff on matters pertaining to strengthening the College's internal organizational culture, including cultural competence, and social relations, as well as social events such as awards and recognition, health and wellness, graduation, and retirement.

Financial Affairs Committee. Function and authority: Advise the Dean on financial matters and policies pertaining to the College, including long-range fiscal planning, facilities, technology, resource generating, and budget allocation.

Ad hoc Committees. The Dean will appoint other committees or sub-committees to standing committees as necessary to the work of the College.

Fall, 2011

Charge relevant committees to begin deliberations on, and generate recommendations, for:

- Possible name change of the college
- Coordination of doctoral programs
- Coordination of Ecampus programs
- Coordination and development of the double degree and graduate pathways for teacher licensure
- Review of tenure-track and instructor position descriptions
- Refine budget projects for FY12
- Work with deans of Education and Science to formulate P&T procedures

Programmatic Structure

With this reorganization, College faculty members take the first step in aligning tenure-track faculty with each academic program. Four programs have been put on hold in recognition of the over-extension of program offerings by faculty and are noted in bold. All programs are described below forming the backdrop next year for faculty review for further coordination and consolidation. Following this section, Figure 2 shows the current alignment of faculty to programs. There is a complete listing of faculty by name and position in the Appendix. Programs labeled as “online” are purely distance delivered. Programs labeled as “hybrid” are offered off site as face-to-face classes supplemented by distance delivery. Otherwise the program is delivered on campus.

What follows is an outline of programs in place for Fall 2011.

Program Codes

Teacher & Counselor Education

- | | | |
|----|--------------------|--|
| 1. | DD | Education Double Degree (with elementary and secondary licensure)
BA/BS |
| 2. | EDM | Education Masters Degree (online) |
| 3. | COUN | Counseling Doctoral program PhD (hybrid) |
| 4. | CPD | Continuing Professional Development for Educators |
| | ELDP | Education Doctoral program PhD (on hold) |
| | MAT (2yr) | Elementary Master of Arts in Teaching (MAT) 2-Year (on hold) |
| | MAT (Immer) | Elementary Master of Arts in Teaching (MAT) Immersion (on hold) |
| | MS | Counseling Masters program (on hold) |

Adult & Higher Education

- | | | |
|----|------|--|
| 5. | CCLP | Community College Leadership Program EdD/PhD in Education
(hybrid) |
| 6. | OHRE | Organization and Human Resource Education EdM in Education
(hybrid) |
| 7. | CSSA | College Student Services Administration EdM/MS |

Science & Mathematics Education

- | | | |
|-----|----------|--|
| 8. | SME | Middle and High School math/science MA/MS |
| 9. | K12/FCL | K-12 and free-choice learning leaders (online) MA/MS |
| 10. | Sci/Math | Concentrations in K12, Collegiate Teaching, Free-Choice Learning PhD
in Education |

Cascades Campus

- | | |
|-----|--|
| MS | Counseling |
| MAT | Early Childhood & Elementary Teaching |
| MAT | Middle & High School Teaching |
| MAT | Language Arts (Separate proposal to rename to MAT in Humanities) |

2. Explain how outcomes in the newly organized program or unit will be assessed.

Assessing the outcomes of the College reorganization will use a three-fold model: Process, Progress, and Product. For Process, we will document organizational meetings through minutes and documents. For Progress, we will assess if significant tasks outlined in this proposal and specified in the process documents were completed in a timely manner. For Product, the person in the Assessment position will lead faculty in reviewing the accomplishments at the end of each year. The ongoing goal will be for new assessment routines and procedures to evolve into practice, which can be used to evaluate the end products of this reorganization.

D. Resources needed, if any: personnel, FTE academic, FTE classified, facilities and equipment.

The reorganization structure shown in Figure 1b indicates a dean and two associate deans along with a professional faculty position for Director of Licensure and another for Assessment and Accreditation. This organization creates efficiencies in faculty and administration with better alignment of work between administration, faculty, and staff positions.

Further, as shown in Figure 2, there are programs where there is a need for realignment of tenure-track faculty. Some realignment will come from moving faculty from programs now on hold. Additional realignment will come from faculty discussions concerning consolidation of online programs (i.e. EDM, K12/FCL) and review of existing programs for additional consolidation and collaboration (e.g. PhD programs). Current searches will also help with the alignment of tenure-track faculty with programs in the areas of: (a) the double degree (creating a STEM-focused elementary program), (b) educational policy in adult and higher education, and (c) English as a second language endorsement program.

In addition to an associate dean, Figure 1b shows a position for Assessment and Accreditation. This position has a primary focus in creating a culture of assessment within the College. The licensure and accreditation requirements for professional programs carry specific expectations for ongoing assessment. University accreditation is also building a culture of assessment within the institution as a whole. This position will be charged with building an infrastructure that supports data collection guided by faculty objectives for program research and evaluation. The person in this position will have a terminal degree in a relevant field of educational research to guide and coordinate the study of program effectiveness, producing data valuable for research, and at the same time generating the evidence required for program licensure and accreditation.

A current listing of faculty is in the Appendix. Examining Figure 2, there are 21 tenure-track (17.4 FTE) and 16 full or part-time instructors and professional faculty (15.24 FTE). The Appendix also lists, adjuncts and part-time faculty who contribute directly to College of Education's programs. While consolidation will significantly reduce term-to-term hiring, specialized expertise from working professionals are a significant and a valuable part of all professional programs. Term-to-term faculty who have specialized professional expertise will continue in the program.

F. Relationship of the proposed unit to the institutional mission.

1. How will the proposed program or unit support OSU's mission and goals?

- OSU's mission and goals focus on providing outstanding academic programs, excellent teaching and learning environments and substantial increased revenues that further strengthen performance and pre-eminence in the three Signature Areas of Distinction: Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress. This new college will support OSU's achievements through the following efforts: A portion of our externally-funded research directly addresses enhancing teaching and learning, particularly in STEM, and through our courses, seminars and conferences, includes distribution of research results to practicing teachers, university professors and free-choice educators here at OSU, around Oregon and the nation.
- We are focusing on cultural and linguistic diversity in learning communities, which supports the preparation of talented young people from all backgrounds, resulting in the benefits cultural diversity brings to the mainstream STEM community, as well as increasing the number of non-traditional, under-represented STEM professionals.
- Our externally funded research also addresses analysis of both free-choice/informal and formal learning environments (K-12 as well as higher education) for evidence of practice that facilitates the development of young people as critical thinkers in their discipline of choice.
- By informing the practice of STEM educators through our research and collaborations, we directly impact the nation's future STEM leaders. Our scholarly activities provide scenarios in which culturally diverse and inclusive learning environments create culturally competent, analytically minded professionals who then are able to interact with peers to optimize brainstorming, idea formulation, and ultimately innovation.
- We collaborate with other OSU colleges and departments (Engineering, Oceanic and Atmospheric Sciences, Physics) to study learners and the learning process, optimize instruction, and assess learning outcomes, thereby developing lifelong learners capable of contributing to the innovation that occurs at OSU, as well as within STEM industries.
- We study the human aspects of tackling issues of societal concern in the 21st century; namely, the learning processes and methods involved in educating the public in both formal and free-choice learning environments about complex issues--clean technology, environment, health and population. It is not enough to understand the science and technology; we also must understand how people learn and make decisions on complex issues in order to be effective at creating significant change. This relates directly to OSU's signature areas of distinction.
- Our externally-funded research on lifelong learning contributes understanding about the mental and physical health of the world's population since research documents that active learning throughout one's life is a major component of wellbeing and a healthy, long life.

- Our externally-funded research impacts both pre- and post-college; therefore, through our scholarly activities and academic programs we expand the reach of OSU beyond current students to make a positive impact in the lives of persons yet to attend college, as well as professionals who have matriculated from the University.

G. Long-range goals and plans for the unit (including a statement as to anticipated funding sources for any projected growth in funding needs).

We will use our current research and academic strengths to leverage the necessary breadth in undergraduate and graduate programs from the division and across the University. We will build a shared vision for this newly reorganized College by engaging faculty in other colleges in focused discussions about collaborative externally-funded research and assistance in understanding research-based approaches to creating effective teaching and learning environments. We envision that lifelong learning will encompass all program levels in the current College and do so in innovative and collaborative ways that strengthen our alignment with the goals of the Division of Arts and Sciences, as well as the Divisions of Earth Systems Science, Health Sciences, and Business and Engineering. From a shared, campus-wide vision for the College will come proposals for faculty hires that complement the research and programmatic interests across departments and colleges. Early candidates for these discussions are faculties in: Psychology, History, Philosophy, Ethnic Studies, Statistics, Physics, and Mathematics.

Research is the foundation that drives innovation in the design of effective academic programs, new learning environments, the creation of educationally productive social structures, and innovations in lifelong learning opportunities. Currently Science and Mathematics Education faculty receive over \$250,000 per year per FTE in external research funding. Within the envisioned new College design, this funding level will serve as a base for developing more robust external funding across a larger faculty. Through strategic hires and new research-oriented job descriptions, we anticipate additional increased funding through inter-departmental collaborations across the University. The department currently has active relationships with faculty in the Colleges of Science, Liberal Arts, Engineering, Agricultural Sciences, Forestry and Public Health and Human Sciences. Mindful of the innovative approach we are taking to education and learning with particular focus on STEM and cultural/linguistic diversity, we anticipate national and international interest in our research agenda and continued healthy funding from National Science Foundation (programs in Research on Learning in Formal and Informal Settings, Human Resource Development and Undergraduate Education), NOAA, NASA, Department of Agriculture and Department of Commerce (workforce development). In addition we anticipate interest from private foundations including the Kauffman, Noyce, Kellogg and Spencer Foundations.

The College will become **the** source of information in the state, region and nation on life-long learning in STEM education with special emphasis on cultural and linguistic diversity. The College will work closely with the new Center for Research in Lifelong STEM Learning to design and maintain information databases that will also meet the needs of accreditation from NCATE,

TSPC, and CACREP as well as be a model for the campus in demonstrating a “culture of assessment” for University accreditation.

The new College will examine the valuable lessons learned from Science and Mathematics Education and College of Education faculty as they have experimented with innovative methods of distance and on-campus program delivery. We will learn from and preserve highly successful programs and streamline, redesign and focus others to support faculty research, particularly in the two areas of excellence, STEM learning and cultural/linguistic diversity. Advancing innovative learning in the 21st century, the College will mine and develop the rich resource of the Internet and distance delivery in order to enrich the education of Oregon citizens and the nation in the areas of STEM and cultural diversity. Externally funded research will enhance this resource and build new knowledge about learning in technologically integrated environments.

H. Relationship of Programs to Other OUS Institution

The following programs are unique to or have unique features in the OUS system: Double Degree, MS online, PhD in Counseling*, CCLP*, and AE-OHRE*.

****PhD Counseling***

PSU offers school and clinical mental health counseling MS programs. UO offers a counseling psychology PhD program.

****CCLP***

There are generic educational leadership programs, but none are focused solely on community college leadership.

****AE-OHRE***

PSU does offer programs in adult education; they do not offer the part-time option for working professionals.

EdM online

- Portland State University offers a Curriculum and Instruction Master’s Degree program (MA/MS) for licensed teachers or professionals in related fields; courses are available on campus only.
- The University of Oregon has a master’s degree in Curriculum and Teacher Education (MS). This is a part-time with courses are available on campus only and many are cross-listed with undergraduate courses.
- Eastern Oregon University offers a Master of Science degree. Some courses are offered face-to-face on campus or on site, only required courses are available online.

MS online

This is the only online MS in the OUS system offering concentrations in K12 Math education, K12 science education, and Free-Choice Learning.

Ph.D. in Mathematics or Science Education.

Portland State University also offers a PhD in math education from the Mathematics Department. UO offers an EdD in educational leadership.

I. Professional Accreditation

The following programs hold national or state accreditation by the indicated organizations:

- Counseling program – Council on Accreditation for Counseling and Related Educational Programs (CACREP)
- Teacher Education – National Council for Accreditation of Teacher Education (NCATE) and Oregon Teacher and Standards and Practices Committee (TSPC)

Budget Pages

The budget analysis shows the proposed new administration cost compared to the current cost. The new organization offers efficiencies some reduced costs following the transition period of about one year. As outlined in Table 1, administrative functions have been redistributed away from department chairs and to the Dean's office. In addition, staff positions have been replaced to create efficiencies benefiting programs and faculty. Additional transition costs include the development of a professionally designed newsletter for broad distribution to alumni and friends (\$10,000) and redesign of the web site to highlight the four program units and research foci of faculty (\$10,000). The web site will foreground the major educational and research emphases of STEM education and cultural and linguistic diversity education.

All other costs associated with the current College of Education and Department of Science and Mathematics Education will remain the same in the new structure. These include but are not limited to, faculty salaries and services and supplies.

Appendix: Faculty Resources

Tenure-Track Faculty

Allan Brazier (Professor)
Jay Carbon (Cascades) (Professor)
Kathryn Ciechanowski (Assistant Professor)
Derron Coles, with Equal Opportunities Program (Assistant Professor)
Kathleen Cowing (Cascades) (Assistant Professor)
Thomas Dick, mathematics (Professor)
Lynn Dierking (Professor)
Cass Diemen (Associate Professor)
Molly Engle (Associate Professor)
Larry G Enoch's (Professor)
Rebekah Elliott (Associate Professor)
John Falk (Professor)
Larry Flick (Professor)
Nam Hwa Kang (Associate Professor)
Karen Higgins (Associate Professor)
Rick Orozco (Assistant Professor)
Shawn Rowe, with Sea Grant Extension (Assistant Professor)
Deborah Rubel (Associate Professor)
Darlene Russ-Eft (Professor)
Sam Stern (Professor)
Ken Winograd (Associate Professor)

Fixed-term

John Baek (Assistant Professor, Senior Research)
Kathy Biles (Cascades) (Instructor)
Jessie Buhrle (Cascades) (Instructor)
Shelley Dubkin-Lee (Instructor)
Donna Drake-Clark (Instructor)
Gene Eakin (Director Student Services, Head Advisor)
Ron Gray (Instructor)
Marla Greene (Cascades) (Instructor)
Sue Helback (Instructor)
Joyce Mphande-Finn (Cascades) (Instructor)
Mike O'Malley (Instructor)
Nell O'Malley (Instructor)

May 30, 2011

Dr. Larry Flick
Department of Science and Mathematics Education
College of Science
Corvallis, OR 97331

Dear Larry:

I wanted to express my enthusiastic support for the Category I proposal outlining the merger of Science and Mathematics Education and the College of Education. I see this as a tremendous opportunity for the two units to establish national prominence in research and teaching about STEM education.

I am very committed to the development of a reorganized College of Education that will foster research, teaching, and outreach in education with a focus on science, technology, engineering, and mathematics (STEM), with a strong commitment to cultural and linguistic diversity. This provides a truly unique opportunity for the College of Education and the College of Science to work together to create a single unit committed to pursuing fundamental knowledge, understanding, and application about how students of all ages learn in our increasingly diverse and technological society. It is an exciting prospect and something that OSU is uniquely suited to pursue because of the success you have all created over the years.

Dean Stern and I have drafted an MOU for the Provost that articulates our joint commitments for CoED to continue and build the work of the Department of Science and Mathematics Education and for COS to continue and build the financial support for the mission of CoED.

I wish you and your colleagues the best in this innovative endeavor. Please let me know if I can help in any way.

Best regards,

A handwritten signature in black ink, appearing to read "S. H. Bloomer".

Sherman H. Bloomer
Dean, College of Science

From: "Stern, Sam" <sam.stern@oregonstate.edu> **Date:** Tue, 31 May 2011 15:46:46 - 0700 **To:** "Rodgers, Lawrence" <Larry.Rodgers@oregonstate.edu>, Sonny Ramaswamy <Sonny.Ramaswamy@oregonstate.edu>, "Bray, Tammy" <Tammy.Bray@oregonstate.edu> **Cc:** Sherm Bloomer <Sherman.Bloomer@oregonstate.edu> **Subject:** Request for liaison letter of support...

Larry, Sonny, and Tammy,

Attached is the abbreviated Category I proposal that describes the reorganization of the College of Education. Major elements include the formation of a "faculty of the whole" and elimination of academic departments; inclusion of faculty and programs formerly in the Department of Science and Mathematics Education in the College of Science; and emphasis on STEM (science, technology, engineering, and math) education and cultural and linguistic diversity. This proposal has been developed over the past year by faculty, and has my support and Sherm Bloomers'. The Education Double Degree, master's degree teacher education programs in your colleges, accreditation, and teacher licensure remain a priority and will continue to be supported by the reorganized College of Education.

I hope you will each prepare a brief liaison letter of support that can be included with the proposal.

Do let me know if you have any questions or concerns.

Best, Sam

Sam Stern, Professor & Dean
College of Education, OSU

From: Ramaswamy, Sonny **Sent:** Tuesday, June 21, 2011 8:51 AM **To:** Stern, Sam **Cc:** Thompson, Greg; Green, Cary **Subject:** Re: Request for liaison letter of support...

Good morning, Sam. My sincere apologies — I meant to respond to you sooner, but somehow it got away from me.

At the outset, congratulations to you and your college on articulating an outstanding vision for a College of Education that will focus on our strengths at Oregon State University. It will indeed allow us to carve out a comparative advantage and niche, which, as it develops, will be hard to beat.

As Dean of the College of Agricultural Sciences, I do have a few suggestions about the proposal, which may have overlooked some collaborative opportunities.

As you know, there are significantly broader efforts in the realm of STEM education at Oregon State University, than just that undertaken within the College of Science — with scientists, engineers, and mathematicians in the Colleges of Agricultural Sciences, Engineering, and Forestry, along with scientists in Health and Human Sciences, Veterinary Medicine, and Pharmacy, it is a seriously missed opportunity to create that comparative advantage that you have so well articulated in the proposal.

There are a number of institutions that can offer STEM educational opportunities, but Oregon State is in a unique position because of the broader representation of the relevant disciplines. I would like to see that breadth reflected in the proposal and also ways to engage the latter institutions in helping realize the vision of an internationally recognized program in STEM disciplines.

Secondly, and more importantly for the College of Agricultural Sciences, I was disappointed that Agricultural Education was not even mentioned as potential partners and adjunct faculty in the proposal — maybe it was just an oversight, but I hope that it will be corrected. Our faculty have always been adjunct faculty members in the College of Education, and I hope that our faculty would continue to be adjunct faculty members and continue within the licensure faculty. I believe our faculty have a lot to offer as adjunct faculty and have indicated a desire to work with the PhD students in the College of Education. Not only does the latter enhance the breadth of the programs in the College of Education, it is critical for our Agricultural Education faculty and students.

I hope the College of Education would consider these opportunities for a broader partnership and collaborations within their proposal, and that the broader opportunities described above are incorporated into the proposal as it is revised. Please do let me know if you wish to discuss this further.

Thanks for giving us the opportunity to respond to your Category 1 proposal, and thanks

for considering our suggestions.

From: "Stern, Sam" <sam.stern@oregonstate.edu> **Date:** Tue, 31 May 2011 15:46:46 - 0700 **To:** "Rodgers, Lawrence" <Larry.Rodgers@oregonstate.edu>, Sonny Ramaswamy <Sonny.Ramaswamy@oregonstate.edu>, "Bray, Tammy" <Tammy.Bray@oregonstate.edu> **Cc:** Sherm Bloomer <Sherman.Bloomer@oregonstate.edu> **Subject:** Request for liaison letter of support...

Larry, Sonny, and Tammy,

Attached is the abbreviated Category I proposal that describes the reorganization of the College of Education. Major elements include the formation of a "faculty of the whole" and elimination of academic departments; inclusion of faculty and programs formerly in the Department of Science and Mathematics Education in the College of Science; and emphasis on STEM (science, technology, engineering, and math) education and cultural and linguistic diversity. This proposal has been developed over the past year by faculty, and has my support and Sherm Bloomers'. The Education Double Degree, master's degree teacher education programs in your colleges, accreditation, and teacher licensure remain a priority and will continue to be supported by the reorganized College of Education.

I hope you will each prepare a brief liaison letter of support that can be included with the proposal.

Do let me know if you have any questions or concerns.

Best, Sam

Sam Stern, Professor & Dean

College of Education, OSU

Subject: CoE Proposed Changes

Dear Sam:

I have reviewed the proposed changes for the College of Education outlined in the abbreviated cat 1, including the org chart and the statements involving mission and goals. I am fully supportive of the plan as it is detailed in the document. Assuming that you don't encounter bureaucratic obstacles beyond your span of control, I also think the proposed timeline is achievable.

I'm especially pleased by your focus on STEM learning, which is, to my mind, not only a strategically smart direction for CoE to be going but also represents a real opportunity for distinction for OSU.

Let me know if I can help support this in any way as it moves forward.

Subject: **Letter of support**

Dear Sam and Larry:

Congratulations to both of you – one is taking on the new responsibility and one is embracing the new adventure (you know who is who - :-))!

My apology for this tardy email of support of your abbreviated Category 1 proposal entitled "Reorganization of the College of Education". I am very supportive of your restructuring and appreciate your emphasis on administrative efficient and the focus on STEM. Your embracing the entire education programs at OSU including Cascade as a whole is commendable. However, as I am reading this proposal, I did not see any mention of the programs in our college. I am wondering if your reorganization will change the professional relationship between College of Education and College of PHHS? I am talking about the current two programs in CPHHS, early childhood development and education (double degree) and physical education teacher education (master degree). Will we continue the double degree program of our students in HDFS with you as currently structured? Will we continue to prepare and receive our Physical Education Teacher Education licensure from you? I think I know the answers, but I just need some assurance.

Again, my apology for this late response, I should have started earlier on my reading assignment. Thanks for the opportunity to review the proposal.

Tammy

Carolyn,

I asked Dr. Nama Kang to chair a committee to provide feedback on your proposal for the MAT at Cascades. They took a very thorough look at your plans and reflection on the relationship of an MAT and MS degrees. I would be please to answer any questions you have. But I urge you to contact Nama directly related to her committee's thinking.

Larry

Subject: Cascade MAT feedback

Larry,

We had a productive meeting this morning regarding the Cascade MAT program. We came up with the following recommendations:

1. We suggest that the MAT program runs as one program with four tracks including science and math education.
2. As one program, the MAT could use the current courses including pre-requisites that all students in the four tracks can take together.
3. Each track can be differentiated in the following ways: (1) taking two subject-specific pedagogy courses and (2) 9 credit content courses.

The suggestions are based on two main considerations: (a) differentiations between MAT and MS and (b) resources on Cascade campus. We believe that the differentiation between the MAT and MS would also help NCATE and TSPC.

Karen strongly recommended for the Cascade to use Studio classes in Bend.

Hope this helps.

Nama

Extend from OSU-Main to OSU-Cascades

MAT: Integrated Science Education Area of Concentration
MAT: Advanced Mathematics Education Area of Concentration

Oregon State University
College of Education and OSU-Cascades
CPS Tracking #83047
December 2011

1. Program Description

a. Program title, level:

- This proposal seeks to extend the Master of Arts in Teaching (MAT) in Integrated Science Education and the MAT in Advanced Mathematics Education from OSU-Main to the OSU-Cascades branch campus. OSU-Cascades has previously been granted approval to offer the MAT in Language Arts Education (that includes the MAT in Social Science Education) for those students seeking licensure to teach at the middle and high school grade levels.
- **CIP #s : 131311 – Teaching: Advanced Mathematics Education**
131316 – Teaching: Integrated Science Education

Table 1: Classification of Instructional Programs (CIP) Numbers:

CIP #: **131311**

Title: Mathematics Teacher Education.

Definition: A program that prepares individuals to teach mathematics programs at various educational levels.

CIP #: **131316**

Title: Science Teacher Education/General Science Teacher Education.

Definition: A program that prepares individuals to teach general science programs, or a combination of the biological and physical science subject matter areas, at various educational levels.

(Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.)

b. OSU Main campus department and school/college under which the program is offered:

- Department of Teacher and Counselor Education, College of Education

c. Who will be the administrators of the OSU-Cascades program?

- Marla Hacker, Dean of Academic Programs
- Lawrence Flick, Dean of the College of Education
- Carolyn Platt, Program Lead, MAT

d. Briefly describe the academic program, and provide a program degree audit sheet that lists all courses (including number of credits) and indicate how each course will be offered at OSU-Cascades [resident course {COCC, OSU} distance education, web, etc.].

Table 2: Proposal Summary: MAT in Integrated Science Education and MAT in Advanced Mathematics Education

NEW

- *Degrees:* **MAT in Integrated Science Education (CIP #: 131316)**
MAT in Advanced Mathematics Education (CIP #: 131311)
- *Academic Units:* **Department of Teacher and Counselor Education,
College of Education and OSU-Cascades**
- *Course Designators:* **TCE and SED (existing)**
- *Proposed Effective Term:* **Summer Term 2012 (Banner: 201300)**

- The academic program is the OSU Master of Arts in Teaching offered through the College of Education's Professional Teacher Education Program. Currently OSU-Cascades, by MOU approval, offers the MAT in Language Arts Education for pre-service teachers who wish to teach at the secondary level (5th-12th grades). This program (which includes course work, clinical experience and national exams) complies with the licensure standards and requirements of the Oregon Teacher Standards and Practices Commission (TSPC) to teach language arts or social studies upon successful completion of the degree program. Students receive an Oregon Initial 1 teaching license in addition to the Masters' degree.

The intent of this proposal is to extend the current MAT degree in Integrated Science Education and MAT in Advanced Mathematics Education, housed at OSU-main campus, to the OSU-Cascades campus for students who wish to teach middle and high school math or science. The degree name would be Master of Arts in Teaching in either Integrated Science Education or Advanced Mathematics Education, depending on the concentration of courses, the student teaching experience, and the national exams the student completes.

The original OUS approval for OSU to offer an MAT included the science and math tracks. The MAT degree has since extended to the Cascades campus in the form of an

MAT in Language Arts Education and Corvallis now offers a Masters in Science Education (MS) and a Masters in Mathematics Education (MS). Faculty in Corvallis' Science and Math Education department (SMED) and the College of Education reviewed this MAT MOU in relation to the MS degree awarded on main campus and offered the following recommendations:

- 1) That the MAT program runs as one program with areas of concentration (endorsements-- language arts, social studies, science and math);*
- 2) That all students take several of the current MAT educational theory and pedagogical courses together; and*
- 3) That each area of concentration (endorsement for licensure) be differentiated in the following ways: (1) taking subject specific pedagogy courses (language arts, math or science education) and (2) graduate level content courses (English, math, science) in support of the specific MAT degree program.*

The faculty goes on to state, "These suggestions are based on two main considerations: (a) differentiations between MAT and MS; and (b) resources on the OSU-Cascades campus. We believe that the differentiation between the MAT and MS [degrees] would also help NCATE [our national program accreditation body] and TSPC." (Dr. Namhwa Kang, email correspondence to Dean Flick, June 7, 2011)

The MAT degree is generally considered to be a pre-service degree that requires education classes in order to meet state licensure requirements, and emphasizes advanced course work in a specific academic discipline to enhance one's knowledge in that subject area. Furthermore, it focuses on educating the candidate in practical teaching skills for use as a teacher, as opposed to focusing on performing research in the educational field, which is traditionally the MS degree. The MAT degree is often advantageous to middle school and secondary school teachers because it allows them to focus on subject area knowledge in their undergraduate program and then acquire pedagogical skills in their graduate studies.

The original MAT approved for OSU in 1991 consisted of a minimum of 48 graduate credits distributed as follows:

- ♦ Six hours of graduate professional core courses in Education Foundations,
- ♦ Eighteen to twenty one hours of graduate professional course work in the teaching specialty,
- ♦ Fifteen to eighteen hours of graduate professional internship, and
- ♦ Nine hours of graduate electives in subject matter specialization.

This proposal calls for a minimum of 68 graduate credit hours, which brings the MAT in Integrated Science Education and the MAT in Advanced Mathematics Education in line with the current MAT in Language Arts Education.

The MOU for the MAT to be offered at the OSU-Cascades campus (approved in 2009) changed the required number of graduate elective credits in subject matter specialization from nine to "between 6 and 8 hours", and the current MAT with the Language Arts area of concentration follows that requirement.

The MAT for the preparation of secondary teachers is designed “considering empirical research on teaching. Students completing the program will have expert knowledge both in their academic fields and in pedagogical knowledge....Acquisition of the pedagogical content knowledge, gained by teaching experience, requires not only the depth and breadth in each of the knowledge bases, but also in a heavily field-based program stressing reflection upon subject matter, instructional decision and their consequences in the classroom.” (Proposal for the Initiation of a Master of Arts in Teaching, Oregon State University College of Education Extended OSSHE Format for Category 1 Proposals, 1990).

In addition to the course requirements for MAT degree completion, students must submit a Professional Portfolio and sit for an oral examination in the final term of enrollment. These requirements are coordinated through TCE 524, the capstone course entitled “Teacher as a Reflective Practitioner”. Graduate School approved faculty from TCE sit on the orals and score the portfolios, and the addition of mathematics and science education student orals will not require any further staffing for the oral exams.

The target date for beginning enrollment for this academic program is June 25, 2012. The MAT program at OSU-Cascades is based on a cohort model in which all members begin the program coursework in the summer term together. Approval for the extension of this MAT will need to occur by the end of February 2012 in order to accept applications for admission and obtain student teaching placements, which begin in the late summer.

The existing MAT in Language Arts Education degree at OSU-Cascades operates in full cooperation with the Corvallis faculty and extending the graduate education degree to an MAT in Integrated Science Education and an MAT in Advanced Mathematics Education builds upon an existing focus on Science, Technology, Engineering and Mathematics (STEM) education at OSU. OSU-Cascades has a strong core MAT in place, one that is recognized by school districts throughout Oregon and, increasingly, the nation, as well as by the Teacher Standards and Practices Commission (TSPC)-- the state educators’ licensing board. The Central Oregon school districts have asked us to move forward with the extension of the MAT to science and mathematics as quickly as possible, as they are currently employing temporary teachers with emergency licenses who have no pedagogical training in the teaching of these subjects.

Audit sheets for the MAT in Integrated Science Education and the MAT in Advanced Mathematics Education appear below. Each area of concentration would build upon the approved graduate professional core and professional internship offerings around which the OSU-Cascades MAT in Language Arts Education is centered. Students enrolled in the science or mathematics areas of concentration would add the appropriate math and science methods coursework as well as graduate level content work.

All courses would be offered at OSU-Cascades by Graduate School approved faculty. OSU-Cascades has faculty in place to teach the Professional Core classes, the internship course work, and staff the oral examinations. OSU-Cascades will hire a full-time, tenure track faculty member to teach six of the SED courses, plus adjuncts who are teachers of

science and math in the secondary schools for the additional six courses to be taught in SED. The graduate level subject specific course work in math or science will be taught by the math and science faculty already in place at OSU-Cascades.

Math or Science Graduate Content Coursework

Graduate work at the 500 level will support the specific MAT area of concentration and will meet the approval from the corresponding Corvallis faculty.

CREDITS: 6-8

e. Indicate in what ways the proposed program at OSU-Cascades will differ from the OSU main campus program:

The proposed design of the MAT in Integrated Science Education and in Advanced Mathematics Education follows the approved MAT for OSU and OSU-Cascades. The specific program minimum

requirements listed in 1.d. for the degree audit closely parallel those of the original CAT 1. At the same time, the intended specific course selections to fulfill the graduate professional course work in the teaching specialty closely parallel the course work in the MS on the main campus. OSU main campus has chosen to offer the MS degree in Science or Mathematics Education because of its organizational association with the College of Science. OSU approved the MAT degree being offered at OSU-Cascades seven years ago with the MAT in elementary education and three years ago with the MAT in Language Arts Education (that includes social science) for the secondary level authorization in teaching. The MAT at Cascades is “already crafted as a very high quality program in concert with the Corvallis MS [degree]” (Dean Larry Flick, email correspondence, October 21, 2011 to Dr. Platt) and the addition of the science and mathematics areas of concentration will assure that the nature of the master’s level Professional Teacher Education Licensure and Masters Programs will extend the teaching practices, content and research to OSU-Cascades’ campus.

f. List any special requirements or pre-requisites for admission to the program at OSU-Cascades:

Students must demonstrate the following criteria:

- ♦ Completed bachelor’s degree from an accredited higher education institution (prior to enrollment).
- ♦ Minimum GPA of 3.0 in the last 90 quarter hours of graded undergraduate work and all work completed thereafter.
- ♦ Competence in science or math demonstrated through the completion of appropriate course content work.
- ♦ 60 hours of volunteer and observation experience with middle and high school students, with at least 30 hours in the public school classroom.
- ♦ Effective oral and written communication.
- ♦ Completion of TCE 560 Research in Learning (or equivalent) and TCE 499 Civil Rights in Education.
- ♦ Satisfactory answers to “good conduct” questions as required by the Oregon Teacher Standards and Practices Commission (TSPC)
- ♦ Sincere and appropriate desire to become a public school teacher and an understanding of the demands placed on a teacher.
- ♦ Passing results on: (1) either the EAS, California Basic Education Skills Test (CBEST) or all three subtests of the PRAXIS PPST, (2) the ORELA multiple subjects’ exam, (3) the ORELA Civil Rights exam, and (4) the NES content exams required for licensure in the endorsement area (language arts, social studies, math or sciences).

g. Is there an accrediting agency or professional society that has established standards for this program? If so, is the program currently accredited? If accredited, what steps would be needed to ensure that accreditation is maintained vis-à-vis the OSU-Cascades offering? Does the accrediting body require notification of the program offering at a new location?

The OSU-Cascades MAT programs are nationally accredited through the National Council for Accreditation of Teacher Education (NCATE) as well as regionally accredited through the Northwest Commission on Colleges and Universities (NWCCU). Additionally, OSU-Cascades is approved to offer professional teacher licensure programs by the Oregon Teacher Standards and Practices Commission (TSPC).

2. Demand

a. List any similar programs offered at the proposed or nearby location.

OSU-Cascades currently offers an MAT in Elementary Education as well as an MAT in Language Arts Education. Other universities such as George Fox University and Eastern Oregon University offer the MAT in a hybrid (distance and limited location) model. There is consistent and very strong support for OSU resident graduate programs in education for Central Oregon by regional superintendents, teachers, school boards and community patrons.

b. Provide evidence of need for the program at the new locations.

The extension of the MAT in Integrated Science Education and in Advanced Mathematics Education is central to President Ray's vision for the OSU-Cascades' campus and Central Oregon region as a strong presence in STEM (Science, Technology, Engineering, and Math) practice and research. The education of excellent math and science teachers in the middle and high school levels is a well-documented national need. The superintendents of our six Central Oregon school districts have asked OSU-Cascades to extend the MAT to science and math to fulfill the vacancies for teachers in these subject areas. Currently, local school districts have had to hire some math and science teachers without any pedagogical background via provisional/emergency licenses.

c. Estimate enrollment and number of graduates over the next five years. Will any enrollment limitation be imposed? If so, how will prospective students to be enrolled be selected?

OSU-Cascades plans to award between 10 and 20 MAT in Integrated Science Education and MAT Advanced Mathematics Education degrees per year over the next five years:

Year 2012: 10 degrees
Year 2013: 15 degrees
Year 2014: 15 degrees
Year 2015: 20 degrees
Year 2016: 20 degrees

OSU-Cascades utilizes a Cohort model, with the students commencing their program in the summer term. Enrollment limitation would be subject to funding, staffing requirements prescribed by NCATE, and student teaching placement opportunities. Prospective students will be selected through the criteria outlined above with particular attention paid to academic ability, depth of knowledge in content area, experience with middle and high school students, and dispositional characteristics that indicate the likelihood of professional success in the classroom.

3. Personnel

a. List the names and qualifications of faculty (regular and adjunct) who will be involved in delivering the program at OSU-Cascades, and their tentative teaching assignments. Will new faculty be needed?

OSU-Cascades will hire one full-time, tenure track, faculty member with STEM Education background who will serve as course instructor, advisor, and act as liaison with STEM research on the main campus. This person will be expected to teach six courses. (This is the teaching load specified for tenure track, full time faculty at OSU-Cascades.) In addition, we will continue our instructor model that works closely with the Central Oregon school districts to identify talented practitioners to teach as adjuncts for the

remaining six methods courses. We will also nominate to the Graduate School current OSU-Cascades science and math faculty to teach the graduate level content courses once these people are determined.

Adjunct instructors at OSU-Cascades are paid per course they teach. In addition to the contracted amount for the course, OSU-Cascades pays into the PERS or other benefit program in which the instructor is invested (a percentage amount based on the number of courses being taught).

Current faculty who will continue to teach core professional courses in the MAT program include:

| | |
|-------------------------|---|
| Jay Casbon, Ed.D.: | TCE 499 Civil Rights in Education
TCE 560 Research in Learning |
| Dennis Lynn, Ph.D.: | TCE 512 Psychology of the Adolescent |
| Phil Hoffman, Ph.D.: | TCE 520 Classroom Management and Discipline |
| Carolyn Platt, Ph.D. | TCE 524 Teacher as a Reflective Practitioner
TCE 560 Research in Learning
TCE 599 Professional Formation |
| Cate Denson Hill, MAT: | TCE 549 Teaching in a Differentiated and Diverse Classroom |
| Laura Sugden, MAT: | TCE 545 Planning Curriculum Aligned to Standards
TCE 525 Curriculum Implementation & Instructional Strategies
TCE 528 Using Assessment to Improve Instruction |
| Ann Owings Allred, MAT: | TCE 509 Practicum-First Authorization
TCE 510 Internship-Second Authorization |

New Hires: One new, full time, tenure track, SMED faculty member will be hired to teach six of the following courses, as well as adjuncts to teach the remaining six courses, to be approved by the Graduate School:

SED 511 (3): Analysis of Classrooms I
SED 512 (3): Technology Foundations for Teaching Mathematics and Science
SED 513 or 514 (3): Inquiry in Science and Science Education OR Inquiry in Mathematics and Mathematics Education
SED 515 (3): Analysis of Classrooms II
SED 518 (3): Analysis of Classrooms III
SED 552 or SED 553 (3): Mathematics Methods: Practicum 1 OR Science Methods: Practicum I
SED 573 or 574 (4): Science Pedagogy and Technology 1 OR Mathematics Pedagogy and Technology I
SED 576 or 577 (4): Mathematics Pedagogy and Technology II OR Science Pedagogy and Technology

b. Estimate the number and type of support staff needed to provide the program at the new location.

OSU-Cascades has in place the support staff needed for this program and they include:

Placement Coordinator: 1 (will move from .49 to .75 FTE) This person secures and coordinates the student teaching placements.

Licensure and Administrative Coordinator: 1 (already 1.0 FTE) This person coordinates all testing and licensing requirements, as well as annual state and national accreditation reports.

Educational Librarian: 1 (already at 1.0 FTE)

We will need to hire two Student Teacher Evaluators, one who is licensed to teach in Oregon and endorsed in mathematics, and one who is licensed to teach in Oregon and endorsed in science, who will work on a part-time basis, with the amount of appointment to be dependent upon the number of enrolled students in student teaching practicums and internships. These field evaluators are paid on a formula based on number of students they oversee, number of visits made to the site, and the distance to the site. There are fees attached to the student teaching internship courses (TCE 509 and 510) to cover these costs.

The new and expanded hires are reflected in the budget submitted with this proposal. Please see the budget notes as well for clarification.

4. Other Resources

a. Describe facilities necessary to offer the program at the new locations.

Classroom and support facilities are in place in the OSU-Cascades building (Cascades Hall) and will be available in the new building for OSU-Cascades into which the graduate programs will move in early June. Laboratory sections of the science courses will meet in middle school and high school labs in the Bend LaPine schools, as well as in the laboratory classroom in Cascades Hall. All classrooms are multi-media equipped. The educational library is incorporated into the Central Oregon Community College/OSU-Cascades Library.

b. Indicate how library needs will be met.

Library Support for the MAT in Advanced Mathematics and MAT in Integrated Science Education Areas of Concentration on OSU-Cascades Campus

OSU-Cascades' library services offers the collections and services described below in support of the proposed MAT in Advanced Mathematics and MAT in Integrated Science Education Concentrations at the OSU-Cascades Campus. Portions of the curriculum for this program are identical to the existing MAT Secondary education programs and similar to existing programs in Corvallis so OSU Libraries already provides much of the support the program is expected to need.

Periodicals

OSU Libraries provides access to the article databases essential for education research including *ERIC*, *Education Research Complete*, and *PsycINFO*. In addition to the many titles available electronically through these subscriptions, the Libraries also subscribe to core journals publishing research in Education and related fields. Periodicals are purchased electronically whenever possible, providing equal access to students and faculty regardless of campus.

Currently the Valley Library receives print subscriptions to the National Council of Teachers of Mathematics publications. Of particular interest to the secondary program will be *The Mathematics Teacher* and *Mathematics Teaching in the Middle School*. Articles from these print journals are available to Cascades students and faculty through the Scan and Deliver program which sends scanned copies of materials held by the Valley Library to requestors' email, generally within 24 hours. If Cascades decides immediate access to these titles is crucial, the titles are available to institutions for \$104 per year (each.) An additional NCTM publication, *The Journal of Research in Mathematics Education* is also available via Scan and Deliver or Cascades could add a print subscription for \$161 annually.

The Libraries also subscribe to the National Science Teacher Association titles *Science Scope* and *The Science Teacher*. These are available electronically back to around 2005 and older volumes are held at the Valley Library and available to OSU-Cascades faculty and students through the Scan and Deliver service.

Monographs and Media

OSU-Cascades currently maintains a strong local collection of education materials purchased to complement the collection at Valley Library. We anticipate some additional need for materials that specifically cover mathematics and science education theory and pedagogy at the middle and high school level. An additional \$500 per year for at least the first two years would allow the library to purchase, in consultation with the faculty, any needed core materials.

OSU Libraries also participate in Summit, a consortium of academic libraries in Oregon, Washington, and now Idaho. This participation gives OSU-Cascades faculty and students access to the collections (both books and videos) of more than 35 additional libraries, twenty of which also offer masters-level education programs.

c. Indicate how students at the new location will receive student services (e.g. academic advising):

OSU-Cascades has a complete student services and academic support system in place to serve its students, including academic advisors, counselors, career services and student activities. The in-program faculty in TCE does the bulk of advising for MAT students. The Licensure Coordinator assists in advising on licensure issues.

5. Budgetary Impact

a. Indicate the estimated cost of the program for the first four years of its operation. Use the Budget Outline and Budget Outline instructions forms on the Forms and Guidelines website.)

OSU-Cascades funds its program costs, as well as all administrative costs, through the tuition revenue generated by FTE enrollment. There is complete separation of funds and budget from OSU main campus. The largest expense to extend the two MAT areas of concentration will center on hiring faculty with science and math education experience.

The library will need to acquire some materials specific to math and science education. There is an annual library budget in place for TCE that will go towards supporting these purchases. See library needs assessment section.

Marketing of the science/math areas of concentration, business cards, and office set up for the new faculty hire will be minimal and therefore will impact the OSU-Cascades' budget only slightly. (See the attached budget pages.) OSU-Cascades markets the graduate programs (MAT in Language Arts Education and Counseling) together through printed materials, media and information sessions. A budget already exists for this effort. The majority of applicants use the OSU-Cascades' website and this will be updated to reflect the extension of the MAT in Advanced Mathematics Education and the MAT in Integrated Science Education once they are approved. OSU-Cascades will announce the availability of the new programs (once approved) to our school districts through a monthly meeting of Superintendents which Becky Johnson, Vice President for OSU-Cascades, attends.

Please see Budget Attachments for specific anticipated costs for the extension of the MAT to science and mathematics.

b. If the program will be financed from existing resources:

1. Describe what the budgetary unit will be doing that is not currently done in terms of additional activities.

See 5.a. above plus appendices.

2. State what these new activities will cost and whether financed or staffed by shifting of assignments within the budgetary unit or reallocation of resources within the institution. State which resources will be moved and how this will affect those programs losing resources.

See 5.a. above plus appendices.

6. Draft of the MOU—the following template is required.

a. The program title and limitations (if any):

M.A.T. in Integrated Science Education and M.A.T. in Advanced Mathematics Education

b. What are the responsibilities of the OSU-Cascades campus administration, faculty and staff in order for the program to be delivered at OSU-Cascades?

Marla Hacker, Dean of Academic Programs and Dennis Lynn, Director of Graduate Programs, will oversee the administration, faculty and staff involved in this extension. Enrollment Management and Student Affairs already serve OSU-Cascades students. Carolyn Platt, as program lead for the MAT, will provide the program supervision and administration.

c. What are the responsibilities of the OSU-Main campus administration, faculty and staff in order for the program to be delivered at OSU-Cascades?

The College of Education will continue to be the academic home for the Teacher and Counselor Education program at OSU-Cascades. The MAT is tightly connected with the governance structure of OSU's College of Education and is represented on the Dean's Council. Programmatic decisions, curriculum, and faculty hiring are coordinated and approved in consultation with the Dean of the College of Education or his designee, along with the Vice President and Academic Dean on the OSU-Cascades campus and the Graduate School on the main campus.

d. Provide documentation of discussion of the proposal for the new program with the faculty of the sponsoring department on the Corvallis campus.

The extension of the MAT to include Integrated Science Education and Advanced Mathematics Education at OSU-Cascades has the full support of the OSU College of Education faculty and

administrators. See attached emails between OSU-Cascades and Corvallis departments and faculty, as well support letters from the Bend LaPine School District, OSU-Cascades largest school district partner.

Executive Summary for the MOU Proposal to extend from OSU-main campus to OSU-Cascades campus:

MAT in Integrated Science Education (CIP: 131316)
MAT in Advanced Mathematics Education (CIP: 131311)

This MOU seeks to extend the Master of Arts in Teaching (MAT) in Integrated Science Education and Master of Arts in Teaching (MAT) in Advanced Mathematics Education, housed at OSU-main campus, to the OSU-Cascades campus for students who wish to teach middle and high school mathematics or science. Oregon State University extended the MAT in Language Arts Education to OSU-Cascades three years ago. This move will build upon the MAT areas of concentration to be offered at OSU-Cascades.

MOU Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

MOU to extend program from OSU to OSU-CASCADES

Full Proposal

- ☐ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☐ Reorganization -- moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Title of Proposal:

MAT in Integrated Science Education
MAT in Advanced Mathematics Education

Effective Date:

2012
2012

Department/Program:

Teacher and Counselor Education

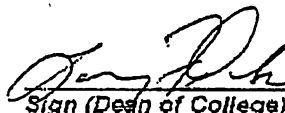

College:

College of Education

I certify that the above proposal has been reviewed and approved by the appropriate Department and College committees:

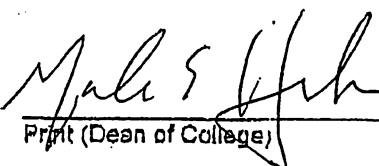

Sign (Dept Chair/Head; Director)

Date

Print (Department Chair/Head; Director)

Print (Dean of College)

The BFP group approved proposal 83047 today. It notes a minor error in the budget. The faculty salaries for years 2 and 3 are 107778 and 107796, which does not reflect an appropriate inflation factor.

W. Loveland

Review of Food, Culture and Social Justice Proposals

What we are asked to consider

There are two proposals to establish (1) a graduate *minor* and (2) a *graduate certificate* in Food Culture, and Social Justice. Comments specific to each follow general comments about both the proposals.

General comments

1. Significant concerns are raised in the liaison communications, not all of which are addressed, especially for the certificate program.
2. Liaison comments are co-mingled between minor and certificate. Concerns are different for each one and hence review of each of the above proposals (one a Cat II and the other is a Cat I) is made difficult.

Food, Culture, and Social Justice Graduate Minor

Definition of a graduate minor

(<http://oregonstate.edu/ap/curriculum/policies.html#38>)

"A graduate minor is an academic area that clearly supports the major. It consists of a group of related courses totaling at least 15 credits in a specific topical area. On a master's or doctoral program, a minor may be:

- an academic area available only as a minor,
- a different major,
- the same major with a different area of concentration,
- an approved major at another institution in the Oregon University System, or
- an integrated minor. An integrated minor consists of a series of cognate courses from two or more areas. These courses must be outside the major area of concentration, with most of the courses being outside the major department. The graduate faculty member representing the integrated minor must be from outside the major department.

Although the courses in a graduate minor may be from more than one academic department, one academic unit/program must be responsible for directing the minor. Necessary facilities and faculty expertise to support the minor must be available. For a graduate minor to appear on a student's official academic record and transcript, the minor must be listed on the student's approved degree program."

Process: Needs a cat II

Graduate Minor Comments and Observations

- A minor in Food, Culture and Social Justice is proposed. There is no major in this field, and according to the curriculum guidelines this is fine.
- However, minors should be in "clear support of the major" (see guidelines) and it's not clear which majors would be interested in taking this minor. Liaison emails suggest that the Nutrition and Exercise Sciences Department students might choose this minor, but the faculty in this Department had several issues with the proposal. Students in Applied Anthropology (originators of this proposal) may also wish to take this minor. In this context, it is important to list the

prerequisites for the proposed courses- these are hard to find in the catalog and from the information provided (see table below).

- At least 15 credits in a specific topical area are required for a minor for Masters' students and 18 credits for PhD students. Table 1 below lists the courses proposed. Concerns include:
 - Only 5 courses + 1 project blanket course are provided in the minor (not much choice of courses). Another course (XX 599 Introduction to Food Systems: Global, Regional and Local) seems to have been proposed from reading the liaison emails, but is not listed in the minor.
 - Only one of these courses is a stand-alone graduate level course (Research methods in food culture and social justice). When the xx599 course is counted the number of stand-alone courses is two, which is still quite low.
 - Was addition of Social Justice an afterthought? The original proposal title reads "Food and Culture."

Food, Culture and Social Justice Graduate Certificate

Definition of a graduate certificate

The Graduate Certificate Program at Oregon State University is a structured progression of graduate-level courses that constitute a coherent body of study with a defined focus within a single discipline or a logical combination of disciplines. It is designed for a student who has completed a baccalaureate degree and is in pursuit of advanced-level learning. Students desiring a graduate certificate must be admitted to the university as a credential-seeking graduate student, but are not required to be on track for a specific degree. There is no formal committee requirement for graduate certificates. Certificate students are subject to all general policies governing the courses for the master's degree.

The graduate certificate curriculum consists of a minimum of 18 graduate credits, and may include a final project, portfolio, or report for integration of the sequence of course materials. All graduate student programs of study submitted to the Graduate School must consist of, at a minimum, 50 percent graduate stand-alone courses. The remaining credits may be the 500 component of 400/500 slash courses. No final examination is required.

Process: Needs a Cat I proposal

Comments and Observations

- Note that this is not a stand-alone certificate and must be taken in conjunction with a "degree program"- assumption is that the degree program being referred to is a graduate degree program. The originators of the proposal made this change at a later stage and the proposal was resubmitted. This change is critical in answering the "need" question. Since the certificate is not a stand-alone, it will only be seen as added value to students who are majoring in other areas and obtain this certificate along the way. If the "degree program" that is being referred to is an undergraduate degree program, then there still is the issue of demand for this certificate among potential employers that needs to be addressed (but not by the grad council).
- What is the need for a certificate if you can get a minor? Who would choose a minor vs. certificate and why? Numbers need to be shown for how many would choose a minor vs. a certificate.
- Significant concerns are raised in the liaison communications with respect to the weak scientific/technical content of the certificate. A course has been added to address some of the comments, although it is not clear that a Category II proposal has been submitted for that course (it will be offered by another College). Another fix to address this issue is to have this certificate be taken in conjunction with a degree program and not as a stand-alone.
- The certificate has five core courses and a total (minimum) of 23 credits need to be taken. The five core courses, totaling 18 credits, along with 1 credit of Food Projects and 1 credit of Capstone Portfolio form the 20 credit core. Students are required to take 1 additional elective; ten potential elective courses are listed. One of the core courses is new (ANTH 547) and another one is in the

works (Intro to Food Systems: Local to Global) based on several e-mail exchanges in the liaison section. Currently, the only material that we have is a list of topics for the course and the instructors who would teach these topics. There is talk of splitting the ANTH 4/586 course to a stand-alone graduate course. Concerned that even if the ANTH 586 is made a graduate level course, the total number of graduate only course credits (not including blanket courses) will total eleven. This is on the borderline of 50+ percent grad courses for a graduate program.

- More details are needed on how the team taught course (Food Systems...) will add to the faculty load. Also, are there plans of compensation for teaching this course? If so state this in the budget.
- Faculty time for the students' capstone portfolio- need details on what mentoring the portfolio entails; reduce max number of students advised per faculty to 3 or 4 based on projected enrollments. Also, a comment is made that the hiring of the program coordinator will help reduce the load of reviewing capstone portfolios. Please elaborate- will this person be grading the portfolios and mentoring students?
- How will the learning outcomes be assessed? Please provide a matrix linking each learning outcome to the assessment method.

Figure 1: Food, Culture, and Society Course Information and Comments

| Course #/Name | Minor | Cert | Credits | Existing? New? | Prerequisites | Comments |
|--|-------|------|--|---|---|---|
| ANTH 547: Research methods in Food, Culture and Social Justice | X | X | 4 | New, course number does not exist, unclear if Cat II has been filed | Not sure, none listed in syllabus | CLO 5 is vague; also assessment needs explanation. This would be a stand-alone grad course. |
| ES 499/599: Food and Ethnic Identity-Eating at the Border | X | X | Variable, but 3 for this special topics course | Existing | None mentioned | Does not have learning outcomes for either undergrad or grad. No differentiation for grad assessment. There is a potential to double count the Empty Bowls service project with 444/544 |
| ANTH 444/544: Nutritional Anthropology | X | | 4 | Existing, not being taught in FY11-12 | Enforced- ANTH 110 or 210 and ANTH 240 or 330 | Concerned that the proposed 544 activity (committee oversight and reading group) tests higher learning levels |
| HIST 599: Food in World History | X | | 4 | Existing | None mentioned | No comments |
| ANTH 486/586: Anthropology of Food | X | X | Variable, but 4 credits for this topic | Existing | Recommended ANTH 370 or graduate standing | No comments |
| WS 465/565: Women, weight, and body image | X | | 3 | Existing | | No access to syllabus |
| HIST 416/516: Food in World History | | X | 4 | Existing | | Grad learning outcomes are not higher order outcomes, not separate assessment for grad students |
| AREC 599: Food Systems: Local to Global | | X | 3 | New course, not clear if Cat II has been developed | | This would be a new, stand-alone course |
| ANTH 406/506: Projects | X | X | 1 | Existing | | |
| ANTH 406/506: Capstone Course | X | X | 1 | | | |

DRAFT

CATEGORY I REVIEW

PROPOSAL NAME: Graduate Certificate in Public Health (GCPH)

PROPOSAL CONTACTS: Marie Harvey & Tom Eversole

GC REVIEWERS: Carolyn Aldwin & Andrew Plantinga

1. PROGRAM DESCRIPTION:

- a. Currently, GCPH can be offered by OSU, OHSU, and PSU as part of the *collaborative OMPH program*
- b. *Proposal is for CPHHS to offer it through OSU and through E-campus*
- c. *Curriculum depends on existing on-campus classes; E-campus versions will need to be developed*
- d. *Current faculty will deliver on-campus and E-campus versions*
- e. *Targeted at mid-career professionals in Oregon*
- f. *Fulfills an accreditation requirement to provide continuing education*

Problems:

- g. *Anticipated enrollment based on the assumption of a “fully functioning, robust public health system.” What if this doesn’t happen? What is the current enrollment in the online program offered by OHSU?*
- h. *Who are our competitors? Specifically, note from OHSU (Paula Gubrud) states that they are putting their GCPH program back on line in fall 2012. How will that affect our enrollment? Also, note from Tom Engle suggests that courses are available outside of Oregon.*

- i. Who exactly will be teaching the e-campus version? Concern that it will affect resources needed for on-campus program
 - j. Assuming that the e-campus version will be taught primarily by lecturers and GTAs, who will be supervising them?
 - k. How will the E-campus version handle the prerequisites for Biostatistics and Epidemiology? Will mid-career professionals have the same preparation as on-campus MPH students?
- 2. MISSION STATEMENT – fine
- 3. ACCREDITATION – NA
- 4. NEED (Evidence of market demand)
 - a. Strong support from PH community stake holders, citing need for training at Oregon State University
 - b. Again, based on optimistic assumptions and issues of overlap with OHSU and other institutions
 - c. Logical to provide data on experience at OHSU
- 5. OUTCOMES AND QUALITY ASSESSMENT
 - a. Description is fine, but
 - b. Who is supervising GTAs? Pre-requisites?
- 6. PROGRAM INTEGRATION AND COLLABORATION
 - a. Again, what is overlap with OHSU?
- 7. FINANCIAL STABILITY
 - a. Looks ok, based on projected estimates
 - b. BUT, no funding to supervise GTAs/Instructor
- 8. EXTERNAL REVIEW
 - a. Very strong support
 - b. OHSU again

Review Panel report of Oregon State University's Graduate Programs in Geology and Geography

1. Overall Recommendation:

Expand the Geography Graduate Program

Maintain the Geology Graduate Program

2. Summary of Findings and Recommendations

Both graduate programs are small in size, but of very high quality and populated by excellent faculty and graduate students. Overall performance indicators, in terms of external funding productivity, research publication, and graduate placement, all compare favorably to competing programs in the Geosciences. Graduate education thrives within both programs despite resource constraints, especially within Geography. Program personnel in Geosciences, moreover, play a critical role in graduate training across campus, with teaching and advising efforts that benefit allied programs in natural resources and environmental sciences. We have identified five key areas in which these programs are in need of increased resources.

1. The Geography program requires an **infusion of new faculty FTE** in order to maintain its viability, but we also believe that faculty in other OSU graduate programs (e.g., Forestry, Marine Resource Management) could be recruited to teach dedicated graduate (as opposed to so-called “slash”) courses in support of graduate education and training.
2. The **high proportion of slash courses** in the Geology graduate program is also a problem, although this issue (as well as some others delineated throughout this report) may be resolved when the Geosciences graduate programs are integrated within COAS in the coming year.
3. Recruitment of the best students in both Geosciences graduate programs is compromised by the **inequity of TA and RA stipends** relative to those in other Colleges at OSU. This issue is also impacting the morale of the Geosciences student body and needs to be resolved prior to the merger into COAS.
4. The Geosciences graduate programs also have some key infrastructure needs that must be addressed soon: (i) increased **suitable space for research laboratories and graduate student offices**, and (ii) **enhanced computer technology capabilities and support**, specifically acquisition of both hardware and software, as well as better computer lab accessibility for students.
5. Finally, we believe Geosciences graduate students would benefit from further **professional development in the areas of teacher training and grant proposal preparation**.

Detailed findings

Introduction

This review of the Geography and Geology graduate programs in the Department of Geosciences at OSU was undertaken by a committee consisting of: Peter Schiffman (Geology, U.C. Davis), Paul Robbins (Geography, U. Arizona), Anne MacDonald (GeoEngineers, Portland), James Strittholt (Conservation Biology Institute, Corvallis), and Walt Loveland (Chemistry, OSU). The review is based upon an extensive self-study document prepared by Geosciences, as well as on meetings conducted with OSU administrators, faculty and students on February 27th and 28th, 2011. This report uses the organizational template suggested by the OSU Graduate Council

Inputs

1. The fit of the mission etc.

Geography

The fit of the Geography program to both college and university mission is strong. Specifically, Geography faculty research and graduate training focuses closely on topics including: maintenance of sustainable marine ecosystems, measurement and provisioning of water resources, and the linkages between resource availability, natural hazards, and political conflicts. These match directly with OSU strategic initiatives in the area of a “healthy planet” and College of Science efforts to match basic research with practical policy to advance human and ecosystem health.

Geology

The fit of the Geology program to both college and university mission is similarly strong: Geology faculty research and graduate training focuses on topics including volcanic and tectonic hazards, economic geology, hydrogeology, Earth surface processes, and climate and biogeochemical cycles. The Geology faculty also has strong research and teaching ties with a wide range of groups on the OSU campus.

2. Quality of students

Data on student quality/admissions selectivity were provided for three graduate programs: Geography, Geology, and the interdisciplinary Water Resources program housed in the Graduate Council, but strongly supported by Geosciences faculty advisors. Objective measures of student quality (i.e., GPAs and GRE scores) were highest for matriculated students in Water Resources, lowest for Geography, and intermediate in Geology. This is explained by the dominant “audience” for each of these programs: the Water Resources program is relatively unique in the western United States, and completely unique within the Oregon higher education system.

The Geography program dominantly attracts students who intend to carry their graduate education only through a Master's level before embarking upon their professional careers. The Geology program attracts a more typical blend of Master's and Doctorate graduate students, with commensurately higher entering qualifications.

Selectivity on the part of the admitted students is also an important consideration. Relative student quality is measured as the average of GPA and GRE scores (exclusive of analytical writing, which is not uniformly available). The "quality" ratio of matriculated students to those who refused their OSU admissions offer was 99% in Geology, 96% in Water Resources, and 92% in Geography. This indicates that OSU is not losing their "best" applicants in Geology, but may be in Geography. Nonetheless, the overall quality of geography graduate students is consistent and strong. Students in this program have shown a notable ability to secure fellowships and scholarships, as well as external support from agencies including the National Science Foundation. There is some reported modest difficulty retaining the very best students in the area of human dimensions and social/environmental issues, owing to competition from parallel institutions, including University of Oregon. The overall success rate for students in finding external funding and their excellent post-graduation placement speaks to the strength of the program in maintaining a strong student pool this regard, however.

3. Admissions selectivity

Admissions selectivity can be measured in a number of ways. Geology has the highest applicant: matriculated ratio (nearly 11:1), while Geography and Water Resources are comparable (6:1 and 4:1, respectively). With respect to qualifications, as measured by the average of GPA and GRE category scores (exclusive of analytical writing), matriculated students are slightly (2-3%) better qualified than the entire applicant pool across all three programs. Using this same "quality" measure and comparing admitted to rejected students, the OSU programs are only slightly more selective: admitted students score 3% higher than rejected applicants in Geology, and 8 and-9% higher, respectively, in Geography and Water Resources.

Geography

The percentage of applicants admitted between 2005 and 2009 averaged 39% in Geography, and 51% in Water Resources. Compared to peer institutions, the Quantitative GRE scores of OSU Geography students is 30 points lower (see Table 3 of the self study report). No similar data are available for Water Resources students. Average quantitative GRE scores for admitted Geography students fall only marginally below those of peer institutions.

Geology

The GPA and quantitative GRE scores of admitted and matriculated students are very high, but the GRE scores are lower than those at peer institutions by nearly 80 points (see data from Table 3 of the self-study report). Between 2005-2009, 399 students applied to the Geology graduate program and 133 of these (or 33%) were granted admission.

4. Level of financial support of students

In the current and near-future economic climate, financial support for students is imperative. Geosciences graduate students are at the bottom of the pay scale on the OSU campus. This issue is affecting student morale and potentially will affect the ability to be competitive in recruiting the highest quality graduate students into these programs. Once student stipends are made comparable to those of other COAS students, we suggest that the OSU Geosciences program compare stipends to those of their peer institutions on an “affordability” basis as a means of evaluating the competitiveness of student support.

Geography

This program periodically admits some students without financial support but some of these students have been given teaching assistantships, so only a small proportion of students are self-funded.

Geology

This program does not admit students without a promise of financial support. Since 2005, 93 % of graduate students have had either a TA or RA stipend, and 96% have had a tuition fee waiver. Students expressed concern regarding the security of their grants over their degree programs.

5. Curriculum strength

All students take a course in Geosciences Communication, which provides an introduction to research methods and provides the opportunity to develop a thesis proposal. This course also begins the development of a graduate student cohort. Cohort development is strengthened by an orientation field trip (Geology graduate students) or GE0534 (Field Research in Physical Geography). The Geology graduate students expressed interest in further tailoring of these courses to match the skill levels of incoming students.

The Geology graduate program has elected to maintain strengths in three main areas: (1) Volcanology and Igneous Petrology (VIPR) (i.e., volcanology, igneous petrology, economic geologic) (2) Structural Geology/Geophysics/Tectonics (including neotectonics and earthquake geology), and (3) Surface Earth processes

and history (i.e., Earth system history, hydrology and hydrogeology, geomorphology, and climate and biogeochemical cycles). The number and range of course offerings are good to strong in each of these categories: 10 courses listed for VIPR, 6 courses listed for structural geology/tectonics/ geophysics, and 12 courses listed in surficial processes and history. The course offerings are strengthened when geography courses are included: geography course are useful to increasing degrees from areas 1 to 3. There are a significant proportion of offerings as joint upper division/graduate “slash” courses (an average of 46%, ranging from 33-52% per school year from 2005-2010), which proves somewhat problematic for Masters students interested in attaining a degree within 2 years. Students are sent to other departments as needed (e.g., mathematics, chemistry, civil engineering) for specialized advanced analytical training.

Geography graduate curriculum focuses largely in the area of physical geography, techniques, and resource management. In the area of Geographic Information Science, the curriculum is thoroughly rigorous and includes fully updated techniques and methods.

A crucial area of program success has been the creation and flourishing of the graduate program in Water Resources. That degree area has consistently attracted, retained, and graduated students with higher GREs and GPAs than the other units within Geosciences, and represents a signature program area for Oregon State University that is unavailable elsewhere. That program’s success has been predicated on utilizing already existing resources (especially faculty advising time and GTA lines), moreover, with little additional institutional support. Further modest investment in this area, therefore, will likely pay dividends in terms of matriculation, graduation, placement and increasing program and university profile.

6. Quality of personnel and adequacy to achieve mission and goals

Geography

The Geography program is extremely small in comparison to peer institutions, with 7 current FTE. These numbers are further constrained in their ability to deliver graduate teaching and advising, owing to faculty commitments to key programs, especially E-campus courses and the GIS certificate. Nevertheless, the program has maintained a relatively short time to graduation, successful pursuit of external funding sources support students, and excellent graduate placement.

Geology

There are currently only 10 faculty FTE in the Geology program, which is small relative to comparably ranked programs (most of which are in the 20+ range). The small size of the Geology faculty restricts its ability to comprehensively offer graduate courses in some programs areas (particularly structural geology/ tectonics and stratigraphy/sedimentary petrology) and eliminates the option to provide

coverage in other Geoscience topics (e.g., paleontology, which is comprehensively provided at the University of Oregon).

7. Quality of organizational support

The impending merger with COAS should have a positive effect on the Geology graduate program as students will have more access to COAS courses, facilities, and faculty. The campus has created 32 new positions across campus of which one position will come to Geosciences, in Geography. The College of Sciences is trying to assist Geosciences with their space needs by providing storage space off-campus for collections, thus freeing up space in Wilkinson Hall.

Productivity

1. Level and quality of student performance

Geography and Geology

Completion and retention rates in the program meet and exceed those of comparable programs, with very good time-to-degree for both Masters and PhD students. These students, moreover, demonstrate high levels of productivity when involved in faculty research, with research presentation at international meetings (including venues like the Association of American Geographers and the Ecological Society of America, the Geological Society of America, and the American Geophysical Union) as well as co-authored publications (in outlets including *Land Use Policy*, *Bulletin of the Geological Society of America*, *Journal of Geophysical Research*, *Geophysical Research Letters*, *Earth and Planetary Sciences Letters*). Graduate students in Geology have also received prestigious national fellowships (i.e., NSF IGERT and Research Fellowships, NASA Space Grant Fellowships).

2. Level and quality of faculty performance

The Geography faculty maintains rates of publication and citations per publication (2.22 – double that of those programs compared) far higher than peer institutions, indicating an extremely high level of productivity as well as a very high individual and institutional profile. Publications are consistently in major and high profile outlets. Approximately 80% of faculty members hold grants, a high rate relative to peer institutions.

In terms of research productivity (e.g., % with extramural grants and publications/year), the Geology faculty ranks well with peer institutions (see compilation of data from recent NRC report on graduate programs, as summarized in Table 47 of the self-study document).

3. Viability of scholarly community within which students can interact

The scholarly community within the Geosciences graduate programs remains at a good size to represent a breadth of investigations. This provides a benefit to graduate students directly or indirectly; after OSU, these students are not likely to work in a professional world composed solely of those similarly trained. Continued efforts to build a cohort across the department are encouraged to provide a strong level of investment in their colleagues' research. Furthermore, the OSU scholarly community has been robust and attractive to graduate students regionally for over 30 years thanks to the faculty, students, and programs in the Colleges of Oceanography and Atmospheric Sciences, Forestry, Agriculture, Engineering and Arts and Sciences, along with the contribution of the USDA Forest Services' Forest Science Lab (FSL) and related facilities such as the HJ Andrews Experimental Forest. [n.b., Although it is not within the control of OSU, disinvestment in FSL by the federal government and key retirements by USFS personnel within the next decade could reduce the quality of this interaction in the area of surface processes.]

Geography

The high ratio of students to faculty, coupled with high levels of research and instructional commitments on the part of Geography faculty, make student interaction with faculty more difficult, though there is little evidence of an impaired intellectual atmosphere. Graduate students report very high satisfaction both with the quality of their interactions with their major professor as well as overall intellectual interactions with their peers. Then program also facilitates student access to linked research groups across campus.

Geology

Although there are only 10 faculty members in Geology, the close proximity between Geology and COAS greatly increases the number of potential scholars available to Geology graduate students. Also, the University of Oregon's Geology Department is relatively close, and some OSU students have taken graduate courses in Eugene.

Outcomes

1. Professional viability of graduates

Geography and Geology

A central measure of program productivity and success is the excellent record of graduate placement. The direction and emphases of graduate employment reflects program strengths, moreover, specifically in crucial, applied, problem-solving areas in natural resource management. Graduates are consistently employed in key sectors, including state land management agencies (e.g. National Parks Service),

non-governmental and multi-lateral institutions (e.g. World Bank), and private sector areas (e.g. environmental consulting). The range and prestige of these institutions speaks directly to the overall success of the graduate training mission of the program, along with the list of peer institutions to which many students go on for further study or employment. Multiple specific elements contribute to this effective professionalization, including a well-established, cohort-centered approach (reflected in things like the annual field camp and student-student mentoring activities) as well as an effective effort to network students with potential employers. This has unquestionably produced a viable scholarly community.

2. Satisfaction of students and graduates

The Department of Geosciences can't guarantee office space to new graduate students, but has been able to do so to date. Most students don't like their assigned spaces because most offices have no windows. Some have expressed frustration with privacy issues, particularly as it pertains to accomplishing their research – some students reported conducting telephone interviews on their cell phones in the hallways or empty classrooms rather than in their crowded offices. There is also no communal space for graduate students to meet and, e.g., eat their lunch.

Geology

When interviewed, the Geology graduate students expressed their happiness with choosing the OSU graduate program, primarily because of the reputation of their research advisors. It was also pretty evident that they didn't choose this program because of the quality of the facilities or the financial support that was offered them. The TA stipend inequity issue is having an adverse affect on graduate student morale. The students also expressed concern about the seismic safety hazard in Wilkinson Hall. Students felt that laboratory safety issues are not well addressed, and that some are expected to establish these for their own labs. Students who work with rocks noted the lack of suitable space for rock crushing/sample preparation. Students expressed unhappiness with the limited number of graduate course offerings: many are so-called "slash" courses (offered to both grads and undergrads) but campus only allows 50% of grad courses for degree requirements. Curriculum in slash classes is generally less advanced. Courses offered through COAS help because none are slash. Students would welcome a dedicated proposal writing class in fall quarter. They felt that Geosciences 518, offered in winter quarter, is not filling their needs (e.g., many felt that many of the topics covered were too elementary). Students felt that they need more teacher-training to be better TA's: they feel that the single day course they currently receive is not adequate. Students felt they have very little input into suggesting seminar speakers.

Geography

Geography students uniformly reported satisfaction in their choice to come to OSU, specifically citing the high caliber of the faculty. Some Geography students stated a concern about the uneven and low levels of assistantship stipends. Students also explicitly expressed concern about the work levels and work/life balance of their professors: “burning the candle at both ends”.

3. Rankings/ratings

Geography

NRC rankings of the Geography program released in 2010 show a reputational rank range of 15-38, among 49 doctoral programs overall. Most notable in terms of comparative achievement, OSU’s program performed in the top-ten of smaller programs for Placement Rate of students, confirming internal assessment of the very high rate of success in training students for professional activities.

Geology

In the recent NRC survey of graduate programs, the OSU Geology program ranked well relative to peer institutions. Overall, it ranked 38th amongst 140 programs in the “reputational” category and 56th in the “statistical” category.

Conclusion and recommendations:

Both of these graduate programs are of excellent quality, but the Geography program is in dire need of FTE infusion to maintain its viability. We offer the following recommendations on issues we feel need to be addressed:

1. Need for Geography FTE

Across the university, but especially in any new CEOAS formation, there will be increasing demands for human dimensions expertise, spatial and spatiometric analysis, as well as synthesis experience and theory. Larger interdisciplinary solicitations from NSF (coupled natural human system research, LTER, ULTRA, etc.) and other agencies - which require human dimensions participation - will create further demand in these areas. Given the development of such solicitations and an overall increase in demand for science-society collaboration, as well as human dimensions and global change adaptation research and training, the need for ongoing development of faculty strengths in geographic science is not only desirable, but likely inevitable. In this sense, if there is not a strong Geography program when this area of critical work begins, the university and CEOAS will likely have to *create one*. The committee concludes, therefore, given the demonstrated current efficiencies and strengths of the graduate program in Geography, which will be the only PhD-granting unit performing human dimensions research in the new

unit, it would be advisable to “double-down” on the existing program and support its expansion precisely into these area of human-environment research, environmental management, and spatially-explicit resource planning (the program’s historic strengths).

This would represent a reversal of the current trajectory. Despite dramatically increasing productivity of individual geography faculty, increasing advising by individual faculty, and a relatively short time to degree, the diminution of faculty FTE over time (from 11 to 7), has led to a decreasing GRA opportunities and funding, with a concomitant decrease in graduate admissions in the program. In terms of the overall resources and time available to meet multiple goals, the Geography unit has reached an apparent breaking point and requires reinvestment. Given the likelihood of an additional retirement within the next five-years, moreover, the window for retaining the program’s viability is time-limited.

To that end, there is a demonstrable need to expand the core Geography faculty if the program is to remain viable and crucial graduate training is to continue. There are several key areas where hires in geography might foster effective cross-campus collaborations and external funding flows, including biogeography, science / policy analysis, coastal marine spatial planning and the geography of food security. Most urgent, however, especially for leveraging synergies in allied units (e.g. the new climate center), *three* key hires would maintain the viability of the unit and its critical role across campus:

- 1) Human dimensions of global change adaptation and sustainability science
- 2) Environmental risks and hazards
- 3) Geographic information science, modeling, in the area of adaptation and risk

2. Need to increase number of dedicated graduate courses in Geosciences.

Geosciences can’t continue to rely on other units on campus to provide dedicated (i.e., non-slash) courses for Geology and Geography graduate students. This issue is less significant for Geology graduate students as they have access to courses offered through COAS. An infusion of faculty FTE for Geography would improve this situation for their graduate students.

3. Need for resolving stipend inequity for graduate students

This issue is undermining student morale and must be resolved prior to the merger with COAS. We recommend that stipends for Geosciences graduate students should be identical to those in COAS.

4. Need for increased laboratory and graduate space for teaching and research missions.

One of the principal challenges for the future health of the Geology and Geography graduate programs is the lack of adequate research and teaching space. The self-study reports that as of 2006, the Geosciences Department had 9563 ft² of research space and 10285 ft² of office space. The relevant University metrics for this department would indicate the research space should be 19194 ft² and the office space should be 11879 ft², deficits of 9631 and 1594 ft². In 2007, the department requested 1700 ft² of office space, 4200 ft² of lab space and 2900 ft² of storage space. In the intervening time, the situation has worsened, as the research funding of the department increased. Without new or renovated facilities, growth of the graduate and research programs will be limited. Additional space is needed for graduate student offices and laboratories, graduate instruction, graduate student communal space, and faculty research. Apart from computer facilities, the majority of space in Wilkinson Hall has not been renovated in four decades.

The space deficit is significant (11,225 ft²) but not overwhelming. The ultimate solution would be a new Geosciences building built in cooperation with other groups in the Earth Sciences Division. However, given this building is not on the current OSU building priority list, that solution is decades away.

The Department needs to develop a realistic plan to address space issues in the short and medium term. The forthcoming merger of Geosciences with COAS may offer opportunities to increase the space available for Geosciences. The review panel urges the Department to make a series of realistic shorter-term estimates for various plans to address space issues. One of these plans should deal with various options for the renovation/remodeling of Wilkinson Hall. (We understand Wilkinson Hall was built to accommodate the addition of another floor for the building although the need for seismic retrofitting may impact that option). The review panel encourages the Department to develop a set of smaller short-term projects that will improve the quality of the present space and increase it in modest increments. The Department needs to seek external funding for these improvements in cooperation with the College of Science, the Earth Sciences Division and the OSU Foundation.

5. Need for enhanced computing facilities

Geography and related disciplines are growing increasingly dependant on high-end computer mapping technologies including remote sensing and geographic information systems (GIS). Modeling and statistical software is becoming increasingly demanding as it keeps pace with rapid advances in computer hardware. In order to attract and keep high-quality students, it is imperative for any modern Geography department to remain at the forefront of these technologies.

Currently, students of the Department of Geosciences have various computer facilities for their use. There is 30-seat Digital Earth Classroom (Wilkinson 210), which is largely used for teaching, the small Terra Cognita Lab (Wilkinson 208), and even smaller Graduate Student Research Facility (Wilkinson 106). Graduate students working under some faculty also have access to additional computing facilities for their research. The Digital Earth facility is primarily for teaching but allows some use by students for research.

Based on the site visit, review of facility specifications, discussions with faculty, and interviews with graduate students, the current computing facility is not fully meeting the current demand by students and will deteriorate without clear planning for the future. There is an overwhelming sense of frustration by the students in terms of not having the computing tools available to do their best work. Students frequently reported that they had to resort to purchasing their own hardware and software in order to carry-out their classroom work and research, because these resources were not being provided or were not easily accessible by the department. In order to remain a strong Geosciences department, close and continued attention to the computing facility is fundamentally important.

The following recommendations are -

1. Consider developing a lab similar to Digital Earth (~15-20 stations) to be used exclusively for research. This would relieve pressure on the Digital Earth Classroom and dramatically improve the current demand for dedicated computer facilities for graduate students.
2. A hardware upgrade policy should be formalized that maximizes graduate student access to the most current technology.
3. Current hardware performance is generally good, but some number of machines should be dedicated as state-of-the-art machines and reserved for projects that are computationally demanding. Most computers are using fast processors but are beginning to lag on RAM and video card speed. Hard drive space is also limiting in some instances and relatively inexpensive to address. Computers built for spatial analysis and visualization need to keep pace with the technology.
4. Student access to current resources should be improved and the changes clearly communicated to students. Some facilities should be available to graduate students 24/7.
5. For those students with heavy computer needs, a dedicated workstation should be assigned for their research.

6. Software review should be regularly conducted with student involvement and the most useful packages maintained, including the high-end functions that are often not included in base packages.

6. Need for improved professional development for graduate students in the areas of teacher training and proposal writing.

We recommend that Geosciences establish a 1 unit, fall quarter-length TA training course that brings up real, on-going issues that TA's are facing as well as topics such as syllabus development. Revise Geosciences 518 into 2 separate courses. Create a writing class for all new students, and a separate (NSF-style) proposal writing class for PhD students who have already completed a MS thesis.

OSU Graduate Council

**Pre-review of the COE Reorganization/COE & SMED Merger
Category I Proposal**

Notes of Interest

Pre-reviewers: Cass Dykeman & Michael Lerner

In reference to graduate programs, we identified two areas to note: (1) comments by the AG and CPHHS liaisons, and (2) impact on graduate programs if Category I proposal is approved.

Area 1: Liaison Comments

From Ag Dean:

Secondly, and more importantly for the College of Agricultural Sciences, I was disappointed that Agricultural Education was not even mentioned as potential partners and adjunct faculty in the proposal — maybe it was just an oversight, but I hope that it will be corrected. Our faculty have always been adjunct faculty members in the College of Education, and I hope that our faculty would continue to be adjunct faculty members and continue within the licensure faculty. I believe our faculty have a lot to offer as adjunct faculty and have indicated a desire to work with the PhD students in the College of Education. Not only does the latter enhance the breadth of the programs in the College of Education, it is critical for our Agricultural Education faculty and students.

Reply from COE Dean:

Sonny: A combination of factors brings this revised Cat. I document for the College of Education to you at this time. I hope you will find the revisions made in response to your quite relevant observations on pages 4-5 satisfactory. Suffice it to say that the environment for producing this document have been a bit strained. I appreciated our conversation some weeks ago and let me assure you that I do not intend to run a second rate college. There is far too much talent and opportunity at OSU to settle for anything less than state and national leadership in STEM education and cultural and linguistic diversity. We will soon be announcing an extremely successful round of new hires.

From CPHHS Dean:

However, as I am reading this proposal, I did not see any mention of the programs in our college. I am wondering if your reorganization will change the professional relationship between College of Education and College of PHHS? I am talking about the current two programs in CPHHS, early childhood development and education (double degree) and physical education teacher education (master degree). Will we continue the double degree program of our students

in HDFS with you as currently structured? Will we continue to prepare and receive our Physical Education Teacher Education licensure from you? I think I know the answers, but I just need some assurance.

Reply from COE Dean:

Tammy: A combination of factors brings this revised Cat. I document for the College of Education to you at this time. I hope you will find the revisions made in response to your quite relevant observations on pages 4-5 satisfactory. Your comments about the Cat I has allowed me voice in a small way my interest in discussing with you the value of growing a Consumer and Family Studies endorsement program as well as continuing to work on a STEM-focused elementary education program. I think these two areas have significant possibilities in helping to advance your public health interests and open research possibilities within Education.

Area 2: Impact on Graduate Programs

1. No graduate degrees are eliminated (*i.e.*, EdD, EdM, MS, MAT, PhD).
2. No graduate major is eliminated (*i.e.*, Adult Education, Education, Education, college Student Services Administration, Counseling, Teaching, Mathematics Education, Science Education).
3. No MAT content area is eliminated (*i.e.*, Advanced Mathematics Education, Integrated Science Education, Language Arts Education—Cascades campus only, Biology Education, Chemistry Education, Physics Education, Elementary Education, Family and Consumer Sciences Education).
4. Admissions to the following Graduate Areas of Concentrations of the following majors of the following degrees (*i.e.*, Concentration/Major/Degree) are on indefinite hold on the Corvallis Campus: *Teacher Leadership/Education/PhD*.
5. Admissions to the following content areas of the MAT are on indefinite hold on the Corvallis Campus: *Elementary Education*.

n.b., The reason for these holds: (1) current discussions about integration of TCE and SMED offerings, and (2) strategic realignment of the COE to the STEM and CLD foci.

6. Admissions to the following Graduate Areas of Concentrations of the following majors of the following degrees (*i.e.*, Concentration/Major/Degree) are on indefinite hold on the Corvallis Campus: *Clinical Mental Health Counseling/Counseling/MS*.

n.b., This hold was done: (1) to support enrollment growth at Cascades by creating a "signature program" for that campus, (2) to support the Corvallis campus mandate from the Higher Ed Board to provide access to counselor training across the state through the Counseling Academic Unit's long standing (since 1976) Ecampus graduate concentration of School Counseling/Counseling/MS, and (3) to allow the faculty in counseling Corvallis to focus on STEM motivation and achievement in their training of counselors.

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin – Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☐ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☒ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Abbreviated Category I
Reorganization of the College of Education
Executive Summary
July 6, 2011

The College of Education will be reorganized as a “college of the whole.” Faculty in the current Department of Science and Mathematics Education (SMED) in the College of Science will be administratively joined with faculty in the College of Education in the same organizational structure. Funding for the SMED faculty will continue to come through the College of Science but the dean of Education will administer this money as part of the overall Education budget.

The proposed change administratively consolidates and focuses the work of faculty from the Department of Science & Mathematics Education (College of Science) into the College of Education poised to create a nationally/internationally recognized signature program for OSU in the fields of science, technology, engineering, and mathematics (STEM) and cultural and linguistic diversity. This administrative change creates an innovative partnership between the Colleges of Education and Science. The partnership is built on the premise that developing understandings in STEM and cultural and linguistic diversity is necessary in an increasingly complex, global society. These foci for the College complement and directly support the OSU Strategic Plan and the three signature areas of excellence. The direct partnership with Science provides a model for expanding collaborations in research and programmatic activities across OSU colleges including Forestry, Agriculture, Engineering, Public Health and Human Science, and Liberal Arts. An MOU between the deans of Science and Education filed with the Provost will govern this partnership in the long-term.

Administration and staff in the current structure are supported by 10.25 FTE and the new structure will be made up of 11.0 FTE. The major transition cost is a six-month 1039 appointment of the retiring associate dean to facilitate the transfer of scheduling, budgetary, and other administrative tasks. The new administrative budget will be just over 80% of the current administrative budget. The savings comes from eliminating department chairs and better alignment of tasks among administrative, faculty and staff. The proposed structure also allows some flexibility for adding administrative support as the new college and partnership with Science takes shape.

The faculty and staff have already been at work anticipating this reorganization. SMED faculty served on governance committees in Education in FY11. SMED and Education faculty have worked together to successfully hire one new Provost position. SMED and Education faculty have also worked together as a design team for the proposed Center for Research in Lifelong STEM Learning.

**Reorganization of the College of Education
Oregon State University**

[Name(s) of Proposing College(s) or School(s)] College of Education

[Name of Proposing Department(s) or Program(s)] College of Education

[CIP* Number from the Office of Institutional Research] 130101

**Classification of Instructional Program number*

CPS Tracking #: 82222

[Date of Proposal] Spring 2011

[Proposed Effective Date or Term] Fall 2011

- A. Title of the proposed instructional, research, or public service unit. For name changes, give both the current and proposed names. Describe the reason(s) for the proposed change.**

College of Education

- B. Location within the institution's organizational structure. Include "before" and "after" organizational charts (show reporting lines all the way up to the Provost).**

Administrative Structure. The College of Education includes the Cascades Campus and all references to the College organization assume programmatic connections to the Cascades Campus. The College of Education will be reorganized as a “college of the whole.” Faculty in the current Department of Science and Mathematics Education (SMED) in the College of Science will be administratively joined with faculty in the College of Education in the same organizational structure. Figure 1a shows the current organizational structure and Figure 1b shows the new organizational structure. Revised standing committees that exist in current College of Education will provide faculty governance. During AY 2010-11, Science and Mathematics Education faculty participated on College of Education governance committees. In a college of the whole senior faculty will assume leadership of degree programs through a faculty advisory group that periodically meets with the Associate Dean of Academic Affairs. Table 1 outlines the contrast between the current and proposed administrative structure. The current administrative structure of 11 FTE will lose department chair FTE and pick up an assistant to the dean plus a 3-year contribution to the *Center for Research in Lifelong STEM Learning*.

Abbreviated Category I: Reorganization of College of Education

| Current College | 11.0 FTE | Proposed College | 10.125 FTE | Current Cost | New Cost | Incr. Cost |

Table 1. College of Education Current and Proposed Administrative Leadership + FTE Contribution with Science for STEM Research Center Director.

Abbreviated Category I: Reorganization of College of Education

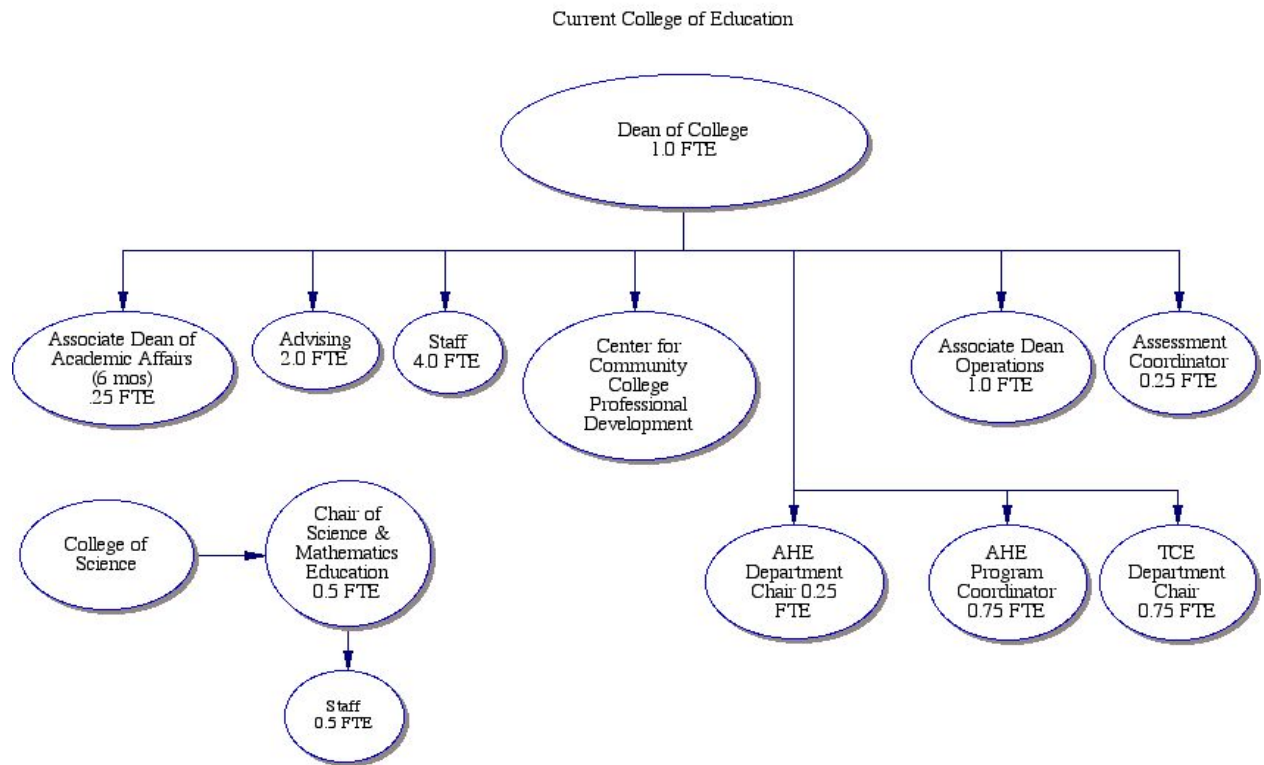

Figure 1a: Current College Organizational Structure.

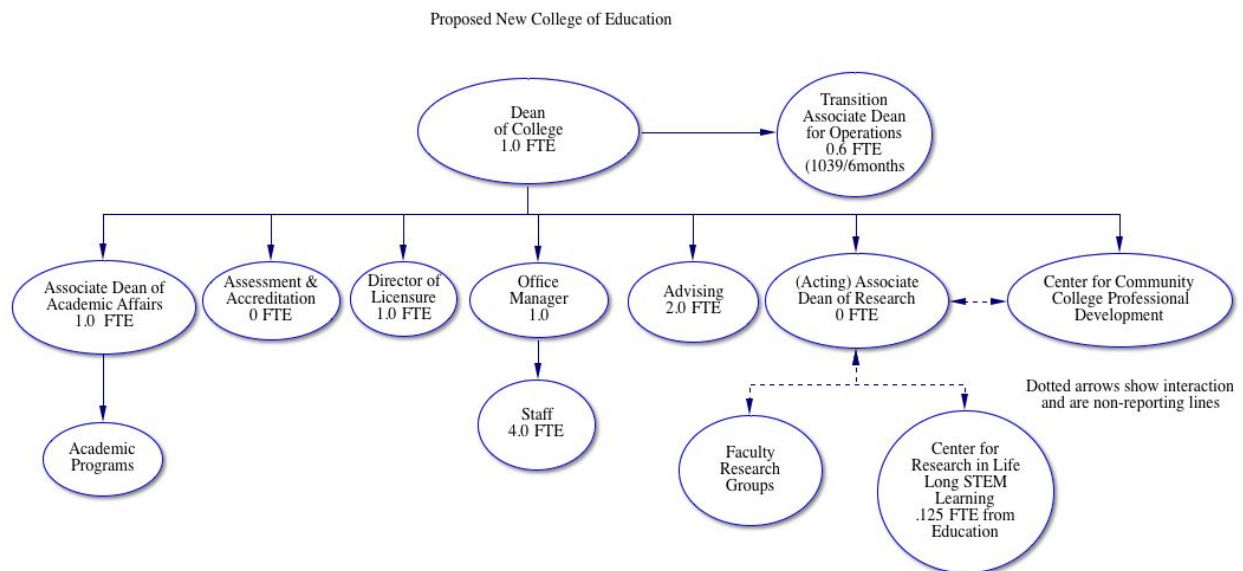

Figure 1b: College of the whole organizational structure.

C. Objectives, functions (e.g., instruction, research, public service), and activities of the proposed unit.

1. Explain how the program or unit's current objectives, functions, and/or activities will be changed. How will the reorganized program be stronger than the existing program?

The proposed change administratively consolidates and focuses the work of faculty from the Department of Science & Mathematics Education (College of Science) into the College of Education poised to create a nationally/internationally recognized signature program for OSU in the fields of science, technology, engineering, and mathematics (STEM) and cultural and linguistic diversity. This administrative change creates an innovative partnership between the Colleges of Education and Science. The partnership is built on the premise that developing understandings in STEM and cultural and linguistic diversity is necessary in an increasingly complex, global society.

[added 3/6/12]

These foci for the College complement and directly support the OSU Strategic Plan and the three signature areas of excellence. The direct partnership with Science provides a model for expanding collaborations in research and programmatic activities across OSU colleges including Forestry, Agriculture, Engineering, Public Health and Human Science, Business, and Liberal Arts. SMED has a longstanding relationship with Agricultural Education where instructors in their program enter the science education PhD program and faculty teach in the SMED PhD program. Education maintains a close relationship with CPHHS where graduates from Human Development and Family Sciences go on to earn teaching credentials in elementary education (double degree), physical education (MAT), and become endorsed in Consumer and Family Studies (double degree). The three broad areas encompassed by these teaching credentials have a significant impact on student understanding of public health at the K12 level. There is also an ongoing involvement of faculty from several colleges who serve on graduate committees in SMED and Education. There is great potential in capitalizing on the numerous outreach activities in STEM education across many colleges in the university as research sites for examining ways to improve and extend the reach of OSU in this critical area.

There are already substantive signs of this partnership between Education and SMED taking shape through significant work underway since the fall of 2010. A Reorganization Committee representing all major departments started work in October 2010. The College of Education, in partnership with Science and Mathematics Education (SMED), held open forums for broad discussion of this venture. SMED faculty participated in the College of Education governance committees and the chair of SMED met with the Dean's Council throughout the year. SMED faculty is working with the dean and architects to be located in the renovated Education Hall.

[Added 3/5/12]

Current programs in the College rely heavily on part-time faculty. Adult and Higher Education (AHE) uses 6 part-time faculty (no benefits) across three programs: College Student Services Administration (CSSA), Community College Leadership PhD (CCLP), and Organization and Human Resource Education EdM in Education (hybrid). CSSA current has no tenure-track faculty and is run through campus-based adjuncts from non-academic units. The viability of this program is in question and is current under review. Teacher and Councilor Education (TCE) uses 24 part-time faculty (no-benefits) across four programs: Double Degree, Education Masters (online), Continuing Professional Development (online), Counseling PhD (hybrid). TCE has 10 professorial rank faculty. Counseling and CCLP PhD programs are severely understaffed. CCLP will completed a new hire for fall 2011 and will likely complete another for fall 2012. The structure in the Double Degree utilizes classroom supervisors hired on a per-observation basis. These part-time clinical faculty are not well integrated into the program and this structure is under review. New programmatic responsibilities are being worked out such that specific tenure-track faculty are directly responsible for specific programs.

Consolidating Program Offerings

- ELDP Education Doctoral program PhD (on hold)
- MAT (2yr) Elementary Master of Arts in Teaching (MAT) 2-Year (on hold)
- MAT (Immer) Elementary Master of Arts in Teaching (MAT) Immersion (on hold)
- MS Counseling Masters program (on hold)

With this reorganization, College faculty members take the first step in aligning tenure-track faculty with each academic program. Four programs have been put on hold in recognition of the over-extension of program offerings by faculty and are noted in bold. All programs are described below forming the backdrop next year for faculty review for further coordination and consolidation. Following this section, Figure 2 shows the current alignment of faculty to programs. There is a complete listing of faculty by name and position in the Appendix. Programs labeled as “online” are purely distance delivered. Programs labeled as “hybrid” are offered off site as face-to-face classes supplemented by distance delivery. Otherwise the program is delivered on campus.

Further, as shown in Figure 2, there are programs where there is a need for realignment of tenure-track faculty. Some realignment will come from moving faculty from programs now on hold. Additional realignment will come from faculty discussions concerning consolidation of online programs (i.e. EDM, K12/FCL) and review of existing programs for additional consolidation and collaboration (e.g. PhD programs). Current searches will also help with the alignment of tenure-track faculty with programs in the areas of: (a) the double degree (creating a STEM-focused elementary program), (b) educational policy in adult and higher education, and (c) English as a second language endorsement program.

SMED PhD and MS licensure cohort are operated by 7.25 FTE of professorial rank faculty and one instructor.

This new organization will combine two on-line programs at the masters level creating an efficiency of scale with a broader reach in distance delivery. Consistent with the overall College mission, citizens of Oregon, the nation, and the world will have access to a unique program that supports lifelong learning and education in the science and technology arenas. Finally, this reorganization forges a substantive partnership with faculty in the College of Science. This gives institutional expression to the principle that research in curriculum, instruction, and free-choice learning is rooted in the content of the disciplines.

Vision

The College of Education is an international leader in innovative research and the preparation of scholars and lifelong learning leaders in two signature areas critical to an increasingly complex and global society: science, technology, engineering, and mathematics (STEM) and cultural and linguistic diversity. Through our research and professional preparation, we contribute to the development of a literate citizenry prepared to be engaged, reflective, creative, and caring members of their communities, as well as the world.

Mission

The College of Education, in association with a College of Science partnership, develops multi-culturally competent researchers, scholars, learning leaders and practitioners who make a difference by promoting innovation, social justice, and lifelong learning with a focus on STEM and cultural and linguistic diversity. Our research and professional preparation fosters scholarship, intellectual stimulation, openness, flexibility, and a sense of community.

Values and Beliefs

- We believe that the discovery, dissemination, and application of knowledge in STEM disciplines must be situated in a context of social justice that acknowledges and embraces cultural and linguistic diversity.
- We value a collaborative, interdisciplinary approach to research and to teaching learners of all ages and cultural and ethnic backgrounds.
- Our programs are informed by research and our research is informed by our practice as educators.

Goals

- Conduct research that fosters a deeper understanding of STEM learning across the lifespan.
- Conduct research that furthers our understanding of the impact of cultural and linguistic diversity in a global society.
- Work with the Cascades Campus and in partnership with colleagues across the campus including those in OSU's proposed Center for Research in Lifelong STEM Learning,

Western Center for the Study of Community Colleges, and Center for Teaching and Learning, to infuse our research and academic programs with interdisciplinary and multicultural approaches to learning.

- Work collaboratively with colleagues across Oregon and the nation in school districts, community colleges, free-choice learning institutions, community-based organizations, and other national centers such as the Center for the Advancement of Informal Science Education (CAISE) based in Washington, DC.
- Expand our capacity to meet the needs of learners of all ages who are from culturally and linguistically diverse backgrounds.

Faculty Development

A major component in reorganization is an overall alignment of tenure-track faculty roles on research and academic programs. This section provides guidelines for work to be done during the next year in examining faculty position descriptions, as well as instructor roles in program content, administration and delivery. This section also outlines a general approach to promotion and tenure to be reviewed by the faculty and the new dean. OSU Cascades faculty will be full participants in this process.

From the OSU Academic Affairs [<http://oregonstate.edu/admin/aa/>]

“Academic employees are engaged in a wide variety of activities, including teaching, research, creative activity, extending the university's programs and expertise to regional, national, and international publics, and providing service to the University and profession... Development of the position description should be done in consultation with the academic employee, but final authority for assigning duties and establishing a position description rests with the supervisor... A minimum of 15% should be allocated to scholarly and creative activity for all professorial rank faculty...”

Tenure-Track Faculty. In general tenure-track faculty positions will have job responsibilities distributed across Teaching, Research, and Service. The proportion will vary by academic rank, the nature of research within the sub-discipline, and availability of external funding. A research-oriented faculty is committed to seeking external support for research but sub-disciplines vary with respect to the amount of available research dollars. Tenure-track faculty at the OSU Cascades campus will possibly have different opportunities, but their positions will be viewed in the same way as the Corvallis campus. Position descriptions will recognize these differences by adjusting expectations across teaching, research, and service. Within teaching, tenure-track faculty will have a portion of their load allocated toward graduate student advising. Particular consideration will be given to advising during dissertation and thesis writing.

Instructors. Instructors and senior instructors will have fixed-term appointments with primary responsibilities for instruction. A 100% teaching load will be reviewed in the coming year by faculty and dean. A full-time teaching load will be the benchmark by which teaching portions of

tenure-track faculty will be judged. This load will vary based on the proportion of undergraduate and graduate courses and class size. A portion of an instructor position may be allocated to running the day-to-day work of a program. This may include, but is not limited to, scheduling program meetings, working with faculty to work out staffing, coordinating admissions, advising students, and helping to coordinate faculty research on and evaluation of programs. A portion of instructor time may also be allocated to scholarly accomplishments as described in OSU's Promotion and Tenure Guidelines (<http://oregonstate.edu/facultystaff/handbook/>), "scholarly accomplishment requires peer-review and dissemination" (Academic Appointment Guidelines, September 2008).

Professional Faculty. Professional faculty in the College will have roles in "academic support, administrative support, and student support units" (Academic Appointment Guidelines, September 2008). The proposed Assessment, Licensure, and Accreditation position is an example of professional faculty. This position will have a central role in coordinating the complex process of professional teacher licensure in the state as well as state and national professional accreditation processes.

Managing Joint Faculty. The joint venture between the College of Education and College of Science brings tenure-track faculty and instructors from Science and Mathematics Education in the College of Science into the administrative structure of the College of Education. The Science funded faculty will report to the Dean of Education. The deans of both colleges will manage the joint enterprise. Promotion and tenure will start in the College of Education with appropriate review in the College of Science to be determined by the two deans.

Implementation and Timeline

The faculties in this joint partnership have invested considerable time and effort in good faith to create a significant venture for OSU. This effort suggests a bright future for creating national leadership and world recognition in education in STEM and cultural and linguistic diversity. It is expected that the approval process will take some time but implementation must be ready. The following timeline puts in place a plan for achieving the launch of the new College.

July 1, 2011: The new College of Education will create a strategic partnership between the Colleges of Education and Science. This will formally close the Department of Science and Mathematics Education in the College of Science.

Spring/Summer 2011

- Initiate planning for new web presence
- Engage with the Advisory Board and other external constituencies to determine major branding elements
- Communicate with existing and future graduate students the nature of the proposed changes and the timeline for approval.
- Begin stake holding with other units in the University concerning vision and mission of the new College and open discussions concerning strategic hires of joint benefit.

Abbreviated Category I: Reorganization of College of Education

- Begin process of filling administrative positions.

Standing committees for governance will be reviewed and begin work in September 2011.

Academic Affairs Committee. Function and authority: Academic program issues of the College. The functions of the Academic Affairs Committee will include: Assurance of fit of curriculum proposals with long-range goals of the College; elimination of duplication of effort; assurance of integrity of proposed course or program objectives, content, and evaluation; academic standing of students; student advising policies; program accreditation; and assurance that the best interests of students, programs, and the College are being met. Make recommendations to the Dean and to the Faculty Senate's Curriculum Committee regarding substance of Category II proposals. Make recommendations to the Academic Staff as a whole on Category I proposals.

Personnel Affairs Committee. Function and authority: Advise the Dean on policies related to personnel matters, including search and appointment, promotion and tenure, performance review, salary determination, professional development, and grievance. Personnel policy deliberations need to recognize that academic staff may hold appointment in one or more other units outside the College and this context must be taken into consideration. Academic staff at or above the level being evaluated must do evaluation of the dossiers of candidates for indefinite tenure and/or promotion, and recommendations to the Dean will be purview of academic staff only. Evaluation of dossiers for tenure and promotion will be given first priority in terms of the Committee's workload. Should other personnel matters need immediate attention, sub-committees to the Personnel Affairs Committee that include additional academic staff will be appointed as needed by the Dean.

Cultural and Social Affairs Committee. Function and authority: Advise the Dean and Staff on matters pertaining to strengthening the College's internal organizational culture, including cultural competence, and social relations, as well as social events such as awards and recognition, health and wellness, graduation, and retirement.

Financial Affairs Committee. Function and authority: Advise the Dean on financial matters and policies pertaining to the College, including long-range fiscal planning, facilities, technology, resource generating, and budget allocation.

Ad hoc Committees. The Dean will appoint other committees or sub-committees to standing committees as necessary to the work of the College.

Fall, 2011

Charge relevant committees to begin deliberations on, and generate recommendations, for:

- Possible name change of the college
- Coordination of doctoral programs

Abbreviated Category I: Reorganization of College of Education

- Coordination of Ecampus programs
- Coordination and development of the double degree and graduate pathways for teacher licensure
- Review of tenure-track and instructor position descriptions
- Refine budget projects for FY12
- Work with deans of Education and Science to formulate P&T procedures

Programmatic Structure

With this reorganization, College faculty members take the first step in aligning tenure-track faculty with each academic program. Four programs have been put on hold in recognition of the over-extension of program offerings by faculty and are noted in bold. All programs are described below forming the backdrop next year for faculty review for further coordination and consolidation. Following this section, Figure 2 shows the current alignment of faculty to programs. There is a complete listing of faculty by name and position in the Appendix. Programs labeled as “online” are purely distance delivered. Programs labeled as “hybrid” are offered off site as face-to-face classes supplemented by distance delivery. Otherwise the program is delivered on campus.

What follows is an outline of programs in place for Fall 2011.

Program Codes

Teacher & Counselor Education

- | | | |
|----|--------------------|--|
| 1. | DD | Education Double Degree (with elementary and secondary licensure)
BA/BS |

2. Explain how outcomes in the newly organized program or unit will be assessed.

Assessing the outcomes of the College reorganization will use a three-fold model: Process, Progress, and Product. For Process, we will document organizational meetings through minutes and documents. For Progress, we will assess if significant tasks outlined in this proposal and specified in the process documents were completed in a timely manner. For Product, the person in the Assessment position will lead faculty in reviewing the accomplishments at the end of each year. The ongoing goal will be for new assessment routines and procedures to evolve into practice, which can be used to evaluate the end products of this reorganization.

D. Resources needed, if any: personnel, FTE academic, FTE classified, facilities and equipment.

The reorganization structure shown in Figure 1b indicates a dean and two associate deans along with a professional faculty position for Director of Licensure and another for Assessment and Accreditation. This organization creates efficiencies in faculty and administration with better alignment of work between administration, faculty, and staff positions.

Further, as shown in Figure 2, there are programs where there is a need for realignment of tenure-track faculty. Some realignment will come from moving faculty from programs now on hold. Additional realignment will come from faculty discussions concerning consolidation of online programs (i.e. EDM, K12/FCL) and review of existing programs for additional consolidation and collaboration (e.g. PhD programs). Current searches will also help with the alignment of tenure-track faculty with programs in the areas of: (a) the double degree (creating a STEM-focused elementary program), (b) educational policy in adult and higher education, and (c) English as a second language endorsement program.

In addition to an associate dean, Figure 1b shows a position for Assessment and Accreditation. This position has a primary focus in creating a culture of assessment within the College. The licensure and accreditation requirements for professional programs carry specific expectations for ongoing assessment. University accreditation is also building a culture of assessment within the institution as a whole. This position will be charged with building an infrastructure that supports data collection guided by faculty objectives for program research and evaluation. The person in this position will have a terminal degree in a relevant field of educational research to guide and coordinate the study of program effectiveness, producing data valuable for research, and at the same time generating the evidence required for program licensure and accreditation.

A current listing of faculty is in the Appendix. Examining Figure 2, there are 21 tenure-track (18.4 FTE) and 16 full or part-time instructors and professional faculty (14.24 FTE). The Appendix also lists, adjuncts and part-time faculty who contribute directly to College of Education's programs. While consolidation will significantly reduce term-to-term hiring, specialized expertise from working professionals are a significant and a valuable part of all professional programs. Term-to-term faculty who have specialized professional expertise will continue in the program.

F. Relationship of the proposed unit to the institutional mission.

1. How will the proposed program or unit support OSU's mission and goals?

- OSU's mission and goals focus on providing outstanding academic programs, excellent teaching and learning environments and substantial increased revenues that further strengthen performance and pre-eminence in the three Signature Areas of Distinction: Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress. This new college will support OSU's achievements through the following efforts: A portion of our externally-funded research directly addresses enhancing teaching and learning, particularly in STEM, and through our courses, seminars and conferences, includes distribution of research results to practicing teachers, university professors and free-choice educators here at OSU, around Oregon and the nation.
- We are focusing on cultural and linguistic diversity in learning communities, which supports the preparation of talented young people from all backgrounds, resulting in the benefits cultural diversity brings to the mainstream STEM community, as well as increasing the number of non-traditional, under-represented STEM professionals.
- Our externally funded research also addresses analysis of both free-choice/informal and formal learning environments (K-12 as well as higher education) for evidence of practice that facilitates the development of young people as critical thinkers in their discipline of choice.
- By informing the practice of STEM educators through our research and collaborations, we directly impact the nation's future STEM leaders. Our scholarly activities provide scenarios in which culturally diverse and inclusive learning environments create culturally competent, analytically minded professionals who then are able to interact with peers to optimize brainstorming, idea formulation, and ultimately innovation.
- We collaborate with other OSU colleges and departments (Engineering, Oceanic and Atmospheric Sciences, Physics) to study learners and the learning process, optimize instruction, and assess learning outcomes, thereby developing lifelong learners capable of contributing to the innovation that occurs at OSU, as well as within STEM industries.
- We study the human aspects of tackling issues of societal concern in the 21st century; namely, the learning processes and methods involved in educating the public in both formal and free-choice learning environments about complex issues--clean technology, environment, health and population. It is not enough to understand the science and technology; we also must understand how people learn and make decisions on complex issues in order to be effective at creating significant change. This relates directly to OSU's signature areas of distinction.
- Our externally-funded research on lifelong learning contributes understanding about the mental and physical health of the world's population since research documents that active learning throughout one's life is a major component of wellbeing and a healthy, long life.

- Our externally-funded research impacts both pre- and post-college; therefore, through our scholarly activities and academic programs we expand the reach of OSU beyond current students to make a positive impact in the lives of persons yet to attend college, as well as professionals who have matriculated from the University.

G. Long-range goals and plans for the unit (including a statement as to anticipated funding sources for any projected growth in funding needs).

We will use our current research and academic strengths to leverage the necessary breadth in undergraduate and graduate programs from the division and across the University. We will build a shared vision for this newly reorganized College by engaging faculty in other colleges in focused discussions about collaborative externally-funded research and assistance in understanding research-based approaches to creating effective teaching and learning environments. We envision that lifelong learning will encompass all program levels in the current College and do so in innovative and collaborative ways that strengthen our alignment with the goals of the Division of Arts and Sciences, as well as the Divisions of Earth Systems Science, Health Sciences, and Business and Engineering. From a shared, campus-wide vision for the College will come proposals for faculty hires that complement the research and programmatic interests across departments and colleges. Early candidates for these discussions are faculties in: Psychology, History, Philosophy, Ethnic Studies, Statistics, Physics, and Mathematics.

Research is the foundation that drives innovation in the design of effective academic programs, new learning environments, the creation of educationally productive social structures, and innovations in lifelong learning opportunities. Currently Science and Mathematics Education faculty receive over \$250,000 per year per FTE in external research funding. Within the envisioned new College design, this funding level will serve as a base for developing more robust external funding across a larger faculty. Through strategic hires and new research-oriented job descriptions, we anticipate additional increased funding through inter-departmental collaborations across the University. The department currently has active relationships with faculty in the Colleges of Science, Liberal Arts, Engineering, Agricultural Sciences, Forestry and Public Health and Human Sciences. Mindful of the innovative approach we are taking to education and learning with particular focus on STEM and cultural/linguistic diversity, we anticipate national and international interest in our research agenda and continued healthy funding from National Science Foundation (programs in Research on Learning in Formal and Informal Settings, Human Resource Development and Undergraduate Education), NOAA, NASA, Department of Agriculture and Department of Commerce (workforce development). In addition we anticipate interest from private foundations including the Kauffman, Noyce, Kellogg and Spencer Foundations.

The College will become **the** source of information in the state, region and nation on life-long learning in STEM education with special emphasis on cultural and linguistic diversity. The College will work closely with the new Center for Research in Lifelong STEM Learning to design and maintain information databases that will also meet the needs of accreditation from NCATE,

TSPC, and CACREP as well as be a model for the campus in demonstrating a “culture of assessment” for University accreditation.

The new College will examine the valuable lessons learned from Science and Mathematics Education and College of Education faculty as they have experimented with innovative methods of distance and on-campus program delivery. We will learn from and preserve highly successful programs and streamline, redesign and focus others to support faculty research, particularly in the two areas of excellence, STEM learning and cultural/linguistic diversity. Advancing innovative learning in the 21st century, the College will mine and develop the rich resource of the Internet and distance delivery in order to enrich the education of Oregon citizens and the nation in the areas of STEM and cultural diversity. Externally funded research will enhance this resource and build new knowledge about learning in technologically integrated environments.

H. Relationship of Programs to Other OUS Institution

The following programs are unique to or have unique features in the OUS system: Double Degree, MS online, PhD in Counseling*, CCLP*, and AE-OHRE*.

****PhD Counseling***

PSU offers school and clinical mental health counseling MS programs. UO offers a counseling psychology PhD program.

****CCLP***

There are generic educational leadership programs, but none are focused solely on community college leadership.

****AE-OHRE***

PSU does offer programs in adult education; they do not offer the part-time option for working professionals.

EdM online

- Portland State University offers a Curriculum and Instruction Master’s Degree program (MA/MS) for licensed teachers or professionals in related fields; courses are available on campus only.
- The University of Oregon has a master’s degree in Curriculum and Teacher Education (MS). This is a part-time with courses are available on campus only and many are cross-listed with undergraduate courses.
- Eastern Oregon University offers a Master of Science degree. Some courses are offered face-to-face on campus or on site, only required courses are available online.

MS online

This is the only online MS in the OUS system offering concentrations in K12 Math education, K12 science education, and Free-Choice Learning.

Ph.D. in Mathematics or Science Education.

Portland State University also offers a PhD in math education from the Mathematics Department. UO offers an EdD in educational leadership.

I. Professional Accreditation

The following programs hold national or state accreditation by the indicated organizations:

- Counseling program – Council on Accreditation for Counseling and Related Educational Programs (CACREP)
- Teacher Education – National Council for Accreditation of Teacher Education (NCATE) and Oregon Teacher and Standards and Practices Committee (TSPC)

Budget Pages

The budget analysis shows the proposed new administration cost compared to the current cost. The new organization offers efficiencies some reduced costs following the transition period of about one year. As outlined in Table 1, administrative functions have been redistributed away from department chairs and to the Dean's office. In addition, staff positions have been replaced to create efficiencies benefiting programs and faculty. Additional transition costs include filling the positions of dean's assistant and an office manager. We are also developing of a newly designed web site to highlight the four program units and research foci of faculty. The web site will foreground the major educational and research emphases of STEM education and cultural and linguistic diversity education.

All other costs associated with the current College of Education and Department of Science and Mathematics Education will remain the same in the new structure. These include but are not limited to, faculty salaries and services and supplies.

Appendix: Faculty Resources

Tenure-Track Faculty

SueAnn Bottoms, Education
Jay Carbon (Cascades) (Professor)
Kathryn Ciechanowski (Assistant Professor)
Derron Coles, with Equal Opportunities Program (Assistant Professor)
Kathleen Cowing (Cascades) (Assistant Professor)
Thomas Dick, mathematics (Professor)
Lynn Dierking (Professor)
Cass Diemen (Associate Professor)
Molly Engle (Associate Professor)
Larry G Enoch's (Professor)
Rebekah Elliott (Associate Professor)
John Falk (Professor)
Larry Flick (Professor)
Nam Hwa Kang (Associate Professor)
Karen Higgins (Associate Professor)
Rick Orozco (Assistant Professor)
Shawn Rowe, with Sea Grant Extension (Assistant Professor)
Deborah Rubel (Associate Professor)
Darlene Russ-Eft (Professor)
Sam Stern (Professor)
Ken Winograd (Associate Professor)

Fixed-term

John Baek (Assistant Professor, Senior Research)
Kathy Biles (Cascades) (Instructor)
Jessie Buhrle (Cascades) (Instructor)
Shelley Dubkin-Lee (Instructor)
Donna Drake-Clark (Instructor)
Gene Eakin (Director Student Services, Head Advisor)
Ron Gray (Instructor)
Marla Greene (Cascades) (Instructor)
Sue Helback (Instructor)
Joyce Mphande-Finn (Cascades) (Instructor)
Mike O'Malley (Instructor)
Nell O'Malley (Instructor)
Carolyn Platt (Cascades) (Instructor)
Kay Stephens (Instructor)
Daniel Stroud (Cascades) (Instructor)
Emily van Zee, Ph.D. (Associate Professor, Part-time)

Professional Faculty

Allan Brazier, Education Dean
Ryan Collay, M.S. SMILE
Alicia Christensen, M.S. SMILE
Jay Well, M.S. SMILE
Gene Newburg, Education advisor
Matt Lewis, Academic Advisor

Emeritus Faculty

Margaret Niess (Professor Emeritus)

Adjunct Faculty

Mamta Accapadi (Student Life)
Tracy Bentley-Townlin (Student Life)
David Craig (Residential Education)
Eric Hansen (Housing & Dining)
Don Johnson (Program & Marketing)
Kerry Kincanon (Head Advisor)
Bob Kerr (Greek Life)
Tom Kirch (Recreational Sports)
Jeff Malone (Academic Advisor)
Janet Nishihara (Educational Opportunities Program)
Larry Roper (Student Affairs)
Tom Scheuermann (Housing & Dining)
Kristin Winter (Orientation)
Melissa Yamamoto (Educational Opportunities Program)
Jessica White (Education)

1039 Faculty

Alex Sanchez, Ph.D.
Chris Ward, Ph.D.

Part-time Faculty

The College has a varying number of part-time faculty from term-to-term. Some of these could be consolidated to form full-time positions. Some of these part-time faculty provide valuable specialized expertise and experience.

Collaborative Faculty

Engineering
Science
Psychology

Staff, Corvallis

Kristin Kinman - *Administrative Program Asst.*
Lynda Thomas - *Reception, Student Services*
Biana Weatherford - *Reception, Student Services*
Laurie Brendle-Sleipness - *Admin Program Asst*

Dr. Larry Flick
Department of Science and Mathematics Education
College of Science
Corvallis, OR 97331

Dear Larry:

I wanted to express my enthusiastic support for the Category I proposal outlining the merger of Science and Mathematics Education and the College of Education. I see this as a tremendous opportunity for the two units to establish national prominence in research and teaching about STEM education.

I am very committed to the development of a reorganized College of Education that will foster research, teaching, and outreach in education with a focus on science, technology, engineering, and mathematics (STEM), with a strong commitment to cultural and linguistic diversity. This provides a truly unique opportunity for the College of Education and the College of Science to work together to create a single unit committed to pursuing fundamental knowledge, understanding, and application about how students of all ages learn in our increasingly diverse and technological society. It is an exciting prospect and something that OSU is uniquely suited to pursue because of the success you have all created over the years.

Dean Stern and I have drafted an MOU for the Provost that articulates our joint commitments for CoED to continue and build the work of the Department of Science and Mathematics Education and for COS to continue and build the financial support for the mission of CoED.

I wish you and your colleagues the best in this innovative endeavor. Please let me know if I can help in any way.

Best regards,

A handwritten signature in black ink, appearing to read "S. H. Bloomer". The signature is fluid and cursive, with a long horizontal stroke at the end.

Sherman H. Bloomer
Dean, College of Science

From: "Stern, Sam" <sam.stern@oregonstate.edu> **Date:** Tue, 31 May 2011 15:46:46 - 0700 **To:** "Rodgers, Lawrence" <Larry.Rodgers@oregonstate.edu>, Sonny Ramaswamy <Sonny.Ramaswamy@oregonstate.edu>, "Bray, Tammy" <Tammy.Bray@oregonstate.edu> **Cc:** Sherm Bloomer <Sherman.Bloomer@oregonstate.edu> **Subject:** Request for liaison letter of support...

Larry, Sonny, and Tammy,

Attached is the abbreviated Category I proposal that describes the reorganization of the College of Education. Major elements include the formation of a "faculty of the whole" and elimination of academic departments; inclusion of faculty and programs formerly in the Department of Science and Mathematics Education in the College of Science; and emphasis on STEM (science, technology, engineering, and math) education and cultural and linguistic diversity. This proposal has been developed over the past year by faculty, and has my support and Sherm Bloomers'. The Education Double Degree, master's degree teacher education programs in your colleges, accreditation, and teacher licensure remain a priority and will continue to be supported by the reorganized College of Education.

I hope you will each prepare a brief liaison letter of support that can be included with the proposal.

Do let me know if you have any questions or concerns.

Best, Sam

From: Ramaswamy, Sonny **Sent:** Tuesday, June 21, 2011 8:51 AM **To:** Stern, Sam **Cc:** Thompson, Greg; Green, Cary **Subject:** Re: Request for liaison letter of support...

Good morning, Sam. My sincere apologies — I meant to respond to you sooner, but somehow it got away from me.

At the outset, congratulations to you and your college on articulating an outstanding vision for a College of Education that will focus on our strengths at Oregon State University. It will indeed allow us to carve out a comparative advantage and niche, which, as it develops, will be hard to beat.

As Dean of the College of Agricultural Sciences, I do have a few suggestions about the proposal, which may have overlooked some collaborative opportunities.

As you know, there are significantly broader efforts in the realm of STEM education at Oregon State University, than just that undertaken within the College of Science — with scientists, engineers, and mathematicians in the Colleges of Agricultural Sciences, Engineering, and Forestry, along with scientists in Health and Human Sciences, Veterinary Medicine, and Pharmacy, it is a seriously missed opportunity to create that comparative advantage that you have so well articulated in the proposal.

There are a number of institutions that can offer STEM educational opportunities, but Oregon State is in a unique position because of the broader representation of the relevant disciplines. I would like to see that breadth reflected in the proposal and also ways to engage the latter institutions in helping realize the vision of an internationally recognized program in STEM disciplines.

Secondly, and more importantly for the College of Agricultural Sciences, I was disappointed that Agricultural Education was not even mentioned as potential partners and adjunct faculty in the proposal — maybe it was just an oversight, but I hope that it will be corrected. Our faculty have always been adjunct faculty members in the College of Education, and I hope that our faculty would continue to be adjunct faculty members and continue within the licensure faculty. I believe our faculty have a lot to offer as adjunct faculty and have indicated a desire to work with the PhD students in the College of Education. Not only does the latter enhance the breadth of the programs in the College of Education, it is critical for our Agricultural Education faculty and students.

I hope the College of Education would consider these opportunities for a broader partnership and collaborations within their proposal, and that the broader opportunities described above are incorporated into the proposal as it is revised. Please do let me know if you wish to discuss this further.

Thanks for giving us the opportunity to respond to your Category 1 proposal, and thanks

for considering our suggestions.

Subject: CoE Proposed Changes

Dear Sam:

I have reviewed the proposed changes for the College of Education outlined in the abbreviated cat 1, including the org chart and the statements involving mission and goals. I am fully supportive of the plan as it is detailed in the document. Assuming that you don't encounter bureaucratic obstacles beyond your span of control, I also think the proposed timeline is achievable.

I'm especially pleased by your focus on STEM learning, which is, to my mind, not only a strategically smart direction for CoE to be going but also represents a real opportunity for distinction for OSU.

Let me know if I can help support this in any way as it moves forward.

Subject: **Letter of support**

Dear Sam and Larry:

Congratulations to both of you – one is taking on the new responsibility and one is embracing the new adventure (you know who is who - :-))!

My apology for this tardy email of support of your abbreviated Category 1 proposal entitled "Reorganization of the College of Education". I am very supportive of your restructuring and appreciate your emphasis on administrative efficient and the focus on STEM. Your embracing the entire education programs at OSU including Cascade as a whole is commendable. However, as I am reading this proposal, I did not see any mention of the programs in our college. I am wondering if your reorganization will change the professional relationship between College of Education and College of PHHS? I am talking about the current two programs in CPHHS, early childhood development and education (double degree) and physical education teacher education (master degree). Will we continue the double degree program of our students in HDFS with you as currently structured? Will we continue to prepare and receive our Physical Education Teacher Education licensure from you? I think I know the answers, but I just need some assurance.

Again, my apology for this late response, I should have started earlier on my reading assignment. Thanks for the opportunity to review the proposal.

Tammy

GRADUATE COUNCIL THREE-YEAR REVIEW OF THE GRADUATE PROGRAM IN FOOD SCIENCE & TECHNOLOGY

March 2012

The Graduate Council conducted a site review of the undergraduate and graduate programs in the Department of Food Science and Technology on March 3 and 4, 2008. This review was undertaken in conjunction with an external review team as well as a Curriculum Council team, with the latter team focusing on the undergraduate program. The present report represents a three-year follow-up of the graduate program review.

Darlene Russ-Eft (College of Education), who was an original member of the graduate review committee, conducted the follow-up review, first on February 17, 2011 and again on February 7, 2012. The review consisted of meetings of about one hour each with the department head, Robert McGorin. The reason for the delay involved the need for FST to implement most of the recommendations.

Summary of the Specific Recommendations

These fell broadly into three categories: (a) Research capabilities and faculty resources, (b) Graduation education and issues of graduate students, and (c) Facilities and administration. Each of the recommendations, along with specific actions, appears in the attached report from Robert McGorin.

A. Research Capabilities and Faculty Resources

1. The Department should have a long-term plan of action for increasing linkages with relevant federal and state agencies, as well as continued linkages with private industry. Such linkages may help with future research funding.
2. The faculty is encouraged to continue to build linkages with other departments within the College of Agricultural Sciences (CAS) and outside of CAS, including Business and Forestry.
3. Attention should be paid to mentoring and supporting new faculty in their efforts to obtain research funding.
4. The Department should consider establishment of a more organized mechanism for gaining stakeholder inputs to planning. Involving relevant stakeholders may help to highlight the need for additional research funding for the department.

B. Graduate Education and Issues for Graduate Students

5. The Department should consider developing a comprehensive plan for recruitment of minority students. In particular, the current admission process has the potential to let qualified minority candidates slip through the cracks.
6. The last Graduate Program Review identified the high number of international graduate students. Some progress has been made, but further attention needs to be placed on recruiting domestic graduate students.
7. The self-study document prepared by the Department identified that there has been a drop in Ph.D. candidates over the past four years from 19 students in 2003-4 to 7 students in 2006-7. More energy and attention needs to be paid to recruiting Ph.D. students and to the graduate student experience. The review team felt a lack of enthusiasm among the graduate students and faculty on the Corvallis campus.
8. Continue the leadership and mentorship of graduate students in the Astoria facility, including the monthly graduate student meetings to discuss research. The graduate students in the Astoria facility were very satisfied with the leadership and mentorship that they experienced. They appeared to be working well as a team, and the facilities were considered adequate.
9. Efforts should be made to continue to develop processes to ensure communication and linkages among on-campus and off-campus graduate students and faculty. This may help to solve the issue of enthusiasm, given perceived satisfaction with leadership and mentorship in the Astoria facility. Some possibilities include but are not limited to: (a) scheduling on-campus seminars and other similar activities such that they do not conflict with off-campus activities, (b) scheduling off-campus seminars that do not conflict with on-campus activities and courses, and (c) providing a van for students to travel to campus or to one of the off-campus facilities as a group.
10. Attention should be focused on increasing the number of graduate advisors and mentoring new faculty into that role. The self-study document noted that five graduate advisors accounted for over 55% of the graduate degrees awarded. Furthermore, three of the five advisors have either retired or have been reassigned to new positions.
11. The Department must further evaluate 400/500 “slash” courses, and especially examine the consistency with which such courses are taught across the curriculum. Graduate students complained that they have to seek courses through forestry and toxicology to fill out their credit requirements. The Department self-study mentioned that all faculty members are expected to develop a graduate course in their areas of expertise that will be taught every other year. Such development would provide a great addition to the program.
12. Efforts should be made to increase teaching opportunities to graduate students, particularly through increasing the number of Teaching Assistantships. The department should continue to develop graduate teaching assistants for courses with large enrollments. It would seem that MS students could be utilized for some of the graduate teaching assignments. A second year MS student should be capable of picking up some of the TA load, at least for some of the

lower level courses. For Ph.D. students who want teaching experience, the Department could consider offering course credit in return for teaching.

13. The previous Graduate Program Review identified a concern about the lack of consistency in communicating information about the program requirements, particularly the preliminary written exams. Concerns still exist regarding the qualification exam. The purpose and the rationale of this exam were not clear to the review team. The multiple levels of screening and testing of graduate students seem unnecessary. It is suggested some streamlining could take place and not utilize the “optional” exam. The present approach also seems to leave the program open for criticism as arbitrary
14. The previous Graduate Program Review identified that the FST seminar program was of concern. Over the past years no major restructuring has been done. There appear to be no scheduled seminars, and when they do occur, they are not well attended by faculty or students. Both students and faculty expressed interest in improving the current seminar status, and this should be given priority attention.
15. Graduate students must find a funded lab to undertake research, and there are no rotations within labs and disciplines. This may lead to issues as to exposure of students to the various science and technology techniques and approaches as well as possible personnel conflicts. The Department should consider instituting some form of lab rotation process for graduate students.
16. The Department should continue to conduct annual reviews with graduate students. It can help to keep graduate students on track and can serve to “catch” struggling or failing students.
17. The Department should continue to conduct surveys of recent graduates, as this provides valuable feedback.

C. Facilities and Administration

18. The Department is encouraged to develop a space and equipment utilization plan. Certainly Wiegand Hall is an older building, but attention should be placed on replacing old equipment and obtaining new equipment, such as autoclaves, cold storage units, freezers, and centrifuges.
19. An area of concern for graduate students involves the lack of a graduate student lounge. As part of the space utilization plan, the Department should consider creating a graduate student lounge separate from the undergraduate student lounge.

Third-year Graduate Program Progress Summary (2008-2011)

Food Science & Technology

Oregon State University

March 12, 2012

Prepared by:

Robert McGorrin

Department Head, Food Science & Technology

Recommendations of Graduate Program Review – March 4, 2008

1. *The Department should have a long-term plan of action for increasing linkages with relevant federal and state agencies, as well as continued linkages with private industry. Such linkages may help with future research funding.*

Progress since review: During the last three years' annual FST Faculty Retreats, part of the agenda has been devoted to pursue new research funding opportunities. At the 2011 Faculty Retreat, a live video conference was established with four USDA national program leaders in agriculture and food science research, specifically to explore potential future grant opportunities in food quality, food safety, research on specialty crops, and national needs Ph.D. training grants. Department faculty have established several stakeholder groups (Fruit & Vegetable industry; Brewing industry; Wine industry; Cheese and Dairy industry) that are actively involved, give input about research projects, and have provided lobbying support for research funding and highlighting the importance of the department's education, research, and outreach missions to help preserve Experiment Station funding in the state legislature.

2. *The faculty is encouraged to continue to build linkages with other departments within the College of Agricultural Sciences (CAS) and outside CAS, including Business and Forestry.*

Progress since review: Faculty in the Department are continuing to build collaborative relationships with other departments within the College of Agricultural Sciences. Most notable are the following strong research connections: Brewing Science with hops and barley breeding in Crop & Soil Science Dept., Food Chemistry with wheat breeding program in Crop & Soil Science; Flavor Chemistry with viticulture program in Horticulture; FST Enology with viticulture program in Horticulture; Value-Added Fruits and Vegetables with faculty in the Linus Pauling Institute and the specialty organic fruits breeding program in Horticulture; Fermentation Biotechnology with Biochemistry and with the nanotechnology program in Environmental & Molecular Toxicology. Opportunities are emerging with the hire of several new faculty, including the department head of Animal & Rangeland Science and newly-forming collaborations in dairy processing (FST Artisan cheese program) and collaborative opportunities with a newly-approved Food Safety Systems position; meat science and seafood protein

functionality collaborations with the new Director of the Seafood Research and Education Center in Astoria.

Across Colleges and Divisions, several research collaborations are building. One relates to the newly formed (2010) Oregon Wine Research Institute and its emerging connections with faculty in Business. Several faculty in Food Science are members of the Wine Research Institute. The Institute Director (a faculty member in the Department) is interested in forming collaborations with the College of Public Health & Human Sciences. A strong research collaboration has been forged with faculty in the Department of Wood Science & Engineering in the College of Forestry. The chemistry of cellulose nano-crystals and wood polymer composites is being translated to collaborative research in Food Science with carbon nano-fiber applications for packaging films, compression board made of grape pomace, and analytical techniques to measure polymer film strength. The most notable new collaboration was forged among Food Science, Crop & Soil Science, and the College of Engineering related to the OSU mini-malter project. This involved the construction by students of an innovative piece of equipment for the malting of small batches of barley to test the suitability of limited amounts of experimental varieties for brewing applications. The story was reported in 2011 in the *Oregonian*: <http://www.bit.ly/IBJt5V> and the Corvallis Gazette-Times: http://www.gazettetimes.com/news/local/article_8c963374-4e0a-11e0-994e-001cc4c002e0.html

3. *Attention should be paid to mentoring and supporting new faculty in their efforts to obtain research funding.*

Progress since review: New faculty have been assigned peer mentors who are available to provide discussions relative to research programs, Extension, P&T, and faculty success. During the annual FST Faculty Retreat, we have divided faculty into brainstorming teams to discuss research ideas, ideas for collaborative projects, funding sources, etc. in which new faculty actively participate. New faculty also work with the department head to obtain advice for sources of funding, as well as input and advice on grants. The College offers a grant-writing workshop that new faculty have been encouraged to attend.

4. *The Department should consider establishment of a more organized mechanism for gaining stakeholder inputs to planning. Involving relevant stakeholders may help to highlight the need for additional research funding for the department.*

Department faculty have established several stakeholder groups (Fruit & Vegetable industry; Brewing industry; Wine industry; Cheese and Dairy industry) that are actively involved, give input about research projects, and have provided lobbying support for research funding and highlighting the importance of the department's education, research, and outreach missions to help preserve Experiment Station funding in the state legislature. The Department is currently working to develop an advisory board primary whose mission would be to provide stakeholder input for strategic planning, employer feedback, and fundraising.

5. *The Department should consider developing a comprehensive plan for recruitment of minority students. In particular, the current admission process has the potential to let qualified minority candidates slip through the cracks.*
6. *The last Graduate Program Review identified the high number of international graduate students. Some progress has been made, but further attention needs to be placed on recruiting domestic graduate students.*
7. *The self-study document prepared by the Department identified that there has been a drop in Ph.D. candidates over the past four years from 19 students in 2003-4 to 7 students in 2006-7. More energy and attention needs to be paid to recruiting Ph.D. students and to the graduate student experience. The review team felt a lack of enthusiasm among the graduate students and faculty on the Corvallis campus.*

Progress since review (Sections 5-7): Faculty have been aware of the need to recruit domestic and minority graduate students in order to provide a workforce that satisfies the hiring needs of the domestic food industry. The Department has implemented a process to increase and broaden recruitment of U.S. minority students by identifying/flagging minority applicants on the applicant sheets before they are routed to the faculty. Asian students currently comprise the Department's major proportion of U.S. minority students. Historically, the department had a predominant population of international graduate students. In 1995-96, the percentage of FST domestic graduate students was 25%, increasing to 38% in 2006-07 at the end of the previous review. The FST graduate student admission profile from Fall 2007-2011 is shown in Table 1. Continual progress has been made in recruiting more domestic graduate students during the past several years, and the current percentage of domestic students is trending around 48%. Over the past several years since the last review, the enrollments have increased from 7 to an average of 13.4 Ph.D. students (see Table 3 following Recommendation # 10). The population of Ph.D. graduate students has stabilized at 75% on-campus, and 25% located in Astoria.

**Table 1. Food Science & Technology Graduate Student Admission Profile
(Fall 2007 – Fall 2011)**

| Term | New Enrollments | | | Composition | | |
|----------------|-----------------|------------|------------|-------------|------------|-----------------|
| | Total | M.S. | Ph.D. | Male | Female | Domestic |
| 2007-08 | 12 | 10 | 2 | 5 | 7 | 7/12 |
| 2008-09 | 10 | 8 | 2 | 1 | 9 | 3/10 |
| 2009-10 | 12 | 10 | 2 | 7 | 5 | 6/12 |
| 2010-11 | 12 | 9 | 3 | 4 | 8 | 7/12 |
| 2011-12 | 12 | 11 | 1 | 5 | 7 | 5/12 |
| Average | 11.6 | 9.6 | 2.0 | 4.4 | 7.2 | 5.6/11.6 |

8. *Continue the leadership and mentorship of graduate students in the Astoria facility, including the monthly graduate student meetings to discuss research. The graduate students in the Astoria facility were very satisfied with the leadership and mentorship that they experienced. They appeared to be working well as a team, and the facilities were considered adequate.*
9. *Efforts should be made to continue to develop processes to ensure communication and linkages among on-campus and off-campus graduate students and faculty. This may help to solve the*

issue of enthusiasm, given perceived satisfaction with leadership and mentorship in the Astoria facility. Some possibilities include but are not limited to: (a) scheduling on-campus seminars and other similar activities such that they do not conflict with off-campus activities, (b) scheduling off-campus seminars that do not conflict with on-campus activities and courses, and (c) providing a van for students to travel to campus or to one of the off-campus facilities as a group.

Progress since review (Sections 8-9): Continuous opportunities for remote participation of graduate students and faculty in activities occur among campus with the department's two branch stations at the OSU Seafood Research and Education Center in Astoria, and at the Food Innovation Center in Portland. Due to the distance (3.5-hour drive each way from Astoria; 2-hour drive from Portland), students routinely participate in department, graduate, and faculty seminars by Polycom videoconferencing. They often drive to campus to participate in thesis defense seminars. An annual hands-on smoked seafood workshop is being taught at the OSU Seafood Research and Education Center over a weekend experience. This allows students from Corvallis to visit Astoria to stay over and participate in the event, and serves multiple functions as a learning, social, and friendship-building experience. In the past several years, the director of the Food Innovation Center has encouraged and promoted the opportunity for graduate students to conduct research and product development projects at the Center. An additional way for graduate students at the branch stations to bond with their campus-based colleagues is through their graduate representatives. Two graduate student representatives are elected each year to serve the graduate student interests. Currently one of the graduate student representatives is based at the Astoria Seafood lab, and the other is on campus. The graduate student representatives serve as advocates for fellow FST graduate students, are peer resources of information concerning graduate student life in the department, and help to resolve questions and problems of fellow students.

10. *Attention should be focused on increasing the number of graduate advisors and mentoring new faculty into that role. The self-study document noted that five graduate advisors accounted for over 55% of the graduate degrees awarded. Furthermore, three of the five advisors have either retired or have been reassigned to new positions.*

Progress since review: Faculty have devoted renewed attention to building the number of graduate advisees in the department. Newer FST faculty hires are contributing to increased productivity in graduate student advising and mentoring. Differences among faculty in the Department continue relative to the size of their research groups and the number of graduate students they advise. This is directly related to their ability to attract funding, greater difficulties in attracting competitive federal funding, as well as variations in funding emphasis which are related to a particular sub-specialty of food science (e.g., food microbiology vs. food engineering). Faculty discussion has also focused on the relative research productivity merits of hiring post-doctoral scholars or faculty research assistants versus graduate student trainees. However, the rapid increases in the department's undergraduate majors have necessitated increasing the numbers of TA's to help teach the numerous laboratory course sections related to the FST major (see recommendation #12).

The department continues to monitor enrollment and graduation metrics relative to FST graduate program performance. Graduate student statistics reported in the previous ten-year

review ended with the 2006-07 academic year for an enrollment of 29 graduate students (22 M.S., 7 Ph.D.) (Table 2). Since the previous review, FST graduate student enrollments remained stable for two years, then increased by over 30% to a total enrollment of 38 graduate students (25 M.S., 13 Ph.D.) in 2011-12 (Table 3).

**Table 2. Food Science & Technology Graduate Enrollments and Degree Rates
(Fall 1995 – Spring 2007)**

| Term | Enrollments | | | Degrees | | |
|----------------|-------------|-------------|-------------|-------------|------------|------------|
| | Total | M.S. | Ph.D. | Total | M.S. | Ph.D. |
| 1995-96 | 35 | 15 | 20 | 12 | 7 | 5 |
| 1996-97 | 32 | 17 | 15 | 12 | 8 | 4 |
| 1997-98 | 34 | 20 | 14 | 8 | 4 | 4 |
| 1998-99 | 30 | 17 | 13 | 13 | 8 | 5 |

| 2006-07 | 29 | 22 | 7 | 11 | 10 | 1 |
| Average | 33.5 | 17.9 | 15.6 | 10.7 | 6.7 | 4.1 |

**Table 3. Food Science & Technology Graduate Enrollments and Degree Rates
(Fall 2007 – Spring 2011)**

| Term | Enrollments | | | Degrees | | |
|----------------|-------------|-------------|-------------|------------|------------|------------|
| | Total | M.S. | Ph.D. | Total | M.S. | Ph.D. |
| 2007-08 | 32 | 17 | 15 | 15 | 13 | 2 |
| 2008-09 | 30 | 19 | 11 | 7 | 6 | 1 |
| 2009-10 | 30 | 17 | 13 | 7 | 3 | 4 |
| 2010-11 | 37 | 22 | 15 | 9 | 7 | 2 |
| 2011-12 | 38 | 25 | 13 | | | |
| Average | 33.4 | 20.0 | 13.4 | 9.5 | 7.3 | 2.3 |

The number of Ph.D. candidates is trending upwards to levels previously achieved in the department over 8 years ago. The number of M.S. candidates exceeds Ph.D. students by a factor of two. The reasons for these increases are redoubled efforts by the faculty to obtain grant funding and recruit more graduate students into the program. Since the previous review, total grants and contracts increased by over 60% from \$800,000 to currently \$1.3 million. New campus-based programs, such as the Provost's initiative, were also noted as opportunities to attract greater numbers of outstanding students to the FST graduate program.

11. *The Department must further evaluate 400/500 "slash" courses, and especially examine the consistency with which such courses are taught across the curriculum. Graduate students complained that they have to seek courses through forestry and toxicology to fill out their credit*

requirements. The Department self-study mentioned that all faculty members are expected to develop a graduate course in their areas of expertise that will be taught every other year. Such development would provide a great addition to the program.

Progress since review: A core curriculum of required courses is taken by graduate students in the FST program (see Appendix.) This includes MB 540/541 Food Microbiology, BEE 572 Introduction to Food Process Engineering, and a choice of any two of FST 522 Food Chemistry Fundamentals, FST 523 Food Analysis, or FST 525 Food Systems Chemistry. These are the core “slash” courses taught in the Department, and each require additional learning outcomes and/or assignments for the graduate-level (see Appendix). Additionally, FST Faculty have an expectation to develop and teach a graduate-level class in their area of specialty every other year. Thus far, FST faculty have developed three “stand-alone” graduate level courses which are taught as electives: FST 514 Health Benefits of Functional Foods, Nutraceuticals, and Dietary Supplements (3 cr.); FST 628 Flavor Chemistry; and FST 641 Processing Wheat and other Small Grains: A Molecular View. One barrier to developing additional graduate level elective courses is potential low class enrollments, depending on the number of students in the program at the time in a particular area of specialty. The department will continue to explore additional offerings of graduate elective courses in the future, and to partner with programs such as Environmental & Molecular Toxicology or Nutrition to attract a broader graduate student enrollment.

12. *Efforts should be made to increase teaching opportunities to graduate students, particularly through increasing the number of Teaching Assistantships. The department should continue to develop graduate teaching assistants for courses with large enrollments. It would seem that MS students could be utilized for some of the graduate teaching assignments. A second year MS student should be capable of picking up some of the TA load, at least for some of the lower level courses. For Ph.D. students who want teaching experience, the Department could consider offering course credit in return for teaching.*

Progress since review: Since summer 2010, a new departmental teaching requirement was instated, which requires both M.S. and Ph.D. graduate students in Food Science & Technology to participate in a structured teaching experience. M.S. students are required to serve as a Teaching Assistant for 2 credits, whereas Ph.D. students are required to serve as a Teaching Assistant for 4 credits. This was initiated by a recommendation from the FST Graduate Committee, following considerable faculty discussion over the period of a year. Key events that drove this decision were two successive 15% cuts in the College’s FY 2009-2011 Experiment Station budget, and a difficult period resulting from this starting in FY 2009, during which all department-funded Teaching Assistantships were permanently eliminated. Assessment of student performance for the new department teaching requirement is by the lead instructor for the course in which the student is participating. The objective of this requirement is to provide students an opportunity to improve their basic knowledge and communication skills within their scientific discipline. Graduate students who have academic career objectives will also be able to document the teaching experience on their transcripts. When FST graduate students serve as a TA, they register for the Teaching Practicum class (FST 509 or 609) and receive course credits with a letter grade. Each student will be observed in their teaching experiences by a Food

Science & Technology faculty member as part of their professional development. All teaching observations will be shared with the student.

13. *The previous Graduate Program Review identified a concern about the lack of consistency in communicating information about the program requirements, particularly the preliminary written exams. Concerns still exist regarding the qualification exam. The purpose and the rationale of this exam were not clear to the review team. The multiple levels of screening and testing of graduate students seem unnecessary. It is suggested some streamlining could take place and not utilize the "optional" exam. The present approach also seems to leave the program open for criticism as arbitrary*

Progress since review: Since the last graduate program review, the preliminary written examination requirement was eliminated for Ph.D. students in the FST graduate program. This preliminary written exam was typically administered after graduate students had completed their coursework, usually in the second year of their program, and often involved development of a research proposal on a topic related to, but different from, their thesis project. The purposes of this previous written exam were to evaluate the student's qualifications as a Ph.D. candidate, to identify deficiencies in the student's training, and to prepare the student for the oral preliminary exam.

After evaluation of the Ph.D. degree requirements by the FST Graduate Committee, it was decided that the purpose for the preliminary written examination was redundant with that of the Ph.D. qualifying examination that was instituted in 2006. The purpose of the qualifying exam is to evaluate a student's qualifications and potential for success in the Ph.D. program. Qualifications include competence in basic and applied sciences, ability to discuss and evaluate scientific research relevant to Food Science, ability to formulate and express ideas, ability to critically evaluate the food science literature, and ability to speculate intelligently. The no more than two-hour exam consists of a student preparing a 15-20 minute PowerPoint presentation critically evaluating a research paper selected by the committee from the relevant literature close to the student's area. The oral presentation is followed by an open-ended discussion and questioning by the committee, which is meant to serve as a catalyst for a broader discussion about how one asks scientific questions, designs experiments, and evaluates data. Therefore, the exam assesses the student's scientific understanding of food science principles and their critical thinking abilities, and does not focus exclusively on the paper. The examination committee consists of two members of the FST Graduate Committee, plus three FST faculty on a rotating basis, excluding the student's major professor. Because of the high amount of service effort and degree of FST specialization required, faculty from other departments do not serve on the FST qualifying exam committees, however they routinely serve on our graduate students' thesis committees. Additional details about the FST qualifying exam are found in the FST Graduate Handbook: <http://oregonstate.edu/dept/foodsci/graduate/Y%20GradHandBook2011-12.pdf>

14. *The previous Graduate Program Review identified that the FST seminar program was of concern. Over the past years no major restructuring has been done. There appear to be no scheduled seminars, and when they do occur, they are not well attended by faculty or students. Both*

students and faculty expressed interest in improving the current seminar status, and this should be given priority attention.

Progress since review: The department has put renewed efforts into offering several FST seminar series. The Fall seminar series include presentations by FST faculty and outside speakers. Since many of our faculty have overlapping interests in Fermentation Science, the Food Science seminars are co-sponsored with the Wine Research Institute. The graduate student seminar series is scheduled during the Winter and Spring quarters (see example schedule for Spring 2011 in Appendix). A change since the review is that all M.S. and Ph.D. students are required to register in FST 507/607 Graduate Seminar for both Winter and Spring term (2 credits required), for which they receive a letter grade. Students enrolled in the seminar class who are not presenting will receive a P/N grade, which is based on attendance (>80% attendance = P grade). Additional details are provided on pages 9 and 15 of the FST Graduate Handbook: <http://oregonstate.edu/dept/foodsci/graduate/Y%20GradHandBook2011-12.pdf>

15. *Graduate students must find a funded lab to undertake research, and there are no rotations within labs and disciplines. This may lead to issues as to exposure of students to the various science and technology techniques and approaches as well as possible personnel conflicts. The Department should consider instituting some form of lab rotation process for graduate students.*

Progress since review: There was considerable discussion about this idea among the department faculty. Whereas from an outsider's perspective a rotation process may make sense, there was a general consensus that the different non-intersecting disciplinary programs (chemistry, microbiology, engineering) within the department preclude this from easily being implemented. In specific instances where the graduate student's research project has a interdisciplinary focus, cross-training is already occurring (for example, between flavor chemistry and dairy processing; or small fruits and horticulture). However, an across-the-board rotation process was viewed as difficult to implement. Many of the research deliverables for commodity-funded projects are on tight scheduling, and student research productivity would be negatively affected in some cases. In other instances, there are large variations in funding among the different research groups in the department, which prevents rotation from happening easily. We will continue to be aware of this opportunity, but at present time don't envision an easy mechanism to implement it as a standard graduate student training practice.

16. *The Department should continue to conduct annual reviews with graduate students. It can help to keep graduate students on track and can serve to "catch" struggling or failing students.*

The FST graduate faculty adhere to this policy as a standard practice. The annual evaluation of graduate students conducted by their major advisor includes an assessment of the student's knowledge in their research area, laboratory proficiency, ability to communicate research results and findings, and overall progress towards completion of their degree.

17. *The Department should continue to conduct surveys of recent graduates, as this provides valuable feedback.*

Progress since review: Surveys of recent graduates and alumni will continue to be performed on a frequent basis. A new development is that exit interviews are being conducted by the department head with graduate students as they leave the program. This has been incorporated as a standard practice as part of the Department's new Graduate Assessment Plan. During the interview, the students will be given opportunity to describe their experiences – good and bad – with the program as well as suggestions for improvements. Student feedback will be used to inform program improvements.

18. *The Department is encouraged to develop a space and equipment utilization plan. Certainly Wiegand Hall is an older building, but attention should be placed on replacing old equipment and obtaining new equipment, such as autoclaves, cold storage units, freezers, and centrifuges.*

Progress since review: The department has developed a detailed space plan in conjunction with University Facilities Services, which denotes the utilization of research laboratory, teaching laboratories, pilot plant and classroom space in Wiegand Hall. Priority space renovation and remodeling plans for Wiegand Hall are currently being prepared in conjunction with a request for coordinated fundraising activities by the College of Agricultural Sciences. Food Science and Animal & Rangeland Science are the two lead departments for this activity. The large bank of eight walk-in coolers and freezers in Wiegand Hall were replaced since the previous review at a cost of \$500,000. These facilities support the graduate research programs in Food Science.

Space utilization plans for the Pilot Creamery and dairy and enology laboratories have also been prepared for those department-related activities which are conducted in space in Withycombe Hall. A major remodeling of the Pilot Creamery and adjacent laboratory space was recently completed.

19. *An area of concern for graduate students involves the lack of a graduate student lounge. As part of the space utilization plan, the Department should consider creating a graduate student lounge separate from the undergraduate student lounge.*

Progress since review: The Department has considered creating a separate graduate student lounge, however there is presently no available space in Wiegand Hall. Additional feedback is there is a strong working relationship between undergraduate students and graduate students in the Department, and this may create additional boundaries which are not currently present. Both our graduate and undergraduate students have common professional interests and participate in Food Science Club activities, and with the Student Association of the Institute of Food Technologists. There is not the typical age/ maturity difference observed in other majors between graduate and undergraduate students, since many of our undergraduate students are transfer students and upperclassmen. Undergraduate students typically take core sciences classes their first two years outside of the department.

APPENDIX

I. Graduate Coursework Student Learning Outcomes

The majority of Food Science & Technology graduate coursework is provided via “slash” courses, that is, courses that are directed to both senior level undergraduate and graduate students. The learning outcomes are differentiated for each.

Core Curriculum Required Courses

MB 440/540 – Food Microbiology

1. Retain specialized language relevant to food microbiology.
2. Demonstrate basic knowledge about food microbiology and food-borne pathogenic microorganisms in general and detailed understanding of important aspects of the role in human disease and food contaminations.
3. Demonstrate understanding of research methods that permits them to read articles from current journals and extract pertinent information and judge the quality of the work described.
4. Retain key concepts relevant to food microbiology and food-borne microbial pathogens.

Additional learning outcomes for graduate students taking FST 540:

5. In addition to the previously described learning outcomes, graduate students will communicate scientific concepts and analytical arguments clearly and concisely, both orally and in writing.

BEE 472/572 – Introduction to Food Process Engineering

Upon completion of the course, students will be able to:

1. Analyze and solve Newtonian and non-Newtonian fluid flow problems.
2. Estimate the thermodynamic properties of process streams.
3. Perform material and energy balances around process units.
4. Calculate heat transfer coefficients of process streams.

Additional learning outcomes for graduate students taking FST 572:

5. Identify funding agency Request-for-Proposals of relevance to the course.
6. Synthesize a coherent proposal including budget.

Pick any two of the following five chemistry courses:

FST 422/522 – Food Chemistry Fundamentals

1. Students will be able to name and describe the chemical structures of the major components of foods (water, proteins, carbohydrates, and lipids) and selected minor components (e.g., pigments, additives, and/or flavor compounds).
2. Students will be able to give a molecular rationalization for the observed physical properties and reactivity of major food components.
3. Students will be able to provide a theoretical explanation for observed extents and rates of reactions that are common to foods.
4. Students will be able to predict how processing conditions are likely to change the reactivity of food components.
5. Students will be able to predict how changes in overall composition are likely to change the reactivity of individual food components.
6. Students will be able, through critical evaluation, to determine approaches that may be used to control the reactivity of those food components that are likely to impact the overall quality of finished products.

Additional learning outcomes for graduate students taking FST 522:

7. Students will be able to critically evaluate original research papers in food chemistry.
8. Students will be able to develop hypotheses, design experiments, and evaluate experimental data pertaining to chemistry-based food phenomena.

FST 423/523 – Food Analysis

1. Students will develop knowledge of representative techniques of macro- and micro-component food analysis. At the conclusion of the course students should be capable of:
 - ◆ naming and describing the general principle of a range of methods available for common analytical problems including nutritional food labeling.
 - ◆ describing in detail the basis and application of methods practiced in laboratory.
 - ◆ demonstrating laboratory proficiency in the application of traditional methods of analysis.
 - ◆ exercising judgment in the selection of a suitable method for specific analytical situations - taking into account sample preparation, necessary analytical equipment/instrumentation, required detection limit, sensitivity and interferences.
2. Students will increase their skills in reading and writing technical papers. The ability to analyze and interpret food analytical data will be demonstrated through a series of laboratory reports throughout the term.

Additional learning outcomes for graduate students taking FST 523:

3. Designing experiments (or an experiment) to solve practical concerns related to foods and agricultural products

FST 425/525 – Food Systems Chemistry

1. Students will be able to give **molecular-level** explanations for observed phenomena related to the major components of foods and beverages: as raw materials, and as they change during processing, storage. Or consumption.
2. Students will be able to predict how processing conditions are likely to change the physical and chemical characteristics of food components.
3. Students will be able to predict how changes in food formulations, raw material composition, or processing conditions are likely to change the characteristics of foods and their components.
4. Students will be able, through critical evaluation, to determine approaches that may be used to control the properties (e.g., color, texture, storage stability) of selected foods.
5. Students will be able to effectively summarize in writing scientific literature addressing complex food systems.
6. Students will be able to constructively critique the writing of peers, and to accept and incorporate feedback in their own writing.

Additional learning outcomes for graduate students taking FST 525:

7. Students will be able to develop hypotheses, design experiments, and evaluate experimental data pertaining to complex food phenomena.
8. Students will be able to critically evaluate original research papers in food chemistry.

FST 628 – Flavor Chemistry

1. Describe the general principles of a range of methods available for flavor isolation and analysis.
2. Exercise judgment in the selection of a suitable methods for flavor isolation and analysis based on the analytical objectives and sample matrix.
3. Describe the principles of flavor interactions with other food components
4. Name the most important aroma compounds in dairy, fruits and wines and describing their contributions to the aroma characteristics.

FST 641 - Processing Wheat and Other Small Grains: A Molecular View

1. Describe the path of wheat, and other small grains, from harvest, through milling and baking or other processing, to storage and consumption.
2. Describe the scientific and technological foundation required of a cereal product researcher or a skilled technical or artisan baker.
3. Describe and discuss:
 - grain structure and anatomy
 - the genetics of wheat grain texture
 - the relationship of wheat grain texture to grain fracture mechanics,

- the basics of dough rheology and the physical chemistry of dough strength and stress relaxation, and the relationship of these phenomena to the craft of bread-making.
 - the influence of selected enzyme technologies on cereal processing, storage, and consumption
 - the influence of starch in bread-making
4. Synthesize the preceding into a coherent whole to be able to compare how differences in raw materials, ingredients, or process affect both intermediate processes and final outcomes.
 5. Describe the chemical and physical phenomenology of the **process** of bread-making, including ingredient effects, pre-ferments, dough mixing, bulk dough fermentation, the importance of dough resting, dough shaping, proofing, the inter-relationships of mixing, bulk fermentation, and proofing times, and the transformation of dough to bread in the oven.
 6. Identify raw material composition required to produce specified end-products.
 7. Demonstrate an understanding of selected structure-function relationships of polymers and their relevance in selected cereal processing and storage operations.
 8. Read and understand scientific literature relevant to the science of milling and baking and demonstrate ability to coherently summarize their findings orally and in writing

FST 607 Seminar *(Students are required to register for two terms):*

1. Winter term: Students will learn methods and approaches for giving effective seminars
2. Spring term: Each PhD student will present a 50-min departmental seminar, on a topic chosen in consultation with their thesis advisor

FST 609 Teaching Practicum *(Students are required to register for four credits):*

Students must be able to demonstrate ability to present labs/lectures, work with individuals in groups or in laboratory, participate in designing specific lab exercises, grading lab reports and/or quizzes, and participating in lab preparation and/or clean-up.

Elective Courses

FST 420/520 – Sensory Evaluation of Food

1. To understand principles of physiology, psychology and measurement upon which methods of sensory testing are based.
2. To gain factual knowledge in sensory evaluation techniques.
3. To apply statistical knowledge in analyzing sensory data.
4. To apply their knowledge to real-world problems in the food and/or consumer product industry and food research.
5. To be able to design and execute a sensory study independently and to effectively communicate the results

Additional learning outcomes for graduate students taking FST 520:

6. Graduate students will conduct a final project related to his or her thesis work. Each student will individually consult with the course instructor about the project before undertaking.

FST 421/521 – Food Law

1. Students will be able to recall major food safety and food labeling laws and regulations and be able to explain their implications.
2. Students will understand and be able to explain the scientific bases of representative food laws and regulations.
3. Students will have a working familiarity with administrative law (rulemaking, enforcement tools, grievance channels, etc.)
4. Students will have the ability to access and work with statutes, regulations, and cases related to food law.
5. Students will be able to recognize and apply the basic analytical thought processes used in legal reasoning.

Additional learning outcomes for graduate students taking FST 521:

6. Students will be able to recognize and explain the government's application of risk analysis in the regulatory management of food safety.
7. Students will be able to use the federal government's evidence-based review system for drawing conclusions as to the validity of food-related health claims.

FST 460/560 – Brewing Science

1. articulate the technological processes and sequences required to malt grain, produce wort and ferment & finish beer
2. identify raw material composition and processing regimes required to produce a desired product
3. design a beer that meets generally acceptable standards
4. troubleshoot production practices when defects appear

Additional learning outcomes for graduate students taking FST 560:

5. identify and analyze 5-10 studies on a topic relevant to course content
6. synthesize a coherent written critique of those studies

FST 461/561 – Brewing Analysis

1. perform analytical measurements on raw materials and finished products for the purpose of assessing their quality
2. interpret analytical data from quality measurements for material specification sheets for the purpose of assessing their quality
3. identify and describe aromatic and flavor impacts and defects in commercial beer
4. This is a Writing Intensive Course (WIC) and has the following additional learning outcomes related to written communication in Fermentation Science:
 - a. develop a written processing and testing regime for producing a specified beer style
 - b. maintain a comprehensive record of laboratory work in a notebook
 - c. write a concise report of the development and analysis of a trial of different brewing variables
 - d. critique scientific writing and incorporate peer and instructor feedback into revisions of their own writing.

Additional learning outcomes for graduate students taking FST 561:

5. research a technical brewing problem, analytical method or beer style
6. lecture undergraduate students on this topic
7. develop a laboratory exercise on this topic
8. write a technical report in journal manuscript form

FST 466 – Wine Production Principles

1. Understand, apply, and analyze the principles of wine production, encompassing the varietal and stylistic variations commonly encountered in modern wine production facilities.
2. Be knowledgeable in the biochemistry, chemistry and microbiology of all aspects of wine production, including stages from berry development through fermentation, bottling and aging. Be able to apply this knowledge if employed in a commercial wine operation.

FST 467/567 – Wine Production, Analysis, and Sensory Evaluation

1. All students will be able to:
 - a. Produce red and white wine
 - b. Understand the principles of wine sensory evaluation
 - c. Have the ability to identify and name wine aromas and wine defects
 - d. Determine the chemical and microbial condition of musts and wines
 - e. Describe the influence of various wine production practices on the chemical and sensory composition of wines

Additional learning outcomes for graduate students taking FST 567:

2. Design and undertake an additional project in the area of wine chemistry, microbiology, or sensory that utilizes and expands on material presented in class.
3. Critically evaluate two assigned scientific articles in the following way:
 - a. Critically evaluate the claims made in the two papers by first determining what the claims were
 - b. Identifying the specific experiments that provide the data used as evidence to support those claims
 - c. Evaluate the evidence for each claim and discuss validity of the claims given the evidence

FST 479/579 – Fermentation Microbiology

1. Be able to correlate defects or alterations in microbial metabolism with overproduction of metabolites used as food ingredients.
2. With respect to specific fermented foods and beverages, be able to rationalize how and why the process of fermentation results in major changes to raw agricultural products.

Additional learning outcomes for graduate students taking FST 579:

1. Be able to write a critical evaluation of the claims of an assigned scientific article.
2. Teach class about a fermented food or beverage or food ingredient not covered by instructor in a 15-min oral presentation given in groups of 2 or 3 students.

FST 490/590 – Food Processing Calculations

7. Explain in technical and lay terms the fundamental principles of thermal processing, freezing, drying, intermediate moisture technology and high pressure processing.
8. Explain in technical and lay terms how these technologies depend on engineering properties that are intrinsic to foods (e.g., thermal conductivity, thermal diffusivity, moisture monolayer values, pH, a_w , etc.) and operational parameters (e.g., retort temperature, processing time, etc.) to produce foods that are safe, profitable and meet the quality expectations of the consumer.
9. Communicate effectively to other processors, consumers and regulatory officers the benefits and limits of each food processing technology covered in this course.
10. Use quantitative predictive models in process and product development supported by Excel spreadsheets for each food processing technology covered in this course.
11. Use critical thinking to identify solutions to product safety and quality problems.

Additional learning outcomes for graduate students taking FST 590:

12. Prepare a mini-lecture on a topic not covered in class.
13. Prepare a written critical review on a topic not covered in class.

FST 491/591 – Food Processing Calculations Laboratory

1. Identify key pieces of equipment for food processing and the utilities (steam, processing water, compressed air, etc.), and the temperature and flow control devices required for their operation.
2. Explain in technical and lay terms the operational principles of food processing.
3. Communicate to consumers and regulatory officers the benefits and limits of processing technologies.
4. Use Excel spreadsheets to implement quantitative predictive models in process and product development.
5. Use critical thinking and Excel spreadsheets to identify solutions to product safety and quality problems.

Additional learning outcomes for graduate students taking FST 591:

6. Design, execute and analyze experiments to validate a process using engineering models.
7. Synthesize predictive model calculations and experimental validation data into an oral group presentation.

FST 495/595 – Food Packaging

1. Identify current and future raw materials for use in food packaging
2. Identify major conversion technologies transforming a raw material into a packaging solution

3. Explain in technical and lay terms the differences of the conversion technologies so as to be able to make recommendations for the selection of a technology for a given product
4. Assess the impact of the key properties on the functional properties for each raw material used for packaging (e.g., impact of the fiber length on the mechanical properties of paper, effect of hydrophobic/hydrophilic nature of polymers on the moisture and gas permeability of plastic films)
5. Use critical thinking to identify packaging solutions to product safety and quality problems that are also attractive to consumers
6. Communicate effectively to consumers and regulatory officers the benefits and limits of packaging technologies with a particular emphasis on safety and environmental impact
7. Understand the role of packaging as the communication interface between producers and consumers

FST 511/NFM 511 - Health Benefits of Functional Foods, Nutraceuticals and Dietary Supplements

1. The student will be able to recognize the structures of the major bioactive food constituents that are being incorporated into functional foods. Know their sources, solubility properties, stabilities, and how they are absorbed and metabolized.
2. The student will be able to critically evaluate the trade literature as to the scientific validity of marketing claims.
3. The student will be able to recognize functional food products that are nutritionally logical, technically feasible, and that also are in compliance with FDA regulatory guidelines.
4. The student will be able to understand the differences between a dietary supplement and a functional food/nutraceutical, and the labeling/marketing around these substances.
5. The student will be able to become aware of specific research areas within functional foods, nutraceuticals, and dietary supplements

II. Food Science Graduate Seminar Schedule – Spring 2011

| Wk | Date | Title | Speaker |
|----|--------|---|--------------------------------|
| 1 | Mar 29 | INTRODUCTION | |
| 2 | Apr 5 | The Effects of Ethanol on the Absorption of Volatile Sulfur Compounds in Wine on SPME Fiber | Peter Davis |
| 3 | Apr 12 | NO SEMINAR | |
| 4 | Apr 19 | Traceability for Specialty Crops / Methods for Reducing <i>Vibrio vulnificus</i> in Raw Oysters and Seafood Safety | Lisa Weller/
Jing Mou |
| 5 | Apr 26 | Fluid Milk Shelf Life in Oregon: An Overview of Fluid Milk Quality | Liam Wustenberg |
| 6 | May 3 | Characteristics of Deacetylation and Depolymerization of β -chitin from Jumbo Squid (<i>Dosidicus gigas</i>) Pens | Joo-Yeoun Jung |
| 7 | May 10 | Analysis of Hop-derived Terpenes Using Headspace SPME and GC/FID | Peter Wolfe |
| 8 | May 17 | The Impact of Malolactic Fermentation on Red Wine Color and Color Stability | Tresider Burns |
| 9 | May 24 | The impact of taste and retronasal odor on vegetable liking | Arthi Padmanabhan |
| 10 | May 31 | Effect of Alkaline Processing on Lignocellulosic Reactivity | Supaporn
Sophonputtanaphoca |

Carolyn,

I asked Dr. Nama Kang to chair a committee to provide feedback on your proposal for the MAT at Cascades. They took a very thorough look at your plans and reflection on the relationship of an MAT and MS degrees. I would be please to answer any questions you have. But I urge you to contact Nama directly related to her committee's thinking.

Subject: Cascade MAT feedback

Larry,

We had a productive meeting this morning regarding the Cascade MAT program. We came up with the following recommendations:

1. We suggest that the MAT program runs as one program with four tracks including science and math education.
2. As one program, the MAT could use the current courses including pre-requisites that all students in the four tracks can take together.
3. Each track can be differentiated in the following ways: (1) taking two subject-specific pedagogy courses and (2) 9 credit content courses.

The suggestions are based on two main considerations: (a) differentiations between MAT and MS and (b) resources on Cascade campus. We believe that the differentiation between the MAT and MS would also help NCATE and TSPC.

Karen strongly recommended for the Cascade to use Studio classes in Bend.

Hope this helps.

Nama

Extend from OSU-Main to OSU-Cascades

MAT: Integrated Science Education Area of Concentration
MAT: Advanced Mathematics Education Area of Concentration

Oregon State University
College of Education and OSU-Cascades
CPS Tracking #83047
December 2011

1. Program Description

a. Program title, level:

- This proposal seeks to extend the Master of Arts in Teaching (MAT) in Integrated Science Education and the MAT in Advanced Mathematics Education from OSU-Main to the OSU-Cascades branch campus. OSU-Cascades has previously been granted approval to offer the MAT in Language Arts Education (that includes the MAT in Social Science Education) for those students seeking licensure to teach at the middle and high school grade levels.
- *CIP #s* : **131311 – Teaching: Advanced Mathematics Education**
131316 – Teaching: Integrated Science Education

Table 1: Classification of Instructional Programs (CIP) Numbers:

CIP #: **131311**

Title: Mathematics Teacher Education.

Definition: A program that prepares individuals to teach mathematics programs at various educational levels.

CIP #: **131316**

Title: Science Teacher Education/General Science Teacher Education.

Definition: A program that prepares individuals to teach general science programs, or a combination of the biological and physical science subject matter areas, at various educational levels.

(Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.)

b. OSU Main campus department and school/college under which the program is offered:

- Department of Teacher and Counselor Education, College of Education

c. Who will be the administrators of the OSU-Cascades program?

- Marla Hacker, Dean of Academic Programs
- Lawrence Flick, Dean of the College of Education
- Carolyn Platt, Program Lead, MAT

d. Briefly describe the academic program, and provide a program degree audit sheet that lists all courses (including number of credits) and indicate how each course will be offered at OSU-Cascades [resident course {COCC, OSU} distance education, web, etc.].

Table 2: Proposal Summary: MAT in Integrated Science Education and MAT in Advanced Mathematics Education

NEW

- *Degrees:* **MAT in Integrated Science Education (CIP #: 131316)**
MAT in Advanced Mathematics Education (CIP #: 131311)
- *Academic Units:* **Department of Teacher and Counselor Education,
College of Education and OSU-Cascades**
- *Course Designators:* **TCE and SED (existing)**
- *Proposed Effective Term:* **Summer Term 2012 (Banner: 201300)**

- The academic program is the OSU Master of Arts in Teaching offered through the College of Education's Professional Teacher Education Program. Currently OSU-Cascades, by MOU approval, offers the MAT in Language Arts Education for pre-service teachers who wish to teach at the secondary level (5th-12th grades). This program (which includes course work, clinical experience and national exams) complies with the licensure standards and requirements of the Oregon Teacher Standards and Practices Commission (TSPC) to teach language arts or social studies upon successful completion of the degree program. Students receive an Oregon Initial 1 teaching license in addition to the Masters' degree.

The intent of this proposal is to extend the current MAT degree in Integrated Science Education and MAT in Advanced Mathematics Education, housed at OSU-main campus, to the OSU-Cascades campus for students who wish to teach middle and high school math or science. The degree name would be Master of Arts in Teaching in either Integrated Science Education or Advanced Mathematics Education, depending on the concentration of courses, the student teaching experience, and the national exams the student completes.

The original OUS approval for OSU to offer an MAT included the science and math tracks. The MAT degree has since extended to the Cascades campus in the form of an

MAT in Language Arts Education and Corvallis now offers a Masters in Science Education (MS) and a Masters in Mathematics Education (MS). Faculty in Corvallis' Science and Math Education department (SMED) and the College of Education reviewed this MAT MOU in relation to the MS degree awarded on main campus and offered the following recommendations:

- 1) That the MAT program runs as one program with areas of concentration (endorsements-- language arts, social studies, science and math);*
- 2) That all students take several of the current MAT educational theory and pedagogical courses together; and*
- 3) That each area of concentration (endorsement for licensure) be differentiated in the following ways: (1) taking subject specific pedagogy courses (language arts, math or science education) and (2) graduate level content courses (English, math, science) in support of the specific MAT degree program.*

The faculty goes on to state, "These suggestions are based on two main considerations: (a) differentiations between MAT and MS; and (b) resources on the OSU-Cascades campus. We believe that the differentiation between the MAT and MS [degrees] would also help NCATE [our national program accreditation body] and TSPC." (Dr. Namhwa Kang, email correspondence to Dean Flick, June 7, 2011)

The MAT degree is generally considered to be a pre-service degree that requires education classes in order to meet state licensure requirements, and emphasizes advanced course work in a specific academic discipline to enhance one's knowledge in that subject area. Furthermore, it focuses on educating the candidate in practical teaching skills for use as a teacher, as opposed to focusing on performing research in the educational field, which is traditionally the MS degree. The MAT degree is often advantageous to middle school and secondary school teachers because it allows them to focus on subject area knowledge in their undergraduate program and then acquire pedagogical skills in their graduate studies.

The original MAT approved for OSU in 1991 consisted of a minimum of 48 graduate credits distributed as follows:

- ♦ Six hours of graduate professional core courses in Education Foundations,
- ♦ Eighteen to twenty one hours of graduate professional course work in the teaching specialty,
- ♦ Fifteen to eighteen hours of graduate professional internship, and
- ♦ Nine hours of graduate electives in subject matter specialization.

This proposal calls for a minimum of 68 graduate credit hours, which brings the MAT in Integrated Science Education and the MAT in Advanced Mathematics Education in line with the current MAT in Language Arts Education.

The MOU for the MAT to be offered at the OSU-Cascades campus (approved in 2009) changed the required number of graduate elective credits in subject matter specialization from nine to "between 6 and 8 hours", and the current MAT with the Language Arts area of concentration follows that requirement.

The MAT for the preparation of secondary teachers is designed “considering empirical research on teaching. Students completing the program will have expert knowledge both in their academic fields and in pedagogical knowledge....Acquisition of the pedagogical content knowledge, gained by teaching experience, requires not only the depth and breadth in each of the knowledge bases, but also in a heavily field-based program stressing reflection upon subject matter, instructional decision and their consequences in the classroom.” (Proposal for the Initiation of a Master of Arts in Teaching, Oregon State University College of Education Extended OSSHE Format for Category 1 Proposals, 1990).

In addition to the course requirements for MAT degree completion, students must submit a Professional Portfolio and sit for an oral examination in the final term of enrollment. These requirements are coordinated through TCE 524, the capstone course entitled “Teacher as a Reflective Practitioner”. Graduate School approved faculty from TCE sit on the orals and score the portfolios, and the addition of mathematics and science education student orals will not require any further staffing for the oral exams.

The target date for beginning enrollment for this academic program is June 25, 2012. The MAT program at OSU-Cascades is based on a cohort model in which all members begin the program coursework in the summer term together. Approval for the extension of this MAT will need to occur by the end of February 2012 in order to accept applications for admission and obtain student teaching placements, which begin in the late summer.

The existing MAT in Language Arts Education degree at OSU-Cascades operates in full cooperation with the Corvallis faculty and extending the graduate education degree to an MAT in Integrated Science Education and an MAT in Advanced Mathematics Education builds upon an existing focus on Science, Technology, Engineering and Mathematics (STEM) education at OSU. OSU-Cascades has a strong core MAT in place, one that is recognized by school districts throughout Oregon and, increasingly, the nation, as well as by the Teacher Standards and Practices Commission (TSPC)-- the state educators’ licensing board. The Central Oregon school districts have asked us to move forward with the extension of the MAT to science and mathematics as quickly as possible, as they are currently employing temporary teachers with emergency licenses who have no pedagogical training in the teaching of these subjects.

Audit sheets for the MAT in Integrated Science Education and the MAT in Advanced Mathematics Education appear below. Each area of concentration would build upon the approved graduate professional core and professional internship offerings around which the OSU-Cascades MAT in Language Arts Education is centered. Students enrolled in the science or mathematics areas of concentration would add the appropriate math and science methods coursework as well as graduate level content work.

All courses would be offered at OSU-Cascades by Graduate School approved faculty. OSU-Cascades has faculty in place to teach the Professional Core classes, the internship course work, and staff the oral examinations. OSU-Cascades will hire a full-time, tenure track faculty member to teach six of the SED courses, plus adjuncts who are teachers of

science and math in the secondary schools for the additional six courses to be taught in SED. The graduate level subject specific course work in math or science will be taught by the math and science faculty already in place at OSU-Cascades.

Graduate Professional Core Classes in Education Foundations

TCE 512 (3): Psychology of Adolescents
TCE 520 (3): Classroom Management and Discipline
TCE 524 (2): Teacher as a Reflective Practitioner (Capstone)
TCE 528 (3): Using Assessment to Improve Instruction
TCE 545 (3): Planning Curriculum Aligned to Standards
TCE 549 (3): Teaching in a Differentiated and Diverse Classroom
TCE 599 (1): Professional Formation

Math or Science Graduate Content Coursework

Graduate work at the 500 level will support the specific MAT area of concentration and will meet the approval from the corresponding Corvallis faculty.

CREDITS: 6-8

e. Indicate in what ways the proposed program at OSU-Cascades will differ from the OSU main campus program:

The proposed design of the MAT in Integrated Science Education and in Advanced Mathematics Education follows the approved MAT for OSU and OSU-Cascades. The specific program minimum

requirements listed in 1.d. for the degree audit closely parallel those of the original CAT 1. At the same time, the intended specific course selections to fulfill the graduate professional course work in the teaching specialty closely parallel the course work in the MS on the main campus. OSU main campus has chosen to offer the MS degree in Science or Mathematics Education because of its organizational association with the College of Science. OSU approved the MAT degree being offered at OSU-Cascades seven years ago with the MAT in elementary education and three years ago with the MAT in Language Arts Education (that includes social science) for the secondary level authorization in teaching. The MAT at Cascades is “already crafted as a very high quality program in concert with the Corvallis MS [degree]” (Dean Larry Flick, email correspondence, October 21, 2011 to Dr. Platt) and the addition of the science and mathematics areas of concentration will assure that the nature of the master’s level Professional Teacher Education Licensure and Masters Programs will extend the teaching practices, content and research to OSU-Cascades’ campus.

f. List any special requirements or pre-requisites for admission to the program at OSU-Cascades:

Students must demonstrate the following criteria:

- ♦ Completed bachelor’s degree from an accredited higher education institution (prior to enrollment).
- ♦ Minimum GPA of 3.0 in the last 90 quarter hours of graded undergraduate work and all work completed thereafter.
- ♦ Competence in science or math demonstrated through the completion of appropriate course content work.
- ♦ 60 hours of volunteer and observation experience with middle and high school students, with at least 30 hours in the public school classroom.
- ♦ Effective oral and written communication.
- ♦ Completion of TCE 560 Research in Learning (or equivalent) and TCE 499 Civil Rights in Education.
- ♦ Satisfactory answers to “good conduct” questions as required by the Oregon Teacher Standards and Practices Commission (TSPC)
- ♦ Sincere and appropriate desire to become a public school teacher and an understanding of the demands placed on a teacher.
- ♦ Passing results on: (1) either the EAS, California Basic Education Skills Test (CBEST) or all three subtests of the PRAXIS PPST, (2) the ORELA multiple subjects’ exam, (3) the ORELA Civil Rights exam, and (4) the NES content exams required for licensure in the endorsement area (language arts, social studies, math or sciences).

g. Is there an accrediting agency or professional society that has established standards for this program? If so, is the program currently accredited? If accredited, what steps would be needed to ensure that accreditation is maintained vis-à-vis the OSU-Cascades offering? Does the accrediting body require notification of the program offering at a new location?

The OSU-Cascades MAT programs are nationally accredited through the National Council for Accreditation of Teacher Education (NCATE) as well as regionally accredited through the Northwest Commission on Colleges and Universities (NWCCU). Additionally, OSU-Cascades is approved to offer professional teacher licensure programs by the Oregon Teacher Standards and Practices Commission (TSPC).

2. Demand

a. List any similar programs offered at the proposed or nearby location.

OSU-Cascades currently offers an MAT in Elementary Education as well as an MAT in Language Arts Education. Other universities such as George Fox University and Eastern Oregon University offer the MAT in a hybrid (distance and limited location) model. There is consistent and very strong support for OSU resident graduate programs in education for Central Oregon by regional superintendents, teachers, school boards and community patrons.

b. Provide evidence of need for the program at the new locations.

The extension of the MAT in Integrated Science Education and in Advanced Mathematics Education is central to President Ray's vision for the OSU-Cascades' campus and Central Oregon region as a strong presence in STEM (Science, Technology, Engineering, and Math) practice and research. The education of excellent math and science teachers in the middle and high school levels is a well-documented national need. The superintendents of our six Central Oregon school districts have asked OSU-Cascades to extend the MAT to science and math to fulfill the vacancies for teachers in these subject areas. Currently, local school districts have had to hire some math and science teachers without any pedagogical background via provisional/emergency licenses.

c. Estimate enrollment and number of graduates over the next five years. Will any enrollment limitation be imposed? If so, how will prospective students to be enrolled be selected?

OSU-Cascades plans to award between 10 and 20 MAT in Integrated Science Education and MAT Advanced Mathematics Education degrees per year over the next five years:

Year 2012: 10 degrees
Year 2013: 15 degrees
Year 2014: 15 degrees
Year 2015: 20 degrees
Year 2016: 20 degrees

OSU-Cascades utilizes a Cohort model, with the students commencing their program in the summer term. Enrollment limitation would be subject to funding, staffing requirements prescribed by NCATE, and student teaching placement opportunities. Prospective students will be selected through the criteria outlined above with particular attention paid to academic ability, depth of knowledge in content area, experience with middle and high school students, and dispositional characteristics that indicate the likelihood of professional success in the classroom.

3. Personnel

a. List the names and qualifications of faculty (regular and adjunct) who will be involved in delivering the program at OSU-Cascades, and their tentative teaching assignments. Will new faculty be needed?

OSU-Cascades will hire one full-time, tenure track, faculty member with STEM Education background who will serve as course instructor, advisor, and act as liaison with STEM research on the main campus. This person will be expected to teach six courses. (This is the teaching load specified for tenure track, full time faculty at OSU-Cascades.) In addition, we will continue our instructor model that works closely with the Central Oregon school districts to identify talented practitioners to teach as adjuncts for the

remaining six methods courses. We will also nominate to the Graduate School current OSU-Cascades science and math faculty to teach the graduate level content courses once these people are determined.

Adjunct instructors at OSU-Cascades are paid per course they teach. In addition to the contracted amount for the course, OSU-Cascades pays into the PERS or other benefit program in which the instructor is invested (a percentage amount based on the number of courses being taught).

Current faculty who will continue to teach core professional courses in the MAT program include:

| | |
|-------------------------|---|
| Jay Casbon, Ed.D.: | TCE 499 Civil Rights in Education
TCE 560 Research in Learning |
| Dennis Lynn, Ph.D.: | TCE 512 Psychology of the Adolescent |
| Phil Hoffman, Ph.D.: | TCE 520 Classroom Management and Discipline |
| Carolyn Platt, Ph.D. | TCE 524 Teacher as a Reflective Practitioner
TCE 560 Research in Learning
TCE 599 Professional Formation |
| Cate Denson Hill, MAT: | TCE 549 Teaching in a Differentiated and Diverse Classroom |
| Laura Sugden, MAT: | TCE 545 Planning Curriculum Aligned to Standards
TCE 525 Curriculum Implementation & Instructional Strategies
TCE 528 Using Assessment to Improve Instruction |
| Ann Owings Allred, MAT: | TCE 509 Practicum-First Authorization
TCE 510 Internship-Second Authorization |

New Hires: One new, full time, tenure track, SMED faculty member will be hired to teach six of the following courses, as well as adjuncts to teach the remaining six courses, to be approved by the Graduate School:

SED 511 (3): Analysis of Classrooms I
SED 512 (3): Technology Foundations for Teaching Mathematics and Science
SED 513 or 514 (3): Inquiry in Science and Science Education OR Inquiry in Mathematics and Mathematics Education
SED 515 (3): Analysis of Classrooms II
SED 518 (3): Analysis of Classrooms III
SED 552 or SED 553 (3): Mathematics Methods: Practicum 1 OR Science Methods: Practicum I
SED 573 or 574 (4): Science Pedagogy and Technology 1 OR Mathematics Pedagogy and Technology I
SED 576 or 577 (4): Mathematics Pedagogy and Technology II OR Science Pedagogy and Technology

b. Estimate the number and type of support staff needed to provide the program at the new location.

OSU-Cascades has in place the support staff needed for this program and they include:

Placement Coordinator: 1 (will move from .49 to .75 FTE) This person secures and coordinates the student teaching placements.

Licensure and Administrative Coordinator: 1 (already 1.0 FTE) This person coordinates all testing and licensing requirements, as well as annual state and national accreditation reports.

Educational Librarian: 1 (already at 1.0 FTE)

We will need to hire two Student Teacher Evaluators, one who is licensed to teach in Oregon and endorsed in mathematics, and one who is licensed to teach in Oregon and endorsed in science, who will work on a part-time basis, with the amount of appointment to be dependent upon the number of enrolled students in student teaching practicums and internships. These field evaluators are paid on a formula based on number of students they oversee, number of visits made to the site, and the distance to the site. There are fees attached to the student teaching internship courses (TCE 509 and 510) to cover these costs.

The new and expanded hires are reflected in the budget submitted with this proposal. Please see the budget notes as well for clarification.

4. Other Resources

a. Describe facilities necessary to offer the program at the new locations.

Classroom and support facilities are in place in the OSU-Cascades building (Cascades Hall) and will be available in the new building for OSU-Cascades into which the graduate programs will move in early June. Laboratory sections of the science courses will meet in middle school and high school labs in the Bend LaPine schools, as well as in the laboratory classroom in Cascades Hall. All classrooms are multi-media equipped. The educational library is incorporated into the Central Oregon Community College/OSU-Cascades Library.

b. Indicate how library needs will be met.

Library Support for the MAT in Advanced Mathematics and MAT in Integrated Science Education Areas of Concentration on OSU-Cascades Campus

OSU-Cascades' library services offers the collections and services described below in support of the proposed MAT in Advanced Mathematics and MAT in Integrated Science Education Concentrations at the OSU-Cascades Campus. Portions of the curriculum for this program are identical to the existing MAT Secondary education programs and similar to existing programs in Corvallis so OSU Libraries already provides much of the support the program is expected to need.

Periodicals

OSU Libraries provides access to the article databases essential for education research including *ERIC*, *Education Research Complete*, and *PsycINFO*. In addition to the many titles available electronically through these subscriptions, the Libraries also subscribe to core journals publishing research in Education and related fields. Periodicals are purchased electronically whenever possible, providing equal access to students and faculty regardless of campus.

Currently the Valley Library receives print subscriptions to the National Council of Teachers of Mathematics publications. Of particular interest to the secondary program will be *The Mathematics Teacher* and *Mathematics Teaching in the Middle School*. Articles from these print journals are available to Cascades students and faculty through the Scan and Deliver program which sends scanned copies of materials held by the Valley Library to requestors' email, generally within 24 hours. If Cascades decides immediate access to these titles is crucial, the titles are available to institutions for \$104 per year (each.) An additional NCTM publication, *The Journal of Research in Mathematics Education* is also available via Scan and Deliver or Cascades could add a print subscription for \$161 annually.

The Libraries also subscribe to the National Science Teacher Association titles *Science Scope* and *The Science Teacher*. These are available electronically back to around 2005 and older volumes are held at the Valley Library and available to OSU-Cascades faculty and students through the Scan and Deliver service.

Monographs and Media

OSU-Cascades currently maintains a strong local collection of education materials purchased to complement the collection at Valley Library. We anticipate some additional need for materials that specifically cover mathematics and science education theory and pedagogy at the middle and high school level. An additional \$500 per year for at least the first two years would allow the library to purchase, in consultation with the faculty, any needed core materials.

OSU Libraries also participate in Summit, a consortium of academic libraries in Oregon, Washington, and now Idaho. This participation gives OSU-Cascades faculty and students access to the collections (both books and videos) of more than 35 additional libraries, twenty of which also offer masters-level education programs.

c. Indicate how students at the new location will receive student services (e.g. academic advising):

OSU-Cascades has a complete student services and academic support system in place to serve its students, including academic advisors, counselors, career services and student activities. The in-program faculty in TCE does the bulk of advising for MAT students. The Licensure Coordinator assists in advising on licensure issues.

5. Budgetary Impact

a. Indicate the estimated cost of the program for the first four years of its operation. Use the Budget Outline and Budget Outline instructions forms on the Forms and Guidelines website.)

OSU-Cascades funds its program costs, as well as all administrative costs, through the tuition revenue generated by FTE enrollment. There is complete separation of funds and budget from OSU main campus. The largest expense to extend the two MAT areas of concentration will center on hiring faculty with science and math education experience.

The library will need to acquire some materials specific to math and science education. There is an annual library budget in place for TCE that will go towards supporting these purchases. See library needs assessment section.

Marketing of the science/math areas of concentration, business cards, and office set up for the new faculty hire will be minimal and therefore will impact the OSU-Cascades' budget only slightly. (See the attached budget pages.) OSU-Cascades markets the graduate programs (MAT in Language Arts Education and Counseling) together through printed materials, media and information sessions. A budget already exists for this effort. The majority of applicants use the OSU-Cascades' website and this will be updated to reflect the extension of the MAT in Advanced Mathematics Education and the MAT in Integrated Science Education once they are approved. OSU-Cascades will announce the availability of the new programs (once approved) to our school districts through a monthly meeting of Superintendents which Becky Johnson, Vice President for OSU-Cascades, attends.

Please see Budget Attachments for specific anticipated costs for the extension of the MAT to science and mathematics.

b. If the program will be financed from existing resources:

1. Describe what the budgetary unit will be doing that is not currently done in terms of additional activities.

See 5.a. above plus appendices.

2. State what these new activities will cost and whether financed or staffed by shifting of assignments within the budgetary unit or reallocation of resources within the institution. State which resources will be moved and how this will affect those programs losing resources.

See 5.a. above plus appendices.

6. Draft of the MOU—the following template is required.

a. The program title and limitations (if any):

M.A.T. in Integrated Science Education and M.A.T. in Advanced Mathematics Education

b. What are the responsibilities of the OSU-Cascades campus administration, faculty and staff in order for the program to be delivered at OSU-Cascades?

Marla Hacker, Dean of Academic Programs and Dennis Lynn, Director of Graduate Programs, will oversee the administration, faculty and staff involved in this extension. Enrollment Management and Student Affairs already serve OSU-Cascades students. Carolyn Platt, as program lead for the MAT, will provide the program supervision and administration.

c. What are the responsibilities of the OSU-Main campus administration, faculty and staff in order for the program to be delivered at OSU-Cascades?

The College of Education will continue to be the academic home for the Teacher and Counselor Education program at OSU-Cascades. The MAT is tightly connected with the governance structure of OSU's College of Education and is represented on the Dean's Council. Programmatic decisions, curriculum, and faculty hiring are coordinated and approved in consultation with the Dean of the College of Education or his designee, along with the Vice President and Academic Dean on the OSU-Cascades campus and the Graduate School on the main campus.

d. Provide documentation of discussion of the proposal for the new program with the faculty of the sponsoring department on the Corvallis campus.

The extension of the MAT to include Integrated Science Education and Advanced Mathematics Education at OSU-Cascades has the full support of the OSU College of Education faculty and

administrators. See attached emails between OSU-Cascades and Corvallis departments and faculty, as well support letters from the Bend LaPine School District, OSU-Cascades largest school district partner.

Executive Summary for the MOU Proposal to extend from OSU-main campus to OSU-Cascades campus:

MAT in Integrated Science Education (CIP: 131316)
MAT in Advanced Mathematics Education (CIP: 131311)

This MOU seeks to extend the Master of Arts in Teaching (MAT) in Integrated Science Education and Master of Arts in Teaching (MAT) in Advanced Mathematics Education, housed at OSU-main campus, to the OSU-Cascades campus for students who wish to teach middle and high school mathematics or science. Oregon State University extended the MAT in Language Arts Education to OSU-Cascades three years ago. This move will build upon the MAT areas of concentration to be offered at OSU-Cascades.

MOU Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one: MOU to extend program from OSU to OSU-CASCADES

Full Proposal

- ☐ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☐ Reorganization -- moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Title of Proposal:

MAT in Integrated Science Education
MAT in Advanced Mathematics Education

Effective Date:

2012
2012

Department/Program:

Teacher and Counselor Education

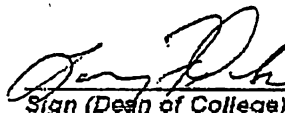

College:

College of Education

I certify that the above proposal has been reviewed and approved by the appropriate Department and College committees:

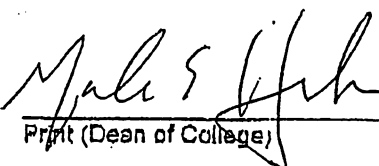

Sign (Dept Chair/Head; Director)

12/9/11
Date

Sign (Dean of College)

12/12/11
Date

Print (Department Chair/Head; Director)

Print (Dean of College)

The BFP group approved proposal 83047 today. It notes a minor error in the budget. The faculty salaries for years 2 and 3 are 107778 and 107796, which does not reflect an appropriate inflation factor.

Proposal for Graduate Options

Proposal.

To create a Graduate Option that would appear on the official academic record and transcript for a student. The definition of an option at the graduate level is as follows:

A graduate option consists of a minimum of 12 designated quarter credits of related coursework, comprised of coursework offered by the sponsoring unit as well as by other academic units. The option may be comprised of specific courses, completion of a designated number of credits from a longer list of alternative courses, or a combination of specific and alternative course lists. Approved options may be added to a graduate Program of Study, and approved by the faculty advisor(s) and the director of the sponsoring unit. When the unit submits the final examination card to validate awarding of the major to the Graduate School, the unit will also validate that the requirements of the option have been completed.

To create, change, or drop an option, departments submit a Category II proposal. The proposal must contain a list of courses as they will appear in the OSU Catalog and documented liaison with all departments involved. The proposal must also list the graduate faculty and appropriate facilities associated with delivery of the option (necessary facilities and faculty expertise to support the option must be available). Upon approval by the Graduate Council and the Curriculum Council, the option will appear in the OSU catalog and an option code will be created for use within the Banner system.

Concept.

The graduate-level option would be similar to the options that are currently available at the undergraduate level. The options will facilitate tracking and degree accountability of graduate students pursuing specialized areas of study within a graduate degree program. The options differ from an Area of Concentration (see background below) in that the designated students will be assigned a specific option code within the Banner system and the option will appear on the academic transcript. The use of Banner option codes necessitates a restriction of graduate options to recurring areas of study.

Implementation Considerations.

Oversight over the faculty who participate in a particular option (teaching courses or serving on committees) will be left to the director of the degree program. The Graduate School will verify that all faculty listed on the program plan are associated with the degree program. The director of the degree program is responsible for validating that coursework on the program plan are adequate to satisfy option requirements and that the faculty committee is comprised of appropriate faculty academically qualified to represent the option.

Declaration of an option is not required. The decision to declare an option should be made by the individual student and their faculty committee.

Conversion from an “area of concentration” to an option is not required. Degree programs may contain both areas of concentration and options.

Proposed change to current OSU Policy: <http://oregonstate.edu/ap/curriculum/policies.html#40>

Options

Options are for students of a specific major. An option is one of several distinct variants of course aggregations within a major that focus on an area of study designed to provide a student with specialized knowledge, competence, and skills while sharing a minimum core of courses.

Options consist of a minimum of 21 designated quarter credits of related course work, 15 of which must be at the upper-division level.

For an undergraduate option to appear on a student's official academic record and transcript, the student must make application to the Registrar's Office at the same time formal application is made for a degree. The Graduation Audit from the Registrar's Office will list the option as well as the major and degree. This audit is sent to the student's dean for certification of the option at the same time the student is cleared for graduation.

To create, change, or drop an option, departments submit a [Category II proposal](#). Proposals must contain a list of courses as they will appear in the OSU Catalog and documented liaison with all departments involved.

- Courses required for an option may not count towards a minor in the same field of study. Students may not take an option and a minor from the same field of study.
- Options must be approved by all academic units involved.
- Courses may be selected from those offered by the sponsoring unit as well as by other academic units.
- Course substitutions must be approved by the dean of the sponsoring college, who must certify that all requirements are fulfilled.

Proposed change:

Options are for students of a specific major. An option is one of several distinct variants of course aggregations within a major that focus on an area of study designed to provide a student with specialized knowledge, competence, and skills while sharing a minimum core of courses.

An undergraduate option consist of a minimum of 21 designated quarter credits of related course work, 15 of which must be at the upper-division level. For an undergraduate option to appear on a student's official academic record and transcript, the student must make application to the Registrar's Office at the same time formal application is made for a degree. The Graduation Audit from the Registrar's Office will list the option as well as the major and degree. This audit is sent to the student's dean for certification of the option at the same time the student is cleared for graduation.

A graduate option consists of a minimum of 12 designated quarter credits of related coursework, comprised of coursework offered by the sponsoring unit as well as by other academic units. The option may be comprised of specific courses, completion of a designated number of credits from a longer list of alternative courses, or a combination of specific and alternative course lists. Approved options may be added to a graduate Program of Study, and approved by the faculty advisor(s) and the director of the sponsoring unit. When the unit submits the final examination card to validate awarding of the major to the Graduate School, the unit will also validate that the requirements of the option have been completed.

To create, change, or drop an option, departments submit a [Category II proposal](#). Proposals must contain a list of courses as they will appear in the OSU Catalog and documented liaison with all departments involved.

- Courses required for an option may not count towards a minor in the same field of study. Students may not take an option and a minor from the same field of study.
- Options must be approved by all academic units involved.
- Courses may be selected from those offered by the sponsoring unit as well as by other academic units.
- Course substitutions must be approved by the dean of the sponsoring college, who must certify that all requirements are fulfilled.
- For graduate options, the category II proposal must also list the graduate faculty and appropriate facilities associated with delivery of the option (necessary facilities and faculty expertise to support the option must be available).

Background.

Table 1 below shows the minimum credit hours for various degree programs at OSU.

Table 1. Minimum Credit Hours for OSU Degree Programs

| | Major | Minor | Option |
|---------------|---------------|-------|--------|
| Undergraduate | 36 | 27 | 21 |
| Masters | 45 | 15 | 12* |
| Doctorate | 108 beyond UG | 18 | 12* |

* - Proposed

Graduate Area of Concentration:

An area of concentration is a subdivision of a major or minor in which a strong graduate program is available. They may be shown on the student's program of study, but they are not listed on the student's transcript. Areas of concentration are listed in the OSU Catalog.

The Graduate School provides departments instructions for adding/dropping areas of concentration for their graduate major and minor offerings in conjunction with the annual production of the Graduate Catalog. In addition to this annual process, departments may change their areas of concentration at any time without having to do a full curriculum proposal (unless the proposed change would constitute a major shift in the thrust of the program, in which case a more comprehensive curriculum proposal may be required). Any new courses would need to be submitted for approval as [Category II proposals](#).

To change an area of concentration, the graduate department or program should submit a memo to the Associate Dean of the Graduate School specifying:

- the curriculum and faculty associated with the new area,
- how the new area differs from other areas that exist, and
- evidence of appropriate liaison with other programs that may be affected.

If approved by the Graduate School, the changes will appear in the OSU Catalog, and students may use the new area on their programs of study.

Ref: <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/curricular-policies-and-procedures#90>

Graduate Minor:

A graduate minor is an academic area that clearly supports the major. It consists of a group of related courses totaling at least 15 credits in a specific topical area. On a master's or doctoral program, a minor may be:

- an academic area available only as a minor,
- a different major,
- the same major with a different area of concentration,

- an approved major at another institution in the Oregon University System, or
- an integrated minor. An integrated minor consists of a series of cognate courses from two or more areas. These courses must be outside the major area of concentration, with most of the courses being outside the major department. The graduate faculty member representing the integrated minor must be from outside the major department.

Although the courses in a graduate minor may be from more than one academic department, one academic unit/program must be responsible for directing the minor. Necessary facilities and faculty expertise to support the minor must be available. For a graduate minor to appear on a student's official academic record and transcript, the minor must be listed on the student's approved degree program.

To create, change, or drop a graduate minor, departments submit a [Category II proposal](#).

To propose a graduate minor, units without an approved graduate major must include in their proposal:

- Identification of the academic unit/program responsible for the minor.
- Listing of a sufficient number of approved and related graduate course offerings to support the minor, at least 15 credits. Please list courses as they will appear in the OSU Catalog.
- Identification of sufficient faculty expertise and facilities to support the minor.
- Liaison with other academic units must be addressed.

Ref: <http://oregonstate.edu/ap/curriculum/policies.html#38>

Graduate Major.

A graduate major is the area of academic specialization, approved by the State Board of Higher Education, in which the student chooses to qualify for a graduate degree. Upon completion of a graduate degree, the degree awarded and the graduate major are listed on the student's transcript. To create, or change an undergraduate or graduate major or certificate, units must submit a [Category I Proposal](#). An [Abbreviated Category I](#) is necessary to do any of the following:

- Rename a major
- Move responsibility for an academic program
- Merge or split an academic unit
- Terminate a degree, certificate, or academic unit
- Suspend or reactivate a degree, certificate, or academic unit

Ref: <http://oregonstate.edu/ap/curriculum/policies.html#36>

Review – Department of Zoology Oregon State University

7 NOVEMBER 2011

Overall Recommendation

The Department of Zoology has a tradition of leadership in teaching, research, and service; and this Department is thus a ‘point of pride’ for Oregon State University. However, the Department’s ability to maintain and to extend those traditions urgently requires expanded and redirected resources. We recommend:

- that the program (faculty and graduate students) be expanded
- that GTA stipends be increased substantially,
- that the infrastructure be improved and modernized.

Further, ongoing planning for the reorganization and integration of the Department into a School of Life Sciences within the College of Science should proceed in a manner that provides efficiencies and opportunities for collaboration, but does not compromise the high quality of the existing Zoology program.

Executive Summary

We live in *The Century of Biology*, and the various disciplines of the biological sciences have direct environmental, biomedical, and economic impact on Oregon. OSU’s Department of Zoology is a world-class department. It provides exceptional leadership and service to biological education, research, and outreach and thus effectively serves the community, State of Oregon, and Nation. The Department encompasses all levels of biological organization (molecular to evolutionary), and it actively promotes research and teaching that cross and integrate these disciplinary levels. Its goals mesh tightly with the University’s mission. It is central to the University’s and Oregon’s future.

The Department’s success and strong reputation trace directly to its prestigious faculty, who bring broad disciplinary strength in fields such as marine ecology, conservation, evolutionary biology, physiology, and genomics. Recent hires (junior, mid-career) are superb and promise continued leadership, despite pending retirements. Faculty run high-profile programs (PISCO and COMPASS) that have positive ecological and economic impacts on the State and region. Museum

collections (arthropod, amphibians & reptiles, bird, mammal, fish) are important resources for the region and maintain a long commitment to natural organisms; this is especially important given that no state natural history museum serves this function.

The graduate program attracts excellent students, as evidenced by high percentage of fellowship awardees, and generally serves them well, as evidenced by placement in postdoctoral and faculty positions. The undergraduate program in Biology is staffed mainly by Zoology faculty and effectively serves large numbers of students with diverse career trajectories. The graduation rate is equivalent to OSU's graduation rate.

A new Chair has revamped departmental governance. These new approaches are promising.

Primary and conspicuous concerns include the lack of a strategic plan, appallingly low stipends for graduate students, inadequate advising for undergraduates, OSU's inappropriate diversion of grant overhead to subsidize the educational responsibilities of the University, the lack of central planning to modernize research and teaching spaces, and the need of the Department to take a more proactive role in defining its own identity and in directing new hiring initiatives.

Participants and Order of Events

Off-campus participants include **Dr. Margaret Harmon** (ScienceMedia, Inc.), **Dr. Raymond B. Huey** (Professor, Department of Biology, University of Washington), and **Dr. Kenneth P. Sebens** (Director, Friday Harbor Laboratories and Professor of Biology, University of Washington). On-campus participants include **Dr. Gary Beach** (Office of Academic Affairs and International Programs), **Dr. Katharine Field** (Associate Professor, Microbiology, and Director, BioResource Research Interdisciplinary Biosciences Major), **Dr. Theresa Filtz** (Associate Professor, College of Pharmacy), **Dr. Martin Fisk** (Associate Dean, Graduate School), **Dr. Jack Higginbotham** (President, Faculty Senate, Professor of Nuclear Engineering and Radiation Health Physics), and **Dr. Brenda McComb** (Dean, Graduate School).

The Review commenced with a dinner meeting on the evening of 6 November 2011. The full Review team was present. The next day we met sequentially with **Dr. Virginia Weis** (Chair, Department of Zoology), **Dr. Vincent Remcho** (Associate Dean for Research, Graduate Studies & Administration, College of

Science), the chairs of key Program Committees, representative undergraduates and graduates, Zoology faculty, and again with **Chair Weis**. In addition we toured Oregon State Arthropod Collection, several faculty labs, and the Human Anatomy and Physiology teaching labs.

Summary of Areas Needing Support from the School, College, and Provost

- Decouple funding of the research and educational missions. Specifically, educational programs should be funded from the E&G budget, not from research overhead.
- Immediately work with the Department to increase graduate stipends (see below).
- Ensure that funds generated *by faculty efforts* (e.g., summer and e-campus courses, grant-generated returned overhead, building use credits) are available to the Department to foster self-directed initiatives.
- Evaluate and pursue options to renovate Cordley Hall to ensure that needed infrastructural upgrades can support modern research and animal-care requirements, and that instructional laboratories will be sufficient to meet the needs of growing numbers of undergraduates. Begin evaluating the need for a new building, given Cordley's age and condition.
- Develop centralized assessment of educational activities and of successes. In particular, collect post-graduation data (job placement) for BS, MS, and PhD students.
- Continue to work with the Department to support mid-career and spousal hires. OSU and the Department have a strong record here.
- Ensure that endowment income is being used only for its stated purposes and not diverted to centralized programs.

Summary of Areas Needing Support from the Department

Substantially increase graduate stipends and bring them at least to parity with peers in related units. The viability of the graduate program (and the ability to bring in and retain top faculty) is in doubt unless the Department does this.

Solving this problem will probably involve either increased support from the College, or reducing the number of stipends provided, *even if this requires reducing the undergraduate educational mission*. The Department must take the lead here.

Develop a comprehensive and quality strategic plan with particular attention to planning for and leading faculty hiring initiatives.

The Department urgently needs to develop a comprehensive strategic plan that defines its scope, strengths, identity, and mission. The plan should also develop explicit goals and justifications for hiring initiatives (see below). This plan can help the Department to *anticipate* retirements of highly influential senior faculty as well as to foster expansion into emerging disciplines. We encourage annual and targeted retreats that focus discussions on an immediate to decadal time frame, as appropriate.

As part of its strategic plan, Zoology should proactively plan and guide new hiring initiatives rather than passively responding to initiatives developed by the upper administration. Of course, Zoology has prospered from some initiatives (e.g., Dee Denver from the CGBI cluster hire in 2005). Even so, Zoology should take advantage of its national prominence and drive the development of new initiatives for group hires.

Make expansion of the diversity of the faculty and of graduate students an explicit goal of the strategic plan.

As part of its strategic discussions, the Department should consider transitioning into a Biology Department that can better encompass contemporary dimensions of integrated biological research (see below). This will require both development of a clearer mission and identity, and coordination with other departments. It is also desirable that the transition does not cause the Department's and its students' strong current identification with Zoology and organismal biology to be lost.

Continue and expand recent initiatives to improve and streamline faculty governance and activities.

The graduate program is strong but needs true graduate lecture courses, as this will enable faculty to share their expertise at a high level ¹. The Department must

¹ Faculty who develop and teach a new graduate –lecture course should of course

make sure that graduate seminars (Z507) are offered regularly (or reduce requirements in this area), and that graduate “career skills courses” are available (career development, ethics, research tools and techniques). Survey current graduate students to gauge their needs and desires with respect to graduate course offerings.

Enhance the Departmental seminar series. Add periodic faculty “mini-symposia,” in which three or four faculty give short talks. This is cost effective and can help promote Departmental cohesion and integration.

Pursue opportunities (training grants, individual grants) that can provide more research assistantships for graduate students, many of whom teach excessively during their graduate careers.

Without delay, implement required training for graduate students in the ethical conduct of research and teaching.

Hire professional undergraduate advisors for upper-division students. Thus use faculty as career and research advisors, and not as program advisors. This will not only enhance the advising, but also reduce workloads on faculty. Given the number of Zoology students, the E&G budget should pay for these advisors.

Provide space for an undergraduate meeting place (lounge) to foster collegiality.

Increase opportunities for undergraduate students to gain needed writing skills (e.g., research papers, theses, proposals).

Provide centralized career, internship, research and employment advice for undergraduates. Provide career guidance into fields that do not require a post-graduate degree.

Develop an undergraduate capstone class that promotes the professional development of students.

General Notes on the Undergraduate Program

1. **Quality of Students:** : Average SAT scores and high school GPAs of undergraduate students entering Zoology are higher than the overall OSU

receive some relief from undergraduate duties.

averages, in some cases substantially so (for example, Verbal and Writing SAT scores). Enrollments are growing much faster in Zoology than overall at OSU.

2. Curriculum Strength: Students strongly identify themselves as “Zoologists”, and feel that Departmental courses are excellent. However, they identified several issues (below) that can be solved by having professional advisors and by revising aspects of the curriculum:

a) **Lack of timely information prevents students from taking advantage of all the Department has to offer.** Some upper classmen stated that they were unable to take some advanced courses because they hadn’t taken the prerequisites in time. [Whether this reflects a structural or advising problem, or bad planning by students, is unclear.] As a result, students take some courses that were available to them rather than those that met their interests and needs. The department should consider means to making the path to upper level Zoology courses easier to navigate. This could involve clarifying prerequisites on the checklist of courses, using professional advisers, and training advisers on the dynamics of sequential scheduling. Courses that fulfill more than one requirement could increase scheduling flexibility and help students to get the most from their tuition dollar. Every student we spoke with had credits far in excess of requirements for graduation; taking excess credits should be a choice, not a necessity.

b) **Writing skills should be emphasized whenever possible.** Most of the undergraduates that we met had never written a term paper in their discipline. The intent of the Writing Intensive Curriculum (WIC) at OSU to provide opportunities to write within the discipline is not being fulfilled with the current use of History of Science courses to meet the Zoology students WIC requirements. Providing students with opportunities to write in their major field is crucial to their future success. We recognize that new writing assignments will add a burden on teaching staff, but more appropriate WIC courses must be developed in Zoology.

c) **Lack of options:** Students felt that their intellectual and career development needs would be better served if more focused options were available within their major.

3. Level and Quality of infrastructure: Cordley Hall is very old, and the facilities are inadequate for contemporary biological research and for modern laboratory instruction. Noted were the “brownout instructions” on laboratory doors and the loss of valuable materials during recent power outages (e.g. freezer failures). The two Anatomy and Physiology teaching labs run approximately 12

hours a day, and additional space is needed to meet increasing demand for this important course. The long-term solution will be to build a new. A short-term solution could be achieved by renovating and expanding teaching lab space, adding backup generators, providing climate control, renovating and expanding collection space, and providing space for small-group teaching initiatives.

4. Productivity, level and quality of student performance: Many undergraduates in Zoology have participated in research, but they seem to find research opportunities fortuitously (e.g., from interactions with TAs) or from other departments (e.g., Fisheries and Wildlife). Professional advisors could serve as gateway for research, internships, scientific meetings, and employment opportunities, which will help prepare undergraduates for their careers.

5. Viability of the scholarly community: Some students do not feel part of the Zoology community. Various clubs are available to them but are not Zoology specific. In addition some students feel too over-committed to participate in club activities, such that their current sense of connectivity to the Zoology Department comes mainly from working in labs or taking classes. Several steps could address this problem:

a) Have an undergraduate lounge that will promote informal learning, interactions, and collegiality. Ideally, the lounge **would be located in an accessible area and would have seating, bulletin and white boards, and cooking facilities (microwave)**. Suitable models are lounges in the Honors College and in the Fisheries and Wildlife Department.

b) **Many departments help foster a sense of community** by offering an introductory (100-level, 1-credit) class that highlights faculty programs and interests, introduces advisers, builds skills such as library research, and promotes professional and experiential opportunities, such as clubs and international experiences.

6. Outcomes, professional viability of graduates: Undergraduates feel that their degree will help them enter post-graduate programs (biomedical, biological) but not pursue other careers. Professional advisers could provide such career counseling, and the availability of options would help students plan their paths.

7. The department has fallen behind in conducting peer evaluations of teaching. Such evaluations are crucial for promotion and tenure dossiers. **Without delay, the department needs to implement teaching evaluation and program-assessment practices.**

8. Enhance student and alumni tracking: The ability of departments to appreciate and respond to changing student needs requires (in part) quantitative data from surveys of graduating seniors and of recent alumni. However, the response rate of current surveys is very low and needs to be improved.

General Notes on the Graduate Program

1. Quality of the students, admissions selectivity, student performance, and professional viability: Students admitted to the graduate program have a very high average undergraduate GPA (3.7 average) and GRE scores in 60 to 90th percentile. Admissions selectivity appears excellent but the data are not fully available to gauge how accepted students compare to matriculated students. While in the program, students win many awards and NSF fellowships and are productive with publications.

The graduate program has an excellent internal and external reputation. The graduate students are very positive, interactive, and productive. They consider the Department's program to be excellent and are very pleased with their experience. Faculty stated that they limit the number of graduate students they supervise so they can offer support and nurture the students. Graduate students said that their field and laboratory experiences have been extensive and productive, and that they often have the chance to travel for research and to present papers at national and international meetings. Many have been strongly supported through the PISCO program and have become important contributors to marine ecology. The graduate students were less pleased with their overall preparation to enter the job market, although they said that Zoology PhDs have successfully obtained postdoctoral and faculty positions.

2. Level of student financial support: The initial offer of five years of support for incoming graduate students is very positive and attractive, and many other departments do not do this. However, the GTA stipends (discussed above) are so low that they hamper the recruitment of some top students, as many prospective students do not even bother to apply after learning about the low stipends. In addition, faculty should increase their efforts to provide GRAs and training-grant positions, so that students need to TA less often than many currently do.

3. Curricular strength and viability of the scholarly community: Graduate students stated that graduate seminar offerings were insufficient, given that they are required to take several Zoology seminars. Indeed, the number of graduate

seminars has declined over the past five years, and no seminars are available in some terms. In response, faculty noted that lots of seminars are offered across campus. However, these types of seminars do not seem to meet the degree requirements. Moreover, graduate students want to attend seminars presented by Zoology faculty and to interact more with and be taught by the nationally renowned researchers. The Department should review the Zoology graduate-seminar program (degree requirements, offerings) to remedy this situation.

The students also wanted more dedicated graduate-level courses. Currently, they are forced to take mostly 400/500 level courses (upper-level courses that require an additional project from graduate students). They noted that these courses are not taught at a graduate level, and do not foster interactions among graduate students. This paucity of dedicated graduate courses is unfortunate, given the high quality of the Department's faculty. Faculty responded that some graduate-level classes they have offered have not been taught because of under-enrollment, and that the ever increasing demands of undergraduate teaching may not allow them time to design and teach additional graduate-level courses. [As noted above, this could be ameliorated by reducing the undergraduate load of participating faculty.] Graduate-level courses in grant preparation, writing and other basic skills are provided and are popular and commendable.

4. Adequacy and quality of faculty personnel: The quality of Zoology faculty is high, and the faculty includes National Academy members, have active grant support, and strong international reputations. OSU obtains high rankings nationwide among ecology graduate programs—despite not having an ecology program—partly based on the reputation of Zoology faculty. Unfortunately, faculty lines have been lost to retirement over the last 10 years, and the department will struggle to maintain status in the future if this trend continues.

The undergraduate drain on graduate teaching and diminishment of faculty lines is not unique to this department, and needs correction. We suggest that the department ensures that every Zoology faculty member teach both graduate (at least periodically) and undergraduate classes. This would provide better balance of educational efforts and enhance morale. Creating an inter-departmental Ecology and Evolution graduate program, or other inter-departmental programs, might also enhance the availability of graduate-level courses - — this approach apparently works well in the cell and molecular area (MCB). In addition, creation of a first-year required course series, which could include ethics and professional skills, would foster interactions among graduate students. We suggest that strategic planning (further elaboration below) be utilized to ensure continuing and future success and reputation of the department.

5. Level and quality of infrastructure and organizational support: See undergraduate program notes above.

Need for Strategic Planning

The Department has not developed a strategic plan, such that planning for future hires and directions appears undirected and thus problematic. Moreover, faculty felt that recent hiring trajectories were guided by higher-level initiatives, and not by the Department's needs.

We strongly encourage the Department to develop a clearer mission and identity, which will allow them to formulate a strategic hiring plan for the next decade. This is especially important given the pending retirement of key senior faculty. We recognize that any decadal plan must be general and flexible. Even so, the Department should be able to establish broad priorities and then seek the resources necessary for implementing their priorities. Increases in tuition revenues should open opportunities for new hires, but the Department needs to become more pro-active in guiding hiring initiatives.

Given the forthcoming reorganization at the College level, the Department needs to articulate how it wants to be integrated into the new structure. This will require both development of a clearer mission and identity, and coordination with other departments. Becoming a "Biology" department could be more attractive to students than the narrower and now less common "Zoology". Becoming an "Integrative Biology" Department is another option. However, any transition should be structured so that the students and faculty are able to maintain their strong programs in zoology, organismal biology, animal biology, ecology, and physiology.

3/27/12

Graduate Council Reviewers: Andrew Plantinga, Stacy Semevolos

1. Program Description: Department of Animal Sciences and Department of Rangeland Ecology and Management will be merged into the Department of Animal and Rangeland Sciences (AnRS) as part of the strategic restructuring plan of OSU. The intent is to enhance synergy among faculty in livestock production, animal welfare and behavior, and forage management. The new department will eliminate previous options associated with AS and REM, changing to options of Science or Management in Animal Sciences.

Questions:

- Will the MS/PhD degree names be changed as well? If so, this change should be listed on the first page of the proposal along with the current changes to B.S. names. Does the termination of options for Animal Sciences and Rangeland Ecology and Management affect the graduate degrees?
- If the current graduate degrees are combined into one M.S. and one Ph.D. degree in the combined department, what will the new requirements be for these programs? Which program will they be modeled after? What courses will be required, etc? What is the current graduate enrollment if the goal is to have 8 MS and 3PhD students per year? How many faculty are there in each of the current "signature" areas of graduate training? How will 5 additional FTEs help these? It seems that the identified priority 5 FTEs may not fit neatly into any of these signature areas.
- Will the proposed tracks of Science and Management also apply to graduate students or will there be different ones?

2. Mission Statement – fine

3. Accreditation – Should strengthen RS and improve changes for accreditation through Society of Range Management.

4. Need (Evidence of market demand) – 87% of Oregon in rangeland or forest and half of this land is grazed by livestock. Strong need in Oregon for both animal sciences and rangeland management. Stakeholders depend on extension programs and training of students in these fields.

5. Outcome and Quality Assessment – With regards to Graduate Education, no real outcomes assessments are given. Mainly listed are goals for enrollment, GRE scores, etc.

6. Program Integration and Collaboration – see above regarding combine graduate degree requirements.

7. Financial Stability –5 FTE faculty lines promised by Sonny.

8. External Review – relationship with Ag program at Eastern Oregon University

Materials linked from the April 11, 2012 Graduate Council agenda.

April 6, 2012

Dear all,

Attached you will find a draft of the 5-year strategic plan for the Graduate School. This is the result of 4 meetings of a 16 member committee, hours of subcommittee work, input from 171 graduate students, and review by the entire committee of an earlier draft. Via this email I am asking the planning committee to review the plan yet again and we also ask for comments from the Graduate Council, the Graduate School and the Research Office. Once we have comments back from everyone we will craft another draft and prepare a 2-3 page executive summary that captures the main points, and then share the draft with the Provost to make any final changes and determine the next best steps for release to campus.

Please direct your comments and suggestions to Courtney Everson (eversonc@onid.orst.edu), who will work with us to compile all comments and help us prepare the final draft. We will need your comments by no later than **April 23rd, 2012**.

We look forward to your suggestions,

Courtney Everson, GRA
Theresa Filtz, co-Chair of the planning committee
Brenda McComb, co-Chair of the planning committee

**Planning the Future of Student-Centered Graduate Education
at Oregon State University: A Five-year Agenda**

Introduction

As the state's land, sea, space, and sun grant institution, Oregon State University (OSU) offers graduate programs in a broad array of fields including both traditional disciplines as well as transdisciplinary programs aimed to promote fundamental understanding, create solutions to global challenges, and address emerging opportunities. Oregon State University offers 80 graduate degree majors with flexibility that allows students to assemble programs suited to their academic and career goals.

This document is the culmination of a planning process to align the strategic direction of the Graduate School with the strategic directions of the university.

Our **vision** is to position OSU to be a leader in graduate training in the U.S. and globally, and also to be a leader in exploring new approaches to graduate training. The 5-year agenda outlined herein will directly contribute to the advancement of excellence and innovation in graduate education at Oregon State University, while also supporting university enrollment goals and serving as a primary contributor to OSU's three signature areas and the university's mission.

Mission of the Graduate School

The Graduate School contributes to OSU's goal of achieving top ten land grant status by providing leadership in all aspects of graduate education, through advocacy for the critical importance of the graduate enterprise to the university's mission, and by providing core centralized services to the graduate community. In partnership with the Graduate Faculty, the Graduate School plays a leadership and advocacy role to ensure that OSU attracts the best graduate students and delivers a compelling and high-quality graduate experience that prepares them to create new ideas and knowledge, to educate others, to make positive impacts on society, and to lead innovation.

Alignment of Graduate Education with OSU's Strategic Directions

OSU has identified three signature areas of distinction: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress. These three signature areas contribute to the overarching goal of fostering exceptional educational, research, and outreach initiatives that sustain human well-being and improve the quality of human life. Graduate Education at OSU is at the interface between those using knowledge and those developing knowledge. Our graduate programs must train a diverse student body in core disciplinary principles while also encouraging collaboration and effective communication across disciplines in an effort to solve complex societal problems.

OSU has two broad commitments toward this goal: (1) to lead in developing a globally competitive workforce and an informed and capable citizenry; and (2) to address multifaceted national and global challenges that resist simple technical or social solutions.

The OSU strategic plan additionally articulates three more specific goals:

Goal 1: Provide outstanding academic programs that further strengthen performance and pre-eminence in the three Signature Areas of Distinction. We will focus repositioning and development of new graduate programs to align with the three signature areas, and we will work to increase graduate and professional student enrollment to 25% of the OSU student population, as directed by the OSU strategic plan.

Goal 2: Provide an excellent teaching and learning environment and attain student access, persistence, and success through graduation and beyond that matches the best land grant universities in the country.

Goal 3: Substantially increase revenues from private fundraising, partnerships, research grants, and technology transfers while strengthening our ability to more effectively invest and allocate resources to achieve Goal 2.

The Planning Process

The details describing our planning process can be found in Appendix 1. Briefly, we were a 16-member committee representing many academic programs and administrative offices to guide the development of this plan:

Barbara Bond, Director of Postdoctoral Programs, Graduate School
Bella Bose, Associate Director, School of Electrical Engineering and Computer Science
Jim Coakley, Associate Dean, College of Business
Tracy Daugherty, Distinguished Professor, English
Dan Edge, Head, Department of Fisheries and Wildlife
Courtney Everson, Doctoral Candidate, Applied Medical Anthropology, Graduate Research Assistant for the Graduate School
Theresa Filtz, Associate Professor, Pharmacy and Co-Chair of the Planning Committee
Kevin Gable, Professor, Chemistry
Rich Holdren, Associate Vice President, Research Office
Sunil Khanna, Associate Provost for International Programs
David King, Associate Provost, Outreach and Engagement
Brenda McComb, Dean, Graduate School and Co-Chair of the Planning Committee
Lisa Templeton, Executive Director, Extended Campus
Becky Warner, Senior Vice Provost, Academic Affairs
Jessica White, Assistant Director for Co-Curricular Learning, Center for Teaching and Learning
Tom Wolpert, Professor, Botany and Plant Pathology

The committee was co-chaired by Theresa Filtz and Brenda McComb and we relied heavily on information and contributions from Courtney Everson. Courtney also facilitated in-person open forums and online mechanisms to seek input from students as well as direct involvement in drafting this plan. The ideas generated from the committee and the student contributions were summarized and structured to form the goals and objectives of this plan. See Appendix 2 for a list of our peer institutions used in this planning process and Appendix 3 for select internal metrics data used as the basis for identifying issues and generating approaches, provided by Institutional Research and compiled by Courtney Everson.

Unless otherwise indicated, the action items herein are assumed to be the responsibility of the Graduate School to implement over the next five years.

Overarching Goals of the 5-year Agenda

GOAL 1. Increase our graduate student population to 25% of total university enrollment through recruitment and retention of high achieving and diverse students

More effective recruiting, retention and timely graduation will be needed to meet the dual expectations of program excellence and increased graduate student enrollment on the OSU main campus as well as enrollment on the Eastern Oregon University campus,

Cascades Campus, and Hatfield Marine Science Center. Competitive financial assistance is such an integral component of recruitment, retention and support that it is addressed separately in the last section of this plan (Goal 3). In Goal 1, we will target and support programs to recruit and retain the best and brightest graduate students in the world with a specific focus on the inclusion of under-represented minorities, including students with disabilities. We must provide all graduate students with effective mentoring and other support structures necessary for success in their graduate programs, in their search for employment, and in their post-graduation careers.

Objective 1.1. Effectively recruit high achieving students and insure representation of under-represented minorities

We need a coordinated recruiting system that integrates efforts at the program and unit levels with centralized support to achieve goals for all programs across the campus (see Appendix 4 for our enrollment plan). These efforts must ensure that under-represented minorities are reflected in our student body at least in proportion to those in our geographic region.

Action Items

1.1.1: Poll individual programs to identify the extent, types and success of recruitment activities currently occurring at the program and unit levels at OSU.

1.1.2: Identify programs with the capacity for growth and develop enrollment growth strategies for each of these programs. Recruitment efforts will focus on these programs.

1.1.3: Develop and disseminate information on best practice guidelines for recruitment based on findings from 1.1.1 and 1.1.2, and other sources such as the Council of Graduate Schools and the published literature.

1.1.4: During recruiting activities and orientation, provide information to applicants and matriculants on navigating the financial aid, payroll, and human resource systems at OSU.

1.1.5: Create and distribute recruiting materials to programs and units that focus on commonalities: Corvallis and its environs, student support services at OSU, Graduate School processes and procedures, interdisciplinary resources, information on fees, books, printing, parking and the cost of living in Corvallis, among others (see Open Forums Findings Report for more information about this identified need).

1.1.6: Provide support to programs in an effort to enhance their recruitment efforts, such as site visits, visits to campus, recruiting information and online recruiting efforts.

1.1.7: Use central resources to represent OSU's graduate programs at national

conferences where recruitment of under-represented minorities is a high priority (e.g., SACNAS, ABRCAMS, etc.) and assess effectiveness of these efforts.

Objective 1.2. Increase the efficiency of the application and matriculation process, and improve timely and clear communication with applicants and matriculants

Both faculty and applicants to degree programs have expressed frustrations with the application processes at OSU. To improve the matriculation yield, improve student satisfaction from day zero, and improve efficiencies, the application and matriculation processes need to be assessed and revised to meet the needs of faculty and students.

Action Items

1.2.1: Identify and employ software that allows a one-stop application website, including a “progress bar” with estimated time to a decision, and program contacts. All materials for an application, including letters of recommendation and official transcripts, will be submitted and tracked via this site and data will be harvested from the system to populate annual reports back to programs on all aspects of student progress.

1.2.2: Develop mechanisms that allow individual programs to waive application fees if desired in return for compensation to the Graduate School for lost revenue.

Objective 1.3. Provide centralized support for best practices in graduate education and professional development

Currently, approximately a third of our doctoral students and a fourth of our masters students are either not graduating or taking longer than eight years and four years, respectively, to complete their programs. There are multiple causes and impediments to timely completion, and we should address as many as possible to ensure that students are given every opportunity to complete their degrees in a timely and successful manner. Success will require graduate student-specific support to demonstrate the value of the degree, improve the likelihood of persistence, and increase timely completion rates.

Action Items

1.3.1: Provide a template to each program incorporating common features and best practices regarding support and guidance for graduate student success, including counseling for career options upon graduation.

1.3.2: Develop additional, specific guidelines and dissemination of best practices to programs and units to ensure support for under-represented minorities who often face unique barriers to success.

1.3.3: Provide at least three pedagogical and/or motivational workshops per year to graduate students relevant to all aspects of student progress through and persistence in graduate studies.

1.3.4: Monitor the success of recruitment and retention efforts and provide an annual report to each graduate program.

Objective 1.4. Ensure that student services provided on campus are graduate-student focused and specifically meet the unique needs of graduate students

Most services available to students at OSU aim to serve the overall student population, including both undergraduate and graduate students. Graduate students commonly face different obstacles or needs than undergraduates, especially among under-represented minorities, international students, non-traditional and part-time students, students with families, and distance education students. Increased efforts are required to gauge and effectively address the particular needs of the diverse community of graduate students.

Action Items

1.4.1: Evaluate the needs of graduate students for specific support services, including specialized career counseling, family and life issues, financial needs, and cultural awareness (particularly for international and first-generation students). Where possible, evaluate and prioritize these needs in relation to students' abilities to complete degrees in a timely manner.

1.4.2: In collaboration with the Division of Student Affairs, develop and enhance support services specific to graduate students and that effectively meet the diverse and unique needs identified in 1.4.1. Ensure that graduate student needs are integrated into student services as standards of practice.

Objective 1.5. Improve mentoring and advising relationships between students and graduate faculty

Studies have shown that the quality of the student and faculty advisor relationship is central to student persistence in graduate programs, timely graduation, and career success.

Action Items

1.5.1: Institute a mentoring orientation session for all incoming faculty, and require completion of an on-campus or online mentoring training module prior to appointment as Graduate Faculty, and assess the effectiveness of this effort.

1.5.2: Provide two workshops each year for advisors and students, respectively, on effective mentoring and advising, focusing on the difference between mentoring and advising, and assess their effectiveness.

1.5.3: Develop a rubric and online mechanism for student assessment of the quality of faculty mentoring and advising. Ensure that the rubric provides guidelines and informs students about what effective advising/mentoring should look like so that students may truly evaluate the effectiveness of advising/mentoring.

1.5.4: Work with the Provost's Office and Faculty Senate to elevate advising and mentoring of graduate students as specific evaluation items in the promotion and tenure decision and the annual performance evaluation.

1.5.5: Alter the term of appointment to the OSU graduate faculty from indefinite to a five-year, renewable term. Utilize data gathered from 1.5.3, as well as each faculty member's own interest and role in continuing as a Graduate Faculty Member, to assess faculty for renewal. Work with department/unit/program chairs to decide on reappointments and also to help faculty with advising/mentoring issues.

Objective 1.6. Improve Communication among the Graduate School, Graduate Students and Graduate Faculty.

Open Forums with graduate students, sponsored by the Graduate School, provided the opportunity to hear student concerns and revealed the frequency of common misconceptions among the graduate student population. Similarly, Graduate Faculty familiarity with Graduate Council policies and Graduate School procedures is sometimes incomplete. Although faculty have been graduate students themselves somewhere, few have been OSU graduate students. Communication needs to be improved so that all stakeholders are aware of and have quick access to information on policies, procedures, fees and support services when they need it. Groups of students who are at particular risk for discontinuation need to be targeted for increased intervention and improved success.

Action Items

1.6.1: Restructure and upgrade the Graduate School website to more effectively provide information to prospective and current students and faculty. Include software that allows visible and consistently updated pages and notices on Graduate School policy and procedural changes for both graduate students and faculty.

1.6.2: Assess the utility of the current use of Facebook and the Grad Connections Newsletter to provide news and information to students. Increase or alter information provided through social media outlets based on findings.

1.6.3: Provide a mechanism annually to gather student and faculty feedback, particularly relating to progress being made through the implementation of this plan.

1.6.4: Identify groups of students, based on 1.6.3 and in consultation with program directors and advising services, whose needs require particular attention to ensure retention and success. Develop targeted programs to identify at-risk students early and try to improve persistence in the degree program.

1.6.5: Work with the International Programs Office to identify the particular informational needs of international students regarding OSU graduate policies and procedures, and develop materials for graduate program directors, faculty and students addressing the international graduate student experience at OSU.

Indicators of Success for Goal 1

1. An increased total number of applications to OSU's graduate programs
2. Increased overall GPA and GRE scores in the matriculant pool
3. Increased yield of matriculating students from accepted applicants
4. Increased number of matriculants from under-represented minorities
5. Reduction in time from a completed submission to a decision
6. Reduction in the net cost of the application/enrollment/matriculation process
7. Improved level of satisfaction expressed by students and faculty with regards to the application and matriculation processes
8. By 2014, each program will have a detailed guide for graduate student success
9. The four-year graduation rate for masters students and eight year graduation rates for doctoral students will have increased by 2017
10. The four year graduation rate for masters students and eight year graduation rates for doctoral students will be increased by a similar amount to the above for under-represented minorities (e.g. women in STEM fields, racial minorities)
11. Increased student satisfaction with graduate studies at OSU reflected in the Graduate School's exit surveys
12. Increase in the scope and effectiveness of graduate student-focused services provided on campus
13. Increase in the number of graduate student contacts with student support services
14. Majority of graduate students using student support services rating the quality of services received as good to excellent.
15. Increased number of positive assessments by students of faculty mentoring and advising
16. Fewer complaints received by the Graduate School, CAPS, and the Ombuds office regarding student relationships with major advisors
17. Increase in positive responses to questions regarding communication during annual feedback mechanisms (e.g., open forums, online surveys, exit surveys, etc.) from both students and faculty.
18. Decrease in the number of inaccurate perceptions by students expressed during annual feedback mechanisms.
19. Increased persistence of all students but particularly those who are at high risk for drop-out.

GOAL 2. Continuously Improve Program Quality

OSU desires to become a top ten land grant university by 2025. To do so, most perceive that we need to grow the graduate student population to 25% of the student body, and to improve national awareness and the reputations of our graduate programs. Simultaneously, we need to ensure that the quality of incoming students, courses, curricula, and mentoring is maintained and continually improved to be successful.

Objective 2.1. Improve the national stature and reputation of OSU graduate programs

The Graduate School will work with departments, colleges, and graduate programs to strategically realign graduate degrees around the university's signature areas, thus increasing our opportunities for national recognition in areas of excellence in graduate education. Restructuring will likely include coalescence of new or existing graduate degrees into umbrella programs that would house multiple transcript-visible options, but different models for cooperation including confederations of existing degrees, or new interdisciplinary single degree programs may evolve from the process. Additionally, we need to ensure that our M.S. and Ph.D. degree program graduates are trained for a variety of career options both inside, and more importantly, outside of academia. We need to provide a well-trained workforce for a rapidly-changing future.

Action Items

2.1.1: Survey graduate program directors, department chairs, and college deans to identify disciplines around which we can build umbrella or interdisciplinary graduate programs.

2.1.2: Create task forces around areas of excellence (e.g. Conservation Biology, Plant Science, Ecology) and support creative restructuring efforts and advocacy for faculty release time to pursue Category I proposals when needed.

2.1.3: Support restructuring of degree programs to be responsive to the needs of an expanded list of potential employers in all sectors, including government, industry, and non-governmental organizations as well as academia.

2.1.4: In collaboration with the Research Office, develop incentives for Principal Investigators to balance hiring of doctoral students with post-doctoral fellows.

2.1.5: Facilitate conversations among program faculty, students and potential employers to enable degree programs to revise curricula to keep abreast of the evolving skills and training required for newly-emerging career opportunities both inside and outside of academia.

2.1.6: Work with University Relations and Marketing to regularly promote graduate education inside and outside the university.

Objective 2.2. Improve quality assessment of graduate programs

Continuous quality improvement requires the articulation of a comprehensive and consistent set of metrics by which to assess graduate programs. Ideally, these metrics will be used to compare graduate programs across the university, to benchmark improvement internally, and to compare our programs to peers for the purposes of accreditation, program improvement, recruitment and stakeholder investment.

Action Items

2.2.1: The Graduate School will work with the University Assessment Council, the Graduate Council, Institutional Research, and the Academic Programs, Accreditation, and Assessment (APAA) office to develop a set of metrics for consistent comparison of graduate program quality over time (trends) and with our peer institutions. These data should be collected centrally and reported annually to programs. Additionally, these metrics will form the core of the university accreditation data on graduate programs and the self-study for decadal external graduate program reviews. Because programs are diverse, the Graduate School will work with each program to identify any additional program specific metrics that ensure a meaningful reflection of the program trends and comparisons with programs at peer institutions.

2.2.2: Along with the Assessment Council, help graduate programs to develop effective full-cycle assessment programs that align with accreditation and graduate program review needs of the university, and guide them in effective use and reporting of assessment data.

2.2.3: Annually provide training sessions for graduate program directors to discuss on-going assessment needs, reporting requirements, new policies and procedures, dissemination of best practice information, and progress in meeting the goals of the strategic plan.

2.2.4: Every fall term, provide an orientation program for new graduate program directors to provide essential information (hard copy and online) on the management of a graduate program, including OSU Graduate Council rules and policies, best practices, expectations, and support services.

Objective 2.3. Improve the quality and accessibility of graduate courses

To continuously improve the quality of the graduate student experience at OSU, we need to expand the number of stand-alone graduate courses and ensure that they are being taught at regular, predictable and reasonable intervals. Access to stand-alone courses has been articulated by OSU graduate students since the early 1990s as a prime issue. The Graduate Council has focused on this issue on many occasions, but it continues to be one of the top graduate student concerns at decadal program reviews and in open forum discussions.

Action Items

2.3.1: Work with graduate programs, colleges and departments to communicate the value of offering stand-alone graduate courses.

2.3.2: Identify incentives to reduce the number of intermingled undergraduate/graduate (a.k.a. "slash") courses. Advocate for university investment of resources to increase the availability of stand-alone graduate courses. Require more extensive justification in the Category II process for the creation of new slash courses, explaining why a stand-alone graduate course is not being proposed in preference to the slash course.

2.3.3: Propose a policy change to the Graduate Council that would decrease the number of slash courses allowed on a graduate program of study from 50% of total credits to 50% of all didactic (non-blanket) courses.

2.3.4: Develop assessment procedures to ensure that remaining slash courses provide effective mechanisms for meeting the rigor and depth of knowledge expected by graduate students. Consult with program directors and department chairs to remedy concerns related to slash courses.

2.3.5: Ensure that graduate courses listed in the catalog are offered regularly and predictably by working with graduate programs on course scheduling, and assess barriers to achieving predictability and regularity in course offerings. Ensure scheduling of all graduate level core courses is completed at least 3 years into the future.

2.3.6: Offer workshops designed to enhance effectiveness of graduate courses both on campus and Ecampus by working with the Center for Teaching and Learning and collaborating with chairs/deans/directors from programs who have successfully developed an independent graduate curriculum. Graduate courses need to have the disciplinary depth and rigor appropriate to graduate education, while also allowing for interdisciplinary communication to efficiently use teaching resources and successfully deliver material. Consider the creation of modular course units to address the needs of different populations of graduate students; for example, an introductory module to introduce interdisciplinary students to a topic or approach, and more advanced units to address the in-depth training required for students in the discipline.

Objective 2.4. Grow the number of graduate faculty and their capacity to train students

To increase the graduate student population at OSU, increase our national stature and rankings, and increase the training options for existing students, we need to increase the number of OSU faculty involved in graduate education, and in particular, involvement in Ph.D. training specifically.

Action Items

2.4.1: Contact all tenured and tenure-track faculty who are not currently a graduate faculty member to discuss and assess their capability to advise graduate students. Encourage them to participate in graduate education. If a faculty member is not interested in becoming a graduate faculty member, determine why and attempt to provide incentives for involvement.

2.4.2: Working with graduate program directors, the Graduate School will contact PhD scientists and scholars in the region who might be qualified to serve as graduate faculty through a courtesy appointment and assess their capability to advise a student. Make special efforts to recruit graduate faculty who are under-represented minorities. Provide direct support efforts to ensure that off-campus graduate faculty have the information, tools, skills and university support to perform well as a graduate advisor.

Objective 2.5. Improve and enhance transdisciplinary and interdisciplinary opportunities in graduate education

To stay current, relevant and attractive to prospective students and employers, graduate degree programs need to continuously evolve to encompass emerging disciplines, anticipate skills needed by a future employer, and enable the creation of new knowledge at the boundaries of disciplinary fields. Many perceive OSU to have relatively low barriers to interdisciplinary and transdisciplinary collaborations, and we consider this a strength to be celebrated and supported. However, participation in degree programs outside of one's departmental home are sometimes perceived to have "less value" to a faculty member's career advancement and to the base budget of the home department. In concert with OSU's Research Agenda, we need to foster policies and incentives that promote faculty involvement in transdisciplinary and interdisciplinary research and graduate training opportunities. Appendix 6 outlines a draft proposal to facilitate tracking and valuing of the contributions of faculty to interdisciplinary programs.

Action Items

2.5.1: Support opportunities for new transdisciplinary and interdisciplinary collaborations for graduate students by rewarding the contributions of faculty to existing and new interdisciplinary and transdisciplinary programs (see Appendix 6 for draft proposal for accounting of interdisciplinary efforts).

2.5.2: Work with the Academic Programs, Assessment and Accreditation office (and perhaps the Oregon University System) to streamline the creation of new transdisciplinary and interdisciplinary graduate programs on a trial basis. We suggest a six year trial period before formal Category I applications are required or a decision to terminate is made.

2.5.3: In collaboration with the Research Office, sponsor workshops to facilitate idea development and support proposal writing for new NSF IGERT programs and other interdisciplinary training grants.

2.5.4: Explore potential funding sources, possibly from the private sector, to support new interdisciplinary and transdisciplinary graduate programs, including "IGERT-like" programs.

Objective 2.6. Increase the number of joint degree graduate programs within OSU and with other institutions

To expand opportunities for our students while simultaneously maximizing efficient use of resources, we need to facilitate the completion of agreements to expand joint degree offerings and shared degree programs.

Action Items

2.6.1: In collaboration with the Office of International programs, the Academic Programs, Assessment and Accreditation office, and ultimately, the Oregon University System, develop a process for approval of new joint international and joint domestic

degree programs including programs with other state of Oregon Institutions (e.g. OHSU).

2.6.2: Develop a co-terminal degree program for high achieving undergraduates who as seniors can begin graduate coursework and thesis planning that is applied toward a masters degree.

Indicators of Success for Goal 2

1. An increase in OSU's scores on the NRC criteria for rankings of graduate programs (see Appendix 5)
2. Increased satisfaction and employment-in-their-field of masters and doctoral alumni
3. Development of effective full-cycle assessment programs, and implementation of changes to achieve improvement based on assessment results
4. Development and use of consistent metrics for meaningful comparisons with peer institutions
5. Improvements in quality and delivery of internal program metrics over a five-year time span
6. Decreased number of slash courses offered
7. Increased number of stand-alone graduate courses offered at the 500 and 600 level
8. Reduced complaints regarding slash courses during annual graduate student feedback mechanisms
9. Reduced complaints regarding the predictability of graduate course offerings during annual graduate student feedback mechanisms
10. Increase in the percentage of the total student body that is graduate students
11. Increase the number of graduate faculty qualified to advise doctoral and masters students.
12. Improvement in student assessment of faculty mentoring and advising
13. Increased number of interdisciplinary and transdisciplinary graduate programs
14. Increased enrollment in and graduation from interdisciplinary degree programs
15. Increased faculty participation in interdisciplinary programs
16. More IGERT and "IGERT-like" proposals submitted and funded, with a goal of being awarded up to one per year for the next three years, and then an additional three programs in the following two years
17. An increase in number of students and faculty involved in international research
18. An increase in student access to domestic institutions with unique facilities (e.g. the Pacific Northwest National Laboratory) to enhance specific training and internship opportunities
19. An increase in the number of shared degree programs within OSU and with other institutions in Oregon and the region
20. Establishment of a co-terminal degree program for selected graduate programs

GOAL 3: Grow and Invest Resources to Enhance Graduate Education Opportunities

Attracting students, providing them with an opportunity to succeed, and ensuring a reasonable time to degree completion are all at least partially contingent on financial

support for graduate students at OSU. Strategic allocation of financial resources will help us to grow enrollment, provide support for students and provide value-added opportunities that enable the long term success of our alumni.

Objective 3.1. Create new or restructured graduate programs where there is capacity

Several colleges have few or no graduate programs (especially doctoral programs), but with modest investments in faculty lines, could develop viable graduate programs.

Action Items

3.1.1: Consult with the College of Liberal Arts and the College of Business to explore the possibilities of developing new graduate programs with a focus on doctoral program development, and support efforts as needed.

3.1.2: Explore the restructuring of existing programs or development of new programs that contribute to our signature areas of excellence in other colleges as well (see Objective 2.1).

Objective 3.2. Create endowments for graduate fellowships

In order to achieve parity with our peer institutions, we must meet the goal of having greater than 70% of all doctoral students supported on an assistantship or fellowship, and to do this, we will need to increase fellowship opportunities.

Action Items

3.2.1: Establish a greater number of OSU Graduate Fellowships by working with the OSU Foundation and the academic Deans to identify donors and by raising the priority of graduate student funding at the college and university levels.

Objective 3.3. Incentivize assistantship opportunities for graduate students

The undergraduate enrollment at OSU increased by 5.4% during the 2010-11 academic year, and is predicted to increase by 2-3% per year in the near future. The number of graduate teaching assistantships (GTAs) did not increase proportionately even though GTAs can facilitate success of undergraduate students. Increasing the number of GTA positions is not only an effective means to support increased numbers of graduate students, but they also support undergraduate student access and success. To this end, we encourage colleges and departments to invest in GTA positions in relation to the number of undergraduates in their college/department, thereby increasing the quality of graduate education and financial support for graduate students.

Further, the number of postdoctoral positions has been increasing 5% per year while the number of GRA positions has increased only 1% per year. As the research agenda grows its efforts in three strategic areas (see <http://oregonstate.edu/research/research-agenda.html>) and increases its involvement in commercialization, graduate training

should be a key part of that effort. We need to rebalance the growth in postdoctoral positions and GRA positions to provide more support for graduate students

Action Items

3.3.1: Provide training and incentives for expanded GTA positions to ensure that increases in GTA positions follow increases in undergraduate enrollment in each college. Work to identify those undergraduate programs targeted for increases in enrollment, and work with college deans to encourage them to invest in GTA positions to meet the needs of the undergraduate program while also improving and investing in graduate education.

3.3.2: Finalize development of a Certificate in University Teaching, which will provide an 18-credit opportunity for advanced training in university teaching in an effort to provide a high level of training for those students planning a career in academia.

3.3.3: In collaboration with the Center for Teaching and Learning, develop workshops that provide training for new GTAs.

3.3.4: Work with programs to ensure that GTA positions that are available within departments, but not filled within departments, are advertised broadly.

3.3.5: Incentivize the hiring of graduate research assistants (GRAs) by allocating a limited number of tuition remissions to GRAs based on university research agenda and strategic enrollment goals.

Objective 3.4. Assess and revise GTA salaries and allocation across and within colleges and programs

The issue of inequities in terms of salary and expected effort among GTA positions across colleges and departments is a perennial issue with graduate students. Some of the salary differentials occur due to market factors that are beyond the control of the university or graduate programs. Nevertheless, efforts should be made to advocate for reductions in salary inequities where possible and investigate the re-allocation of resources to improve access to the baccalaureate core and other areas where demand is high.

Action Items

3.4.1: Conduct a comprehensive assessment of current GTA salaries across colleges, investigate gross salary inequities and recommend revisions as appropriate. In particular, in situations where GTAs from two different departments are being paid different wages for the same work (e.g. serving in the same course), efforts need to be made to correct the differential.

3.4.2: Assess the allocation of GTA positions across programs and advocate for revisions or additional resources to ensure that the number of GTA positions within a program is sufficient to support undergraduate classroom instruction needs. Encourage

departments to invest in GTA positions where higher undergraduate classroom demand is present.

3.4.3: Assess the number of fellowship and scholarship awardees by graduate program and determine the reasons for any inequities in awards among programs. If a fellowship or scholarship program is not meeting an adequate return on investment, or disadvantages applicants in one program relative to another, then we will revise the nomination and application guidelines to ensure that students from all programs can compete fairly for available resources.

Objective 3.5. Increase the number of GTAs funded by Ecampus revenue.

Ecampus undergraduate course offerings and degree programs are growing at a rapid rate. To meet the need for instruction of these courses, graduate students can be employed as GTAs. Students may be trained in online learning techniques through Ecampus training, CTL training or earning a Certificate in University Teaching focused on online learning and instruction methods.

Action Items

3.5.1: Identify areas for growth in undergraduate and graduate Ecampus programs by working with academic units and Ecampus. Where undergraduate courses are offered online, consider opening courses with capped enrollment and obvious demand, and use the additional revenue to support necessary additional GTA positions. We will encourage units to invest in GTAs to both enable undergraduate learning, while also providing experience for graduate students in online instruction.

3.5.2: Provide training opportunities for GTAs in online instructional techniques in collaboration with the CTL.

Objective 3.6. Target centrally-administered fellowships, scholarships and other resources to support the goals of this strategic plan.

Fellowships, scholarships, and other financial resources are critical to graduate student funding and success, and are also prime pathways for helping to meet the goals and objectives of this plan and the university's mission. We recommend ongoing assessment and subsequent revisions to fellowships, scholarships and other financial resource programs as a means to achieving Graduate School and university targets.

Action Items

3.6.1: Re-evaluate the fellowships, scholarships, and other financial resources provided to students on campus to assess the return on our investment in achieving the goals and objectives outlined in this plan, and to re-invest strategically with priority given to the following:

- Programs in one of the signature areas of excellence identified in the OSU strategic plan

- Programs demonstrating excellence in all aspects of graduate education
- Programs which are implementing a plan to improve program effectiveness.

3.6.2: Annually assess whether scholarship and fellowship awards are meeting enrollment, diversity, retention, and completion goals and revise guidelines iteratively as needed to improve selection procedures and achieve goals.

Indicators of Success for Goal 3

1. Increased number of graduate students
2. Addition of new graduate programs in Colleges of Business and Liberal Arts
3. Increase in total dollars raised per year in support of graduate fellowships, scholarships, and other forms of support for our graduate students within the Graduate School and among colleges
4. Increase in number of graduate students recruited to serve as GRAs on research projects addressing the OSU Research Agenda
5. Increase in the number of GTA FTE within each college proportional to the number of undergraduates
6. Assessment of the relevance and effectiveness of the Certificate in University Teaching and other teaching workshops for employment success through Graduate School exit surveys and alumni surveys
7. Improved GTA salary competitiveness and equity across programs
8. Increased number of graduate scholarship and fellowship awardees
9. Increased number of GTAs assigned to online courses.
10. Number of students completing the optional Certificate in University Teaching each year
11. Improvement in achieving goals articulated for each scholarship and fellowship program

Appendix 1. The Planning Process

This planning process began in Fall 2011 with the formation of the planning committee who agreed to assist with the development of this strategic plan. This committee represents faculty at multiple levels in their university careers and across disciplines, graduate programs and colleges. The committee was selected due to the diversity of expertise each brought to the table and their demonstrated commitment to and experience with excellence in graduate education. The committee met four times during the fall and winter terms, and subsequently, developed three core themes for improving the graduate student experience, advancing high-quality graduate education, and meeting enrollment goals:

1. Student Recruitment, Retention and Support
2. Ensuring Program Excellence
3. Growing Opportunities for Financial Support

Three sub-committees of the planning committee were then organized around the identified core themes. Each sub-committee met through fall and winter terms, and drafted their ideas and approaches to addressing each of these core themes by identifying specific goals, tactics to achieve the goals, and metrics to measure success toward achievement of goals. Following receipt of sub-committee drafts, Brenda McComb, Courtney Everson and Theresa Filtz worked to write a cohesive, final draft plan. This draft plan then went through a targeted, soft launch process with key individuals and entities to receive feedback and recommendations for revision. The following individuals and entities were included in this targeted, soft launch process: the planning committee, the Graduate School leadership team, and the Graduate Council. The final plan was delivered to Sabah Randhawa, Provost and Executive Vice President of OSU, for review and approval. The final plan was made publically available in Spring 2012, and the five-year starting mark for this plan is summer term 2012.

At the heart of the planning process was the need for accurate, up-to-date internal metrics for OSU as well as external data and best practices from peer institutions (see Appendix 2 for list of peers) and the published literature. The planning committee developed a list of requested internal and external metrics and best practices, and requests were fulfilled by Courtney Everson in collaboration with Institutional Research and Sal Castillo. Select internal metrics are included in Appendix 3. The data gathered allowed the planning committee to make evidence-based decisions regarding the 5-year agenda and future of graduate education at OSU, while also helping to ensure that the 5-year plan aligns with emerging best practices and trends in graduate education at a national level. Specifically, data allowed the planning committee to: 1) identify areas of current strength and those in need of improvement; 2) prioritize issues and organize into priority goals for this strategic plan; 3) analyze how OSU compares to peer institutions;

4) develop best practices to insure the competitiveness and innovativeness of graduate education at OSU; and 5) identify gaps in the current data collection systems at OSU, which constitutes a priority need for insuring compliance, accreditation, and continued graduate education excellence.

In addition to the data and metrics provided to the planning committee, Courtney Everson worked collaboratively with key graduate student leaders to solicit ideas and concerns from the OSU graduate student body via four facilitated in-person open forums on the OSU campus, as well as through an online interface designed to engage students not located in Corvallis or otherwise unable to make on-campus sessions. The student leaders working with Courtney on this initiative were:

Angela Baxter, MAIS Student, Director of Graduate Affairs for ASOSU
Ashley Bromley, Masters Student, Vice President of Organizing for CGE
Dennis Dugan, Masters of Public Policy Student, GTA for Team Liberation
Harmony Burright, Masters Student, President of OSU Chapter of MBB
Kim Ogren, Masters Student, Member of OSU Chapter of MBB
Miriah Russo, PhD Student, Vice President of OSU Chapter of MBB

In total, 171 students contributed ideas to us through these forums. Their input fell into three broad thematic categories:

1. Graduate Student Experiences, Quality of Life & Support Systems
2. Academic Programs & Quality of Education
3. Graduate School Costs, Funding & Employment.

The student-identified themes corresponded broadly with the themes identified by the planning committee. While specific issues raised by the students provided additional insight from the student perspective, the emerging ideas remained complementary to those addressed by the planning committee. Student ideas generated were incorporated into the themes addressed by the planning committee to the degree possible. Some comments and suggestions made by students were better handled more immediately by the Graduate School outside of the planning process, and some simply required additional communication to correct erroneous perceptions by students. A full findings report from this open forums project can be located here:

http://oregonstate.edu/dept/grad_school/openforums/OpenForums_FinalReport_Feb12.pdf

Appendix 2. Peer Institutions for the purposes of this planning process:

For purposes of providing background in this document and our strategic planning purposes, the Provost and Dean have settled on the following list of aspirational peer institutions.

Cornell University
Michigan State University
Ohio State University
Pennsylvania State University
Texas A&M University
University of Arizona
University of California, Davis
University of Illinois, Urbana-Champaign
University of Wisconsin, Madison
North Carolina State University

Appendix 3. Select Internal Metrics used in this planning process.

| Metric | SUMMARY ANSWER |
|--|---|
| <i>Student & Program Characteristics (** indicates this is a NRC Criterion)</i> | |
| Graduate students enrolled in Fall term by year | Fall 2011: 3001 graduate students; 775 non-degree seeking students; 580 first professional (total: 4356) |
| Graduate students enrolled in Fall term by degree | Fall 2011: 1693 for Master's; 1308 for Doctorate; 775 for Non-degree grad; 580 For First Professional |
| Proportion of the total student body who are graduate and professional school students | Fall 2011: 14.34% (3581 total grads/professional, excluding non-degree seeking students; 24,977 total student body) |
| Proportion of graduate students and first professional students from underrepresented groups (racial and gender diversity)** | <p>Fall 2011: 50.16% women* (all fields, grad & first prof combined; 47.04% women for grad only, 68.10% women for first prof only)</p> <p>15.24% racial minorities* (all fields, grad & first prof combined; 13.24% racial minorities for grad only, 28.28% for first prof only)</p> <p>*Note: non-degree seeking grad students are included, based on 4356 total grads and first profs</p> |
| Proportion of international graduate and first professional students** | <p>Fall 2011: 19.67% total* (all fields, grad & first prof combined; 22.25% for grads only, 2.93% for first prof only)</p> <p>Note: non-degree seeking grad students are included, based on 4356 total grads & first profs</p> |
| Masters, Doctorates, and First Professional Graduates per year** | 2010 - 2011: 745 Master's, 174 Doctorates, 141 First Professional |
| Percentage of students completing Master's and PhD degrees** | <p>62% 8-year graduation rate for PhD (Avg. over F1996 to F2003 cohort)</p> <p>76% 4-year graduation rate for Master's (Avg. over F1996 to F2007 cohort)</p> |
| Average time to degree completion (Master's and PhD)** | 8 years for PhD; 4 years for Master's |
| Proportion of graduate students on GTA and GRA** | 56.95% (855 GTAs, 854 GRAs; Percentage based on graduate student total of 3001 for Fall 2011) |
| Proportion of graduate students on fellowships** | 3.33% (100 students on fellowship; Percentage based on graduate student total of 3001 for Fall 2011) |
| PhD Student : Faculty Ratio** | 1:1 |
| Student Credit Hours (SCH) generated in graduate courses per year | Total: 129,791/year (Fall 2010: 44,656, Winter 2011: 43,337; Spring 2011: 41,798) |
| <i>Faculty Characteristics (** indicates this is a NRC Criterion)</i> | |
| Graduate Faculty FTE | Fall 2011: 1108.4 grad faculty FTE (those approved to teach grad courses <i>or</i> direct grad theses/dissertations) |
| Graduate courses taught per year per | Fall 2011: 2.4 average grad faculty courses taught per grad |

| | |
|---|---|
| graduate faculty member | faculty member (including theses and blanketed number courses) |
| Number of graduate faculty involved in interdisciplinary programs/degrees** | <p>50.41% approved to direct in established interdisciplinary programs (551 interdisciplinary approved out of 1093 total approved to direct)</p> <p>23.33% approved to direct in two or more disciplines, excluding established interdisciplinary programs above (255 approved in 2 or more out of 1093 total approved to direct)</p> |
| Number of graduate faculty from underrepresented groups (racial and gender diversity)** | <p>Fall 2011*: 35% women; 13.85% racial minority</p> <p>*Note: based on total of 1220 grad faculty approved to <i>either</i> teach or direct</p> |

Oregon State & National Underrepresented Groups Composition (Gender & Racial Minority) – 2010 Data

| METRIC | US | Oregon | OSU Graduate Students |
|--------------------------------------|-------------|-----------|-----------------------|
| Population | 308,745,538 | 3,831,074 | 4,356 |
| Gender | | | |
| Female | 50.80% | 50.50% | 50.16% |
| Male | 49.20% | 49.50% | 49.84% |
| Race | | | |
| White persons | 72.40% | 83.60% | 59.11% |
| Black persons | 12.60% | 1.80% | 1.24% |
| American Indian and Alaska Native | 0.90% | 1.40% | 0.85% |
| Asian/Pacific Islander | 5.00% | 4.00% | 6.04% |
| Persons reporting two or more races | 2.90% | 3.80% | 2.59% |
| Persons of Hispanic of Latino origin | 16.30% | 11.70% | 4.52% |
| International | | | 19.67% |
| Declined/missing | | | 5.98% |

Appendix 4. Enrollment Plan:

OSU Graduate enrollment: growing toward the 25% goal

Fall 2011 Graduate Students (from IR)

- Over 5600 applications
- 3776 graduate students (15.1% of all OSU students)
 - 1790 women, 1986 men
 - 134 U.S. Minorities (3.5% of Graduate students)
- And an additional 580 Professional students (2.3% of all OSU students)
- 857 International Graduate Students (15.3% of Graduate Students)
- 142 INTO Graduate Pathway students
- 235 Graduate students took courses only through Ecampus
- 124 graduate students at the Cascades Campus

Issues

- Post doc numbers increasing @ 5% / yr. Doctoral students increasing @ 1% / yr.
- Some programs have capacity for growth, some do not;
- New programs and new degrees can be developed; on campus and Ecampus
- Fellowship support is a significant recruiting tool; but we need to recruit
- International student applications = 2500/year; a small proportion are accepted.
- Many extension faculty and some other T/TT faculty off campus are not advising graduate students

Proposed Strategies

- ***Waiver of Tuition on full indirect return research grants***
 - Incentivize faculty to include students on grants
 - Cost of ~\$5 million per year; potentially offset by increased grants
- ***Create endowments for Graduate Fellowships***
 - Work with you to bring funds to the Foundation
 - Each Fellowship requires a \$750,000 endowment
 - Provosts Distinguished Fellowship recruiting; allocate all funds this year
- Focus efforts on Recruiting, Retention and Assessment
 - Full cycle assessment of the Graduate Student Experience
- Facilitate ***development of new programs***, e.g.
 - PhD Public Policy
 - MA in Women Studies
 - Masters of Business Admin and Accounting
 - Certificate in University Teaching
- ***Ecampus Graduate Programs*** – potential to add 300-400 more students
- Engaging unengaged faculty as student advisers: Extension, Cascades, Exp. Stns
- International Admissions
 - Pathway programs
 - Revise TOEFL and IELTS to be program specific
 - Joint and Dual degree programs

- Supporting new faculty: recruiting and mentoring workshops
- Increase GTA appointments proportional to undergraduate enrollment increases.

DRAFT

Appendix 5. The primary NRC criteria determining rankings include:

1. Number of PhD students graduated
2. Ph.D./Faculty ratio
3. Percentage of students completing Ph.D. degree
4. Time to degree
5. Financial support
6. Full financial support
7. Fellowship
8. GRE
9. Publication
10. Publication per faculty
11. Number of citations per publication
12. Grant
13. Racial and gender diversity
14. Gender diversity
15. International students
16. Involvement with interdisciplinary work
17. Placement
18. Perception by peers

Appendix 6. Accounting of interdisciplinary efforts.

Interdepartmental graduate programs at OSU are growing in number and in enrollment. Such cross-cutting, often trans-disciplinary programs take advantage of the expertise residing in multiple administrative units to enhance the educational opportunities for students. Because of the hierarchical nature of universities, departments are distinct administrative units that receive funding and other forms of support to allow undergraduate and graduate programs to flourish. But graduate programs are not always cleanly aligned with departments, especially in the case of interdepartmental programs. Many Department Heads are concerned that the contributions made by their faculty and their departmental resources to interdepartmental programs are not fully accounted for during annual or periodic assessments of their department's success. We provide an accounting mechanism that ensures that departments receive appropriate credit for contribution to multiple graduate programs while also ensuring that graduate programs can be effectively assessed during graduate program reviews.

To facilitate the accounting it is important to recognize that graduate programs are distinct from departments even when the department is the administrative home for a graduate program. Graduate Faculty in a program can come from a number of different administrative units on campus. Hence the issue of accounting for people, money and time separately by department and by graduate program is important even for graduate programs housed within a department.

We provide an example of such accounting using hypothetical data for student head count in Environmental Sciences Graduate Program (table 1). The home department of the adviser of each graduate student is used to align that student with an academic unit. Similar matrices can be formed for faculty FTE devoted to teaching courses to students in various programs based on SCH's taken by students in each Graduate Program. Another table could be developed for square foot office or lab space or other departmental resources allocated to students in each graduate program.

Table 1. A HYPOTHETICAL EXAMPLE of the home department of graduate student advisers used to align graduate students among various graduate programs with departments.

| Graduate Programs | Departments | | | | | Total |
|-------------------|-------------|-----|-----|-------------|-----|-------|
| | Zoology | BPP | F&W | Geosciences | FES | |
| Env. Science | 20 | 15 | 15 | 12 | 6 | 62 |
| Zoology | 45 | 0 | 1 | 1 | 0 | 47 |
| BPP | 0 | 45 | 0 | 0 | 1 | 46 |
| Fisheries | 0 | 0 | 30 | 1 | 0 | 31 |
| Wildlife | 0 | 0 | 45 | 1 | 6 | 52 |
| FES | 0 | 0 | 2 | 2 | 52 | 56 |
| Other ID programs | 12 | 3 | 8 | 25 | 11 | 59 |
| Total | 77 | 63 | 93 | 42 | 76 | |

These matrices can be used to demonstrate departmental success and commitment more fully, and also used to illustrate the effectiveness of graduate programs in cutting across administrative boundaries. For instance without such an approach, an analysis of the Zoology graduate students would reflect only 45 students enrolled, while accounting for contributions to interdisciplinary programs would ensure that the full 77 students were reflected in their departmental assessments. Similarly a Graduate Program Review of Zoology would reflect 47, not 45 students if several graduate faculty in Zoology were in other academic departments, and a graduate program review for Environmental Sciences would include all 62 students advised by faculty from 5 departments.

Development of these matrices annually, with separate accounting of current students and graduates, would allow monitoring of trends in both departmental and graduate program contributions to graduate education at OSU. Should financial or space resource allocation need to consider students who are members of interdisciplinary programs then a more complete accounting of departmental contributions is possible.

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☐ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☐ Reorganization – moving responsibility for an academic program from one unit to another
- ☒ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Title of Proposal:

Effective Date:

Reorganize the College of Liberal Arts into Six Schools

7/2012

Abbreviated Category I Proposal to Reorganize the College of Liberal Arts into Six Schools

As part of OSU reorganization, we are proposing to re-structure the College of Liberal Arts at Oregon State University to capitalize on existing and potential partnerships for delivering strong undergraduate and graduate programs that reflect and extend the strengths of CLA/OSU. The proposal descriptions reflect the reconfiguration of thirteen units (11 departments and two programs) recreated as five new schools with constituent programs. The proposed School configurations echo the merger last year of Economics, Political Science, and Sociology into the School of Public Policy. The Liberal Studies Program will continue to be administered through the CLA Dean's office and managed by the CLA Head Advisor. The merger and realignment does not affect the delivery of any existing undergraduate or graduate programs, although we believe it positions the College of Liberal Arts to create new interdisciplinary programs in the future and to maintain and build on existing strengths in graduate programs.

Reorganization: Establishment of Schools in the College of Liberal Arts

**College of Liberal Arts (CLA)
Oregon State University**

**March 2012
Proposed Effective Term: Summer 2012**

CPS Tracking #: 83297

A. Title of the proposed instructional, research, or public service unit. For name changes, give both the current and proposed names. Describe the reasons for the proposed change.

As part of OSU reorganization, we are proposing to re-structure the College of Liberal Arts at Oregon State University to capitalize on existing and potential partnerships for delivering strong undergraduate and graduate programs that reflect and extend the strengths of CLA/OSU. The proposal descriptions reflect the reconfiguration of thirteen units (11 departments and two programs) recreated as five new schools with constituent programs. The proposed School configurations echo the merger last year of Economics, Political Science, and Sociology into the School of Public Policy. The Liberal Studies Program will continue to be administered through the CLA Dean's office and managed by the CLA Head Advisor. Reorganization

- CPS #: **83927**
<https://secure.oregonstate.edu/ap/cps/proposals/view/83927>
- CIP #: **Not applicable**
- SIS #: **Not applicable**
- Degree Types Offered: **(No Change: see the summary table in this proposal or OSU's online Catalog)**
- Program Types: **(No Change: Undergraduate degrees and certificates; Graduate degrees)**
- Academic Home: **College of Liberal Arts**
- Options: **(No Change: see the summary table in this proposal or OSU's online Catalog)**
- Areas of Concentration: **(No Change: see OSU's online Catalog)**
- Undergraduate Minors: **(No Change: see the summary table in this proposal or OSU's online Catalog)**
- Graduate Minors: **(No Change: see the summary table in this proposal or OSU's online Catalog)**
- Course Designators: **(No Change)**
- Delivery Mode and Location: **(No Change)**
- Unique Admission Requirements: **(No Change)**
- Enrollment Limitations: **None** (No Change to existing enrollment policies and practices)
- Accreditation: **Music Education** (existing) and **Public Policy** (planned: future)
- Proposed Effective Date: **Summer Term 2012** (preference) or **Fall Term 2012** (Banner 201300 or 201301)

New

- School of Arts and Communication
- School of History, Philosophy, and Religion
- School of Language, Culture, and Society
- University School of Psychological Science
- School of Public Policy
- School of Writing, Literature, and Film

Terminate

- Department of Anthropology
- Department of Art
- Department of English
- Department of Ethnic Studies
- Department of Foreign Languages and Literatures
- Department of History
- Department of Music
- Department of Philosophy
- Department of Psychology
- Department of Speech Communication
- New Media Communication Program
- Women Studies Program

Current College of Liberal Arts Organizational Chart

College of Liberal Arts Proposed Organizational Chart

Configuration of Programs

Overview:

The reconfiguration of the College of Liberal Arts is the forward-looking product of a two-year process of intensive and thoughtful college-wide deliberation. Beginning in 2009, faculty in the College conducted extensive dialogue within and across existing Departments through public meetings, online forums, ad-hoc committees, and, in some cases, facilitated conversations. Faculty in all 13 previously existing departments and programs participated in these discussions. Faculty input on reorganization is provided in each School description.

The basic function of research, teaching, and service remain the same through the College. Rationale, mission, functions, and program strengths are identified in area descriptions below. Nothing has changed about our programs and degrees offered, so our previously approved graduate and undergraduate assessment plans remain in place. Program liaisons (unpaid) serve as curricular and scheduling leads in all units.

The new configuration of Schools is represented in the following descriptions.

School of Arts and Communication

The merger of the Departments of Art, Music, Speech Communication, and the New Media Communications (NMC) program in the College of Liberal Arts into a new School of Arts and Communication (SAC) will build on shared disciplinary foci and practice. Art, Music, Speech (with Theatre), as well as NMC, have a history of collaborations and associations spanning three decades. Music and Theatre have participated in the Department of Art's interdisciplinary precollege program Jumpstart since 1995. The Department of Speech Communication and the University Theatre have been linked through common curriculum and resource sharing for over five decades. New Media Communication's curriculum was developed by faculty in Art, Music, Speech Communication, and the former Department of Journalism. Art and Music both share curriculum with NMC, and one faculty member in New Media Communication has his tenure home in Music. The Theatre option of Speech Communication frequently shares classes and creates joint projects with the Department of Music. The various arts and disciplines within the proposed school have long provided a significant outlet for creative endeavor to students all across campus and from a wide variety of academic majors. In doing so SAC programs from music to art to theatre to

forensics and film-making represent one of the most visibly striking and vibrant public faces of the university. The (proposed) School of Arts and Communication is a logical merger of five significant majors/degree options that have historically collaborated, shared curriculum and developed new programs. The proposed school began the reorganization process in Fall of 2009, with a series of meetings that included the Chairs of Art, Music, Speech Communication, and the NMC Program Director. In January of 2010 the first meeting of all faculty/staff in the three departments and one program included presentation of the merger proposal and the solicitation of faculty input/participation in creating the basic administrative structure. That meeting led to the formation of six “task force” committees who submitted documents in support of the development of the school, including administrative structure, school vision, and its overall mission. A subsequent meeting (conducted by an outside facilitator) was held in the spring of 2010, and in a near unanimous vote, faculty concurred that if restructuring was inevitable, these areas were best suited to merge and become the face of the visual, performing and communication arts at OSU. The (proposed) SAC met as a whole again at the beginning of Winter and Spring Terms of 2011. At the latter meeting faculty and staff were asked to respond to a questionnaire addressing fundamental concerns and challenges of the ongoing restructuring; the response data demonstrate a fundamental recognition of the challenges of creating the new school as well as solid support for it. In Winter 2012 faculty in the proposed school were again invited to respond to the details of the proposed merger to both the current transitional director and to the Dean of the College of Liberal Arts; all who responded voiced support for the overall merger. In short, the (proposed) School of Arts and Communication has and will confirm OSU's significance as a vigorous social, economic, and artistic force through contributions to the cultural life of geographic and virtual communities at all levels.

School of History, Philosophy, and Religion

The School of History, Philosophy, and Religion will be sustained by the notion that the dialogue between disciplines within the School will enhance a core mission of OSU and higher education generally: the creation of educated citizens. Each area – history, philosophy, and religious studies – offers an essential means of orienting the present moment. History explores how and why the change occurs over time, highlighting alternatives left behind and the ways in which the past unfolds into the present; Philosophy eyes the future, presenting different means of exploring the world as it ought be and the values and principles that we might use to bring that world into being; religious studies contemplates the ways in which the world's major spiritual traditions have been brought to bear in society, politics, and culture. While majors and minors will not be altered with the creation of the School – students who do not have an interest beyond their major should not feel the

School's presence in any palpable way – the curious will have the opportunity to think about the collective ways in which these three disciplines help us understand the past, negotiate the present, and chart the future. Faculty in the proposed School met in several different formats during academic year 2010-2011. Each department continued meetings that had been launched the prior year to discuss the reorganization at the university. In November 2010, an ad hoc committee, comprised of faculty in both Philosophy and History, met biweekly (and sometimes more frequently) to discuss an administrative structure and set of working principles for the School. Based on those meetings, both faculties decided to move forward with the proposed School, and at our first School meeting on June 6, 2011, faculty voted for the School's new name: History, Philosophy, and Religion. That "history" and "philosophy" might appear in the title seems self-evident; the addition of "religion" to the title of the School reflects the fact that there is substantial interest by School faculty in the study of religion, whether from an historical, philosophical, or religious studies perspective.

School of Language, Culture, and Society

The School of Language, Culture, and Society builds on Anthropology, Ethnic Studies, Foreign Languages and Literatures, and Women Studies' existing academic and research priorities in global justice, with particular emphases in food insecurity and sovereignty, Latino/a studies, and social and environmental justice. The structure of the School generates greater collaboration across disciplines in teaching and scholarship and helps support faculty in innovative teaching, grant-writing, and engaged scholarship within an international and multicultural context. Additionally, as part of its emphasis on global justice, the School is committed to improving the climate for students and faculty/staff of color and increasing diversity on campus. Each of the four units has a coordinator who facilitates class scheduling, fixed term hires, undergraduate curriculum development, and student service. Additionally, each unit also elects a representative who becomes part of the School's Advisory Council, along with the coordinators. The Advisory Council works with the Director on issues of policy and planning. The School also has a fulltime undergraduate advisor for Anthropology, Ethnic Studies, and Women Studies (Foreign Languages has a .25 undergraduate advisor in the unit), as well as a fulltime undergraduate advisor for the Anthropology online major and a .25 undergraduate advisor for the online Women Studies major. Each unit also has a graduate coordinator. Furthermore, the faculty have created a promotion and tenure policy for the School that has been accepted by the Senior Vice Provost. In addition to undergraduate degrees, these units offer an MA and PhD in Applied Anthropology, an MA in Contemporary Hispanic Studies, an MA in Women Studies, and primary and secondary areas in the MAIS. Current conversations are focusing on possible shared degrees in social justice studies that draw on the

perspectives and contributions of all four units, as well as those of the School of Public Policy. The realignment allows opportunities for greater collaboration in teaching, research, and service than has been experienced under the current departmental model. Colleagues across disciplines now have opportunities to teach together, to develop shared projects in engaged scholarship, to serve on committees together, and to develop the School's emphases on global justice, international exchange, and community involvement. At its fall 2011 retreat, the faculty and staff of Anthropology, Ethnic Studies, Foreign Languages and Literatures, and Women Studies voted 30-4 in favor of the proposal to create the School of Language, Culture, and Society.

School of Public Policy

As a result of an approved Abbreviated Category I proposal the Departments of Economics, Political Science, and Sociology along with the Masters in Public Policy program merged to create a School of Public Policy. We continue to offer undergraduate degrees in three of the four programs and expect to offer a PhD in Public Policy in AY 2012-13. We continue to offer undergraduate minors in Economics, Political Science, and Sociology, and graduate minors in Political Science and Sociology. No change was made to any of the degree programs, concentrations, or minors through the Category I process. The School of Public Policy demonstrates CLA's commitment to promoting the OSU Strategic Plan in which scientists and other scholars at OSU are contributing knowledge and expertise to three strategic areas. It also describes our commitment to creating a ranked Public Policy program for the Pacific Northwest that draws on the strength of existing OSU programs. After considerable debate and multiple meetings during 2009-2010, an Abbreviated Category I proposal was created and reviewed by all faculty as well as Deans and other University leaders. After suggested revisions were integrated into the proposal, an almost unanimous vote of the faculty approved the creation of a School of Public Policy (one person voted against the merger). The CLA Dean approved the proposal and the budget needed to create the new School, and the proposal was reviewed and revised through the academic program review process with a vote to approve by the Faculty Senate in June 2011.

School of Psychological Science

The School of Psychological Science will be constituted as a name change and a refocusing of the mission of the Department of Psychology. As is currently the case, Psychology will play a central role in the University's educational mission (through a very large major, a large presence in the Baccalaureate Core, and providing necessary coursework for outside degrees), research mission, and public service mission. Psychological Science as a topic is centrally important for the

University's signature areas of "Improving Human Health and Wellness" and "Promoting Economic Growth and Social Progress". There is also relevance to the Sustainable Earth Systems signature area. More generally, citation analyses show that psychology is a "hub science" that feeds information into other areas. The faculty associated with the proposed School see it as the provider of such information to the campus community, as a campus driver of collaborative enterprises relevant to psychological science, as a campus resource for psychological expertise, and as a place of convergence for the community of people on campus whose work involves psychological science in some capacity. We have active relationships with psychologists all across campus, and have been part of collaborations and initiatives involving every college on campus. The nomenclature shift from "Psychology" to "Psychological Science" is designed to emphasize the unit's scientific orientation to questions of behavior and cognition. Psychology has always had such an orientation, but sometimes outsiders, especially students, do not understand this. This can lead to problems when, for instance, students are surprised at the scientific content they find in our classes. Note too that this nomenclature is consistent with that of our field's research-based professional organization, the Association for Psychological Science (APS). The Psychology faculty discussed its reorganizational options extensively over multiple meetings, and the proposed option was adopted with no dissent.

School of Writing, Literature, and Film

The proposed School of Writing, Literature, and Film is configured as a name change and reorganization of constituent areas of the English Department. The name change and reorganization makes explicit the multiple disciplines offered within the academic unit and creates synergistic opportunities for students across programs. Following on-cycle academic program review in 2007, redesign of the unit was already underway at the beginning of the OSU reorganization period. An ad-hoc reorganization team of junior and senior faculty met for two years (2009-11) to study and consider all reasonable reorganization options. The School structure was developed to preserve and create intellectual cohesion among disciplines that are closely allied in their focus and student outcomes—all are textual disciplines. Given its broad mission to foster 21st century literacies for an educated citizenry, the School maintains collaborative linkages with other Schools, to the exclusion of none. The School brings together faculty who typically prepare graduate and undergraduate students for challenging careers in teaching, writing, and research. Reorganization includes streamlining of four areas of literary studies into one literature area, with strengths in material approaches to literature and transnational literary studies. Over the next 5-10 years, the faculty see themselves building upon established graduate programs (an MFA in

Creative Writing and an MA in English), with the goal of growing these programs to 70 - 80 students, and adding a “partner” low-residency MFA program at OSU Cascades. The name change also calls attention to our expansive embrace of writing programs—in aggregate, the largest of any single academic unit in OUS (foundational writing skills, Ecampus and on-campus writing minor, Baccalaureate Core Writing I and II, INTO/International Pathways writing, and MFA). Explicit reference to film highlights the coursework and research activity already present in the proposed School and enables us to consider transcript-visible options for graduate and undergraduate areas where film exists. Approximately 500-600 undergraduate students from around the university are enrolled in film courses in the School each year (an equivalent of a minor is already being offered). Over three decades, film has already evolved as a co-discipline of English studies, teaching many of the same skills (in most community colleges and Oregon high schools, film counts as a literature elective). The School maximizes existing resources by bringing together adjunct film faculty in CLA with capacity to deliver elective courses and advise theses. Direction of graduate MFA/MA and writing programs remains the same as before reorganization. Faculty fully support reorganization and voted unanimously to support the proposed new School configuration in October 2011.

C. Objectives, functions (instruction, research, people served) and activities of proposed units

The fundamental objectives and functions of the academic units do not change. All programs in all of the proposed Schools will continue to have responsibility for instruction, research and/or creative activity, and outreach and engagement. The students and community members served do not change as a result of reorganization.

All programs in all Schools will have developed program outcomes for student learning. Program assessment will continue to be the responsibility of School assessment coordinators. Outcomes developed for the programs do not change as a result of reorganization.

1. Impact on undergraduate programs

No changes are being proposed in undergraduate majors, minors, options, or certificates. All undergraduate programs will continue to be offered. There will be no impact on delivery of Baccalaureate Core, DPD, or courses currently offered by CLA programs.

Undergraduate majors and minors (Fall, 2011 degree enrollment):

School of Arts and Communications

| | |
|---------------------------------------|----------|
| Art (Art & Applied Visual Art) Majors | 263 |
| Art Minors | 86 |
| Music Majors | 118 |
| Music Minors | 35 |

School of Psychological Sciences

| | |
|-------------------|------------|
| Psychology Majors | 700 |
| Psychology Minors | <u>132</u> |
| Total | 832 |

2. Impact on Graduate Programs

All graduate programs (MA, MS, MAIS, Ph.D.) continue to be offered. There is no immediate change in graduate program degrees. As part of its long-term vision and mission, the School reorganization will make it possible for CLA to develop strategically focused graduate programs distinctive to OSU and OUS.

Graduate majors and minors (Fall, 2011 degree enrollment):

School of Arts and Communication

Music Education (MAT)

| | |
|--------------------------|-----------|
| MAIS (primarily Sp/Comm) | <u>19</u> |
| Total | 28 |

School of History, Philosophy, and Religion

| | |
|----------------------------------|----------|
| History of Science (MA, MS, PhD) | 13 |
| Applied Ethics (MA) | 9 |
| MAIS (History & Philosophy) | <u>9</u> |
| Total | 31 |

School of Language, Culture, and Society

| | |
|--|-----------|
| Anthropology (MA, PhD) | 41 |
| Women Studies (MA) | 5 |
| Contemporary Hispanic Studies | 9 |
| MAIS (Ethnic Studies) | 7 |
| MAIS (Foreign Languages and Literatures) | 10 |
| MAIS (Anthropology) | 2 |
| MAIS (Women Studies) | <u>12</u> |
| Total | 86 |

School of Public Policy

| | |
|-------------------------|----|
| Master of Public Policy | 65 |

School of Writing, Literature, and Film

| | |
|---------------------------|----------|
| Master of Arts in English | 20 |
| MFA in Creative Writing | 24 |
| MAIS (English) | <u>7</u> |
| | 51 |

School of Psychological Science

| | |
|-------------------|---|
| MAIS (Psychology) | 6 |
|-------------------|---|

Note: CLA is an active participant in the MAIS degree program. The MAIS degree is awarded by the Graduate School. Enrollment signifies one 15 credit hour field selected by a student.

3. Impact on Undergraduate and Graduate Advising

There is no change to the current advising structure in majors and minors or graduate studies in CLA as a result of reorganization. First year undergraduate advising will continue to be conducted by the CLA Advising Office and all programs have advising processes in place. This advising structure will not change. There are no foreseeable impacts on student access. Graduate program coordinators will administer the graduate programs in each school, as they do currently.

D. Resources needed, if any: personnel, FTE academic, FTE classified, facilities and equipment.

The reorganization of the College of Liberal Arts does not require additional or new resources. The combination of units under a single administrative structure rather than the creation of new units is being done for strategic reasons. The reorganization does not require new personnel or facilities. Changes in location of personnel are not required by the reorganization. There will be some minimal costs associated with letterhead, webpage and signage changes, which will be covered by E-campus revenue, as they are currently.

The major budgetary impact to the College of Liberal Arts lies in the transfer of 16 chair salaries and stipends to six full-time directors. Overall, the proposed reorganization is estimated to result in a net savings of \$111,500. Details regarding the budgetary impact of the proposal are in the Appendix and Budget Outline pages.

Current faculty resources, Fall 2011 (all tenure/tenure-line faculty plus instructors who have served for three years or more at 0.75 FTE or above; faculty CVs are available on request):

 Leibowitz, Flo (Professor, Philosophy)
 Shirazi, Mehra (Assistant Professor/Women Studies and film)
 Wood, Guy (Professor/Hispanic/Western European film)

E. Funding Sources: state sources, federal funds, other funds as specified.

There will be no change in the sources of funding due to the CLA reorganization.

F. Relationship of the proposed unit to the institutional mission

The re-organization within the College of Liberal Arts furthers OSU's institutional mission in three significant ways. First, we want to underscore that the reorganization does not alter majors and minors within CLA, and so the proposal is at base a means of offering more opportunities to students and faculty, rather than displacing what is already done so well in CLA. Second, while maintaining all majors and minors, the reorganization facilitates the possibility of interdisciplinary work, emphasizing the ways in which particular disciplinary methods are complementary means of understanding profound questions that are delineated in OSU's areas of distinction. Sustainable ecosystems, human health and wellness, and the promotion of social economic progress are problems of such magnitude that the richest possible understanding will of necessity see the relation between different ways of asking questions and pursuing answers. Finally, the reorganization furthers OSU's core project of creating an educated citizenry. In placing disciplines in dialogue with one another within Schools, and Schools in dialogue with one another within the College, the new units have the potential to more forcefully highlight the essential relation between Liberal Arts and the goal of educating citizens, both at OSU and beyond.

G. Long range goals and plans for the unit (including a statement as to anticipated funding sources for any projected growth in funding needs).

Teaching: The proposed Schools will deliver strong undergraduate and graduate majors, minors, and certificate programs in the liberal arts disciplines; increase involvement in international opportunities including development of student/faculty exchange partnerships; and leverage new School structures to develop robust disciplinary and interdisciplinary graduate programs that capitalize on OSU strengths and strategic plans.

Research and Creative Activity: As long-range goals, each School plans to increase external funding for research and creative efforts to support high expectations for CLA faculty productivity and student training. We will capitalize on new School structures by bringing together faculty and students in multi- and interdisciplinary efforts. Finally, we plan to increase our international research presence.

Outreach and Service: The proposed Schools will develop and implement strong E-campus programs/majors so that students around the state, country, and world can benefit from OSU teaching excellence; provide professional development opportunities for faculty and staff to

increase their skills and capacities to deliver expertise as needed in professional and local communities; and, participate as effective members of the OSU community in governance, administrative, and other responsibilities.

The College of Liberal Arts continues to develop E-campus courses that provide a regular source of revenue for new and continuing programs. Involvement in OSU INTO is also providing revenue for teaching innovations, especially those related to international programs. And, increased external funding can bring with it recovered indirect resources that can be directed to improving faculty success and productivity.

H. Relationship of the proposed unit to programs at other institutions in the state.

All of the sub-units within each School have already been approved within the OUS system. While individual faculty may collaborate with colleagues from other OUS institutions, units within the proposed School do not have formal collaborations with the other universities. The proposal would not change the relationship to OUS or other institutions in the state.

Appendix A: Budget outline pages

The budget figures listed here are incremental budgets, including increases to budgets planned for the development of the School.

The four budget years are in current dollars and have not been adjusted for any raises provided (including the FY12 raises) or increases in OPE costs. Any such budget adjustments will increment the budgets of the constituent parts of the proposed School in the same manner as for other units in the College. The annual service and supplies expenditures are arbitrarily divided between the stationary and equipment categories.

New costs for the Schools are listed on the attached sheets. These include:

- a) One time costs in the first and second years for some minor renovation of space for the School offices and for moving and consolidation (from Foundation funds, shown as “other budgetary authority”). Note that some of the first year costs have already been paid.
- b) One time costs over the first two years to replace stationary and signage as necessary (from Foundation funds, shown as “other budgetary authority”). A good part of these costs have already been paid. The balance will come from Foundation or College fund balance.
- c) Compensation for the School Directors are shown as new costs, as these are new positions. However, they are more than offset by the savings from compensation previously allocated to department and program chairs. Previously, there were 16 different units whose heads received salary increments at a total cost of about \$377,000. The new costs for the six school directors averages \$25,000 per position for a total of \$150,000 in salary and about \$187,500 in total costs (salary and OPE). These costs have already been budgeted for the transitional leaders in each program.
- d) There will be some realignment of staff positions and ranks in the new school as unit offices are consolidated. For example, assistants to the School Directors were rebudgeted at a base salary of \$48,000 annually, for a total net cost increase of \$45,000 (salary and OPE). Those costs have already been budgeted, but will be covered as savings from consolidation and restructuring of support positions through attrition.

- e) Addition of 2.0 FTE advisors to support the growth in Liberal Arts majors, and to professionalize advising throughout the College. The College has one of these advisors with funds the Provost committed in Spring, 2011. A second position will be filled as demand is assessed in different areas. The cost of that second position is estimated at \$67,500 salary and OPE.

The net change in costs are:

| | | |
|---------|-------------------------------|-------------|
| Income: | Programmatic savings: | \$377,000 |
| | Foundation, fund balance: | \$30,000 |
| | Provost funding advisor: | \$63,000 |
| Costs: | School Director compensation: | (\$187,500) |
| | Net staff changes: | (\$45,000) |
| | 2 new advisors: | (\$126,000) |
| Net: | | \$111,500 |

A 4% annual inflationary increase is included in the costs after AY2012-13. After the first year it is assumed that the Provost's allocation for an advisor is in the "current budgetary unit".

As you know, the College of Liberal Arts has gone through a two-year process of realignment from 17 separate units into six schools. The attached expedited Category I proposal has been developed by leaders and faculty in the College to describe the impacts of that realignment. As per agreement with Larry Rodgers, the Provost, and the Faculty Senate Executive Committee, we are submitting this proposal as an omnibus proposal modeled on the passage of the HHS reorganization proposal. We invite your comments, questions, and concerns about the proposal before we move further through the approval process. If we do not hear from you by Friday, February 10, we will assume that you have minimal or no concerns. Thank you, in advance, for taking the time to read and share with appropriate faculty and leaders in your College.

Mike Oriard
Associate Dean
College of Liberal Arts

From: Hoffman, Mark **Sent:** Friday, March 23, 2012 11:57 AM **To:** Oriard, Michael **Cc:** Serewis, Helene **Subject:** RE: liaison

Michael:

As you know I support this. I will provide comments below. The will be somewhat brief, if you feel they need to be more detailed just let me know.

“ I support the proposal presented by CLA. This is the type of reorganization that was undertaken in the College of Public Health and Human Sciences. It has proven to be an effective structure and I am confident it is a good approach for CLA.”

From: Oriard, Michael **Sent:** Friday, March 23, 2012 11:35 AM **To:** Hoffman, Mark **Cc:** Serewis, Helene **Subject:** FW: liaison

Mark:

You may recall that we bumped into each other outside the library after the deadline passed for liaison comments, and you mentioned that if your endorsement was still needed, you'd be happy to provide it. I just attended a meeting with various chairs of Faculty Senate

committees on the proposal, and I was told that having your comments would be useful. Could you fire off a note expressing your support, and “reply to all” so that it goes to Helene Serewis, the dean’s assistant, who can upload it to the proposal.

Thanks,

Mike

To: Oriard, Michael **Subject:** RE: liaison

Michael

I will provide you a more formal response after I hear from COE School Heads (presuming I hear anything from them). Personally I am very supportive of the merger/realignment.

In reading through the proposal I noticed that in some places the School of Psychological Sciences is referred to as the University School of Psychological Sciences and in some places "University" is not included. Which is intended and if University is intended, why is the modifier used?

Thanks
Jim

James R. Lundy, Ph.D., P.E.

Abbreviated Category I Proposal to
Create a School of Design and Human Environment
College of Business
Oregon State University

Executive Summary

This proposal is to 1) create a School of Design and Human Environment bringing together the current Department of Design and Human Environment (currently in the College of Public Health and Human Sciences) and the Graphic Design program (currently in the College of Liberal Arts) and 2) align the School of Design and Human Environment within the College of Business. The proposal is a result of several years of conversations among the faculty and administration in these units and is fully supported by the faculty in DHE, Graphic Design, and the College of Business. A separate Category I proposal to create a BFA major in Graphic Design is currently under review. No changes are being proposed in the undergraduate or graduate majors in current programs in DHE: Apparel Design (BS, HBS), Interior Design (BS, HBS), Merchandising Management (BS, HBS) or Design and Human Environment (MA, MS, PhD).

Objectives, Functions, and Activities of the Proposed School of Design and Human Environment

1. To prepare future leaders in the global textile, apparel, interior/residential design, graphic design, and associated marketing and retailing industries. Undergraduate and graduate professional programs in the School of Design and Human Environment will build upon current strengths in DHE and Graphic Design. Graduates of the School of Design and Human Environment will mesh creative confidence, technical skill, evidence-based knowledge, and socially responsible ethics to effectively approach the design and merchandising processes from innovation/design solutions to market/user acceptance.
2. To advance knowledge, policies, and practices in the design and merchandising of sustainable and functional design communications and environments. Research and creative activities in the proposed School will address essential industry, community, and individual needs with a focus on sustainable design processes from innovation/design solution to market/user acceptance -- thus enhancing OSU's research/creative activity enterprise in 1) Functional/Sustainable Design and 2) Consumer/User Behavior related to designed environments.

Rationale

One of OSU's Signature Areas of Distinction is to Promote Economic Growth and Social Progress. OSU is particularly poised to promote economic growth and social progress in Oregon and beyond through the educational, research, and outreach programs of the proposed School of Design and Human Environment. OSU is the only university west of the Rockies that offers Bachelors through PhD degrees in the programs offered through Design and Human Environment. As such, OSU is uniquely positioned to move sustainable and innovative design education and research to the next level by bringing together our design and merchandising programs together within the College of Business. The proposed School of DHE will serve as the

primary higher education partner for the design and creative services industries in Oregon through the enhancement of already strong industry ties to companies involved with functional apparel design and merchandising (e.g., Nike, Columbia Sportswear, Adidas), housing/residential design and remodeling (e.g., Neil Kelly Company), commercial design (e.g., Smith/CFI, Herman Miller), graphic design (Nike, Ziba Design, Adidas), and associated retailers (e.g., Macy's, Nordstrom, Target), fostering a growing and healthy economy in Oregon and beyond.

The proposed School of DHE will also leverage already strong ties to the Colleges of Business and Engineering as well as enhancing current collaborations with the Center for Healthy Aging Research, Center for Healthy Children and Families, and faculty in the Colleges of Agricultural Sciences and Liberal Arts.

Budget Analysis

A five-year estimated budget was developed by the Health Sciences and Business and Engineering Business Centers. This budget reflects increased revenue primarily through differential tuition which allows for growth in faculty and staff positions. An initial differential tuition proposal has been approved including a multi-year phase-in.

*Abbreviated Category I Proposal to
Create a School of Design and Human Environment
College of Business
Oregon State University*

Date of Proposal: February 2012
Proposed Effective Date: July 1, 2012
CPS #: 83339

Current Structure and Department Name
Department of Design and Human Environment
College of Public Health and Human Sciences

Graphic Design program
College of Liberal Arts

CIP #: 190905

Undergraduate degrees

- Apparel Design (BS, HBS), CIP #190901
- Graphic Design (BFA) pending approval -- currently an option in BFA in Applied Visual Arts/ART/CLA), CIP #500401

Notes: A Category I proposal to create a BFA in Graphic Design is currently under review (CPS # 82870). A proposal to change the course designator from ART to GD for Graphic Design courses has been approved by the Curriculum Council conditional on the creation of a Graphic Design major.

- Interior Design (BS, HBS), CIP #500408
 - Interior Design option
 - Housing Studies option
- Merchandising Management (BS, HBS), CIP #190203

Undergraduate minor

- Merchandising Management

Graduate degrees

- M.S., M.A., Ph.D. in Design and Human Environment, CIP #190905
 - Current areas of concentration: Human/Consumer Behavior, Cultural and Historic Aspects of the Near Environment, Design in the Near Environment, Merchandising Management and Textiles.

Graduate minor

- Design and Human Environment

Proposed Structure and School Name

School of Design and Human Environment

College of Business

Proposed CIP: 190905

Undergraduate degrees

- Apparel Design (BS, HBS)—no changes are being proposed
- Graphic Design (BFA) – see notes above
- Interior Design (BS, HBS) –no changes are being proposed
 - Interior Design Option – no changes are being proposed
 - Housing Studies Option – no changes are being proposed
- Merchandising Management (BS, HBS)—no changes are being proposed

Undergraduate minor

- Merchandising Management – no changes are being proposed

Graduate degrees – no changes are being proposed

- M.S., M.A., Ph.D. in Design and Human Environment
 - Areas of concentration: Human/Consumer Behavior, Cultural and Historic Aspects of the Near Environment, Design in the Near Environment, Merchandising Management, and Textiles.

Graduate minor – no changes are being proposed

- Design and Human Environment

Describe Reasons for the Proposed Change

New School: Reorganization / Merger / Rename

- Undergraduate Minors: **No change**
- Course Designators: **DHE** (Existing—No change; change Graphic Design course designators from **ART** to **GD**)
- Delivery Mode and Location: **On-campus/OSU-Main**
- Unique Admission Requirements: **Apparel Design, Graphic Design, and Interior Design use a pre-/pro- model for admissions**
- Enrollment Limitations: **None (initially)**
- Accreditation: **None initially** (Not accredited) Following approval, Council for Interior Design Accreditation (CIDA) and National Association of Schools of Art and Design (NASAD) submissions are planned
- Proposed Start Date: **Summer Term 2012** (Banner 201300)

School of Design and Human Environment

Historical Background and Timeframe of Conversations for the Proposed Change

The Department of Design and Human Environment (DHE) was established in 1908 as the Department of Domestic Arts. Over the past 104 years, the Department has evolved, adapted, and changed to meet the needs of society, industries, and students in Oregon and beyond. This has resulted in several mergers of related programs and subsequent name changes, changes in undergraduate majors, the establishment of a master's program in 1931, the creation of an Industry Advisory Board in 1986, and the establishment of a Ph.D. program in 1993. Currently, the Department is administered within the College of Public Health and Human Sciences. The name Design and Human Environment (DHE) was approved in 2004. Since the creation of the College of Health and Human Sciences in 2004 (and the subsequent name change to the College of Public Health and Human Sciences in 2011), PHHS has invested in DHE with a focus on: 1) building strategic research areas in functional design and consumer behavior (and hired faculty

accordingly); 2) investing in research infrastructure; 3) enhancing collaborations across campus; and 4) enhancing already strong industry connections. During the past six years, undergraduate and graduate enrollments increased 35% to approximately 624 undergraduate majors (730 with Graphic Design) and 39 graduate students (M.S., M.A., and Ph.D.).

During this same time, the College of Health and Human Sciences embarked on a process for becoming an accredited College of Public Health and Human Sciences. Whereas there was a desire for continued collaborations among faculty in DHE and other units in PHHS related to health and the built environment, the exploration of opportunities that might exist with alternative organizational alignments for DHE was encouraged. In 2009 the Dean of the College and Liberal Arts and the Dean of the College of Health and Human Sciences asked faculty in the Department of Design and Human Environment and the Graphic Design program to explore opportunities for bringing together OSU's design and merchandising programs under a single administrative unit. For the past two+ years faculty in the Graphic Design program and in the Department of Design and Human Environment have been meeting together on a regular basis to discuss multiple opportunities for shared curriculum, student engagement, research, and creative scholarship. Students have also been engaged in joint projects, e.g., 2010 Recycled Fashion Show, 2011 and 2012 DHE/Graphic Design Career Symposia. Based on these conversations and to enhance these collaborations and the educational opportunities for students, faculty in both units approached our respective deans about the possibility of creating an administrative unit that would bring OSU's design and merchandising programs together.

In Fall 2009, Dean Kleinsorge, College of Business, appointed a task force of faculty from the College of Business, DHE, and Graphic Design with the charge to "make a recommendation regarding the opportunity to create (what was then being referred to as) a "School of Design and Merchandising" within the College of Business." The task force conducted a "SWOT analysis" of the opportunity and recommended that "the Deans consider this opportunity and work through budget allocation issues" necessary for such a unit to be created. The task force also outlined an "implementation process and timeframe." During conversations among faculty and the deans during Winter and Spring Terms 2010, it was clear that a separate unit budget needed to be created. At the time, DHE's unit budget did not include infrastructure support (e.g., undergraduate advising, research and graduate program support, etc.) that were administered at the college level. For the unit to transfer to another college, funding for these support processes needed to be determined and allocated.

In July 2010, Deans Bray, Kleinsorge, Adams, and Rodgers met with Leslie Burns (Chair, DHE) and Andrea Marks (Coordinator, Graphic Design) to discuss the next steps in bringing the design programs together under a single administrative unit and to what college that unit might report. As a result of this meeting with the deans, Burns and Marks were given the "green light" to develop a proposal to create a School of Design and Human Environment. The recommendation was that the proposed School of DHE would remain in the College of Public Health and Human Sciences until the School was financially independent and/or the college became an accredited College of Public Health and Human Sciences. The proposed School would then transfer to the "Healthy Economy" division, affiliated with the College of Business and College of Engineering (the exact structure was not decided). In Fall 2010, faculty in DHE and Graphic Design

unanimously agreed to develop an abbreviated Category I proposal to create a School of Design and Human Environment.

After much discussion and evaluation of several names for the proposed School, faculty in DHE and Graphic Design decided to propose the name *School of Design and Human Environment* as reflective of the proposed programs in the School.

Three aspects of the proposal needed to be approved prior to the submission of the abbreviated Category I proposal:

- 1) Approval of differential tuition for undergraduate students in DHE. Differential tuition was approved to begin Fall 2011 and is reflected in the budget information. A subsequent proposal to increase the differential tuition is currently under review.
- 2) Approval of a Category I proposal to create a BFA in Graphic Design.
- 3) Approval of an MOU to transfer the Graphic Design program to the Department of Design and Human Environment.

During the 2010-2011 academic year, an initial differential tuition was approved for undergraduate students in DHE, a Category I proposal to create a major in Graphic Design was developed, and an MOU to transfer the Graphic Design program to DHE was created.

In Summer 2011, Provost Randhawa met with Deans Bray, Rogers, and Kleinsorge. They decided that the proposed School of Design and Human Environment might be better served if the transition of the School to the College of Business was moved forward during the 2011-2012 academic year. Therefore, an MOU to transfer a combined DHE/Graphic Design unit from CPHHS and CLA to the College of Business was created.

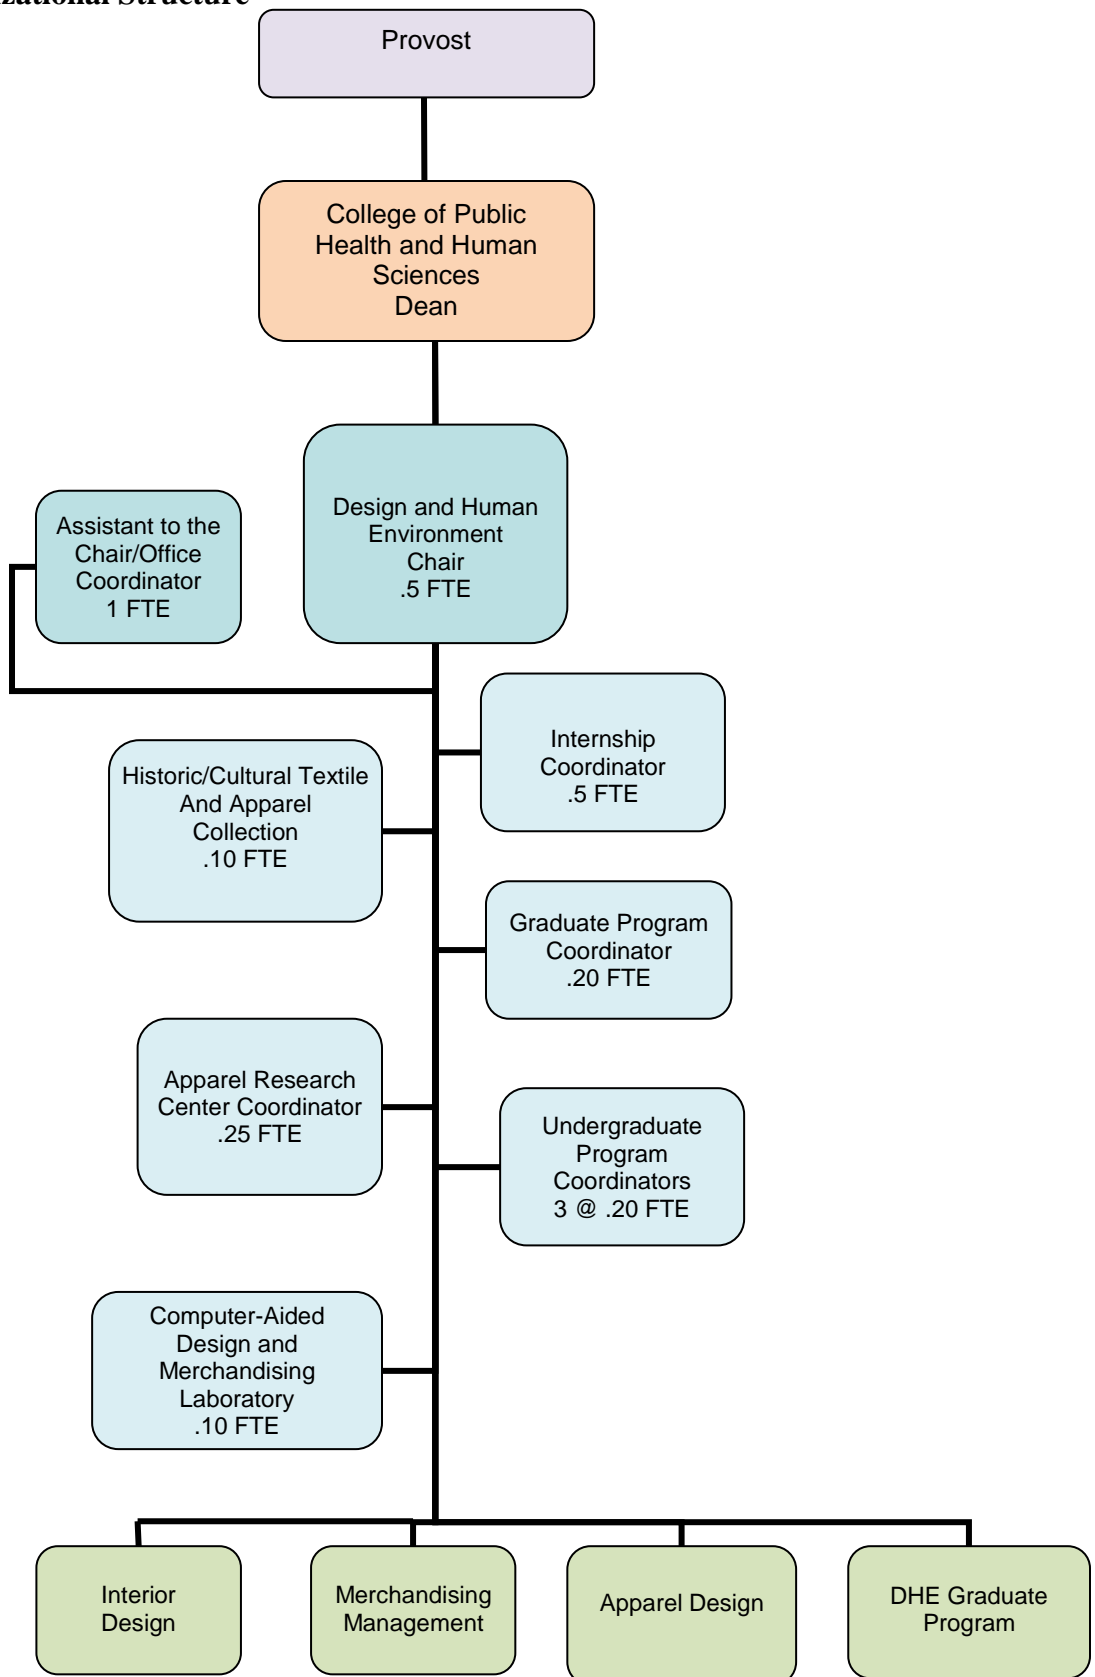

The MOU to transfer Graphic Design to DHE and the MOU to transfer the combined DHE/Graphic Design unit to the College of Business have both been signed by all affected administrators and have been approved by Provost Randhawa.

Therefore, all the necessary steps have been completed for this abbreviated Category I proposal to be submitted for review.

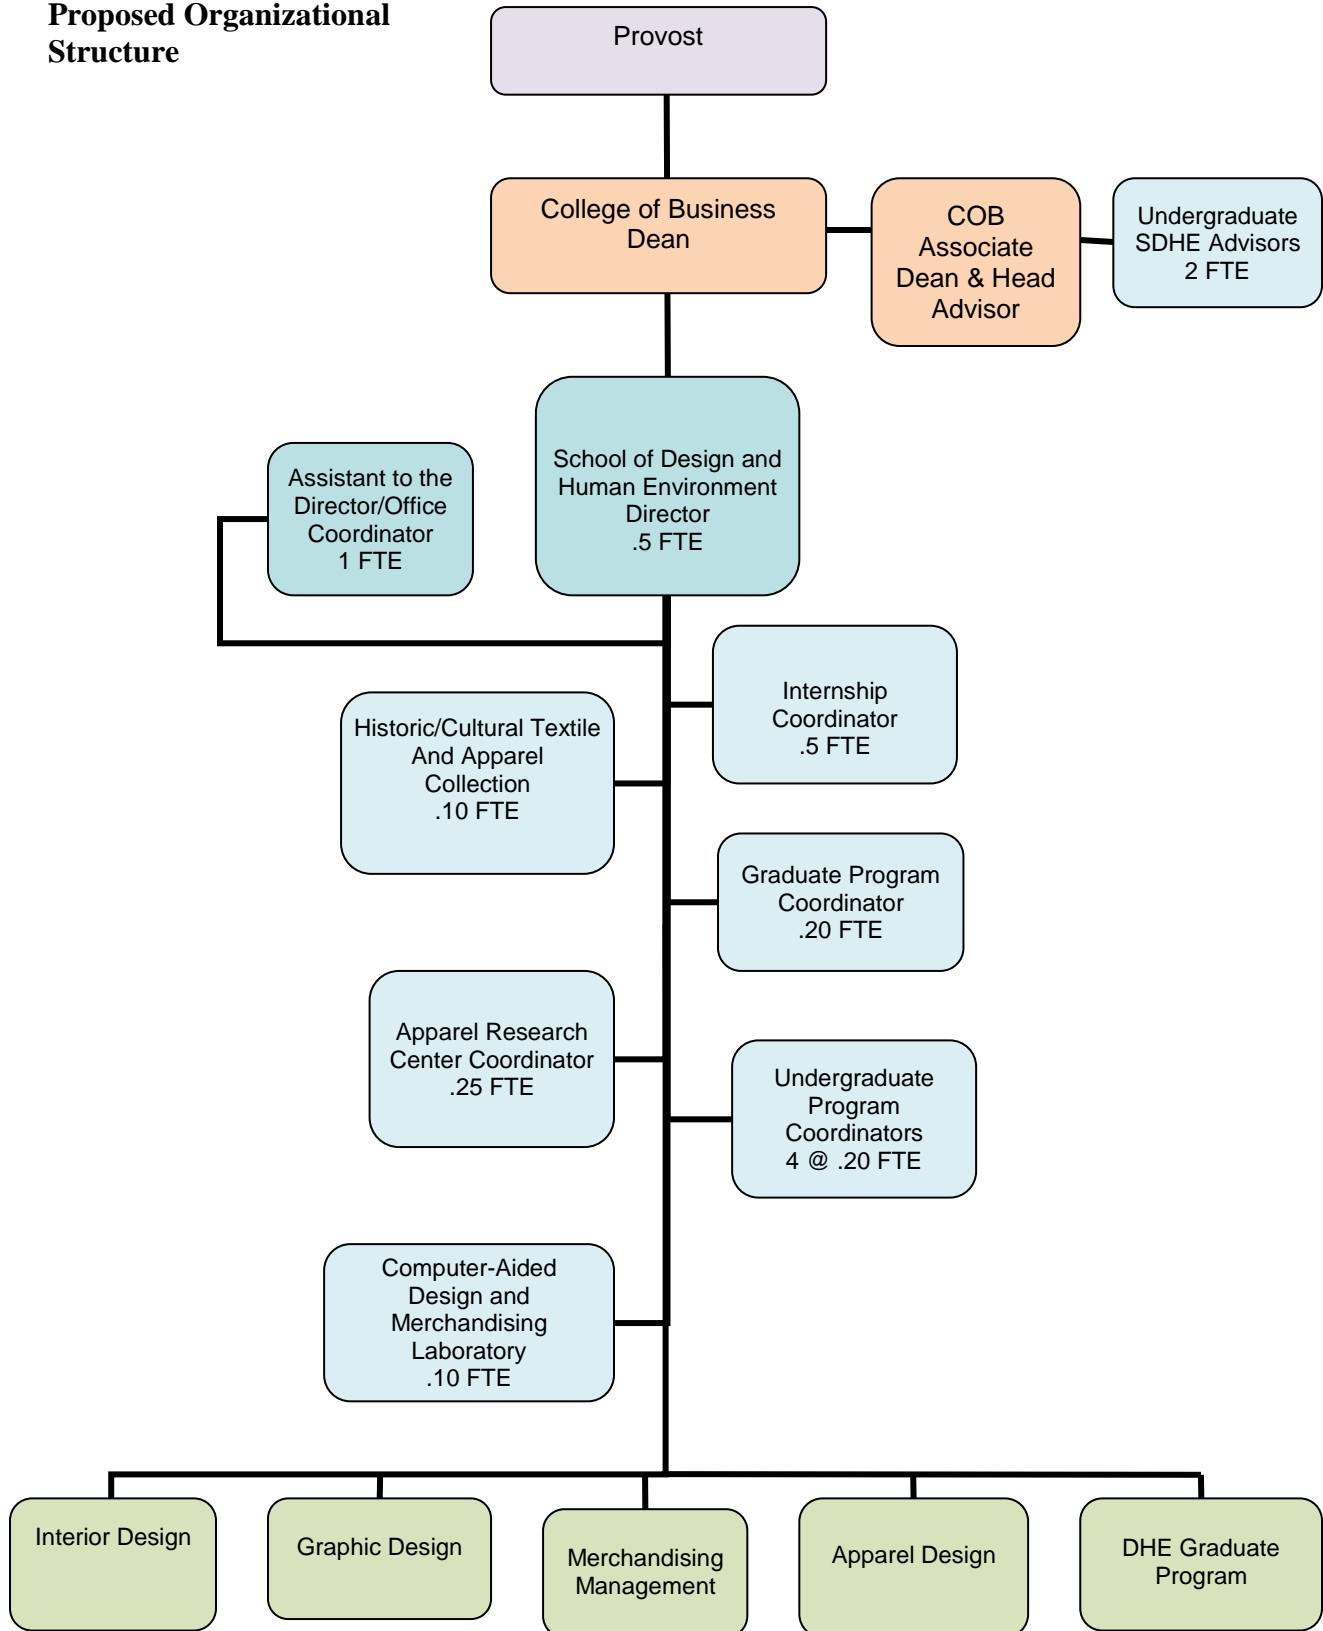

Organizational Structure

The proposed School of Design and Human Environment would be housed within and administered through the College of Business with the unit head of the School reporting to the Dean of the College of Business. See Current and Proposed Organizational Structure charts on the following pages.

Current Organizational Structure

Proposed Organizational Structure

Objectives, Functions, and Activities of the Proposed Unit

School of Design and Human Environment

1. To **prepare future leaders** in the global textile, apparel, interior/residential design, graphic design, and associated marketing and retailing industries.

Undergraduate and graduate professional programs in the School of Design and Human Environment will build upon current strengths in DHE and Graphic Design. Graduates of the School of Design and Human Environment will mesh creative confidence, technical skill, evidence-based knowledge, and socially responsible ethics to effectively approach the design and merchandising processes from innovation/design solutions to market/user acceptance. Students will have opportunities to work with award-winning faculty in research/creative activities, experiential learning, internships, leadership and professional development opportunities, and global experiences. Currently, the Department of Design and Human Environment is the only university unit west of the Rockies to offer bachelors through Ph.D. degree programs in design and human environment specialty areas. This distinction would also fall on the proposed School.

2. To advance knowledge, policies, and practices in the design and merchandising of sustainable and functional design communications and environments.

Research and creative activities in the proposed School will **address essential industry, community, and individual needs** with a focus on sustainable design processes from innovation/design solution to market/user acceptance -- thus enhancing OSU's research/creative activity enterprise in the following areas:

- **Functional/Sustainable Design:**

Current research/scholarship includes:

- Development and consumer testing of environmentally responsible textiles made from agricultural by-products
- Development and consumer testing of high performance sports apparel designs
- Assessment of thermal properties of military helmets, sports apparel, and other functional apparel designs
- Assessment of design and functionality of aging-in-place technologies
- Development of visual design strategies and innovations that consider audience, content, and delivery from historical and cultural dimensions

- **Consumer/User Behavior:**

Current research/scholarship includes:

- Effect of website design on consumer decision making and online purchases
- Effect of the design of children's environments on children's behavior and learning
- Effect of design of learning environments (including digital technology) on students' learning
- Consumer responses to marketing efforts related to corporate/social responsibility
- Marketing and personal factors contributing to unhealthy consumer behavior

The foundations of degree programs, and of research and creative scholarship, are: sustainability, social responsibility, creative problem solving, collaboration, human development across the lifespan, and interdisciplinary approaches.

Assessment and Accreditation

Student learning objectives for the undergraduate and graduate programs will not change.

Assessment processes will include a combination of:

- Review of student work including professional portfolios in relation to specific learning objectives identified
- Feedback from internship supervisors
- Feedback from the Industry Advisory Board regarding topic/content areas and skills that will be needed by current and future professionals
- Feedback from students who participated in the internship program
- Focus groups with senior students to assess perceived competency in selected process and content skills
- Focus groups with graduate students to assess perceived competency in selected process and content skills

Upon the creation of the proposed School, accreditation by the Council for Interior Design Accreditation (CIDA) is planned. The CIDA accreditation process is currently underway with the self-study to be submitted January 2014. Upon the creation of the proposed School, the School will take the lead in seeking accreditation of OSU by the National Association of Schools of Art and Design (NASAD). The accreditation covers all art and design programs at an institution.

The College of Business is accredited by the Association to Advance Collegiate Schools of Business. The academic programs within the proposed School of Design and Human Environment do not include the minimum number of business courses necessary to be included in this accreditation. Therefore, the proposed School will not affect the College of Business' accreditation.

Why a "School"?

Academic subdivisions vary among universities and consistent definitions and/or criteria do not exist. However, at OSU, a School is typically an academic subdivision within a College that includes multiple disciplines (the Graduate School is an exception to this general definition). Size of unit, as reflected in number of students and/or number of faculty also appears to be unwritten criteria; although current Schools vary in both number of students served and number of faculty administered within the subdivision. The proposed School of Design and Human Environment is similar to other Schools on the OSU campus in that it brings together multiple disciplines within an administrative subdivision that will serve over 700 undergraduate majors and 40 graduate students. Although the current number of faculty in the proposed School is relatively small compared to other Schools at OSU, increased number of faculty are planned as budgets will allow. Currently, the College of Business does not have subdivisions. A School designator will be an important means for communicating the distinction between the accredited College of Business and the accredited School of Design and Human Environment as distinct accredited programs under a single administrative umbrella.

Relationship of the Proposed Units to the Institutional Mission Strategic Initiative Alignment

Why Design and Merchandising? Why Oregon? Why OSU?

Why Design and Merchandising?

Although there are multiple definitions of, methods of, and approaches to “design”, from the perspective of the design disciplines taught at OSU (apparel design, graphic design, interior design), design is user-centered, focusing on the needs, wants, and limitations of the end user of the design. In addition, the design programs at OSU are guided by a philosophy of sustainable design, in which environmental concerns are reflected in design solutions. The design disciplines taught at OSU are all involved in finding solutions to problems with an ultimate goal of commercialization of design innovations. Indeed, industries in which design graduates devote their careers are demanding graduates entering the workforce possess a new set of strategic skills including “design thinking”, merchandising, and commercialization. Designers need to be strategic and tactical and must be able to work in multi-disciplinary teams. Although the designing of objects can involve techniques associated with the fine arts (e.g., silkscreening, photography, etc), the design disciplines taught at OSU are closely aligned not only with each other but also with engineering and business.

“Merchandising” refers to the methods, practices, and operations (including market research, development of new products, and coordination of manufacture and marketing) used to promote and sell categories of products and services. Although merchandising can be applied to any product category or service, OSU’s Merchandising Management program focuses on product categories and retailing services associated with soft goods and designed environments; i.e., apparel and accessories, interior design, graphic design, and residential design. As such, the design and merchandising programs in the proposed School of DHE are integrally connected with integrated curriculum and research/scholarship.

Why Oregon?

The strategic plans of the City of Portland, the Portland Development Commission, the Oregon Economic and Community Development Department, and Oregon Business Plan all include design and creative services as selected targeted growth industries to further position the region as an international sustainable design center. The City of Portland Economic Development Strategy has a goal of creating 10,000 jobs within the next five years in design and creative services. Indeed, the City of Portland, Portland Development Commission, and higher education have come together to create DesignForum/PDX, a cross-disciplinary resource for the broader design community in the Portland metropolitan area. Board members of DesignForum/PDX include industry representatives from graphic design, industrial design, interior design, architecture, and apparel design in addition to university administrators. The overarching goal of DesignForum/PDX is “solidifying Portland’s standing as a global hub for design and innovation” (Oregon Business, December 2, 2010). Companies with design and merchandising headquarters in Oregon include Nike, Columbia Sportswear, Adidas America, Pendleton Woolen Mills, KEEN Footwear, Ziba Design and dozens of smaller apparel, graphic and interior design firms (most of which are entrepreneurial).

More specifically, however, the Athletic and Outdoor Industry is one of Portland Development Commission's five targeted industry clusters for resource investments (the other's being Clean Tech, Advanced Manufacturing, Software, and Research and Commercialization). Anchored by the "big 3 global corporations" (Nike, Columbia Sportswear, and Adidas America), the Portland metropolitan area is home to over 300 apparel, outdoor, and athletic design and merchandising companies with a statewide employment of over 14,000. Nike is Oregon's only Fortune 500 company. Indeed, as noted by the PDC in a recent (2010) report: "What Hollywood is to the movie industry, Portland is to the Athletic and Outdoor Industry". http://www.pdc.us/bus_serv/target_industries/t-activewear.asp. Whereas, this specific initiative may appear to primarily benefit apparel/footwear design and merchandising programs at OSU, given the size and scope of this industry cluster, these global companies hire apparel designers, industrial designers, graphic designers, interior designers, and merchandising professionals with an emphasis on product development and design overall. For example, Angela Snow, the Creative Director of Apparel for Nike is a alumnus of OSU's Graphic Design program.

Why OSU?

One of OSU's Signature Areas of Distinction is to Promote Economic Growth and Social Progress. OSU is particularly poised to promote economic growth and social progress in Oregon and beyond through the educational, research, and outreach programs of the proposed School of Design and Human Environment. OSU is the only university west of the Rockies that offers Bachelors through PhD degrees in the programs offered through Design and Human Environment. As such, OSU is uniquely positioned to move sustainable and innovative design education and research to the next level by bringing together our design and merchandising programs together within the College of Business. The proposed School of DHE will serve as the primary higher education partner for the design and creative services industries in Oregon through the enhancement of already strong industry ties to companies involved with functional apparel design and merchandising (e.g., Nike, Columbia Sportswear, Adidas), housing/residential design and remodeling (e.g., Neil Kelly Company), commercial design (e.g., Smith/CFI, Herman Miller), graphic design (Nike, Ziba Design, Adidas), and associated retailers (e.g., Macy's, Nordstrom, Target), fostering a growing and healthy economy in Oregon and beyond.

The proposed School of DHE will also leverage already strong ties to the Colleges of Business and Engineering as well as enhancing current collaborations with the Center for Healthy Aging Research, Center for Healthy Children and Families, and faculty in the Colleges of Agricultural Sciences and Liberal Arts.

Changes in Resources Needed

Funding the School of Design and Human Environment

Investment in the Future

It is estimated that an investment of \$350,000 over the next 4 years will be needed for the creation of the proposed School. The investment would be used to hire tenure/tenure track faculty, instructors, support staff (one additional professional advisor), and related increased services and supplies needed to create the School and to align with the College of Business. This investment will be achieved through differential tuition. This investment will be in addition to the current budget for DHE and the Graphic Design portion of the Department of Art's E&G budget.

Differential Tuition

Effective Fall Term 2011, undergraduate students majoring in the professional programs in the Department of Design and Human Environment are paying the following differential tuition:

Pre-Apparel Design: additional \$5/credit hour

Pre-Interior Design: additional \$5/credit hour

Apparel Design: additional \$5/credit hour

Interior Design: additional \$5/credit hour

Merchandising Management: additional \$5/credit hour

An application for incremental increases in the differential tuition is being submitted to increase the differential tuition for DHE students (including Graphic Design). An analysis by the Business and Engineering Business Center (12/16/2011) indicated that the increased revenue through the differential tuition will be:

FY12: \$107,880

FY13 estimate: \$275,000

FY14 estimate: \$375,000

Distribution of E&G Investments for New Faculty, Support Staff, and Services & Supplies

Note: this is an addition to the current DHE and Graphic Design E&G funds

T/TT average/9-month = \$75,000 + \$36,000 OPE (\$111,000 total)

Instructor average/9-month = \$40,000 + \$22,400 OPE (\$62,400 total)

Support Staff average = \$40,000 + \$22,400 OPE (\$62,400)

Inflation is estimated at 4% per year

| Academic Year | FY13 | FY14 | FY15 | FY16 |
|---------------|----------|-----------|----------|---------|
| T/TT | | \$115,440 | | |
| Instructors | | \$64,896 | \$67,492 | |
| Support Staff | \$62,400 | | | |
| Services & | \$25,000 | \$5,000 | \$5,000 | \$5,000 |

| | | | | |
|------------------------------|-----------|-----------|-----------|-----------|
| Supplies | | | | |
| Total/year | \$87,400 | \$185,336 | \$72,492 | \$5,000 |
| Cumulative increase | \$87,400 | \$272,736 | \$345,228 | \$350,228 |
| Differential Tuition revenue | \$275,000 | \$375,000 | \$375,000 | \$375,000 |

Teaching/Research Faculty FTE by Year

| Academic Year | FY 13 | FY 14 | FY 15 | FY16 |
|---------------|-------|-------|-------|------|
| T/TT | 10 | 11 | 11 | 11 |
| Instructors | 4.5 | 5.5 | 6.5 | 6.5 |
| Other | 2 | 2 | 2 | 2 |
| Total | 16.5 | 18.5 | 19.5 | 19.5 |

Revenue Diversification

Although differential tuition will allow the School to grow to meet student demands, diversification of revenue beyond differential tuition will allow the School to evolve and develop. Because of the strong ties with Oregon companies, development efforts related to endowments for professorships are already underway. The Department of Design and Human Environment has had an active Industry Advisory Board since 1986. Members of the Industry Advisory Board are in the process of creating a Development Council for the School. Working with a development officer for the School, the School Director will create a development plan and spend a high proportion of his/her time further cultivating donor relationships. The Apparel Research Center was created in 2011 and will be funded through a combination of client-based fees and contracts, research grants, and endowments and will contribute overhead to the School. As future funding allows, the School of Design and Human Environment will be positioned to expand degree and research/creative activity programs in areas such as footwear design and development -- in collaboration with faculty in the College of Engineering.

Enrollment Trends and Projected Enrollments

Three undergraduate programs in the proposed School admit students into a pre-professional program and then at the end of their first year or the beginning of their second year, students apply to the professional program and are admitted into a cohort based on studio capacity of 22-24/students per studio. For Fall 2011, 48 students were admitted into the professional Apparel Design program, 24 students were admitted into the Interior Design program, and 22 students were admitted into the Graphic Design program. Undergraduate enrollments steadily increased from 2004-2010 at which time enrollment management strategies were implemented to stabilize enrollments necessary to maintain quality programs. With the current and proposed faculty positions, an undergraduate enrollment of 700-750 undergraduate majors and graduate enrollment of 30-35 graduate students are considered optimal.

Undergraduate and Graduate Enrollment – Fall Term 4th week

| | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 ¹ | 2013 ¹ | 2014 ¹ |

¹Projected

²Interior Design and Housing Studies are a consolidated major beginning Fall 2010. The last Housing Studies cohort will graduate Spring 2012

³In 2011, Graphic Design professional program went from a “2-studio cohort” to a “1-studio cohort”

Decision Making Process

The aspiration to create a School of Design and Human Environment has been part of the strategic plan for the Department of Design and Human Environment since 2004, conditional on additional funding. Since that time, targeted faculty hires, increased research infrastructure, and growth in instructional capacity have been put into place. Conversations between faculty in DHE and Graphic Design regarding a joint unit began in 2009. The present proposal is a culmination of several years of conversations, meetings with deans and other administrators, work of several cross-unit task forces, and multiple retreats. Below is a general outline of the primary decision making processes and “milestones.”

- Fall 2009: faculty in Graphic Design and Design and Human Environment started meeting on a regular basis to develop a plan for creating a School that would bring together DHE and the Graphic Design program.
- November 2009: a task force of faculty in DHE, Graphic Design, and Business was created to explore merging, what was then referred to as, a School of Design and Merchandising with the College of Business. A final report was submitted to Deans

Kleinsorge and Bray in January, 2010. The task force conducted a “SWOT analysis” of the opportunity and recommended that “the Deans consider this opportunity and work through budget allocation issues” necessary for such a unit to be created.

- November 2009: Leslie Burns and Jim McAlexander met with the College of Business Dean’s Circle of Excellence (industry executives) to get feedback on the idea of a school of design within the College of Business.
- December 4, 2009: faculty met with Dean Tammy Bray (HHS) about opportunities for a joint DHE and Graphic Design unit within the CPHHS.
- January 15, 2010: faculty met with Dean Ilene Kleinsorge (COB) about opportunities for a joint DHE and Graphic Design unit within the COB.
- February 4, 2010: DHE faculty met with members of the DHE Industry Advisory Board and student leaders and solicited feedback regarding opportunities for a joint DHE and Graphic Design unit and the impact of differential tuition. Feedback was very positive for both initiatives.
- February 10, 2010: Leslie Burns met with Chairs in CLA who were initiating the creation of, what was then referred to as, a School of Performing and Interactive Arts in CLA to explore opportunities for collaboration. The conclusion was that it made sense for the two initiatives (School of DHE and School of Performing and Interactive Arts) to move forward as separate proposals.
- February 26, 2010: faculty in DHE and Graphic Design met with Dean Larry Rodgers (CLA) about opportunities for a joint DHE and Graphic Design unit within the CLA.
- July 2010: Deans Bray, Kleinsorge, Adams, and Rodgers met with Leslie Burns and Andrea Marks to discuss the next steps in bringing the design programs together under a single administrative unit and to what college that unit might report. Conclusion was for Burns and Marks to develop an abbreviated Category I proposal for a School to initially be administered by CPHHS and then moved to the Division of Business and Engineering at a later date.
- Fall 2010: faculty in DHE and Graphic Design unanimously agreed to develop an abbreviated Category I proposal to create a School of Design and Human Environment.
- February 3, 2011: faculty in DHE met with the DHE Industry Advisory Board to discuss merging with Graphic Design, creating a School, organizational alignment opportunities, and external support needed for the School.
- Winter-Spring 2011: an MOU to transfer Graphic Design to DHE was developed and reviewed by the Department of Art, CLA, and CPHHS.
- Winter-Spring 2011: A Category I proposal to create a BFA major in Graphic Design was drafted.
- Summer 2011: Provost Randhawa met with Deans Bray, Rogers, and Kleinsorge. The recommendation was for a proposed School of Design and Human Environment combining the current DHE and Graphic Design be transferred to the College of Business in FY13.
- Fall 2011: an MOU to transfer a combined DHE/Graphic Design to COB was developed and reviewed by CLA, CPHHS, and COB.
- September 21, 2011: Deans Bray and Kleinsorge attended the DHE/Graphic Design faculty retreat to voice support of the proposed School and answer questions.

- Fall 2011, DHE and Graphic Design faculty created three task forces to identify transition issues and timeframe for conversations and decisions for bringing together DHE and Graphic Design:
 - Faculty Governance/Promotion and Tenure
 - Curriculum
 - Student Engagement
- Fall 2011: Leslie Burns met with Dean Kleinsorge on a regular basis to discuss issues with transferring the joint DHE/Graphic Design unit to the COB.
- Fall 2011: Leslie Burns, Andrea Marks, Kim McAlexander (Head advisor in CPHHS), Brenda Saltee (Head Advisor in Business), and Carol Brown (Associate Dean of the College of Business) met to discuss and plan advising transitions. An advising transition team will meet through Winter and Spring Terms 2012 to assure a smooth transition for students in this process.
- February 3, 2012: At their college faculty meeting, the College of Business faculty unanimously endorsed the integration of a proposed School of DHE into the College of Business.
- A joint DHE/COB Integration task force comprised of faculty and staff was appointed by Dean Kleinsorge with the charge to “analyze and make recommendations to faculty and the dean *for operational structures, processes, and policies* for the successful integration of DHE and COB. The recommendations should reflect operational efficiency and result in DHE and COB faculty and staff having a sense of community and inclusion.” The first meeting of the task force was March 2012 with periodic meetings throughout Spring Term.

In addition, over the course of two years, Leslie Burns has met with Shawn Scoville, Kevin Heaney, and Julie Brandis from the OSU Foundation regarding a fund-raising/development plan for the School.

Lastly, over the course of two+ years, faculty in DHE and Graphic Design have reviewed and provided input on several drafts of this proposal and are in unanimous support of the proposal.

School of Design and Human Environment Faculty

- Leslie Burns *, Ph.D., Professor and Chair
Merchandising management and consumer behavior
- Hsiou-Lien Chen *, Ph.D., Associate Professor
Functional/sustainable textiles; sustainable agricultural by-products for textile end uses
- Brigitte Cluver, Ph.D., Research Associate/Instructor, Coordinator of the Apparel Research Center
Functional/sustainable textiles; sustainable agricultural by-products for textile end uses
- Sandy Dawson, M.S., Instructor/Internship Coordinator

Merchandising management and consumer behavior

- Marianne Egan, M.S., Instructor
Apparel Design
- Nancy Froehlich M.F.A.: Assistant Professor
Graphic Design
- Christine Gallagher, M.F.A., Instructor
Graphic Design
- Minjeong Kim *, Ph.D., Associate Professor, Coordinator of the Merchandising Management Program
Merchandising management and consumer behavior
- Seunghae Lee, Ph.D., Associate Professor
Interior Design for aging populations
- Andrea Marks *, M.F.A, Associate Professor, Coordinator of the Graphic Design Program
Graphic Design
- Kathy Mullet *, Ph.D., Associate Professor, Coordinator of the Apparel Design Program
Functional Apparel Design
- Elaine Pedersen *, Ph.D. Associate Professor, Curator, Historic/Cultural Textile and Apparel Collection
Historic/cultural aspects of the near environment including human behavior related to apparel design
- Marilyn Read, Ph.D., Associate Professor, Coordinator of the Interior Design Program
Interior Design across the lifespan
- Peggy Suzio, M.S., Instructor
Interior Design
- Carmen Steggell *, Ph.D., Associate Professor, Coordinator of the DHE Graduate Program and Housing Studies Option in Interior Design
Housing Studies and aging-in-place technologies
- Elif Tural, Ph.D., Research Associate
Interior Design/Housing Studies

*Tenured

Letters of Support from Industry Partners

Forthcoming

Email received March 2, 2012

Leslie,

As a proud alumnus of the program, I am in full support of the creation of a School of Design and Human Environment in the College of Business at OSU. Your program is strong, and is the fuel behind the workforce for many industry businesses in Portland and beyond.

I am excited to see this come to fruition!

Sincerely,

Suzanne Peters
Class of '83

Suzanne is a DHE alum and Chair of the OSU Design Network Steering Committee. The OSU Design Network is a division of the OSU Alumni Association.

.....

Email received March 5, 2012

Hi Leslie,

I am very excited and in full support of the creation of a School of Design and Human Environment in the College of Business at OSU. I think it will give the students a great competitive advantage in the industry. In my 20 years at Nike, I have had the opportunity to hire and mentor many students, it has been my experience that students who have a foundation in Business make the best candidates and become very successful employees. Understanding Business fundamentals with talent in Design is the perfect partnership between Art and Science. This Art and Science is at the core of every meeting, successful collection, and ultimately the success of companies like Nike.

Thank you for recognizing this, and preparing your students for future success.

Sincerely,

Janet Moss
Nike, Inc.

February 2012

**Proposal to Increase Differential Tuition
Department of Design and Human Environment
College of Public Health and Human Sciences
College of Business
Oregon State University**

Request

The College of Public Health and Human Sciences and the College of Business requests that, effective Fall Term 2012, the Department of Design and Human Environment be permitted to increase differential tuition for students in the following undergraduate professional programs.

Year 1 – 2012-2013

Pre-Apparel Design: \$10/SCH

Pre-Interior Design: \$10/SCH

Pre-Graphic Design: \$10/SCH (Category I proposals to create Graphic Design pre-professional and professional degree programs and to transfer these programs to DHE are currently under review)

Merchandising Management: \$10/SCH

Apparel Design: \$20/SCH

Interior Design: \$20/SCH

Graphic Design: \$20/SCH (Category I proposals to create Graphic Design pre-professional and professional degree programs and to transfer these programs to DHE are currently under review)

Year 2 – 2013-2014

Pre-Apparel Design: \$15/SCH

Pre-Interior Design: \$15/SCH

Pre-Graphic Design: \$15/SCH

Merchandising Management: \$15/SCH

Apparel Design: \$25/SCH

Interior Design: \$25/SCH

Graphic Design: \$25/SCH

Current differential tuition for all DHE majors (pre-Apparel Design, Pre-Interior Design, Merchandising Management, Apparel Design, and Interior Design) is \$5/SCH.

The requested increase in differential tuition is in alignment with differential tuition assessed to Oregon State University students majoring in similar undergraduate professional programs:

Pre-Engineering: \$17/SCH

Engineering: \$34/SCH

Business Administration: \$11/SCH

Costs of materials used by students in studio and laboratory courses are covered by separate course fees and are not affected by the proposed increase in differential tuition.

Justification

Since the creation of the College of Health and Human Sciences in 2004 and the College of Public Health and Human Sciences in 2011, PHHS has invested in DHE with a focus on: 1) building strategic research areas in functional design and consumer behavior (and hired accordingly), 2) enhancing research infrastructure, 3) enhancing collaborations across campus, and 4) enhancing already strong industry connections. Undergraduate enrollment in DHE is approximately 650 undergraduate majors with an additional 80 majors in Graphic Design. Differential tuition is a necessary budgetary component for continued growth and development of design and merchandising programs at OSU. An initial differential tuition level went into effect Fall 2011 with the intention that incremental increases would be phased in over a 2-3 year period. An Abbreviated Category I proposal is currently under review which would move the administrative responsibilities of Graphic Design to DHE and the combined DHE and Graphic Design programs to the College of Business within the Division of Business and Engineering.

DHE currently offers undergraduate degrees in Apparel Design, Interior Design, and Merchandising Management. A Category I proposal is currently under review that would create a major in Graphic Design which would be administered in DHE. Graduates of these programs mesh creative confidence, technical skill, evidence-based knowledge, and socially responsible ethics to effectively approach the design and merchandising processes from innovation/design solutions to market/user acceptance. Students study all aspects of the supply chain including textiles/materials, design, global sourcing, marketing, and retail distribution; all taught from a social/corporate responsibility and sustainability framework. Students work with award-winning faculty in research/creative activities, experiential learning, internships, global experiences, and leadership and professional development opportunities. Graduates of the undergraduate programs in DHE are in high demand by industry because of their professional and leadership experiences, their knowledge of the supply chain, and their evidence-based problem solving approaches to design and merchandising operations. Graduates go on to design and management positions within the growing design, creative services, and retailing industries in Oregon and beyond.

The strategic plans of the City of Portland, the Portland Development Commission, the Oregon Economic and Community Development Department, and Oregon Business Plan all include design and creative services as selected targeted growth industries to further position the region as an international sustainable design center. The City of Portland Economic Development Strategy has a goal of creating 10,000 jobs within the next five years in design and creative services. Indeed, the City of Portland, Portland Development Commission, and higher education have come together to create DesignForum/PDX, a cross-disciplinary resource for the broader design community in Portland metropolitan area. Board members of DesignForum/PDX include industry representatives from graphic design, industrial design, interior design, architecture, and apparel design in addition to university administrators. The overarching goal of DesignForum/PDX is “solidifying Portland’s standing as a global hub for design and innovation” (Oregon Business, December 2, 2010). Companies with design headquarters in Oregon include

Nike, Columbia Sportswear, Adidas America, Pendleton Woolen Mills, KEEN Footwear, Ziba Design and dozens of smaller apparel, graphic and interior design firms (most of which are entrepreneurial). Enhancing OSUs already strong industry ties to companies involved with functional apparel design and merchandising (e.g., Nike, Columbia Sportswear, Adidas), residential design and remodeling (e.g., Neil Kelly Company), commercial design (e.g., Smith/CFI, Herman Miller), graphic design (Nike, Ziba Design, Adidas), and associated retailers (e.g., Macy's, Nordstrom, Target) will foster a growing and healthy economy in Oregon and beyond.

Quality instruction within these design and merchandising professional programs requires a number of courses taught in a studio and laboratory format including the need for specialized equipment and extended instructional contact hours. Apparel Design and Interior Design professional program curricula is heavily studio and lab-based. Both facility size/design and faculty time limit the number of students who can enroll in studio and laboratory courses. With the high demand in Apparel Design, Interior Design, and Merchandising Management programs, resources are needed to continue to offer these specialized technical studio and laboratory experiences for students.

In addition, because of the high demand for courses in these program areas, aging specialized equipment and facilities in the department have experienced severe wear and tear. With increased use of technology in these programs, constant upgrades to specialized equipment and facilities are needed. In addition, up-graded gallery and demonstration space is needed. The funds from differential tuition will enable the department to provide safer, better equipped, and more effective facilities for our students.

The department has a basic computer-aided design laboratory (partially funded through Technology Resource Fees) providing students with access to and experience with basic design software. However, these professional programs also require advanced specialized digital equipment including 3D design software, specialized scanners, digital printers for textiles, and access to online trend forecasting and materials data bases. Funds from differential tuition will help make it possible to offer students opportunities to engage with this specialized software and equipment, thus making them more competitive in the marketplace.

Because Oregon State University is not located in a metropolitan area, it is often difficult to bring students in contact with practicing designers and merchandisers. Therefore, one of the priorities of the department is to establish a stronger program of visiting professionals for a number of purposes including serving as jurors of student projects, conducting portfolio reviews, and giving lectures and workshops. In this way students and faculty will come in contact with a greater diversity of styles, approaches, and ideas that would greatly enhance the design and merchandising programs.

Lastly, tuition and fees including differential tuition associated with these specialized undergraduate professional programs in DHE will remain less than the tuition and fees charged for design and merchandising programs at other institutions. For example, a student majoring in Apparel Design at OSU paying out-of-state tuition (including the proposed differential tuition)

would still pay less tuition and fees than if she/he were enrolled in a program at a private design school.

Cost Comparison of Tuition and Fees for an Apparel Design 4-year Bachelors Degree 2011-2012: Full-time Degree-seeking Student (Professional Program)

| OSU | Tuition (academic year) | Fees (academic year) | Total: Tuition and Fees (academic year) |
|--|-------------------------|----------------------|---|
| OSU in state | \$6,453 | \$1,372 | \$7,825 |
| Proposed in state w/differential tuition | \$7,128 | \$1,372 | \$8,500 |
| OSU out-of-state | \$20,169 | \$1,372 | \$21,541 |
| Proposed out-of-state w/differential tuition | \$20,844 | \$1,372 | \$22,216 |
| Other Institutions | | | |
| Art Institute of Portland | \$21,645 | \$844 | \$22,489 |
| Art Institute of Los Angeles | \$23,310 | \$1,008 | \$24,318 |
| Fashion Inst of Design & Merchandising* | \$25,265 | \$545 | \$25,810 |
| Parsons The New School for Design** | \$38,510 | \$460 | \$38,970 |

*AA in Fashion Design; B.S in Business Management

** BFA

Access, affordability, and student choice of undergraduate major

The faculty in Design and Human Environment are sensitive to the additional financial burden differential tuition will place on our students. Therefore, DHE will initially set aside 10% of the differential tuition received from students majoring in these undergraduate programs and make these funds available for needy students enrolled in the programs. In addition, it will be a priority of our future fund-raising and development efforts to increase the number of scholarships available to our students beyond this initial funding level. The scholarship funding made available through the differential tuition will be included in the College of Public Health and Human Sciences existing process for undergraduate scholarships. Through a variety of communications (e.g., email, web, faculty announcements), all students are informed by the faculty and advisors of the scholarship process. A college-wide committee made up of faculty and advisors selects students to receive these scholarships. Recipients for these scholarships will be evaluated based on their FAFSA index of financial need as well as academic ability.

Student Consultation and Support

This proposal for differential tuition has been shared with the DHE Industry Advisory Board, a group that includes industry executives and Presidents of the five student organizations in the department. Through this group, students' perspectives on the differential tuition proposal were solicited and taken into account as the proposal was developed. Student leaders were asked to garner input from other students and share this input with the DHE faculty. Input received focused on students' understanding of the need for differential tuition, their excitement about the educational opportunities that differential tuition may offer, and their concerns regarding the additional financial burden.

Upon approval of the differential tuition proposal, students will be informed on the change in tuition through several means including: 1) postcard sent to their home address with a short explanation, website link, and contact information, 2) email to all current students with a short explanation, website link, and contact information, and 3) website that will fully explain the purpose of the differential tuition and give specific examples of what the funds will be used for.

Therefore, the College of Public Health and Human Sciences, the College of Business, and the Department of Design and Human Environment request permission to increase differential tuition for undergraduate professional programs in the Department of Design and Human Environment. Funds from the differential tuition will assure the growth and development of quality design and merchandising programs needed for the economic development of Oregon. The differential tuition will also assure continued high quality educational opportunities with emphases on advanced technical skills, corporate responsibility and sustainability, leadership opportunities, internships, and global experiences.

January 2012

Memorandum of Understanding

**Between the College of Public Health and Human Sciences, College of Business, and
College of Liberal Arts for the Transfer of the Graphic Design program to the
Department of Design and Human Environment**

Purpose of the Transfer:

The Graphic Design program is currently an option within the Applied Visual Arts BFA degree program within the Department of Art in the College of Liberal Arts. The transfer of the Graphic Design program to the Department of Design and Human Environment would leverage OSU resources to better meet the needs of current and future students and the industries served in Oregon and beyond.

Justification:

The design and creative services industries are vitally important to the economy of Oregon. Design and creative services industries include companies that focus on design and marketing of a variety of products and services including apparel, footwear and other accessories, outdoor gear, packaging, and consumer products for specific target customers. For example, the Athletic and Outdoor Industry Cluster has been identified by the Portland Development Commission as one of five targeted industry clusters for enhanced growth and investment for future economic development (the other four being Clean Tech, Software, Advanced Manufacturing, and Research and Commercialization). Anchored by the “big 3” (Nike, Columbia Sportswear, and Adidas America) Portland is home to over 300 Athletic and Outdoor companies all of which focus on design, marketing, and merchandising. Statewide, over 700 companies employ over 14,000 individuals with a payroll of nearly \$1.2 billion. Indeed, as the Portland Development Commission noted in a recent report (<http://pdxeconomicdevelopment.com/cluster-activewear.html>) “what Hollywood is the movie industry, Portland is to the Athletic and Outdoor Industry.”

In addition, the strategic plans of the City of Portland, the Portland Development Commission, the Oregon Economic and Community Development Department, and Oregon Business Plan all include design and creative services as selected targeted growth industries to further position the region as an international sustainable design center. Other companies with design headquarters in Oregon include Pendleton Woolen Mills, LaCrosse/Danner, KEEN Footwear, Nau, S Group, Ziba Design and dozens of smaller apparel, graphic and interior design firms (most of which are entrepreneurial). PDC also notes “talent is essential to this cluster’s success”. As the only academic unit West of the Rockies to offer bachelors through Ph.D. in design and merchandising specialty areas, DHE is the primary higher education partner for these important segments of the Oregon economy. The transfer of the Graphic Design program to DHE will bring together the design and merchandising programs at OSU to:

- Prepare future leaders in apparel design and merchandising, interior and residential design, graphic design, design communications, and soft goods retailing for the growing design and creative services industries in the Portland metropolitan area and beyond.
- Enhance the research/creative scholarship enterprise through multidisciplinary collaborations among scholars of design (apparel, graphic, interior, and industrial), consumer behavior, and merchandising with a focus on design and merchandising processes from innovation/design solution to market/user acceptance.

Timeframe for Conversations and Faculty Input:

In 2009 the Deans of the Colleges and Liberal Arts and Health and Human Sciences encouraged faculty in the Department of Design and Human Environment and the Graphic Design program to explore opportunities for bringing together OSU's design and merchandising programs under a single administrative unit. For the past two years faculty in the Graphic Design program and in the Department of Design and Human Environment have been meeting together on a regular basis to discuss multiple opportunities for shared curriculum, student engagement, research, and creative scholarship. Students have also been engaged in joint projects, e.g., 2010 Recycled Fashion Show, 2011 DHE Career Symposium. Based on these conversations and to enhance these collaborations and the educational opportunities for students, faculty in both units approached our respective deans about the possibility of creating an administrative unit that would bring OSU's design and merchandising programs together.

In July 2010, Deans Bray, Kleinsorge, Adams, and Rodgers met with Leslie Burns (Chair, DHE) and Andrea Marks (Coordinator, Graphic Design) to discuss the next steps in bringing the design programs together under a single administrative unit and to what college that unit might eventually report. As a result of that meeting with the deans, Burns and Marks were given the "green light" to develop a proposal to create a School of Design and Human Environment that would report to HHS until 2013-14 at which time it would be transferred within the "Healthy Economy" division. In Fall 2010, faculty in DHE and Graphic Design unanimously agreed to develop an abbreviated Category I proposal to create a School of Design and Human Environment. A necessary component of that proposal is to transfer the Graphic Design program to the Department of Design and Human Environment. All faculty members in DHE and Graphic Design program are very supportive of this transfer. Upon the approval of the faculty, John Maul (Department Chair of Art) and Leslie Burns (Department Chair of DHE) met and also agreed with this transfer. In January 2011 the Provost requested an MOU outlining the specific agreements between the Colleges of Liberal Arts and (Public) Health and Human Sciences related to the transfer of university resources associated with the Graphic Design program. During Summer 2011, the decision was made that the Department/School of Design and Human Environment would be transferred to the College of Business. Therefore, this MOU is to transfer the Graphic Design program to DHE. A second MOU will outline the transfer of DHE to COB.

Conditions and Effective Date

Currently, Graphic Design is an option within the Applied Visual Arts Undergraduate Major. A Category I proposal is currently under review to create an undergraduate major in Graphic Design. This MOU is conditional on the approval of the Graphic Design major. The MOU will be effective when the Graphic Design major is approved. Until that time, the Department of Art will be responsible for the administration, management, and expenditures associated with the Graphic Design program.

I. Transfer of Academic Personnel

a. Tenure-home transfer

Tenure-home for the one tenured faculty member in Graphic Design (Marks) and one tenure-track faculty member (Froelich) will be transferred from Art to DHE.

b. Budget transfer

- i. The base budget (i.e., salary and OPE) for two professorial rank faculty and two instructor positions currently funded in the College of Liberal Arts will be transferred to the Department of Design and Human Environment. The positions include:
 1. Associate Professor, tenured, 1.0 FTE
 2. Assistant Professor, tenure-track 1.0 FTE
 3. Instructor 1, fixed-term, 1.0 FTE. Based on 1.0 FTE = teaching 36 credits/academic year in accordance with HHS Faculty Workload policy.
 4. Instructor 2, fixed-term, .50 FTE. Based on 1.0 FTE = teaching 36 credits/academic year in accordance with HHS Faculty Workload policy

See attached Summary of Instructional Responsibilities as justification for the transfer of the faculty positions.

- ii. Starting with Fall Term 2012 or when the Graphic Design major is approved, course fees associated with the Graphic Design courses listed below will be deposited into the appropriate course fee account in DHE. New financial indexes will be created for these course fees.

c. Faculty Space

Office space and primary studio space for the Graphic Design faculty will be located in the West end of Milam Hall -- current home of the Department of Design and Human Environment. University classrooms, as available, will be used for course offerings.

II. Transfer of Graphic Design Majors

Currently, Graphic Design is an option within the Applied Arts Undergraduate Major. A Category I proposal is currently under review to create an undergraduate major in Graphic Design. Upon approval of the Category 1 proposal, students currently coded as Applied Arts majors with a Graphic Design option will be coded as Graphic Design majors. This major code will be transferred to DHE.

- a. Students' catalog year will be honored for program requirements including having access to Art courses (not listed below in the courses to be transferred to DHE).
- b. Within two years of the program transfer, curricular proposals to change degree requirements will be submitted which will phase-out Art courses (not listed below) as required courses within the Graphic Design major.
- c. Within two years of the program transfer, the curricular and budgetary impacts of the phase-out of Art courses (not listed below) as required courses within the Graphic Design major will be reviewed and agreements revised, if needed.

III. Management Costs

- a. The Department of Design and Human Environment will assume the management costs for Graphic Design upon the effective date noted above. This includes the salaries and benefits for DHE administrative and support staff.

IV. Other Commitments

- a. All future income generated by the Graphic Design faculty and courses in fees, summer term instruction, and Ecampus instruction will flow through DHE.
- b. All costs associated with the Graphic Design program will be assumed by DHE upon the effective date noted above.

V. Curriculum Development and Management

- a. The management (course assignment, instruction, facilities, and course assessment) of the following ART courses will be transferred to DHE upon the effective date noted above. A Category II curriculum proposal to change the course designator for these courses has been approved by the Curriculum Council conditional on the approval of the Category I proposal to create a major in Graphic Design.

Note: Graphic Design students will enroll in DHE 410 Internship instead of ART 410 Internship.

b. Undergraduate Student Advising

Graphic Design undergraduate students will initially be advised through the centralized PHHS Advising Office upon the effective date noted above. Two new undergraduate advisors will be hired and will transfer to COB when DHE transfers to COB. Graphic Design faculty will continue to advise undergraduate students on career-related matters.

VI. Space and Infrastructure

- a. As noted under Section I, space assigned to faculty for their offices and studios will be reassigned in Milam Hall.
- b. Equipment purchased and fund balance from the 2010-2011 TRF funding cycle will be transferred to DHE. DHE will assume responsibility for installation of equipment. See attached spreadsheet for the equipment and fund balance information.

VII. Fund Account Transfers

- a. Current active grants for Graphic Design faculty will be transferred from the CLA ORG code to the COB ORG code. All new grant awards by Graphic Design faculty will be assigned to the appropriate COB ORG. All new grant proposals will go through COB.
- b. Upon the effective date noted above, the budget amount outlined above will be transferred to the appropriate accounts designated by COB.

Memorandum of Understanding

Between the College of Public Health and Human Sciences and College of Business for the Transfer of the Department of Design and Human Environment to the College of Business

Purpose of the Transfer:

The Department of Design and Human Environment is currently administered by the College of Public Health and Human Sciences. The transfer of the Department of Design and Human Environment to the College of Business aligns these units to better meet the strategic plan of Oregon State University; enhance synergies among the design, business, and engineering programs; and leverage resources for providing outstanding educational programs.

Justification:

The design and creative services industries are vitally important to the economy of Oregon. Design and creative services industries include companies that focus on design and marketing of a variety of products and services including apparel, footwear and other accessories, outdoor gear, packaging, and consumer products for specific target customers. For example, the Athletic and Outdoor Industry Cluster has been identified by the Portland Development Commission as one of five targeted industry clusters for enhanced growth and investment for future economic development (the other four being Clean Tech, Software, Advanced Manufacturing, and Research and Commercialization). Anchored by the “big 3” (Nike, Columbia Sportswear, and Adidas America) Portland is home to over 300 Athletic and Outdoor companies all of which focus on design, marketing, and merchandising. Statewide, over 700 companies employ over 14,000 individuals with a payroll of nearly \$1.2 billion. Indeed, as the Portland Development Commission noted in a recent report (<http://pdxeconomicdevelopment.com/cluster-activewear.html>) “what Hollywood is the movie industry, Portland is to the Athletic and Outdoor Industry.”

In addition, the strategic plans of the City of Portland, the Portland Development Commission, the Oregon Economic and Community Development Department, and Oregon Business Plan all include design and creative services as selected targeted growth industries to further position the region as an international sustainable design center. Other companies with design headquarters in Oregon include Pendleton Woolen Mills, LaCrosse/Danner, KEEN Footwear, Nau, S Group, Ziba Design and dozens of smaller apparel, graphic and interior design firms (most of which are entrepreneurial). PDC also notes “talent is essential to this cluster’s success”. As the only academic unit West of the Rockies to offer bachelors through Ph.D. in design and merchandising specialty areas, DHE is the primary higher education partner for these important segments of the Oregon economy.

Lastly, *design thinking*, as a process for problem solving has become part of contemporary design and engineering practice as well as a foundation perspective in business and management. The rationale is that by understanding the processes designers use in problem solving, students across disciplines can be better equipped to innovate at a higher level. Thus, bringing design thinking expertise to the College of Business will build on the current momentum in higher education for design thinking education.

Timeframe for Conversations and Faculty Input:

In July 2010, Deans Bray, Kleinsorge, Adams, and Rodgers met with Leslie Burns (Chair, DHE) and Andrea Marks (Coordinator, Graphic Design) to discuss the next steps in bringing the design programs together under a single administrative unit and to what college that unit might eventually report. As a result of that meeting with the deans, a task force was created by Dean Kleinsorge, co-chaired by Burns (DHE) and McAlexander (BA) and included faculty from DHE, Graphic Design, and Business to explore transferring DHE (with Graphic Design) to the COB. The Task Force report recommended that the respective Deans and faculty continue to explore this reorganization. In January 2011, faculty from DHE and Graphic Design met with Dean Kleinsorge to discuss the transfer and benefits to both units. It was clear that vision and budgetary issues needed to be resolved prior to a transfer. Since January 2011, Burns and Dean Bray worked with the HSBC in separating the DHE budget so that the budget transfer could be as smooth as possible. Since 2010 faculty in DHE, Graphic Design, and Business have continued to enhance collaborations and foster partnerships in graduate and undergraduate education and in research and to build a common vision for a combined unit. During Summer 2011, the decision was made that the Department/School of Design and Human Environment would be transferred to the College of Business. All faculty in DHE, Graphic Design, and College of Business are supportive of this transfer. Therefore, this MOU is to transfer the DHE (including Graphic Design) to the COB. A second MOU outlines the transfer of Graphic Design to DHE.

Conditions and Effective Date

I. Transfer of Academic Personnel

a. Tenure-home transfer

Tenure-home for the all tenured faculty members in DHE and Graphic Design and for all tenure-track faculty members in DHE and Graphic Design will be transferred to COB.

b. Budget transfer

- i. As of July 1, 2012, the base budget for DHE, including the budget transfer for the Graphic Design program, will be transferred to COB.
- ii. Starting with Fall Term 2012, course fees associated with DHE and Graphic Design courses will be deposited into the appropriate course fee

account in COB. New financial indexes will be created for these course fees.

c. Faculty Space

Office space and primary studio space for the DHE/Graphic Design faculty will be located in the West end of Milam Hall -- current home of the Department of Design and Human Environment. University classrooms, as available, will be used for course offerings.

II. Transfer of Majors

Students currently coded as Pre-Apparel Design, Apparel Design, Pre-Interior Design, Interior Design, Pre-Graphic Design, Graphic Design, and Merchandising Management will be transferred to COB.

III. Management Costs

- a. The COB will assume the management costs for DHE/Graphic Design starting July 1, 2012. This includes the salaries and benefits for DHE administrative and support staff.

IV. Other Commitments

- a. Starting July 1, 2012, all future income generated by the DHE/Graphic Design faculty and courses in fees, summer term instruction, and Ecampus instruction will flow through COB.
- b. Starting July 1, 2012, all costs associated with DHE/Graphic Design will be assumed by COB.

V. Curriculum Development and Management

- a. The management (course assignment, instruction, facilities, and course assessment) of all DHE courses and the following ART courses will be transferred to COB starting July 1, 2012. A Category II curriculum proposal to change the course designator for these courses has been approved by the Curriculum Council conditional on the approval of the Category I proposal to create a Graphic Design major.

ART 412. Contemporary Issues in Design (3)

ART 419. Senior Portfolio (2)

ART 420. Graphic Design: Pre-Press (4)

ART 428. Senior Thesis Project (4)

ART 421. Information and Publication Design (4)

ART 423. Experimental Typography (4)

ART 424. Visual Identity Systems (4)

ART 425. Environmental and Exhibition Design (4)

ART 427. Package Design (4)

ART 429. Graphic Design Studio (4)

Note: Graphic Design students will enroll in DHE 410 Internship instead of ART 410 Internship.

b. Undergraduate Student Advising

DHE/Graphic Design undergraduate students will be advised through the centralized COB Advising Office. DHE/Graphic Design faculty will continue to advise undergraduate students on career-related matters.

VI. Space and Infrastructure

- a. As noted under Section I, space assigned to faculty for their offices and studios will be reassigned in Milam Hall.

VII. Fund Account Transfers

- a. Current active grants for DHE/Graphic Design faculty will be transferred to the COB ORG code. All new grant awards by DHE/Graphic Design faculty will be assigned to the appropriate COB ORG. All new grant proposals will go through COB.
- b. As of July 1, 2012, the budget amount outlined above will be transferred to the appropriate accounts designated by COB.

Email received on:

Leslie,

I have read the abbreviated Category 1 proposal to create the School of Design and Human Environment within the College of Business. I whole-heartedly support the proposal.

Beyond that, I am excited about a School at OSU that focuses on the process of design and treats it as a more general problem. It is that general process of design that links DHE to the engineering design thread that runs through the programs of MIME. With the new School's move to the College of Business and membership in the Division of Business and Engineering, I believe there will be many new opportunities for creation of integrated courses, collaborative research projects and other faculty collaboration. I look forward to this great arrangement.

Thanks,
Rob

Robert B. Stone, Ph.D. | Professor and Interim Head | School of Mechanical, Industrial and Manufacturing Engineering | Oregon State University

Email received on March 1, 2012

Good morning Leslie,

Thank you for sharing the abbreviated Category 1 proposal for the creation of the School of Design and Human Environment.

I am very supportive of this proposal. Because the Department of Horticulture has strong industry ties to the landscape design and resource management service industry, I envisage a strong collaboration with the proposed School. This collaboration will especially be fruitful with respect to training the new sustainable design professionals for urban and peri-urban areas; and, specifically, the Portland Metropolitan area.

All the best in the creation of the School. I look forward to the opportunity to create interdisciplinary teaching, learning and research opportunities across our units.

Sincerely,

Anita Nina Azarenko
Professor and Head
Horticulture and Community Food Systems
ALS 4017
Oregon State University
Corvallis, OR 97331
(541) 737- 5475

Carol Brown (College Approver - Business) March 5, 2012 4:47pm
Proposal has gone through all appropriate reviews within the College of Business.

Gary Beach (Curriculum Coordinator) March 8, 2012 2:37pm
Per an email request received from Leslie Burns, Chair of the Department of Design and Human Environment, the proposal is being sent back so that additional documents can be added.

--Gary

Gary Beach (Curriculum Coordinator) March 8, 2012 3:09pm
Except for Illene Kleinsorge's signature page, which will be posted to the CPS shortly, the proposal is now ready for review by the Budgets and Fiscal Planning Committee.

--Gary

Walter Loveland (Budgets and Fiscal Planning Committee) March 16, 2012 9:42am
The BFP group and the Director of Budgets suggest the budget be revised to indicate the total incremental cost to the University of the program. At present, after two years of funding for a new advisor and/or faculty position, the cost disappears from the budget. It should continue for the entire project lifetime. There is an additional question which the Director of Budgets is resolving as to the actual magnitude and details of the Provost's support.

Leslie Burns March 22, 2012 2:30pm
A revised budget has been attached. The earlier version included incremental increases (e.g., funding a new advisor) in the budget in the following year's base budget. The revised version indicates the line items across the entire project lifetime instead.

Walter Loveland (Budgets and Fiscal Planning Committee) April 13, 2012 10:49am
Please fix the following problems in the budget: (a) all salaries and expenses should be adjusted for inflation with time. (You pick the inflation factor). (b) Under "Expense Summary" there is a category marked "Other". Please give examples of what is involved here. (c) Under Revenue there is a category called misc (salary raises) We assume this refers to monies provided by the Provost for routine salary increases. Can you please describe this category in that way, if that is the intent. If something different is meant, please describe it. Upon receipt of the revised proposal, it will be automatically approved without further review.

Leslie Burns April 13, 2012 4:22pm
A revised 4-year budget is attached including: a) 4% annual inflation increase is included for salaries, OPE, and expenses; b) the "Other" category under Expenses is clarified -- it includes services, supplies, and computer support, c) the Misc category for revenue is clarified and now refers to centrally funded salary increases.

Fall 2011 New Graduate Teaching Assistant Orientation Summary

Center for Teaching and Learning

The Center for Teaching and Learning (CTL) supports excellence in teaching and learning in the academic curriculum and learning in co-curricular settings. In the fall of 2011, the CTL facilitated its first New Graduate Teaching Assistant (GTA) Orientation on September 15 & 16, 2011. Day 1 on September 15, 2011 was designed for and delivered to new international students in partnership with the Division of International Programs. Day 2 on September 16, 2011 was designed for and delivered to all new GTAs, including international GTAs, in partnership with the Graduate School. This summary was prepared by CTL staff to provide the Oregon State University community a summary of the event's impact.

1. OSU Graduate Student Enrollment*

Fall 2011

| | |
|-----------------------------------|------|
| New Graduate Student Enrollment | 786 |
| Total Graduate Student Enrollment | 3776 |

*Data collected from the Office of Institutional Research OSU Enrollment Summary 2011

2. Fall 2011 New GTA Orientation Attendance

| | Total
Registered | Total
Attended | Ag | COAS | Ed | Engr | For | Grad | LA | Pharm | PHHS | Sci |
|---|---------------------|-------------------|----|------|----|------|-----|------|----|-------|------|-----|

Greetings OSU colleagues:

In fall 2011, the Center for Teaching and Learning (CTL) facilitated its first New Graduate Teaching Assistant (GTA) Orientation in September. Day 1 on September 15, 2011, was designed for and delivered to new international students in partnership with the Division of International Programs. Day 2 on September 16, 2011, was designed for and delivered to all new GTAs, including international GTAs, in partnership with the Graduate School.

Support for and attendance at the event exceeded our expectations. Twenty-six colleagues from across campus, including faculty, staff, and veteran GTAs, designed and delivered 30+ sessions to over 200 new GTAs at the two-day event. Assessment of the event was positive, with attendees' mean scores indicating that considerable gains were made with respect to our learning outcomes as a result of the event.* Additionally, attendees rated the event high with respect to clarity, organization, delivery, as well as ability to stimulate thinking and promote a welcoming environment. Scores and information by college can be found in the attached summary document.

The CTL will be facilitating New Graduate Teaching Assistant Orientation again this fall on September 13-14, 2012. A formal invitation to new GTAs to participate along with registration information will follow in the coming months as we collaborate with the Graduate School in promoting the event. When you receive the announcement later this summer, please pass the information along to your new incoming GTAs. We greatly appreciate your assistance in spreading the word about the event in encouraging new GTAs to participate.

Between now and then, we welcome your inquiries as well as any feedback you may have regarding how the CTL can best support your GTAs.

Best,
Jessica White and Robin Pappas

Jessica White, Ph.D.
Assistant Director for Co-Curricular Learning, Center for Teaching and Learning
139 Waldo Hall
ph: 541.737.8576
email: jessica.white@oregonstate.edu

Robin Pappas, Ph.D.
Assistant Director, Center for Teaching and Learning

email: robin.pappas@oregonstate.edu

*Note: a few anomalies were noted in our findings by college. On Day 1 (for international GTAs), attendees from the College of Agricultural Sciences and College of Education (n=3) reported post-test scores that were lower than pre-test scores in all eight learning areas. Given the structure of the pre-test/post-test assessment, it is possible that survey was a bit confusing to some respondents. Staff members are reviewing the instrument and reviewing the literature to determine whether there are other possibilities for these unusual responses.

Pilot Program: International Graduate Students from India

Admitting Students with 3-Year Undergraduate Degree

Recruitment of top-quality international graduate students by US universities is facing new and perhaps sustained challenges amid changing geopolitical circumstances around the globe. A large number of US universities are adopting innovative recruitment strategies to grow their international student enrollments, especially international graduate student enrollments. At Oregon State, in order to meet the goals in the University's Strategic Plan, the discussion to increase international graduate student enrollment has focused on implementing key strategies, including improving the visibility of OSU amongst top-quality institutions worldwide, enhancing our recruitment strategies, streamlining the graduate admissions process, reducing decision-making time on graduate applications, and offering competitive funding in the form of assistantships/fellowships.

Although OSU's current graduate admissions policy allows programs to apply for exceptions for deserving students¹, it prohibits the acceptance of students with a 3-year undergraduate degree from India into OSU's master's programs. While OSU's doctoral programs have benefited greatly from the presence of international students, our master's programs have not been able to take advantage of a growing market of top-quality undergraduate students from India – a country with a long-standing tradition of higher education and with one of the fastest growing economies in the world.

In fall 2011, under the direction of the Provost and Executive Vice President, the Division of International Programs constituted a taskforce² to review and discuss our current graduate admissions policies and to examine the possibility of considering students with 3-year undergraduate degree from India for admissions into our master's programs. The findings of the taskforce and the concept of the pilot were discussed with the leadership and faculty in the Colleges of Business and Public Health and Human Sciences.

The taskforce recommended admitting a specified number of high-achieving students with a three-year undergraduate degree from top-tiered accredited Indian universities into our MBA and MPH programs for two years (2013-2015). At the end of the pilot period, the taskforce, along with leadership in the two Colleges, will evaluate the outcome of the program based on standardized criteria to measure student success.

The pilot program will involve accepting a limited number, to be specified by the two Colleges, of top-quality students with an undergraduate degree from certain top-ranked and accredited Indian universities. Under the pilot program, faculty in both the MBA and MPH programs at OSU will review applications using program-specific admissions criteria. Once admitted, the students' performance will be tracked for grade point average and graduation rates.

¹ The Graduate Council in 2007-2008 reviewed the graduate admissions criteria and discussed admission of students with 3-year Bachelor's degree specifically from Bologna¹ countries. The GC concluded that, "...as long as the exception process is clearly articulated and there is a process available, we should continue to allow the department chairs and admissions groups to decide which 3-year degrees are equivalent" (GC Meeting minutes, February 1, 2007).

² Taskforce members: Amy McGowan, Brenda McComb, Gigi Bruce, Jim Coakley, Sunil Khanna, and Valerie Rosenberg.

At the end of this period, a team of faculty and administrators from the COB, PHHS, the Graduate School, will review the program and report the outcome to the Provost and Executive Vice President so that modification and or continuation of the program can be considered.

Higher Education System in India: An Overview

Since the system of higher education in India differs from the United States, it is important to understand some of the key characteristics, including the three-year undergraduate degree program and the accreditation system, that are unique to the Indian system. Although India's higher education system is rapidly transforming, it owes much to India's colonial past. The Indian university system follows a three-tiered degree structure – undergraduate, master, and doctorate and a network of colleges affiliated with degree granting universities. While the instruction takes place in affiliated colleges, the university is responsible for drafting and revising the syllabi, conducting examinations, and awarding degrees.

Accreditation and Assessment of Higher Education

In order to regulate the higher education system, the Indian government established the University Grants Commission (UGC) in 1956 and adopted the University Grants Commission Act (UGC Act)³. The UGC Act defines the UGC as the apex charged with regulating the quality of higher education in India. The UGC accredits all federally-funded or state-funded universities. It also maintains a rigorous database of government-accredited universities eligible to award degrees. In 1994, the UGC founded the National Assessment and Accreditation Council (NAAC) and the National Board of Accreditation (NBA) to improve the quality of higher education and to establish a nation-wide system of accreditation and assessment of universities/institutions that are funded by the Federal or state government. Both the NAAC and the NBA recruit university vice-chancellors, deans, principals, and department heads to serve as members of these national-level accrediting bodies.

The primary responsibility of both the NAAC and the NBA is to assess and accredit universities based on a clearly defined process⁴ and criteria that include the curriculum, teaching and student assessment, infrastructure and resources, student support, and institutional management. Institutions that complete the process successfully and qualify for accreditation are graded on a 100-point scale⁵. The UGC website provides a list of all accredited universities/institutions⁶. These include institutions of national importance, universities (federally or state funded), and “deemed universities.”

³ Under the UGC Act, “...the right of conferring or granting degrees shall be exercised only (a) by a University established or incorporated by or under the Central Act, or a State Act; or (b) by an Institution deemed to be University or an institution specially empowered by an Act of the Parliament to confer or grant degrees.” For additional details, please see The University Grants Commission Act 1965 and Rules and Regulations Under the Act. University Grants Commission, Government of India, 2002. (http://www.ugc.ac.in/policy/ugc_act.pdf)

⁴ A university undergoes the accreditation process in a step-wise manner under the guidance of the NAAC. First, the university prepares a self-study report which is evaluated by the NAAC. This evaluation is followed by a site visit by the NAAC team of accreditors. Finally, based on the outcomes of the first two steps, the NAAC awards accreditation and assigns an accreditation grade to the university.

⁵ Grade A = 85-100; Grade B = 70-85; Grade C = 55-70. The grading scale is heavily weighed (70%) toward teaching and learning resources. The remaining 30 points are used to evaluate institutional management and sports.

⁶ Please also see <http://www.ugc.ac.in/>.

Accredited universities in India award three-year Bachelor Degrees in arts (B.A.), science (B.Sc.), and commerce (B.Com.). Each Bachelor degree can be awarded as a “pass or general” or as an “honors” degree. All “pass or general” degrees require students to study English and one Indian language in addition to two or three core disciplinary areas. All “honors” degrees require students to complete coursework in an area of specialization in addition to taking courses in “subsidiary” and “qualifying” disciplines. The key distinguishing feature here is that, unlike in the US universities, Indian universities do not designate the subsidiary or qualifying courses as “background” or “baccalaureate core.”

Pilot Program: Scope and Structure

The Graduate School and the academic colleges, with oversight from the Graduate Council and support from the Division of International Programs will work to implement the pilot. The pilot is designed to identify and recruit top-quality graduate students to the two professional degree programs (MBA and MPH), and to increase diversity in our international graduate student population. OSU’s partnership with INTO University Partnerships allows us a strategic advantage to use their global recruitment network and experience to market OSU’s programs, assist in identifying top-quality students, and facilitating recruitment of the students to OSU’s MBA and MPH programs.

The Colleges of Business and Public Health and Human Sciences have agreed to accept a maximum number of 15 students each. The following minimum criteria for admission will be used to ensure that the programs only accept top-quality students into the two professional degree programs (see Diagram 1). Each College also requires letters of recommendation, statements of objectives, etc.

Minimum OSU Evaluation Criteria

1. OSU GPA requirement: ‘First Class’ or 60% out of 100% is generally equivalent to a ‘B’ average. Minimum GPA varies by individual school grading scale. Students must have 60% on the last two years of graded undergraduate coursework and any work completed after the undergraduate degree.
2. English Language Requirements

| | |
|-------|---|
| TOEFL | Paper - 550, Internet - 80 (with minimum sub-scores of 18)
Paper - 500, Internet - 61 (possible Conditional Admission) |
| IELTS | 6.5
6.0 (possible Conditional Admission) |

MBA Admissions Criteria

1. Only students with an undergraduate degree from a UGC accredited or NAAC designated as “A or above” ranked university in India will be allowed to apply under the pilot program (see Annexure 1).
2. Minimum acceptable undergraduate GPA is a ‘First Class’ 60% out of 100%, which is generally equivalent to a ‘B’ average. Minimum GPA varies by individual school grading scale. Students must have ‘First Class’ on the last two years of graded undergraduate coursework and any work completed after the undergraduate degree.

3. Minimum acceptable language proficiency score is 575 on the paper-based TOEFL test; 91 total with minimum subscores of at least 22 on the internet-based version or a minimum score of 7 on the IELTS. The OSU MBA program does not offer conditional admission.
4. Minimum acceptable GMAT is 500, and verbal, quantitative, and analytical writing sub-scores in at least the 20th percentile.

MPH Admissions Criteria

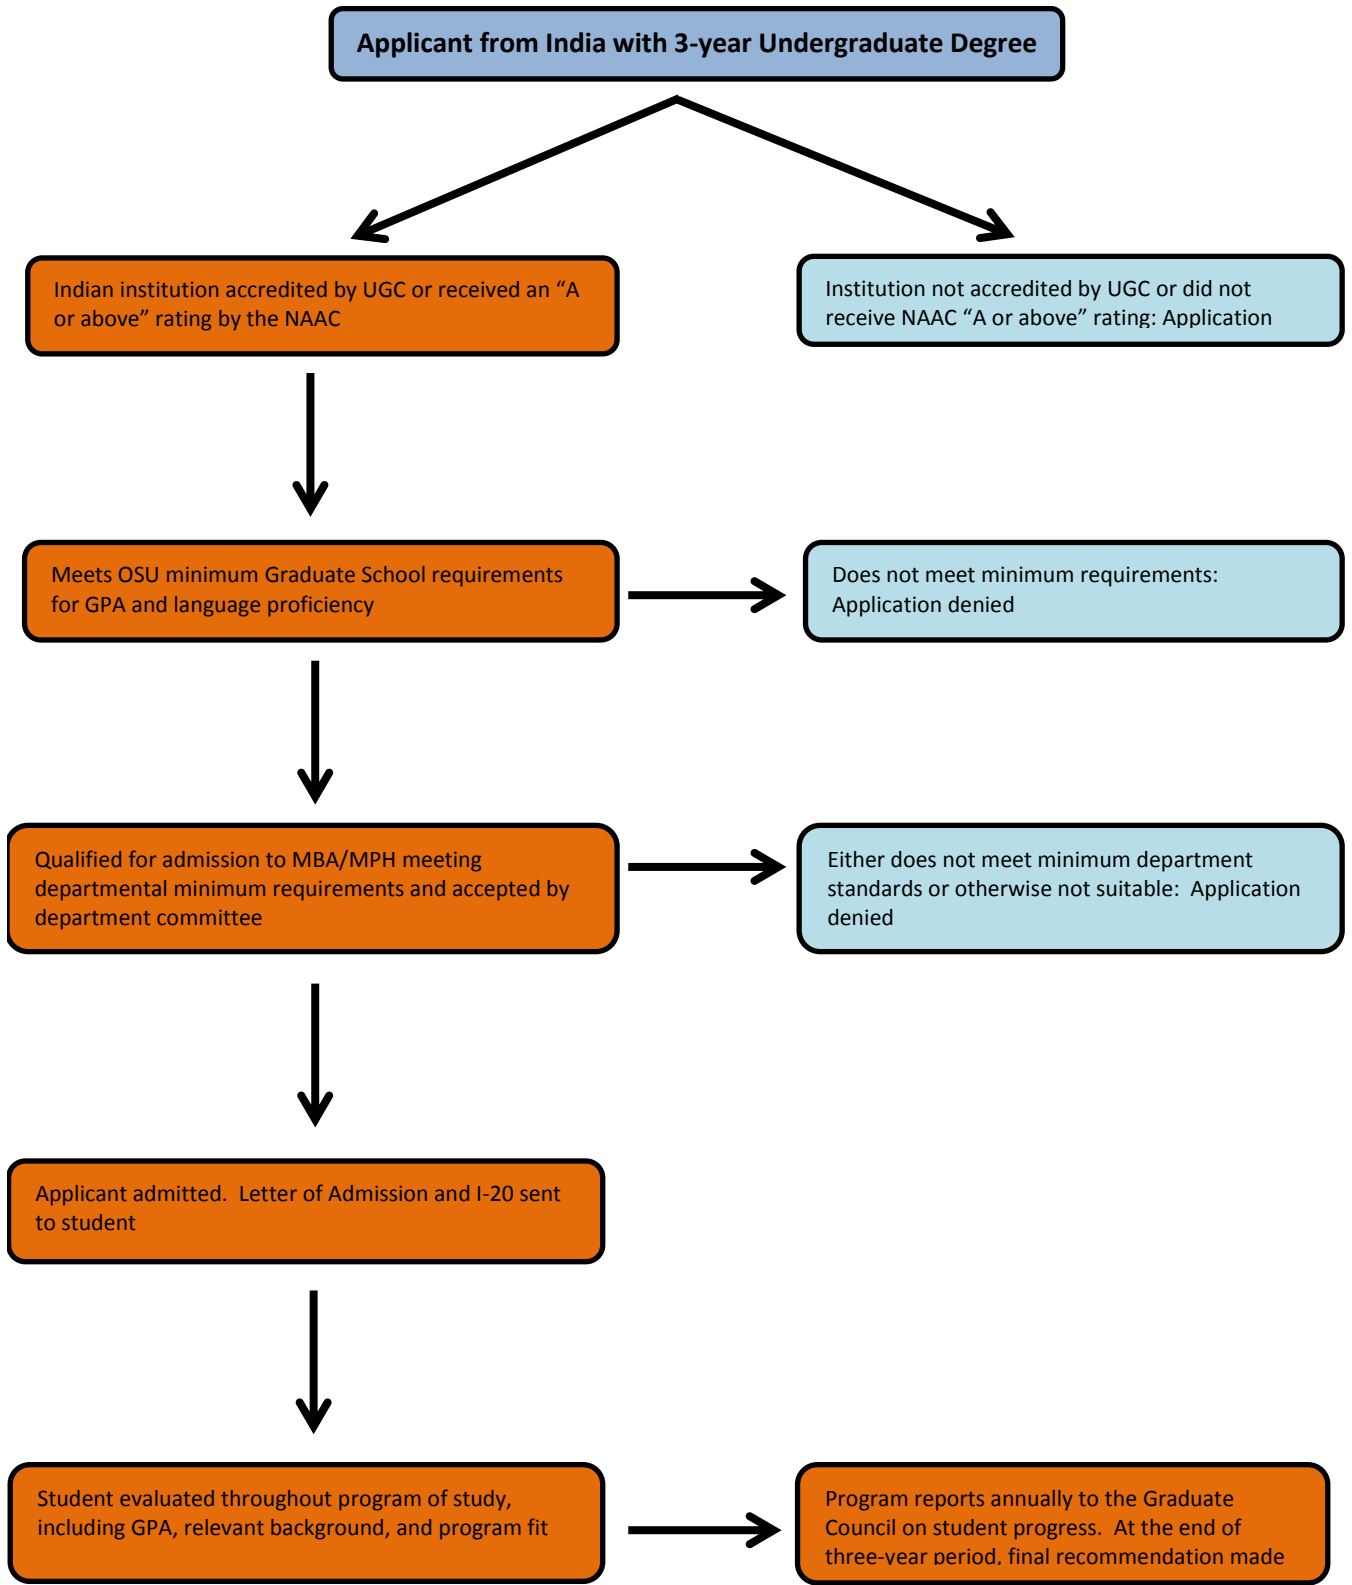

1. Only students with an undergraduate degree from a UGC accredited or NAAC designated as “A” ranked university in India will be allowed to apply under the pilot program (see Annexure 1).
2. Priority will be given to students interested in the Biostatistics and Epidemiology tracks in the MPH program.
3. Minimum acceptable undergraduate GPA is 60% out of 100% on the last two years of graded undergraduate coursework and any work completed after the undergraduate degree.
4. Prerequisite coursework: Students requesting admission to a specific program area will have successfully completed significant undergraduate foundational coursework in their area of interest. All MPH tracks require successful completion of an undergraduate course in statistics. In some instances, a lack of prerequisite entrance coursework may result in provisional program admission.
5. Minimum acceptable language proficiency score is 550 on the paper-based TOEFL; 80 total with minimum subscores of at least 18 on the internet-based version or a minimum score of 6.5 on the IELTS. Conditional admission may be considered in some cases.
6. Minimum acceptable GRE scores are generally around 500 in each GRE category (verbal and quantitative) and a minimum score of 4.5 in the analytical category is used as the guideline for acceptance to the MPH program. MPH applicants may submit MCAT scores.

Evaluation of the Pilot Program

Standardized data on student performance will be used to evaluate the outcome of the pilot program on an annual basis.

1. Grades in individual courses
2. Overall GPA
3. Graduation Rates

Diagram 1: Admissions Criteria for the Three-Year Undergraduate Degree Pilot Program

Annexure 1: Indian Universities Accredited by the University Grants Commission (UGC) or National Assessment and Accreditation Council (NAAC)

Note: This is a comprehensive list that includes names and locations of universities accredited either by the UGC or by NAAC. This list includes only those NAAC accredited universities that have received an A or higher accreditation grade. Unlike the NAAC, the UGC does not use a grading system for accreditation.

Arunachal Pradesh

1. Rajiv Gandhi University, Itanagar (UGC)

Assam

2. Assam University, Silchar (UGC)
3. Tezpur University, Tezpur (UGC)

Andhra Pradesh

4. Andhra University, Visakhapatnam* (NAAC Grade = A)
5. Maulana Azad National Urdu University, Hyderabad (UGC)
6. Osmania University, Hyderabad* (NAAC Grade = A+)
7. University of Hyderabad, Hyderabad* (NAAC Grade = A+)

Bihar

8. Central University of Bihar, BIT Campus, P.O. - B.V. College, Patna (UGC)

Chhatisgarh

9. Guru Ghasidas Vishwavidyalaya, Bilaspur, Chhatisgarh (UGC)

Delhi

10. Guru Gobin Singh Indraprastha University, Delhi (NAAC Grade = A)
11. Jamia Millia Islamia, Jamia Nagar, New Delhi* (UGC)
12. Jawahar Lal Nehru University, New Mehrauli Road, New Delhi* (UGC)
13. Jamia Hamdard University, Delhi (NAAC Grade = A)
14. Indian Institute of Foreign Trade, New Delhi* (NAAC Grade = A)
15. Indira Gandhi National Open University, New Delhi (UGC)
16. The University of Delhi, Delhi* (UGC)

Gujarat

17. Central University of Gujarat, Gandhinagar (UGC)
18. Veer Narmad South Gujarat University (UGC)
19. Dr. Babasaheb Ambedkar Open University, Ahmedabad (UGC)
20. Hemchandracharya North Gujarat University (UGC)
21. Maharaja Sayajirao University of Baroda (UGC)
22. Gujarat University (UGC)
23. Sardar Patel University, Vallab Vidyanagar (UGC)
24. Saurashtra University, Rajkot (UGC)

Himachal Pradesh

25. Central University of Himachal Pradesh, Dharamashala (UGC)

Haryana

26. Central University of Haryana, Gurgaon (UGC)
27. Kurukshetra University, Kurukshetra (UGC)
28. Maharshi Dayanand University, Rohtak (UGC)

Jammu & Kashmir

29. Central University of Kashmir, Srinagar (UGC)
30. Central University of Jammu, Jammu (UGC)

Jharkhand

31. Central University of Jharkhand, Ranchi (UGC)

Karnataka

- 32. Bangalore University, Karnataka* (NAAC Grade = A+)
- 33. Central University of Karnataka, Gulbarga (UGC)
- 34. Manipal University, Mangalore, Karnataka* (NAAC Grade = B+)

Kerala

- 35. Central University of Kerala, Kasaragod (UGC)

Madhya Pradesh

- 36. The Indira Gandhi National Tribal University, Amarkantak (UGC)
- 37. Dr. Harisingh Gour Vishwavidyalaya, Sagar (UGC)

Maharashtra

- 38. Bharti Vidyapeeth University/Pune, Maharashtra (NAAC Grade = A)
- 39. Gohkale Institute of Politics & Economics/Pune, Maharashtra (NAAC Grade = A+)
- 40. Mumbai University/Mumbai, Maharashtra* (NAAC Grade = A+)
- 41. Symbiosis International University/Pune, Maharashtra* (NAAC Grade = A)
- 42. Tata Institute of Social Science/Mumbai, Maharashtra* (NAAC Grade = A+)
- 43. Pune University (UGC)
- 44. Rashtrasant Tukadoji Maharaj Nagpur University (UGC)
- 45. Dr. D.Y. Patil Vidyapeeth (UGC – Deemed)
- 46. Narsee Monjee Institute of Management Studies (UGC – Deemed)

Mizoram

- 47. Mizoram University, Aizwal (UGC)

Meghalaya

- 48. North Eastern Hill University, Shillong (UGC)

Manipur

- 49. Manipur University, Imphal (UGC)

Nagaland

- 50. Nagaland University, Campus Kohima, Lumani (UGC)

Orissa

- 51. Central University of Orissa, Koraput (UGC)

Pondicherry

- 52. Pondicherry University, Puducherry* (UGC)

Punjab

- 53. Central University of Punjab, Bathinda* (UGC)
- 54. Punjab University (UGC)
- 55. Guru Nanak Dev University (UGC)
- 56. Lovely Professional University (UGC)

Rajasthan

- 57. Central University of Rajasthan, Jaipur (UGC)

Sikkim

- 58. Sikkim University, Sikkim (UGC)

Tamil Nadu

- 59. Alaagapa University, Karaikudi (NAAC Grade = A)
- 60. Anna University, Chennai* (NAAC Grade = A+)
- 61. Bharatiar University, Coimbatore* (NAAC Grade = A)
- 62. Central university of Tamil Nadu, Tiruvarur (UGC)
- 63. Periyar University, Salem (NAAC Grade = B+)
- 64. University of Madras, Chennai* (NAAC Grade = A)

Tripura

- 65. Tripura University, Suryamaninagar, Agartala (UGC)

Uttar Pradesh

- 66. Aligarh Muslim University, Aligarh* (UGC)
- 67. Babasaheb Bhimrao Ambedkar University, Lucknow (UGC)
- 68. Banaras Hindu University, Varanasi* (UGC)
- 69. Shobit University, Noida (UGC)
- 70. University of Allahabad, Allahabad* (UGC)
- 71. Amity University (UGC)

Uttarakhand

- 72. Hemwati Nandan Bahuguna Garhwal University, Srinagar, Garhwal (UGC)

West Bengal

- 73. Visva Bharati, Shantiniketan (UGC)
- 74. Calcutta University (UGC)

*The MBA program will consider applicants who have received an undergraduate degree from these universities.

Materials linked from the May 9, 2012 Graduate Council agenda.

Remote Participation Report

Summary of Informal Emails

Marty Fiske:

There are a couple things to think about on the remote participation form.

One is the survey that the Graduate Council requested the Graduate School do to determine if departments and graduate faculty at exams had any issues with remote participation. I looked at those surveys as they came in and there were a few participants that said the remote participation impaired their ability to evaluate the student. This was a small number of responses, ~1%. We could stop conducting this survey. Bruce may not know that I reviewed these forms and what the outcome was.

The other form is the one that informs the department chair that there will be a remote exam and, I think, requires the chair's signature, to allow it. It also has the list of requirements for remote participation that were set up by the Graduate Council. The Graduate Council Rep is supposed to affirm that the requirements have been met and return the form with the exam paperwork. I think this form is still needed. Bruce is sure to be on top of the details related to this reporting.

Bruce Rettig:

Staff members I talked with were not aware that they should be giving them to me. I have not researched this thoroughly, but I think the forms may have been scanned into student records and then shredded. However, the staff members I talked with confirm Marty's impression that most reports include no comments. The most frequent comments relate to inconvenience when a telephone or Skype connection was broken and time was needed to restore the link.

On the other hand, communication with staff reveals that many faculty and students need guidance and ask questions about what they need to do and how they should be proceeding. If you examine the form at http://oregonstate.edu/dept/grad_school/Survival_Guide/Graduate_Forms/Remote.pdf, you will see that it includes notification of seven conditions for the examination: advance agreement by student and committee members, two-way audio-video unless major professor approves and audio only when student is at remote, advance distribution of visual aids and other materials, all parties participating for the full duration of the meeting (exam), major professor agreement to oversee logistics, student or program responsible for any costs required, and a public presentation by the PhD student of dissertation findings even if the final examination itself takes place by distance. Also, the form insures that the department head or graduate program director is kept informed of the frequency of remote participation.

It may be helpful to recall that the current policy/arrangement has been in place for approximately two years. It was last approved on January 22, 2010, announced publicly later that year and began to be used at an increasing rate as that academic year went by. See <http://oregonstate.edu/senate/committees/gradcncl/min/2010/20100122.html>. The minutes did record Theresa Filtz's suggestion that the policy be tried for one year and then made permanent or modified. At the end of one year, Marty was to report his survey results and the Council could decide on any changes that are appropriate (See Theresa's motion for approval). For a variety of reasons, Marty did not have the opportunity to report to the Graduate Council. I agree that the current process is widely accepted and that the Council would be likely to either make it permanent or amend the policy. Perhaps Brenda has heard complaints about the process. None have come to me. My suggestion would be to continue operating without change until the Graduate Council has an opportunity to review the policy.

I will leave it to Brenda and Carolyn whether changing this policy should go on the Graduate Council agenda this spring or whether this is an issue for the Graduate Council to take up next year. Finally, the language approved by the GC did include the sentence "Appeals for exceptions to this policy may be

addressed to the Dean of the Graduate School.” This provides Brenda the flexibility to experiment with alternative approaches while waiting for the Graduate Council to pick up the issue.

Theresa Filtz:

I agree that it is time for the GC to re-examine the issue and consider making remote participation more of a normal mode. My sense of the GC at the time was that the approvals were part of the pilot project and intended to be re-examined.

April 24, 2012

DRAFT OUTLINE

GRADUATE COUNCIL MANUAL

TASKS

I. PROGRAM REVIEWS

- a. All graduate programs are reviewed every 10 years (or more frequently if there is evidence of problems which need to be monitored).
- b. Reviews are organized by Graduate School who identifies a lead external reviewer (after consultation with department/program chair); Assoc. Dean from Graduate School participates; Grad Council provides in-house reviewer; community reviewers sometimes included. Writing responsibility is distributed across the reviewers, but external reviewer has overall responsibility.
- c. Review is presented to Grad Council; then department/program chair and dean is invited in. Review is revised per Grad Council and department/program chair input and then voted on by Grad Council and sent to Dean of Graduate School as well as program/department chair and Dean of College.
- d. Academic Plan is then prepared by department/program chair with input from faculty and Dean of College and submitted to Graduate School and Graduate Council. Presentation to Provost (or designee) with attendance at meeting by Graduate School Dean (or designee), Grad Council representative and Chair.
- e. Three year follow-up is written by original graduate representative from current Grad Council which gathers information from department/program chair and Dean of College (or designee) on progress on Academic Plan. This report is presented to Graduate Council by original representative and voted on. Attendance by department/program chair is not required unless Grad Council representative identifies significant problems. Report sent to Graduate School. In the case of significant problems, additional follow-up reviews and/or an accelerated review timeline may be required.

See

http://oregonstate.edu/dept/grad_school/Graduate_Council/Program_Review_Guidelines.pdf.

II. CATEGORY I REVIEWS

There are two types of reviews, Full CAT I and Abbreviated CAT I. Full CAT I is to create new degree program or certificate, administrative unit, or deliver existing program at new location, and requires OUS approval. Abbreviated CAT I is for renaming existing units, merging, splitting, or relocating units. CAT I's are submitted through Curricular Planning System (CPS) to Grad Council Chairs.

See <http://oregonstate.edu/ap/curriculum/cati.html>.

- a. Primary reviewer (often from college) and secondary reviewer are assigned by Grad Council chair.
- b. Review draft and attend Academic Planning Committee (APC) meeting; inform Grad Council re potential problems, if any. Focus should be on:
 - a. whether there are sufficient graduate faculty to support program;
 - b. whether Graduate School requirements are being met (e.g., 50% stand along graduate classes or credit requirements);
 - c. If assessment plans are in place;
 - d. If appropriate liaisons have been conducted.
- c. Review submission (can use attached template) and present to Graduate Council
- d. Graduate Council votes and submits to Graduate School. NOTE: can put on hold if serious problem identified or can approve provisionally pending additional information.

III. CATEGORY II REVIEWS

CAT II reviews are to create new classes or modify existing ones. CAT II's are also submitted through CPS but to reviewers identified by Graduate Council.

- a. College representative takes primary responsibility; secondary reviewer is for consultation. Problems can be presented to whole Graduate Council.
- b. Reviews should focus on:
 - i. Whether OSU syllabus requirements are being met (see http://oregonstate.edu/ap/curriculum/policies/S_syllabus.html);
 - ii. If appropriate liaisons have been included to prevent duplication across departments.
 - iii. For slash classes, if appropriate additional graduate level work is required.

IV. POLICY

The Graduate Council oversees policies, procedures, and requirements of graduate education, in consultation with Graduate School. Issues may be presented to the Graduate Council from faculty, GC representatives, or the Graduate School.

V. AWARDS

Graduate Council representatives work in conjunction with the Graduate School in reviewing applications for awards. These include:

- Laurels Block Graduate Program (2 GC + 3 outside members)
- Oregon Lottery Scholarship (3 members)
- Bayley/Yerex Fellowships (3 members)
- Frolander Outstanding GTA Award (2 members)
- CGS/UMI Dissertation and WAGS/UMI Thesis Awards (2 members)
- Excellence in Graduate Mentoring Award (2 members)

VI. AD HOC COMMITTEES

- a. Grievance Committee (2 GC + 1 student members)
- b. Distance Education Liaison
- c. Others, such as IGERT reviews

GRADUATE COUNCIL CHAIR TASKS

- I. Make certain that colleges have representatives (in consultation with Faculty Senate President)
- II. Assign representatives to committees and review panels, as appropriate, in consultation with Graduate School
- III. Schedule and conduct meetings
- IV. Arrange agenda to facilitate timely review processes
- V. Edit and distribute minutes
- VI. Maintain close liaison with Graduate School concerning program reviews, policy, procedures, and new initiatives.
- VII. Maintain liaison with other Faculty Senate committees, as appropriate
- VIII. Prepare annual report

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☒ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☐ Reorganization -- moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Proposal for MS, MEng, PhD Graduate Degrees in Environmental Engineering

Executive Summary

Institution and Program

Oregon State University, School of Chemical, Biological and Environmental Engineering

Program Description

The proposed program seeks to establish discipline-specific graduate degrees in environmental engineering within the School of Chemical, Biological and Environmental Engineering (CBEE) at Oregon State University (OSU). Degrees to be offered include Master of Science (MS), Masters of Engineering (MEng), and Doctor of Philosophy (PhD). A graduate minors in Environmental Engineering will be offered. The program will be directed towards advanced studies related to traditional environmental engineering focus areas of water and wastewater treatment, industrial and hazardous wastes management, solid wastes, groundwater remediation, air pollution control, and sustainability within the built environment. Graduates will be employable environmental engineering positions within consulting firms; federal, state and local governments; and regulated industries. Graduates will and also be able to pursue further graduate education or academic positions in teaching and research.

Evidence of Need

The evidence of need is shown by the continued demand for our graduate students with an environmental engineering emphasis in the market place. The employers of our graduates for the last 10 years who graduated with either a Chemical Engineering or Civil Engineering graduate degree with an environmental engineering emphasis cover state, national and international consulting firms, governmental agencies and regulated corporations. Our graduates have consistently found employment upon graduation in professional positions.

Target Population

Students to be served include B.S./B.A. graduates in environmental, civil and chemical engineering seeking advanced education with an environmental engineering emphasis. Students without B.S./B.A. degrees in engineering can be accepted into the program by taking prescribed remedial coursework.

Institution: Oregon State University
College/School: College of Engineering
Department/Program: School of Chemical, Biological and Environmental Engineering
CPS Tracking #:87814
December 2011

1. Program Description

- a. Proposed Classification of Instructional Programs (CIP) number (*contact your Registrar or campus Institutional Research office for this number*).

CIP # 14.1401

Title: Environmental/Environmental Health Engineering

Definition: A program that prepares individuals to apply mathematical and scientific principles to the design, development and operational evaluation of systems for controlling contained living environment and for monitoring and controlling factors in the external natural environment, including pollution control, waste and hazardous material disposal, health and safety protection, conservation, life support, and requirements for protection of special materials and related work environments.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

- b. Brief overview (1-2 paragraphs) of the proposed program, including its disciplinary foundations and connections; program objectives; programmatic focus; degree, certificate, minor, and concentrations offered.

The proposed program establishes discipline-specific graduate degrees in environmental engineering within the School of Chemical, Biological and Environmental Engineering (CBEE) at Oregon State University (OSU). A graduate offering with an emphasis on environmental engineering has existed in the School since its adoption in 2007 with graduate students obtaining M.S., M.Eng., or Ph.D. degree in "Chemical Engineering." Before 2007, graduate students with an environmental engineering emphasis obtained M.S., M.Eng., or Ph.D. degrees in "Civil Engineering" through the Department of Civil, Construction and Environmental Engineering.

The national trend is for environmental engineering programs in departments and schools with chemical engineering programs to have separate graduate degrees. This separation of degrees is much less common when environmental engineering programs are housed within civil and environmental engineering departments because of the broader nature of “civil engineering” which encompasses several disciplines (structural, transportation, geotechnical and water resources engineering). There are five programs in the United States with combined chemical and environmental engineering with a single administrative unit: University of Arizona, University of California-Riverside, University of Toledo, Yale University, and Oregon State University. Of these programs, both the University of Arizona and Yale University offer discipline-specific graduate degrees in environmental engineering.

The objective of this proposal is to create discipline-specific graduate degrees which reflect the graduate curriculum requirements for environmental engineering within CBEE. Degrees to be offered include Masters of Science, Masters of Engineering, and Doctor of Philosophy. Other programs on campus will be able to offer graduate minors in Environmental Engineering. The program will be directed towards advanced studies related to the traditional environmental engineering areas of concentration: water and wastewater treatment, industrial and hazardous wastes management, solid wastes, groundwater remediation, air pollution control, and sustainability within the built environment. Graduates will be able to be employed in environmental engineering positions in consulting firms; federal, state and local governments; and regulated industries and also be able to pursue further graduate education or academic positions in teaching and research.

MS, MENG, PhD in Environmental Engineering (CIP # 141401)

- Degree Types:
 - Master of Science (MS)**
 - Master of Engineering (MEng)**
 - Doctor of Philosophy (PhD) and Bachelor of Science (BS)**
- Program Type: **Graduate**
- Academic Home: **School of Chemical, Biological, and Environmental Engineering**
- Areas of Concentration:
 - Air Pollution Control**
 - Groundwater Remediation**
 - Industrial and hazardous Wastes Management**
 - Solid Wastes**
 - Sustainability Within the Built Environment**
 - Water and Wastewater Treatment**
- Graduate Minor: **Environmental Engineering**

- Course Designator: **ENVE** (existing)
- Delivery Mode and Location: **On-Campus/OSU-Main**
- Enrollment Limitations: **None**
- Accreditation: **None**
- Proposed Effective Date: **Summer Term 2012**

- c. Course of study – proposed curriculum, including course numbers, titles, and credit hours.

Graduate courses presently offered with an environmental engineering course designator (ENVE) within CBEE are listed below. Additional courses will not be required to support the proposed degrees.

ENVE 521. Water and Wastewater Characterization (4) (slash course with ENVE 421)

PREREQ: ENVE 321 or ENVE 322

ENVE 522. Environmental Engineering Design (4) (slash course with ENVE 422)

PREREQ: ENVE 421

ENVE 525. Air Pollution Control (3) (slash course with ENVE 425)

PREREQ: ENVE 321 or ENVE 322

ENVE 531. Fate and Transport of Chemicals in Environmental Systems (4) (slash course with ENVE 431)

PREREQ: (CH 123 or CH223 or CH 226H) and (CH 440 or CHE 331) and (ENVE 321 or ENVE 322) and ENVE 421

ENVE 532. Aquatic Chemistry: Natural and Engineered Systems (4)

PREREQ: CH221, CH222, CH 223 or equivalent. COREQ: ENVE 536 and/or OC 652

ENVE 534. Physical and Chemical Processes for Water Quality Control (4)

COREQ: ENVE 532

ENVE 535. Physical and Chemical Processes for Hazardous Waste Treatment (4)

COREQ: ENVE 532

ENVE 536. Aqueous Environmental Chemistry Laboratory (1)

COREQ: ENVE 532

ENVE 541. Microbial Processes in Environmental Systems (4)

ENVE 542. Microbial Process Design for Municipal and Hazardous Wastes (4)

PREREQ: ENVE 541

ENVE 554. Groundwater Remediation (4)

PREREQ: ENVE 514

ENVE 556. Sustainable Water Resources Development (3) (slash course with ENVE 456)

It is expected that ENVE 521 and ENVE 522 (both “slash” courses) will be removed from the curriculum as graduate courses during the 2011-2012 academic year, but retained in their ENVE 421 and ENVE 422 formats for the undergraduate degree.

Descriptions of the proposed degree requirements for the M.S., M.Eng., and Ph.D. degrees in environmental engineering are described in detail in Appendix 1.

- d. Manner in which the program will be delivered, including program location (if offered outside of the main campus), course scheduling, and the use of technology (for both on-campus and off-campus delivery).

The program will be delivered on-campus through classroom and laboratory formats. There are no plans to offer these degrees through E-Campus.

- e. Ways in which the program will seek to assure quality, access, and diversity.

The program will continue to seek to recruit students nationally and internationally. The program with its associated degrees will be advertised through traditional channels such as brochures, mailing and our website. Typically, the numbers of inquiries for graduate admission with an environmental emphasis are about one hundred per year resulting in about 20 to 30 graduate applications. About one quarter of the applications are from international students and about one half are from women. Underrepresented students are encouraged to apply for admission in all recruiting materials and all efforts are made to provide financial aid to all qualified underrepresented students. Mailing lists from the McNair Scholars Directory, the California Forums for Diversity in Graduate Education, the Society for the Advancement of Chicano and Native American Students and other appropriate sources will be used to advertise the degree offerings.

Graduate admission requirements are a B.S. or B.A. degree in engineering. Students without an engineering degree (e.g. environmental science degree) will be required to complete a set of remedial engineering courses upon entrance to the program which are described in Appendix 1.

To be admitted to the graduate degrees, students must have an undergraduate grade point average (GPA) of 3.00 (on a 4-point scale) for the last graded 90 quarter or 60 semester credit hours. The minimum GRE score is 1100 (combined verbal and quantitative). For international students, the minimum TOEFL score is 580 (or iBT of 18 on each section). GRE exams are required for all applicants except those with degrees from the College of Engineering at OSU. For Fall Term 2011 graduate admits who chose an environmental engineering area of concentration, the average GPA on

the last 90 quarter hours was 3.41; the average verbal GRE score was 595; and the average quantitative GRE score was 700.

Financial aid is presently offered to students through GTAs, GRAs, and university and school scholarships and fellowships. Nearly all of the present graduate students in the program seeking M.S. and Ph.D. degrees are at least partially funded. Students seeking M.Eng. degrees are ineligible for financial aid as this is a coursework only degree.

- f. Anticipated fall term headcount and FTE enrollment over each of the next five years.

The number of graduate students in CBEE with an environmental engineering emphasis is typically from 20 to 40 persons. Presently, the student enrollment is seventeen M.S., six M.Eng., and six Ph.D. students, a total of twenty-nine. The new enrollment for Fall Term 2011 was seven M.S., two M.Eng. and no Ph.D. students. The number of M.Eng. students is expected to increase in the future because of increasing enrollment of INTO students.

- g. Expected degrees/certificates produced over the next five years.

The expected number of graduates per year from the program should be about eight M.S., two to eight M.Eng., and two Ph.D. students.

- h. Characteristics of students to be served (resident/nonresident/international; traditional/nontraditional; full-time/part-time; etc.)

The students to be served are primarily expected to be full-time, traditional students. The program has traditionally had a small number of part time students who are working in the Corvallis area. It is expected that the student population will be about 75% US and 25% international, although the mix will depend heavily upon the INTO enrollment.

- i. Adequacy and quality of faculty delivering the program.

CBEE presently has about 20 faculty all in which have graduate status. There are seven faculty members who have a strong emphasis in environmental engineering. These seven faculty teach all of the undergraduate and graduate environmental engineering courses plus some undergraduate and graduate courses in the general CBEE curriculum. All seven faculty members have active research programs and advise graduate students with the environmental engineering area of concentration.

- j. Faculty resources – full-time, part-time, adjunct.

The faculty members with an emphasis within the environmental engineering area of concentration include:

Dr. Mark Dolan. Ph.D. from Stanford University. Associate Professor. Professional emphasis includes microbial process, bioremediation, groundwater treatment, and biological wastewater treatment.

Dr. Stacy Harper. Ph.D. from Oregon State University, Assistant Professor (joint appointment with Environmental Toxicology). Professional emphasis includes environmental toxicology, fate and transport of chemicals in the environment, and toxicity of nanoparticles.

Dr. Jeff Nason. Ph.D. from University of Texas, Austin. Assistant Professor. Professional emphasis includes water treatment, particles interaction dynamics, and emerging contaminants.

Dr. Lewis Semprini. Ph.D. from Stanford University. Distinguished OSU Professor. Professional emphasis includes microbial processes, bioremediation and groundwater treatment. Serves as Executive Chair of the OSU Subsurface Biosphere Initiative.

Dr. Dorthe Wildenschild. Ph.D. from Technical University of Denmark. Associate Professor. Professional emphasis includes groundwater remediation, transport in porous media and small-scale visualization techniques.

Dr. Kenneth Williamson. Ph.D. from Stanford University. Emeritus Professor. Professional emphasis includes sustainable engineering, biological treatment, and environmental policy.

Dr. Brian Wood, Ph.D. from University of California, Davis. Full professor. Professional emphasis includes transport phenomenon, transport in porous media, and applied engineering mathematics.

All of the faculty members presently teaching in the program or advising graduate students are full-time except Dr. Williamson who is half time and Dr. Harper who has a joint appointment. There is presently no adjunct faculty members.

k. Other staff.

Dr. Mohammad Azzizian. Research Assistant Professor. Ph.D. from Oregon State University. Professional emphasis is in analytical techniques for measurement of environmental contaminants.

Dr. Azzizian teaches one graduate laboratory course and serves as manager of the environmental engineering laboratory and as an active research faculty working on several grants.

l. Facilities, library, and other resources.

Computer, teaching and research laboratories and faculty offices are presently located in Merryfield and Owen Halls. Computer services are provided through the College of Engineering and include access to graduate-level software packages for analysis and design. Graduate students are provided offices in Merryfield and Owen Halls. No changes in the needed library resources or library use are required as students with an environmental engineering emphasis are presently enrolled and the program is not expected to substantially grow by adoption of these degrees.

m. Anticipated start date.

June 1, 2012.

2. Relationship to Mission and Goals

- a. Manner in which the proposed program supports the institution's mission and goals for access; student learning; research, and/or scholarly work; and service.

The environmental engineering degrees will support OSU's mission and goals through education, research and service by providing graduates with expertise in environmental engineering analysis and design. These degrees will provide access for national and international students as well as OSU's environmental, chemical and civil engineering undergraduates. OSU's strong commitment to maintaining environmental quality and sustainability will be further enhanced by the addition of these degrees.

- b. Connection of the proposed program to the institution's strategic priorities and signature areas of focus.

The broad nature of the proposed environmental engineering degrees contributes to all of OSU's strategic priorities including sustainable earth ecosystems, improving health and wellness, and promotion of economic growth and social progress. Technologies to maintain clean water, air and land resources are essential for all of these priorities.

- c. Manner in which the proposed program contributes to Oregon University System goals for access; quality learning; knowledge creation and innovation; and economic and cultural support of Oregon and its communities.

OSU and OUS strategic goals overlap in general and the addition of the environmental engineering graduate degree will support both. Seeking to serve the citizens of Oregon, identifiable advanced education in environmental engineering will provide for optimal statewide development through lower costs and reduced environmental impacts.

- d. Manner in which the program meets broad statewide needs and enhances the state's capacity to respond effectively to social, economic, and environmental challenges and opportunities.

Environmental engineering as a profession is dedicated to solving a variety of societal needs related to social, economic and environmental challenges. Oregon's greatest 21st Century challenge will be how to provide adequate infrastructure for its population growth and economic development without sacrificing its clean water, air and land resources. The graduates with these degrees will be ideally suited to enter Oregon's workforce and provide leadership, expertise and innovation for the tasks at hand.

3. Accreditation

- a. Accrediting body or professional society that has established standards in the area in which the program lies, if applicable.

There are no plans to accredit the graduate degrees in environmental engineering.

- b. Ability of the program to meet professional accreditation standards. If the program does not or cannot meet those standards, the proposal should identify the area(s) in which it is deficient and indicate steps needed to qualify the program for accreditation and date by which it would be expected to be fully accredited.

Not applicable.

- c. If the proposed program is a graduate program in which the institution offers an undergraduate program, proposal should identify whether or not the undergraduate program is accredited and, if not, what would be required to qualify it for accreditation.

The undergraduate program in environmental engineering is accredited by the Accrediting Board of Engineering and Technology (ABET).

- d. If accreditation is a goal, the proposal should identify the steps being taken to achieve accreditation. If the program is not seeking accreditation, the proposal should indicate why it is not.

Accreditation of the degrees is not a goal. ABET does not allow accreditation of undergraduate and graduate degrees at the same institution in the same program.

4. Need

a. Evidence of market demand.

Taken from the American Academy of Environmental Engineers's website, the market demand for environmental engineers is described as:

"The area commonly described as environmental protection or management is very broad. However, the large majority of people employed in this general career area are scientists and engineers.

Environmental engineering training offers you opportunities to work in any aspect of environmental protection. The major areas include air pollution control, industrial hygiene, radiation protection, hazardous waste management, toxic materials control, water supply, wastewater management, storm water management, solid waste disposal, public health, and land management. And, within each of these major categories are many sub-specialties.

Environmental engineering provides limitless opportunities as to type of work, for whom you work, and where you work. A career in environmental engineering provides a comfortable salary, job security, and considerable personal satisfaction.

- **Competitive salaries** --- As the 1990's drew to a close, B.S. degree engineers were receiving starting salaries ranging from \$36-\$42,000 with some as much as \$48,000; with a Masters degree, \$40-\$45,000; and with a Ph.D., \$42-\$50,000. A licensed engineer (it takes a minimum of four years of post B.S. degree experience to qualify) with five years experience can expect to earn \$50-\$60,000. Along with salary come the standard fringe benefits of vacation, insurance, etc.
- **Job security** --- Since before the turn of this century, there have always been many more jobs than environmental engineers to fill them. So, you will never be out of work."

The best evidence of market demand is the continued demand for our graduate students with an environmental engineering area of concentration in the market place. The employers of our graduates for the last 10 years who graduated with either a Chemical Engineering or Civil Engineering graduate degree with an environmental engineering area of concentration are shown in Appendix 2. Our graduates have always found excellent opportunities in the field both nationally and internationally.

- b. If the program's location is shared with another similar OUS program, proposal should provide externally validated evidence of need (e.g., surveys, focus groups, documented requests, occupational/employment statistics and forecasts).

Not applicable.

- c. Manner in which the program would serve the need for improved educational attainment in the region and state.

There is a continued demand for environmental engineers in both Oregon and the Pacific Northwest. In the past, our graduates have filled many of these positions in both private consulting, governmental agencies and regulated industries.

- d. Manner in which the program would address the civic and cultural demands of citizenship.

Graduate students with advanced degrees in environmental engineering will have a unique professional expertise which will support their civic lives through a greater knowledge base for personal, local and statewide decisions related to environmental quality. Such civic issues (i.e. climate change) continue to become increasingly complex and technical and desperately call for informed technical input. Graduates in environmental engineering will be able to be important contributors as society seeks to find optimal solutions to a wide variety of environmental problems and their associated management.

Outcomes and Quality Assessment

- a. Expected learning outcomes of the program.

The learning outcomes and the proposed assessment methods are listed below for each proposed degree.

**Evaluated Graduate Learning Objectives/Outcomes for Ph.D., M.S., and M.Eng. Programs
Environmental Engineering, College of Engineering**

| Ph.D. Outcomes | MS Outcomes | MEng Outcomes |
|--|--|--|
| <p>Outcome 1: Scholarship
The student will be able to identify and conduct original research resulting in a significant contribution to knowledge in the fields spanned by Chemical, Biological and Environmental Engineering (CBEE) and to effectively communicate this work to a technically literate audience.
This will be assessed using the Ph.D. Qualifier Examination, Ph.D. Thesis and Final Oral Examination ("Defense").</p> | <p>Outcome 1: Scholarship
The student will be able to conduct original research and assemble a creative new body of work in the fields spanned by CBEE and to effectively communicate this work to a technically literate audience.
This will be assessed using the M.S. Thesis and Final Oral Examination.</p> | <p>Outcome 1: Scholarship
The student will be able to assemble a presentation synthesizing aspects of core knowledge in the fields spanned by CBEE and to effectively communicate this work to a technically literate audience.
This will be assessed using the M.Eng. Final Oral Examination.</p> |
| <p>Outcome 2: Mastery of Subject Material
The student will be able to think critically, creatively and to address technical problems in the fields spanned by CBEE.
This will be assessed through satisfactory completion of the graduate program of study, as well as course summaries written by the instructors.</p> | <p>Outcome 2: Mastery of Subject Material
The student will be able to think critically, creatively and to address technical problems in the fields spanned by CBEE.
This will be assessed through satisfactory completion of the graduate program of study, as well as course summaries written by the instructors.</p> | <p>Outcome 2: Mastery of Subject Material
The student will be able to think critically, creatively and to address technical problems in the fields spanned by CBEE.
This will be assessed through satisfactory completion of the graduate program of study, as well as course summaries written by the instructors.</p> |
| <p>Outcome 3: Ethical Conduct
Students will be educated in ethical and responsible conduct in research and professional activities.
This will be assessed through satisfactory completion of the graduate seminar (CHE507), as well as ethical completion of the Ph.D. Qualifier Examination and the Ph.D. Thesis and Final Oral Examination.</p> | <p>Outcome 3: Ethical Conduct
Students will be educated in ethical and responsible conduct in research and professional activities.
This will be assessed through satisfactory completion of the graduate seminar (CHE507), as well as ethical completion of the M.S. Thesis and Final Oral Examination.</p> | <p>Outcome 3: Ethical Conduct
Students will be educated in ethical and responsible conduct in professional activities.
This will be assessed through satisfactory completion of the graduate seminar (CHE507), as well as ethical completion of the M.Eng. Final Oral Examination.</p> |

- b. Methods by which the learning outcomes will be assessed and used to improve curriculum and instruction.

A mapping of the assessment method for each degree is shown below.

Ph.D. degree:

Mapping Guide for the Ph.D. Degree – *Environmental Engineering*

The main activities are listed for each outcome. Other activities may also support the outcomes, but data will be collected for those listed using the described method.

| Activities
↓ | <i>Learning Outcomes and Evidence: Graduate students in the Ph.D. program will demonstrate</i> | | |
|--|--|---|---|
| | Outcome 1: Scholarship
Identify and conduct original research, scholarship or creative endeavors; communicate with peers | Outcome 2: Mastery of Subject Field
The student will be able to think critically, creatively and to address technical problems in field | Outcome 3: Ethical Conduct
Conduct professional activities in an ethical and responsible manner |
| 1. Completion of Coursework | | Completion of Program of Study; Course Summaries for Core Courses in ENVE program (ENVE 531, ENVE 532, ENVE 534, ENVE 536 and ENVE 541) | |
| 2. Seminar Series | | | Completion of Program of Study showing participation in CHE 507 seminar |
| 3. Ph.D. Qualifier Exam | Filled individual examiner's rubrics and committee summary rubric | | Filled individual examiner's rubrics and committee summary rubric |
| 4. Ph.D. Thesis and Final Oral Exam | Filled individual examiner's rubrics and committee summary rubric | | Filled individual examiner's rubrics and committee summary rubric |

M.S. degree:

Mapping Guide for the M.S. Degree – *Environmental Engineering*

The main activities are listed for each outcome. Other activities may also support the outcomes, but data will be collected for those listed using the described method.

| Activities
↓ | Learning Outcomes and Evidence: Graduate students in the M.S. program will demonstrate | | |
|---|--|---|---|
| | Outcome 1: Scholarship
Identify and conduct original research, scholarship or creative endeavors; communicate with peers | Outcome 2: Mastery of Subject Field
The student will be able to think critically, creatively and to address technical problems in field | Outcome 3: Ethical Conduct
Conduct professional activities in an ethical and responsible manner |
| 1. Completion of Coursework | | Completion of Program of Study; Course Summaries for Core Courses in ENVE program (ENVE 531, ENVE 532, ENVE 534, ENVE 536 and ENVE 541) | |
| 2. Seminar Series | | | Completion of Program of Study showing participation in CHE 507 seminar |
| 3. M.S. Thesis and Final Oral Exam | Filled individual examiner's rubrics and committee summary rubric | | Filled individual examiner's rubrics and committee summary rubric |

M.Eng. degree:

Mapping Guide for the M.Eng. Degree – *Environmental Engineering*

The main activities are listed for each outcome. Other activities may also support the outcomes, but data will be collected for those listed using the described method.

| Activities
↓ | Learning Outcomes and Evidence: Graduate students in the M.Eng. program will demonstrate | | |
|-----------------|--|---|---|
| | Outcome 1: Scholarship
Conduct literature research on a CBEE related process and assemble an oral presentation summarizing the process; communicate with peers | Outcome 2: Mastery of Subject Field
The student will be able to think critically, creatively and to address technical problems in field | Outcome 3: Ethical Conduct
Conduct professional activities in an ethical and responsible manner |

| | | | |
|------------------------------------|---|---|---|
| 1. Completion of Coursework | | Completion of Program of Study; Course Summaries for Core Courses in ENVE program (ENVE 531, ENVE 532, ENVE 534, ENVE 536 and ENVE 541) | |
| 2. Seminar Series | | | Completion of Program of Study showing participation in CHE 507 seminar |
| 3. Final Oral Exam | Filled individual examiner's rubrics and committee summary rubric | | Filled individual examiner's rubrics and committee summary rubric |

- c. Program performance indicators, including prospects for success of program graduates (employment or graduate school) and consideration of licensure, if appropriate.

Various performance indicators will be collected including:

- Number of applicants, offers and acceptance rates
 - Academic qualifications of applicants and accepted students
 - Retention and graduation rates
 - Employment upon graduation
 - Student satisfaction from exit interviews
 - Employer satisfaction
- d. Nature and level of research and/or scholarly work expected of program faculty; indicators of success in those areas.

All faculty members who identify with the environmental engineering graduate program are active in research including funded projects. For the six faculty listed in Section 1, the present research funding is about \$2 million per year. The scholarly publication rate for these faculty combined is about 15 to 20 refereed journal articles per year.

Performance parameters continually collected by the College of Engineering include:

- Scholarly publication
- Participation in professional meetings, conferences and workshops
- External funding for research
- Number and magnitude of proposals written
- Participation in professional societies, committees, boards, and commissions
- Commercial development including disclosures, patents and start-up companies

These indicators are evaluated each year in the faculty member's annual review.

6. Program Integration and Collaboration

- a. Closely related programs in other OUS universities and Oregon private institutions.

There is a graduate program at Portland State University which offers M.S., M.Eng. and Ph.D. degrees in Civil and Environmental Engineering; there is also a graduate program at the Oregon Health and Science University/Oregon Graduate Institute (OSHU/OGI) which offers M.S. and Ph.D. degrees in Environmental Science and Engineering.

- b. Ways in which the program complements other similar programs in other Oregon institutions and other related programs at this institution. Proposal should identify the potential for collaboration.

The proposed graduate degrees in environmental engineering complement both the PSU and OHSU/OGI offerings. The PSU program in environmental engineering is strongly focused upon water quantity and quality issues, similar to the Water Resources Engineering degrees offered by the OSU Graduate School. The OGI program in environmental science and engineering is strongly focused upon biogeochemical processes and groundwater remediation. Neither of these programs have a strong emphasis upon traditional environmental engineering focus areas in the built environment.

The faculty members within CBEE have collaborated in the past with both the PSU and OGI programs. Joint proposals and projects have been conducted with both programs and the OSU environmental engineering faculty members have had substantial interaction with PSU faculty around the establishment of Oregon's Built Environment and Sustainable Technologies (BEST) Signature Research Center. Future collaborations are expected as appropriate.

- c. If applicable, proposal should state why this program may not be collaborating with existing similar programs.

Not applicable.

- d. Potential impacts on other programs in the areas of budget, enrollment, faculty workload, and facilities use.

No impact on other programs is expected.

7. Financial Sustainability (attach the completed *Budget Outline*)

- a. Business plan for the program that anticipates and provides for its long-term financial viability, addressing anticipated sources of funds, the ability to recruit and retain faculty, and plans for assuring adequate library support over the long term.

The support of these graduate degrees is part of the College of Engineering's present budget and future strategic plan. No changes to present plans for financial viability, funding, recruitment of faculty or library support are expected (see Table 1).

- b. Plans for development and maintenance of unique resources (buildings, laboratories, technology) necessary to offer a quality program in this field.

The research programs associated with the proposed degree are located in Merryfield and Owen Halls and are funded by support to CBEE and the on-going research program. The present estimated costs for the graduate program for an environmental engineering area of concentration are about \$1 million per year including state support and external research grants and contracts (Table 2 which is in a file in additional materials). We have listed an added cost in future years of approximately \$2000 per year for new brochures and changes to the webpage.

- c. Targeted student/faculty ratio (student FTE divided by faculty FTE).

The COE strategic plan sets expectations of 3 M.Eng./M.S. students and 4 Ph.D. students per research active faculty by 2025. This would put the total graduate enrollment for the three degrees at about 40 to 50 students.

- d. Resources to be devoted to student recruitment.

Present resources for student recruitment include the costs of brochures, mailing, and webpage maintenance. This commitment of resources is expected to continue in the future and will be supplemented with small funding (~\$2,000 per year, inflated by 2.5% per year) as mentioned above.

8. External Review (if the proposed program is a graduate level program, follow the guidelines provided in *External Review of new Graduate Level Academic Programs* in addition to completing all of the above information)

The proposed external reviews of this program include:

Dr. John Ferguson

Subject: Proposed Environmental Engineering Graduate Degree

The Graduate Committee in CBEE fully supports the proposal addition of M.Eng., M.S., and Ph.D. degrees in environmental engineering within the School. These degrees will provide a clearer distinction between the environmental and chemical engineering graduates. The offerings of degrees in chemical and environmental engineering will assist the Graduate Committee in both attracting excellent students nationally and internationally and in advising graduate students within the School related to required coursework.

Subject: EnvE Proposal

To: Kenneth Williamson

From: Milo Koretsky, Chair of the Curriculum Committee, School of Chemical, Biological, and Environmental Engineering

The Curriculum Committee in the School of Chemical, Biological, and Environmental Engineering is supportive of the offering of M.Eng., M.S., and Ph.D. degrees in environmental engineering. This proposal requires no new courses or curricular changes from our present offerings.

Milo Koretsky
Professor
School of Chemical, Biological, and Environmental Engineering

December 5, 2011

Professor Kenneth J. Williamson
School of Chemical, Biological and Environmental Engineering
Oregon State University
102 Gleeson Hall
Corvallis, OR 97331-2702

Dear Dr. Williamson:

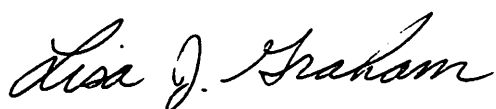

I am writing in support of the addition of Environmental Engineering to the graduate degrees offered at Oregon State University. As the Chief Operating Officer (COO) of Bend Research Inc., I know first-hand of the importance of this type of expertise and the demand that exists for graduates with this type of degree.

By way of introduction, Bend Research is a private research, development, and manufacturing company focused on the advancement of our clients' best new medicines. We provide pharmaceutical formulation and dosage-form support, assist in process development and optimization, manufacture clinical trial quantities of drug candidates in our current Good Manufacturing Practice (cGMP) facility, and advance promising drug candidates from conception to commercialization. Bend Research has more than 240 employees based in four state-of-the-art facilities in Bend, Oregon, USA.

Given the size and scope of the work we perform, environmental engineering plays a key role in our work, in terms of experimental design, process design, waste mitigation, and waste treatment, as well as figuring significantly into our Environmental Health and Safety (EH&S) procedures.

At Bend Research, we view our role as a good corporate citizen as an important one, so having access to employees who can help us enhance sustainability and mitigate the environmental impact of our work is vital to us. The addition of such a degree to OSU's offering would certainly assist us in our efforts.

Sincerely,

Lisa J. Graham, Ph.D., P.E.

Category I Proposal

Guidelines for Addressing Accessibility of New Programs

Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990 prohibits discrimination against individuals with disabilities and mandates the provision of reasonable accommodations to ensure access to programs and services. Oregon State University is committed to providing equal opportunity to higher education for academically qualified students without regard to a disability.

For questions and assistance with addressing access, please contact the Office of Disability and Access Services (737-4098) or the Office of Affirmative Action and Equal Opportunity (737-3556)

Library Evaluation for Category I Proposal

MEng, MS and PhD Degrees in Environmental Engineering
Title of Proposal

Chemical, Biological & Ecological Engineering
Department

Engineering
College

The subject librarian responsible for collection development in the pertinent curricular area has assessed whether the existing library collections and services can support the proposal. Based on this review, the subject librarian concludes that present collections and services are:

- ☐ inadequate to support the proposal (see budget needs below)
- ☐ marginally adequate to support the proposal
- ☒ adequate to support the proposal

Estimated funding needed to upgrade collections or services to support the proposal (details are attached)

Year 1:

Ongoing (annual):

Comments and Recommendations: None.

Date Received: 11/15/11

Date Completed: 11/27/11

Oregon State University Libraries Evaluation of the Collection Supporting a Proposed Classification of Instructional Program in Environmental Engineering (M.Eng., M.S., Ph.D.)

Summary

As noted by the Category 1 Proposal "A graduate offering with an emphasis on environmental engineering has existed in the School [of Chemical, Biological and Environmental Engineering] since its adoption in 2007, with graduate students obtaining M.S., M.Eng. or Ph.D. degree in Chemical Engineering." Additional courses will not be required to support the proposed degrees. In the past several years, OSU Libraries has been building up collections in the broad subject areas of water resources, environmental engineering, ecological engineering and sustainability. Because of this focus, and the fact that no new courses are proposed, the OSU Libraries' resources are currently adequate to support the proposed ENVE program. Students and faculty should understand that OSU Libraries collections are not as broad or deep as some of the institutions named in the Category I Proposal as having comparable programs (Yale University, the University of Arizona, and University of California, Riverside).

Monographs

A search of the OSU Libraries' Catalog revealed 857 titles classified under the subject heading "environmental engineering." While University of Arizona and Yale University libraries hold more titles in environmental engineering, OSU students, faculty and researchers have access to over 1,000 additional environmental engineering books through the Summit consortial catalog of the Orbis/Cascade Alliance, to which OSU Libraries belong. Books requested through Summit are delivered to OSU Libraries within three to five working days. In addition, ENVE students and faculty may suggest book titles for the OSU Libraries to purchase.

Appendix A provides a brief comparison between OSU; Yale; University of California, Riverside; University of Arizona; University of Toledo; and the Summit catalog.

Serials/Journals:

Thomson Reuters' *Journal Citation Reports* provides impact factor metrics for the category of Environmental Engineering. Fifteen of the top 20 journals (by impact factor) in this category are held at OSU Libraries in print and/or online. OSU Libraries has current subscriptions to sixteen of the top journals in the Water Resources category. Students may find that journals they need for the graduate level curriculum in Environmental Engineering are lacking at OSU. Interlibrary Loan (ILL) can fill this gaps, but students and faculty should be aware that they need to have ILL accounts and be prepared to wait a few days for articles.

Appendix B gives listings by impact factor of the top 20 journals in the category of Environmental Engineering Appendix C gives a listing by impact factor of the top 20 journals in the Water Resources category

Electronic Access to Journals:

OSU Libraries' subscriptions to online journal packages, such as Springer, Wiley, and Elsevier have expanded electronic access and in most cases cover the years 1995 – present.

A new service from Interlibrary Loan, called Scan and Deliver, allows students, faculty and staff to order articles from the OSU Libraries print collection for online delivery.

Subject-Specific Indexes and Abstracts

OSU Libraries subscribes to the following online databases that can be useful for identifying literature in environmental engineering:

- Academic Search Premier (1975 – present)
- Compendex (1970 - present)
- Environment and Energy Publishing (2007-present)
- Environmental Sciences & Pollution Management
 - Ecology Abstracts [part of ESPM] (1982-present)
 - Environmental Engineering Abstracts [part of ESPM] (1990-present)
 - Pollution Abstracts [part of ESPM] (1981-present)
 - Sustainability Science Abstracts [part of ESPM] (1995-present)
 - Water Resources Abstracts [part of ESPM] (1967-present)
- GeoRef (1785 – present)
- Reaxys
- SciFinder Scholar (1907- present)
- Science Citation Index [Web of Science] (1965- present)

In addition to the databases listed, online handbooks and encyclopedias (CRC Handbook of Chemistry and Physics, UXL Encyclopedia of Water Science), and online standards (ASTM) may be useful for course work and research.

Library staff and expertise:

Librarian support for this program as proposed is Margaret Mellinger, the OSU Libraries liaison to the College of Engineering.

Respectfully submitted,

Margaret Mellinger, OSU Librarian

11/28/11

Faculty resources – full-time, part-time, adjunct.

The faculty members with an environmental engineering emphasis include:

Dr. Mark Dolan. Ph.D. from Stanford University. Associate Professor. Professional emphasis includes microbial process, bioremediation, groundwater treatment, and biological wastewater treatment.

Dr. Stacey Harper. Ph.D. from Oregon State University. Assistant Professor (joint appointment with EMT). Professional emphasis includes toxicity of environmental pollutants and nanoparticles, bioassay testing methods.

Dr. Jeff Nason. Ph.D. from University of Texas, Austin. Assistant Professor. Professional emphasis includes water treatment, particles interaction dynamics, and emerging contaminants.

Dr. Lewis Semprini. Ph.D. from Stanford University. Distinguished OSU Professor. Professional emphasis includes microbial processes, bioremediation and groundwater treatment. Serves as Executive Chair of the OSU Subsurface Biosphere Initiative.

Dr. Dorte Wildenschild. Ph.D. from Technical University of Denmark. Associate Professor. Professional emphasis includes groundwater remediation, transport in porous media and small-scale visualization techniques.

Dr. Kenneth Williamson. Ph.D. from Stanford University. Emeritus Professor. Professional emphasis upon sustainable engineering, biological treatment, and environmental policy.

Dr. Brian Wood, Ph.D. from University of California, Davis. Full professor. Professional emphasis includes transport phenomenon, transport in porous media, and applied engineering mathematics.

All of the faculty members presently teaching in the program or advising graduate students are full-time except Dr. Williamson who is half time. There are presently no adjunct faculty members.

Other staff.

Dr. Mohammad Azzizian. Research Assistant Professor. Ph.D. from Oregon State University. Professional emphasis upon analytical techniques for measurement of environmental contaminants.

Dr. Azzizian teaches one graduate laboratory course and serves as manager of the environmental engineering laboratory and as an active research faculty on several grants.

Appendix 1

Program Requirements for MEng, MS and PhD Degrees in Environmental Engineering

Oregon State University MEng Degree Program in Environmental Engineering

Program Philosophy

The Master of Engineering (MEng) degree provides students with the option of obtaining a Master's-level degree, but without the research component requirement associated with the traditional Master of Science degree (MS).

The MEng is a coursework-only Master's degree of 45 credits based on curricula that allow graduate students to efficiently focus on the academic courses that are most relevant to their professional objectives. The specific learning outcomes for this degree differ from those of the MS program, because MEng students will not be required to learn research methods or to conduct independent research. Rather, the emphasis is on acquiring specific job-related knowledge and skills as currently presented in existing graduate level courses.

The MEng is now offered because professional engineering societies and industry are calling for a Master's degree as the entry-level engineering degree. Furthermore, many graduate students are interested in pursuing more advanced studies in specialized areas, but a career in research is not their professional goal. For part-time students, the MEng program can be more feasible and attractive than an MS program due to the lack of a thesis or project requirement. Thus, the MEng offers these students a viable alternative to the MS degree.

1.1 MEng Thesis Requirement

The MEng degree in Environmental Engineering does not have a Thesis requirement.

1.2 Minimum Academic Requirements for the MEng Degree

The MEng degree is intended for students who wish to pursue a "coursework only" graduate degree in Environmental Engineering. The MEng degree program requires a minimum of 45 credit hours in graduate-level coursework. This includes 21 credits in the Major field (Environmental Engineering), 15 credits in the Minor field, and an additional 9 credits of approved coursework. If a minor is declared, the student's advisory committee must include a faculty member from the minor department. Approximately two-thirds of the work (30 graduate credits) should be listed in the major field and one third (15 graduate credits) in the minor field. The program of study is developed under the guidance of the major professor and minor professor, when a minor is included, and signed by those professors and chair of the academic unit before filing in the Graduate School. Credit hours used in one Master's Program Form may not be used in an additional Master's Program Form for another degree.

All MEng degree students must earn a cumulative 3.00 GPA for courses listed in their graduate program of study. Any course in their graduate program of study with a grade of C- or lower must be repeated. They must also maintain a cumulative 3.00 GPA for all courses taken at OSU as a graduate student.

1.3 Residence Requirements

After admission to the graduate program, 30 OSU graduate credits as a degree-seeking graduate student are required in residence. Unless on approved Leave of Absence, all graduate students in graduate programs must register continuously for a minimum of 3 graduate credits, excluding summer session, until their degree is granted.

1.4 Registration Requirements

Full-time status as a graduate student is defined by Oregon University System (OUS) as enrollment in 9 credits per term.

1.5 Graduate Study Program

A MEng degree student is required to file a program of study with the Graduate School **before completing 18 hours of graduate credit**. A student who does not file a program of study within the specified deadline will not be allowed to register for the next term.

1.6 Time Limit

All work toward a MEng degree must be completed within 7 years.

1.7 Final Oral Examination

The MEng degree requires a comprehensive Final Oral Examination. The student will arrange a time that is acceptable for all committee members, and then schedule a two-hour exam through the Graduate School. The exam will consist of a 30 minute presentation prepared and delivered by the candidate that provides a meaningful evaluation and reflection on experiences gained in coursework completed toward the degree, followed by questions from the committee on the candidate's presentation and knowledge gained from the candidate's coursework. The 30 minute presentation should highlight the following items:

1. A statement of the candidate's professional goals for obtaining the MEng degree.
2. An overview on how the MEng coursework, including both Major and Minor areas, provided the preparation needed to achieve the candidate's professional goals.
3. A highlight of examples from class projects, homework, job search efforts, etc. that illustrate and elaborate on Item 2.

The MEng candidate must also provide a two-page MEng Coursework Program Summary Statement that highlights items 1 to 3 above, to be handed in at the beginning of the Final Oral Examination.

2. Course Requirements

2.1 Major Courses (21 credits)

The Environmental Engineering Program offers the following core courses which must be taken for graduate credit for the major in Environmental Engineering.

| | | |
|----------|-----|---|
| CHE 525 | (4) | Chemical Engineering Analysis |
| ENVE 532 | (4) | Aquatic Chemistry: Natural and Engineered Systems |
| ENVE 535 | (4) | Physical and Chemical Processes for Hazardous Waste Treatment |
| ENVE 536 | (1) | Aqueous Environmental Chemistry Laboratory |
| ENVE 541 | (4) | Microbial Processes in Environmental Systems |
| ENVE 507 | (3) | Seminar (F, W, S) |

For all new graduate students, the enrollment in Seminar (ENVE 507) is required for the first academic year (F, W, S). Attendance in the ENVE 507 Seminar is required for all graduate students.

A M.Eng. candidate without a B.S. degree in Environmental Engineering (or equivalent Engineering degree) must take the following courses in addition to the ENVE core:

Pre-requisite courses (completion required before taking ENVE core courses)

Math through Differential Equations

One year of General Chemistry

One year of Physics

CBEE 211 (3) Material Balances and Stoichiometry

ENVE 322 (4) Fundamentals of Environmental Engineering

Co-requisite courses

ENVE 421 (4) Water and Wastewater Characterization

ENVE 422 (4) Environmental Engineering Design

CE 547 (4) Water Resources Engineering I: Principles of Fluid Mechanics

2.2 Minor Courses (15 credits)

A graduate minor is an academic area that clearly supports the major. Neither the Graduate School nor the School of CBEE require a student to pursue an academic minor outside of their major area of study. If a minor is desired, the minor can be one of several choices:

- (1) the same academic area as the major with a different area of concentration,
- (2) an academic area available only as a minor (from another program at OSU),
- (3) a different major,
- (4) an approved major at another institution in the OUS,
- (5) an integrated minor.

Students pursuing a minor will need a Minor Professor to oversee the completion of their academic minor. For option (1) above, the Minor Professor is an ENVE faculty member. For options (2-5), the Minor Professor would be chosen from graduate faculty in the academic area of interest. Option (4), an integrated minor, consists of a series of cognate courses from two or more academic areas outside the major area of concentration (limit of one ENVE course in an integrated minor). The Minor Professor for an integrated minor must be from **outside** the ENVE program and represent (at least one of) the academic area(s) of interest.

A list of courses offered by the Environmental Engineering Program that are often part of a minor in same academic area as the major, but with a different area of concentration, are:

| | | |
|----------|-----|---|
| ENVE 525 | (3) | Air Pollution Control |
| ENVE 531 | (4) | Fate and Transport of Chemicals in Environmental Systems |
| ENVE 542 | (4) | Microbial Process Design for Municipal and Hazardous Wastes |
| ENVE 554 | (4) | Groundwater Remediation |
| ENVE 556 | (3) | Sustainable Water Resources Development |
| ENVE 599 | | Selected Topics |
| ENVE 505 | | Reading and Conference |

Reading and Conference, ENVE 505, is used only occasionally and may be taken as a minor ENVE course but is handled on a case-by-case basis with a faculty member willing to act as instructor for the course. No more than 6 credits of blanket-numbered courses, courses that contain a zero as the middle digit (ENVE #0#), may be applied toward the minimum-45-credit Master's degree.

2.3 Transfer of Credits from MEng to MS or PhD Program

If a student enrolled in the Environmental Engineering MEng program later decides to pursue an MS or PhD degree, then credits obtained in the MEng degree can be transferred to the MS degree or PhD degree program, subject to approval by the student's MS or PhD Committee.

2.4 Graduate Level Course Requirement

At least 50% of the total coursework for the MEng degree must be "graduate level only" courses. True "graduate level only" courses are at the 500 level and are not cross-listed at the 400 level. All 600 level courses are graduate level only.

3. Advisor & Committee

3.1 Advisor Selection

The Environmental Graduate Committee Chair will serve as the advisor to all MEng degree candidates.

3.2 Committee Selection & Duties

The Committee will consist of at least three members of the graduate faculty: the Environmental Graduate Committee Chair, one additional faculty member in the Major field, and one faculty member in the Minor field. The Committee will perform the following duties: 1) Review and approve the student's program of study, including the student's Minor field of coursework study; 2) participate in the Final Examination (see section 1.7).

| Total | 13-17 | 14-17 | 8-15 | |

Notes:

- Graduate ENVE Core, 20 credits: ENVE 507(3x1), CHE 525(4), ENVE 532(4), ENVE 536(1), ENVE 535(4), ENVE 541(4) [Seminar (ENVE 507) is required for all terms]
- Take 1 of ENVE 525, ENVE 556 and ENVE531. (Depending upon progress, these courses could be distributed into Year 2).
- Graduate Minor: 15+ credits, typically 4-5 courses. (Depending upon progress, these courses could be distributed into Year 2).

Total Graduate Credits: 45+

Coursework Credits: 45 minimum (20 Graduate ENVE Core and 15 Graduate Minor, 10 general engineering).

**Oregon State University
MS Degree Program in Environmental Engineering**

1. Program Philosophy

1.1 MS Thesis Academic Requirement

A M.S. Thesis is required for the M.S. degree in Environmental Engineering. The M.S. Thesis must have one or more of the following elements: contribution to theory; development of new method for scientific investigation; generation of new data which clearly contribute to science and engineering.

1.2 Minimum Academic Requirements for the MS Degree

The M.S. degree program requires a minimum of 45 graduate credit hours, 36 credits of which are reserved for course work and 9 credits for the M.S. Thesis. However, the M.S. Thesis effort will reflect the requirements of the M.S. Thesis stated above, typically up to a year of research effort has been expended to complete the M.S. Thesis. Two-thirds of the work (30 credits including 9 credits for the Thesis) must be in the major field and one-third (15 credits) in the minor field. No more than 6 credits of blanket-numbered courses, courses other than thesis or project that contain a zero as the middle digit (ENVE #0#), may be applied toward the minimum-45-credit Master's degree. Credit hours used in one master's program may not be used in an additional master's program.

All M.S. degree students must earn a cumulative 3.00 GPA for courses listed in their graduate program of study. Any course in their graduate program of study with a grade of C- or lower must be repeated. They must also maintain a cumulative 3.00 GPA for all courses taken at OSU as a graduate student.

1.3 Residence Requirements

After admission to the graduate program, 30 OSU graduate credits as a degree-seeking graduate student are required in residence. Unless on approved Leave of Absence, all graduate students in graduate programs must register continuously for a minimum of 3 graduate credits, excluding summer session, until their degree is granted.

1.4 Registration Requirements

Full-time status as a graduate student is defined by the Oregon University System (OUS) as enrollment in 9 credits per term. M.S. students on GTA (Graduate Teaching Assistant) and GRA (Graduate Research Assistant) appointments are required to register for a minimum of 12 credits each term of the appointment. Graduate Assistants whose appointments range between 0.15 and 0.29 FTE (Full Time Equivalent) may register for a maximum of 15 credits per term. Those whose appointments range from 0.30 and 0.49 FTE may register for no more than 12 credits per term.

1.5 Graduate Study Program

Each M.S. degree student is required to find an Advising Professor before the end of their second term of coursework. The student must file a program of study with the Graduate School **before completing 18 hours of graduate credit**. A student who does not file a program of study within the specified deadline will not be allowed to register for the next term.

1.6 Time Limit

All work toward a M.S. degree must be completed within 7 years.

1.7 Final Examination

Successful completion of a final oral examination is required for all M.S. degrees. The examination committee is nominated by the student's advisor, subject to the approval of the CBEE School Head and the Graduate School.

M.S. Thesis. An examination copy of the M.S. Thesis must be presented to the Graduate School **two weeks prior to the final oral examination**. Additional examination copies of the thesis are distributed by the student at this time to other members of the examining committee, including the Graduate Council Representative.

The committee will consist of at least four members of the graduate faculty: two in the Major field, including the student's advisor/major professor; one in the Minor field; and a Graduate Council Representative. **It is the student's responsibility** to obtain his or her own Graduate Council Representative from a list provided by the Graduate School.

Oral Examination. The final oral examination must be scheduled through the Graduate School and also must be announced in the School of CBEE not less than one week prior to the date of the examination. The final examination should be scheduled for two hours. No more than half of the examination period should be devoted to the presentation and defense of the thesis; the remaining time can be spent on questions that assess the student's knowledge of the major and minor fields. One dissenting vote is permitted for the M.S. degree and no more than one re-examination is permitted.

2. Course Requirements

2.1 Major Courses (30 credits)

The Environmental Engineering Program offers the following core courses which must be taken for graduate credit for the major in Environmental Engineering.

| | | |
|----------|-----|---|
| CHE 525 | (4) | Chemical Engineering Analysis |
| ENVE 532 | (4) | Aquatic Chemistry: Natural and Engineered Systems |
| ENVE 535 | (4) | Physical and Chemical Processes for Hazardous Waste Treatment |

| | | |
|----------|-----|--|
| ENVE 536 | (1) | Aqueous Environmental Chemistry Laboratory |
| ENVE 541 | (4) | Microbial Processes in Environmental Systems |
| ENVE 507 | (3) | Seminar (F, W, S) |

For all new graduate students, the enrollment in Seminar (ENVE 507) is required for the first academic year (F, W, S). Attendance in the ENVE 507 Seminar is required for all graduate students. Additional elective courses in the Major area and thesis credits will constitute the remainder of the required Major coursework.

A M.S. candidate without a B.S. degree in Environmental Engineering (or equivalent Engineering degree) must take the following courses in addition to the ENVE core:

Pre-requisite courses (completion required before taking ENVE core courses)

Math through Differential Equations

One year of General Chemistry

One year of Physics

CBEE 211 (3) Material Balances and Stoichiometry

ENVE 322 (4) Fundamentals of Environmental Engineering

Co-requisite courses

ENVE 421 (4) Water and Wastewater Characterization

ENVE 422 (4) Environmental Engineering Design

CE 547 (4) Water Resources Engineering I: Principles of Fluid Mechanics

2.2 Minor Courses (15 credits)

A graduate minor is an academic area that clearly supports the major. Neither the Graduate School nor the School of CBEE require a student to pursue an academic minor outside of their major area of study. If a minor is desired, the minor can be one of several choices:

- (1) the same academic area as the major with a different area of concentration,
- (2) an academic area available only as a minor (from another program at OSU),
- (3) a different major,
- (4) an approved major at another institution in the OUS,
- (5) an integrated minor.

Students pursuing a minor will need a Minor Professor to oversee the completion of their academic minor. For option (1) above, the Minor Professor is an ENVE faculty member. For options (2-5), the Minor Professor would be chosen from graduate faculty in the academic area of interest. Option (4), an integrated minor, consists of a series of cognate courses from two or more academic areas outside the major area of concentration (limit of one ENVE course in an integrated minor). The Minor Professor for an integrated minor must be from **outside** the ENVE program and represent (at least one of) the academic area(s) of interest.

A list of courses offered by the Environmental Engineering Program that are often part of a minor in same academic area as the major, but with a different area of concentration, are:

| | | |
|----------|-----|---|
| ENVE 525 | (3) | Air Pollution Control |
| ENVE 531 | (4) | Fate and Transport of Chemicals in Environmental Systems |
| ENVE 542 | (4) | Microbial Process Design for Municipal and Hazardous Wastes |
| ENVE 554 | (4) | Groundwater Remediation |

| | | |
|----------|-----|---|
| ENVE 556 | (3) | Sustainable Water Resources Development |
| ENVE 599 | | Selected Topics |
| ENVE 505 | | Reading and Conference |

Reading and Conference, ENVE 505, is used only occasionally and may be taken as a minor ENVE course but is handled on a case-by-case basis with a faculty member willing to act as instructor for the course. No more than 6 credits of blanket-numbered courses, other than thesis, may be applied toward the minimum-45-credit Master's degree.

2.3 Graduate Level Course Requirement

At least 50% of the total coursework for the MS degree must be "graduate level only" courses. True "graduate level only" courses are at the 500 level and are not cross-listed at the 400 level. All 600 level courses are graduate level only. The 9 credits of M.S. Thesis (ENVE 503) count towards the 50% "graduate level only" requirement.

3. Advisor & Committee

3.1 Advisor Selection

All new graduate students arriving fall term must have a Thesis Advisor (Major Professor) by the end of the following winter term. M.S. Thesis Advisor/Major Professor selection is a three-step process. The Environmental Graduate Committee Chair coordinates each step of the advisor selection process described below.

In the first step, the students learn about the current research opportunities within the School. During fall term, new graduate students must attend ENVE seminar (ENVE 507). At this seminar faculty will present their present research interests and opportunities for new graduate students in their research group.

In the second step of the advisor selection process, following their introduction to faculty in the ENVE seminar, the new graduate students are strongly encouraged to make appointments with individual faculty members to further discuss the research projects they are most interested in. This process must be completed by the second week of the following winter term. The new graduate students then fill out the "New Graduate Student Thesis Advisor Preferences" form where they list and rank their top three "faculty member & project" choices. This form must be submitted to the Environmental Graduate Committee Chair by the end of the second week of winter term.

In the third step of the advisor selection process, the faculty will meet to discuss the new graduate student preferences as detailed in the completed "New Graduate Student Advisor Preferences" forms. The faculty member then contacts the student(s) they are interested in and makes an offer to each student to join the research group. This process is to be completed by the end of the seventh week of winter term. If the student accepts a faculty member's offer, then both faculty member and the student complete and sign the "Major Professor Selection for New Graduate Students" letter. This form is submitted to the Environmental Graduate Committee Chair by the last week of winter term.

The student cannot accept more than one offer. Furthermore, it is not allowed for any student to change his/her choice of a final Major Professor after signing the "Major Professor Selection for New graduate Students" letter, unless the student is placed under extraordinary circumstances which they have discussed with the Environmental Graduate Committee Chair. In situations where no faculty member accepts a new student, the Environmental Graduate Committee Chair or a designated faculty member will work with the School Head to place the student. If a student needs to change his/her advisor because of funding reasons, the student must contact the Environmental Graduate Committee Chair, and the Environmental Graduate Committee Chair or a designated faculty member will work with the School Head to place the student. If a suitable placement cannot be found, the student will be advised to seek a Masters of Engineering degree, MEng, which does not have a thesis component.

The Environmental Graduate Committee Chair is the faculty academic advisor for all Environmental graduate students who have not yet selected a Major Professor/Thesis Advisor. After the student has secured a Major Professor, the major Professor assumes all academic advising responsibilities for the student.

The Graduate School requires that new graduate students secure a Major Professor/Thesis Advisor before completing 18 credits towards the graduate program of study.

3.2 Committee Selection & Duties

The Committee will consist of at least four members of the graduate faculty: the student's Major Professor/Thesis Advisor, one additional faculty member in the Major field, one faculty member in the Minor field, and a Graduate Council Representative. It is the student's responsibility to obtain his or her own Graduate Council Representative from a list provided by the Graduate School.

The Committee will perform the following duties: 1) Review and approve the student's Graduate Study Program for the MS degree in Environmental Engineering, including the student's Minor field of coursework study; 2) participate in the Final Examination (see section 1.7).

- Seminar (ENVE 507) is required for all three terms in the first year (if possible)
- M.S. Thesis, 9+ credits: only 9 thesis credits are counted toward degree requirements; however, thesis credits can exceed 9 units total to meet graduate assistantship requirements (e.g. 12 credits per term)
- Graduate Minor: 15+ credits, typically 4-5 courses. Depending upon the demands of your research assistantship, these course can be distributed into Year 2

Total Graduate Credits: 45+

Coursework Credits: 36 minimum (21 Graduate Major and 15 Graduate Minor)

M.S. Thesis Credits: 9

DOCTORAL DEGREE PROGRAM

Doctor of Philosophy in Environmental Engineering

1. General Requirements

The Doctor of Philosophy degree is granted primarily for creative scholarly achievements. There is no rigid credit requirement; however, the equivalent of at least three years of full-time graduate work beyond the bachelor's degree is required.

A Ph.D. degree student in the School of Chemical, Biological, and Environmental Engineering must include a minimum of 108 credits on his/her doctoral program. A minimum of one full-time academic year (at least 36 credits) should be devoted to the preparation of thesis. A minimum of one full-time academic year of regular non-blanket course work (at least 36 credits) must be included on the doctoral program. No more than 15 credits of blanket-numbered courses, other than thesis, may be included in the minimum 108-credit program. Coursework completed as part of a Master's degree (M.S. or M.Eng.) can be transferred for credit towards the doctoral degree with the consent of the student's doctoral committee.

A Ph.D. candidate without a M.S. degree in Environmental Engineering must take the following six ENVE core courses:

| | | |
|----------|-----|---|
| CHE 525 | (4) | Chemical Engineering Analysis |
| ENVE 532 | (4) | Aquatic Chemistry: Natural and Engineered Systems |
| ENVE 535 | (4) | Physical and Chemical Processes for Hazardous Waste Treatment |
| ENVE 536 | (1) | Aqueous Environmental Chemistry Laboratory |
| ENVE 541 | (4) | Microbial Processes in Environmental Systems |
| ENVE 507 | (3) | Seminar (1 credit each term, F,W,Sp) |

A Ph.D. candidate without a B.S. degree in Environmental Engineering (or equivalent Engineering degree) must take the following courses in addition to the ENVE core:

Pre-requisite courses (completion required before taking ENVE core courses)

Math through Differential Equations

One year of General Chemistry

One year of Physics

CBEE 211 (3) Material Balances and Stoichiometry

ENVE 322 (4) Fundamentals of Environmental Engineering

Co-requisite courses

ENVE 421 (4) Water and Wastewater Characterization

ENVE 422 (4) Environmental Engineering Design

CE 547 (4) Water Resources Engineering I: Principles of Fluid Mechanics

There are five steps to be completed towards a Ph.D. degree:

- (1) Approval of graduate study program
- (2) Oral qualifying examination
- (3) Preliminary examination
- (4) Final oral examination
- (5) Thesis submission

2. Graduate Program of Study

2.1 Selecting a Doctoral Committee

The doctoral committee will consist of a *minimum* of five members of the graduate faculty, including the Major Professor and one additional Environmental Engineering faculty member, one faculty from each declared minor field, and a Graduate Council Representative. It is the student's responsibility to obtain his or her own Graduate Council Representative from a list provided by the Graduate School. The doctoral committee will review and approve the student's program of study for the PhD degree and participate in all formal committee meetings and student examinations required for the PhD degree, including the preliminary and final exams.

2.2 Filing a Program of Study with the Graduate School

A graduate student who holds a master's degree must file a program of study form with the Graduate School by the end of their first academic year of enrollment as a doctoral student. A graduate student who *does not* hold a master's degree in Environmental Engineering must file a program of study form with the Graduate School by the end of the fifth quarter of enrollment as a doctoral student. If the program of study form is not filed within the specified deadline, the student will not be allowed to register for the next term.

2.3 Approval of the Program of Study

The student's doctoral program of study is formulated and approved subject to departmental policies at a **formal meeting** of his/her doctoral committee. Unlike other formal committee meetings, the program meeting does not need to be scheduled in advance with the Graduate School, but all committee members, including the Graduate Council Representative, must be present. The student must be registered for a minimum of 3 credits for the term in which the program meeting is held.

It is recommended that graduate students have their program of study approved as soon as sufficient information on the proposed research topic is obtained to define the scope of the thesis. When the program of study is approved by the doctoral committee, the department head, and the dean of the Graduate School, it becomes the obligation of the student to complete the requirements as formulated. Changes in the program may be made by submitting a Petition for Change Form available from the Graduate School.

3. Residence Requirement

After admission to the doctoral program, students must spend at least three terms of full-time graduate academic work (at least 9 credits/term) on site at the Corvallis campus and a minimum of 36 graduate credits (from Oregon State University) must be completed as a Ph.D. student. Unless on approved Leave of Absence, all graduate students in graduate programs must register continuously for a minimum of 3 graduate credits, excluding summer session, until their degree is granted.

4. Advisor Selection

Because the Graduate School requires that new graduate students secure a Major Professor/Thesis Advisor before completing 18 credits toward their graduate program of study, graduate students admitted fall term must select a Thesis Advisor (Major Professor) by the end of the following winter term. Many incoming PhD students arrive at OSU having already secured a Ph.D. Major Professor/Thesis Advisor through previous agreement. For those students who have not secured a Ph.D. Major Professor/Thesis Advisor before arriving to campus, selection is a three-step process. The Environmental Graduate Committee Chair coordinates each step of the advisor selection process described below.

In the first step, students learn about the current research opportunities within the department. During fall term, new graduate students attend Seminar (ENVE 507) where faculty will present their present research interests as well as discuss opportunities for new graduate students in their research group.

As a second step, students are strongly encouraged to make appointments with individual faculty members to further discuss potential research projects. The new graduate students then complete the "New Graduate Student Thesis Advisor Preferences" form. This process must be completed and the form submitted to the Environmental Graduate Committee Chair by the end of the second week of winter term.

In the third step of the advisor selection process, the faculty will meet to discuss the new graduate student preferences as detailed in the completed "New Graduate Student Advisor Preferences" forms. The faculty member then contacts the student(s) they are interested in and makes an offer to each student to join the research group. This process is to be completed by the end of the seventh week of winter term. If the student accepts a faculty member's offer, then both faculty member and the student complete and sign the "Major Professor Selection for New Graduate Students" letter. This form is submitted to the Environmental Graduate Committee Chair by the last week of winter term.

The Environmental Graduate Committee Chair is the academic advisor for all graduate students who have not yet selected a Major Professor/Thesis Advisor. After the student has secured a Major Professor, the Major Professor assumes all academic advising responsibilities for the students.

In situations where no match is found between a faculty member and a new student, the Environmental Graduate Committee Chair or a designated faculty member will work with the School Head to place the student. If a suitable placement cannot be found, the student may be advised to seek a Masters of Engineering degree, M.Eng., which does not have a research and thesis component.

5. Oral Qualifying Examination

An Oral Qualifying Examination is required of all PhD candidates prior to the Preliminary Exam. The purpose of the exam is to ensure that each PhD candidate has a mastery of basic Environmental Engineering subjects. The Oral Qualifying Exam is a CBEE School requirement and should be taken upon completion of the first year of coursework. A committee consisting of a minimum of 3 Environmental Engineering graduate faculty members, including the Environmental Graduate Committee Chair, will administer the examination.

The exam should be scheduled for two hours and will consist of an oral examination of the candidate's breadth of understanding of fundamental Environmental Engineering knowledge.

One dissenting vote is permitted, but **no re-examination is permitted**. Failure to pass the qualifying exam will result in termination of the student's PhD candidacy. In appropriate cases, students may choose to complete a M.Eng. degree upon termination of their PhD candidacy.

6. Preliminary Examination

There are two components to preliminary examinations in the School of Chemical, Biological, and Environmental Engineering: (1) the Written Preliminary Examination, and (2) the Oral Preliminary Examination.

The written preliminary exam followed by an oral defense is intended to evaluate a PhD student's ability to utilize scientific literature, to think critically, to write creatively, to articulate ideas, and to demonstrate understanding of his/her specific field of study. The Preliminary Examination will consist of both written and oral parts. The oral part of this examination will also evaluate the student's breadth of knowledge in areas of broader focus, yet related to the area of research. Generally, the oral part of the exam will begin with an approximately 45 minute presentation by the student, in which he/she presents her research, and thus, the report contents. This will be followed by a question and answer session in which the committee can address both the research itself and also more general knowledge. Preliminary exams should be scheduled for *at least two hours*.

6.1 Written Preliminary Examination

The Written Preliminary Exam must be completed prior to the Oral Preliminary Exam. Candidates must write a proposal on their thesis topic and distribute it to their doctoral committee members at least *one week prior* to the date of the Oral Preliminary Exam.

Guidelines for the Written Research Proposal

This examination will also test the student's ability to develop, investigate, and defend their original research idea. The originality, scholarly quality, and the technical feasibility of the research proposal will be evaluated.

The format of the written research proposal required for the Preliminary Exam is as follows.

1. The report is intended to contain a summary of the student's research, to demonstrate knowledge in the area of research, progress so far, expected results, and a timeline for completing the research and thus to graduation.
2. This 'report' style document should contain an introduction, literature review, outline of major hypotheses, discussion of methods that will be used to test the hypotheses, preliminary findings up to the point of the exam, a summary, and a timeline indicating roughly when key elements of the research will be completed. Such a report would likely serve as a basis for the first several chapters of the PhD candidate's dissertation.
3. The written research proposal is limited to *fifteen single-spaced pages* (including references, timeline, etc.)
4. The written research proposal must be written by the PhD candidate with limited input from the thesis advisor.

6.2 Oral Preliminary Examination

The Oral Preliminary Examination is conducted by the student's doctoral committee and should cover the student's knowledge in his/her major and minor subjects. The examination consists of an oral defense of the proposal submitted in the Written Preliminary Examination on the candidate's proposed research topic. However, no more than one-half of the time should be devoted to specific aspects of the thesis project. The first part of the examination (i.e., the presentation and defense of the student's thesis proposal) is generally presented as a seminar to the student's doctoral committee. This portion should last no longer than 30 to 45 minutes. The committee will then ask questions relating to the thesis proposal, the candidate's course work, or the student's research. All members of the doctoral committee, including the GCR, are expected and encouraged to participate in examining the student. No committee member should be allowed to monopolize the examination, and the student must be given an adequate and fair opportunity to respond to the questions.

The examination will be scheduled for *at least two hours*, and the examination date must be scheduled with the Graduate School *at least one week in advance*.

If more than one negative vote is recorded by the examining committee, the candidate will have failed the oral examination. Only one re-examination is permitted.

At least one complete academic term must elapse between the time of the Oral Preliminary Examination and the Final Oral Examination. If more than five years elapse between these two examinations, the candidate must take another Oral Preliminary Examination.

7. Thesis

All PhD candidates must submit a thesis embodying the results of research and presenting evidence of originality and ability in independent investigation. The thesis must constitute a valid contribution to knowledge in the field of study, and must be based on the candidate's own investigation, including one or more of the following elements:

- Contribution to theory
- Development of new method for scientific investigation
- Generation of new scientific data which clearly contribute to the development of sciences
- Development and/or novel implementation of a numerical model

The thesis must reflect a mastery of the literature of the subject and be written in scientific format.

7.1 Graduate School Thesis Regulations

Regulations concerning the doctoral thesis are the same as those for the master's degree with the following exceptions:

- (1) An examination copy of the thesis must be presented to the Graduate School (and the doctoral committee members) *at least two weeks prior* to the final oral examination:

- (2) Within *six weeks* of the final oral examination, two final copies of the thesis must be submitted to the OSU library and one extra copy of the abstract and title page must be deposited unbound with the Graduate School.

8. Final Oral Examination

After completion of or while concurrently registered for all work required by the program, the student must pass a final oral examination. The final oral examination must be scheduled with the Graduate School *not less than two weeks* prior to the date of the examination. The final oral examination must be announced in the School of Chemical, Biological, and Environmental Engineering *no less than two weeks* prior to the examination date.

The thesis defense portion of the final oral examination is open to all interested persons. After the open portion of the exam, the examining committee excludes all other persons and continues with the examination of the candidate's knowledge of the field of study and the evaluation of the candidate's performance. The oral final examination should be scheduled for *at least two hours*.

8.1 Re-examination

The candidate is expected to defend their thesis during the final oral exam and show a satisfactory knowledge of his or her field. If more than one negative vote is recorded by the examining committee, the candidate has failed the examination. **Only one re-examination is permitted.**

8.2 Timing

The final oral examination must be taken within five years after the oral preliminary examination. If more than five years elapse, the candidate is required to take another oral preliminary examination. The student must be registered for at least 3 credits during the term the final examination is to take place.

SUBJECT: Curriculum Liaison

The attached Category I proposal describes our proposed new graduate degrees in Environmental Engineering. In accordance with the liaison criteria in the Curricular Procedures Handbook, this memo serves as notification to your Department, School or Program of our intent to make this curricular change. The entire packet of materials for the proposal can be viewed at <https://secure.oregonstate.edu/ap/cps/proposals/view/82814>.

Please review the attached materials or send to the appropriate person in your unit and send comments, concerns, or support to me by December 1, 2011. Your timely response is appreciated.

Please note that a lack of response will be interpreted as support.

Thank you for your time and input.

Summary of Liaison Comments from OSU:

Terri Fiez, EECS:
Looks fine to me.

Robert Stone, MIME
MIME has no concerns with your proposal and supports it.

Mary Santelmann, Water Resources Program
I have no objection to making this change and providing students with an opportunity to represent their area of concentration in graduate school on their transcripts.

Summary of Liaison Comments from External to OSU:

Brad Tebo, OHSU
We have no objections to your proposed degrees.

Alan Dickman, Environmental Studies Program, UO
I see no overlap with the Environmental Studies graduate program at the University of Oregon and your proposed new graduate degrees in Environmental Engineering. I wish you the best as you proceed with plans to develop this program.

Scott Wells, Department of Civil and Environmental Engineering, PSU
Thanks for the notice—your Envir Engr students really need this to go through.

CATEGORY I REVIEW – Graduate Programs in Environmental Engineering (EE)

GC REVIEWER – Vinod Narayanan

BRIEF BACKGROUND – EE program resides within the School of Chemical Biological and Environmental Engineering. Previously, it was housed in the Civil, Construction and Environmental Engineering Department. In either case, students specializing in EE were/are awarded Civil engineering or Chemical Engineering degrees. As a "truth in advertising" the ChemE faculty would rather that the EE majors got EE degrees. This sentiment has been apparently felt by the EE grad students as well for several years. What is sought through this Cat I is discipline-specific graduate degrees in Environmental Engineering (MS, MEng, PhD).

REVIEWER COMMENTS – This is a pretty straightforward proposal. No new courses are being proposed; need is well documented; faculty have been teaching courses and mentoring students in this area- it is just that students will now be able to call themselves EE graduates. So, there is no major change. The faculty and courses currently exist to support this graduate program and nothing much changes. Between 20 and 40 students exist in this program on average. This will only be an on-campus program. Liaison comments were all positive and supported this change.

1. Need for this graduate program – the need is not an issue here since this program has existed for several years; students have been placed in industry, government agencies, internationally, and in academia.
2. Implementation – all courses exist and no major changes are needed; faculty are already bringing in grants to support students
3. Resources – faculty, staff, infrastructure – all are in place

At the APC there was only one issue pertinent to the GC that was brought up. This pertained to the need to revise the Learning Outcomes to be consistent with those set by the GC as well as the assessment plan for these outcomes. This change has since been incorporated into the Cat I. Other comments are listed per the suggested review outline.

1. MISSION STATEMENT – consistent with OSU strategic priorities in sustainable earth systems, improving health and wellness and promotion of economic growth and social progress.
2. ACCREDITATION – no accreditation is sought for the graduate degrees
3. NEED (Evidence of market demand) – exit student employment data is provided strongly suggesting need. Support letter from Bend Research is also provided.

4. OUTCOMES AND QUALITY ASSESSMENT – completed, no big issues here. Only needs a clarification regarding the assessment of Outcome 3 – The assessment plan for ethical conduct includes completion of CHE 507 Seminar – please describe how ethical aspects are integrated into this seminar series.
5. PROGRAM INTEGRATION AND COLLABORATION – no collaboration is proposed. PSU and OHSU/OGI offer programs in environmental science and/or engineering. OSU program complements these. It is the only program with strong emphasis in traditional EE focused on the built environment.
6. FINANCIAL STABILITY – stable; faculty line and TA support already exists; students are funded through GTAs and GRAs. All listed faculty are active in research.
7. EXTERNAL REVIEW – list of reviewers have been suggested external to the State.

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment

Executive Summary

The certificate curriculum was developed by the campus wide committee described in 1.b. The 18-credit graduate certificate in College and University Teaching is designed to provide advanced coursework and experiential learning opportunities to current OSU graduate students who plan to pursue careers in teaching and instruction in higher education settings or who plan to pursue careers that require similar skill sets in facilitation. This proposed certificate has three primary goals:

- 1) To elevate the quality of instruction provided to OSU undergraduate students by Graduate Teaching Assistants (GTAs) by offering graduate students training and development opportunities related to pedagogy and engagement.
- 2) To create a cadre of highly skilled graduate teaching assistants at OSU. Not only will these GTAs provide valuable instruction to OSU undergraduates, they may eventually assist in the training of less experienced graduate students. We anticipate that this program, and the possibility of serving in an advanced mentorship role, will be attractive enough that it will help recruit highly capable graduate students to OSU.
- 3) To enhance the initial employability, preparedness, and early career development of graduate students who have completed this graduate certificate at OSU.

The proposed 18-credit graduate certificate in College and University Teaching is designed to provide advanced coursework and experiential learning opportunities to current graduate students who plan to pursue careers in teaching and instruction in higher education settings or who plan to pursue careers that require similar skill sets in facilitation. The general structure of the certificate is

- core coursework (8 credits)
- specialized coursework and experiences (4 credits)
- supervised teaching internship (3 credits)
- capstone teaching portfolio (3 credits)

Graduate students completing this Graduate Certificate program will receive a formal, transcript-visible credential and will be better prepared to compete in the national and international marketplace for highly sought after faculty positions in colleges and universities. The certificate in College and University Teaching will be granted through the Graduate School.

Students who successfully complete all experiences associated with the graduate certificate will have the skills and knowledge to:

- Describe and discuss key theories, orientations, models, and principles of learning and development in adulthood
 - As measured by the successful completion of AHE 553 and all related assignments and the development of a capstone portfolio
- Develop a college and university course, including the creation of a course syllabus with learning outcomes, a plan for assessing student learning, and related and engaging instructional activities
 - As measured by the successful completion of AHE 547 and all related assignments and the development of a capstone portfolio
 - As measured by the successful completion of AHE 507/607 and all related assignments and the development of a capstone portfolio
- Design and deliver quality instructional activities to college and university students and make changes to instruction in response to feedback from students, peers, and colleagues
 - As measured by the successful completion of AHE 510/610 and all related assignments and the development of a capstone portfolio

- Identify key instructional issues or trends within a specific discipline or area of professional interest
 - As measured by the successful completion of specialized coursework and/or workshops and all related assignments and the development of a capstone portfolio
- Conduct a self-appraisal of instructional skills, identify areas of improvement, and articulate a philosophy of teaching
 - As measured by the successful completion of AHE 510/610 and all related assignments and the development of a capstone portfolio
 - As measured by the successful completion of AHE 507/607 and all related assignments and the development of a capstone portfolio

The funding to support this program will be provided through the Graduate School with a commitment from the Provost to increase the Graduate School recurring budget to cover annual costs for a 0.5 FTE Program Director, administrative support and instructor time.

Oregon State University
Graduate Certificate in College and University Teaching

Preliminary Draft of the Category 1 proposal
CPS tracking #: To Be Determined
March 2012

1. Certificate Program Overview

a.

CIP#: 131299

Title: Teacher Education and Professional Development, Specific Levels and Methods, Other.

Definition: Any instructional program in teacher Education and professional development not listed above. *Examples: [Distance Learning Teacher], [Online Teaching], Postsecondary Instructor Education], [College Teaching].*

b. Brief overview including description and rationale:

1. The proposed certificate is an outgrowth of several years of conversations involving numerous faculty members and administrators who are interested in improving the quality of undergraduate learning and in enhancing graduate students' professional development in the area of teaching. These conversations revealed widespread interest in and support for the development of a centralized educational opportunity for OSU graduate students. To move this general interest forward to action, in the fall of 2008, the Dean of the Graduate School invited a committee to develop a curriculum proposal leading to the establishment of a graduate certificate in teaching and learning. The committee members at that time included: Gary DeLander, Toni Doolen, Robert Duncan, Larry Enochs, Cary Green, Jeff Hale, Ed Jensen, Bob Mason, Peter Saunders, Greg Thompson, Sue Tornquist, Janine Trempy, and Jessica White. Considerable progress was made toward envisioning a graduate certificate program in college and university teaching. In the summer of 2011, Brenda McComb, Dean of the Graduate School, reconvened many members of the original work group to continue work. Members of that second committee included Gary DeLander, Toni Doolen, Robert Duncan, Larry Enochs, Cary Green, Mark Hoffman, Ed Jensen, Robert Mason, Brenda McComb, Susan Shaw, Greg Thompson, Janine Trempy, and Jessica White.

The proposed certificate has three primary goals:

- 1) To elevate the quality of instruction provided to OSU undergraduate students by Graduate Teaching Assistants (GTAs) by offering graduate students training and development opportunities related to pedagogy and engagement.
- 2) To create a cadre of highly skilled graduate teaching assistants at OSU. Not only will these GTAs provide valuable instruction to OSU undergraduates, they may eventually assist in the training of less experienced graduate students. We anticipate that this program, and the possibility of serving in an advanced mentorship role, will be attractive enough that it will help recruit highly capable graduate students to OSU.

- 3) To enhance the initial employability, preparedness, and early career development of graduate students who have completed this graduate certificate at OSU.

The proposed 18-credit graduate certificate in College and University Teaching is designed to provide advanced coursework and experiential learning opportunities to current graduate students who plan to pursue careers in teaching and instruction in higher education settings or who plan to pursue careers that require similar skill sets in facilitation. The general structure of the certificate is

- core coursework (8 credits)
- specialized coursework and experiences (4 credits)
- supervised teaching internship (3 credits)
- capstone teaching portfolio (3 credits)

The core courses will focus on educational/learning theory and instructional strategies for working with adult learners. The specialized coursework will include student-selected coursework, workshops, and/or other approved experiences appropriate to the student's field of study. The supervised teaching internship will allow students to engage in supervised field experiences to practice and refine instructional skills. The capstone teaching portfolio will provide a culminating professional development experience for students.

Graduate students completing this Graduate Certificate program will receive a formal, transcript-visible credential and will be better prepared to compete in the national and international marketplace for highly sought after faculty positions in colleges and universities. In the past fifteen years, more than 45 leading doctoral degree granting universities have launched Preparing Future Faculty (PFF) programs (see <http://www.cgsnet.org/Default.aspx?tabid=226>) with goals similar to those associated with the proposed certificate. OSU graduate students who receive the graduate certificate in College and University Teaching will be better positioned to compete for jobs with those students who have participated in Preparing Future Faculty and similar programs and will have opportunities to develop competencies related to teaching.

The certificate in College and University Teaching will be granted through the Graduate School. There are currently five interdisciplinary and multi-departmental graduate programs housed in the Graduate School. Because this certificate has a strong interdisciplinary emphasis, in that it intends to attract students from all colleges on campus, and because the Graduate School has traditionally been the administrative home for interdisciplinary graduate programs, this organizational structure is critical to the successful creation and deployment of the certificate at OSU. Furthermore, housing this program in the Graduate School reinforces the campus wide reach of the program while leveraging scarce resources and fostering a cross and multi-disciplinary structure. Core coursework for the certificate will be offered in partnership with the College of Education. Other colleges and units will provide the remaining coursework and experiential opportunities.

c. When will the program be operational, if approved?

Fall, 2012, or as soon as feasible.

2. Course of Study

a. Briefly describe the proposed curriculum.

The certificate curriculum was developed by the campus wide committee described in 1.b. The 18-credit graduate certificate in College and University Teaching is designed to provide advanced coursework and experiential learning opportunities to current OSU graduate students who plan to pursue careers in teaching and instruction in higher education settings or who plan to pursue careers that require similar skill sets in facilitation. Once this program is in place and it has been assessed and should there be market demand, the certificate may be made available via Ecampus for students beyond the OSU campus.

Recipients of the certificate will effectively facilitate undergraduate student learning at the college and university level and possess experience and skills needed to support successful career paths in higher education or other related settings. Graduate students who envision careers beyond university instruction in fields such as business or engineering will also benefit from this certificate, as the proposed curriculum will focus on how to facilitate adult learning, whether that be through instructing students in the

classroom, designing and delivering corporate training sessions, or leading design teams in industry. Additionally, the intentionally flexible curriculum will allow students to create learning opportunities that are most applicable to their circumstances and needs.

The graduate certificate curriculum will be extremely valuable to OSU Graduate Teaching Assistants who engage in the broad range of instructional assignments, including developing and teaching their own classes, leading labs and recitations, or engaging in other responsibilities meant to provide support to faculty members. It is anticipated that this foundational knowledge of teaching and learning will improve the quality of the student experience for those undergraduates who are enrolled in courses that utilize OSU GTAs for instructional and support activities.

The certificate curriculum is comprised of

- Core coursework, required by all students seeking the certificate (8 credits)
 - AHE 547: Instructional Strategies for Adult Learners (4 credits)
 - AHE 553: Adult Learning and Development (4 credits)
- Specialized coursework and experiences, specific selection of which will be determined by students and the program(s) for which they teach (4 credits)
 - Discipline-specific courses approved by the Graduate Teaching Certificate Committee. These courses may include any of the following and may include others as disciplines deliver additional for-credit experiences:
 - AED 553: Applied Instructional Strategies (3 credits)
 - AHE 507: Seminar in GTA Training and Development (1 credit)
 - MB 699: Special Topics/Student Success in the Classroom (2 credits)
 - SED 596: Methods of College Teaching in Mathematics and Science (3 credits)
 - SED 599: Communicating Ocean Sciences to Informal Audiences (3 credits)
 - WR 520: Studies in Writing (4 credits)
 - WS 535: Feminist Teaching and Learning (3 credits)
 - ECAMPUS COURSE ON ONLINE LEARNING (under development) (3 credits)

OR

- Workshops offered by the Center for Teaching and Learning (CTL) and Teaching Across the Curriculum (TAC). Similar to the academic courses, one credit shall be equivalent to ten hours of workshop attendance, two credits shall be equivalent to 20 hours of workshop attendance, three credits shall be equivalent to 30 hours of workshop attendance, and four credits shall be equivalent to 40 hours of workshop attendance. To receive credit for CTL or TAC workshops attended, students must register in advance and attend the entire workshop. Attendance sheets managed by the CTL and TAC will provide documentation of registration and attendance. Students will register for academic credits associated with their level of workshop attendance. Students must maintain a reflective journal for all workshops attended and then submit a reflective paper after all workshops are completed that analyzes and synthesizes ideas from the various workshop topics and addresses how they applied what they learned from the workshops to an actual teaching/learning

situation. Credits will be assigned to an IST 599 course based on number of workshops successfully completed.

- IST 610: Supervised teaching internship (3 credits) [Category II proposal under consideration]
 - The internship will be supervised by a faculty member affiliated with the certificate program who will maintain regular contact with students and site supervisors, guide interns in activities designed to maximize learning and skill development, and assign final grades. An internship could include activities associated with a traditional GTA assignment on the OSU campus, an experience at another college, university, community college, or another approved experience.
- IST 607: Capstone teaching portfolio (3 credits) [Category II proposal under consideration]
 - The culminating experience will be the development of an individual teaching portfolio which may contain elements such as a statement of teaching philosophy, curriculum vitae, a video recording and analysis of the student's teaching, samples of graded student work, student, peer, or supervisor evaluations of teaching, video sample course materials such as course syllabi, learning activities, assessment tools, and uses of technology to support learning. The capstone teaching portfolio will be guided and instructed by the Director of the certificate program as part of a graded for-credit course.

The core courses will focus on adult learning theory and on instructional strategies for adult learners. The intent of the core coursework is to provide a solid theoretical and pedagogical foundation for working with adult learners. The specialized coursework comprises practitioner specific skill development, workshops, and/or other sessions appropriate to students' fields of study. The intent of the specialized coursework/experiences is for students to identify and participate in other opportunities that address learning specific to their discipline or a particular area in which they require further training. The supervised teaching internship is intended to support students in their "hands-on" instructional experiences where they are encouraged to hone their skills and reflect upon the experiences in thoughtful and purposeful ways with a university faculty member. The capstone teaching portfolio is meant to provide a culminating experience for students whereby they demonstrate and articulate their knowledge and skills in the area of teaching and learning.

Based on a recent survey of OSU graduate students (see Section 4: Evidence of Need for Additional Details), it is expected that there also will be a strong demand among some graduate students for taking some of the coursework without completing the entire certificate. For some graduate students, their schedules may prohibit them from completing the full 18 credits, or they may already possess some prior skills or training. Students actively pursuing the certificate will be offered priority registration for the two core class (AHE 547 and AHE 553), the supervised teaching internship (IST 610), and the capstone teaching portfolio (IST 607) after which graduate students at large will be permitted to enroll.

It is also expected that some students may wish to be admitted to the certificate program after completing some of the required or specialized coursework. Petitions to

be admitted under these circumstances and transfer existing work to meet the requirements of the certificate will be considered on a case by case basis.

b. Describe new courses; include proposed course numbers, titles, credit hours, and course descriptions.

No new courses are proposed in conjunction with this certificate. Coursework and experiences will be offered in partnership with the College of Education and other colleges and units as deemed appropriate.

c. Provide a discussion of any non-traditional learning modes to be utilized in the new courses, including, but not limited to: 1) the role of technology, 2) the use of career development activities such as internships.

Technology, primarily via Blackboard, will be used to support ongoing communication with on-campus students pursuing the certificate and to maintain a virtual community during experiences such as the internship and the capstone experience.

This program will offer a blend of theoretical and practical learning approaches. The supervised internship and capstone portfolio experiences are critical to the overall design of the graduate certificate and will solidify learning by contextualizing pedagogical training and promoting professional development. Because this certificate program will attract graduate students from a wide range of degree programs across campus at OSU, it will have an added benefit of providing a cross-disciplinary learning experience for graduate student participants.

d. What specific learning outcomes will be achieved by students who complete this course of study?

Students who successfully complete all experiences associated with the graduate certificate will have the skills and knowledge to:

- Describe and discuss key theories, orientations, models, and principles of learning and development in adulthood
 - As measured by the successful completion of AHE 553 and all related assignments and the development of a capstone portfolio
- Develop a college and university course, including the creation of a course syllabus with learning outcomes, a plan for assessing student learning, and related and engaging instructional activities
 - As measured by the successful completion of AHE 547 and all related assignments and the development of a capstone portfolio
 - As measured by the successful completion of AHE 507/607 and all related assignments and the development of a capstone portfolio
- Design and deliver quality instructional activities to college and university students and make changes to instruction in response to feedback from students, peers, and colleagues
 - As measured by the successful completion of AHE 510/610 and all related assignments and the development of a capstone portfolio
- Identify key instructional issues or trends within a specific discipline or area of professional interest

- As measured by the successful completion of specialized coursework and/or workshops and all related assignments and the development of a capstone portfolio
- Conduct a self-appraisal of instructional skills, identify areas of improvement, and articulate a philosophy of teaching
 - As measured by the successful completion of AHE 510/610 and all related assignments and the development of a capstone portfolio
 - As measured by the successful completion of AHE 507/607 and all related assignments and the development of a capstone portfolio

e. Is there a maximum time allowed for a student to complete this program? If so, please explain.

The graduate certificate program is designed to be completed in two years. Though the certificate committee believes that a cohort approach would enhance students' experience, it was recognized that students would desire the opportunity to enter the program at different times given the demanding and varied schedules of graduate students at OSU. Students will be bound by all standard Graduate School policies and timelines (e.g., completing a Master's degree within a 7-year time period) regardless of progress toward completion of the graduate certificate.

3. Accreditation of the Program

a. If applicable, identify any accrediting body or professional society that has established standards in the area in which the proposed program lies.

NA

b. If applicable, does the proposed program meet professional accreditation standards?

NA

4. Evidence of Need

a. What evidence does the institution have of need for the program? Please be explicit.

There is currently no centralized professional development program at OSU designed to provide advanced coursework and experiential learning opportunities to current graduate students or those beyond campus who plan to pursue careers in teaching and instruction in higher education settings or who plan to pursue careers that require similar skill sets in facilitation.

The Center for Teaching and Learning offers a campus-wide new GTA orientation, a variety of GTA-focused workshops, and a newly developed leadership opportunity for veteran GTAs called the GTA Fellows Program. This proposed certificate will collaborate with these and other existing campus efforts to increase the depth and breadth of offerings for GTAs.

Other seminars and lectures are offered on an ad hoc or intermittent basis to students in specific degree programs. Similarly, specific courses aimed at GTA development are offered by various units independently on a smaller scale. However, none of these activities has been integrated to create a meaningful or structured learning opportunity resulting in a formal certificate credential. This proposed certificate intends to create a rigorous, centralized, and efficient means for graduate students to acquire the skills and knowledge needed to compete successfully for future university teaching positions.

In comparison with other colleges and universities nationally, a recent study of structured professional development opportunities for graduate and professional students (Kalish, et al, 2009) found that of the 258 institutions studied, 81 (31.4%) already had well developed certificates related to teaching and learning, with six others having a program under development. Of the very high research institutions in the study, 45 (52.9%) had graduate certificate programs. In this respect, OSU is lagging behind its peers in the delivery of structured training and development opportunities to its graduate students. Clearly, creation of this certificate does not position OSU as a leader in the preparation of future college and university faculty members. But it *will* contribute toward filling the gap between professional development opportunities offered at OSU and those that have been offered at peer institutions for well over a decade.

Similarly, in its recent Assessment of the Research Doctorate, the National Research Council collected extensive data related to the quality of doctoral programs. Whether the institution, program, or both offered “Organized training to help students improve teaching skills” was among a list of types of student support for which data were collected. The inclusion of this item in this critical national study is another clear indicator of the importance of launching this graduate certificate program. Indeed, the reasons for offering this certificate program are clear, compelling, and well-documented. To responsibly serve our undergraduate and graduate students requires us to provide such professional development opportunities.

It is important to note that this commitment to graduate student development is consistent with the *Oregon State University Strategic Plan-Phase II, 2008-2013*. Within the plan, and despite daunting economic challenges statewide, OSU has confirmed its commitment to providing outstanding academic programs that further strengthen its performance and pre-eminence within its three signature areas of excellence (Goal #1). Within this goal, the University’s leaders have stated that “rais[ing] the profile of graduate education at OSU through repositioning of existing programs and introducing targeted new programs to support OSU’s three areas of excellence” is an important initiative toward meeting this objective. Similarly, in meeting the goal of providing an excellent teaching and learning environment (Goal #2), the quality of teaching skills is highlighted as crucial. Accordingly, steps must be taken to “Ensure all teaching faculty contribute to a learner-centered academic experience.” This proposed graduate certificate in college and university teaching represents a collective institutional effort to raise the profile of graduate education campus-wide and foster excellence in teaching among those graduate students who are responsible for considerable portions of the university’s instruction.

- b. Identify statewide and institutional service-area employment needs the proposed program would assist in filling. Is there evidence of regional or national need for additional qualified individuals such as the proposed program would produce? If yes, please specify.**

“Re-envisioning the PhD” (Nyquist & Woodford, 2000), a project located at the University of Washington Graduate School (see http://depts.washington.edu/envision/project_resources/index.html), attempted to answer the question, “How can we re-envision the Ph.D. to meet the needs of the society of the 21st Century?” The researchers interviewed and surveyed leaders in higher education, K-12 education, doctoral students, government agencies, business and industry, and foundations to learn their concerns about the way US doctoral education has been conducted in the modern era. Among the findings was the following concern voiced by institutions of higher education:

Lack of pedagogical training means that new faculty are not prepared to teach today’s students at these colleges and universities. The main preparation for new faculty has been teaching assistantships, so they are limited in their teaching repertoire by the nature of their particular assignment—usually in a discussion section or laboratory for a large lecture class, often without supervision or adequate mentoring. (p. 13)

Pruitt-Logan, Gaff, and Jentoft (2002) and Gaff, Pruitt-Logan, Sims, and Denecke (2003) summarized recent research by stating that, generally, doctoral students want to see “a closer relationship between doctoral preparation and the realities of faculty work and similar views among new faculty members” (p. 11). They reported that the literature cites interest among doctoral students for more professional development opportunities during their doctoral preparation including more teaching preparation. Given that about half of doctoral students pursue careers in academia, attention to better preparation of college and university faculty members is critical to addressing these concerns.

c. What are the numbers and characteristics of students to be served? What is the estimated number of graduates of the proposed program over the next five years? On what information are these projections based?

In fall 2011, OSU enrolled over 3600 graduate students in a wide variety of academic programs. Of those graduate students, 1,729 were Master’s students, 1230 were doctoral students, and 659 were non-degree seeking students. In a recent OSU Advanced Degree Recipients Exit Survey, about 20% of respondents indicated that they intended to pursue careers in college and university teaching. Additional data collected from recent Graduate School open forums as part of a strategic planning process indicate that graduate students are seeking more professional development opportunities and more training regarding teaching and class management. OSU graduate students are increasingly aware of the availability of such opportunities at peer institutions and see the clear disadvantage they face as a result of not having access to such programs. Hence, we estimate that as many as 150 graduate students will be interested in the proposed graduate certificate in a given year. However, because of budget constraints, the program is planned for a maximum capacity of 30 students per year with approximately 60 students matriculating at any given point in time. Should student demand to pursue this certificate consistently exceed capacity in future years, consideration will be given to expanding the program and the additional resources necessary to do so.

A survey of all graduate students enrolled during winter term 2009 was conducted to assess interest in this proposed program. A total of 455 responses was received.

Respondents were nearly evenly divided between doctoral and master's degree students. Thirty-nine percent were first-year graduate students, 23 percent were in their second year, 15 percent were in their third year, and the remaining 22 percent had been graduate students for more than three years. Respondents were fairly well distributed among the graduate programs across campus. Forty-five percent (n=205) of respondents indicated that they were extremely interested (6 on a scale of 1-6) in improving their teaching skills while at OSU. Thirty-one percent (n=140) were extremely likely to take one or more courses for credit in order to improve and document teaching skills. Fifty-four respondents indicated that it was extremely likely that they would take courses offered via Ecampus to improve teaching skills. Seventy-eight respondents indicated that they would be extremely likely to complete an entire 18-credit transcript-visible set of courses that would result in a graduate certificate in college and university teaching.

To further examine the demand for a full graduate certificate, several cross tabulations were calculated. Respondents who indicated that they would be extremely likely (6 on 1-6 scale) to complete an entire 18-credit graduate certificate were equally divided between students enrolled in doctoral and master's degrees.

In regard to respondents' major areas of study, the largest numbers of respondents who indicated they would be extremely likely to complete the proposed graduate certificate were enrolled in programs in education (n=17 or 23% of education respondents) and health and human sciences (n=14 or 19% of PHHS respondents). Among other areas of study, 10% (n=5) of agricultural sciences respondents, 29% (n=7) of liberal arts respondents, 6% (n=5) of engineering respondents, 11% (n=4) of forestry respondents, 13% (n=7) of science respondents, and 50% (n=5) of MAIS respondents indicated that they would be extremely likely to complete the proposed graduate certificate.

Understanding that intention and behavior are not perfectly correlated, we are confident that an annual cohort of 30 students would enroll in the proposed 18-credit graduate certificate. Thirty students represent only 38% of the 78 respondents who indicated that they would be extremely likely to complete the entire certificate program. We consider this to be a conservative estimate with good reliability for curricular planning purposes.

d. Are there any other compelling reasons for offering the program?

Graduate student development, while not new, is an emerging field of research that has arisen in response to the success of national Preparing Future Faculty programs and the identification of graduate students as a relatively underserved and understudied student population on US campuses. A thorough review of the literature by the certificate committee revealed six areas most commonly cited as essential for graduate student development and preparation:

1. Establishment of and engagement with a sense of community (Austin, 2002; Golde, 2005; Lovitts and Nelson, 2000; Luft, Kurdziel, Roehring, and Turner, 2004; Tinto, 1993; White and Nonnamaker, 2008)

- a. Peer community, including other graduate students at their home or another institution, for purposes of communicating across disciplines and normalizing the graduate experience

- b. Academic community, including faculty and postdoctoral fellows to promote academic mastery in appropriate disciplinary areas
 - c. Professional community, including faculty and colleagues, to facilitate the transition to various career paths via networking and socialization to the profession
- 2. Mentorship and/or advising with a key individual or with key individuals who show keen interest in the student's development and preparation (Austin, 2002; Leigh, 2001)
- 3. Supervised and reflective professional experience opportunities (Austin, 2002; Murphy, 2008)
- 4. Career development support (Austin, 2002; French, 2006; Golde, 2005)
- 5. Department feedback, support, and involvement (Barrington, 2001; Luft, Kurdziel, Roehring, and Turner, 2004; Smith, 2001)
- 6. Facilitation of broadly defined "teaching" skills (model proposed by Simpson and Smith, 1993; other citations include Smith, 2001; Takalkar, Micceri, and Eison, 1993)
 - a. Scholastic skills (e.g., mastery of subject matter, ability to advise students into the professional field, general recognition of importance of teaching)
 - b. Planning skills (e.g., course material selection, class session preparation, consideration of learning styles)
 - c. Management skills (e.g., administrative responsibilities, response to disciplinary or academic dishonesty issues, knowledge of important policies)
 - d. Presentation and communication skills (e.g., written and oral communication, use of technology, leading class discussion and lecturing)
 - e. Evaluation and feedback skills (e.g., development of good tests and evaluation measures, engagement in effective grading and providing feedback to students, modification of instructional approaches as needed)
 - f. Interpersonal skills (e.g., strategies for motivating students and working with diverse student populations)
 - g. Pedagogical skills (e.g., understanding of and development of approaches to teaching and learning that reflect knowledge of the art and science of teaching)

The committee believes that the proposed graduate certificate program addresses each of these essential elements: community (through shared coursework with students across disciplines), mentorship (through the Director (see 6c) and course instructors), supervised opportunities (through the supervised internship), career development support (through the capstone teaching portfolio), department support (through the incorporation of specialized coursework), and development of teaching skills (through the core courses, specialized courses, and CTL workshop offerings).

- e. Identify any special interest in the program on the part of local or state groups (e.g., business, industry, agriculture, professional groups).**

None.

- f. Discuss considerations given to making the complete program available for part-time, evening, weekend, and/or place bound students.**

Within the proposed two-year time frame, all core courses will be offered at least twice to accommodate graduate students' varied schedules. Internship (IST 610) and Capstone (IST 607) courses will require considerable out-of-class work on the part of the student and will allow for flexibility in scheduling.

5. Similar Programs in the State

a. List all other closely related OUS programs.

There is no closely related OUS graduate certificate. Portland State University currently offers a graduate certificate in Teaching Adult Learners. The PSU certificate is designed for teachers and instructors who already have advanced degrees, many of whom have been teaching or training in vocational technical fields but now wish to pursue a formal credential. This proposed certificate is intended for OSU graduate students who wish to further develop their teaching and facilitation skills while seeking their respective degrees so that they may utilize these skills immediately in undergraduate class settings and graduate with credentials that may position them better for employment.

b. In what way, if any, will resources of other institutions (another OUS institution or institutions, community college, and/or private college/university) be shared in the proposed program?

All resources necessary for the Graduate Certificate in College and University Teaching are located at OSU.

c. Is there any projected impact on other institutions in terms of student enrollment and/or faculty workload?

There are no projected impacts on other institutions in terms of student enrollment and/or faculty workload. There is no similar graduate certificate offered at either UO or PSU.

6. Resources

a. Identify program faculty, briefly describing each faculty member's expertise/specialization. Separate regular core faculty from faculty from other departments and adjuncts. Collect current vitae for all faculty, to be made available to reviewers upon request. See Appendix B.

AHE 547: TBD
AHE 553: TBD
AED 553: Misty Lambert
AHE 507: Jessica White
MB 699: Janine Trempy
SED 596: TBD
SED 599: Alicia Christensen/Shawn Rowe
WR: Susan Meyers
WS 535: Susan Shaw

b. Estimate the number, rank, and background of new faculty members who would need to be added to initiate the proposed program in each of the first

four years of the proposed program's operation (assuming the program develops as anticipated). What commitment does the institution make to meet these needs?

No new faculty members are needed in conjunction with this certificate program, but resources are needed for a program director, program GTA, administrative support, and term-to-term instructors for additional sections of the AHE core courses (see section 6c). Funding for these positions will be provided by the Graduate School.

c. Estimate the number and type of support staff needed, if any in each of the first four years of the program.

Administrative support staff at .25 FTE will be needed to deliver this Graduate Certificate in each of the first four years of the program.

Additional support in the way of a .49 FTE GTA will be needed to provide additional support and program management. Eventually and ideally, the GTA selected for this position will be someone who has completed the certificate and can serve as a mentor to those currently in the program.

A part-time Director of Graduate Student Development (.50 FTE) will be needed to administer the program. As this certificate is not connected with any other academic degree offering, the Director will be responsible for all aspects of the graduate certificate program including: program development and planning; assuring that core classes are staffed appropriately and taught regularly; coordinating with those academic units offering specialized coursework in conjunction with the certificate; collaborating on the development and delivery of CTL and TAC workshops geared toward graduate student development, especially those that may be attended by students completing the certificate; recruiting and admitting students; monitoring student progress; managing program resources; and working with a Graduate Teaching Certificate Committee to oversee the certificate program. The Director will also instruct the supervised teaching internship (IST 610) and the capstone teaching portfolio (IST 607) courses. The Director will be selected from among current OSU staff or faculty.

Additional resources will be needed to staff required core classes including AHE 547 and AHE 553 (once each academic year). Currently, these courses are offered only via Ecampus in conjunction with an online degree offered through the College of Education.

d. Describe the adequacy of student and faculty access to library and department resources that are relevant to the proposed program.

See Appendix E for the Library report. There are no issues with access.

e. How much, if any, additional financial support will be required to bring access to such reference materials to an appropriate level? How does the institution plan to acquire these needed resources?

The library suggested purchase of Multicultural Education & Technology Journal (\$491), which has been highly requested through interlibrary loan in the last 2 years.

- f. Identify any unique resources, beyond those on hand, necessary to offer this program. How does the institution propose that these additional resources will be provided?**

None.

Appendix A: Course Descriptions

AED 553. APPLIED INSTRUCTIONAL STRATEGIES (3). Fall. Lambert.

Helps students in the identification and development of goals, objectives and units. The course includes the development and application of subject area instructional strategies/models, including applied math, writing, communication skills, measurement and evaluation of achievement, and delivery of instruction to at-risk students. Safety is a primary focus.

AHE 507: GTA TRAINING (1). Fall, Winter, Spring. White

AHE 547. INSTRUCTIONAL STRATEGIES FOR ADULT LEARNERS (4). TBA.

Exploration of and practice using instructional strategies to enhance adult learning. Acquisition of an instructional strategy tool kit as well as a method for evaluating adult learning events. This course is repeatable for a maximum of 60 credits.

AHE 553. ADULT LEARNING AND DEVELOPMENT (4). Fall. TBA.

Introduce participants to key theories, orientations, models, and principles of learning and development in adulthood.

IST 607: SEMINAR (1-5/1-16) [Category II proposal under consideration]

IST 610: INTERNSHIP (1-18/1-15) [Category II proposal under consideration]

MB 699: SUCCESS IN THE COLLEGE CLASSROOM (2). Winter. Trempy.

SED 596. METHODS OF COLLEGE TEACHING IN MATHEMATICS AND SCIENCE (3).
Spring. Enochs.

Focuses on methods and problems in planning and implementing mathematics or science instruction at the college level. Particular emphasis is placed upon selecting teaching strategies, organizing materials, and evaluating student assessment.

SED 599: COMMUNICATING OCEAN SCIENCES TO INFORMAL AUDIENCES (3), Winter,
Christensen and Rowe

WS 535. FEMINIST TEACHING AND LEARNING (3). Fall. Shaw.

Focuses on the experiences and practices of the feminist classroom. Key components of the class include issues associated with the identity and development of the teacher as well as the development of skills to help facilitate understanding, empowerment, and the personal and social agency of students.

WR 520: STUDIES IN WRITING (4), Winter. Meyers

Selected topics in rhetoric and composition.

To Whom It May Concern:

The Coalition of Graduate Employees (CGE) supports the Category 1 proposal to develop a graduate certificate in college and university teaching. We share the goals of (1) improving the quality of education provided to OSU undergraduates by GTAs, (2) creating GTAs with greater teaching skills, and (3) increasing the employability of OSU graduate students interested in pursuing careers in college and university teaching.

We believe the proposed certificate will incentivize participation in existing classes and workshops aimed to increase the quality of graduate student teaching. This curriculum's dual focus on both formal training in teaching theory and practical pedagogy will help produce well rounded and better prepared graduate educators. The certificate will also recognize the work of graduate students who have pursued excellence in teaching and, when properly implemented, improve their employability after they complete their degrees.

Coupled with continued and broadened initiatives around training for beginning GTAs, the creation of this certificate will begin to increase the quality of education offered to OSU undergraduates. It is our hope that efforts such as this will contribute to a larger dialogue on campus around the value of graduate teaching and the need to support and train GTAs and to recognize the value and quality of their work. We support the creation of the graduate certificate in college and university teaching as part of a larger initiative to increase the quality of graduate teaching at OSU.

On behalf of CGE,

A handwritten signature in black ink, appearing to read 'S. Ashley Bromley'. The signature is fluid and cursive, with a long horizontal stroke extending to the right.

Oregon State University Libraries Evaluation of the Collection Supporting: Proposal for a new Instructional program for a graduate Certificate in College and University Teaching

Oregon State University
Graduate School

This library assessment reviews the monographic and serials collections as related to the New Instructional Program for a Graduate Certificate in College and University Teaching.

Summary

We compared Oregon State University Libraries' monographic collections to those of Colorado State, Washington State and North Carolina State University, all participants in the Preparing Future Faculty program. Overall, the book collection is adequate to serve the needs of this program. Some gaps, such as curriculum evaluation, can be addressed using the current education monographs budget. Student and faculty needs can also be filled by either our consortial lending agreements with the Orbis-Cascade Alliance (Oregon-Washington libraries) or Interlibrary Loan services.

For serials, we reviewed the OSU collections using the ISI-Thompson *Journal Citation Report* (JCR) list of the top 20 titles in Education & Educational Research and the *Eigenfactor* ranking for journals in Education & Educational Research and Educational Psychology. OSU owns 48 out of the top 53 JCR and *Eigenfactor* journals in Education and Educational Psychology. The journal collection is adequate to support the graduate certificate course but we would encourage the purchase of *Multicultural Education & Technology Journal* (\$491), which has been highly requested through interlibrary loan in the last 2 years.

Monographs:

We compared Oregon State University Libraries monographic collections to those of Colorado State, Washington State and North Carolina State University. All three institutions are part of the Preparing Future Faculty program, have a similar course structure to the proposed program and are considered OSU Peer Institutions. Appendix A shows the monographic holdings in the main areas of emphasis for the New Instructional Program for a Graduate Certificate in College and University Teaching at OSU as compared to these peer-institutions.

We reviewed a list of Library of Congress Subject Headings that reflects the content of the program. The OSU holdings were compared against the average unique holdings from the three institutions. OSU Libraries' holdings are adequate, especially given that this will be a more practical than theoretical program. Three areas can be improved upon: curriculum evaluation, college teaching, and effective teaching. These gaps can be addressed through the purchase of materials in these areas using the current education monographs budget. The areas can further be supplemented either through the borrowing of materials from the Orbis-Cascade Alliance or via Interlibrary Loan.

Students in this program will very likely benefit from practical books that provide examples of classroom activities or assessment techniques they can do. The current education monographs budget can support the purchase of these materials.

Serials/Journals:

JCR/Eigenfactor rankings

We compared the OSU Libraries' journal holdings against the list of the twenty top education journals in the Education & Education Research category listed in Thompson-ISI's *Journal Citation Report (JCR)* and from the Education & Educational Research and Educational Psychology categories from the *Eigenfactor* site. *JCR* ranks journals by impact factor. The category of Education and Educational Research contains journals relevant to higher education but also other grade levels so journals not relevant to higher education or college teaching and those not in English were removed from the list. *Eigenfactor* is similar to *JCR* but the score is based on an estimate of the percentage of time that library users spend with that journal. We looked at the top 20 journals for each of the two categories (educational research and educational psychology) from the *Eigenfactor* site. We removed non-English language journals and journals clearly focused on primary and secondary education. We merged all three lists and removed duplicates for a total of 53 journals. Of these, only 4 are not owned by OSU and one was cancelled in 2009 (*Metacognitive Learning*).

Interlibrary Loan

A review of interlibrary loan requests indicates that there are some journals that receive heavy use; *Multicultural Education and Technology Journal*, *Educational Administration Quarterly* and *Journal of College Student Retention*.

Faculty publishing

We checked the online databases to see what journals faculty in the College of Education are publishing in to see if OSU Libraries subscribes to these journals. This helps us establish the breadth of the collection. We removed those journals not relevant to higher education. We identified seventeen journals where College of Education faculty members have published recently. OSU Libraries currently subscribes to fourteen of these publications.

The *JCR* highly ranked journals we do not own, *Academy of Management Learning & Education*, *Educational Policy*, *Journal of Educational and Behavioral Statistics*, and *Journal of Psychoeducational Assessment*, are all recognized research journals. Since the program is focused on practical work more than theoretical work, adding these titles is probably not necessary given the large number of education journals the library owns. However, we would encourage the purchase of *Multicultural Education & Technology Journal* for a 2-3 year trial period (\$491). This journal has been highly requested through interlibrary loan and the topic is clearly of interest. While the program is adequately supported without immediate access to this title, this is a highly relevant topic for new faculty and, should funding be available, would be a valuable addition to the collection. After the end of the trial period, usage statistics will be used to determine if the subscription should be retained or cancelled.

The primary concern with the education journals is the large numbers that have an embargo on them meaning that the most current year is not available. The students and faculty can supplement what they need through interlibrary loan services but this should be monitored to see if there are any journals that are highly requested as a result of this program. In that case, it may be less expensive to purchase a subscription to the journal than acquire the articles through interlibrary loan.

The list of journals and our holdings can be found in Appendix B.

Electronic Access to Journals:

OSU Libraries' subscriptions to online journal packages include important educational publishers such as Sage, Springer, and Wiley. The recent addition of *PsycArticles* has increased our online access to educational psychology journals.

Subject-Specific Indexes and Abstracts:

OSU Libraries subscription databases that can be useful for Graduate Certificate in College and University Teaching include:

- *ERIC* (1966-present)– Index to research articles, government and independent reports and conference papers covering all areas of education at all levels. The database contains more than 1.3 million records and links to more than 323,000 full-text documents dating back to 1966.
- *Education Research Complete* (Varies by title)- covers all levels of education from early childhood to higher education, and all educational specialties, such as multilingual education, health education, and testing. Education Research Complete provides indexing and abstracts for more than 1,500 journals, as well as full text for more than 750 journals, and includes full text for more than 100 books and monographs, and for numerous education-related conference papers. *Educators Reference Complete* (1980-present)- Contains more than 1,100 periodicals and 200 reports from the U.S. Department of Education.
- *PsycINFO* (1887-present)Index to journal articles, series and books for all areas of psychology including animal, applied, clinical, developmental, educational, general, human experimental, general, physiological, social and sport psychology, and treatment and prevention. Full text to many of these articles (1985-)is available through *PsycArticles*.
- *Psychology and Behavioral Sciences Collection* (1965-present) – a comprehensive database covering information concerning topics in emotional and behavioral characteristics, psychiatry & psychology, mental processes, anthropology, and observational & experimental methods. This is the world's largest full text psychology database offering full text coverage for nearly 400 journals.
- *Professional Development Collection* - Designed for professional educators, this database provides a highly specialized collection of nearly 520 high quality education journals, including more than 350 peer-reviewed titles. This database also contains more than 200 educational reports. *Professional Development Collection* is the most comprehensive collection of full text education journals in the world.

Subject Librarian Support:

OSU Libraries has an Education librarian, Stefanie Buck. Stefanie Buck is also the librarian for Psychology. Subject librarians in other disciplines, such as mathematics or science, to support participants in the program who are interested in discipline specific topics are also available for research and consultation.

Summary:

OSU Libraries' collections are adequate to support the New Instructional Program for a Graduate Certificate in College and University Teaching as proposed. However, we would like to suggest the addition of *Multicultural Education & Technology Journal* to the collection on a trial basis.

Respectfully submitted by:

Stefanie Buck
Ecampus and Instructional Design Librarian
Liaison to the College of Education

This proposal is ready for review by Budgets and Fiscal Planning.

3. Review - Budgets and Fiscal Planning Committee

Approved by [Walter Loveland](#), May 4, 2012 10:35am

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) May 4, 2012 10:35am
The only note we add is that the student's advisor should be aware that the student is enrolling in this program. That should happen as part of the program meeting but may not.

**Graduate Certificate in College and University Teaching
CPS # 83870**

Graduate Council Member Pre-Review

General Impressions:

1. The authors presented a strong rationale for this graduate certificate.
2. The proposed curriculum was strong.
3. The proposed GLOs and assessment plan were sufficient.
4. The projected on-campus enrollment seemed accurate.

Proposal Questions:

1. The letter from Gary Delander was not a letter but simply a list of those involved in the development of the proposal. This list also appeared in the proposal. Is there a missing letter?
2. Since many enrollees in this certificate will be master's students does a 600-level number for the capstone make sense? *As we are unsure the number of master's versus doctoral students who will enroll in the certificate, we can certainly list the course at a 500-level or a 600-level, perhaps even cross list it if that is an option. As this course is still in proposal form (ready to be submitted to the Category II process) that change can be made relatively easily. We welcome the Grad Council's input.*
3. Is there missing a letter from the graduate dean committing to cover the expenses for offering this certificate?
4. Is there missing a liaison letter from the lead of the AHE program supporting the use of AHE courses? *Regarding the liaison letters, the committee that was assembled by Dean McComb and who drafted the proposal represent all of the Colleges and programs that will be contributing to the program. There is specific mention in the proposal that the Graduate School has committed to covering staffing and instructional expenses and there is a specific letter of support from the Dean of the College of Education referencing the use of AHE courses. Beyond that, I believe the committee thought that additional letters of support would be redundant.*
5. Is there missing a liaison letter from the lead of the IST program supporting the use of IST courses?
6. Is there missing a liaison letter from the lead of the MB program supporting the use of MB courses?
7. Is there missing a liaison letter from the lead of the SMED program supporting the use of SMED courses?
8. Is there missing a liaison letter from the lead of the WR program supporting the use of WR courses?
9. Is there missing a liaison letter from the lead of the WS program supporting the use of WS courses?
10. Is there missing a letter of support from ECampus?
11. Since IST 599 doesn't exist why not use AHE 508 workshop for the workshop credits? *The committee believed that a significant portion of the required coursework for the certificate should be offered via the certificate's academic home (in this case, the Graduate School). While leveraging existing coursework make sense, it is also important that the certificate have coursework that is unique to it and is not affiliated with any*

specific academic unit. Along with the proposals to create IST 610 and 607, we will submit a Cat II for IST 599 if necessary.

12. What is the Cat II status for IST 610 and IST 607? Also, wouldn't it be easier to use the existing AHE 610 and 607? *Both IST 610 and 607 are still in proposal form and ready to be submitted to the Category II process. We welcome guidance as to when this should be done so as to best coordinate with the Category I process. In response to why we are proposing two new IST courses rather than tapping into existing AHE courses, the committee believed that a significant portion of the required coursework for the certificate should be offered via the certificate's academic home (in this case, the Graduate School). While leveraging existing coursework make sense, it is also important that the certificate have coursework that is unique to it and is not affiliated with any specific academic unit.*
13. What is the Cat II status for the ECampus course on Online Learning?
14. This proposal includes a request for approval to offer this certificate via ECampus. Is there a missing discussion on how this certificate is to be offered via ECampus?

Policy Questions:

1. Given that one of the main beneficiaries of this certificate will be undergraduate education, why is the Graduate School solely responsible to fund this certificate?
2. What are the opportunity costs to graduate education of the Graduate School funding this certificate?

-Respectfully submitted by Cass Dykeman

Materials linked from the May 23, 2012 Graduate Council agenda.

Review Panel Report: Oregon State University Environmental Sciences Graduate Program

OVERALL RECOMMENDATION

The Review Panel recommends that the Environmental Sciences Graduate Program (ESGP), a multi-disciplinary program at Oregon State University offering PSM, MS, MA and PhD degrees be maintained. The mission of the ESGP is very much in alignment with the University's mission to promote environmental progress; the challenge is to maintain high quality and provide evidence of success of graduates of this program. Program continuity by engagement and participation of more active faculty is essential for the future success of the program. Faculty need to be given a sense of 'ownership' in the program.

SUMMARY OF FINDINGS AND RECOMMENDATIONS

The Environmental Sciences Graduate Program is currently academically administered and financially categorized under the Graduate School. Given its multi-disciplinary nature, the Graduate School provides a natural home.

The Graduate School provides some funding for administration and other purposes, however, the main support for graduate students falls to the major professor or their departments. The College of Science has also provided funding in the form of GTAs for basic biology classes. However, the Dean of the College of Science has indicated that future GTA funding for students in this program is not guaranteed. This funding model is precarious, especially in the face of the current budgetary climate. Unfortunately the panel could only identify this problem---we were unable to solve it, however a few suggestions are mentioned below.

Given the current funding model, we do not recommend that the program increase their admissions.

The budget from the previous four years provided on p. 38 of the Self Study report suggests that the year-end balances could be used to support approximately two graduate students per year. Perhaps the faculty in the program could pursue an IGERT in one or more of the thematic areas. If this is successful, graduate student support could be guaranteed for several years.

In other programs on campus, revenue from the professional side is used to subsidize the Master's and PhD students. Perhaps that could be pursued here as well.

A related issue is the fact that faculty currently have little incentive to participate in the program, particularly as major professors. Apparently some financial incentive has been given in some past years, which might address this problem. According to the self study document, roughly only 10% of the graduate faculty have participated as major professors. ESGP students often end up as 'second class citizens', especially in terms of funding. Students within the various disciplines are generally given higher priority in their respective Departments.

The program is truly multidisciplinary, with almost 150 faculty listed as members of the ESGP faculty. They hail from across the OSU campus, as well as agencies such as the USEPA. While it is impressive to see such a large faculty listing, it is clear from the Self Study report that very few of these faculty have actually participated in the program over the past few years. Again it might be helpful to reinstate financial incentives.

There are three required ES courses. Students then choose among eight tracks, with approved lists of course offerings. This cross-disciplinary focus is both a strength and weakness of this program. The panel suggests streamlining the tracks (the self study notes that the water resources track may be eliminated due to overlap, but the Deans and Directors recommend keeping it as it offers a niche not available in water resources). The Natural Resources track may overlap with the Master's in Natural Resources degree. We also recommend streamlining/updating the course offerings within the tracks, perhaps with student and faculty input.

The program relies heavily on its web pages to attract applicants and inform current students of program requirements. These need to be regularly updated (since our review, these pages have been updated).

Given the fact that students in this program do not have a natural common home (other than the graduate school), there is little chance for students to form an 'esprit de corps' other than that formed when they take the core ES courses in the winter term. Modern technology could afford students a virtual home, which we encourage the students to pursue. We would also recommend moving the ES courses to the fall term for entering students. Another issue that needs attention is inequality in student salary across Departments within ESGP and between students in the home Department and ESGP.

The panel recommends that the program reconsider the current policy that students follow the requirements of the respective Departments of their major professor in completing their degree, which are being undertaken. A uniform policy concerning exams, for example requiring only oral exams should be considered. Also, it would be helpful to provide major professors with an 'information packet' concerning the program requirements.

The requirement that incoming students have a major professor is reasonable for the MS and PhD students (PSM students do not have this requirement), however it appears that the Director, Andy Blaustein, is bearing the biggest burden in finding and contacting matches. Although the program has set up its own web-based admissions, which is excellent, there are apparently still problems with incentives for faculty to participate in committee work. This again goes back into faculty buy-in for the program. It is recommended that the Director, the Dean of the Graduate School, and the Deans of the participating Colleges meet to discuss ways in which faculty engagement can be enhanced. Perhaps an IGERT and/or graduate internship opportunities could motivate faculty into participating more actively in the program.

The interdisciplinary nature of the program makes the administration of the program complex. Luckily, the leadership has been enthusiastic and energetic under both Bill Winner and Andy Blaustein, and the staff (Linda James) has been indispensable. Reduction in staff support would be devastating, an increase would be more than welcome.

Students can easily fall through the cracks in this type of program. We recommend that students be evaluated annually (a standard form for students to ask their advisors to complete might work). Also, we recommend that the program keep track of completion rates, time to completion and student placement after graduation.

The current ES core teaching staff is excellent---enthusiastic, talented, and excited about the resourcefulness of their students. There is, however, no clear plan for long term teaching of these courses.

Introduction

This was the first review of the graduate program in Environmental Sciences (ESGP) since its approval in Winter 1998. The stated goals of the review were to assess: the direction and growth of the program, funding adequacy, adequacy of core courses, and the program's ability to meet employer demands.

The review took place on June 3, 2009 at the Memorial Union. Because of the interdisciplinary nature of this program, no specific on-site tour of facilities was undertaken as a part of the review.

The participants on the review team included: Alison Power (Dean of the Graduate School at Cornell University), Susan Walls (Florida Integrated Science Center), and two members of the Graduate Council: Vinod Narayanan (Engineering) and Shawna Grosskopf (Liberal Arts). The team was provided with guidelines as well as an excellent Self Study Report prepared by Dr. Andrew Blaustein (program director) and coordinators Kimi Grzyb and Kathleen Kraska before the review. We were also provided copies of the Category I proposal establishing the program.

Present as observers were Sally Francis, Dean of the Graduate School and Martin Fisk, Associate Dean. Nagwa Naguib from the Graduate School also attended.

We first met with Dr. Andrew R. Blaustein, ESGP director, who provided us with a very helpful summary of the written report. We then met with three of the seven deans involved in this program (Sherman Bloomer, Dean of the College of Science, Larry Curtis, Associate Dean, Agricultural Sciences, and Larry Rodgers, Dean of the College of Liberal Arts). Next we met with the faculty teaching the core courses (William Hogsett, EPA, Eric Seabloom, Zoology, Elizabeth Borer, Zoology), followed by meetings with graduate students, graduate faculty, and a closing session with the director and administrative assistant Linda James.

All participants were extremely open and helpful. The panel members appreciated the professional conduct of the review visit as well as the documents provided to us. We were provided ample time to

pose questions, and we believe that the participants were given ample time to provide opinions, comments and suggestions for improving the program.

The rest of the report follows the outline for the review panel report provided by the Graduate School.

INPUTS

1. Fit of the Mission of the Program with college and university missions

The stated mission of Oregon State University (<http://oregonstate.edu/mission/>) is to promote economic, social, cultural and environmental progress for people across Oregon, the nation and the world through our graduates, research, scholarship, outreach, and engagement. By providing a cross-cutting platform across several disciplines such as Zoology, Forestry, Liberal Arts, Agricultural Sciences, and Oceanic and Atmospheric Sciences, the ES Graduate Program fits well with OSU's mission of affecting environmental, social and economic progress. The graduates from this program are trained to analyze environmental systems and predict changes in the environment as well as manage environmental resources. The ESGP is housed at the Graduate School and hence transcends the mission of each of its participating Colleges.

A unique aspect of the ESGP is that it is a Joint Campus program between Oregon State, University of Oregon and Portland State Universities. Faculty and students researchers participate in a Joint Campus conference once a year. The review team considers this conference to be of great value to students since it gives the students exposure to the diverse, yet complementary nature of environmental sciences. There were some concerns expressed related to the low turnout at a recent Joint conference. This review team was not privy to the structure of the ESGP at UO and PSU and hence cannot suggest ways of improving participation. However, the low attendance of participating faculty and Deans with the Review team indicates that the inter-disciplinary inter- institutional nature of this program is both its uniqueness as well as its challenge. One suggestion is to coordinate reviews of the ESGP at all three institutions or to have Directors of the ESGP from UO and PSU provide input on their respective programs to the review team.

At OSU, the ES Graduate Program has eight tracks: Biogeochemistry, Ecology, Environmental Education, Natural Resources, Quantitative Analysis, Social Science, and Water Resources, in addition to a Professional Science Masters' track. The Director has informed the Review Committee that two other tracks are in the planning stages, one of which is Conservation Biology. The Director further informed the Review team that only three of these eight tracks, namely Ecology, Social Science, and Professional Science Masters had the largest enrollments. **This observation, coupled with the other regarding lack of active faculty participation except for a select group, suggests that elimination of tracks with low enrollment should be considered.** While such a move would not necessarily change the financial situation, it would help in two ways: (a) present a more coherent front to the Program, and (b) reduce the burden of processing some additional applications.

2. Quality of Students

ESGP students consistently have GPA's over 3.0 and GRE scores that are competitive with the national averages (as determined in 2000). For all degree programs in the ESGP, a high proportion of applicants

and graduating students are female and either international or non-residents of Oregon. Students are resourceful, with many of them garnering their own funding and being recognized with a variety of honors and awards. Several have published in peer-reviewed scientific journals and given presentations at professional meetings.

3. Admissions selectivity

From 2004 to 2008, the number of applications to the ESGP that were received, followed by the number of students admitted, were as follows: 2004, 17 (3); 2005, 9 (7); 2006, 23 (12); 2007, 26 (10), and 2008, 22 (7). This resulted in an overall average rejection rate of 56.4%, ranging from 22.2 to 82.3%. The primary reason that applicants are not admitted to the program is the inability of a student to secure a major professor prior to admission (not a requirement of PSM students). The Program Director exerts a considerable amount of time and energy in attempting to match the interests of prospective students with those of ESGP faculty. This is an example of a task with which the Program Director needs the participation of his ESGP colleagues (see below).

4. Level of financial support of students

Many students receive external financial support and/or GRA's through their major professor's department, however support is not guaranteed. The self-study report notes that 56% of ES graduate students worked in non-university funded jobs during graduate school, compared to 35% of OSU graduate students overall. There are no ESGP fellowships available. **To compete for, recruit and sustain high quality graduate students, teaching stipends need to be increased (both in terms of number of stipends available and the funding amount per stipend).** There are only 6 annual GTA positions available for students, offered in conjunction with the Biology undergraduate program, each at \$1,380.00/month. These are mostly funded through the College of Sciences, and are not guaranteed. Moreover, because some GTA's receive stipends from their respective home departments, and departments vary in funding available for stipends, GTA's perceive that there is a disparity in stipend amounts for the same workload. **Funding mechanisms for GTA's should perhaps be standardized, if possible.** Other possibilities for students to earn income in their academic field of study are described below.

5. Curriculum strength

The required core courses (ENSC 515, 520 and 508) are well-structured, relevant to current environmental issues, and germane to the mission and goals of the ESGP. In addition to these three classes, graduate students are required to take up to one additional course from an approved list of core courses to comprise a total of 9-12 credits of a core curriculum. The required and approved additional core courses address contemporary needs of prospective employers in both the public and private sectors. Additional courses are required to fulfill degree requirements, and the number of these needed vary with program of study. In theory, the lists of available courses are sufficiently diverse to allow students the flexibility to design a course of study tailored to their particular interests, whether more academic or applied. However, it is not clear how many of these courses are actually offered on a regular basis. A course that appears to be lacking, but which would be beneficial to students, is one on Professional Development (e.g. one that covers development of a curriculum vitae, statements of teaching and research, interview skills). This might be offered as a workshop at the annual meeting.

6. Quality of personnel and adequacy to achieve mission and goals

The credentials of the faculty available for participation in the ESGP are stellar. A pivotal concern is the general lack of faculty participation in the program, which undoubtedly could be increased by offering incentives. Faculty participation is needed for service on committees (e.g. admissions), as well as for teaching. The Program Director has had little support from his colleagues with detailed decision-making processes. The faculty who have been involved in teaching the core courses (Borer, Hogsett and Seabloom) are extremely creative, vibrant and enthusiastic, with excellent research credentials. They should be recognized for their commitment to the program (as should the Director). Participation by other faculty is greatly needed, however, to allow these faculty the opportunity to rotate out and teach other classes in their areas of specialties.

Administrative support: The program is understaffed. Linda James does an excellent job as the singular support person for this program. **The addition of even modest additional support, such as a work study student, could potentially improve administration, especially if that person also had expertise to provide website support, a skill which is needed.**

7. Level and quality of infrastructure

The Environmental Sciences graduate program is a purely interdisciplinary degree program involving eight colleges with degrees granted through the Graduate School; ESGP does not have its own physical facilities. The Director and Student Services Manager reside in offices in Cordley Hall which are shared with the Environmental Science Distance program, Entomology, Science Pre-Education and first and second year Biology/Zoology students. The program also receives support from the College of Science Management Center (Cindy Alexis and Leah Quinlivan handled ESGP finances and are moving to the Arts and Sciences Business Center); Dr. Ursula Bechert manages student recruitment, mentoring and outreach for the PSM Program in Environmental Sciences and Andrea Wirth is the Geosciences and Environmental Sciences librarian. Although library budgets have declined, roughly half of the monographs in the environmental sciences section have been purchased since 2000. OSU subscribes to 18 of the 20 top journals in the environmental science area. Given that materials are available through Summit and Interlibrary loan, library services are probably adequate.

All participating faculty have home departments or agencies other than Environmental Science. There are no dedicated facilities for the graduate students in the program, which probably contributes to the perceived lack of cohesion and communication among these students. Although a physical home would certainly be welcome, the social infrastructure and communication among students and between faculty and students could be enhanced even without such a home. During our visit with graduate students, many suggestions were made, including setting up an online communication network among the students themselves (see section on student satisfaction below for more recommendations). **We recommend that the ESGP include student representatives on program committees (which will be done starting this Fall), make Fall orientation a community-building event by inviting returning students and faculty, consider moving required courses to the Fall term, and schedule an annual review of students to provide feedback on their progress.**

8. Quality of Organizational Support

The Graduate School provides financial support for the Environmental Sciences Graduate Program, which includes funding for the Director and Student Services Manager for the program. As mentioned in the previous section, additional staff support services are provided by the College of Science Management Center, which appears to be moving to the Arts and Sciences Business Center. Dr. Ursula Bechert provides services to the PSM Program in Environmental Sciences as part of her duties as director of off-campus programs.

According to the self study report, as of FY08 the program no longer receives funding from other units. Since FY04, there has been a positive end of year balance, which presumably could have been used to invite seminar speakers or finance graduate students. The report notes that the ESGP was awarded an additional \$19,000 in 2008/2009 by the Graduate School which was to be spent on travel and student support by June 2009.

The review committee would recommend additional funding for FTE staff or student workers to help with the web and perhaps an Associate Director, however the persistent positive balances need to be addressed.

The organizational structure as it stands looks fine on paper, however, the support provided by the ESGP advisory committee and the Graduate admissions committee is lacking what economists call incentive compatibility. Participation on these committees is entirely voluntary with 'rotating faculty'. In practice, it appears that participation on the admissions committee in particular, falls on a few faculty---currently the Director has apparently been bearing the major burden which is considerable given the requirement that all ESGP students (except PSM students) must have a major professor to be admitted. It is unlikely that students themselves can identify and convince one of the over 100 faculty listed as participating ESGP graduate faculty to be their major professor. Again, these faculty all have home departments and agencies, to which they have obligations and students to support and mentor. Although there were financial incentives in the past, currently there is no real incentive to actively participate as a major professor or committee member in this program. Although the problem is easy to identify, our review committee does not have a remedy, other than to refer the problem to the participating deans.

PRODUCTIVITY

1. Level and quality of student performance

The review committee's meeting with Environmental Science graduate students suggested that the majority of students are bright, articulate, and thoughtful. The quality of their academic performance was somewhat more difficult to evaluate based on the information provided in the program's self-study.

Indicators of student performance for doctoral and research master's students include numbers of publications, numbers of presentations at national meetings, and grants received. While there is evidence that some students are presenting their research regularly at national meetings, it is not clear how common this is among the students. Numbers of publications in peer-reviewed publications are limited. Students appear to be applying for, and receiving, various small grants, but it is not clear

whether they have been applying for national awards such as NSF Graduate Research Fellowships, EPA STAR fellowships, or NSF Doctoral Dissertation Improvement Grants. Success in these highly competitive national grant programs would be a clear signal of high quality student performance. However, faculty assistance is necessary to inform students about these opportunities and guide them through the application process, so a lack of these awards does not mean that the students could not be competitive with faculty guidance.

Students in the Professional Science Master's program who are not carrying out research would not necessarily be expected to publish, present at meetings, or apply for grants. While GPA in coursework might be an appropriate indicator of performance for these students, the most useful indicator is likely job placement. As noted below under Outcomes, the data on job placement is minimal. **We recommend a concerted effort to collect such data in a systematic way, though we recognize that this probably could not be done without additional administrative assistance.**

Other measures of student performance, such as time to degree and completion rates, can be useful indications of the success of a graduate program. Those data were not available to the review team and therefore cannot be evaluated. **Again, we recommend that the program systematically collect these data in collaboration with the Graduate School, to the extent that resources permit.**

2. Level and quality of faculty performance

Overall, the Environmental Sciences Graduate Program faculty are demonstrably outstanding. They have garnered numerous honors and awards and have highly successful research programs funded by NSF, EPA, NIH, DOE, USDA, CDC, US Forest Service, and many other government agencies, foundations, and non-governmental organizations. Curriculum vitae indicate excellent publication records for many faculty members. Many of these faculty would be excellent advisors and mentors to Environmental Science students. However, it is the impression of the review team that relatively few of these faculty actually advise students. Instead, it appears that only a handful of faculty members are actively engaged in the program, either teaching core courses and/or advising students. Relatively few faculty came to the review team's scheduled meeting with faculty. Moreover, there is some concern that a number of the active faculty are at or close to retirement. **To ensure a successful program, it is essential to provide incentives to engage faculty, particularly early to mid-career faculty with active research programs.**

3. Viability of scholarly community

Due to a lack of centralized space for Environmental Science graduate students, the ES scholarly community is less than the sum of its parts. Some students expressed strong feelings of isolation and a lack of interactions with other students and faculty in the program. The students who expressed the most satisfaction had identified with the scholarly community in their home department (e.g., Zoology), rather than Environmental Science. **It is clear to the review committee that the program needs additional attention from faculty to build and sustain a viable scholarly community.**

OUTCOMES

1. Professional viability of graduates: The stated vision of the ESGP is to develop a strong

interdisciplinary graduate program that prepares graduate students for employment in academia, government agencies, and private industries. Thus far, 56.5% of ESGP students have secured employment after graduation, and 100% of these positions were directly related to ESGP degree training. The data on job placement that were provided to the review team did not appear to be comprehensive, hence it is difficult to judge outcomes with any confidence.

With the exception of one student placed at a Turkish university, none of the placements listed in the self-study report were academic. Since the data were sparse, it is possible that there have been other academic placements. Unlike placements in the private sector, these would be relatively easy to find using simple web searches. Assuming that the data are accurate and academic placement has been rare for Environmental Science students, it would be useful to determine whether students are encouraged to consider an academic career, or whether the program actively directs them toward other professional options. It is telling that a survey of current students indicates that the students do not expect assistance from their major professor in seeking employment. Traditionally, the faculty advisor is the single most important source of advice regarding academic employment. The program course offerings are sufficiently diverse to provide a broad knowledge base that is adequate for students that wish to pursue an academic career, along with opportunities for specialization. But the surveys indicate that **enhanced career services, for both academic and non-academic careers, are essential for students to succeed in realizing their professional potential.**

For those interested in employment opportunities with both state and federal agencies, there are on-line sources of information (see Attachment 1) that would be helpful for students to consult in designing a course of study that is best suited for their particular career interests. By informing themselves of the prerequisites for employment with these agencies, and by becoming aware of existing student employment opportunities, students can potentially enhance their professional viability upon graduation.

2. Student Satisfaction

The review team met with several graduate students in the ES program, including the PSM program. The team also evaluated the satisfaction section of the self-study report and e-mails received after the review. This section presents our findings of satisfaction of students currently enrolled in the program as well as that of the alumni. It affords several recommendations on how to improve student satisfaction by some simple means. In general, the students were very appreciative of the opportunity to be pursuing an inter-disciplinary degree in the ES. They were very positive about the efforts of both the Director, Dr. Blaustein, as well as the administrative assistant, Linda James.

The current student satisfaction survey indicates that students are in general satisfied with their experience in the ESGP, and very satisfied with their major advisors. Three areas have been indicated by students in the survey as less than satisfactory: Departmental advising/guidance, the level of financial support, and somewhat with the resources available for student research. Our meeting with the students also revealed that these areas needed to be addressed. We observed that student satisfaction was related substantially to the home Department of the ES student. For example students in the Department of Zoology (the Director's home unit) were very satisfied with their experience while those

in other Departments were less than satisfied in several areas. Some of their concerns, along with recommendations, are indicated below.

Several students commented on inconsistencies in the expectation level of each faculty member on their dissertation committees. ESGP faculty echoed this comment as well. Students were also concerned with the multiple requirements (coursework as well as examination policies) that needed to be satisfied.

The ESGP needs to have a consistent policy on requirements for students. This policy should clearly lay out the examinations and coursework.

Faculty who wish to mentor students in ESGP should be made aware of this policy and the differences between Departmental and ESGP students.

Faculty who participate in the ESGP students' committee, in particular, the GCR, should be made aware of the policies of the program.

The Director of ESGP should meet with the Deans/ Heads/ Chairs of participating Colleges/Departments to ensure that students are not made to jump through two hurdles-- one for their department and the other for ESGP.

With the exception of the Joint-campus conference, students were mostly unaware of the advantages of the Joint-campus program, such as being able to take courses at either UO or PSU.

The Director should meet with his counterparts at UO and PSU and discuss which of the courses in their institutions are equivalent to those in the OSU program.

The Joint campus advantages, as well as procedures, should be clearly identified on the website of all three campus programs.

Several students remarked that they faced an "Identity crisis" –This is a challenge with any program that transcends a single Unit level. With the exception of the first year, students are not in classes together.

A seminar series that meets one or two term a year, in which each student presents his/her ongoing research, would help in bringing students together. A venue for students to meet gives them a chance to discuss their experiences and research. The Director or one of the core faculty could facilitate the seminar series (although the annual inter campus conference does help serve this purpose).

Students had resolved to form an e-mail listing by the end of our meeting with them- this could be a simple, no-cost mechanism to connect students. Students could self-organize social events and such other activities. The recommendation is for the ES administration to formalize this listing of students and keep it current. A formal ESGP Graduate Student Association would probably be useful for continuity.

With the exception of Zoology students, ES students felt that they were treated as "second class citizens" within their departments: Teaching Assistantships and office space were offered to other students within their Departments prior to the ES students. This is a serious concern that needs to be addressed since there is little incentive for faculty to mentor ES students.

The Director needs to meet with Deans/Head/Chairs of participating Units and ensure that ES students are treated in the same manner as other students within the participating Units. This treatment includes: (a) equal opportunity to obtain TAs, office space as regular students (we have learned that office space will be available for 10-12 students this fall), and (b) equal pay scale for TAs

within the unit. The committee realizes that this recommendation is very challenging to implement since the Director does not really have any “carrots” to offer to the Unit Heads/Chairs.

Although not explicitly mentioned by the students, the Director brought to the review team’s attention dissatisfaction among ES students with regards to the disparity in salary scale across the program. See the discussion above on level of financial support for students.

There was a strong desire by all students to see an updated course listing provided on the website as well as on the brochures of the tracks. The Director informed us that the website was being redesigned to address this concern.

The Director appoints “Track Leads” who can update and maintain the course listing in their tracks, perhaps with student input. The Director would have to provide some incentive for the track lead or negotiate with the unit heads to count this towards the Lead’s service obligation.

The PSM students had a more cohort sense than the other tracks-- this is to be expected considering the structure of their program. However, they felt a disconnect with the rest of the ES program.

Recommendation: Drs. Blaustein and Bechert need to discuss how to better integrate and enrich the experiences of the two groups of students.

3. Rankings/Ratings

The major sources of graduate program rankings, the National Research Council’s Assessment of Research Doctorate Programs and U.S. News and World Report, do not include rankings of graduate programs in Environmental Science. Using rankings for biology programs, conservation biology programs, or even ecology programs, is tenuous, since Environmental Science is a highly interdisciplinary program that includes faculty from the social sciences as well as a variety of biophysical sciences. The review team was unable to identify a useful source of ratings for environmental science graduate programs.

The self study document points out the OSU is highly ranked in the area of research productivity in conservation biology according to a recent paper in *Conservation Biology*. Although this isn’t directly linked to ESGP, this certainly could be used as part of a recruiting effort.

The committee recommends that the ESGP track completion rates and time to completion of their students.

Conclusions

The overall recommendation of the panel is that the Environmental Sciences Graduate Program be retained. Steps to improve the Program are presented in the Summary of Findings as well as the Detailed Report above and include the following:

- Review tracks, streamline where there are low enrollments and redundancy with other programs
- Update course lists for tracks, perhaps with appointed track leaders and student input
- Keep web pages updated, including links to PSU and University of Oregon programs; additional staff or student worker help is recommended
- Work with Deans to provide incentives for faculty participation in the program as major professors, committee members and core teachers
- Collect consistent data on completion rates, time to completion and student placement after graduation. Also provide annual student reviews
- Consider moving core courses to fall term to build student esprit de corps, include returning faculty and students to fall orientation, encourage formation of student e-mail list, student seminar series and a formal ESGP Student Association
- Have a consistent policy on requirements for students, including examinations and coursework
- Work with Deans, Chairs etc to ensure that ES students are on par with students in the participating units
- Enhanced career services for both academic and non-academic careers

Attachment 1

For those interested in employment opportunities with both state and federal agencies, students should be advised at the start of their degree program to consult websites such as <http://www.usajobs.gov/> for examples of prospective employment opportunities in their field of interest, and to pay particular attention to the required educational and experiential qualifications listed for a given position. Such consultation will aid in designing a course of study that is best suited for their particular career interests. Another means by which the professional viability of students can be enhanced would be to take advantage of student career opportunities that are available within at least some federal science agencies (e.g. U.S. Geological Survey, U.S. Fish & Wildlife Service and the USDA Forest Service). Within these agencies, there is a Student Educational Employment Program (SEEP) that has two components, the Student Temporary Employment Program (STEP) and the Student Career Experience Program (SCEP) (<http://www.usgs.gov/ohr/student/benefit/seep.html>). *Pending available federal funds*, this opportunity is available to all levels of students: high school, vocational and technical, associate degree, baccalaureate degree, graduate degree, and professional degree students. In the STEP program, job opportunities offer temporary employment that can provide students with a valuable work experience. Employment can range from summer jobs to positions that can last as long as student status is maintained (in one-year increments or less). The duties do not have to relate to a chosen academic field of study. Students in this program may be eligible for conversion to SCEP positions. The SCEP option offers valuable work experience directly related to a student's academic field of study. It provides formal periods of work and study while attending school. The program is designed to be a partnership between the student, his or her academic institution, and the federal agency. SCEP combines academic classroom learning with practical, on-the-job experience and provides students with paid work experience in their field of study. The SCEP may lead to permanent employment after you graduation and upon meeting the necessary position requirements. Agencies such as the U.S. Geological Survey want to attract students who demonstrate the talent, skills, and abilities the USGS needs. USGS student vacancies are highly competitive. Moreover, in some situations, students may be eligible for tuition assistance.

Environmental Science Graduate Program (ESGP) 3 –year Follow-up Review

A three-year follow-up meeting was held between Andy Blaustein, Director of the ESGP and Vinod Narayanan, representing the Graduate Council on May 10th 2012. The meeting lasted approximately 30 minutes. Both went over the Action Plan and Andy provided updates on the actions taken towards addressing concerns in the Program Review. The Review Panel report and the Action Plan are attached for reference.

As a brief background, ESGP is an interdisciplinary program that is housed in the Graduate School. It is unique in that it is a Joint-campus program between PSU, OSU and UO. It has eight tracks of specialization- Biogeochemistry, Ecology, Environmental Education, Natural Resources, Quantitative Analysis, Social Science, Water Resources, and PSM in Environmental Science. The Program was reviewed in Spring (June 3rd) 2009 by a team consisting of Alison Power (Dean of Graduate School at Cornell), Susan Walls (Florida Integrated Science Center), and two members of the Graduate Council, Shawna Grosskopf (lead) and Vinod Narayanan. The overall recommendation was that the program be maintained at its current level. Several recommendations were made in the report to which the Director prepared an Action Plan. This action plan was subsequently discussed in a meeting with the Provost in 2009.

Current Status of the ESGP- The ESGP continues to flourish with a current enrolment of 58 students. Approximately 19 students have been accepted into the program for next year of which about 10 students are expected to show up. Andy Blaustein continues to be the Director of the Program, and a new Associate Director (25% FTE) has been added. A Program Administrative Assistant works with the Director and co-Directors in running the ESGP. The ESGP office was vacated for the COS Business Office in 2009 and is now housed in Geosciences. Students have their offices in Strand Hall.

Updates in each of the areas identified in the Review Panel Report and Action Plan are provided below.

- Funding Model-
 - a. Uncertainty with GTA lines- “The Graduate School provides some funding for administration and other purposes, however, the main support for graduate students falls to the major professor or their departments. The College of Science has also provided funding in the form of GTAs for basic biology classes. However, the Dean of the College of Science has indicated that future GTA funding for students in this program is not guaranteed.”

3-year Update- The funding model remains the same. The Director mentioned that there is a new Dean for College of Science so he does not know about support yet per se but the Dean seems very supportive. There continue to be at least 6 TA lines given annually to ESGP and the Director believes that so long as the Biology Chair does not change, and

the demand for undergraduate biology courses continues to increase, this will continue to be the case. This year, ESGP was given 10 TA lines. “In other programs on campus, revenue from the professional side is used to subsidize the Master’s and PhD students.”

3-year Update- There has been no communication between the Directors of the ESGP and PSM programs about the issue of funding ESGP students with revenue from the PSM program.

- b. “A related issue is the fact that faculty currently have little incentive to participate in the program except for the fact that they can get some good graduate students, particularly as major professors. Apparently some financial incentive has been given in some past years, which might address this problem.”

3-year Update- There is no major change in funding levels from the Graduate School; hence no incentives can be provided to the home Departments of participating faculty members.

- c. “Although the program has set up its own web-based admissions, which is excellent, there are apparently still problems with incentives for faculty to participate in committee work. This again goes back into faculty buy-in for the program. It is recommended that the Director, the Dean of the Graduate School, and the Deans of the participating Colleges meet to discuss ways in which faculty engagement can be enhanced. Perhaps an IGERT and/or graduate internship opportunities could motivate faculty into participating more actively in the program.”

3-year Update- There is still lack of financial incentive for faculty to participate in committee work. Thus far, there has been no preparation of IGERTs and other collaborative proposals to boost faculty engagement.

- Curriculum-

- a. “Review tracks, streamline where there are low enrollments and redundancy with other programs”

3-year Update- A reasonable justification was provided for not reducing the number of tracks in the program. The Water Resources Science Director asked the ESGP Director to retain the Water Resources Track. Elimination of tracks might prove problematic since ESGP is a Joint-campus program. The director is working towards implementing a new track in Disease Ecology. The Director also proposed a track in Environment and the Humanities twice to Liberal Arts but has not received a response.

- b. “Update course lists for tracks, perhaps with appointed track leaders and student input”

3-year Update- The list of courses is being updated regularly. There are no incentives for folks to volunteer to be track leaders.

- c. “Keep web pages updated, including links to PSU and University of Oregon programs; additional staff or student worker help is recommended”

3-year Update- The Director has engaged the help of student workers to keep the webpage updated. It is however still difficult to find a link to the Joint-campus program on the ES website. The Director has assured that this problem will be fixed ASAP.

- d. “Work with Deans to provide incentives for faculty participation in the program as major professors, committee members and core teachers”

3-year Update- There has not been a change in budget to the ESGP for financial incentives encouraging faculty participation. The Director does offer some form of support to students in the ESGP, be it in the form of travel grants or small research support (~\$500).

One major issue at the time of review was that two of the faculty who were teaching the core courses in ESGP were leaving OSU. Since then, the Director has hired (using the existing budget) a part-time Associate Director, Carolyn Fonyo, to teach these core courses. This arrangement provides some permanence to the core course instructors. The Associate Director also helps the Director in reviewing graduate applications.

- e. Joint-campus conference- 3-year Update- Each year, in spring term, students and faculty from UO, OSU and PSU take part in a Joint-campus conference in ES. The Director reported an issue with this year’s conference, which was to be hosted by PSU. At the last moment, the PSU Chair of ES decided not to host the conference citing financial reasons. The OSU Director and UO Director have since managed to convince PSU to host the conference; however, the conference will now occur in Fall instead of Spring 2012, creating logistical difficulties due to teaching commitments among others.

- “Collect consistent data on completion rates, time to completion and student placement after graduation. Also provide annual student reviews”

3-year Update- The new Administrative Assistant has started keeping a list of alumni from the ESGP in order to track placement. According to the Action plan, student reviews were being conducted for some students (~10 per year). However, the Director was burdened with performing all reviews. With the hiring of the Associate Director, this burden is to be shared in the future.

- “Consider moving core courses to fall term to build student esprit de corps, include returning faculty and students to fall orientation, encourage formation of student e-mail list, student seminar series and a formal ESGP Student Association”

3-year Update- A new Associate Director is now in charge of the core-courses. The Director mentioned that core courses remain in winter for a variety of reasons. Student offices have been provided in Strand Hall. However, this building is scheduled to be demolished perhaps next year and an alternate office space will need to be found. In order to build camaraderie amongst students, there was an initiation to have an annual dinner at the Associate Director's house for ESGP students. Some students have organized get group together. There is an active student email list.

- "Have a consistent policy on requirements for students, including examinations and coursework"

3-year Update- The Directors reports that a consistent policy exists and is clearly stated on the website. However, implementation of the policy still needs work. Some faculty choose to ask for written examination of students, which is not stated on the ESGP guidelines.

- "Work with Deans, Chairs etc to ensure that ES students are on par with students in the participating units"

3-year Update- TA salaries remain low in ESGP, similar to zoology TA salaries. The Director has initiated travel and small research grants for ESGP students.

Environmental Science Graduate Program Review Action Plan

General Statements:

--On 15 September, Linda James, the Administrative Assistant for ESGP resigned to pursue graduate education. She was the Administrative Assistant for 10 years.

-- This position not filled until 1 December. I ran the program with little assistance until 1 December.

--The ESGP now has one part-time (.4) Administrative Assistant and one part-time work-study student.

--The ESGP office, student lounge, offices and mailboxes were vacated for the COS Business Affairs on 15 September.

--ESPG office is now housed in Geosciences

--Students need offices and the Graduate Dean has helped to identify areas where offices may be found. Sherm Bloomer is also involved in finding office space for students.

--This year, we had about 100 applications for ESGP.

1. Review tracks, streamline where there are low enrollments and redundancy with other programs

Some tracks have relatively low enrollments but there is no harm that we can see in keeping them. Removing and streamlining tracks is problematic because this is not just interdisciplinary across campus it is interdisciplinary among three campuses.

Certain tracks appear to overlap with other programs:

Example--Water Resources Track is fundamentally different from Water Resources Science which is geared more toward Hydrology/Geology rather than ecology. At the urging of the Water Resources Science Director--Mary Santelmann and in a meeting with Graduate Deans and other IDP directors--we are keeping our track in Water Resources.

2. Update course lists for tracks, perhaps with appointed track leaders and student input

At this point, the tracks will remain the same. We have interest in adding tracks in Conservation and Disease Ecology. Discussions about these tracks are being initiated with appropriate departments.

A recent proposal primarily by the College of Liberal Arts that there be a major/program in Environment and the Humanities has been discussed. I believe that the original proposal concerned both undergraduate and graduate levels. I proposed the possibility that Environment and the Humanities would be an ideal track in ESGP. I have had little response about my proposal.

Track leaders are a good idea. But we need incentives for this to work.

3. Keep web pages updated, including links to PSU and University of Oregon programs; additional staff or student worker help is recommended

I have one part time administrative assistant (.4 FTE) who is attempting to do this. I recently searched for another part time person to assist with this. I believe that Hou Truong, may take this position part time. He is an expert computer and web person who currently works on campus part time. Negotiations are occurring.

4. Work with Deans to provide incentives for faculty participation in the program as major professors, committee members and core teachers

We have a Dean's meeting in June where this will be addressed.

5. Collect consistent data on completion rates, time to completion and student placement after graduation. Also provide annual student reviews

We have attempted to collect these data and what we have is in our Self-Study Report.

Annual Reviews are done for several students per quarter. Again, I have to do most of this myself. So, I do about two or three per quarter.

6. Consider moving core courses to fall term to build student esprit de corps, include returning faculty and students to fall orientation, encourage formation of student e-mail list, student seminar series and a formal ESGP Student Association

Core Courses were taught by Drs. Eric Seabloom and Elizabeth Borer along with Dr. William Hogsett, Seabloom and Borer left for the University of Minnesota

just before the courses were to be taught this year. Dr. Hogsett along with a graduate TA took this course over. The course is being taught in winter until we find a solution as to who will be teaching it.

I strongly urge the university to dedicate one FTE to ESGP to teach the core courses. Dedicated FTEs exist in Environmental Sciences/Studies at our sister campuses (University of Oregon and Portland State). We are the only campus that does not have dedicated person/persons to teach in the core courses.

A student e-mail list has been initiated.

7. Have a consistent policy on requirements for students, including examinations and coursework

I am working on that but most of our policy is consistent and is written on the web page.

8. Work with Deans, Chairs etc to ensure that ES students are on par with students in the participating units

We need incentives for Chairs, Deans etc. to want Interdisciplinary students in their program. In many departments, there is no difference in attitude or relationship among ESGP students and others in the home department of the major professor. I do not see this as a big problem except in a few instances. In fact, I have dedicated funds every year for travel to meetings and for research supplies to ALL students who have applied. These types of funds are not available to students in many departments. This year, for example, I have partially funded 9 ESGP students to travel to professional meetings to present research papers. This is an excellent incentive and I know that the students and their professors are very appreciative when receiving these funds.

9. Enhanced career services for both academic and non-academic careers

I need to get help with this. Mostly, my Administrative Assistant has been handling this.

10. Incentives for faculty to participate

In the past substantial funding was provided to the home department for each student participating in IDPs.

11. Student Seminars

Inter-campus conference: We have a full day of student seminars every year that switches between campuses. Students also present papers at BGSS (Biology Graduate Student Symposium).

12. Orientation

We have this every fall.

13. Students on committees

We are in the process of doing this.

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☐ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☐ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☒ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Title of Proposal:

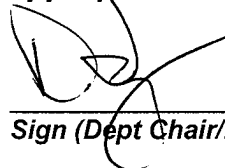

Effective Date:

Terminate the Master of Business and Engineering (MBE) in Constr. Engineering Management

Department/Program:
School of Civil and Construction Engineering

College:
Engineering

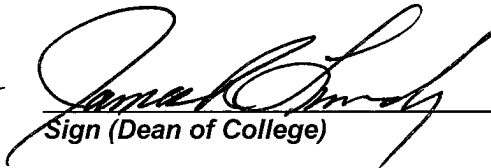

I certify that the above proposal has been reviewed and approved by the appropriate Department and College committees:

Executive Summary – Termination of the Master of Business and Engineering (MBE) degree in Construction Engineering Management

The Master of Business and Engineering (MBE) Program in the School of Civil and Construction Engineering was established in 2005 with the objective of offering a broader education in construction engineering and management and business. Although there has been modest enrollment (<8) in the MBE program, enrollment has further decreased and there are currently only three (3) students enrolled in the program. This proposal is to eliminate the MBE program yet still offer students the same classes through the graduate program in Construction Engineering Management in the School of Civil and Construction Engineering.

All classes required for the MBE will continued to be offered and all students currently in the program will be allowed to complete their MBE degrees. However, if a student prefers to transfer to the M.Eng or M.S. degrees in Construction Engineering Management within the Civil and Construction Engineering program, the students will be allowed to do so. It is anticipated that the elimination of the MBE program will have no effect on existing students.

PROPOSAL TO TERMINATE MASTER OF BUSINESS AND ENGINEERING (MBE) DEGREE IN CONSTRUCTION ENGINEERING MANAGEMENT

Oregon State University
College of Engineering
School of Civil and Construction Engineering
Proposal by: David Trejo
Banner SIS Major number: 3380
CPS#: 8 3 2 7 2
January 12, 2012
Proposed Effective Date: March 1, 2012

- 1. Title of the proposed instructional, research, or public service unit. For name changes, give both the current and proposed names. Describe the reason(s) for the proposed change.** 1a CIP#: 143301 1b The Master of Business and Engineering (MBE) program in the School of Civil and Construction Engineering was established in 2005 with the objective of offering a broader education in construction engineering and management and business. Although there has been modest enrollment (<8) in the MBE program, enrollment has further decreased and there are currently only three (3) students enrolled in the program. This proposal is to terminate the MBE program yet still offer students the same classes through the graduate program in Civil Engineering in the School of Civil and Construction Engineering.

All classes required for the MBE will be continued to be offered and all students currently in the program will be allowed to complete their MBE degrees. However, if a student prefers to transfer to the M.Eng. or M.S. degrees in Civil Engineering they will be allowed to do so. It is anticipated that the termination of the MBE program will have no effect on existing students.

- 2. Location within the institution's organizational structure. Include "before" and "after" organizational charts (show reporting lines all the way up to the Provost).** College of Engineering, School of Civil and Construction Engineering.
- 3. Objectives, functions (e.g., instruction, research, public service), and activities of the proposed unit.** Not applicable.²
- 4. Resources needed, if any: personnel, FTE academic, FTE classified, facilities and equipment.** None.
- 5. Funding sources: state sources (institutional funds - state general fund, tuition and fees, indirect cost recoveries), federal funds, other funds as specified.** Not applicable – MBE program is being terminated.

- 6. Relationship of the proposed unit to the institutional mission.** This program supported the Oregon State University mission, but students have been much more interested in enrolling in the Civil Engineering graduate program and focusing their studies on Construction Engineering Management. The program in Civil and Construction Engineering allows students to get a minor in the MBA program and this will replace the MBE program.
- 7. Long-range goals and plans for the unit (including a statement as to anticipated funding sources for any projected growth in funding needs).** Not applicable.
- 8. Relationship of the proposed unit to programs at other institutions in the state.**
Not applicable.
- 9. If the program is professionally accredited, identify the accrediting body and discuss how the proposed change may affect accreditation.** Not applicable. This program is not accredited.

Appendices:

- **Transmittal Sheet:** Attached.
- **Budget Table:** Attached
- **Library Evaluation:** Not applicable.
- **Liaisons:** Ilene Kleinsorge; Scott Ashford; Jim Lundy; Terri Fiez; Robert Stone; Greg Rorrer; Kathryn Higley

David

We do not have concerns about your decision. However, may I suggest you suspend the degree rather than terminate the degree. A suspension would allow you to offer it again in the future without going through the university system for approval. As we offer develop and deliver an MBA in a hybrid on-line version, you may find it easy to offer the degree in a similar format using our courses and the degree will be more attractive to students at a distance.

Just a thought.

Subject: Termination of MBE degree

Hi all;

I hope the term is going well. You are being contacted as "liasons" for our proposal to terminate the MBE degree in our School. The program currently has three students and two of these students will likely graduate next term. Because enrollment has never exceeded ~8 students and current numbers are very low, we feel it is in the best interest of our School, College, and the University to terminate the degree. I have initiated the process of terminating the degree and you have been identified as "liasons," potential people/programs that may be affected by the change. I believe that terminating the degree will have limited, if any, impact on any of your Schools/Departments as enrollment has been mostly limited to civil and construction engineering students, but it is at the same time important that you know of the

potential changes and impacts. Could you please let me know if you or your School/Department has any concerns will terminating the degree and if so, what are the concerns? Thanks!

David

Subject: Termination of MBE Degree in COstruction Engineering Management

Hello Ilene;

I hope the term is going well. I want to bring you up to speed on the MBE program in our School – I believe David Sillars has already discussed this with you. Currently, the program has three students and two of these students can graduate within the next term. Because enrollment has never exceeded ~8 students and current numbers are very low, we feel it is in the best interest of our School, College, and the University to terminate the degree. I have initiated the process of terminating the degree. I believe that terminating the degree will have limited, if any, impact on the COB, but wanted to pass this by you. Could you please let me know if you or the COB have any concerns will terminating the degree?

Thanks!

Comments

Walter Loveland (Budgets and Fiscal Planning Committee) May 4, 2012 10:37am

Please change the first year budget to be a no cost budget unless you really think that there is an incremental cost of the proposal in the first year. If you really think so, the OPE needs to be added

4. Originator Response

Action Plan and Follow-up (2009–2012)

May 23, 2012

How Recommendations from the May 2009 Graduate Program Review have been addressed Department of Biological & Ecological Engineering

GRADUATE PROGRAM

| <i>Panel Recommendation</i> | <i>Panel Assessment</i> | <i>BEE Response</i> | <i>Detailed Actions</i> | <i>Lead role</i> | <i>Follow-up</i> |
|--|--|--|--|-------------------------------|--|
| 1. Develop greater investment in the departmental instructional programs by the College of Engineering | Additional funding needed in Water Resource Engineering | We agree, but this has been a challenging area. | 1. Work with COE Dean to identify additional funding and investment opportunities to support BEE programs. | Department Head | Remains challenging due to decreased investment by the state. Differential tuition (ca. \$100K now kept by COE) may be a source of funds; however, would require changes in COE; a new COE dean may consider this |
| 2. Build a unifying framework around the discipline of Biological Engineering | Current program organized around application areas | We view Ecological Engineering as distinct from Biological Engineering, based on the science of Ecological Systems rather than Biology. | 1. Arrange meeting with COE Dean, CBEE Head to discuss additional linkages between CBEE, BEE | Department Head | Clearly related to Item 3. There is now a BEE curriculum coordinator at the undergraduate and graduate levels. Has led to streamlining curriculum discussions (mostly at undergraduate level); grad level distinction is already strong. |
| 3. Meet with CBEE group to develop joint vision/mission/goals | Current structure considered sub-optimal | We currently coordinate curriculum; have engaged in additional conversations in the past without significant results. Future conversations should include Forest Engineering and possibly Wood Science and Engineering | 1. Arrange meeting with COE Dean, CBEE Head to discuss additional linkages between CBEE, BEE.
2. Explore additional opportunities for linkages with FE, WSE | Department Head | Note linkage with Item 2. Still limited success in working with CBEE. However, there has been progress in working with FE and WSE towards the development of a School of Natural Resources Engineering (see note at end of table for details). Anticipate support from the new dean of COA. |
| 4. Develop recruitment plan for high-quality graduate students, including diversity plan | Identify additional needs for research in areas of Department strength | Agreed. | 1. Develop recruitment plan addressing diversity, quality
2. Explore additional funding opportunities for bringing in exceptional graduate students | Department Graduate Committee | Diversity is noted to be good. It is “near the top” for COE and higher than national averages. This might also develop this fall as the School of Natural Resources progresses. Donors could provide targeted fellowships. |
| 5. Provide greater | Need to explore | Agreed. We have no | 1. Identify issues relate to | Departmental | TAs still do not exist in BEE; however, |

| | | | | | |
|--|---|--|--|---------------------------------|---|
| opportunities for graduate students to obtain teaching experience | strategies for including, assessing teaching experiences | teaching assistantships, so other mechanisms need to be identified | non-TA grad student teaching experiences
2. Develop plan for providing additional teaching opportunities
3. Develop funding plan to support grad student teaching experiences
4. Development assessment methods | Graduate committee | this has been an area of active improvement. Graduate students are or will be engaged in:
1) teaching in area of expertise,
2) undergraduate mentoring,
3) e-campus coursework.
The build-up to e-campus classes is notable and is well-supported at this stage of development |
| 6. Add Graduate Student to our Graduate Committee | improved communication between students, faculty would be helpful | Agreed. | 1. Add graduate student to BEE Graduate Committee. | Department Head | Done. |
| 7. Encourage graduate students to apply for university and external awards to enhance program visibility | | Agreed. This is part of our existing efforts | 1.Continue existing efforts in this area
2. Identify new opportunities related to grad student awards | Departmental Graduate Committee | This has started. Examples are recent awards of EPA Star and NSF Graduate Student Fellowship grants. |
| 8. Consider development of NSF REU program | May enhance recruiting success of undergraduate and underrepresented groups | Agreed. We are expanding our efforts in this area | 1. Continue to identify REU opportunities | Graduate Faculty | An application for an REU is pending. BEE is participating with Inst. for Water and Watersheds Willamette Water 2100 (WW2100), a large multi-departmental grant. Both Tullos and Selker have programs (see note at end of table for details). |
| 9.Reactivate External Advisory Group | | Agreed. | 1. Schedule annual advisory board meetings starting early 2010 | Department Head | Done. Two meetings in the last year. |
| 10. Develop mechanism to track student performance | | This is generally handled by the major professor | 1. Explore whether additional mechanisms are needed to track student performance | Departmental Graduate Committee | BEE is using the new OSU electronic tracking system. Audits for graduate students are in place. Exit interviews now conducted. No post-graduate tracking is occurring at this time although addresses/contact information is maintained. |
| 11. Develop a Departmental Seminar Series | This would be helpful for student to gain understanding of current | Agreed, but available resources limit our capacity to be responsive. | 1. Explore funding mechanism, possible collaborations with other units/programs to deliver relevant seminar series | Department Head | This is underway using a traditional model (current topic is Climate Change). Also, professional development seminar is conducted for undergraduate students. |

Functions of the School of Natural Resources Engineering:

- Recruiting
- Program marketing, web site maintenance
- Awarding "school based" scholarships (as opposed to departmental ones)
- Curriculum changes (interdepartmental committees)
- Class scheduling
- ABET accreditation
- Outreach
- Seminars / continuing education

Functions of the Departments

- Faculty mentoring, P&T
- Staffing
- Research functions
- Student advising
- Outreach related to departmental research

Internship opportunities. More info at: <http://eco-informatics.engr.oregonstate.edu/> for the ecoinformatics program run by Desiree Tullos. John Selker also has been teaching a Soil Physics field course in Chile providing an opportunity for graduate and undergraduate students to get field experiences in an international setting.

On May 9th 2012, Tom Wolpert met with Robert Stone the Interim Head of the school of Mechanical, Industrial and Manufacturing Engineering (MIME) and David Cann, the Associate Head for Graduate Education. The meeting was held as part of the 3-year follow up on the Action Plan developed by the school in response to the 24 recommendations provided in the review of the Mechanical Engineering Graduate Program conducted May 5-4, 2008. The action plan submitted to the Provost and Graduate School, dated June 2, 2008, is included below. Imbedded in the action plan and written in italics, are the follow up responses to the action plan as provided on May 9th, 2012:

Mechanical Engineering Graduate Degree Program Action Plan in Response to the Review of 2 June 2008

Prepared by David Cann (12 Dec 08)
Associate Head for Graduate Education
School of Mechanical, Industrial, and Manufacturing Engineering

The review committee conducted an on-site interview on May 4-5, 2008 and a written report was submitted on 2 June 2008. The report contains a total of 24 recommendations; this document details the specific actions being taken by the ME program in response to these recommendations. Given that it is not possible to implement all of these recommendations in the short term, each action lists the appropriate priority.

Recommendation 1: Identify specific, existing collaborative interactions with international institutions and develop a plan for how these could be expanded within the programmatic effort, e.g., summer exchange program, semester abroad for collaborative research, etc.

Action: The ME program has existing, but informal, exchange programs with Germany and Japan. Such programs are best initiated by individual faculty members with specific research collaborations. Therefore, mechanisms for expanding our current portfolio will be discussed with the ME faculty. Priority = Low.

Follow up: Currently, no formal program for international collaborative interactions has been developed. However, such interactions continue to proceed on an individual basis. Additionally, plans are currently underway to implement a graduate student exchange program with Sweden.

Recommendation 2: The Graduate Program Chair should investigate building on existing links with institutions in China and determine whether it is possible to use current opportunities to expand the contribution of Chinese students to the ME program.

Action: The ME program is a charter participant in the graduate-level INTO program and, if successful, this may increase the number of Chinese students in our graduate program. In the initial years it will be limited to 4 to 8 per year, but could grow into significantly larger numbers. Priority = Currently being implemented.

Follow up: The School is engaged with the INTO program at OSU and as such includes the participation of Chinese students. No additional programs are planned.

Recommendation 3: The Graduate Program Chair needs to develop a full recruiting plan with a budget.

Action: A detailed recruiting plan with a budget will be developed by the end of the 2008-9 academic year with guidance from the MIME recruiting committee. Given current budget predictions it is unlikely that significant resources can be made available for the near future. Priority = Moderate.

Follow up: Efforts toward Graduate Student recruitment have been significantly increased and appear to be increasingly successful. For example, the school now invites and funds up to 20 candidates a year for campus interviews. Last year's recruiting efforts resulted in the matriculation of 30 graduate students.

Recommendation 4: Submit a proposal to the National Science Foundation to establish a Research Experience for Undergraduates (REU) site in ME. If such a proposal is funded it will give ME faculty access to some of the best and most highly motivated undergraduates in the United States. The effectiveness of these sites in recruiting top students into graduate school has been widely documented. They also increase recruiting opportunities for domestic PhD students.

Action: The annual deadline for the REU site proposals is in August. A team of faculty in MIME will submit a proposal in August 2009. Priority = Moderate.

Follow up: REUs are obtained on an individual level by faculty. Currently, plans are being developed for a possible site under the theme "Engineering for Good". Also, a newly recruited faculty member has had prior experience directing an REU site and will be considered a resource for developing a proposal at OSU.

Recommendation 5: Reduce required course credits to Graduate School minimums. Such a reduction would facilitate flexibility and allow students to take courses (including some at the undergraduate level) outside ME and outside the College of Engineering.

Action: The ME graduate faculty recently (5 Dec 2008) voted to reduce the total number of course credits from 36 to 30 for the MS degree. A similar initiative is under consideration for the PhD degree. Priority = Already implemented for MS, High priority for PhD.

Follow up: As indicated, this was completed for MS degrees in 2008 and recently also completed for Ph.D. degrees. For the latter, a reduction of 54 course credits to 48 was approved.

Recommendation 6: Emphasize the option to develop flexible interdisciplinary programs of graduate study when promoting the graduate program (e.g. on the ME program web page and in the department offer letter).

Action: The faculty of MIME are currently developing research clusters to help define our research activities. Most of these are highly interdisciplinary in nature and will be used on all external publications and websites, etc. Priority = Being Implemented Currently.

Follow up: The School anticipates defining a suite of approximately 12 individual, transcript-visible options for their graduate programs under proposed new guidelines as provided by the Graduate School. Among these will be a "flexible" option.

Recommendation 7: Continue providing the Graduate Communication Seminar and consider expanding it to two quarters or possibly the entire year.

Action: From a practical standpoint, this recommendation cannot be implemented without an increase in the number of faculty. Priority = Low.

Follow up: The Graduate Communication Seminar is still offered on a yearly basis. Currently, resources are insufficient to consider a higher frequency.

Recommendation 8: Provide graduate opportunities for international exchange and collaboration.

Action: Similar to Recommendation 1. The ME program has existing, but informal, exchange programs with Germany and Japan. Such programs are best initiated by individual faculty members with specific research collaborations. Therefore, mechanisms for expanding our current portfolio will be discussed with the ME faculty. Priority = Low.

Follow up: Such opportunities are available on an individual, faculty-initiated basis.

Recommendation 9: Establish graduate cooperative agreements for industry internships.

Action: This topic will be brought to the attention of the MIME Industrial Advisory Board. If positively received, MIME faculty will develop a strategy for implementing this using a similar structure to the successful MECOP program for undergraduate students. Priority = Moderate.

Follow up: The School has developed formal exchange fellowships with both Intel and Blount International Inc. Additionally, plans are underway to develop additional fellowship opportunities with other companies that have strong research interactions with MIME.

Recommendation 10: Increase the opportunities for graduate student presentations.

Action: All of the specialization groups within ME currently have seminar series (2 of them associated with a formal course number, the others are run on a more informal basis). Priority = Already Implemented.

Follow up: Currently, 4-5 different seminar programs exist within the School. Each of these offers opportunities for graduate student presentations. The School estimates that most students present 1-2 formal presentations over the course of their graduate careers.

Recommendation 11: The School should consider forming a faculty “vision” or “long-range planning” committee. Encouraging widespread faculty participation would help to foster a sense of collaboration and shared sense of future.

Action: An MIME-wide Vision Committee was initiated in 2007-8. It meets regularly addressing strategic issues facing the School. Priority = Already Implemented.

Follow up: The Vision Committee has been suspended due to excessive committee assignments for faculty. However, work of this nature continues under the Graduate Program Committee.

Recommendation 12: Consider the role of the Qualifying Examination and whether it is being used in the most effective way.

Action: The Qualifying Examination has only been in operation in its current format since the 2007-8 academic year. An assessment of its effectiveness would be appropriate within the next academic year. Priority = Moderate.

Follow up: The requirement for qualifying examinations had only recently been implemented at the time of the review making it impossible to adequately assess. The requirement has now been in place four years and appears to be working as intended. It provides an early and effective means to evaluate future student success toward a higher degree.

Recommendation 13: Metrics for graduate student success should be identified and tracked.

Action: We are currently developing a number of tracking systems that will include the ability to identify students progress in the program of study, and other accomplishments outside the classroom. Priority = Currently Being Implemented.

Follow up: Adequate tracking of graduate student success was deemed impractical, as an appropriate database is not readily available. Additionally, efforts along this line are increasingly being discussed as part of a possible University effort. School plans will develop in parallel with those of the institution.

Recommendation 14: Form a Graduate Student Awards Nomination Committee.

Action: The responsibility for nominating graduate students for awards currently lies with the Graduate Program Committee. At a future faculty meeting, we will seek input from the faculty to determine if the MIME Awards committee is a more appropriate committee to handle graduate student nominations. Priority = Low.

Follow up: An Awards Committee has been established that encompasses considerations for faculty, staff and students.

Recommendation 15: The School should clarify/develop policies regarding the formation and maintenance of graduate committees and publication requirements for graduate degrees.

Action: This issue will be brought up at a MIME GPC meeting during this academic year. Priority = Moderate.

Follow up: The School follows the recommendation of the Graduate School for forming graduate student committees. No consensus has been reached on the publication requirements for graduate degrees and is not considered likely. This is due to the diversity of programs included within the school. For example, some programs involve explicit intellectual property agreements that preclude publication.

Recommendation 16: Form a Faculty Awards Committee. This committee should identify outstanding faculty and help nominate them for Fellow status in their respective societies and national awards available through professional societies such as MRS and ASEE.

Action: The current MIME Awards Committee is currently charged with this task. Priority = Already Implemented.

Follow up: See Recommendation 14.

Recommendation 17: The School should provide travel funds on a competitive basis (maybe matched by the Graduate School) to encourage graduate (particularly doctoral) student attendance at conferences.

Action: There are currently funds available for PhD students to receive \$500 to help defray costs of presenting at conferences. Currently only students that have passed their Prelim Exam are eligible, but if additional funds can be made available it will be expanded. Priority = Already Implemented.

Follow up: Funds for individual students have been increased from \$500 to \$1000. Also, students can now compete for funds following completion of their qualifying exams (previously-upon completion of their preliminary exam). This allows for more students to compete and to attend conferences earlier in their academic program. The School funds from 10-20 students per year.

Recommendation 18: The School should consider forming a student organization within ME.

Action: This issue will be brought up at the next scheduled meeting with the graduate students to see if there is interest amongst the students to initiate a student organization. Priority = Moderate.

Follow up: A graduate student-initiated organization has been developed in the School. The School contributes \$1000/year to help defray organization expenses through an account independently handled through the OSU Memorial Union. In exchange for funding, the student organization contributes to the graduate recruitment activities of the School.

Recommendation 19: The School should improve tracking for graduate alumni.

Action: As mentioned above, we are currently developing a number of tracking systems for our graduate students. The initial efforts are aimed at incoming and existing students, but maintaining communication with alumni will be included in the tracking system. Priority = Currently Being Implemented.

Follow up: This has not been aggressively pursued. However, increased voluntary contacts have been facilitated through professional networks such as "LinkedIn".

Recommendation 20: The School should consider creating a curriculum committee to periodically review programmatic needs and teaching activities.

Action: The responsibilities for the review and maintenance of the ME graduate curriculum lies with the ME Graduate Program Committee. Priority = Already Implemented.

Follow up: This activity is currently handled by the Graduate Program Committee.

Recommendation 21: Clarify on the web and any published documents the course requirements and how students can satisfy these requirements.

Action: The ME graduate program web sites were updated in the 2007-8 academic year and now accurately reflect all course requirements. Priority = Already Implemented.

Follow up: The web site is consistently maintained and periodically updated.

Recommendation 22: Provide access to student training in aspects of entrepreneurship either through the College of Engineering and/or Business and establish mechanisms for exposing students to ongoing entrepreneurial activities within the College.

Action: Students will be made aware of courses on entrepreneurship offered for graduate students. Priority = Moderate.

Follow up: At the time of the review, enrollment opportunities for MIME students in these programs was limited. This has been addressed and students can now participate in both the College of Engineering and Business programs.

Recommendation 23: Maintain the graduate student directory and keep School web site current.

Action: The web site was updated significantly in the 2007-8 academic year. Priority = Already Implemented.

Follow up: The graduate student directory is updated annually and other web functions on an 'as need' basis.

Recommendation 24: Encourage student participation on committees.

Action: The ME GPC will allow a graduate student representative to attend meetings as needed. Priority = High.

Follow up: A formal policy for graduate committee participation has not been developed. However, student participation is encouraged in a range of School functions.

Additional follow up discussions: Due to the recent (2007) fusion of graduate programs into a single School, the School has indicated an interest in having all their graduate programs assessed in unison. This includes the Mechanical Engineering and Industrial Engineering degree programs, as well as the interdepartmental Materials Science degree program which is administered by MIME. The School would appreciate this consideration by the Graduate Committee.

Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Planning and Assessment
110 Kerr Admin -- Oregon State University

For instructions, see <http://oregonstate.edu/ap/curriculum/cati.html>. Please attach Proposal, Library Evaluation (performed by the library), Liaison Correspondence, Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

Check one:

Full Proposal

- ☒ New degree program
- ☐ New certificate program or administrative unit
- ☐ Major change in existing program
- ☐ Establishment of a new College or Department

Abbreviated Proposal

- ☐ Rename of an academic program or unit
- ☐ Reorganization – moving responsibility for an academic program from one unit to another
- ☐ Merging or splitting an academic unit
- ☐ Termination of an academic program or unit
- ☐ Suspension or reactivation an academic program or unit

For proposals to establish a new center or institute, contact the Research Office (737-3437).

For requests to offer existing certificate and degree programs at new locations, use the New Location Request Form available on the Web: <http://www.ous.edu/aca/aca-forms.html>

Proposal for the Initiation of a New Instructional Program Leading to the Master of Science/Master of Arts Degree in Communication

**Oregon State University
College of Liberal Arts
Department of Speech Communication**

Executive Summary:

This Master of Science/Master of Arts (M.S./M.A.) in Communication provides a discipline-based, integrated study of communication and rhetoric structured around a core of fundamental theories, methodologies, and applications. While speech communication departments at some universities in the United States feature only rhetoric (such as public address, argumentation, persuasion, or media) or only communication (communication in personal contexts such as intercultural, small group, organizational, or family) in their graduate degrees, this program follows a more comprehensive model that combines both rhetoric and communication under the umbrella label of Communication. In keeping with the discipline of Speech Communication, this M.S./M.A. program addresses the means, functions, and goals of symbolic human interaction. The range of approaches to course offerings within this M.S./M. A. program includes theoretical, pragmatic, epistemological, and critical perspectives.

Students pursuing this degree will combine advanced study in a selection of topics including but not limited to persuasion and argumentation, conflict management and resolution, cultural (family, sex and gender, relational) and intercultural communication, and organizational and group issues, thus preparing students for doctoral study in communication and rhetoric or for careers as communication professionals. Students who do not continue to doctoral level study can pursue careers in law, training and development, advocacy, human resources, mediation and facilitation, group and organizational consulting, politics, community leadership and development, post-secondary college instruction, public relations, and other areas.

This graduate program drives Oregon State University's (OSU's) commitment to "sustain human well being and improve the quality of human life." This program engages personal well being, the public life of Oregon, the critical issues of the nation, and the pressing concerns of the global society because communication and oral rhetoric comprise the heart of the "human system." Producing experts in oral argument who excel in promoting effective interpersonal and small group processes provides a citizenry with the means and tools for grappling with complex, intractable, and fractious issues at all levels.

Program objectives in keeping with OSU's Strategic Plan-Phase II:

- i. To equip students with the practical and cognitive skills for critical thinking and information assessment so students may design solutions to problems in dynamic

professional contexts influenced by political and social trends, including interpersonal and intercultural communication challenges as well as questions regarding persuasion and argument

ii. To produce creative problem solvers, students equipped with tools both for managing interpersonal human interaction in innovative ways and for creating and teaching others to create productive, oral arguments to inspire critical thinking through constructive debate

iii. To mentor students to grow leadership responsibilities so students serve as social resources for understanding, interpreting, analyzing and explaining communication processes in the increasingly “congested and troubled” local and global milieus

iv. To produce communication professionals who promote understanding and collaboration in human interactions within and across cultures, professionals who not only recognize human difference and embrace diversity but also teach effective interpersonal communication practices, model and provide vital argument strategies, and possess and present tools for achieving understanding among citizenry

v. To generate and increase students' commitments as dynamic agents of social change action able to manage communication consequences in personal, local, regional, national, and global contexts, including managing issues that resist simple technical or social solutions

vi. To offer students a comprehensive, in-depth grounding in communication and rhetorical scholarship, a well developed facility to conduct effective research, and a mentored experience in training and practice of effective communication techniques

vii. To prepare this generation of communication professionals to cope with the social, cultural and organizational challenges posed by new technologies

viii. To attract the best students in communication and oral rhetoric to Oregon State University by providing a program focused on information and skills vital to human processes at local and global levels: interpersonal communication, small group work, social influence, and oral rhetoric

ix. To produce leaders who value respect, integrity, and social responsibility, leaders able to achieve accountability through an understanding of guiding theory in the field and who also excel at communication and oral rhetoric to engage present and future inquiry into such areas as high-impact, public policy issues as well as other significant questions regarding human interaction in multiple contexts

x. To enhance Communication (COMM) faculty experience through teaching and advising high-quality graduate students

xi. To provide course work that serves as a resource for graduate and undergraduate students across Oregon State University

b. This program advances OSU's commitment as a public university to engage the public life of Oregon; universities not only train professionals, they educate citizens. Likewise, the fields of rhetoric and communication adhere to traditional commitments to enhance public life and generate coherence among citizens. These commitments increase the potential for this M.S./M.A. to produce more effective civic participants in interpersonal relationships, in social forums, and for society in general, in addition to shaping future leaders for the state of Oregon.

c. This program meets the needs of the state of Oregon by producing students capable of helping people adapt to changes in the Oregonian way of life, including changes in the personal lifestyles as the economy moves toward a focus on high-tech and service industries. Families and individuals will need to cope with increasing effects of social and institutional demands. Citizens of Oregon also will be facing an increasingly difficult set of social and political challenges, including decisions about natural resources, taxes, health care, education, etc. In a state where the value of citizen involvement remains high, this M.S./M.A. will help meet Oregon's need for active, interpersonal interchange within personal relationships where functional and generative communication is critical as is the need for skilled citizen leaders who can facilitate high quality public discussion and argument.

Proposal for the Initiation of a New Instructional Program Leading to the Master of Science/Master of Arts Degree in Communication

**Oregon State University
College of Liberal Arts
Department of Speech Communication**

Description of Proposed Program

1. Program Overview

a. CIP number

b. This Master of Science/Master of Arts (M.S./M.A.) in Communication provides a discipline-based, integrated study of communication and rhetoric structured around a core of fundamental theories, methodologies, and applications. While speech communication departments at some universities in the United States feature only rhetoric (such as public address, argumentation, persuasion, or media) or only communication (communication in personal contexts such as intercultural, small group, organizational, or family) in their graduate degrees, this program follows a more comprehensive model that combines both rhetoric and communication under the umbrella label of Communication. In keeping with the discipline of Speech Communication, this M.S./M.A. program addresses the means, functions, and goals of symbolic human interaction. The range of approaches to course offerings within this M.S./M. A. program includes theoretical, pragmatic, epistemological, and critical perspectives.

Students pursuing this degree will combine advanced study in a selection of topics including but not limited to persuasion and argumentation, conflict management and resolution, cultural (family, sex and gender, relational) and intercultural communication, and organizational and group issues, thus preparing students for doctoral study in communication and rhetoric or for careers as communication professionals. Students who do not continue to doctoral level study can pursue careers in law, training and development, advocacy, human resources, mediation and facilitation, group and organizational consulting, politics, community leadership and development, post-secondary college instruction, public relations, and other areas.

The Speech Communication faculty delayed this M.S./M.A. proposal until faculty numbers and breadth reached appropriate levels. With the hiring of a new faculty member in intercultural communication in Fall 2008, key faculty now are in place and sufficient faculty resources exist to implement the program. Courses in this department presently used for the M.A.I.S constitute a substantial basis for an M. A. program; only moderate alterations in requirements and the addition of a limited number of new graduate courses are necessary to support an M.S./M.A.

c. This M.S./M.A. program will be operational Winter 2013.

2. Purpose and Relationship of Proposed Program to Oregon State University's Mission and Strategic Plan

a. This graduate program drives Oregon State University's (OSU's) commitment to "sustain human well being and improve the quality of human life." This program engages personal well being, the public life of Oregon, the critical issues of the nation, and the pressing concerns of the global society because communication and oral rhetoric comprise the heart of the "human system." Producing experts in oral argument who excel in promoting effective interpersonal and small group processes provides a citizenry with the means and tools for grappling with complex, intractable, and fractious issues at all levels.

Program objectives in keeping with OSU's Strategic Plan-Phase II:

- i. To equip students with the practical and cognitive skills for critical thinking and information assessment so students may design solutions to problems in dynamic professional contexts influenced by political and social trends, including interpersonal and intercultural communication challenges as well as questions regarding persuasion and argument
- ii. To produce creative problem solvers, students equipped with tools both for managing interpersonal human interaction in innovative ways and for creating and teaching others to create productive, oral arguments to inspire critical thinking through constructive debate
- iii. To mentor students to grow leadership responsibilities so students serve as social resources for understanding, interpreting, analyzing and explaining communication processes in the increasingly "congested and troubled" local and global milieus
- iv. To produce communication professionals who promote understanding and collaboration in human interactions within and across cultures, professionals who not only recognize human difference and embrace diversity but also teach effective interpersonal communication practices, model and provide vital argument strategies, and possess and present tools for achieving understanding among citizenry
- v. To generate and increase students' commitments as dynamic agents of social change action able to manage communication consequences in personal, local, regional, national, and global contexts, including managing issues that resist simple technical or social solutions
- vi. To offer students a comprehensive, in-depth grounding in communication and rhetorical scholarship, a well developed facility to conduct effective research, and a mentored experience in training and practice of effective communication techniques
- vii. To prepare this generation of communication professionals to cope with the social, cultural and organizational challenges posed by new technologies
- viii. To attract the best students in communication and oral rhetoric to Oregon State University by providing a program focused on information and skills vital to human

processes at local and global levels: interpersonal communication, small group work, social influence, and oral rhetoric

ix. To produce leaders who value respect, integrity, and social responsibility, leaders able to achieve accountability through an understanding of guiding theory in the field and who also excel at communication and oral rhetoric to engage present and future inquiry into such areas as high-impact, public policy issues as well as other significant questions regarding human interaction in multiple contexts

x. To enhance Communication (COMM) faculty experience through teaching and advising high-quality graduate students

xi. To provide course work that serves as a resource for graduate and undergraduate students across Oregon State University

b. This program advances OSU's commitment as a public university to engage the public life of Oregon; universities not only train professionals, they educate citizens. Likewise, the fields of rhetoric and communication adhere to traditional commitments to enhance public life and generate coherence among citizens. These commitments increase the potential for this M.S./M.A. to produce more effective civic participants in interpersonal relationships, in social forums, and for society in general, in addition to shaping future leaders for the state of Oregon.

c. This program meets the needs of the state of Oregon by producing students capable of helping people adapt to changes in the Oregonian way of life, including changes in the personal lifestyles as the economy moves toward a focus on high-tech and service industries. Families and individuals will need to cope with increasing effects of social and institutional demands. Citizens of Oregon also will be facing an increasingly difficult set of social and political challenges, including decisions about natural resources, taxes, health care, education, etc. In a state where the value of citizen involvement remains high, this M.S./M.A. will help meet Oregon's need for active, interpersonal interchange within personal relationships where functional and generative communication is critical as is the need for skilled citizen leaders who can facilitate high quality public discussion and argument.

3. Course of Study

a. The proposed curriculum:

| | |
|-----------|---|
| 3 credits | COMM 520 Introduction to Graduate Study in Communication |
| 3 credits | COMM 588 Survey of Rhetorical Theory and Research |
| 3 credits | COMM 589 Survey of Communication Theory and Research |
| 3 credits | COMM 517 Research Methods in Communication |

| | |
|---------------|---|
| 3 credits | COMM 565 Research Methods in Rhetoric |
| 3 credits | COMM 590 Graduate Seminar in Rhetoric |
| 3 credits | COMM 591 Graduate Seminar in Communication |
| 3 credits | COMM 515 Research Methods in Communication |
| 3 credits | COMM 565 Research Methods in Rhetoric |
| 12-15 credits | COMM electives (additional courses, including practica and an internship option) |
| 6-9 credits | Thesis |
| 12 credits | Minor area of study (as approved) |
| Total | = 50-55 credits |

Students wishing to pursue a non-thesis degree will be encouraged to enroll in the M.A.I.S. program where both thesis and project options are available.

b. Course descriptions and explanations:

COMM 520 Introduction to Graduate Study in Communication already exists. The course description reads, "Introductory graduate seminar in the field of communication. Emphasis on the breadth and depth of the discipline, graduate study, and research directions."

COMM 588 Survey of Rhetorical Theory and Research: A survey of Western rhetorical oral traditions from 500 B.C. to the present, this course examines theories of argument and persuasion in public contexts. Some developments in rhetorical theory are investigated by tracing the relationships between rhetoric and historical events or social movements.

COMM 589 Survey of Communication Theory and Research: A survey of Western communication theories deriving from quantitative, qualitative and critical perspectives. Course will include contexts such as conflict management, cultural and intercultural communication, organizational communication, and relational communication.

COMM 517 Research Methods in Communication: This course is designed to train students how to evaluate and also perform qualitative communication research. In order to accomplish this, the assumptions and theoretical traditions of qualitative research will first be established, along with highlighting the role of the researcher in qualitative inquiry. Students will then be introduced to a variety of research methods, including interviews, focus groups, case studies, and participant observation. In order to demonstrate understanding of different data collection techniques, students will engage in practice

assignments to personally experience the challenge inherent in qualitative research. Different approaches to qualitative data analysis will be covered, and finally, ethical issues with regard to conducting qualitative communication research will be discussed.

COMM 565: Research Methods in Rhetoric: This course will explore different approaches to rhetorical criticism practiced in the Twentieth- and Twenty-first Century. Focusing on the preeminent methods that have generated a substantial corpus of criticism, the course will examine how, in each method, rhetorical texts are selected, what contexts are deemed relevant, what aspects of the text warrant attention, and what ends the critic aims to accomplish. This will be accomplished by reading a selection of works exemplary of each mode of criticism and applying our understanding to a substantial work of rhetorical criticism.

COMM 590 Graduate Seminar in Rhetoric: Offers an in-depth exploration into a narrowly focused topic in speech and rhetoric. The seminar will consist of interactive discussion and investigative research regarding the topic. The topic for this Speech Communication seminar will rotate among rhetorical theory; rhetoric in specific, historical eras; and rhetorical criticism.

COMM 591 Graduate Seminar in Communication: Offers an in-depth exploration into a narrowly focused topic in communication. The seminar will consist of interactive discussion and investigative research regarding the topic. The topic for the seminar will rotate among conflict management, organizational and small group communication, intercultural communication, and relational communication.

Each faculty member in the Speech Communication Department will provide one, targeted seminar to be offered in rotation for **COMM 590** and **COMM 591**. Each faculty member will focus their seminar on their general area of expertise and may change the specific topic within that area to reflect current trends in the field. (See Appendix A for examples.) Students and major advisors may take advantage of the interrelationships among topics available during that student's two-year program (for example, conflict management and environmental rhetoric or intercultural communication and rhetorical criticism in speech) to negotiate a coherent program of study for each individual student.

These six basic courses (**COMM 515, 565, 588, 589, 590, and 591**) provide graduate students two important perspectives on the communication discipline--one a broad, wide-ranging discussion of the discipline and one a narrow, closely-focused examination of a single area. The two survey courses each extend students' breadth and depth of knowledge about the discipline as a theoretical and historical whole and provide students with a range of ideas for areas of study to use in their individual programs. The two methods courses provide students with the opportunity to develop research skills appropriate to graduate level extended research. Each targeted seminar, on the other hand, offers a model of in-depth study into a single area of rhetoric and a single area of communication.

Combined with these six basic courses, **COMM 520** introduces students to the rigors and structures of graduate study. Students learn requirements of graduate study—such as the construction of a comprehensive literature review—and review epistemological differences that dictate methodological choices. Students can select areas of study and methodologies to serve

those ends from information they gather 1) in this course in conjunction with experiences students have investigating narrow topics, 2) in the two targeted seminars, and 3) in consultation with their major advisors. Students then can select electives that help inform their particular foci.

At a minimum, three of these five courses will be offered each fall term: **COMM 520**, one of the survey courses, and the complementary topics course. Each fall, the survey/topics pair will rotate; the rhetorical pair will be offered one fall and the communication pair the next. Each winter, the opposite survey course will be offered and each spring its complementary topics course will be offered. Additionally, the methods courses will alternate one Winter and one Spring. With this rotation, graduate students in the program will have access to seven, graduate-only courses in this department in their first years and a sixth course in the fall of their second years, bringing their graduate-only course total to 7 courses (3 credits each), or 21 credits. Together with 9 thesis credits, students would therefore accumulate 30 credits of graduate-only course work. If students include no other graduate-only courses in their programs, they will still meet the 50/50 requirement of the Graduate School. If students enroll in other graduate-only seminars in our department or in their minor areas, they will further exceed the number of courses listed in that requirement.

Elective courses qualifying for the M.S./M.A. requirement include (but are not limited to)

- COMM 518** Interpersonal Communication Theory and Research
- COMM 522** Small Group Communication Theory and Research
- COMM 526** Intercultural Communication: Theories and Issues
- COMM 527** Cultural Codes in Communication
- COMM 530** Theoretical Issues in Communication Inquiry
- COMM 532** Gender and Communication
- COMM 540** Theories of Conflict and Conflict Management
- COMM 542** Bargaining and Negotiation Processes
- COMM 544** Third Parties in Dispute Resolution Mediation
- COMM 546** Communication in International Conflict and Disputes
- COMM 554** Advanced Argumentation
- COMM 556** Rhetoric: 500BC to 500 AD
- COMM 558** Rhetoric: 500AD to 1900
- COMM 559** Contemporary Theories of Rhetoric
- COMM 560** Rhetoric of Revolutionaries and Reactionaries 1750-1900
- COMM 562** Rhetoric of Revolutionaries and Reactionaries 1900-Present
- COMM 566** Ethics of Rhetoric
- COMM 572** The Rhetoric of Popular Culture
- COMM 576** Issues in the Freedom of Speech
- COMM 578** Political Campaign Rhetoric
- COMM 580** History of Media Communication
- COMM 582** Media in Culture and Society
- COMM 584** Media Criticism
- COMM 586** Media Aesthetics
- COMM 512** Special Topics

COMM 524 Communication in Organizations: Theories and Issues will be eliminated from the regular curriculum and will become one of the rotating graduate seminars (**COMM 591**) in Communication.

Sample courses of study are provided in Appendix B.

c. Non-traditional learning modes: Internships and practica are standard components of most communication curricula. In addition, some courses will be available via interactive video from Bend, OR.

d. As specific learning outcomes, students will:

- i. Exhibit an appropriate level of knowledge of core areas in communication and rhetorical theory, research, and practice as well as an appropriate level of knowledge for specialty course topics as applicable.
- ii. Manage and solve communication problems in professional and civic contexts by selecting expedient means from communication and rhetorical theory and research.
- iii. Maximize the dynamic, cross-disciplinary character of rhetoric and communication through an innovative thesis design that integrates the minor area.
- iv. Synthesize and apply the personal, professional, and civic responsibilities of communication specialists in courses, practica, internships, and departmental interactions.
- v. Employ ethical practices for communication specialists and promote ethical use of rhetoric and communication in all contexts.

4. Recruitment and Admission Requirements

a. The program will attract students already interested in OSU, but also a much larger pool of applicants who seek concentrated graduate study in Communication will find this M.S./M.A. attractive. The Department of Speech Communication regularly receives inquiries from potential students who want to do graduate study in Communication but who seek a discipline-based degree rather than an interdisciplinary degree. The number of graduate programs in communication is insufficient and inadequate in the state of Oregon. A standard M. A. program at OSU would draw to this state numerous students whose needs are not met by the M.A.I.S.

b. In addition to meeting the admission requirements of the Graduate School at OSU, students seeking admission will need to meet the following criteria:

- i. Show significant preparation in communication studies, typically a B.A./B.S. in Speech Communication or a closely related field
- ii. Demonstrate a 3.0 or better G.P.A. in their communication course work
- iii. Submit a Graduate Record Exam

iv. Provide a writing sample

c. The total number of graduate students will be limited by the capacity of faculty to administer reasonable advising and mentoring through a student's program including a thesis process. Since the faculty size may change, graduate students will be admitted at a ratio of 4:1 to the number of current faculty. Although that formula would allow about 32 students in the start-up year, trends suggest that this target number of students would not be reached for several years.

5. Accreditation of the program

- a. N/A
- b. N/A
- c. N/A

6. Evidence of Need

a. Evidence of student interest

i. Lack of Alternatives in the State: This program is essential because no such program exists in Oregon; the only other graduate program available is offered at Portland State University, but that program does not contain a significant rhetoric component. A discipline-based program similar to this one was abandoned in 1991 at the University of Oregon when that institution eliminated its Department of Speech, thereby abolishing not only the M.S./M.A. program but also the only Ph.D. program in the state. At present, no graduate program in Communication is available outside of the Portland area.

ii. Evidence from Previous Enrollment (See Appendix C): Most of the M.A.I.S. graduate students we have served have been from the state of Oregon. We would continue to attract these students, but also we would attract others who have gone out of state for standard (i.e., non-M.A.I.S.) programs. The desire for an M.S./M.A. program is evident in M.A.I.S. students; over the past 3 years 86%, 87% and 83% respectively named Speech Communication areas for two of their three major areas of study. These students earn approximately 36 of their 48 credits from this department. That percentage indicates the department already serves graduate students in a capacity approaching the M. A. level, but it also indicates the students' intent to design a program for themselves that more closely aligns with a traditional M.S./M.A. program.

While some students find that the M.A.I.S. meets their needs, many express disappointment about their inability to access an M.S./M.A. at OSU. This department also has had students who have applied to Ph.D. programs only to discover, with regret, that some of those programs do not recognize the M.A.I.S. degree and require the graduate to complete additional courses before entering that program.

iii. Mutual Need for Funding: The department needs disciplined-based graduate students to fill graduate teaching assistantships for Baccalaureate Core courses that

serve both Speech Communication majors and departments across the campus; graduate students need the funding available to them through GTA positions. An M.S./M.A. will provide a mutually beneficial opportunity for graduate students, for the department, and for numerous other university programs that depend on those basic courses.

b. Needs for Employment: The career paths graduates would follow include numerous areas of the job market, including human resource and human resource management, organizational development, training and development, public and community leadership and development, health communication, advocacy, mediation/facilitation/conflict resolution, public service, public participation processes, politics, post-secondary college instruction, public relations, and others. The demand is high regionally, nationally, and globally for individuals trained to lead groups and also to work effectively in groups; to provide conflict and interpersonal communication training within communities and organizations; to advocate successfully in various venues and contexts; to argue persuasively and ethically as leaders in groups and organizations; and to design, implement, and lead development plans in national and international venues.

c. Number and Characteristics of Students to be Served: Using the past six year period as an indicator, the department will serve 18 to 29 graduate students annually in the next few years. That number will increase as funding levels increase based on past indicators. For example, at the highest funding levels, the department served the highest number of graduate students who named two areas of Speech Communication in their M.A.I.S. programs; that correlation indicates that as funding levels rise, more students will be interested in the M.S./M.A. program.

The composition of the graduates in the program can be projected from the history of students in the M.A.I.S. program who have named Speech Communication as one or more of the three areas of study. Of those graduate students, typically, $\frac{1}{2}$ to $\frac{2}{3}$ will be female, $\frac{1}{5}$ to $\frac{1}{3}$ will be non-residents, up to $\frac{1}{10}$ will be international scholars, and between $\frac{1}{10}$ and $\frac{1}{8}$ will be minority.

d. Other Compelling Reasons for Offering the Program:

i. The recent economic plunge in the United States demonstrates the key role communication plays in civic life and social behaviors. Many economists have explained that economic theory did not effectively predict the severity of the downturn in large part because those theories did not account for the "real-life" functions and consequences of human interaction that play such key roles in economic investment. This M.S./M.A. integrates both rhetoric and interpersonal communication, thus graduating individuals well prepared to address exactly those issues of interpersonal communication and public discourse.

ii. OSU has more graduate, Communication faculty than any other Communication program in Oregon and therefore can take the lead in this discipline in the state.

iii. Current and ongoing developments in technology create significant social changes rapidly; social organizations in Oregon will accrue critical benefits from expertise and training offered by communication experts.

- iv. This program complements emerging graduate offerings in the College of Liberal Arts.
 - v. Students have only one practical alternative in the state of Oregon and none outside of the Portland area.
 - vi. Students seeking graduate work in rhetorical theory and practice within the Speech Communication field must go out of state; no Oregon option exists.
 - vii. This program will attract strong graduates in communication, helping to grow OSU traditions in the liberal arts areas.
 - viii. A comprehensive masters degree program in Communication serves the university overall. In addition to attracting top graduate students, it will provide graduate teaching assistants of a quality and quantity appropriate to serve undergraduate students in Baccalaureate Core Communication classes.
- e. Special Interest Groups: American Society for Training and Development, Public Relations Association, Association for Conflict Resolution, Toastmasters International
- f. Program Availability: The Communication Area of the Speech Communication Department intends to maintain its continuing commitment to offering a significant number of evening courses at the graduate level. Opportunities also exist at OSU Cascades Campus in Bend, OR where students could obtain a limited number of graduate courses offered as "slash" courses offered by one faculty member there. Several graduate-level courses also are offered regularly at the OSU campus during summer school, including courses that can be taken during the zero-week offering where students attend one-week courses consisting of eight-hour sessions for 5 days. In addition, the department historically has occasionally offered a 400/500 level course online.

Outcomes

7. Program Evaluation

- a. Evidence that program objectives have been met:
 - i. Faculty will meet annually to review the performances of all graduate students with regard to their course work and progress in their programs. A letter reflecting this assessment will be sent to each student.
 - ii. Faculty will conduct exit interviews with all graduate students at the end of every two years. In addition, faculty will conduct exit interviews with graduates who complete their programs.
 - iii. Theses will be reviewed by a faculty committee on a bi-annual basis.

- iv. Records of alumni activity, in particular employment history, will be charted.
- b. Biennial review: Based on the information from 7a, the faculty will conduct a biennial review of program requirements and procedures. The program will be modified as needed to insure it meets its goals and provides a compelling learning experience.

8. Assessment of Student Learning

Graduate Assessment Plan (Master's programs)

1. **Program Information:**

| | |
|---------------------|-----------------------------------|
| Program | M.A./M.S. in Speech Communication |
| Department/School | Speech Communication |
| College | Liberal Arts |
| Report Submitted by | Trischa Goodnow |

2. **Program Outcomes**

| |
|--|
| Provide the Student Learning Objectives/Outcomes for your Master's program. |
| <p>Outcome 1: Students will be able to identify important problems, pose relevant questions, and conduct original research that extends knowledge of Speech Communication. This requires developing novel and original arguments based on empirical evidence and theoretical justification. This will be demonstrated through discrete research as found in a thesis.</p> <p>Outcome 2: Students will achieve mastery of substantive knowledge in Speech Communication demonstrated through proficiency in relevant methodological and theoretical perspectives.</p> <p>Outcome 3: Students will develop a strong background in scholarship from the area's two related perspectives, interpersonal and small group communication and rhetorical and social influence.</p> <p>Outcome 4: Students will be able to identify ways that Speech Communication can inform discussions of pressing social, environmental, ethical, and/or public issues and be able to communicate these perspectives to relevant audiences.</p> <p>Outcome 5: Students will learn to conduct activities in an ethical manner.</p> |

3. **Measurement** – Provide a detailed narrative or schematic to articulate how all the outcomes will be measured for all outcomes.

| |
|---|
| a) Describe the methods you will use to assess each outcome. |
| <p>Students conduct independent research with oversight by a major professor. This is accomplished in research seminars and as a thesis project. The research product is evaluated so that faculty can assess the qualifications of the student as an independent scholar. Documentation of deficiencies that delay or inhibit successful completion of the degree are noted and reviewed on an annual basis by the Director of Graduate Studies and the student's major professor.</p> <p>Students in the program must maintain a high level of achievement in all coursework. This includes not only the core curriculum but also courses outside of the program. If performance in</p> |

course work proves unsatisfactory, the student will meet with the major professor and Director of Graduate Studies to develop an educational plan for addressing difficulties.

Each student must enroll in the required core curriculum which is designed to provide reading breadth in the field but also to provide ongoing opportunities to refine skills in research, writing, and in formulating original scholarship.

The Director of Graduate Studies will track information about the program including the number of applicants, offers, and acceptances on a yearly basis; retention and graduation rates; and postgraduate employment. Information about all students' background qualifications (e.g., undergrad/grad degrees, schools attended, GPA, GRE scores, etc.) will be collected and reviewed on an annual basis.

The Director of Graduate Studies will bring assessment information to Speech Communication graduate committee regularly for review and input. At one meeting each year, the full assessment package will be discussed in detail to determine if program goals are being met. As evidence is collected that curriculum, program requirements or any other aspect of the program needs improvement, the graduate committee will move to make necessary changes.

b) Describe and attach any measurement tools to be used (exam results, performance criteria, evaluation/performance rubrics, etc.,)

In addition to tracking assessment indicators described above, the Director of Graduate Studies will be responsible for collecting and maintaining information including, but not limited to:

- Number of applicants, offers, and acceptance

- Characteristics of incoming students including previous degrees, GPA, GRE scores

- Retention and graduation rates

- Employment rates and characteristics of employment (e.g., sector, position)

- Student satisfaction/feedback (as measured through student evaluations)

4. **Please provide a skeletal assessment plan (Mapping Guide) for your program:**

Provide a skeleton plan describing the specific activities and assessment method for each outcome.

Outcome 1: This will be addressed through the required thesis which includes enrollment in COMM 406.

Outcome 2: This will be achieved through enrollment in the core curriculum courses: COMM and additional elective courses and seminars.

Outcome 3: This will be achieved through enrollment in the core curriculum courses: and additional elective courses and seminars.

Outcome 4: This can be achieved in several ways, including participation in the intellectual life of the university, especially by attending public lectures, and by communicating students' own research through participation in the Speech Communication Colloquium series, attending conferences, online commentary, and/or submission of research for publication.

Outcome 5: Students who work with human subjects in research will participate in a training course to subject their work to Oregon State University's Institutional Review Board.

5. **Other activities that have informed decision making:**

Please report on any other activities that you feel fall under assessment that were not captured above. This may include general satisfaction surveys, employer input, or other initiatives that

| |
|--|
| contribute to student learning or program improvement. |
| n/a |

Integration of Efforts

9. Similar Programs in the State

a. Other Closely Related Programs: The only closely related program exists at Portland State University since the University of Oregon eliminated its Department of Speech, both undergraduate and graduate programs, in 1991.

Presently, the University of Oregon (U of O) offers only one program that might appear to relate to this M.S./M.A., an M.A./M.S. in Communication and Society, a division of the School of Journalism and Communication. As is noted in the liaison letter from the Dean of the School of Journalism and Communication at the U of O, their program differs significantly from the OSU program; Dean Gleason writes that the concentration in communication and rhetoric “distinguishes” the two programs. The scope of the U of O program differs significantly from that of the proposed OSU degree. Information published on its website explains that the U of O program reflects a strong mass media concentration; for example, the two, required, core courses for the M.A./M.S. examine mass communication and society and mass communication theories. The central focus is mass communication with topics like international communication or communication diversity as electives set in a context of media institutions. Likewise, the graduate certificate offered at U. of O. for communication ethics centers around mass media, training graduates in “ethical decision-making strategies covering a variety of media. . . .” (from the website)

The only overlap mentioned in Dean Gleason’s response cites the possibility that a student at OSU might design a course of study featuring a major emphasis in conflict management and conflict resolution; he mentions a possible overlap with the U of O degree in Conflict and Dispute Resolution. To that point, Dr. David Frank, Director of the U of O Robert Clark Honors College responds that “[t]he proposal you have included places a much-needed focus on the study of communication and rhetoric.” He further describes the OSU proposal as “the only systematic graduate program in communication between Portland and Humboldt State University in California,” asserting that the OSU program would “serve a unique function.” Dr. Frank offers his “full endorsement” of this proposed degree program.

Portland State University (PSU) offers an M.A. in Communication but does not include graduate study in rhetoric. Dr. Cynthia-Lou Coleman, Chair of the Department of Communication at PSU, describes the OSU program as “distinct” from the PSU M.A. and asserts that “the OSU program differs from ours at Portland State. Our program is quite broad in scope, and we offer no courses in rhetoric, argument, conflict and negotiation.” She cites that electives may be the only possible points of overlap because “[i]n terms of requirements, the programs are quite different and I see no overlap between the PSU master’s program and the one proposed at OSU.” According to its department website, PSU’s Department of Communication has 5 full-time,

graduate faculty who hold Ph.D.s in Communication and one faculty member whose Ph.D. is in political science who also serves as a department faculty member. In addition, two fixed-term faculty hold Ph.D.s. In contrast, the department at OSU has 11 faculty with Ph.D.s in Communication, including faculty in both areas of rhetoric and communication.

According to its website, none of the Ph.D. faculty at the Department of Communication at Portland State University focuses primarily on rhetoric and public address. In addition, topics of conflict mediation and resolution are housed in a separate department, the Department of Conflict Resolution, which brings together several disciplines concentrating on peace building, international contexts, mediation and negotiation. PSU's Department of Communication strengths seem to be in mass communication, organizational communication, intercultural communication, and gender communication. OSU's Communication program strengths include conflict and negotiation, classical and contemporary rhetoric, argument and advocacy discourse, persuasion, interpersonal and intercultural communication, organizational communication, and media aesthetics. The OSU program provides a significantly different program to students who can integrate rhetoric and communication combining, for example, contemporary rhetoric, conflict negotiation, advocacy discourse, organizational communication, media aesthetics, and intercultural communication.

b. Program Cooperation with Existing Programs: While the departments at PSU and OSU share some concentrations, each has developed unique curricular areas. Graduate students at either institution could benefit from the individual strengths of the other department. We envision working with PSU so that M.S./M.A. students could, when feasible, take some course work at the sibling institution. OSU students could enroll in specialty courses offered by PSU faculty and PSU students could elect from the range of OSU rhetoric courses not otherwise available to them.

c. Projected Impact on Other Institutions' Enrollment: The M.S./M.A. program we propose will not draw students away from PSU because the nature of the programs is critically different. In addition, students will be deterred by the geographic distance between PSU and OSU. Since interaction between the programs will likely be constituted of particular offerings used only by certain students in each program, an M.S./M.A. program at OSU might contribute some modest course enrollment at PSU and vice-versa.

Resources

10. Faculty

a. List of faculty

i. Recurring appointment faculty (e.g., tenure-track)

Dr. Judith Bowker, Associate Professor, Ph.D., University of Oregon (gender and family communication, communication theory, interpersonal communication)

Dr. Bobette Bushnell, Instructor, Ph. D., Oregon State University (small group communication, nonverbal communication, training)

Dr. Natalie Dollar, Associate Professor, Ph.D., University of Washington (communication theory, intercultural communication, ethnography), OSU-Cascades campus

Dr. Trisha Goodnow, Professor, Ph.D., University of Pittsburgh (visual rhetoric, rhetorical criticism, semiotics, argumentation)

Dr. Robert Iltis, Associate Professor, Ph.D., University of Wisconsin (public address, argumentation, classical rhetoric, propaganda, ethics of rhetoric)

Dr. Mark Moore, Professor, Ph.D., Indiana University (rhetorical theory, rhetorical criticism, media criticism, environmental rhetoric, argumentation)

Dr. Mark Porrovecchio, Assistant Professor, Ph. D., University of Pittsburgh (rhetoric, history of speech communication, pragmatism, forensics).

Dr. Elizabeth Root, Assistant Professor, Ph.D., University of New Mexico (intercultural communication, instructional communication, qualitative research methods)

Dr. Gerald Voorhees, Assistant Professor, Ph.D., University of Iowa (new media communications, rhetorical theory, rhetorical criticism)

Dr. Gregg Walker, Professor, Ph.D., University of Kansas (conflict, negotiation, mediation, research methods, argumentation, organizational communication)

Beginning Fall 2012, we will have an additional faculty member in Organizational Communication. An offer has been made and is in the negotiation stage.

ii. All **COMM** faculty who hold a Ph.D. are members of OSU's graduate faculty. The Communication area also employs a number of regular, part-time faculty.

b. New Faculty Needed: None.

c. New Support Staff Needed: None; this program can be maintained with current support personnel.

11. Reference Sources

a. Library Resources Audit:

According to the Category I Library Assessment Guidelines, the library audit occurs "after completion of a draft review meeting with Academic Planning and Assessment." Loretta Rielly, Humanities/Social Sciences Librarian, explained she would do a preliminary assessment after the proposal was approved at the college level.

12. Facilities, Equipment, and Technology

a. Necessary Unique Resources: None.

b. New Resources Needed: None.

13. External Reviewers

Ann Gill, Colorado State University*
David Henry, University of Nevada, Las Vegas
Dennis Jaehne, San Jose State University
Michael Salvador, Washington State University*
Benjamin Broome, Arizona State University
Betsy Wackernagel-Bach, University of Montana

*OSU Peer institution

14. Budgetary Impact

a. Estimated Cost of the Program: The budget outline sheet will be presented in accordance with the Category I Guidelines after the conclusions following a draft review meeting with Academic Planning and Assessment.

b. Required Federal or Other Grant Funds: None.

c. Budget Impact: No new resources are needed. The M.S./M.A. program in Communication can be supported without compromising existing Communication undergraduate and minor programs. The curriculum changes will include adding 4 new graduate courses (a total of 12 credits) to the Communication curriculum; one graduate course (**COMM 524**, a total of 3 credits) will be eliminated from the regular curriculum and subsumed into the graduate seminar rotation.

The addition of those four course slots can be accomplished without new resources. Two years ago the department began offering a 3-credit graduate-only seminar; that course could be used as one of the 4 slots necessary. Two more slots could be gained by changing faculty options for **COMM 412/512**, a topics course. During 2006-7 and 2007-8 **COMM 412/512** was offered more than twice a year. Reducing 2 faculty options for that course opens 2 more course slots that could be used for the M.S./M.A. Eliminating 2 sections of **COMM 412/512** does not eliminate any regular graduate or undergraduate courses, but it does reduce the number of 400-level courses available for undergraduates. This reduction may not create enrollment issues; distribution of undergraduates to other 400-level courses may occur. Faculty agreed that if pressure for 400-level courses increases (as evidenced by sizes of waiting lists for courses), slightly larger class sizes for other 400-level courses being offered (an increase of 1-3 students per 400-level course) could constitute a possible solution. This plan, then, accrues 2 new slots by eliminating 2 412/512 offerings and 1 slot by subsuming the current, stand-alone graduate course for a total of 3 new course slots on existing schedules. In addition, as noted earlier, with the restructuring we have gained two new courses with the reduction of the Chair's course release. We have also gained one-half FTE in the tenure rank, adding three additional slots.

The last course slot necessary to implement this M.S./M.A. program can be created by reducing a required, basic theory course (**COMM 321**) from 4 to 3 offerings a year. This course is taught by full-time faculty. Until 2004, **COMM 321** had been offered regularly 3 times a year;

the department increased the offerings to 4 times a year in 2004 to reduce enrollment pressure on the course. The course now is offered regularly both during the summer session and online, so the enrollment pressure has decreased and the course may be reduced again to being offered 3 times a year. The scheduling slot made available by that reduction will be used for the fourth graduate-only course for this M.S./M.A.

The only other costs associated with this degree are administrative costs; current departmental infrastructure—including the Graduate Director and office management--is sufficient to accommodate this change, so no new resources will be necessary.

Appendix A

Three syllabi for example courses for COMM 590 and 591

COMM 590: Communication and the Environment

COMM 590: Feminist Rhetorical Theory

COMM 591: Social Identity in the Workplace

SYLLABUS SAMPLE 1

COMM 599: Topics in Speech Communication: Communication and the Environment

3 Course Credits: Course meets 3 hours per week in lecture

Spring 2006

Office Hours: Tuesdays, 2:00-3:00pm; Thursdays, 2:00-4:00pm

Course Description

Communication and the Environment is designed to help students become more critical producers and consumers of environmental discourse. Through the course readings, class discussions, student research papers and assignments, the course explores the concepts of "nature" and the "environment" with respect to what they entail as communication phenomena. The course also considers the problems we face as humans communicating about the environment, along with the conflicting values, meanings, and modes of discourse that define nature and construct socially what we understand as the environment. To do this, the major premises and arguments for and against conservation and environmentalism will be examined, as well as the ways in which these premises and arguments influence environmental policy and the environmental movement as a whole. Therefore, we will study the natural environment as it is described through various types of discourse by focusing on the ways in which communication creates, shapes, and maintains our perceptions of reality and/or social reality. In doing so, the course will cover the following four units in this order: 1) A Communication Perspective of the Environment; 2) Environmental and Conservation Argument; 3) Communication and Environmental Policy; 4) Communication and the Environmental Movement.

Learning Outcomes

Upon completion of this course, students can be expected to:

- analyze substantive discourse and issues in public environmental controversies.
- critically examine how environmental arguments implicate audiences and structure audience responses to environmental problems.
- synthesize and locate sound ethical arguments for conservation and environmental policy-making.
- be more critical producers and consumers of environmental discourse with greater oral and written, environmental communication proficiency.

- evaluate and apply environmental communication skills and knowledge of environmental conflicts to the practical challenges of current environmental problems.

Course Schedule

Week One: April 4

- Introduction to the course.
- A Communication Perspective for the Environment.
- INSTRUCTIONS FOR ORAL PRESENTATION

Week Two: April 11

- Communication Perspective for the Environment.
- Environmental and Conservation Arguments.
- Read: KB&H, Chapters 1, 2, & 3. ECY, Chapter 1.
- INSTRUCTIONS FOR TERM PAPER ASSIGNMENT
- INSTRUCTIONS FOR LEADING GROUP DISCUSSIONS

Week Three: April 18

- Environmental and Conservation Arguments.
- Read: KB&H, Chapters 4 & 5; ECY, Chapter 1.

Week Four: April 25

- Environmental and Conservation Arguments.
- Read: ECY, 10, 12 & 2.
- LEAD GROUP DISCUSSIONS

Week Five: May 2

- Communication and Environmental Policy.
- Read: KB&H, Chapter 6; ECY, Chapters 8 & 11.

- GROUP DISCUSSIONS
- ORAL PRESENTATIONS

–Term paper purpose statement due

Week Six: May 9

–Communication and Environmental Policy.

–Read: KB&H, Chapter 7; ECY, Chapter 6.

- ORAL PRESENTATIONS
- GROUP DISCUSSIONS

Week Seven: May 16

–Communication and Environmental Policy.

–Read: KB&H, Chapter 8; ECY, Chapter 4.

- ORAL PRESENTATIONS
- GROUP DISCUSSIONS

Week Eight: May 23

–Communication, Environmental Policy, and the Environmental Movement

–KB&H, Chapter 9; ECY, Chapters 7 & 9.

- ORAL PRESENTATIONS
- GROUP DISCUSSIONS

Week Nine: May 30

–Communication and the Environmental Movement.

–Read: ECY, Chapters 3, 5, & 9.

- ORAL PRESENTATIONS
- GROUP DISCUSSIONS

Week Ten: June 6

–Communication and the Environmental Movement

–TERM PAPER DUE, WITH INFORMAL PRESENTATION

Key to Abbreviations: KB&H = Kempton, Boster, & Hartley text

ECY = The Environmental Communication Yearbook, vol. 1

Assigned Reading

Willett Kempton, James S. Boster, and Jennifer A. Hartley, *Environmental Values in American Culture*. Cambridge, Mass.: The MIT Press, 1996.

The Environmental Communication Yearbook, vol. 1. Susan L. Senecah (Ed.). Mahwah, NJ: Lawrence Erlbaum Associates, Inc, 2004.

Course Assignments

Oral Presentation: Each student will be assigned a class date for the purpose of giving an oral presentation and then leading a question/answer period on a particular aspect of a current debate over a perceived environmental problem. The environmental problem to be considered for this class will be on the controversy of global warming. Students will provide a full-sentence outline to class members on the day of presentation that will include at least seven sources on the topic outside of class readings. Students should expect to speak for about 15-20 minutes and then lead a question/answer period for about the same length of time. The overall presentation will be worth 100 points. More specific details will be given with the instructions, but keep in mind that the focus of the presentation should be kept on the way that communication plays a role in the nature of the controversy. Attendance on presentation days is mandatory.

Class Discussion Leadership: Each student will lead two class discussions on two of the assigned readings in the syllabus. More specific instructions will be given during the second week of class but students should give a summary or overview of the reading assignment and then lead a discussion of it based on a set of discussion questions prepared in advance. On the day that you lead your discussion you will turn in a copy of the questions with a summary of what you think would be a fitting response to each question. Of course, the success of such an assignment will demand that all students have completed the reading assignment to be discussed and are prepared to engage in discussion. Each assignment is worth 50 points. Attendance on days when group discussions are lead is mandatory.

Term Paper: For this paper, each student will select a current and controversial environmental problem, examine that problem, explain how communication plays a role in it, and then offer potential ways in which communication can play a role in its resolution. The paper will be worth 150 points. Specific details will be given with the instructions during the second week of class.

Point Value for Assignments

| | |
|----------------------------|---------------------|
| Oral Presentation | 100 |
| Discussion Leader (2 X 50) | 100 |
| Term Paper | <u>150</u> |
| | 350 points possible |

Grading Scale

| |
|---------------|
| 315-350 A/A- |
| 280-314 B+/B- |
| 245-279 C+/C- |
| 210-244 D+/D- |
| -209 F |

Course Requirements

Oral presentations must be given on the assigned date and accompanied by a full-sentence outline to be distributed in class on the day of the presentation.

Group discussions to be lead will cover various assigned class readings that will include a list of discussion questions prepared in advance of the day discussions are conducted.

The topic for the term paper must be approved by submitting a purpose statement at midterm and the term paper itself must be turned in on the assigned date, in class.

Late presentations, discussions, and papers will only be accepted with the instructor's approval, and if approved there will be an appropriate point-value reduction for the assignment.

All graded written materials (outlines, papers, etc.) must be typed.

Due to the amount of group interaction and oral presentation, class attendance is essential to the success of each individual student and to the course as a whole.

All electronic devices and cell phones must be tuned off and put away during class.

Statement Regarding Students with Disabilities

“Accommodations are collaborative efforts between students, faculty and Services for Students with Disabilities (SSD). Students with accommodations approved through SSD are responsible for contacting the faculty member in charge of the course prior to or during the first week of the term to discuss accommodations. Students who believe they are eligible for accommodations but who have not yet obtained approval through SSD should contact SSD immediately at 737-4098.

Statement on Academic Dishonesty

Academic dishonesty is absolutely not tolerated. Link to Statement of Expectations for Student Conduct, i.e., cheating policies <http://oregonstate.edu/admin/achon.htm>

SAMPLE SYLLABUS 2

COMM 590
Feminist Rhetorical Theory
Fall 2010

Dr. Trischa Goodnow
204 Shepard Hall
737-5392
tgoodnow@oregonstate.edu
Office Hours: M 11:30-1, W 9-10 and by appointment

Objectives: During the course of this term we will explore the entrance of a feminist perspective into the realm of rhetorical study, examine the ways in which feminist theory has been articulated as rhetorical theory, and consider feminist rhetoric itself as an alternative to the traditional patriarchal rhetoric studied since the beginning of the art.

Learning Outcomes: Upon completion of the course, students will be able to

1. Identify and explain points of difference between traditional rhetorical theory and feminist rhetorical theory
2. Explain constructs that support a particular, feminist rhetorical theory
3. Locate and identify alternative ways to engage points of difference with others, ways juxtaposed to the traditional means espoused in standard, public speaking protocols
4. Articulate criticisms of feminist theory

Text: Course packet provided by University Readers. Here is the purchase information: Detailed instructions are available at www.universityreaders.com/students/instructions/

Your custom course materials published by University Readers contain required readings that have been carefully selected for this course. If you hope to do well in this course, it is highly recommended that you purchase the course pack and always stay on top of your reading. To purchase your course materials, please visit University Readers at www.universityreaders.com and click the white "STUDENTS BUY HERE" button located within the red "Students" section in the upper-right corner of our home page. You will create an account and be prompted to choose your state and institution. Easy-to-follow instructions will lead you through the rest of the purchasing process. Payment can be made by all major credit cards or electronic check. Your order is then processed and shipped out to you (orders are typically processed within 24 hours and often same day). Shipping time will depend on the selected shipping method. If available for your course, you will also be emailed instructions on how to download a FREE 20% PDF download so you can get started on your required readings right away. If you have any difficulties, please e-mail orders@universityreaders.com or call 800.200.3908.

You should bring your reading packet to class.

Assignments:

Grades will be based on the following assignments:

| | |
|-----------------------------|---------|
| Reaction Papers/Question | 100 pts |
| Literature Review | 200 pts |
| Final Paper | 300 pts |
| Presentation | 100 pts |
| Non-Speech Experience Paper | 50 pts |

Reaction Papers: Each week on Monday you will turn in a one page, typed and proofread reaction paper to the readings. This paper is due by the end of class. If you are not in class on a Monday, the reaction paper must be in my mailbox by the time I return from class. I will not accept late papers or papers via email. This paper should NOT be a summary of the reading. Nor should it be an assessment of the quality of the reading. Rather, you should engage the material. What do you think about the reading? What does it make you think about? Do you agree or disagree? Is there something that confuses you? The purpose of these papers is first, to make sure you've done the reading, but secondly, and more importantly, to make sure you've thought about the issues raised. This will lead to more productive discussions in class. To gain full points on the reaction papers you must illustrate that you're thinking critically about the readings. The papers will be graded with the following points: 10 points means you've done a good job engaging the material, 5 points means you've done an adequate job and zero points means you barely tried. You must also proofread. If there are more than two errors, I will return the paper to you with zero points. There are eight weeks of readings. The Foss and Griffin reading is due Thanksgiving week. During the first month of the term (by Oct. 31), you should come talk to me in my office. We'll have a little meet and greet in my office during the first two weeks that will count for the first reaction paper. This will be the 10th reaction paper. Each one is worth 10 points. Total: 100 points. **I WILL NOT ACCEPT REACTION PAPERS LATE OR VIA EMAIL!**

Literature Review: You will choose either one Feminist theory or one Feminist theorist that we study this term and conduct a literature review. If you choose the theory option you will examine the theory and reactions to it and ways in which others have used the theory. If you choose the theorist you will examine their body of work and how they have developed their theory(ies). This is a 7-10 page paper that follows the guidelines below except for the number of sources. This should be appropriate to the topic. This paper is due November 19.

Final Paper: You have several options for the final paper. These are to be typed and proofread. All options require a page length of 15 to 20 pages. Pages should be numbered with one inch margins. You should NOT have a cover page. The first page should ONLY include the title of your paper. The final page should include your name. Each paper will include a MINIMUM of eight outside sources. These sources should be scholarly sources. The following will NOT be counted toward the required total of sources: wikis, dictionaries, any readings from the course packet, more than one source from a webpage. You may include the above, but they will not count toward the required total. If you use a source, cite it. If I discover plagiarism (using another person's words or ideas without giving them credit), you will receive a "0" for the

assignment. You should cite these sources according to the APA style manual. If you do not know how to cite according to this style, you can reference the Department of Speech Communication website: <http://oregonstateedu/dept/speech/writing.html>. You can also access the APA style manual at the library. Failure to follow this style manual or any of these instructions will result in a full letter grade deduction for this assignment.

All essays should follow the following outline: introduction (attention getter, thesis statement, preview of how you will proceed in the paper), the body (this is a clear explanation of two to four arguments you wish to make in your paper with each argument be explained separately) and conclusion (review of main arguments, restate thesis, and concluding statement).

Options:

- A)** Choose one theory essay that we have read this term and refute it. We will read several essays that take issue with previous feminist theory. You should not just parrot these criticisms. While you may share some of their concerns, you should expand their logic, approach from a different angle, or explain your own critiques. The idea here is that feminist rhetorical theory is evolving and no theory is considered a law. Your job here is to challenge assumptions and advance theory by pointing out where a particular theory falls short.
- B)** Choose one theory essay that we have read this term and extend it. Theory is a starting point in the humanities. Consider the essay you've chosen. Are there weaknesses? Are there areas that have not been fully developed? In this paper, you might talk about ways that this theory could be used in areas the author(s) did not think about. The idea here is to think more broadly about the proposed theory.
- C)** Choose one rhetorical theory that you have studied in another class that would not be considered a feminist rhetorical theory. Using theory or theories we study this term draw a comparison between the traditional theory and the feminist rhetorical theory. In what ways are they similar? Where are the differences? Are the theories compatible or are they mutually exclusive? In this paper you will explore the place of the feminist theory in relation to traditional rhetorical theory.
- D)** For the final option, you may choose to explore one piece of contemporary rhetoric using one of the Feminist theories we explore this term. This is essentially a rhetorical criticism using Feminist theory. You will choose one speech act (either verbal or nonverbal/visual) and apply a feminist theory to draw conclusions. The essays on the Grimké sisters, Barbara Jordan, and Bernadette Devlin are examples of this assignment. However, you should not be constrained by methods used in these articles. The purpose here is to test the validity of the theory in practical application.

Papers are due Monday of finals week at 5 p.m.

Presentation: During the course of the term, you will lead a discussion of your topic for the literature review on the appropriate day in class. You will begin with a 15 to 20 minute lecture that covers your research. You will then lead the class in a discussion of the reading for that day.

Non-Speech Experience: One of the arguments that is made in a variety of ways in Feminist Rhetorical Theory is that women often seek alternative rhetorical outlets to public speaking. During the first three weeks of the term, you will experience one of these ways. You have two options: 1) *Birth* 2) *Unraveling the Ribbon*. *Birth* and *Unraveling the Ribbon* are plays sponsored by various organizations and the University Theatre. *Birth* explores the idea of women's ownership of the birth process while *Unraveling the Ribbon* examines how breast cancer impacts relationships. *Birth* will take place on Thursday, Friday, and Saturday Oct. 9-11 at 7:30 in the Lab Theatre and on Sunday Oct. 12 at 2 in the Lab. Your admission is free (you will have to give your name at the box office). *Unraveling the Ribbon* opens the following weekend Oct. 16-18 at 7:30 in the Lab Theatre. Admission is free. Upon seeing one of the shows, you will write a two page reaction paper. This paper should not be about the quality of the production. Rather, the critique should engage the content of the play. How does it communicate its message to the audience? What is the message? How would this differ from a speech on the same topic? Is this a more or less effective way to communicate the message? What are the advantages and disadvantages of communicating through this medium? The paper should be typed and proofread. It is due October 22 in class.

Tentative Schedule

SYLLABUS SAMPLE 3

COMMUNICATION & SOCIAL IDENTITY IN THE DIVERSE WORKPLACE

COMM 591

Department of Speech Communication
Oregon State University
Spring, 2008

Shepard Hall, Room 208
(541) 737-5396
Email: drwalls@orst.edu

Course Overview: A focus on diversity in the workplace responds to demographic changes and anticipates future cultural shifts in the work place by framing diversity as a process and a resource to be leveraged rather than as a problem to be solved. To be successful, managers must learn to integrate different viewpoints to enhance creative problem solving, task performance and leadership ability. In short, the organization of the future will be increasingly heterogeneous. Therefore, many of the key opportunities and challenges for diverse workplaces will center around people from different cultures working together effectively.

Course Credit Hours: 3

Course Objectives:

- ❑ Demonstrated knowledge, synthesis and critical assessment of fundamental theories of social identity and their impact on workplace relations and related outcomes
- ❑ Analysis, evaluation and understanding of theoretical concepts of social identity such that students can make use of and challenge theories of social identity
- ❑ Application and integration of personal experiences with social identity theories and principles via experiential assignments

Course Format: This course will begin with an overview of diversity issues in the workplace. More specifically, the goal of this course is to teach students how to make strategic use of intercultural and other synergies to help organizations improve market penetration, employee engagement, customer loyalty and the bottom line. To this end, we will examine organizational strategies for creating and sustaining a workforce which is inclusive of difference of race, gender culture and personal values.

Course Methodology: Instructional activities consist of both lecture and discussion although I will try to emphasize the latter as much as possible. The success of this course is predicated upon highly interactive methods of teaching. Thus, students who offer original perspectives and who integrate examples from other contexts will be rewarded. This course requires on significant writing assignment as well as several short analytic papers and responsibility for one presentation.

Student Accommodations

Accommodations are collaborative efforts between students, faculty and Services for Students with Disabilities (SSD). Students with accommodations approved through SSD are responsible for contacting the faculty member in charge of the course prior to or during the first week of the term to discuss accommodations. Students who believe they are eligible for accommodations but who have not yet obtained approval through SSD should contact SSD immediately at 737-4098.

Academic Integrity

The highest standards of academic integrity are expected of all students. The failure of any student to meet these standards may result in suspension or expulsion from the university and other sanctions as specified in the academic integrity policies of the individual colleges. Violations of academic integrity include, but are not limited to, cheating, fabrication, tampering, plagiarism, or facilitating such activities.

Assignments

Your Area of Interest/Area of Honest Inquiry/Hot Button/Rationale/Other

During the first part of this course, you are expected to select an article (academic or popular culture), a film clip, or a book or maybe even a picture/photo that focuses on an area of interest to you related to social identity at work. Your topic may be linked to your thesis or project, to something you always wanted to explore or to something that you think is connected to a current event of interest. Your objective is to bring the article to class and conduct a mini-presentation of the issue to the class. Specifically, using 5-7 minutes, overview the topic and then using another 5-7 minutes lead us in a brief discussion about the relevance of the topic to workplace social identity and to our previous discussion of Chapters 1, 2 and 9 in the Allen text. This is considered part of your participation grade and will be assessed largely as "pass/fail" in terms of meeting the basic requirements outlined herein.

Presentation: Leading A Class Discussion

Each student will be responsible for a presentation which will articulate framing questions, offer an interpretive context, and introduce other resources relevant to a specific text, film clip or other course material. The format is flexible and can be, for example, an individual oral presentation, a structured debate with guest speakers or a video you make addressing the issues. This presentation will require you to exhibit careful analysis, creativity, originality and strong presentation skills. In essence, you will be given a portion of the class in which to lead discussion on a specific topic. Your goal is to teach the rest of us; give us some knowledge, awareness and skills that we can use in our professional lives. *See the last page of this syllabus (articles for student-led presentations) for a list of the possible articles from which to choose your class presentation topic. They are available on a first-come, first-served basis.*

Note: This presentation is in addition to your presentation of your major paper, which occurs at the end of the term.

Individual Experiential Paper (IEP): Being Exposed to Diversity

The purpose of this assignment is to expose you to a new situation that required to carefully observe your surroundings and asks you to both describe what you felt and what other individuals might feel about having you among them. Your assignment is to go by yourself (you may not take anyone with you) to a place you have not been before and to observe what you see (and participate if appropriate). Please note that these two conditions (going by yourself and doing something you have not done before) are important. After your field experience, you will write a 4-5 page paper that includes the following:

- ✓ Date and address of where the experience took place
- ✓ Length of time you were there
- ✓ Brief description of the setting
- ✓ Your reaction to the situation in terms of your behavior and feelings
- ✓ The reaction of the other individuals toward you
- ✓ What this experience teaches you about being different from others in your environment
- ✓ How such an experience might influence your development in you were to work in such a setting for a major period of your life
- ✓ Concluding comments

Listed below are some examples of places other students have visited:

- A protestant visits a Buddhist service
- A man takes a “Lamaze” class
- A Caucasian visits a Black church or student organization
- A student of color visits a resource center for a different minority group (e.g., Native American visits Asian cultural center)
- An atheist or agnostic visits any institution of faith (e.g, church, synagogue, etc.)
- A hearing individuals visit a school for the deaf
- A man visits a maternity clinic
- A student visits “dignity village” (Portland) or other local “homeless” shelter
- A younger person visits an assisted living facility for the elderly
- A single person visits a children’s nursery at times to include observation of the dropping off and picking up of children by their parents
- An able person visits student disabled services to learn about the range of disability issues the organization deals with
- Other

Do not choose to visit a setting where you might feel like an intruder into someone’s privacy. In some situations, you may need to get permission to observe the group. Use your good judgment. *Do not place yourself in a situation that is physically dangerous.* Choose a setting that you truly want to learn about so you don’t feel like an undercover agent. The papers are due at the end of

the term and must be double-spaced, and typewritten with 1-inch margins. They will be evaluated on the extent to which they are clearly organized, with no grammatical or spelling errors. In writing your paper, make sure to make specific references to readings and their content and to appropriately reference work when you draw from readings and other literature.

Short Analytic Papers (HBR Case Studies)

For your choice of any 3 of the 5 topics below, develop a focused, cleanly written 2-4 page analysis addressing the issues raised in each question. For each paper, a well-thought out argument is required; to that end, use the questions below as a “jumping off” point for developing your perspective of the issues raised in the case. Each paper is worth 20 points and is due on or near the date the topic is discussed in class.

1. How do stereotypes around leadership styles work to the “disadvantage of both men and women” in “Three Men, Two Women on a Raft?” What really happens in Raft No. 4 to undermine the team’s effectiveness?
2. At the close of “It Wasn’t About Race. Or Was It?”, Jack Parson must come up with an agenda for the Wednesday morning meeting. What are the underlying issues in the case? What should he do?
3. Based on the “Case of the Religious Network Group”, how should corporations “accommodate diverse religious practice and spiritual values” in the workplace setting? If you select #3, you must also do #5.
4. In “Mommy-track Backlash”, what are the work/life balance issues Jessica feels are clouding the waters for her in terms of making an equitable decision regarding her employees? What would you do and why?
5. In “Dear White Boss”, what parallels do you see with the Connor case study? (#3 above). For this case study, respond with a letter of reply as the “white boss.” If you select #5, you must also do #3.

Note: As an alternative to one or more of the suggested topics above, individual students are welcome to propose their own arguments for short analytic papers. These topics must derive from particular course readings. My consent is required before submission.

Participation

Class participation is central part of the learning process in this course. Classes may include discussions, role plays, pre-class/in-class writing, debates and guest lectures. Each student is expected to attend class fully prepared, complete assignment by due dates and contribute to class discussion. Additionally, students are expected to frame appropriate questions in anticipation of question and answer sessions with guest speakers.

Major Paper

Final papers can focus on one of two specific contexts:

1. A specific domestic social identity group
2. A specific organization or industry

Within the context of your choice, you have two options for completing your paper:

Option One involves conducting primary or secondary research on a specific topic of interest to develop implications for practice. For example, you might focus on performance, creativity, innovation or small group performance. Then, using your variable of interest, tell me what specific actions you would recommend be taken or avoided to a) promote and sustain an inclusive workforce, b) make welcome a particular employee subculture or c) more effectively recruit and also retain diverse employees and so forth.

Option Two involves choosing a specific organizational context and using course materials to develop a manual that would provide diagnostic questions for the resolution of conflict due to the integration of specific forms of diversity. Your manual might include suggestions for conflict de-escalation in specific situations and recommendations for conflict management system design, including specific steps an organization might take to anticipate and mitigate potential conflict due to diversity in the first place.

Each student must make a 12-minute presentation of his work. Presentations will be held on the last day of class or in the final exam time slot (not decided yet). Your goal is to teach the rest of us; give us some knowledge, awareness and skills that we can use in our professional lives.

Course Assignments

DRAFT LETTER
9 March 2011 (CLC)

Dear Professor Iltis:

Thank you for contacting the Department of Communication with the news that Oregon State University hopes to house a master's program, and I appreciate the opportunity to review your packet.

Based on the information, the OSU program differs from ours at Portland State. Our program is quite broad in scope, and we offer no courses in rhetoric, argument, conflict and negotiation. Our main core courses engage students in three areas of theory and three areas of methods. Speaking briefly our required theory courses cover (1) Social, Institutional and Media Theories, (2) Cognitive and Relational Theories, and (3) Critical and Cultural Theories. Our three required research courses entail qualitative, quantitative and critical methodologies.

In terms of requirements, the programs are quite different and I see no overlap between the PSU master's program and the one proposed at OSU. Indeed, the only areas where I see similarities are with the electives. For example, you note that each OSU faculty member will teach a seminar in her or his area of expertise, such as intercultural communication. To that end, we do have graduate faculty who teach, for example, intercultural communication as their area of expertise. But, unlike OSU, we typically teach courses in media studies, political communication, new technologies in mass media, health communication, metaphor, and conversation analysis.

In summary, I find the OSU program distinct from the master's in communication at Portland State, and wish you every success.

/s/ CLC

Subject: RE: Request for Liaison, MA/MS Proposal, OSU

Prof. Iltis:

Thank you for the opportunity to review the materials for the OSU master's program. I will make sure our department graduate advisor and the dean's office gets a copy for their files.

I am happy to write a letter that supports the program, which is substantively different from ours. Your focus in rhetoric, argumentation and conflict makes it quite distinctive. I have drafted a letter (attached): let me know if this meets your needs and, if so, I will send you a clean copy.

Success, Cindy Coleman

From: Iltis, Robert [<mailto:riltis@oregonstate.edu>]

Professor Cynthia-Lou Coleman, Chair
Department of Communication
Portland State University
Portland, Oregon 97403

Dear Professor Coleman:

In September 2001 Professor David Ritchie provided a favorable liaison letter to Dr. Gregg Walker for our department's Master of Arts proposal in Communication. Unfortunately, budget constraints in the College of Liberal Arts required the tabling of that proposal and others in the college. With a more favorable economic scenario the Department of Speech Communication is resubmitting the proposal. I am writing to request again a liaison letter.

We hope to complement your excellent program's focus on Urban Life, Media Theories; Critical, Cultural and Relational Theories and Cognitive Theories. Our proposed program's strengths include conflict and negotiation, classical and contemporary rhetoric, argument and advocacy discourse, persuasion, interpersonal and intercultural communication, organizational communication, and media aesthetics. The O.S.U. program will provide a significantly different program to students who can integrate rhetoric and communication combining, for example, contemporary rhetoric, conflict negotiation, advocacy discourse, organizational communication, media aesthetics, and intercultural communication.

We believe that graduate students at either institution could benefit from the individual strengths of the other department. We envision working with your program so that M.S./M.A. students could, when feasible, take some course work at the sibling institution. O.S.U. students could enroll in specialty courses offered by P.S.U. faculty and P.S.U. students could elect from the range of O.S.U. rhetoric courses not otherwise available to them.

The proposal is fundamentally the same as the one Dr. Ritchie reviewed in 2001, except that we will offer an MS option as well as the MA.

I have attached the current draft of the proposal as well as a copy of your letter from 2001.

It is facile to say that your time is valuable, but it is true. I regret requesting an update of an old letter, but members of the University Curriculum Committee properly reasoned that new liaison letters would be prudent. Too much time has passed.

Of course I am happy to answer any questions you may have about the proposal.

Sincerely,

Robert S. Iltis, Ph.D.

UNIVERSITY OF OREGON

School of Journalism and Communication

December 9, 2010

Robert S. Iltis, Ph.D., Chair
Department of Speech Communication
Shepard Hall 104
Oregon State University
Corvallis OR 97331

Dear Professor Iltis:

Thank you for the opportunity to again review the Master of Arts degree program in Communication.

As I wrote when reviewing the proposal in September 2001, the proposed program's focus on communication and rhetoric distinguishes it from the graduate programs offered in the University of Oregon School of Journalism and Communication.

I will note that the proposal does propose "conflict management and resolution" as a major option. This option may overlap with the UO's Master's Degree Program In Conflict and Dispute Resolution, <http://conflict.uoregon.edu/>.

Sincerely,

Tim Gleason
Edwin L. Artzt Dean
Professor of Journalism

OFFICE OF THE DEAN

1275 University of Oregon, Eugene OR 97403-1275 T (541) 346-3739 F (541) 346-0682 <http://jcomm.uoregon.edu>

An equal-opportunity, affirmative-action institution committed to cultural diversity and compliance with the Americans with Disabilities Act

UNIVERSITY OF OREGON

Dear Dr. Walker:

I am delighted that you have asked me to offer my judgment on your M.A. proposal. As you know, the University of Oregon was forced to eliminate its Speech department, leaving a significant void in our curriculum and leaving students interested in pursuing graduate work in non-mediated communication with very few choices of programs in the Pacific Northwest. I hold a Ph.D. in Rhetoric and Communication, and am qualified to assess the proposed program.

The proposal you have included places a much-needed focus on the study of communication and rhetoric. The program objectives, clearly set forth in the first paragraph of the proposal, would provide graduate students with refined insight on the functions played by symbols in human society. While other disciplines touch upon the symbol, the field of communication and rhetoric places the symbol at the center of research and instruction. Scholars of communication and rhetoric build on a heritage of some 2,000 years, providing theoretical insight and practical guidance on the most important problems in society. Without question, students entering and graduating from OSU with a M.A. in Communication would be well prepared to enter careers in marketing, public and community relations, and a host of other occupations.

As part of the curriculum, the program would offer coursework in organizational communication, rhetoric theory, and a number of other curricular options. Oregon State would have the only systematic graduate program in communication between Portland and Humboldt State University in California. The program would serve a unique function and offer an essential discipline to students.

ROBERT D. CLARK HONORS COLLEGE

1293 University of Oregon · Eugene OR 97403-1293 · (541) 346-5414

Oregon State has the faculty and the facility to offer a graduate degree, and I give my full endorsement of the proposal you have included. You have developed a strong proposal, deserving adoption. If I can be of assistance, I am hopeful you will contact me.

Sincerely,

Collection Evaluation for the proposed MA in Speech Communication

Overview

In response to the Category I Proposal submitted by the Speech Communication Department, I reviewed the monographs collection, including the age of the OSU collection, the number of monographs published in the discipline, use of the current collection as well as the number of titles being published in the discipline. I also compared some of this data with other institutions with programs similar to the one being proposed. For serials, I reviewed the journals with the highest impact factor, compared this to our holdings, usage statistics, journals titles recommended by *Magazines for Libraries*¹, the journals cited by faculty, and journals where our faculty have published. I also solicited journal title recommendations from the faculty. In general, the monographic holdings compare favorably to other institutions but purchasing has declined significantly in the last decade and the collection is not adequate to maintain an MA program. The collection is also missing several core journals in the discipline. This is especially crucial when considering an MA program that requires a thesis.

Comparator Institutions Overview

I reviewed the current collection against 4 comparator institutions recommended by the Speech Communication faculty. These institutions were selected because they are considered a) peer-institutions of Oregon State and b) they offer an MA program that is comparable in course work and course offering to the proposed OSU program. All are MA programs with the exception of NCSU which also offers a PhD. I reviewed the class lists to see if generally the curriculums are comparable. They require fewer credit hours for the MA program than the proposed OSU program.

| Institution | | Credit hours | MA Thesis |
|---------------------|-----------------------------|--------------|-----------|
| Colorado State | Communication Studies | 27 credits | Yes |
| San Diego State | School of Communication | 30 credits | |
| Cal State Fullerton | College of Communications | 30 credits | Yes |
| NCSU | Department of Communication | 27 credits | Comps |

Collections - Monographs

The Category I proposal identifies four areas of concentration for the MA program.

- Persuasion and argumentation
- Conflict management and resolution
- Cultural and intercultural communication
- Organizational and group issues

Speech Communication is interdisciplinary. Students and faculty doing research in speech communication use the collections in the areas of philosophy, rhetoric, political science, history, mass media, psychology, business and education. This assessment used subject areas rather than call numbers due to the interdisciplinary nature of the subject.

The last assessment of the communications collection was done in 2000. That assessment acknowledges that in conjunction with collections in other disciplines “the collection is able to support the department at a much higher level - at a level 3b or 3c” but the summary of that assessment concluded that “the collection is barely able to

¹ Katz, B. & Katz, L.S. (2010). *Magazines for Libraries*. New York: Bowker. Despite the title of the book, this source lists recommended academic and scholarly journals as well as magazines in many different disciplines.

support Masters level research and should be brought to and maintained at a 3c level.² Overall, the picture is one of an aging collection unable to keep up with publishing trends.” Since then, the number of monographs purchased for the collection has decreased in all but a few areas which makes is unlikely that the collection is now at the 3c level.

Comparing our holdings to other libraries is not a perfect indicator, since we do not have collection ages for these institutions and we do not know which of those titles are for graduates or undergraduates. I used selected Library of Congress Subject Headings, based on the areas that the program wants to emphasize, to make the comparison. This indicates that there are gaps in our collections. Overall, OSU has from 58-93% of the number of titles owned by the comparator institutions depending on the subject area. The largest gaps (under 55%) are in **conflict management, crisis management, discourse analysis, mediation (international), negotiation, and visual communication**. Our collection in the subject heading of communications is equal to Cal State Fullerton but less that Colorado State (82%), San Diego State (74%), and NCSU (70%). See Appendix A for OSU holdings compared to peer institutions.

Speech Communications is a discipline that still relies on monographic literature. This based on a conversation with the Speech Communications faculty and the library use statistics for selected subject headings. Usage of monographs is quite high, indicating that the need for a healthy book budget to continue the support of the program. See Appendix B: Use Statistics. Access to print materials (books, videos) can always be supplemented with Summit and Interlibrary Loan materials. However, there are always costs involved with Summit and Interlibrary Loan and the OSU Libraries cannot be only a borrower but also needs to be a lender in the alliance. To rely solely on other collections for books is not advisable.

Since we are purchasing far fewer items than in the past, we are also looking at an older collection which is an area of concern. In some areas of the discipline, such as the history of rhetoric, this is not a major problem but it is in political discourse, mass media and visual communication, for example. MA students and faculty will require access to the latest research. Again, I used subject headings rather than call numbers. In all but 3 areas, **mass media, rhetoric--philosophy, rhetoric--political aspects (United States)** and **visual communication**, the number of books purchased has declined by an average of 33% between 1991-2000 and 2001-2010. See Appendix C: OSU Breakdown by Age of Collection.

I searched YBP, our book vendor service database, to get an overview of how many titles were published for certain Library of Congress subject areas in 2009, 2008 and 2007 to see if the number of items publish has increased, decreased or remained stable. In all areas the number of titles published has increased from anywhere from 27% to 100% (average of 240 titles in selected areas). See Appendix D: Monographs published in selected areas in the last 3 years.

The current book budget for Speech Communications is:

| | |
|--------------|------------------------------------|
| Firm | \$995 (12 books/year) ³ |
| Approval | \$8,700 (112 book/year) |
| Total | \$9,695 |

Firm order books are selected by the subject librarian or used to purchase faculty requests. The approval books come in under the YBP approval plan and are primarily university press titles.

I asked several of the peer- institutions⁴ about their budgets for Speech Communications but only one was willing to provide the information. Again, the interdisciplinary nature of the study makes it hard to compare budgets.

² Conspectus Level 3c is considered the level necessary to support advanced study in an MA program

³ Average cost of a social sciences monograph is \$77. Per YBP Annual Book Price Update 2009/2010.

⁴ The librarian asked me not to include the institution's name.

| | Institution A |
|----------|------------------------------------|
| Firm | 3,000 (30 books/year) ⁵ |
| Approval | 3,500 (40 books/year) |
| Students | 36 |

The OSU budget is quite comparable for purchasing scholarly and academic sources (YBP Approval) but Speech Communication also requires trade publications. If we want to maintain the collection and keep up with publishing output, I recommend supplementing the firm book budget by 50% raising the book budget to \$1,500. This would allow us to purchase an additional 20 books per year. In the first 2 years, we can build up the areas which are currently less well developed and then use the funds to improve the collection overall in the coming years. This should help create a robust collection and we can continue to supplement the collection with Summit and Interlibrary Loan.

Recommendations:

- Increase the firm order book budget by \$500.

⁵ This librarian estimated the cost of a title at about \$98.

Collections-Serials

The last assessment of the Communications collection was done in 2000. The summary of that assessment concluded that “the journal collection is very low - an absolute minimum to support our programs. “ As with all other programs, Speech Communication has had serials cancellations in the last few years.

To review the journals holdings, I

1. Used Journal Citation Reports to see which journals have the highest impact factor⁶ and compare this to what titles OSU owns
2. Reviewed where our faculty are publishing
3. Reviewed what journals the faculty are citing in their research
4. Reviewed ILL statistics to see what faculty and students in Speech Communication are requesting most frequently
5. Reviewed list of journals recommended by *Magazines for Libraries* for Communications

Indexes and Abstracts

Discoverability is not as difficult as it used to be with the advent of Google Scholar. It is much easier to locate citations to articles in journals that are not included in a major index but a search in Google Scholar will not locate all of the literature on a given topic. Access to the major indexing sources is a must especially for an MA program where comprehensive research is required.

Magazines for Libraries lists the recommended journals for a specific discipline. It also includes where these journals are indexed. There are 52 indexes listed. Not all of these are completely relevant, such as the *American Bibliography of Slavic and East European Languages* or *Index Islamicus*, but appear on the list because a specific journal is indexed there. *Magazines for Libraries* lists the following as important indexes for communications related topics: America, History and Life, ComAbstracts, Linguistics and Language Behavior Abstracts, MLA, Peach Research Abstracts, PsycInfo, Sociological Abstracts, Social Sciences Citation Index, Social Sciences Abstracts, and Violence and Abuse Abstracts. See Appendix E: Databases for Communication Studies for a complete list.

OSU provides online access to all of these except Peace Studies Abstracts, Social Sciences Abstracts and Violence and Abuse Abstracts. There are no journals indexed in these databases that are not indexed elsewhere. Other relevant indexes to which OSU has access includes Communications and Mass Media, Education Research Complete, Education Reference Complete, Psychology and Behavioral Sciences Collection, Psychology Collection, Social Services Abstracts and Women's Studies International. We have access to the major indexes and do not need to purchase any additional databases. We do need to make sure, however, that databases that are crucial to communication studies are maintained.

Serials

Serials are always a challenge since they are an ongoing financial investment and costs generally increase every year. We can use Interlibrary Loan to supplement journal needs but this too can become expensive and may even be more expensive than actually purchasing the journal itself.

⁶ This is a quantitative measure that reflects the frequency with which the "average article" in a given scholarly journal has been cited in a particular year or period. Used in citation analysis, Impact Factors are calculated each year by the Institute for Scientific Information.

I compiled a list of 105 journals based on the factors of use⁷, impact, citing and publishing by faculty, recommendations by faculty, interlibrary loan requests and recommendations by *Magazines for Libraries*. Of those journals, OSU libraries does not own 38 titles (27%), either in print or online, which is not an unreasonably large number. However, there are some journals that are high impact and high use that OSU does not have and should acquire to support the program. See Appendix F for a Journal Summary including the selection criteria.

For the high impact journals, as determined by Journal Citations Reports, OSU Libraries owns 21 out of 55 titles (38%). Two of these titles are particularly important since they also have the highest impact factor; *Journal of Computer Mediated Communication* and the *Journal of Communication*.

Interlibrary Loan data indicates there were over 400 interlibrary loan requests for communication related journals in 2009. The data cannot tell us who requested the item (which department) but does tell us if the person is undergraduate, graduate or faculty. Of the 400 requests, 247 were from faculty or graduate students (62%). Of the 15 top requested journal articles, we do not own 8. Several of these journals are high impact journals. Journals with the highest number of interlibrary loan requests were:

| Journal Title | OSU Holdings /online | OSU holdings /print | Impact factor | times cited by OSU faculty | times OU faculty published | 2009 Uses | 2010 Uses | ILL(Fac/Grad) |
|---|-----------------------|----------------------|---------------|----------------------------|----------------------------|----------------|-----------|-----------------|

| Southern Communication Journal | 1997- | 1988-2006 | | 1 | | n | n | 5 |

OSU Libraries had access to several Wiley journal packages in the past through a consortial agreement. This agreement ended in 2009 and OSU lost access to some important, high-impact journals in the field. These include Communication Theory, Human Communication Research, Journal of Communication, and Journal of Computer Mediated Communication. All four are Wiley titles. Three additional titles that are high impact or have been recommended by the faculty. The high impact journals are also the most expensive but need to be considered if we are to support a MA program.

⁷ Usage data is not available for all titles

⁸ Not available

| Journal title | Holdings | Impact factor | # of times cited by OSU faculty | # times published in | 2009 Uses | 2010 Uses | ILL (Fac/grad) | Cost |
|---|-----------------------|---------------|---------------------------------|----------------------|-----------|-----------|----------------|----------------|
| Journal of Communication | 2006-2009 (Cancelled) | 2.415 | 27 | 2 | 131 | 81 | 9 | \$1,034 |
| Journal of Computer Mediated Communication | 2006-2009 (Cancelled) | 3.639 | | | n | n | | \$1,034 |
| Human Communication Research | 2006-2009 (Cancelled) | 2.2 | 6 | 1 | 73 | 41 | | \$1,034 |
| Communication Theory | 2006-2009 (Cancelled) | 1.208 | 2 | 4 | 16 | 8 | | \$1,138 |
| Negotiation Journal (Faculty recommendation) | 0 | 0.725 | | | | | | \$780 |
| Environmental Communication: Journal of Nature and Culture (Faculty recommendation) | 0 | 0.185 | | | | | | \$413 |
| TOTAL | | | | | | | | \$5,433 |

Putting together all of the criteria of use, impact, citing and publishing, interlibrary loan requests and faculty recommendations, there are 6 titles I recommend adding to the collection.

Recommendation:

- The library does not need to purchase any additional databases/indexes.
- Purchase subscriptions to:
 - Journal of Communication
 - Journal of Computer Mediated Communication
 - Human Communication Research
 - Communication Theory
 - Negotiation Journal
 - Environmental Communication: Journal of Nature and Culture

Summary

The library collection is currently small but provides a good beginning foundation for an MA in Speech Communication, especially when it comes to the monographs. The journal collection requires some additional resources. If we want to maintain and grow the library collection for Speech Communication and support a growing student population, I recommend the following:

| | |
|--------------|--------------|
| Monographs | \$500/annual |
| New Journals | \$5,433/year |
| Total | \$5,933 |

April 20, 2011

To: University Curriculum Council

From: Robert S. Ittis, Department of Speech Communication

Subject: Liaison Responses for MS/MA Proposal

Please note that we have included our responses to liaison letters in the liaison pdf's. We incorporated responses to points raised by the liaisons into the proposal that the CLA Curriculum Committee approved.

Hello Gary,

I hope your summer has gone well also.

You are correct – we approved the MA, MS in Communication proposal at our last meeting.

There were no fundamental budgetary issues with this proposal – all members in attendance voted to approve the proposal. Please use this email as the formal written confirmation of the FY11 BFP Committee's approval of this proposal.

Thanks,
Steve Hoelscher
541-737-6631

To the Graduate Council: Responses to questions received October 20, 2011

1. We were not able to find the responses to CLA Liaison.

Responses to the CLA liaisons were integrated into the text of the proposal. For clarity, we have attached copies of both the liaison comments and our responses to those comments. Please note in our responses the specific item and line for each reply or change we made.

2. We were confused by a statement at the bottom of page two of the English Liaison document. The liaison letter indicates that when graduate students name Speech Communication as both their first and second areas, they complete their masters' work using only 9 credits outside the department. Yet page 12 of the proposal states that these students earn 36 of their 48 credits from the Communications department. Please explain the disparity, and how this meets the MAIS requirement of 15 credits from each of the three areas.

The confusion may stem from two points: the 36/48 is an average and the 15-credit presumption is incorrect. After we explain these figures, however, we also will explain how these figures must now be adjusted to reflect changes in the MAIS program, changes that occurred after this proposal began its journey through the university system.

First, the 36/48 comparison cited in the observation above is explained in the text as an average based on the average ratio drawn from the 3-year record of students who named Speech Communication as 2 of their 3 areas. The statement reads that "[t]hese students earn approximately 36 of their 48 credits from this department." In the MAIS program operating at the writing of this proposal, some 2-area students earned as many as 39/48 credits from our department; others earned fewer than 39/48. The average was 36/48. We were demonstrating the existing reliance by 2-area, MAIS students on our program for 4/5 of the courses they use to complete their degrees. Our argument throughout the proposal is that 1) we already are providing a significant proportion of a 2-area graduate students' degrees and 2) the majority of our MAIS students are 2-area Comm students. These figures were evidence to support our argument.

With limited changes in our program, we can offer to these students—who are at present trying to maximize their work in our discipline—an MA/MS focused on Speech Communication. Those curriculum changes on our part also would open new possibilities for us to attract prospective graduates from across the nation who are looking for an MA/MS program in Speech Communication. We make these arguments in our proposal.

The second part of your question—and the second part of the confusion with these figures--results from an inaccurate presumption. As cited below, at the time of the writing of this document and also after the recent MAIS changes, the MAIS required a minimum of 9 credits in each of the 3 fields of study rather than 15 as cited in the question. Therefore, if a student elected two areas of Comm, that student could complete as many as 39 credits divided between the two Comm areas, taking only 9 more credits outside Comm in the third

area.

Program Requirements

The Master of Arts in Interdisciplinary Studies (MAIS) degree is granted for attainment of broad, advanced knowledge and achievement integrated from three fields of study. Any graduate major or minor may serve as a field for this degree. Two of the three fields may be from one department if the areas of concentration within these two fields are different. **A minimum of 9 credits in each of the three fields of study is required.** The degree requires a minimum of 49 credits, including 4 credits of course work on interdisciplinary research methods.

As the third part of our response to your inquiry, we will explain how these figures must now be adjusted in this MA/MS document to reflect changes in the MAIS program. The MAIS requirement of total credits has changed since this document was submitted to the council; the “48” credit requirement has changed to “49” in the document and will be used in this answer as the minimum graduate credits required for an MAIS degree. In addition, the MAIS program now requires that 4 of those 49 credits consist of 3 credits of IST 512 and 1 credit of IST 511. As a consequence, MAIS students now will divide their 3 areas of concentration among 45 credits (instead of the 48 credits in the old program). At present, then, a 2-area Comm graduate could enroll in as many as 36 of 45 credits. Although the actual numbers have changed slightly, the new ratio of the number of credits in Speech Communication to the number of credits in the program changes only very slightly. (Old ratio of $39/48 = .81$; new ratio of $36/45 = .80$)

3. We were not able to find a clear distinction between the MA and the MS degree requirements within the proposal.

In clarifying this point, we have altered the language in 3.b. to include:

“Students pursuing the Master of Arts degree must show foreign language proficiency (including American Sign Language) equivalent to that attained at the end of a second-year university course in that language with a grade of “C” (2.0) or better. The foreign language requirement must be completed before the student takes the final oral examination for the degree.”

We believe the M.A. option is appropriate for students pursuing certain areas of study, such as intercultural communication, or for students intending on pursuing Ph.D. work in Communication or Rhetoric. The M.S. option is appropriate for

students intending the Masters degree to be a terminal degree.

4. The Category 1 lists Fall 2011 as the implementation date. (pg 4, item 1c)

We continue to reset the date to the nearest possible start time; we will continue to make this change as the proposal moves through committees. The date has been changed to Winter 2013.

5. We are concerned with the extensive use of slash courses in the proposal. If the thesis credits are removed from the equation, at least 41% of the course work is slash courses. Since the proposal is for building an MA/MS degree with a projection of 20 students, why not develop the proposal with more stand-alone graduate coursework? What is driving the choice of using slash courses in the curriculum?

We have several responses to this concern. First, the related item in Question 6 has been rectified. We concur that methods courses should be offered at the graduate level as stand alone courses. To that end we have added two methods courses to the required graduate class load, one in Communication Research Methods and one in Rhetorical Research Methods. This increases the required stand alone graduate course load for MA/MS students to 21 required stand alone credits not including the 6-9 thesis credits.

We believe these totals to be consistent with other MA/MS programs in the College of Liberal Arts. For example, English, with 4 credit courses, requires only 4 stand alone courses, allowing 16 credits of slash course work, Women Studies requires 21 stand alone credits with 12-13 credits of slash course work permitted.

Consequently, requiring 21 stand alone credits is appropriate.

6. Related to the point above, we note that the research methods courses are slash courses. We believe it may be more appropriate to use stand-alone graduate coursework for research methods.

See answer to Question 5 and 3A in the proposal.

7. Given the large percentage of slash courses, would this degree program really be an option for OSU Communication undergraduates?

Even without the addition of the two stand alone methods courses, a large percentage of our M.A.I.S. students come from our undergraduate population. Of the current group of MAIS students only one comes from outside of Oregon State University. While this may seem to diminish the need for the degree outside of OSU, the difficulty in recruiting students has been in the offering of the M.A.I.S. degree rather than a discipline based degree.

8. Pg 9, item 3d – Learning outcomes. The third learning outcome suggests

the thesis will integrate the minor area. However, the curriculum proposed does not specify the requirement for a minor area. Please explain.

The curriculum proposed specifies 12 credits of a minor area of study under 3A, Proposed Course of Study.

9. The proposal cites that the GRE will be required for admission, but does not specify minimum scores. How will the results of the GRE be used in the selection decisions? (pg 10)

Because of the recent changes in the GRE exam, we feel that it would be premature to cite a minimum score at this time. However, as we collect data and begin to assess how GRE scores correlate to graduate success we may put in place a minimum score. We would note that the History of Science Masters requires a GRE without citing a minimum score.

10. On page 11 (item 6aiii), the proposal seems to justify the need for this degree program because GTAs are needed to teach lower-division Communication classes. From the university perspective, and giving consideration to the lost revenue associated with tuition remission, it would seem that the use of professional faculty to deliver classes would be more cost effective. The GTA positions should be used to attract highly qualified candidates for the degree program.

We want to attract excellent scholars from our discipline to OSU to pursue graduate course work. Students' opportunities to earn Graduate Teaching Assistantships operate as enhancements for this program rather than justifications for a need. If we can attract high quality students whose interests are directly targeted to Speech Communication, we can focus our courses and our student research endeavors on discipline-based issues and discipline-based inquiries. We have sufficient professional faculty to deliver courses; we would make choices about course instruction based on who can provide the finest service to students and to the department.

11. Is data available on the current enrollments in the UO and PSU Master in Communication degree programs?

The School of Communication and Journalism at the UO accepts between 110 and 120 applicants for ALL of its Masters programs.

David Sandin of Portland State reports they have 40 graduate students currently in their program.

12. Pg 12, item 6b – Needs for employment:

What are the specific labor market projections (Oregon and US) for master's graduates from CIP # 09.0101? (n.b., <http://nces.ed.gov/ipeds/cipcode/cipdetail.aspx?y=55&cipid=88045>)

We attempted to access the information at the site provided. However, no information was available. Further, we would note that this information is not required of degree programs, and, therefore, has not been provided.

13. To the point that many of the MA/MS students will come from the MAIS program:

• Can placement results from past MAIS-dual-communication-area graduates be provided? The proposal makes very general statements regarding demand for graduates from this degree program. It would seem that the placement results of past graduates could be used to demonstrate demand and the types of career opportunities available.

Because we do not have placement results from MA/MS graduates, it would seem that placement results from the MAIS would be misleading as to the desire for the MA/MS degree. We can, however, summarize some trends in our MAIS students and their course of action after receiving the MAIS degree:

Community College or University Instruction: 12

College Recruitment: 2

Ph.D. Programs: 6

Management 4

Law 2

• Is there any data to suggest the number of students who are currently pursuing the MAIS with a concentration in Communication that would opt to switch to a Communication master's degree?

In responding to a query sent to current MAIS students with a Communication concentration, 15 students responded. 12 stated that they would switch should the MA/MS become available, 2 stated that they would not switch because of the status of their current program but would have entered as an MA/MS student had the option been available. One student would not switch as, though Communication is her concentration, her main area is Theatre, which is listed under Communication.

14. Is there data on the number of alumni from the MAIS with a dual concentration in Communication that would have instead opted for a Master in Communication?

We do not have specific numbers at this time. However, three years ago, we did do a survey of 14 then-current MAIS students and who would switch to the MA/MS and at that time all said they would.

15. Pg 14, Item 8. Assessment. The proposal indicates that assessment will be based on individual courses and the evaluation of the thesis. If so, then the learning outcomes need to be mapped to the specific courses in which they are evaluated and assessed. Given the current emphasis within the university on assessment, a more thoughtful program for assessment should be included in the program.

We have revised the assessment plan to be in line with current master's program plans. See section 8 in the proposal.

16. The proposed budget does not seem to reflect the diversion of faculty time for teaching additional stand-alone graduate classes and guiding up to 32 thesis projects. If it is budget neutral with no additional faculty resources, then what impact would this degree program have on the quality of the current undergraduate program?

Since we initially proposed this program, our faculty has changed to the benefit of the MA/MS proposal. We have gained an additional .5 FTE is a Provost's Initiative Hire whom we share with New Media Communications. Further, with the College reorganization, we have gained two courses. This occurred with the elimination of the Chair's position who was granted a three course release for Chair duties. In the current structure, the Department Liaison has only a single course release. Thus, the Department nets two additional courses, for a total of five additional courses since the MA/MS was first proposed. In addition, our increasing presence in e-campus provides ample opportunities for undergraduates in our program.

We are currently chairing 20 MAIS committees. With 10 and 1/2 full time faculty, that averages approximately 2 committees each in the proposed MA/MS program. Given that at certain times, particular faculty have chaired between 5 and 7 committees, three seems reasonable.

When the proposal has been revised, please re-submit the proposal using the CPS. If you wish this proposal to be re-considered at the next Graduate Council meeting on 2 November, we will need the revised proposal one week before that date. However, we would encourage you to take all the time necessary to make a full response to the Council's concerns.

Subject: COMM MA/MS

Hello Kerry,

Our proposal for an MA/MS in Communication has now been pre-vetted by college and university administration, and will be sent to the CLA Curriculum Committee in the next couple of days.

This note is to thank you and our colleagues in English for your thoughtful responses to the proposal. Faculty members across campus have been pressed to do “more with less” and we appreciate the time your faculty devoted toward improving our proposal. You'll find below responses to each comment. My thanks to Judy Bowker in our department, who developed these responses and took the lead in incorporating the responses into the final document.

Overall, we made some changes in the language in the document to reflect our focus on rhetoric in the oral tradition to help clarify our emphasis and delineate it from a focus in rhetoric and composition. For example, we changed the course description for COMM 588 from “a survey of Western rhetorical traditions from 500 B.C. to present. . .” to “a survey of Western rhetorical oral traditions from 500 B.C. to present. . . .”

One writer objected to “d, iv, v, and vi” (meaning 6d). The writer also questioned the phrase, “more communication faculty,” which appears in 6d, ii.

6d. ii. In section 9a of this document, we report the number of graduate faculty for P.S.U. and O.S.U. That section also describes in more detail differences between the P.S.U. and O.S.U. programs. To clarify our description, however, we have changed the language in this M.A. proposal document from “more Communication faculty” to “more Communication graduate faculty.”

6d. iv. We have changed the language in this item from the MA complements “an emerging set of graduate offerings” to “emerging graduate offerings.” Indeed, any new offerings in New Media, Women’s Studies, Ethnic Studies, Political Science, History, English, and Anthropology (as well as other areas including some science topics) complement students’ foci in communication or rhetoric in those areas.

6d. v. Portland State University is the only other public university offering an M.A. in Speech Communication in Oregon. The University of Oregon does not offer this degree. Other options for students such as private universities, online degrees, or entities such as the University of Phoenix may be available.

6d. vi. This statement is true. Students wanting to study rhetoric in Speech Communication at the graduate level must go out of state.

When we wrote “additional courses from other departments,” we intended to convey our flexibility to allow students some leeway in designing their programs. We do not anticipate that a graduate student in this program will draw from other departments except to complete her/his minor or to include in his/her program a specialty course directly related to the focus of the program. In our department, we offer a sufficient number of graduate-only courses for students to comply with the 50/50 Graduate School

requirement.

For example, a student who might use courses in the English Department would be one who desires an English minor for their Speech Communication M.A./M.S. That student would need approval by and authorization from the English Department as well as approval from his/her committee to name English as a minor. The only other use of English courses by students in the Speech Communication M.A./M.S. program might involve an occasional, “specialty” course that uniquely fits the student’s program focus.

The other issue, New Media, operates in a like manner. At O.S.U. New Media is a separate area from Speech Communication. A student might choose New Media as a minor area of study or might include a New Media course (by approval of both her/his committee and the New Media Department) for a specific purpose.

We do not anticipate that graduate students will take many classes in other departments; our curriculum provides a complete menu of courses and a sufficient number of graduate-only courses to fulfill their program needs. We do, however, experience the occasional circumstance when an M.A.I.S. student will draw 3 credits from a department outside the Speech Curriculum; we wanted to extend that same flexibility to M. A./M.S. students.

We added this paragraph to 3b to explain:

“At a minimum, three of these five courses will be offered each fall term: **COMM 520**, one of the survey courses, and the complementary topics course. Each fall, the survey/topics pair will rotate; the rhetorical pair will be offered one fall and the communication pair the next. Each winter, the opposite survey course will be offered and each spring its complementary topics course will be offered. With this rotation, graduate students in the program will have access to five, graduate-only courses in this department in their first years and a sixth course in the fall of their second years, bringing their graduate-only course total to 6 courses (3 credits each), or 18 credits. Together with 9 thesis credits, students would therefore accumulate 27 credits of graduate-only course work. If students include no other graduate-only courses in their programs, they will still meet the 50/50 requirement of the Graduate School. If students enroll in other graduate-only seminars in our department or in their minor areas, they will further exceed the number of courses listed in that requirement.”

Regarding concerns about budget and committee work: the Department of Speech Communication participates in the M.A.I.S. program and offers two areas of concentration, one in Rhetoric and Social Influence and one in Interpersonal and Small Group Communication. Graduate students routinely name Speech Communication as both their first and second areas; those graduate students complete their masters’ work using only 9 credits outside our department. Because we have such a large number of graduate students and such a large number of graduate students who primarily take only our courses, our department has in place the necessary graduate-school relationships and protocols. We have a Graduate Director who screens applicants and convenes conferences or committee meetings as necessary to discuss questions about applicants. Our faculty meets regularly to vet applicants. The Graduate Director acts as advisor to all incoming graduate students; within the first quarter, she/he helps students select an appropriate committee chair. Some of our cohorts of graduate students have created informal “graduate student groups” and the Graduate Director has contributed to those efforts and the meetings of the groups. (The present cohort has not formed such a group.) The Graduate Director also attends regional and national conferences and recruits new students; the Graduate Director (and other faculty) also often sponsors graduate students to attend these conferences both for personal enrichment and for professional experience. Our Graduate Director will continue in that role with the M.A./M.S. No change in budget is

necessary.

Regarding GTAs, the department long has had in place a mandatory, week-long, GTA orientation training before classes begin in Fall; weekly-convened GTA training and instruction during all three quarters; and close supervision through classroom observation as well as oral and written criticisms. Both COMM 111 and COMM 114 are directed by a faculty member who meets with GTAs weekly to supervise their progress as teachers. In addition, the faculty as a whole meets regularly to discuss the program progress of all graduate students. These systems are in place and will not require budgetary changes when the M.A. begins to operate.

With regard to scheduling matters, we have plotted out a two-year model of course schedules (using the example of the schedule we used in the previous two years) and have been successful at incorporating courses necessary for the M.A./M.S. while retaining a sufficient number and kind of courses for undergraduates. Since we have such a large contingent of graduate students completing the M.A.I.S., we already have in place four courses that operate in a fashion similar to the five courses we name in the proposal; in other words, we currently offer COMM 520 and three topics courses. To accommodate the M.A., we need only to change one of our three topics courses to a survey course and add the second survey course. These changes do not accrue any costs.

In addition, we have juggled our curriculum over the last five years several times and have found the right “fit” for the rotating graduate-only courses. To put the M.A./M.S. in place, the sum total increase in number of classes to our curriculum will be the addition of one course. We recognize, however, that the number of courses is not the only change that will occur. We also have considered the qualitative changes to the curriculum, including relative sizes of methodology courses (which we already offer in significant numbers to accommodate undergraduate enrollment) and other upper-division offerings (as we anticipate higher enrollment of graduates in the “slash” courses). We have used these considerations as we organized the new, two-year schedule and have been able to accommodate the changes.

Again, we thank you for the careful consideration of this proposal.

Subject: RE: Liaison Request, Proposed MA in Communication

Hello, Robert.

A big step forward! I read your proposal this morning, and it all looks good to me. English will support you in any way we can in all the transitions. My only worry is the statement that Speech can support the M.A. program without any added budget.

At your convenience, we could get together to talk about the following, among others:

1. The admissions committee work is considerable.
2. GTA orientation and supervision (our Director of Writing now replaces the former Composition Coordinator, and either arrangement involves a reduced teaching load--providing coherence in the GTA-taught courses and guidance/community in the GTA academic experience is a job).
3. English also has a Graduate Coordinator--we are redefining the duties right now--who advises, runs a fall-term M.A. Writing Group to help with thesis preparation, and receives a one-course reduction. The M.F.A. side has a Director, similarly defined.
4. Speech will have a new relationship with the Graduate School--the requirements for the M.A. degree involve 50% 500-only work which thesis and donut-course hours only help to cover, and even without that pressure, scheduling becomes a bit more complicated (Ann Leen in English is a genius at this sort of thing)
5. did someone say "four-credit conversion"?

Cheers,
Kerry

TO: Dr. Kerry Ahearn, Chair, Department of English, Oregon State University
FROM: Robert S. Iltis, Chair, Department of Speech Communication, Oregon State University
SUBJECT: Curriculum Liaison, MA in Communication, Oregon State University
The attached Category I proposal describes a new MA degree program at Oregon State University. In accordance with the liaison criteria in the Curricular Procedures Handbook at Oregon State University, this memo serves as notification to your of our intent to make this curricular change.

Please review the enclosed/attached materials and send your comments, concern, or support to me by March 11. An e-mail response will suffice.
Your timely response is appreciated. As per Oregon State University procedures, please note that a lack of response will be interpreted as support.
Thank you for your time and input.

Subject: MA Proposal response

Hello, Robert.

I sent your attachment to selected faculty here, and I will forward you the comments as they come in. My faculty assumes that the proposal will be closely read at PSU and the U of O, among other places, and wants to play a similar role in advance. Please see below.

Cheers,
Kerry

Chair, Department of English

kahearn@oregonstate.edu

On first read, the claims on under "d", iv, v, vi are somewhat questionable. Can it really be true that this there are "more communication faculty" than in any program in Oregon?

Can it really be true (vi) that there are no other degree options for students in "rhetorical theory and practice" in Oregon? We might want to nicely and candidly raise a question about this one by reminding Robert that graduate students can take an MA with emphasis in rhetoric and writing in English, and that we intend to keep this in our revised MA program. There's a point early where "additional courses from other departments" are mentioned. We could ask how they envision drawing upon the resources of courses in rhetoric and composition, advanced writing, rhetorical theory in English studies. Seems relevant since we have a graduate area.

I'm also really curious about how new media fits in. There could be increasing competition for new media students at the graduate level—we ("we," as in the rhetoric and writing group, see this as a huge, huge area, and want to stay involved where appropriate—we're already involved with the writing minor there anyway). The proposal is extremely general on the highly significant point of relations to "other programs emerging in CLA" (see again d, iv, v, vi).

Subject: MA Proposal Response

Hello, Robert.

I paste another response below. Thanks.

Kerry

Chair, Department of English
240D Moreland Hall
Oregon State University
Corvallis, OR 97331
541 737-1634
kahearn@oregonstate.edu

I've looked at the proposal, and have flagged some points for your attention.

It stands to reason that stepped-up attention to student access be seen as a justification for a discipline-based program in

Communication. I note that it is not only COMM 111 but COMM 114 and (some) COMM 218 that may be covered by graduate students in the program.

The proposal does not address pedagogical practicum courses or TA training, although it does make brief mention (7c) of "internships and practica as a common feature of communications programs." In our experience, pre-service orientation and guidance (prior to the fall term of teaching), continuous assessment and training in the first term of teaching are the bare minimums for any peer institution working with grad TAs. Costs associated with pedagogical training and faculty supervision include cost of covering practicum courses and some course down time for faculty charged with scheduling and administration of a multi-faceted discipline-based program in which the whole university is served by well-trained GTAs.

In our experience in English, the quality of grad students is essential to a successful program and effective teaching university-wide. From this standpoint, I am encouraged by the mention of graduate record exams, but minimum scores are not noted.

The proposal does not clarify how the 50/50 grad school requirement will be met. I assume (since they are not in the present catalogue), that new courses ENG 590, 591, 588, 589 are being created (perhaps as well the 2 "research methods courses," although I'm not sure) in order to meet that component. How does the creation of new 500-only courses bear on program costs? What will be a "full load" for faculty supervising GTAs?

I'd like to see some fleshing out around two points in particular on page 10/d/iv, v, vi. Which "emerging sets of grad offerings in CLA" are complemented? The proposal notes that other similar comm. programs in the state (e.g. PSU) do not offer training in the historical depth of rhetorical traditions. However, OSU/English offers a graduate area in rhetoric and writing with appropriate sequences in the history of rhetoric.

We are familiar with some of the differences in rhetoric offered within English departments and communication departments, but we might want to minimize potential overlaps there. Our WR gtas would not be able to meet requisite teaching of writing courses in COMM courses, and perhaps

COMM students would not fulfill the “public address” requirements in our rhetoric and writing advanced courses. Still, we should note that OSU does offer and intends to continue to offer (in our revised MA proposal) a rhetoric and writing graduate strand.

Hope this helps.

Robert, Our Department has reviewed your Cat 1 proposal and we were impressed by the way you plan to organize the curriculum. We would just ask that you take into consideration the presence in Anthropology of courses that would be complimentary, particularly in the area of language and communication.

Good luck with your new MA/MS.

David McMurray

Subject: Liaison request

Hi David,

I'm requesting an expedited liaison regarding my department's MA/MS proposal. The CLA Curriculum Committee noted that we had not sought liaison with Anthropology regarding your department's emphasis in Language and Cross Cultural Communication in your MA program. I'm glad the committee noted the oversight, and apologize for not seeking liaison at the beginning of the process.

Our proposal includes a minor. While the specific outcomes of our respective programs differ, we will encourage students to draw on your coursework as a resource, and to minor in Anthropology.

I'm sending a copy of our proposal.

Subject: MA in COMM

Robert,

It was good to run into you earlier today. I'm excited for the MA program you're proposing. As you know, a sizable number of students in the MAIS degree program are really interested in earning an MA in COMM, and this proposal will allow them to do so.

This will have an impact on applications to the MAIS and our overall numbers, by as much as 30-40%. This is not a problem for me at all. We'll end up with students whose interests will represent a stronger fit with the aims of the MAIS.

Also, I've spoken with Sally Francis about this in the past, as she's been supportive of the idea that the MAIS could decrease in numbers as new masters programs are developed in CLA. I can't speak for the Graduate School on this particular proposal, but as for me, as your proposal impacts the MAIS, you've got no opposition.

Jon,

We worked through the committee's responses, and are resubmitting the proposal for the committee's consideration. Attached please find a letter to the committee, and the revised proposal. Please let us know if you need other documents. Susie Leslie told me by phone that her office works with departments on budget matters and requests the library assessment after the college endorses the academic merits of the proposal. E-mails regarding those matters are in the letter.

Please let me know if I can provide additional material, and thanks in advance for reviewing the resubmission.

Subject: Cat 1 proposal

Robert: Two members of the college curriculum committee went over the Speech/Comm Cat 1 proposal. What follows are their comments/suggestions. No doubt you know the drill -- you will need to speak to these comments/suggestions and then resubmit. The timing for resubmission is a little problematic, in that we will have only one more/one last meeting this term (May 15) so if you can get all of these problems solved by then, by all means resubmit -- if not, you will probably have to wait for next fall ... I will make sure that next year's chair has a full record of this first look at the proposal so next year's committee does not simply re-start the process. Feel free to contact me for more details ... JL

Here are the committee's comments/suggestions:

Comments on Category I proposal to create an MS/MA Degree in Communication

- First of all, the proposal should be paginated
- Cat I proposals take sometimes 12 months to approve, so there is little possibility it could be operational by Fall 2010. Perhaps Fall 2011?
- There is no justification given for the existence of an M.S. degree and sometimes it is referred to simply as the M.A. program. It seems rather odd that one would bypass a foreign language requirement for a Masters in Communication. If the M.S. is motivated by a track that requires a focus other than language, that should be spelled out in the proposal.
- P. 5 last paragraph talks about a sixth graduate-only course, but it's not clear what this is.
- Under 7. Change "insure" to "ensure"?
- 14. Budgetary Impact - Faculty have done a good job in figuring out how to offer the requisite number of graduate courses without unduly affecting their undergraduate program. However, it is naïve to think that no new funds will be necessary. At a minimum, we must withhold judgment until the library assessment is completed. Furthermore, it is our understanding that many of the lower division classes that will be taught by the graduate students depend on access funds. If this is to be the only way to fund graduate students, there should be a bit more permanency in the budget. Suzy Leslie is your source on these kinds of matters, we think you should have been in touch with her already so that she could advise you on how to put together the budget section.
- There will also be an increase of workload for both the faculty and the administration. Not only will each faculty member have more graduate students, but they will all be writing theses as opposed to many MAIS students who do papers. Admissions and committee work is considerable and who will mentor and coordinate the GTAs?
- The Titles and numbers of courses listed in the sample syllabi must match the course of study on page 3
- Appendix C shows quite poor graduation rates for MAIS students with a Communication focus. How does this compare with other MAIS students? We think the following possibilities should be explored 1) Are they too lax in who they admit to the program? 2) Does requiring them to teach early and without much training put them at risk of not finishing? These questions should be looked into and addressed before launching a new program that might suffer from the same problems.
- We were concerned with the response to the liaison letters from English. It seemed as if a bridge could be made between Rhetoric and Writing and History of Rhetoric in English and this new program. Instead, the response was to differentiate what they do (oral) from the written word. It

also seems like liaison should have occurred with Anthropology's Language and Cross Cultural Communication MA and with New Media.

Sent Back by [Walter Loveland](#), October 19, 2011 10:33pm

Comments

Walter Loveland (Graduate Committee - Liberal Arts (M-Z)) October 19, 2011 10:33pm

The Graduate Council is returning this proposal for clarification of a number of points. Our proposal review team has produced the following report on this proposal.

We have reviewed the Category I proposal for the MA/MS in Communications and believe that additional information about the proposal is needed to inform the deliberations and decision by the council.

- We were not able to find the responses to CLA Liaison.
- We were confused by a statement at the bottom of page two of the English Liaison document. The liaison letter indicates that when graduate students name Speech Communication as both their first and second areas, they complete their masters' work using only 9 credits outside the department. Yet page 12 of the proposal states that these students earn 36 of their 48 credits from the Communications department. Please explain the disparity, and how this meets the MAIS requirement of 15 credits from each of the three areas.
- We were not able to find a clear distinction between the MA and the MS degree requirements within the proposal.
- The Category 1 lists Fall 2011 as the implementation date. (pg 4, item 1c)
- We are concerned with the extensive use of slash courses in the proposal. If the thesis credits are removed from the equation, at least 41% of the course work is slash courses. Since the proposal is for building an MA/MS degree with a projection of 20 students, why not develop the proposal with more stand-alone graduate coursework? What is driving the choice of using slash courses in the curriculum?
- Related to the point above, we note that the research methods courses are slash courses. We believe it may be more appropriate to use

stand-alone graduate coursework for research methods.

- Given the large percentage of slash courses, would this degree program really be an option for OSU Communication undergraduates?
 - Pg 9, item 3d – Learning outcomes. The third learning outcome suggests the thesis will integrate the minor area. However, the curriculum proposed does not specify the requirement for a minor area. Please explain.
 - The proposal cites that the GRE will be required for admission, but does not specify minimum scores. How will the results of the GRE be used in the selection decisions? (pg 10)
 - On page 11 (item 6aiii), the proposal seems to justify the need for this degree program because GTAs are needed to teach lower-division Communication classes. From the university perspective, and giving consideration to the lost revenue associated with tuition remission, it would seem that the use of professional faculty to deliver classes would be more cost effective. The GTA positions should be used to attract highly qualified candidates for the degree program.
 - Is data available on the current enrollments in the UO and PSU Master in Communication degree programs?
 - Pg 12, item 6b – Needs for employment:
 - o What are the specific labor market projections (Oregon and US) for master's graduates from CIP # 09.0101? (n.b., <http://nces.ed.gov/ipeds/cipcode/cipdetail.aspx?v=55&cid=88045>)
 - o To the point that many of the MA/MS students will come from the MAIS program:
 - Can placement results from past MAIS-dual-communication-area graduates be provided? The proposal makes very general statements regarding demand for graduates from this degree program. It would seem that the placement results of past graduates could be used to demonstrate demand and the types of career opportunities available.
 - Is there any data to suggest the number of students who are currently pursuing the MAIS with a concentration in Communication that would opt to switch to a Communication master's degree?
 - Is there data on the number of alumni from the MAIS with a dual concentration in Communication that would have instead opted for a Master in Communication?
 - Pg 14, Item 8. Assessment. The proposal indicates that assessment will be based on individual courses and the evaluation of the thesis. If so, then the learning outcomes need to be mapped to the specific courses in which they are evaluated and assessed. Given the current emphasis within the university on assessment, a more thoughtful program for assessment should be included in the program.
 - The proposed budget does not seem to reflect the diversion of faculty time for teaching additional stand-alone graduate classes and guiding up to 32 thesis projects. If it is budget neutral with no additional faculty resources, then what impact would this degree program have on the quality of the current undergraduate program?
- In addition the Council discussed this proposal at length and is concerned about the proposal. The overall feeling is that this is a weak Master's program with a coursework degree and a minimal thesis. Part of the justification for the program seems to be recruit graduate students to help teach the large undergraduate course program in Communications. Another possibility would be to employ fixed term instructors to do that teaching. We encourage the proposers to re-build this proposal to create a strong program that builds on the strengths of the faculty. Possible use of Ecampus to deliver the program in a hybrid or on-line version might be productive.

When the proposal has been revised, please re-submit the proposal using the CPS. If you wish this proposal to be re-considered at the next Graduate Council meeting on 2 November, we will need the revised proposal one week before that date. However, we would encourage you to take all the time necessary to make a full response to the Council's concerns.

We have revised as requested and added a document in response to Walt Loveland and the Graduate Council's concerns.

June 1, 2012

DRAFT

Proposed Changes to the Graduate Catalog Examination Policy

In some graduate programs, there is confusion as to how preliminary exams differ from comprehensive exams and oral preliminary exams, and whether or not comprehensive exams must have both written and oral components. The purpose of this proposed revision is to clear up sources of confusion in the language, by clearly defining three distinct types of examinations:

- (1) Comprehensives, which focus on the student's knowledge of the overall field, and which may be written and/or oral;
- (2) oral preliminary examination, which focuses on a student's knowledge of his/her specific area, as well as the dissertation proposal defense;
- (3) oral final examination, which is a public dissertation defense.

This is a preliminary draft – I would welcome suggestions to make certain that this is flexible enough to allow for disciplinary differences.

Preliminary Examination

~~The student working toward a doctoral degree must pass a comprehensive preliminary examination. The purpose of this exam is to determine the student's understanding of his or her major and minor fields and also to assess the student's capability for research. Students must enroll for a minimum of 3 credits during terms in which they undertake departmental written or oral preliminary examinations.~~

Graduate Examination Policies

Students must enroll for a minimum of 3 credits during terms in which they undertake graduate examinations.

~~Written~~ Comprehensive Examination

~~The student working toward a doctoral degree must pass a comprehensive preliminary examination (written and/or oral). Most programs require a written comprehensive examination to be taken before the oral preliminary examination. The purpose of this exam is to determine the student's understanding of his or her major and minor fields and also to assess the student's capability for research. If a written examination is required, it~~
This must be completed prior to the oral preliminary examination. The content, length, timing, passing standard, and repeatability of this examination are at the discretion of the major department. The general rules and structure of this examination, however, must be provided in writing to all candidates for this examination and a current copy of these guidelines must be on file with the Graduate School. Copies of the written examination

(questions and student's answers) must be available to all members of the student's doctoral committee at least one week prior to the oral preliminary examination.

Oral Preliminary Examination

The oral examination is taken near the completion of the student's course work. The oral examination is conducted by the student's doctoral committee, and should cover the student's knowledge in his or her ~~major and minor subjects~~ [specialty area\(s\)](#). The exam may cover the student's proposed research topic, although no more than one-half the time should be devoted to specific aspects of the proposal. The examination should be scheduled for at least two hours, and the exam date must be scheduled in the Graduate School at least one week in advance. If more than one negative vote is recorded by the examining committee, the candidate will have failed the oral examination. No more than two re-examinations are permitted by the Graduate School, although academic units may allow fewer re-examinations.

Final Oral Examination

[Students will present their dissertations in a public oral examination. Note that the meeting may be closed to the public when the committee questions the student and deliberates on whether s/he has passed the examination.](#) At least one complete academic term must elapse between the time of the preliminary oral examination and the final oral examination. If more than five years elapse between these two examinations, the candidate will be required to take another preliminary oral examination.

Subject: Graduate Program Review -- Philosophy

Dear Jim:

I'm writing to you as Chair of the Graduate Council (I hope I have that right). I am the Transitional Director of the new School of History, Philosophy, and Religion in the College of Liberal Arts, and the Applied Ethics M.A. program is slated for review this spring (2013). When I took over as Transitional Director in Spring 2011, Larry Rodgers and I requested a two-year deferment of the Applied Ethics review. A central figure in the degree program had just retired, we were searching for a replacement hire, and the Dept. as a whole was having intensive conversations on the future of the program. Things have moved forward since then. But it would still be extremely helpful to have the second year of the deferral granted; the program will be in a far stronger position for a productive review next year (2013-14). Would it be possible to schedule a time to chat, either in person or over the phone, about the possibilities here?

All best wishes,
Ben

Oregon State University**

Section I: Justifications and Objectives

This policy was developed in order to facilitate a Graduate Student's degree obtainment and successful completion of their academic program and career goals. The policy will facilitate the recruitment and retention of Graduate Students from diverse backgrounds and life circumstances. The Graduate School at Oregon State University recognizes that unforeseen life circumstances, as well as planned life events, may occur during the course of a graduate career. The Graduate School recognizes that Graduate Students are holistic individuals who must navigate physical, psychosocial, academic, personal and family needs and events during the course of an advanced degree program, which often spans two (2) to seven (7) years depending on program requirements.

In commitment to increasing the graduating success rate of Graduate Students at Oregon State University, as well as the quality and diversity of graduating students, the Graduate School implements this family/medical leave policy and associated provisions.

Section II: Eligibility

This policy applies to all Graduate Students in good academic standing making satisfactory progress toward degree completion and includes those receiving Graduate Assistantships (GRA/GTA), Graduate Fellowships and other paid positions.¹

Section III: Policy

All eligible Graduate Students may take a minimum of twelve (12) full weeks of a continuous block of approved leave as parental leave or to care for their own serious health condition or that of a family member.² Intermittent leave periods are not available under this policy. If less than twelve (12) continuous weeks of intermittent leave is to be requested for family/medical leave, the Graduate Student is advised to request a regular leave of absence with the Graduate School, or to make arrangements on an individual basis with their academic unit/program.

The Graduate Student must re-enroll in the graduate program in the term directly following the end date of any approved leave. Failure to re-enroll in the term following the end date of the approved leave may result in the student being required to re-apply for admission to the Graduate School.

For parental leave, Graduate Students may take advantage of this family/medical leave policy once per new child. For all other leave due to a serious health condition of the Graduate Student

or his/her family member, only one leave may be granted during the Graduate Student's pursuit of a graduate degree.

If both parents are Graduate Students at OSU, one parental leave period will be shared by both parents.

Section IV: Additional Provisions and Benefits

During the term(s) in which the family/medical leave is approved, the following provisions and benefits apply to all Graduate Students requesting leave:

- 1) Enrollment is not required and there is no penalty for non-enrollment during the approved term of leave;
- 2) An additional one (1) term extension will be given for all courses and program requirements in progress at the beginning of approved leave (such as qualifying examinations, thesis defense, and other program requirements). Academic units, departments, programs, and committee members will honor the one (1) term extension as outlined in this policy; if a student faces barriers in receiving their one-term extension, a grievance may be filed with the Graduate School and the Graduate School will work with the student and their program to develop a plan for the successful continuance and completion of their degree program;
- 3) Graduate Students holding an external fellowship during the term in which leave is requested must work with their external grantors to ensure the student meets the scholarship guidelines/conditions of the award during leave. The Graduate School will provide support to fellowship students if needed in communicating with their external grantors about the requested family/medical leave once the leave is approved. The Graduate School has no control, however, over whether the grantor will approve the leave and continue funding the student, and the Graduate School will not provide alternative funding during approved leave.

Section V: Procedure

To request leave under this policy, a Graduate Student must contact the Office of Human Resources (OHR) at FMLA@oregonstate.edu. OHR notify the Graduate School of the leave request and determination.

¹ *For specific policy governing Graduate Assistant, Graduate Fellow or other paid appointments, please see the Graduate Assistant Family Medical Leave Policy on the OHR website : [provide link].*

² *“Family” is defined as it is defined in the Oregon family Medical Leave Act, which includes same-sex domestic partners. “Parental leave” is defined as it is defined in the Oregon Family Medical Leave Act. “Serious health condition” is a condition that meets the definition of the same term in the federal Family Medical Leave Act.*

**Family and Medical Leave Policy for Graduate Students
The Graduate School
Oregon State University**

Section I: Justifications and Objectives

This policy was developed in order to facilitate a graduate student's degree attainment and successful completion of their academic program and career goals. The policy will facilitate the recruitment and retention of graduate students from diverse backgrounds and life circumstances. The Graduate School at Oregon State University recognizes that unforeseen life circumstances, as well as planned life events, may occur during the course of a graduate career. The Graduate School recognizes that graduate students are holistic individuals who must navigate physical, psychosocial, academic, personal and family needs and events during the course of an advanced degree program, which often spans two (2) to seven (7) years depending on program requirements.

In commitment to increasing the graduating success rate of graduate students at Oregon State University, as well as the quality and diversity of graduating students, the Graduate School implements this family/medical leave policy and associated provisions.

Section II: Eligibility

This policy applies to all graduate students in good academic standing making satisfactory progress toward degree completion and includes, but is not limited to, those receiving Graduate Assistantships (GRA/GTA), Graduate Fellowships and other paid positions.¹

Section III: Policy

All eligible graduate students may take a twelve (12) week continuous block of approved leave as parental leave or to care for their own serious health condition or that of a family member.² Intermittent leave periods (i.e. – multiple leaves of less than 12 weeks) are not available under this policy.

The graduate student must re-enroll in the graduate program in the term directly following the end date of any approved leave. Failure to re-enroll in the term following the end date of the approved leave may result in the student being required to re-apply for admission to the Graduate School.

Section IV: Additional Provisions and Benefits

During the term(s) in which the family/medical leave is approved, the following provisions and benefits apply to all Graduate Students requesting leave:

- 1) Enrollment is not required and there is no penalty for non-enrollment during the approved term of leave;

- 2) An additional one (1) term extension will be given for all courses and program requirements in progress at the beginning of approved leave (such as qualifying examinations, thesis defense, and other program requirements). Academic units, departments, programs, and committee members will honor the one (1) term extension as outlined in this policy; if a student faces barriers in receiving their one-term extension, a grievance may be filed with the Graduate School, and the Graduate School will work with the student and their program to develop a plan for the successful continuance and completion of their degree program;
- 3) Graduate Students holding an external fellowship during the term in which leave is requested must work with their external grantors to ensure the student meets the scholarship guidelines/conditions of the award during leave. The Graduate School will provide support to fellowship students if needed in communicating with their external grantors about the requested family/medical leave once the leave is approved. The Graduate School has no control, however, over whether the grantor will approve the leave and continue funding the student, and the Graduate School will not provide alternative funding during approved leave if approval is not granted.

Section V: Procedure

To request leave under this policy, a Graduate Student must contact the Office of Human Resources (OHR) at FMLA@oregonstate.edu. OHR notifies the Graduate School of the leave request and decision.

¹ *For specific policy governing Graduate Assistant, Graduate Fellow or other paid appointments, please see the Graduate Assistant Family Medical Leave Policy on the OHR website: [provide link].*

² *"Family" is defined as it is defined in the Oregon Family Medical Leave Act, which includes same-sex domestic partners. "Parental leave" is defined as it is defined in the Oregon Family Medical Leave Act. "Serious health condition" is a condition that meets the definition of the same term in the federal Family Medical Leave Act.*

Materials linked from the October 11, 2012 Graduate Council agenda.

Prioritized Objectives to Achieve Strategic Plan Goals

Following approval of the Strategic Plan for the Graduate School by Provost Randhawa, we were asked to develop a list of prioritized goals and objectives that we would begin working on immediately. The following represents the list of 3 goals and 9 objectives that we identified as a high priority following a morning long discussion at our annual Graduate School retreat, a process facilitated by Paul Biwan from Human Resources. Those among the Graduate School Leadership identified to lead each effort were agreed upon during a subsequent leadership meeting. The leads for each objective will consider the proposed Action Items, modify these or add their own as needed, and begin moving forward on their assigned objectives. Assistance from Graduate Council members is most welcome!

Goal 1: Increase our graduate student population to 25% of total university enrollment through recruitment and retention of high achieving and diverse students.

Objective 1.1 -- Effectively recruit high achieving students and ensure representation of under-represented minorities. Leads: Fran, Kim, Rosemary

Action Items

1.1.1: Poll individual programs to identify the extent, types and success of recruitment activities currently occurring at the program and unit levels at OSU.

1.1.2: Identify programs with the capacity (sufficient well-qualified faculty, infrastructure, support mechanisms, etc.) for growth, and develop enrollment growth strategies for each of these programs. Recruitment efforts will focus on these programs.

1.1.3: Develop and disseminate information on best practice guidelines for recruitment and admissions based on findings from 1.1.1 and 1.1.2, and other sources such as the Council of Graduate Schools and the published literature.

1.1.4: During recruiting activities and orientation, provide information to applicants and matriculants on navigating the financial aid, payroll, and human resource systems at OSU with a special focus on the increased use and effectiveness of the MyOSU Portal system.

1.1.5: Create and distribute recruiting information to programs and units that focus on commonalities: Corvallis and its environs, student support services at OSU, Graduate School processes and procedures, interdisciplinary resources, information on fees, books, printing, parking and the cost of living in Corvallis, among others (see Open Forums Findings Report for more information about this identified need).

1.1.6: Provide support to programs in an effort to enhance their recruitment efforts, such as site visits, visits to campus, recruiting information and online recruiting efforts.

1.1.7: Use central resources to represent OSU's graduate programs at national and international conferences where recruitment of under-represented minorities and international students is a high priority (e.g., SACNAS, ABRCAMS, etc.) and assess effectiveness of these efforts.

1.1.8: Increase support for dual degree options with professional programs, and develop a process for facilitating the transition of high-achieving undergraduates into graduate programs.

Objective 1.2 --Increase the efficiency of the application and matriculation process, and improve timely and clear communication with applicants and matriculants. Leads: John, Rosemary

Action Items

1.2.1: Identify and employ software that allows a one-stop application website, including a "progress bar" with estimated time to a decision, and program contacts. All materials for an application, including letters of recommendation and official transcripts, will be submitted and tracked via this site and data will be harvested from the system to populate annual reports back to programs on all aspects of student progress.

1.2.2: Develop mechanisms that allow individual programs to waive application fees if desired in return for compensation to the Graduate School for lost revenue.

Objective 1.6 --Improve communication among the Graduate School, graduate students and graduate faculty. Leads: Courtney, Anita, John, Nagwa, Kim

Action Items

1.6.1: Restructure and upgrade the Graduate School website to more effectively provide information to prospective and current students and faculty. Include software that allows visible and consistently updated pages and notices on Graduate School policy and procedural changes for both graduate students and faculty.

1.6.2: Assess the utility of the current use of Facebook and the Grad Connections Newsletter to provide news and information to students. Increase or alter information provided through social media outlets based on findings.

1.6.3: Provide a mechanism annually to gather constructive student and faculty feedback, particularly relating to the progress being made through the implementation of this plan.

1.6.4: Identify groups of students based on 1.6.3 and in consultation with program directors and advising services whose needs require particular attention to ensure retention and success. Develop targeted programs to identify at-risk students early and try to improve persistence in the degree program.

1.6.5: Work with the International Programs office to identify the particular informational needs of international students regarding OSU graduate policies and procedures, and develop materials for graduate program directors, faculty and students addressing the international graduate student experience at OSU.

Indicators of Success for Goal 1

1. Increased total number of applicants to OSU's graduate programs that have the capacity to grow their graduate student population
2. Increased overall GPA and GRE scores in the matriculant pool
3. Increased yield of matriculating students from accepted applicants
4. Increased number of matriculants from under-represented minorities
5. Reduction in time from a completed application to a decision by the program
6. Reduction in the net cost of the application/enrollment/matriculation process
7. Improved level of satisfaction expressed by students and faculty with regards to the application and matriculation processes
8. Increased student satisfaction with graduate studies at OSU reflected in a variety of annual feedback mechanisms including the Graduate School's exit surveys
9. Increase in positive responses to questions regarding communication during annual feedback mechanisms (e.g., open forums, online surveys, exit surveys, etc.) from both students and faculty
10. Decrease in the number of inaccurate perceptions by students expressed during annual feedback mechanisms

Goal 2: Continuously Improve Program Quality

Objective 2.2 – Improve quality assessment of graduate programs; Leads: Anita, Marty, Courtney

Action Items

2.2.1: The Graduate School will work with the University Assessment Council, the Graduate Council, Institutional Research, and the Academic Programs, Accreditation, and Assessment (APAA) office to develop a set of metrics for consistent comparison of graduate program quality over time (trends) and with our peer institutions. These data should be collected centrally and reported annually to programs. Additionally, these metrics will form the core of the university accreditation data on graduate programs and the self-study for decadal external graduate program reviews. Because programs are diverse, the Graduate School will work with each program to identify any additional program specific metrics that ensure a meaningful reflection of the program trends and comparisons with programs at peer institutions.

2.2.2: Along with the Assessment Council, help graduate programs to develop effective full-cycle assessment programs that align with accreditation and graduate program review needs of the university, and guide them in effective use and reporting of assessment data.

2.2.3: Annually provide training sessions for graduate program directors to discuss ongoing assessment needs, reporting requirements, new policies and procedures, dissemination of best practice information, and progress in meeting the goals of this strategic plan.

2.2.4: Every fall term, provide an orientation program for new graduate program directors to provide essential information (hard copy and online) on the management of a graduate

program, including OSU Graduate Council rules and policies, best practices, expectations, and support services.

Objective 2.4 – Grow the number of graduate faculty and their capacity to train students;

Lead: Anita

Action Items

2.4.1: Contact all tenured and tenure-track faculty who are not currently a graduate faculty member to discuss and assess their capability to advise graduate students. Encourage them to participate in graduate education. If a faculty member is not interested in becoming a graduate faculty member, determine why and attempt to provide incentives for involvement.

2.4.2: Working with graduate program directors, the Graduate School will contact PhD scientists and scholars in the region who might be qualified to serve as graduate faculty through a courtesy appointment and assess their capability to advise a student. Make special efforts to recruit graduate faculty who are under-represented minorities. Provide direct support efforts to ensure that off-campus graduate faculty have the information, tools, skills and university support necessary to perform well as a graduate advisor.

Objective 2.5 -- Improve and enhance transdisciplinary and interdisciplinary opportunities in graduate education. Leads: Brenda, Marty, Anita, Barb

Action Items

2.5.1: Support opportunities for new transdisciplinary and interdisciplinary collaborations for graduate students by rewarding the contributions of faculty to existing and new interdisciplinary and transdisciplinary programs. Work with the Office of Budget and Fiscal Planning to develop new funding models for interdisciplinary programs.

2.5.2: Work with the Academic Programs, Assessment and Accreditation office (and perhaps the Oregon University System) to streamline the creation of new transdisciplinary and interdisciplinary graduate programs on a trial basis. We suggest a six year trial period before formal Category I applications are required or a decision to terminate is made.

2.5.3: In collaboration with the Research Office, sponsor workshops to facilitate idea development and support proposal writing for new NSF IGERT programs and other interdisciplinary training grants.

2.5.4: Explore potential funding sources, possibly from the private sector, to support new interdisciplinary and transdisciplinary graduate programs including "IGERT-like" programs.

Indicators of Success for Goal 2

1. Increase in OSU's scores on the NRC criteria for rankings of graduate programs
2. Increased satisfaction and employment-in-their-field of masters and doctoral alumni
3. Development of effective full-cycle assessment programs, and implementation of changes to achieve improvement based on assessment results
4. Development and use of consistent metrics for meaningful comparisons with peer institutions

- 5. Improvements in quality and delivery of internal program metrics over a five-year time span
- 6. Increase in the percentage of the total student body that is graduate students
- 11. Increase in the number of graduate faculty qualified to advise doctoral and masters students
- 12. Improvement in student assessment of faculty mentoring and advising
- 13. Increased number of interdisciplinary and transdisciplinary graduate programs
- 14. Increased enrollment in and graduation from interdisciplinary degree programs
- 15. Increased faculty participation in interdisciplinary programs
- 16. More IGERT and "IGERT-like" proposals submitted and funded, with a goal of being awarded up to one per year for the next three years, and then an additional three programs in the following two years

GOAL 3: Grow and invest resources to enhance graduate education opportunities

Objective 3.1 -- Create new or restructured graduate programs where there is capacity. Leads: Brenda, Anita

Action Items

3.1.1: Consult with the College of Liberal Arts and the College of Business to explore the possibilities of developing new graduate programs with a focus on doctoral program development, and support efforts as needed.

3.1.2: Explore the restructuring of existing programs or development of new programs that contribute to our signature areas of excellence in other colleges as well (see Objective 2.1).

Objective 3.2 -- Create endowments for graduate fellowships Leads: Brenda, Anita

Action Item

3.2.1: Establish a greater number of OSU Graduate Fellowships by working with the OSU Foundation and the academic deans to identify private and industry donors and by raising the priority of graduate student funding at the college and university levels.

Objective 3.3 -- Incentivize assistantship opportunities for graduate students Leads: Marty, Anita, Fran, Brenda

Action Items

3.3.1: Provide training and incentives for expanded GTA positions to ensure that increases in GTA positions follow increases in undergraduate enrollment in each college. Work to identify those undergraduate programs targeted for increases in enrollment, and work with college deans to encourage them to invest in GTA positions to meet the needs of the undergraduate program while also improving and investing in graduate education.

3.3.2: Finalize development of a Certificate in University Teaching that will provide an 18-credit opportunity for advanced training in university teaching in an effort to provide a high level of training for those students planning a career in academia.

3.3.3: In collaboration with the Center for Teaching and Learning, develop workshops that provide training for new GTAs.

3.3.4: Work with programs to ensure that GTA positions available within departments, but not filled within departments, are advertised broadly.

3.3.5: Incentivize the hiring of graduate research assistants (GRAs) by allocating a limited number of tuition remissions to GRAs based on university research agenda and strategic enrollment goals.

Indicators of Success for Goal 3

1. Increased number of graduate students
2. Addition of new graduate programs in Colleges of Business and Liberal Arts
3. Increase in total dollars raised per year in support of graduate fellowships, scholarships, and other forms of support for our graduate students within the Graduate School and among colleges
4. Increase in number of graduate students recruited to serve as GRAs on research projects addressing the OSU Research Agenda
5. Increase in the number of GTA FTE within each college proportional to the number of undergraduates
6. Assessment of the relevance and effectiveness of the Certificate in University Teaching and other teaching workshops for employment success through Graduate School exit surveys and alumni surveys
7. Improved GRA/GTA salary competitiveness and equity across programs
8. Increased number of graduate scholarship and fellowship awardees
9. Increased number of GTAs assigned to Ecampus courses.
10. Number of students completing the optional Certificate in University Teaching each year
11. Improvement in achieving goals articulated for each scholarship and fellowship program

Coakley, James - COB

Subject: Prioritized objectives from our strategic plan
Attachments: Prioritized objectives for Strategic Plan goals 100912.docx

Jim,

Attached is a detailed outline of goals and objectives that we intend to focus on for the next few years as an outcome of our strategic planning process and a subsequent graduate school retreat. We welcome input and assistance from members of the Graduate Council.

In fairness to Kimberly Johnson, we did assign her to co-lead a few objectives even though she has not yet formally started with us! So we may need to make a few adjustments as we hear directly from her where she would like to contribute once she begins work with us.

I hasten to point out that we have other initiatives that we are working on as well, even though the attached documents represents our priorities. Specifically in addition to those items on the attached document, we are:

- Exploring hybrid course approaches to better address slash courses
- Developing an RFP to seek ideas from programs on effective recruiting.
- Redefining interdisciplinary and intercollegiate programs and sustainable support for those programs
- Revising the Program Review Guidelines and assisting programs with meeting their needs for data to prepare their self-study documents
- Advancing efforts of the Oregon Council of Graduate Schools
- Developing new admissions procedures for International Students that will better meet the needs for programs.
- Exploring new approaches to building Professional Science Masters programs collaboratively with COS
- Exploring a variety of IT solutions and contribution to upcoming dashboard development (in conjunct with Lois Brooks)
- Online course development for Research Ethics training and for undergrads preparing to enter grad school

...and more. The energy and ideas that result from our leadership team is truly inspiring and I fully expect new initiatives to be proposed regularly that will improve the experience for our graduate students and the effectiveness of our graduate faculty.

brenda

EXTERNAL PANEL REVIEW

**THE GRADUATE PROGRAM IN HORTICULTURE
OREGON STATE UNIVERSITY**

**On site visit, May 31, 2012
Final Report, July 27, 2012**

External Review Team:

Emily Hoover, Department Head and Professor
Department of Horticultural Science
University of Minnesota

Joe Williams, Manager
Corvallis Plant Materials Center
Natural Resource Conservation Service

Joanne Tynon, Associate Professor
Forest Ecosystems and Society
Oregon State University

Denise Lach, Director
School of Public Policy
Oregon State University

OVERALL RECOMMENDATION

Maintain and perfect/refine

SUMMARY OF FINDINGS AND RECOMMENDATIONS

INTRODUCTION

The external review committee organized its review and assessment by the evaluation criteria suggested by the Guidelines for the Review of Graduate Programs offered by the Graduate Council of Oregon State University. The Horticulture Program organized a detailed and comprehensive self-study document that allowed the committee to prepare for the review and explore questions in detail. Interviews with Associate Deans of the College of Agricultural Sciences, and graduate faculty and students in the Horticultural program all revealed uniform support for the program while recognizing resource limitations. The external review committee shares that support, although notes some limitations presented by current methods for organizing the program. Our recommendation, therefore, is for the program to **maintain** its direction while experimenting with new ways for supporting graduate education and students.

DETAILED FINDINGS

1. *The fit of the mission of the program and its relationship to the mission of the academic college(s), and the university mission.*

The link of this graduate program to the overall mission of the college and university are very clear. The three initiatives from the Provost advancing science of sustainable earth ecosystems, improving human health and wellness, and promoting economic growth and social progress are all included within the mission of this graduate program. Within the Department of Horticulture, there are 1.9 FTEs budgeted through E/G funds from the college, with an additional 7.1 FTEs through the experiment station. The program identifies almost 40 faculty as part of this graduate program. The committee concluded that the number of FTEs funded on E/G funds is low compared with teaching expectations. Additionally, given the size and scope of the horticulture industry within the state and the Pacific Northwest region, the overall number of FTEs also seems low (Figure 1 in the review document). Given the few number of faculty, they perform extremely well, increasing the number of graduate students and external funding for their programs to continue to support this important sector of the Oregon economy.

2. *Quality of students and 3. admissions selectivity*

As indicated in the Self Study for the Review of the Horticulture Program (pp. 7-13) the quality of students is generally high although there have been periods in the past when the average GPA dropped below 3.0. GRE scores seemed to be somewhat low, with average scores ranging from less than 1000 to slightly more than 1100. (The review committee did not have comparative data on GRE scores for other programs so cannot comment on whether these are representative of horticulture programs in general.) The fluctuating GPA and GRE scores may be due, at least in part, to the non-competitive admissions process that admits students only when funding is available through a faculty member's grant. We heard from one student, for example, who "networked" into the program through personal contacts in the local community. Without a strong pool of students to select from, faculty who need assistance on research efforts may be taking students who are available rather than excellent. This

noncompetitive process also does not allow the program to systematically recruit and fund a diverse cohort of graduate students.

Recommendations:

- a. *Develop a recruiting effort that targets diverse populations* interested in horticulture. This may be done in conjunction with related programs (e.g., crop and soil science, botany and plant pathology). One idea used successfully in other programs is a “recruitment weekend,” that brings together a group of excellent candidates to learn more about the opportunities available at OSU. Resources at OSU can help identify low-income, first generation, and other non-representative student populations.
- b. *Pursue alternative methods for supporting students beyond external dollars.* These methods could include sharing GTA positions with other programs (e.g., Biology), Laurel Grants to fund tuition, Provost awards, e-campus revenue, etc. These supplementary funds can also be used as incentives for faculty who agree to provide service to the graduate program (e.g., teach horticulture classes). Also see discussion below about financial support.

4. Level of financial support for students

All Horticulture graduate students are funded, with most receiving support from faculty grants. There are currently two GTA positions being funded with e-campus revenue. Students expressed gratitude for the support. Providing support for all graduate students is a definite strength of this program although the source of funding (individual grants) appears to be somewhat problematic for the program as a whole (see comments above about strategic recruiting and diversity). Creating program-based funding sources (e.g., GTAs, Laurel Awards, Provost awards) can allow the Horticulture program to be more strategic in its recruiting and also be used to supplement and/or reward both students and faculty who contribute to the program.

Recommendation:

See recommendation b about developing additional sources of funding to supplement current practices

5. Curriculum strength

For both the MS and PhD degrees, graduates are expected to gain an in-depth knowledge in the discipline (Outcome 2, p. 23 and 24). Given that desired outcome, the committee was surprised that the discipline was not defined through a curriculum for either degree. Curriculum presently is dependent on course selection and scheduling across a number of departments representing numerous disciplines. Graduate students and faculty identified the lack of stand-alone courses within the discipline of horticulture as a weakness and the committee concurs.

The curriculum for this graduate program is flexible. Flexibility within the curriculum has advantages and disadvantages. However, consistency in disciplinary knowledge was expressed as a need by students and faculty as well as a desire for some increase in the structure of curriculum. To maintain flexibility while increasing structure, the committee suggests the

graduate faculty think about a course in analytical skills including statistics, research methods, or equivalent (e.g., handling large data sets and spreadsheets). Additionally, many students take basic science courses such as biochemistry and genetics. The faculty should develop a list of expected learning outcomes for these types of courses so students understand the context of these within the discipline of horticulture.

One of the requirements for the program is a seminar. The committee recommends the faculty require presentation skills to be developed as part of the course. Presently students work with their faculty advisor for the seminar. There are models where students work closely with a different faculty member to increase student-faculty interactions and expose graduate students to different approaches to science.

Recommendations:

c. *Offer courses in innovative ways or in different formats* to take advantage of the expertise within the graduate horticulture faculty on and off campus.

d. *Pursue cross listing courses and/or team teaching critical courses* to meet the disciplinary needs of students in horticulture.

6. Quality of personnel and adequacy to achieve mission and goals

The Department of Horticulture has seen a 46% reduction in the number of faculty which translates to a 37% reduction in FTEs. A strength of the program is the linkage between the graduate program in horticulture with USDA researchers located in Corvallis thus effectively increasing the number of faculty associated with the graduate program to almost 40. The quality of the faculty is excellent. Graduate advising is very strong.

However, because of the federal rules governing USDA researchers, they are not able to be the primary instructor for courses. Thus the number of advisors is certainly adequate for advising, the number of faculty who teach is much smaller.

Recommendation

See recommendation c above

7. Level and quality of infrastructure

Both faculty and students expressed general satisfaction with existing infrastructure (e.g., labs, greenhouses, farms and field sites, computer facilities, office space). Some of the greenhouses are old and unlikely to be repaired due to Historic District rules that govern the OSU campus. While there appears to be generally good connection with the facilities (and faculty and staff) at the North Willamette research station, there was some discussion about the lack of housing facilities at other locations, which limits use/interest by students.

Recommendation:

e. Explore possibility of *creating housing opportunities* at statewide facilities to encourage wider use by Corvallis-based students and faculty. This could be done in conjunction with other programs and units.

8. Quality of organizational support

Both students and faculty expressed strong support and gratitude about the organizational and administrative support provided by the Horticulture program. IT support and administrative support both received high marks. Both students and faculty reported that Anita Azarenko, Head of the Horticulture program, is a strong and effective advocate for the program and is extremely responsive to problems and needs that arise. The grad program director, John Lambrinos, was also recognized as a strong steward of the program as well as a good mentor to all students with problems and concerns.

Students reported that faculty mentoring was inconsistent; some described a strong relationship with their major advisors while others reported a more hands-off style. Both approaches had champions and detractors. Another issue raised by students was the lack of a general orientation (although there is a record of providing this service to students). Students reported that the Student Handbook was out of date.

Recommendations:

- f. Consider a new way of *delivering and/or marketing orientation services* to students. This may be especially important as students begin the program during different terms.
- g. Provide *professional development regarding mentoring relationships* for both faculty and students. The handbook already contains a great example of responsibilities of both parties, and additional information can be provided in seminars, checklists, and trainings.

9. Level and quality of student performance

As indicated in the Self Study for the Review of the Horticulture Program (pp. 51-52), the vast majority of students who have entered the program finished with their intended degree. It is reported that only 9% of students admitted over the review period withdrew from the graduate program. Although data for comparable MS programs were not readily available, it is reported in the U.S. graduate programs in the Agricultural Sciences in 2009 report (National Science Foundation 2010) that the time to degree is significantly below the median of 8.0 years.

Graduate student outputs in the number of publications and presentations are impressive. It was reported that on average the publication rate was 1.5 publications per student in the program since 2006. Graduate students were sole or coauthors on 207 publications and 39 presentations since 2006. Overall, the review committee thought the level of student performance was strong.

Recommendations:

- h. Although student performance overall is good, additional consideration regarding the recruitment of excellent performing students would no doubt increase the level and quality of student performance within the graduate program (see recommendations a and b above).

10. Level and quality of faculty performance

The review committee was impressed overall with the level of faculty performance for the program given the increased workloads due to budget constraints, faculty retirement and a

relatively small amount of FTEs devoted to graduate education. Faculty members generated grants and contracts that totaled more than 18.2 million dollars between fiscal years 2007-2010. These grants and contracts significantly support the graduate program. Graduate students mentioned that faculty members seem happy to work with and mentor students and are very supportive of the graduate program. However, as mentioned earlier in this report, graduate students highlighted the inconsistency of faculty mentoring.

Graduate students liked that faculty members are very engaged with industry, although it was apparent to the review committee that grant research may be different than what industry wants or perceives to need.

Recommendations:

- i. See recommendation e about providing professional development for mentoring students.

11. Viability of scholarly community within which students can interact

Graduate students reported that they were very happy with the opportunity to be able to interact with multiple disciplines within the program. The close proximity of USDA facilities and scientists was identified as a big positive to graduate students, faculty, and the review team. The addition of entomology faculty within the department was mentioned as greatly adding to the overall balance and breadth of the program. It was pointed out that a majority of professional plant breeders in horticulture and crop science are located in the Willamette Valley and serves as another positive addition to the local scholarly community.

Recommendations:

- j. Continue to *pursue and cultivate opportunities for student interaction outside of the horticulture department community*. This could include more interaction with faculty in other OSU Departments such as Crop Science and Botany and Plant Pathology.

12. Professional viability of graduates

Graduate faculty advisors reported that 75% of MS students and 100% of Ph.D. students have produced scholarly output in the form of publications from their theses and dissertations. Graduate students, however, report that they are not having discussions with their advisors early on about how authorship will be/is apportioned. Post-graduation employment data shows that, of those graduates contacted, most are working in a position either directly or somewhat directly related to their degree. A sizeable number of the students contacted are employed in academia, either as tenure-track or non-tenure track faculty. However, only Ph.D. students have a required teaching component in their degree program.

Recommendations:

- k. Consider including *expectations for authorship* to the orientation handbook.
- l. The OSU Graduate School is in the process of offering a teaching certificate. Consider adding this *teaching certificate* to both M.S. and Ph.D. degree programs.

13. Satisfaction of students and graduates

Graduate students expressed satisfaction with being able to design their own program of study. They noted as strengths not having to worry about financial support (they are all funded), the diversity of course offerings, and the diversity of faculty. There is a very active graduate student group that facilitates camaraderie and peer mentoring. Graduates students especially noted that Anita Azarenko, Head of the Horticulture program, makes an effort to come to their meetings. Students remarked that they feel comfortable taking their concerns to either Anita Azarenko or to John Lambrinos, Graduate Program Coordinator. Overall, they feel that the administration, faculty, and office staff are very supportive. They characterized the department as one with “no stress” and a “happy atmosphere.”

Despite the diversity of courses listed in the catalog, many of the courses are not offered. This makes it difficult for students to plan their program of study. Students expressed frustration that there are not enough stand-alone courses and too many slash courses. Students cited a need for a course where they can learn how to write a proposal (e.g., how to do a literature review). Some also expressed a desire for seminars or workshops on how to use shortcuts in Microsoft software programs and how to deal with data management.

Graduate students noted that there are different expectations from different advisors, and that there is no annual GRA review.

Recommendations:

- m. *Streamline course listings* in the catalog by eliminating courses no longer offered. Provide a *list of recommended courses, seminars, and workshops* and what term they are offered.
- n. Consider requiring *annual GRA reviews* so that students and advisors assess progress towards degree completion.

14. Ranks/rating: N/A because of the methodology of the rating organizations

CONCLUSION

The review committee concluded the graduate program in horticulture should be maintained. The recommendations within this report should be followed up with a response on how the program is going to address the issues raised. The committee feels with a few minor changes the program will gain strength within Oregon State University as well as with horticulture programs around the country.

List of recommendations that need to be addressed to continue to strengthen the graduate program in horticulture:

- a. *Develop a recruiting effort that targets diverse populations* interested in horticulture. This may be done in conjunction with related programs (e.g., crop and soil science, botany and plant pathology). One idea used successfully in other programs is a “recruitment weekend,” that brings together a group of excellent candidates to learn more about the opportunities available at OSU. Resources at OSU can help identify low-income, first generation, and other non-representative student populations.
- b. *Pursue alternative methods for supporting students beyond external dollars.* These methods could include sharing GTA positions with other programs (e.g., Biology), Laurel Grants to fund tuition, Provost awards, e-campus revenue, etc. These supplementary funds can also be used as incentives for faculty who agree to provide service to the graduate program (e.g., teach horticulture classes). Also see discussion below about financial support.
- c. *Offer courses in innovative ways or in different formats* to take advantage of the expertise within the graduate horticulture faculty on and off campus.
- d. *Pursue cross listing courses and/or team teaching critical courses* to meet the disciplinary needs of students in horticulture.
- e. Explore possibility of *creating housing opportunities* at statewide facilities to encourage wider use by Corvallis-based students and faculty. This could be done in conjunction with other programs and units.
- f. Consider a new way of *delivering and/or marketing orientation services* to students. This may be especially important as students begin the program during different terms.
- g. Provide *professional development regarding mentoring relationships* for both faculty and students. The handbook already contains a great example of responsibilities of both parties, and additional information can be provided in seminars, checklists, trainings, etc.
- h. Although student performance overall is good, additional consideration regarding the recruitment of excellent performing students would no doubt increase the level and quality of student performance within the graduate program (see recommendations a and b above).
- i. See recommendation e about providing professional development for mentoring students.
- j. Continue to *pursue and cultivate opportunities for student interaction outside of the horticulture department community.* This could include more interaction with faculty in other OSU Departments such as Crop Science and Botany and Plant Pathology.
- k. Consider including *expectations for authorship* to the orientation handbook.
- l. The OSU Graduate School is in the process of offering a teaching certificate. Consider adding this *teaching certificate* to both M.S. and Ph.D. degree programs.
- m. *Streamline course listings* in the catalog by eliminating courses no longer offered. Provide a *list of recommended courses, seminars, and workshops* and what term they are offered.
- n. Consider requiring *annual GRA reviews* so that students and advisors assess progress towards degree completion.

EXTERNAL PANEL REVIEW of

**THE MASTER IN PUBLIC POLICY GRADUATE PROGRAM
OREGON STATE UNIVERSITY**

School of Public Policy
Economics Program
Political Science Program
Sociology Program

OVERALL RECOMMENDATION

Maintain and Perfect.

SUMMARY OF FINDINGS AND RECOMMENDATIONS

While less than a decade old, the School of Public Policy and its Master in Public Policy (MPP) graduate program has recruited diverse and high quality students into a rigorous interdisciplinary program with strengths in research methods, public policy analysis and theory, statistical analysis, and economics. Graduates of the program have secured jobs in the top public and private agencies in Oregon and the United States.

Any observable challenges or issues of the program were of secondary nature and mostly related to the implementation of the growing program and not to the core structure of the program. These challenges and issues include fine-tuning the delivery of the curriculum; uneven distribution of service and leadership that is heavily concentrated upon the School Director and Graduate Program Director; maintaining the quality of the program with its recent and future growth; incorporating learning outcomes of ethics and diversity more firmly into the current curriculum; and improving assessment measures to capture the rigor of the program.

The external review committee organized its assessment of the program and its recommendations by thirteen evaluation criteria suggested by the Guidelines for the Review of Graduate Programs offered by the Graduate Council of Oregon State University. These evaluation criteria are summarized in Table 1 as well as the recommendations to consider for improvements. As stated, the recommendations are for consideration and do not represent absolute procedures for implementation and required action by the School of Public Policy. We note the limitations of our observations and interviews and offer the recommendations with all the humility of three observers who assessed the program in less than 24 hours on May 18, 2012.

Interviews with the Dean of the College of Liberal Arts, faculty in the School of Public Policy, and current students demonstrated *uniform enthusiasm and support* for the MPP program and School of Public Policy. The external review committee shares the enthusiasm and support as expressed by those interviewed on the site visit at Oregon State University. The recommendation, therefore, is for the program to maintain its current trajectory and to perfect its delivery of the program.

TABLE 1. Summary of Evaluation Criteria and Recommendations to Consider for Improvement

| Evaluation Criteria | Recommendation to Consider for Improvement |
|---|---|
| <i>The fit of the mission of the program and its relationship to the mission of the academic college(s), and University mission.</i> | (1) Develop a long-term strategy for incorporating other disciplines and fields at Oregon State University into the MPP program to strengthen the ways in which School of Public Policy addresses the interdisciplinary nature of societal problems and serves as a valuable contributor to the University's commitment to societal outreach and engagement. |
| <i>Quality of Students</i> | (1) Maintain admissions expectations of incoming students;
(2) Seek national data for comparisons of incoming MPP program students to similar university programs to better document student quality. |
| <i>Admission Selectivity</i> | (1) Formalize the pre-screening and recruitment efforts by the Graduate Program Director into written procedures and establish a faculty recruiting committee;
(2) Strengthen and diversify recruitment efforts to maintain and increase applicant numbers. |
| <i>Level of Financial Support of Students</i> | (1) Maintain funding to students;
(2) Develop better approaches to communicate to students about how funding decisions are made;
(3) Attempt to make funding decisions prior to the start of each term. |
| <i>Curriculum Strength</i> | (1) Maintain the rigor in the MPP program especially in the quantitative, economic, and research methods.
(2) Improve the delivery of classes through better sequencing of classes.
(3) Remove unnecessary overlap between classes.
(4) Consider additional emphasis in qualitative analyses.
(5) Create assessment tools to document and measure the reported levels of rigor in the MPP program.
(6) Develop a strategic plan for incorporating ethics and diversity into the curriculum and the accompanying means for assessment.
(7) Develop strategies for overcoming the limitations of "slash courses" for MPP students.
(8) Reassess the purpose and benefits of concentrations offered by the MPP. Establish a procedure for reviewing and updating these offerings. |

| | |
|--|---|
| <i>Quality of personnel and adequacy to achieve mission and goals</i> | <ul style="list-style-type: none"> (1) Develop strategies for formalizing into procedures and distributing the duties performed by the Graduate Program Director; (2) Develop proactive strategies for retaining faculty, particularly new faculty hires; (3) Maintain an incentive structure to motivate faculty to mentor students and seek external funding; (4) Develop a method for monitoring service by faculty for the MPP program. |
| <i>Level and quality of infrastructure</i> | <ul style="list-style-type: none"> (1) Identify strategies for overcoming the negative effects from the physical infrastructure, given financial and spatial constraints. |
| <i>Quality of Organizational Support</i> | <ul style="list-style-type: none"> (1) Develop a plan for forming and using an external advisory committee to support the MPP program. |

| <i>Satisfaction of students and graduates</i> | <ul style="list-style-type: none"> (1) Maintain and perfect delivery of the program and efforts to meet the expectations of students. |
| <i>Rankings/Ratings</i> | <ul style="list-style-type: none"> (1) Discuss a need and strategies for developing and maintaining a national reputation as one of the best schools in public policy in the United States. |

DETAILED FINDINGS

The fit of the mission of the program and its relationship to the mission of the academic college(s), and University mission.

From climate change to rural poverty, the problems facing society as well as finding any plausible solutions intersect the traditional disciplines found in academia. As a result, universities that are traditionally structured by disciplines can scarcely contribute to solving many of society's most pressing problems. Needed are new interdisciplinary structures. The School of Public Policy and its Master in Public Policy (MPP) program is one interdisciplinary structure at Oregon State University that spans sociology, political science, and economics in educating students through rigorous course work, in

guiding students through on-the-job internships, and in mentoring students towards higher levels of professionalism. The result is high student satisfaction and quality job placements among students in positions where they can make a difference in society.

A university must also approach societal problems from a base of its traditional strengths. The MPP program is built around three traditional disciplines at Oregon State University (sociology, political science, and economics) and also around the study of "outdoor" rural and environmental issues rather than just urban issues, as might be found in many other programs in public affairs and public policy. One of the underlying premises of the MPP program is to build a quality program rooted in the strength of Oregon State University to serve the needs of Oregon, the nation, and the world.

As the School of Public Policy and its MPP program grows into the future, needed is a strategic plan for building the capacity for responding to interdisciplinary nature of societal problems and for incorporating more of the disciplinary strengths found at Oregon State University. Such a plan is critical not just to manage growth at the School of Public Policy and its MPP program but also for a growing university in changing times. Today more than ever, a university must prove how its services contribute to society; the School of Public Policy could provide another means for other disciplines and fields at Oregon State University to achieve greater outreach and engagement.

Recommendation: (1) Develop a long-term strategy for incorporating other disciplines and fields at Oregon State University into the MPP program to strengthen the ways in which School of Public Policy addresses the interdisciplinary nature of societal problems and serves as a valuable contributor to the University's commitment to societal outreach and engagement.

Quality of Students

As indicated in the Self Study for Review of the Master of Public Policy Graduate Program (pages 8-10), the quality of the MPP students is high. The average GPA of incoming students is 3.64 with GRE average scores greater than 600 for quantitative and verbal (800 is the maximum). The average score for GRE-analytical (starting in 2006) is 4.4 (6.0 is the maximum). While national averages for public policy students are unknown to the external review committee, the quality of the MPP students at Oregon State University is high by speculation and by casual observation.

Recommendations: (1) Maintain admissions expectations of incoming students; (2) Seek national data for comparisons of incoming MPP program students to similar university programs to better document student quality.

Admission Selectivity

Through various strategies, including visual brochures, personalized letters, posters, and well-designed websites, the Graduate Program Director has been able to recruit talented and diverse students (see page 11 of Self Study for details). Additionally, the

Graduate Program Director pre-screens all interested students, thereby inviting some applicants to apply and turning others away.

The Self Study (pages 10 and 11) also indicates an increasing number of applicants that reached the mid 50s between 2009 and 2011. The number fell to 39 in 2012. Many public policy and public affairs programs in the United States recorded a similar spike in applications between 2009 and 2010 that likely reflected the election of President Obama and enthusiasm for public service as well as the economic recession. One implication is that the efforts and strategies by the Graduate Program Director may not have mattered as much as broader societal trends.

Recommendations: (1) Formalize the pre-screening and recruitment efforts by the Graduate Program Director into written procedures; (2) Strengthen and diversity recruitment efforts to maintain and increase applicant numbers.

Level of Financial Support of Students

Nearly all MPP students are funded through teaching assistant positions, research assistant positions, or scholarships (see Self Study page 13). Such funding is extremely rare for professional programs across the United States and also a contributor to the quality of graduating students from the MPP program.

From the site visit, students expressed sincere appreciation for the level of financial support. A few expressed concerns about how decisions were made for assigning various assistantships (who gets what position) and when decisions were made (days into the quarter). A need for communicating financial support might be needed more for transfer students or students enrolled in dual programs.

Recommendations: (1) Maintain funding to students. (2) Develop better approaches to communicate to students about how funding decisions are made. (3) Attempt to make funding decisions prior to the start of the quarter.

Curriculum Strength

In nearly all the interviews, one of the reported strengths of MPP program is the analytical rigor in the curriculum, especially in quantitative statistical analysis, economics, and research methods. By casual observation, the level of rigor in the MPP program rivals that of the best in the country.

Current surveys express satisfaction among students and employees as well as solid employment of student graduates (see Self Study pages 37-45). However, better documentation of learning and of the reported high rigor levels is needed. For example, current surveys ask student to express their agreement about the level of rigor in the program but the conceptual meaning and indicators of what “rigor” means remain unknown. Similar comments can be made about self-reported measures of critical thinking. As Universities come under additional scrutiny to measure learning and

document positive outcomes, effort should be devoted toward better assessment of the reported levels of rigor in the program.

From the site visit, students expressed an appreciation for the rigorous training that they were receiving in the MPP program. Some requested better sequencing of classes, coordination among classes, even more quantitative analysis classes, or offering a qualitative analysis class. Some students appreciated the exposure to different statistical software. Minor concerns included an expressed desire to learn more techniques in policy analysis (e.g., benefit cost analysis) and for better scheduling of classes throughout the academic year (apparently many desired classes were offered in the spring quarter the year of the site visit). The next steps should be to perfect the current offering of classes including better sequencing and removal of unwanted overlap. The incorporation of qualitative analysis should be considered.

Substantively the MPP program provides diverse electives that reflect the strength of Oregon State University, including an emphasis on rural studies and environmental issues. The rural emphasis is particularly rare for any MPP program. Views from students and faculty indicated some concern about the number of concentrations, their overlap, and their need. Such concerns are common for public affairs programs as the concentrations are often in a state of constant adaptation and evolution to societal needs and student and faculty interests. While arguably a low priority, the MPP program and the School of Public Affairs should discuss the purpose of current concentrations and the processes for adaptation and evolution over time.

Among the learning outcomes (Self Study page 6) not represented in the curriculum are ethics and diversity. From the site visit, the study of ethics is marginally in the curriculum in the form of IRB certification and possibly as part of research ethics. Similarly, while the MPP program devotes significant attention to diversity in recruitment, it does not provide equal attention to a commitment to diversity in the curriculum. A need for growth in the program is to incorporate ethics and diversity into the core curriculum without adding classes.

Students and faculty strongly supported the internship experience. Faculty report taking time and effort to help with the internship process with students but also accepted the responsibility as part of the job. Unknown is the magnitude and extent of faculty time in supporting the internship experience, monitoring of this time and effort could be incorporated as a formal item on faculty yearly reviews.

Students expressed concern about the quality “slash courses”; that is, courses that combine both graduate and undergraduate students. Students felt such courses were not of graduate-level quality. Students also expressed appreciation for attempts by faculty to deal with slash courses by including extra time after class for discussion. Some hoped that new slash courses could be created that combine MPP and PhD students.

Recommendations: (1) Maintain the rigor in the MPP program especially in the quantitative, economic, and research methods. (2) Improve the delivery of classes through better sequencing of classes. (3) Remove unnecessary overlap between classes. (4) Consider additional emphasis in qualitative analyses. (5) Create assessment tools to document and measure the reported levels of rigor in the MPP program. (6) Develop a strategic plan for incorporating ethics and diversity into the curriculum and the accompanying means for assessment. (7) Develop strategies for overcoming the limitations of “slash courses” for MPP students. (8) Reassess the purpose and benefits of concentrations offered by the MPP.

Quality of personnel and adequacy to achieve mission and goals

Uniform was the admiration from both faculty and students for the Graduate Program Director (Dr. Brent Steel) and the Director of the School of Public Policy (Dr. Denise Lach) in leading the MPP program and the School of Public Policy. Nearly all expressed concerns about the work load on the Graduate Program Director. No clear succession plan for the Graduate Program Director is evident. At least one student indicated that she did not approach the Graduate Program Director out of respect for his time, given his workload. Effort should be given toward translating the efforts by the Graduate Program Director into formal procedures.

Similar uniform admiration was directed toward recent faculty hires and adaptation by some of the current faculty to the new School of Public Policy. Every effort should be taken to proactively retain current faculty, especially the new hires. (Note: there is no indication that current faculty were dissatisfied with the program, hence, this is a “proactive” suggestion.)

Some described the MPP program and the School of Public Policy as requiring a lot of volunteer and committee work and a small group of faculty carrying a large service load. While the new political science hire (the Debach Professorship) and the part-time Director of Public Policy Graduate Programs may possibly alleviate the situation, there needs to be better monitoring of hours spent for service in the MPP program by School of Public Policy faculty. Once those numbers are known, action – if any – can be taken.

There are increasing expectations for grant writing by all faculty in the School of Public Policy. However, not all faculty are trained or experienced in grant writing. While faculty reported efforts to train and mentor faculty in grant writing, concerns remain for some members about writing grants. Some faculty are worried about the role of external grants in securing tenure and expressed uncertainty about whether the measurement of success involves merely applying for a grant or whether it requires the award of a grant.

Retirement of previous faculty has not always been replaced with tenure track faculty -- or even with adjunct positions or instructor positions. Faculty spoke of potential issues

among instructors and tenure track faculty. This is not an issue in the present but may become an issue in the future. The distribution of faculty also affects the distribution of an increasing work load as adjunct and instructor positions do not serve on committees or have the same service responsibilities as tenured track faculty.

Producing rigorously trained MPP students requires advising and mentoring of students. While some students mentioned difficulties in finding a mentor, most were pleased with the quality of mentoring from faculty to student. Part of this success comes from the incentive structure that provides a course offload for mentoring a number of students.

Recommendations: (1) Develop strategies for formalizing into procedures and distributing the duties performed by the Graduate Program Director; (2) Develop proactive strategies for retaining faculty, particularly new faculty hires; (3) Maintain the incentive structure to motivate faculty to mentor students and seek external funding; (4) Develop a method for monitoring service by faculty for the MPP program.

Level and quality of infrastructure

The MPP faculty are physically dispersed across the campus. Faculty and students identified the facilities as a negative for the program. Faculty reported a need for collaboration that often comes from face-to-face daily interactions. Students reported that physical dispersion reduced the availability of some faculty. Faculty also recognized the limitations of space and funding for better facilities from the University.

Recommendation: (1) Identify strategies for overcoming the negative effects from the physical infrastructure given financial and spatial constraints.

Quality of Organizational Support

The MPP program is strongly supported by the leadership at Oregon State University and by the Graduate Program Director and Director of the School of Public Policy. The MPP program also partners with many external actors (e.g., Pacific Northwest Laboratory) and this should continue.

Needed is a stronger presence of an external advisory committee to help with philanthropy, serve students through better curriculum, internships, and job placements, act as an advocate for the program, and help link the MPP program and the School of Public Policy to the Oregon community and beyond. The external advisory committee should also consider members from disciplines across the Oregon State University campus.

The program is in constant adaptation, in part to meet student needs and in response to recent growth. This has led to some issues with consistent delivery and seamless delivery of the curriculum.

Recommendation: (1) Develop a plan for forming and using an external advisory committee to support the MPP program.

Level and quality of student performance

Student performance is high (see Self Study pages 30-34). Of the 77 students who have entered the program since its inception, 65 have graduated and only 11 did not complete the degree. Additionally, many MPP students have received university and professional awards. Similar to documenting the rigor in the MPP program, the current measures of student level and quality of performance are limited by what can be easily measured (e.g., graduation rates and student awards). What is needed is original measures that document performance of the students through learning and development of professional skills as taught in the program.

Recommendation: (1) Develop measures of student learning in the MPP program.

Level and quality of faculty performance

The performance of the faculty in the School of Public Policy is impressive and meets and sometimes exceeds that of peer programs (see Self Study pages 34-36). Some faculty expressed concern about their abilities to write and secure external funding.

Recommendation: (1) Maintain scholarly trajectory of faculty with an emphasis on developing a culture of writing and securing external funding.

Professional visibility of graduates

The Self Study (pages 37-39) provides a list of job placements for recent graduates. Placements reflect the rigor of the program with jobs as economic analysts, data analysts, policy advisors and analysts, and research analysts with government and non government organizations. More than 90 percent of students report their initial graduate status/position directly or was somewhat related to their MPP degree.

Recommendation: (1) Maintain monitoring of jobs and policy impacts of recent graduates.

Satisfaction of students and graduates

The satisfaction of students and graduates is extremely high (see Self Study pages 37-45). Such satisfaction was unanimously repeated by current students on the site visit. Any complaints by current students were on secondary and minor issues and discussed previously in this external report (e.g., course sequencing, incorporation of ethics into the curriculum).

Recommendation: (1) Maintain and perfect delivery of the program and efforts to meet the expectations of students.

Rankings/Ratings

Currently the MPP program is unranked. Accreditation through the National Association of Schools of Public Affairs and Administration (NASPAA) will help with national recognition. An issue that should be discussed is the School's reputation among public affairs programs in the United States, which often builds from work that speaks directly to the fields of public administration, public management, and public policy. It is important to note that a national reputation in public affairs is not a required necessity for a rigorous education in the MPP program. A national reputation will likely have an effect, however, in the ranking of the MPP program by peer institutions, which could affect the recruitment of quality students and quality faculty into the future. Such a discussion should be conducted with caution and respect as current faculty members clearly have their strengths and reputations in their respected fields in economics, political science, and sociology.

Recommendation: (1) Discuss a need and strategies for developing and maintaining a national reputation as one of the best schools in public policy in the United States.

CONCLUSION

The recommendation is to maintain and perfect the MPP program in the School of Public Policy. The program has grown in an upward trajectory of student applicants and numbers and has provided 65 students with a rigorous education and professional experience contributing to their job placement and to their influence in the development of public policy. As the recommendations in this report suggest, the next steps should focus on keeping to the current trajectory, improving the delivery of classes, responding to the growth of the program, and maturing the program as faculty mature that support it.

Additionally, the external review committee supports the trend and forecasts as well as the self recommendations found in the Self Study (pages 47-48). Borrowing from the Self Study as well as the observations of this committee, the challenges in relation to the MPP program will likely include the following:

- (1) The implementation of the PhD program and the taxing of already stretched faculty time and effort.
- (2) A dual effort to decentralize and support the leadership offered by the Graduate Program Director and the Director of the School of Public Policy;
- (3) The implementation of the Oregon Policy Analysis Laboratory (OPAL) and its integration with faculty and students in the School of Public Policy and throughout Oregon State University.
- (4) Completing accreditation of the National Association of Schools of Public Affairs and Administration (NASPAA) and developing strategies for establishing and maintaining a national reputation as one of the top public policy programs in the country.
- (5) Issues of expansion of the program either through electives or concentrations to span more broadly the strengths of Oregon State University to serve its mission of outreach and engagement of the people of Oregon, the nation, and the world.

Oregon State University Department of Physics Academic Program Review

Report of the Review Committee

P. Kornilovich, M. Lerner, W. Pickett, M. Unsworth

The OSU Physics Department has faced challenges over the past decade or more, reflected in their small faculty count, inadequate and deteriorating infrastructure, and challenges in recruiting and retaining the desired number of excellent students. The program has taken innovative steps to deal with these challenges and cope with the constraints, and the program remains a congenial and stable one, albeit ranked very low amongst PhD granting programs nationally. The review panel is encouraged by the program's expectations for a more promising future, based partly on some increase in faculty numbers in recent years, and its willingness to listen to recommendations and consider bold changes that can raise its profile.

The review committee benefited from the detailed self study prepared by the Department and from the well organized and informative full-day visit to the Department.

Mission of the program and its relation to the missions of the University and College.

The department does not have a formal mission statement, but the self study mentioned two broad goals:

- producing graduates whose knowledge of physics distinguishes them as scientifically literate, critical thinkers who are adept at understanding, articulating, and solving problems in science.
- undertaking nationally and internationally recognized research programs and collaborating with industries to apply basic science to technology.

The panel recommends that the program agree upon an official mission statement and post it prominently on its web site. Discussion of this topic may well provide some new viewpoints on its mission and how it is impacted by program size and level of activity.

The department's research program aligns with the Research Agenda articulated by the OSU Research Office, particularly with regard to the healthy spectrum of fundamental and applied research that is conducted collaboratively with external and internal partners. Within these broad goals the department fosters two special themes: (1) advancing the physics curriculum to improve student learning and experience, and (2) developing research, often in collaboration with other organizations inside and outside OSU, to impart to students how physicists approach problem solving by making precision measurements and building an understanding on fundamental principles.

The OSU mission promotes *"economic, social, cultural and environmental progress, to be achieved by producing graduates competitive in the global economy, supporting a continuous search for new knowledge and solutions, and maintaining a rigorous focus on*

academic excellence, particularly in the three Signature Areas: Advancing the Science of Sustainable Earth Ecosystems; Improving Human Health and Wellness; and Promoting Economic Growth and Social Progress.”

On the face of it these Signature Areas do not readily fit the program of a typical physics department. The department has however usefully focused its research and graduate teaching along two very relevant lines by strengthening its applied solid state and optics research programs to interface with materials science and computational modeling in other departments and regional industries, and by developing connections with the life sciences through biophysics research applying optics, nanotechnology and computational strengths. This review group agrees that these lines of research focus are appropriate and have much potential for strengthening the graduate program and enhancing faculty productivity. They are less convinced that it is appropriate in the current circumstances to devote significant faculty effort to physics education research, a topic we return to below.

The program's long term and short term goals were presented in the self study. The long term goals, stated briefly, are to: (i) increase research visibility (“publications”), (ii) attend to student placement, (iii) increase extramural funding, (iv) attract excellent new faculty. These are well chosen goals that will strengthen the research effort and the program more broadly. The short term goals are (admirably) specific: (i) increase the number of RA positions, (ii) hire additional faculty, (iii) improve research-related infrastructure, (iv) attract a stronger graduate cohort. The panel has kept these goals in mind while preparing this report.

Admissions selectivity and quality of students

The number of graduate applicants is variable year to year, but appears to be trending lower; this trend is certainly true over a decade or more. This negative slope is due in large part to the decreased number of international applicants, and also likely connected to the reduction in scope of the curriculum as the number of faculty fell. Over the recent 2009-11 period, the average was roughly 90 total applicants. About 25-35% of total applicants are admitted each year, and 35-50% of these admitted students matriculate. Women comprise less than 30% of the applicant pool, and an even lower percentage of matriculants. This gender imbalance reflects a nationwide long term issue for physics programs and is a concern at the American Physical Society level.

The relatively small number of applicants also means the pool of highly qualified applicants is small, thus selectivity is limited. This limited pool may become a significant hurdle in recruiting and retaining research-active new faculty, as well as in growing the graduate program enrollment. A recruiting plan to increase the number of highly qualified applicants, including international applicants, is not in place but should be formulated. Some components of this plan might include: forming a standing recruiting committee with chair serving for several consecutive years; seeking resources and assistance from the graduate school and international office; developing pipelines domestically and internationally; sending research-active and new faculty on recruiting seminars or interview trips; sending top grad students to revisit their alma maters. The program should formulate a plan for assessing which of these (or other) choices are the most effective.

The department supports admitted students for a recruiting weekend, and the percentage of students that accept offers is quite good. To get a handle on the effectiveness of the

recruiting weekend, it will be useful to track the percentage of accepted offers from the students who take advantage of this visit. We note, however, that highly successful programs offer similar visits to the students they make offers to, and it may simply be non-competitive not to do so.

Incoming student metrics, such as GPA and test scores, have remained constant or trended upwards recently. There was one faculty comment about relatively low capabilities of graduate students, but overall faculty views of student quality are good. This conforms to graduate students' views in general of faculty; relationships and perceptions are very positive in both directions. The numbers of students leaving without a PhD degree is high, in the range of 35-50%. This fraction is large, but probably not out of line with many other physics programs. This attrition leaves the perception of a problem, but may simply reflect the complexities of achieving a PhD degree in the midst of many other life decisions.

Level of financial support

The department restricts the number of graduate student offers to ensure that sufficient TA positions are available for incoming and continuing students. Students are supported, at a minimum, by the department on TA or RA appointments for 9 months. Compared to peer institutions, monthly stipends are at least average, possibly somewhat higher. However, some students (a small number, we believe) are not supported fully through the summer as is done at most programs at major universities. Students understand the economics but emphasized that this is a problem, and faculty feel it is a problem not only for the impacted students but also for recruiting. We recommend making it a program priority to find a mechanism to provide 12 months of support for students.

On a separate issue, some students as well as some faculty thought a tiered support system, with higher stipends based on benchmarks (viz. more teaching experience, higher research productivity) would be more equitable than uniform pay, and help to provide incentives. A tiered salary system appears difficult to implement and regulate. However, we heard that some units already do this at OSU so, with input from those units, the idea may be worth exploring.

Curriculum Strength and Areas of Specialization

Teaching in the department is done by the 13 faculty, buttressed by 4-5 fixed-term instructors to enable the delivery of several large foundational (introductory) courses that are required by other departments. The undergraduate program is not being reviewed by this panel, hence undergraduate students were not interviewed for their impressions. However, the undergraduate program affects both the faculty and the TAs, and requires comment.

Undergraduate: lower division. In a large and expanding university, a faculty of 13 that also provides a PhD program in physics requires instructors to handle most lower division courses. With a little experience, instructors can and do become excellent educators, as seems to have occurred at OSU. The fixed term nature of the appointments (often one year, it seemed), with the uncertainty it carries, presents an extra, and unnecessary, challenge to the delivery of the undergraduate curriculum and therefore of the graduate curriculum. Longer term appointments are needed to ensure the stability of these courses, and they will serve the entire department – faculty, students, and instructors – well.

Undergraduate: upper division. The small faculty pool for teaching has posed challenges in providing the depth and breadth of courses that are provided by most PhD granting institutions (which have many more faculty). Physics is an essential foundational discipline for quantitative sciences and engineering, and teaching it with physicists (including instructors) must be protected. The department has addressed this challenge of a restricted teaching pool by providing (1) research area-specific courses only in the areas of graduate research at OSU, and (2) by providing, instead of a large number of specific courses, an innovative curriculum comprising ~10 “Paradigms in Physics,” nine of which are required of each physics major. The ‘Paradigms’ material and their delivery method appear to have been well received. If the faculty can increase by several members, as is their plan and as is supported by this panel (see below), they will have some latitude to begin to fill out their upper division course list. The justification of additional faculty is clear from the large number of students (~2000) that are taught annually.

Graduate curriculum. Some time ago, to accommodate to the low faculty count, the program resolved to focus on teaching graduate courses related to their research expertise (condensed matter experiment, optics, computational physics) at the loss of courses in particle physics and astrophysics. Physics education is also emphasized, due to the interest of several faculty and that science education specifically is not attractive to education colleges. This selection of research areas necessitates that recruiting focus on only those students who have, or are likely to have, interest in these areas. This approach can be said to be working; students definitely aimed at other specialties will not apply. However, by limiting the type of applicants who apply, some excellent applicants will be excluded. Elsewhere in this report the applicant pool is discussed at more length.

The graduate curriculum is definitely constrained by the number of faculty available to teach, even considering the restriction to their own research areas. Group theory; many body theory; exotic phases (viz. superconductors and topological insulators); these are areas of current great importance that can only receive attention if there is growth in the number of faculty.

PSM (Professional Science Masters) program. The department has been encouraged to participate in this PSM program that has been implemented by a few graduate programs at OSU, very successfully in some cases. The PSM program was mentioned several times during the panel visit, and the panel met with the faculty administrator. The program has graduated 4 students total over several years, however only one of them came from outside specifically to take the program. For a program that is intended to attract additional students of a different kind, the level of activity is extremely low. While it is not a huge drain on time (the courses are already in the curriculum), it does require time of the faculty administrator even when inactive (making brochures, filing reports). It seems that this science + business + communication offering is only rarely successful in physics departments, and probably then only in much stronger departments. There is no discernible benefit to the department from this low level of activity. The panel recommends discontinuing the PSM offering, “focus on strengths” is usually the best plan.

Ecampus. OSU has in place its Ecampus model for online teaching that provides strong support and entrepreneurial opportunities for departments. Physics, despite its strength in education and curriculum development as well as expertise in computational physics that might provide benefit for online teaching, has thus far only one faculty member (emeritus)

involved in the Ecampus program. Students are increasingly at home in cyberspace, there is a need for more scheduling flexibility and distance teaching, and there are enough examples in universities elsewhere, that the panel sees this lack as a missed opportunity. In the OSU model of Ecampus there are also financial benefits to participating departments, which could be used to support the graduate program. The department should find a faculty champion and, assuming good faculty support, invest resources in getting an Ecampus program underway,

Quality and Adequacy of Personnel

Chair. This discussion can begin with the lead position, the Chair. The current chair took the position 14 years ago, before the modern practice of targeting the chair position at 3-5 year tenures. The panel addressed this issue of the chair's acceptance and effectiveness, both indirectly and directly. In their interview, the students – while mentioning some issues that are addressed elsewhere in this report – praised the chair for his accessibility: he is felt to be approachable and eager to make the time to talk with students. In the panel's interview with the faculty, the length of service and effectiveness of the chair was brought up. The response, without going into details, was overwhelmingly favorable. The chair consults with the faculty on department issues; he decides on pressing issues when or if discussions bog down (stated positively by the faculty). He does course scheduling, and is recognized for being willing to teach the orphan course that has no other instructor. He teaches a full load, unlike most chairs who get some teaching relief. This full load may be necessitated by the small number of faculty; possibly it may also be enabled to some extent by the small size of the department. The panel encountered no significant negative comment about the chair; the overriding impression is that he goes above and beyond the normal chair's duties to ensure the survival of the department and the success of the students. That said, it seems common knowledge that the chair does not intend to remain in the position for more than two more years. The deans indicated that an outside search is plausible if no obvious candidate arises from within. The panel recommends that the department and deans indeed keep open the option of an open search. An outside person brings in an additional excellent and experienced physicist, and there are numerous examples where an outside person provided a stimulus that would not be possible with an inside, entrenched person.

Office Coordinator. The person identified in this position was praised especially by students but also greatly appreciated by faculty. There is little to add: no problem in this area, quite the opposite: the primary department staff person is admired by all.

Other Departmental Staff. Due to the shortness of the one-day visit, other staff positions were not addressed specifically.

Level and Quality of Infrastructure

The program self study identified infrastructure as one of the difficulties faced by the department. Space *per se* is not the issue; after all, more faculty members were accommodated in earlier years in the same space. However, in what is often referred to as "vintage 1960s laboratory space," modern researchers usually find the space that is available to be unacceptable for precision equipment and measurements that are required for modern experiments. One serious issue for several faculty is vibration level, for which many modern experiments have strict requirements. There are other areas of inadequate

physical infrastructure: sufficient cooling and heating at the appropriate times, and availability of water, gas, and power. On the staffing side, there has been little formal training of students in the machine and electrical shops. On this topic of shop training, the department can consider partnering with other physical science or engineering departments.

Computational infrastructure. Computational physics has a comparatively long history at OSU; its educational presence in this area has national visibility (including a textbook by a faculty member), and there are several researchers with successful programs in computational physics. The infrastructure in this research and teaching area is woefully inadequate. This deficiency highlights what can be characterized as a lack of fair treatment of computational scientists, a feature of many (but not all) campuses. It has long been accepted, and rightfully so, that laboratory scientists and engineers are entitled to the space and infrastructure facilities that will enable modern, competitive research opportunities. With modern accounting methods, it is *space* that is the expensive item, followed by the related infrastructure that enables modern, precision experiments. With computational science growing alongside experimental science and now surpassing purely theoretical science as one of the three pillars of science -- experimental, computational, theoretical -- their infrastructure needs should be recognized and addressed.

Computational physicists require comparatively little space, actually very minor compared to laboratory scientists. The necessities of electrical power and cooling are not inconsequential, but are not great compared to the laboratory scientist. The Physics Department has a useful but comparatively (to peer programs) small room for its computer clusters that is woefully limited in infrastructure: cooling certainly, and almost surely an upgrade in power is necessary. It seems a comparatively minor issue to provide the computational research group with the infrastructure that is necessary to house their computational hardware. The panel was made aware that some faculty have the capability of purchasing more computational hardware, but the infrastructure currently is unsuitable. The panel strongly recommends that the infrastructure be developed to enable the computational physicists to expand their programs and pursue leading-edge research.

Laboratory infrastructure. The available laboratory space in the Weniger Building is widely acknowledged to be unacceptable for most modern laboratories for the condensed matter experimentalists that form part of the core of the departmental plan for hiring. To the University's credit, recent hires have been accommodated with renovations that enable their research at a modern, competitive level. Although the panel hears of plans of a new building in the future ("Pauling II") this addition to infrastructure appears to be years in the future. The panel encourages all involved persons at OSU to support, and facilitate, improvements in the infrastructure for the experimental faculty in Physics. Such improvement, or definite scheduled plans for it, will be necessary to succeed in hiring new faculty who can excel in their research.

Quality of Institutional Support

The panel was not apprised of enough of the history of the physics program at OSU to understand the many issues that have resulted in the low number of faculty in recent years. However, it became clear that the faculty level (FTE) fell from the level of 19 about 2 decades ago, to 9 a decade ago and then to only 8, and then to recover to the 13+1 (one new hire) in 2012. During at least the latter part of this time, the student body at OSU has

grown considerably, and the teaching of physics to physical science, engineering, and bioscience majors has increased greatly. The physics department continues to teach fundamental physics (typically called service courses) to the students in other science areas who must be able to incorporate the fundamental physical laws into their research thinking. With the low number of physics FTE, this teaching has been accomplished by the hiring of fixed-term instructors. This policy has allowed the physics program at OSU to survive.

The panel believes that it is crucial for a major university that the Physics Department is facilitated in a way that it cannot only survive but can thrive and carry out forefront research and train excellent PhD students, in addition to one of its primary educational roles: to educate young scientists in the understanding of, and the disciplinary tenets of, modern physics. The principles of physics underlie the physical sciences and engineering, as has long been recognized, but the precise, quantitative measurements and the problem-solving aspects long associated with physics increasingly underpin leading edge research in the biological sciences. In addition, small programs are increasingly under fire from state and national figures who are attacking higher education. Physics is one of the fundamental disciplines that should be brought up to, and maintained, at critical mass.

Level and quality of student performance

About 10-12 students per year are admitted, a number limited mainly by the availability of TA positions, as there are relatively few RA positions available. About 25-35% of entering students leave the program without a degree, a fraction that is typical of physics programs nationwide. Two or three in recent years leave after receiving an MS degree, and typically 4-5 students progress to doctoral candidacy each year. Time to completion of a PhD is 5-6 years in most cases, comparable to the national norm in physics. Students are expected to be involved in a research program in their second year, with the expectation that some will be taken on as RAs after spending ~2 years as TAs. Talking to the students, the panel got the impression that some felt very integrated into active research groups, had clearly defined research programs and had opportunities to attend conferences etc., whereas others had more difficulty identifying research topics to pursue.

The students were generally satisfied with the level and quality of graduate teaching but mentioned one or two classes that they strongly felt needed oversight by experienced educators: one clear issue was *far too much* homework in one class. Several students would have liked more formal computational physics classes, and stated that the computer facilities were out of date. Other students mentioned a lack of machine shop technical support. There seemed to be little or no interest among the students in developing an internship program with industry or government laboratories. Given the local possibilities, this seems to be an area faculty might revisit and look for opportunities. All students commented very favorably on the willingness of the faculty to provide advice and encouragement. At the risk of repeating ourselves, we again emphasize that the panel was heartened by the camaraderie displayed between all levels within the department.

Level and quality of faculty performance

The faculty members are strained to cover their undergraduate and graduate teaching responsibilities, which they take very seriously. There is impressive enthusiasm facultywide for the innovative teaching approaches for which the department has

established a reputation in recent years. With the exception of a few low scores recently, student evaluations of graduate teaching are good to very good.

The faculty as a whole publish about ten refereed articles per year – a low output for 13 faculty, but undoubtedly influenced by the heavy teaching load, small number of RAs, and the limitations of infrastructure. Average research grant income per faculty member is well toward the low side, but this average hides the success of a few individual research programs. It is particularly encouraging to see the successful programs of several relatively new faculty, including three NSF Career grants. Research grants also clearly show the very effective collaborations that several faculty have developed with researchers in other OSU departments and elsewhere. The panel notes a good range of non-traditional agencies providing funding, particularly the ONAMI program and the Office of Naval Research.

Viability of the scholarly community

Although the students commented on the openness and activity of the faculty, a few faculty do not seem to be active in research. This difference adds to the load of the active faculty who need to serve as major professors to well over the average number of students. The program also creates an additional advising burden by requiring all senior undergraduates to complete a research project, a commendable practice both for attracting good students and for giving them useful experience for future careers but also a drain on faculty time. The recent influx of several new young faculty has shown the benefits that new energy and enthusiasm can bring. If similarly impressive hires can be made over the next few years the department will be re-invigorated. Without such an expansion it is hard to see how the research performance can improve significantly. The faculty who are so inclined will not have the time available for additional grant writing, and without grants there will not be enough RA support to grow the graduate program.

Professional viability of graduates

According to the self study, out of 32 students graduated from the PhD program since 2006, 26 found employment at the time of degree in physics-related jobs. This is a commendable record in these economic times. Out of the 26, nine went into the private sector, three to the National Labs, thirteen to colleges and universities (these include teaching positions at community colleges and post-doctoral research positions at universities), and one became a high-school teacher. This is an example of success that should be kept handy for those who need, or want, to know and use such information.

As for their earlier graduates, the department (and, apparently, the college) does not keep up-to-date information on career progress of its graduates, and with some contact has been lost. While such a database may be difficult to maintain at the department level, it is very important to follow students in their careers. They can share their career path and life experiences with current students and contact with alumni is important to the development effort. The panel makes two recommendations in this area: (1) regularly invite alumni but also physicists from industry and from national labs such as PNNL, LBNL, and LLNL to share with students and faculty their job seeking and working experiences, and (2) engage the college, the university, and alumni organizations to help keep alumni contact information up to date, as it is needed for development purposes.

One of the drawbacks of the small size of the department is the inability to offer a broad curriculum. As mentioned above, the current curriculum is limited to foundational courses (quantum mechanics, electromagnetism, optics, solid-state physics, and computational physics), and a few courses in the areas of research interests of the faculty. Modern technological megatrends, such as mobile devices, green energy, and sustainability, require physical knowledge beyond the traditional set of courses that interface with other fields: chemistry (e.g. batteries), engineering, biology and others. With a large graduate fraction going to industry, it is important that students receive proper training that will make them competitive in today's labor market. One of the benefits of growing the physics program at OSU could be extending the curriculum to include other modern topics, e.g. multiphysics modeling and physics-related courses in engineering departments. The panel recommends that the department consider such extensions as part of its long-term development plan. It might be appropriate to develop some modules in collaboration with other departments.

In conversations with the panel, students mentioned that writing research papers, preparing grant applications, and giving conference presentations are distributed unevenly among the research groups. Many active programs provide such opportunities for development of these and other professional skills. While such a disparity is not unexpected, some students may not receive the training needed later in professional life. The panel recommends finding ways to provide minimal training to everybody. For example, a class or seminar on writing grant proposals may be useful. Again, collaboration with other departments should be considered. There is for example a thriving graduate class on this topic offered in CEOAS.

Satisfaction of students and graduates

The panel found overall satisfaction among graduate students to be high, inspite of the challenges that are mentioned in this report. The students complimented the chair, faculty, and staff for accessibility, openness and dedication. The students feel engaged, most of them enjoy the research they conduct, and the majority consider physics to be their future profession. However, areas for improvement do exist. Several of these items may be addressed in the near term, others are consequences of underfunding that can be improved only on a longer time scale.

- Students are consulted about many aspects of the departmental life. For example, they meet with all new hire candidates and then are asked to provide their impressions. However, it is not clear how students' opinions affect the final decisions.
- Similarly, students do not know what effect their evaluation forms have. The complaint mechanism is not clear to them. The University has support structures but most students are unaware of them.
- There is an employment gap for some students during summer months, which creates financial uncertainty.
- Some students expressed an opinion that lack of differentiation in salary reduces incentives to work harder.
- Machine shop skills are seen by many as beneficial for the future but obtaining training is problematic. Broken equipment takes a long time to have fixed.

- The students would welcome more opportunities to interact, such as what a larger graduate common room would promote. (The panel learned during the tour that attention to this item is already under way.)

Rankings/rating

The National Research Council Assessment of Physics Doctorate programs released in 2010 places OSU in the 140-150 category among 162 programs surveyed. This is acknowledged in the self study to be “quite low”. The panel does recognize that this ranking was based on the data collected in 2005-2006, when the OSU department was small and just began hiring young faculty members. The available ranking is not necessarily representative of the current state of the Department. (The panel is aware that there are gross inaccuracies in the NRC database. It lists in relation to OSU physics: “Total Faculty in 2006” of 30, and “Number of Core and New Faculty in 2006” of 25, which is total fiction. Although those numbers were not used in ranking according to the database, this raises a question about the accuracy of the information on which the ranking was based.)

We note that the previous ranking, released in 1995, placed the OSU graduate physics program at #75, and it can expect to have fallen as the program’s size and activity level decreased since that time. There is, not surprisingly, a very strong correlation between a physics program size and its ranking in the various lists. A benefit of increasing the program size is that it will provide more opportunity to rise in the rankings.

Recommendations to the Deans

The Department of Physics has weathered a difficult era in which faculty numbers dwindled while students, and student credit hours taught, have increased very substantially. This accommodation was accomplished by (i) general tightening of belts, (ii) employing instructors to help with lower division teaching, (iii) by revising their upper division curriculum to deliver several elements of the fundamental physics curriculum while offering ten paradigms in focused form, and (iv) focusing graduate offerings to the research areas of the faculty. The delivery of the undergraduate curriculum has survived, and the education and training of PhD students has been maintained, but the ranking of the graduate program has decreased to the lowest levels of PhD granting institutions.

Physics is the discipline that provides the fundamental physical principles that underlie the physical sciences, all engineering disciplines, and more recently the biological sciences. It is unthinkable that a major PhD granting university can move to the next level in visibility and impact without a thriving Physics Department. It is noteworthy that the OSU Physics Department has begun a recovery, increasing its numbers to 14 faculty in 2012-13. But at this size, it remains a very small program, albeit one on the upturn. The stated goal of the program is to hire four new faculty in the near term (~5 years), as well as replacing two likely retirements.

Based on the dedication of the faculty and the needs of a vigorous physics program at a major university, this panel supports this ambitious but laudable goal, and we recommend that the deans who are involved find the means to achieve this goal. The Physics program must revisit its curriculum and research plans together with its hiring plans, and provide a lucid justification for the direction of the program; additional comments are provided below. The hiring plan written in 2009 is near its end timewise, even if its (understandably

ambitious) goals have yet to be reached. Now is the time to develop a current department plan, including the hiring plan but extending into curricular areas as well. It is necessary for the program to serve its constituency, including projecting that constituency.

I. Our first recommendation to the deans is: support a well prepared and strongly justified department plan from the Physics faculty, including the growth of the tenured faculty by up to four new faculty in the next five years. We provide below our recommendations to the faculty of what is likely to be required of the justification for this expansion.

II. We further recommend to the deans that the pressing infrastructure needs of the Physics Department be addressed in the near term, based on prioritized needs provided by the department.

Recommendations to the Physics Program

The review panel applauds the faculty for its dedication and tenaciousness throughout recent tough times. Their decision and commitment, to survive and to educate their students in spite of small numbers, is inspiring. The program has demonstrated a resiliency that bodes well for the challenging task of moving the program to a more vigorous, more visible, and clearly viable program to serve the State in coming years. The challenges are several, but a concerted effort by administration, faculty, staff, and students can forge the path to a strong Physics program. The way forward will require concerted effort, and this review panel intends their recommendations to be constructive in this effort. The statement of recommendation will be kept very short when the explanation given within this report (above) requires no elaboration.

- A. The *hiring plan* will be central in progressing toward a thriving and improving Physics program. The program has strength in condensed matter physics, in optics, and in computational physics which overlaps other areas (condensed matter, biological, potentially other areas). The program has also accumulated an admirable nucleus in physics education, an area that we want to pinpoint. The national (and state) need for more and better science education and teachers is very real. This area is also receiving focus from federal agencies, up to and including OSTP (Office of Science and Technology Policy, at the White House level). It would be a notable service to the state and country to devote effort and resources to this worthy aim. It is, on the other hand, a somewhat risky strategy upon which to base the recovery of a struggling Physics program. While it is true that federal funding is becoming available in this area, there are possible downsides. One is that the level of funding in the education of physics majors dedicated to secondary school teaching is substantially less than available for the other areas of focus in the program. Fewer students would be supported, likely less visibility will accrue to the program. Secondly, graduate physics programs overwhelmingly attract students interested in *physics research versus education research*, as laudable as the latter may be. While the review panel does not provide an answer to these choices, it does recommend that the Physics program obtain funding profiles and other evidence that will allow them to make projections of research funding (thus student support) that can inform their new department plan.
- B. Create an informative and inspiring official mission statement.
- C. Discontinue PSM offering, focus on strengths.
- D. Find a method to ensure full summer support for students.

- E. Identify faculty/staff leaders and resources to develop an Ecampus program in Physics.
- F. Initiate systematic tracking of the success and career paths of graduates. College or university staff may be available to handle the recordkeeping.
- G. Consider developing a seminar class, possibly shared between undergraduate and graduate students, of visitors and alumni to discuss their careers after obtaining a Physics degree. Studies indicate that most graduate students enter Physics programs thinking of an academic or research career, while there are relatively few positions in those areas. A seminar course, possibly shared between undergraduate and graduate students, of visitors to discuss their careers after obtaining a physics degree can be very informative. This format can also serve other purposes; inviting alumni back to present can help in development.
- H. Formalize communication lines with students.
- I. Consider seriously an open search for the next chair.
- J. Prioritize needs involving improvement of infrastructure; prepare and circulate a document on this issue.
- K. Extend, or institute where necessary, student training: machine shops; writing of publications and grant preparation.
- L. Expand collaboration with other departments, in both teaching and research.
- M. Develop a vigorous but sustainable recruiting plan.

Community College Leadership Program Review - 2012

Materials linked from the October 25, 2012 Graduate Council Agenda.

Review Committee

Brenda McComb, Dean, Graduate School, Oregon State University

Greg Hamann, President, Linn-Benton Community College

Paul Heckman, Associate Dean and Professor, School of Education, UC Davis

Murray Levine, Professor, College of Earth, Ocean, and Atmospheric Sciences, Oregon State University

Jon Louis Dorbolo, Associate Director, Technology Across the Curriculum, Oregon State University

1. Overall Recommendation

Restructure

2. Summary of Findings and Recommendations

- A. Choose a degree focus for the program; either Ed.D applied scholarship or PhD research scholarship.
- B. Improve the design and practice of online instruction by development of guidelines and training for faculty.
- C. Revise the portfolio project to apply consistent expectations and approaches to be communicated early in the program.
- D. Locate and assess a venue for intensive course work sessions that provides strong connectivity for mobile devices and computers, as well as greater travel accessibility.
- E. Develop a program learning objective intended to achieve learner proficiency in managing technological change in the teaching and learning environment.

3. Detailed Findings

Introduction

The overall consensus of the reviewers is that the Community College Leadership Program (CCLP) is an excellent and needed program in which a great deal is going right. Students consistently attested to the value of the curriculum, the relationships formed, and the relevance of these experiences to practice in the world of work. Experts on the review panel confirmed to the need for this program in order to address the changing national and global higher education environment. This is a program to be sustained and strengthened. The recommendations made here are pursuant to that intent.

Community College Leadership Program Review - 2012

Over the past decade, the national dialogue about education has increasingly focused on student success and program, degree, or diploma completion. This is not a passing fad but instead reflects a growing body of evidence that the United States is rapidly losing and in fact has lost its leading role in educational attainment. Where the U.S. once boasted of having the most educated citizenry on the planet, no less than a dozen countries now have a greater percentage of their people obtaining post-secondary degrees and certificates than here in the U.S., and this fact alone greatly jeopardizes our future capacity to compete and succeed in the global marketplace. With the intent of turning around this troubling trend, President George W. Bush instituted “No Child Left Behind” a decade ago and, more recently, President Barack Obama turned his – and our nation’s – attention to our 1600 community colleges. Following suit, the State of Oregon instituted the educational attainment goal of “40-40-20” when it passed Senate Bill 253 in the 2011 Legislative Session, and it is no secret that the center “40” – the one that focuses on Associate’s Degrees and Career-Technical Certificates – is the goal the we are furthest from and therefore requires our greatest attention.

If our community colleges are to succeed in guiding and supporting 40% of Oregon’s people toward the completion of Associate’s Degrees or Career-Technical Certificates, and if our community colleges across the country are to achieve similar goals established by their respective states, then we are going to need to greatly expand the capacity and improve the performance of these critical institutions. And, to accomplish this, we are going to need a new generation of motivated, skilled, and visionary community college leaders.

OSU’s Community College Leadership Program (CCLP) has a long history of being a source for high quality community college leaders in our region. Oregon’s Commissioner for Community Colleges and Workforce Development, as well as numerous community college presidents, vice-presidents, and deans, are all CCLP graduates, and our students and our communities have been the beneficiaries. This role is to be commended and must be preserved – and perhaps even expanded – as the leaders of the CCLP look to the future. Doing so will require these leaders to combine their evident deep passion for the CCLP with a dispassionate objectivity that will allow them to continuously adapt the CCLP in a manner that not just corresponds to but helps guide the evolving role that our community colleges play in the lives of our students, our communities, our states, and our nation. It is with this need in mind that we have reviewed and now provide our commendations and recommendations regarding the Community College Leadership Program at Oregon State University.

Quality of students

It is difficult to assess quantitatively the quality of applicants and incoming students as a standardized test, such as the GRE, is not required, and the GPAs were not available. However, the CCLP web page states that “admission is limited and competitive.” Applicants must have “completed a master’s degree in education or a related field, or the equivalent in post baccalaureate graduate-level course work,” and “need a minimum of three years of professional experience in technical or community colleges or a professional field related to teaching,

Community College Leadership Program Review - 2012

learning and/or leadership.”¹ No indication is given as to how the degrees and work experience are evaluated during the application process.

Admissions selectivity

A sense of admission selectivity can perhaps be made by considering the percentage of students that are accepted to the program. According to Table A in the Self-Study, over the past 10 years a total of 52 students were rejected and 137 were accepted. The number of students that were admitted each year over the past 10 years ranged from 11 to 16, with an average near 14. Clearly, not everyone is accepted, but it is difficult to gain much quantitative information from these numbers.

Related to admission selectivity is the issue of the strength of the applicant pool in both numbers and composition. A strength of the program “has been its ability to attract working professionals from across the country.” Over the past 10 years about half the students are Oregon residents; most non-residents are from Washington, Idaho and California. A few students have come from as far away as Florida, Hawaii and Alaska. Broadening the applicant pool is being attempted by publicizing the program through targeted efforts.²

Level of financial support of students

The program currently does not provide financial support as this is an e-Campus Program and all students are currently employed off-campus.³

Level and quality of student performance

A useful measure of student performance in this Ed.D. and Ph.D. program is the graduation rate. Based on cohorts 10 through 14 (entering 2001 through 2005), about 55% (40 of 72) have graduated (revised version of Table A). The average time to graduation is about 4.1 years. Of the 32 that have not graduated, 9 are still labeled as active. However, it is unlikely that very many of them will eventually graduate given that the longest time for a student to graduate so far has been 6.5 years. For cohorts 15 through 19 (entering 2006 through 2010), 11 have graduated taking an average time of 3.8 years. So, the overall average time to degree appears to be consistent over the past ten years.

A graduation rate of around 50% is probably a reasonable rate for this type of program. Students are usually employed in full-time jobs and receive little financial support. In addition

Community College Leadership Program Review - 2012

after their intensive course work experiences, students do not have the benefit of personal interaction with faculty and peers, as is the case for students in residence on campus. Another measure of student performance would be the advancement in their position subsequent to obtaining their degree. However, this information would require a detailed survey of graduates.

A. Degree Focus

We find that the Community College Leadership Program (CCLP) will benefit by choosing a single degree focus, conferring either a PhD. or Ed.D. Degree. The Ph.D. is a research degree and is most suitable for those wanting to continue to do research and those looking for employment in academia. The Ed.D is appropriate for those desiring to work in leadership positions in community college and similar institutions. Note that although more students in this program now choose the PhD, more students wind up in positions emphasizing leadership rather than research.

The program provided the option of choosing a PhD. degree option over an Ed.D. degree in 2004. That provision appears to also have made a subtle turn from the original purpose of the CCLP noted below. Page 8 of the program's self-study document notes that the PhD. is to be a degree for "scholar researchers," while the Ed.D. is the degree for "scholar practitioners".

The first paragraph on page 6 of the self-study document expands on the description of the purpose of the program by noting the following:

The Community College Leadership Program (CCLP) was established 20 years ago to prepare teachers and administrators for leadership roles in technical and community colleges and similar organizations. The program was developed to serve a growing need in the Northwest Region for leadership preparation for the community college. A local advisory committee of community college leaders developed the components of the program. Over time, the program has managed to maintain its emphasis on serving the need for leadership preparation with an increased emphasis on the application of quality research to the problems and opportunities in community colleges.

This statement suggests that graduates of the CCLP program are prepared to assume leadership roles in their institutions and apply their skills and insights to the problems and opportunities that they will face there. However, it is not clear why the PhD. degree is necessary to do that. In fact, an EdD. degree would seem to better promote the connection between research and practice, theory and action, as discussed below.

In our interviews and meetings with faculty and students, that purpose and the important ways that an Ed.D. may promote leadership and leaders for today's community colleges did not appear to be clear in the mind of the participants, faculty, or students. A few students indicated

Community College Leadership Program Review - 2012

that they chose the PhD. because it took less time to complete a thesis than it did to satisfy the Ed.D. internship requirement. The main reasons for the PhD. that we heard in our conversations suggested that students were choosing a PhD. over an Ed.D. because of the reputation that follows from having a PhD rather than an Ed.D. That is, in this view, the PhD. is recognized more widely and provides greater status and wider career choices to the holder of that degree.

As previously noted, during our meetings with faculty and students, the Harvard Graduate School only offers an Ed.D. Those graduates have career choices. In the experience of some of the review committee members, Colleges and Schools of Education do not value Ed.D. or PhD degrees differently. Nor are specific degrees offered as a reason to support a candidate for a position. Nonetheless, the status issue seems to be most dominant in students' minds in CCLP as they make their decisions about which degree to pursue. And thus, most of the students are seeking the PhD., not the Ed.D., for these presumed status and career advantages.

Lee Shulman has nicely shown that the distinctions between these two degrees are not clear and the issues arising from this lack of clarity are pervasive, especially in Schools and Colleges of Education:

In reality, the distinctions between the programs are minimal, and the required experiences (curriculum) and performances (dissertation) strikingly similar (Anderson, 1983; Dill & Morrison, 1985; Murphy & Vriesenga, 2005). Instead of having two separate entities that effectively accomplish distinct functions, we have confounding and compromise, a blurring of boundaries, resulting in the danger that we achieve rigorous preparation neither for practice nor for research.¹

Shulman and colleagues further argue that scholars, whether practitioners or researchers, have to become stewards of the discipline:

We believe these people are scholars first, in the fullest sense of the word—future leaders who will creatively generate new knowledge, critically conserve valuable and useful ideas, and responsibly transform those understandings through writing, teaching, and application. We call such people “stewards of the discipline.”²

If all scholars are to reflect these qualities, what then might distinguish the students seeking an Ed. D. from those pursuing the PhD. in CCLP? The self-study document on page 8 suggests that such a distinction rests in students figuring out if they want to become a scholar researcher or a scholar practitioner. That is it.

¹ Lee S. Shulman, Chris M. Golde, Andrea Conklin Bueschel, and Kristen J. Garabedian (April 2006). Reclaiming Education's Doctorates: A Critique and a Proposal. Educational Researcher, Volume 35, Number 3, p. 26.

² Shulman et al, 2006, P. 27.

Community College Leadership Program Review - 2012

The decision to promote scholar researchers seems then to change the purpose of the program from one of preparing “teachers and administrators for leadership roles in technical and community colleges and similar organizations” to one of preparing educational researchers for Tier One universities and other research organizations. As it now stands, a predominant number of students select the PhD. instead of the Ed.D., implicitly suggesting that the program prepares researchers more than it prepares students for leadership roles in community colleges.

To avoid the criticism that Shulman offered earlier—that is, not doing well in preparing researchers or leaders for community colleges—a focus is necessary. If the focus is on preparing researchers, then it is necessary to promote a hefty increase in the required experiences for students to fully realize the range of knowledge and skills required to become educational researchers.

For example, Shulman and his colleagues, who are involved in the Carnegie Initiative on the Doctorate (CID), call for PhD. programs to have a heavy emphasis on a quality research apprenticeship and have a strong intellectual community in which students in a PhD. program perform these apprenticeships. In other words, novice researchers—PhD. students—interact with many different practicing and other peer novices in a strong intellectual community where they learn, hone their skills, and attain knowledge of the stewardship of their discipline.³

Without this kind of development, there is the risk that graduates will not be effective researchers. In Shulman’s eyes, this is one of the greatest challenges facing PhD program in Education.⁴ To address this challenge, Shulman suggests several features of a quality apprenticeship offered to a small number of doctoral students as they take courses during their first three years of their program:

... most students are also immersed in an apprenticeship to scholarly life: conducting research and teaching undergraduate classes. Students quickly transition from consuming to producing research, whether they are incorporated into a faculty member’s ongoing research program (typical in the labor field-based physical, biological, and social sciences) or are producing smaller pieces of scholarship under the tutelage of faculty in courses (usual in the humanities and other social sciences). Once they advance to candidacy, students spend most of their time on their own research and scholarship under the regular mentoring supervision of faculty.

An Ed.D program could go in another direction. In the process, students would gain expertise in what Boyer has called the Scholarship of Application. While not a perfect term, Boyer’s description of it fits well with the purpose earlier noted for the CCLP—preparing leaders for

³ George Walker, Chris M. Golde, Laura Jones, Andrea Conklin Bueschel & Pat Hutchins (2008). The Formation of Scholars: Rethinking Doctoral Education for the Twenty-first Century. San Francisco, CA: Jossey-Bass Publishers, page 4.

⁴ Shulman, 2006, p. 26.

Community College Leadership Program Review - 2012

community colleges. For Boyer, this kind of scholarship, and the kind we imagine for a scholar practitioner who becomes a leader in today's community colleges, involves the following activities:

... we speak of applying knowledge, we do not mean "doing good," although that's important. Academics have their civic functions, which should be honored, but by scholarship of application we mean having professors become what Donald Schon of the Massachusetts Institute of Technology has called "reflective practitioners," moving from theory to practice, practice back to theory, which in fact makes theory, then, more authentic-something we're learning in education and medicine, in law and architecture, and all the rest.⁵

Some of this kind of scholarship is already part of the program, but it seems more in the background than in the foreground. In addition, all of the students spend most of their time in their work settings in their home communities, unlike students who spend full-time in the apprenticeship activities noted by Shulman at their respective university settings of their PhD program. The CCLP students are clearly immersed in their home educational setting, not the university setting, not the intellectual community of the university, but the intellectual community of their cohort and home educational setting.

There, and in their cohort, they can engage well in the scholarship of application. The activities of this kind of scholarship and the qualities of a reflective practitioner and the thought involved in problems of practice can include the following:

(a) recognizing the existence of a problem, (b) defining the nature of the problem, (c) representing information about the problem, (d) formulating a strategy for solving the problem, (e) allocating resources to the solution of a problem, (f) monitoring one's solution of the problem, and (g) evaluating feedback regarding that solution.⁶

High standards of quality exist for evaluating this kind of scholarship. For example, questions like the following can be asked and answered: Is the identified problem being addressed and clearly stated about their work setting? Are the methods being used to understand the data about the problem appropriate and of the best kind? Are the generalizations on which a solution and its evaluation are based reliable and valid? Are the generalizations and solution-based in what is known in the literature? Are the manner and the product of communicating about the nature of the practical problem and its solution clearly and effectively conveyed?⁷

⁵ Ernest L. Boyer (Apr., 1996). The Scholarship of Engagement, *Bulletin of the American Academy of Arts and Sciences*, 49, 7, pp. 18-33, p. 27.

⁶ Robert J. Sternberg (1998) A balance theory of wisdom, pp. 347-365, *Review of General Psychology*, 2,4), p. 352.

⁷ Eugene D. Shapiro and David L. Coleman (September 2000). The Scholarship of Application, *Academic Medicine*, 75, 9, pp. 895-898.

Community College Leadership Program Review - 2012

The answers to these questions and the reflective thought required to answer them is clearly furthered among the cohort members if and when they come together at their monthly gatherings to share and evaluate these experiences, their problems, their solutions, and the evidence being used to provide warrants for these thoughts and actions. In that process, they would then be enacting the scholarship of application and using that scholarship in the leadership practices in their role of leading community colleges.

B. Online Design and Delivery

We find the need for the program to invest earnestly in increasing the quality and consistency of the online elements. Indeed, the program is offered as online learning via OSU Ecampus. We recommend that the program administrators engage professional online learning design expertise in order to structure resources, design, and practices that are appropriate to the online learning mode.

Design for Blackboard usage: Students reported that usage of Blackboard, OSU's Learning Management System (LMS) was inconsistent and sometimes unorganized. Some instructors do not use Blackboard at all and many use it in minimally. We are not urging the use of more technology. The recommendation is to use the online technologies effectively. Students should have a systematic design that reflects a program, provides consistent user-interfaces, and utilizes available tools for appropriate purposes. An online learning design expert will assist in attaining this level of overall and course-level quality.

Instructor training for effective use of technologies: In order to use online technologies effectively instructors must know what capabilities are available, what advantages and disadvantages they have, and how to manage them. This is a training task and such training is available at OSU. The outcome will be more confident and knowledgeable instructors with respect to the means of conducting online learning.

Guidelines for online practice: Students should know what they may expect from instructors in an online learning environment. Some of the expectations will be course and instructor specific. Other factors belong at the program level such as what elements make up a basic online course, interval within which student communications will be responded to, policies for technological issues, to indicate a few. The program will benefit by developing a set of guidelines for online learning that may be applied across the program.

Assessments of technology effectiveness: The program will benefit by conducting periodic assessments of the effectiveness of the technologies and designs. Technology and online learning practices constantly change. A cycle of feedback, reflection, and improvement will keep the online learning aspects of the program current and relevant.

Community College Leadership Program Review - 2012

C. Portfolio Project

We find a need to clarify the forms and expectations of the portfolio option.

Students may take a comprehensive oral or written exam to demonstrate proficiency in all eight learning outcomes or students may choose to submit a professional portfolio in lieu of written examination. To insure uniform quality and substance in all professional portfolios, the student must provide adequate evidence that each program outcome has been accomplished.⁸

Specifications for the portfolios are clearly organized around the program learning outcomes. A significant proportion of students expressed lack of clarity over the design and format of the portfolio. It appears to them that individual instructors have distinct expectations for portfolios. Several students conveyed that they were well into the program before portfolio expectations were resolved.

This seems to review committee members to be a matter of coordination and communication. Faculty should clarify among themselves what forms portfolios may take and what expectations for each of the forms are. These forms and expectations should be provided to students early in the program so that students may build their portfolios with confidence from the onset.

D. Intensive Course Work Venue

We find cause to reconsider location(s) for the intensive course work sessions. Classes are held one weekend per month at Silver Falls. Students travel to this location each month to meet and study with their cohort.

Many learners and faculty value the natural setting and small-community environment of the Silver Falls facility. They experience a serene isolated venue that promotes collaboration and camaraderie. This can be a positive experiential component for learners and faculty in a primarily online program. Program alumni noted that these relationships continue into professional life.

The positives of the Silver Falls venue must be weighed against the deficits, which vary among students. Travel to the site is time consuming. Some students expressed concern that the journey is hazardous in Winter and Spring. Most expressed desire for reliable communication capabilities via cell coverage and wireless connectivity. Neither is reliable or robust at Silver

⁸Community College Leadership Program Self Study, 2012. College of Education. Oregon State University. P.12.

Community College Leadership Program Review - 2012

Falls. This leaves working professional learners out of touch with their families and work. Given that this is a distance degree program offered via OSU Ecampus we may suppose that students already have robust usage of internet and mobile devices in their personal and professional lives. If the program intends to limit access to outside communication during intensive course work sessions, it should be implemented by design and agreement, not as a side-effect of the location.

Our findings indicate the need to reassess the purposes and values of the Silver Falls location. There are many possible outcomes, such as varying locations especially during seasons of inclement weather.

E. Technologies Learning Objective

We find that the program will benefit by developing a learning objective and appropriate course elements that focus on proficiencies in managing technological change within an educational context. This will include capabilities to assess needs and outcomes, research options, and develop effective strategies for emerging technologies. Even a basic familiarity in these areas renders leaders more capable decision makers.

...the planning and management strategies necessary for the successful implementation of new technologies really require a change in the culture of many institutions. A laissez-faire approach to teaching and the use of technology becomes increasingly difficult or expensive as the application of technology to teaching spreads throughout an institution. The danger is that planning and rationalizing the use of scarce resources may lead to top-down management and unacceptable restrictions on academic freedom. One of the most difficult challenges will be to build a postindustrial form of organization, with teaching and administration devolved to small and flexible units in an overall planning and management framework.⁹

The successful use of technology for teaching and learning also demands major changes in teaching and organizational culture. Graduates from CCLP who go on to work as Community College administrators will encounter environments in which technologies are essential elements. No one in higher education is unaffected by technological change. Whether as budget managers or committee members, administrators need to make assessments and decisions about appropriate technologies. A learning objective directed to the technological side of institutions will bring important contemporary knowledge into the program. This development will be consistent with the program goal;

⁹Bates, A.W. 2000. Managing Technological Change: Strategies for College and University Leaders. Jossey-Bass. P.4.

Community College Leadership Program Review - 2012

Understand the role of leadership in instruction, student services, and community college finance.¹⁰

Each of those areas is integrally shaped by information technology. Understanding contemporary institutions for leadership requires awareness of key issues and dynamics of technological change.

4. Conclusion

We find that the Community College Leadership Program (CCLP) is effective and needed. The program succeeds at the mission to prepare community college professionals. Given the national growth of the US community college system this program has contemporary relevance and importance. CCLP stands on a twenty year history and undoubtedly look toward a vibrant future. This review is primarily a commendation of those successes.

Our critical finding concerns the mission of the program;

*The Doctor of Education (Ed.D) and Doctor of Philosophy (Ph.D.) with an emphasis in Community College Leadership at Oregon State University, are designed to prepare professionals whose career path includes that of leadership roles and research in community college education.*⁴

The applied degree and the research degree in education are different paths and distinct professions. CCLP the committee finds that focusing the mission to one degree path will optimize the program resources and provide learners with clearer direction. Rather than choosing a Ph.D track based on intuitions about status, students will be dedicated to academic and career focus from the start with purpose.

How the program addresses this recommendation is a matter for the program and college. The committee members agree that the Ed.D. is the appropriate focus based on student outcomes and the direction of contemporary higher education.

The remaining recommendations concern details and logistics of the program. We believe that the students, faculty, and the program overall will benefit by addressing these findings. We encourage CCLP administration to seek expertise and resources available at Oregon State University in addressing the recommendations.

¹⁰Community College Leadership Program Self Study. 2012. College of Education. Oregon State University. P.11.

⁴ **Error! Main Document Only.**Community College Leadership Program Self Study. 2012. College of Education. Oregon State University. P.10.

Community College Leadership Program Review - 2012

Principally we thank the CCLP and the College of Education for their sincerity and hospitality. We anticipate a bright future for this well conducted and highly needed program.

Current Requirements

| | Graduate Applicants | |
|----------------|--|--|
| TOEFL | Regular Admission | Conditional Admission |
| Paper | 550 | 500-547 |
| Internet (iBT) | 80
Minimum score of 18 on each section
Speaking sub-score of 26 if awarded GTA | 61-79

Or any sub-score less than 18 |
| IELTS | 6.5 | 6.0 |

Exempt from English Language Testing:

- Individuals who have completed a bachelors or master's degree from a regionally accredited institution in the U.S. or other English speaking country (See list below).
- Individuals who are in the process of earning an advanced degree from an accredited institution in the U.S. or another English speaking country may be **conditionally admitted**.
- Citizens of the following countries: Australia, Belize, Canada, Ghana**, New Zealand, Scotland, West Indies, and United Kingdom.

** Exemptions for citizens of African countries are considered on a case-by-case basis if the medium of instruction is English.

Proposed Requirements

| | Graduate Applicants | |
|---|---|-----------------------|
| TOEFL | Regular Admission | Conditional Admission |
| Paper | 525 | 500-524 |
| Internet (iBT) | 70 | 61-69 |
| Internet (iBT)
Applicants
awarded GTA | 80
Speaking & Listening sub-score of 22
Reading & Writing sub-score of 18 | |
| IELTS | 6.0 | 5.5 |

Exempt from English Language Testing:

Applicants who have demonstrated success by achieving an overall GPA greater than 3.0 on a 4.0 scale for 2 or more semesters/quarters in a rigorous undergraduate or postgraduate program in the U.S. or from one of the following English speaking countries**: Australia, Canada, New Zealand, and United Kingdom.

** Exemptions for citizens of African countries are considered on a case-by-case basis if the medium of instruction is English.

Exceptions to the proposed requirements will be considered by the Graduate School Dean on request if :

- Applicants GRE Verbal score is greater than 500 (153 – revised GRE) **OR**
- The Chair of the Graduate Program (or designated faculty) has personally interviewed the student and establishes a plan for language support for the student, if needed, which may include additional English Language Training, **OR**
- Successful completion of language training at INTO-OSU as designated by the Conditional Admission Program -CAP

Community College Leadership Program

Response to the Graduate Council and External Review

November 6, 2012

The Graduate Council and External Review Team examined Self-Study Materials, met with faculty, and traveled to Silver Falls State Park to meet with two cohorts of students. The CCLP Faculty appreciated the Review Team's involvement with both the faculty and the students. Based on this review, the following were the recommendations of the Review Team; and the CCLP faculty members have met several times to review, discuss, and act on the various recommendation. The following describes the work that has been accomplished to date:

1. Overall Recommendation

Restructure, as discussed below.

2. Summary of Findings and Recommendations

A. Choose a degree focus for the program; either EdD applied scholarship or PhD research scholarship.

CCLP Faculty Response:

We wholeheartedly agree with the issue of differentiating the Ed.D. from the Ph.D. The faculty are currently working with the dean and the associate dean of the college to finalize the details of this transition as the entire College of Education is currently examining the requirements for both the Ed.D., applied scholarship, and the Ph.D., research scholarship. It is anticipated that the details of this differentiation will be finalized by the end of this year. All CCLP faculty have been instrumental in working on that examination and in developing a differentiation between the two degrees.

The CCLP faculty members recognize that the degree has and will continue to focus on the Ed.D. applied scholarship to enhance the knowledge, skills, and careers for community college faculty and administrators. Thus, most of the CCLP students will be directed to the Ed.D. At the same time, there is a lack of solid research and scholarship on community colleges; and the program and its faculty can make substantial contributions to the field. We therefore feel that, in any one cohort, there may be one or possibly two students for whom the Ph.D. option would serve best. Some of the differences currently being discussed are listed below:

- Ph.D. student would have to undertake a research internship under the direction of an OSU faculty member. (In contrast, the Ed.D. students would undertake a practically-oriented internship.)
- Ph.D. student would be required to take a written examination that focuses on research and on the community college. This would be done prior to the preliminary oral examination. (In contrast, the Ed.D. students would have the option of undertaking the portfolio or the written examination prior to the preliminary oral examination.)

- Ph.D. student would focus the dissertation on a theoretical issue, and the focus of the dissertation would be on developing or expanding on theory. (In contrast the Ed.D. students would focus on practical issues and/or evaluations of programs of interest.)
- Ph.D. student would have to submit for publication one or more portions of their dissertation prior to the doctoral defense.

B. Improve the design and practice of online instruction by development of guidelines and training for faculty.

CCLP Faculty Response:

The CCLP faculty members feel that the Review Team may have considered the CCLP program to be an online program. In fact, the once a month meetings at Silver Falls fulfill the 30 hours of face-to-face instruction required for three-credit courses. Thus, the online instruction serves as a connection with students during the three weeks after they have returned to their home campuses. That being said, the faculty members recognize that we need to enhance the online instruction for all of the courses. The Review Team made some very specific recommendations, and the faculty members have begun to work on each of these:

Instructor training for effective use of technologies: We began in May 2012, after the Review, to require all CCLP instructors to participate in special training with eCampus. The plan is to continue such training each year.

Design for Blackboard usage: In addition, over the next year, we plan to require each faculty member to meet with and work with an instructional designer from eCampus to restructure the online presence and offerings.

Guidelines for online practice: Once faculty have worked with an instructional designer and restructured their Blackboard site(s), we plan to work with eCampus to develop guidelines for all CCLP faculty to use.

Assessments of technology effectiveness: This is an excellent suggestion, and we plan to undertake such assessments every other year, starting in 2014.

C. Revise the portfolio project to apply consistent expectations and approaches to be communicated early in the program.

CCLP Faculty Response

The CCLP faculty members agree with this recommendation. Currently the portfolio is to undertake a synthesis of the literature, a personal reflection, and then plans for future development in each of eight learning outcomes. We agree that several of these outcomes seem to overlap. Therefore, we have begun a process of examining the CCLP Learning Outcomes and comparing them with the list of six competencies for community college leaders as presented by the American Association of Community Colleges. The plan is to finalize smaller and more distinct list of learning outcomes and to develop more specific guidelines regarding the portfolio by Winter term 2013. In April of 2013, both current cohorts of students who meet at Silver Falls will be introduced to the new listing and guidelines. They will be given a choice as to which they would prefer, along with an evening workshop reviewing those outcomes and drafts of

materials that they have produced. The new portfolio guidelines will be included in the Orientation of new students beginning in Fall 2013.

D. Locate and assess a venue for intensive course work sessions that provides strong connectivity for mobile devices and computers, as well as greater travel accessibility.

CCLP Faculty Response

The CCLP faculty members partially agree with this recommendation. For much of the CCLP program, the students and faculty have met face-to-face at Silver Falls. One of the unique aspects of that arrangement initially was the lack of connectivity. This meant that the busy administrators were forced to “disconnect” and to concentrate on the course content and the cohort member relationships. As technology has progressed, this level of isolation has been diminished, although it is still the case that a single online video can destroy the wireless connection at Silver Falls. Nevertheless, the faculty members feel that it is important for the development of the cohort to continue meeting at Silver Falls for part of the year – specifically in the Fall and Spring terms. Note that the courses meet on campus in May (for the Carpenter Lecture) and in the Summer.

The faculty, however, recognize the need for increased use of technology, as well as some travel difficulties, specifically in the winter months. We, therefore, requested and recently received permission from the dean to move the program to the Wilsonville Training Center of Clackamas Community College. This will require additional expense to the program, but we feel that it will enable greater connectivity for those courses and will reduce the travel hazard.

E. Develop a program learning objective intended to achieve learner proficiency in managing technological change in the teaching and learning environment.

CCLP Faculty Response

The CCLP faculty members agree with this recommendation. As described in C above, there is a current review being undertaken of the learning outcomes for the program. In addition, the faculty members have begun discussing the best approaches to addressing the issue of managing technology change, whether through one of the courses or through the Friday Evening Seminar or some combination of the two.

Growing and Sustaining Interdisciplinary and Intercollegiate Graduate Programs at OSU

Interdisciplinary (ID) programs at OSU may be housed in individual departments (e.g., Forest Ecosystems and Society), individual colleges (e.g., Public Policy) or among Colleges (e.g., Environmental Sciences). Similarly disciplinary programs can be housed in individual departments (e.g., Chemistry), between departments within Colleges (e.g., Masters of Engineering) or among colleges (e.g., Molecular and Cellular Biology). Whereas the opportunities for faculty and graduate students to address complex problems in an interdisciplinary or trans-disciplinary manner often lie at the interface between or among disciplines or institutional units, the flow of resources and faculty lines are often distinct from one academic unit to another. Similarly strong disciplinary programs in areas such as Ecology and Evolutionary Biology are possible, but faculty are distributed among multiple academic units. In an effort to facilitate the growth of interdisciplinary or intercollegiate(IC) degree programs, the Graduate School has been the administrative home for six such programs, several of which have flourished under this structure.

The Role of the Graduate School

The Graduate School can serve as an incubator in developing and administering interdisciplinary and intercollegiate (ID/IC) programs, but it should not become an accumulator of programs. As new programs are proposed and approved, the Graduate School should play an active role in ensuring that the Program Director and support staff, as well as participating academic units, are all working toward a common goal of fostering program growth as evidenced by increased enrollment, regular course offerings, and projected graduation rates that meet or exceed university targets for masters and doctoral programs (2 doctoral students per year/ 5 Masters students per year). After a period of four years the success of the program will be evaluated and if it is succeeding then a new administrative home for the program should be sought using the guidelines provided below. If the program is failing to meet university criteria around enrollment levels or projected graduation rates, then the continuation of the program will be reassessed and if necessary, terminated.

Defining Programs for Graduate School Support

Newly proposed Interdisciplinary and/or intercollegiate (ID/IC) programs which would qualify for initial support from the Provost through the Graduate School would be those that:

1. Involve 3 or more colleges,
2. Involve < 60% of Graduate Faculty from any single academic home unit,
3. Enroll < 60% of students whose major adviser is from a single academic home unit.

Programs not meeting these requirements can still be developed but would be proposed and administered collaboratively between units. Those programs meeting the above criteria would have the Graduate School as their administrative home for four years.

Funding Structure for Newly Proposed ID/IC programs

Newly proposed programs that meet all Category 1 approval processes will be supported by the following Funding Structure for a period of four years:

The Provost via Graduate School will provide funds annually for four years for:

- 0.5 FTE for Program Director
- 0.25 FTE for administrative Assistant
- Up to \$5000 for services and supplies

Participating colleges will provide support for the program via a 3-year MOU for:

- Faculty FTE to teach required courses
- GTAs/GRAs
- Other expenses as required (travel, recruiting, etc.)

Program Assessment and Continual Improvement

The Graduate Program will be reviewed after four years to assess success in program growth and progress of enrolled students. If deemed successful, then the program will then enter the decadal Program Review cycle that is required of all graduate programs. The Graduate School will provide annually data on a set of metrics used in program review so that the faculty, students and administration can be aware of the progress being made by the program. In addition, an annual report of progress on achieving program specific graduate learning outcomes will be provided to the Office of Assessment as is required for all graduate programs.

Funding and Administrative Structure for Successful ID/IC programs

Those programs deemed successful after the 4-year incubation period in the Graduate School will be transitioned to an administrative home in one the participating colleges. The program will have a faculty Curriculum Committee consisting of Graduate Faculty from each of the participating units who will ensure continued involvement of all participating units in curriculum, admissions, and program requirements. Funding for the Program Director FTE and Administrative Support FTE will be transferred from the Provost to the administrative home for three years, at which point participating colleges assume responsibility for continued support for the program via an agreed upon MOU.

Termination or Restructuring of a Program

Should any graduate program be deemed unsustainable as a result of failing to meet university metrics on graduation rates, or the result of a graduate program review, then the Graduate School will work with the Graduate Council and the Program Director to cease further admission to the program and initiate a Category 1 proposal to terminate the degree program. All students enrolled at the time of initiating termination procedures will be allowed to complete their degree, but no new students will be admitted.

An alternative to termination is to restructure a program to better meet both graduate learning outcomes as well as university metrics on enrollment and graduation rates. Restructuring can take many forms but may include merging programs and establishing transcript visible options. Graduate options are created and terminated using a Category 2 process so can be much more responsive to market demands as well as shifting expertise among graduate faculty in the program.

Accounting for Faculty Participation in Interdisciplinary Programs

Because faculty can be members of the Graduate Faculty in multiple degree programs, it is important that their supervisor be able to account for Graduate Faculty participation in all programs with which their faculty are involved during annual PROF reviews, and during annual reports to College Deans and the Provost. Similarly, it is important for the directors of interdisciplinary and intercollegiate graduate programs to report accurately the number of students directed by Graduate Faculty in the programs. The Graduate School has begun tracking participation of faculty as graduate advisers and can assist both the Programs and the Departments in documenting faculty participation. Both the Graduate School and the Provost recognize that receiving recognition for their success is important and that student headcount and student credit hours taught (available from the Registrar) should be reported by both the departments for all of their faculty as well as by the graduate programs for all of their faculty. In essence, students are double counted for purposes of receiving appropriate recognition for contributions to multiple graduate programs by a faculty member whose academic home is in a Department or School or College.

MEMORANDUM

November 30, 2012

TO: Rebecca Warner
Senior Vice Provost, Academic Affairs

FROM: James R. Coakley
Chair, Graduate Council

SUBJECT: Graduate Council Recommendations for the CCLP Graduate Program
Review

The Graduate Council accepts the Graduate Program Review of the Community College Leadership Program (CCLP) with the following amendment:

Rather than supporting the overall recommendation of "Restructure", the Council recommends that the EdD program be maintained and improved, while the PhD program should be suspended until the program develops the faculty and resources needed to produce a consistent stream of PhD scholars (with appropriate graduate funding).

Full Category I and Abbreviated Category I Proposal Transmittal Sheet

Submit proposals to: Office of Academic Programs, Assessment, and Accreditation,
500 Kerr Administration Building – Oregon State University

For Instructions, see <http://oregonstate.edu/admin/aa/apaa/academic-programs/curriculum/category-1-proposals> Please attach Executive Summary, Proposal, Library Evaluation (performed by the Library), Accessibility Form, Letters of Support (External to OSU), Liaison Correspondence (Internal to OSU), Faculty Curriculum Vitae, and Budget Sheets, as appropriate.

**BA, BS, MA IN WOMEN, GENDER, AND SEXUALITY STUDIES
PROPOSAL TO RENAME THE WOMEN STUDIES PROGRAM,
UNDERGRADUATE MINOR, UNDERGRADUATE MAJOR,
AND MASTER OF ARTS DEGREE**

EXECUTIVE SUMMARY

The Women Studies Program proposes to rename the Program and its undergraduate major, undergraduate minor, undergraduate certificate, graduate minor, and MA to Women, Gender, and Sexuality Studies. This change reflects growth in the program as well as national trends in the field. With the addition of new faculty and courses, the Program is now able to offer a breadth of courses in these areas. This name change is enthusiastically supported by our faculty and students and should enhance our ability to recruit for our various degree programs.

CIP Number 050207

Date of Proposal: May 30, 2012

Proposed Effective Date: January 1, 2013

CPS Proposal Number:

1. **Title of the proposed instructional, research, or public service unit. For name changes, give both the current and proposed names. Describe the reason(s) for the proposed change.**

CIP # **050207**

Title: Women's Studies.

Definition: A program that focuses on the history, sociology, politics, culture, and economics of women, and the development of modern feminism in relation to the roles played by women in different periods and locations in North America and the world. Programs may focus on literature, philosophy, and the arts as much as on social studies and policy. Illustrative examples: Women's and Gender Studies.

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

Currently, the program is "Women Studies." We propose to change the name to "Women, Gender, and Sexuality Studies." We also propose to change the name of our undergraduate minor, undergraduate major, and MA degree programs to "Women, Gender, and Sexuality Studies." The name change reflects both changes in the discipline nationally and the addition of faculty in the School of Language, Culture, and Society (SLCS) who can provide courses in sexuality and gender studies that will complement the current offerings in Women Studies.

As the discipline has grown from its roots in the Women's Movement of the late 1960 and early 1970s, it has become more diverse and inclusive, reflecting the intersections of gender, race, and sexual identity and has called into question essential categories of gender and sexuality reflected in binary labels such as "women," "men," "heterosexual," and "homosexual." Many institutions across the country have changed their program or department names to "Women and Gender Studies" or "Women, Gender, and Sexuality Studies" to reflect this shift toward inclusivity and the disruption of binaries. We have chosen to maintain "Women" in the name and have intentionally placed it first in the list as both an acknowledgement of our history and as way to maintain the visibility of women. While we understand that "woman" is a constructed category, we also note the material reality that

individuals who are included in the category experience systematic and institutionalized discrimination based on their inclusion in that category. Therefore, maintaining the visibility of women even as we question the category itself is essential.

Our proposal is also driven by changes in our faculty. As the SLCS has added faculty members, we now have a line devoted to Queer Studies, and we have faculty members who have areas of specialization in gender studies, as well as men and masculinity studies, and indigenous and transnational sexualities studies. So the name change reflects our ability to offer a full curriculum across the spectrum of women, gender, and sexuality studies. Finally, the name change reflects the interests and desires of our students and will likely attract a wider audience for our courses and degree programs.

- Proposed Start Date: **Winter Term 2013**

2. **Location within the institution's organizational structure. Include "before" and "after" organizational charts (show reporting lines all the way up to the Provost).**

No change.

3. **Objectives, functions (e.g., instruction, research, public service), and activities of the proposed unit.**

- a. **Explain how the program or unit's current objectives, functions, and/or activities will be changed. Where applicable, address issues such as course offerings, program requirements, admission requirements, student learning outcomes and experiences, and advising structure and availability. How will the reorganized program be stronger than the existing program?**

The name change will actually reflect changes already underway in the program. We had already developed some courses in gender and sexuality studies, and now we have expanded those options with the addition of new faculty members. In essence, the name change will be catching up with changes that have already happened.

Because Women Studies works from feminist intersectional frameworks, the program has always addressed issues of the social construction of gender and its impact on men as well as women, and we have integrated examination of sexualities throughout our curriculum. The name change reflects the new degree to which we are able to do these things with additional coursework in specialized areas. Our new Queer Studies professor will be developing an entire slate of courses in the area to accompany our existing courses in Queer Theories and Women and Sexuality (soon to be renamed Feminisms and Sexualities). Another professor will be developing a new course in Men and Masculinities. In recent years, we have also added to our curriculum WS 325 Disney: Gender, Race, and Empire; WS 585 Transnational Feminisms; WS 320 Gender and Technology; and WS 340 Gender and Science. We are currently working on proposals for 4/500 courses in Race, Ethnicity, Gender, and Health and Fat Studies. These courses should be submitted through the curricular proposal process during the 2012-2013 academic year. The name change reflects what we have already done in our learning outcomes for the undergraduate and graduate degree programs by emphasizing intersections and inclusivity, and so the name change will not change our existing learning outcomes.

The name change will strengthen the program by offering a more accurate reflection of what we do and providing a wider appeal to diverse students.

- b. **Explain how outcomes in the newly organized program or unit will be assessed.**

We intend to maintain our previously approved BA (CIP#050207) and MA (CIP #050207) outcomes and assessment metrics. These outcomes already reflect the varied emphases of the new name.

4. Resources needed, if any: personnel, FTE academic, FTE classified, facilities and equipment.

- a. Identify the staffing and resource needs for the proposed program or unit. Note any impact on the budgets of affected programs or units. Provide an analysis of how the resulting programs or units will be adequately staffed and funded.

No impact on staffing will occur. Initially, we will need about \$500 to change business cards and letterhead.

- b. Explain the extent to which affected faculty and personnel support this change.

All of the Women Studies faculty members enthusiastically support this change.

5. Funding sources: state sources (institutional funds - state general fund, tuition and fees, indirect cost recoveries), federal funds, other funds as specified.

- a. Identify the revenue and funding sources for the proposed program or unit (i.e., federal, state, other funding sources).

Funding for new business cards and letterheads will come from the existing services and supplies budget (i.e., internal reallocation of existing resources).

- b. If new resources will be required (e.g., for new faculty positions, graduate research/teaching assistants, facilities, equipment), explain where these resources will be coming from. Specify whether internal reallocation, college, institution, federal, state, private, or other funding sources. [Note: Deans/chairs/heads/directors of units committed to providing additional resources will be required to sign the proposal.]

N/A

- c. Provide an estimated annual budget for the proposed program or unit (see Appendices).

The only expense will be in the first year changing business cards and letterhead.

6. Relationship of the proposed unit to the institutional mission.

- a. How will the proposed program or unit support OSU's mission and goals?

The name change will undergird OSU's stated commitments to diversity, equity, and inclusion. The new name will offer increased visibility for the program and should attract greater interest across a wide variety of current and prospective students.

- b. Describe potential positive and negative impact of the proposed change on the program(s) or unit(s) involved. Identify other OSU programs or units which may be affected, and describe the potential positive and negative impact on their mission and activities.

N/A

7. Long-range goals and plans for the unit (including a statement as to anticipated funding sources for any projected growth in funding needs).

As part of the School of Language, Culture, and Society, we are involved in developing a new slate of courses in Queer Studies. That position is funded through the Provost's Initiative. These courses will be a central part of the Women, Gender, and Sexuality Studies degree programs.

8. Relationship of the proposed unit to programs at other institutions in the state.

- a. What is the current relationship of the proposed program or unit to OUS and other higher education institutions in the state? Describe how this relationship might be altered based on the proposed change.

We are involved with the Northwest Women's Studies Association and through that with other OUS institutions. Those relationships will not be affected by this change.

- b. Describe how the proposed change will affect other constituencies outside of OUS.

The only likely effect will be a wider and more inclusive pool of applicants for our degree programs, particularly the MA.

9. If the program is professionally accredited, identify the accrediting body and discuss how the proposed change may affect accreditation.

Appendices:

- **Transmittal Sheet**
- **Budget Table** (attach current budget and proposed budget)
- **Library Evaluation** (attach library evaluation if the proposal involves an academic program that is substantially changed or expanded)
- **Liaison** (attach all liaison correspondence, both internal to the college/school and with all affected, or potentially affected, academic units and institutions within or outside of OSU)

Subject: Re: a favor

Susan, I am happy to hear that OSU is considering a name change from Women's Stuides to Women, Gender and Sexuality Studies. Such a change speaks to the historical roots of our work (with its focus on women) and to the new directions in which the field has expanded.

When we undertook this change at PSU a few years ago, it was for those very reasons. Nomenclature is important as it signifies the scope of the academic work of the unit, but it also connotes some of the underlying philosophy that supports our educational endeavors. On a national level new scholarship into gender, gender expressions, sexuality, and systems of power, to name only a few, is expanding the issues scholars and educators are theorizing and investigating. Our curriculum at PSU was developing similarly. For example, the Program launched a new Sexuality, Gender, and Queer Studies minor, thereby expanding the scope and type of courses we offer. We also have faculty whose scholarship and teaching has moved to include more emphasis on gender and sexuality within a global frame. It was also important for the name to reflect the history of our program in honoring and studying the contributions of women to society and how gendered systems of power impact women. Having seen your proposal for your new MA program and speaking with you, I know that your WS program has developed in similar ways. I hope your proposed name change comes about soon.

Please feel free to use my email as part of your supporting documentation for your proposal (or I can also write something on official letterhead if needed). All the best! Sally

Hi, Sally. We're changing our name to Women, Gender, and Sexuality Studies, and I'm working on the Abbreviated Category I proposal for that. Would you be willing to send me a short email outlining your support for the name change, perhaps with reference to the reasons PSU changed to that name? Thanks!
Susan

**Women Studies (WS) Undergraduate Courses
to be Changed to Women, Gender, and Sexuality Studies (WGSS) Courses**

WS 199 SPECIAL STUDIES (1-3)

Special topics of contemporary relevance to research of women and gender role issues. For students who seek an elementary introduction to a specific realm of women studies. May be repeated for credit when topic varies. This course is repeatable for a maximum of 9 credits.

WS 223 WOMEN: SELF AND SOCIETY (3) Offered in current or future terms Baccalaureate Core Course
Multidisciplinary introduction to women studies. Focuses on the lives and status of women in society and explores ways institutions such as family, work, media, law and religion affect different groups of women. Explores issues of gender, race, class, age, sexual orientation, size and ability. (SS) (Bacc Core Course)

WS 223H WOMEN: SELF AND SOCIETY (3) Offered in current or future terms Baccalaureate Core Course
Multidisciplinary introduction to women studies. Focuses on the lives and status of women in society and explores ways institutions such as family, work, media, law and religion affect different groups of women. Explores issues of gender, race, class, age, sexual orientation, size and ability. (SS) (Bacc Core Course) PREREQS: Honors College approval required.

WS 224 WOMEN: PERSONAL AND SOCIAL CHANGE (3) Offered in current or future terms Baccalaureate Core Course

Examines the way the questioning of traditional gender roles and their accompanying power structures can lead to change in women's personal and public lives. Explores women's heritage and contributions and focuses on issues of self-growth and social movements for change. (SS) (Bacc Core Course)

WS 230 WOMEN IN THE MOVIES (3) Offered in current or future terms Baccalaureate Core Course
Examines ways women are depicted in the movies and how those depictions are created by and create larger social constructions of women. Special attention is given to the intersections of race, class, sexual identity, and age with gender. (Bacc Core Course)

WS 235 GLOBAL WOMEN IN THE MOVIES (3) Offered in current or future terms Baccalaureate Core Course

Explores constructions and practices of gender in a transnational, multi-religious, and global framework by examining a wide variety of films about women around the world. (Bacc Core Course)

WS 235H GLOBAL WOMEN IN THE MOVIES (3) Offered in current or future terms Baccalaureate Core Course

Explores constructions and practices of gender in a transnational, multi-religious, and global framework by examining a wide variety of films about women around the world. (Bacc Core Course) PREREQS: Honors College approval required.

WS 240 WOMEN IN SPORT (3) Offered in current or future terms Baccalaureate Core Course

Focuses on the influence of sport, a gendered institution, on women from cultural, psychosocial, and political perspectives, as well as how influential women can be in redefining sport to be more socially inclusive. Examines intersections of gender with age, social class, income status, race and ethnicity and politics. (Bacc Core Course)

WS 270 VIOLENCE AGAINST WOMEN (3) Offered in current or future terms
Addresses issues of domestic violence, rape, dating violence, as well as contemporary social debates about pornography and the media's impact on increasing violence against women. (SS)

WS 280 GLOBAL WOMEN (3) Offered in current or future terms Baccalaureate Core Course
Focuses on women's experiences throughout the world and examines women's issues and status cross-culturally. (Bacc Core Course)

WS 280H GLOBAL WOMEN (3) Offered in current or future terms Baccalaureate Core Course
Focuses on women's experiences throughout the world and examines women's issues and status cross-culturally. (Bacc Core Course) PREREQS: Honors College approval required.

WS 299 TOPICS IN WOMEN STUDIES (1-6) Offered in current or future terms
Current topics related to women. Description and analysis of different realms of knowledge about gender issues. This course is repeatable for a maximum of 12 credits.

WS 320 GENDER AND TECHNOLOGY (3) Baccalaureate Core Course
Explores women's contributions and focuses in technology fields. Analyzes gendered nature of technology. Theory and practice of technologies. (Bacc Core Course)

WS 325 DISNEY: GENDER, RACE, EMPIRE (3) Offered in current or future terms Baccalaureate Core Course
Explores constructions of gender, race, class, sexuality, and nation in the animated films of Walt Disney, introduces concepts in film theory and criticism, and develops analyses of the politics of representation. (Bacc Core Course)

WS 340 GENDER AND SCIENCE (3) Offered in current or future terms Baccalaureate Core Course
Analyzes the relationship between society and science by explaining technology and science as gendered practices and bodies of knowledge. Focuses on the ways the making of women and men affect the making of science and explores the roles of women in scientific pursuits. (SS) (Bacc Core Course)

WS 380 MUSLIM WOMEN (3) Offered in current or future terms Baccalaureate Core Course
Examines the lives and experiences of Muslim women in Islamic communities around the world from a variety of perspectives in order to highlight issues significant for contemporary Muslim women: family, education, work, politics, health, marriage, divorce, war, and violence. (Bacc Core Course)

WS 399 TOPICS IN WOMEN STUDIES (1-6) Offered in current or future terms
Current topics on women and gender role issues. May be repeated for credit when topic varies. This course is repeatable for a maximum of 12 credits.

WS 399H TOPICS IN WOMEN STUDIES (1-6)
This course is repeatable for a maximum of 12 credits. PREREQS: Honors College approval required.

WS 402 INDEPENDENT STUDY (1-16) Offered in current or future terms
This course is repeatable for a maximum of 16 credits. PREREQS: Departmental approval required.

WS 406 PROJECTS (1-16) Offered in current or future terms
This course is repeatable for a maximum of 16 credits. PREREQS: Departmental approval required.

WS 407 SEMINAR (3)

This course is repeatable for a maximum of 9 credits.

WS 410 INTERNSHIP (1-16) Offered in current or future terms

The internship experience provides the opportunity to gain experience within an off-campus private, public, or community agency or organization which has as one of its goals the improvement of the status of women in society. Students work with an on-site mentor who guides their field experience in collaboration with the internship coordinator in the WS program. Only 6 credits will count toward the Women Studies major. This course is repeatable for a maximum of 16 credits. PREREQS: Departmental approval required.

WS 414 SYSTEMS OF OPPRESSION IN WOMEN'S LIVES (3) Offered in current or future terms

Baccalaureate Core Course

Explores the ways different systems of oppression and discrimination impact women's lives. Examines sexism, classism, racism, and anti-Jewish oppression, as well as discrimination against lesbians, older women, and those who differ in ability and appearance. (SS) (Bacc Core Course) PREREQS: WS 223 and /or instructor approval required.

WS 414H SYSTEMS OF OPPRESSION IN WOMEN'S LIVES (3) Baccalaureate Core Course

Explores the ways different systems of oppression and discrimination impact women's lives. Examines sexism, classism, racism, and anti-Jewish oppression, as well as discrimination against lesbians, older women, and those who differ in ability and appearance. (SS) (Bacc Core Course) PREREQS: WS 223 and Honors College approval required or instructor approval required.

WS 416 THEORIES OF FEMINISM (3) Offered in current or future terms

Explores feminist conceptions about the nature of the world, women's reality and visions for change. Analyzes major issues raised by the women's movement and the development of feminist ideas, as well as provides a critical examination of feminist thought and different theories which comprise it. PREREQS: (WS 223 or WS 224) and /or instructor approval required.

WS 417 FEMINIST PHILOSOPHIES (3)

Diverse forms of feminist philosophy, including a variety of critiques, especially those based on race and class, with in-depth consideration of selected social issues, such as rape and pornography. CROSSLISTED as PHL 417/PHL 517. PREREQS: 6 credits of philosophy or upper-division standing.

WS 420 HATE, RESISTANCE, AND RECONCILIATION (3) Baccalaureate Core Course

Examines hate movements, hate-related activities, and resistant acts and movements. Special attention is given to the role of gender. (Bacc Core Course)

WS 420H HATE, RESISTANCE, AND RECONCILIATION (3) Baccalaureate Core Course

Examines hate movements, hate-related activities, and resistant acts and movements. Special attention is given to the role of gender. (Bacc Core Course) PREREQS: Honors College approval required.

WS 430 WOMEN OF COLOR IN THE U.S. (3) Offered in current or future terms

Explore the contemporary experiences of women of color in the U.S. Develops a framework for analyzing history and experience through the lens of race, ethnicity, class, gender, sexual identity, and national belonging, and examines particular areas of women's lives. PREREQS: WS 223

WS 440 WOMEN AND NATURAL RESOURCES (3) Baccalaureate Core Course

Explores the relationship between women and natural resources. In particular, the course examines the roles of policy, technology, culture, and management in women's use and control of natural resources. (Bacc Core Course)

WS 450 ECOFEMINISM (3) Baccalaureate Core Course

Focuses on the ecological and feminist principles that mediate humanity's relationship with nature. (Bacc Core Course) PREREQS: Upper-division standing.

WS 460 WOMEN AND SEXUALITY (3) Offered in current or future terms WIC Core Course

Explores the historical, theoretical, and political dimensions of female sexuality. The course also examines the basic assumptions about the meaning of female sexuality, how it has been shaped and controlled, and why women's sexuality has been/is a source of both women's liberation and subjugation. (SS) (Writing Intensive Course) PREREQS: (WS 223 or WS 224) and /or instructor approval required.

WS 462 INTRODUCTION TO QUEER STUDIES (3) Baccalaureate Core Course

Introduces key themes and critical frameworks in Lesbian, Gay, Bisexual, Transgendered, and Queer (LGBTQ) Studies. Topics include histories of sexuality; forms of oppression including heterosexism, homophobia, and transphobia; resistance to oppression; violence against LGBTQ people; queer activism; diverse experiences of sexuality; and representations in literature, art, and popular media. (Bacc Core Course) PREREQS: WS 223 or WS 224 or instructor permission.

WS 465 WOMEN, WEIGHT, AND BODY IMAGE (3)

Focuses on women's increasing struggles with weight, eating disorders, and broader body image issues in contemporary society. Explores how social institutions such as media, medicine, government contribute to weight bias and unhealthy standards for appearance. Examines weightism as a system of oppression that intersects with other systems of oppression including sexism, racism, classism, heterosexism, ableism, and ageism. PREREQS: (WS 223 or WS 224)

WS 480 INTERNATIONAL WOMEN (3) Offered in current or future terms Baccalaureate Core Course

Examines the lives and experiences of women in different parts of the world, looking at work, education, the family, the arts and social movements. Explores the comparative realities of various women's struggles for social injustice and studies key definitions and theoretical assumptions relevant to the subject of global feminism. (NC) (Bacc Core Course) PREREQS: (WS 223 or WS 224) and /or instructor approval required.

WS 482 GLOBAL PERSPECTIVES ON WOMEN'S HEALTH (3)

Women's health issues are examined from a global perspective in the context of a woman's life and through a feminist political lens. Central to our discussions will be an analysis of the interplay among race, class, and gender in shaping particular health care outcomes. The course stresses the potential for women's agency and autonomy with respect to improving their health and environments.

WS 486 GLOBAL EXPERIENCE I (1)

Prepares students to participate in a short-term study abroad experience that emphasizes volunteer experiences in women's organizations and analysis from transnational feminist perspectives.

WS 487 GLOBAL EXPERIENCE II (1)

Engages students in a short-term study abroad experience that emphasizes volunteer experiences in women's organizations and analysis from transnational feminist perspectives. PREREQS: WS 486 or WS 586

WS 488 GLOBAL EXPERIENCE III (1)

Students reflect on their short-term study abroad experience by engaging in in-depth transnational feminist analysis of particular aspects of the study abroad experience. PREREQS: (WS 486 and WS 487)

WS 490 SELF-ESTEEM AND PERSONAL POWER (3)

Explores ways to improve self-esteem and develop personal power. Focuses on issues of self and identify, contextualizing these in the ways gender is constructed in society. (SS) PREREQS: Upper-division standing.

WS 495 GLOBAL FEMINIST THEOLOGIES (3) Baccalaureate Core Course

Explores the connections between women's religious experiences around the world and the global problems addressed by feminist theology and spirituality. (Bacc Core Course) PREREQS: WS 223 or WS 224 and junior standing

WS 498 SENIOR SEMINAR (3)

For graduating seniors in women studies. Building on knowledge and experiences acquired in required and elective women studies courses, it focuses on central questions for feminist research. In particular, the course helps students identify their approaches to women's studies scholarship and develop deeper understandings of the process of generating feminist knowledge, especially in relation to gender, race, class, sexuality, and national belonging. PREREQS: (WS 414 and WS 416)

WS 499 TOPICS (1-6) Offered in current or future terms

Topics on contemporary research on women and related public policies. May be repeated for credit when topic varies. This course is repeatable for a maximum of 12 credits. PREREQS: Upper-division standing.

**Women Studies (WS) Graduate Courses
to be Changed to Women, Gender, and Sexuality Studies (WGSS) Courses**

WS 501 RESEARCH AND SCHOLARSHIP (1-16) Offered in current or future terms

This course is repeatable for a maximum of 16 credits.

WS 502 INDEPENDENT STUDY (1-16) Offered in current or future terms

This course is repeatable for a maximum of 16 credits. PREREQS: Departmental approval required.

WS 503 THESIS (1-16) Offered in current or future terms

This course is repeatable for a maximum of 16 credits.

WS 506 PROJECTS (1-16) Offered in current or future terms

This course is repeatable for a maximum of 16 credits. PREREQS: Departmental approval required.

WS 510 INTERNSHIP (1-16) Offered in current or future terms

The internship experience provides the opportunity to gain experience within an off-campus private, public, or community agency or organization which has as one of its goals the improvement of the status of women in society. Students work with an on-site mentor who guides their field experience in collaboration with the internship coordinator in the WS program. This course is repeatable for a maximum of 16 credits. PREREQS: Departmental approval required.

WS 511 ORIENTATION AND PROFESSIONALIZATION I (1) Offered in current or future terms

The WS 511, 512, 513 sequence prepares Women Studies graduate student to succeed in their courses of study and in their chosen profession. WS 511 provides knowledge about Women Studies as a discipline and as a course of study that helps students manage the transition to graduate school. Graded P/N.

WS 512 ORIENTATION AND PROFESSIONALIZATION II (1) Offered in current or future terms

The WS 511, 512, 513 sequence prepares Women Studies graduate student to succeed in their courses of study and in their chosen profession. WS 512 guides students in the development of an intellectual life with a focus on thriving and surviving as scholar in Women Studies. Graded P/N.

WS 513 ORIENTATION AND PROFESSIONALIZATION III (1)

The WS 511, 512, 513 sequence prepares Women Studies graduate student to succeed in their courses of study and in their chosen profession. WS 513 focuses on helping students shape a future that utilizes the graduate degree in Women Studies. It helps students manage the transition of life after the Women Studies Master's program at OSU. Graded P/N.

WS 514 SYSTEMS OF OPPRESSION IN WOMEN'S LIVES (3) Offered in current or future terms

Explores the ways different systems of oppression and discrimination impact women's lives. Examines sexism, classism, racism, and anti-Jewish oppression, as well as discrimination against lesbians, older women, and those who differ in ability and appearance. PREREQS: WS 223 or WS 224 or instructor approval required.

WS 516 THEORIES OF FEMINISM (3) Offered in current or future terms

Explores feminist conceptions about the nature of the world, women's reality and visions for change. Analyzes major issues raised by the women's movement and the development of feminist ideas, as well as provides a critical examination of feminist thought and different theories which comprise it. PREREQS: WS 223 or WS 224 or instructor approval required.

WS 517 FEMINIST PHILOSOPHIES (3)

Diverse forms of feminist philosophy, including a variety of critiques, especially those based on race and class, with in-depth consideration of selected social issues, such as rape and pornography. CROSSLISTED as PHL 417/PHL 517. PREREQS: 6 credits of philosophy or upper-division standing.

WS 518 FEMINIST RESEARCH (4)

Explores the socio-political and historical context out of which traditional research methodologies emerge and the relationship of gender to scientific pursuits. Teaches what it means to do emancipatory anti-sexist and participatory research.

WS 520 HATE, RESISTANCE, AND RECONCILIATION (3)

Examines hate movements, hate-related activities, and resistant acts and movements. Special attention is given to the role of gender.

WS 521 FEMINIST LEADERSHIP AND MANAGEMENT (3) Offered in current or future terms

Consideration of leadership and management through a feminist lens. Through this course participants will explore and develop their own leadership style and examine various contexts in which leadership can occur. This course will also examine principles of effective management within organizations.

WS 522 GRANT WRITING AND DEVELOPMENT FOR FEMINIST ORGANIZATIONS (1) Offered in current or future terms

Provides students with the skills needed to be successful in grant-writing and fund-raising for feminist organizations.

WS 523 COMMUNITY ORGANIZING AND COLLECTIVE ACTION (2)

Addresses relationships between theory and action in feminist context. Explores both social change activism in terms of individual and collective action strategies and social movement theory in historical and contemporary perspectives.

WS 525 GENDER AND TECHNOLOGY (3)

Explores women's contributions and focuses in technology fields. Analyzes gendered nature of technology. Theory and practice of technologies for change and activism.

WS 530 WOMEN OF COLOR IN THE U.S. (3) Offered in current or future terms

Explore the contemporary experiences of women of color in the U.S. Develops a framework for analyzing history and experience through the lens of race, ethnicity, class, gender, sexual identity, and national belonging, and examines particular areas of women's lives. PREREQS: WS 223

WS 535 FEMINIST TEACHING AND LEARNING (3) Offered in current or future terms

Focuses on the experiences and practices of the feminist classroom. Key components of the class include issues associated with the identity and development of the teacher as well as the development of skills to help facilitate understanding, empowerment, and the personal and social agency of students.

WS 540 WOMEN AND NATURAL RESOURCES (3)

Explores the relationship between women and natural resources. In particular, the course examines the roles of policy, technology, culture, and management in women's use and control of natural resources.

WS 550 ECOFEMINISM (3)

Focuses on the ecological and feminist principles that mediate humanity's relationship with nature. PREREQS: Upper-division standing.

WS 560 WOMEN AND SEXUALITY (3) Offered in current or future terms

Explores the historical, theoretical, and political dimensions of female sexuality. The course also examines the basic assumptions about the meaning of female sexuality, how it has been shaped and controlled, and why women's sexuality has been/is a source of both women's liberation and subjugation. PREREQS: WS 223 or WS 224 or instructor approval required.

WS 562 INTRODUCTION TO QUEER STUDIES (3)

Introduces key themes and critical frameworks in Lesbian, Gay, Bisexual, Transgendered, and Queer (LGBTQ) Studies. Topics include histories of sexuality; forms of oppression including heterosexism, homophobia, and transphobia; resistance to oppression; violence against LGBTQ people; queer activism; diverse experiences of sexuality; and representations in literature, art, and popular media. PREREQS: WS 223 or WS 224, or instructor permission.

WS 565 WOMEN, WEIGHT, AND BODY IMAGE (3)

Focuses on women's increasing struggles with weight, eating disorders, and broader body image issues in contemporary society. Explores how social institutions such as media, medicine, government contribute to weight bias and unhealthy standards for appearance. Examines weightism as a system of oppression that intersects with other systems of oppression including sexism, racism, classism, heterosexism, ableism, and ageism. PREREQS: WS 223 or WS 224

WS 580 INTERNATIONAL WOMEN (3) Offered in current or future terms

Examines the lives and experiences of women in different parts of the world, looking at work, education, the family, the arts and social movements. Explores the comparative realities of various women's struggles for social injustice and studies key definitions and theoretical assumptions relevant to the subject of global feminism. PREREQS: WS 223 or WS 224 or instructor approval required.

WS 582 GLOBAL PERSPECTIVES ON WOMEN'S HEALTH (3)

Women's health issues are examined from a global perspective in the context of a woman's life and through a feminist political lens. Central to our discussions will be an analysis of the interplay among race, class, and gender in shaping particular health care outcomes. The course stresses the potential for women's agency and autonomy with respect to improving their health and environments.

WS 585 TRANSNATIONAL FEMINISMS (3)

In this interdisciplinary graduate seminar, students will be introduced to themes and theoretical principles of transnational feminisms, with special emphasis placed on feminist movements of the global South. We will explore colonialism, globalization, nation-building, representation, global economies, militarism, human rights, and politics of gender, race, class, sexuality, and nation.

WS 586 GLOBAL EXPERIENCE I (1) Offered in current or future terms

Prepares students to participate in a short-term study abroad experience that emphasizes volunteer experiences in women's organizations and analysis from transnational feminist perspectives.

WS 587 GLOBAL EXPERIENCE II (1) Offered in current or future terms

Engages students in a short-term study abroad experience that emphasizes volunteer experiences in women's organizations and analysis from transnational feminist perspectives. PREREQS: WS 486 or WS 586

WS 588 GLOBAL EXPERIENCE III (1) Offered in current or future terms

Students reflect on their short-term study abroad experience by engaging in in-depth transnational feminist analysis of particular aspects of the study abroad experience. PREREQS: (WS 586 and WS 587)

WS 590 SELF-ESTEEM AND PERSONAL POWER (3)

Explores ways to improve self-esteem and develop personal power. Focuses on issues of self and identity, contextualizing these in the ways gender is constructed in society. PREREQS: Upper-division standing.

WS 595 GLOBAL FEMINIST THEOLOGIES (3)

Explores the connections between women's religious experiences around the world and the global problems addressed by feminist theology and spirituality. PREREQS: WS 223 or WS 224 and junior standing

WS 599 TOPICS (1-6) Offered in current or future terms

Topics on contemporary research on women and related public policies. May be repeated for credit when topic varies. This course is repeatable for a maximum of 12 credits. PREREQS: Upper-division standing.

Subject: liaison

Hi SLCS Transitionals (and Denise) and closely affiliated WS program faculty. I am writing because WS would like to change its name and the name of our degree programs to "Women, Gender, and Sexuality Studies." This change reflects our developing discipline and the courses we are now able to offer across women, gender, and sexuality studies. Our plan is to submit our proposal this summer, once the CLA realignment has been approved, so as not to muddy that water. I'm hoping you'll take a look at our proposal and let me know if you have issues or concerns or if we have your support. So please let me know what you think.

Thanks so much!

Susan

Susan:

I'm reading this very quickly, but I'm loving it. I don't think any of the old arguments of dilution apply here. I like the name; I think it reflects what you're doing; I think it's just plain good.

Thanks for the opportunity to comment.

Mina

Hi Susan

I think it looks great—well written and great rationale articulated for the change. Indeed, *Fat Studies* highlights intersections with gender as well as sexual identity with a number of chapters in *The Fat Studies Reader* written by and/or about lesbians, gay men, and trans folks. Also, the field has been likened to Queer Studies. So, yes, sounds good to me!

This is great Susan... makes a lot of sense. I am very supportive of the name change. While I didn't read everything closely, I did catch one spelling/grammar error:

8b -- The only like effect.... The only likely effect...

Hi Susan,

I'm delighted that a proposal is in the works to change the name of Women Studies. That said, my preference would be to change it to Gender and Sexuality Studies. My understanding is that gender studies incorporates traditional women's studies as well as the broader study of the social construction of gender. If this isn't the case, then I'd suggest adding a brief explanation in the proposal as to why "women" is listed but not "men" (as others might have this same

understanding of the definition of gender studies). Plus, I'm all for as short a title/name as possible ☺

Leslie

Subject: RE: liaison

Thanks, Leslie. It's a question of visibility, and the choice to keep women as the first word was very intentional. While gender is an encompassing term, politically, keeping women visible is really important (so while it's a constructed category, the material reality is that women per se face discrimination as women—it's a balancing act between the idea of social construction and the reality of discrimination). But I do think it's a good idea to go ahead and explain that in the proposal, and I will most definitely do that. Thanks for pointing that out for me! Take care.

Hi Susan,

An excellent proposal, and of course you have my support. It's fabulous that we're expanding offerings in sexuality studies! I have one small question, which doesn't at all rise to the level of a "concern": would it be superfluous to have a sentence explaining why the new title retains the word "women" (which I can imagine might be perceived as covered under "gender")--in other words, why that's still an important and distinct part of the program's identity, tie to existing organizations, etc.?

Thanks for circulating this--

Subject: RE: liaison - new name

Hi Susan,

As I told you in person, I think this name change is a very positive reflection of changing times, and I strongly support this change.

I read the proposal carefully, to see if I could make any helpful suggestions, and the only thing I came up with is this: Perhaps it would be appropriate to mention the approval processes for the changes that are already in place, for example, you could mention the approval of new courses by CLA and university curriculum committees. (You did mention the Dean's approval of the new hire.) I think that if these changes have already been approved, that strengthens your case.

Cheers,
Kayla

MEMORANDUM

November 30, 2012

TO: Rebecca Warner
Senior Vice Provost, Academic Affairs

FROM: James R. Coakley
Chair, Graduate Council

SUBJECT: Graduate Council Recommendations for the Physics Graduate Program Review

The Graduate Council accepts the Graduate Program Review of the Department of Physics. The Review Committee was reluctant to make an overall program recommendation, so the Council is adding the following recommendations to the Graduate Program Review.

Overall Recommendation: Significantly restructure.

Related to Recommendation A (hiring plan): The Review Committee noted that there appear to be two distinct areas of emphasis – Physics research and Education research. They suggest that the Physics department should obtain funding profiles in their primary areas of research (condensed matter physics, optics and computation physics), as well as the availability of federal funding for the education of physics majors dedicated to secondary school teaching, and use these projections of research funding to inform decisions regarding hiring of new faculty and admission of graduate students. The development of these projections is also related to recommendation D (find a method to ensure full summer support for students).

The Graduate Council expressed concern that students who write an education-oriented thesis may not have adequate oversight of the educational perspective. The Council recommends that Physics partner with the Science and Math Education (SME) program within the College of Education to consider joint appointments of faculty and add education pedagogy to the Physics degree program. The Physics department should consider requiring that all students who write an education-oriented thesis have a College of Education faculty member on their committee.

Furthermore, if there continues to be an education focus within the Physics degree programs, the pedagogy needs to include instruction in development and delivery of on-line courses.

Related to Recommendations B (create an informative and inspiring official mission statement) and I (consider seriously an open search for the next chair): The Council recommends creation of a vision and mission for the Physics department, and then restructuring the graduate programs within the department to align with this vision and mission. This should include developing a timeline for a change of leadership within the department, and should also inform the hiring of any new faculty into the department. As part of this restructuring, the Council agrees with Recommendation C to discontinue offering of the Professional Science Masters (PSM) degree.

Related to Recommendation M (develop a vigorous but sustainable recruiting plan), the Council agrees with the need to develop a recruiting plan consistent with the recommendation of the Review Committee on page two of the report.

"Some components of this plan might include: forming a standing recruiting committee with chair serving for several consecutive years; seeking resources and assistance from the graduate school and international office; developing pipelines domestically and internationally; sending research-active and new faculty on recruiting seminars or interview trips; sending top grad students to revisit their alma maters. The program should formulate a plan for assessing which of these (or other) choices are the most effective."

In addition, the Council recommends that the department consult with INTO OSU to determine the potential for develop a Graduate Pathway to recruit international students.

The Council agrees with the remaining recommendations of the review without further elaboration.

**Extend: MFA in Creative Writing (Low Residency)
From OSU-Main to OSU Cascades**

**School of Writing, Literature, and Film
College of Liberal Arts**

**March 2012
Proposed Effective Term: Fall 2013**

CPS Tracking #: 83436

1. Program Description

a. Program title, level

- MFA in Creative Writing
- CIP# 231302

CIP # 231302

Title: Creative Writing

Definition: A program that focuses on the process and techniques of original composition in various literary forms such as the short story, poetry, the novel, and others. Includes instruction in technical and editorial skills, criticism, and the marketing of finished manuscripts. .

Source: US Department of Education, National Center for Educational Statistics, CIP 2010 ed.

b. OSU main campus department and school/college under which the program is offered.

- School of Writing, Literature, and Film, College of Liberal Arts

c. Who will be the administrator(s) of the OSU-Cascades program?

- Marla Hacker, Dean of Academic Programs
- Neil Browne, Director, American Studies
- A faculty board with representation from English and creative writing at OSU/Corvallis and at OSU Cascades will be created to oversee the program.
- The OSU Low-Residency Faculty Board will be an appointed board consisting of 2 OSU Cascades faculty members, along with 3 members the OSU Corvallis MFA. The Low-Residency MFA Faculty Board would draw on strengths of faculty knowledgeable in low-residency programs to provide artistic and curricular guidance for a 21st century program suited to OSU and the unique opportunities of OSU/Cascades. The Low-Residency Faculty

Board would also be represented in the hiring of a Director through a national search process. Once a Director is hired, the Board would serve in an ongoing function as a recommending body on artistic and curricular direction, while day-to-day operations are in Bend.

- The low-residency program is administered under the same conditions as other graduate programs at OSU-Corvallis, with governing authority ultimately belonging to the Chair of English/Director of the School of Writing, Literature and Film, and local authority on day-to-day operations belonging to OSU-Cascades.
- d. Briefly describe the academic program, and provide a program degree audit sheet that lists all courses (including number of credits) and indicates how each course will be offered at OSU-Cascades [resident course {COCC, OSU, OU, EOU, other}, distance education, web, etc.].
- The proposed MFA in Creative Writing at OSU-Cascades (low residency) extends the Advanced Creative Writing workshop-based side of the MFA in Creative Writing on the Corvallis campus and delivers the same high quality training in writing and literary craft. The delivery significantly differs. Studying under a low-residency studio/mentorship model, students in the OSU-Cascades MFA Program must satisfy graduate degree requirements parallel to those established by the OSU-Corvallis MFA in Creative Writing. The MFA in Creative writing at Cascades—through its different delivery method—will add diversity to, not duplication of, the established writing programs at Oregon State University. The OSU-Cascades MFA Program offers a curriculum requiring 60 credit hours, during which students come to develop the skills needed for writing an original book-length creative work. This curriculum is equivalent to the requirements of the OSU-Corvallis MFA: 40 hours in Advanced Fiction Writing / Advanced Poetry Writing and other course work appropriate to the degree, and 20 hours in thesis, writing and conference, or 599 craft courses. Students enroll in at least nine credit hours per term. Students are required to write original fiction, creative nonfiction, or poetry. A project focusing on the craft of writing is required in the form of an essay, lecture or teaching a seminar. The key requirement of the course of study is a creative thesis, an original literary work in the student's chosen genre.

Extend

- CPS #: **83436**
<https://secure.oregonstate.edu/ap/cps/proposals/view/83436>
- CIP #: **2321302**
- SIS #: **8920**
- Degree Types Offered: **Master of Fine Arts (MFA)**
- Program Types: **Graduate**
- Academic Home: **Department of English, School of Writing, Literature, and Film, College of Liberal Arts**
- Options: **Not applicable**
- Areas of Concentration: **No change (existing)**
 - Fiction
 - Nonfiction Writing
 - Poetry
- Undergraduate Minors: **Not applicable**
- Graduate Minors: **Creative Writing (existing)**
- Course Designators: **WR (Existing)**
- Delivery Mode and Location: **OSU-Cascades**
- Unique Admission Requirements: **None**
- Enrollment Limitations: **None** (enrollment will be reevaluated in five years)
- Accreditation: **None currently** (Submission to the Associated Writing Programs (AWP) to

request a site visit in two years.)

- Proposed Start Date: **Summer Term or Fall Term 2013** (Banner 201300 or 201301)

- The OSU-Cascades MFA Program in Creative Writing is comprised of two parts: a mentoring section and a residency section. Central to the OSU-Cascades MFA Program are the residencies and the one-on-one mentoring relationship between student and teacher which, in combination, accelerate the participating students' development as writers.
- Students are not in residence on campus during the mentorship section. They work from a distance. During the off-campus mentorship period, students work one-on-one with professional mentors who guide each student's study of craft and provide written commentary on their student's work. The emphasis is on one-on-one coaching of writing, transmitting professional experience, professional editing, and introduction to the publishing world. Included in the requirements of both professional mentors and students is a regularly scheduled exchange of packets, which include students' original creative work, responses to reading assignments and responses to the mentor's critiques and advice. Also included in the packet assignments are students' analyses and critical papers in craft, and required entries for an annotated bibliography.
- The OSU-Cascades MFA Program in Creative Writing requires four residencies of eight to ten days for 40 days in residence overall. Residencies are typically scheduled at the beginning of summer and winter terms. Students are required to attend each residency. During the eight- to ten-day residencies at the host campus, students attend workshops, lectures, panel discussions, seminars and literary readings led by the program's professional mentors as well as guest authors and representatives of the publishing industry. During the residency period, students, with the professional mentor's assistance, develop a reading list and study plan for the mentored portion of the term. The goal of each residency is to 1) broaden and deepen each student's knowledge and practice of creative writing; 2) develop a supportive literary community for students that offers encouragement and constructive criticism in workshops, seminars and one-on-one discussions with professional mentors; 3) educate students about publishing and editing through panels and informal conferences involving publishers, editors and agents during the residency period; and 4) generate a list of works to be included in the annotated bibliography.
- Assessment:

Learning Outcomes

Outcome 1: Produce original work in a specified genre, culminating in a thesis of publishable quality and of high literary merit. The student and professional mentor confer to determine length, form, and content, but typically a thesis will be for prose, 80-120 pages, and for poetry, 38-45 pages.

Outcome 2: Develop and employ methods of intensive revision.

Outcome 3: Demonstrate mastery of various literary theories and techniques. Mastery will be achieved through participation in the poetry or fiction/non-fiction workshop (24 total credit hours of WR 521 or WR 524), as well as in courses that focus on specific aspects of craft. Craft courses concentrate on a particular theory, genre, theme, technique, author or topic. Examples include courses on dialogue, the "uncanny" novella, linked story collections, the prose poem, the lyric essay, literary imitations, etc.

Outcome 4: Demonstrate an understanding of the contemporary creative writing profession. In addition to the instruction received in workshops on the profession, students attend mandatory residencies each year. These events feature nationally acclaimed writers who give public readings of their work and conduct colloquia specifically designed for the MFA

students. Students engage in in-depth conversations with the writers about craft, the creative process, publishing, creative writing pedagogy, and other topics. Students also benefit from panels on a wide range of subjects relevant to the profession, as well as readings, roundtable discussions, and other events.

Outcome 5: Perform all activities in an ethical manner. This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's coursework in literature, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately.

Measurement

Outcome 1: The student's writing is assessed in three ways. Students submit original work to the workshop throughout the two-year program, and receive extensive feedback, both oral and written, from their peers and professional mentor; students enroll in 12 credit hours of thesis/writing and conference, in which they work one-on-one with a professional mentor who assesses their progress; and students take a two-hour oral examination. The exam measures the quality of the thesis's individual parts, as well as how it coheres as whole.

Outcome 2: Students study and practice methods for revision in workshops and in consultation with the professional mentor. In workshop, participants describe, explore, and evaluate the premises of works in progress, with an eye toward editorial improvement. Revised drafts are submitted to the workshop for consideration and further suggestions. In conferences, students present revisions of work, and professional mentors offer both conceptual and sentence-level suggestions, as well as providing literary models that may assist in the revision process.

Outcome 3: Mastery of various literary theories and techniques is assessed through craft courses and workshop. Craft courses involve both critical writing and creative writing: Students study technique as demonstrated in their readings, analyze technique in their critical papers, and practice technique in creative exercises.

Outcome 4: The understanding of the contemporary creative writing field is measured through the oral examination.

Outcome 5: This will be demonstrated by the student's production of original work; by the student's ability to engage in constructive criticism and evaluation in a workshop setting, both oral and written; and by the student's bibliography project, where he or she will explore a diverse canon of primary and secondary literary sources and document scholarship appropriately.

- **AUDIT SHEET:**
Master of Fine Arts in Creative Writing

To complete the course of study for the MFA degree in Creative Writing, a minimum of 60 quarter/term hours are required in the following categories:

36 hours/credits in Advanced Fiction Writing / Advanced Poetry Writing and
12 hours/credits in Literary Craft Courses
12 hours/credits in Thesis and/or Writing and Conference

Built into the course work is a sustained critical engagement with a broad range of literature and contemporary writing, which will be demonstrated by an annotated bibliography of at least 60 entries and by the students' participation in literary craft courses during the residencies. This work is equivalent to the literature and composition requirements in the program in Corvallis. Because the low residency program will not be primarily focused on training future teachers, the

requirements in the OSU-Cascades MFA Program in Creative Writing will be tailored to the individual student's need as determined by the student and mentor.

Advanced Creative Writing Courses (a total of 40 credit hours is required). This requirement demands that the student complete ten Advanced Creative Writing courses. The topics will vary. All courses will be offered as 500 level courses only.

- WR 516: ADVANCED COMPOSITION (4 credits)
- WR 524: ADVANCED FICTION WRITING (4 credits)
- WR 541: ADVANCED POETRY WRITING (4 credits)
- WR 548: MAGAZINE ARTICLE WRITING (4 credits)

Thesis/Writing and Conference (a total of 20 credit hours is required).

- WR 503: THESIS
- WR 504: WRITING AND CONFERENCE

Year 1 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 4 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Workshop Summer term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre

Residency: 6 hours craft course ENG 599X CRAFT TOPICS (fiction genre, poetry genre, etc.)

Year 2 – 30 credit hours

Workshop January term (low-residency):

10 hours WR 516 (non-fiction), WR 524 (fiction), WR 541 (poetry), depending on genre
